how many are affiliated with non-bank parent companies. Of the 669 IAs, 51 are dually registered as BDs with the SEC.<sup>366</sup> Of the 129 IAs affiliated with banking or thrift institutions, 39 IAs are affiliated with banks and thrifts with \$50 billion or more in assets. Of the 39 IAs, 10 IAs were affiliated with banks and thrift institutions with assets between \$50 billion and \$250 billion; and 23 IAs were affiliated with banks and thrift institutions with assets of more than \$250 billion. As Table 4 shows, the 39 IAs have 25 unique parent institutions and most of these parent institutions (17) are public companies.

TABLE 4—DISTRIBUTION OF 39 IAs AFFILIATED WITH LEVEL 1 AND LEVEL 2 BANKS AND THRIFTS, BY LEVEL SIZE OF THE PARENT

	IA as a subsidiary of a		
	Level 1 parent	Level 2 parent	Parent size n/a
Number of IAs .....	23	10	6
Number of unique parents .....	10	9	6
Number of public parents .....	10	7	0

<sup>363</sup> See Item 1.O of Part 1A of Form ADV. As noted above, the SEC has not historically examined its regulated entities' use of incentive-based employee compensation. In this regard, Form ADV does not contain information with respect to such practices.

<sup>364</sup> By its terms, the definition of "covered financial institution" in section 956 includes any institution that meets the definition of "investment adviser" under the Investment Advisers Act, regardless of whether the institution is registered as an investment adviser under that Act. Most investment advisers (including registered investment advisers, exempt reporting advisers, or otherwise) currently do not report to the SEC their

average total consolidated assets, so the SEC is unable to determine with particularity how many have average total consolidated assets greater than or equal to \$1 billion and less than \$50 billion, greater than or equal to \$50 billion and less than \$250 billion, or greater than or equal to \$250 billion. The estimates used in this section with respect to investment advisers, however, are based on data reported by registered investment advisers and exempt reporting advisers with the SEC on Form ADV, because the SEC estimates that it is unlikely that investment advisers that are prohibited from registering with the SEC would be subject to the proposed rule.

<sup>365</sup> Form ADV requires an adviser to indicate whether it has a "related person" that is a "banking or thrift institution," but does not require an adviser to identify a related person by type (*e.g.*, a depository institution holding company). See Item 7 of Part 1A and Item 7.A of Schedule D to Form ADV. These estimates are therefore limited by the information reported by registered investment advisers and exempt reporting advisers in their Forms ADV and has necessitated manual referencing of the institutions specified.

<sup>366</sup> Because the data presented below for the effects on BDs and IAs are presented separately, in aggregate, they may overstate the costs and other economic effects for dual registrants.

## 2. Current Incentive-Based Compensation Practices

The SEC does not have information on the incentive-based compensation practices of the BDs and IAs themselves. The main reason why the SEC lacks such information is that BDs and IAs are generally not public reporting companies and as a result they do not provide the type of compensation information that a public reporting company would file with the SEC as part of its communications with shareholders. Notwithstanding these limitations on the data regarding the incentive-based compensation arrangements at BDs or IAs, when the BDs or IAs are subsidiaries of public reporting companies, the SEC has information for the public reporting company that is the parent of these BDs and IAs. In particular, the information on incentive-based compensation practices for named executive officers (“NEOs”) is annually disclosed in proxy statements and annual reports filed with the SEC. NEOs typically include the principal executive officer, the principal financial officer, and three most highly compensated executives.<sup>367</sup>

Given that it lacks data on the BDs and IAs themselves, for the purposes of this economic analysis, the SEC uses data on incentive-based compensation of the NEOs at the parent institutions, which for unconsolidated Level 1 and unconsolidated Level 2 BDs are mostly bank holding companies,<sup>368</sup> as an

indirect measure of incentive-based compensation practices at the subsidiary level.<sup>369</sup> The SEC also analyzes the incentive-based compensation of public reporting institutions with assets between \$1 billion and \$50 billion, many of which are not bank holding companies, because it is possible that size may be a determinant of incentive-based compensation arrangements and thus the incentive-based compensation of an unconsolidated Level 3 BD or IA may be more similar to that of a public reporting institution with assets between \$1 billion and \$50 billion.

While the SEC utilizes the above-referenced public reporting company data, it should be noted that there are a number of caveats that may impact the SEC’s analysis. First, the incentive-based compensation arrangement at the subsidiary level may differ from that of the parent level due to either the difference between the size of the subsidiary relative to the size of the parent, or because the business model of the subsidiary is different from that of the parent. More specifically, the incentive-based compensation arrangement of bank holding companies may be different than that of BDs or IAs given the fundamentally differing natures of the underlying business models and the composition of their respective balance sheets. Further, the incentive-based compensation practices at a public reporting company could be different than those at a non-public reporting company. The SEC also does not have information about incentive-based compensation of non-NEOs and of those employees included in the definition of significant risk-takers under the proposed rule. These caveats mean that the SEC’s analysis, which is mainly based on data from public bank holding companies, may not accurately reflect incentive-based compensation practices at BDs and IAs. To address this lack of data, the SEC has

holding companies. For unconsolidated Level 3 BDs, 20 of the 42 unique parent institutions for which data on their size is available are not bank holding companies.

<sup>369</sup> It is also possible that the compensation practices between Level 1 parent and unconsolidated Level 2 subsidiary (or between Level 2 parent and unconsolidated Level 3 subsidiary) may be closer to each other than those of Level 1 parent and unconsolidated Level 3 subsidiary.

supplemented its analysis with anonymized supervisory data from the Board and the OCC, with limitations to the generalizability of the analysis on non-NEOs and significant risk-takers similar to the ones discussed above.

### i. Named Executive Officers

Table 5A presents data on the compensation structure of NEOs at Level 1, Level 2, and Level 3 parent public reporting institutions of unconsolidated Level 1, unconsolidated Level 2, and unconsolidated Level 3 BDs as of the end of fiscal year 2014.<sup>370</sup> In addition to the CEO and the CFO, NEOs typically include the chief operating officer (“COO”), the general counsel (“GC”), and the heads of business units such as wealth management and investment banking. As shown in Table 5A, incentive-based compensation is a significant component of NEO compensation at parent institutions. It is approximately 90 percent of total compensation for Level 1 parent institutions and 85 percent for Level 2 parent institutions (median values are also reported in parentheses).<sup>371</sup> Additionally, a sizable fraction of incentive-based compensation is in the form of long-term incentive compensation, which is mainly awarded in the form of stock, stock options, or debt instruments.<sup>372</sup> The SEC observes that the use of stock options varies by size of the parent institution: Stock options represent on average 6 percent of long-term incentive compensation for Level 1 parents, while they represent approximately 20 percent of long-term incentive compensation for Level 2 parents.<sup>373</sup>

<sup>370</sup> Data comes from Compustat’s ExecuComp database. Out of 30 unique Level 1 and Level 2 parent institutions of Level 1, Level 2, and Level 3 BDs, compensation data is not available for 16 parent institutions.

<sup>371</sup> Incentive-based compensation is determined as Total compensation as reported in SEC filings—Salary.

<sup>372</sup> Long-term incentive compensation is determined using the following items from Compustat’s ExecuComp database: Total compensation as reported in SEC filings—Salary—Bonus—Other annual compensation. Short-term incentive compensation is determined as Bonus + Other annual compensation.

<sup>373</sup> This is consistent with evidence of decreased use of stock options in compensation arrangements over the last decade, with companies replacing the use of stock options with restricted stock units. See Frydman and Jenter, CEO Compensation, *Annual Review of Financial Economics* (2010).

<sup>367</sup> For a company that is not a smaller reporting company, Item 402(a)(3) of Regulation S-K defines named executive officers as: (1) All individuals serving as the company’s principal executive officer or acting in a similar capacity during the last completed fiscal year (PEO), regardless of compensation level; (2) All individuals serving as the company’s principal financial officer or acting in a similar capacity during the last completed fiscal year (PFO), regardless of compensation level; (3) The company’s three most highly compensated executive officers other than the PEO and PFO who were serving as executive officers at the end of the last completed fiscal year; and (4) Up to two additional individuals for whom disclosure would have been provided under the immediately preceding bullet point, except that the individual was not serving as an executive officer of the company at the end of the last completed fiscal year.

<sup>368</sup> For Level 1 and unconsolidated Level 2 BDs, the SEC’s analysis indicates that, as of December 2014, two of their 20 unique parent institutions are non-bank holding companies (one investment management firm and one investment bank/brokerage). For the 39 IAs described in Table 4, six of their 25 unique parent institutions are not bank

TABLE 5A—COMPENSATION STRUCTURE OF BD PARENT INSTITUTIONS BY LEVEL SIZE

Table 5B presents similar statistics for the compensation structures of Level 1 and Level 2 parent institutions of IAs that were affiliated with banks and thrift institutions with assets of more than \$50 billion.<sup>374</sup> The summary statistics for

the parent companies of IAs mirrors the statistics for the BDs' parent companies: A significant portion of NEO compensation is in the form of incentive-based compensation, most of which is long-term incentive

compensation that comes in the form of stock awards.<sup>375</sup> Both Level 1 and Level 2 IA parents exhibit relatively little use of options.

TABLE 5B—COMPENSATION STRUCTURE OF LEVEL 1 AND LEVEL 2 IA PARENT INSTITUTIONS

Table 6A provides summary statistics for types of incentive-based compensation currently awarded by parent institutions of BDs, their vesting periods, and the specific measures on which these awards are based.<sup>376</sup> All

types of parent institutions use cash in their short-term incentive compensation. Only 12 percent of Level 1 parent institutions, and none of the Level 2 parent institutions, defer short-term incentive compensation that is

awarded in cash only. A significant fraction of Level 1 parent institutions awards short-term incentive compensation in the form of cash and stock.

TABLE 6A—TYPE AND FREQUENCY OF USE OF INCENTIVE-BASED COMPENSATION AWARDS—LEVEL 1, LEVEL 2, AND LEVEL 3 BD PARENT INSTITUTIONS

<sup>374</sup> There is an overlap between the parent institutions of BDs and IAs: About half of the IAs' parents are also parents of BDs and included in Table 5A.

<sup>375</sup> This is not surprising given that approximately half of the IAs' parent institutions are also parent institutions of BDs and included in Table 5A.

<sup>376</sup> Data for tables 6A through 10B is collected from the 2015 and 2007 proxy statements, 10-Ks, and 20-Fs of the Level 1, Level 2, and Level 3 parent institutions.

TSR .....	19% .....	25% .....	46% .....	56% .....	75% .....	54%.

A significant percentage of long-term incentive compensation of BD parent institutions comes in the form of restricted or performance stock.<sup>377</sup> Restricted stock accounts for about 36 percent of long-term incentive compensation at Level 1 parent institutions and approximately 26 percent at Level 2 parent institutions. It has a vesting period of approximately 3.5 years. Performance stock awards are more popular: Over 80 percent of Level 1 and Level 2 parent institutions employ performance stock, which on average accounts for approximately 53 percent of the long-term incentive compensation of Level 1 parents and 42 percent of that

of Level 2 parents. Performance stock awards are frequently evaluated using total shareholder return (“TSR”), return on equity (“ROE”), return on assets (“ROA”), earnings per share (“EPS”), or a combination of TSR and one or more accounting measures of performance over an average of 3.7 years for Level 1 parent institutions and 3 years for Level 2 parent institutions. About 14 percent of Level 1 parent institutions impose deferral after the performance period for performance stock. The average deferral period for these awards is approximately 4 years.

Consistent with the results in Table 5A above, stock options do not appear

to be a popular component of incentive-based compensation arrangements among Level 1 parent institutions. They are more frequently used by Level 2 parent institutions, for which options account for approximately 20 percent of long-term incentive compensation. One of the Level 1 parents also uses debt instruments as a part of NEOs’ long-term incentive compensation, which fully vest after five years (*i.e.* cliff vest). Similar results are obtained when examining the compensation practices of Level 1 and Level 2 parent institutions of IAs, as the summary statistics in Table 6B suggest.

TABLE 6B—TYPE AND FREQUENCY OF USE OF INCENTIVE-BASED COMPENSATION AWARDS—LEVEL 1 AND LEVEL 2 IA PARENT INSTITUTIONS

<sup>378</sup> From the disclosures provided by reporting companies on clawback, forfeiture and certain

prohibitions, the SEC is able to establish whether a reporting company currently uses policies that are

in line with the proposed rule, but was not able to establish compliance with certainty.

TABLE 7A—CURRENT DEFERRAL, CLAWBACK, FORFEITURE AND CERTAIN PROHIBITIONS FOR NEOs AT LEVEL 1, LEVEL 2, AND LEVEL 3 BDS PARENT INSTITUTIONS—Continued

In general, the SEC's analysis of the compensation information disclosed in proxy statements and annual reports by parent institutions of covered BDs suggests that NEO compensation practices at most of the parent institutions are in line with the main requirements and prohibitions in the proposed rule. This may not be surprising given that the baseline already reflects a regulatory response to the financial crisis.<sup>379</sup> For example, all Level 1 parents and 80 percent of Level 2 parents of BDs require some form of deferral of incentive-based executive compensation. The average Level 1 parent institution defers 75 percent of incentive-based compensation awarded to CEOs and 73 percent awarded to other NEOs, which is above the minimum deferral amount that would be required by the proposed rule. In a similar vein, an average of 52 percent of incentive-based compensation awarded to CEOs and 49 percent awarded to other NEOs is deferred at Level 2 parent institutions, similar to what would be required by the proposed rule. The length of the deferral period at Level 1 and Level 2 parent institutions is also currently in line with what would be required by the proposed rule: On average, 3.5 years for NEOs at Level 1 parent institutions and approximately 3 years for those at Level 2 parent institutions.

Regarding the type of incentive-based compensation that is being deferred, both Level 1 and Level 2 parent institutions defer equity-based

compensation. One of the Level 1 parent institutions uses debt instruments as incentive-based compensation and defers it as well. Only a fraction of them (20 percent of Level 1 and 25 percent of Level 2 parent institutions), however, currently defer incentive-based compensation in cash; the proposed rule would require deferral of substantial portions of both cash and equity-like instruments for senior executive officers and significant risk-takers at Level 1 and Level 2 covered institutions. Thus, for both Level 1 and Level 2 parent institutions the current composition of their deferred compensation appears to conform to the proposed rule requirements with respect to equity-like instruments, but only a few Level 1 and Level 2 parent institutions appear to conform to the proposed rule requirements with respect to deferral of cash.

Some of the other requirements and prohibitions for Level 1 and Level 2 covered institutions in the proposed rule are also currently in place at the parent institutions of covered BDs. For example, all of the Level 1 parent institutions and a large majority of Level 2 parent institutions require that the incentive-based compensation awards of NEOs be subject to clawback and forfeiture provisions. The frequency of the use of clawback and forfeiture by Level 1 and Level 2 parent institutions is higher than that reported by a commenter<sup>380</sup> based on the results of a study.<sup>381</sup> The commenter did not specify, however, when the study was

done, nor the number and type of companies covered by the study.

A majority of parent institutions also have prohibitions on hedging.<sup>382</sup> Consistent with the proposed prohibition of relying solely on relative performance measures when awarding incentive-based compensation, all of the Level 1 and Level 2 parent institutions currently use a mix of absolute and relative performance measures in their incentive-based compensation arrangements. Additionally, most Level 1 parent institutions prohibit acceleration of compensation payments except in the cases of death or disability, whereas very few Level 2 parent institutions do that. The average maximum incentive-based compensation opportunity is 155 percent of the target amount for Level 1 parent institutions and 190 percent for Level 2 parent institutions, which is above what would be permitted by the proposed rules. In the SEC's analysis of the compensation disclosure, the SEC did not find any mention about prohibition of volume-driven incentive-based compensation as would be proposed by the rule.

Similar results are obtained when analyzing the current practices of the Level 1 and Level 2 parent institutions of IAs (Table 7B). All IA parent institutions defer NEO compensation, on average, for three years. Almost all parent companies subject incentive-based compensation of NEOs to clawback and forfeiture and prohibit hedging transactions.

<sup>379</sup> See, 2010 Federal Banking Agency Guidance, available at: <http://www.federalreserve.gov/newsevents/press/bcreg/20100621a.htm>.

<sup>380</sup> All references to commenters in this economic analysis refer to comments received on the 2011 Proposed Rule.

<sup>381</sup> See comment letter from Financial Services Roundtable (May 31, 2011). The Roundtable conducted a study of a portion of its membership. Data was collected on the risk management strategies and the procedures for determining compensation since 2008.

<sup>382</sup> The proposed rule would prohibit covered institutions from purchasing hedging instruments

on behalf of covered persons. The statistics regarding hedging prohibitions presented in Table 7A and Table 7B, and Table 9A and Table 9B refer to complete prohibition regarding the use of hedging instruments by senior executives and directors respectively.

To examine how the use of the proposed rule's requirements and prohibitions has changed since the financial crisis, in Tables 8A and 8B the SEC reports the use of incentive-based compensation deferral, clawback, forfeiture, and some of the rule prohibitions by the Level 1 and Level 2

parent institutions of BDs and IAs in year 2007, just prior to the financial crisis. A comparison with the results in Tables 7A and 7B shows that just prior to the financial crisis Level 1 and Level 2 covered institutions deferred less of NEOs' incentive-based compensation compared to what they defer nowadays.

More importantly, the use of clawback and forfeiture in 2007 was far less common than it is now: For example, none of these institutions reported using clawback arrangements as of year 2007. Additionally, fewer covered institutions had risk committees in year 2007.

Thus, the analysis suggests that following the financial crisis, most Level 1 and Level 2 parent institutions of BDs and IAs have adopted to a certain extent some of the provisions and prohibitions that would be required by the proposed rule.

Table 9A lists the most frequent triggers for clawback and forfeiture, which include some type of misconduct and adverse performance/outcome. About 19 percent of Level 1 parent institutions use improper or excessive risk-taking as a trigger for forfeiture and clawback. About 88 percent of Level 1 parent institutions use misconduct, and 75 percent of Level 1 parent institutions also use adverse performance as triggers for clawback, similar to the proposed rules.

TABLE 9A—PERCENTAGE OF LEVEL 1, LEVEL 2, AND LEVEL 3 BD PARENT INSTITUTIONS BY TRIGGER FOR FORFEITURE AND CLAWBACK

The use of forfeiture and clawback triggers is similar for IA parent institutions, as Table 9B shows. A

significant number of Level 1 parent institutions use adverse performance

and misconduct as triggers for both clawback and forfeiture.

TABLE 9B—TRIGGERS FOR FORFEITURE AND CLAWBACK OF LEVEL 1 AND LEVEL 2 IA PARENT INSTITUTIONS

Trigger	Level 1 parents		Level 2 parents

Some of the provisions of the proposed rule (*e.g.*, prohibition of hedging) would apply to covered persons that are non-employee directors who receive incentive-based compensation at Level 1 and Level 2 covered institutions. Table 10A presents

summary statistics on the current compensation practices of Level 1, Level 2, and Level 3 parent public institutions of BDs with respect to their non-employee directors. The data shows that most of the Level 1 parent institutions and all of the Level 2 parent institutions

provide incentive-based compensation to their non-employee directors, and this compensation comes mainly in the form of deferred equity. Additionally, a large percentage of both Level 1 and Level 2 parents prohibit hedging by non-employee directors.

TABLE 10A—INCENTIVE-BASED COMPENSATION OF NON-EMPLOYEE DIRECTORS OF BD PARENTS

	Level 1 parents	Level 2 parents	Level 3 parents
Percentage of institutions with non-employee directors receiving IBC .....	77% .....	100% .....	100%.
Non-employee director IBC as percentage of total compensation .....	56% .....	46% .....	55%.
Type of IBC:			
Deferred equity .....	90% .....	100% .....	100%.
Options .....	10% .....	50% .....	8%.
Vesting (average number of years) .....	2.6 years .....	2.3 years .....	1.9 years.

Options .....	0% .....	17%.
Vesting (average number of years) .....	1.5 years .....	1.6 years.
Percentage of institutions prohibiting hedging by non-employee directors .....	78% .....	83%.

ii. Executives Other Than Named Executive Officers

While the above statistics are based on publicly disclosed information on compensation for the five most highly compensated executive officers at parent institutions, the proposed rule would apply to any executive officer, employee, director or principal shareholder (covered persons) who receives incentive-based compensation. Thus, the data presented above may not be representative for non-NEOs. To provide some evidence on the current incentive-based compensation arrangements of non-NEOs, the SEC uses anonymized supervisory data from the Board. It should be noted that the composition of the supervisory data sample could be different than that of the Level 1 and Level 2 parent institutions analyzed above. To alleviate this potential selection problem, Table 10 compares NEO and non-NEO compensation arrangements only for the supervisory data sample. Also, the

supervisory data comes from banks, while the data above is from bank holding companies. Because there may be differences in incentive-based compensation arrangements and policies at the bank level and the bank holding company level, the supervisory data analysis could yield different results compared to the results presented in the tables above.

Since the supervisory data does not identify NEOs and non-NEOs but identifies the managerial position of each executive, the SEC uses an indirect approach to separate the two groups of executives. From the proxy statements of Level 1 and Level 2 parent institutions, the SEC identifies the executives that are most often included in the definition of NEOs, in addition to the CEO and the CFO. These executives are the COO, the GC, and often the heads of wealth management or investment banking. The SEC then classifies these executives as NEOs and any other executive as non-NEO. Table

11 presents summary statistics for NEOs and non-NEOs based on the supervisory data.

Similar to NEOs, non-NEOs tend to have a significant fraction of long-term incentive compensation in the form of restricted stock units ("RSUs") and performance stock units ("PSUs") that is deferred on average for about three years. Only 36 percent of institutions in the sample used cash as incentive-based compensation for non-NEOs and a significant fraction (on average about 50 percent across institutions that use cash as incentive-based compensation) of the cash incentive-based compensation is deferred. Similarly, 45 percent of the deferred incentive-based compensation for non-NEOs was in the form of restricted stock and 54 percent was in the form of performance share units. Fifty percent of the institutions in the sample used options as incentive-based compensation for non-NEOs, with average vesting period of approximately 3.7 years.

TABLE 11—EXISTING COMPENSATION ARRANGEMENTS FOR NEO AND NON-NEO EXECUTIVES

iii. Significant Risk-Takers

The proposed rule requirements also would apply to significant risk-takers who receive incentive-based compensation. Because data on the compensation of significant risk-takers is not publicly available, the SEC relies on bank supervisory data from the OCC

to provide some evidence on the current practices regarding significant risk-taker compensation at covered institutions. In the OCC anonymized data, banks identify material risk-takers and specific compensation arrangements for them. The definition of a material risk-taker is similar, but not identical, to that of a significant risk-taker in the proposed

rule. Based on supervisory data from three Level 2 covered institutions, it seems that the incentive-based compensation of material risk-takers is subject to deferral, clawback and forfeiture. The fraction of incentive-based compensation that is subject to deferral depends on the size of the compensation a material risk-taker

receives. As Table 12 suggests, the percentage deferred varies, with some exceptions, from 40 percent to 60

percent. The average length of the deferral period is three years.

TABLE 12—DEFERRAL POLICY FOR MATERIAL RISK-TAKERS AT THREE LEVEL 2 COVERED INSTITUTIONS

Institutions	Deferral percent	Forfeiture/ clawback	Length of deferral (years)
Institution 1 .....	40%–60% .....	Yes .....	3
Institution 2 .....	40% .....	Yes .....	3
Institution 3 .....	10%–40%, 40% if bonus >\$750,000 .....	Yes .....	3

Due to the lack of data, the SEC is unable to shed light on current significant risk-taker compensation practices with respect to some of the other proposed rule requirements such as the use of hedging or the type of compensation that is being deferred (cash vs. stock vs. options). In addition, the data is based on information from only three Level 2 covered institutions. It is also worth noting that the OCC data is at the bank subsidiary level, not the depository institution holding company level. Thus, it is possible that the features of the compensation of significant risk-takers at the bank subsidiary level may not be representative of the compensation of significant risk-takers at BDs and IAs.

#### iv. Covered Persons at Subsidiaries

Economic theory suggests that, in large, complex, and interconnected financial institutions that are perceived to receive implicit government guarantee, managers of these institutions could have the incentive to take on more risk than they would have taken had there been no implicit government backstops, thus creating negative externalities for taxpayers. As discussed above, the proposed rule could decrease the likelihood of such negative externalities. To the extent that certain BDs and IAs pose high risk that may lead to externalities, covered persons likely would therefore include those individuals who, by virtue of receiving incentive-based compensation, are in a position of placing significant risks.

Under the proposed rule, senior executive officers and significant risk-takers of BDs and IAs that are covered institutions would be considered covered persons. The proposed rule would require consolidation of

subsidiaries of BHCs that are themselves covered institutions for the purpose of applying certain rule requirements and prohibitions to covered persons. As a result of this proposed consolidation, covered persons employed at BDs and IAs would be subject to the same requirements as the covered persons of their parent institutions, even though the BDs and IAs may be of a smaller size, and hence otherwise treated at a lower level, than their parent institutions. This proposed consolidation would significantly affect unconsolidated Level 3 BDs because most of them are held by Level 1 and Level 2 covered institutions, as well as Level 3 IAs that are held by Level 1 and Level 2 covered institutions. The proposed consolidation would also affect unconsolidated Level 2 BDs and IAs that are held by Level 1 covered institutions because those BDs and IAs will also become Level 1 covered institutions for the purposes of the rule.

As of December 2014, there were 29 unconsolidated Level 3 BDs whose parent institutions are Level 1 and Level 2 institutions (Table 3); only one of those parent institutions was not a covered institution as defined by the rule. Additionally, there were 38 unconsolidated Level 3 BDs whose parents were private institutions; while it is possible that some of these may be Level 1 or Level 2 institutions, the SEC lacks data to determine their size. With respect to the proposed rule requirements, the current compensation arrangements of NEOs of Level 3 parent institutions exhibit some important differences compared to Level 1 and Level 2 parent institutions. For example, Level 3 parent institutions typically defer a smaller fraction of NEOs' incentive-based compensation (Table 7A), defer cash less frequently (Table

7A), and tend to use more options as part of their incentive-based compensation arrangements (Table 6A), compared to Level 1 and Level 2 parent institutions. On the other hand, Level 3 covered institutions, like Level 1 and Level 2 covered institutions, tend to apply forfeiture and clawback and prohibit hedging (Table 7A).

The proposed rule also would require consolidation with respect to certain significant risk-takers. Under the proposed definition of significant risk-taker, employees of a subsidiary that could put substantial capital of the parent institution at risk would be deemed significant risk-takers of the parent institution, and the proposed rule requirements would apply to them in the same manner as the significant risk-taker at their parent institutions. Because data on the compensation of significant risk-takers is not publicly available, the SEC relies on bank supervisory data from the OCC regarding the current compensation practices for significant risk-takers at Level 3 financial institutions; the SEC does not have data on the compensation arrangements at Level 1 and Level 2 institutions. Table 13 shows summary statistics for the compensation arrangements of significant risk-takers at Level 3 covered institutions. The compensation arrangements of significant risk-takers of Level 3 covered institutions seem similar to those of NEOs of Level 3 covered institutions. It is also worth noting that the OCC data is at the bank subsidiary level, not the depository institution holding company level. Thus, it is possible that the features of the compensation of significant risk-takers at the bank subsidiary level may not be representative of the compensation of significant risk-takers at BDs and IAs.

### 3. Regulatory Baseline

The existing regulatory environment, especially after the financial crisis of 2007–2008, is also relevant to the current compensation practices of covered institutions and the effects of the proposed rulemaking. Several guidance and codes that specifically target incentive-based compensation have been adopted by various financial regulators that may also apply to some BDs and IAs. Some of those prescribe compensation practices and suggest prohibitions that are similar to the requirements and prohibitions in the proposed rules.

#### i. Guidance on Sound Incentive Compensation Policies

In June 2010, the U.S. Federal Banking Agencies<sup>383</sup> adopted the Guidance on Sound Incentive Compensation Policies.<sup>384</sup> The guidance applies to banking institutions and, because most of the parents of Level 1 and Level 2 BDs are bank holding companies subject to the guidance, its principles may apply to these BDs as well if the compensation structures at subsidiaries are similar to those at the parent institutions and the parent institution determines to implement

relatively uniform incentive-based compensation policies for the consolidated institution. The guidance may also apply to the 39 IAs that are affiliated with banks and thrift institutions with assets of more than \$50 billion.

The guidance is designed to prevent incentive-based compensation policies at banking institutions from encouraging imprudent risk-taking and to aid in the development of incentive-based compensation policies that are consistent with the safety and soundness of the institution. It has three key principles providing that compensation arrangements at a banking institution should: (a) Provide employees with incentives that appropriately balance risk and reward; (b) be compatible with effective risk management and controls; and (c) be supported by strong corporate governance, including active and effective oversight by the institution's board of directors. Similar to the proposed rules, this guidance applies to senior executives and other employees who, either individually or as a part of a group, have the ability to expose the relevant banking institution to a material level of risk. The guidance suggests several methods of balancing risk and rewards: Risk adjustment of awards; deferral of payment; longer performance periods; and reduced sensitivity to short-term performance.

#### ii. UK Prudential Regulatory Authority Remuneration Code

The SEC notes that for BDs and IAs whose parents are regulated by foreign authorities, the foreign regulatory framework with respect to incentive-based compensation may also be relevant for compliance with the proposed rules.<sup>385</sup> For example, in 2010, the UK PRA adopted four remuneration codes that apply to banks and investment firms and share important similarities with the proposed rules.<sup>386</sup> For instance, the SYSC 19A remuneration code imposes a deferral of at least 40 percent for not less than 3–5 years. For higher earners, at least 60 percent has to be deferred. The code applies to senior management, risk takers, staff engaged in control functions, and any employee receiving compensation that takes them into the same income bracket as senior management and risk takers, whose professional activities have a material impact on the firm's risk profile. The code also requires that at least 50 percent of any bonus must be made in shares, share-linked instruments or

<sup>385</sup> For example, 3 Level 1 and Level 2 BDs have parent institutions that are subject to the UK PRA rules.

<sup>386</sup> There are four codes: SYSC 19A (covering Deposit Taker and Investment firms), SYSC 19B (covering Alternative Investment Fund Managers), SYSC 19C—BIPRU (covering Investment firms), and SYSC 19D (covering Dual-regulated firms Remuneration Code). See <https://www.thefca.org.uk/remuneration>.

<sup>383</sup> The Federal Banking Agencies, as of 2010, were the Board, OCC, FDIC, and Office of Thrift Supervision.

<sup>384</sup> See, 2010 Federal Banking Agency Guidance, available at: <http://www.federalreserve.gov/newsevents/press/bcreg/20100621a.htm>.

other equivalent non-cash instruments of the firm. These shares should be subject to an appropriate retention period. Firms also need to disclose details of their remuneration policies at least annually.

In July 2014, the Prudential Regulation Authority (PRA) and Financial Conduct Authority (FCA) published two joint consultation papers “aimed at improving individual responsibility and accountability in the banking sector.”<sup>387</sup> The papers seek feedback on proposed changes to the rules for remuneration for UK banks and PRA-designated investment firms.<sup>388</sup> The PRA and FCA’s new proposed rules follow recommendations made by the UK Parliamentary Commission on Banking Standards, “Changing Banking for Good,” published in June 2013, and are a response to the major role played by banks in the financial crisis in 2007–2008 and allegations of the attempted manipulation of LIBOR. Their new proposed rules were deemed necessary because the current rule on individual accountability is “often unclear or confused”<sup>389</sup> and thus undermines public trust in the banking sector and the financial regulators. The PRA and FCA proposed that banks defer bonuses for a minimum of 7 years for senior managers and 5 years for other material risk-takers. Financial institutions would be able to recover variable pay even if it was paid out or vested for up to 7 years after the award date.

#### D. Scope of the Proposed Rule

##### 1. Levels of Covered Institutions

The proposed rule would create a tiered system of covered institutions based on an institution’s average total consolidated assets during the most recent consecutive four quarters.<sup>390</sup>

<sup>387</sup> See “Prudential Regulation Authority and Financial Conduct Authority Consult on Proposals to Improve Responsibility and Accountability in the Banking Sector,” Press Release by the Financial Conduct Authority, (July 30, 2014), available at: <https://www.fca.org.uk/news/pru-and-fca-consult-on-proposals-to-improve-responsibility-and-accountability-in-the-banking-sector>.

<sup>388</sup> See “Strengthening Accountability in Banking: A New Regulatory Framework for Individuals,” PRA CP14/13, Consultation Paper, July 2014, available at: <https://www.fca.org.uk/news/cp14-13-strengthening-accountability-in-banking>. See also, “Strengthening the Alignment of Risk and Reward: New Remuneration Rules,” PRA CP14/14, Consultation Paper, July 2014, available at: <https://www.fca.org.uk/news/cp14-14-strengthening-the-alignment-of-risk-and-reward>.

<sup>389</sup> See FSA Consultation Paper 14/13: Strengthening accountability in banking: a new regulatory framework for individuals (<https://www.fca.org.uk/news/cp14-13-strengthening-accountability-in-banking>).

<sup>390</sup> For IAs, the tiered system would be based on year end balance sheet assets (excluding non-proprietary assets).

There are three levels of covered institutions: Level 1, Level 2, and Level 3 covered institutions. Some of the proposed rule requirements (e.g., deferral of compensation, forfeiture and clawback) would apply differentially to covered institutions based on their size tier, with more stringent restrictions on the incentive-based compensation arrangements at larger institutions (i.e., Level 1 and Level 2 covered institutions). In general, the importance of financial institutions in the economy tends to be positively correlated with their size. This is apparent from the use of implicit “too-big-to-fail” policies by governments and central banks, providing support to large financial institutions at times of financial crises because of their importance to the greater financial system.<sup>391</sup> In a similar vein, the 2010 Federal Banking Agency Guidance prescribes stricter compensation rules and related risk-management and corporate governance practices for large and more complex banking institutions.<sup>392</sup>

There are various measures developed to estimate the amount of risk<sup>393</sup> posed by an institution to the greater financial system. One study finds that the degree of leverage, maturity mismatch and the size of the institution are all related to a measure of systemic importance and risk.<sup>394</sup> Another study finds that institution size, degree of leverage and covariance of the institution’s stock with the market during distress are related to the systemic risk contribution of an institution.<sup>395</sup> Moreover, an

<sup>391</sup> See, for example, Frederic Mishkin, *Financial Institutions*.

<sup>392</sup> Large banking institutions include, in the case of banking institutions supervised by (i) The Board, large, complex banking institutions as identified by the Board for supervisory purposes; (ii) the OCC, the largest and most complex national banks as defined in the Large Bank Supervision booklet of the Comptroller’s Handbook; (iii) the FDIC, large, complex insured depository institutions (IDIs). See, 2010 Federal Banking Agency Guidance, available at: <http://www.federalreserve.gov/newsevents/press/bcreg/20100621a.htm>.

<sup>393</sup> See Bisias et al. 2012. A Survey of Systemic Risk Analytics. Office of Financial Research, Working Paper.

<sup>394</sup> See Adrian, T., Brunnermier, M. 2011. COVAR. *American Economic Review*, forthcoming. The paper proposes a measure for systemic risk contribution by financial institutions. The forward-looking measure of systemic risk contribution is significantly related to lagged characteristics of financial institutions such as size, leverage, and maturity mismatch.

<sup>395</sup> See Brownlees, C., Engle, R. 2015. SRISK: A Conditional Capital Shortfall Index for Systemic Risk Measurement. Working Paper. The paper develops a measure of systemic risk contribution of a financial firm. This measure associates systemic risk with the capital shortfall a financial institution is expected to experience conditional on a severe market decline. The measure is a function of the firm’s size, degree of leverage and the expected equity loss conditional on a market downturn.

academic study of the financial crisis states that the size of an institution is likely to magnify the impact of failure to the entire financial system.<sup>396</sup> In terms of defining systemic importance, bank holding companies with assets over \$50 billion are required to disclose to the Board on an annual basis, three indicators related to their systemic risk: Institution size, interconnectedness and complexity.<sup>397</sup>

By setting stricter restrictions on the incentive-based compensation arrangements at Level 1 and Level 2 covered institutions, the tiered approach could benefit taxpayers. To the extent that stricter incentive-based compensation rules are effective at curbing inappropriate risk-taking, this could lessen the default likelihood for Level 1 and Level 2 covered institutions, thus increasing the likelihood that taxpayers would not have to incur costs to rescue important institutions. Moreover, if the stricter incentive-based compensation rules lower the likelihood of default for Level 1 and Level 2 covered institutions, the likelihood of default for smaller institutions could decrease as well, to the extent that smaller institutions are exposed to counterparty risks due to their connection with larger Level 1 and Level 2 covered institutions.

Consolidation requirements aside, the tiered approach also would not impose as great a compliance burden on smaller Level 3 covered institutions for which the proposed rule requirements on deferral, forfeiture and clawback, and some other prohibitions and requirements do not apply. To the extent that compliance costs have a fixed component that may have a disproportionate impact on smaller institutions, excluding Level 3 covered institutions from more burdensome requirements would not place them at a competitive disadvantage compared to Level 1 and Level 2 covered institutions. Moreover, to the extent that executives’ incentives become distorted due to the implicit government guarantee, this is less likely to be the case for Level 3 covered institutions due to their relatively smaller size. Thus, the potential benefits of the proposed rule may be less substantial for smaller covered institutions since such institutions are less likely to be in a

<sup>396</sup> See French et al. 2010. *Squam Lake Report: Fixing the Financial System*. Princeton University Press.

<sup>397</sup> Size is correlated with the two other measures of systemic importance, complexity and interconnectedness. See FSOC 2015 Annual Report, available at: <https://www.treasury.gov/initiatives/fsoc/studies-reports/Documents/2015%20FSOC%20Annual%20Report.pdf>.

position to take risks that may lead to externalities.

However, to the extent that the stricter proposed requirements for incentive-based compensation arrangements at Level 1 and Level 2 covered institutions induce less than optimal risk-taking incentives for covered persons from shareholders' point of view, this could result in a decrease in firm value and hence lower returns for the shareholders of these institutions. Additionally, the stricter requirements for Level 1 and Level 2 covered institutions could make it more difficult to attract and retain human capital, thus creating competitive disadvantages in the labor market for these institutions. If these institutions become disadvantaged due to their stricter compensation requirements, they might be forced to increase overall compensation to be able to compete for managerial talent with firms that are not affected by the proposed rules.

As discussed above, besides an institution's average total consolidated assets, other indicators (for example, the size of that institution's open counterparty positions in a market) not perfectly correlated with size could be a proxy for the importance of financial institutions to the financial sector and the broader economy. If size is not a good proxy for the importance of a financial institution, then the proposed rule would likely pose a disproportionate compliance burden on larger institutions while not covering institutions that may be more significant to the overall financial system under different proxies for importance.

The proposed thresholds for identifying Level 1 covered institutions (over \$250 billion) and Level 2 covered institutions (between \$50 billion and \$250 billion) are similar to those used by banking regulators in other contexts. For example, the \$250 billion is used by Basel III as a threshold to identify core banks that must adopt the Basel standards; and the \$50 billion threshold is used in a number of sections of the Dodd-Frank Act.<sup>398</sup> The use of these two thresholds might place a higher compliance burden on institutions that,

are close to, but just above the threshold compared to institutions that are close, but just below the threshold. For example, a BD that has a size of \$49 billion is likely to be similar in many aspects to a BD that has a size of \$51 billion. Yet, with the current cutoff points, the former would not be subject to deferral, forfeiture and clawback, and other prohibitions in the proposed rule, while the latter would be.

By covering various types of financial institutions (e.g., banks, BDs, IAs, thrifts, etc.) with at least \$1 billion in assets, section 956 and the proposed rule implicitly assume that larger institutions pose higher risks, including risks that may impact the financial system at large. This assumption may not hold true for certain institutions. For example, in the case of BDs and IAs, which may have a much narrower scope of activities than a comparably sized commercial bank, the narrower range of activities could limit their impact on the overall financial system. On the other hand, larger BDs and IAs may pose higher risks than smaller BDs and IAs. Also, at least one study has suggested that the interconnectedness of financial institutions generally could affect multiple financial institutions in a crisis and impact otherwise unrelated parts of the larger financial system.<sup>399</sup> Another study asserts that financial institutions, including broker-dealers, have become highly interrelated and less liquid in the past decade, thus increasing the level of risk in the financial sector.<sup>400</sup>

<sup>399</sup> See, for example, Bisias D., M. Flood, A.W. Lo, and S. Valavanis, 2012. A Survey of Systemic Risk Analytics. Office of Financial Research, Working paper, available at: [https://www.treasury.gov/initiatives/wsr/ofr/Documents/OFRwp0001\\_BisiasFloodLoValavanis\\_ASurveyOfSystemicRiskAnalytics.pdf](https://www.treasury.gov/initiatives/wsr/ofr/Documents/OFRwp0001_BisiasFloodLoValavanis_ASurveyOfSystemicRiskAnalytics.pdf). On page 9, the authors argue that "In a world of interconnected and leveraged institutions, shocks can propagate rapidly throughout the financial network, creating a self-reinforcing dynamic of forced liquidations and downward pressure on prices." The study discusses the interconnectedness between financial institutions in general and does not focus on the potential role of BDs and IAs.

<sup>400</sup> See Billio M., M. Getmansky, A.W. Lo, and L. Pelizzon. 2012. Econometric Measures of Connectedness and Systemic Risk in the Finance and Insurance Sectors, *Journal of Financial Economics*, 104, 535–559. The study examines and finds evidence that banks, brokers, hedge funds and insurance companies have become highly interrelated during the last decade, thus increasing the level of systemic risk in the financial sector. For example, insurance companies have had little to do with hedge funds until recently when these companies expanded into markets such as providing insurance for financial products and credit default swaps. Such activities have potential implications for systemic risk when conducted on a large scale.

## 2. Senior Executive Officers and Significant Risk-Takers

The requirements under the proposed rule would place differential restrictions on compensation arrangements of covered persons. Within each covered institution, the proposed rule would create different categories of covered persons, which include any executive officer, employee, director, or principal shareholder that receives incentive-based compensation. While the proposed rule would apply to directors or principal shareholders who receive incentive-based compensation, the SEC's baseline analysis suggests that most of the parent institutions provide incentive-based compensation to non-employee directors but none of them provide such compensation arrangements to principal shareholders that are neither executives nor non-employee directors. Below, the SEC focuses the discussion of the economic effects of the proposed rule on two types of covered persons: Senior executive officers and significant risk-takers.

As discussed above, a senior executive officer is defined as a covered person who holds the title or, without regard to title, salary, or compensation, performs the function of one or more of the following positions at a covered institution for any period of time in the relevant performance period: President, executive chairman, CEO, CFO, COO, chief investment officer, chief legal officer, chief lending officer, chief risk officer, chief compliance officer, chief audit executive, chief credit officer, chief accounting officer, or head of a major business line or control function (as defined in the proposed rule). A significant risk-taker is defined as a covered person, other than a senior executive officer, who receives compensation of which at least one-third is incentive-based compensation and is: Either (1) placed among the highest 5 percent in annual base salary and incentive-based compensation among all covered persons (excluding senior executive officers) of a Level 1 covered institution or of any covered institution affiliate, or (2) placed among the highest 2 percent in annual base salary and incentive-based compensation among all covered persons (excluding senior executive officers) of a covered Level 2 covered institution or of any covered institution affiliate, or (3) may commit or expose 0.5 percent or more of the common equity tier 1 capital, or in the case of a registered securities broker or dealer, 0.5 percent or more of the tentative net capital, of the covered institution or of any affiliate of the covered institution

<sup>398</sup> For example, sections 165 and 166 of the Dodd-Frank Act require the Board to establish enhanced prudential standards for nonbank financial companies supervised by the Board and bank holding companies with total consolidated assets of \$50 billion or more. In prescribing more stringent prudential standards, the Board may, on its own or pursuant to a recommendation by the Council in accordance with section 115, differentiate among companies on an individual basis or by category, taking into consideration their capital structure, riskiness, complexity, financial activities (including the financial activities of their subsidiaries), size, and any other risk-related factors that the Board deems appropriate.

that is itself a covered institution, or (4) is designated as a significant risk-taker by the SEC or the covered institution.

The proposed rule would impose differential requirements on compensation arrangements of senior executive officers and significant risk-takers conditional on the size of the covered institution. Regarding senior executive officers, at least 60 percent of a senior executive officer's incentive-based compensation would be required to be deferred at a Level 1 covered institution, whereas 50 percent would be the minimum deferral amount for a senior executive officer at a Level 2 covered institution. Regarding significant risk-takers, 50 percent of a significant-risk-taker's incentive-based compensation at a Level 1 covered institution would be required to be deferred as compared to 40 percent for a significant risk-taker's incentive-based compensation at a Level 2 covered institution. Moreover, the minimum deferral period for all covered persons at Level 1 covered institutions would be four years for qualifying incentive-based compensation and two years for incentive-based compensation received under long-term incentive plans whereas the deferral period for covered persons at a Level 2 covered institution would be three years for qualifying incentive-based compensation and one year for compensation received under long-term incentive plans.

In general, the proposed rule would impose relatively stricter requirements for compensation arrangements of individuals who are more likely to be in a position to execute or authorize actions with accompanying risks that may have a significant impact on the financial health of the covered institution or of any covered institution affiliate. Specifically, the proposed rule would require a higher percentage of incentive-based compensation to be deferred for senior executive officers compared to significant risk-takers at covered institutions. If senior executive officers are in a position to make decisions that have a more significant impact on the degree of risk a covered institution takes than significant risk-takers, then the higher percentages of deferral amounts for senior executive officers appear to be commensurate with the degree of inappropriate risk-taking in which they could engage. This would likely provide proportionately stronger disincentives for inappropriate risk-taking by individuals that are more likely to be able to expose the covered institution to greater amounts of risk, thus potentially benefiting taxpayers and other stakeholders. In general, if certain significant risk-takers (e.g.,

traders with the ability to place significant bets that could endanger the financial health of the covered institution or of any affiliate of the covered institution) could engage in more or similarly significant risk-taking than senior executive officers, the proposed rules would place less stringent requirements on the compensation arrangements of such significant risk-takers compared to senior executive officers, lowering risk-taking disincentives for significant risk-takers and/or imposing a potential higher cost to senior executive officers. However, the proposed rules may also create an incentive for senior executive officers to monitor significant risk-takers in those situations when they do not directly supervise such significant risk-takers.

While the definition of senior executive officer would be primarily based on job function, the definition of significant risk-taker would be based on multiple criteria. To identify significant risk-takers, one direct approach would require knowledge of their authority to expose their institution to material amounts of risk. This risk-based approach has intuitive appeal because it relates the application of the rules to the potential for risk taking. Such an approach could, however, be designed in many different ways, including differences relating to determining the appropriate risk-based measure, whether it should be applied to individuals or a group (e.g., a trader or a trading desk), and whether it would be appropriate to subject all trading activity to the same risk-based measure (e.g., U.S. treasury securities versus collateralized mortgage obligations). One of the criteria in the definition of significant risk-takers in the proposed rules is based on individuals' relative size of annual base salary and incentive-based compensation within a covered institution and its affiliates. If the highest paid individuals at BDs and IAs are the ones that could place BDs and IAs, or their parent institutions, at risk of insolvency, then the use of this criterion is likely to reasonably identify individuals that are significant risk-takers and as a result lower the likelihood of inappropriate risks being undertaken and potentially safeguard the health of these institutions and the broader economy. If, however, the highest paid individuals at BDs and IAs are not likely to be able to expose their parent institution to significant risks, this criterion may be overly inclusive, resulting in individuals being designated as significant risk-takers without possessing the ability to inflict

substantial losses on BDs or IAs, or their parent institutions. This may impose restrictions on the compensation of those individuals and as a consequence may put BDs and IAs at a disadvantage in hiring or retaining human capital. BDs and IAs may have to increase the compensation of affected individuals to offset the restrictions imposed by the proposed rule.

For IAs that are covered institutions in another capacity and BDs, the proposed rules would also identify significant risk-takers using a measure of their ability to expose the covered institution to risks. More specifically, a person that receives compensation of which at least one-third is incentive-based compensation and may commit or expose 0.5 percent or more of the common equity tier 1 capital, or in the case of a registered securities broker or dealer, 0.5 percent or more of the tentative net capital, of the covered institution or of any affiliate of the covered institution would be a significant risk-taker. As discussed above, the Agencies are proposing the exposure test because individuals who have the authority to expose covered institutions to significant amounts of risk can cause material financial losses to covered institutions. For example, in proposing the exposure test, the Agencies were cognizant of the significant losses caused by actions of individuals, or a trading group, at some of the largest financial institutions during and after the financial crisis that began in 2007. In the case of a covered institution that is a subsidiary of another covered institution and is smaller than its parent, this particular criterion of the significant risk-taker definition could result in individuals being classified as significant risk-takers who do not have the ability to expose significant amounts of the parent's capital to risk.

Additionally, under the proposed definition of significant risk-taker, a covered person of a BD or IA subsidiary of a parent institution that is a Level 1 or Level 2 covered institution may be designated as a significant risk-taker relative to: (i) In the case of a BD subsidiary, the size of the BD's tentative net capital or; (ii) in the case of both BD and IA subsidiaries, the tentative net capital or common equity tier 1 capital of any section 956 affiliate of the BD or IA, if the covered person has the ability to commit capital of the affiliate, even if the BD or IA subsidiary has significantly fewer assets than its parent. Because the BD subsidiary would be treated as a Level 1 or Level 2 covered institution due to its parent, a covered person of a BD that is a

relatively smaller subsidiary would be subject to more stringent compensation restrictions than would an employee of a comparably sized BD that is not a subsidiary of a Level 1 or Level 2 covered institution. As a consequence, if such a designated significant risk-taker of a smaller BD subsidiary of a Level 1 or Level 2 covered institution is not in a position to undertake actions that place the entire institution at risk, then the proposed approach may impose disproportionately stricter compensation restrictions on such covered person.

An alternative would be to use an individual's level of compensation as a proxy for his or her ability or authority to undertake risks within a corporate structure. The main assumption under this approach would be that there is a positive link between an individual's total compensation and that individual's authority to commit significant amounts of capital at risk at the covered institution or any affiliate of the covered institution. A benefit of the total compensation-based approach would be the implementation simplicity in the identification of significant risk-takers. However, the main challenge would be the determination of the total compensation threshold that would appropriately qualify individuals as significant risk-takers. On one hand, setting the total compensation threshold too low could impose incentive-based compensation restrictions on individuals that do not have authority to undertake significant risks. As a result, it is possible that incentive-based compensation requirements imposed on individuals that do not have significant risk-taking authority could lead to a disadvantage in the efforts of the institutions to attract and retain talent. On the other hand, setting the total compensation threshold too high could impose incentive-based compensation restrictions on an incomplete set of significant risk-takers, limiting the potential benefits of the proposed rule.

### 3. Consolidation of Subsidiaries

The proposed rule would subject covered institution subsidiaries of a depository institution holding company that is a Level 1 or Level 2 covered institution to the same requirements as the depository institution holding company. In this manner, the proposed rule would capture the effect that risk-taking within the subsidiaries of a depository institution holding company could have on the parent, and the negative externalities that could result for taxpayers.

For example, covered persons at a \$10 billion BD subsidiary of a depository

institution holding company that is a Level 1 covered institution would be treated as covered persons of a Level 1 covered institution and subject to the proposed requirements and prohibitions applicable to covered persons at a Level 1 covered institution. One benefit of the proposed approach is the implementation simplicity of the proposed rule since the parent institution's size would determine the requirements for all covered persons in the covered institution's corporate structure. Such an approach also has the advantage that it may cover situations where the subsidiary could potentially expose the consolidated institution to substantial risks. This could be the case if for example the parent institution has provided capital to the subsidiary and the subsidiary is large enough that its failure would represent a significant loss for the parent institution. Moreover, such an approach curbs the possibility that a covered institution might place significant risk-takers in a smaller unregulated subsidiary, in order to evade the compensation restrictions of the proposed rule for individuals with authority to expose the institution to significant amounts of risk.

There may also be costs associated with the proposed consolidation approach. The main disadvantage of such approach is that it may impose requirements and prohibitions on individuals employed in smaller subsidiaries that are less likely to be in a position to expose the institution to significant risks. Thus, the assumptions underlying the rule's consolidation may not be accurate in all cases. The proposed rules' treatment of subsidiaries would depend on their size and the size of their parent, and also on the effect that risk-taking within those subsidiaries could have on the potential failure of the parent institution and the potential risk that such a failure could impose on the overall financial system and the subsequent negative externality that this could create for taxpayers. For example, if the parent institution does not explicitly provide capital or implicitly guarantee the subsidiary's positions, the proposed rules would impose similar requirements on the incentive-based compensation of individuals with different abilities to expose the institution to risk. Such compensation requirements may impose costs on individuals in these subsidiaries, and it might affect the ability of these subsidiaries to compete for managerial talent with stand-alone companies of the same size as the subsidiary. If that were the case, the subsidiaries of larger parent institutions

may have to provide additional pay to individuals to compensate for the relatively stricter compensation requirements and prohibitions. If these additional compensation requirements are significantly costly, there may be incentives for smaller subsidiaries to spin-off from their parents and operate as stand-alone firms to avoid the stricter compensation requirements that would be applicable based on the size of the parent institution.

Additionally, the costs of the proposed consolidation approach would depend on how different the current incentive-based compensation arrangements of a subsidiary are from those of its parent institution. If the compensation arrangements of BDs' and IAs' covered persons are similar to those of their parent institutions (*e.g.*, they use similar deferral percentages and terms, prohibit hedging, etc.), then the proposed consolidation approach is not likely to lead to significant compliance costs for BDs and IAs. The 2010 Federal Banking Agency Guidance has significantly limited differences in compensation arrangements between financial institutions and their subsidiaries. If, however, the compensation arrangements at BDs and IAs more closely resemble the compensation structures of financial institutions of similar size, than the proposed rule's consolidation requirement may lead to significant compliance costs. Unconsolidated Level 3 BDs and IAs are most likely to be affected by this proposition. The parent institutions of Level 3 BDs, to the extent that they are owned by one, are mainly Level 1 and Level 2 covered institutions. Although the SEC does not have data about the parent institutions of Level 3 IAs, the SEC expects that they would also be mainly Level 1 and Level 2 covered institutions. As shown above, compensation practices at Level 3 parent institutions differ significantly from Level 1 and Level 2 parent institutions on a number of dimensions: They defer a smaller fraction of NEOs incentive-based compensation (Table 7A), defer cash less frequently (Table 7A), and tend to use more options as part of their incentive-based compensation (Table 6A) compared to Level 1 and Level 2 parent institutions. They also rather infrequently prohibit hedging with respect to non-employee directors that receive incentive-based compensation (Table 10A). If the compensation arrangements of unconsolidated Level 3 BDs and IAs are similar to those of Level 3 parent institutions, under the proposed rule they would need to make significant

changes to certain features of their compensation arrangements to be compliant with the proposed rule. On the other hand, to the extent that their current compensation practices are not optimal from the perspective of taxpayers and other stakeholders of such BDs and IAs, there may be potential benefits. This point holds for the remainder of the economic analysis where the SEC discusses the potential costs and benefits to unconsolidated Level 3 BDs and IAs of a larger covered institution from applying the proposed rule requirements and prohibitions.

An alternative to the proposed consolidation approach would be to use the subsidiary's size to determine its status as a Level 1, Level 2, or Level 3 covered institution. For example, a \$10 billion BD subsidiary of a Level 1 depository institution holding company would be treated as a Level 3 covered institution and covered persons within the subsidiary would be subject to all requirements and prohibitions applicable to a Level 3 covered institution. This alternative approach would not entail the potential costs identified in the proposed approach described above. However, differential application of the rule depending on subsidiary size could provide covered institutions with an incentive to re-organize their operations by placing significant risk-takers into relatively smaller subsidiaries to bypass the proposed requirements. This type of behavior, however, might be mitigated in some circumstances by the proposed rule's prohibition on such indirect actions: A covered institution must not indirectly, or through or by any other person, do anything that would be unlawful for such covered institution to do directly under this part. Moreover, this type of behavior would be constrained by the fact that the SEC's capital requirements for broker-dealers require that the broker-dealer itself carry the necessary capital for all broker-dealer positions.<sup>401</sup> Additionally, the rule's definition of a significant risk-taker would treat any employee of the subsidiary with the ability to commit certain amount of capital or to create risks for the parent institution as a significant risk-taker of the parent, further limiting the ability of institutions to bypass the proposed requirements by placing such individuals into relatively smaller subsidiaries.

#### E. Potential Costs and Benefits of the Proposed Rule's Requirements and Prohibitions

In the following sections, the SEC provides an analysis of the potential costs and benefits associated with the proposed rule's requirements and prohibitions and possible alternatives.<sup>402</sup> For purposes of this analysis, the SEC addresses the potential economic effects for covered BDs and IAs resulting from the statutory mandate and from the SEC's exercise of discretion together, recognizing that it is often difficult to separate the costs and benefits arising from these two sources. The SEC also requests comment on any economic effect the proposed requirements may have on covered BDs and IAs. The SEC appreciates comments that include both qualitative information and data quantifying the costs and the benefits identified in the analysis or alternative implementations of the proposed rule.

##### 1. Limitations on Excessive Compensation

The proposed rule would prohibit covered institutions from establishing or maintaining any type of incentive-based compensation arrangement, or any feature of any such arrangement, that encourages inappropriate risk-taking by providing a covered person with excessive compensation, fees, or benefits or that could lead to material loss for the institution.

The proposed rule would not define excessive compensation; instead, it would use a principles-based approach that would provide covered institutions with the flexibility to structure incentive-based compensation arrangements that do not constitute excessive compensation based on several factors that are outlined below. These factors would include: The total size of a covered person's compensation; the compensation history of the covered person and other individuals with comparable expertise at the institution; the financial condition of the covered institution; compensation practices at comparable institutions based upon such factors as

asset size, geographic location, and the complexity of the covered institution's operations and assets; for post-employment benefits, the projected total cost and benefit to the covered institution; and any connection between the covered person and any fraudulent act or omission, breach of trust or fiduciary duty, or insider abuse with regard to the covered institution.

The flexibility that the proposed rule provides would likely benefit covered institutions by allowing them to tailor the incentive-based compensation arrangements to the skills and job requirements of each covered person and to the nature of a particular institution's business and the risks thereof instead of applying a "one size fits all" approach. The differences in the size, complexity, interconnectedness, and degree of competition in the market for managerial talent among the institutions covered by the proposed rule make excessive compensation difficult to define universally.

As mentioned above, a principles-based approach is likely to provide greater discretion to covered institutions in tailoring compensation arrangements that do not provide incentives for inappropriate risk-taking. Such discretion may potentially allow for differential interpretation among covered institutions on what constitutes excessive compensation and as a consequence, differential compensation arrangements even for similar institutions could be designed. Given the flexibility inherent under a principles-based approach, it is also possible that in fact some compensation contracts to covered persons constitute excessive compensation that could lead to inappropriate risk-taking, particularly if the compensation setting process is not efficient or unbiased.<sup>403</sup> It is also possible that boards of directors may find it difficult to evaluate whether a compensation arrangement creates excessive compensation that could lead to inappropriate risk-taking. As such, it is likely that governance mechanisms in place would be crucial for institutions to benefit from the flexibility of the principles-based approach and avoid the potential costs described above.

An alternative would be a more prescriptive approach in defining compensation arrangements that constitute excessive compensation. For example, an explicit definition of excessive compensation could be provided for covered institutions. As mentioned above, such an approach has

<sup>402</sup> Commenters on the 2011 Proposed Rule suggested more expansive discussion and analysis of economic effects of the proposed rulemaking on items such as the ability of covered institutions to compete for talent acquisition and retention (*See, for example, letters by the U.S. Chamber and FSR*), and also on the effects of the rule on risk taking incentives and its consequences for covered institutions' ability to compete (*See, for example, FSR*). Below, the SEC's economic analysis outlines and discusses potential economic effects of the various rule provisions, including items identified in comment letters discussing economic considerations.

<sup>403</sup> For example, *see* Coles, J., Daniel, N., and Naveen, L. Co-opted Boards. 2014. *Review of Financial Studies* 27, 1751–1796.

<sup>401</sup> *See* 17 CFR 15c3–1(a).

the disadvantage of restricting compensation arrangement options for covered institutions and thus an increased likelihood that inefficient compensation arrangements would be applied to at least some covered institutions, given the significant differences among covered institutions and covered persons.

2. Performance Measures

The proposed rule would require covered institutions to use a variety of performance measures when determining the incentive-based compensation of covered persons. Incentive-based compensation arrangements would be required to include a mix of financial (*i.e.*, accounting and stock-based) measures and non-financial measures, with the ability for non-financial measures to override financial measures when appropriate. Additionally, any amounts to be awarded under the arrangement would be subject to adjustment to reflect actual losses, inappropriate risks taken, compliance deficiencies, or other measures or aspects of financial and non-financial performance.

There is evidence in the economic literature suggesting that non-financial measures of performance are incremental predictors of long-term financial performance relative to financial measures of performance, and provide important information about executives' performance.<sup>404</sup> Moreover, non-financial measures of performance in compensation arrangements may better capture progress or milestones of

strategic goals that may be unique to specific institutions.<sup>405</sup> Thus, the proposed requirement to use a mix of the two types of measures would likely provide more relevant information to enable covered institutions to set up incentive compensation arrangements for covered persons. In addition, the flexibility that the proposed rule would provide to covered institutions to adjust the compensation awards based on various factors would allow covered institutions to tailor their compensation arrangements to their specific circumstances.

The baseline analysis suggests that many of the public parent institutions of some BDs and IAs already use a mix of financial and non-financial measures in determining the incentive-based compensation awards of senior executive officers. To the extent that BDs and IAs use a similar mix of measures to determine the incentive-based compensation awards of their senior executive officers, the SEC expects the costs of compliance with this provision of the proposed rule to be relatively low. If BDs and IAs do not use the same mixture of financial and non-financial measures as their parents, or do not rely on non-financial measures when determining the compensation of their senior executive officers and significant risk-takers, the compliance costs associated with this particular rule requirement may be significant. Such costs may be in the form of additional expenditures related to hiring compensation consultants and/or lawyers to design compensation

schemes and assure the compliance of newly designed compensation schemes with the proposed rule.

The SEC has attempted to quantify such costs using data reported by Level 1, Level 2, and Level 3 covered institutions that are parents of BDs and IAs. Table 14 provides some summary statistics on the use of compensation consultants and the fees paid to those over the period 2007–2014.<sup>406</sup> Based on the results in the table, Level 1 and Level 2 covered institutions use on average two compensation consultants, while Level 3 covered institutions use one compensation consultant on average. If a Level 1 BD or IA has to hire compensation consultant(s) to help them meet this rule requirement, it may incur costs of approximately \$185,515 per year. If an unconsolidated Level 2 BD or IA has to hire compensation consultant(s) to help them meet this rule requirement, it may incur costs of approximately \$77,000 per year.<sup>407</sup> If an unconsolidated Level 3 BD or IA, because of the consolidation requirement, has to hire compensation consultant(s) to help meet this rule requirement, it may incur costs of approximately \$18,788 per year. These costs could be higher if the compensation consultant is asked to provide additional services other than compensation consulting services. These costs could be lower, however, if the parent institutions of BDs and IAs already employ compensation consultants and could extend their services to meet the proposed rule requirements for BDs and IAs.

TABLE 14—THE USE AND COSTS OF COMPENSATION CONSULTANTS BY CERTAIN LEVEL 1, LEVEL 2, AND LEVEL 3 COVERED INSTITUTIONS THAT ARE PARENTS OF BDs AND IAs, 2007–2014

	Average number of compensation consultants used	Median fees for consulting services to the compensation committee	Number of institutions
Level 1 .....	2	185,515	7
Level 2 .....	2	77,000	9
Level 3 .....	1	18,788	6

<sup>404</sup> See, e.g., Banker, R., G. Potter, and D. Srinivasan, 1999. An Empirical Investigation of an Incentive Plan that Includes Nonfinancial Performance Measures. *The Accounting Review* 75, 65–92. The study examines whether non-financial measures of performance, specifically customer satisfaction, are incremental predictors of future performance and whether inclusion of such measures of performance in compensation contracts is efficient. The study finds that customer satisfaction is incremental in predicting future financial performance and inclusion of such performance measure in compensation contracts leads to improved future performance.

<sup>405</sup> See, e.g., Ittner, C., D. Larcker, and T. Randall, 2003. Performance Implications of Strategic Performance Measurement in Financial Services Firms. *Accounting, Organizations and Society* 28, 715–741. The study uses a sample of 140 U.S. financial services firms to examine the relation between measurement system satisfaction, economic performance, and two general approaches to strategic performance measurement: Greater measurement diversity and improved alignment with firm strategy and value drivers. The study finds evidence that firms making more extensive use of a broad set of financial and non-financial measures than firms with similar strategies or value drivers have higher measurement system satisfaction and stock market returns.

<sup>406</sup> Data used in the table comes from the ISS database.

<sup>407</sup> We note that while we report the median consulting fee for covered institutions in Table 14, the average compensation consultant fees are higher. For example, for Level 1 covered institutions the average consulting fee is \$198,673, for Level 2 covered institutions the average consulting fee is \$293,501, and for Level 3 covered institutions the average consulting fee is \$59,828. The presence of outliers in the compensation consulting fee data and the small sample size are the reason for the large difference between average and median consulting fee.

### 3. Board of Directors

Additionally, the proposed rule would require that the board of directors of covered institutions oversee a covered institution's incentive-based compensation program, and approve incentive-based compensation arrangements for senior executive officers or any material exceptions or adjustments to incentive-based compensation policies or arrangements.

Since overseeing and approving executive compensation arrangements is one of the primary functions of the compensation committee of the corporate board, the SEC believes that this rule requirement would not impose significant compliance costs on covered institutions that already have compensation committees. Moreover, because the baseline analysis suggests that the majority of the parents of some covered institutions already employ most of the requirements and limitations of the proposed rule, it may not be particularly costly for boards of directors or compensation committees to comply with the proposed rule. However, there might be additional compliance costs for covered institutions if the board of directors or the compensation committee have to exert incremental effort (*i.e.*, meet more frequently) in designing and approving compensation arrangements. Additionally, if because of the rule's definition of significant risk-takers the compensation committee of a covered institution has to cover a much larger number of employees and consider additional factors than it does at present, this may increase compliance costs.

For covered BDs and IAs that do not have compensation committees, the board of directors as a whole may be able to oversee and approve executive compensation arrangements. Thus, for such BDs and IAs the compliance costs of this rule requirement could result in more time being spent for the board of directors on these issues, which might entail higher directors' fees and possibly additional compensation consulting costs.

### 4. Disclosure and Recordkeeping

The proposed rule would require all covered institutions to create annually and maintain for a period of at least 7 years records that document the structure of all its incentive-based compensation arrangements and demonstrate compliance with the proposed rule. At a minimum, these must include copies of all incentive-based compensation plans, a record of who is subject to each plan, and a

description of how the incentive-based compensation program is compatible with effective risk management and controls.

The SEC is proposing an amendment to Exchange Act Rule 17a-4(e)<sup>408</sup> and Investment Advisers Act Rule 204-2<sup>409</sup> to require that registered broker-dealers maintain and investment advisers, respectively, the records required by the proposed rule, in accordance with the recordkeeping requirements of Exchange Act Rule 17a-4 and Investment Advisers Act Rule 204-2, respectively. Exchange Rule 17a-4 and Investment Advisers Act Rule 204-2 establish the general formatting and storage requirements for records that registered broker-dealers and investment advisers, respectively, are required to keep. For the sake of consistency with other broker-dealer and investment adviser records, the SEC believes that registered broker-dealers and investment advisers, respectively, should also keep the records required by the proposed rule, in accordance with these requirements.

The proposed recordkeeping requirement would assist covered BDs and IAs in monitoring incentive-based compensation awards and payments and comparing them with actual risk outcomes to determine whether incentive-based compensation payments to senior executive officers and significant risk-takers lead to inappropriate risk-taking. The proposed recordkeeping requirement would also help BDs and IAs to modify the incentive-based compensation arrangements of senior executive officers and significant risk-takers, if, over time, incentive-based compensation paid does not appropriately reflect risk outcomes. These records would be available to SEC staff for examination, which may enhance compliance and facilitate oversight.

This proposed requirement would likely impose compliance costs on covered institutions. The SEC expects the magnitude of the compliance costs to depend on whether broker-dealers and investment advisers already have a system in place to generate information regarding their compensation practices for internal use (*e.g.*, for reports to the board of directors or the compensation committee) or for required disclosures under the Exchange Act (for reporting companies). To the extent that such existing platforms can be expanded to produce the records required under the proposed rule, the SEC expects this

requirement to impose lower compliance costs on these institutions. The compliance costs associated with this particular proposed rule requirement would likely be higher for covered institutions that may not be generating such information, if for example they are not subject to related reporting obligations, or may not keep the type and detail of records that would be required under the proposed rule. Given that all Level 1 and unconsolidated Level 2 BDs, and most unconsolidated Level 3 BDs and IAs, are non-reporting companies, the SEC expects that the recordkeeping costs associated with the rule may be substantial for these BDs and IAs. The SEC notes, however, that because it does not have information on the compensation reporting and recordkeeping at the subsidiary level, the SEC may be overestimating compliance costs for BDs and IAs with reporting parent institutions. For example, if the parent institution reports and keeps records of the incentive-based compensation arrangements at the subsidiary level, and on the same scale and detail as required by the proposed rule, it is possible that the compliance costs for such BDs could be lower than the compliance costs for BDs with non-reporting parent institutions. Since the SEC does not have data on how many covered IAs have parent institutions, it is also possible that a significant number of these IAs may be stand-alone companies and therefore could have higher costs to comply with the proposed rule compared to covered IAs and BDs that are part of reporting parent institutions.

According to the 2010 Federal Banking Agency Guidance, a banking organization should provide an appropriate amount of information concerning its incentive compensation arrangements for executive and non-executive employees and related risk-management, control, and governance processes to shareholders to allow them to monitor and, where appropriate, take actions to restrain the potential for such arrangements and processes to encourage employees to take imprudent risks. Such disclosures should include information relevant to employees other than senior executive officers. The scope and level of the information disclosed by the institution should be tailored to the nature and complexity of the institution and its incentive compensation arrangements. Thus, private covered institutions that are banking institutions and apply the policies of the 2010 Federal Banking Agency Guidance may already be

<sup>408</sup> 17 CFR 240.17a-4(e).

<sup>409</sup> 17 CFR 275.204-2.

collecting the information that would be required by the proposed rule. The SEC expects the compliance costs to be lower for such covered institutions, to the extent that there is an overlap between the information collected under the 2010 Federal Banking Agency Guidance and the information that would be required for disclosure and recordkeeping under the proposed rule. The BDs and IAs that are stand-alone non-reporting firms or have non-reporting parent institutions that are not banking institutions would most likely be the ones to incur higher compliance costs of disclosure and recordkeeping.

By requiring covered institutions to create and maintain records of incentive-based compensation arrangements for covered persons at all covered BDs and IAs, the proposed recordkeeping requirement is expected to facilitate the SEC's ability to monitor incentive-based compensation arrangements and could potentially strengthen incentives for covered institutions to comply with the proposed rule. As a consequence, an increase in investor confidence that covered institutions are less likely to be incentivizing inappropriate actions through compensation arrangements may occur and potentially result in greater market participation and allocative efficiency, thereby potentially facilitating capital formation. As discussed above, it is difficult for the SEC to estimate compliance costs related to the specific provision. However, for covered institutions that do not currently have a similar reporting system in place, there could be significant fixed costs that may disproportionately burden smaller covered BDs and IAs and hinder competition. Overall, the SEC does not expect the effects of the proposed recordkeeping requirements on efficiency, competition and capital formation to be significant.

#### 5. Reservation of Authority

Under the proposed rule, an Agency may require a Level 3 covered institution with average total consolidated assets greater than or equal to \$10 billion and less than \$50 billion to comply with some or all of the provisions of §§ 5 and 7 through 11 of the proposed rule applicable to Level 1 and Level 2 covered institutions if the agency determines that such Level 3 covered institution's complexity of operations or compensation practices are consistent with those of a Level 1 or Level 2 covered institution.

This proposed rule requirement would allow the SEC to treat senior executive officers and significant risk-

takers at BDs and IAs that have total consolidated assets below \$50 billion as covered persons of a Level 1 or Level 2 covered institution, because, for example, the complexity of the BDs' and IAs' operations or risk profile could have a significant impact on the overall financial system and could generate negative spillover effects for taxpayers. As a result, the number of BDs and IAs that would be subject to the portions of the proposed rule applicable to Level 1 and Level 2 covered institutions may increase relative to the estimates presented in the baseline.<sup>410</sup>

The proposed requirement may increase compliance costs for these BDs and IAs. As shown above, Level 3 parent institutions differ significantly from Level 1 and Level 2 parent institutions on a number of dimensions: They tend to defer a smaller fraction of NEOs incentive-based compensation (Table 7A), tend to defer cash less frequently (Table 7A), and tend to use more options as part of their incentive-based compensation (Table 6A) compared to Level 1 and Level 2 parent institutions. They also use rather infrequently the prohibition of hedging with respect to non-employee directors that receive incentive-based compensation (Table 9A). If the compensation arrangements of Level 3 BDs and IAs are similar to those of Level 3 parent institutions, then for Level 3 BDs and IAs that are designated as Level 1 or Level 2 covered BDs and IAs by an Agency, the proposed rule is likely to require significant changes to certain features of their compensation arrangements to be in compliance.

#### F. Potential Costs and Benefits of Additional Requirements and Prohibitions for Level 1 and 2 Covered Institutions

##### 1. Mandatory Deferral

The proposed rule would require a minimum amount of annual incentive-based compensation to be deferred for a minimum number of years for senior executive officers and significant risk-takers at Level 1 and Level 2 covered institutions. For senior executive officers and significant risk-takers at Level 1 and Level 2 BDs and IAs, such requirement is expected to establish a minimum accountability horizon with respect to the outcomes of actions of these individuals, including the

realization of longer-term risks that may be associated with such actions.

As discussed above, from an economic standpoint, managerial actions carry associated risks, and the horizon over which such risks unfold is uncertain. If the risk realization horizon is longer than the performance period used to measure and compensate the performance of senior executive officers and significant risk-takers, they may have an incentive to undertake projects that deliver strong short-term performance at the potential expense of long-term value. A minimum compensation deferral period aims to curb incentives for such undesired behavior by increasing senior executive officers' and significant risk-takers' accountability for the potential adverse outcomes of their actions that may be realized in the long run, which in turn may discourage short-termism and inappropriate risk-taking and as a consequence lower the likelihood of default for the covered institution and the potential risk such a default could pose to the greater financial system.

As discussed above, the proposed minimum deferral periods required by the proposed rule for Level 1 and Level 2 BDs and IAs covered institutions would relate to the horizons over which the risks in these institutions may be realized. The deferral periods are likely to overlap with a traditional business cycle to identify outcomes associated with a senior executive officer's or significant risk-taker's performance and risk-taking activities. As noted, the business cycle reflects periods of economic expansion or recession, which typically underpin the performance of the financial sector. There might be specific facts and circumstances (for example, the variety of assets held, the changing nature of those assets over time, the normal turnover in assets held by financial institutions, and the complexity of the business models of BDs and IAs) that may affect the horizon over which risks may be realized for particular covered institutions, so a uniform deferral period may be more or less aligned with the horizon over which a particular covered institution realizes certain risks.

With regard to the type of incentive-based compensation instruments to be deferred, the rule proposes to require deferred compensation to consist of substantial amounts of both cash and equity-linked instruments. Whereas deferred equity-linked compensation would be subject to both upside potential (for example, if the stock price of the firm increases during the deferral period) and downside risk, the cash component of deferred compensation

<sup>410</sup> As discussed above in the Baseline section, as of the end of 2014, there were 33 BDs with total consolidated assets between \$10 and \$50 billion. Due to the lack of data, the SEC cannot determine the number of IAs with total consolidated assets between \$10 and \$50 billion.

would be mainly subject to downside risk, thus resembling the payoff structure of a debt security. More specifically, the cash component of deferred compensation would not appreciate in value if firm performance during the deferral period is positive, but would be subject to downward adjustment, forfeiture, and clawback if, for example, the executive has engaged in inappropriate risk-taking that results in poor performance during the performance, deferral and post-deferral periods respectively. This asymmetry in the payoff structure of the cash component of deferred compensation is expected to provide incentives for responsible risk-taking by covered persons thus lowering the likelihood of default at these institutions as well as the corresponding risk to the greater financial system posed by certain large, complex, and interconnected institutions.<sup>411</sup> Economic studies suggest a negative relation between pre-crisis levels of managerial debt holdings and measures of default risk during the crisis for bank holding companies—bank holding companies whose executives held larger debt holdings were less likely to default.<sup>412</sup>

<sup>411</sup> The academic literature provides evidence regarding the effect of compensation instruments resembling a debtholder's payoff and the effect of such compensation instruments on various aspects of the agency costs of debt. For example, there is evidence of a negative relation between levels of inside debt and the cost of debt; see Anantharaman et al. 2013. Inside debt and the design of corporate debt contracts. *Management Science* 60, 1260–1280. Also, studies have documented a negative relation between inside debt and restrictiveness of debt covenants and demand for accounting conservatism, and a positive relation between CEO inside debt and firm liquidation values; see Chen, F., Y. Dou, and X. Wang. 2010. Executive Inside Debt Holdings and Creditors' Demand for Pricing and Non-Pricing Protections. Working Paper. With respect to the mechanism through which inside debt holdings lead to lower firm risk, evidence suggests that such firms apply more conservative investment as well as financing choices. Inside debt in particular has been shown to be negatively related to future stock return volatility, a market-based measure of risk; see Cassell, Cory A., Shawn X. Huang, Juan Manuel Sanchez, and Michael D. Stuart. 2012. The relation between CEO inside debt holdings and the riskiness of firm investment and financial policies. *Journal of Financial Economics* 103, 588–610.

It must be noted that the academic literature proxies for such debt-like compensation instruments mostly through pensions and other forms of deferred compensation. Such instruments may not fully resemble the characteristics of deferred cash under the rule, particularly with respect to the horizon of deferral as well as the vesting schedules (pro-rata vs. cliff-vesting).

<sup>412</sup> See Bennett et al. (2015). Inside Debt, Bank Default Risk, and Performance during the Crisis. *Journal of Financial Intermediation* 24, 487–513. The study examines the relation between pre-crisis levels of inside equity vs. inside debt holdings by bank holding company CEOs and risk and performance of these BHCs during the crisis. The findings reveal a negative relation between pre-

As mentioned above, the deferral requirements of the proposed rule for senior executive officers and significant risk-takers at the largest covered institutions are also consistent with international standards on compensation. Having standards that are generally consistent across jurisdictions would ensure that covered institutions in the United States, compared to their non-U.S. peers, are on a level playing field in the global competition for talent.

The mandatory deferral requirements of the proposed rule may impose significant costs on affected BDs and IAs.<sup>413</sup> As a consequence of the mandatory deferral requirement, the wealth of covered persons would be likely less diversified and more tied to prolonged periods of a covered institution's performance. This potential deterioration of wealth diversification may induce covered persons to demand an increase in pay which could result in higher compensation-related costs for covered institutions.<sup>414</sup> This increase in compensation costs may be necessary in order for covered institutions to be able to both attract and retain human talent. The SEC notes, however, that there may be other factors affecting the ability of a covered institution to attract and retain human talent, such as the supply of talent and non-pecuniary benefits of employment at covered institutions. These factors may exacerbate or mitigate the potential increase in compensation costs. For example, if senior executive officers and significant risk-takers value non-pecuniary job benefits such as prestige, networking, and visibility, these benefits may offset the costs associated with deterioration in the diversification of their portfolios.

As a result of the proposed compensation deferral requirement, covered persons at BDs and IAs may be incentivized to curb inappropriate risk-taking given the increased accountability over their actions. There could be situations, however, where bonus deferral could actually lead to an increase in risk-taking incentives.<sup>415</sup> For

crisis CEO inside debt holdings and default risk during the crisis, and higher supervisory ratings for these BHCs before the crisis.

<sup>413</sup> Several commenters raised accounting related issues with respect to covered institutions' financial statements under the proposed rule (see, e.g., KPMG, CEC) and tax related issues with respect to individuals affected by the proposed rule (see, e.g., KPMG, MFA, SIFMA, CEC, PEGCC).

<sup>414</sup> Three commenters argued that the proposed rule could result in unintended consequences such as higher fixed compensation or other benefits (See FSR, WLF, U.S. Chamber).

<sup>415</sup> See Leisen, D. (2014). Does Bonus Deferral Reduce Risk Taking? Working Paper. The paper develops a model comparing risk-taking incentives

example, if firm performance during the deferral period significantly declines and causes a significant loss in the value of deferred compensation, senior executive officers and significant risk-takers could potentially have an incentive to engage in high-risk actions in an effort to recoup at least some of the value of their deferred compensation.

As discussed above, deferral of the cash component of compensation resembles the payoff structure of debt and as a consequence may expose managerial compensation to risk without a corresponding upside. Whereas this may provide incentives to covered persons to avoid actions that would expose a covered institution to higher likelihood of default and for important institutions risks to the financial system, such incentives may result in misalignment of interests between managers and shareholders and potentially harm shareholder value. Several studies suggest that managers with significant debt instruments in their compensation arrangement tend to undertake a more conservative approach in managing their firms.<sup>416</sup> The significant use of debt in compensation arrangements is viewed negatively by shareholders: Stock prices of companies whose executives hold significant debt positions experience a decrease upon disclosure of such compensation arrangements.<sup>417</sup> Thus, whereas the utilization of debt-like instruments in compensation arrangements in important institutions may lower the risk to the greater financial system, this may come at the expense of shareholder value at these institutions. One commenter suggested that the proposed rule could cause covered institutions to perform in a less competitive way given lower incentives for risk-taking.<sup>418</sup>

Alternatively, the Agencies could have proposed higher deferral percentages and/or longer deferral horizons. Some commenters<sup>419</sup> suggested more stringent deferral requirements, such as a longer deferral

from bonuses with and without deferral. The results challenge the common belief that bonus deferral unequivocally leads to reduced risk-taking incentives; under certain conditions, deferral of bonus could lead to stronger risk-taking incentives during the deferral period.

<sup>416</sup> See Anantharaman, D., V.W. Fang, and G. Gong. 2014. Inside Debt and the Design of Corporate Debt Contracts. *Management Science* 60, 1260–1280; Chen et al. (2010); and Cassell et al. (2012).

<sup>417</sup> See Wei, C., and Yermack, D. (2011).

<sup>418</sup> See FSR.

<sup>419</sup> It should be noted that comments were based on the 2011 Proposed Rule's 3-year deferral period (as opposed to the 4-year deferral period currently proposed).

horizon,<sup>420</sup> a higher percentage subject to deferral,<sup>421</sup> and holding the entire deferred amount back until the end of the deferral period.<sup>422</sup> For example, the Agencies could have selected a seven-year deferral for senior executive officers and a five-year horizon deferral horizon for significant risk-takers, similar to the rules that the Prudential Regulation Authority has recently proposed in the UK. Such long deferral periods may have allowed for longer-term risks to materialize and thus be accounted for when calculating managerial compensation. On the other hand, as mentioned above, longer deferral periods could result in inappropriate risk-taking if firm performance during the deferral period significantly declines and causes a significant loss in the value of deferred compensation. Additionally, a longer deferral period increases the probability that financial performance is impacted by actions or factors that are not related to covered persons' actions and as such result in an inefficient compensation contract. Moreover, lengthening of the deferral period is likely to lead to increased liquidity issues for covered persons since their compensation cannot be cashed out on a timely basis to meet their liquidity needs. Finally, it is also possible that further prolonging of the deferral period could create incentives for institutions to shift away from incentive-based compensation and increase the fixed component of compensation. A potential consequence from such action may be distortion of value-enhancing incentives that are generated through incentive-based compensation. Another potential cost from deferral requirements that are more strict could be that affected institutions may not be able to compete and as a consequence lose talent to other sectors that are not subject to the proposed rule.

Another alternative could be shorter deferral periods (e.g., deferral period of less than four years for the qualifying incentive-based compensation of senior executive officers at Level 1 covered institutions; for example, 3 years as in the 2011 Proposed Rule) and/or smaller deferral percentages (e.g., deferral of less than 60 percent of qualifying incentive-based compensation for senior executive officers at Level 1 covered institutions; for example, 50 percent as in the 2011 Proposed Rule). A shorter deferral period and/or smaller deferral percentage amount, however, may not provide adequate incentives to covered

persons to engage in responsible risk-taking. On the other hand, if the risk realization horizon is actually shorter than the deferral horizon proposed in the rule, then using a shorter deferral period would avoid exposing covered persons' wealth to risks that do not result from their actions and would also impose lower liquidity constraints on undiversified executives. From the baseline analysis of current compensation practices, it appears that all of the Level 1 public parent institutions and most of the Level 2 public parent institutions of BDs and IAs already have deferral policies in place similar to the proposed rule requirements. Currently, about 50 percent to 75 percent of incentive-based compensation is deferred for a period of about three years, and the deferral includes NEOs, non-NEOs and significant risk-takers.

If the compensation structure of BDs and IAs is similar to that of their parent institutions, and the compensation structure of private institutions is similar to that of public institutions, for the covered BDs and IAs the implementation of the deferred aspect of the proposed rule is unlikely to lead to significant compliance costs. The only potentially significant compliance costs that such covered institutions could incur with respect to the deferral requirement is related to the deferral of cash compensation, which currently only 20 percent to 25 percent of Level 1 and Level 2 covered institutions defer, and the prohibition on accelerated vesting, which very few of the Level 2 covered parent institutions currently use. On the other hand, if the compensation practices of parent institutions are significantly different than those at their subsidiaries, covered BDs and IAs could experience significant compliance costs when implementing the proposed deferral rule. Since the SEC does not have data on how many covered IAs have parent institutions, it is also possible that a significant number of these IAs may be stand-alone companies and therefore could have higher costs to comply with the proposed rule compared to covered IAs and BDs that are part of reporting parent institutions. As discussed above, the SEC has data regarding the incentive-based compensation arrangements at the depository institution holding company parents of Level 1 and unconsolidated Level 2 and unconsolidated Level 3 BDs and IAs because many of those bank holding companies are public reporting companies under the Exchange Act. The SEC lacks information regarding the

compensation arrangements of BDs and IAs that are not so affiliated, and hence the SEC cannot accurately assess the compliance costs for those issuers. The same holds true if the incentive-based compensation practices at BDs and IAs are generally different than those at banking institutions, which most of their parent institutions are. Lastly, because some BDs and IAs are subsidiaries of private parent institutions, if there is a significant difference in the compensation practices between public and private covered institutions such private BDs and IAs could face larger compliance costs. To better assess the effects of deferral on compliance costs for BDs and IAs the SEC requests comments on these issues.

## 2. Options

For senior executive officers and significant risk-takers at Level 1 and Level 2 covered institutions, the proposed rule would limit the amount of stock option-based compensation that can qualify for mandatory deferral at 15 percent, effectively placing a cap on the use of stock options as part of the incentive-based compensation arrangements for senior executive officers and significant risk-takers at Level 1 and Level 2 covered institutions.<sup>423</sup> This implies that 45 percent of incentive-based compensation would have to be in some other form to fulfill the 60 percent deferral amount for a senior executive officer or significant risk-taker at a Level 1 and Level 2 covered institution. As discussed in the Broad Economic Considerations section, the payoff structure from stock options is asymmetric and thus generates incentives for executives to undertake risks. For the financial services industry in general, economic studies find that higher levels of stock options in compensation arrangements of publicly traded bank CEOs are positively related to multiple measures of risk, such as equity volatility.<sup>424</sup> Thus, limiting the

<sup>423</sup> If stock options awarded are not part of incentive-based compensation, there is no limit to such awards.

<sup>424</sup> See Mehran, H., Rosenberg, J. 2009. The Effect of CEO Stock Options on Bank Investment Choice, Borrowing, and Capital. Federal Reserve Bank of New York. The study finds a positive relation between the use of stock options in bank CEO compensation arrangements and risk-taking as evident by higher levels of equity and asset volatility. The paper also finds that the increased risk exposure in these banks comes from riskier project choices rather than increased use of leverage.

See DeYoung, R., Peng, E., Yan, M. 2013. Executive Compensation and Business Policy Choices at U.S. Commercial Banks. *Journal of Financial and Quantitative Analysis* 48, 165–196.

<sup>420</sup> See AFR, Public Citizen, Chris Barnard, AFSCME, AFL-CIO, Senator Brown.

<sup>421</sup> See AFR, Public Citizen, AFSCME.

<sup>422</sup> See AFR, Senator Brown, Public Citizen.

use of stock options in compensation arrangements could result, on average, in lower risk-taking incentives for senior executive officers and significant risk-takers at Level 1 and Level 2 covered institutions. As previously noted, however, the link between stock options and risk-taking is not indisputable. For example, a study that examined the effect of a decrease in the provision of stock options in compensation arrangements due to an unfavorable change in accounting rules regarding option expensing, did not identify decreased risk-taking by executives as a response to a decrease in stock options awards.<sup>425</sup>

The unique characteristics of the financial services sector compared to the rest of the economy—significantly higher leverage,<sup>426</sup> interconnectedness with other institutions and markets, and the possibility for negative externalities—may create a conflict of interest between shareholders (managers) of important financial institutions and taxpayers with respect to the optimal level of risk-taking. In other words, shareholders may enjoy the upside of risk-taking actions whereas taxpayers and other stakeholders have to bear the costs associated with such risk-taking. While the literature does not specifically reference BDs and IAs, but rather the financial services sector more generally, the SEC believes that the global point may be applicable to BDs and IAs given that these entities

constitute a segment of the financial services sector. In addition, many BDs and IAs that would be covered by the proposed rule are subsidiaries of bank holding companies and as such these studies may be relevant for them. Thus, for BDs and IAs the use of options in compensation arrangements could potentially amplify this conflict of interest as it provides covered persons with an asymmetric payoff structure and an incentive to undertake risks that may be optimal from shareholders' point of view but may provide risk-taking incentives to management that could lead to higher likelihood of default at these institutions and potentially increase the risk to the greater financial system. Consequently, capping the use of stock options and curbing covered persons' incentives for inappropriate risk-taking at BDs and IAs could decrease their likelihood of default, better align managers' incentives with those of a broader group of stakeholders and limit potential negative externalities generated by the default of particularly important institutions.<sup>427</sup> However, although BDs and IAs are financial institutions, any generalization based on the findings in the literature may not be very accurate because BDs and IAs also have some differences with respect to other financial institutions. For example, BDs and IAs differ from other financial institutions with respect to business models, nature of the risks posed by the institutions, and the nature and identity of the persons affected by those risks.

To the extent that the asymmetric payoff structure of options encourages covered persons at BDs and IAs to undertake risks that are also suboptimal from a shareholders' point of view, the proposed rule's limitation on the use of options as part of compensation arrangements may also improve incentive alignment between executives and shareholders. However, as discussed in the Broad Economic Considerations section, executives may be reluctant to undertake value-increasing but risky projects due to the undiversified nature of their wealth and as such may engage in actions that lower firm value (*i.e.*, forgo risky but value-increasing projects). For example, an economic study found that low sensitivity of compensation to risk resulted in a loss of firm value due to suboptimal risk-taking by executives in

these companies.<sup>428</sup> Mechanisms that are put in place to curb such undesired behavior by executives include incentive-based compensation components whose value is generally increasing in risk, such as stock options. Thus, risk-taking incentives induced by options may be valuable in order to provide covered persons at BDs and IAs with incentives to take risks that are desirable by shareholders. As a consequence, a potential cost of the proposed limit to the use of stock options in incentive-based compensation arrangements at covered institutions is the potential for such limit to generate sub-optimally low risk-taking incentives for the covered persons at BDs and IAs, potentially leading to lower shareholder values for these institutions.

Limiting the amount of stock option based compensation that can qualify for mandatory deferral at 15 percent suggests that a covered institution could theoretically award up to 55 percent of its annual incentive-based compensation in the form of stock options (for senior executive officers and significant risk-takers at Level 1 and Level 2 covered institutions). Based on the SEC's baseline analysis, it appears that the use of options is increasingly infrequent in incentive-based compensation arrangements at public parent institutions of BDs and IAs. Stock options at Level 1 covered institutions represent about 4 percent of total incentive-based compensation, while at Level 2 covered institutions they represent about 20 percent.

If the compensation structure of BDs and IAs is similar to that of their parent institutions, and the compensation structure of private institutions is similar to that of public institutions, the specific restriction imposed by the proposed rule would be unlikely to affect the usage of options at Level 1 or unconsolidated Level 2 BDs and IAs and would likely result in insignificant compliance costs. On the other hand, if the compensation practices of parent institutions are significantly different from those at their subsidiaries, covered BDs and IAs could experience

<sup>425</sup> See Chen, C., Steiner, T., Whyte, A. 2006. Does stock option-based executive compensation induce risk-taking? An analysis of the banking industry. *Journal of Banking and Finance* 30, 915–945. The paper examines whether option-based compensation is related to various measures of risk for a sample of commercial banks. Option-based compensation is positively related to various market measures of risk such as systematic and idiosyncratic risk. However, causality cannot be inferred; risk also has an effect on the structure of compensation arrangements.

<sup>426</sup> See Hayes, R., Lemmon, M., Qiu, M., 2012. 'Stock options and managerial incentives for risk taking: Evidence from FAS 123R'. *Journal of Financial Economics* 105, 174–190. This study examines the effect of changes in option-based compensation, due to a change in the accounting treatment of stock options in 2005, on risk-taking behavior. Firms significantly reduce the use of stock options in compensation arrangements as a response to the unfavorable treatment of stock options in financial statements. However, the study finds little evidence that the decline in option usage resulted in less risky investment and financial policies.

<sup>427</sup> See Bolton, P., Mehran, H., Shapiro, J. 2011. Executive Compensation and Risk Taking. Federal Reserve Bank of New York Staff Reports, available at: [https://www.newyorkfed.org/medialibrary/media/research/staff\\_reports/sr456.pdf](https://www.newyorkfed.org/medialibrary/media/research/staff_reports/sr456.pdf). The report shows the significant difference between the composition of financing for the average non-financial firm (having about 40% of debt on its balance sheet), as opposed to the average financial institution (having at least 90% of debt on its balance sheet).

<sup>428</sup> See French et al., 2010. The Squam Lake Report: Fixing the Financial System. *Journal of Applied Corporate Finance* 22, 8–21; and McCormack, J., Weiker, J. 2010. Rethinking 'Strength of Incentives' for Executives of Financial Institutions. *Journal of Applied Corporate Finance* 22, 25–72.

<sup>429</sup> See Low, A., 2009. Managerial risk-taking behavior and equity-based compensation. *Journal of Financial Economics* 92, 470–490. The study examines changes in risk-taking by CEOs whose firms have become more protected from a takeover due to a change in anti-takeover laws. The study finds that CEOs with compensation arrangements with a low sensitivity of compensation to volatility decrease risk-taking following the adoption of the anti-takeover law, and that such a decrease in risk-taking activity is value destroying. The study also shows that as a response, firms increase the sensitivity of CEO compensation to volatility to encourage risk-taking following the adoption of the anti-takeover law.

significant compliance costs when implementing the specific requirement of the proposed rule. Since the SEC does not have data on how many covered IAs have parent institutions, it is also possible that a significant number of these IAs may be stand-alone companies and therefore could have higher costs to comply with this specific requirement of the proposed rule compared to covered IAs and BDs that are part of reporting parent institutions.

As discussed above, BDs and IAs could also incur direct economic costs such as decrease in firm value if the proposed rule leads to lower than optimal use of options in senior executive officers and significant risk-takers incentive-based compensation arrangements. The same holds true if the compensation of BDs and IAs is generally different than that of banking institutions, which most of their parent institutions are. Lastly, because some BDs and IAs are subsidiaries of private parent institutions, if there is a significant difference in the compensation practices of public and private covered institutions such BDs and IAs could face large compliance costs and direct economic costs. The SEC does not have data for the use of options at subsidiaries of Level 1 or Level 2 parents, and thus cannot quantify the impact of the proposed rule on those institutions. To better assess the effects of options on compliance costs for BDs and IAs, the SEC requests comments on the use of options in the compensation structures of BDs and IAs below.

The Agencies could have selected as an alternative not to place a limit on the use of stock options to meet the minimum required deferral amount requirement for a performance period. Such an alternative would provide covered persons at BDs and IAs with more incentives to undertake risks compared to the alternative the SEC has chosen in the proposed rule. Taxpayers would potentially be worse off under the alternative since the combination of high leverage and government guarantees, coupled with additional risk-taking incentives from stock options could lead to inappropriate risk-taking from taxpayers' point of view. Such an alternative likely would have led to a higher probability of default at covered institutions. For important institutions, such an alternative would also increase the likelihood of risks at the institution also propagating to the greater financial system. On the other hand, it is possible that shareholders would potentially prefer increased risk-taking and as a consequence compensation arrangements that

encourage such behavior. From the SEC's baseline analysis, provided that BDs and IAs have similar compensation arrangements as their parents, the proposed rule should not significantly affect existing compensation arrangements of covered institutions.

### 3. Long-Term Incentive Plans

For senior executive officers and significant risk-takers at Level 1 and Level 2 covered institutions the proposed rule would require a minimum deferral period and a minimum deferral percentage amount of incentive-based compensation awarded through long-term incentive plans (LTIPs), where LTIPs are characterized by having a performance measurement period of at least three years. The proposed rule would require deferral of 60 percent (50 percent) of LTIP awards for senior executive officers of Level 1 (Level 2) covered institutions, and deferral of 50 percent (40 percent) of LTIP awards for significant risk-takers of Level 1 (Level 2) covered institutions. The deferral period for deferred LTIPs must be at least two years for covered persons of Level 1 covered institutions and at least one year for covered persons of Level 2 covered institutions.

LTIPs are designed to reward long-term performance, performance that is usually measured over the three-years following the beginning of the performance period.<sup>429</sup> Thus, these plans reward long-term performance outcomes and as such generate incentives for long-term value. LTIP awards can be in the form of cash or stock and these awards occur at the end of the performance period. The amount of the award depends on the degree to which the company meets some predetermined performance milestones. These performance milestones can include a variety of accounting-based performance measures, such as sales and earnings, and research shows that the choice of performance measures is related to company specific strategic goals.<sup>430</sup> Requiring a minimum percentage of LTIP awards to be deferred would lengthen the period over which senior executive officers and significant risk-takers receive compensation under these plans and subject such compensation to downward adjustment during the performance measurement period (prior to the award) as well as forfeiture and clawback during the deferral and post-deferral periods respectively. Some

studies have criticized LTIPs for having short performance periods.<sup>431</sup> The limited economic literature on LTIPs currently does not provide a clear indication of the effect of LTIPs on excessive risk-taking. The only study that investigates the role of LTIPs<sup>432</sup> suggests that companies that use them experience improvement in operating performance and their NEOs do not appear to take higher risks. Similar to the discussion on the benefits and costs of mandatory deferral of other forms of incentive-based compensation, deferral of the LTIP award could allow for long-term risks taken by BD and IA senior executive officers and significant risk-takers to materialize and thus for their compensation to be more appropriately adjusted for the risks they have taken. LTIP deferral may decrease risk-taking because covered persons may have an incentive to manage the institution such that they receive their full compensation under these plans. If the additional deferral of LTIPs lowers risk-taking incentives at covered BDs and IAs to suboptimally low levels, then firm value at these institutions could suffer as a consequence. However, if the additional deferral of LTIPs mitigates incentives for inappropriate risk-taking at covered BDs and IAs, then such outcome would lower the likelihood of default at these institutions, better align managers' incentives with those of a broader group of stakeholders, and also lower the likelihood of negative externalities.

As an alternative, the Agencies could have selected a larger fraction of LTIPs to be deferred (*e.g.*, more than 60 percent for senior executive officer at a Level 1 covered institution) and increased the LTIPs' deferral period (*e.g.*, for more than two years for senior executive officers and significant risk-takers at Level 1 covered institutions). A longer deferral period for LTIPs would prolong the exposure of senior executive officers' and significant risk-takers' compensation to adverse outcomes of their actions. If outcomes of some inappropriate risks are only realized in the longer-term, then prolonging the deferral period for LTIPs would provide incentives to senior executive officers and significant risk-takers to avoid such actions. On the other hand, such an alternative might have exposed senior executive officers and significant risk-takers to outcomes of actions that they are less likely to have been responsible for. Additionally, long deferral period for LTIPs could create potential

<sup>429</sup> See Frederic W. Cook & Co., Inc. The 2014 Top 250 Report: Long-term incentive grant practices for executives.

<sup>430</sup> See Li and Wang (2014).

<sup>431</sup> See The alignment gap between creating value, performance measurement, and long-term incentive design, IRRCI research report, 2014.

<sup>432</sup> See Li and Wang, 2014.

liquidity issues for senior executive officers and significant risk-takers since their compensation cannot be cashed out on a timely basis to meet their liquidity needs.<sup>433</sup> It is also possible that a long deferral period for LTIPs would create incentives for institutions to pay higher fixed pay and as a consequence distort the value-enhancing incentives that are generated through variable pay.

As another alternative, the Agencies could have decided to exclude LTIPs from the amount of incentive-based compensation that is to be deferred in a given year. Such an alternative could have excluded a major part of covered persons' incentive-based compensation arrangements from the deferred amount. LTIPs typically have a performance period of three years, which is shorter than the deferral period proposed in the rulemaking. Under this alternative, not including LTIPs as part of the deferred amount may have limited the ability of the proposed rule to curb inappropriate risk-taking. However, if the current use of LTIPs by covered institutions is consistent with generating optimal risk-taking incentives from the perspective of certain shareholders, then not subjecting LTIPs to mandatory deferral would maintain these value-enhancing incentives.

#### 4. Downward Adjustment and Forfeiture

For senior executive officers and significant risk-takers at Level 1 and Level 2 covered institutions, the rule proposes placing at risk of downward adjustment all incentive-based compensation amounts not yet awarded for the current performance period and at risk of forfeiture all deferred but not yet vested incentive-based compensation. As the analysis in the baseline section suggests, the triggers for downward adjustment and forfeiture consist of adverse outcomes such as poor financial performance due to significant deviations from approved risk parameters, inappropriate risk-taking (regardless of the impact on financial performance), risk management or control failures, and non-compliance with regulatory and supervisory standards resulting in either legal action against the covered institution or a restatement to correct a material error. The compensation of covered persons with either direct accountability or failure of awareness of

an undesirable action would be subject to downward adjustment and/or forfeiture.

With regard to the determination of the compensation amount to be downward adjusted or forfeited, the proposed rule would condition the magnitude of the adjustment or forfeiture amounts on both the intent and the participation of covered persons in the event(s) triggering the review, as well as the magnitude of costs generated by the related actions (including financial performance, fines and litigation and related reputational damage). Compensation would be subject to downward adjustment and forfeiture during the performance period and the deferral period, respectively. As a consequence, this requirement would provide incentives to senior executive officers and significant risk-takers at BDs and IAs to avoid inappropriate risk-taking since they could be penalized in situations where inappropriate risks had been undertaken, regardless of whether such risks resulted in poor performance.

The downward adjustment or forfeiture amounts is conditional on the intent, responsibility and the magnitude of the financial loss caused to the covered institution by inappropriate actions of covered persons. In other words, the penalty imposed on the covered person would increase with the intent, responsibility and the magnitude of financial loss generated. This "progressiveness" characteristic in the proposed rule requirement would imply that the covered person's incentive-based compensation award would be increasingly at stake. Thus, covered persons would be expected to have incentives to avoid excessive risk-taking in order to secure at least part of incentive-based compensation award.

Additionally, provided that senior executive officers and significant risk-takers at BDs and IAs may be deemed accountable and risk their compensation for inappropriate actions that were undertaken by other executives or significant risk-takers, they may have an incentive to establish an effective governance system that would monitor risk exposure. Such an incentive and the corresponding actions would strengthen risk oversight within the covered institution and potentially lower the probability that any inappropriate action taken might go undetected. To this point, a recent economic study indicates that bank holding companies with strong risk controls, as proxied by the presence of an independent and strong risk committee, were found to be exposed to lower tail risk, lower amount of underperforming loans, and had better

operating and financial performance during the financial crisis.<sup>434</sup>

On the other hand, the risk of downward adjustment and forfeiture could increase uncertainty on covered persons' expectations for receiving the compensation. A possibility exists that risks a covered person believes ex-ante to be appropriate may be classified as ex-post inappropriate and thus trigger downward adjustment or forfeiture of related compensation. Such uncertainty about the interpretation of appropriate risk-taking could generate incentives for managers to take approaches with respect to risk-taking that are not optimal from the perspective of shareholders. Such an avoidance of risks, if it occurs, could lead to lower firm value and losses for shareholders.

Based on the SEC's baseline analysis of current compensation practices, it appears that all of the Level 1 public parent institutions and most of the Level 2 public parent institutions already employ forfeiture with respect to deferred compensation. The forfeiture rules are based on various triggers and apply to NEOs, non-NEOs and significant risk-takers. Thus, if the compensation structure of BDs and IAs is similar to that of their parent institutions, and the compensation structure of private institutions is similar to that of public institutions, the implementation of the proposed rule related to forfeiture would be unlikely to lead to significant compliance costs. On the other hand, if the compensation practices of parent institutions are significantly different than those at their subsidiaries (e.g., BDs and IAs do not use downward adjustment and forfeiture in their compensation packages), covered BDs and IAs could experience significant compliance costs when implementing this specific requirement of the proposed rule. Since the SEC does not have data on how many covered IAs have parent institutions, it is also possible that a significant number of these IAs may be stand-alone companies and therefore could have higher costs to comply with this specific requirement of the proposed rule compared to covered IAs and BDs that are part of reporting parent institutions. BDs and IAs could also incur direct economic costs such as decrease in firm value if the proposed rule requirements regarding downward adjustment or forfeiture lead to less risk-taking than is optimal from shareholders' point of view. The same

<sup>433</sup> Interest rates charged to covered persons on loans used to cover their liquidity needs could proxy for the related cost stated in the text. Such costs are likely to be determined by multiple factors (for example, the macroeconomic environment) and vary over time and by individuals making them difficult to quantify.

<sup>434</sup> See Ellul, A., Yerramilli, V. 2013. Stronger Risk Controls, Lower Risk: Evidence from U.S. Bank Holding Companies. *Journal of Finance* 68, 1757–1803.

holds true if the compensation of BDs and IAs is generally different than that of banking institutions, which most of their parent institutions are.

Lastly, because some BDs and IAs are subsidiaries of private parent institutions, if there is a significant difference in the compensation practices of public and private covered institutions such BDs and IAs could face large compliance costs and direct economic costs. The SEC does not have data for the use of downward adjustment and forfeiture at subsidiaries of Level 1 or Level 2 parents, and thus cannot quantify the impact of the rule for those institutions. To better assess the effects of downward adjustment and forfeiture on compliance costs for BDs and IAs. The SEC requests comments below.

#### 5. Clawback

For senior executive officers and significant risk-takers at Level 1 and Level 2 covered institutions, the proposed rule would require clawback provisions in incentive-based compensation arrangements to provide for the recovery of paid compensation for up to seven years following the vesting date of such compensation. Such a clawback requirement would be triggered when senior executive officers and significant risk-takers are determined to have engaged in fraud, intentional misrepresentation of information used to determine a covered person's incentive-based compensation, or misconduct resulting in significant financial or reputational harm to the covered institution. Other existing provisions of law contain clawback requirements that potentially have some overlap with those in the proposed rulemaking. Thus, certain covered institutions may have experience with recovering executive compensation via clawback. For example, section 304 of the Sarbanes Oxley Act ("SOX") contains a recovery provision that is triggered when a restatement occurs as a result of issuer misconduct. This provision applies only to the chief executive officer ("CEO") and chief financial officer ("CFO") and the amount of required recovery is limited to compensation received in the year following the first improper filing.<sup>435</sup> The Interim Final Rules under section 111 of the Emergency Economic Stabilization Act of 2008 ("EESA") required institutions receiving assistance under TARP to mandate Senior Executive Officers to repay compensation if awards based on statements of earnings, revenues, gains,

or other criteria that were later found to be materially inaccurate.<sup>436</sup> Relative to either SOX or EESA, the clawback requirement of the proposed rule is more expansive in that its application is not only limited to CEOs and CFOs but would cover any senior executive officer and significant risk-taker in a Level 1 or Level 2 covered institution. In addition to the broader scope of the clawback provision in the proposed rule regarding covered persons, there is also a broader scope with respect to the circumstances that would trigger clawback. More specifically, the proposed rule includes misconduct that resulted in reputational or financial harm to the covered institution as a trigger for clawback.

The inclusion of the clawback provision in the incentive-based compensation of senior executive officers and significant risk-takers at BDs and IAs could increase the horizon of accountability with respect to the identified actions that are likely to bring harm to the covered institution. As a consequence of the clawback horizon, senior executive officers and significant risk-takers are likely to have lower incentives to engage in actions that may put the covered institution at risk in the longer run. Moreover, the proposed rule may also increase incentives to senior executive officers and significant risk-takers to put in place stronger mechanisms such as governance in an effort to protect their incentive-based compensation from events that may trigger a clawback. Finally, in addition to lowering the incentives of senior executive officers and significant risk-takers for undesirable actions that may harm the covered institution, stakeholders of the covered institution are also expected to benefit from the clawback provision since in the event of an action triggering a clawback, any recovered incentive-based compensation amount would accrue to the institution.

The fact that incentive-based compensation is to a large extent determined by reported performance, coupled with the lowered incentives for covered persons to intentionally misrepresent information, can lead to improved financial reporting quality for covered institutions. Thus, indirectly the potential to claw back incentive-based compensation that is awarded on

erroneous financial information could generate incentives for high quality reporting. The literature finds that market penalties for reporting failures, as captured by restatements of financial reports, *i.e.*, financial reports of (extremely) low quality, are non-trivial and may translate into an increase in the cost of capital for such firms.<sup>437</sup> To the extent that the quality of financial reporting increases as a result of the proposed rule, capital formation may be fostered since the improved information environment may lead to a decrease in the cost of raising capital for covered institutions.<sup>438</sup>

However, the relatively long clawback horizon may generate uncertainty regarding incentive-based compensation of senior executive officers and significant risk-takers. For example, that could be the case if certain actions that trigger a clawback are outside of a covered person's control. As a response to the potentially increased uncertainty, senior executive officers and significant risk-takers may demand higher levels of overall compensation, or substitution of incentive-based compensation with other forms of compensation such as salary. Such potential may distort incentives for risk-taking and as a consequence lower shareholder value. Also, the increased allocation of resources to the production of high-quality financial reporting may divert resources from other activities that may be value enhancing. Finally, covered persons may have a decreased incentive to pursue those projects that would require more complex accounting judgments, perhaps lowering shareholder value.<sup>439</sup>

<sup>437</sup> See Palmrose, Z., Richardson, V., Scholz, S. 2004. Determinants of Market Reactions to Restatement Announcements. *Journal of Accounting and Economics* 37, 59–89. This study observes an average abnormal return of –9% over the 2-day restatement announcement window for a sample of restatements announced over the 1995–1999 period.

See Hribar, P., Jenkins, N. 2004. The Effect of Accounting Restatements on Earnings Revisions and the Estimated Cost of Capital. *Review of Accounting Studies* 9, 337–356. This study observes a significant increase in the cost of capital for firms that restated their financial reports due to lower perceived earnings quality and an increase in investors' required rate of return.

<sup>438</sup> See Francis, J., LaFond, R., Olsson, P., Schipper, K. 2005. The Market Pricing of Accruals Quality. *Journal of Accounting and Economics* 39, 295–327. This study observes a negative relation between measures of earnings quality and costs of debt and equity. The study focuses on the accrual component of earnings to infer earnings quality since this component of earnings involves more discretion in its estimation and is more prone to be manipulated by firms.

<sup>439</sup> For example, if an executive is under pressure to meet an earnings target, rather than manage earnings through accounting judgments, the executive may elect to reduce or defer to a future

<sup>436</sup> Under EESA a "Senior Executive Officer" was defined as an individual who is one of the top five highly paid executives whose compensation was required to be disclosed pursuant to the Securities Exchange Act of 1934. See Department of Treasury, TARP Standards for Compensation and Corporate Governance; Interim Final Rule (June 15, 2009), available at <http://www.gpo.gov/fdsys/pkg/FR-2009-06-15/pdf/E9-13868.pdf>.

<sup>435</sup> See 15 U.S.C. 7243.

Moreover, the potential compliance costs related with the implementation of the clawback provision could be significant. For example, covered institutions may have to rely on the work of outside experts to estimate the amount of incentive-based compensation to be clawed back following a clawback trigger.

Based on the SEC's baseline analysis, it appears that all of the Level 1 covered institutions and most of the Level 2 covered institutions already employ clawback policies with respect to deferred compensation. The clawback policies are based on various triggers and apply to NEOs, non-NEOs and significant risk-takers. Thus, if the BDs and IAs have similar policies on clawback, and the compensation structure of private institutions is similar to that of public institutions, the implementation of the proposed clawback rule would unlikely lead to significant compliance costs. On the other hand, if the compensation practices of parent institutions are significantly different than those at their subsidiaries (e.g., BDs and IAs do not include clawback policies in their compensation packages), covered BDs and IAs could experience significant compliance costs when implementing the proposed rule. The same holds true if the compensation of BDs and IAs is generally different than that of banking institutions, which most of their parent institutions are. Additionally, since the SEC does not have data on how many covered IAs have parent institutions, it is also possible that a significant number of these IAs may be stand-alone companies and therefore could have higher costs to comply with this specific requirement of the proposed rule compared to covered IAs and BDs that are part of reporting parent institutions.

The SEC has attempted to quantify such costs using data in Table 14. We note that these costs are not necessarily going to be in addition to the compliance costs discussed above, as covered institutions may hire a compensation consultant to help them with several requirements in the proposed rules.

Lastly, because some BDs and IAs are subsidiaries of private parent institutions, if there is a significant difference in the compensation practices

of public and private covered institutions such BDs and IAs could face large compliance costs. The SEC does not have data for the use of clawback at subsidiaries of Level 1 or Level 2 parents, and thus cannot quantify the impact of the rule on those institutions. To better assess the effects of clawback on compliance costs for BDs and IAs the SEC requests detailed comments below.

## 6. Hedging

The proposed rule would prohibit the purchase of any instrument by a Level 1 or Level 2 covered institution to hedge against any decrease in the value of a covered person's incentive-based compensation. As discussed above, introducing a minimum mandatory deferral period for incentive-based compensation aims at increasing long-term managerial accountability, including long-term risk implications associated with covered persons' actions. Using instruments to hedge against decreases in firm value would provide downside insurance to covered persons' wealth, including equity holdings that are part of deferred compensation. If the value of (deferred) incentive-based compensation is protected from potential downside through a hedging transaction, this is likely to increase the covered person's tolerance to risk. Thus, the effect of compensation deferral would likely be weakened.<sup>440</sup> For BDs and IAs that currently initiate hedges on behalf of their covered persons, a benefit from the prohibition on hedging is that the incentives of covered persons to exert effort could be strengthened given the same compensation contract. This in turn would imply a stronger alignment between executives' and taxpayers' and other stakeholders' interests for the same amount of performance-based pay.

While the proposed rule intends to eliminate firm initiated hedging, a personal hedging transaction by covered persons would still be permitted (unless

the institution prohibits such transactions from occurring). Thus, a covered person at BDs and IAs could potentially substitute the firm-initiated hedge with a personal hedging<sup>441</sup> contract and restore any changes in incentives from the prohibition of the firm-initiated hedge.

To the extent that the covered person's compensation contract is not adjusted as a response to the elimination of the hedge, the covered person would face stronger incentives to exert effort whereas her tolerance for risk-taking would decrease with the prohibition on hedging. Whether the resulting lower risk-taking tolerance is beneficial for BDs and IAs is difficult to determine. On one hand, if the covered persons' risk-taking incentives are at an optimal level with the hedging transaction in place, then eliminating the hedge may reduce their risk-taking incentives to levels that could be detrimental for shareholder value. If this were the case, however, the institution's compensation committees could adjust compensation structures in a manner to achieve pre-prohibition risk-taking incentives if the distortion from hedging prohibition is deemed to be detrimental to firm value; however, some provisions of the proposed rule could potentially constrain board of directors' flexibility to make such adjustments.<sup>442</sup> On the other hand, if covered persons had incentives to undertake undesirable risks given the downside protection provided by the hedge, then eliminating such protection could lead them to engage in risk-taking which could lead to higher firm values.

Based on the SEC's baseline analysis, it appears that most Level 1 covered institutions (70 percent) and Level 2 covered institutions (60 percent) are already using prohibition on hedging with respect to executive compensation of executives and significant risk-takers. Additionally, 70 percent of Level 1 covered institutions and 100 percent of Level 2 covered institutions already prohibit hedging with respect to executive compensation of non-employee directors. If BDs and IAs have similar policies as their parent institutions, and the compensation structure of private institutions is similar to that of public institutions, the

<sup>440</sup> See Bebchuk, L., Fried, J. Paying for long-term performance. *University of Pennsylvania Law Review* 158, 1915–1959. The paper argues that potential benefits from tying executive compensation to long-term shareholder value are weakened when executives are allowed to hedge against downside risk.

See also Gao, H. 2010. Optimal compensation contracts when managers can hedge. *Journal of Financial Economics* 97, 218–238. This study shows that the ability to hedge against potential downside makes the executive more risk tolerant. In other words, holding the compensation arrangement constant, hedging is predicted to weaken the sensitivity of compensation to performance and also the sensitivity of compensation to risk. However, the study also shows that for executives who can engage in low-cost hedging transactions, compensation contracts tend to provide higher sensitivity of executive pay to both performance and volatility.

<sup>441</sup> Refer to Tables 7a and 7b for statistics regarding the complete prohibition of hedging by parent institutions of BDs and IAs.

<sup>442</sup> For example, boards of directors or compensation committees at covered BDs and IAs would be constrained from increasing the risk-taking incentives of covered persons through the additional provision of stock options, if banning hedging lowers risk-taking incentives to a sub-optimal level.

period research and development or advertising expenses. This could improve reported earnings in the short-term, but could result in a suboptimal level of investment that adversely affects performance in the long run. See Chan, L., Chen, K., Chen, T., Yu, Y. 2012. The effects of firm-initiated clawback provisions on earnings quality and auditor behavior. *Journal of Accounting and Economics* 54, 180–196.

implementation of the proposed rule in its part related to the prohibition of hedging is unlikely to lead to significant compliance costs. The cost of compliance with the proposed requirement of the rule would mostly affect the few BDs and IAs whose parent institutions do not currently implement such a prohibition. On the other hand, if the compensation practices of parent institutions are significantly different than those at their subsidiaries (e.g., BDs and IAs do not prohibit hedging), covered BDs and IAs could experience significant compliance costs when implementing the proposed rule. Since the SEC does not have data on how many covered IAs have parent institutions, it is also possible that a significant number of these IAs may be stand-alone companies and therefore could have higher costs to comply with this specific requirement of the proposed rule compared to covered IAs and BDs that are part of reporting parent institutions. BDs and IAs could also incur direct economic costs such as decrease in firm value if the proposed prohibition on hedging leads to less risk-taking than is optimal. The same holds true if the compensation of BDs and IAs is generally different than that of banking institutions, which most of their parent institutions are. If BDs and IAs do not prohibit hedging and this provides incentives to their covered persons to undertake undesirable risks because of the downside protection provided by the hedge, then applying the rule provisions could lead to more appropriate risk-taking.

Lastly, because some BDs and IAs are subsidiaries of private parent institutions, if there is a significant difference between the compensation practices of public and private covered institutions such BDs and IAs could face large compliance costs and direct economic costs. The SEC does not have data for a prohibition of hedging at subsidiaries of Level 1 or Level 2 private parents, and thus cannot quantify the impact of the rule on those institutions. To better assess the effects of the prohibition on hedging on compliance costs for BDs and IAs the SEC requests comments below.

As an alternative, some commenters suggested disclosure of hedging transactions instead of prohibition.<sup>443</sup> One commenter suggested instead of prohibiting the use of hedging instruments to require full disclosure of all outside transactions in financial markets by covered persons, including hedging transactions, to the extent that these transactions affect pay-

performance sensitivity.<sup>444</sup> This disclosure should be made to the compensation committee of the board of directors and the appropriate regulator, and the board of directors should attest to the fact that these transactions do not distort proper risk-reward balance in the compensation arrangement. According to the commenter, sometimes covered persons may have legitimate purposes for engaging in hedging transactions such as when they are exposed excessively to the riskiness of the covered institution and need to rebalance their personal portfolio. Such an alternative, however, might not prevent covered persons from unwinding the effect of the mandatory deferral. For example, it would not be easy to disentangle hedging transactions that diminish individuals' exposure to the riskiness of the covered institutions from transactions that reverse the effect of the deferral. Additionally, the compensation committee might not have the expertise to evaluate complex derivatives transactions.

#### 7. Maximum Incentive-Based Compensation Opportunity

The proposed rule would prohibit Level 1 and Level 2 covered institutions from awarding incentive-based compensation to senior executive officers and significant risk-takers in excess of 125 percent (for senior executive officers) or 150 percent (for significant risk-takers) of the target amount for that incentive-based compensation. Placing a cap on the amount by which the incentive-based compensation award can exceed the target would essentially limit the upside pay potential due to performance and a potential impact of such restriction could be to lower risk-taking incentives by senior executive officers and significant risk-takers. That could be the case because the cap on incentive-based compensation implies that managers would not be rewarded for performance once the cap is reached.

As discussed above, high levels of upside leverage could lead to senior executive officers and significant risk-takers taking inappropriate risks to maximize the potential for large amounts of incentive-based compensation. Given the positive link between risk and expected payoffs from managerial actions, a potential impact of such restriction could be to lower risk-taking incentives by senior executive officers and significant risk-takers. Whether such an effect is beneficial or not for covered BDs and IAs firm value is likely to depend on many factors

including the level of the incentive-based compensation targets set in compensation arrangements. If the proposed cap excessively lowers appropriate risk-taking incentives, then firm value could suffer. Moreover, another potential cost from the proposed restriction is that effort inducing incentives may be diminished once the cap is achieved, possibly misaligning the interests of shareholders with those of managers. On the other hand, if the cap on incentive-based compensation awards eliminates a range of payoffs that could only be achieved by actions associated with taking suboptimally high risks, then such a restriction would improve firm value.

As the baseline analysis shows, the maximum incentive-based compensation opportunity for Level 1 parent institutions is on average 155 percent and that for Level 2 parent institutions is on average 190 percent. Both are significantly higher than would be permitted under the proposed rule. If BDs and IAs have similar policies as their parent institutions, and the compensation structure of private institutions is similar to that of public institutions, the implementation of the proposed rule in its part related to maximum incentive-based compensation opportunity could lead to significant compliance costs. The cost could result from changing the current practices and, as a result, potentially having to compensate senior executive officers and significant risk-takers for the decreased ability to earn compensation in excess of the target amount. If the current compensation practices with regard to maximum incentive-based compensation opportunity are optimal, it is possible that affected BDs and IAs could experience loss of human capital. On the other hand, as discussed above, if the cap on incentive-based compensation awards eliminates a range of payoffs that could only be achieved by actions associated with taking suboptimally high risks, then such a restriction would improve firm value. Since the SEC does not have data on how many covered IAs have parent institutions, it is also possible that a significant number of these IAs may be stand-alone companies and therefore could have higher costs to comply with this specific requirement of the proposed rule compared to covered IAs and BDs that are part of reporting parent institutions.

Additionally, because some BDs and IAs are subsidiaries of private parent institutions, if there is a significant difference between the compensation practices of public and private covered

<sup>443</sup> See CFP, FSR, SIFMA.

<sup>444</sup> See CFP.

institutions such as BDs and IAs could face large compliance costs when applying this rule requirement. The SEC does not have data on the use of maximum incentive-based compensation opportunity at subsidiaries of Level 1 or Level 2 private parents, and thus cannot quantify the impact of the rule on those institutions. To better assess the effects of the proposed limitations to the maximum incentive-based compensation opportunity on compliance costs for BDs and IAs the SEC requests comments below.

#### 8. Acceleration of Payments

The proposed rule would prohibit the acceleration of payment of deferred regulatory incentive-based compensation except in cases of death or disability of covered persons at Level 1 and Level 2 covered institutions. This would prevent covered institutions from undermining the effect from the mandatory deferral of incentive-based compensation by accelerating the deferred payments to covered persons. It could, however, negatively affect covered persons that decide to leave the institution in search for other employment opportunities. In such cases, these covered persons might have to forgo a significant portion of their compensation.

As the analysis in the Baseline section shows, most Level 1 parent institutions (approximately 70 percent) already prohibit acceleration of payments to their executives, while very few of the Level 2 parent institutions do. The only exceptions are in cases of death or disability. Given that current practices of BDs' and IAs' Level 1 parent institutions already apply most of the prohibitions required by the proposed rule (except employment termination), if those BDs and IAs have similar policies as their parent institutions, and the compensation structure of private institutions is similar to that of public institutions, the implementation of the proposed with respect to the prohibition on the acceleration of payments is unlikely to lead to significant compliance costs. The cost of compliance with the requirement of the rule will mostly affect the BDs and IAs whose parent institutions are Level 2 covered institutions or Level 1 covered institutions that do not currently implement such a prohibition. On the other hand, if the compensation practices of parent institutions are significantly different than those at their subsidiaries (e.g., BDs and IAs do not prohibit acceleration of payments), covered BDs and IAs could experience significant compliance costs when implementing the proposed rule.

Additionally, since the SEC does not have data on how many covered IAs have parent institutions, it is also possible that a significant number of these IAs may be stand-alone companies and therefore could have higher costs to comply with this specific requirement of the proposed rule compared to covered IAs and BDs that are part of reporting parent institutions.

Lastly, because some BDs and IAs are subsidiaries of private parent institutions, if there is a significant difference in the compensation practices of public and private covered institutions such as BDs and IAs could face large compliance costs when applying this rule requirement. The SEC does not have data for the prohibition of acceleration of payments at subsidiaries of Level 1 or Level 2 parents, and thus cannot quantify the impact of the rule on those institutions. The SEC requests comment on the effects of the prohibition on acceleration of payments may have on compliance costs for BDs and IAs.

#### 9. Relative Performance Measures

The proposed rule would prohibit the sole use of relative performance measures in incentive-based compensation arrangements at Level 1 and Level 2 covered institutions. Although relative performance measures are widely used to filter out uncontrollable events that are outside of management control and can reduce the efficiency of the compensation arrangement, a peer group could be opportunistically selected to justify compensation awards at a covered institution. To the extent that covered persons may influence peer selection, opportunism in choosing a performance benchmark may translate into covered persons selectively choosing benchmark firms in order to increase or justify increases in their compensation awards.

Evidence on whether such practices take place is mixed. For example, one study examined the selection of peer firms used as benchmarks in setting compensation for a wide range of firms and showed that, on average, chosen peer firms provided higher levels of compensation to their executives. The study asserts that managers tend to choose higher paying firms as peers to justify increases in the level of their own compensation.<sup>445</sup> The same study

<sup>445</sup> See Faulkender, M., Yang, J. 2010. Inside the black box: The role and composition of compensation peer groups. *Journal of Financial Economics* 96, 257–270. The study suggests that companies appear to select highly paid peers as a benchmark for their CEO's pay to justify higher CEO compensation. The study also suggests that such an effect is stronger when governance is weaker: In

also found that the choice of highly paid peers is more prevalent when the CEO is also the chair of the board of directors, re-enforcing the argument for opportunism in peer selection. Another study found that executives attempt to justify increases in their compensation by choosing relatively larger firms as their peers since larger firms are likely to offer higher compensation to their executives.<sup>446</sup> However, the study also showed that boards of directors exercise conservative discretion in using information from benchmark firms when setting compensation practices. Finally, a third related study<sup>447</sup> suggests that firms choose peers with (relatively) highly paid CEOs when their own CEO is highly talented, a finding that is not consistent with opportunism regarding the choice of peers in compensation setting. Overall, empirical studies suggest that opportunism in the peer group selection may exist, particularly in companies where the CEO may exert influence over her compensation setting process. By restricting the sole use of relative performance measures in compensation arrangements, the proposed rule would curb the ability of covered persons to engage in such opportunistic behavior, which would benefit covered BDs and IAs.

As mentioned above, the proposed rule would prohibit the sole use of relative performance measures in determining compensation at covered institutions. Constraining the use of relative performance measures in incentive-based compensation contracts has potential costs. Absolute firm performance is typically driven by multiple factors and not all of these factors are under the covered persons' control. If incentive-based compensation is tied to measures of absolute firm performance, then at least

companies where the CEO is also the chairman of the board, has longer tenure, and when directors are busier serving on multiple boards.

<sup>446</sup> See Bizjak, J., Lemmon, M., Nguyen, T. 2011. Are all CEOs above average? An empirical analysis of compensation peer groups and pay design. *Journal of Financial Economics* 100, 538–555. The study suggests that companies use compensation peer groups that are larger or provide higher pay in order to inflate pay in their own company and this practice is more prevalent for companies outside of the S&P500. However, the study also shows that boards exercise discretion in adjusting compensation due to the peer group effect; pay increases only close about one-third of the gap between company CEO and peer group CEO pay.

<sup>447</sup> See Albuquerque, A., De Franco, G., Verdi, R. 2013. Peer Choice in CEO Compensation. *Journal of Financial Economics* 108, 160–181. The study examines whether companies that benchmark CEO pay against highly paid peer CEOs is driven by incentives to increase CEO pay. Whereas the study suggests that benchmarking pay against highly paid peer CEOs is driven by opportunism, such practice mostly represents increased compensation for CEO talent.

a part of incentive-based compensation will be tied to events out of covered persons' control. This could generate uncertainty about compensation outcomes for covered persons, reducing the efficiency of the incentive-based compensation arrangement. Whereas the proposed rule would not prohibit the use of relative performance measures, if the proposed limitation regarding the use of performance measures in determining compensation awards leads to less filtering out of the uncontrollable risk component of performance, then covered institutions may increase overall pay to compensate covered persons for bearing uncontrollable risk.

The SEC's baseline analysis of current compensation practices suggests that most Level 1 and Level 2 covered institutions use a mix of absolute and relative performance measures. If BDs and IAs have similar policies as their parent institutions, and the compensation structure of private institutions is similar to that of public institutions, the SEC does not expect this rule requirement to generate significant compliance costs for covered institutions. The cost of compliance with the proposed rule would mostly affect the few BDs and IAs whose parent institutions do not currently implement such a requirement. On the other hand, if the compensation practices of parent institutions are significantly different than those at their subsidiaries (e.g., they do not use absolute performance measures, or use mostly absolute measures), covered BDs and IAs could experience significant compliance costs when implementing the proposed rule. Since the SEC does not have data on how many covered IAs have parent institutions, it is also possible that a significant number of these IAs may be stand-alone companies and therefore could have higher costs to comply with this specific requirement of the proposed rule compared to covered IAs and BDs that are part of reporting parent institutions. The same holds true if the compensation of BDs and IAs is generally different than that of banking institutions, which most of their parent institutions are.

The SEC has attempted to quantify such costs based on the estimates in Table 14. The SEC also notes that these costs are not necessarily going to be in addition to the compliance costs discussed above, as covered institutions may hire a compensation consultant to help them with several requirements in the proposed rules. These costs could be lower, however, if the parent institutions of BDs and IAs already employ compensation consultants and could extend their services to meet the

proposed rule requirements for BDs and IAs. Lastly, because some BDs and IAs are subsidiaries of private parent institutions, if there is a significant difference in the compensation practices of public and private covered institutions such as BDs and IAs could face large compliance costs. The SEC does not have data for the prohibition of the sole use of relative performance measures at subsidiaries of Level 1 or Level 2 parents, and thus cannot quantify the impact of the rule on those institutions. To better assess the effects of this prohibition on compliance costs for BDs and IAs. The SEC requests detailed comments below.

#### 10. Volume-Driven Incentive-Based Compensation

For covered persons at Level 1 and Level 2 covered institutions, the proposed rule would prohibit incentive-based compensation arrangements that are based solely on the volume of transactions being generated without regard to transaction quality or compliance of the covered person with sound risk management. Such a compensation contract would provide incentives for employees to maximize the number of transactions since that outcome would lead to maximizing their compensation. A compensation contract that solely uses volume as the performance indicator is likely to provide employees with incentives for inappropriate risk-taking since employees benefit from one aspect of performance but do not bear the negative consequences of their actions—the associated costs and risks incurred to generate revenue/volume. There is limited academic literature addressing the effect of volume-driven compensation on employee incentives. A study examined the behavior of loan officers at a major commercial bank when compensation switched from a fixed salary structure to a performance-based structure where the measure of performance was set as loan origination volume.<sup>448</sup> The study found a 31 percent increase in loan approvals, holding other factors related to the probability of loan approvals constant.

<sup>448</sup> See Agarwal, S., Ben-David, I. 2014. Do Loan Officers' Incentives Lead to Lax Lending Standards? NBER Working Paper. This study examines changes in lending practices in one of the largest U.S. commercial banks when loan officers' compensation structure was altered from fixed salary to volume-based pay. The study suggests that following the change in the compensation structure, loan origination became more aggressive as evident by higher origination rates, larger loan sizes, and higher default rates. The study estimates that 10% of the loans under the volume-based compensation structure were likely to have negative net present value.

The study also found that the 12-month probability of default in originating loans increased by 27.9 percent. Whereas the study did not conclude whether the bank was better or worse off due to the introduction of the compensation scheme, the authors found that interest rates charged to lower quality loans did not reflect the increased riskiness of the borrowers. Another related study<sup>449</sup> finds that loan officers who are incentivized based on lending volume rather than on the quality of their loan portfolio originate more loans of lower average quality. The study also finds that due to the presence of career concerns or reputational motivations, loan officers with lending volume incentives do not indiscriminately approve all applications. Whereas the study examines the effects of volume-driven compensation on employees that are not likely to be covered by the proposed rule, it confirms intuition that providing incentives for volume maximization may lead to behaviors that do not necessarily maximize firm value.

It is unclear to the SEC whether volume-driven incentive-based compensation arrangements are utilized by IAs and BDs given the nature of the business conducted by IAs and BDs. Assuming that these incentive-based compensation arrangements are relevant to IAs and BDs, restricting the sole use of volume-driven compensation practices may curb incentives that reward employees of BDs and IAs on only partial outcomes of their actions; partial in the sense that costs and risks associated with those actions are not part of the performance indicators used to determine their compensation. As a consequence, to the extent that BDs and IAs contribute significantly to the overall risk profile of their parent institutions, covered persons' incentives would likely become aligned with the interests of stakeholders, including taxpayers, since covered persons would bear both the benefits and the costs from their actions. Likewise, the prohibition on the sole use of volume-driven compensation practices is also likely to

<sup>449</sup> See Cole, S., Kanz, M., Klapper, L. 2015. Incentivizing Calculated Risk-Taking: Evidence from an Experiment with Commercial Bank Loan Officers. *Journal of Finance* 70, 537–575. The study examines the effect of different incentive-based compensation arrangements on loan originators behavior in screening and approving loans in an Indian commercial bank. In general, the study finds that the structure of incentive-based arrangements for loan officers affects their decisions; the performance metric used in compensation arrangements of loan officers as well as whether pay is deferred affect loan officers screening and approval incentives and corresponding decisions.

limit covered persons' incentives for inappropriate risk-taking.

The effect of this proposed rule on BDs and IAs cannot be unambiguously determined because of the lack of data on the current use of volume-driven compensation practices. If BDs and IAs have already instituted similar policies with respect to senior executive officers and significant risk-takers, the SEC does not expect this rule requirement to generate significant compliance costs for covered institutions. On the other hand, if covered BDs and IAs' compensation practices with respect to senior executive officers and significant risk-takers rely exclusively on volume-driven transactions, covered BDs and IAs could experience significant compliance costs when implementing the proposed rule. To better assess the effects of this prohibition on compliance costs for BDs and IAs the SEC requests comments below.

#### 11. Risk Management

The proposed rule would include specific requirements with regard to risk management functions to qualify a covered person's incentive-based compensation arrangement at Level 1 and Level 2 covered institutions as compatible with the rule. Specifically, the proposed rule would require that a Level 1 or Level 2 covered institution have a risk management framework for its incentive-based compensation arrangement that is independent of any lines of business, includes an independent compliance program that provides for internal controls, testing, monitoring, and training, with written policies and procedures consistent with the proposed rules, and is commensurate with the size and complexity of a covered institution's operations. Moreover, the proposed rule would require that covered persons engaged in control functions be provided with the authority to influence the risk-taking of the business areas they monitor and be compensated in accordance with the achievement of performance objectives linked to their control functions and independent of the performance of the business areas they monitor. Finally, a Level 1 or Level 2 covered institution would be required to provide independent monitoring of all incentive-based compensation plans, events related to forfeiture and downward adjustment and decisions of forfeiture and downward adjustment reviews, and compliance of the incentive-based compensation program with the covered institution's policies and procedures.

The proposed requirements may strengthen the risk management and

control functions of covered BDs and IAs, which could result in lower levels of inappropriate risk-taking. Academic literature suggests that stronger risk controls in bank holding companies resulted in lower risk exposure, as evident by lower tail-risk and lower fraction of non-performing loans; and better performance, as evident by better operating performance and stock return performance, during the crisis.<sup>450</sup> This study also shows that the risk management function is stronger for larger banks, banks with larger derivative trading operations and banks whose CEOs compensation is more closely tied to stock volatility. Additionally, the study shows that stronger risk function, as measured by this study, was associated with better firm performance only during crisis years, whereas the same relation did not hold during non-crisis periods. As such, a strong and independent risk management function can curtail tail risk exposures at banks and potentially enhance value, particularly during crisis years. Another study shows that lenders with a relatively powerful risk manager, as measured by the level of the risk manager's compensation relative to the top named executives' level of compensation, experienced lower loan default rates. Thus, the evidence in the study seems to suggest that powerful risk executives curb risk-taking with respect to loan origination.<sup>451</sup>

It is also possible that the proposed requirements may not have an effect on the current level of risk-taking at BDs and IAs. For example, if risk-taking is driven by the culture of the institution, then governance characteristics (including risk management functions) may reflect the choice of control functions that match the inherent risk-taking appetite in the institution.<sup>452</sup> A potential downside of applying a strict risk management control function over covered BDs and IAs is that it could lead to decreased risk-taking and potential loss of value for those BDs and IAs that already employ an optimal risk management function. For such BDs and IAs, the implementation of the rule requirements with respect to risk management could result in lower than optimal risk-taking by covered persons.

Based on the SEC's baseline analysis, it appears that all Level 1 parent institutions and most Level 2 parent institutions (67 percent) of BDs already have an independent risk management and control function (e.g., a risk committee) and compensation monitoring function (e.g., a fully independent compensation committee)<sup>453</sup> that could apply the rule requirements. Similarly, all of the Level 1 and Level 2 parent institutions of IAs have risk committees and substantial portion (80 percent and above) have fully independent compensation committees. The SEC, however, does not have information on whether risk committees review and monitor the incentive-based compensation plans. The SEC's analysis suggests that there are some Level 1 covered institutions (30 percent) and Level 2 covered institutions (20 percent) where CROs review compensation packages.

If BDs and IAs have similar policies as their parent institutions, and the risk management structure of private institutions is similar to that of public institutions, the implementation of the proposed rule in its part related to risk management and control is unlikely to lead to significant compliance costs for the majority of covered BDs and IAs because, as mentioned in the previous paragraph, a large percentage of the parent institutions already have fully independent risk committees. Some BDs with Level 2 parent institutions and some IAs with Level 1 and Level 2 parent institutions may face high compliance costs because their parent institutions currently do not employ risk management and compensation monitoring practices similar to the one prescribed by the proposed rule. On the other hand, if the risk management practices of parent institutions are significantly different from those at their subsidiaries (e.g., BDs and IAs do not have risk management and control functions), covered BDs and IAs could experience significant compliance costs when implementing the proposed rule. Since the SEC does not have data on how many covered IAs have parent institutions, it is also possible that a significant number of these IAs may be stand-alone companies and therefore could have higher costs to comply with this specific requirement of the proposed rule compared to covered IAs and BDs that are part of reporting parent institutions. BDs and IAs could also incur direct economic costs such as decrease in firm value if the proposed

<sup>450</sup> See Ellul, A., Yerramilli, V. 2013. Stronger Risk Controls, Lower Risk: Evidence from U.S. Bank Holding Companies. *Journal of Finance* 68, 1757–1803.

<sup>451</sup> See Keys, B., Mukherjee, T., Seru, A., Vig, Vikrant. 2009. Financial regulation and securitization: Evidence from subprime loans. *Journal of Monetary Economics* 56, 700–720.

<sup>452</sup> See Cheng, I., Hong, H., Scheinkman, J. 2015. Yesterday's Heroes: Compensation and Risk at Financial Firms. *Journal of Finance* 70, 839–879.

<sup>453</sup> A risk committee is "fully independent" for purposes of this discussion if it consists only of directors that are not employees of the corporation.

rule requirements regarding risk management lead to less risk-taking than is optimal. The same holds true if the risk management and controls of BDs and IAs is generally different than that of banking institutions, which most of their parent institutions are.

Lastly, because some BDs and IAs are subsidiaries of private parent institutions, if there is a significant difference in the risk management practices of public and private covered institutions such BDs and IAs could face large compliance costs and direct economic costs. The SEC does not have data for the risk management and control functions at subsidiaries of Level 1 or Level 2 parents, and thus cannot quantify the impact of the rule on those institutions. To better assess the effects of these rule requirements on compliance costs for BDs and IAs the SEC requests comments below.

The SEC has attempted to quantify the potential compliance costs for BDs and IAs associated with the proposed rule's requirements regarding the existence and structure of compensation committees and risk committees. BDs and IAs that are currently not in compliance with the proposed committee requirements, either because such a committee does not exist or because the composition of such committee is not consistent with the rule requirements, may have to elect additional individuals in order to either establish the required committees or alter the structure of such committees to be in compliance with the rule's requirements. Table 15 provides estimates of the average annual total compensation of non-employee (*i.e.* independent) directors for Level 1 and Level 2 parents of BDs and Level 1 and Level 2 parents of IAs covered by the proposed rule.<sup>454</sup> Assuming that the cost estimates in the table approximate the compensation requirements for independent members of compensation and/or risk committees, the incremental compliance costs of electing an additional non-employee director to comply with this specific provision of the rule for BDs and IAs that currently do not meet the rule's requirements could be approximately \$333,086 and \$309,513 annually per independent director for a Level 1 BDs and IAs, respectively, and approximately \$208,009 and \$194,563 annually per independent director for unconsolidated Level 2 BDs and IAs, respectively.

**TABLE 15—AVERAGE TOTAL ANNUAL COMPENSATION OF A NON-EMPLOYEE DIRECTOR FOR LEVEL 1 AND LEVEL 2 COVERED INSTITUTIONS**

	Average total annual compensation of a non-employee director
BD parents:	
Level 1 covered institutions .....	\$333,086
Level 2 covered institutions .....	208,009
IA parents:	
Level 1 covered institutions .....	309,513
Level 2 covered institutions .....	194,563

The SEC considers these estimates an upper bound of potential costs that BDs and IAs may incur to comply with these requirements of the proposed rule. It is possible that some BDs and IAs are able to reshuffle existing personnel in order to comply with the rule's requirements (*e.g.*, use existing directors to create a risk committee or fully independent compensation committee) and as such would not incur any of the costs described in the analysis.

## 12. Governance, Policies and Procedures

For Level 1 and Level 2 covered institutions, the proposed rule would include specific corporate governance requirements to support the design and implementation of compensation arrangements that provide balanced risk-taking incentives to affected individuals. More specifically, the proposed rule would require the existence of a compensation committee composed solely of directors who are not senior executive officers, input from the corresponding risk and audit committees and risk management on the effectiveness of risk measures and adjustments used to balance incentive-based compensation arrangements, and a written assessment, submitted at least annually to the compensation committee from the management of the covered institution, regarding the effectiveness of the covered institution's incentive-based compensation program and related compliance and control processes and an independent written assessment of the effectiveness of the covered institution's incentive-based compensation program and related compliance and control processes in providing risk-taking incentives that are consistent with the risk profile of the covered institution, submitted on an annual or more frequent basis by the

internal audit or risk management function of the covered institution, developed independently of the covered institution's management.

The proposed governance requirements would benefit covered BDs and IAs by further ensuring that the design of compensation arrangements is independent of the persons receiving compensation under these arrangements, thus curbing potential conflicts of interest. It could also facilitate the optimal design of compensation arrangements by incorporating relevant information from committees whose mandate is risk oversight. For example, by having a fully independent compensation committee that designs compensation arrangements and a risk committee that reviews those compensation arrangements to make sure they are consistent with the institution's optimal risk policy, a BD or IA may be able to devise compensation arrangements that provide a better link between pay and performance for covered persons.

Based on the SEC's baseline analysis, it appears that the majority of Level 1 and Level 2 covered parent institutions already have a fully independent compensation committee. The SEC does not have information whether BDs and IAs that are subsidiaries have compensation committees and boards of directors. In 2012, the SEC adopted rules requiring exchanges to adopt listing standards requiring a board compensation committee that satisfies independence standards that are more stringent than those in the proposed rule.<sup>455</sup> Therefore, all covered parent institutions with listed securities on national exchanges, or any covered BDs and IAs with listed securities, should have compensation committees that would satisfy the proposed rule's compensation committee independence requirements. Thus, this proposed requirement should place no additional burden on those IAs and BDs that have listed securities on national exchanges, or have governance structures similar to those of their listed parent institutions.

For those BDs and IAs that have compensation committees, the SEC does not have information whether management of the covered BDs and IAs submits to the compensation committee on an annual or more frequent basis a written assessment of the effectiveness of the covered institution's incentive-based compensation program and related compliance and control processes in providing risk-taking incentives that are consistent with the risk profile of the covered institution.

<sup>454</sup> Data is taken from 2015 proxy statements.

<sup>455</sup> 17 CFR parts 229 and 240.

Additionally, the SEC does not have information on whether the compensation committee obtains input from the covered institution's risk and audit committees, or groups performing similar functions. If covered BDs and IAs have already instituted similar policies with respect to the proposed rule's governance requirements, the SEC does not expect this proposed requirement to generate significant compliance costs for them.

On the other hand, if covered BDs and IAs' governance practices are significantly different (e.g., they do not have independent compensation committees, or the compensation committees do not obtain input from the risk and audit committees), then covered BDs and IAs could experience significant compliance costs when implementing the proposed rule. Similarly, for BDs and IAs that do not have securities listed on a national exchange or have governance structures different from those of their parent institutions with listed securities, this rule proposal may result in significant costs. Also, since the SEC does not have data on how many covered IAs have parent institutions, or whether the IAs themselves or their parents have listed securities, it is also possible that a significant number of these IAs may be stand-alone companies that do not have independent compensation committees, and therefore could have higher costs to comply with the proposed rule compared to covered IAs and BDs that are part of reporting parent institutions with independent compensation committees. To better assess the effects of the proposed rule requirement on compliance costs for BDs and IAs, the SEC requests comments below.

For Level 1 and Level 2 covered BDs and IAs, the proposed rule would require the development and implementation of policies and procedures relating to its incentive-based compensation programs that would require among other things, specifying the substantive and procedural criteria for the application of the various policies such as forfeiture and clawback, identifying and describing the role of employees, committees, or groups with authority to make incentive-based compensation decisions, and description of the monitoring mechanism over incentive-based compensation arrangements.

The SEC does not have information about whether covered BDs and IAs have policies and procedures in place as required by the proposed rule. If BDs and IAs have already instituted similar policies, the SEC does not expect this rule requirement to generate significant

compliance costs for them. On the other hand, if the covered BDs and IAs do not have such policies and procedures, or if their policies and procedures are significantly different than what the proposed rule requires, then covered BDs and IAs could experience significant compliance costs when implementing the proposed rule. To better assess the effects of these rule requirements on compliance costs for BDs and IAs the SEC requests comments below.

### 13. Additional Disclosure and Recordkeeping

All covered institutions would be required to create annually and maintain for a period of at least 7 years records that document the structure of all incentive-based compensation arrangements and demonstrate compliance with the proposed rules. Level 1 and Level 2 covered institutions would be required to create annually and maintain for at least 7 years records that document additional information, such as identification of the senior executive officers and significant risk-takers within the covered institution, the incentive-based compensation arrangements of these individuals including deferral details, and any material changes in incentive-based compensation arrangements and policies. Level 1 and Level 2 covered institutions must create and maintain such records in a manner that allows for an independent audit of incentive-based compensation arrangements, policies, and procedures.

The SEC is proposing an amendment to Exchange Act Rule 17a-4(e)<sup>456</sup> and Investment Advisers Act Rule 204-2<sup>457</sup> to require that registered broker-dealers and investment advisers maintain the records required by the proposed rule for registered Level 1 and Level 2 broker-dealers and investment advisers, in accordance with the recordkeeping requirements of Exchange Act Rule 17a-4 and Investment Advisers Act Rule 204-2, respectively. Exchange Act Rule 17a-4 and Investment Advisers Act Rule 204-2 establish the general formatting and storage requirements for records that registered broker-dealers and investment advisers are required to keep. For the sake of consistency with other broker-dealer and investment adviser records, the SEC believes that registered broker-dealers and investment advisers should also keep the records required by the proposed rule for registered Level 1 and Level 2

broker-dealers and investment advisers, in accordance with these requirements.

Such recordkeeping requirements would provide information availability to the SEC in examining and confirming the design and implementation of compensation arrangements for a prolonged period of time. This may enhance compliance and facilitate oversight.

The proposed requirement may increase compliance costs for covered BDs and IAs. The SEC expects that the magnitude of the compliance costs would depend on whether covered BDs and IAs are part of reporting companies or not. Most Level 1 and Level 2 BDs are subsidiaries of reporting parent institutions. Reporting covered institutions provide compensation and disclosure analysis and compensation tables for their named executive officers in their annual reports, and disclose the incentive-based compensation arrangements for named executive officers in the annual proxy statement. In addition, reporting companies have to make an assessment each year whether they need to make Item 402(s) disclosure, which, among other things includes disclosure of compensation policies and practices that present material risks to the company and the board of directors' role in risk oversight. Thus, given that reporting covered institutions create certain records and provide certain disclosures for their annual reports and proxy statements and for internal purposes (e.g., for reports to the board of directors or the compensation committee) that are similar to those required by the proposed rule, the BDs and IAs that are subsidiaries of such parent institutions may experience lower disclosure and recordkeeping compared to BDs and IAs of non-reporting parent institutions or institutions that do not provide such disclosures. Even BDs and IAs of reporting companies, however, would have to incur costs associated with disclosure and recordkeeping of information required by the proposed rule that currently is not disclosed by their parent institutions, such as identification of significant risk-takers details on deferral of incentive-based compensation. The SEC also notes that because it does not have information on the compensation reporting and recordkeeping at the subsidiary level, the SEC may be underestimating compliance costs for BDs with reporting parent institutions. For example, even if the parent institution reports and keeps records of the incentive-based compensation arrangements, this might not be done on the same scale and detail at the subsidiary level.

<sup>456</sup> 17 CFR 240.17a-4(e).

<sup>457</sup> 17 CFR 275.204-2.

The compliance costs associated with this particular rule requirement may be higher for non-reporting covered institutions, since they may not be disclosing such information and as such may not be keeping the type of records required. However, according to 2010 Federal Banking Agency Guidance, a banking institution should provide an appropriate amount of information concerning its incentive compensation arrangements for executive and non-executive employees and related risk-management, control, and governance processes to shareholders to allow them to monitor and, where appropriate, take actions to restrain the potential for such arrangements and processes to encourage employees to take imprudent risks. Such disclosures should include information relevant to employees other than senior executives. The scope and level of the information disclosed by the institution should be tailored to the nature and complexity of the institution and its incentive-based compensation arrangements. The SEC expects the compliance costs to be lower for such covered institutions. Since the SEC does not have data on how many covered IAs have parent institutions, it is also possible that a significant number of these IAs may be stand-alone companies and therefore could have higher costs to comply with this specific requirement of the proposed rule compared to covered IAs and BDs that are part of reporting parent institutions.

By requiring Level 1 and Level 2 covered institutions to create and maintain records of incentive-based compensation arrangements for covered persons, the proposed recordkeeping requirement is expected to facilitate the SEC's ability to monitor incentive-based compensation arrangements and could potentially strengthen incentives for covered institutions to comply with the proposed rule. As a consequence, an increase in investor confidence that covered institutions are less likely to be incentivizing inappropriate actions through compensation arrangements may occur and potentially result to greater market participation and allocative efficiency, thereby potentially facilitating capital formation. As discussed above, it is difficult for the SEC to estimate compliance costs related to the specific provision. However, for covered institutions that do not currently have a similar reporting system in place, there could be significant fixed costs that could disproportionately burden smaller covered BDs and IAs and hinder competition. Overall, the SEC does not expect that the effects of the proposed

recordkeeping requirements on efficiency, competition and capital formation to be significant.

#### H. Request for Comment

The SEC requests comments regarding its analysis of the potential economic effects of the proposed rule. With regard to any comments, the SEC notes that such comments are of particular assistance to the SEC if accompanied by supporting data and analysis of the issues addressed in those comments. For example, the SEC is interested in receiving estimates, data, or analyses on incentive-based compensation at BDs and IAs for all aspects of the proposed rule, including thresholds, on the overall economic impact of the proposed rule, and on any other aspect of this economic analysis. The SEC also is interested in comments on the benefits and costs it has identified and any benefits and costs it may have overlooked.

1. In the SEC's baseline analysis, the SEC uses data from publicly held covered institutions as a proxy for incentive-based compensation arrangements at privately held institutions. The SEC requests comment on the validity of the assumption that privately held institutions employ similar compensation practices to publicly held institutions. The SEC also requests data or analysis with respect to incentive-based compensation arrangements of covered persons at privately held covered institutions.

2. The SEC does not have comprehensive data on incentive-based compensation arrangements for affected individuals, other than those senior executive officers who are named executive officers (NEOs) and some significant risk-takers, for either public or privately held covered institutions. The SEC requests data or analysis related to compensation practices of all senior executive officers and significant risk-takers at covered BDs and IAs as defined in the proposed rule.

3. The SEC uses incentive-based compensation arrangements of NEOs at the parent level as a proxy for incentive-based compensation arrangements of covered persons at covered BDs and IAs that are subsidiaries. The SEC requests comment on the validity of the assumption that incentive-based compensation arrangements for senior executive officers at the parent level is similar to incentive-based compensation arrangements followed at the subsidiary level for other senior executive officers or for significant risk-takers. The SEC also requests any data or related analysis on this issue.

4. Are the economic effects with respect to the asset thresholds (\$50 billion and \$250 billion) utilized to scale the proposed requirements for covered BDs and IAs adequately outlined in the analysis? The SEC also invites comment on the economic consequences of any alternative asset thresholds, as well as economic consequences of potential alternative measures.

5. The proposed consolidation approach would impose restrictions on covered persons' incentive-based compensation arrangements in BDs and IAs that are subsidiaries of depository institution holding companies based on the size of their parent institution. Are the economic effects from the proposed consolidation approach adequately described in the analysis? Are there specific circumstances, such as certain organizational structures, that would deem such a consolidation approach more or less effective?

6. Are there additional effects with respect to the proposed definition of significant risk-takers to be considered? Are there alternative ways to identify significant risk-takers and what would be the economic consequences of alternative ways to identify significant risk-takers?

7. Are the economic effects on the proposed minimum deferral periods and the proposed minimum deferral percentage amounts adequately described in the analysis? What would be the economic effects of any alternative? The SEC also requests literature or evidence regarding the length and amount of deferral of incentive-based compensation that would lead to incentive-based compensation arrangements that best address the underlying risks at covered institutions.

8. Are the economic effects from the proposed vesting schedule for deferred incentive-based compensation adequately described in the analysis? What would be the economic effects from any alternatives?

9. Are there additional economic effects to be considered from the proposed prohibition of increasing a senior executive officer or significant risk-taker's unvested deferred incentive-based compensation? What would be the economic effects of any alternatives?

10. The proposed rule would require deferred qualifying incentive-based compensation to be composed of substantial amounts of both deferred cash and equity-like instruments for covered persons. Are the economic effects of the proposed rule adequately described in the analysis? Would explicitly specifying the mix between

cash and equity-like instruments to be included in the deferral amount be preferred? What would be the economic effects of such an alternative? Are there additional alternatives to be considered?

11. For senior executive officers and significant risk-takers at Level 1 and Level 2 covered institutions, the total amount of options that may be used to meet the minimum deferral amount requirements is limited to no more than 15 percent of the amount of total incentive-based compensation awarded for a given performance period.

Indirectly, this policy choice would place a cap on the amount of options that covered BDs and IAs may provide to affected persons as part of their incentive-based compensation arrangement. Are the economic effects of the provision adequately described in the analysis? What would be the economic effects from any alternatives?

12. Are the triggers for forfeiture or downward adjustment review effective for both senior executive officers and significant risk-takers? Are some of the triggers more effective for significant risk-takers while others are more effective for senior executive officers? What other triggers would be effective for forfeiture or downward adjustment review?

13. Are the economic effects from the 125 percent (150 percent) limit on the amount by which incentive-based compensation may exceed the target amount for senior executive officers (significant risk-takers) at covered BDs and IAs adequately described in the analysis? Are there alternatives to be considered? What would be the economic effect of such alternatives?

14. Are the economic effects regarding the prohibition of the sole use of industry peer performance benchmarks for incentive-based compensation performance measurement adequately described in the analysis? The SEC also requests data on relative performance measures used by covered BDs and IAs and/or related analysis that may further inform this policy choice.

15. The SEC requests any relevant data or analysis regarding the potential effect of the proposed rule on the ability of covered BDs and IAs to attract and retain managerial talent.

16. In general, are there alternative courses of action to be considered that would enhance accountability and limit the potential for inappropriate risk-taking by covered persons at BDs and IAs? What would be the economic effects of such alternatives? Are there specific circumstances, such as certain types of shareholders and other stakeholders, that would make these alternative approaches more or less

effective? For example, should such alternative approaches distinguish between the effects on short-term shareholders and the effects on long-term shareholders?

17. In recent years, several foreign regulators have implemented regulations concerning incentive-based compensation similar to those in the proposed rule. The SEC requests data or analysis regarding the economic effects of those regulations and whether they are similar to or different from the likely economic effects of the proposed rule.

#### *J. Small Business Regulatory Enforcement Fairness Act*

For purposes of the Small Business Regulatory Enforcement Fairness Act of 1996 (“SBREFA”) <sup>458</sup> the SEC must advise the OMB whether the proposed regulation constitutes a “major” rule. Under SBREFA, a rule is considered “major” where, if adopted, it results or is likely to result in: (1) An annual effect on the economy of \$100 million or more; (2) a major increase in costs or prices for consumers or individual industries; or (3) significant adverse effect on competition, investment or innovation.

The SEC requests comment on the potential impact of the proposed amendment on the economy on an annual basis. Commenters are requested to provide empirical data and other factual support for their views to the extent possible.

##### **12 CFR Chapter I**

##### **Authority and Issuance**

For the reasons set forth in the joint preamble, the OCC proposes to amend 12 CFR chapter I of the Code of Federal Regulations as follows:

■ 1. Add part 42 to read as follows:

#### **PART 42—INCENTIVE-BASED COMPENSATION ARRANGEMENTS**

Sec.

- 42.1 Authority, scope, and initial applicability.
- 42.2 Definitions.
- 42.3 Applicability.
- 42.4 Requirements and prohibitions applicable to all covered institutions.
- 42.5 Additional disclosure and recordkeeping requirements for Level 1 and Level 2 covered institutions.
- 42.6 Reservation of authority for Level 3 covered institutions.
- 42.7 Deferral, forfeiture and downward adjustment, and clawback requirements for Level 1 and Level 2 covered institutions.
- 42.8 Additional prohibitions for Level 1 and Level 2 covered institutions.
- 42.9 Risk management and controls requirements for Level 1 and Level 2 covered institutions.
- 42.10 Governance requirements for Level 1 and Level 2 covered institutions.
- 42.11 Policies and procedures requirements for Level 1 and Level 2 covered institutions.
- 42.12 Indirect actions.
- 42.13 Enforcement.

**Authority:** 12 U.S.C. 1 *et seq.* 1, 93a, 1462a, 1463, 1464, 1818, 1831p–1, and 5641.

##### **§ 42.1 Authority, scope, and initial applicability.**

(a) *Authority.* This part is issued pursuant to section 956 of the Dodd-Frank Wall Street Reform and Consumer Protection Act (12 U.S.C. 5641), sections 8 and 39 of the Federal Deposit Insurance Act (12 U.S.C. 1818 and 1831p–1), sections 3, 4, and 5 of the Home Owners’ Loan Act (12 U.S.C. 1462a, 1463, and 1464), and section

5239A of the Revised Statutes (12 U.S.C. 93a).

(b) *Scope*. This part applies to a covered institution with average total consolidated assets greater than or equal to \$1 billion that offers incentive-based compensation to covered persons.

(c) *Initial applicability*—(1)

*Compliance date*. A covered institution must meet the requirements of this part no later than [Date of the beginning of the first calendar quarter that begins at least 540 days after a final rule is published in the **Federal Register**]. Whether a covered institution is a Level 1, Level 2, or Level 3 covered institution at that time will be determined based on average total consolidated assets as of [Date of the beginning of the first calendar quarter that begins after a final rule is published in the **Federal Register**].

(2) *Grandfathered plans*. A covered institution is not required to comply with the requirements of this part with respect to any incentive-based compensation plan with a performance period that begins before [Compliance Date as described in § 42.1(c)(1)].

(d) *Preservation of authority*. Nothing in this part in any way limits the authority of the OCC under other provisions of applicable law and regulations.

## § 42.2 Definitions.

For purposes of this part only, the following definitions apply unless otherwise specified:

(a) *Affiliate* means any company that controls, is controlled by, or is under common control with another company.

(b) *Average total consolidated assets* means the average of the total consolidated assets of a national bank; a Federal savings association; a Federal branch or agency of a foreign bank; a subsidiary of a national bank, Federal savings association, or Federal branch or agency; or a depository institution holding company, as reported on the national bank's, Federal savings association's, Federal branch or agency's, subsidiary's, or depository institution holding company's regulatory reports, for the four most recent consecutive quarters. If a national bank, Federal savings association, Federal branch or agency, subsidiary, or depository institution holding company has not filed a regulatory report for each of the four most recent consecutive quarters, the national bank, Federal savings association, Federal branch or agency, subsidiary, or depository institution holding company's average total consolidated assets means the average of its total consolidated assets, as reported on its regulatory reports, for

the most recent quarter or consecutive quarters, as applicable. Average total consolidated assets are measured on the as-of date of the most recent regulatory report used in the calculation of the average.

(c) *To award incentive-based compensation* means to make a final determination, conveyed to a covered person, of the amount of incentive-based compensation payable to the covered person for performance over a performance period.

(d) *Board of directors* means the governing body of a covered institution that oversees the activities of the covered institution, often referred to as the board of directors or board of managers. For a Federal branch or agency of a foreign bank, "board of directors" refers to the relevant oversight body for the Federal branch or agency, consistent with its overall corporate and management structure.

(e) *Clawback* means a mechanism by which a covered institution can recover vested incentive-based compensation from a covered person.

(f) *Compensation, fees, or benefits* means all direct and indirect payments, both cash and non-cash, awarded to, granted to, or earned by or for the benefit of, any covered person in exchange for services rendered to a covered institution.

(g) *Control* means that any company has control over a bank or over any company if—

(1) The company directly or indirectly or acting through one or more other persons owns, controls, or has power to vote 25 percent or more of any class of voting securities of the bank or company;

(2) The company controls in any manner the election of a majority of the directors or trustees of the bank or company; or

(3) The OCC determines, after notice and opportunity for hearing, that the company directly or indirectly exercises a controlling influence over the management or policies of the bank or company.

(h) *Control function* means a compliance, risk management, internal audit, legal, human resources, accounting, financial reporting, or finance role responsible for identifying, measuring, monitoring, or controlling risk-taking.

(i) *Covered institution* means:

(1) A national bank, Federal savings association, or Federal branch or agency of a foreign bank with average total consolidated assets greater than or equal to \$1 billion; and

(2) A subsidiary of a national bank, Federal savings association, or Federal branch or agency of a foreign bank that:

(i) Is not a broker, dealer, person providing insurance, investment company, or investment adviser; and  
(ii) Has average total consolidated assets greater than or equal to \$1 billion.

(j) *Covered person* means any executive officer, employee, director, or principal shareholder who receives incentive-based compensation at a covered institution.

(k) *Deferral* means the delay of vesting of incentive-based compensation beyond the date on which the incentive-based compensation is awarded.

(l) *Deferral period* means the period of time between the date a performance period ends and the last date on which the incentive-based compensation awarded for such performance period vests.

(m) *Depository institution holding company* means a top-tier depository institution holding company, where "depository institution holding company" has the same meaning as in section 3 of the Federal Deposit Insurance Act (12 U.S.C. 1813).

(n) *Director* of a covered institution means a member of the board of directors.

(o) *Downward adjustment* means a reduction of the amount of a covered person's incentive-based compensation not yet awarded for any performance period that has already begun, including amounts payable under long-term incentive plans, in accordance with a forfeiture and downward adjustment review under § 42.7(b).

(p) *Equity-like instrument* means:

(1) Equity in the covered institution or of any affiliate of the covered institution; or

(2) A form of compensation:

(i) Payable at least in part based on the price of the shares or other equity instruments of the covered institution or of any affiliate of the covered institution; or

(ii) That requires, or may require, settlement in the shares of the covered institution or of any affiliate of the covered institution.

(q) *Forfeiture* means a reduction of the amount of deferred incentive-based compensation awarded to a covered person that has not vested.

(r) *Incentive-based compensation* means any variable compensation, fees, or benefits that serve as an incentive or reward for performance.

(s) *Incentive-based compensation arrangement* means an agreement between a covered institution and a covered person, under which the covered institution provides incentive-

based compensation to the covered person, including incentive-based compensation delivered through one or more incentive-based compensation plans.

(t) *Incentive-based compensation plan* means a document setting forth terms and conditions governing the opportunity for and the payment of incentive-based compensation payments to one or more covered persons.

(u) *Incentive-based compensation program* means a covered institution's framework for incentive-based compensation that governs incentive-based compensation practices and establishes related controls.

(v) *Level 1 covered institution* means:

(1) A covered institution that is a subsidiary of a depository institution holding company with average total consolidated assets greater than or equal to \$250 billion;

(2) A covered institution with average total consolidated assets greater than or equal to \$250 billion that is not a subsidiary of a covered institution or of a depository institution holding company; and

(3) A covered institution that is a subsidiary of a covered institution with average total consolidated assets greater than or equal to \$250 billion.

(w) *Level 2 covered institution* means:

(1) A covered institution that is a subsidiary of a depository institution holding company with average total consolidated assets greater than or equal to \$50 billion but less than \$250 billion;

(2) A covered institution with average total consolidated assets greater than or equal to \$50 billion but less than \$250 billion that is not a subsidiary of a covered institution or of a depository institution holding company; and

(3) A covered institution that is a subsidiary of a covered institution with average total consolidated assets greater than or equal to \$50 billion but less than \$250 billion.

(x) *Level 3 covered institution* means:

(1) A covered institution with average total consolidated assets greater than or equal to \$1 billion but less than \$50 billion; and

(2) A covered institution that is a subsidiary of a covered institution with average total consolidated assets greater than or equal to \$1 billion but less than \$50 billion.

(y) *Long-term incentive plan* means a plan to provide incentive-based compensation that is based on a performance period of at least three years.

(z) *Option* means an instrument through which a covered institution provides a covered person the right, but not the obligation, to buy a specified

number of shares representing an ownership stake in a company at a predetermined price within a set time period or on a date certain, or any similar instrument, such as a stock appreciation right.

(aa) *Performance period* means the period during which the performance of a covered person is assessed for purposes of determining incentive-based compensation.

(bb) *Principal shareholder* means a natural person who, directly or indirectly, or acting through or in concert with one or more persons, owns, controls, or has the power to vote 10 percent or more of any class of voting securities of a covered institution.

(cc) *Qualifying incentive-based compensation* means the amount of incentive-based compensation awarded to a covered person for a particular performance period, excluding amounts awarded to the covered person for that particular performance period under a long-term incentive plan.

(dd) [Reserved].

(ee) *Regulatory report* means:

(1) For a national bank or Federal savings association, the consolidated Reports of Condition and Income ("Call Report");

(2) For a Federal branch or agency of a foreign bank, the Reports of Assets and Liabilities of U.S. Branches and Agencies of Foreign Banks—FFIEC 002;

(3) For a depository institution holding company—

(i) The Consolidated Financial Statements for Bank Holding Companies ("FR Y-9C");

(ii) In the case of a savings and loan holding company that is not required to file an FR Y-9C, the Quarterly Savings and Loan Holding Company Report ("FR 2320"), if the savings and loan holding company reports consolidated assets on the FR 2320, as applicable; or

(iii) In the case of a savings and loan holding company that does not file an FRY-9C or report consolidated assets on the FR2320, a report submitted to the Board of Governors of the Federal Reserve System pursuant to 12 CFR 236.2(ee); and

(4) For a covered institution that is a subsidiary of a national bank, Federal savings association, or Federal branch or agency of a foreign bank, a report of the subsidiary's total consolidated assets prepared by the subsidiary, national bank, Federal savings association, or Federal branch or agency in a form that is acceptable to the OCC.

(ff) *Section 956 affiliate* means an affiliate that is an institution described in § 42.2(i), 12 CFR 236.2(i), 12 CFR 372.2(i), 12 CFR 741.2(i), 12 CFR 1232.2(i), or 17 CFR 303.2(i).

(gg) *Senior executive officer* means a covered person who holds the title or, without regard to title, salary, or compensation, performs the function of one or more of the following positions at a covered institution for any period of time in the relevant performance period: President, chief executive officer, executive chairman, chief operating officer, chief financial officer, chief investment officer, chief legal officer, chief lending officer, chief risk officer, chief compliance officer, chief audit executive, chief credit officer, chief accounting officer, or head of a major business line or control function.

(hh) *Significant risk-taker* means:

(1) Any covered person at a Level 1 or Level 2 covered institution, other than a senior executive officer, who received annual base salary and incentive-based compensation for the last calendar year that ended at least 180 days before the beginning of the performance period of which at least one-third is incentive-based compensation and is—

(i) A covered person of a Level 1 covered institution who received annual base salary and incentive-based compensation for the last calendar year that ended at least 180 days before the beginning of the performance period that placed the covered person among the highest 5 percent in annual base salary and incentive-based compensation among all covered persons (excluding senior executive officers) of the Level 1 covered institution together with all individuals who receive incentive-based compensation at any section 956 affiliate of the Level 1 covered institution;

(ii) A covered person of a Level 2 covered institution who received annual base salary and incentive-based compensation for the last calendar year that ended at least 180 days before the beginning of the performance period that placed the covered person among the highest 2 percent in annual base salary and incentive-based compensation among all covered persons (excluding senior executive officers) of the Level 2 covered institution together with all individuals who receive incentive-based compensation at any section 956 affiliate of the Level 2 covered institution; or

(iii) A covered person of a covered institution who may commit or expose 0.5 percent or more of the common equity tier 1 capital, or in the case of a registered securities broker or dealer, 0.5 percent or more of the tentative net capital, of the covered institution or of any section 956 affiliate of the covered

institution, whether or not the individual is a covered person of that specific legal entity; and

(2) Any covered person at a Level 1 or Level 2 covered institution, other than a senior executive officer, who is designated as a “significant risk-taker” by the OCC because of that person’s ability to expose a covered institution to risks that could lead to material financial loss in relation to the covered institution’s size, capital, or overall risk tolerance, in accordance with procedures established by the OCC, or by the covered institution.

(3) For purposes of this part, an individual who is an employee, director, senior executive officer, or principal shareholder of an affiliate of a Level 1 or Level 2 covered institution, where such affiliate has less than \$1 billion in total consolidated assets, and who otherwise would meet the requirements for being a significant risk-taker under paragraph (hh)(1)(iii) of this section, shall be considered to be a significant risk-taker with respect to the Level 1 or Level 2 covered institution for which the individual may commit or expose 0.5 percent or more of common equity tier 1 capital or tentative net capital. The Level 1 or Level 2 covered institution for which the individual commits or exposes 0.5 percent or more of common equity tier 1 capital or tentative net capital shall ensure that the individual’s incentive compensation arrangement complies with the requirements of this part.

(4) If the OCC determines, in accordance with procedures established by the OCC, that a Level 1 covered institution’s activities, complexity of operations, risk profile, and compensation practices are similar to those of a Level 2 covered institution, the Level 1 covered institution may apply paragraph (hh)(1)(i) of this section to covered persons of the Level 1 covered institution by substituting “2 percent” for “5 percent”.

(ii) *Subsidiary* means any company that is owned or controlled directly or indirectly by another company

(jj) *Vesting of incentive-based compensation* means the transfer of ownership of the incentive-based compensation to the covered person to whom the incentive-based compensation was awarded, such that the covered person’s right to the incentive-based compensation is no longer contingent on the occurrence of any event.

#### **§ 42.3 Applicability.**

(a) *When average total consolidated assets increase—(1) In general—(A) Covered institution subsidiaries of*

*depository institution holding companies.* A national bank or Federal savings association that is a subsidiary of a depository institution holding company shall become a Level 1, Level 2, or Level 3 covered institution when the depository institution holding company’s average total consolidated assets increase to an amount that equals or exceeds \$250 billion, \$50 billion, or \$1 billion, respectively.

(B) *Covered institutions that are not subsidiaries of a depository institution holding company.* A national bank, Federal savings association, or Federal branch or agency of a foreign bank that is not a subsidiary of a national bank, Federal savings association, Federal branch or agency, or depository institution holding company shall become a Level 1, Level 2, or Level 3 covered institution when the national bank, Federal savings association, or Federal branch or agency’s average total consolidated assets increase to an amount that equals or exceeds \$250 billion, \$50 billion, or \$1 billion, respectively.

(C) *Subsidiaries of covered institutions.* A subsidiary of a national bank, Federal savings association, or Federal branch or agency of a foreign bank that is not a broker, dealer, person providing insurance, investment company, or investment adviser shall become a Level 1, Level 2, or Level 3 covered institution when the national bank, Federal savings association, or Federal branch or agency becomes a Level 1, Level 2, or Level 3 covered institution, respectively, pursuant to paragraph (a)(1)(A) or (B) of this section.

(2) *Compliance date.* A national bank, Federal savings association, Federal branch or agency of a foreign bank, or a subsidiary thereof, that becomes a Level 1, Level 2, or Level 3 covered institution pursuant to paragraph (a)(1) of this section shall comply with the requirements of this part for a Level 1, Level 2, or Level 3 covered institution, respectively, not later than the first day of the first calendar quarter that begins not later than 540 days after the date on which the national bank, Federal savings association, Federal branch or agency, or subsidiary becomes a Level 1, Level 2, or Level 3 covered institution, respectively. Until that day, the Level 1, Level 2, or Level 3 covered institution will remain subject to the requirements of this part, if any, that applied to the institution on the day before the date on which it became a Level 1, Level 2, or Level 3 covered institution.

(3) *Grandfathered plans.* A national bank, Federal savings association, Federal branch or agency of a foreign bank, or a subsidiary thereof, that

becomes a Level 1, Level 2, or Level 3 covered institution under paragraph (a)(1) of this section is not required to comply with requirements of this part applicable to a Level 1, Level 2, or Level 3 covered institution, respectively, with respect to any incentive-based compensation plan with a performance period that begins before the date described in paragraph (a)(2) of this section. Any such incentive-based compensation plan shall remain subject to the requirements under this part, if any, that applied to the national bank, Federal savings association, Federal branch or agency of a foreign bank, or subsidiary at the beginning of the performance period.

(b) *When total consolidated assets decrease—(1) Covered institutions that are subsidiaries of depository institution holding companies.* A Level 1, Level 2, or Level 3 covered institution that is a subsidiary of a depository institution holding company will remain subject to the requirements applicable to such covered institution at that level under this part unless and until the total consolidated assets of the depository institution holding company, as reported on the depository institution holding company’s regulatory reports, fall below \$250 billion, \$50 billion, or \$1 billion, respectively, for each of four consecutive quarters.

(2) *Covered institutions that are not subsidiaries of depository institution holding companies.* A Level 1, Level 2, or Level 3 covered institution that is a not subsidiary of a depository institution holding company will remain subject to the requirements applicable to such covered institution at that level under this part unless and until the total consolidated assets of the covered institution, as reported on the covered institution’s regulatory reports, fall below \$250 billion, \$50 billion, or \$1 billion, respectively, for each of four consecutive quarters.

(3) *Subsidiaries of covered institutions.* A Level 1, Level 2, or Level 3 covered institution that is a subsidiary of a national bank, Federal savings association, or Federal branch or agency of a foreign bank that is a covered institution will remain subject to the requirements applicable to such national bank, Federal savings association, or Federal branch or agency at that level under this part unless and until the total consolidated assets of the national bank, Federal savings association, Federal branch or agency, or depository institution holding company of the national bank, Federal savings association, or Federal branch or agency, as reported on its regulatory reports, fall below \$250 billion, \$50

billion, or \$1 billion, respectively, for each of four consecutive quarters.

(4) *Calculations.* The calculations under this paragraph (b) of this section will be effective on the as-of date of the fourth consecutive regulatory report.

(c) *Compliance of covered institutions that are subsidiaries of covered institutions.* A covered institution that is a subsidiary of another covered institution may meet any requirement of this part if the parent covered institution complies with that requirement in a way that causes the relevant portion of the incentive-based compensation program of the subsidiary covered institution to comply with that requirement.

#### **§ 42.4 Requirements and prohibitions applicable to all covered institutions.**

(a) *In general.* A covered institution must not establish or maintain any type of incentive-based compensation arrangement, or any feature of any such arrangement, that encourages inappropriate risks by the covered institution:

(1) By providing a covered person with excessive compensation, fees, or benefits; or

(2) That could lead to material financial loss to the covered institution.

(b) *Excessive compensation.* Compensation, fees, and benefits are considered excessive for purposes of paragraph (a)(1) of this section when amounts paid are unreasonable or disproportionate to the value of the services performed by a covered person, taking into consideration all relevant factors, including, but not limited to:

(1) The combined value of all compensation, fees, or benefits provided to the covered person;

(2) The compensation history of the covered person and other individuals with comparable expertise at the covered institution;

(3) The financial condition of the covered institution;

(4) Compensation practices at comparable institutions, based upon such factors as asset size, geographic location, and the complexity of the covered institution's operations and assets;

(5) For post-employment benefits, the projected total cost and benefit to the covered institution; and

(6) Any connection between the covered person and any fraudulent act or omission, breach of trust or fiduciary duty, or insider abuse with regard to the covered institution.

(c) *Material financial loss.* An incentive-based compensation arrangement at a covered institution encourages inappropriate risks that

could lead to material financial loss to the covered institution, unless the arrangement:

(1) Appropriately balances risk and reward;

(2) Is compatible with effective risk management and controls; and

(3) Is supported by effective governance.

(d) *Performance measures.* An incentive-based compensation arrangement will not be considered to appropriately balance risk and reward for purposes of paragraph (c)(1) of this section unless:

(1) The arrangement includes financial and non-financial measures of performance, including considerations of risk-taking, that are relevant to a covered person's role within a covered institution and to the type of business in which the covered person is engaged and that are appropriately weighted to reflect risk-taking;

(2) The arrangement is designed to allow non-financial measures of performance to override financial measures of performance when appropriate in determining incentive-based compensation; and

(3) Any amounts to be awarded under the arrangement are subject to adjustment to reflect actual losses, inappropriate risks taken, compliance deficiencies, or other measures or aspects of financial and non-financial performance.

(e) *Board of directors.* A covered institution's board of directors, or a committee thereof, must:

(1) Conduct oversight of the covered institution's incentive-based compensation program;

(2) Approve incentive-based compensation arrangements for senior executive officers, including the amounts of all awards and, at the time of vesting, payouts under such arrangements; and

(3) Approve any material exceptions or adjustments to incentive-based compensation policies or arrangements for senior executive officers.

(f) *Disclosure and recordkeeping requirements.* A covered institution must create annually and maintain for a period of at least seven years records that document the structure of all its incentive-based compensation arrangements and demonstrate compliance with this part. A covered institution must disclose the records to the OCC upon request. At a minimum, the records must include copies of all incentive-based compensation plans, a record of who is subject to each plan, and a description of how the incentive-based compensation program is

compatible with effective risk management and controls.

(g) *Rule of construction.* A covered institution is not required to report the actual amount of compensation, fees, or benefits of individual covered persons as part of the disclosure and recordkeeping requirements under this part.

#### **§ 42.5 Additional disclosure and recordkeeping requirements for Level 1 and Level 2 covered institutions.**

(a) A Level 1 or Level 2 covered institution must create annually and maintain for a period of at least seven years records that document:

(1) The covered institution's senior executive officers and significant risk-takers, listed by legal entity, job function, organizational hierarchy, and line of business;

(2) The incentive-based compensation arrangements for senior executive officers and significant risk-takers, including information on percentage of incentive-based compensation deferred and form of award;

(3) Any forfeiture and downward adjustment or clawback reviews and decisions for senior executive officers and significant risk-takers; and

(4) Any material changes to the covered institution's incentive-based compensation arrangements and policies.

(b) A Level 1 or Level 2 covered institution must create and maintain records in a manner that allows for an independent audit of incentive-based compensation arrangements, policies, and procedures, including, those required under § 42.11.

(c) A Level 1 or Level 2 covered institution must provide the records described in paragraph (a) of this section to the OCC in such form and with such frequency as requested by the OCC.

#### **§ 42.6 Reservation of authority for Level 3 covered institutions.**

(a) *In general.* The OCC may require a Level 3 covered institution with average total consolidated assets greater than or equal to \$10 billion and less than \$50 billion to comply with some or all of the provisions of §§ 42.5 and 42.7 through 42.11 if the OCC determines that the Level 3 covered institution's complexity of operations or compensation practices are consistent with those of a Level 1 or Level 2 covered institution.

(b) *Factors considered.* Any exercise of authority under this section will be in writing by the OCC in accordance with procedures established by the OCC and will consider the activities,

complexity of operations, risk profile, and compensation practices of the Level 3 covered institution, in addition to any other relevant factors.

**§ 42.7 Deferral, forfeiture and downward adjustment, and clawback requirements for Level 1 and Level 2 covered institutions.**

An incentive-based compensation arrangement at a Level 1 or Level 2 covered institution will not be considered to appropriately balance risk and reward, for purposes of § 42.4(c)(1), unless the following requirements are met.

(a) *Deferral.* (1) Qualifying incentive-based compensation must be deferred as follows:

(i) *Minimum required deferral amount.* (A) A Level 1 covered institution must defer at least 60 percent of a senior executive officer's qualifying incentive-based compensation awarded for each performance period.

(B) A Level 1 covered institution must defer at least 50 percent of a significant risk-taker's qualifying incentive-based compensation awarded for each performance period.

(C) A Level 2 covered institution must defer at least 50 percent of a senior executive officer's qualifying incentive-based compensation awarded for each performance period.

(D) A Level 2 covered institution must defer at least 40 percent of a significant risk-taker's qualifying incentive-based compensation awarded for each performance period.

(ii) *Minimum required deferral period.* (A) For a senior executive officer or significant risk-taker of a Level 1 covered institution, the deferral period for deferred qualifying incentive-based compensation must be at least 4 years.

(B) For a senior executive officer or significant risk-taker of a Level 2 covered institution, the deferral period for deferred qualifying incentive-based compensation must be at least 3 years.

(iii) *Vesting of amounts during deferral period.*—(A) *Pro rata vesting.* During a deferral period, deferred qualifying incentive-based compensation may not vest faster than on a pro rata annual basis beginning no earlier than the first anniversary of the end of the performance period for which the amounts were awarded.

(B) *Acceleration of vesting.* A Level 1 or Level 2 covered institution must not accelerate the vesting of a covered person's deferred qualifying incentive-based compensation that is required to be deferred under this part, except in the case of death or disability of such covered person.

(2) Incentive-based compensation awarded under a long-term incentive plan must be deferred as follows:

(i) *Minimum required deferral amount.* (A) A Level 1 covered institution must defer at least 60 percent of a senior executive officer's incentive-based compensation awarded under a long-term incentive plan for each performance period.

(B) A Level 1 covered institution must defer at least 50 percent of a significant risk-taker's incentive-based compensation awarded under a long-term incentive plan for each performance period.

(C) A Level 2 covered institution must defer at least 50 percent of a senior executive officer's incentive-based compensation awarded under a long-term incentive plan for each performance period.

(D) A Level 2 covered institution must defer at least 40 percent of a significant risk-taker's incentive-based compensation awarded under a long-term incentive plan for each performance period.

(ii) *Minimum required deferral period.* (A) For a senior executive officer or significant risk-taker of a Level 1 covered institution, the deferral period for deferred long-term incentive plan amounts must be at least 2 years.

(B) For a senior executive officer or significant risk-taker of a Level 2 covered institution, the deferral period for deferred long-term incentive plan amounts must be at least 1 year.

(iii) *Vesting of amounts during deferral period.*—(A) *Pro rata vesting.* During a deferral period, deferred long-term incentive plan amounts may not vest faster than on a pro rata annual basis beginning no earlier than the first anniversary of the end of the performance period for which the amounts were awarded.

(B) *Acceleration of vesting.* A Level 1 or Level 2 covered institution must not accelerate the vesting of a covered person's deferred long-term incentive plan amounts that is required to be deferred under this part, except in the case of death or disability of such covered person.

(3) *Adjustments of deferred qualifying incentive-based compensation and deferred long-term incentive plan compensation amounts.* A Level 1 or Level 2 covered institution may not increase deferred qualifying incentive-based compensation or deferred long-term incentive plan amounts for a senior executive officer or significant risk-taker during the deferral period. For purposes of this paragraph, an increase in value attributable solely to a change in share value, a change in interest rates, or the payment of interest according to terms set out at the time of the award is not

considered an increase in incentive-based compensation amounts.

(4) *Composition of deferred qualifying incentive-based compensation and deferred long-term incentive plan compensation for Level 1 and Level 2 covered institutions.*—(i) *Cash and equity-like instruments.* For a senior executive officer or significant risk-taker of a Level 1 or Level 2 covered institution that issues equity or is an affiliate of a covered institution that issues equity, any deferred qualifying incentive-based compensation or deferred long-term incentive plan amounts must include substantial portions of both deferred cash and equity-like instruments throughout the deferral period.

(ii) *Options.* If a senior executive officer or significant risk-taker of a Level 1 or Level 2 covered institution receives incentive-based compensation for a performance period in the form of options, the total amount of such options that may be used to meet the minimum deferral amount requirements of paragraph (a)(1)(i) or (a)(2)(i) of this section is limited to no more than 15 percent of the amount of total incentive-based compensation awarded to the senior executive officer or significant risk-taker for that performance period.

(b) *Forfeiture and downward adjustment.*—(1) *Compensation at risk.*—(i) A Level 1 or Level 2 covered institution must place at risk of forfeiture all unvested deferred incentive-based compensation of any senior executive officer or significant risk-taker, including unvested deferred amounts awarded under long-term incentive plans.

(ii) A Level 1 or Level 2 covered institution must place at risk of downward adjustment all of a senior executive officer's or significant risk-taker's incentive-based compensation amounts not yet awarded for the current performance period, including amounts payable under long-term incentive plans.

(2) *Events triggering forfeiture and downward adjustment review.* At a minimum, a Level 1 or Level 2 covered institution must consider forfeiture and downward adjustment of incentive-based compensation of senior executive officers and significant risk-takers described in paragraph (b)(3) of this section due to any of the following adverse outcomes at the covered institution:

(i) Poor financial performance attributable to a significant deviation from the risk parameters set forth in the covered institution's policies and procedures;

(ii) Inappropriate risk taking, regardless of the impact on financial performance;

(iii) Material risk management or control failures;

(iv) Non-compliance with statutory, regulatory, or supervisory standards that results in:

(A) Enforcement or legal action against the covered institution brought by a federal or state regulator or agency; or

(B) A requirement that the covered institution report a restatement of a financial statement to correct a material error; and

(v) Other aspects of conduct or poor performance as defined by the covered institution.

(3) *Senior executive officers and significant risk-takers affected by forfeiture and downward adjustment.* A Level 1 or Level 2 covered institution must consider forfeiture and downward adjustment for a senior executive officer or significant risk-taker with direct responsibility, or responsibility due to the senior executive officer's or significant risk-taker's role or position in the covered institution's organizational structure, for the events related to the forfeiture and downward adjustment review set forth in paragraph (b)(2) of this section.

(4) *Determining forfeiture and downward adjustment amounts.* A Level 1 or Level 2 covered institution must consider, at a minimum, the following factors when determining the amount or portion of a senior executive officer's or significant risk-taker's incentive-based compensation that should be forfeited or adjusted downward:

(i) The intent of the senior executive officer or significant risk-taker to operate outside the risk governance framework approved by the covered institution's board of directors or to depart from the covered institution's policies and procedures;

(ii) The senior executive officer's or significant risk-taker's level of participation in, awareness of, and responsibility for, the events triggering the forfeiture and downward adjustment review set forth in paragraph (b)(2) of this section;

(iii) Any actions the senior executive officer or significant risk-taker took or could have taken to prevent the events triggering the forfeiture and downward adjustment review set forth in paragraph (b)(2) of this section;

(iv) The financial and reputational impact of the events triggering the forfeiture and downward adjustment review set forth in paragraph (b)(2) of this section to the covered institution, the line or sub-line of business, and

individuals involved, as applicable, including the magnitude of any financial loss and the cost of known or potential subsequent fines, settlements, and litigation;

(v) The causes of the events triggering the forfeiture and downward adjustment review set forth in paragraph (b)(2) of this section, including any decision-making by other individuals; and

(vi) Any other relevant information, including past behavior and past risk outcomes attributable to the senior executive officer or significant risk-taker.

(c) *Clawback.* A Level 1 or Level 2 covered institution must include clawback provisions in incentive-based compensation arrangements for senior executive officers and significant risk-takers that, at a minimum, allow the covered institution to recover incentive-based compensation from a current or former senior executive officer or significant risk-taker for seven years following the date on which such compensation vests, if the covered institution determines that the senior executive officer or significant risk-taker engaged in:

(1) Misconduct that resulted in significant financial or reputational harm to the covered institution;

(2) Fraud; or

(3) Intentional misrepresentation of information used to determine the senior executive officer or significant risk-taker's incentive-based compensation.

#### **§ 42.8 Additional prohibitions for Level 1 and Level 2 covered institutions.**

An incentive-based compensation arrangement at a Level 1 or Level 2 covered institution will be considered to provide incentives that appropriately balance risk and reward for purposes of § 42.4(c)(1) only if such institution complies with the following prohibitions.

(a) *Hedging.* A Level 1 or Level 2 covered institution must not purchase a hedging instrument or similar instrument on behalf of a covered person to hedge or offset any decrease in the value of the covered person's incentive-based compensation.

(b) *Maximum incentive-based compensation opportunity.* A Level 1 or Level 2 covered institution must not award incentive-based compensation to:

(1) A senior executive officer in excess of 125 percent of the target amount for that incentive-based compensation; or

(2) A significant risk-taker in excess of 150 percent of the target amount for that incentive-based compensation.

(c) *Relative performance measures.* A Level 1 or Level 2 covered institution

must not use incentive-based compensation performance measures that are based solely on industry peer performance comparisons.

(d) *Volume driven incentive-based compensation.* A Level 1 or Level 2 covered institution must not provide incentive-based compensation to a covered person that is based solely on transaction revenue or volume without regard to transaction quality or compliance of the covered person with sound risk management.

#### **§ 42.9 Risk management and controls requirements for Level 1 and Level 2 covered institutions.**

An incentive-based compensation arrangement at a Level 1 or Level 2 covered institution will be considered to be compatible with effective risk management and controls for purposes of § 42.4(c)(2) only if such institution meets the following requirements.

(a) A Level 1 or Level 2 covered institution must have a risk management framework for its incentive-based compensation program that:

(1) Is independent of any lines of business;

(2) Includes an independent compliance program that provides for internal controls, testing, monitoring, and training with written policies and procedures consistent with § 42.11; and

(3) Is commensurate with the size and complexity of the covered institution's operations.

(b) A Level 1 or Level 2 covered institution must:

(1) Provide individuals engaged in control functions with the authority to influence the risk-taking of the business areas they monitor; and

(2) Ensure that covered persons engaged in control functions are compensated in accordance with the achievement of performance objectives linked to their control functions and independent of the performance of those business areas.

(c) A Level 1 or Level 2 covered institution must provide for the independent monitoring of:

(1) All incentive-based compensation plans in order to identify whether those plans provide incentives that appropriately balance risk and reward;

(2) Events related to forfeiture and downward adjustment reviews and decisions of forfeiture and downward adjustment reviews in order to determine consistency with § 42.7(b); and

(3) Compliance of the incentive-based compensation program with the covered institution's policies and procedures.

#### § 42.10 Governance requirements for Level 1 and Level 2 covered institutions.

An incentive-based compensation arrangement at a Level 1 or Level 2 covered institution will not be considered to be supported by effective governance for purposes of § 42.4(c)(3), unless:

(a) The covered institution establishes a compensation committee composed solely of directors who are not senior executive officers to assist the board of directors in carrying out its responsibilities under § 42.4(e); and

(b) The compensation committee established pursuant to paragraph (a) of this section obtains:

(1) Input from the risk and audit committees of the covered institution's board of directors, or groups performing similar functions, and risk management function on the effectiveness of risk measures and adjustments used to balance risk and reward in incentive-based compensation arrangements;

(2) A written assessment of the effectiveness of the covered institution's incentive-based compensation program and related compliance and control processes in providing risk-taking incentives that are consistent with the risk profile of the covered institution, submitted on an annual or more frequent basis by the management of the covered institution and developed with input from the risk and audit committees of its board of directors, or groups performing similar functions, and from the covered institution's risk management and audit functions; and

(3) An independent written assessment of the effectiveness of the covered institution's incentive-based compensation program and related compliance and control processes in providing risk-taking incentives that are consistent with the risk profile of the covered institution, submitted on an annual or more frequent basis by the internal audit or risk management function of the covered institution, developed independently of the covered institution's management.

#### § 42.11 Policies and procedures requirements for Level 1 and Level 2 covered institutions.

A Level 1 or Level 2 covered institution must develop and implement policies and procedures for its incentive-based compensation program that, at a minimum:

(a) Are consistent with the prohibitions and requirements of this part;

(b) Specify the substantive and procedural criteria for the application of forfeiture and clawback, including the process for determining the amount of

incentive-based compensation to be clawed back;

(c) Require that the covered institution maintain documentation of final forfeiture, downward adjustment, and clawback decisions;

(d) Specify the substantive and procedural criteria for the acceleration of payments of deferred incentive-based compensation to a covered person, consistent with § 42.7(a)(1)(iii)(B) and (a)(2)(iii)(B));

(e) Identify and describe the role of any employees, committees, or groups authorized to make incentive-based compensation decisions, including when discretion is authorized;

(f) Describe how discretion is expected to be exercised to appropriately balance risk and reward;

(g) Require that the covered institution maintain documentation of the establishment, implementation, modification, and monitoring of incentive-based compensation arrangements, sufficient to support the covered institution's decisions;

(h) Describe how incentive-based compensation arrangements will be monitored;

(i) Specify the substantive and procedural requirements of the independent compliance program consistent with § 42.9(a)(2); and

(j) Ensure appropriate roles for risk management, risk oversight, and other control function personnel in the covered institution's processes for:

(1) Designing incentive-based compensation arrangements and determining awards, deferral amounts, deferral periods, forfeiture, downward adjustment, clawback, and vesting; and

(2) Assessing the effectiveness of incentive-based compensation arrangements in restraining inappropriate risk-taking.

#### § 42.12 Indirect actions.

A covered institution must not indirectly, or through or by any other person, do anything that would be unlawful for such covered institution to do directly under this part.

#### § 42.13 Enforcement.

The provisions of this part shall be enforced under section 505 of the Gramm-Leach-Bliley Act and, for purposes of such section, a violation of this part shall be treated as a violation of subtitle A of title V of such Act.

#### Federal Reserve Board

##### 12 CFR Chapter II

##### Authority and Issuance

For the reasons set forth in the joint preamble, the Board proposes to amend 12 CFR chapter II as follows:

- 2. Add part 236 to read as follows:

#### PART 236—INCENTIVE-BASED COMPENSATION ARRANGEMENTS (REGULATION JJ)

Sec.

236.1 Authority, scope, and initial applicability.

236.2 Definitions.

236.3 Applicability.

236.4 Requirements and prohibitions applicable to all covered institutions.

236.5 Additional disclosure and recordkeeping requirements for Level 1 and Level 2 covered institutions.

236.6 Reservation of authority for Level 3 covered institutions.

236.7 Deferral, forfeiture and downward adjustment, and clawback requirements for Level 1 and Level 2 covered institutions.

236.8 Additional prohibitions for Level 1 and Level 2 covered institutions.

236.9 Risk management and controls requirements for Level 1 and Level 2 covered institutions.

236.10 Governance requirements for Level 1 and Level 2 covered institutions.

236.11 Policies and procedures requirements for Level 1 and Level 2 covered institutions.

236.12 Indirect actions.

236.13 Enforcement.

**Authority:** 12 U.S.C. 24, 321–338a, 1462a, 1467a, 1818, 1844(b), 3108, and 5641.

#### § 236.1 Authority, scope, and initial applicability.

(a) *Authority.* This part is issued pursuant to section 956 of the Dodd-Frank Wall Street Reform and Consumer Protection Act (12 U.S.C. 5641), section 5136 of the Revised Statutes (12 U.S.C. 24), the Federal Reserve Act (12 U.S.C. 321–338a), section 8 of the Federal Deposit Insurance Act (12 U.S.C. 1818), section 5 of the Bank Holding Company Act of 1956 (12 U.S.C. 1844(b)), sections 3 and 10 of the Home Owners' Loan Act of 1933 (12 U.S.C. 1462a and 1467a), and section 13 of the International Banking Act of 1978 (12 U.S.C. 3108).

(b) *Scope.* This part applies to a covered institution with average total consolidated assets greater than or equal to \$1 billion that offers incentive-based compensation to covered persons.

(c) *Initial applicability*—(1) *Compliance date.* A covered institution must meet the requirements of this part no later than [Date of the beginning of the first calendar quarter that begins at least 540 days after a final rule is published in the **Federal Register**]. Whether a covered institution is a Level 1, Level 2, or Level 3 covered institution at that time will be determined based on average total consolidated assets as of [Date of the beginning of the first calendar quarter that begins after a final

rule is published in the **Federal Register**].

(2) *Grandfathered plans*. A covered institution is not required to comply with the requirements of this part with respect to any incentive-based compensation plan with a performance period that begins before [Compliance Date as described in § 236.1(c)(1)].

(d) *Preservation of authority*. Nothing in this part in any way limits the authority of the Board under other provisions of applicable law and regulations.

### § 236.2 Definitions.

For purposes of this part only, the following definitions apply unless otherwise specified:

(a) *Affiliate* means any company that controls, is controlled by, or is under common control with another company.

(b) *Average total consolidated assets* means the average of a regulated institution's total consolidated assets, as reported on the regulated institution's regulatory reports, for the four most recent consecutive quarters. If a regulated institution has not filed a regulatory report for each of the four most recent consecutive quarters, the regulated institution's average total consolidated assets means the average of its total consolidated assets, as reported on its regulatory reports, for the most recent quarter or consecutive quarters, as applicable. Average total consolidated assets are measured on the as-of date of the most recent regulatory report used in the calculation of the average.

(c) *To award incentive-based compensation* means to make a final determination, conveyed to a covered person, of the amount of incentive-based compensation payable to the covered person for performance over a performance period.

(d) *Board of directors* means the governing body of a covered institution that oversees the activities of the covered institution, often referred to as the board of directors or board of managers. For a foreign banking organization, "board of directors" refers to the relevant oversight body for the firm's U.S. branch, agency or operations, consistent with the foreign banking organization's overall corporate and management structure.

(e) *Clawback* means a mechanism by which a covered institution can recover vested incentive-based compensation from a covered person.

(f) *Compensation, fees, or benefits* means all direct and indirect payments, both cash and non-cash, awarded to, granted to, or earned by or for the benefit of, any covered person in

exchange for services rendered to a covered institution.

(g) *Control* means that any company has control over a bank or over any company if—

(1) The company directly or indirectly or acting through one or more other persons owns, controls, or has power to vote 25 percent or more of any class of voting securities of the bank or company;

(2) The company controls in any manner the election of a majority of the directors or trustees of the bank or company; or

(3) The Board determines, after notice and opportunity for hearing, that the company directly or indirectly exercises a controlling influence over the management or policies of the bank or company.

(h) *Control function* means a compliance, risk management, internal audit, legal, human resources, accounting, financial reporting, or finance role responsible for identifying, measuring, monitoring, or controlling risk-taking.

(i) *Covered institution* means a regulated institution with average total consolidated assets greater than or equal to \$1 billion.

(j) *Covered person* means any executive officer, employee, director, or principal shareholder who receives incentive-based compensation at a covered institution.

(k) *Deferral* means the delay of vesting of incentive-based compensation beyond the date on which the incentive-based compensation is awarded.

(l) *Deferral period* means the period of time between the date a performance period ends and the last date on which the incentive-based compensation awarded for such performance period vests.

(m) [Reserved].

(n) *Director* of a covered institution means a member of the board of directors.

(o) *Downward adjustment* means a reduction of the amount of a covered person's incentive-based compensation not yet awarded for any performance period that has already begun, including amounts payable under long-term incentive plans, in accordance with a forfeiture and downward adjustment review under § 236.7(b).

(p) *Equity-like instrument* means:

(1) Equity in the covered institution or of any affiliate of the covered institution; or

(2) A form of compensation:

(i) Payable at least in part based on the price of the shares or other equity instruments of the covered institution or of any affiliate of the covered institution; or

(ii) That requires, or may require, settlement in the shares of the covered institution or of any affiliate of the covered institution.

(q) *Forfeiture* means a reduction of the amount of deferred incentive-based compensation awarded to a covered person that has not vested.

(r) *Incentive-based compensation* means any variable compensation, fees, or benefits that serve as an incentive or reward for performance.

(s) *Incentive-based compensation arrangement* means an agreement between a covered institution and a covered person, under which the covered institution provides incentive-based compensation to the covered person, including incentive-based compensation delivered through one or more incentive-based compensation plans.

(t) *Incentive-based compensation plan* means a document setting forth terms and conditions governing the opportunity for and the payment of incentive-based compensation payments to one or more covered persons.

(u) *Incentive-based compensation program* means a covered institution's framework for incentive-based compensation that governs incentive-based compensation practices and establishes related controls.

(v) *Level 1 covered institution* means a covered institution with average total consolidated assets greater than or equal to \$250 billion and any subsidiary of a Level 1 covered institution that would itself be a covered institution.

(w) *Level 2 covered institution* means a covered institution with average total consolidated assets greater than or equal to \$50 billion that is not a Level 1 covered institution and any subsidiary of a Level 2 covered institution that would itself be a covered institution.

(x) *Level 3 covered institution* means a covered institution with average total consolidated assets greater than or equal to \$1 billion that is not a Level 1 covered institution or Level 2 covered institution.

(y) *Long-term incentive plan* means a plan to provide incentive-based compensation that is based on a performance period of at least three years.

(z) *Option* means an instrument through which a covered institution provides a covered person the right, but not the obligation, to buy a specified number of shares representing an ownership stake in a company at a predetermined price within a set time period or on a date certain, or any similar instrument, such as a stock appreciation right.

(aa) *Performance period* means the period during which the performance of a covered person is assessed for purposes of determining incentive-based compensation.

(bb) *Principal shareholder* means a natural person who, directly or indirectly, or acting through or in concert with one or more persons, owns, controls, or has the power to vote 10 percent or more of any class of voting securities of a covered institution.

(cc) *Qualifying incentive-based compensation* means the amount of incentive-based compensation awarded to a covered person for a particular performance period, excluding amounts awarded to the covered person for that particular performance period under a long-term incentive plan.

(dd) *Regulated institution* means:

(1) A state member bank, as defined in 12 CFR 208.2(g);

(2) A bank holding company, as defined in 12 CFR 225.2(c), that is not a foreign banking organization, as defined in 12 CFR 211.21(o), and a subsidiary of such a bank holding company that is not a depository institution, broker-dealer, or investment adviser;

(3) A savings and loan holding company, as defined in 12 CFR 238.2(m), and a subsidiary of a savings and loan holding company that is not a depository institution, broker-dealer, or investment adviser;

(4) An organization operating under section 25 or 25A of the Federal Reserve Act ("Edge or Agreement Corporation");

(5) A state-licensed uninsured branch or agency of a foreign bank, as defined in section 3 of the Federal Deposit Insurance Act (12 U.S.C. 1813); and

(6) The U.S. operations of a foreign banking organization, as defined in 12 CFR 211.21(o), excluding any Federal branch or agency and any state insured branch of the foreign banking organization, and a U.S. subsidiary of such foreign banking organization that is not a depository institution, broker-dealer, or investment adviser.

(ee) *Regulatory report* means:

(1) For a state member bank, Consolidated Reports of Condition and Income ("Call Report");

(2) For a bank holding company that is not a foreign banking organization, Consolidated Financial Statements for Bank Holding Companies ("FR Y-9C");

(3) For a savings and loan holding company, FR Y-9C; if a savings and loan holding company is not required to file an FR Y-9C, Quarterly Savings and Loan Holding Company Report ("FR 2320"), if the savings and loan holding company reports consolidated assets on the FR 2320;

(4) For a savings and loan holding company that does not file a regulatory report within the meaning of § 236.2(ee)(3), a report of average total consolidated assets filed with the Board on a quarterly basis.

(5) For an Edge or Agreement Corporation, Consolidated Report of Condition and Income for Edge and Agreement Corporations ("FR 2886b");

(6) For a state-licensed uninsured branch or agency of a foreign bank, Reports of Assets and Liabilities of U.S. Branches and Agencies of Foreign Banks—FFIEC 002;

(7) For the U.S. operations of a foreign banking organization, a report of average total consolidated U.S. assets filed with the Board on a quarterly basis; and

(8) For a regulated institution that is a subsidiary of a bank holding company, savings and loan holding company, or a foreign banking organization, a report of the subsidiary's total consolidated assets prepared by the bank holding company, savings and loan holding company, or subsidiary in a form that is acceptable to the Board.

(ff) *Section 956 affiliate* means an affiliate that is an institution described in § 236.2(i), 12 CFR 42.2(i), 12 CFR 372.2(i), 12 CFR 741.2(i), 12 CFR 1232.2(i), or 17 CFR 303.2(i).

(gg) *Senior executive officer* means a covered person who holds the title or, without regard to title, salary, or compensation, performs the function of one or more of the following positions at a covered institution for any period of time in the relevant performance period: President, chief executive officer, executive chairman, chief operating officer, chief financial officer, chief investment officer, chief legal officer, chief lending officer, chief risk officer, chief compliance officer, chief audit executive, chief credit officer, chief accounting officer, or head of a major business line or control function.

(hh) *Significant risk-taker* means:

(1) Any covered person at a Level 1 or Level 2 covered institution, other than a senior executive officer, who received annual base salary and incentive-based compensation for the last calendar year that ended at least 180 days before the beginning of the performance period of which at least one-third is incentive-based compensation and is—

(i) A covered person of a Level 1 covered institution who received annual base salary and incentive-based compensation for the last calendar year that ended at least 180 days before the beginning of the performance period that placed the covered person among the highest 5 percent in annual base salary and incentive-based

compensation among all covered persons (excluding senior executive officers) of the Level 1 covered institution together with all individuals who receive incentive-based compensation at any section 956 affiliate of the Level 1 covered institution;

(ii) A covered person of a Level 2 covered institution who received annual base salary and incentive-based compensation for the last calendar year that ended at least 180 days before the beginning of the performance period that placed the covered person among the highest 2 percent in annual base salary and incentive-based compensation among all covered persons (excluding senior executive officers) of the Level 2 covered institution together with all individuals who receive incentive-based compensation at any section 956 affiliate of the Level 2 covered institution; or

(iii) A covered person of a covered institution who may commit or expose 0.5 percent or more of the common equity tier 1 capital, or in the case of a registered securities broker or dealer, 0.5 percent or more of the tentative net capital, of the covered institution or of any section 956 affiliate of the covered institution, whether or not the individual is a covered person of that specific legal entity; and

(2) Any covered person at a Level 1 or Level 2 covered institution, other than a senior executive officer, who is designated as a "significant risk-taker" by the Board because of that person's ability to expose a covered institution to risks that could lead to material financial loss in relation to the covered institution's size, capital, or overall risk tolerance, in accordance with procedures established by the Board, or by the covered institution.

(3) For purposes of this part, an individual who is an employee, director, senior executive officer, or principal shareholder of an affiliate of a Level 1 or Level 2 covered institution, where such affiliate has less than \$1 billion in total consolidated assets, and who otherwise would meet the requirements for being a significant risk-taker under paragraph (hh)(1)(iii) of this section, shall be considered to be a significant risk-taker with respect to the Level 1 or Level 2 covered institution for which the individual may commit or expose 0.5 percent or more of common equity tier 1 capital or tentative net capital. The Level 1 or Level 2 covered institution for which the individual commits or exposes 0.5 percent or more of common equity tier 1 capital or tentative net capital shall ensure that

the individual's incentive compensation arrangement complies with the requirements of this part.

(4) If the Board determines, in accordance with procedures established by the Board, that a Level 1 covered institution's activities, complexity of operations, risk profile, and compensation practices are similar to those of a Level 2 covered institution, the Level 1 covered institution may apply paragraph (hh)(1)(i) of this section to covered persons of the Level 1 covered institution by substituting "2 percent" for "5 percent".

(ii) *Subsidiary* means any company that is owned or controlled directly or indirectly by another company; provided that the following are not subsidiaries for purposes of this part:

(1) Any merchant banking investment that is owned or controlled pursuant to 12 U.S.C. 1843(k)(4)(H) and subpart J of the Board's Regulation Y (12 CFR part 225); and

(2) Any company with respect to which the covered institution acquired ownership or control in the ordinary course of collecting a debt previously contracted in good faith.

(jj) *Vesting of incentive-based compensation* means the transfer of ownership of the incentive-based compensation to the covered person to whom the incentive-based compensation was awarded, such that the covered person's right to the incentive-based compensation is no longer contingent on the occurrence of any event.

### **§ 236.3 Applicability.**

(a) *When average total consolidated assets increase*—(1) *In general.* A regulated institution shall become a Level 1, Level 2, or Level 3 covered institution when its average total consolidated assets or the average total consolidated assets of any affiliate of the regulated institution equals or exceeds \$250 billion, \$50 billion, or \$1 billion, respectively.

(2) *Compliance date.* A regulated institution that becomes a Level 1, Level 2, or Level 3 covered institution pursuant to paragraph (a)(1) of this section shall comply with the requirements of this part for a Level 1, Level 2, or Level 3 covered institution, respectively, not later than the first day of the first calendar quarter that begins at least 540 days after the date on which the regulated institution becomes a Level 1, Level 2, or Level 3 covered institution, respectively. Until that day, the Level 1, Level 2, or Level 3 covered institution will remain subject to the requirements of this part, if any, that applied to the regulated institution on

the day before the date on which it became a Level 1, Level 2, or Level 3 covered institution.

(3) *Grandfathered plans.* A regulated institution that becomes a Level 1, Level 2, or Level 3 covered institution under paragraph (a)(1) of this section is not required to comply with requirements of this part applicable to a Level 1, Level 2, or Level 3 covered institution, respectively, with respect to any incentive-based compensation plan with a performance period that begins before the date described in paragraph (a)(2) of this section. Any such incentive-based compensation plan shall remain subject to the requirements under this part, if any, that applied to the regulated institution at the beginning of the performance period.

(b) *When total consolidated assets decrease.* A Level 1, Level 2, or Level 3 covered institution will remain subject to the requirements applicable to such covered institution under this part unless and until the total consolidated assets of such covered institution, or the total consolidated assets of another Level 1, Level 2, or Level 3 covered institution of which the first covered institution is a subsidiary, as reported on the covered institution's regulatory reports, fall below \$250 billion, \$50 billion, or \$1 billion, respectively, for each of four consecutive quarters. The calculation will be effective on the as-of date of the fourth consecutive regulatory report.

(c) *Compliance of covered institutions that are subsidiaries of covered institutions.* A covered institution that is a subsidiary of another covered institution may meet any requirement of this part if the parent covered institution complies with that requirement in such a way that causes the relevant portion of the incentive-based compensation program of the subsidiary covered institution to comply with that requirement.

### **§ 236.4 Requirements and prohibitions applicable to all covered institutions.**

(a) *In general.* A covered institution must not establish or maintain any type of incentive-based compensation arrangement, or any feature of any such arrangement, that encourages inappropriate risks by the covered institution:

(1) By providing a covered person with excessive compensation, fees, or benefits; or

(2) That could lead to material financial loss to the covered institution.

(b) *Excessive compensation.* Compensation, fees, and benefits are considered excessive for purposes of paragraph (a)(1) of this section when

amounts paid are unreasonable or disproportionate to the value of the services performed by a covered person, taking into consideration all relevant factors, including, but not limited to:

(1) The combined value of all compensation, fees, or benefits provided to the covered person;

(2) The compensation history of the covered person and other individuals with comparable expertise at the covered institution;

(3) The financial condition of the covered institution;

(4) Compensation practices at comparable institutions, based upon such factors as asset size, geographic location, and the complexity of the covered institution's operations and assets;

(5) For post-employment benefits, the projected total cost and benefit to the covered institution; and

(6) Any connection between the covered person and any fraudulent act or omission, breach of trust or fiduciary duty, or insider abuse with regard to the covered institution.

(c) *Material financial loss.* An incentive-based compensation arrangement at a covered institution encourages inappropriate risks that could lead to material financial loss to the covered institution, unless the arrangement:

(1) Appropriately balances risk and reward;

(2) Is compatible with effective risk management and controls; and

(3) Is supported by effective governance.

(d) *Performance measures.* An incentive-based compensation arrangement will not be considered to appropriately balance risk and reward for purposes of paragraph (c)(1) of this section unless:

(1) The arrangement includes financial and non-financial measures of performance, including considerations of risk-taking, that are relevant to a covered person's role within a covered institution and to the type of business in which the covered person is engaged and that are appropriately weighted to reflect risk-taking;

(2) The arrangement is designed to allow non-financial measures of performance to override financial measures of performance when appropriate in determining incentive-based compensation; and

(3) Any amounts to be awarded under the arrangement are subject to adjustment to reflect actual losses, inappropriate risks taken, compliance deficiencies, or other measures or aspects of financial and non-financial performance.

(e) *Board of directors.* A covered institution's board of directors, or a committee thereof, must:

(1) Conduct oversight of the covered institution's incentive-based compensation program;

(2) Approve incentive-based compensation arrangements for senior executive officers, including the amounts of all awards and, at the time of vesting, payouts under such arrangements; and

(3) Approve any material exceptions or adjustments to incentive-based compensation policies or arrangements for senior executive officers.

(f) *Disclosure and recordkeeping requirements.* A covered institution must create annually and maintain for a period of at least seven years records that document the structure of all its incentive-based compensation arrangements and demonstrate compliance with this part. A covered institution must disclose the records to the Board upon request. At a minimum, the records must include copies of all incentive-based compensation plans, a record of who is subject to each plan, and a description of how the incentive-based compensation program is compatible with effective risk management and controls.

(g) *Rule of construction.* A covered institution is not required to report the actual amount of compensation, fees, or benefits of individual covered persons as part of the disclosure and recordkeeping requirements under this part.

**§ 236.5 Additional disclosure and recordkeeping requirements for Level 1 and Level 2 covered institutions.**

(a) A Level 1 or Level 2 covered institution must create annually and maintain for a period of at least seven years records that document:

(1) The covered institution's senior executive officers and significant risk-takers, listed by legal entity, job function, organizational hierarchy, and line of business;

(2) The incentive-based compensation arrangements for senior executive officers and significant risk-takers, including information on percentage of incentive-based compensation deferred and form of award;

(3) Any forfeiture and downward adjustment or clawback reviews and decisions for senior executive officers and significant risk-takers; and

(4) Any material changes to the covered institution's incentive-based compensation arrangements and policies.

(b) A Level 1 or Level 2 covered institution must create and maintain

records in a manner that allows for an independent audit of incentive-based compensation arrangements, policies, and procedures, including, those required under § 236.11.

(c) A Level 1 or Level 2 covered institution must provide the records described in paragraph (a) of this section to the Board in such form and with such frequency as requested by the Board.

**§ 236.6 Reservation of authority for Level 3 covered institutions.**

(a) *In general.* The Board may require a Level 3 covered institution with average total consolidated assets greater than or equal to \$10 billion and less than \$50 billion to comply with some or all of the provisions of §§ 236.5 and 236.7 through 236.11 if the Board determines that the Level 3 covered institution's complexity of operations or compensation practices are consistent with those of a Level 1 or Level 2 covered institution.

(b) *Factors considered.* Any exercise of authority under this section will be in writing by the Board in accordance with procedures established by the Board and will consider the activities, complexity of operations, risk profile, and compensation practices of the Level 3 covered institution, in addition to any other relevant factors.

**§ 236.7 Deferral, forfeiture and downward adjustment, and clawback requirements for Level 1 and Level 2 covered institutions.**

An incentive-based compensation arrangement at a Level 1 or Level 2 covered institution will not be considered to appropriately balance risk and reward, for purposes of § 236.4(c)(1), unless the following requirements are met.

(a) *Deferral.* (1) Qualifying incentive-based compensation must be deferred as follows:

(i) *Minimum required deferral amount.* (A) A Level 1 covered institution must defer at least 60 percent of a senior executive officer's qualifying incentive-based compensation awarded for each performance period.

(B) A Level 1 covered institution must defer at least 50 percent of a significant risk-taker's qualifying incentive-based compensation awarded for each performance period.

(C) A Level 2 covered institution must defer at least 50 percent of a senior executive officer's qualifying incentive-based compensation awarded for each performance period.

(D) A Level 2 covered institution must defer at least 40 percent of a significant risk-taker's qualifying incentive-based compensation awarded for each performance period.

(ii) *Minimum required deferral period.* (A) For a senior executive officer or significant risk-taker of a Level 1 covered institution, the deferral period for deferred qualifying incentive-based compensation must be at least 4 years.

(B) For a senior executive officer or significant risk-taker of a Level 2 covered institution, the deferral period for deferred qualifying incentive-based compensation must be at least 3 years.

(iii) *Vesting of amounts during deferral period.*—(A) *Pro rata vesting.* During a deferral period, deferred qualifying incentive-based compensation may not vest faster than on a pro rata annual basis beginning no earlier than the first anniversary of the end of the performance period for which the amounts were awarded.

(B) *Acceleration of vesting.* A Level 1 or Level 2 covered institution must not accelerate the vesting of a covered person's deferred qualifying incentive-based compensation that is required to be deferred under this part, except in the case of death or disability of such covered person.

(2) Incentive-based compensation awarded under a long-term incentive plan must be deferred as follows:

(i) *Minimum required deferral amount.* (A) A Level 1 covered institution must defer at least 60 percent of a senior executive officer's incentive-based compensation awarded under a long-term incentive plan for each performance period.

(B) A Level 1 covered institution must defer at least 50 percent of a significant risk-taker's incentive-based compensation awarded under a long-term incentive plan for each performance period.

(C) A Level 2 covered institution must defer at least 50 percent of a senior executive officer's incentive-based compensation awarded under a long-term incentive plan for each performance period.

(D) A Level 2 covered institution must defer at least 40 percent of a significant risk-taker's incentive-based compensation awarded under a long-term incentive plan for each performance period.

(ii) *Minimum required deferral period.* (A) For a senior executive officer or significant risk-taker of a Level 1 covered institution, the deferral period for deferred long-term incentive plan amounts must be at least 2 years.

(B) For a senior executive officer or significant risk-taker of a Level 2 covered institution, the deferral period for deferred long-term incentive plan amounts must be at least 1 year.

(iii) *Vesting of amounts during deferral period.*—(A) *Pro rata vesting.*

During a deferral period, deferred long-term incentive plan amounts may not vest faster than on a pro rata annual basis beginning no earlier than the first anniversary of the end of the performance period for which the amounts were awarded.

(B) *Acceleration of vesting.* A Level 1 or Level 2 covered institution must not accelerate the vesting of a covered person's deferred long-term incentive plan amounts that is required to be deferred under this part, except in the case of death or disability of such covered person.

(3) *Adjustments of deferred qualifying incentive-based compensation and deferred long-term incentive plan compensation amounts.* A Level 1 or Level 2 covered institution may not increase deferred qualifying incentive-based compensation or deferred long-term incentive plan amounts for a senior executive officer or significant risk-taker during the deferral period. For purposes of this paragraph, an increase in value attributable solely to a change in share value, a change in interest rates, or the payment of interest according to terms set out at the time of the award is not considered an increase in incentive-based compensation amounts.

(4) *Composition of deferred qualifying incentive-based compensation and deferred long-term incentive plan compensation for Level 1 and Level 2 covered institutions—(i) Cash and equity-like instruments.* For a senior executive officer or significant risk-taker of a Level 1 or Level 2 covered institution that issues equity or is an affiliate of a covered institution that issues equity, any deferred qualifying incentive-based compensation or deferred long-term incentive plan amounts must include substantial portions of both deferred cash and equity-like instruments throughout the deferral period.

(ii) *Options.* If a senior executive officer or significant risk-taker of a Level 1 or Level 2 covered institution receives incentive-based compensation for a performance period in the form of options, the total amount of such options that may be used to meet the minimum deferral amount requirements of paragraph (a)(1)(i) or (a)(2)(i) of this section is limited to no more than 15 percent of the amount of total incentive-based compensation awarded to the senior executive officer or significant risk-taker for that performance period.

(b) *Forfeiture and downward adjustment—(1) Compensation at risk.* (i) A Level 1 or Level 2 covered institution must place at risk of forfeiture all unvested deferred incentive-based compensation of any

senior executive officer or significant risk-taker, including unvested deferred amounts awarded under long-term incentive plans.

(ii) A Level 1 or Level 2 covered institution must place at risk of downward adjustment all of a senior executive officer's or significant risk-taker's incentive-based compensation amounts not yet awarded for the current performance period, including amounts payable under long-term incentive plans.

(2) *Events triggering forfeiture and downward adjustment review.* At a minimum, a Level 1 or Level 2 covered institution must consider forfeiture and downward adjustment of incentive-based compensation of senior executive officers and significant risk-takers described in paragraph (b)(3) of this section due to any of the following adverse outcomes at the covered institution:

(i) Poor financial performance attributable to a significant deviation from the risk parameters set forth in the covered institution's policies and procedures;

(ii) Inappropriate risk taking, regardless of the impact on financial performance;

(iii) Material risk management or control failures;

(iv) Non-compliance with statutory, regulatory, or supervisory standards that results in:

(A) Enforcement or legal action against the covered institution brought by a federal or state regulator or agency; or

(B) A requirement that the covered institution report a restatement of a financial statement to correct a material error; and

(v) Other aspects of conduct or poor performance as defined by the covered institution.

(3) *Senior executive officers and significant risk-takers affected by forfeiture and downward adjustment.* A Level 1 or Level 2 covered institution must consider forfeiture and downward adjustment for a senior executive officer or significant risk-taker with direct responsibility, or responsibility due to the senior executive officer's or significant risk-taker's role or position in the covered institution's organizational structure, for the events related to the forfeiture and downward adjustment review set forth in paragraph (b)(2) of this section.

(4) *Determining forfeiture and downward adjustment amounts.* A Level 1 or Level 2 covered institution must consider, at a minimum, the following factors when determining the amount or portion of a senior executive officer's or

significant risk-taker's incentive-based compensation that should be forfeited or adjusted downward:

(i) The intent of the senior executive officer or significant risk-taker to operate outside the risk governance framework approved by the covered institution's board of directors or to depart from the covered institution's policies and procedures;

(ii) The senior executive officer's or significant risk-taker's level of participation in, awareness of, and responsibility for, the events triggering the forfeiture and downward adjustment review set forth in paragraph (b)(2) of this section;

(iii) Any actions the senior executive officer or significant risk-taker took or could have taken to prevent the events triggering the forfeiture and downward adjustment review set forth in paragraph (b)(2) of this section;

(iv) The financial and reputational impact of the events triggering the forfeiture and downward adjustment review set forth in paragraph (b)(2) of this section to the covered institution, the line or sub-line of business, and individuals involved, as applicable, including the magnitude of any financial loss and the cost of known or potential subsequent fines, settlements, and litigation;

(v) The causes of the events triggering the forfeiture and downward adjustment review set forth in paragraph (b)(2) of this section, including any decision-making by other individuals; and

(vi) Any other relevant information, including past behavior and past risk outcomes attributable to the senior executive officer or significant risk-taker.

(c) *Clawback.* A Level 1 or Level 2 covered institution must include clawback provisions in incentive-based compensation arrangements for senior executive officers and significant risk-takers that, at a minimum, allow the covered institution to recover incentive-based compensation from a current or former senior executive officer or significant risk-taker for seven years following the date on which such compensation vests, if the covered institution determines that the senior executive officer or significant risk-taker engaged in:

(1) Misconduct that resulted in significant financial or reputational harm to the covered institution;

(2) Fraud; or

(3) Intentional misrepresentation of information used to determine the senior executive officer or significant risk-taker's incentive-based compensation.

**§ 236.8 Additional prohibitions for Level 1 and Level 2 covered institutions.**

An incentive-based compensation arrangement at a Level 1 or Level 2 covered institution will be considered to provide incentives that appropriately balance risk and reward for purposes of § 236.4(c)(1) only if such institution complies with the following prohibitions.

(a) *Hedging.* A Level 1 or Level 2 covered institution must not purchase a hedging instrument or similar instrument on behalf of a covered person to hedge or offset any decrease in the value of the covered person's incentive-based compensation.

(b) *Maximum incentive-based compensation opportunity.* A Level 1 or Level 2 covered institution must not award incentive-based compensation to:

(1) A senior executive officer in excess of 125 percent of the target amount for that incentive-based compensation; or

(2) A significant risk-taker in excess of 150 percent of the target amount for that incentive-based compensation.

(c) *Relative performance measures.* A Level 1 or Level 2 covered institution must not use incentive-based compensation performance measures that are based solely on industry peer performance comparisons.

(d) *Volume driven incentive-based compensation.* A Level 1 or Level 2 covered institution must not provide incentive-based compensation to a covered person that is based solely on transaction revenue or volume without regard to transaction quality or compliance of the covered person with sound risk management.

**§ 236.9 Risk management and controls requirements for Level 1 and Level 2 covered institutions.**

An incentive-based compensation arrangement at a Level 1 or Level 2 covered institution will be considered to be compatible with effective risk management and controls for purposes of § 236.4(c)(2) only if such institution meets the following requirements.

(a) A Level 1 or Level 2 covered institution must have a risk management framework for its incentive-based compensation program that:

(1) Is independent of any lines of business;

(2) Includes an independent compliance program that provides for internal controls, testing, monitoring, and training with written policies and procedures consistent with § 236.11; and

(3) Is commensurate with the size and complexity of the covered institution's operations.

(b) A Level 1 or Level 2 covered institution must:

(1) Provide individuals engaged in control functions with the authority to influence the risk-taking of the business areas they monitor; and

(2) Ensure that covered persons engaged in control functions are compensated in accordance with the achievement of performance objectives linked to their control functions and independent of the performance of those business areas.

(c) A Level 1 or Level 2 covered institution must provide for the independent monitoring of:

(1) All incentive-based compensation plans in order to identify whether those plans provide incentives that appropriately balance risk and reward;

(2) Events related to forfeiture and downward adjustment reviews and decisions of forfeiture and downward adjustment reviews in order to determine consistency with § 236.7(b); and

(3) Compliance of the incentive-based compensation program with the covered institution's policies and procedures.

**§ 236.10 Governance requirements for Level 1 and Level 2 covered institutions.**

An incentive-based compensation arrangement at a Level 1 or Level 2 covered institution will not be considered to be supported by effective governance for purposes of § 236.4(c)(3), unless:

(a) The covered institution establishes a compensation committee composed solely of directors who are not senior executive officers to assist the board of directors in carrying out its responsibilities under § 236.4(e); and

(b) The compensation committee established pursuant to paragraph (a) of this section obtains:

(1) Input from the risk and audit committees of the covered institution's board of directors, or groups performing similar functions, and risk management function on the effectiveness of risk measures and adjustments used to balance risk and reward in incentive-based compensation arrangements;

(2) A written assessment of the effectiveness of the covered institution's incentive-based compensation program and related compliance and control processes in providing risk-taking incentives that are consistent with the risk profile of the covered institution, submitted on an annual or more frequent basis by the management of the covered institution and developed with input from the risk and audit committees of its board of directors, or groups performing similar functions,

and from the covered institution's risk management and audit functions; and

(3) An independent written assessment of the effectiveness of the covered institution's incentive-based compensation program and related compliance and control processes in providing risk-taking incentives that are consistent with the risk profile of the covered institution, submitted on an annual or more frequent basis by the internal audit or risk management function of the covered institution, developed independently of the covered institution's management.

**§ 236.11 Policies and procedures requirements for Level 1 and Level 2 covered institutions.**

A Level 1 or Level 2 covered institution must develop and implement policies and procedures for its incentive-based compensation program that, at a minimum:

(a) Are consistent with the prohibitions and requirements of this part;

(b) Specify the substantive and procedural criteria for the application of forfeiture and clawback, including the process for determining the amount of incentive-based compensation to be clawed back;

(c) Require that the covered institution maintain documentation of final forfeiture, downward adjustment, and clawback decisions;

(d) Specify the substantive and procedural criteria for the acceleration of payments of deferred incentive-based compensation to a covered person, consistent with § 236.7(a)(1)(iii)(B) and (a)(2)(iii)(B);

(e) Identify and describe the role of any employees, committees, or groups authorized to make incentive-based compensation decisions, including when discretion is authorized;

(f) Describe how discretion is expected to be exercised to appropriately balance risk and reward;

(g) Require that the covered institution maintain documentation of the establishment, implementation, modification, and monitoring of incentive-based compensation arrangements, sufficient to support the covered institution's decisions;

(h) Describe how incentive-based compensation arrangements will be monitored;

(i) Specify the substantive and procedural requirements of the independent compliance program consistent with § 236.9(a)(2); and

(j) Ensure appropriate roles for risk management, risk oversight, and other control function personnel in the covered institution's processes for:

(1) Designing incentive-based compensation arrangements and determining awards, deferral amounts, deferral periods, forfeiture, downward adjustment, clawback, and vesting; and

(2) Assessing the effectiveness of incentive-based compensation arrangements in restraining inappropriate risk-taking.

#### **§ 236.12 Indirect actions.**

A covered institution must not indirectly, or through or by any other person, do anything that would be unlawful for such covered institution to do directly under this part.

#### **§ 236.13 Enforcement.**

The provisions of this part shall be enforced under section 505 of the Gramm-Leach-Bliley Act and, for purposes of such section, a violation of this part shall be treated as a violation of subtitle A of title V of such Act.

### **Federal Deposit Insurance Corporation**

#### **12 CFR Chapter III**

#### **Authority and Issuance**

For the reasons set forth in the joint preamble, the Federal Deposit Insurance Corporation proposes to amend chapter III of title 12 of the Code of Federal Regulations as follows:

#### **■ 3. Add part 372 to read as follows:**

### **PART 372—INCENTIVE-BASED COMPENSATION ARRANGEMENTS**

#### **Sec.**

372.1 Authority, scope, and initial applicability.

372.2 Definitions.

372.3 Applicability.

372.4 Requirements and prohibitions applicable to all covered institutions.

372.5 Additional disclosure and recordkeeping requirements for Level 1 and Level 2 covered institutions.

372.6 Reservation of authority for Level 3 covered institutions.

372.7 Deferral, forfeiture and downward adjustment, and clawback requirements for Level 1 and Level 2 covered institutions.

372.8 Additional prohibitions for Level 1 and Level 2 covered institutions.

372.9 Risk management and controls requirements for Level 1 and Level 2 covered institutions.

372.10 Governance requirements for Level 1 and Level 2 covered institutions.

372.11 Policies and procedures requirements for Level 1 and Level 2 covered institutions.

372.12 Indirect actions.

372.13 Enforcement.

**Authority:** 12 U.S.C. 5641, 12 U.S.C. 1818, 12 U.S.C. 1819 Tenth, 12 U.S.C. 1831p–1.

#### **§ 372.1 Authority, scope, and initial applicability.**

(a) *Authority.* This part is issued pursuant to section 956 of the Dodd-Frank Wall Street Reform and Consumer Protection Act (12 U.S.C. 5641), and sections 8 (12 U.S.C. 1818), 9 (12 U.S.C. 1819 Tenth), and 39 (12 U.S.C. 1831p–1) of the Federal Deposit Insurance Act.

(b) *Scope.* This part applies to a covered institution with average total consolidated assets greater than or equal to \$1 billion that offers incentive-based compensation to covered persons.

(c) *Initial applicability—(1) Compliance date.* A covered institution must meet the requirements of this part no later than [Date of the beginning of the first calendar quarter that begins at least 540 days after a final rule is published in the **Federal Register**]. Whether a covered institution is a Level 1, Level 2, or Level 3 covered institution at that time will be determined based on average total consolidated assets as of [Date of the beginning of the first calendar quarter that begins after a final rule is published in the **Federal Register**].

(2) *Grandfathered plans.* A covered institution is not required to comply with the requirements of this part with respect to any incentive-based compensation plan with a performance period that begins before [Compliance Date as described in § 372.1(c)(1)].

(d) *Preservation of authority.* Nothing in this part in any way limits the authority of the Corporation under other provisions of applicable law and regulations.

#### **§ 372.2 Definitions.**

For purposes of this part only, the following definitions apply unless otherwise specified:

(a) *Affiliate* means any company that controls, is controlled by, or is under common control with another company.

(b) *Average total consolidated assets* means the average of the total consolidated assets of a state nonmember bank; state savings association; state insured branch of a foreign bank; a subsidiary of a state nonmember bank, state savings association, or state insured branch of a foreign bank; or a depository institution holding company, as reported on the state nonmember bank's, state savings association's, state insured branch of a foreign bank's, subsidiary's, or depository institution holding company's regulatory reports, for the four most recent consecutive quarters. If a state nonmember bank, state savings association, state insured branch of a foreign bank, subsidiary, or depository institution holding company has not

filed a regulatory report for each of the four most recent consecutive quarters, the state nonmember bank, state savings association, state insured branch of a foreign bank, subsidiary, or depository institution holding company's average total consolidated assets means the average of its total consolidated assets, as reported on its regulatory reports, for the most recent quarter or consecutive quarters, as applicable. Average total consolidated assets are measured on the as-of date of the most recent regulatory report used in the calculation of the average.

(c) *To award* incentive-based compensation means to make a final determination, conveyed to a covered person, of the amount of incentive-based compensation payable to the covered person for performance over a performance period.

(d) *Board of directors* means the governing body of a covered institution that oversees the activities of the covered institution, often referred to as the board of directors or board of managers. For a state insured branch of a foreign bank, "board of directors" refers to the relevant oversight body for the state insured branch consistent with the foreign bank's overall corporate and management structure.

(e) *Clawback* means a mechanism by which a covered institution can recover vested incentive-based compensation from a covered person.

(f) *Compensation, fees, or benefits* means all direct and indirect payments, both cash and non-cash, awarded to, granted to, or earned by or for the benefit of, any covered person in exchange for services rendered to a covered institution.

(g) *Control* means that any company has control over a bank or over any company if—

(1) The company directly or indirectly or acting through one or more other persons owns, controls, or has power to vote 25 percent or more of any class of voting securities of the bank or company;

(2) The company controls in any manner the election of a majority of the directors or trustees of the bank or company; or

(3) The Corporation determines, after notice and opportunity for hearing, that the company directly or indirectly exercises a controlling influence over the management or policies of the bank or company.

(h) *Control function* means a compliance, risk management, internal audit, legal, human resources, accounting, financial reporting, or finance role responsible for identifying,

measuring, monitoring, or controlling risk-taking.

(i) *Covered institution* means

(1) A state nonmember bank, state savings association, or a state insured branch of a foreign bank, as such terms are defined in section 3 of the Federal Deposit Insurance Act, 12 U.S.C. 1813, with average total consolidated assets greater than or equal to \$1 billion; and

(2) A subsidiary of a state nonmember bank, state savings association, or a state insured branch of a foreign bank, as such terms are defined in section 3 of the Federal Deposit Insurance Act, 12 U.S.C. 1813, that:

(i) Is not a broker, dealer, person providing insurance, investment company, or investment adviser; and

(ii) Has average total consolidated assets greater than or equal to \$1 billion.

(j) *Covered person* means any executive officer, employee, director, or principal shareholder who receives incentive-based compensation at a covered institution.

(k) *Deferral* means the delay of vesting of incentive-based compensation beyond the date on which the incentive-based compensation is awarded.

(l) *Deferral period* means the period of time between the date a performance period ends and the last date on which the incentive-based compensation awarded for such performance period vests.

(m) *Depository institution holding company* means a top-tier depository institution holding company, where “depository institution holding company” has the same meaning as in section 3 of the Federal Deposit Insurance Act (12 U.S.C. 1813).

(n) *Director* of a covered institution means a member of the board of directors.

(o) *Downward adjustment* means a reduction of the amount of a covered person’s incentive-based compensation not yet awarded for any performance period that has already begun, including amounts payable under long-term incentive plans, in accordance with a forfeiture and downward adjustment review under § 372.7(b).

(p) *Equity-like instrument* means:

(1) Equity in the covered institution or of any affiliate of the covered institution; or

(2) A form of compensation:

(i) Payable at least in part based on the price of the shares or other equity instruments of the covered institution or of any affiliate of the covered institution; or

(ii) That requires, or may require, settlement in the shares of the covered institution or of any affiliate of the covered institution.

(q) *Forfeiture* means a reduction of the amount of deferred incentive-based compensation awarded to a covered person that has not vested.

(r) *Incentive-based compensation* means any variable compensation, fees, or benefits that serve as an incentive or reward for performance.

(s) *Incentive-based compensation arrangement* means an agreement between a covered institution and a covered person, under which the covered institution provides incentive-based compensation to the covered person, including incentive-based compensation delivered through one or more incentive-based compensation plans.

(t) *Incentive-based compensation plan* means a document setting forth terms and conditions governing the opportunity for and the payment of incentive-based compensation payments to one or more covered persons.

(u) *Incentive-based compensation program* means a covered institution’s framework for incentive-based compensation that governs incentive-based compensation practices and establishes related controls.

(v) *Level 1 covered institution* means

(1) A covered institution that is a subsidiary of a depository institution holding company with average total consolidated assets greater than or equal to \$250 billion;

(2) A covered institution with average total consolidated assets greater than or equal to \$250 billion that is not a subsidiary of a covered institution or of a depository institution holding company; and

(3) A covered institution that is a subsidiary of a covered institution with average total consolidated assets greater than or equal to \$250 billion.

(w) *Level 2 covered institution* means

(1) A covered institution that is a subsidiary of a depository institution holding company with average total consolidated assets greater than or equal to \$50 billion but less than \$250 billion;

(2) A covered institution with average total consolidated assets greater than or equal to \$50 billion but less than \$250 billion that is not a subsidiary of a covered institution or of a depository institution holding company; and

(3) A covered institution that is a subsidiary of a covered institution with average total consolidated assets greater than or equal to \$50 billion but less than \$250 billion.

(x) *Level 3 covered institution* means

(1) A covered institution that is a subsidiary of a depository institution holding company with average total consolidated assets greater than or equal to \$1 billion but less than \$50 billion;

(2) A covered institution with average total consolidated assets greater than or equal to \$1 billion but less than \$50 billion that is not a subsidiary of a covered institution or of a depository institution holding company; and

(3) A covered institution that is a subsidiary of a covered institution with average total consolidated assets greater than or equal to \$1 billion but less than \$50 billion.

(y) *Long-term incentive plan* means a plan to provide incentive-based compensation that is based on a performance period of at least three years.

(z) *Option* means an instrument through which a covered institution provides a covered person the right, but not the obligation, to buy a specified number of shares representing an ownership stake in a company at a predetermined price within a set time period or on a date certain, or any similar instrument, such as a stock appreciation right.

(aa) *Performance period* means the period during which the performance of a covered person is assessed for purposes of determining incentive-based compensation.

(bb) *Principal shareholder* means a natural person who, directly or indirectly, or acting through or in concert with one or more persons, owns, controls, or has the power to vote 10 percent or more of any class of voting securities of a covered institution.

(cc) *Qualifying incentive-based compensation* means the amount of incentive-based compensation awarded to a covered person for a particular performance period, excluding amounts awarded to the covered person for that particular performance period under a long-term incentive plan.

(dd) [Reserved].

(ee) *Regulatory report* means

(1) For a state nonmember bank and state savings association, Consolidated Reports of Condition and Income;

(2) For an state insured branch of a foreign bank, the Reports of Assets and Liabilities of U.S. Branches and Agencies of Foreign Banks—FFIEC 002; and

(3) For a depository institution holding company:

(i) The Consolidated Financial Statements for Bank Holding Companies (“FR Y–9C”);

(ii) In the case of a savings and loan holding company that is not required to file an FR Y–9C, the Quarterly Savings and Loan Holding Company Report (“FR 2320”), if the savings and loan holding company reports consolidated assets on the FR 2320, as applicable; and

(iii) In the case of a savings and loan holding company that does not file an FRY-9C or report consolidated assets on the FR2320, a report submitted to the Board of Governors of the Federal Reserve System pursuant to 12 CFR 236.2(ee).

(ff) *Section 956 affiliate* means an affiliate that is an institution described in § 372.2(i), 12 CFR 42.2(i), 12 CFR 236.2(i), 12 CFR 741.2(i), 12 CFR 1232.2(i), or 17 CFR 303.2(i).

(gg) *Senior executive officer* means a covered person who holds the title or, without regard to title, salary, or compensation, performs the function of one or more of the following positions at a covered institution for any period of time in the relevant performance period: President, chief executive officer, executive chairman, chief operating officer, chief financial officer, chief investment officer, chief legal officer, chief lending officer, chief risk officer, chief compliance officer, chief audit executive, chief credit officer, chief accounting officer, or head of a major business line or control function.

(hh) *Significant risk-taker* means:

(1) Any covered person at a Level 1 or Level 2 covered institution, other than a senior executive officer, who received annual base salary and incentive-based compensation for the last calendar year that ended at least 180 days before the beginning of the performance period of which at least one-third is incentive-based compensation and is—

(i) A covered person of a Level 1 covered institution who received annual base salary and incentive-based compensation for the last calendar year that ended at least 180 days before the beginning of the performance period that placed the covered person among the highest 5 percent in annual base salary and incentive-based compensation among all covered persons (excluding senior executive officers) of the Level 1 covered institution together with all individuals who receive incentive-based compensation at any section 956 affiliate of the Level 1 covered institution;

(ii) A covered person of a Level 2 covered institution who received annual base salary and incentive-based compensation for the last calendar year that ended at least 180 days before the beginning of the performance period that placed the covered person among the highest 2 percent in annual base salary and incentive-based compensation among all covered persons (excluding senior executive officers) of the Level 2 covered institution together with all individuals

who receive incentive-based compensation at any section 956 affiliate of the Level 2 covered institution; or

(iii) A covered person of a covered institution who may commit or expose 0.5 percent or more of the common equity tier 1 capital, or in the case of a registered securities broker or dealer, 0.5 percent or more of the tentative net capital, of the covered institution or of any section 956 affiliate of the covered institution, whether or not the individual is a covered person of that specific legal entity; and

(2) Any covered person at a Level 1 or Level 2 covered institution, other than a senior executive officer, who is designated as a “significant risk-taker” by the Corporation because of that person’s ability to expose a covered institution to risks that could lead to material financial loss in relation to the covered institution’s size, capital, or overall risk tolerance, in accordance with procedures established by the Corporation, or by the covered institution.

(3) For purposes of this part, an individual who is an employee, director, senior executive officer, or principal shareholder of an affiliate of a Level 1 or Level 2 covered institution, where such affiliate has less than \$1 billion in total consolidated assets, and who otherwise would meet the requirements for being a significant risk-taker under paragraph (hh)(1)(iii) of this section, shall be considered to be a significant risk-taker with respect to the Level 1 or Level 2 covered institution for which the individual may commit or expose 0.5 percent or more of common equity tier 1 capital or tentative net capital. The Level 1 or Level 2 covered institution for which the individual commits or exposes 0.5 percent or more of common equity tier 1 capital or tentative net capital shall ensure that the individual’s incentive compensation arrangement complies with the requirements of this part.

(4) If the Corporation determines, in accordance with procedures established by the Corporation, that a Level 1 covered institution’s activities, complexity of operations, risk profile, and compensation practices are similar to those of a Level 2 covered institution, the Level 1 covered institution may apply paragraph (hh)(1)(i) of this section to covered persons of the Level 1 covered institution by substituting “2 percent” for “5 percent”.

(ii) *Subsidiary* means any company that is owned or controlled directly or indirectly by another company.

(jj) *Vesting* of incentive-based compensation means the transfer of

ownership of the incentive-based compensation to the covered person to whom the incentive-based compensation was awarded, such that the covered person’s right to the incentive-based compensation is no longer contingent on the occurrence of any event.

### § 372.3 Applicability.

(a) *When average total consolidated assets increase—(1) In general—(i) Covered institution subsidiaries of depository institution holding companies.* A state nonmember bank or state savings association that is a subsidiary of a depository institution holding company shall become a Level 1, Level 2, or Level 3 covered institution when the depository institution holding company’s average total consolidated assets increase to an amount that equals or exceeds \$250 billion, \$50 billion, or \$1 billion, respectively.

(ii) *Covered institutions that are not subsidiaries of a depository institution holding company.* A state nonmember bank, state savings association, or state insured branch of a foreign bank that is not a subsidiary of a state nonmember bank, state savings association, or state insured branch of a foreign bank, or depository institution holding company shall become a Level 1, Level 2, or Level 3 covered institution when such state nonmember bank, state savings association, or state insured branch of a foreign bank’s average total consolidated assets increase to an amount that equals or exceeds \$250 billion, \$50 billion, or \$1 billion, respectively.

(iii) *Subsidiaries of covered institutions.* A subsidiary of a state nonmember bank, state savings association, or state insured branch of a foreign bank, as described under § 372.2(i)(2), shall become a Level 1, Level 2, or Level 3 covered institution when the state nonmember bank, state savings association, or state insured branch of a foreign bank becomes a Level 1, Level 2, or Level 3 covered institution, respectively, under paragraph (a)(1)(i) or (ii) of this section.

(2) *Compliance date.* A state nonmember bank, state savings association, state insured branch of a foreign bank, or subsidiary thereof, that becomes a Level 1, Level 2, or Level 3 covered institution pursuant to paragraph (a)(1) of this section shall comply with the requirements of this part for a Level 1, Level 2, or Level 3 covered institution, respectively, not later than the first day of the first calendar quarter that begins at least 540 days after the date on which such state nonmember bank, state savings association, state insured branch of a

foreign bank, or subsidiary thereof becomes a Level 1, Level 2, or Level 3 covered institution, respectively. Until that day, the Level 1, Level 2, or Level 3 covered institution will remain subject to the requirements of this part, if any, that applied to the institution on the day before the date on which it became a Level 1, Level 2, or Level 3 covered institution.

(3) *Grandfathered plans.* A state nonmember bank, state savings association, state insured branch of a foreign bank, or subsidiary thereof, that becomes a Level 1, Level 2, or Level 3 covered institution under paragraph (a)(1) of this section is not required to comply with requirements of this part applicable to a Level 1, Level 2, or Level 3 covered institution, respectively, with respect to any incentive-based compensation plan with a performance period that begins before the date described in paragraph (a)(2) of this section. Any such incentive-based compensation plan shall remain subject to the requirements under this part, if any, that applied to such state nonmember bank, state savings association, state insured branch of a foreign bank, or subsidiary thereof at the beginning of the performance period.

(b) *When total consolidated assets decrease—*(1) *Covered institutions that are subsidiaries of depository institution holding companies.* A Level 1, Level 2, or Level 3 covered institution that is a subsidiary of a depository institution holding company will remain subject to the requirements applicable to such covered institution at that level under this part unless and until the total consolidated assets of the depository institution holding company, as reported on the depository institution holding company's regulatory reports, fall below \$250 billion, \$50 billion, or \$1 billion, respectively, for each of four consecutive quarters.

(2) *Covered institutions that are not subsidiaries of depository institution holding companies.* A Level 1, Level 2, or Level 3 covered institution that is not a subsidiary of a depository institution holding company will remain subject to the requirements applicable to such covered institution at that level under this part unless and until the total consolidated assets of the covered institution, as reported on the covered institution's regulatory reports, fall below \$250 billion, \$50 billion, or \$1 billion, respectively, for each of four consecutive quarters.

(3) *Subsidiaries of covered institutions.* A Level 1, Level 2, or Level 3 covered institution that is a subsidiary of a state nonmember bank, state savings association, or state insured branch of a

foreign bank that is a covered institution will remain subject to the requirements applicable to such state nonmember bank, state savings association, or state insured branch of a foreign bank at that level under this part unless and until the total consolidated assets of the state nonmember bank, state savings association, state insured branch of a foreign bank, or depository holding company of the state nonmember bank or state savings association, as reported on its regulatory reports, fall below \$250 billion, \$50 billion, or \$1 billion, respectively, for each of four consecutive quarters.

(4) The calculations under this paragraph (b) of this section will be effective on the as-of date of the fourth consecutive regulatory report.

(c) *Compliance of covered institutions that are subsidiaries of covered institutions.* A covered institution that is a subsidiary of another covered institution may meet any requirement of this part if the parent covered institution complies with that requirement in a way that causes the relevant portion of the incentive-based compensation program of the subsidiary covered institution to comply with that requirement.

#### **§ 372.4 Requirements and prohibitions applicable to all covered institutions.**

(a) *In general.* A covered institution must not establish or maintain any type of incentive-based compensation arrangement, or any feature of any such arrangement, that encourages inappropriate risks by the covered institution:

(1) By providing a covered person with excessive compensation, fees, or benefits; or

(2) That could lead to material financial loss to the covered institution.

(b) *Excessive compensation.*

Compensation, fees, and benefits are considered excessive for purposes of paragraph (a)(1) of this section when amounts paid are unreasonable or disproportionate to the value of the services performed by a covered person, taking into consideration all relevant factors, including, but not limited to:

(1) The combined value of all compensation, fees, or benefits provided to the covered person;

(2) The compensation history of the covered person and other individuals with comparable expertise at the covered institution;

(3) The financial condition of the covered institution;

(4) Compensation practices at comparable institutions, based upon such factors as asset size, geographic location, and the complexity of the

covered institution's operations and assets;

(5) For post-employment benefits, the projected total cost and benefit to the covered institution; and

(6) Any connection between the covered person and any fraudulent act or omission, breach of trust or fiduciary duty, or insider abuse with regard to the covered institution.

(c) *Material financial loss.* An incentive-based compensation arrangement at a covered institution encourages inappropriate risks that could lead to material financial loss to the covered institution, unless the arrangement:

(1) Appropriately balances risk and reward;

(2) Is compatible with effective risk management and controls; and

(3) Is supported by effective governance.

(d) *Performance measures.* An incentive-based compensation arrangement will not be considered to appropriately balance risk and reward for purposes of paragraph (c)(1) of this section unless:

(1) The arrangement includes financial and non-financial measures of performance, including considerations of risk-taking, that are relevant to a covered person's role within a covered institution and to the type of business in which the covered person is engaged and that are appropriately weighted to reflect risk-taking;

(2) The arrangement is designed to allow non-financial measures of performance to override financial measures of performance when appropriate in determining incentive-based compensation; and

(3) Any amounts to be awarded under the arrangement are subject to adjustment to reflect actual losses, inappropriate risks taken, compliance deficiencies, or other measures or aspects of financial and non-financial performance.

(e) *Board of directors.* A covered institution's board of directors, or a committee thereof, must:

(1) Conduct oversight of the covered institution's incentive-based compensation program;

(2) Approve incentive-based compensation arrangements for senior executive officers, including the amounts of all awards and, at the time of vesting, payouts under such arrangements; and

(3) Approve any material exceptions or adjustments to incentive-based compensation policies or arrangements for senior executive officers.

(f) *Disclosure and recordkeeping requirements.* A covered institution

must create annually and maintain for a period of at least seven years records that document the structure of all its incentive-based compensation arrangements and demonstrate compliance with this part. A covered institution must disclose the records to the Corporation upon request. At a minimum, the records must include copies of all incentive-based compensation plans, a record of who is subject to each plan, and a description of how the incentive-based compensation program is compatible with effective risk management and controls.

(g) *Rule of construction.* A covered institution is not required to report the actual amount of compensation, fees, or benefits of individual covered persons as part of the disclosure and recordkeeping requirements under this part.

**§ 372.5 Additional disclosure and recordkeeping requirements for Level 1 and Level 2 covered institutions.**

(a) A Level 1 or Level 2 covered institution must create annually and maintain for a period of at least seven years records that document:

(1) The covered institution's senior executive officers and significant risk-takers, listed by legal entity, job function, organizational hierarchy, and line of business;

(2) The incentive-based compensation arrangements for senior executive officers and significant risk-takers, including information on percentage of incentive-based compensation deferred and form of award;

(3) Any forfeiture and downward adjustment or clawback reviews and decisions for senior executive officers and significant risk-takers; and

(4) Any material changes to the covered institution's incentive-based compensation arrangements and policies.

(b) A Level 1 or Level 2 covered institution must create and maintain records in a manner that allows for an independent audit of incentive-based compensation arrangements, policies, and procedures, including, those required under § 372.11.

(c) A Level 1 or Level 2 covered institution must provide the records described in paragraph (a) of this section to the Corporation in such form and with such frequency as requested by the Corporation.

**§ 372.6 Reservation of authority for Level 3 covered institutions.**

(a) *In general.* The Corporation may require a Level 3 covered institution with average total consolidated assets

greater than or equal to \$10 billion and less than \$50 billion to comply with some or all of the provisions of §§ 372.5 and 372.7 through 372.11 if the Corporation determines that the Level 3 covered institution's complexity of operations or compensation practices are consistent with those of a Level 1 or Level 2 covered institution.

(b) *Factors considered.* Any exercise of authority under this section will be in writing by the Corporation in accordance with procedures established by the Corporation and will consider the activities, complexity of operations, risk profile, and compensation practices of the Level 3 covered institution, in addition to any other relevant factors.

**§ 372.7 Deferral, forfeiture and downward adjustment, and clawback requirements for Level 1 and Level 2 covered institutions.**

An incentive-based compensation arrangement at a Level 1 or Level 2 covered institution will not be considered to appropriately balance risk and reward, for purposes of § 372.4(c)(1), unless the following requirements are met.

(a) *Deferral.* (1) Qualifying incentive-based compensation must be deferred as follows:

(i) *Minimum required deferral amount.*

(A) A Level 1 covered institution must defer at least 60 percent of a senior executive officer's qualifying incentive-based compensation awarded for each performance period.

(B) A Level 1 covered institution must defer at least 50 percent of a significant risk-taker's qualifying incentive-based compensation awarded for each performance period.

(C) A Level 2 covered institution must defer at least 50 percent of a senior executive officer's qualifying incentive-based compensation awarded for each performance period.

(D) A Level 2 covered institution must defer at least 40 percent of a significant risk-taker's qualifying incentive-based compensation awarded for each performance period.

(ii) *Minimum required deferral period.* (A) For a senior executive officer or significant risk-taker of a Level 1 covered institution, the deferral period for deferred qualifying incentive-based compensation must be at least 4 years.

(B) For a senior executive officer or significant risk-taker of a Level 2 covered institution, the deferral period for deferred qualifying incentive-based compensation must be at least 3 years.

(iii) *Vesting of amounts during deferral period.*—(A) *Pro rata vesting.* During a deferral period, deferred qualifying incentive-based

compensation may not vest faster than on a pro rata annual basis beginning no earlier than the first anniversary of the end of the performance period for which the amounts were awarded.

(B) *Acceleration of vesting.* A Level 1 or Level 2 covered institution must not accelerate the vesting of a covered person's deferred qualifying incentive-based compensation that is required to be deferred under this part, except in the case of death or disability of such covered person.

(2) Incentive-based compensation awarded under a long-term incentive plan must be deferred as follows:

(i) *Minimum required deferral amount.* (A) A Level 1 covered institution must defer at least 60 percent of a senior executive officer's incentive-based compensation awarded under a long-term incentive plan for each performance period.

(B) A Level 1 covered institution must defer at least 50 percent of a significant risk-taker's incentive-based compensation awarded under a long-term incentive plan for each performance period.

(C) A Level 2 covered institution must defer at least 50 percent of a senior executive officer's incentive-based compensation awarded under a long-term incentive plan for each performance period.

(D) A Level 2 covered institution must defer at least 40 percent of a significant risk-taker's incentive-based compensation awarded under a long-term incentive plan for each performance period.

(ii) *Minimum required deferral period.* (A) For a senior executive officer or significant risk-taker of a Level 1 covered institution, the deferral period for deferred long-term incentive plan amounts must be at least 2 years.

(B) For a senior executive officer or significant risk-taker of a Level 2 covered institution, the deferral period for deferred long-term incentive plan amounts must be at least 1 year.

(iii) *Vesting of amounts during deferral period.*—(A) *Pro rata vesting.* During a deferral period, deferred long-term incentive plan amounts may not vest faster than on a pro rata annual basis beginning no earlier than the first anniversary of the end of the performance period for which the amounts were awarded.

(B) *Acceleration of vesting.* A Level 1 or Level 2 covered institution must not accelerate the vesting of a covered person's deferred long-term incentive plan amounts that is required to be deferred under this part, except in the case of death or disability of such covered person.

(3) *Adjustments of deferred qualifying incentive-based compensation and deferred long-term incentive plan compensation amounts.* A Level 1 or Level 2 covered institution may not increase deferred qualifying incentive-based compensation or deferred long-term incentive plan amounts for a senior executive officer or significant risk-taker during the deferral period. For purposes of this paragraph, an increase in value attributable solely to a change in share value, a change in interest rates, or the payment of interest according to terms set out at the time of the award is not considered an increase in incentive-based compensation amounts.

(4) *Composition of deferred qualifying incentive-based compensation and deferred long-term incentive plan compensation for Level 1 and Level 2 covered institutions—(i) Cash and equity-like instruments.* For a senior executive officer or significant risk-taker of a Level 1 or Level 2 covered institution that issues equity or is an affiliate of a covered institution that issues equity, any deferred qualifying incentive-based compensation or deferred long-term incentive plan amounts must include substantial portions of both deferred cash and equity-like instruments throughout the deferral period.

(ii) *Options.* If a senior executive officer or significant risk-taker of a Level 1 or Level 2 covered institution receives incentive-based compensation for a performance period in the form of options, the total amount of such options that may be used to meet the minimum deferral amount requirements of paragraph (a)(1)(i) or (a)(2)(i) of this section is limited to no more than 15 percent of the amount of total incentive-based compensation awarded to the senior executive officer or significant risk-taker for that performance period.

(b) *Forfeiture and downward adjustment—(1) Compensation at risk.* (i) A Level 1 or Level 2 covered institution must place at risk of forfeiture all unvested deferred incentive-based compensation of any senior executive officer or significant risk-taker, including unvested deferred amounts awarded under long-term incentive plans.

(ii) A Level 1 or Level 2 covered institution must place at risk of downward adjustment all of a senior executive officer's or significant risk-taker's incentive-based compensation amounts not yet awarded for the current performance period, including amounts payable under long-term incentive plans.

(2) *Events triggering forfeiture and downward adjustment review.* At a

minimum, a Level 1 or Level 2 covered institution must consider forfeiture and downward adjustment of incentive-based compensation of senior executive officers and significant risk-takers described in paragraph (b)(3) of this section due to any of the following adverse outcomes at the covered institution:

(i) Poor financial performance attributable to a significant deviation from the risk parameters set forth in the covered institution's policies and procedures;

(ii) Inappropriate risk taking, regardless of the impact on financial performance;

(iii) Material risk management or control failures;

(iv) Non-compliance with statutory, regulatory, or supervisory standards that results in:

(A) Enforcement or legal action against the covered institution brought by a federal or state regulator or agency; or

(B) A requirement that the covered institution report a restatement of a financial statement to correct a material error; and

(v) Other aspects of conduct or poor performance as defined by the covered institution.

(3) *Senior executive officers and significant risk-takers affected by forfeiture and downward adjustment.* A Level 1 or Level 2 covered institution must consider forfeiture and downward adjustment for a senior executive officer or significant risk-taker with direct responsibility, or responsibility due to the senior executive officer's or significant risk-taker's role or position in the covered institution's organizational structure, for the events related to the forfeiture and downward adjustment review set forth in paragraph (b)(2) of this section.

(4) *Determining forfeiture and downward adjustment amounts.* A Level 1 or Level 2 covered institution must consider, at a minimum, the following factors when determining the amount or portion of a senior executive officer's or significant risk-taker's incentive-based compensation that should be forfeited or adjusted downward:

(i) The intent of the senior executive officer or significant risk-taker to operate outside the risk governance framework approved by the covered institution's board of directors or to depart from the covered institution's policies and procedures;

(ii) The senior executive officer's or significant risk-taker's level of participation in, awareness of, and responsibility for, the events triggering the forfeiture and downward adjustment

review set forth in paragraph (b)(2) of this section;

(iii) Any actions the senior executive officer or significant risk-taker took or could have taken to prevent the events triggering the forfeiture and downward adjustment review set forth in paragraph (b)(2) of this section;

(iv) The financial and reputational impact of the events triggering the forfeiture and downward adjustment review set forth in paragraph (b)(2) of this section to the covered institution, the line or sub-line of business, and individuals involved, as applicable, including the magnitude of any financial loss and the cost of known or potential subsequent fines, settlements, and litigation;

(v) The causes of the events triggering the forfeiture and downward adjustment review set forth in paragraph (b)(2) of this section, including any decision-making by other individuals; and

(vi) Any other relevant information, including past behavior and past risk outcomes attributable to the senior executive officer or significant risk-taker.

(c) *Clawback.* A Level 1 or Level 2 covered institution must include clawback provisions in incentive-based compensation arrangements for senior executive officers and significant risk-takers that, at a minimum, allow the covered institution to recover incentive-based compensation from a current or former senior executive officer or significant risk-taker for seven years following the date on which such compensation vests, if the covered institution determines that the senior executive officer or significant risk-taker engaged in:

(1) Misconduct that resulted in significant financial or reputational harm to the covered institution;

(2) Fraud; or

(3) Intentional misrepresentation of information used to determine the senior executive officer or significant risk-taker's incentive-based compensation.

#### **§ 372.8 Additional prohibitions for Level 1 and Level 2 covered institutions.**

An incentive-based compensation arrangement at a Level 1 or Level 2 covered institution will be considered to provide incentives that appropriately balance risk and reward for purposes of § 372.4(c)(1) only if such institution complies with the following prohibitions.

(a) *Hedging.* A Level 1 or Level 2 covered institution must not purchase a hedging instrument or similar instrument on behalf of a covered person to hedge or offset any decrease

in the value of the covered person's incentive-based compensation.

(b) *Maximum incentive-based compensation opportunity.* A Level 1 or Level 2 covered institution must not award incentive-based compensation to:

(1) A senior executive officer in excess of 125 percent of the target amount for that incentive-based compensation; or

(2) A significant risk-taker in excess of 150 percent of the target amount for that incentive-based compensation.

(c) *Relative performance measures.* A Level 1 or Level 2 covered institution must not use incentive-based compensation performance measures that are based solely on industry peer performance comparisons.

(d) *Volume driven incentive-based compensation.* A Level 1 or Level 2 covered institution must not provide incentive-based compensation to a covered person that is based solely on transaction revenue or volume without regard to transaction quality or compliance of the covered person with sound risk management.

**§ 372.9 Risk management and controls requirements for Level 1 and Level 2 covered institutions.**

An incentive-based compensation arrangement at a Level 1 or Level 2 covered institution will be considered to be compatible with effective risk management and controls for purposes of § 372.4(c)(2) only if such institution meets the following requirements.

(a) A Level 1 or Level 2 covered institution must have a risk management framework for its incentive-based compensation program that:

(1) Is independent of any lines of business;

(2) Includes an independent compliance program that provides for internal controls, testing, monitoring, and training with written policies and procedures consistent with § 372.11; and

(3) Is commensurate with the size and complexity of the covered institution's operations.

(b) A Level 1 or Level 2 covered institution must:

(1) Provide individuals engaged in control functions with the authority to influence the risk-taking of the business areas they monitor; and

(2) Ensure that covered persons engaged in control functions are compensated in accordance with the achievement of performance objectives linked to their control functions and independent of the performance of those business areas.

(c) A Level 1 or Level 2 covered institution must provide for the independent monitoring of:

(1) All incentive-based compensation plans in order to identify whether those plans provide incentives that appropriately balance risk and reward;

(2) Events related to forfeiture and downward adjustment reviews and decisions of forfeiture and downward adjustment reviews in order to determine consistency with § 372.7(b); and

(3) Compliance of the incentive-based compensation program with the covered institution's policies and procedures.

**§ 372.10 Governance requirements for Level 1 and Level 2 covered institutions.**

An incentive-based compensation arrangement at a Level 1 or Level 2 covered institution will not be considered to be supported by effective governance for purposes of § 372.4(c)(3), unless:

(a) The covered institution establishes a compensation committee composed solely of directors who are not senior executive officers to assist the board of directors in carrying out its responsibilities under § 372.4(e); and

(b) The compensation committee established pursuant to paragraph (a) of this section obtains:

(1) Input from the risk and audit committees of the covered institution's board of directors, or groups performing similar functions, and risk management function on the effectiveness of risk measures and adjustments used to balance risk and reward in incentive-based compensation arrangements;

(2) A written assessment of the effectiveness of the covered institution's incentive-based compensation program and related compliance and control processes in providing risk-taking incentives that are consistent with the risk profile of the covered institution, submitted on an annual or more frequent basis by the management of the covered institution and developed with input from the risk and audit committees of its board of directors, or groups performing similar functions, and from the covered institution's risk management and audit functions; and

(3) An independent written assessment of the effectiveness of the covered institution's incentive-based compensation program and related compliance and control processes in providing risk-taking incentives that are consistent with the risk profile of the covered institution, submitted on an annual or more frequent basis by the internal audit or risk management function of the covered institution,

developed independently of the covered institution's management.

**§ 372.11 Policies and procedures requirements for Level 1 and Level 2 covered institutions.**

A Level 1 or Level 2 covered institution must develop and implement policies and procedures for its incentive-based compensation program that, at a minimum:

(a) Are consistent with the prohibitions and requirements of this part;

(b) Specify the substantive and procedural criteria for the application of forfeiture and clawback, including the process for determining the amount of incentive-based compensation to be clawed back;

(c) Require that the covered institution maintain documentation of final forfeiture, downward adjustment, and clawback decisions;

(d) Specify the substantive and procedural criteria for the acceleration of payments of deferred incentive-based compensation to a covered person, consistent with § 372.7(a)(1)(iii)(B) and (a)(2)(iii)(B));

(e) Identify and describe the role of any employees, committees, or groups authorized to make incentive-based compensation decisions, including when discretion is authorized;

(f) Describe how discretion is expected to be exercised to appropriately balance risk and reward;

(g) Require that the covered institution maintain documentation of the establishment, implementation, modification, and monitoring of incentive-based compensation arrangements, sufficient to support the covered institution's decisions;

(h) Describe how incentive-based compensation arrangements will be monitored;

(i) Specify the substantive and procedural requirements of the independent compliance program consistent with § 372.9(a)(2); and

(j) Ensure appropriate roles for risk management, risk oversight, and other control function personnel in the covered institution's processes for:

(1) Designing incentive-based compensation arrangements and determining awards, deferral amounts, deferral periods, forfeiture, downward adjustment, clawback, and vesting; and

(2) Assessing the effectiveness of incentive-based compensation arrangements in restraining inappropriate risk-taking.

**§ 372.12 Indirect actions.**

A covered institution must not indirectly, or through or by any other

person, do anything that would be unlawful for such covered institution to do directly under this part.

### § 372.13 Enforcement.

The provisions of this part shall be enforced under section 505 of the Gramm-Leach-Bliley Act and, for purposes of such section, a violation of this part shall be treated as a violation of subtitle A of title V of such Act.

## National Credit Union Administration

### 12 CFR Chapter VII

#### Authority and Issuance

For the reasons stated in the joint preamble, the National Credit Union Administration proposes to amend chapter VII of title 12 of the Code of Federal Regulations as follows:

### PART 741—REQUIREMENTS FOR INSURANCE

- 4. The authority citation for part 741 continues to read as follows:

**Authority:** 12 U.S.C. 1757, 1766, 1781–1790, and 1790d; 31 U.S.C. 3717.

- 5. Add § 741.226 to read as follows:

#### § 741.226 Incentive-based compensation arrangements.

Any credit union which is insured pursuant to Title II of the Act must adhere to the requirements stated in part 751 of this chapter.

- 6. Add part 751 to subchapter A to read as follows.

### PART 751—INCENTIVE-BASED COMPENSATION ARRANGEMENTS

Sec.

- 751.1 Authority, scope, and initial applicability.
- 751.2 Definitions.
- 751.3 Applicability.
- 751.4 Requirements and prohibitions applicable to all credit unions subject to this part.
- 751.5 Additional disclosure and recordkeeping requirements for Level 1 and Level 2 credit unions.
- 751.6 Reservation of authority for Level 3 credit unions.
- 751.7 Deferral, forfeiture and downward adjustment, and clawback requirements for Level 1 and Level 2 credit unions.
- 751.8 Additional prohibitions for Level 1 and Level 2 credit unions.
- 751.9 Risk management and controls requirements for Level 1 and Level 2 credit unions.
- 751.10 Governance requirements for Level 1 and Level 2 credit unions.
- 751.11 Policies and procedures requirements for Level 1 and Level 2 credit unions.
- 751.12 Indirect actions.
- 751.13 Enforcement.
- 751.14 Credit unions in conservatorship or liquidation.

**Authority:** 12 U.S.C. 1751 *et seq.* and 5641.

#### § 751.1 Authority, scope, and initial applicability.

(a) *Authority.* This part is issued pursuant to section 956 of the Dodd-Frank Wall Street Reform and Consumer Protection Act (12 U.S.C. 5641) and the Federal Credit Union Act (12 U.S.C. 1751 *et seq.*)

(b) *Scope.* This part applies to any federally insured credit union, or any credit union eligible to make application to become an insured credit union under 12 U.S.C. 1781, with average total consolidated assets greater than or equal to \$1 billion that offers incentive-based compensation to covered persons.

(c) *Initial applicability*—(1) *Compliance date.* A credit union must meet the requirements of this part no later than [Date of the beginning of the first calendar quarter that begins at least 540 days after a final rule is published in the **Federal Register**]. Whether a credit union is a Level 1, Level 2, or Level 3 credit union at that time will be determined based on average total consolidated assets as of [Date of the beginning of the first calendar quarter that begins after a final rule is published in the **Federal Register**].

(2) *Grandfathered plans.* A credit union is not required to comply with the requirements of this part with respect to any incentive-based compensation plan with a performance period that begins before [Compliance Date as described in paragraph (c)(1) of this section].

(d) *Preservation of authority.* Nothing in this part in any way limits the authority of NCUA under other provisions of applicable law and regulations.

#### § 751.2 Definitions.

For purposes of this part only, the following definitions apply unless otherwise specified:

- (a) [Reserved].
- (b) *Average total consolidated assets* means the average of a credit union's total consolidated assets, as reported on the credit union's regulatory reports, for the four most recent consecutive quarters. If a credit union has not filed a regulatory report for each of the four most recent consecutive quarters, the credit union's average total consolidated assets means the average of its total consolidated assets, as reported on its regulatory reports, for the most recent quarter or consecutive quarters, as applicable. Average total consolidated assets are measured on the as-of date of the most recent regulatory report used in the calculation of the average.

(c) *To award incentive-based compensation* means to make a final determination, conveyed to a covered person, of the amount of incentive-based compensation payable to the covered person for performance over a performance period.

(d) *Board of directors* means the governing body of a credit union that oversees the activities of the credit union.

(e) *Clawback* means a mechanism by which a credit union can recover vested incentive-based compensation from a covered person.

(f) *Compensation, fees, or benefits* means all direct and indirect payments, both cash and non-cash, awarded to, granted to, or earned by or for the benefit of, any covered person in exchange for services rendered to a credit union.

(g) [Reserved].

(h) *Control function* means a compliance, risk management, internal audit, legal, human resources, accounting, financial reporting, or finance role responsible for identifying, measuring, monitoring, or controlling risk-taking.

(i) [Reserved].

(j) *Covered person* means any executive officer, employee, or director who receives incentive-based compensation at a credit union.

(k) *Deferral* means the delay of vesting of incentive-based compensation beyond the date on which the incentive-based compensation is awarded.

(l) *Deferral period* means the period of time between the date a performance period ends and the last date on which the incentive-based compensation awarded for such performance period vests.

(m) [Reserved].

(n) *Director* of a credit union means a member of the board of directors.

(o) *Downward adjustment* means a reduction of the amount of a covered person's incentive-based compensation not yet awarded for any performance period that has already begun, including amounts payable under long-term incentive plans, in accordance with a forfeiture and downward adjustment review under § 751.7(b).

(p) [Reserved].

(q) *Forfeiture* means a reduction of the amount of deferred incentive-based compensation awarded to a covered person that has not vested.

(r) *Incentive-based compensation* means any variable compensation, fees, or benefits that serve as an incentive or reward for performance.

(s) *Incentive-based compensation arrangement* means an agreement between a credit union and a covered

person, under which the credit union provides incentive-based compensation to the covered person, including incentive-based compensation delivered through one or more incentive-based compensation plans.

(t) *Incentive-based compensation plan* means a document setting forth terms and conditions governing the opportunity for and the payment of incentive-based compensation payments to one or more covered persons.

(u) *Incentive-based compensation program* means a credit union's framework for incentive-based compensation that governs incentive-based compensation practices and establishes related controls.

(v) *Level 1 credit union* means a credit union with average total consolidated assets greater than or equal to \$250 billion.

(w) *Level 2 credit union* means a credit union with average total consolidated assets greater than or equal to \$50 billion that is not a Level 1 credit union.

(x) *Level 3 credit union* means a credit union with average total consolidated assets greater than or equal to \$1 billion that is not a Level 1 credit union or Level 2 credit union.

(y) *Long-term incentive plan* means a plan to provide incentive-based compensation that is based on a performance period of at least three years.

(z) [Reserved].

(aa) *Performance period* means the period during which the performance of a covered person is assessed for purposes of determining incentive-based compensation.

(bb) [Reserved].

(cc) *Qualifying incentive-based compensation* means the amount of incentive-based compensation awarded to a covered person for a particular performance period, excluding amounts awarded to the covered person for that particular performance period under a long-term incentive plan.

(dd) [Reserved].

(ee) *Regulatory report* means NCUA form 5300 or 5310 call report.

(ff) [Reserved].

(gg) *Senior executive officer* means a covered person who holds the title or, without regard to title, salary, or compensation, performs the function of one or more of the following positions at a credit union for any period of time in the relevant performance period: President, chief executive officer, executive chairman, chief operating officer, chief financial officer, chief investment officer, chief legal officer, chief lending officer, chief risk officer, chief compliance officer, chief audit

executive, chief credit officer, chief accounting officer, or head of a major business line or control function.

(hh) *Significant risk-taker* means:

(1) Any covered person at a Level 1 or Level 2 credit union, other than a senior executive officer, who received annual base salary and incentive-based compensation for the last calendar year that ended at least 180 days before the beginning of the performance period of which at least one-third is incentive-based compensation and is—

(i) A covered person of a Level 1 credit union who received annual base salary and incentive-based compensation for the last calendar year that ended at least 180 days before the beginning of the performance period that placed the covered person among the highest 5 percent in annual base salary and incentive-based compensation among all covered persons (excluding senior executive officers) of the Level 1 credit union;

(ii) A covered person of a Level 2 credit union who received annual base salary and incentive-based compensation for the last calendar year that ended at least 180 days before the beginning of the performance period that placed the covered person among the highest 2 percent in annual base salary and incentive-based compensation among all covered persons (excluding senior executive officers) of the Level 2 credit union; or

(iii) A covered person of a credit union who may commit or expose 0.5 percent or more of the net worth or total capital of the credit union; and

(2) Any covered person at a Level 1 or Level 2 credit union, other than a senior executive officer, who is designated as a “significant risk-taker” by NCUA because of that person's ability to expose a credit union to risks that could lead to material financial loss in relation to the credit union's size, capital, or overall risk tolerance, in accordance with procedures established by NCUA, or by the credit union.

(3) [Reserved]

(4) If NCUA determines, in accordance with procedures established by NCUA, that a Level 1 credit union's activities, complexity of operations, risk profile, and compensation practices are similar to those of a Level 2 credit union, the Level 1 credit union may apply paragraph (hh)(1)(i) of this section to covered persons of the Level 1 credit union by substituting “2 percent” for “5 percent”.

(ii) [Reserved]

(jj) *Vesting of incentive-based compensation* means the transfer of ownership of the incentive-based compensation to the covered person to

whom the incentive-based compensation was awarded, such that the covered person's right to the incentive-based compensation is no longer contingent on the occurrence of any event.

### 751.3 Applicability.

(a) *When average total consolidated assets increase*—(1) *In general.* A credit union shall become a Level 1, Level 2, or Level 3 credit union when its average total consolidated assets increase to an amount that equals or exceeds \$250 billion, \$50 billion, or \$1 billion, respectively.

(2) *Compliance date.* A credit union that becomes a Level 1, Level 2, or Level 3 credit union pursuant to paragraph (a)(1) of this section shall comply with the requirements of this part for a Level 1, Level 2, or Level 3 credit union, respectively, not later than the first day of the first calendar quarter that begins at least 540 days after the date on which the credit union becomes a Level 1, Level 2, or Level 3 credit union, respectively. Until that day, the Level 1, Level 2, or Level 3 credit union will remain subject to the requirements of this part, if any, that applied to the credit union on the day before the date on which it became a Level 1, Level 2, or Level 3 credit union.

(3) *Grandfathered plans.* A credit union that becomes a Level 1, Level 2, or Level 3 credit union under paragraph (a)(1) of this section is not required to comply with requirements of this part applicable to a Level 1, Level 2, or Level 3 credit union, respectively, with respect to any incentive-based compensation plan with a performance period that begins before the date described in paragraph (a)(2) of this section.

(b) *When total consolidated assets decrease.* A Level 1, Level 2, or Level 3 credit union will remain subject to the requirements applicable to such credit union under this part unless and until the total consolidated assets of the credit union, as reported on the credit union's regulatory reports, fall below \$250 billion, \$50 billion, or \$1 billion, respectively, for each of four consecutive quarters. The calculation will be effective on the as-of date of the fourth consecutive regulatory report.

### 751.4 Requirements and prohibitions applicable to all credit unions subject to this part.

(a) *In general.* A credit union must not establish or maintain any type of incentive-based compensation arrangement, or any feature of any such arrangement, that encourages inappropriate risks by the credit union:

(1) By providing a covered person with excessive compensation, fees, or benefits; or

(2) That could lead to material financial loss to the credit union.

(b) *Excessive compensation.*

Compensation, fees, and benefits are considered excessive for purposes of paragraph (a)(1) of this section when amounts paid are unreasonable or disproportionate to the value of the services performed by a covered person, taking into consideration all relevant factors, including, but not limited to:

(1) The combined value of all compensation, fees, or benefits provided to the covered person;

(2) The compensation history of the covered person and other individuals with comparable expertise at the credit union;

(3) The financial condition of the credit union;

(4) Compensation practices at comparable credit unions, based upon such factors as asset size, geographic location, and the complexity of the credit union's operations and assets;

(5) For post-employment benefits, the projected total cost and benefit to the credit union; and

(6) Any connection between the covered person and any fraudulent act or omission, breach of trust or fiduciary duty, or insider abuse with regard to the credit union.

(c) *Material financial loss.* An incentive-based compensation arrangement at a credit union encourages inappropriate risks that could lead to material financial loss to the credit union, unless the arrangement:

(1) Appropriately balances risk and reward;

(2) Is compatible with effective risk management and controls; and

(3) Is supported by effective governance.

(d) *Performance measures.* An incentive-based compensation arrangement will not be considered to appropriately balance risk and reward for purposes of paragraph (c)(1) of this section unless:

(1) The arrangement includes financial and non-financial measures of performance, including considerations of risk-taking, that are relevant to a covered person's role within a credit union and to the type of business in which the covered person is engaged and that are appropriately weighted to reflect risk-taking;

(2) The arrangement is designed to allow non-financial measures of performance to override financial measures of performance when

appropriate in determining incentive-based compensation; and

(3) Any amounts to be awarded under the arrangement are subject to adjustment to reflect actual losses, inappropriate risks taken, compliance deficiencies, or other measures or aspects of financial and non-financial performance.

(e) *Board of directors.* A credit union's board of directors, or a committee thereof, must:

(1) Conduct oversight of the credit union's incentive-based compensation program;

(2) Approve incentive-based compensation arrangements for senior executive officers, including the amounts of all awards and, at the time of vesting, payouts under such arrangements; and

(3) Approve any material exceptions or adjustments to incentive-based compensation policies or arrangements for senior executive officers.

(f) *Disclosure and recordkeeping requirements.* A credit union must create annually and maintain for a period of at least seven years records that document the structure of all its incentive-based compensation arrangements and demonstrate compliance with this part. A credit union must disclose the records to NCUA upon request. At a minimum, the records must include copies of all incentive-based compensation plans, a record of who is subject to each plan, and a description of how the incentive-based compensation program is compatible with effective risk management and controls.

(g) *Rule of construction.* A credit union is not required to report the actual amount of compensation, fees, or benefits of individual covered persons as part of the disclosure and recordkeeping requirements under this part.

**§ 751.5 Additional disclosure and recordkeeping requirements for Level 1 and Level 2 credit unions.**

(a) A Level 1 or Level 2 credit union must create annually and maintain for a period of at least seven years records that document:

(1) The credit union's senior executive officers and significant risk-takers, listed by legal entity, job function, organizational hierarchy, and line of business;

(2) The incentive-based compensation arrangements for senior executive officers and significant risk-takers, including information on percentage of incentive-based compensation deferred and form of award;

(3) Any forfeiture and downward adjustment or clawback reviews and

decisions for senior executive officers and significant risk-takers; and

(4) Any material changes to the credit union's incentive-based compensation arrangements and policies.

(b) A Level 1 or Level 2 credit union must create and maintain records in a manner that allows for an independent audit of incentive-based compensation arrangements, policies, and procedures, including, those required under § 751.11.

(c) A Level 1 or Level 2 credit union must provide the records described in paragraph (a) of this section to NCUA in such form and with such frequency as requested by NCUA.

**§ 751.6 Reservation of authority for Level 3 credit unions.**

(a) *In general.* NCUA may require a Level 3 credit union with average total consolidated assets greater than or equal to \$10 billion and less than \$50 billion to comply with some or all of the provisions of §§ 751.5 and 751.7 through 751.11 if NCUA determines that the Level 3 credit union's complexity of operations or compensation practices are consistent with those of a Level 1 or Level 2 credit union.

(b) *Factors considered.* Any exercise of authority under this section will be in writing by the NCUA Board in accordance with procedures established by the NCUA Board and will consider the activities, complexity of operations, risk profile, and compensation practices of the Level 3 credit union, in addition to any other relevant factors.

**§ 751.7 Deferral, forfeiture and downward adjustment, and clawback requirements for Level 1 and Level 2 credit unions.**

An incentive-based compensation arrangement at a Level 1 or Level 2 credit union will not be considered to appropriately balance risk and reward, for purposes of § 751.4(c)(1), unless the following requirements are met.

(a) *Deferral.* (1) Qualifying incentive-based compensation must be deferred as follows:

(i) *Minimum required deferral amount.* (A) A Level 1 credit union must defer at least 60 percent of a senior executive officer's qualifying incentive-based compensation awarded for each performance period.

(B) A Level 1 credit union must defer at least 50 percent of a significant risk-taker's qualifying incentive-based compensation awarded for each performance period.

(C) A Level 2 credit union must defer at least 50 percent of a senior executive officer's qualifying incentive-based compensation awarded for each performance period.

(D) A Level 2 credit union must defer at least 40 percent of a significant risk-taker's qualifying incentive-based compensation awarded for each performance period.

(ii) *Minimum required deferral period.*

(A) For a senior executive officer or significant risk-taker of a Level 1 credit union, the deferral period for deferred qualifying incentive-based compensation must be at least 4 years.

(B) For a senior executive officer or significant risk-taker of a Level 2 credit union, the deferral period for deferred qualifying incentive-based compensation must be at least 3 years.

(iii) *Vesting of amounts during deferral period—(A) Pro rata vesting.*

During a deferral period, deferred qualifying incentive-based compensation may not vest faster than on a pro rata annual basis beginning no earlier than the first anniversary of the end of the performance period for which the amounts were awarded.

(B) *Acceleration of vesting.* A Level 1 or Level 2 credit union must not accelerate the vesting of a covered person's deferred qualifying incentive-based compensation that is required to be deferred under this part, except in the case of:

(1) Death or disability of such covered person; or

(2) The payment of income taxes that become due on deferred amounts before the covered person is vested in the deferred amount. For purposes of this paragraph, any accelerated vesting must be deducted from the scheduled deferred amounts proportionally to the deferral schedule.

(2) Incentive-based compensation awarded under a long-term incentive plan must be deferred as follows:

(i) *Minimum required deferral amount.* (A) A Level 1 credit union must defer at least 60 percent of a senior executive officer's incentive-based compensation awarded under a long-term incentive plan for each performance period.

(B) A Level 1 credit union must defer at least 50 percent of a significant risk-taker's incentive-based compensation awarded under a long-term incentive plan for each performance period.

(C) A Level 2 credit union must defer at least 50 percent of a senior executive officer's incentive-based compensation awarded under a long-term incentive plan for each performance period.

(D) A Level 2 credit union must defer at least 40 percent of a significant risk-taker's incentive-based compensation awarded under a long-term incentive plan for each performance period.

(ii) *Minimum required deferral period.*

(A) For a senior executive officer or

significant risk-taker of a Level 1 credit union, the deferral period for deferred long-term incentive plan amounts must be at least 2 years.

(B) For a senior executive officer or significant risk-taker of a Level 2 credit union, the deferral period for deferred long-term incentive plan amounts must be at least 1 year.

(iii) *Vesting of amounts during deferral period—(A) Pro rata vesting.* During a deferral period, deferred long-term incentive plan amounts may not vest faster than on a pro rata annual basis beginning no earlier than the first anniversary of the end of the performance period for which the amounts were awarded.

(B) *Acceleration of vesting.* A Level 1 or Level 2 credit union must not accelerate the vesting of a covered person's deferred long-term incentive plan amounts that is required to be deferred under this part, except in the case of:

(1) Death or disability of such covered person; or

(2) The payment of income taxes that become due on deferred amounts before the covered person is vested in the deferred amount. For purposes of this paragraph, any accelerated vesting must be deducted from the scheduled deferred amounts proportionally to the deferral schedule.

(3) *Adjustments of deferred qualifying incentive-based compensation and deferred long-term incentive plan compensation amounts.* A Level 1 or Level 2 credit union may not increase deferred qualifying incentive-based compensation or deferred long-term incentive plan amounts for a senior executive officer or significant risk-taker during the deferral period. For purposes of this paragraph, an increase in value attributable solely to a change in share value, a change in interest rates, or the payment of interest according to terms set out at the time of the award is not considered an increase in incentive-based compensation amounts.

(4) [Reserved].

(b) *Forfeiture and downward adjustment—(1) Compensation at risk.*

(i) A Level 1 or Level 2 credit union must place at risk of forfeiture all unvested deferred incentive-based compensation of any senior executive officer or significant risk-taker, including unvested deferred amounts awarded under long-term incentive plans.

(ii) A Level 1 or Level 2 credit union must place at risk of downward adjustment all of a senior executive officer's or significant risk-taker's incentive-based compensation amounts not yet awarded for the current

performance period, including amounts payable under long-term incentive plans.

(2) *Events triggering forfeiture and downward adjustment review.* At a minimum, a Level 1 or Level 2 credit union must consider forfeiture and downward adjustment of incentive-based compensation of senior executive officers and significant risk-takers described in paragraph (b)(3) of this section due to any of the following adverse outcomes at the credit union:

(i) Poor financial performance attributable to a significant deviation from the risk parameters set forth in the credit union's policies and procedures;

(ii) Inappropriate risk taking, regardless of the impact on financial performance;

(iii) Material risk management or control failures;

(iv) Non-compliance with statutory, regulatory, or supervisory standards that results in:

(A) Enforcement or legal action against the credit union brought by a federal or state regulator or agency; or

(B) A requirement that the credit union report a restatement of a financial statement to correct a material error; and

(v) Other aspects of conduct or poor performance as defined by the credit union.

(3) *Senior executive officers and significant risk-takers affected by forfeiture and downward adjustment.* A Level 1 or Level 2 credit union must consider forfeiture and downward adjustment for a senior executive officer or significant risk-taker with direct responsibility, or responsibility due to the senior executive officer's or significant risk-taker's role or position in the credit union's organizational structure, for the events related to the forfeiture and downward adjustment review set forth in paragraph (b)(2) of this section.

(4) *Determining forfeiture and downward adjustment amounts.* A Level 1 or Level 2 credit union must consider, at a minimum, the following factors when determining the amount or portion of a senior executive officer's or significant risk-taker's incentive-based compensation that should be forfeited or adjusted downward:

(i) The intent of the senior executive officer or significant risk-taker to operate outside the risk governance framework approved by the credit union's board of directors or to depart from the credit union's policies and procedures;

(ii) The senior executive officer's or significant risk-taker's level of participation in, awareness of, and responsibility for, the events triggering

the forfeiture and downward adjustment review set forth in paragraph (b)(2) of this section;

(iii) Any actions the senior executive officer or significant risk-taker took or could have taken to prevent the events triggering the forfeiture and downward adjustment review set forth in paragraph (b)(2) of this section;

(iv) The financial and reputational impact of the events triggering the forfeiture and downward adjustment review set forth in paragraph (b)(2) of this section to the credit union, the line or sub-line of business, and individuals involved, as applicable, including the magnitude of any financial loss and the cost of known or potential subsequent fines, settlements, and litigation;

(v) The causes of the events triggering the forfeiture and downward adjustment review set forth in paragraph (b)(2) of this section, including any decision-making by other individuals; and

(vi) Any other relevant information, including past behavior and past risk outcomes attributable to the senior executive officer or significant risk-taker.

(c) *Clawback.* A Level 1 or Level 2 credit union must include clawback provisions in incentive-based compensation arrangements for senior executive officers and significant risk-takers that, at a minimum, allow the credit union to recover incentive-based compensation from a current or former senior executive officer or significant risk-taker for seven years following the date on which such compensation vests, if the credit union determines that the senior executive officer or significant risk-taker engaged in:

(1) Misconduct that resulted in significant financial or reputational harm to the credit union;

(2) Fraud; or

(3) Intentional misrepresentation of information used to determine the senior executive officer or significant risk-taker's incentive-based compensation.

#### **§ 751.8 Additional prohibitions for Level 1 and Level 2 credit unions.**

An incentive-based compensation arrangement at a Level 1 or Level 2 credit union will be considered to provide incentives that appropriately balance risk and reward for purposes of § 751.4(c)(1) only if such credit union complies with the following prohibitions.

(a) *Hedging.* A Level 1 or Level 2 credit union must not purchase a hedging instrument or similar instrument on behalf of a covered person to hedge or offset any decrease

in the value of the covered person's incentive-based compensation.

(b) *Maximum incentive-based compensation opportunity.* A Level 1 or Level 2 credit union must not award incentive-based compensation to:

(1) A senior executive officer in excess of 125 percent of the target amount for that incentive-based compensation; or

(2) A significant risk-taker in excess of 150 percent of the target amount for that incentive-based compensation.

(c) *Relative performance measures.* A Level 1 or Level 2 credit union must not use incentive-based compensation performance measures that are based solely on industry peer performance comparisons.

(d) *Volume driven incentive-based compensation.* A Level 1 or Level 2 credit union must not provide incentive-based compensation to a covered person that is based solely on transaction revenue or volume without regard to transaction quality or compliance of the covered person with sound risk management.

#### **§ 751.9 Risk management and controls requirements for Level 1 and Level 2 credit unions.**

An incentive-based compensation arrangement at a Level 1 or Level 2 credit union will be considered to be compatible with effective risk management and controls for purposes of § 751.4(c)(2) only if such credit union meets the following requirements.

(a) A Level 1 or Level 2 credit union must have a risk management framework for its incentive-based compensation program that:

(1) Is independent of any lines of business;

(2) Includes an independent compliance program that provides for internal controls, testing, monitoring, and training with written policies and procedures consistent with § 751.11; and

(3) Is commensurate with the size and complexity of the credit union's operations.

(b) A Level 1 or Level 2 credit union must:

(1) Provide individuals engaged in control functions with the authority to influence the risk-taking of the business areas they monitor; and

(2) Ensure that covered persons engaged in control functions are compensated in accordance with the achievement of performance objectives linked to their control functions and independent of the performance of those business areas.

(c) A Level 1 or Level 2 credit union must provide for the independent monitoring of:

(1) All incentive-based compensation plans in order to identify whether those plans provide incentives that appropriately balance risk and reward;

(2) Events related to forfeiture and downward adjustment reviews and decisions of forfeiture and downward adjustment reviews in order to determine consistency with § 751.7(b); and

(3) Compliance of the incentive-based compensation program with the credit union's policies and procedures.

#### **§ 751.10 Governance requirements for Level 1 and Level 2 credit unions.**

An incentive-based compensation arrangement at a Level 1 or Level 2 credit union will not be considered to be supported by effective governance for purposes of § 751.4(c)(3), unless:

(a) The credit union establishes a compensation committee composed solely of directors who are not senior executive officers to assist the board of directors in carrying out its responsibilities under § 751.4(e); and

(b) The compensation committee established pursuant to paragraph (a) of this section obtains:

(1) Input from the risk and audit committees of the credit union's board of directors, or groups performing similar functions, and risk management function on the effectiveness of risk measures and adjustments used to balance risk and reward in incentive-based compensation arrangements;

(2) A written assessment of the effectiveness of the credit union's incentive-based compensation program and related compliance and control processes in providing risk-taking incentives that are consistent with the risk profile of the credit union, submitted on an annual or more frequent basis by the management of the credit union and developed with input from the risk and audit committees of its board of directors, or groups performing similar functions, and from the credit union's risk management and audit functions; and

(3) An independent written assessment of the effectiveness of the credit union's incentive-based compensation program and related compliance and control processes in providing risk-taking incentives that are consistent with the risk profile of the credit union, submitted on an annual or more frequent basis by the internal audit or risk management function of the credit union, developed independently of the credit union's management.

### **§ 751.11 Policies and procedures requirements for Level 1 and Level 2 credit unions.**

A Level 1 or Level 2 credit union must develop and implement policies and procedures for its incentive-based compensation program that, at a minimum:

- (a) Are consistent with the prohibitions and requirements of this part;
- (b) Specify the substantive and procedural criteria for the application of forfeiture and clawback, including the process for determining the amount of incentive-based compensation to be clawed back;
- (c) Require that the credit union maintain documentation of final forfeiture, downward adjustment, and clawback decisions;
- (d) Specify the substantive and procedural criteria for the acceleration of payments of deferred incentive-based compensation to a covered person, consistent with § 751.7(a)(1)(iii)(B) and (a)(2)(iii)(B);
- (e) Identify and describe the role of any employees, committees, or groups authorized to make incentive-based compensation decisions, including when discretion is authorized;
- (f) Describe how discretion is expected to be exercised to appropriately balance risk and reward;
- (g) Require that the credit union maintain documentation of the establishment, implementation, modification, and monitoring of incentive-based compensation arrangements, sufficient to support the credit union's decisions;
- (h) Describe how incentive-based compensation arrangements will be monitored;
- (i) Specify the substantive and procedural requirements of the independent compliance program consistent with § 751.9(a)(2); and
- (j) Ensure appropriate roles for risk management, risk oversight, and other control function personnel in the credit union's processes for:

- (1) Designing incentive-based compensation arrangements and determining awards, deferral amounts, deferral periods, forfeiture, downward adjustment, clawback, and vesting; and
- (2) Assessing the effectiveness of incentive-based compensation arrangements in restraining inappropriate risk-taking.

### **§ 751.12 Indirect actions.**

A credit union must not indirectly, or through or by any other person, do anything that would be unlawful for such credit union to do directly under this part. The term "any other person"

includes a credit union service organization described in 12 U.S.C. 1757(7)(I) or established under similar state law.

### **§ 751.13 Enforcement.**

The provisions of this part shall be enforced under section 505 of the Gramm-Leach-Bliley Act and, for purposes of such section, a violation of this part shall be treated as a violation of subtitle A of title V of such Act.

### **§ 751.14 Credit unions in conservatorship or liquidation.**

(a) *Scope.* This section applies to federally insured credit unions for which any one or more of the following parties are acting as conservator or liquidating agent:

- (1) The National Credit Union Administration Board;
- (2) The appropriate state supervisory authority; or
- (3) Any party designated by the National Credit Union Administration Board or by the appropriate state supervisory authority.

(b) *Compensation requirements.* For a credit union subject to this section, the requirements of this part do not apply. Instead, the conservator or liquidating agent, in its discretion and according to the circumstances deemed relevant in the judgment of the conservator or liquidating agent, will determine the requirements that best fulfill the requirements and purposes of 12 U.S.C. 5641. The conservator or liquidating agent may determine appropriate transition terms and provisions in the event that the credit union ceases to be within the scope of this section.

### **Federal Housing Finance Agency**

#### **Authority and Issuance**

Accordingly, for the reasons stated in the joint preamble, under the authority of 12 U.S.C. 4526 and 5641, FHFA proposes to amend chapter XII of title 12 of the Code of Federal Regulation as follows:

■ 7. Add part 1232 to subchapter B to read as follows:

### **PART 1232—INCENTIVE-BASED COMPENSATION ARRANGEMENTS**

Sec.

- 1232.1 Authority, scope, and initial applicability.
- 1232.2 Definitions.
- 1232.3 Applicability.
- 1232.4 Requirements and prohibitions applicable to all covered institutions.
- 1232.5 Additional disclosure and recordkeeping requirements for Level 1 and Level 2 covered institutions.
- 1232.6 Reservation of authority for Level 3 covered institutions.

1232.7 Deferral, forfeiture and downward adjustment, and clawback requirements for Level 1 and Level 2 covered institutions.

1232.8 Additional prohibitions for Level 1 and Level 2 covered institutions.

1232.9 Risk management and controls requirements for Level 1 and Level 2 covered institutions.

1232.10 Governance requirements for Level 1 and Level 2 covered institutions.

1232.11 Policies and procedures requirements for Level 1 and Level 2 covered institutions.

1232.12 Indirect actions.

1232.13 Enforcement.

1232.14 Covered institutions in conservatorship or receivership.

**Authority:** 12 U.S.C. 4511(b), 4513, 4518, 4526, ch. 46 subch. III, and 5641.

### **§ 1232.1 Authority, scope, and initial applicability.**

(a) *Authority.* This part is issued pursuant to section 956 of the Dodd-Frank Wall Street Reform and Consumer Protection Act (12 U.S.C. 5641) and sections 1311, 1313, 1314, 1318, and 1319G and Subtitle C of the Safety and Soundness Act (12 U.S.C. 4511(b), 4513, 4514, 4518, 4526, and ch. 46 subch. III).

(b) *Scope.* This part applies to a covered institution with average total consolidated assets greater than or equal to \$1 billion that offers incentive-based compensation to covered persons.

(c) *Initial applicability*—(1) *Compliance date.* A covered institution must meet the requirements of this part no later than [Date of the beginning of the first calendar quarter that begins at least 540 days after a final rule is published in the **Federal Register**]. Whether a covered institution other than a Federal Home Loan Bank is a Level 1, Level 2, or Level 3 covered institution at that time will be determined based on average total consolidated assets as of [Date of the beginning of the first calendar quarter that begins after a final rule is published in the **Federal Register**].

(2) *Grandfathered plans.* A covered institution is not required to comply with the requirements of this part with respect to any incentive-based compensation plan with a performance period that begins before [Compliance Date as described in paragraph (c)(1) of this section].

(d) *Preservation of authority.* Nothing in this part in any way limits the authority of the Federal Housing Finance Agency under other provisions of applicable law and regulations.

### **§ 1232.2 Definitions.**

For purposes of this part only, the following definitions apply unless otherwise specified:

- (a) [Reserved].

(b) *Average total consolidated assets* means the average of a regulated institution's total consolidated assets, as reported on the regulated institution's regulatory reports, for the four most recent consecutive quarters. If a regulated institution has not filed a regulatory report for each of the four most recent consecutive quarters, the regulated institution's average total consolidated assets means the average of its total consolidated assets, as reported on its regulatory reports, for the most recent quarter or consecutive quarters, as applicable. Average total consolidated assets are measured on the as-of date of the most recent regulatory report used in the calculation of the average.

(c) *To award incentive-based compensation* means to make a final determination, conveyed to a covered person, of the amount of incentive-based compensation payable to the covered person for performance over a performance period.

(d) *Board of directors* means the governing body of a covered institution that oversees the activities of the covered institution, often referred to as the board of directors or board of managers.

(e) *Clawback* means a mechanism by which a covered institution can recover vested incentive-based compensation from a covered person.

(f) *Compensation, fees, or benefits* means all direct and indirect payments, both cash and non-cash, awarded to, granted to, or earned by or for the benefit of, any covered person in exchange for services rendered to a covered institution.

(g) [Reserved].

(h) *Control function* means a compliance, risk management, internal audit, legal, human resources, accounting, financial reporting, or finance role responsible for identifying, measuring, monitoring, or controlling risk-taking.

(i) *Covered institution* means a regulated institution with average total consolidated assets greater than or equal to \$1 billion.

(j) *Covered person* means any executive officer, employee, director, or principal shareholder who receives incentive-based compensation at a covered institution.

(k) *Deferral* means the delay of vesting of incentive-based compensation beyond the date on which the incentive-based compensation is awarded.

(l) *Deferral period* means the period of time between the date a performance period ends and the last date on which the incentive-based compensation

awarded for such performance period vests.

(m) [Reserved].

(n) *Director* of a covered institution means a member of the board of directors.

(o) *Downward adjustment* means a reduction of the amount of a covered person's incentive-based compensation not yet awarded for any performance period that has already begun, including amounts payable under long-term incentive plans, in accordance with a forfeiture and downward adjustment review under § 1232.7(b).

(p) *Equity-like instrument* means:

(1) Equity in the covered institution or of any affiliate of the covered institution; or

(2) A form of compensation:

(i) Payable at least in part based on the price of the shares or other equity instruments of the covered institution or of any affiliate of the covered institution; or

(ii) That requires, or may require, settlement in the shares of the covered institution or of any affiliate of the covered institution.

(q) *Forfeiture* means a reduction of the amount of deferred incentive-based compensation awarded to a covered person that has not vested.

(r) *Incentive-based compensation* means any variable compensation, fees, or benefits that serve as an incentive or reward for performance.

(s) *Incentive-based compensation arrangement* means an agreement between a covered institution and a covered person, under which the covered institution provides incentive-based compensation to the covered person, including incentive-based compensation delivered through one or more incentive-based compensation plans.

(t) *Incentive-based compensation plan* means a document setting forth terms and conditions governing the opportunity for and the payment of incentive-based compensation payments to one or more covered persons.

(u) *Incentive-based compensation program* means a covered institution's framework for incentive-based compensation that governs incentive-based compensation practices and establishes related controls.

(v) *Level 1 covered institution* means a covered institution with average total consolidated assets greater than or equal to \$250 billion that is not a Federal Home Loan Bank.

(w) *Level 2 covered institution* means a covered institution with average total consolidated assets greater than or equal to \$50 billion that is not a Level 1 covered institution and any Federal

Home Loan Bank that is a covered institution.

(x) *Level 3 covered institution* means a covered institution with average total consolidated assets greater than or equal to \$1 billion that is not a Level 1 covered institution or Level 2 covered institution.

(y) *Long-term incentive plan* means a plan to provide incentive-based compensation that is based on a performance period of at least three years.

(z) *Option* means an instrument through which a covered institution provides a covered person the right, but not the obligation, to buy a specified number of shares representing an ownership stake in a company at a predetermined price within a set time period or on a date certain, or any similar instrument, such as a stock appreciation right.

(aa) *Performance period* means the period during which the performance of a covered person is assessed for purposes of determining incentive-based compensation.

(bb) *Principal shareholder* means a natural person who, directly or indirectly, or acting through or in concert with one or more persons, owns, controls, or has the power to vote 10 percent or more of any class of voting securities of a covered institution.

(cc) *Qualifying incentive-based compensation* means the amount of incentive-based compensation awarded to a covered person for a particular performance period, excluding amounts awarded to the covered person for that particular performance period under a long-term incentive plan.

(dd) *Regulated institution* means an Enterprise, as defined in 12 U.S.C. 4502(10), and a Federal Home Loan Bank.

(ee) *Regulatory report* means the Call Report Statement of Condition.

(ff) [Reserved].

(gg) *Senior executive officer* means a covered person who holds the title or, without regard to title, salary, or compensation, performs the function of one or more of the following positions at a covered institution for any period of time in the relevant performance period: President, chief executive officer, executive chairman, chief operating officer, chief financial officer, chief investment officer, chief legal officer, chief lending officer, chief risk officer, chief compliance officer, chief audit executive, chief credit officer, chief accounting officer, or head of a major business line or control function.

(hh) *Significant risk-taker* means:

(1) Any covered person at a Level 1 or Level 2 covered institution, other

than a senior executive officer, who received annual base salary and incentive-based compensation for the last calendar year that ended at least 180 days before the beginning of the performance period of which at least one-third is incentive-based compensation and is—

(i) A covered person of a Level 1 covered institution who received annual base salary and incentive-based compensation for the last calendar year that ended at least 180 days before the beginning of the performance period that placed the covered person among the highest 5 percent in annual base salary and incentive-based compensation among all covered persons (excluding senior executive officers) of the Level 1 covered institution;

(ii) A covered person of a Level 2 covered institution who received annual base salary and incentive-based compensation for the last calendar year that ended at least 180 days before the beginning of the performance period that placed the covered person among the highest 2 percent in annual base salary and incentive-based compensation among all covered persons (excluding senior executive officers) of the Level 2 covered institution; or

(iii) A covered person of a covered institution who may commit or expose 0.5 percent or more of the regulatory capital, in the case of a Federal Home Loan Bank, or the minimum capital, in the case of an Enterprise, of the covered institution; and

(2) Any covered person at a Level 1 or Level 2 covered institution, other than a senior executive officer, who is designated as a “significant risk-taker” by the Federal Housing Finance Agency because of that person’s ability to expose a covered institution to risks that could lead to material financial loss in relation to the covered institution’s size, capital, or overall risk tolerance, in accordance with procedures established by the Federal Housing Finance Agency, or by the covered institution.

(3) [Reserved].

(4) If the Federal Housing Finance Agency determines, in accordance with procedures established by the Federal Housing Finance Agency, that a Level 1 covered institution’s activities, complexity of operations, risk profile, and compensation practices are similar to those of a Level 2 covered institution, the Level 1 covered institution may apply paragraph (hh)(1)(i) of this section to covered persons of the Level 1 covered institution by substituting “2 percent” for “5 percent”.

(ii) [Reserved].

(jj) *Vesting* of incentive-based compensation means the transfer of ownership of the incentive-based compensation to the covered person to whom the incentive-based compensation was awarded, such that the covered person’s right to the incentive-based compensation is no longer contingent on the occurrence of any event.

#### § 1232.3 Applicability.

(a) *When average total consolidated assets increase—*(1) *In general.* A regulated institution other than a Federal Home Loan Bank shall become a Level 1, Level 2, or Level 3 covered institution when its average total consolidated assets increase to an amount that equals or exceeds \$250 billion, \$50 billion, or \$1 billion, respectively.

(2) *Compliance date.* A regulated institution that becomes a Level 1, Level 2, or Level 3 covered institution pursuant to paragraph (a)(1) of this section shall comply with the requirements of this part for a Level 1, Level 2, or Level 3 covered institution, respectively, not later than the first day of the first calendar quarter that begins at least 540 days after the date on which the regulated institution becomes a Level 1, Level 2, or Level 3 covered institution, respectively. Until that day, the Level 1, Level 2, or Level 3 covered institution will remain subject to the requirements of this part, if any, that applied to the regulated institution on the day before the date on which it became a Level 1, Level 2, or Level 3 covered institution.

(3) *Grandfathered plans.* A regulated institution that becomes a Level 1, Level 2, or Level 3 covered institution under paragraph (a)(1) of this section is not required to comply with requirements of this part applicable to a Level 1, Level 2, or Level 3 covered institution, respectively, with respect to any incentive-based compensation plan with a performance period that begins before the date described in paragraph (a)(2) of this section. Any such incentive-based compensation plan shall remain subject to the requirements under this part, if any, that applied to the regulated institution at the beginning of the performance period.

(b) *When total consolidated assets decrease.* A Level 1, Level 2, or Level 3 covered institution other than a Federal Home Loan Bank will remain subject to the requirements applicable to such covered institution under this part unless and until the total consolidated assets of the covered institution, as reported on the covered institution’s regulatory reports, fall below \$250

billion, \$50 billion, or \$1 billion, respectively, for each of four consecutive quarters. A Federal Home Loan Bank will remain subject to the requirements of a Level 2 covered institution under this part unless and until the total consolidated assets of the Federal Home Loan Bank, as reported on the Federal Home Loan Bank’s regulatory reports, fall below \$1 billion for each of four consecutive quarters. The calculation will be effective on the as-of date of the fourth consecutive regulatory report.

#### § 1232.4 Requirements and prohibitions applicable to all covered institutions.

(a) *In general.* A covered institution must not establish or maintain any type of incentive-based compensation arrangement, or any feature of any such arrangement, that encourages inappropriate risks by the covered institution:

(1) By providing a covered person with excessive compensation, fees, or benefits; or

(2) That could lead to material financial loss to the covered institution.

(b) *Excessive compensation.*

Compensation, fees, and benefits are considered excessive for purposes of paragraph (a)(1) of this section when amounts paid are unreasonable or disproportionate to the value of the services performed by a covered person, taking into consideration all relevant factors, including, but not limited to:

(1) The combined value of all compensation, fees, or benefits provided to the covered person;

(2) The compensation history of the covered person and other individuals with comparable expertise at the covered institution;

(3) The financial condition of the covered institution;

(4) Compensation practices at comparable institutions, based upon such factors as asset size, geographic location, and the complexity of the covered institution’s operations and assets;

(5) For post-employment benefits, the projected total cost and benefit to the covered institution; and

(6) Any connection between the covered person and any fraudulent act or omission, breach of trust or fiduciary duty, or insider abuse with regard to the covered institution.

(c) *Material financial loss.* An incentive-based compensation arrangement at a covered institution encourages inappropriate risks that could lead to material financial loss to the covered institution, unless the arrangement:

(1) Appropriately balances risk and reward;

(2) Is compatible with effective risk management and controls; and  
 (3) Is supported by effective governance.

(d) *Performance measures.* An incentive-based compensation arrangement will not be considered to appropriately balance risk and reward for purposes of paragraph (c)(1) of this section unless:

(1) The arrangement includes financial and non-financial measures of performance, including considerations of risk-taking, that are relevant to a covered person's role within a covered institution and to the type of business in which the covered person is engaged and that are appropriately weighted to reflect risk-taking;

(2) The arrangement is designed to allow non-financial measures of performance to override financial measures of performance when appropriate in determining incentive-based compensation; and

(3) Any amounts to be awarded under the arrangement are subject to adjustment to reflect actual losses, inappropriate risks taken, compliance deficiencies, or other measures or aspects of financial and non-financial performance.

(e) *Board of directors.* A covered institution's board of directors, or a committee thereof, must:

(1) Conduct oversight of the covered institution's incentive-based compensation program;

(2) Approve incentive-based compensation arrangements for senior executive officers, including the amounts of all awards and, at the time of vesting, payouts under such arrangements; and

(3) Approve any material exceptions or adjustments to incentive-based compensation policies or arrangements for senior executive officers.

(f) *Disclosure and recordkeeping requirements.* A covered institution must create annually and maintain for a period of at least seven years records that document the structure of all its incentive-based compensation arrangements and demonstrate compliance with this part. A covered institution must disclose the records to the Federal Housing Finance Agency upon request. At a minimum, the records must include copies of all incentive-based compensation plans, a record of who is subject to each plan, and a description of how the incentive-based compensation program is compatible with effective risk management and controls.

(g) *Rule of construction.* A covered institution is not required to report the actual amount of compensation, fees, or

benefits of individual covered persons as part of the disclosure and recordkeeping requirements under this part, though it may be required to do so under other applicable regulations of the Federal Housing Finance Agency.

**§ 1232.5 Additional disclosure and recordkeeping requirements for Level 1 and Level 2 covered institutions.**

(a) A Level 1 or Level 2 covered institution must create annually and maintain for a period of at least seven years records that document:

(1) The covered institution's senior executive officers and significant risk-takers, listed by legal entity, job function, organizational hierarchy, and line of business;

(2) The incentive-based compensation arrangements for senior executive officers and significant risk-takers, including information on percentage of incentive-based compensation deferred and form of award;

(3) Any forfeiture and downward adjustment or clawback reviews and decisions for senior executive officers and significant risk-takers; and

(4) Any material changes to the covered institution's incentive-based compensation arrangements and policies.

(b) A Level 1 or Level 2 covered institution must create and maintain records in a manner that allows for an independent audit of incentive-based compensation arrangements, policies, and procedures, including those required under § 1232.11.

(c) A Level 1 or Level 2 covered institution must provide the records described in paragraph (a) of this section to the Federal Housing Finance Agency in such form and with such frequency as requested by the Federal Housing Finance Agency.

**§ 1232.6 Reservation of authority for Level 3 covered institutions.**

(a) *In general.* The Federal Housing Finance Agency may require a Level 3 covered institution with average total consolidated assets greater than or equal to \$10 billion and less than \$50 billion to comply with some or all of the provisions of §§ 1232.5 and 1232.7 through 1232.11 if the Federal Housing Finance Agency determines that the Level 3 covered institution's complexity of operations or compensation practices are consistent with those of a Level 1 or Level 2 covered institution.

(b) *Factors considered.* Any exercise of authority under this section will be in writing by the Federal Housing Finance Agency in accordance with procedures established by the Federal Housing Finance Agency and will

consider the activities, complexity of operations, risk profile, and compensation practices of the Level 3 covered institution, in addition to any other relevant factors.

**§ 1232.7 Deferral, forfeiture and downward adjustment, and clawback requirements for Level 1 and Level 2 covered institutions.**

An incentive-based compensation arrangement at a Level 1 or Level 2 covered institution will not be considered to appropriately balance risk and reward, for purposes of § 1232.4(c)(1), unless the following requirements are met.

(a) *Deferral.* (1) Qualifying incentive-based compensation must be deferred as follows:

(i) *Minimum required deferral amount.* (A) A Level 1 covered institution must defer at least 60 percent of a senior executive officer's qualifying incentive-based compensation awarded for each performance period.

(B) A Level 1 covered institution must defer at least 50 percent of a significant risk-taker's qualifying incentive-based compensation awarded for each performance period.

(C) A Level 2 covered institution must defer at least 50 percent of a senior executive officer's qualifying incentive-based compensation awarded for each performance period.

(D) A Level 2 covered institution must defer at least 40 percent of a significant risk-taker's qualifying incentive-based compensation awarded for each performance period.

(ii) *Minimum required deferral period.* (A) For a senior executive officer or significant risk-taker of a Level 1 covered institution, the deferral period for deferred qualifying incentive-based compensation must be at least 4 years.

(B) For a senior executive officer or significant risk-taker of a Level 2 covered institution, the deferral period for deferred qualifying incentive-based compensation must be at least 3 years.

(iii) *Vesting of amounts during deferral period.*—(A) *Pro rata vesting.* During a deferral period, deferred qualifying incentive-based compensation may not vest faster than on a pro rata annual basis beginning no earlier than the first anniversary of the end of the performance period for which the amounts were awarded.

(B) *Acceleration of vesting.* A Level 1 or Level 2 covered institution must not accelerate the vesting of a covered person's deferred qualifying incentive-based compensation that is required to be deferred under this part, except in the case of death or disability of such covered person.

(2) Incentive-based compensation awarded under a long-term incentive plan must be deferred as follows:

(i) *Minimum required deferral amount.*

(A) A Level 1 covered institution must defer at least 60 percent of a senior executive officer's incentive-based compensation awarded under a long-term incentive plan for each performance period.

(B) A Level 1 covered institution must defer at least 50 percent of a significant risk-taker's incentive-based compensation awarded under a long-term incentive plan for each performance period.

(C) A Level 2 covered institution must defer at least 50 percent of a senior executive officer's incentive-based compensation awarded under a long-term incentive plan for each performance period.

(D) A Level 2 covered institution must defer at least 40 percent of a significant risk-taker's incentive-based compensation awarded under a long-term incentive plan for each performance period.

(ii) *Minimum required deferral period.*

(A) For a senior executive officer or significant risk-taker of a Level 1 covered institution, the deferral period for deferred long-term incentive plan amounts must be at least 2 years.

(B) For a senior executive officer or significant risk-taker of a Level 2 covered institution, the deferral period for deferred long-term incentive plan amounts must be at least 1 year.

(iii) *Vesting of amounts during deferral period—(A) Pro rata vesting.* During a deferral period, deferred long-term incentive plan amounts may not vest faster than on a pro rata annual basis beginning no earlier than the first anniversary of the end of the performance period for which the amounts were awarded.

(B) *Acceleration of vesting.* A Level 1 or Level 2 covered institution must not accelerate the vesting of a covered person's deferred long-term incentive plan amounts that is required to be deferred under this part, except in the case of death or disability of such covered person.

(3) *Adjustments of deferred qualifying incentive-based compensation and deferred long-term incentive plan compensation amounts.* A Level 1 or Level 2 covered institution may not increase deferred qualifying incentive-based compensation or deferred long-term incentive plan amounts for a senior executive officer or significant risk-taker during the deferral period. For purposes of this paragraph, an increase in value attributable solely to a change in share

value, a change in interest rates, or the payment of interest according to terms set out at the time of the award is not considered an increase in incentive-based compensation amounts.

(4) *Composition of deferred qualifying incentive-based compensation and deferred long-term incentive plan compensation for Level 1 and Level 2 covered institutions—(i) Cash and equity-like instruments.* For a senior executive officer or significant risk-taker of a Level 1 or Level 2 covered institution, any deferred qualifying incentive-based compensation or deferred long-term incentive plan amounts must include substantial portions of both deferred cash and, in the case of a covered institution that issues equity instruments and is permitted by the Federal Housing Finance Agency to use equity-like instruments as compensation for senior executive officers and significant risk-takers, equity-like instruments throughout the deferral period.

(ii) *Options.* If a senior executive officer or significant risk-taker of a Level 1 or Level 2 covered institution receives incentive-based compensation for a performance period in the form of options, the total amount of such options that may be used to meet the minimum deferral amount requirements of paragraph (a)(1)(i) or (a)(2)(i) of this section is limited to no more than 15 percent of the amount of total incentive-based compensation awarded to the senior executive officer or significant risk-taker for that performance period.

(b) *Forfeiture and downward adjustment—(1) Compensation at risk.* (i) A Level 1 or Level 2 covered institution must place at risk of forfeiture all unvested deferred incentive-based compensation of any senior executive officer or significant risk-taker, including unvested deferred amounts awarded under long-term incentive plans.

(ii) A Level 1 or Level 2 covered institution must place at risk of downward adjustment all of a senior executive officer's or significant risk-taker's incentive-based compensation amounts not yet awarded for the current performance period, including amounts payable under long-term incentive plans.

(2) *Events triggering forfeiture and downward adjustment review.* At a minimum, a Level 1 or Level 2 covered institution must consider forfeiture and downward adjustment of incentive-based compensation of senior executive officers and significant risk-takers described in paragraph (b)(3) of this section due to any of the following

adverse outcomes at the covered institution:

(i) Poor financial performance attributable to a significant deviation from the risk parameters set forth in the covered institution's policies and procedures;

(ii) Inappropriate risk taking, regardless of the impact on financial performance;

(iii) Material risk management or control failures;

(iv) Non-compliance with statutory, regulatory, or supervisory standards that results in:

(A) Enforcement or legal action against the covered institution brought by a federal or state regulator or agency; or

(B) A requirement that the covered institution report a restatement of a financial statement to correct a material error; and

(v) Other aspects of conduct or poor performance as defined by the covered institution.

(3) *Senior executive officers and significant risk-takers affected by forfeiture and downward adjustment.* A Level 1 or Level 2 covered institution must consider forfeiture and downward adjustment for a senior executive officer or significant risk-taker with direct responsibility, or responsibility due to the senior executive officer's or significant risk-taker's role or position in the covered institution's organizational structure, for the events related to the forfeiture and downward adjustment review set forth in paragraph (b)(2) of this section.

(4) *Determining forfeiture and downward adjustment amounts.* A Level 1 or Level 2 covered institution must consider, at a minimum, the following factors when determining the amount or portion of a senior executive officer's or significant risk-taker's incentive-based compensation that should be forfeited or adjusted downward:

(i) The intent of the senior executive officer or significant risk-taker to operate outside the risk governance framework approved by the covered institution's board of directors or to depart from the covered institution's policies and procedures;

(ii) The senior executive officer's or significant risk-taker's level of participation in, awareness of, and responsibility for, the events triggering the forfeiture and downward adjustment review set forth in paragraph (b)(2) of this section;

(iii) Any actions the senior executive officer or significant risk-taker took or could have taken to prevent the events triggering the forfeiture and downward

adjustment review set forth in paragraph (b)(2) of this section;

(iv) The financial and reputational impact of the events triggering the forfeiture and downward adjustment review set forth in paragraph (b)(2) of this section to the covered institution, the line or sub-line of business, and individuals involved, as applicable, including the magnitude of any financial loss and the cost of known or potential subsequent fines, settlements, and litigation;

(v) The causes of the events triggering the forfeiture and downward adjustment review set forth in paragraph (b)(2) of this section, including any decision-making by other individuals; and

(vi) Any other relevant information, including past behavior and past risk outcomes attributable to the senior executive officer or significant risk-taker.

(c) *Clawback*. A Level 1 or Level 2 covered institution must include clawback provisions in incentive-based compensation arrangements for senior executive officers and significant risk-takers that, at a minimum, allow the covered institution to recover incentive-based compensation from a current or former senior executive officer or significant risk-taker for seven years following the date on which such compensation vests, if the covered institution determines that the senior executive officer or significant risk-taker engaged in:

- (1) Misconduct that resulted in significant financial or reputational harm to the covered institution;
- (2) Fraud; or
- (3) Intentional misrepresentation of information used to determine the senior executive officer or significant risk-taker's incentive-based compensation.

#### **§ 1232.8 Additional prohibitions for Level 1 and Level 2 covered institutions.**

An incentive-based compensation arrangement at a Level 1 or Level 2 covered institution will be considered to provide incentives that appropriately balance risk and reward for purposes of § 1232.4(c)(1) only if such institution complies with the following prohibitions.

(a) *Hedging*. A Level 1 or Level 2 covered institution must not purchase a hedging instrument or similar instrument on behalf of a covered person to hedge or offset any decrease in the value of the covered person's incentive-based compensation.

(b) *Maximum incentive-based compensation opportunity*. A Level 1 or Level 2 covered institution must not award incentive-based compensation to:

(1) A senior executive officer in excess of 125 percent of the target amount for that incentive-based compensation; or

(2) A significant risk-taker in excess of 150 percent of the target amount for that incentive-based compensation.

(c) *Relative performance measures*. A Level 1 or Level 2 covered institution must not use incentive-based compensation performance measures that are based solely on industry peer performance comparisons.

(d) *Volume driven incentive-based compensation*. A Level 1 or Level 2 covered institution must not provide incentive-based compensation to a covered person that is based solely on transaction revenue or volume without regard to transaction quality or compliance of the covered person with sound risk management.

#### **§ 1232.9 Risk management and controls requirements for Level 1 and Level 2 covered institutions.**

An incentive-based compensation arrangement at a Level 1 or Level 2 covered institution will be considered to be compatible with effective risk management and controls for purposes of § 1232.4(c)(2) only if such institution meets the following requirements.

(a) A Level 1 or Level 2 covered institution must have a risk management framework for its incentive-based compensation program that:

- (1) Is independent of any lines of business;
- (2) Includes an independent compliance program that provides for internal controls, testing, monitoring, and training with written policies and procedures consistent with § 1232.11; and
- (3) Is commensurate with the size and complexity of the covered institution's operations.

(b) A Level 1 or Level 2 covered institution must:

- (1) Provide individuals engaged in control functions with the authority to influence the risk-taking of the business areas they monitor; and
- (2) Ensure that covered persons engaged in control functions are compensated in accordance with the achievement of performance objectives linked to their control functions and independent of the performance of those business areas.

(c) A Level 1 or Level 2 covered institution must provide for the independent monitoring of:

- (1) All incentive-based compensation plans in order to identify whether those plans provide incentives that appropriately balance risk and reward;

(2) Events related to forfeiture and downward adjustment reviews and decisions of forfeiture and downward adjustment reviews in order to determine consistency with § 1232.7(b); and

(3) Compliance of the incentive-based compensation program with the covered institution's policies and procedures.

#### **§ 1232.10 Governance requirements for Level 1 and Level 2 covered institutions.**

An incentive-based compensation arrangement at a Level 1 or Level 2 covered institution will not be considered to be supported by effective governance for purposes of § 1232.4(c)(3), unless:

(a) The covered institution establishes a compensation committee composed solely of directors who are not senior executive officers to assist the board of directors in carrying out its responsibilities under § 1232.4(e); and

(b) The compensation committee established pursuant to paragraph (a) of this section obtains:

(1) Input from the risk and audit committees of the covered institution's board of directors, or groups performing similar functions, and risk management function on the effectiveness of risk measures and adjustments used to balance risk and reward in incentive-based compensation arrangements;

(2) A written assessment of the effectiveness of the covered institution's incentive-based compensation program and related compliance and control processes in providing risk-taking incentives that are consistent with the risk profile of the covered institution, submitted on an annual or more frequent basis by the management of the covered institution and developed with input from the risk and audit committees of its board of directors, or groups performing similar functions, and from the covered institution's risk management and audit functions; and

(3) An independent written assessment of the effectiveness of the covered institution's incentive-based compensation program and related compliance and control processes in providing risk-taking incentives that are consistent with the risk profile of the covered institution, submitted on an annual or more frequent basis by the internal audit or risk management function of the covered institution, developed independently of the covered institution's management.

#### **§ 1232.11 Policies and procedures requirements for Level 1 and Level 2 covered institutions.**

A Level 1 or Level 2 covered institution must develop and implement

policies and procedures for its incentive-based compensation program that, at a minimum:

(a) Are consistent with the prohibitions and requirements of this part;

(b) Specify the substantive and procedural criteria for the application of forfeiture and clawback, including the process for determining the amount of incentive-based compensation to be clawed back;

(c) Require that the covered institution maintain documentation of final forfeiture, downward adjustment, and clawback decisions;

(d) Specify the substantive and procedural criteria for the acceleration of payments of deferred incentive-based compensation to a covered person, consistent with § 1232.7(a)(1)(iii)(B) and (a)(2)(iii)(B));

(e) Identify and describe the role of any employees, committees, or groups authorized to make incentive-based compensation decisions, including when discretion is authorized;

(f) Describe how discretion is expected to be exercised to appropriately balance risk and reward;

(g) Require that the covered institution maintain documentation of the establishment, implementation, modification, and monitoring of incentive-based compensation arrangements, sufficient to support the covered institution's decisions;

(h) Describe how incentive-based compensation arrangements will be monitored;

(i) Specify the substantive and procedural requirements of the independent compliance program consistent with § 1232.9(a)(2); and

(j) Ensure appropriate roles for risk management, risk oversight, and other control function personnel in the covered institution's processes for:

(1) Designing incentive-based compensation arrangements and determining awards, deferral amounts, deferral periods, forfeiture, downward adjustment, clawback, and vesting; and

(2) Assessing the effectiveness of incentive-based compensation arrangements in restraining inappropriate risk-taking.

#### § 1232.12 Indirect actions.

A covered institution must not indirectly, or through or by any other person, do anything that would be unlawful for such covered institution to do directly under this part.

#### § 1232.13 Enforcement.

The provisions of this part shall be enforced under subtitle C of the Safety and Soundness Act (12 U.S.C. ch. 46 subch. III).

#### § 1232.14 Covered institutions in conservatorship or receivership.

(a) *Scope.* This section applies to covered institutions that are in conservatorship or receivership, or are limited-life regulated entities, under the Safety and Soundness Act.

(b) *Compensation requirements.* For a covered institution subject to this section, the requirements that would otherwise apply under this part shall be those that are determined by the Agency to best fulfill the requirements and purposes of 12 U.S.C. 5641, taking into consideration the possible duration of the covered institution's conservatorship or receivership, the nature of the institution's governance while under conservatorship or receivership, the need to attract and retain management and other talent to such an institution, the limitations on such an institution's ability to employ equity-like instruments as incentive-based compensation, and any other circumstances deemed relevant in the judgment of the Agency. The Agency may determine appropriate transition terms and provisions in the event that the covered institution ceases to be within the scope of this section.

#### Securities and Exchange Commission Authority and Issuance

For the reasons set forth in the joint preamble, the SEC proposes to amend title 17, chapter II of the Code of Federal Regulations as follows:

#### PART 240—GENERAL RULES AND REGULATIONS, SECURITIES EXCHANGE ACT OF 1934

■ 8. The authority citation for part 240 continues to read in part as follows:

**Authority:** 15 U.S.C. 77c, 77d, 77g, 77j, 77s, 77z-2, 77z-3, 77eee, 77ggg, 77nnn, 77sss, 77ttt, 78c, 78c-3, 78c-5, 78d, 78e, 78f, 78g, 78i, 78j, 78j-1, 78k, 78k-1, 78l, 78m, 78n, 78n-1, 78o, 78o-4, 78o-10, 78p, 78q, 78q-1, 78s, 78u-5, 78w, 78x, 78dd, 78ll, 78mm, 80a-20, 80a-23, 80a-29, 80a-37, 80b-3, 80b-4, 80b-11, 7201 *et seq.*, and 8302; 7 U.S.C. 2(c)(2)(E); 12 U.S.C. 5221(e)(3); 18 U.S.C. 1350; and Pub. L. 111-203, 939A, 124 Stat. 1376 (2010), unless otherwise noted.

\* \* \* \* \*

Section 240.17a-4 also issued under secs. 2, 17, 23(a), 48 Stat. 897, as amended; 15 U.S.C. 78a, 78d-1, 78d-2; sec. 14, Pub. L. 94-29, 89 Stat. 137 (15 U.S.C. 78a); sec. 18, Pub. L. 94-29, 89 Stat. 155 (15 U.S.C. 78w);

\* \* \* \* \*

■ 9. Section 240.17a-4 is amended by adding paragraph (e)(10). The addition reads as follows:

#### § 240.17a-4 Records to be preserved by certain exchange members, brokers and dealers.

\* \* \* \* \*

(e) \* \* \*

(10) The records required pursuant to §§ 303.4(f), 303.5, and 303.11 of this chapter.

\* \* \* \* \*

#### PART 275—RULES AND REGULATIONS, INVESTMENT ADVISERS ACT OF 1940

■ 10. The authority citation continues to read in part as follows:

**Authority:** 15 U.S.C. 80b-2(a)(11)(G), 80b-2(a)(11)(H), 80b-2(a)(17), 80b-3, 80b-4, 80b-4a, 80b-6(4), 80b-6a, and 80b-11, unless otherwise noted.

\* \* \* \* \*

Section 275.204-2 is also issued under 15 U.S.C. 80b-6.

\* \* \* \* \*

■ 11. Section 275.204-2 is amended by adding paragraph (a)(19) and by revising paragraph (e)(1). The additions and revisions read as follows:

#### § 275.204-2 Books and records to be maintained by investment advisers.

(a) \* \* \*

(19) The records required pursuant to, and for the periods specified in, §§ 303.4(f), 303.5, and 303.11 of this chapter.

\* \* \* \* \*

(e)(1) All books and records required to be made under the provisions of paragraphs (a) to (c)(1)(i), inclusive, and (c)(2) of this section (except for books and records required to be made under the provisions of paragraphs (a)(11), (a)(12)(i), (a)(12)(iii), (a)(13)(ii), (a)(13)(iii), (a)(16), (a)(17)(i), and (a)(19) of this section), shall be maintained and preserved in an easily accessible place for a period of not less than five years from the end of the fiscal year during which the last entry was made on such record, the first two years in an appropriate office of the investment adviser.

\* \* \* \* \*

■ 12. Add part 303 to read as follows:

#### PART 303—INCENTIVE-BASED COMPENSATION ARRANGEMENTS

Sec.

303.1 Authority, scope, and initial applicability.

303.2 Definitions.

303.3 Applicability.

303.4 Requirements and prohibitions applicable to all covered institutions.

303.5 Additional disclosure and recordkeeping requirements for Level 1 and Level 2 covered institutions.

303.6 Reservation of authority for Level 3 covered institutions.

- 303.7 Deferral, forfeiture and downward adjustment, and clawback requirements for Level 1 and Level 2 covered institutions.
- 303.8 Additional prohibitions for Level 1 and Level 2 covered institutions.
- 303.9 Risk management and controls requirements for Level 1 and Level 2 covered institutions.
- 303.10 Governance requirements for Level 1 and Level 2 covered institutions.
- 303.11 Policies and procedures requirements for Level 1 and Level 2 covered institutions.
- 303.12 Indirect actions.
- 303.13 Enforcement.

**Authority:** 15 U.S.C. 78q, 78w, 80b–4, and 80b–11 and 12 U.S.C. 5641.

**§ 303.1 Authority, scope, and initial applicability.**

(a) *Authority.* This part is issued pursuant to section 956 of the Dodd-Frank Wall Street Reform and Consumer Protection Act (12 U.S.C. 5641), 15 U.S.C. 78q, 78w, 80b–4, and 80b–11.

(b) *Scope.* This part applies to a covered institution with average total consolidated assets greater than or equal to \$1 billion that offers incentive-based compensation to covered persons.

(c) *Initial applicability—(1) Compliance date.* A covered institution must meet the requirements of this part no later than [Date of the beginning of the first calendar quarter that begins at least 540 days after a final rule is published in the **Federal Register**]. Whether a covered institution is a Level 1, Level 2, or Level 3 covered institution at that time will be determined based on average total consolidated assets as of [Date of the beginning of the first calendar quarter that begins after a final rule is published in the **Federal Register**].

(2) *Grandfathered plans.* A covered institution is not required to comply with the requirements of this part with respect to any incentive-based compensation plan with a performance period that begins before [Compliance Date as described in paragraph (c)(1) of this section].

(d) *Preservation of authority.* Nothing in this part in any way limits the authority of the Commission under other provisions of applicable law and regulations.

**§ 303.2 Definitions.**

For purposes of this part only, the following definitions apply unless otherwise specified:

(a) *Affiliate* means any company that controls, is controlled by, or is under common control with another company.

(b) *Average total consolidated assets* means the average of a regulated institution's total consolidated assets, as reported on the regulated institution's

regulatory reports, for the four most recent consecutive quarters. If a regulated institution has not filed a regulatory report for each of the four most recent consecutive quarters, the regulated institution's average total consolidated assets means the average of its total consolidated assets, as reported on its regulatory reports, for the most recent quarter or consecutive quarters, as applicable. Average total consolidated assets are measured on the as-of date of the most recent regulatory report used in the calculation of the average. Average total consolidated assets for a regulated institution that is an investment adviser means the regulated institution's total assets (exclusive of non-proprietary assets) shown on the balance sheet for the regulated institution for the most recent fiscal year end.

(c) *To award* incentive-based compensation means to make a final determination, conveyed to a covered person, of the amount of incentive-based compensation payable to the covered person for performance over a performance period.

(d) *Board of directors* means the governing body of a covered institution that oversees the activities of the covered institution, often referred to as the board of directors or board of managers.

(e) *Clawback* means a mechanism by which a covered institution can recover vested incentive-based compensation from a covered person.

(f) *Compensation, fees, or benefits* means all direct and indirect payments, both cash and non-cash, awarded to, granted to, or earned by or for the benefit of, any covered person in exchange for services rendered to a covered institution.

(g) *Control* means that any company has control over any company if—

(1) The company directly or indirectly or acting through one or more other persons owns, controls, or has power to vote 25 percent or more of any class of voting securities of the company;

(2) The company controls in any manner the election of a majority of the directors or trustees of the company; or

(3) The Commission determines, after notice and opportunity for hearing, that the company directly or indirectly exercises a controlling influence over the management or policies of the company.

(h) *Control function* means a compliance, risk management, internal audit, legal, human resources, accounting, financial reporting, or finance role responsible for identifying, measuring, monitoring, or controlling risk-taking.

(i) *Covered institution* means a regulated institution with average total consolidated assets greater than or equal to \$1 billion.

(j) *Covered person* means any executive officer, employee, director, or principal shareholder who receives incentive-based compensation at a covered institution.

(k) *Deferral* means the delay of vesting of incentive-based compensation beyond the date on which the incentive-based compensation is awarded.

(l) *Deferral period* means the period of time between the date a performance period ends and the last date on which the incentive-based compensation awarded for such performance period vests.

(m) *Depository institution holding company* means a top-tier depository institution holding company, where “depository institution holding company” has the same meaning as in section 3 of the Federal Deposit Insurance Act (12 U.S.C. 1813).

(n) *Director* of a covered institution means a member of the board of directors.

(o) *Downward adjustment* means a reduction of the amount of a covered person's incentive-based compensation not yet awarded for any performance period that has already begun, including amounts payable under long-term incentive plans, in accordance with a forfeiture and downward adjustment review under § 303.7(b).

(p) *Equity-like instrument* means:

(1) Equity in the covered institution or any affiliate of the covered institution; or

(2) A form of compensation:

(i) Payable at least in part based on the price of the shares or other equity instruments of the covered institution or of any affiliate of the covered institution; or

(ii) That requires, or may require, settlement in the shares of the covered institution or of any affiliate of the covered institution.

(q) *Forfeiture* means a reduction of the amount of deferred incentive-based compensation awarded to a covered person that has not vested.

(r) *Incentive-based compensation* means any variable compensation, fees, or benefits that serve as an incentive or reward for performance.

(s) *Incentive-based compensation arrangement* means an agreement between a covered institution and a covered person, under which the covered institution provides incentive-based compensation to the covered person, including incentive-based compensation delivered through one or

more incentive-based compensation plans.

(t) *Incentive-based compensation plan* means a document setting forth terms and conditions governing the opportunity for and the payment of incentive-based compensation payments to one or more covered persons.

(u) *Incentive-based compensation program* means a covered institution's framework for incentive-based compensation that governs incentive-based compensation practices and establishes related controls.

(v) *Level 1 covered institution* means a:

(i) Covered institution with average total consolidated assets greater than or equal to \$250 billion; or

(ii) Covered institution that is a subsidiary of a depository institution holding company that is a Level 1 covered institution pursuant to 12 CFR 236.2.

(w) *Level 2 covered institution* means a:

(i) Covered institution with average total consolidated assets greater than or equal to \$50 billion that is not a Level 1 covered institution; or

(ii) Covered institution that is a subsidiary of a depository institution holding company that is a Level 2 covered institution pursuant to 12 CFR 236.2.

(x) *Level 3 covered institution* means a covered institution with average total consolidated assets greater than or equal to \$1 billion that is not a Level 1 covered institution or Level 2 covered institution.

(y) *Long-term incentive plan* means a plan to provide incentive-based compensation that is based on a performance period of at least three years.

(z) *Option* means an instrument through which a covered institution provides a covered person the right, but not the obligation, to buy a specified number of shares representing an ownership stake in a company at a predetermined price within a set time period or on a date certain, or any similar instrument, such as a stock appreciation right.

(aa) *Performance period* means the period during which the performance of a covered person is assessed for purposes of determining incentive-based compensation.

(bb) *Principal shareholder* means a natural person who, directly or indirectly, or acting through or in concert with one or more persons, owns, controls, or has the power to vote 10 percent or more of any class of voting securities of a covered institution.

(cc) *Qualifying incentive-based compensation* means the amount of incentive-based compensation awarded to a covered person for a particular performance period, excluding amounts awarded to the covered person for that particular performance period under a long-term incentive plan.

(dd) *Regulated institution* means a broker or dealer registered under section 15 of the Securities Exchange Act of 1934 (15 U.S.C. 78o) and an investment adviser as such term is defined in section 202(a)(11) of the Investment Advisers Act of 1940 (15 U.S.C. 80b-2(a)(11)).

(ee) *Regulatory report* means, for a broker-dealer registered under section 15 of the Securities Exchange Act of 1934 (15 U.S.C. 78o), the Financial and Operational Combined Uniform Single Report, Form X-17A-5, 17 CFR 249.617, or any successors thereto.

(ff) *Section 956 affiliate* means an affiliate that is an institution described in § 303.2(i), 12 CFR 42.2(i), 12 CFR 236.2(i), 12 CFR 372.2(i), 12 CFR 741.2(i), or 12 CFR 1232.2(i).

(gg) *Senior executive officer* means a covered person who holds the title or, without regard to title, salary, or compensation, performs the function of one or more of the following positions at a covered institution for any period of time in the relevant performance period: President, chief executive officer, executive chairman, chief operating officer, chief financial officer, chief investment officer, chief legal officer, chief lending officer, chief risk officer, chief compliance officer, chief audit executive, chief credit officer, chief accounting officer, or head of a major business line or control function.

(hh) *Significant risk-taker* means:

(1) Any covered person at a Level 1 or Level 2 covered institution, other than a senior executive officer, who received annual base salary and incentive-based compensation for the last calendar year that ended at least 180 days before the beginning of the performance period of which at least one-third is incentive-based compensation and is—

(i) A covered person of a Level 1 covered institution who received annual base salary and incentive-based compensation for the last calendar year that ended at least 180 days before the beginning of the performance period that placed the covered person among the highest 5 percent in annual base salary and incentive-based compensation among all covered persons (excluding senior executive officers) of the Level 1 covered institution together with all individuals who receive incentive-based

compensation at any section 956 affiliate of the Level 1 covered institution;

(ii) A covered person of a Level 2 covered institution who received annual base salary and incentive-based compensation for the last calendar year that ended at least 180 days before the beginning of the performance period that placed the covered person among the highest 2 percent in annual base salary and incentive-based compensation among all covered persons (excluding senior executive officers) of the Level 2 covered institution together with all individuals who receive incentive-based compensation at any section 956 affiliate of the Level 2 covered institution; or

(iii) A covered person of a covered institution who may commit or expose 0.5 percent or more of the common equity tier 1 capital, or in the case of a registered securities broker or dealer, 0.5 percent or more of the tentative net capital, of the covered institution or of any section 956 affiliate of the covered institution, whether or not the individual is a covered person of that specific legal entity; and

(2) Any covered person at a Level 1 or Level 2 covered institution, other than a senior executive officer, who is designated as a “significant risk-taker” by the Commission because of that person's ability to expose a covered institution to risks that could lead to material financial loss in relation to the covered institution's size, capital, or overall risk tolerance, in accordance with procedures established by the Commission, or by the covered institution.

(3) For purposes of this part, an individual who is an employee, director, senior executive officer, or principal shareholder of an affiliate of a Level 1 or Level 2 covered institution, where such affiliate has less than \$1 billion in total consolidated assets, and who otherwise would meet the requirements for being a significant risk-taker under paragraph (hh)(1)(iii) of this section, shall be considered to be a significant risk-taker with respect to the Level 1 or Level 2 covered institution for which the individual may commit or expose 0.5 percent or more of common equity tier 1 capital or tentative net capital. The Level 1 or Level 2 covered institution for which the individual commits or exposes 0.5 percent or more of common equity tier 1 capital or tentative net capital shall ensure that the individual's incentive compensation arrangement complies with the requirements of this part.

(4) If the Commission determines, in accordance with procedures established by the Commission, that a Level 1 covered institution's activities, complexity of operations, risk profile, and compensation practices are similar to those of a Level 2 covered institution, the Level 1 covered institution may apply paragraph (hh)(1)(i) of this section to covered persons of the Level 1 covered institution by substituting "2 percent" for "5 percent."

(ii) *Subsidiary* means any company that is owned or controlled directly or indirectly by another company.

(jj) *Vesting of incentive-based compensation* means the transfer of ownership of the incentive-based compensation to the covered person to whom the incentive-based compensation was awarded, such that the covered person's right to the incentive-based compensation is no longer contingent on the occurrence of any event.

### § 303.3 Applicability.

(a) *When average total consolidated assets increase*—(1) *In general.* (i) A regulated institution shall become a Level 1, Level 2, or Level 3 covered institution when its average total consolidated assets increase to an amount that equals or exceeds \$250 billion, \$50 billion, or \$1 billion, respectively.

(ii) A covered institution regardless of its average total consolidated assets (provided that, for the avoidance of doubt, such covered institution has average total consolidated assets greater than or equal to \$1 billion) that is a subsidiary of a depository institution holding company shall become a Level 1 or Level 2 covered institution when such depository institution holding company becomes a Level 1 or Level 2 covered institution, respectively, pursuant to 12 CFR 236.3.

(2) *Compliance date.* (i) A regulated institution that becomes a Level 1, Level 2, or Level 3 covered institution pursuant to paragraph (a)(1)(i) of this section shall comply with the requirements of this part for a Level 1, Level 2, or Level 3 covered institution, respectively, not later than the first day of the first calendar quarter that begins at least 540 days after the date on which the regulated institution becomes a Level 1, Level 2, or Level 3 covered institution, respectively. Until that day, the Level 1, Level 2, or Level 3 covered institution will remain subject to the requirements of this part, if any, that applied to the regulated institution on the day before the date on which it became a Level 1, Level 2, or Level 3 covered institution.

(b) A covered institution that becomes a Level 1 or Level 2 covered institution pursuant to paragraph (a)(1)(ii) of this section shall comply with the requirements of this part for a Level 1 or Level 2 covered institution, respectively, not later than the first day of the first calendar quarter that begins at least 540 days after the date on which the regulated institution becomes a Level 1 or Level 2 covered institution, respectively. Until that day, the Level 1 or Level 2 covered institution will remain subject to the requirements of this part, if any, that applied to the covered institution on the day before the date on which it became a Level 1 or Level 2 covered institution.

(3) *Grandfathered plans.* (i) A regulated institution that becomes a Level 1, Level 2, or Level 3 covered institution under paragraph (a)(1)(i) of this section is not required to comply with requirements of this part applicable to a Level 1, Level 2, or Level 3 covered institution, respectively, with respect to any incentive-based compensation plan with a performance period that begins before the date described in paragraph (a)(2)(i) of this section. Any such incentive-based compensation plan shall remain subject to the requirements under this part, if any, that applied to the regulated institution at the beginning of the performance period.

(b) A covered institution that becomes a Level 1 or Level 2 covered institution under paragraph (a)(1)(ii) of this section is not required to comply with requirements of this part applicable to a Level 1 or Level 2 covered institution, respectively, with respect to any incentive-based compensation plan with a performance period that begins before the date described in paragraph (a)(2)(ii) of this section. Any such incentive-based compensation plan shall remain subject to the requirements under this part, if any, that applied to the covered institution at the beginning of the performance period.

(b) *When total consolidated assets decrease.* (1) A Level 1, Level 2, or Level 3 covered institution will remain subject to the requirements applicable to such covered institution under this part unless and until the total consolidated assets of such covered institution, as reported on the covered institution's regulatory reports, fall below \$250 billion, \$50 billion, or \$1 billion, respectively, for each of four consecutive quarters. The calculation will be effective on the as-of date of the fourth consecutive regulatory report.

(2) A Level 1, Level 2, or Level 3 covered institution that is an investment adviser will remain subject to the

requirements applicable to such covered institution under this part unless and until the average total consolidated assets of the covered institution fall below \$250 billion, \$50 billion, or \$1 billion, respectively as of the most recent fiscal year end.

(3) A covered institution that is a Level 1 or Level 2 covered institution solely by virtue of its being a subsidiary of a depository institution holding company will remain subject to the requirements applicable to such covered institution under this part unless and until such depository institution holding company ceases to be subject to the requirements applicable to it in accordance with 12 CFR 236.3.

### § 303.4 Requirements and prohibitions applicable to all covered institutions.

(a) *In general.* A covered institution must not establish or maintain any type of incentive-based compensation arrangement, or any feature of any such arrangement, that encourages inappropriate risks by the covered institution:

(1) By providing a covered person with excessive compensation, fees, or benefits; or

(2) That could lead to material financial loss to the covered institution.

(b) *Excessive compensation.* Compensation, fees, and benefits are considered excessive for purposes of § 303.4(a)(1) when amounts paid are unreasonable or disproportionate to the value of the services performed by a covered person, taking into consideration all relevant factors, including, but not limited to:

(1) The combined value of all compensation, fees, or benefits provided to the covered person;

(2) The compensation history of the covered person and other individuals with comparable expertise at the covered institution;

(3) The financial condition of the covered institution;

(4) Compensation practices at comparable institutions, based upon such factors as asset size, geographic location, and the complexity of the covered institution's operations and assets;

(5) For post-employment benefits, the projected total cost and benefit to the covered institution; and

(6) Any connection between the covered person and any fraudulent act or omission, breach of trust or fiduciary duty, or insider abuse with regard to the covered institution.

(c) *Material financial loss.* An incentive-based compensation arrangement at a covered institution encourages inappropriate risks that

could lead to material financial loss to the covered institution, unless the arrangement:

(1) Appropriately balances risk and reward;

(2) Is compatible with effective risk management and controls; and

(3) Is supported by effective governance.

(d) *Performance measures.* An incentive-based compensation arrangement will not be considered to appropriately balance risk and reward for purposes of paragraph (c)(1) of this section, unless:

(1) The arrangement includes financial and non-financial measures of performance, including considerations of risk-taking, that are relevant to a covered person's role within a covered institution and to the type of business in which the covered person is engaged and that are appropriately weighted to reflect risk-taking;

(2) The arrangement is designed to allow non-financial measures of performance to override financial measures of performance when appropriate in determining incentive-based compensation; and

(3) Any amounts to be awarded under the arrangement are subject to adjustment to reflect actual losses, inappropriate risks taken, compliance deficiencies, or other measures or aspects of financial and non-financial performance.

(e) *Board of directors.* A covered institution's board of directors, or a committee thereof, must:

(1) Conduct oversight of the covered institution's incentive-based compensation program;

(2) Approve incentive-based compensation arrangements for senior executive officers, including the amounts of all awards and, at the time of vesting, payouts under such arrangements; and

(3) Approve any material exceptions or adjustments to incentive-based compensation policies or arrangements for senior executive officers.

(f) *Disclosure and recordkeeping requirements.* A covered institution must create annually and maintain for a period of at least seven years records that document the structure of all its incentive-based compensation arrangements and demonstrate compliance with this part. A covered institution must disclose the records to the Commission upon request. At a minimum, the records must include copies of all incentive-based compensation plans, a record of who is subject to each plan, and a description of how the incentive-based compensation program is compatible

with effective risk management and controls.

(g) *Rule of construction.* A covered institution is not required to report the actual amount of compensation, fees, or benefits of individual covered persons as part of the disclosure and recordkeeping requirements under this part.

### **§ 303.5 Additional disclosure and recordkeeping requirements for Level 1 and Level 2 covered institutions.**

(a) A Level 1 or Level 2 covered institution must create annually and maintain for a period of at least seven years records that document:

(1) The covered institution's senior executive officers and significant risk-takers, listed by legal entity, job function, organizational hierarchy, and line of business;

(2) The incentive-based compensation arrangements for senior executive officers and significant risk-takers, including information on percentage of incentive-based compensation deferred and form of award;

(3) Any forfeiture and downward adjustment or clawback reviews and decisions for senior executive officers and significant risk-takers; and

(4) Any material changes to the covered institution's incentive-based compensation arrangements and policies.

(b) A Level 1 or Level 2 covered institution must create and maintain records in a manner that allows for an independent audit of incentive-based compensation arrangements, policies, and procedures, including those required under § 303.11.

(c) A Level 1 or Level 2 covered institution must provide the records described in paragraph (a) of this section to the Commission in such form and with such frequency as requested by the Commission.

### **§ 303.6 Reservation of authority for Level 3 covered institutions.**

(a) *In general.* The Commission may require a Level 3 covered institution with average total consolidated assets greater than or equal to \$10 billion and less than \$50 billion to comply with some or all of the provisions of §§ 303.5 and 303.7 through 303.11 if the Commission determines that the Level 3 covered institution's complexity of operations or compensation practices are consistent with those of a Level 1 or Level 2 covered institution.

(b) *Factors considered.* Any exercise of authority under this section will be in writing by the Commission in accordance with procedures established by the Commission and will consider

the activities, complexity of operations, risk profile, and compensation practices of the Level 3 covered institution, in addition to any other relevant factors.

### **§ 303.7 Deferral, forfeiture and downward adjustment, and clawback requirements for Level 1 and Level 2 covered institutions.**

An incentive-based compensation arrangement at a Level 1 or Level 2 covered institution will not be considered to appropriately balance risk and reward, for purposes of § 303.4(c)(1), unless the following requirements are met.

(a) *Deferral.* (1) Qualifying incentive-based compensation must be deferred as follows:

(i) *Minimum required deferral amount.* (A) A Level 1 covered institution must defer at least 60 percent of a senior executive officer's qualifying incentive-based compensation awarded for each performance period.

(B) A Level 1 covered institution must defer at least 50 percent of a significant risk-taker's qualifying incentive-based compensation awarded for each performance period.

(C) A Level 2 covered institution must defer at least 50 percent of a senior executive officer's qualifying incentive-based compensation awarded for each performance period.

(D) A Level 2 covered institution must defer at least 40 percent of a significant risk-taker's qualifying incentive-based compensation awarded for each performance period.

(ii) *Minimum required deferral period.* (A) For a senior executive officer or significant risk-taker of a Level 1 covered institution, the deferral period for deferred qualifying incentive-based compensation must be at least 4 years.

(B) For a senior executive officer or significant risk-taker of a Level 2 covered institution, the deferral period for deferred qualifying incentive-based compensation must be at least 3 years.

(iii) *Vesting of amounts during deferral period.* (A) *Pro rata vesting.* During a deferral period, deferred qualifying incentive-based compensation may not vest faster than on a pro rata annual basis beginning no earlier than the first anniversary of the end of the performance period for which the amounts were awarded.

(B) *Acceleration of vesting.* A Level 1 or Level 2 covered institution must not accelerate the vesting of a covered person's deferred qualifying incentive-based compensation that is required to be deferred under this part, except in the case of death or disability of such covered person.

(2) Incentive-based compensation awarded under a long-term incentive plan must be deferred as follows:

(i) *Minimum required deferral amount.* (A) A Level 1 covered institution must defer at least 60 percent of a senior executive officer's incentive-based compensation awarded under a long-term incentive plan for each performance period.

(B) A Level 1 covered institution must defer at least 50 percent of a significant risk-taker's incentive-based compensation awarded under a long-term incentive plan for each performance period.

(C) A Level 2 covered institution must defer at least 50 percent of a senior executive officer's incentive-based compensation awarded under a long-term incentive plan for each performance period.

(D) A Level 2 covered institution must defer at least 40 percent of a significant risk-taker's incentive-based compensation awarded under a long-term incentive plan for each performance period.

(ii) *Minimum required deferral period.* (A) For a senior executive officer or significant risk-taker of a Level 1 covered institution, the deferral period for deferred long-term incentive plan amounts must be at least 2 years.

(B) For a senior executive officer or significant risk-taker of a Level 2 covered institution, the deferral period for deferred long-term incentive plan amounts must be at least 1 year.

(iii) *Vesting of amounts during deferral period.*—(A) *Pro rata vesting.* During a deferral period, deferred long-term incentive plan amounts may not vest faster than on a pro rata annual basis beginning no earlier than the first anniversary of the end of the performance period for which amounts were awarded.

(B) *Acceleration of vesting.* A Level 1 or Level 2 covered institution must not accelerate the vesting of a covered person's deferred long-term incentive plan amounts that is required to be deferred under this part, except in the case of death or disability of such covered person.

(3) *Adjustments of deferred qualifying incentive-based compensation and deferred long-term incentive plan compensation amounts.* A Level 1 or Level 2 covered institution may not increase deferred qualifying incentive-based compensation or deferred long-term incentive plan amounts for a senior executive officer or significant risk-taker during the deferral period. For purposes of this paragraph, an increase in value attributable solely to a change in share value, a change in interest rates, or the payment of interest according to terms set out at the time of the award is not

considered an increase in incentive-based compensation amounts.

(4) *Composition of deferred qualifying incentive-based compensation and deferred long-term incentive plan compensation for Level 1 and Level 2 covered institutions.*—(i) *Cash and equity-like instruments.* For a senior executive officer or significant risk-taker of a Level 1 or Level 2 covered institution that issues equity or is an affiliate of a covered institution that issues equity, any deferred qualifying incentive-based compensation or deferred long-term incentive plan amounts must include substantial portions of both deferred cash and equity-like instruments throughout the deferral period.

(ii) *Options.* If a senior executive officer or significant risk-taker of a Level 1 or Level 2 covered institution receives incentive-based compensation for a performance period in the form of options, the total amount of such options that may be used to meet the minimum deferral amount requirements of paragraph (a)(1)(i) or (a)(2)(i) of this section is limited to no more than 15 percent of the amount of total incentive-based compensation awarded to the senior executive officer or significant risk-taker for that performance period.

(b) *Forfeiture and downward adjustment.*—(1) *Compensation at risk.* (i) A Level 1 or Level 2 covered institution must place at risk of forfeiture all unvested deferred incentive-based compensation of any senior executive officer or significant risk-taker, including unvested deferred amounts awarded under long-term incentive plans.

(ii) A Level 1 or Level 2 covered institution must place at risk of downward adjustment all of a senior executive officer's or significant risk-taker's incentive-based compensation amounts not yet awarded for the current performance period, including amounts payable under long-term incentive plans.

(2) *Events triggering forfeiture and downward adjustment review.* At a minimum, a Level 1 or Level 2 covered institution must consider forfeiture and downward adjustment of incentive-based compensation of senior executive officers and significant risk-takers described in paragraph (b)(3) of this section due to any of the following adverse outcomes at the covered institution:

(i) Poor financial performance attributable to a significant deviation from the risk parameters set forth in the covered institution's policies and procedures;

(ii) Inappropriate risk taking, regardless of the impact on financial performance;

(iii) Material risk management or control failures;

(iv) Non-compliance with statutory, regulatory, or supervisory standards that results in:

(A) Enforcement or legal action against the covered institution brought by a federal or state regulator or agency; or

(B) A requirement that the covered institution report a restatement of a financial statement to correct a material error; and

(v) Other aspects of conduct or poor performance as defined by the covered institution.

(3) *Senior executive officers and significant risk-takers affected by forfeiture and downward adjustment.* A Level 1 or Level 2 covered institution must consider forfeiture and downward adjustment for a senior executive officer or significant risk-taker with direct responsibility, or responsibility due to the senior executive officer's or significant risk-taker's role or position in the covered institution's organizational structure, for the events related to the forfeiture and downward adjustment review set forth in paragraph (b)(2) of this section.

(4) *Determining forfeiture and downward adjustment amounts.* A Level 1 or Level 2 covered institution must consider, at a minimum, the following factors when determining the amount or portion of a senior executive officer's or significant risk-taker's incentive-based compensation that should be forfeited or adjusted downward:

(i) The intent of the senior executive officer or significant risk-taker to operate outside the risk governance framework approved by the covered institution's board of directors or to depart from the covered institution's policies and procedures;

(ii) The senior executive officer's or significant risk-taker's level of participation in, awareness of, and responsibility for, the events triggering the forfeiture and downward adjustment review set forth in paragraph (b)(2) of this section;

(iii) Any actions the senior executive officer or significant risk-taker took or could have taken to prevent the events triggering the forfeiture and downward adjustment review set forth in paragraph (b)(2) of this section;

(iv) The financial and reputational impact of the events triggering the forfeiture and downward adjustment review set forth in paragraph (b)(2) of this section to the covered institution, the line or sub-line of business, and

individuals involved, as applicable, including the magnitude of any financial loss and the cost of known or potential subsequent fines, settlements, and litigation;

(v) The causes of the events triggering the forfeiture and downward adjustment review set forth in paragraph (b)(2) of this section, including any decision-making by other individuals; and

(vi) Any other relevant information, including past behavior and past risk outcomes attributable to the senior executive officer or significant risk-taker.

(c) *Clawback*. A Level 1 or Level 2 covered institution must include clawback provisions in incentive-based compensation arrangements for senior executive officers and significant risk-takers that, at a minimum, allow the covered institution to recover incentive-based compensation from a current or former senior executive officer or significant risk-taker for seven years following the date on which such compensation vests, if the covered institution determines that the senior executive officer or significant risk-taker engaged in:

- (1) Misconduct that resulted in significant financial or reputational harm to the covered institution;
- (2) Fraud; or
- (3) Intentional misrepresentation of information used to determine the senior executive officer or significant risk-taker's incentive-based compensation.

#### **§ 303.8 Additional prohibitions for Level 1 and Level 2 covered institutions.**

An incentive-based compensation arrangement at a Level 1 or Level 2 covered institution will be considered to provide incentives that appropriately balance risk and reward for purposes of § 303.4(c)(1) only if such institution complies with the following prohibitions.

(a) *Hedging*. A Level 1 or Level 2 covered institution must not purchase a hedging instrument or similar instrument on behalf of a covered person to hedge or offset any decrease in the value of the covered person's incentive-based compensation.

(b) *Maximum incentive-based compensation opportunity*. A Level 1 or Level 2 covered institution must not award incentive-based compensation to:

- (1) A senior executive officer in excess of 125 percent of the target amount for that incentive-based compensation; or
- (2) A significant risk-taker in excess of 150 percent of the target amount for that incentive-based compensation.

(c) *Relative performance measures*. A Level 1 or Level 2 covered institution

must not use incentive-based compensation performance measures that are based solely on industry peer performance comparisons.

(d) *Volume driven incentive-based compensation*. A Level 1 or Level 2 covered institution must not provide incentive-based compensation to a covered person that is based solely on transaction revenue or volume without regard to transaction quality or compliance of the covered person with sound risk management.

#### **§ 303.9 Risk management and controls requirements for Level 1 and Level 2 covered institutions.**

An incentive-based compensation arrangement at a Level 1 or Level 2 covered institution will be considered to be compatible with effective risk management and controls for purposes of § 303.4(c)(2) only if such institution meets the following requirements.

(a) A Level 1 or Level 2 covered institution must have a risk management framework for its incentive-based compensation program that:

- (1) Is independent of any lines of business;
- (2) Includes an independent compliance program that provides for internal controls, testing, monitoring, and training with written policies and procedures consistent with § 303.11; and
- (3) Is commensurate with the size and complexity of the covered institution's operations.

(b) A Level 1 or Level 2 covered institution must:

- (1) Provide individuals engaged in control functions with the authority to influence the risk-taking of the business areas they monitor; and
- (2) Ensure that covered persons engaged in control functions are compensated in accordance with the achievement of performance objectives linked to their control functions and independent of the performance of those business areas.

(c) A Level 1 or Level 2 covered institution must provide for the independent monitoring of:

- (1) All incentive-based compensation plans in order to identify whether those plans provide incentives that appropriately balance risk and reward;
- (2) Events related to forfeiture and downward adjustment reviews and decisions of forfeiture and downward adjustment reviews in order to determine consistency with § 303.7(b); and
- (3) Compliance of the incentive-based compensation program with the covered institution's policies and procedures.

#### **§ 303.10 Governance requirements for Level 1 and Level 2 covered institutions.**

An incentive-based compensation arrangement at a Level 1 or Level 2 covered institution will not be considered to be supported by effective governance for purposes of § 303.4(c)(3), unless:

(a) The covered institution establishes a compensation committee composed solely of directors who are not senior executive officers to assist the board of directors in carrying out its responsibilities under § 303.4(e); and

(b) The compensation committee established pursuant to paragraph (a) of this section obtains:

- (1) Input from the risk and audit committees of the covered institution's board of directors, or groups performing similar functions, and risk management function on the effectiveness of risk measures and adjustments used to balance risk and reward in incentive-based compensation arrangements;
- (2) A written assessment of the effectiveness of the covered institution's incentive-based compensation program and related compliance and control processes in providing risk-taking incentives that are consistent with the risk profile of the covered institution, submitted on an annual or more frequent basis by the management of the covered institution and developed with input from the risk and audit committees of its board of directors, or groups performing similar functions, and from the covered institution's risk management and audit functions; and
- (3) An independent written assessment of the effectiveness of the covered institution's incentive-based compensation program and related compliance and control processes in providing risk-taking incentives that are consistent with the risk profile of the covered institution, submitted on an annual or more frequent basis by the internal audit or risk management function of the covered institution, developed independently of the covered institution's management.

#### **§ 303.11 Policies and procedures requirements for Level 1 and Level 2 covered institutions.**

A Level 1 or Level 2 covered institution must develop and implement policies and procedures for its incentive-based compensation program that, at a minimum:

- (a) Are consistent with the prohibitions and requirements of this part;
- (b) Specify the substantive and procedural criteria for the application of forfeiture and clawback, including the process for determining the amount of

incentive-based compensation to be clawed back;

(c) Require that the covered institution maintain documentation of final forfeiture, downward adjustment, and clawback decisions;

(d) Specify the substantive and procedural criteria for the acceleration of payments of deferred incentive-based compensation to a covered person, consistent with § 303.7(a)(1)(iii)(B) and (a)(2)(iii)(B);

(e) Identify and describe the role of any employees, committees, or groups authorized to make incentive-based compensation decisions, including when discretion is authorized;

(f) Describe how discretion is expected to be exercised to appropriately balance risk and reward;

(g) Require that the covered institution maintain documentation of the establishment, implementation, modification, and monitoring of incentive-based compensation arrangements, sufficient to support the covered institution's decisions;

(h) Describe how incentive-based compensation arrangements will be monitored;

(i) Specify the substantive and procedural requirements of the independent compliance program consistent with § 303.9(a)(2); and

(j) Ensure appropriate roles for risk management, risk oversight, and other control function personnel in the covered institution's processes for:

(1) Designing incentive-based compensation arrangements, and determining awards, deferral amounts, deferral periods, forfeiture, downward adjustment, clawback, and vesting; and  
(2) Assessing the effectiveness of incentive-based compensation arrangements in restraining inappropriate risk-taking.

#### **§ 303.12 Indirect actions.**

A covered institution must not, indirectly or through or by any other person, do anything that would be unlawful for such covered institution to do directly under this part.

#### **§ 303.13 Enforcement.**

The provisions of this part shall be enforced under section 505 of the Gramm-Leach-Bliley Act and, for purposes of such section, a violation of this part shall be treated as a violation of subtitle A of title V of such Act.

Federal Railroad Administration

49 CFR Part 214

Railroad Workplace Safety; Roadway Worker Protection Miscellaneous  
Revisions (RRR); Final Rule

**DEPARTMENT OF TRANSPORTATION****Federal Railroad Administration****49 CFR Part 214**

[Docket No. FRA–2008–0086]

RIN 2130–AB89

**Railroad Workplace Safety; Roadway Worker Protection Miscellaneous Revisions (RRR)**

**AGENCY:** Federal Railroad Administration (FRA), Department of Transportation (DOT).

**ACTION:** Final rule; retrospective regulatory review (RRR).

**SUMMARY:** FRA is amending its Roadway Worker Protection (RWP) regulation to resolve interpretative issues that have arisen since the 1996 promulgation of that rule. In particular, this final rule adopts certain terms, resolves miscellaneous interpretive issues, codifies certain FRA Technical Bulletins, adopts new requirements governing redundant signal protections and the movement of roadway maintenance machinery over signalized non-controlled track, and amends certain qualification requirements for roadway workers. This final rule also deletes three outdated incorporations by reference of industry standards in FRA's Bridge Worker Safety Standards, and cross references the Occupational Safety and Health Administration's (OSHA) regulations on the same point.

**DATES:** This final rule is effective April 1, 2017. The incorporation by reference of certain publications listed in the rule is approved by the Director of the Federal Register as of April 1, 2017. Petitions for reconsideration must be received on or before August 9, 2016. Petitions for reconsideration will be posted in the docket for this proceeding. Comments on any submitted petition for reconsideration must be received on or before September 13, 2016.

**ADDRESSES:**

*Petitions for reconsideration and comments on petitions for reconsideration:* Any petitions for reconsideration to the Federal Railroad Administrator or comments on petitions for reconsideration related to this docket may be submitted by any of the following methods:

- *Online:* Federal eRulemaking Portal, <http://www.regulations.gov>. Follow the online instructions for submitting documents.
- *Fax:* 202–493–2251.
- *Mail:* Docket Management Facility, U.S. Department of Transportation, 1200

New Jersey Avenue SE., Room W12–140, Washington, DC 20590.

• *Hand Delivery:* Room W12–140 on the Ground level of the West Building, 1200 New Jersey Avenue SE., Washington, DC, between 9 a.m. and 5 p.m. ET, Monday through Friday, except Federal holidays.

*Instructions:* All submissions must include the agency name and docket number or Regulatory Identification Number (RIN) for this rulemaking. Note that all submissions received will be posted without change to <http://www.regulations.gov> including any personal information. Please see the Privacy Act heading in the **SUPPLEMENTARY INFORMATION** section of this document for Privacy Act information related to any submitted comments or materials.

*Docket:* For access to the docket to read background documents or comments received, go to <http://www.regulations.gov> at any time or to Room W12–140 on the Ground level of the West Building, 1200 New Jersey Avenue SE., Washington, DC between 9 a.m. and 5 p.m. Monday through Friday, except Federal Holidays.

**FOR FURTHER INFORMATION CONTACT:** Joseph Riley, Track Specialist, Track Division, Office of Safety Assurance and Compliance, FRA, 1200 New Jersey Avenue SE., RRS–15, Mail Stop 25, Washington, DC 20590 (telephone (202) 493–6357); or Joseph St. Peter, Trial Attorney, Office of Chief Counsel, FRA, 1200 New Jersey Avenue SE., RCC–10, Mail Stop 10, Washington, DC 20590 (telephone (202) 493–6047 or 202–493–6052).

**I. Executive Summary**

On August 20, 2012, FRA published a notice of proposed rulemaking (NPRM) proposing amendments to its regulation on railroad workplace safety to resolve interpretative issues that have arisen since the 1996 promulgation of the original RWP regulation. 77 FR 50324. As detailed in the NPRM, FRA based its proposed amendments, in large part, on recommendations of FRA's Railroad Safety Advisory Committee (RSAC).

Noteworthy RSAC recommendations that FRA is adopting in this final rule include: A job briefing requirement regarding the accessibility of the roadway worker in charge; the adoption of procedures for how roadway workers cross railroad track; a new exception for railroads conducting snow removal and weed spraying operations; a clarification of the existing "foul time" provision; three new permissible methods of establishing working limits on non-controlled track; the expanded use of individual train detection at controlled points; an amended provision governing train audible warnings for roadway workers; and, amendment of certain roadway worker training requirements.

FRA is also addressing other items on which RSAC did not reach consensus and certain miscellaneous other revisions proposed in the NPRM. Noteworthy among these items are: Redundant signal protections; the electronic display of working limits authorities; amendments to the existing provision governing the qualification of roadway workers in charge; a new provision establishing minimum safety standards governing the use of "occupancy behind" or "conditional" working limit authorities; the phase-out of the use of definite train location and informational train line-ups; amendments to clarify the existing roadway worker protection and blue signal protection requirements for work performed within shop areas; the use of existing tunnel niches and clearing bays as a place of safety; and, the use of other railroad tracks as a place of safety. This final rule also deletes certain outdated incorporations by reference of personal protective equipment standards in FRA's Bridge Worker Safety Standards

at subpart B of part 214, and instead cross references the relevant OSHA's regulations.

For the 20-year period analyzed, the estimated quantified costs to the railroad industry total \$20,965,962, discounted to \$11,491,330 (present

value (PV), 7 percent) and \$15,832,099 (PV, 3 percent). For the same 20-year period, the estimated quantified benefits total \$53,109,702, discounted to \$28,132,247 (PV, 7 percent) and \$39,506,913 (PV, 3 percent). Net

benefits total \$32,143,740, discounted to \$16,640,917 (PV, 7 percent) and \$23,674,814 (PV, 3 percent). Table 1 presents the estimated quantified costs and benefits broken down by section of the final rule.

**Table 1. Summary of Quantified Costs and Benefits**

Costs		Year 1	2 - 20	Total 20 year	7% PV	3% PV
214.315	Job Briefings	\$179,468	\$179,468	\$3,589,356	\$1,901,284	\$2,670,028

**Note:** Dollars are discounted over a 20-year period.

## II. Executive Order 13563 Retrospective Review

Consistent with the requirements of Executive Order 13563, this final rule modifies the existing RWP requirements, in part, based on what FRA learned from its retrospective review of the existing regulation. Executive Order 13563 requires agencies to review existing regulations "that may be outmoded, ineffective, insufficient, or excessively burdensome, and to modify, streamline, expand, or repeal them in accordance with what has been learned."<sup>1</sup> As a result of its retrospective review, FRA is deleting or sun setting several sections of the existing RWP regulation it believes to be outdated or

superfluous (§§ 214.302, 214.305, 214.331 and 214.333), and is also increasing flexibility for compliance in several other sections (§§ 214.317, 214.327 and 214.337).

## III. Rulemaking Authority and Background of the Existing RWP Rule

The Federal Railroad Safety Act of 1970, as codified at 49 U.S.C. 20103, provides that, "[t]he Secretary of Transportation, as necessary, shall prescribe regulations and issue orders for every area of railroad safety supplementing laws and regulations in effect on October 16, 1970." The Secretary's responsibility under this provision and the balance of the railroad safety laws have been delegated to the FRA Administrator. 49 CFR 1.89(a). As noted in the NPRM, in the field of railroad workplace safety, FRA has

traditionally pursued a conservative course of regulation, relying upon the industry to implement suitable railroad safety rules and mandating in the broadest ways that employees be "instructed" in the requirements of those rules and that railroads create and administer programs of operational tests and inspections to verify compliance. This approach is based on several factors, including recognition of the strong interest of railroads in avoiding costly accidents and personal injuries, the limited resources available to FRA to directly enforce railroad safety rules, and the apparent success of management and employees accomplishing most work in a safe manner.

Over the years, however, it became necessary to codify certain requirements, either to remedy

<sup>1</sup> Executive Order No. 13563, 76 FR 3821, Jan. 21, 2011; available online at: <http://www.gpo.gov/fdsys/pkg/FR-2011-01-21/pdf/2011-1385.pdf>.

perceived shortcomings in the railroads' rules, emphasize the importance of compliance, or give FRA a more direct means of promoting compliance. A detailed description of the background and history of FRA's RWP regulation is found in the NPRM.

#### IV. RSAC Overview

As explained in the preamble to the NPRM, FRA's RSAC provides a forum for collaborative rulemaking and program development. The RSAC includes representatives from all of the railroad industry's major stakeholder groups, including railroads, labor organizations, suppliers and manufacturers, and other interested parties.<sup>2</sup> When appropriate, FRA assigns a task to the RSAC, and, after consideration and debate, the RSAC may accept or reject the task. If the task is accepted, the RSAC establishes a working group that possesses the appropriate expertise and representation of interests to develop consensus recommendations to FRA for action on the task. A working group may establish one or more task forces to develop facts and options on a particular aspect of a given task. The individual task force then provides that information to the working group for consideration.

<sup>2</sup> RSAC member groups are: American Association of Private Railroad Car Owners (AAPRCO); American Association of State Highway and Transportation Officials (AASHTO); American Chemistry Council; American Petroleum Institute; American Public Transportation Association (APTA); American Short Line and Regional Railroad Association (ASLRRA); American Train Dispatchers Association (ATDA); Association of American Railroads (AAR); Association of Railway Museums; Association of State Rail Safety Managers (ASRSM); Brotherhood of Locomotive Engineers and Trainmen (BLET); Brotherhood of Maintenance of Way Employees Division (BMWED); Brotherhood of Railroad Signalmen (BRS); Chlorine Institute; Federal Transit Administration (FTA);\* Fertilizer Institute; High Speed Ground Transportation Association (HSGTA); Institute of Makers of Explosives; International Association of Machinists and Aerospace Workers; International Association of Sheet Metal, Air, Rail and Transportation Workers (SMART), including the Sheet Metal Workers' International Association (SMWIA) and United Transportation Union (UTU); International Brotherhood of Electrical Workers (IBEW); Labor Council for Latin American Advancement (LCLAA);\* League of Railway Industry Women;\* National Association of Railroad Passengers (NARP); National Association of Railway Business Women;\* National Conference of Firemen & Oilers; National Railroad Construction and Maintenance Association (NRCMA); National Railroad Passenger Corporation (Amtrak); National Transportation Safety Board (NTSB);\* Railway Supply Institute (RSI); Safe Travel America (STA); Secretaria de Comunicaciones y Transporte (Mexico);\* Tourist Railway Association, Inc.; Transport Canada;\* Transport Workers Union of America (TWU); Transportation Communications International Union/BRC (TCIU/BRC); and Transportation Security Administration (TSA). \* Indicates associate membership.

When a working group comes to unanimous consensus on recommendations for action, the package is presented to the full RSAC for a vote. If the proposal is accepted by a simple majority of RSAC members, the proposal is formally recommended to the FRA Administrator. FRA then determines what action to take on the recommendation. Because FRA staff members play an active role at the working group level discussing the issues and options and drafting the consensus recommendation, FRA often adopts the RSAC recommendation.

FRA is not bound to follow the RSAC's recommendation, and the agency exercises its independent judgment on whether a recommendation achieves the agency's regulatory goal(s), is soundly supported, and is consistent with policy and legal requirements. Often, FRA varies in some respects from the RSAC recommendation in developing the actual regulatory proposal or final rule. FRA explains any such variations in the rulemaking. If RSAC is unable to reach consensus on a recommendation for action, the task is withdrawn and FRA determines the best course of action.

#### V. RWP RSAC Working Group

As detailed in the NPRM, on January 26, 2005, the RSAC formed the RWP Working Group (Working Group)<sup>3</sup> to consider specific actions to advance the on-track safety of railroad employees and their contractors engaged in maintenance-of-way activities throughout the general system of railroad transportation. FRA tasked the Working Group with reviewing the existing RWP regulation, technical bulletins, and a safety advisory dealing with on-track safety for roadway workers, and, as appropriate, to consider enhancements to the existing rule to further reduce the risk of serious injury or death to roadway workers.

The Working Group held 12 multi-day meetings and worked diligently to reach

consensus on 32 separate items. The Working Group's consensus recommendations included adding or amending various provisions in the following sections in part 214, subpart C:

- § 214.7—add two new definitions; revise an existing definition; and incorporate three other existing definitions from part 236.
- § 214.309—revision to address on-track safety manual for lone workers and changes to the manual.
- § 214.315—requirement that on-track safety job briefings include information concerning adjacent tracks and accessibility of the roadway worker in charge.
- § 214.317—new paragraph to formalize procedures for roadway workers to walk across tracks; new paragraph for on-track weed spray and snow blowing operations on non-controlled track.
- § 214.321—new paragraph to address the use of work crew numbers.
- § 214.323—clarification of foul time provision prohibiting roadway worker in charge or train dispatcher from permitting movements into working limits.
- § 214.324—new section called “verbal protection” for abbreviated working limits within manual interlocking and controlled points.
- § 214.327—three new paragraphs to formalize the following methods of making non-controlled track inaccessible: Occupied locomotive as a point of inaccessibility; block register territory; and, the use of track bulletins to make track inaccessible within yard limits.
- § 214.335—revision of paragraph (c) concerning on-track safety for tracks adjacent to occupied tracks. Key elements are the elimination of “large-scale” and the addition of a new requirement for on-track safety for tracks adjacent to occupied tracks for specific work activities (addressed in separate rulemaking proceeding as discussed below).
- § 214.337—allow the use of individual train detection at controlled points consisting only of signals and a new paragraph limiting equipment/materials that can only be moved by hand by a lone worker.
- § 214.339—revision of this section concerning train audible warnings to address operational considerations.
- § 214.343—new paragraph to ensure contractors receive requisite training/and or qualification before engaged by a railroad.
- § 214.345—lead-in phrase requiring all training to be consistent with initial

<sup>3</sup> The Working Group included members representing the following organizations: Amtrak; APTA; ASLRRA; ATDA; AAR, including members from BNSF Railway Company (BNSF), Canadian National Railway Company (CN), Canadian Pacific Railway, Limited (CP), Consolidated Rail Corporation (Conrail), CSX Transportation, Inc. (CSXT), The Kansas City Southern Railway Company (KCS), Norfolk Southern Corporation railroads (NS), and Union Pacific Railroad Company (UP); Belt Railroad of Chicago; BLET; BMWED; BRS; FRA; Indiana Harbor Belt Railroad (IHB); Long Island Rail Road (LIRR); Metro-North Commuter Railroad Company (Metro-North); Montana Rail Link; NRC; Northeast Illinois Regional Commuter Railroad Corporation (Metra); RailAmerica, Inc.; Southeastern Pennsylvania Transportation Authority (SEPTA); UTU; and Western New York and Pennsylvania Railroad (WNY&P).

or recurrent training, as specified in § 214.343(b).

- §§ 214.347, 214.349, 214.351, 214.353, and 214.355—consistent requirements for various roadway worker qualifications and a maximum 24-month time period between qualifications.

On June 26, 2007, the full RSAC voted to accept the above recommendations presented by the Working Group. In addition to the above, the Working Group worked on a proposal to use electronic display of authorities as a provision under exclusive track occupancy. The Working Group developed lead-in regulatory text and agreed to some conceptual items. When circulated back to the Working Group prior to the full RSAC vote, however, technical issues were raised that could not be resolved in the time available. Accordingly, in the NPRM, FRA addressed the electronic display issue, and certain other issues the Working Group did not reach consensus on, and FRA is addressing certain of those items in this final rule. Other items the Working Group did not reach consensus on include:

- § 214.7—new term and definition for a “remotely controlled hump yard facility.”
- § 214.7—revision to the definition for the term “roadway worker.”
- § 214.317—use of tunnel clearing bays.
- § 214.321—track occupancy after passage of a train.
- § 214.329—removal of objects from the track under train approach warning.
- § 214.336—passenger station platform snow removal and cleaning.
- § 214.337—consideration of allowance for the use of individual train detection at certain types of manual interlockings or controlled points.
- § 214.353—qualification of employees other than roadway workers who directly provide for the on-track safety of a roadway work group.

As described further in either the preamble to the NPRM or below, FRA is not addressing all of these non-consensus items in this final rule. This rule does not address revisions to the terms “roadway worker” or “remotely controlled hump yard facility,” the removal of objects from the track under train approach warning, the addition of a new “verbal protection” section, or passenger station platform snow removal and cleaning, but the remaining non-consensus items this rule does address are discussed in detail in the relevant Section-by-Section analyses below.

## VI. Proceedings Concerning On-Track Safety Procedures for Adjacent Tracks

As mentioned above, the Working Group reached consensus on items that dealt specifically with adjacent-track on-track safety issues. In light of roadway worker fatality trends involving adjacent track protections, and to expedite lowering the safety risk associated with roadway workers fouling adjacent tracks, FRA undertook a rulemaking proceeding to separately address the adjacent-track safety issues the Working Group contemplated. FRA then published an NPRM addressing adjacent-track on-track safety on July 17, 2008 (73 FR 41214), but formally withdrew the NPRM on August 13, 2008 (73 FR 47124). FRA then published a revised NPRM on November 25, 2009 (74 FR 61633), and a final rule on November 30, 2011 (76 FR 74586). FRA received two petitions for reconsideration of the final rule, and five public comments on those petitions for reconsideration. See Docket No. FRA–2008–0059, available at [www.regulations.gov](http://www.regulations.gov). On December 27, 2013, FRA issued an amended final rule which made certain modifications to the adjacent track final rule in light of issues the petitions for reconsideration raised. 79 FR 1743. The final rule, as amended, became effective on July 1, 2014. The provisions in that rulemaking have limited interaction with the miscellaneous revisions in this final rule amending subpart C. However, as a result of the adjacent track rulemaking, the subpart C section numbering in this final rule for the RSAC’s consensus recommendations is slightly different from that recommended. Any relevant numbering changes are noted in the Section-by-Section analysis below.

## VII. Proceedings in This Rulemaking to Date

On August 20, 2012, FRA published an NPRM in the **Federal Register** proposing nearly all the RSAC consensus recommendations the adjacent track rulemaking did not address and requesting public comment on a variety of other proposals. 77 FR 50324. Noteworthy consensus recommendations proposed in the NPRM include: A job briefing requirement regarding the accessibility of the roadway worker in charge; the adoption of procedures for how roadway workers walk across railroad track; a new allowance for railroad’s conducting on-track snow removal and weed spraying operations; a clarification of the existing “foul time” provision; a new “verbal protection” provision; three new permissible methods of

establishing working limits on non-controlled track; the expanded use of individual train detection at controlled points; an amended provision governing audible warnings by trains for roadway workers; and, clarification of training requirements for roadway workers.

The NPRM also addressed items on which the Working Group did not reach consensus and certain miscellaneous other revisions. These items include: electronic display of track authorities, NTSB Safety Recommendation R–08–06 (redundant signal protections), using certain tunnel niches as a place of safety for roadway workers; a new provision for the removal of objects from railroad track when train approach warning is used as the method of on-track safety; amendments to the existing provision governing the qualification of roadway workers in charge (RWIC); a new section addressing passenger station platform snow removal; a new provision governing using “occupancy behind” or “conditional” working limit authorities; the phase-out of using definite train location and informational train line-ups, potential amendments to the existing RWP and blue signal protection requirements for work performed within shop areas, and, using other railroad track as a place of safety when train approach warning is used as the method of on-track safety. Finally, the NPRM also proposed to delete certain incorporations by reference of personal protective equipment standards in FRA’s Bridge Worker Safety Standards at subpart B of part 214, and instead cross reference OSHA’s regulations on the same point.

## VIII. Public Comments Received

FRA received 14 comments in response to the NPRM. Commenters include: AAR, APTA, ASLRRA, BMWED and BRS (jointly; BMWED/BRS comment), Kimberly Clark Professional, Metro-North and LIRR jointly (MTA comment), New Jersey Transit (NJT), NTSB, Reflective Apparel Factory, SEPTA, and 3M Occupational Health and Environmental Safety Division (3M). FRA also received two comments from individuals, and an additional late comment from BMWED. Section VIII.A below contains a summary and analysis of the comments FRA received that FRA is not adopting in this final rule. Section VIII.B below addresses the effective date of the final rule. Section VIII.C below contains a discussion of the general comments FRA received in response to the NPRM. Section IX contains the Section-by-Section discussion of the final rule, and addresses comments received in response to the NPRM on

each respective section of the regulation.

#### *A. Comments on NPRM Proposals Not Included in Final Rule*

##### **1. Passenger Station Platform Snow Removal and Cleaning**

In the NPRM, FRA proposed a new § 214.338 addressing snow removal and cleaning on passenger station platforms. As proposed, under certain circumstances a single RWIC could oversee several “station platform work coordinators” each responsible for directing the on-track safety of a roadway worker or workgroup performing snow removal or cleaning at passenger stations. FRA intended the proposal to address issues associated with snow removal and routine maintenance operations, and to ensure roadway worker safety while facilitating railroads’ ability to carry out these tasks on passenger stations platforms.

FRA received seven comments on this proposal. NTSB’s comment opposed FRA’s proposal, stating it would detract from safety. The BMWED/BRS comment also opposed the proposal, asserting it would weaken existing safety protections and that the existing regulation already facilitates timely removal of snow from passenger station platforms. AAR’s comment indicated proposed § 214.338 is confusing and suggested changes to the proposal (including removal of the 79 mph speed limitation and increased exceptions for snow removal on crosswalks). APTA also opposed FRA’s proposal, and specifically noted it disagreed with FRA’s stated position that part 214 applies to routine passenger station maintenance activities. APTA and BMWED/BRS’s comment also opposed this provision’s related training section (proposed § 214.352). MTA opposed FRA’s proposal, citing an alleged lack of benefits and implying FRA’s NPRM preamble discussion attempted to expand the existing requirements of part 214. SEPTA commented that snow removal and maintenance activities do fall under the scope of existing part 214’s on-track safety requirements and supported the proposal. NJT commented that it successfully utilizes snow removal procedures like those proposed on the Northeast corridor, but stated the proposed 79 mph speed limit would impose financial burdens on the railroad with no resulting safety benefit.

After evaluating the issue and comments received, FRA is not adopting proposed § 214.338 in this final rule. After recent winters in which many States received heavy snowfalls, FRA’s evaluation of this issue indicates the

existing regulation is not problematic. Thus, FRA concludes the proposed amendments are not necessary. Further, several commenters opposed all or parts of FRA’s proposal, with two commenters asserting that adopting the proposal would decrease safety. Because FRA is not adopting proposed § 214.338 in this final rule, FRA is not adopting that provision’s related training at proposed § 214.352. Similarly, FRA is not adopting the proposed revisions to existing § 214.329(a) or to § 214.7’s definition of the term “watchmen/lookouts” that both related to the sight distance exception of proposed § 214.338.

While FRA is not including the station platform snow removal and cleaning proposal in this final rule, FRA believes it is important to clarify that snow removal activities involving railroad employees or contractors fouling track are subject to the requirements of existing part 214. The definition of a roadway worker includes employees or contractors to a railroad who perform maintenance of roadway or roadway facilities on or near track, or with the potential of fouling a track, which includes snow removal activities. Whether a roadway worker sweeps snow from a switch, a signal appliance, or at a passenger station, if the roadway worker is fouling track (or could potentially foul the track), the risk of injury or death to the roadway worker is the same. FRA recognizes the risks of fouling track may be somewhat mitigated when snow removal is conducted on elevated station platforms (railroad passengers safely occupy the same area where these activities occur). However, not all station platforms are high platforms, and often roadway workers face risks when they foul track with their bodies or equipment while removing snow or performing other routine maintenance activities (e.g., a roadway worker clearing snow from an outside station platform may foul the track with his or her shovel). Before receiving the comments, FRA believed industry understood part 214 applies to snow removal activities. For example, in 2011, Amtrak petitioned FRA for relief from part 214’s definition of “fouling a track” when hand tools are used to remove snow from a station platform’s tactile warning area. *See* Docket No. FRA 2011–0077, available at [www.regulations.gov](http://www.regulations.gov). As noted in BMWED/BRS’s comment, FRA granted that waiver.

In the NPRM, FRA also requested comment on whether station platform work coordinators should be required to wear highly visible garments conforming to the standards of the

American National Standards Institute/International Safety Equipment Association. In response, APTA, BMWED/BRS, 3M, Kimberly-Clark Professional, the Reflective Apparel Factory, and NTSB commented. The BMWED/BRS commented that individual railroads should determine the selection and their employees’ use of highly visible protective equipment. NTSB commented that most railroads currently require roadway workers to wear highly visible vests, and, because of the low visibility conditions that typically exist during snow removal operations on station platforms, FRA should require highly visible safety apparel for all work performed in those conditions. APTA’s comment supported using high visibility apparel to help differentiate passengers on the platform from workers, but stated it did not support considering these workers “roadway workers.” Kimberly-Clark Professional, the Reflective Apparel Factory, and 3M all expressed general support for a highly visible garment requirement for station platform work coordinators. As discussed above, FRA is not adopting proposed § 214.338 in this final rule. Accordingly, FRA is not adopting a highly visible garment requirement. As noted in NTSB’s comment, FRA understands most railroads already require roadway workers to wear highly visible garments.

##### **2. Verbal Protection**

Consistent with a recommendation of the Working Group, in the NPRM, FRA proposed new § 214.324, designed to enable roadway workers to establish working limits using “verbal protection.” In the NPRM, FRA explained that by proposing to adopt the Working Group’s “verbal protection” recommendations, it intended to address discrepancies discussed by the Working Group regarding how on-track safety terminology and use varies in different parts of the country. As proposed, verbal protection nearly mirrored the requirements of foul time. For example, as proposed, if a RWIC established working limits utilizing either verbal protection or foul time, he or she would not have to copy a written authority and maintain possession of it while working limits were in effect. Instead, the RWIC would only have to correctly repeat back the applicable working limits information to the train dispatcher or control operator. The primary difference between verbal protection as proposed and the existing rule allowing establishment of working limits via foul time is that under verbal protection, a RWIC could authorize on-track equipment and trains to move into

and within working limits. Under existing § 214.323, foul time can be utilized both within and outside of manual interlockings or controlled points, but trains and on-track equipment are prohibited from moving into working limits until the roadway worker who obtained the foul time reports clear of the track.

In the NPRM, FRA requested comment on whether a RWIC using verbal protection to establish working limits should be required to make and maintain a copy of the working limits information. FRA noted that such a requirement would ensure a RWIC could reference a written document if any question regarding the working limits arose. FRA believes this would be particularly important when a RWIC utilizing verbal protection is asked to clear track to permit trains or other on-track equipment to move through his or her working limits and then resume work.

In response to this request for comment, FRA received comments from AAR, MTA, and the BMWED/BRS. AAR's comment stated the rule should not require a RWIC to make and maintain a written copy of working limits when using verbal protection, as there is no "significant opportunity for confusion if the procedures for verbal protection are followed." AAR further stated the use of a written authority would defeat the purpose of verbal protection. MTA's comment made the same point and added that requiring a RWIC to copy the information could potentially distract that RWIC. BMWED/BRS's comment indicated this proposal would exclude lone workers from being able to establish verbal protection working limits (due to § 214.7's proposed definition of the term "roadway worker in charge") and advocated requiring the RWIC to make a written copy of working limits authority via verbal protection. BMWED/BRS indicated that because an RWIC could authorize train and on-track equipment movements into working limits authorized by verbal protection, a written document would enhance safety and eliminate mental errors regarding the working limits.

In light of the comments received, FRA again reviewed the records of the Working Group's discussions on verbal protection. Those records indicate the Working Group may have primarily intended verbal protection as a method for roadway maintenance machines to occupy and move through interlockings and controlled points and to perform short duration work as necessary. FRA notes that existing part 214 already accommodates these activities through

the establishment of working limits via foul time (§ 214.323) and exclusive track occupancy (§ 214.321). Existing § 214.323 permits the establishment of foul time working limits within a manual interlocking or controlled point, and permits the working limits to be established verbally by the RWIC and dispatcher. Although part 214 does not specify any time limit on the duration of foul time, typically, foul time is used for short durations. If longer duration work needs to be performed, and a RWIC desires to let trains through working limits without giving up his or her authority, the RWIC can use the exclusive track occupancy procedures at existing § 214.321. Further, FRA notes that part 214 does not always require the establishment of working limits to move roadway maintenance machines through an interlocking or controlled point. Existing § 214.301(c) allows roadway maintenance machine movements in travel mode (not performing work such that working limits are required) to do so under the authority of a dispatcher or control operator. Because existing part 214 already provides the flexibility FRA intended the proposal for verbal protection to achieve, and consistent with AAR's comment, FRA believes requiring a RWIC to write down his or her working limits information would make verbal protection somewhat indistinguishable from existing exclusive track occupancy procedures under § 214.321.

FRA also believes that in some instances using verbal protection could raise safety issues if not utilized as intended (e.g., a roadway work group's establishment of working limits within an interlocking to perform work requiring the group to repeatedly clear and then re-occupy track to let trains travel through working limits). After careful consideration of this issue, FRA strongly believes that if a work group wants to let trains or other on-track equipment travel through working limits without releasing its authority, the RWIC should have a written (or electronic) document to refer to containing all relevant information for that authority (e.g., the exact limits of the authority, track number(s)). The existing exclusive track occupancy procedures at § 214.321 provide for such a document for the work group to reference.

FRA understands the operating rules of railroads may utilize different terminology than exists in part 214 (e.g., some railroads' rules may refer to § 214.321's exclusive track occupancy requirements as "foul time"). FRA also understands some railroads' rules may

differ from part 214 in not permitting using certain forms of working limits within the limits of an interlocking or controlled point. However, existing part 214 has no such restrictions. A new verbal protection section would not create any flexibility in establishing working limits within a manual interlocking or controlled point that part 214 does not already provide, and could potentially introduce safety concerns that do not currently exist if not used as the Working Group seems to have originally intended. Thus, FRA declines to adopt the proposed "verbal protection" section in this final rule.

### 3. Physical Characteristics Qualification for Watchmen/Lookouts and Lone Workers

Existing § 214.353 governs the qualification and training of RWICs and includes training on the "relevant physical characteristics of the territory of the railroad upon which the roadway worker is qualified." However, similar training and qualification is not required for lone workers or watchmen/lookouts. See §§ 214.347 and 214.349. In the NPRM, FRA requested comment on whether lone workers and watchman/lookouts should be trained and qualified on the physical characteristics of a territory similar to the qualification requirement for RWICs. Lone workers are similar to RWICs because they establish on-track safety, but only for themselves rather than for an entire roadway work group like an RWIC. FRA sought comment on this issue to determine if such a requirement could potentially improve the safety of lone workers and better enable watchmen/lookouts to provide effective train approach warning at particular locations.

BMWED/BRS, AAR, SEPTA, NJT, and MTA each commented on this proposal. The BMWED/BRS comment supported including physical characteristics qualification and training for lone workers, noting they must be able to establish working limits when necessary, and be familiar with their assigned territory. Both BMWED/BRS and SEPTA opposed physical characteristics training for watchmen/lookouts because such employees work under the supervision of a RWIC who must be qualified on the physical characteristics and have cost concerns. Noting the lack of accidents attributed to roadway workers lacking familiarity with the physical characteristics of a territory, AAR's comment opposed this proposal, stating there is no evidence to support the requirement and citing cost concerns. NJT's comment stated lone workers already have to be qualified on

physical characteristics to foul track. FRA agrees with NJT to the extent a railroad chooses to require physical characteristics training to consider a lone worker “qualified,” as that term is defined at existing § 214.7. With regard to watchmen/lookouts, NJT’s comment stated that physical characteristics qualification would not always help an employee determine proper sight distances and such a requirement would not significantly enhance safety. Rather, NJT suggested FRA should clarify job briefing requirements when roadway work groups utilize watchmen/lookouts. MTA’s comment stated it does not believe watchmen/lookouts should be required to have physical characteristics qualification.

After evaluating the comments, FRA is not adopting either the lone worker or watchmen/lookouts physical characteristics qualification requirement. First, no commenters supported the proposal on watchmen/lookouts, pointing to cost prohibitions, the fact that each roadway work group is already required to have a RWIC qualified on the physical characteristics, and issues with logistics and efficiency. Although some commenters did support such a requirement applying to lone workers, FRA is not aware of accident data to offset the costs such a requirement might entail and does not believe that specifically mandating the physical characteristics qualification of lone workers would yield any real safety benefit. As a practical matter, as NJT’s comment recognized, lone workers are often already qualified on the physical characteristics of a territory, as they need to be conversant in which type of protection (working limits versus individual train detection) is appropriate at any given work location. FRA also notes that under the existing RWP regulation lone workers always have the absolute right to establish working limits when fouling track, which eliminates safety concerns regarding the use of individual train detection if the lone worker is not comfortable using that form of on-track safety at any location. *See* 49 CFR 214.337(b).

#### 4. Removal of Objects by Hand Under Train Approach Warning

Consistent with the Working Group’s consensus recommendation, in the NPRM FRA proposed to add new paragraph (g) to § 214.337. Paragraph (g) is adopted in this final rule and prohibits lone workers from utilizing individual train detection to provide on-track safety when using a roadway maintenance machine, equipment, or material that cannot be readily removed

from the track by hand. As noted in the NPRM, the Working Group also discussed the use of train approach warning (§ 214.329) by roadway work groups using roadway maintenance machines, equipment, or material not easily removed from the track. Although the Working Group did not reach consensus on this point, because the existing RWP regulation is silent on this issue, FRA proposed in the NPRM new § 214.329(h). FRA intended paragraph (h) to prohibit using train approach warning as the form of on-track safety when a roadway work group is using equipment they cannot easily remove from the track and to clarify the establishment of working limits is necessary in such situations. FRA is not adopting proposed § 214.329(h) in this final rule for the reasons explained below.

NTSB and BMWED/BRS comments opposed adding proposed paragraph (h) to § 214.329. NTSB stated the purpose of existing § 214.329 governing train approach warning provided by watchmen/lookouts is to ensure roadway workers can occupy a place of safety not less than 15 seconds before a train arrives. Further, NTSB notes the section is intended to protect roadway workers by allowing them to immediately move to occupy a place of safety when train approach warning is provided, not to allow the coordination of equipment removal.

Like NTSB’s comments, BMWED/BRS commented that train approach warning is limited to warning persons to clear the track and is not intended to protect equipment fouling a track. BMWED/BRS noted that issues with removing equipment from track have not arisen in situations involving the train approach warning regulation. BMWED/BRS explained that if a roadway worker is holding a hand tool or a small handheld power tool, he or she will normally carry that tool with them to the place of safety. BMWED/BRS argued proposed paragraph (h) is unsafe, would increase the risk of roadway workers being struck by trains or on-track equipment, and that “FRA should not require roadway workers to do anything except immediately move to a predetermined place of safety upon receiving a train approach warning.”

After FRA published the NPRM, on January 6, 2014, the rail industry’s Fatality Analysis of Maintenance-of-Way Employees and Signalmen (FAMES) Committee<sup>4</sup> published a

report analyzing fatal accidents which occurred under train approach warning.<sup>5</sup> The report noted that three of the 10 fatal accidents analyzed, which occurred when roadway workers used train approach warning to establish on-track safety, resulted from watchmen/lookouts not being fully focused on the task of detecting approaching trains. The FAMES report emphasized compliance with certain practices required by existing § 214.329. That existing regulatory provision requires watchmen/lookouts to devote their full attention to detecting the approach of trains and communicating the appropriate warnings to roadway workers. That section further prohibits assigning any other duties to the watchman/lookout while that individual is functioning as a watchmen/lookout. After careful consideration of the comments received and the findings of the FAMES report, FRA believes that emphasis on the existing requirements of § 214.329 and continued vigilant enforcement efforts are the best methods to ensure roadway worker safety when train approach warning is used to establish on-track safety. Accordingly, FRA is not adopting proposed paragraph (h) in this final rule. FRA believes the commenters raised valid points regarding the safety of roadway workers and that the regulation is intended to protect roadway workers, not equipment. FRA also agrees a roadway worker’s first responsibility upon receiving train approach warning is to move to occupy a place of safety. While FRA intended this proposal to improve safety, it appears safety is best improved by reinforcing strict compliance with existing § 214.329. That section, if followed, provides for effective on-track safety for roadway workers.

#### B. Effective Date

In the NPRM, FRA requested comment regarding the appropriate effective date of this final rule. SEPTA, MTA, BMWED/BRS, and AAR submitted comments in response to this request. SEPTA agreed with the NPRM’s preamble discussion noting that the effective date of this final rule should consider railroad training schedules. MTA commented that FRA should consider the time needed for the preparation of training materials to select an effective date. MTA’s comment also indicated that if this final rule required certain employees to be trained

<sup>4</sup> The FAMES Committee consists of safety representatives from a cross section of railroad labor, railroad management, and federal regulators. FAMES analyzed all fatalities and selected related

incidents to make recommendations to reduce the risk of future occurrences and eliminate fatalities to roadway workers.

<sup>5</sup> <http://www.fra.dot.gov/eLib/Details/L04902>.

on both part 218's blue signal protections and subpart C's roadway worker protections, additional time for developing training would be necessary. FRA is not adopting a requirement that employees be trained on the protections in both part 218 (blue signal) and part 214 (on-track safety) in this final rule.

BMWED/BRS requested the effective date to be timed to coincide with the effective date of the adjacent track final rule. However, that rule already took effect on July 1, 2014. AAR's comment urged FRA to choose an effective date providing sufficient time to allow for the preparation of training materials for training classes.

In light of the comments received and consideration of the safety benefits to be gained from implementation of this rule, the effective date of this final rule is April 1, 2017. As this final rule is being published in the first half of 2016, railroads have adequate time to adjust training materials used for training classes to be conducted in the first quarter of 2017, or during the time period when annual training is typically conducted for roadway workers. Industry practice is for railroads to finalize their annual rules instruction programs in the fourth quarter of the calendar year, and then to actually instruct their employees in the first quarter of the next calendar year. Based on the implementation date chosen, railroads will not have to alter the timing of their instruction programs for the rule to take effect after the first quarter of 2017.

#### *C. Discussion of General Comments Received*

SEPTA recommended that FRA limit this rulemaking to issues the RSAC addressed. As noted in the NPRM and discussed above, the Working Group meetings that form the basis for much of this final rule took place between 2005 and 2007. Since these meetings, FRA focused its efforts and resources on the adjacent track rulemaking discussed above and other safety issues and Congressional mandates (most notably implementation of the Rail Safety Improvement Act of 2008 (Pub. L. 110-432, Division A, 122 Stat. 4848) (RSIA), which required significant new FRA regulatory efforts). In the interim time, however, FRA continued to address safety issues related to roadway worker protection in general, including NTSB Safety Recommendation R-08-06. Therefore, issuing a regulation not taking into consideration the latest relevant developments and safety issues would be an inefficient and ineffective use of FRA's resources.

APTA requested that FRA publish specific proposed rule text to comment on so the public can appropriately focus their comments and increase the effectiveness of public comments. The Administrative Procedure Act (*see* 5 U.S.C. 553(b)(3)), does not require an agency to propose specific regulatory text in proposed rules, but instead allows an agency to provide "a description of the subjects and issues involved." Nevertheless, in the NPRM, FRA proposed specific regulatory text for almost all its proposals. In this final rule, FRA is adopting three of the items proposed without specific regulatory text (tunnel niches (§ 214.317(d)), blue signal allowances (§ 214.318), and redundant signal protections (§ 214.319(b)). FRA believes the public comments received addressing the benefits and/or drawbacks and potential burdens of these proposals sufficiently inform FRA's reasonable regulatory decisions, particularly in light of the past RSAC discussions. Further, on certain proposals, such as whether FRA should permit using blue signal protections for certain maintenance performed within locomotive and car shop areas, FRA reasonably sought comments broadly addressing how best to implement the proposals if adopted in a final rule (*see* new § 214.318 below). Last, AAR commented that the NPRM's accompanying cost-benefit analysis relied on business benefits. AAR stated that where NPRM proposals would impose burdens on the railroad industry, to adopt those provisions in a final rule, the proposals must be modified if there are no offsetting safety benefits. FRA addresses this comment further in the Regulatory Impact Analysis (RIA) accompanying this rule.

### **IX. Section-by-Section Analysis**

#### *Section 214.7 Definitions*

In the NPRM, FRA proposed amending the existing part 214 definitions to add both new definitions and revise existing definitions. In this final rule, FRA is adding new definitions for the following terms: controlled point; interlocking, manual; maximum authorized speed; on-track safety manual; and roadway worker in charge (RWIC). FRA is also amending part 214's existing definitions for "effective securing device" and "watchman/lookout."

Consistent with the consensus recommendation of the Working Group, in the NPRM, FRA proposed to add the same definition of "controlled point" to part 214 as in FRA's signal regulations at 49 CFR 236.782. In this final rule, FRA is adopting the definition as

proposed. As explained in the NPRM, a definition of "controlled point" in part 214 is necessary because existing § 214.337 prohibits using individual train detection by a lone worker inside the limits of a "controlled point." *See* § 214.337(c)(3). However, the term "controlled point" is not defined in the existing RWP regulation. As also explained in the NPRM, in 2005, in response to interpretation issues, FRA issued Technical Bulletin G-05-29. Technical Bulletin G-05-29 adopted § 236.782's definition of "controlled point" and that definition is used in the RWP regulation today.

AAR and BMWED/BRS commented on this proposal. AAR expressed concern that under the proposed definition any location with a remote controlled power switch would be considered a controlled point. AAR stated that absolute signals are not always at these locations (*e.g.*, dual-control switches that may be manipulated either by hand or remotely, typically by a train dispatcher or control operator) in non-signaled track warrant control territory. In addition, AAR stated the practical effect of this definition would be that railroads could not use individual train detection where there is a remote controlled power switch since it only permits using individual train detection outside the limits established by a controlled point. AAR also expressed concern that switch heaters, snow blowers, signal call lights, blue signal protection, electric switch locks, and bridges can be "controlled" by dispatchers via the control system, but these locations are not considered "controlled points" as commonly understood in the industry. AAR urged FRA to delete the words "and/or other functions of a traffic control system" from the definition of "controlled point" in this final rule.

BMWED/BRS expressed concern about allowing roadway workers to use individual train detection at power-operated switches. BMWED/BRS asserted that power-operated switches can be manipulated by a train crew from a distance resulting in injury to a roadway worker performing work on such a switch while relying on individual train detection as his or her means of on-track safety. BMWED/BRS urged FRA to prohibit lone workers from using individual train detection as a method of on-track safety while working on power-operated switches.

FRA agrees with AAR's comments to the extent that FRA did not intend to include most of the mechanisms AAR listed in the definition of "controlled point" (switch heaters, blue signal protection, snow blowers, *etc.*). FRA

disagrees, however, with regard to remote-controlled power switches and to bridges that are moveable via a control machine (by train dispatcher or control operator). FRA does intend to include those mechanisms in the definition. Under the existing regulation, a lone worker working on a moveable bridge that is a controlled point is always required to establish working limits because a lone worker using individual train detection as his or her form of on-track safety is not required to notify a train dispatcher or control operator of the work they are performing. If a lone worker used individual train detection on a moveable bridge “controlled point,” the dispatcher or control operator may be unaware of the roadway worker’s presence and could remotely move the bridge with the roadway worker on it, creating risk of injury or death to the roadway worker. Accordingly, FRA does not agree with AAR’s comment regarding movable bridges has merit.

In the NPRM, FRA explained that power-operated switches are not generally considered interlockings or controlled points when the switches have wayside indication devices that convey the position of a switch and are operated by train crews. However, FRA further noted that if a power operated switch can be remotely operated by a control operator or dispatcher, it may be considered a “controlled point.” See 77 FR 50333. The Working Group specifically contemplated whether to expand the allowable use of individual train detection in the otherwise prohibited “controlled point” locations, but did not reach consensus on this issue, largely for safety reasons. FRA agrees with the Working Group’s concerns and does not believe it prudent to expand use of individual train detection to “controlled points” consisting of remote-controlled power switches. As explained in the original 1996 RWP final rule, using individual train detection is appropriate only in

very limited circumstances. 61 FR 65959, 65971.

In response to the BMWED/BRS comment, in the NPRM, FRA addressed power-operated switches (77 FR 50333), explaining that use of individual train detection by a lone worker at power-operated switch installation locations is permitted if:

- The signals at these installations do not convey train movement authority; and
- The switch installation is not controlled by a train dispatcher or control operator, and is not part of a manual interlocking or controlled point.

FRA does not believe it prudent to expand the definition of “controlled point” to include all power-operated switches. Rather, the longstanding guidance described above from FRA Technical Bulletin G–05–11 regarding which power-operated switches constitute “controlled points,” will continue to control. Lone workers performing work at these installations, or at any other location where individual train detection use is permitted, maintain the absolute right to use a form of on-track safety other than individual train detection. See § 214.337(b). Thus, a blanket expansion of the definition to address all power-operated switches is not justified. Upon the effective date of this final rule, the definitions of “controlled point” and “interlocking, manual” (discussed below) adopted in this rule supplant FRA Technical Bulletin G–05–29.

Consistent with the Working Group recommendation, in the NPRM FRA proposed amending the existing definition of “effective securing device” to incorporate the contents of Technical Bulletin G–05–20. In this final rule, FRA is adopting the revised definition as proposed. FRA intended to clearly identify effective securing devices and to prevent railroad employees from being injured attempting to operate a secured device. Therefore, FRA proposed to specify in the definition of

“effective securing device” that any such device must be equipped with a “unique tag” clearly indicating to other railroad employees that the switch is secured by roadway workers.

AAR, BMWED/BRS, and an individual submitted comments on FRA’s proposed amendment to this definition. BMWED/BRS advocated for a tag affixed to an effective securing device to be either a generic or a unique tag if the tag clearly indicates inaccessible track working limits and the railroad’s rules prohibit operating in those limits except as the RWIC permits. AAR similarly commented that FRA should clarify the meaning of “unique” tag. AAR stated unique tags should be craft-specific, and not unique to an individual employee. AAR also stated that requiring an individual employee to sign the tag would be unnecessary and burdensome. Finally, an individual commenter asked if an RWP-specific tag would suffice or whether FRA’s proposed amendment would require an additional “unique” tag.

FRA is adopting the revised definition as proposed. In response to the comments received, FRA clarifies that the tag does not have to be “unique” to a specific person or work gang. Rather, a craft-specific tag is considered unique.

In this final rule, as proposed in the NPRM and consistent with BMWED/BRS’s comment supporting the proposal, FRA is adopting the Working Group’s recommended definition for the new term “interlocking, manual.” This definition mirrors the existing definition for the same term in FRA’s signal and train control regulation (§ 236.751).

Because we are not making substantive revisions in this final rule to the proposals in the NPRM for the definitions of “controlled point” or “interlocking, manual,” for ease of reference, below, FRA is duplicating the table included in the NPRM, summarizing the applicability of individual train detection on various types of track arrangements:

Track arrangement	Individual train detection permitted
Controlled point/manual interlocking with switches, crossings (diamonds), or moveable bridges .....	No.
Controlled point with signals only—see § 214.337(c)(3) .....	Yes.
Manual interlocking .....	No.
Automatic interlocking .....	Yes.
Power-operated switch installations .....	See discussion above.

In this final rule FRA is adopting the new definition for the term “maximum authorized speed” proposed in the NPRM. Existing § 214.329(a) requires that train approach warning be given in

sufficient time for a roadway worker to occupy a previously arranged place of safety not less than 15 seconds before a train moving at the maximum speed authorized on that track can pass the

location of the roadway worker. Existing § 214.337(c) contains a similar requirement for lone workers. However, no definition for “maximum authorized speed” exists in the current RWP

regulation. Accordingly, the Working Group recommended that FRA define the term “maximum authorized speed” as the speed designated for a track in a railroad’s timetable, special instructions, or bulletin. The Working Group agreed that using a temporary speed restriction as the basis to determine the appropriate train approach warning distance could pose inherent dangers. That danger can occur when someone removes a temporary restriction from a particular segment of track without notifying the roadway work group or lone worker using that temporary speed restriction so they can determine the appropriate train approach warning distance.

In response to the NPRM proposal, both NJT and BMWED/BRS comments agreed temporary speed restrictions should not be used to determine appropriate train approach warning distances and supported the proposed definition. Therefore, FRA is adopting the new definition as proposed. FRA notes this new definition also applies to the RWP requirements in the adjacent track rulemaking. *See* § 214.336.

Consistent with the consensus recommendation of the Working Group, in the NPRM, FRA proposed to define “on-track safety manual.” FRA intended the proposed definition to provide clarity. FRA is adopting the definition substantially as proposed, with minor clarifying language suggested by BMWED/BRS.

As noted in the NPRM, existing § 214.309 requires each RWIC and lone worker to have with them a manual containing the rules and operating procedures governing track occupancy and protection. To clarify the materials that must be included in such a manual, FRA proposed to define the term “on-track safety manual,” in part, as “the entire set of instructions designed to prevent roadway workers from being struck by trains or other on-track equipment.” BMWED/BRS suggested that the definition require “the entire set of on-track safety rules and instructions” to be in the manual and to expressly state the on-track safety rules and instructions must be maintained together in one manual. FRA agrees with both of BMWED/BRS’s suggestions. First, BMWED/BRS’s suggested reference to “the entire set of on-track safety rules and instructions” more accurately captures the manual’s required contents. Second, consistent with the existing RWP regulation, FRA intended to require that the “on-track safety manual” be a single manual. As discussed in the NPRM preamble, and in the 1996 final rule preamble BMWED/BRS quoted in their

comment, that single manual may be divided into binders (separate sections where appropriate), rather than requiring railroads to issue new manuals each time it amends a rule or issues a new rule. For example, the manual could be broken into separate sections addressing on-track safety rules, good faith challenge procedures, roadway maintenance machine procedures, and other relevant issues.

As discussed in the NPRM, FRA Technical Bulletins G-05-12 and G-05-25 both address concerns regarding the requirement to maintain on-track safety manuals. Because this final rule’s adoption of a definition for “on-track safety manual” alleviates the need for Technical Bulletins G-05-12 and G-05-25, those Technical Bulletins are supplanted upon the effective date of this final rule.

Next, in the NPRM FRA proposed a definition for the term “roadway worker in charge” (RWIC). The term is used in existing § 214.321, and is also described interchangeably throughout the existing regulation as the “roadway worker responsible for the on-track safety of others,” the “roadway worker designated by the employer to provide for on-track safety for all members of the group,” the “roadway workers in charge of the working limits,” and other similarly descriptive terms. The Working Group’s consensus recommendations for this rulemaking also used the term “roadway worker in charge” in several places. However, that term is not defined in the existing regulation, and the Working Group did agree on a recommended definition of the term.

The NPRM’s proposed definition of RWIC mirrored the existing definition for the term in FRA’s Railroad Operating Practices Regulation (*see* § 218.93). FRA also proposed to amend numerous sections of part 214 to substitute the term “roadway worker in charge” for the wide variety of terms currently used to describe the roadway worker who is in charge of a roadway work group and establishes on-track safety for that group.

In its comments on FRA’s proposed definition of RWIC, BMWED/BRS recommended that FRA revise the proposed definition to include lone workers. BMWED/BRS supported including lone workers in the definition of “roadway worker in charge” to permit a lone worker to establish on-track safety for his or her self (without unnecessary regulatory text referring to both RWICs and lone workers). Specifically, BMWED/BRS suggested adding the words “and lone workers qualified in accordance with § 214.347

for the purpose of establishing on-track safety for themselves” to the end of the proposed definition.

FRA concurs with the BMWED/BRS comment, and, in this final rule, is adopting a slightly different definition of RWIC than the suggested language. FRA is defining “roadway worker in charge” as a roadway worker who is qualified under § 214.353 to establish on-track safety for roadway work groups, and lone workers qualified under § 214.347 to establish on-track safety for themselves. Under the current regulation, lone workers can establish on-track safety for their own protection, either via individual train detection or by establishing working limits. In the NPRM, FRA did not intend to prohibit lone workers from establishing working limits for their own protection. FRA emphasizes, however, that consistent with the existing regulation, a lone worker who is qualified under § 214.347 may establish the appropriate form of on-track safety for his or herself. However, if a lone worker is establishing on-track safety for any other roadway workers, he or she must be qualified under § 214.353 as a RWIC.

Finally, FRA noted in the preamble of the NPRM that a RWIC may only perform watchman/lookout duties if the requirements of § 214.329 are met. Section 214.329(b) requires that watchmen/lookouts devote full attention to detecting the approach of trains and communicating warning thereof, and shall not be assigned any other duties while functioning as watchmen/lookouts. Thus, a RWIC could not perform any other duties, such as providing direction to a roadway work group, while simultaneously serving as a watchman/lookout. The limitation on performing other tasks while simultaneously serving as a watchman/lookout severely limits the instances when a RWIC may permissibly fill both roles.

In the NPRM, FRA proposed to amend the definition of “watchman/lookout” to account for the proposed use of station platform work coordinators and requested comment on potentially amending the existing definition to more accurately reflect the training and qualification requirements for a watchman/lookouts. In this final rule, FRA is not adopting the proposed station platform work coordinators provisions. Thus, the proposed revision to the watchman/lookout definition is unnecessary. With regard to watchman/lookout training and qualification requirements, the existing regulation defines a watchman/lookout, in part as, an employee who has been annually trained and qualified to provide train

approach warning to roadway workers of approaching trains or on-track equipment. See § 214.7. However, as discussed below in the Section-by-Section analysis for § 214.347, the current regulation does not specify the frequency of “periodic” qualification requirements for specific roadway worker qualifications (e.g., lone worker, watchman/lookout, flagman, or RWIC qualification). Existing § 214.349(b) requires initial and periodic qualification of a watchman/lookout to be evidenced by demonstrated proficiency, mirroring the other existing additional roadway worker qualification sections. FRA requested comment on whether it should remove the word “annually” from the existing definition of “watchman/lookout” so the definition more accurately reflects both the current and any future RWP refresher qualification and training requirements and is consistent with the other existing roadway worker qualification definitions.

BMWED/BRS submitted a joint comment in response to the proposal, and BMWED, submitted its own additional late comment. Noting that the Working Group reached consensus on annual training and qualification requirements for roadway workers, in their comments, BMWED/BRS opposed removing the word “annual” from the definition of watchman/lookout.

After consideration of BMWED/BRS’s comment, in this final rule FRA is removing the word “annually” from the definition of “watchman/lookout.” As stated above, removing the reference to “annual” is for consistency with the definitions of the other roadway worker qualifications, and because the “periodic” qualification requirement is not considered an “annual” requirement under the RWP regulation. FRA’s longstanding position since the RWP rule became effective in 1997 is that roadway worker training is an annual requirement (see Section-by-Section analysis discussion for §§ 214.343, 214.345, 214.347, 214.349, 214.351 and 214.353). As discussed in the Section-by-Section analysis for the roadway worker training sections below, the RSAC consensus recommendation was for a 24-month “periodic” re-qualification requirement, and the training standards rulemaking at 49 CFR part 243 requires a minimum three-year qualification interval. FRA is not amending the annual training requirement for watchmen/lookouts or for roadway workers generally. However, as discussed in the Section-by-Section analysis for the training sections below, FRA is adopting a

definite interval for periodic re-qualification in this final rule.

The BMWED’s later comment expressed concern that some railroads are not providing watchmen/lookouts with any audible or visual warning devices to provide appropriate train approach warning. The comment points out the existing definition of the term “watchman/lookout” in § 214.7 requires, in part, that roadway workers acting as watchmen/lookouts be properly equipped to provide visual and auditory warning, such as whistle, air horn, white disk, red flag, lantern, fusee. The comment urges FRA to clarify in this final rule that use of such audible and/or visible warning devices are mandatory to provide train approach warning under § 214.329. FRA concurs with the BMWED. Both the definition of watchman/lookout, and the operative train approach warning regulation at § 214.329(c) and (g), provide that watchmen/lookouts must be properly equipped to provide train approach warning. As explained in the preamble to the 1996 final rule implementing subpart C:

[t]his section further imposes a duty upon the employer to provide the watchman/lookout employee with the requisite equipment necessary to carry out his on-track safety duties. It is intended that a railroad’s on-track safety program would specify the means to be used by watchmen/lookouts to communicate a warning, and that they be equipped according to that provision.

61 FR 65970, Dec. 16, 1996. Thus, FRA emphasizes that under the existing RWP regulation, a railroad must properly equip a watchman/lookout with the equipment specified by the railroad’s on-track safety program to properly communicate a warning. Except in limited circumstances (e.g., a watchman/lookout assigned to provide train approach warning for a single welder and who is located immediately next to the welder to provide a warning), if a railroad does not provide equipment with the specified auditory or visual warning capabilities to the roadway workers a watchman/lookout is protecting, the railroad is in violation of § 214.329. If an on-track safety program fails to specify the “requisite equipment necessary” for a watchman/lookout to provide on-track safety for a roadway work group, the program also is not compliant with part 214.

#### *Subpart B—Bridge Worker Safety Standards*

In the NPRM, FRA proposed to delete the existing incorporations by reference of certain outdated industry standards for personal protective equipment (PPE) in subpart B of part 214 (Bridge Worker

Protection). Specifically, §§ 214.113, 214.115, and 214.117 incorporate by reference certain American National Standards Institute (ANSI) standards governing head, foot, eye, and face protection, respectively. FRA originally promulgated those sections in 1992 and they reference standards from 1986. 57 FR 28116, Jun. 24, 1992. Although the regulatory requirements have not been substantively updated in some time, ANSI has updated the standards themselves. Employers and employees may not be able to obtain PPE manufactured using the older standards currently incorporated by reference. As such, FRA proposed to (1) amend these existing sections to reflect the updated ANSI standards, (2) allow the continued use of any existing equipment which meets the standards currently incorporated by reference in part 214, and (3) allow the use of equipment meeting updated versions of those standards. FRA received no comments on these NPRM proposals and is adopting the revisions to §§ 214.113, 214.115, and 214.117 as proposed. For a detailed discussion of these amendments, see the preamble to the proposed rule at 77 FR at 50335–36.

#### *Subpart C—Roadway Worker Protection* Section 214.301 Purpose and Scope

Section 214.301 sets forth the purpose and scope of subpart C of part 214. Existing paragraph (c) explains that subpart C prescribes safety standards for the movement of roadway maintenance machines when such movements affect the safety of roadway workers. Paragraph (c) further explains that subpart C does not affect the movements of roadway maintenance machines that are conducted under the authority of a train dispatcher, a control operator, or the operating rules of a railroad. To clarify the paragraph’s meaning, FRA proposed regulatory text explicitly stating that while roadway maintenance machines are traveling under the authority of a train dispatcher, a control operator, or the operating rules of the railroad, the operator is not required to establish on-track safety under part 214. FRA did not intend this proposed amendment to be substantive but rather to clarify the existing meaning of paragraph (c) consistent with FRA Technical Bulletin G–05–14. Technical Bulletin G–05–14 explains that the regulation does not affect movements of roadway maintenance machines over non-controlled track being made under the operating rules of the railroad, but, those same machines, while actually conducting work, must establish on-track safety. After careful consideration

of the issue and comments received, FRA concluded the meaning of paragraph (c) is already well understood and the proposed amendment is unnecessary. Thus, in this final rule, FRA is not adopting this proposed amendment to paragraph (c).

However, FRA is adding a reference in paragraph (c) to new § 214.320 adopted in this final rule. Section 214.320 pertains to the NPRM's proposed revisions to § 214.301 on the movement of roadway maintenance machines over non-controlled track equipped with automatic block signal (ABS) systems where trains are permitted to travel at greater than restricted speed. The discussion of that issue, and of the comments received, appears below in the Section-by-Section analysis for new § 214.320.

As a result of the amendments this final rule makes to §§ 214.301, 214.320, and 214.329, and as noted in the NPRM, upon the effective date of this final rule Technical Bulletin G-05-14 is supplanted.

#### Section 214.302 Information Collection Requirements

FRA received no comments in response to this proposal. Therefore, as proposed in the NPRM, FRA is deleting this existing section from part 214. For a detailed summary of the information collection requirements, please see the Paperwork Reduction Act discussion in Section X of the preamble below.

#### Section 214.305 Compliance Dates

As proposed in the NPRM, FRA is deleting existing § 214.305, because the compliance dates in the section are obsolete. FRA received no comments in response to this proposal.

#### Section 214.307 On-Track Safety Programs

Existing § 214.307 requires a railroad to notify FRA in writing at least one-month in advance of its on-track safety program becoming effective, and sets forth FRA's formal review and approval process for such programs. In the NPRM, FRA proposed to amend this section by: (1) Rescinding the requirement that railroads provide FRA advance notice of the effective date of their on-track safety programs; and (2) modifying the existing on-track safety program formal approval process. Instead, FRA proposed to review railroads' on-track safety programs upon request. FRA proposed these amendments intending to alleviate burdens as part of its retrospective review of subpart C. Related to this proposed revision, FRA proposed a new paragraph (b) mirroring other provisions

FRA recently adopted in the Federal railroad safety regulations (*see* 49 CFR 220.313). In new paragraph (b), FRA proposed that the FRA Associate Administrator for Railroad Safety and Chief Safety Officer could disapprove a program for cause stated, and proposed requiring a railroad to respond to any such disapproval within 35 days by either (1) amending its program and submitting the amendments for approval, or (2) providing a written response in support of its program. As proposed, FRA's Associate Administrator for Railroad Safety and Chief Safety Officer would subsequently render a decision in writing either approving or disapproving the program. Under this proposal, FRA would consider a failure to submit an amended program or provide a written response as the section requires a failure to implement a program under this part. Finally, in the NPRM, FRA proposed removing the outdated reference to the compliance dates of § 214.305.

BMWED/BRS submitted comments recommending that FRA retain and clarify the advance notification requirement of the section, and additionally suggested language clarifying the requirement for railroads to maintain an on-track safety program approved by FRA. BMWED/BRS also recommended requiring railroads amending or adopting an on-track safety program notify FRA one month prior to the effective date of any amendments to a program or implementation of a new program.

FRA agrees with BMWED/BRS's comment regarding the retention of the advance notification requirement. FRA is retaining that existing provision but moving it to paragraph (b) of this section. FRA agrees it should continue to have advance notice so it can review new on-track safety programs (or railroads' amendments to existing FRA-approved programs). FRA is, however, amending this section to eliminate the required formal review process for each new program and each amendment to existing FRA-approved programs. Specifically, FRA is amending paragraph (a) of this section to require railroads to maintain and make their programs available to FRA upon request. This amendment will enable FRA to better utilize its limited resources to focus on addressing legitimate safety concerns with railroads' on-track safety programs, rather than conducting mandatory formal reviews of programs that, in some instances, been established and approved by FRA for many years.

As proposed in the NPRM, FRA is also amending this section to eliminate

reference to the compliance dates in § 214.305, because as explained above, those dates are obsolete and this final rule deletes § 214.305. Given the deletion of § 214.305, however, FRA is amending paragraph (a) of § 214.307 to specifically require railroads to have an on-track safety program in effect by the date on which each railroad's operations commence. Finally, FRA is adopting proposed paragraph (b), but is redesignating it as paragraph (c) in this final rule.

#### Section 214.309 On-Track Safety Manual

Existing § 214.309, titled "On-track safety program documents," mandates, in part, that rules and operating procedures governing track occupancy and protection be maintained together in one manual and be readily available to all roadway workers. In the NPRM, FRA proposed amendments to this section consistent with the consensus language recommended by the Working Group. In this final rule, FRA is amending this section to incorporate the definition for the new term "on-track safety manual" (*see* discussion of § 214.7 above for background on this newly-defined term). As proposed in the NPRM, FRA is also amending the title of this section to reflect the new term "on-track safety manual." As proposed in the NPRM, new paragraph (a) of this section incorporated the term "on-track safety manual," and then repeated the current existing text of § 214.309. In response to this proposal, for consistency with the new term "roadway workers in charge," BMWED/BRS suggested that FRA add the words "in charge" to the second sentence of this paragraph (so that the sentence would require RWICs responsible for the on-track safety of others and lone workers to have and maintain a copy of the on-track safety manual). FRA concurs, and, in final rule, is amending paragraph (a) consistent with BMWED/BRS's suggestion.

In the NPRM, FRA intended new paragraph (b) to address the difficulty a lone worker, such as a signal maintainer or a walking track inspector, might experience carrying a large on-track safety manual. FRA proposed that a railroad must provide an alternate process for a lone worker to obtain on-track safety information. As proposed, the alternate process could include use of a phone or radio for a lone worker to contact an employee who has the on-track safety manual readily accessible. In response to this proposal, BMWED/BRS suggested FRA remove the reference to situations where it is impracticable for a lone worker to

“carry” the on-track safety manual, and instead refer to situations where it is “impracticable for the on-track safety manual to be readily available” to a lone worker. FRA agrees BMWED/BRS’s proposed language more accurately captures the requirement with regard to access to the on-track safety manual, and is adopting that change in this final rule.

Related to the “alternative access” provision of paragraph (b), FRA is also adopting the Working Group’s recommendation to require each railroad’s lone worker training program to include training on the on-track safety manual alternative access requirement (see discussion of § 214.347 below).

As proposed, new paragraph (c) of this section provides for the temporary publication of changes to a railroad’s on-track safety manual in bulletins or notices carried along with the on-track safety manual. This proposed change recognizes that railroads often need to make temporary or permanent changes to on-track safety rules and procedures and to publish and distribute those new or revised requirements on an as-needed basis. While any permanent amendments to a railroad’s on-track safety program must be incorporated into the on-track safety manual, existing § 214.309 does not allow for the temporary nature of some documents or the practical difficulties with incorporating permanent changes immediately after issuance.

In response to this proposal, consistent with their recommendation in paragraph (b) of this section and noting that bulletins and notices are not always literally “carried” by a RWIC or lone worker, the BMWED/BRS suggested that FRA not require temporary bulletins and notices to be “carried” with the on-track safety manual, but rather any temporary publications be “retained” with the on-track safety manual. FRA concurs with this suggestion and is adopting this change in the final rule.

In response to proposed paragraph (c), BMWED/BRS also suggested that to prevent “an open-ended process where stacks of ‘temporary’ notices will ultimately supplant” a railroad’s on-track safety manual, FRA should require employers to update their on-track safety manual at least annually to incorporate any relevant changes. FRA declines to adopt an annual update requirement because the RSAC did not recommend the requirement, FRA did not propose the requirement in the NPRM, and FRA data does not demonstrate a pattern of problems or accidents resulting from a lack of

updates to railroads’ on-track safety manuals. Even so, FRA encourages railroads to regularly update their on-track safety manuals to ensure roadway workers have clear access to the most current on-track safety rules.

#### Section 214.315 Supervision and Communication

Existing § 214.315 mandates that railroads provide job briefings to roadway workers assigned duties requiring the worker to foul a track. Section 214.315 sets forth certain communication requirements between members of a roadway work group, and, in the case of a lone worker, between that lone worker and his or her supervisor or other designated employee. The Working Group recommended FRA add new requirements to this existing section, mainly addressing job briefing terminology and the substance of the required job briefings. FRA addressed most of these consensus recommendations in the adjacent track rulemaking. 74 FR 74614. One recommendation FRA did not address in the adjacent track rulemaking is the Working Group’s recommendation to require job briefings to include information regarding the accessibility of the RWIC to individual roadway workers and alternative procedures if the RWIC is not accessible to members of the roadway work group. In the NPRM, FRA proposed the Working Group’s recommended consensus language requiring employers to designate a substitute employee with the relevant qualifications to serve as RWIC when a roadway work group’s original RWIC departs a work site for an extended period of time. FRA is adopting that language in this final rule.

SEPTA commented on this proposed amendment noting the inconsistency of the proposal with FRA Technical Bulletin G–05–07. Specifically, SEPTA noted that Technical Bulletin G–05–07 states “‘when a RWIC departs a work site for an extended period, a substitute employee with relevant qualifications *may* be designated.’” (Emphasis added.) SEPTA specifically took exception to FRA’s use of the word “must” in the NPRM’s preamble rather than the word “may” used in the technical bulletin.

An RWIC is the person who establishes and directs the on-track safety for a roadway work group, and it is critical that each roadway worker in a roadway work group have access to the RWIC. Access is necessary when a member of the group invokes a good faith challenge, or when he or she has questions concerning the established on-track safety protection. As discussed

in FRA Technical Bulletin G–05–07, generally a RWIC must be located in the immediate vicinity of the work activity, but it may be necessary for a RWIC to depart a work location for a short period to travel to another area encompassing the same work activity (e.g., to conduct on-track safety checks throughout a large mechanized production activity). When an RWIC is away from a work site for a short period, it is imperative the roadway work group have a readily available means to communicate with that person. When a RWIC departs a work site for an extended period and is not readily available to communicate with members of the roadway work group, the roadway work group members effectively do not have a RWIC, as he or she is not at the work group’s location and cannot communicate with the group.

After carefully considering SEPTA’s comment, FRA finds that “must” is correct. The RWIC is responsible for ensuring the on-track safety of members of a roadway work group and must be readily available to communicate with members of the group. Thus, FRA is adopting this recommended consensus item as the NPRM proposed.

In the NPRM, FRA also proposed minor changes to existing paragraphs (b), (c), and (d) to reflect that roadway work groups often include multiple roadway workers and to ensure consistent use of the term “roadway worker in charge” and “on-track safety job briefing” throughout subpart C. FRA received no comments on these minor proposed amendments and is adopting them in this final rule. For more background on these amendments see the discussion in the preamble to the NPRM. 77 FR 50338.

#### Section 214.317 On-Track Safety Procedures, Generally

Existing § 214.317 generally requires employers to provide on-track safety for roadway workers by adopting on-track safety programs compliant with §§ 214.319 through 214.337. In the NPRM, FRA proposed adopting two substantive amendments to this section recommended by the Working Group. The first recommendation would impose requirements for roadway workers who walk across railroad track in new paragraph (b), and the second recommendation would provide new exceptions for roadway workers conducting snow removal or weed spraying operations on non-controlled track in new paragraph (c). FRA also requested comment on whether it should amend subpart C to address using tunnel niches or clearing bays less than four feet from the field side of the

near rail. After consideration of comments received, FRA is adopting a slightly modified new paragraph (b), paragraph (c) substantially as proposed, and a new paragraph (d) to address the use of certain tunnel niches and clearing bays. FRA is also redesignating the existing text of § 214.317 as paragraph (a) of the section to account for new paragraphs (b), (c), and (d).

In the NPRM, FRA proposed new paragraph (b) in this section to require roadway workers to (1) stop and look before crossing track and (2) move directly and promptly across tracks. Proposed paragraph (b) would also require railroads to adopt rules governing how roadway workers determine if it is safe to cross track and clarify the section is not a substitute for required on-track safety when roadway workers are required to foul the track to perform roadway worker duties. As explained in the NPRM, this proposal addresses the practical reality that roadway workers often need to walk across tracks while not directly engaged in activities covered by the existing RWP regulation. For example, a roadway worker might incidentally walk from a work site on a track in which working limits are in effect to a vehicle adjacent to the right of way. While walking to the vehicle, a roadway worker may have to cross over other "live" tracks where working limits or another form of on-track safety is not in effect. Proposed paragraph (b) is intended to prevent roadway workers from being struck by trains or other on-track equipment when incidentally crossing track, while at the same time recognizing the need for procedures enabling roadway workers to cross tracks safely without formal on-track safety in place.

As proposed, paragraph (b) would have required roadway workers to first stop and look in all directions a train or other on-track equipment could approach from before starting across a track to ensure they could safely clear the track before the arrival of any train or other on-track equipment. FRA intended the proposal to provide an opportunity for roadway workers to physically stop what they are doing and consider the on-track circumstances before crossing live track.

SEPTA, BMWED/BRS, NJT, and AAR submitted comments in response to this proposal. SEPTA's comment opposed a requirement that roadway workers stop before crossing each track, explaining that a person who would attempt to cross a track without proper sight distance or in a high traffic area is not likely to stop and look in all directions anyway, so the utility of such a

provision would be minimal. NJT's comment supported the requirement that roadway workers look in both directions before crossing a track. BMWED/BRS supported requiring roadway workers to look in all directions before starting across track, but opposed requiring roadway workers to "stop" before crossing. The labor organizations stated a requirement to stop: (1) Is unnecessary; (2) would cause delays; (3) could lead to increases in slips, trips, and falls; (4) is over-prescriptive; and (5) could subject roadway workers to abuse by managers or FRA inspectors conducting safety audits. AAR also opposed the requirement to "stop" before crossing, stating there could be no expectation such a requirement would regularly be followed, and railroads would then be liable for such noncompliance.

After evaluating the comments, in this final rule FRA is not adopting the proposed requirement that roadway workers stop and look in all directions before crossing track. Commenters expressed unanimous opposition to the proposed requirement and FRA recognizes it would be very difficult to enforce. FRA believes stopping and looking before crossing railroad track is also a matter of common sense and a necessary reality roadway workers are already faced with. Thus, while in this final rule FRA is not adopting the proposed language requiring roadway workers to stop and look before crossing tracks, FRA is adopting the remaining portions of proposed paragraph (b). New paragraph (b) requires roadway workers to move directly and promptly across tracks and railroads to adopt rules governing how roadway workers determine if it is safe to cross track. Consistent with the proposal in the NPRM, as adopted in this final rule, paragraph (b) also clarifies the requirements of the paragraph are not a substitute for required on-track safety when roadway workers are required to foul the track to perform roadway worker duties. For further background on when on-track safety is required for roadway workers, see the discussion in the preamble to the NPRM. 77 FR 50339–50340.

FRA is also adopting the Working Group's recommendation to require a railroad's safety rules governing walking across railroad tracks to be included in all roadway worker training. As proposed in the NPRM, FRA has adopted this recommended training requirement in the roadway worker training provision at § 214.345 (discussed below).

New paragraph (c) of this section addresses the Working Group's

recommendation for on-track snow removal and weed spraying on non-controlled track. As proposed, paragraph (c) permits on-track snow removal and weed spraying operations on non-controlled track without requiring the track to be made inaccessible under § 214.327. FRA intends the provision to alleviate the difficulty of establishing working limits on non-controlled track for operating equipment moving over long distances, and where roadway workers are conducting limited to no on-ground work activities.

After careful consideration of comments responding to proposed paragraph (c), in this final rule, FRA is adopting the paragraph substantially as proposed. Paragraph (c) allows weed spraying and snow removal operations under § 214.301, with the limitations and/or conditions listed in paragraphs (c)(1) through (4) of the paragraph. AAR's comments advocated expanding this provision to allow inspection activities under the same circumstances, but noted the Working Group did not discuss this possibility. Because the Working Group did not discuss this possibility, and FRA did not propose it, FRA declines to include inspection activities in the activities covered by paragraph (c). Also, FRA believes allowing expansion of this exception to include inspection activities would present safety risks as "inspection activities" may entail many different roadway worker activities, and are not of the specialized and more limited nature of the specific snow removal and weed spray operations the Working Group addressed. Further, § 214.301 already covers certain inspection activities while roadway maintenance machines are in "travel" mode, and hi-rail inspection activities are also already subject to certain on-track safety exclusions under § 214.336. Thus, FRA is retaining the existing on-track safety requirements for work activities other than the specific snow removal and weed spray operations the Working Group addressed.

Paragraph (c)(1) requires railroads to adopt and comply with procedures for on-track snow removal and weed spraying operations if the allowances under paragraph (c) are utilized. Paragraphs (c)(1)(i) through (iv) set minimum standards for what those procedures must include. Paragraph (c)(1)(i) requires all on-track movements in the area where on-track snow removal or weed spraying operations are occurring be informed of those operations. AAR's comment opposed this requirement, stating it is unnecessary and problematic in areas

without radio reception. In response, FRA notes that in areas without radio reception it may be likely there are no other persons conducting on-track movements in the "affected area" required to be notified. Further, there are communication methods other than radio if a railroad wishes to utilize the exception in § 214.317(c) in an area without radio reception. FRA also emphasizes paragraph (c) is an exception to the requirement to establish on-track safety, and FRA anticipates that in the majority of instances this exception can be utilized for, radio reception will not be an issue. If radio reception is an issue and there is no other way to inform others making on-track movements in the area of snow removal or weed spraying operations, railroads will have to follow existing methods of establishing on-track safety to perform the work.

As proposed in the NPRM, paragraph (c)(1)(ii) of this final rule requires railroads' procedures to ensure all weed spraying and snow removal operations conducted under paragraph (c) operate at restricted speed defined in § 214.7; except on other than yard tracks and yard switching leads, where movements may operate at no more than 25 miles-per-hour (mph) and must be prepared to stop within one-half the range of vision. Paragraph (c)(1)(iii) requires the procedure adopted by a railroad to ensure there is a means of communication between on-track equipment conducting snow removal and weed spraying operations and any other on-track movements in the area.

Paragraph (c)(1)(iv) prohibits remotely controlled hump yard facility operations from being in effect while snow removal or weed spraying operations are in progress and also prohibits the kicking of cars unless agreed to by the RWIC of the snow removal or weed spraying operation. The prohibition on kicking cars is intended to help ensure there is no free rolling equipment near on-track snow removal or weed spraying operations. Thus, before machines can operate under this provision in remotely controlled hump yard facilities, humping operations must be suspended. As explained in the NPRM, in proposing to prohibit weed spraying and snow removal operations when hump yard operations are "in effect," FRA considered AAR's post-RSAC recommendation to instead prohibit weed spraying and snow removal operations when hump operations are "in progress." BMWED's post-RSAC comment stated it favored "in effect," because that term is more inclusive as hump operations might be "in effect" but not actually "in progress" (e.g., cars

not literally being humped right at the moment that weed spraying operations begin). FRA agreed with the BMWED's position, and proposed the initial Working Group's consensus wording of "in effect," but requested further comment on this issue from all interested parties.

In response to the NPRM proposal, the BMWED/BRS comment reconfirmed the labor organizations' support for the term "in effect" for the status of hump yards. BMWED/BRS stated if "hump yard operations are not 'in effect', that would mean that humping operations have been suspended until released back to the hump by the RWIC." The labor organizations objected to using the term "in progress" because hump operations are not suspended just because humping may not actually be "in progress" at a particular moment.

After considering these additional comments, FRA continues to agree with BMWED/BRS's recommendation to prohibit snow removal and weed spraying operations when hump yard operations are "in effect." This language makes clear FRA's intent for no humping operations to take place until a roadway work group utilizing this section reports clear of hump yard tracks that present the possibility of being struck by humped cars. Thus, FRA is adopting the language it proposed in the NPRM.

FRA does not intend that the only way the exceptions in this section may be utilized is to shut down an entire classification yard. Rather, FRA's intent is the hump operations must not be in effect for the tracks (or group of tracks) that would be affected by snow removal or weed spray operations. For example, under this section it is permissible for a block to be placed on a group of tracks within a classification yard where snow blowing activities are taking place, such that equipment could not be humped into those tracks until the roadway work group utilizing this section reports clear of those tracks.

Paragraph (c)(2) provides that roadway workers engaged in snow removal or weed spraying operations retain an absolute right to utilize the provisions of § 214.327 (inaccessible track). FRA is adopting this provision as proposed.

Paragraph (c)(3) provides that roadway workers engaged in snow removal or weed spraying operations subject to § 214.317 can line switches for the machine's movement without establishing a form of on-track safety under §§ 214.319 through 214.337, but may not engage in any roadway work activity. In its comments, AAR recommends amending this provision to

include the lining of derails. FRA agrees with AAR's recommendation as applied to derails lined via switch stands. The lining of derails by switch stand does not typically require fouling the track. FRA does not agree with AAR's recommendation for derails not operated via switch stands. These derails require roadway workers to bend down onto the rail (or directly adjacent to and in the foul of the rail) to operate the derail. Thus, FRA is adding the words "or derails operated by switch stand" to this provision. For derails not operated by switch stand, a method of on-track safety complaint with subpart C is required.

As proposed and adopted in this final rule, paragraph (c)(4) contains the consensus recommendation of the Working Group for the roadway equipment utilized under this provision. Paragraph (c)(4) requires that each machine engaged in snow removal or weed spraying operations under § 214.317(c) be equipped with: (1) An operative 360-degree intermittent warning light or beacon; (2) an illumination device, such as a headlight, capable of illuminating obstructions on the track ahead in the direction of travel for a distance of 300 feet under normal weather and atmospheric conditions; (3) a brake light activated by the application of the machine braking system, and designed to be visible for a distance of 300 feet under normal weather and atmospheric conditions; and, (4) a rearward viewing device, such as a rearview mirror. If a machine is utilized in snow removal or weed spraying operations conducted during the period between one-half hour after sunset and one-half hour before sunrise, or in dark areas such as tunnels, that machine must also be equipped with work lights, unless equivalent lighting is otherwise provided. AAR commented that paragraph (c)(4) does not address what happens when there is an equipment failure, such as if a machine's headlight burns out. AAR suggested that railroads be permitted to operate the equipment under § 214.317 for seven days after learning of a failed component. FRA declines to adopt AAR's suggested amendment. As noted above, § 214.317(c) is designed as an exception to the current requirement to establish on-track safety while certain roadway work activities are performed. FRA believes under the provisions of this paragraph the specified activities can be conducted safely. When equipment fails, such as a headlight in AAR's example, the safety of the operation is potentially compromised. Accordingly, when equipment required

by this section fails, railroads must default to part 214's existing on-track safety requirements until the equipment is repaired and operating.

Finally, in the NPRM, FRA requested comment on using certain existing tunnel niches (also referred to as clearing bays) as places of safety for roadway workers. As explained in detail in the NPRM (77 FR 50331), some existing railroad tunnels have niches built into the sidewalls that roadway workers occupy as places of safety while performing work in tunnels (typically inspection work). Some of the niches may, by design, be slightly less than four feet from the field side of the near rail. Because existing subpart C does not address using tunnel niches as places of safety, the use of niches less than four feet from the field side of the near rail as a place of safety technically violates the existing regulation because a roadway worker occupying the niche would be "fouling a track" as defined by § 214.7. The Working Group discussed this issue but did not reach consensus. The Working Group did, however, decide against modifying the definition of "fouling a track" to accommodate using tunnel niches. Working Group discussions indicated tunnel niches outside the clearance envelope, but less than four feet from the field side of the rail, existed on a small number of railroads, primarily in the Eastern United States, and those railroads have a long history of safely utilizing the niches.

FRA did not propose specific regulatory text regarding the use of tunnel niches, but requested comment on whether, and how, to address the issue in a final rule. FRA listed certain items it anticipated a regulatory provision allowing using tunnel niches would need to include (*e.g.*, railroad designation of niches, time for a roadway worker to move into a niche upon the approach of a train, that niches must be free from debris).

In response to its request for comments on tunnel niches, FRA received comments from SEPTA, MTA, BMWED/BRS, APTA, and AAR. SEPTA's comment stated that using tunnel niches as a safe place should be allowed if individuals using the niches are not at risk of being struck by moving on-track equipment. MTA's comment supported using niches as a safe place for roadway workers, and indicated railroads should review each niche location before designating it as a safe place. BMWED/BRS's comment opposed using tunnel niches less than four feet from the near running rail as a place of safety. Citing the presence of debris, vagrants, rats, spiders, mice,

raccoons and other hazards, and noting that conditions such as claustrophobia could cause roadway workers to panic and jump out of a tunnel niche into the path of an oncoming train, BMWED/BRS indicated its members typically establish working limits before entering tunnels with close side clearances. BMWED/BRS also expressed concern about roadway work groups exceeding the capacity of a tunnel niche, potentially resulting in one or more roadway workers being left out in the foul with no ability to reach an alternative place of safety.

In its comments, AAR disagreed with BMWED/BRS noting that, particularly in the Northeast United States, railroads have safely used tunnel niches for a century. AAR specifically noted Amtrak's use of tunnel niches as places of safety for inspectors and argued that given the decades of experience demonstrating that tunnel niches can be safely used, FRA should permit Amtrak to continue to use tunnel niches.

APTA's comment indicated that tunnel niches, clearing bays on bridges, and passenger platforms all provide appropriate clearance of the envelope of train and equipment passage and all are safe places with "no historical incident data" supporting the need for FRA to establish additional regulatory provisions to improve their safety. Finally, APTA recommended FRA allow using tunnel niches, clearing bays on bridges, and platforms as designated places of safety and require analysis of any related potential safety issues under FRA's future risk reduction and system safety regulations.

After further evaluating this issue and considering the comments received, in this final rule FRA is adopting new paragraph (d) in § 214.317 authorizing, subject to certain conditions, the use of existing tunnel niches or clearing bays less than four feet from the nearest rail as places of safety for roadway workers. Although FRA recognizes some railroads have successfully used tunnel niches and clearing bays as designated places of safety for roadway workers for some time, existing subpart C technically prohibits such use. New paragraph (d) of § 214.317 sets minimum standards for the use of such existing niches to ensure their continued safe use. Consistent with existing § 214.337(b) applicable to lone workers and § 214.317(c)(2) adopted in this final rule for certain snow removal and weed spraying operations, paragraph (d) also makes clear RWICs and lone workers maintain the absolute right to designate a place of safety in a location other than a tunnel niche or to establish working limits if appropriate.

Paragraph (d) authorizes only using tunnel niches and clearing bays that have a place of safety less than four feet from the field side of the near rail in existence on the effective date of this final rule, if the conditions of paragraphs (d)(1) and (2) are met. Paragraph (d)(1) requires RWICs or lone workers to inspect each tunnel niche or clearing bay prior to determining the niche is suitable to use as a place of safety. Consistent with the requirements of §§ 214.329 and 214.337, paragraph (d)(2) requires a RWIC or lone worker to determine if there is adequate sight distance to permit roadway worker(s) to occupy the place of safety in the niche or clearing bay at least 15 seconds prior to the arrival of a train or other on-track equipment at the work location.

Finally, like existing § 214.337's provision providing lone workers with the absolute right to establish alternate methods of on-track safety, paragraph (d)(3) gives the RWIC or lone worker the absolute right to designate a place of safety in a location other than a tunnel niche or clearing bay, or to establish working limits if appropriate.

Compliance with this new paragraph will ensure the continued safe use of existing tunnel niches, as the RWIC or lone worker is required to visually inspect each niche and determine the proper sight distance to utilize each niche before designating the niche a safe place. Moreover, by providing RWICs and lone workers the absolute right to designate a place of safety other than a tunnel niche which might be less than four feet from a running rail, or to utilize another method of establishing on-track safety, FRA believes BMWED/BRS's safety concerns are alleviated.

#### Section 214.318 Locomotive and Car Shop Repair Track Areas

In the NPRM, FRA requested comment on potentially amending subpart C and/or the existing blue signal regulations in part 218, subpart B to provide a limited exception from part 214's on-track safety requirements for using blue signal protections for certain incidental work performed by mechanical employees within the limits of locomotive servicing and car shop repair track areas (shop areas). FRA did not propose specific regulatory text on this issue, but indicated it might adopt a provision addressing this topic in a final rule. For the reasons explained below, in this final rule FRA is amending subpart C by adding a new § 214.318 addressing incidental work performed in locomotive servicing and car shop repair track areas. This amendment allows "workers," as defined by § 218.5, to utilize blue signal

protections in place of subpart C's on-track safety procedures.

As discussed in the NPRM, subpart C currently requires "roadway workers" performing work with the potential to foul a track within a locomotive servicing or car shop repair track area (including performing work on signals or structures within those areas that may involve fouling track) to utilize the on-track safety procedures of subpart C. Conversely, any "workers," as defined by § 218.5 (typically mechanical department employees), performing work involving the inspection, testing, repairing, or servicing of rolling equipment within locomotive servicing or car shop repair track areas are required to do so in compliance with the blue signal regulations. Because certain incidental duties "workers" under § 218.5 typically perform in shop areas often technically meet the definition of the type of work a "roadway worker" would do (e.g., mechanical department employee performing work on the overhead door of a locomotive maintenance building when such work involves fouling a track), questions arose over what protections are appropriate within shop facilities for certain types of "incidental" work performed by mechanical department employees (i.e., "workers" under § 218.5).

FRA's Technical Bulletin G-08-03 addresses this issue, and explains FRA will not take enforcement action for "incidental" work performed in shop areas similar to roadway worker duties (e.g., sweeping a shop floor or changing a light bulb in an inspection pit). Despite Technical Bulletin G-08-03, many railroads argue shop personnel ("workers" under § 218.5) are already trained on the blue signal regulations and believe FRA should exempt certain work within shop areas from the subpart C on-track safety requirements. Railroads argue shop employees perform the work safely utilizing the blue signal protections they are trained on and most familiar with. Railroads further argue that training shop personnel on two different protection regimes is both costly and confusing for the employees. Thus, railroads argue the requirement to require using the on-track safety protections of subpart C by "worker" in shop areas is detrimental to safety.

In the NPRM, FRA requested comment on potential amendments to the existing part 214 or 218 to address this issue. Because contractor employees are subject to part 214 but not part 218's blue signal requirements, FRA also specifically asked how best to

address applying these requirements to contractor employees.

FRA received six comments in response to this request from APTA, AAR, BMWED/BRS, ASLRRA, MTA, and SETPA. According to APTA, the existing blue signal and RWP regulations are adequate for work performed in shop areas and there is no accident history supporting concerns about this issue. AAR's comment acknowledged the controversy, but noted that for decades blue signal protection has proven to be an effective way to provide for the safety of employees in shop areas. AAR reasoned if blue signal protection adequately protects employees when working on rolling stock, it also will adequately protect employees performing other incidental activities in shop areas. From a safety perspective, AAR stated employees should be permitted to utilize the method of protection they are most familiar with—for mechanical employees within shop areas, that is blue signal protection (part 218), and for roadway workers it is roadway worker protections under part 214, subpart C. AAR also recommended FRA treat contractors the same as railroad employees.

AAR also asserted significant additional costs would result if FRA does not permit mechanical employees who might foul track while performing their duties inside a shop area to utilize blue signal protection as opposed to RWP protection, and noted certain potential drug and alcohol testing implications. AAR explained costs would be incurred for: (1) Providing additional training; (2) placing RWICs in shop areas; and (3) purchasing additional switch locks. AAR indicated one large railroad estimated initial costs at \$1.2 million, and costs of \$700,000 in subsequent years. AAR proposed specific rule text for parts 214 and 218 to permit employees in shop areas to use blue signal protections under part 218, instead of complying with the RWP requirements of part 214.

In its comments, ASLRRA disagreed with FRA's explanation in the NPRM of certain activities within shop areas being subject to the on-track safety regulations of part 214. ASLRRA said FRA's position, consistently applied, would require railroads to use blue signal protection to repair a roadway maintenance machine irrespective of the repair location. ASLRRA urged FRA to not change the regulations.

BMWED/BRS's comment stated the type of work being performed governs whether the blue signal regulations or the RWP regulations apply and argued against any change eliminating the

distinction between the two different forms of protection.

Noting the existing blue signal protection requirements provide a proven level of Safety, SEPTA's comment indicated the railroad industry would be better served if mechanical department employees could perform certain facility-maintenance work within the limits of shop areas using blue signal protection rather than the on-track safety requirements of part 214. Further, SEPTA stated any inconsistency in the forms of protection employees utilize increases the potential for confusion and reduces safety. SEPTA also questioned if the original RWP rulemaking even considered applying the on-track safety requirements in shop areas and expressed doubt that the intended scope of the original RWP regulation even covered work in shop areas.

MTA's comment indicated the primary consideration in deciding what protections to follow in shop areas should be whether employees are adequately protected while performing their assigned duties. MTA asserted it would be overly prescriptive to require employees to be familiar with different types of protection and recommended individual railroads determine the appropriate type of protection employee's should use based on the specific task being performed.

FRA believes the assertion that part 214 as it currently exists does not apply in shop areas is without merit. FRA notes the discussion in the NPRM preamble titled "RWP and Blue Signal Protection in Shop Areas" (77 FR 50329-50330) did not, as AAR and ASLRRA suggested in their comments, attempt to expand the scope of the existing RWP and blue signal regulations. Rather, the discussion described the existing state of interplay between the two regulations. FRA is puzzled by AAR's comment asserting estimated additional costs would be incurred to comply with the requirements of the RWP regulation in place since 1997. FRA agrees it is not in the best interests of safety to apply the requirements of part 214 to certain activities in shop areas not involving work on, under, or between rolling equipment. FRA notes, however, the existing regulations do not allow certain work to be conducted in shop areas without on-track protection under part 214. Thus, compliance with the existing regulation could not impose additional new costs to railroads as AAR's comment states.

FRA also disagrees with the ASLRRA comment asserting "[i]f one were to apply FRA's logic consistently . . .

every time a roadway maintenance machine broke down and had to be repaired on any track, blue signal protections would have to be applied, whether in a yard or on a main track.” FRA cannot envision how the existing regulations could require blue signal protections be applied to repair of roadway maintenance machines as ASLRRA’s comment asserted. The existing blue signal protection regulation (part 218, subpart B) applies to work performed on, under, or between “rolling equipment.” The part 218 definition of the term “rolling equipment” (locomotives and cars), and the corresponding definition of the term “locomotive,” do not include roadway maintenance machines. Repairs to roadway maintenance machines are specifically covered by the definition of “roadway worker” in part 214. Therefore, the literal application of the regulations would not require blue signal protections be applied to repair of roadway maintenance machines as ASLRRA’s comment asserted.

FRA generally agrees with the comments of BMWED/BRS, SEPTA, and MTA and believes allowing railroad employees and contractors to utilize the procedures they are trained on and most familiar with provides clear direction and consistency and will actually eliminate confusion and increase safety. FRA agrees with SEPTA’s comment that the original RWP rule did not specifically discuss maintenance work performed in shop areas. BMWED/BRS argued against FRA eliminating any distinction between RWP protection and blue signal protection and warned doing so could present unforeseen consequences. FRA does not believe providing railroads with the flexibility to use blue signal protection or RWP protection in certain instances within shop facilities in any way eliminates a distinction between the two forms of protection. Finally, FRA believes new § 214.318 addresses both SEPTA and MTA’s stated concerns as “workers” in shop areas will be permitted to utilize blue signal protections in most instances to ensure they are protected while performing their assigned duties.

For all the reasons discussed above, in this final rule, FRA is amending part 214 to permit “workers” (as defined by § 218.5), in certain instances, to utilize the blue signal protections of part 218, subpart B (as opposed to the on-track safety requirements of part 214) in locomotive servicing and car shop repair track areas when fouling track while performing duties incidental to inspecting, testing, servicing, or repairing rolling equipment. FRA believes this is the reasonable and

logical application of parts 214 and 218 in locomotive servicing and car shop repair track areas. Although FRA is not adopting the specific regulatory language amending both parts 214 and 218 AAR suggested, FRA believes new § 214.318 accomplishes the same goal.

As noted by several commenters, for decades “workers” have successfully used blue signal protections in shop areas. In general, when blue signal protections are applied on a track, the regulations prohibit: (1) The movement of equipment on the track (except under the very specific conditions described in § 218.29); (2) coupling to any equipment on the track; and (3) rolling equipment from passing a blue signal. These requirements ensure worker safety by prohibiting the movement of equipment on a protected track. As SEPTA’s comments noted, the conditions in shop areas (where mechanical employees repair rolling equipment secured from movement) are different than situations the RWP regulation typically addresses (e.g., maintenance-of-way workers working along the railroad right-of-way where trains and other on-track equipment pass). FRA does not believe safety is improved by mandating that a railroad employee be trained on, and comply with, the requirements of the blue signal regulation to safely tighten a bolt on a locomotive, and also be trained on and apply the differing requirements of the RWP regulation while standing in the exact same location to perform the incidental work of tightening a bolt on an overhead door. Such a literal approach to the regulations introduces the potential for confusion and the misapplication of the differing requirements, and is also not cost effective, efficient, or reasonable.

Accordingly, new § 214.318(a) reasonably allows “workers” (as defined by § 218.5) within the limits of locomotive servicing and car shop repair track areas (as also defined by § 218.5) to utilize a railroad’s blue signal protection procedures to perform duties incidental to their work on, under, or between rolling equipment while fouling a track protected by blue signal(s). If a railroad chooses to allow “workers” to use blue signal protections authorized by this new section, paragraph (a) also requires the railroad rules address how those protections apply to the incidental duties “workers” perform. By “incidental” duties, FRA means duties within the shop area such as working on a shop door, sweeping excess ballast off a shop floor or away from a work area, cleaning up fluid spills in the gage of the track in a work area, or performing electrical work in a locomotive shop to an appliance such as

an exhaust hood above a track. FRA emphasizes that for this new section to apply, all work must be performed on a track protected by blue signals as required by part 218, subpart B.

This new section does not require railroads to use blue signal protections instead of part 214 on-track safety procedures where applicable inside shop areas. Instead, this new section only gives railroad’s the option to decide the appropriate form of protection for “workers” in shop areas. Roadway workers still must comply with part 214 when fouling track within a shop area. For example, if a signal department employee fouls a track in a shop area while performing work on an electronic system controlling the blue signal display within the shop area, that employee must comply with part 214’s on-track safety requirements because as a signal department employee, he or she is not a “worker” under § 218.5 who inspects, tests, services, or repairs rolling equipment. Similarly, bridge and building department employees required to foul track while building a structure within a shop area also still must establish on-track safety under part 214 because bridge and building department employees are clearly not “workers” under part 218 (they do not inspect, test, service, or repair rolling equipment).

Paragraph (b) of this section addresses how this section applies to contractor employees. As discussed in the NPRM, although the on-track safety requirements of part 214 apply to contractor employees, FRA’s blue signal regulations do not. Typically, however, railroad rules require contractors to follow the railroad’s blue signal procedures when performing work within shop areas. As noted above, AAR recommended FRA treat contractors the same as railroad employees for purposes of what protections apply to those employees while performing the same work as railroad employees. FRA agrees, but because contractor employees do not meet part 218’s definition of “workers,” FRA cannot enforce part 218’s requirements on contractors. Accordingly, in paragraph (b), FRA is extending application of paragraph (a) of this section to contractor employees, but only if the contractor employee’s work is supervised by a railroad employee qualified on the railroad’s rules and procedures implementing the requirements of part 218, subpart B. Thus, if a railroad elects to use the exception in paragraph (a), a contractor within a shop area performing duties incidental to those of inspecting, testing, servicing, and repairing rolling equipment may perform the work

utilizing the railroad's blue signal protections, if the contractor employee is supervised by a railroad employee qualified (as defined by § 217.9) on the railroad's blue signal rules

For example, if a railroad elects to use the exception in paragraph (a) of this section, a contractor employee servicing a shop building's exhaust hood above idling locomotives on a track protected by blue signals may do so under the supervision of a blue signal-qualified railroad employee. If a railroad does not elect to use the exception in paragraph (a), or the contractor employee is not supervised by a blue-signal qualified railroad employee, the contractor would be subject to the RWP requirements of subpart C of part 214 when servicing the exhaust hood because the employee would be a "roadway worker," under § 214.7.

Similarly, if a railroad elects to use the exception in paragraph (a), and implements rules governing its use, if a contractor employee vacuums water from a switch in a locomotive shop on track protected by blue signals and his/her work is supervised by a blue signal-qualified railroad employee, the contractor need only comply with the railroad's blue signal requirements. If the contractor employee is not supervised by a blue signal-qualified employee while performing this duty, the contractor must comply with the on-track safety requirements of part 214 because the work performed makes the contractor a "roadway worker" per existing § 214.7.

Paragraph (c) of this new section requires compliance with part 214, subpart C, for any work performed within a shop area requiring the presence of a person qualified under § 213.7 of FRA's Track Safety Standards. FRA intends this paragraph to make clear traditional inspection, construction, maintenance, or repair of railroad track affecting the ability of rolling equipment to move safely over that track continues to be governed by the on-track safety requirements of part 214, regardless of the craft of a particular employee (or whether the employee(s) are railroad employees or contractors) performing the work. FRA intends this provision to prevent situations where "workers" who are not qualified to perform maintenance-of-way duties perform such duties in a shop or locomotive repair area, potentially affecting the safe movement of rolling equipment over track structures.

To determine if railroad employees or contractors working in shop areas are "workers" under § 218.5 (and can use blue signal protection) or roadway

workers under § 214.7 (and required to establish on-track safety under part 214), FRA will look to the employee's primary duties and the primary purpose of the work performed (whether the work is performed on, under, or between rolling equipment or incidental to work performed on, under, or between rolling equipment). Examples include:

- A mechanical department employee whose primary duty is performing electrical work on locomotives, but to access part of a locomotive to perform such work, fouls a track while shoveling snow from the gauge of the track on which the locomotive is located (and on which blue signal is applied). This mechanical department employee's primary duties involve the inspection, testing, repair, or servicing of rolling equipment. As such, shoveling snow off the track to access the locomotive is performing duties incidental to his or her primary duties. FRA would consider this employee a "worker" under § 218.5, and if the railroad elected to utilize the paragraph (a) exception in this section, the employee could use the railroad's blue signal procedures as opposed to establishing on-track safety under part 214.

- A railroad engineering department employee who is assigned to repair a switch in a locomotive shop area is a "roadway worker" who requires on-track safety compliant with part 214 because the primary duties of engineering department employees do not typically include testing, inspecting, servicing, or repairing rolling equipment. Rather, the primary duties of engineering department employees typically involve the maintenance and repair of railroad track.

- A railroad employee replacing concrete in front of the doors of a shop to ensure an adequate flangeway for the wheels on rolling stock must establish on-track safety under part 214, because such duties are not "incidental" to work on, under, or between rolling equipment and because the work likely requires the presence of a person qualified under § 213.7.

FRA understands not all examples will be so obvious, particularly on smaller railroads where one employee may fill many roles. In such instances FRA would look to the primary purpose of the work being performed, and whether such work was related to that performed on, under, or between rolling equipment. As a practical matter, if an employee of a small railroad routinely performs varying jobs' functions involving both maintenance-of-way work, work traditionally thought of as mechanical work on rolling equipment,

the employee already must be trained the on-track safety requirements of part 214 when performing "roadway worker" duties, and likewise, must be trained on blue signal protection under part 218 when working on, under, or between rolling equipment.

In developing this final rule, FRA considered adopting a requirement for RWICs of roadway work groups performing work within the limits of locomotive shop or car shop repair track areas to notify the person in charge of workers in the shop prior to beginning work. FRA believes such a notification procedure may be useful in situations where unknown to the person in charge of the workers in the shop area, a roadway work group uses derails or other protections to establish working limits in the shop area. Due to cost considerations, FRA is not adopting such a notification requirement in this rule. However, FRA encourages railroads, as circumstances may warrant, to adopt such a procedure. FRA will continue to monitor this issue and may implement such a notification requirement in a future rulemaking.

Upon the effective date of this final rule, FRA Technical Bulletins G-05-21 and G-08-03 are supplanted. Those technical bulletins are no longer valid in light of the adoption of new § 214.318 here.

#### Section 214.319 Working Limits, Generally

Existing § 214.319 sets forth the requirements for establishing working limits consistent with subpart C. FRA is making several changes to this section in the final rule. First, FRA redesignated the last sentence of the existing introductory text of this section as paragraph (a), and redesignated existing paragraphs (a)-(c) of this section as paragraphs (a)(1) through (3). This amendment is only structural and not intended to be substantive in nature to accommodate adding new paragraph (b) of this section (discussed below).

As proposed in the NPRM, FRA is replacing "roadway worker" in newly designated paragraphs (a)(1) and (2) with "roadway worker in charge." These revisions are consistent with the use of the new term "roadway worker in charge" discussed in the Section-by-Section analysis of that term in § 214.7 and clarify that only a roadway worker who is qualified in accordance with § 214.353 can establish or have control over working limits for the purpose of establishing on-track safety.

In the NPRM, FRA also proposed amending the introductory paragraph of § 214.319 to reference the "verbal protection" method of establishing

working limits proposed in new § 214.324. However, as explained above, in this final rule FRA is not adopting the proposed “verbal protection” provision, so the reference to that section is no longer necessary.

Next, FRA is adding new paragraphs (b) and (c) to this section. In the NPRM, in response to NTSB Safety Recommendation R–08–06, FRA asked if railroads should be required to utilize redundant forms of working limits protection when a roadway work group depends on a train dispatcher or control operator to provide signal protection when working limits are established in signalized controlled track territories. NTSB issued Safety Recommendation R–08–06, after a 2007 accident near Woburn, Massachusetts in which two Massachusetts Bay Transportation Authority (MBTA) maintenance-of-way employees died. At the time of the accident, MBTA’s rules required roadway workers to shunt track circuits to provide redundant signal protections to prevent trains or other rolling equipment from entering working limits. NTSB found the roadway work group involved in the accident did not comply with that rule and cited two probable causes of the accident: (1) The roadway work group’s failure to apply a shunting device under the railroad’s rule; and (2) the train dispatcher’s failure to maintain blocking that provided signal protection for the track segment occupied by the working group.<sup>6</sup> In Safety Recommendation R–08–06, NTSB recommends that FRA “[r]equire redundant signal protection, such as shunting, for maintenance of way work crews who depend on the train dispatcher to provide signal protection.” In 2013, NTSB reiterated Safety Recommendation R–08–06 to FRA after an accident in which a Metro-North maintenance-of-way employee was struck and killed by a train in Connecticut.<sup>7</sup>

FRA notes that both the 2007 MBTA and the 2013 Metro-North accidents involved violations of the existing requirements of subpart C. In both instances the train dispatchers did not maintain the required blocking devices, allowing train movements into the roadway work groups’ established working limits without the relevant RWIC’s knowledge. *See, e.g.,* § 214.321(d). Despite the fact that FRA’s

regulations already prohibit the actions that led to these accidents, FRA recognizes more can be done to try to prevent these types of mistakes from causing future tragedies.

In response to FRA’s request for comment regarding a potential redundant protection requirement, AAR, NTSB, SEPTA, BMWED/BRS, APTA, MTA, NJT, and an individual, submitted comments. NTSB urged FRA to add a provision in this final rule requiring using redundant forms of protection such as shunting. AAR urged FRA not to adopt such a provision, indicating it would be counterproductive from a safety perspective. AAR stated such a provision would be counterproductive because shunting cannot be relied on due to: (1) The characteristics of track infrastructure that lead to periodic loss of shunt for certain equipment; (2) the susceptibility of shunts to work only intermittently when used near signal islands; and (3) the lack of reliability of individual locomotives or roadway maintenance machines to shunt. AAR’s comment pointed to the safety issues shunting presents in some circumstances, specifically grade crossing warning device malfunctions and signal system interference, and to concerns related to cost, training, and the practicality of shunting requirements (*e.g.*, trying to shunt as a roadway worker conducts walking track inspections or mobile weed spray operations). BMWED/BRS supported using redundant forms of protection, if it does not interfere with grade crossing warning devices. BMWED/BRS also indicated a requirement for roadway workers to use shunts would necessitate additional training to ensure using shunts did not interfere with grade crossing warning devices or signal systems’ operation.

In its comment, SEPTA recommended that the use of redundant protections be left up to individual railroads because each railroad is in the best position to evaluate the using such a requirement on its property. NJT commented a requirement to use shunts could pose a problem when work is performed within the limits of an interlocking containing a moveable bridge, because if a roadway work group planned to let a train(s) pass through the group’s working limits, the shunts would have to be removed and replaced for each train to allow the signal system to clear to permit the bridge operator to open or close the bridge. MTA commented shunting can result in unintended consequences, including grade crossing malfunctions and signal system disruptions. Citing a discussion in the

preamble to a 2003 FRA rule (68 FR 44388, 44390) addressing roadway maintenance machines (RMMs), individual commenters expressed support for a redundant protection requirement. Noting that RMMs do not reliably shunt signal systems, these commenters stated a uniform requirement for protection beyond those provided by a dispatcher would improve safety.

Subsequent to publication of the NPRM and NTSB issuing Safety Recommendations R–08–06 and R–13–17, on December 4, 2015, the President signed into law the Fixing America’s Surface Transportation Act, Public Law 114–94, 129 Stat. 1686 (Dec. 4, 2015) (FAST Act). Section 11408 of the FAST Act (Section 11408) addresses redundant signal protections and requires FRA (as the Secretary of Transportation’s delegate) to promulgate a rule requiring railroads, whenever practicable and consistent with other safety requirements, to implement redundant signal protections for roadway work groups who depend on train dispatchers to provide signal protection. Section 11408 also requires FRA to consider exempting from any redundant signal protection requirements each segment of track for which operations are governed by a PTC system. Thus, to fulfill the mandates of Section 11408 and address the NPRM’s request for comment, FRA is adopting new paragraphs (b) and (c) of this section. Paragraph (b) requires Class I and II railroads and intercity passenger and commuter railroads utilizing controlled track working limits in signalized territory to establish on-track safety to adopt redundant signal protection procedures. Paragraph (c) explains the procedures to request an exemption from the redundant signal protections for segments of track governed by a functioning PTC system.

Under the discretion Section 11408 affords, FRA is not specifically requiring railroads to utilize shunting as a redundant signal protection. Consistent with the views of several commenters, including BMWED/BRS and AAR, FRA is concerned that in many instances shunting presents new risks. As the NTSB stated in its report on the 2007 MBTA accident at Woburn, shunting by maintenance-of-way crews is not a common practice in the railroad industry. Track shunts have traditionally been designed as a tool to test signal systems rather than to provide protection to roadway workers. Shunting procedures can be disruptive to signal systems and grade crossing warning systems (improper use may violate 49 CFR parts 234 and 236) and,

<sup>6</sup> See NTSB Accident Report NTSB/RAR–0801, “Collision of Massachusetts Bay Transportation Authority Train 322 and Track Maintenance Equipment near Woburn, Massachusetts, January 9, 2007;” available online at: <http://www.nts.gov/doclib/reports/2008/RAR0801.pdf>.

<sup>7</sup> <http://www.nts.gov/doclib/recletters/2013/R-13-17.pdf>.

in certain situations, employees applying shunts may be unnecessarily exposed to electrical hazards and other environmental hazards along the railroad right-of-way. Shunts are also not failsafe and do not guarantee the signal system will protect a roadway work group. FRA is concerned a mandatory shunting requirement nationwide could increase certain railroad safety risks involving highway-rail grade crossing warning devices and railroad signal systems. Further illustrating the risks shunting can present, FRA is currently investigating a fatality that occurred in February 2016 when a railroad employee was attempting to install shunts to conduct an operational test and was struck by a train.

In developing this final rule, FRA conducted a preliminary cost-benefit analysis of a nationwide requirement to shunt, or to otherwise adopt a redundant signal protection involving manipulating the signal system or implementing a technology-based solution allowing roadway work groups to prevent train incursions into established working limits. FRA's analysis indicates the costs of a specific shunting or similar requirement would significantly outweigh the potential benefits and would cost the railroad industry well in excess of \$100 million annually.

For the above reasons, FRA concurs with SEPTA's comment that an individual railroad is in the best position to determine what method of providing redundant signal protections is appropriate for its own operations. Thus, paragraph (b) requires Class I or II and passenger railroads that establish on-track safety using controlled track working limits (§§ 214.321–214.323) in signalized territories to evaluate their particular operations and identify what type of redundant signal protection(s) is appropriate. This evaluation must be completed by July 1, 2017. Varying signal systems, physical characteristics, equipment, operating rules, and other factors make a one-size fits all Federal mandate to shunt, or to adopt a specific form of redundant signal protection, impractical and not the safest course of action.

After railroads conduct the required evaluation, paragraph (b) requires them to adopt (if such procedures are not currently in place) an appropriate method of redundant signal protections in their on-track safety program by January 1, 2018, and to comply with the adopted procedure(s). FRA may object to a railroad's method of providing redundant signal protections under the review procedures specified in

§ 214.307, or may take other appropriate enforcement action if a railroad neglects to evaluate, adopt, and comply with appropriate redundant protection procedures.

Paragraph (b)(1) explains that for purposes of this section, the term “redundant signal protections” means risk mitigation measures or safety redundancies adopted to ensure the proper establishment and maintenance of signal protections for controlled track working limits until such working limits are released by the roadway worker in charge. In other words, “redundant signal protections” are intended to protect against dispatchers or control operators unintentionally or mistakenly allowing train or other on-track movements into working limits before a roadway work group has released its authority (e.g., by removing a signal blocking device). Redundant signal protections could include various individual risk mitigation measures (or a combination of measures) such as technology, training, supervision, or operating-based procedures; or could include use of redundant signal protection such as shunting, designed to prevent signal system-related incursions into established controlled track working limits.

Permissible redundant signal protections under new paragraph (b) do not have to require members of the roadway work group or the RWIC to manipulate the signal system. Instead, redundant protections under this section could involve redundant actions by the control operator or train dispatcher operating the signal system. As noted above, NTSB cited apparent errors by the train dispatchers involved in both the 2007 MBTA and 2013 Metro-North accidents as probable causes of the accidents. Thus, FRA intends that appropriate redundant procedures required of the dispatcher involving operation of the signal system could also fulfill the requirement of new paragraph (b).

FRA notes a railroad is free to utilize shunting procedures to comply with paragraph (b) if the railroad's evaluation identifies such procedures as an appropriate way to provide redundant protections. FRA believes many railroads have already implemented redundant protections other than shunting procedures meeting the requirements of new paragraph (b). For example, at least one Class I railroad utilizes a technology-based procedure in its dispatching system that, if implemented properly, could satisfy the requirements of paragraph (b). FRA understands that dispatching system will not allow a dispatcher to release

controlled track working limits until the RWIC affirmatively indicates via an electronic prompt that he or she is releasing working limits authority. Other railroads use extended job briefing procedures between the RWIC and dispatcher before a dispatcher may remove a blocking device, and/or monitor dispatcher job performance with extra operational tests and audits involving the removal of blocking devices. As an example of an additional briefing procedure (via radio communication) that would be an appropriate component of a railroad's redundant signal protections, a railroad could adopt in its railroad rules a prohibition on dispatchers releasing working limits and removing blocking devices until the RWIC confirms all roadway workers and equipment are clear of the track to be released. Similarly, a railroad rule requiring an additional member of the roadway work group to make the same confirmation to the dispatcher that the track to be released is clear of roadway workers and equipment could also be one component of a railroad's procedures adopted to comply with this new redundant signal protections requirement.

As additional background, on November 25, 2014, FRA published Safety Advisory 2014–02 (Advisory) regarding clear communication, compliance with existing rules and procedures, and ensuring appropriate safety redundancies are in place. 79 FR 70268; correction published at 79 FR 71152, Dec. 1, 2014. The Advisory recommended, in part, that railroads monitor their employees for compliance with existing applicable rules and procedures and examine their train dispatching systems, rules, and procedures to ensure appropriate safety redundancies are in place in the event of miscommunication or error. *Id.* at 70270. FRA issued the Advisory in response to then-open NTSB Safety Recommendation R–08–05, open Safety Recommendation R–08–06, and other incidents where roadway workers were either outside of working limits authority, or where working limits were no longer protected due to dispatcher error. The Advisory discussed available technologies to establish redundant signal protections for roadway work groups (not involving shunting) that, depending on a railroad's specific operating situation, could serve as appropriate forms of redundant protection under new paragraph (b) of this section. Specifically, the Advisory discussed the Enhanced Employee Protection System (EEPS). *Id.* at 70269. FRA understands certain railroads are

deploying the EEPS system. And, the NTSB deemed Metro-North's response to Safety Recommendation R-13-17 (redundant signal protections recommendation to Metro-North specifically) as "Closed-Acceptable Action" after Metro-North implemented EEPS on its system.<sup>8</sup> FRA encourages railroads to use new technologies such as EEPS as they become available to provide redundant signal protections for roadway work groups and to comply with new paragraph (b). As is FRA's practice, it polled railroads to evaluate what, if any, actions railroads took to address the recommendations in the Advisory. A review of responses indicates many railroads' existing procedures already comply with new paragraph (b), as redundancies currently exist within their train dispatching procedures and procedures governing the release of controlled track working limits in signalized territory. FRA is also aware that in addition to these existing safety redundancies, many railroads' roadway maintenance machines are being equipped with modern shunting devices that more effectively shunt track while operating.

Each railroad subject to paragraph (b) must conduct the required evaluation of its on-track safety program by July 1, 2017. This evaluation must be completed even if the railroad believes its existing on-track safety program already provides appropriate redundancies. A railroad's on-track safety program must specifically identify and implement any redundancies by January 1, 2018. FRA believes this amount of time is adequate for each railroad to conduct the evaluation required by paragraph (b), formulate any necessary additions to the on-track safety program, and train roadway workers, train dispatchers, and control operators on any new redundant protections a railroad adopts.

Given operational and practicability considerations, new paragraph (b), requiring redundant protections, applies only to Class I and II railroads and intercity passenger and commuter railroads. By limiting the applicability of this requirement to these larger railroads, FRA is addressing nearly all of the controlled, signalized track in this country, and not imposing an unnecessary burden on smaller entities (Class III railroads). For purposes of this final rule, FRA considers carriers providing "intercity rail passenger transportation" and "commuter rail passenger transportation" to be the same

as those defined at 49 U.S.C. 24102 (definitions of passenger railroads required to install PTC systems under 49 U.S.C. 20157(a)).

FRA must evaluate the costs and benefits of all new regulatory requirements and the burdens of those requirements on small businesses. In short, the safety issues requiring the redundant signal protections contemplated by paragraph (b) of this section are not typically present on the smallest railroads. Generally, Class III railroads do not have signalized controlled track where the redundant protections provision of paragraph (b) would even apply and Class III railroad operations are typically lower speed operations as compared to passenger and Class I or II railroad operations. The accidents NTSB's Safety Recommendation R-08-06 and R-13-07 address both occurred on commuter railroads and the more recent notable accidents described in the Advisory all occurred on either Class I or commuter railroads. Regarding the costs/burden of this new requirement, as discussed above, FRA polled the Class I and II railroads and certain passenger railroads to determine what actions railroads have taken to implement the recommendations in the Advisory. Most railroads that responded indicated they had redundant protections in place prior to FRA issuing the Advisory through their existing dispatching and on-track safety procedures. FRA does not believe there will be prohibitive costs to implement this new requirement, particularly with the flexibility that this final rule provides. A more detailed discussion of the estimated costs and benefits of this new provision is in the RIA accompanying this final rule.

New paragraph (c) of § 214.319 implements the "alternative safety measures" provision of Section 11408 paragraph (b). That paragraph requires FRA to consider exempting from the redundant signal protections requirements "a segment of track for which operations are governed by a [PTC] system certified under [49 U.S.C. 20157], or any other safety technology or practice that would achieve an equivalent or greater level of safety in providing additional signal protection." Paragraph (c) establishes how railroads may request FRA consideration of such an exemption for a segment of track.

FRA's regulations governing the implementation of PTC systems are in 49 CFR part 236, subpart I. Among other safety protections, part 236 requires PTC systems to prevent incursions into established roadway worker working limits. 49 CFR 236.1005(a)(1)(iii). To

comply with this requirement, railroads generally have numerous system design options. In FRA's 2010 initial final rule on PTC, however, FRA explained it would scrutinize a railroad's PTC development and safety plans to determine if the plans left any opportunity for a single point human failure with regard to incursions into work zones (e.g., any opportunity for a dispatcher to remove a blocking device in error as occurred in the 2007 MBTA accident described above). 75 FR 2598, 2613. As noted in that rule, FRA funded the development of a portable terminal allowing an RWIC to control the entry of trains (and restrict train speed) into established working limits, and prohibiting a dispatcher from releasing working limits in the absence of verification of a desired release from the RWIC. *Id.* In the 2010 final rule, FRA strongly recommended railroads utilize terminals with such functionality in implementing PTC. *Id.*

FRA believes a PTC system involving dual protections for roadway work groups (such as described above) would improve roadway worker safety and be consistent with allowing an appropriate PTC exemption from the redundant protection requirements in paragraph (b) of this section. However, without knowing the particular PTC system a railroad is using at a given location, and to ensure this type of dual protection system is successfully implemented, FRA cannot provide a universal exemption without performing a detailed review of each PTC system's working limits' incursion protections. Moreover, a railroad may use a solution to the PTC standard that is not necessarily redundant and would not fulfill the FAST Act's signal protections mandate.

Thus, new paragraph (c) requires a railroad seeking to exempt a segment of track governed by a PTC system from the redundant signal protections requirement of paragraph (b) to submit a written request for exemption to FRA's Associate Administrator for Railroad Safety and Chief Safety Officer. The written request for approval must include all relevant details regarding how the PTC system at a given location prevents train incursions into established working limits, and discuss how such a PTC system eliminates a single point human failure in the enforcement of established working limits. Paragraph (c) specifies that FRA will provide notice of approval or disapproval of a railroad's request within 90 days, and will specify the basis for FRA's decision if the request is disapproved. Of course, a railroad may choose to implement appropriate

<sup>8</sup> [http://www.ntsb.gov/investigations/\\_layouts/ntsb.recsearch/Recommendation.aspx?Rec=R-13-017](http://www.ntsb.gov/investigations/_layouts/ntsb.recsearch/Recommendation.aspx?Rec=R-13-017).

redundant signal protections under new § 214.319(b) on segments of track governed by an operative PTC system to provide an extra measure of safety for roadway workers.

Both MBTA and Metro-North (the railroads that experienced the accidents which led NTSB to issue Safety Recommendation R-08-06) are required to install PTC. FRA already accounted for the cost of PTC installation and the corresponding benefits of preventing other types of unintended work zone incursions in the final PTC rule. 75 FR 2598; *see* accompanying FRA RIA, Docket No. 2008-0132-0060; available online at [www.regulations.gov](http://www.regulations.gov). The Advisory discussed above also reiterated the probability of certain types of work zone incidents occurring as a result of non-compliance with existing rules and regulations could be significantly reduced by effective implementation of PTC systems. FRA believes paragraph (b)'s new redundant protections provision, along with implementation of PTC systems under part 236, will greatly reduce the likelihood of future injuries and deaths resulting from incursions into controlled track working limits in signalized territory. However, FRA will continue to evaluate this issue, and, as new technologies evolve, may revisit the topic of redundant signal protections.

#### Section 214.320 Roadway Maintenance Machine Movements Over Signalized Non-Controlled Track

In the NPRM, FRA proposed to amend § 214.301 to address a potential safety issue resulting from roadway maintenance machine movements under that section on non-controlled track. Section 214.301 allows train or on-track equipment movements on non-controlled track without authorization from a train dispatcher or control operator.<sup>9</sup> Typically, movements on non-controlled track are governed by railroad operating rules limiting movements to speeds not exceeding restricted speed. Section 214.7 defines restricted speed as a speed that will permit a train or other equipment to stop within one-half the range of vision of the person operating the train or other equipment, but not exceeding 20 miles per hour, unless further restricted by the operating rules of the railroad. The requirement to stop within one-half the range of vision prevents collisions between any equipment operating on the same non-controlled track. As such,

under existing § 214.301(c), operations at restricted speed allow roadway maintenance machines to safely travel over non-controlled track without having to establish working limits. However, some non-controlled track is equipped with automatic block signal (ABS) systems. ABS systems are designed to prevent collisions while allowing trains to operate at speeds greater than restricted speed. As discussed in the NPRM, this scenario is problematic for purposes of the movement of roadway maintenance machines on non-controlled track under existing paragraph (c) because roadway maintenance machines do not all shunt track circuits. Absent the establishment of inaccessible track working limits or other protections, nothing in existing part 214 prevents a train operating on non-controlled ABS-signaled track at greater than restricted speed from colliding with roadway maintenance machines traveling on the same track that do not shunt the signal system (no authority is needed to occupy non-controlled track and trains are not required to stop within one-half their operator's range of vision).

As noted in the NPRM, one Class I railroad had a significant stretch of ABS non-controlled track and a train traveling at greater than restricted speed struck a hi-rail vehicle.<sup>10</sup> To address this safety concern, in the NPRM, FRA proposed allowing roadway maintenance machine movements on signalized non-controlled track under § 214.301(c) (*i.e.*, without establishing working limits) only if train and locomotive speeds on the track are limited to speeds at or below restricted speed.

With the exception of block register territories (addressed in proposed § 214.327(a)(7) below), FRA believes railroad operations over most non-controlled track are already limited to restricted speed. For example, FRA understands yard track is typically non-controlled track with operations limited to restricted speed. Thus, FRA did not believe this proposed requirement would represent a cost burden to the industry. To provide additional flexibility on this point, however, in the NPRM FRA also proposed allowing the movement of roadway maintenance machines over non-controlled track without establishing working limits under operating rules other than restricted speed that are demonstrated

to provide an equivalent level of protection as restricted speed rules. This proposal only referred to train and locomotive speeds on non-controlled track, and not to the speeds at which roadway maintenance machines are authorized to travel over non-controlled track. Existing § 214.341 already requires each railroad's on-track safety program to address the spacing between machines and the maximum working and travel speeds for machines depending on weather, visibility, and stopping capabilities. Roadway maintenance machines typically have stopping capabilities far in excess of that of trains. FRA intended this proposal to address situations where trains and locomotives are not required to stop within one-half the range of vision on non-controlled track, and could collide with roadway maintenance machines in travel mode under railroad operating rules that do not shunt signal systems.

AAR commented on this proposal. AAR's comment suggested altering FRA's proposed language by specifying that "restricted speed" would permit train and equipment movements at up to 25 miles per hour (mph). AAR also suggested specific rule text for alternate procedures if FRA allowed speeds greater than restricted speed (versus the NPRM proposal requiring FRA approve or disapprove of any alternative procedures adopted by railroads). AAR's comment estimated a cost of \$297 million over a 20-year period for one railroad "if no other relief were granted."<sup>11</sup>

In this final rule, FRA is adding new § 214.320 addressing the movement of roadway maintenance machines on non-controlled track without establishing working limits. For purposes of this new section, FRA defines restricted speed as movements prepared to stop within one-half the range of vision but not exceeding 25 mph. The 25-mph maximum speed is consistent with the meaning of restricted speed for purposes of new § 214.317(c) (discussed above) in which FRA adopted an RSAC-consensus provision allowing on-track roadway maintenance machines to conduct snow removal and weed spraying operations while traveling over non-controlled track without establishing working

<sup>11</sup> FRA notes the calculation in AAR's comment incorrectly indicates AAR's \$297 million estimated cost relates to the NPRM's proposed RSAC consensus definition of the term "controlled point" (see the title of Attachment B to AAR's comment). In reviewing AAR's comment, however, it is clear the \$297 million cost estimate actually pertains to FRA's proposal to amend existing § 214.301(c) to address a safety risk that occurs when roadway maintenance machines travel over signalized non-controlled track.

<sup>9</sup> Section 214.7 defines "non-controlled track" as track upon which trains are permitted by railroad rule or special instruction to move without receiving authorization from a train dispatcher or control operator.

<sup>10</sup> Another Class I railroad with non-controlled, signaled track, moves roadway maintenance machines over the track by creating working limits via a dispatcher controlling the signals at either end of the non-controlled limits to make the track inaccessible.

limits. The 25-mph maximum speed is also consistent with AAR's recommended revisions and will minimize the potential costs, if any, of this new paragraph. This new section requires roadway workers moving roadway maintenance machines over non-controlled track equipped with an ABS signal system, and over which trains are permitted to operate at speeds over restricted speed (above 25 mph), to establish working limits under § 214.327. Because no control operator or dispatcher controls movements over non-controlled track, and roadway maintenance machines may not shunt the track while traveling over it, this new section helps prevent roadway maintenance machines from colliding with trains or other on track equipment where movements are made at speeds in excess of restricted speed on non-controlled track.

To address this situation, AAR suggested specific rule text requiring dispatchers or control operators to provide permission for a train to move into or within non-controlled track. By definition, however, FRA believes this would make the track "controlled track." See § 214.7 definition of "controlled track". If track is "controlled track," then this provision as proposed and as adopted in new § 214.320 would not even apply. FRA also notes AAR's recommended procedure is very similar to the procedures in new § 214.327(a)(8) adopted in this final rule for establishing working limits on non-controlled track. Thus, a railroad may choose to comply with new § 214.327(a)(8) if it does not want to comply with the restricted speed provision of new § 214.320 or an FRA-approved alternate procedure under that section.

In this new section, FRA provides flexibility for railroads to adopt alternate procedures to move roadway maintenance machines over non-controlled track and to utilize those procedures instead of establishing working limits or restricting on-track movements to restricted speed. With the new methods of establishing working limits on non-controlled track discussed below in § 214.327, the flexibility provided in this new § 214.320, and the small number of situations when § 214.320 will apply, FRA believes railroads have sufficient flexibility to conduct train movements at track speed over signalized non-controlled track, while at the same time providing for the safe movement of non-shunting roadway maintenance machines traveling over the same non-controlled track.

AAR's comment estimated one railroad would incur costs of \$297 million as a result of this provision. FRA disagrees with AAR's calculation. According to AAR, this one railroad identified 13 locations covered by the NPRM proposal. The railroad then estimated 252 trains operating over those 13 locations daily, with an additional 126 "opposing trains delayed" per day at these locations, for a total of 378 trains affected daily. AAR then estimated delay costs for each of the 378 trains, for every single day of the year, for a 20-year period. AAR stated the delay costs are due to trains being delayed as a result of having to travel at restricted speed.

AAR's calculation is flawed. Nothing in the NPRM or this final rule requires trains to travel at restricted speed at any of the identified 13 locations. This provision merely requires roadway workers, at the periodic times when roadway maintenance machines travel over non-controlled track, to establish working limits under § 214.327. If a railroad does not want to require its roadway workers to establish working limits under these circumstances, new § 214.320 allows railroads to adopt alternative procedures providing an equivalent level of protection to restricted speed protections. These alternative procedures, once demonstrated to provide an equivalent level of safety as restricted speed protections and approved by FRA, would permit roadway maintenance machines to travel over these locations without establishing working limits.

AAR's basis for its train delay estimate is also unfounded because as mentioned above, neither the NPRM nor this final rule require any trains to travel at restricted speed. This provision only requires roadway workers to establish working limits if no alternative procedures are adopted, which would only affect a fraction of train traffic at these 13 locations. If for some reason a railroad chooses not to adopt alternative procedures providing an equivalent level of protection for roadway maintenance machines movements, FRA is unsure any of these trains would be affected, because even under the existing railroad rules, trains permitted to operate at greater than restricted speed on non-controlled track already have to somehow yield to roadway maintenance machine movements travelling over the same track to avoid colliding with the machines. As explained in the accompanying RIA, FRA does not believe new § 214.320 will impose any significant costs. FRA understands the one railroad estimating costs for this NPRM provision revised

its procedures to designate some track in question "controlled track" and is now using new procedures that may already comply with this section. Thus, via existing industry practices, FRA does not believe there are any large costs to implement this provision. FRA believes this final rule will, at most, only impose de minimis costs in light of the additional methods of establishing working limits via § 214.327 proposed in the NPRM that are akin to AAR's proposal in its comment discussed above. Also, as explained above, FRA has specified restricted speed is a maximum of 25 mph (stopping within one-half the range of vision) for purposes of this provision, per the request made in AAR's comment. This further alleviates any stated cost concerns.

#### Section 214.321 Exclusive Track Occupancy

Existing § 214.321 sets forth the requirements for establishing working limits on controlled track through exclusive track occupancy procedures. In the NPRM, FRA proposed several amendments to this section, including both Working Group consensus items and non-consensus items. FRA proposed to replace the words "roadway worker" in existing paragraphs (a) and (b) with "roadway worker in charge." As discussed previously, this change is intended to clarify the existing variety of generic references to roadway workers in charge and, in this section in particular, to clarify that an authority for exclusive track occupancy must be communicated to the "roadway worker in charge," as opposed to the "roadway worker" as currently stated in existing paragraph (b) of this section (per existing § 214.319, only a roadway worker in charge can establish working limits).

Next, existing paragraph (b) of this section states a "data transmission" may be used to transmit an exclusive track occupancy authority to a roadway worker (*i.e.*, a roadway worker in charge). However, existing paragraph (b)(2) states only that the roadway worker in charge must maintain possession of a "written or printed authority" while the authority for working limits is in effect, and does not currently account for authorities conveyed via data transmission displayed on the screen of an electronic device. In the NPRM, FRA proposed to amend paragraph (b)(2) to clarify that an authority displayed on an electronic screen may be used in place of the "written or printed" authority existing § 214.321(b)(2) requires. FRA is adopting this amendment in this final

rule. FRA notes that electronic authorities must also comply with the requirements of new § 214.322, discussed in the Section-by-Section analysis below.

The Working Group recommended consensus language requiring exclusive track occupancy authorities to specify a unique roadway work group number, an employee name, or other unique identifier. In the NPRM, FRA proposed language consistent with this Working Group recommendation as new paragraph (b)(4) to § 214.321.

AAR and NJT submitted comments about this proposal. AAR supported this proposal, but noted an inconsistency between the preamble discussion and proposed rule text. AAR noted the preamble discussion implied using an employee name to identify an exclusive track occupancy authority when conveying working limits would not be permitted, but the proposed rule text allowed using an employee name. FRA agrees and notes that as proposed and as adopted in this final rule, paragraph (b)(4) of this section permits using an employee's name to identify an exclusive track occupancy authority.

NJT requested clarification of the language in paragraph (b)(4) which required railroads to adopt procedures requiring precise communication between trains and other on-track equipment and the RWIC or lone worker controlling the working limits in accordance with § 214.319. Specifically, NJT asked if the language was meant to require a train to communicate with every piece of on-track equipment in a roadway work group, in addition to communicating with the RWIC, when seeking to pass through working limits. NJT indicated that if this proposal required such communication, both locomotive engineers and roadway work groups could become distracted due to excessive sounding of the locomotive horn as the train passed through working limits. FRA clarifies this language, as proposed in the NPRM and adopted in this final rule, is intended to require a train or other on-track equipment to communicate only with the RWIC (or lone worker) of the working limits through which the train or on-track equipment seeks to enter or travel through. FRA addresses NJT's comment on potential excessive sounding of the locomotive horns in these circumstances in the Section-by-Section analysis for § 214.339 below.

Next, as proposed, FRA is amending existing paragraph (d) to refer to the "roadway worker in charge" rather than to the "roadway worker" having control over the working limits. As discussed elsewhere in this preamble, FRA is

making similar changes in multiple locations in this final rule to replace the varying existing language generically referring to the "roadway worker in charge" throughout subpart C. Existing paragraph (d) of this section requires the movement of trains and other on-track equipment within exclusive track occupancy working limits be made only under the direction of the RWIC. As discussed in the preamble to the NPRM, in 2005 FRA issued Technical Bulletin G-05-22 addressing paragraph (d) and recognizing there may be times, such as during an emergency, when a RWIC cannot be contacted by a train or other on-track equipment seeking to move into or through the RWIC's working limits. In this final rule, FRA intends new paragraph (b)(4) to work in conjunction with the requirements of existing paragraph (d). New paragraph (b)(4) requires railroads to adopt procedures governing communications between trains and RWICs. FRA expects railroads to adopt procedures addressing what actions employees must take if there is an emergency and a RWIC cannot be contacted by a train crew or the operator of other on-track equipment. Upon the effective date of this final rule, Technical Bulletin G-05-22 is supplanted.

In addition, as explained in the NPRM, the existing text of the beginning of the second sentence of paragraph (d) currently reads that "[s]uch movements shall be restricted speed." FRA proposed to amend that text to instead state "[s]uch movements shall be made *at* restricted speed." (Emphasis added.) For clarity and readability, FRA is adopting this proposed revision.

Finally, in the NPRM, FRA proposed adding new paragraph (e) to this section. This paragraph proposed minimum safety requirements when an exclusive track occupancy authority is given to a RWIC (or lone worker) before the roadway work group (or lone worker) is to occupy the limits, or when train(s) may be occupying the same limits. As explained in the NPRM, these authorities are referred to as "occupancy behind," "conditional," or "do not foul the limits ahead of" authorities<sup>12</sup> and enable a train dispatcher or control operator to issue an authority allowing a roadway work group (or lone worker) to occupy a track, if such occupancy

only occurs after certain trains or other on-track equipment pass. At the time occupancy behind authorities are issued to roadway work groups (or lone workers), trains may still be ahead of the point the roadway worker(s) will be occupying, or in some cases may be past the point to be occupied but still within the working limits. Railroads have a history of using "occupancy behind" authorities and expressed to FRA using such authorities is crucial for efficient railroad operations. The Working Group discussed potential problems with miscommunications involving "occupancy behind" authorities, but did not reach consensus on recommended regulatory text addressing the issue. However, FRA believes it is necessary to adopt minimum safety requirements for using such authorities when RWICs (or lone workers) are establishing exclusive track occupancy working limits.

As proposed, paragraph (e)(1) requires the RWIC or lone worker to confirm affected train(s) are past the point the roadway worker(s) intend to occupy or foul before working limits may be established under paragraph (e). Paragraph (e)(2), as proposed, requires a railroad's operating rules to include procedures prohibiting affected train(s) from making reverse moves into the limits roadway worker(s) are authorized to foul or occupy when a RWIC or lone worker confirms the passage of affected train(s) by visually identifying the train(s). Paragraph (e)(3), as proposed, requires the RWIC or lone worker, after confirming the affected train(s) had passed the point the roadway worker(s) intended to occupy or foul, to record "on the authority" the time the train(s) passed and locomotive number(s) of the affected train(s). As proposed, paragraph (e)(4) prohibits roadway workers located between the rear end of the last affected train and the RWIC, or who are still located ahead of any affected train, from fouling or occupying the track until the RWIC confirms and records affected train(s) passed under paragraphs (e)(1) and (3) and provides the roadway worker(s) permission to occupy or foul the track.

NTSB, SEPTA, BMWED/BRS, and AAR commented on this proposal. After careful consideration of each of these comments, in this final rule, FRA is adopting paragraphs (e)(1) through (3) as proposed and paragraph (e)(4) with slight modifications from that proposed. FRA believes adoption of this paragraph's minimum standards for establishing "occupancy behind" working limit authorities codifies best practices and will help ensure safety. A detailed discussion of FRA's responses

<sup>12</sup> FRA notes 49 CFR 220.61 requires issuing "mandatory directives" via radio transmission for both trains and on-track equipment. Exclusive track occupancy authority to establish working limits granted by a train dispatcher or control operator to a RWIC are sometimes also considered "mandatory directives" under that section. The existing requirements in § 214.321 are in addition to the requirements of existing § 220.61.

to comments received on to new paragraph (e) is below.

NTSB indicated its awareness of the perceived benefits of “occupancy behind” track authorities, but cited four train accidents occurring between 1996 and 2004 involving the use of these types of authorities. NTSB urged FRA not to adopt the proposed changes in a final rule, indicating such changes would diminish safety. FRA appreciates and understands NTSB’s point of view on this issue, but FRA believes adopting minimum safety standards for “occupancy behind” authorities will improve safety. The use of conditional authorities, such as those contemplated by paragraph (e), currently occurs in the railroad industry. The existing on-track safety regulations of subpart C do not address this practice. By adopting paragraph (e) in this final rule, FRA is establishing minimum Federal safety requirements for this practice and believes these standards will further improve track-related safety issues, as roadway workers and dispatchers will continue to be able to maximize the time available for roadway workers to perform quality track inspections as required by 49 CFR part 213. If FRA prohibited using occupancy behind authorities, the time available for roadway workers to conduct track inspections in busy rail corridors would likely decrease as authorities for roadway workers to occupy or foul track could not be issued until after all trains passed the point the roadway worker(s) need to occupy or foul track. FRA believes more frequent and quality track inspections will improve railroad safety, as track-caused derailments are one of the leading causes of railroad accidents.

SEPTA requested clarification of the requirements in proposed paragraphs (e)(3) and (4). SEPTA asked how, under proposed paragraph (e)(3), a RWIC could confirm in writing the train passed if the roadway worker received the authority through a data transmission. SEPTA also asked if under proposed paragraph (e)(4) every roadway worker between the RWIC and the affected train(s) would have to be qualified to the level of a RWIC, or whether each additional work group would be required to have an employee qualified as a RWIC.

In response, FRA clarifies that if an authority is conveyed electronically, a RWIC or lone worker may, under paragraph (e)(3), record the time of passage and engine numbers of trains passing the point to be occupied or fouled in one of two ways. First, a railroad could program its system to issue electronic authorities so roadway workers can enter the required

information electronically onto the authority and maintain access to that information while the authority is in effect. Second, as discussed in the NPRM, an RWIC could write the time of passage and engine numbers on a paper and maintain that paper while the authority is in effect. This written information is considered part of the authority, and must be kept by the RWIC while the authority is in effect.

In response to SEPTA’s request for clarification of paragraph (e)(4), in this final rule, FRA is amending the text to clarify the paragraph refers to separate roadway work groups. FRA intended this provision to allow separate roadway work groups (or lone workers) located between the rear end of affected trains and the RWIC to have a roadway worker qualified under § 214.353 communicate with the RWIC holding the authority.

BMWED/BRS opposed amending the regulations to accommodate issuing “conditional authorities” to establish working limits. Noting the Working Group did not reach consensus on this point, the labor organizations stated working limits should only be in effect after all trains and on-track equipment have reported clear of the working limits. BMWED/BRS indicated that if conditional authorities such as those proposed are permitted, all trains and on-track equipment traveling within working limits must be required to operate at restricted speed.

In response, FRA notes that in many instances, particularly in high-volume corridors, the potential economic costs of requiring all trains to travel at restricted speed within authority limits in occupancy behind situations would likely outweigh the economic benefits of such a requirement. FRA also reiterates that in the absence of FRA action in this final rule, occupancy behind authorities would continue to be used regularly by the railroad industry without this final rule’s minimum safety requirements addressing such use. Thus, FRA believes this provision improves safety.

AAR’s comment stated paragraph (e)(3)’s requirement that the RWIC record the time of passage and engine numbers of a train after the train has passed is problematic and unnecessary. AAR asked where a RWIC should record such information if an electronic authority is used. AAR also stated it is unaware of an instance where the information regarding time of passage and train engine numbers would have been useful.

AAR’s comment also stated that paragraph (e)(4)’s requirement regarding additional RWICs could be costly, as a RWIC might have roadway workers acting under his or her working limits

authority located miles apart. AAR asserted this requirement could necessitate additional communication within a roadway group, and could lead to confusion in large work gangs accustomed to a single source for confirmation regarding whether it is safe to foul a track. Finally, AAR’s comment questioned what constitutes a separate roadway work group under paragraph (e)(4), stating the reasonable approach is that when all the workers are engaged in a common task only one employee qualified as a RWIC should be required.

In response to AAR’s first question regarding where a roadway worker who is utilizing an electronic authority should copy the time of passage and engine numbers of a passing train, FRA refers to the response to SEPTA’s similar inquiry above, and to the NPRM’s discussion regarding a separate written document. 77 FR 50344. The RWIC can copy that information in writing so it can be compared to the information in the electronic authority. The written information must be kept by the RWIC while the authority is in effect under § 214.321(b). 77 FR 50344. FRA believes roadway workers must copy this information, because if a dispatcher gives a roadway worker authority behind or after the passage of a train(s), the engine numbers are a simple check to ensure the train that has passed the RWIC’s location is indeed the train the dispatcher had intended would pass before roadway workers fouled track. FRA staff is aware of situations when there was confusion over whether the roadway workers could occupy a track after a particular train passed. This provision helps eliminate any confusion, and, in some instances, will save time by alleviating the need for additional dispatcher communication to verify the appropriate trains have passed the point to be occupied.

Regarding paragraph (e)(4)’s requirement addressing an additional RWIC for roadway work groups that might piggyback within the working limits of the RWIC named on the authority, FRA also refers to the response to SEPTA’s comment above. Consistent with FRA’s intent in the NPRM, FRA is clarifying in this final rule that this requirement only applies to separate roadway work groups at a location away from the RWIC listed on the authority. Regarding AAR’s inquiry about what constitutes a separate roadway work group, FRA agrees a roadway work group is composed of roadway workers “. . . organized to work together on a common task” as stated in the definition of the term “roadway work group” at existing § 214.7. In this regard, roadway workers

who are part of the same group will continue to follow the instructions of the RWIC when fouling track, as is required in all instances under the existing regulation. So, a large roadway work group that might be spread out over some distance will not be permitted to foul the track in question until the RWIC indicates the members of the roadway work group may do so (and after the passage of the trains listed on the authority).

In this final rule, FRA retains the NPRM's text addressing a RWIC of a roadway work group away from the location of the initial group. If a second roadway work group wishes to "piggyback" on an occupancy behind authority, the RWIC of the second group must also have a copy of the authority and confirm the affected trains have passed the group's location before the group occupies the track. As an example, if the RWIC of a tie gang establishes working limits authority under paragraph (e), and a bridge gang two miles away wishes to piggyback on that authority, the bridge gang must have its own RWIC communicate with the tie gang's RWIC before permitting the bridge gang to foul the track. In many regards, this is the same way roadway work groups are used under another RWIC's authority under existing part 214. FRA notes this procedure is not limited to two roadway work groups, but multiple groups may be involved.

FRA believes that from a safety perspective these requirements are necessary. Where an additional roadway work group is located a distance from the RWIC listed on the authority, the only safe way for that additional roadway work group to ensure affected trains have passed their location is to make the required confirmation of train engine numbers. This is necessary because a second roadway work group may have arrived at location either before or after an affected train listed on the authority has already passed that location. Meaning, unless confirmation is made by each roadway work group, the group may not know how many affected trains have already passed (or if a train exited the track to be occupied, or stopped, before reaching a roadway work group's location). If the RWIC listed on an authority is not physically present at a separate roadway work group's location, which may be some distance away, he or she cannot know whether a train has actually passed that other location to be able to tell an additional roadway work group it is safe to foul the track yet. The RWIC at the particular location where the piggybacking group wishes to foul track

must make that determination. This procedure is necessary to avoid miscommunications between separate roadway work groups on an occupancy behind authority, and addresses safety concerns regarding occupancy behind authorities discussed by the Working Group. Such qualification is necessary to ensure the RWIC of a separate work group utilizing another group's authority has been trained on, and can apply, the rules regarding occupancy behind procedures. It also ensures a RWIC is present to recognize whether appropriate on-track safety measures are in place and to address any potential good faith challenges.

As mentioned above, FRA is slightly amending the rule text of (e)(4) based on further evaluation of this issue, to more clearly account for situations where additional roadway work groups are located at the same place as the RWIC listed on the authority. In that instance, the RWIC who obtained authority may confirm the passage of affected train(s), and may communicate to an additional roadway work group it is safe to foul the track (without need for an additional RWIC to have a copy of the authority). If the RWIC can see the affected trains are past a separate roadway work group's location, the RWIC of the authority can verbally inform the other roadway work group it is permissible to foul the track without need for that second group to have a copy of the authority per paragraphs (e)(4)(i) and (ii).

With regard to the requirements and application of new paragraph (e) as a whole, paragraph (e)(1) states an authority is only in effect after the RWIC or lone worker confirms affected train(s) have passed the point to be occupied or fouled by the roadway work group or lone worker. This is necessary because in many instances the train(s) listed in the roadway worker in charge's authority may still be ahead of (*i.e.*, may have not yet reached and traveled past) the point to be occupied or fouled. The text permits such confirmation to be made in three ways: (1) By visually identifying the affected train(s); (2) by direct radio contact with a crew member of the affected train(s); or (3) by receiving information about the affected train(s) from the dispatcher or control operator.

Paragraph (e)(2) states that when such confirmation is made by the RWIC visually identifying the affected train(s), the railroad's operating rules must include procedures to prohibit such trains from making a reverse movement into the limits being fouled or occupied (this provision, in addition to the requirements of proposed

§ 214.321(e)(4) below, protects roadway worker(s) located ahead of the point to be occupied who intend to "piggyback" on a RWIC's exclusive track occupancy authority). FRA believes this is necessary, as this confirmation method does not require the RWIC to actually talk to the crew of the affected train(s) (or for the train dispatcher to talk with the crew or verify that that train is beyond the point to be occupied), such that the crew may not be cognizant of the working limits or point to be occupied. In this final rule, FRA has also added the word "within" to this provision, as whether a reverse movement is made into, or within the working limits, by a train after having passed the point to be occupied presents the same risk to a roadway work group that will be fouling the track.

Paragraph (e)(3) requires that after confirmation of the passage of affected train(s) is made, the RWIC must record on the authority document (or display) both the time of passage and the engine (locomotive) numbers of the affected train(s). If passage confirmation is made via radio communication with the train crew, the time of that communication along with the engine numbers must be recorded on the authority. When confirmation of the passage of the affected train(s) is made via the train dispatcher or control operator, the time of such confirmation and the engine numbers must be recorded on the authority. If the time and engine numbers are not recorded on the authority itself, as explained above (and in the NPRM), FRA considers a separate written document used to record information regarding passing trains to be a component of the authority. That separate document must be maintained with the authority while it is in effect.

Paragraph (e)(4) states separate roadway work groups who are located away from the RWIC listed on the authority may only foul track under an occupancy behind authority after receiving permission to do so from the RWIC who received the authority and after the RWIC fulfilled the provisions of proposed § 214.321(e)(1) and (3). As explained above in response to the AAR and SEPTA comments, FRA has amended the NPRM's reference to "roadway workers" in paragraph (e)(4) to instead refer to a "separate roadway work group." FRA's intent was that each additional roadway work group piggybacking on the initial roadway work group's authority would also have its own roadway worker qualified under § 214.353. For the reasons explained above, the RWIC of another roadway work group piggybacking on an occupancy behind authority is also

required to have a copy of such authority and fulfill the requirements of § 214.321(e)(1) and (3) before working limits may be occupied or fouled at a particular location. The authority information may be verbally transmitted by the RWIC to the additional roadway work group utilizing the working limits.

FRA removed what was proposed paragraph (e)(5) in the NPRM from this final rule. Proposed (e)(5) would have reiterated that lone workers who wished to utilize this occupancy behind procedure must comply with the same procedures a RWIC of a roadway work group is required to adhere to under paragraph (e). This paragraph was unnecessary, however, as paragraph (e)(1) and the amended definition of “roadway worker in charge” already account for lone workers utilizing the procedures under this paragraph.

New paragraph (e)(5) (formerly proposed paragraph (e)(6)) establishes any train movements within working limits after passage of the affected trains listed on the authority will continue to be governed by existing § 214.321(d), or under the direction of the RWIC.

#### Section 214.322 Exclusive Track Occupancy, Electronic Display

Existing § 214.321(b) permits an exclusive track occupancy authority to be issued via data transmission from the train dispatcher or control operator to the RWIC. Certain railroads utilize electronic devices to display such authorities received via data transmission. FRA anticipates that using such electronic devices to display working limits authorities will continue to grow, especially with the implementation of PTC systems. As such, the Working Group considered this topic, and contemplated minimum requirements for using such electronic displays. The Working Group agreed in principle to basic concepts for using electronic display for working limits. However, the Working Group did not agree to consensus language.

Paragraph (a), as proposed in the NPRM, contained the items agreed to in principle by the Working Group, and established that an electronically displayed authority must be readily viewable by the RWIC while such authority is in effect. Proposed paragraph (a)(1) stated that when a device malfunctions or fails, or cannot otherwise display an authority in effect (e.g., batteries powering the electronic device displaying the authority lose charge), the RWIC must instruct all roadway workers to stop and occupy a place of safety until a written or printed copy of the authority can be obtained, or another form of on-track safety can be

established. FRA requested comment regarding whether to first allow the RWIC the opportunity to obtain a written copy of an authority before requiring the members of the roadway work group to stop work and occupy a place of safety (and if a written authority could not immediately be obtained, *then* requiring the work group to occupy a place of safety).

Paragraph (a)(2), as proposed in the NPRM, stated the RWIC must conduct an on-track job safety briefing to determine the safe course of action with the roadway work group. Proposed paragraph (a)(2) attempted to provide flexibility in situations where an electronic display fails and the RWIC cannot communicate with the train dispatcher via radio, which might occur in a deep rock cut or a tunnel, and a roadway work group may have to move within established working limits to a location where they can occupy a place of safety and/or re-establish communication with the dispatcher.

FRA received comments from BMWED/BRS, AAR, and SEPTA about proposed paragraph (a). The BMWED/BRS comment supported proposed paragraph (a)'s requirement that, in the event of an electronic display failure, roadway workers must stop and occupy a place of safety until a copy of the authority could be obtained or another form of on-track safety could be established. The comment indicated there is no reason to delay the order to occupy a place of safety while the RWIC tries to get access to the authority or establish another form of on-track safety.

AAR's comment stated a RWIC should have an opportunity to obtain a written copy of the authority expeditiously before work is required to stop, indicating there is no reason to stop work immediately when a momentary lapse in the visibility of the authority occurs. AAR stated the display failure will have no effect if a written copy of the authority is obtained without delay. AAR also stated that a roadway worker having a written copy of the authority at all times (either paper or on an electronic display) is inconsistent with authorization of verbal protection (as was proposed in the NPRM but not adopted in this final rule). AAR also questioned what would constitute a place of safety for a worker on a bridge or in a tunnel if the electronic display failed.

The SEPTA comment disagreed with the proposed requirement that roadway workers stop work and occupy a place of safety until a written copy of the authority is obtained or another form of on-track safety is obtained. SEPTA

stated that as long as the working limits are not released, the roadway workers would be no less safe than they were before the display failure. Rather than require a work stoppage, SEPTA suggested the RWIC should have an opportunity to obtain an alternate copy of the authority, stating that there is no logical reason to stop work unless the actual work conditions change.

After evaluating this issue and the comments received, FRA decided to consolidate proposed (a)(1) and (2) into a single paragraph (b). FRA decided to allow the RWIC an opportunity to obtain a written or printed copy of an authority without delay before requiring roadway workers to occupy a place of safety. FRA believes that as long as an authority is still in effect, and the only issue is the display failure, in many instances the track on which working limits have been established is the safest place for a roadway worker to occupy. However, FRA is specifying that any moving roadway maintenance machines must stop if an electronic display fails, so if there is a question about the limits of an authority, there is no risk of roadway workers traveling outside of protected working limits on a moving machine. If a new authority cannot be obtained or another form of on-track safety cannot be established, work must stop and roadway workers are required to occupy a place of safety. A job safety briefing must then be conducted with the roadway work group to determine the safe course of action. FRA believes this is the appropriate course from a safety perspective when a new authority cannot be obtained, because if questions arise regarding the on-track safety being provided, the working limits authority cannot be referenced or amended if necessary. Of course, a method to prevent this situation from even occurring is for a RWIC to also print a copy of the authority after it is issued via data transmission. If a display fails, a copy of the authority is then already available for reference.

FRA added the words “without delay” to describe how the RWIC must obtain another version of the authority if an electronic display fails. This means the RWIC must contact the dispatcher or obtain new authority directly upon noticing a display failure. If, for example, the dispatcher responds by instructing the RWIC to call back at a later time to obtain a new authority, then the roadway work group would have to stop work and occupy a place of safety until an authority can be obtained. If a dispatcher or control operator does not respond to contact attempts by the RWIC, the work group must stop work and occupy a place of

safety. In response to AAR's comment about a tunnel or bridge and what constitutes a place of safety, FRA understands the track on which working limits have been established may be the best, or only, place of safety in such instances. As such, FRA would not take exception to such situations, and expects the on-track job safety briefing following a display failure to be used to determine the safest course of action for the group, even if the safest course of action is to continue to occupy the track on which working limits had been established. In this final rule, FRA also added reference to hi-rail vehicles in paragraph (b), as FRA recognizes a hi-rail vehicle on track is not always considered an "on-track roadway maintenance machine" as defined by § 214.7 if used to inspect track. Thus, this provision also applies to an electronic authority being used by a roadway worker(s) occupying track in a hi-rail vehicle.

Paragraphs (c)–(h) (proposed as paragraphs (b)–(g)) address technical attributes of the electronic display of exclusive track occupancy authorities, and are safety and security-related. FRA is largely adopting the rule text proposed as discussed below. FRA received comment on these proposals from the BMWED/BRS. Their comments supported these security provisions, but suggested four changes. The comment stated FRA should add a provision on display survivability, addressing the ability of an electronic device to stand up to environmental conditions such as heat and cold. The comment also suggested a provision regarding readability by a roadway worker, indicating the display must be legible in all environmental conditions and appearing in text, with supplemental graphic displays allowed. The comment next suggested that authorities transmitted electronically must be retained for one year (versus the proposed 72 hours) and the authority must be available for review, recall, and printing by the requesting employee during that time. Last, the comment suggested roadway workers should have the absolute right to speak to the dispatcher via voice communications rather than via data transmission to ensure proper on-track safety is in place.

FRA is declining to adopt these suggested revisions. First, FRA believes the environmental requirements are unnecessary, as FRA has established requirements to provide for roadway worker safety if a display fails. Also, because of continuous improvement in technology, such technical standards for a display device would quickly become outdated, and also might be so costly

they could not be justified economically. Nevertheless, FRA expects railroads to take into account the environment such devices will be subject to during use. As noted in the NPRM, railroads are always allowed to implement more restrictive security requirements provided the requirements do not conflict with Federal regulation.

FRA also believes that regulation text requiring electronic authorities to be in text and the RWIC to have an absolute right to talk to a dispatcher via voice communication instead of via data transmission are unnecessary. Under existing § 214.313(c), roadway workers are already required to ascertain that on-track safety is being provided before fouling a track. If there is any question regarding on-track safety, FRA urges roadway workers to clarify the extent of the working limits (or any other questions that may arise), and notes § 214.313(d) already provides for a good faith challenge procedure. If roadway workers are required to foul track while uncertain of the extent of the on-track safety being provided, FRA urges roadway workers to raise a good faith challenge and to not foul track until those questions have been resolved. Further, the required on-track job safety briefing required to take place before track is fouled is also a tool to resolve any potential questions regarding the on-track safety being provided.

With regard to the BMWED/BRS suggestion that all authorities be retained for one-year, FRA believes such a requirement is unnecessary. First, FRA is already specifying that for electronic devices used to obtain an authority where an accident is then involved, such authority data must be kept for one year, and for 72 hours in the absence of an accident. FRA notes there are no similar requirements for written authorities under the sections in part 214 addressing working limits. For cost reasons, FRA chose not to adopt any similar requirements for written authorities (though 49 CFR part 228's requirements apply to certain dispatcher-created records), and also because traditionally FRA has not had issue obtaining copies of written authorities after an accident, and can review dispatcher records and radio recordings. As such, FRA is not certain what utility a one-year electronic retention requirement in the absence of an accident would provide, and is not reasonably certain any utility would outweigh potential costs.

With regard to application of new § 214.322, paragraphs (c) and (d) require identification and authentication of users. A user is the RWIC and train dispatcher or control operator, as they

are most often involved in an exclusive track occupancy authority transaction. A user could also be a process or a system that accesses or attempts to access an electronic display system to perform tasks or process an authority. Identification is the process through which a user presents an identifier uniquely associated with that user to gain access to an electronic authority display system.

Authentication is the process through which an individual user's identity is validated. Most authentication techniques follow the "challenge-response" model by prompting the user (the challenge) to provide some private information (the response). Basic authentication factors for individual users could involve information an individual knows, something an individual possesses, or something an individual is (e.g., personal characteristics or "biometrics" such as a fingerprint or voice pattern).

Paragraph (d) requires any authentication scheme utilized to ensure the confidentiality of authentication data and protect that data from unauthorized access. Such schemes must utilize algorithms approved by the Federal government's National Institute of Standards and Technology (NIST), or any similarly recognized standards body.<sup>13</sup> This requirement parallels a similar requirement for PTC systems at 49 CFR 236.1033(b),<sup>14</sup> and is intended to help prevent deliberate "spoofing" or "man in the middle" attacks on exclusive track occupancy authority information communicated and displayed via electronic device.

Paragraph (e) addresses transmission, reception, processing, and storing exclusive track occupancy authority data, and is proposed to help ensure the integrity of such data. Data integrity is the property of data not being altered since the time data was created, transmitted, or stored, and generally refers to the validity of the data. This paragraph establishes that new electronic authority display systems placed into service on or after July 1, 2017 are required to utilize message authentication codes (MACs) to ensure data integrity. Similar to the requirements of paragraph (d), MACs would have to utilize algorithms approved by NIST or a similarly recognized standards body. Unlike Cyclical Redundancy Codes (CRCs), MACs protect against malicious interference. Paragraph (e) permits the

<sup>13</sup> NIST is responsible for defining cryptographic algorithms for non-Department of Defense entities.

<sup>14</sup> 75 FR 2598, 2676, Jan. 15, 2010.

use of systems implemented prior to July 1, 2017 to utilize CRCs, but requires that the collision rate for the CRCs' checks utilized be less than or equal to 1 in  $2^{32}$  (*i.e.* two to the 32nd power). This collision rate helps provide reasonable protection against accidental or non-malicious errors on channels subject to transmission errors, and is based on a Department of Defense standard. Existing systems using CRCs that do not meet this minimum standard must be retired and replaced with systems that utilize MACs not later than July 1, 2018. Paragraph (e)(2) requires that MACs' or CRCs' checks only be used to verify the accuracy of a message, and that an authority must fail if the checks do not match.

Paragraph (f) requires the actual electronic device used to display an authority issued via data transmission to retain any authorities issued for a minimum of 72-hours after expiration of such authority. This minimum requirement is primarily for investigation purposes, as it gives railroad safety investigating bodies such as FRA or the NTSB an opportunity to study authority data in non-reportable accident/incident situations, and to compare it to a dispatcher or control operator's corresponding electronic authority transmission records. This requirement will also be helpful for compliance audits.

Paragraph (g) is the same as 49 CFR 229.135(e) of FRA's Railroad Locomotive Safety Standards. Section 229.135(e) governs preserving data from locomotive event recorders or other locomotive mounted recorders if there is an accident. Paragraph (g) requires railroads to preserve data from any electronic device used to display an authority for one year from the date of a reportable accident/incident under 49 CFR part 225, unless FRA or the NTSB notifies the railroad in writing the data is desired for analysis.

Paragraph (h) requires new electronic display systems implemented on or after July 1, 2017 to provide Level 3 assurance as defined by the August 2013, version of NIST Special Publication 800-63-2, "Electronic Authentication Guideline." NIST is the Federal agency that works with industry to develop and apply technology, measurements, and standards. FRA is incorporating by reference this NIST Special Publication into this paragraph. NIST Special Publication 800-63-2 provides technical guidelines for widely used methods of electronic authentication, and is reasonably available to all interested parties online at <http://nvlpubs.nist.gov/nistpubs/SpecialPublications/NIST.SP.800-63-2.pdf>, or by contacting NIST via the contact information in new § 214.322(h). Additionally, FRA will maintain a copy available for review.

The incorporation of NIST Special Publication 800-63-2 is a change from the NPRM proposal that referenced the earlier version of the same standard, which was issued in December 2011 (NIST Special Publication 800-63-1). The updated standard incorporated by reference in this paragraph is a limited update, and substantive changes are made only in section 5 of the document. FRA understands the changes in the more updated version are related to improvement in issuing credentials.<sup>15</sup>

Systems implemented prior to July 1, 2017 must provide at least Level 2 assurance as described in NIST Special Publication 800-63-2, and systems that do not provide Level 2 assurance or higher must be retired or updated to provide such assurance no later than July 1, 2018. These assurance levels govern the elements of the authentication process. Level 2 assurance requires some identity proofing and passwords are accepted (but not PINS). Level 3 assurance requires more stringent identity proofing and multi-factor authentication, typically a password or a biometric factor used in combination with a software or hardware token.

In the NPRM, FRA requested comment on whether existing electronic display systems in use already comply with the above requirements, to include potential cost on information. FRA received no comments in response to that request.

#### Section 214.323 Foul Time

Existing § 214.323 sets forth the requirements for establishing working limits on controlled track using foul time. In the NPRM, FRA proposed several amendments to this section. First, FRA proposed to add the words "or other on track equipment" to existing paragraph (a), which currently provides that foul time may be provided only after the relevant train dispatcher or control operator has withheld authority "of all trains" to move into or within the working limits. This change is only for consistency within this existing section, as existing paragraph (c) prohibits the movement of both trains and on-track equipment from moving into working limits while foul time is in effect. This revision also acknowledges that the incursion of on-track equipment into or within working limits while foul time is in effect

presents the same safety risk to roadway workers as train movements into or within working limits.

Consistent with the revisions made throughout this final rule, FRA also proposed to amend the reference to "roadway worker" in existing paragraph (b) to "roadway worker in charge."

In the NPRM, FRA also proposed to add a new paragraph (d) to this section. As proposed, paragraph (d) would prohibit the RWIC from permitting the movement of trains or other on-track equipment into or within working limits protected by foul time.

BMWED/BRS recommended paragraph (d) include lone workers in addition to RWICs, as lone workers are also permitted to establish foul time working limits. FRA concurs, and, as discussed above, the definition of "roadway worker in charge" in this final rule includes lone workers who establish working limits to provide on-track safety for themselves.

Although not proposed in the NPRM, in this final rule FRA is also adding "or track identifier" to paragraph (b) of this section. Existing paragraph (b) requires an RWIC receiving foul time verbally to "repeat the track number, track limits and time limits" of the foul time to the issuing employee for confirmation before the foul time is effective. FRA believes railroads and roadway workers understand existing subpart C allows them to use "a track identifier" (in addition to the track number and track limits) to positively identify the track(s) where working limits are being established. As discussed in the NPRM, AAR's post-RSAC comments to proposed § 214.324 addressing "verbal protection" also suggested adding "track identifier," and proposed § 214.324 shared much of the same language as existing § 214.323. FRA is adding "track identifier" in this section. Other than BMWED/BRS's comment, FRA received no other comments on its proposed revisions to § 214.343, so this final rule adopts the revisions to this section.

#### Section 214.325 Train Coordination

In the NPRM, FRA proposed a minor amendment to existing § 214.325. Section 214.325 governs the establishment of working limits on controlled track by train coordination (direct coordination between the RWIC or lone worker and a train crew). Unlike the other controlled track working limits provisions (§§ 214.321 and 214.323), the existing text of § 214.325 does not state it applies to working limits established on controlled track. Therefore, FRA proposed to add "on controlled tracks" to the first sentence of the introductory paragraph in § 214.325. Consistent with

<sup>15</sup> <http://nvlpubs.nist.gov/nistpubs/SpecialPublications/NIST.SP.800-63-2.pdf>.

revisions made elsewhere in this final rule, FRA also proposed to add the words “in charge” after “roadway worker” in the first sentence of the introductory paragraph. FRA received no comments on this NPRM proposal, other than the BMWED/BRS comment recommending the definition of “roadway worker in charge” include “lone workers.” For the reasons explained above and in the NPRM, in this final rule, FRA is adopting the proposed amendments to § 214.325.

#### Section 214.327 Inaccessible Track

Section 214.327 governs the establishment of working limits on non-controlled track.<sup>16</sup> To establish working limits on non-controlled track, § 214.327 requires the track to be made physically inaccessible and provides five methods to do so. In the NPRM, consistent with the recommendations of the Working Group, FRA proposed to add three new methods for making non-controlled track physically inaccessible.

First, proposed new paragraph (a)(6) would allow using a manned locomotive (with or without cars coupled to it) to establish a point of inaccessibility into working limits. In this final rule, FRA is adopting paragraph (a)(6) as proposed. To establish a locomotive as a point of inaccessibility under proposed § 214.327(a)(6)(i), a RWIC must communicate with the train crew in control of the locomotive and determine that: (1) He or she can see the locomotive; and (2) the locomotive is stopped. Once this initial communication and determination is made, proposed paragraph (a)(6)(ii) prohibits further movement of the locomotive except as permitted by the RWIC.<sup>17</sup> Paragraph (a)(6)(iii) prohibits the crew of the locomotive from leaving the locomotive unattended or going off duty unless the crew communicates with the RWIC and the RWIC establishes an alternate means of on track-track safety. As noted in the NPRM, “attended” means the crew is in a position to readily control the locomotive (the locomotive engineer does not need to remain at the control position for the entire time working

limits are in effect). See 49 CFR 232.103(n).<sup>18</sup> Finally, paragraph (a)(6)(iv) applies if cars are coupled to a locomotive being used to make a track inaccessible under this section. As proposed, this paragraph requires cars coupled to the end of the locomotive nearest the roadway workers to be connected to the train’s air brake system, and the air brake system must be charged with air to initiate an emergency brake application in case of unintended uncoupling. Cars coupled to the locomotive on the opposite end of the roadway workers must have sufficient braking capability to control movement.

In response to proposed paragraph (a)(6), MTA suggested that FRA not limit this proposed provision to use of locomotives only and instead allow the use of other types of on-track equipment to render track inaccessible. After considering this request, for several reasons, FRA declines to adopt MTA’s suggestion. First, the Working Group did not recommend it. Second, using other on-track equipment that may weigh substantially less than a locomotive, and might not have a similar level of positive air brake protection as provided by a locomotive, will not provide as much resistance to rolling equipment as a locomotive would. Third, another piece of on-track equipment adjacent to a roadway work group is likely part of the roadway work group and likely being used to perform roadway maintenance duties. FRA does not want to require an equipment operator engaged in the performance of substantive work to also be required to provide for the on-track safety of a roadway work group by serving as a physical block. FRA believes this could diminish the safety of the roadway workers being protected by the physical block and lead to confusion.

Consistent with the Working Group’s consensus recommendation, paragraph (a)(7) proposed to allow using a railroad’s block register territory rules as a method to render track inaccessible and establish working limits on non-controlled track.<sup>19</sup> In this final rule, FRA is adopting paragraph (a)(7)

substantially as proposed, but is specifying a RWIC or lone worker maintains the absolute right to render track physically inaccessible by an alternative method authorized by this section.

Generally, in block register territory a train can occupy a block of track only after its crew reviews a log book or register to ensure no other trains or equipment are occupying that block. After verifying that no other trains are occupying a block, a train crew wishing to occupy a particular block would then indicate in the log book their train is occupying the block. Upon exiting the block, the crew would indicate in the log book, that their train cleared the block. The Working Group recommended a RWIC or lone worker be allowed to utilize a railroad’s procedures governing block register territory to establish working limits on non-controlled track. Existing § 214.313(a) requires roadway workers to follow a railroad’s on-track safety rules and procedures.

Under this new paragraph (a)(7), working limits are established when a RWIC or lone worker complies with all applicable railroad procedures for occupying a block register territory (including making the required log entries to indicate the block is occupied). When the log indicates a roadway worker or work group is occupying a track, the railroad’s operating rules must prohibit the entry of any other trains or other on-track equipment into the block. Proposed paragraph (a)(7) provided the RWIC or lone worker with the absolute right to choose to use the procedures in paragraphs (a)(1) through (6) of this section (any of the five existing methods of establishing working limits on non-controlled track or the proposed method allowing for the use of a locomotive to make a track inaccessible) as opposed to a railroad’s block register procedures. FRA requested comment on if newly proposed paragraph (a)(8) (providing for the establishment of working limits by bulletin on non-controlled main track within yard limits or restricted limits) should be included in that list, as proposed paragraph (a)(8) would be another method to establish inaccessible track working limits authorized by § 214.327. In response, BMWED/BRS’s comment stated the regulation must allow RWICs to render non-controlled block register territory and main tracks within yard limits or restricted limits (the tracks affected by proposed paragraph (a)(8)) physically inaccessible. FRA agrees, and has adopted in this final rule a provision providing a RWIC or lone worker with

<sup>16</sup> “Non-controlled track” means “track upon which railroads are permitted by railroad rule or special instruction to move without receiving authorization from a train dispatcher or control operator.” 49 CFR 214.7.

<sup>17</sup> As FRA noted in the NPRM, these proposed requirements parallel the existing requirements of § 214.325’s train coordination provision, but this proposed procedure differs from train coordination because it is a way to establish working limits on non-controlled track (and as such additional trains could move into the same segment of track at any time).

<sup>18</sup> A remote control locomotive may be used to provide working limits under this proposal. If a remote control locomotive is used, the remote control operator must attend to (be on or near) the remote control locomotive while it is used to provide working limits.

<sup>19</sup> As discussed in the NPRM, block register territory is generally considered non-controlled track, but when a train dispatcher or other employee must authorize occupancy or movement on a track in block register territory, the track becomes controlled track and proposed paragraph (a)(7) would not apply. Instead, the on-track safety methods for controlled track under subpart C would apply (§§ 214.319, 214.321, 214.323 or 214.325).

the absolute right to use any other provision of § 214.327 to make track in a block register territory inaccessible if, for any reason, they choose to do so. This amendment provides the flexibility for the RWIC or lone worker to utilize paragraphs (a)(1)–(6) or paragraph (a)(8) of this section to establish working limits rather than utilizing this block register territory procedure.

As recommended by the Working Group, proposed paragraph (a)(8) of this section addressed establishing working limits by bulleting on non-controlled main tracks within yard and restricted limits. As proposed, paragraph (a)(8) would require railroad operating rules to ensure train or engine crew or operators of on-track equipment are notified of any working limits in effect on main track in yard limits or restricted limits before entering the limits. Under paragraph (a)(8), railroad operating rules must prohibit movements on main track within yard limits or restricted limits unless the crew or operator of the on-track equipment is first required to receive notification of any working limits in effect. Before occupying the track where any notification of working limits are in effect, the crew or operator must receive permission from the RWIC to enter the working limits. The Working Group intended this provision to apply to planned work activities (activities railroads know about and plan for in advance enabling railroads to produce bulletins or other forms of notification ahead of time to be issued to train crews or operators).

As proposed, if the maximum authorized speed is restricted speed (as defined by § 214.7), paragraph (a)(8) requires the display of red flags or signs at the limits of the roadway worker(s) working limits. As noted in the NPRM, this requirement provides an extra measure of safety by providing train crews notice to stop their movement unless they have the RWIC's permission to enter the working limits. Where restricted speed is in effect, proposed paragraph (a)(8) requires train crews or operators to stop their movement within one-half the range of vision (one-half the distance to the flag). Where the maximum authorized speed is over restricted speed, proposed paragraph (a)(8) requires advance warning flags or signs, as physical characteristics permit to ensure an approaching crew or operator is able to stop his or her train or other on-track equipment short of the working limits.

In response to this proposal, BMWED/BRS's submitted comments opposing allowing any train to operate in excess of restricted speed under paragraph (a)(8). BMWED/BRS recommended

revising paragraph (a)(8) to require a train or engine receiving notification of any working limits in effect to operate at restricted speed and prepared to stop within half the range of vision of any stop signs or flags marking working limits. BMWED/BRS also proposed amended rule text giving the RWIC or lone worker the absolute right to utilize another applicable provision of § 214.327(a) to render track inaccessible other than proposed paragraph (a)(8).

After carefully evaluating this issue and BMWED/BRS's comment, FRA is adopting paragraph (a)(8) as proposed, with a minor modification. FRA has added reference to "other on-track equipment" in addition to the Working Group's consensus reference to trains or engines in this paragraph. As discussed above in the analysis for § 214.323 (foul time), an incursion into working limits by a piece of on-track equipment that might not be part of the roadway work group presents the same hazards to roadway workers as an incursion by a train or locomotive.

FRA is not adopting BMWED/BRS's recommended modifications to paragraph (a)(8), because it is an RSAC consensus recommendation that both BMWED and BRS agreed to. Also, as discussed above, the procedure of paragraph (a)(8) is intended for use when railroads are conducting planned work activities and, as such, the procedure is comparable to longstanding existing requirements for establishing working limits on controlled track under § 214.321. The procedures of § 214.321 are proven to be safe when complied with, even though those procedures are typically used on main track over which train operate at much higher speeds than that contemplated under paragraph (a)(8) of this section. Also, under existing paragraph § 214.327(a)(1), railroads are permitted to use flagmen (without the benefit of bulletins to train crews or mandatory use of advance flags) to make non-controlled track inaccessible. Appropriately placed stop boards (or flags), designating the point at which trains or other on-track equipment may not travel any further without permission, effectively serves the same function as flagmen. Paragraph (a)(8)'s requirement that bulletins be issued to train crews before the crews can operate into a roadway worker or work group's limits, and that advance flags be placed, when possible, where speeds higher than restricted speed are authorized, represent two additional measures of safety not in § 214.327's existing provision authorizing the use of flagmen. Further, FRA believes most situations will not involve speeds

exceeding restricted speed, as U.S. railroads' operating rules traditionally require compliance with restricted speed operating rules when trains or other on-track equipment are traveling over main track within yard limits or restricted limits. Because it is not always possible (or useful) to place advance flags warning of upcoming working limits, FRA is not adopting an absolute requirement for advance flags for all movements above restricted speed. For example, if there are many entrance switches from a railroad yard to a section of non-controlled main track, advance flags might not be practical and may serve no useful purpose for a train leaving the yard track at restricted speed to enter the main track where a higher speed is authorized. Historically, railroads' own operating rules have addressed the use of advance flags, and contain specific provisions for when advance flags are not necessary (e.g., when entering a railroad's yard limits from a foreign railroad's track, where advance flags cannot be practically located).

#### Section 214.329 Train Approach Warning Provided by Watchmen/Lookouts

Section 214.329 addresses using watchmen/lookouts to provide warning of approaching trains to roadway workers in a roadway work group who foul track outside of working limits. In the NPRM, FRA proposed four amendments to this section. First, FRA proposed to amend paragraph (a) of this section to accommodate proposed new § 214.338(a)(2)(iii) regarding passenger station platform snow removal. However, as discussed above, FRA is not adopting proposed § 214.338 in this final rule. Thus, FRA is not adopting the proposed amendment to paragraph (a) of § 214.329 referencing the snow removal provision.

In the NPRM, FRA also proposed to amend paragraph (a) to change the reference to "maximum speed authorized" to "maximum authorized speed." This amendment reflects the Working Group's recommended consensus definition of "maximum authorized speed" to e clarify existing sections §§ 214.329(a) and 214.337(c)(4). FRA proposed to amend these two sections merely to properly order the words in the Working Group recommended and which FRA adopted in this final rule.

FRA also proposed to amend paragraph (a) of this section by adding a sentence to the end of the paragraph prohibiting the use of a track as a place of safety to be occupied upon the approach of a train, unless working

limits are established on that track. As explained in the NPRM, this language is already in existing § 214.337(d), which governs on-track safety procedures for lone workers. This requirement is also the subject of FRA Technical Bulletin G-05-10. As explained in that Technical Bulletin, it is expected that roadway workers would clear all tracks when given a train approach warning. Clearing onto another track where only train approach warning (or no form on-track safety) is provided presents an extremely dangerous situation which may potentially trap workers if multiple train movements occur simultaneously. FRA has long interpreted existing § 214.329 to already prohibit using another track as a place of safety, and this amendment merely codifies that interpretation.

AAR commented this proposal is infeasible for Amtrak. AAR stated that in Penn Station, roadway workers do clear to a live track protected by a watchman/lookout. AAR suggested revising this proposal in a final rule to allow such scenarios by adding “. . . or that track is protected by a watchman/lookout” to the rule text. FRA declines to alter this proposal for safety reasons. As explained above, FRA has long interpreted existing § 214.329 to already prohibit using another track as a place of safety and issued Technical Bulletin G-05-10 to address this particular situation. If a place of safety is designated as another track protected by a watchman/lookout, but a train approaches on that track (which is designated as the place of safety) while roadway workers clear toward it, the situation is the same as having no on-track safety at all. Common sense dictates that if roadway workers are given train approach warning and clear onto another track where nothing stops a train from also approaching on that track at the same time, it endangers roadway workers who are left without a place of safety to go to. Thus, a general exclusion in the regulation allowing such a situation to occur is not appropriate from a safety perspective. If a unique situation exists at a particular location such as Penn Station where roadway workers will always have an appropriate place of safety to occupy when a train approaches, FRA believes a waiver application from this safety-critical requirement could be appropriate to address such unique situations. FRA Technical Bulletin G-05-10 is supplanted upon the effective date of this final rule.

Last, FRA proposed to add a new paragraph (h) to this section. This paragraph would have prohibited the use of train approach warning as an

acceptable form of on-track safety for a roadway work group using equipment or material that cannot be readily removed by hand from the track to be cleared. FRA did not adopt this proposal in the final rule as explained in detail in section VIII.A.4 above.

While FRA did not to adopt a provision in this final rule addressing the removal of equipment or material by hand under train approach warning, FRA is addressing a related matter where questions occasionally arise under part 214. In part 214, no rule text prohibits the use of train approach warning outside working limits to provide on-track safety when on-track roadway maintenance machine foul track (except § 214.336(f), which governs when a component of a roadway maintenance machine fouls an adjacent controlled track). Such blanket rule text is not appropriate because train approach warning (or individual train detection under § 214.337) must sometimes be used when a hi-rail or other on-track machine sets on a track to begin traveling (perform roadway inspection duties) under the operating rules of the railroad. In certain instances, depending on applicable railroad operating rules and the operational conditions at a location, using train approach warning or individual train detection can be appropriate.

However, FRA notes that using train approach warning to provide on-track safety for roadway workers who are performing roadway work involving using on-track equipment would most often be in violation of existing § 214.329. In a recent example, FRA inspectors observed a roadway work group using multiple pieces of on-track equipment spread out over nearly a mile. Upon investigation, FRA learned the roadway work gang was apparently using train approach warning under § 214.329 as a form of on-track safety, with a watchman/lookout stationed at each end of the roadway work group. The location where FRA observed this violation was on non-controlled track where trains were required to travel at restricted speed. In this situation, it was not possible for the railroad to comply with § 214.329. The machine operators were operating noisy, distracting machinery that would require them to look in a particular direction at the time of the warning to receive such warning, in violation of § 214.329(e). Second, the distance the group was spread over, and the type of work being performed by the group, made it impossible for a watchman/lookout far away to be able to provide train approach warning to all members of the roadway work group,

which is also in violation of § 214.329. It appears in this instance the railroad was relying on the requirement that movements must be made at restricted speed to protect the roadway work group. As explained in the 1996 RWP final rule, the RWP regulation does not recognize restricted speed as a sole means of providing on-track safety. 61 FR 65969. The final rule stated that “unusual circumstances at certain locations where [restricted speed] might be considered sufficient would have to be addressed by the waiver process.” *Id.* at 65962. Thus, in the above-described instance, the use of qualified flagmen to establish working limits (or any other method of establishing working limits under § 214.327) rather than the use of watchman/lookouts would have been appropriate.

Aside from noise, distraction, and distance from a watchmen/lookout, using train approach warning might also not be permissible to provide on-track safety under part 214 for another reason. Roadway workers who are operating such machines under train approach warning would have to be able to stop a machine, dismount a machine, and then move to occupy a place of safety at least 15 seconds prior to the arrival of a train traveling at maximum authorized speed at the roadway workers location. In such instances, compliance with § 214.329 is not possible. An operator inside the cab of a machine requires much more time to occupy a place of safety versus a roadway worker who might merely be standing in the foul of a track and can easily move to a place of safety. In addition, where train speeds are permitted to exceed restricted speed, in almost all instances, only the establishment of working limits is appropriate to establish on-track safety. To illustrate, even assuming proper train approach warning could be given to roadway workers operating on-track machinery so they could occupy a place of safety at least 15 seconds before a train's arrival, if trains are permitted to travel in excess of restricted speed, nothing prevents a train from colliding with the on-track equipment left on the occupied track. Railroad operating rules are generally the mechanism relied upon to prevent the collision of trains and on-track roadway maintenance. However, the strict guidelines in § 214.329 and common sense dictate that, in most instances where roadway workers are performing work on an occupied track with on-track machinery, approach warning is not an appropriate or permissible method to provide on-track safety for roadway workers.

Last, as discussed in the NPRM, FRA Technical Bulletin G-05-28 addresses using portable radios and cell phones. That technical bulletin explains that under existing § 214.329, such devices cannot be used as the sole communication to provide train approach warning to roadway workers. These devices are not among those expressly listed in the existing watchman/lookout definition in § 214.7. Further, FRA believes this practice is dangerous; especially if these devices fail in any manner as a train approaches a roadway work group. While FRA has no objection to using a radio or a cell phone to supplement the equipment issued to a watchman/lookout to provide train approach warning, these devices cannot be used to provide the sole auditory warning under this part.

#### Section 214.331 Definite Train Location

In the NPRM, FRA proposed to amend § 214.331 to require railroads to discontinue using definite train location as a form of on-track safety within one year. NTSB and BMWED/BRS submitted comments supporting this proposal. Thus, FRA is adopting the proposal in this final rule.

#### Section 214.333 Informational Line-Ups of Trains

For the reasons explained in the NPRM, FRA proposed to amend § 214.333 to require railroads to discontinue using informational line-ups of trains within one year. NTSB and BMWED/BRS submitted comments supporting the NPRM proposal. Thus, FRA is adopting the proposal in this final rule.

#### Section 214.335 On-Track Safety Procedures for Roadway Work Groups, General

Section 214.335 contains the general on-track safety procedures for roadway work groups. Under this section, before a member of a roadway work group fouls a track, on-track safety must be established under subpart C. FRA proposed four amendments to this section. FRA received no comments on these proposals, and, as explained below, has adopted two of the four proposed amendments. Because FRA is not adopting proposed new § 214.324 (verbal protection) or § 214.338 (snow removal), FRA is not amending existing paragraph (a) of this section to reference those sections as proposed. In the NPRM, FRA proposed to update the list of acceptable methods to establish working limits, FRA is amending paragraph (a) to reference § 214.336 (adjacent track protections) because that

section took effect on July 1, 2014. For the reasons explained in the NPRM, FRA is also removing “and” from the existing text of paragraph (a) listing the available acceptable methods of establishing working limits and replacing it with “or.” FRA is also incorporating the new term “roadway worker in charge” in existing paragraph (b) of this section for the reasons discussed above.

#### Section 214.337 On-Track Safety Procedures for Lone Workers

Section 214.337 governs the on-track safety procedures for lone workers. In the NPRM, FRA proposed to adopt two Working Group consensus recommendations changing this section, including: (1) Amending existing paragraph (c)(3) to allow the use of individual train detection (ITD) at controlled points consisting of signals only; and (2) adding a new paragraph (g) prohibiting the use of ITD by lone workers using equipment or material that cannot be readily removed from a track by hand. In response to the proposed amendment to paragraph (c)(3), and in light of the new definitions FRA proposed for “controlled point” and “interlocking, manual” in § 214.7, both AAR and BMWED/BRS expressed concern about the effect of those definitions on § 214.337(c)(3)’s restrictions on the use of ITD by lone workers. FRA addresses these concerns in the Section-by-Section analysis of § 214.7 above.

As discussed in the NPRM, existing paragraph (c)(3) of § 214.337 prohibits lone workers from using ITD to establish on-track safety within the limits of a manual interlocking, a controlled point, or a remotely controlled hump yard facility. The Working Group recommended expanding the locations where ITD can be used by lone workers to include controlled points consisting of signals only. FRA is adopting this consensus recommendation in this final rule as proposed.

As noted above, in the NPRM, FRA also proposed to adopt the Working Group’s consensus recommendation to add a new paragraph (g) to this section. As recommended by the Working Group, new paragraph (g) would prohibit using ITD as a form of on-track safety for a lone worker using machinery, equipment, or material they cannot readily remove from a track by hand. For the reasons discussed in the NPRM, FRA is adopting this revision as proposed.

#### Section 214.339 Audible Warning From Trains

Based on the Working Group’s recommendations, in the NPRM, FRA proposed revisions to existing § 214.339’s requirement that trains sound their locomotive whistles and bells when approaching roadway workers “on or about the track.” As recommended by the Working Group, FRA proposed to require railroads to adopt and comply with written procedures providing for “effective . . . audible warning by horn and/or bell for trains and locomotives approaching any roadway workers or roadway maintenance machines . . . on the track on which the movement is occurring, or about the track if the roadway workers or roadway maintenance machines are at a risk of fouling the track.”

After considering comments received, in this final rule, FRA is adopting the revisions as proposed. As discussed in detail in the NPRM, four FRA Technical Bulletins (G-05-08, G-05-15, G-05-26, and G-05-27) currently provide guidance on the requirements of § 214.339. These technical bulletins are supplanted upon the effective date of this final rule.<sup>20</sup>

NJT, BMWED/BRS, and 3M commented on the proposed revisions to this section. 3M did not directly address the specifics of FRA’s proposed revised requirements for audible warnings of trains approaching roadway workers. Like their comments on proposed § 214.338, 3M recommended requiring roadway workers to wear high visibility safety apparel to alert approaching train crews to their presence on or near track. Referencing the NPRM’s preamble discussion of the passage of large roadway work groups, such as tie and surfacing production crews spaced out over a long distance, NJT commented the requirement that the locomotive horn be sounded upon the approach of each unit of a work crew will create quality of life complaints about noise in many municipalities. BMWED/BRS supported FRA’s proposed revisions to this section.

In response to 3M’s comment, FRA considered requiring certain roadway workers to wear highly visible clothing. See section VIII.A.1 of this preamble discussing proposed § 214.338 not

<sup>20</sup> The NPRM discussed these Technical Bulletins and various issues the bulletins addressed in detail (audible warnings during shoving movements, operation of multiple-unit passenger train equipment not equipped with a bell, audible warnings over a large work area and duration of those warnings). FRA refers the reader to the NPRM for more information. 77 FR 50324, 50354, Aug. 20, 2012.

adopted in this final rule. Although in this final rule FRA is not adopting this specific requirement, FRA obviously encourages using highly visible reflective clothing and personal protective equipment to help clearly show the presence of roadway workers on or near railroad tracks to locomotive engineers and other on-track equipment operators. FRA also notes most railroad rules already require roadway workers to wear highly visible clothing.

In response to NJT's comment, FRA understands complaints railroads receive about field noise from train horns, particularly at highway-rail grade crossings, and where a roadway work group is working at a particular point in time. FRA understands the potential sensitivity to noise of residents who live in close proximity to railroad tracks. However, providing an audible warning to roadway workers of an approaching train is a longstanding safety-critical component of the RWP regulation and any railroad's on-track safety program—even within highway-rail grade crossing quiet zones. FRA notes the amendments to this section in this final rule are not a substantive change to the particular issue raised by NJT, and FRA's discussion in the NPRM preamble merely restated FRA's longstanding expectation that trains must provide audible warning to roadway workers on or near the track upon the approach of each unit of a work crew. As explained in Technical Bulletin G-05-08 issued in 2005, existing § 214.339 requires trains to provide an audible warning when approaching each roadway worker or roadway work group located within a large scale maintenance project.

#### § 214.343 Training and Qualification, General

Existing § 214.343 sets forth the general training and qualification requirements for roadway workers. Paragraph (c) of existing § 214.343 requires railroad employees other than roadway workers associated with on-track safety procedures, and whose primary duties involve the movement and protection of trains, to be trained "to perform their functions related to on-track safety through the training and qualification procedures prescribed by the operating railroad for the primary position of the employee."

In the NPRM, FRA proposed to amend paragraph (c) to account for proposed new § 214.353 addressing training employees other than roadway workers (typically transportation employees such as conductors) who act as RWICs. MTA commented on this proposal, supporting the training and

qualification of transportation employees under the procedures the railroad prescribes for the primary position of the employee. Thus, FRA is adopting revision to paragraph (c) of this section as proposed. However, FRA did receive comments in response to the NPRM proposal for § 214.353 that implicate this section and addresses those comments in the Section-by-Section analysis for § 214.353 below.

#### § 214.345 Training for All Roadway Workers

Existing § 214.345 has the minimum training contents for roadway workers required by existing subpart C. FRA proposed to amend this section to incorporate two Working Group consensus recommendations. First, to clarify and reinforce the requirements of the existing RWP regulation, FRA proposed adding "[c]onsistent with § 214.343(b)" to the beginning of the first sentence of the existing introductory paragraph of the section. Section 214.343(b) requires employers to provide all roadway workers initial or recurrent training once every calendar year on the on-track safety rules and procedures they are required to follow. In this final rule, FRA is adopting this revision as proposed. As noted in the NPRM, Technical Bulletin G-05-16 provides guidance on existing § 214.345 and is supplanted upon the effective date of this final rule.

In the NPRM, FRA also proposed adding a new paragraph (f) to this section reflecting the Working Group's consensus recommendation requiring all roadway workers' training to include instruction on an employer's procedures governing how roadway workers should determine if it is safe to walk across railroad tracks. FRA removed that consensus item from § 214.317(b), and proposed to include it as new paragraph (f) of this section. In this final rule, FRA is adopting this requirement as proposed.

In preparing this final rule, FRA noticed in the NPRM preamble discussion, it incorrectly intermingled discussion of the periodic "qualification" of roadway workers with the existing roadway worker annual training requirement. *See* 77 FR 50330. Since the original RWP rule first took effect in 1997, it has required roadway workers to receive annual training on the on-track safety procedures they must follow. *See* 49 CFR 214.343(b). As exemplified by the inclusion of costs for annual training for all roadway workers (including lone workers, watchmen/lookouts, flagmen, and RWICs), in the RIA for the 1996 final rule, and the assessment of the paperwork burden for

annual training in the Paperwork Reduction Act information collection estimates provided by FRA in the 1996 final rule, this annual training requirement includes training for all roadway worker qualifications. Further, in 2005, FRA issued Technical Bulletin G-05-16, clarifying that the required time frame for the unspecified "periodic" qualification for additional roadway worker qualifications is separate from the annual training requirement of § 214.345 and applies across all the additional roadway worker qualifications. The existing definition of the term "watchmen/lookout" also states it means an employee who has been annually trained and qualified to provide warning to roadway workers of approaching trains or on-track equipment. Technical Bulletin G-05-16 further explained that because subpart C does not specify a timeframe for the required "periodic qualification" of roadway workers, determining an appropriate timeframe is at the discretion of individual railroads and should be specified in each railroad's on-track safety program. Therefore, the annual training requirement existing since the RWP regulations were promulgated is unchanged by this final rule.

#### § 214.347 Training and Qualification for Lone Workers

Section 214.347 sets forth the training and qualification requirements applicable to lone workers and requires the initial and "periodic" qualification of lone workers to be "evidenced by demonstrated proficiency." In the NPRM, FRA proposed to amend this section by incorporating the Working Group's consensus recommendation to require the training of lone workers on alternative means to access the information in a railroad's on-track safety manual when his or her duties make it impractical to carry the manual. In this final rule, FRA is adopting this provision substantially as proposed. FRA is making minor adjustments to the language in response to BMWED/BRS's comment on § 214.309 noting that lone workers are not literally required to "carry" the on-track safety manual at all times, but rather that the manual must be readily available to them at all times. FRA is also correcting a typographical error in the rule text of this proposed revision by removing the extra word "to" in proposed paragraph (a)(5).

In the NPRM, FRA also asked for comment on two additional issues on the training and qualification of lone workers. First, FRA noted the Working Group's consensus recommendation to

require requalification of roadway workers every 24 months, and recurrent lone worker training every calendar year, did not parallel the separate RSAC recommendation resulting from the mandate of Section 401 of the Rail Safety Improvement Act of 2008 (Section 401) for FRA to set minimum training standards for “each class and craft of safety-related railroad employee.”<sup>21</sup> Thus, FRA asked for comment on how to proceed regarding an appropriate time interval for “periodic” qualification in a final rule. Second, FRA asked if it should require a physical characteristics qualification for lone workers.

Since publication of the NPRM, based on the recommendations of the RSAC Training Standards Working Group, FRA published a final rule addressing the mandate of Section 401. 79 FR 66460, Nov. 7, 2014 (Training Standards Rule; part 243). The rule includes minimum training standards for roadway workers and extensive refresher qualification requirements for roadway workers.

In response to this request for comment, SEPTA, BMWED/BRS, AAR, and two individuals submitted comments. SEPTA suggested that in this final rule, FRA should defer to the three-year interval for training and qualification in the Training Standards Rule. SEPTA asked why, when under the Training Standards Rule, training and re-certification for safety-critical positions such as conductors, engineers, and train dispatchers only has to occur every three years, roadway workers would be treated differently and trained annually. SEPTA asserted existing § 217.9 (requiring operational testing of employees) and § 243.205 (Training Standards Rule training and qualification interval) are adequate to ensure employees know how to perform their work properly.

Noting that at the time of its comment 44 roadway worker fatalities had occurred since 1997, BMWED/BRS supported an annual training and qualification requirement for all roadway workers, and opposed FRA not adopting the Working Group’s consensus recommendation for a 24-month periodic qualification interval.

Consistent with SEPTA’s comment, AAR asserted no basis exists for determining more frequent refresher training or qualification should be required for roadway workers than for other safety-related employees under the Training Standards Rule. Pointing to FRA’s RIA for the Training Standards

NPRM, AAR also expressed the view that the Working Group’s consensus recommendation could not be justified from a cost-benefit perspective due to lack of a safety benefit from more frequent training.

Individual commenters supported the Working Group’s consensus recommendation to require annual training and periodic qualification every 24 months, stating generally that more frequent refresher training will have better results. These commenters believe the benefits of more frequent refresher programs would outweigh the cost of the programs’ development and implementation. The individual commenters pointed to OSHA’s training standards as a model, and urged FRA to adopt a uniform standard of appropriate time intervals for refresher training. The comment did note that implementing programs similar to OSHA’s would be burdensome.

As stated in the discussion of § 214.343 above, in this final rule FRA is not amending the existing annual training requirements of subpart C. FRA did not intend this rulemaking to decrease the training roadway workers receive via existing requirements, and believes it reasonable to continue the existing annual training requirement. Because subpart C already requires annual training for roadway workers, this approach will not result in any additional costs.

In this final rule, FRA is, however, adding a new paragraph § 214.347(b) requiring lone workers to be qualified under part 243 and to be based on evidence of a lone worker’s demonstrated proficiency. Part 243 requires covered employees to be qualified at least every three calendar years. The costs for this qualification requirement are already accounted for in the Training Standards Rule. Although FRA encourages railroads to conduct refresher qualifications more often than the minimum of once every three calendar years under part 243, FRA agrees with AAR that from a cost-benefit basis, the evidence does not support a more frequent qualification requirement for roadway workers than other safety-critical employees subject to part 243 (e.g., locomotive engineers). FRA also agrees with SEPTA that existing § 217.9’s requirements for operational testing already provide a much more frequent opportunity for observations by railroad officials to determine employee proficiency with rules’ compliance than does either a two- or three-year required interval for determining qualification via demonstrated proficiency.

A lone worker’s “demonstrated proficiency” under this new paragraph (b) refers to the longstanding requirement FRA explained in the original 1996 RWP rule. In that rule, FRA stated a roadway worker must show

sufficient understanding of the subject that the employee can perform the duties for which qualification is conferred in a safe manner. Proficiency may be demonstrated by successful completion of a written or oral examination, an interactive training program using a computer, a practical demonstration of understanding and ability, or an appropriate combination of these.

61 FR 65972.

Many of part 243’s requirements will not take effect for a number of years, depending on a railroad’s total employee work hours. See 49 CFR 243.101(a). In the interim, FRA encourages railroads to comply with part 243’s requirements as soon as possible, and, consistent with Technical Bulletin G–05–16, continue to specify in their on-track safety programs the interval at which “periodic” roadway work qualifications will take place. Upon the relevant applicability date of part 243’s requirements for a particular railroad, that railroad must comply with part 243’s qualification requirements (and the requalification of roadway workers must be at least every three calendar years).

Last, as discussed in section VIII.A above, in the NPRM, FRA asked if it should require physical characteristics qualification for lone workers. For the reasons explained in section VIII.A, FRA is not adopting this requirement in this final rule.

#### § 214.349 Training and Qualification for Watchmen/Lookouts

Section 214.349 sets forth the training and qualification requirements applicable to watchmen/lookouts and, consistent with existing § 214.347 applicable to lone workers, requires the initial and “periodic” qualification of lone workers to be “evidenced by demonstrated proficiency.” In the NPRM, FRA requested comment on how to address the Working Group’s consensus recommendation to require requalification of roadway workers, including watchmen/lookouts, every 24 months. For the reasons discussed in the Section-by-Section analysis of § 214.347 above, FRA is not adopting this consensus recommendation in this final rule. Instead, this final rule requires periodic qualification for watchmen/lookouts to be performed consistent with the Training Standards Rule (every three calendar years) and be

<sup>21</sup> Public Law 110–432, Division A, 122 Stat. 4848 (codified at 49 U.S.C. 20162).

based on evidence of demonstrated proficiency.

Consistent with its request for comment on § 214.347 discussed above, FRA asked if it should require a physical characteristics qualification for watchmen/lookouts. For the reasons explained in section VIII.A above, FRA is not adopting such a requirement in this final rule.

#### § 214.351 Training and Qualification for Flagmen

Section 214.351 sets forth the training and qualification requirements applicable to flagmen and, consistent with existing § 214.347 applicable to lone workers and § 214.349 applicable to watchmen/lookouts, requires the initial and “periodic” qualification of flagmen to be “evidenced by demonstrated proficiency.” In the NPRM, FRA requested comment on how to address the Working Group’s consensus recommendation to require requalification of roadway workers, including flagmen, every 24 months. For the reasons discussed in the Section-by-Section analysis of § 214.347 above, FRA is not adopting this consensus recommendation in this final rule. Instead, this final rule is requiring that periodic qualification for watchmen/lookouts be performed consistent with the Training Standards Rule (every three calendar years) and be based on evidence of demonstrated proficiency.

#### Section 214.353 Training and Qualification of Each Roadway Worker in Charge

Existing § 214.353 is titled “Training and qualification of roadway workers who provide on-track safety for roadway work groups.” Paragraph (a) of existing § 214.353 lists the minimal contents of RWIC training and paragraph (b) specifies that a RWICs initial and periodic qualification must be evidenced by a “recorded examination.” In the NPRM, FRA proposed several changes to this section. BMWED/BRS and AAR submitted comments responding to some of the proposed changes.

First, to reflect the new term “roadway worker in charge,” FRA proposed to change the title of this section to “[t]raining and qualification of each roadway worker in charge.” FRA received no comments on proposals and in this final rule is amending the title as proposed.

Second, consistent with the Working Group’s recommendation, FRA proposed to add a new paragraph (a)(5) to this section. Proposed paragraph (a)(5) would require RWICs to be trained on procedures ensuring they remain

immediately accessible to the roadway workers working within the working limits they establish. This paragraph parallels new § 214.315(a)(5) requiring on-track safety job briefings conducted by RWICs to include information on the accessibility of the RWIC, and on alternate procedures if the RWIC is no longer accessible to members of the roadway work group. FRA received no comments on this NPRM proposal, and in this final rule is adopting new paragraph (a)(5) as proposed.

In its comment, BMWED/BRS recommended adding a new paragraph to this section requiring RWICs to be trained on the content and application of the railroad rules governing the resolution of good faith challenges. BMWED/BRS noted that regardless of class or craft of a RWIC, RWICs must understand the good faith challenge procedures and their responsibility to promptly and equitably resolve the challenges. FRA concurs with BMWED/BRS’s statement that RWICs must understand the good faith challenge procedures and their responsibility to resolve such challenges, but believes the existing regulations already require RWICs to be trained on a railroad’s good faith challenge procedures. Under existing §§ 213.311–214.313, good faith challenges may be raised by roadway workers and must be promptly and equitably resolved. Indeed, under those sections, railroads must adopt procedures to address such good faith challenges. Existing § 214.343(b) requires recurrent training every calendar year for the on-track safety rules and procedures each roadway worker is required to follow, and this includes a railroad’s rules and procedures on good faith challenges for a RWIC. *See also* § 214.353(b) (RWIC training requirements).

Nonetheless, FRA believes BMWED/BRS’s comment has merit because the RWIC is typically involved in resolving roadway workers’ good faith challenges. As noted in the NPRM, Technical Bulletin G–05–04 specifies that persons acting as RWICs must be qualified on good faith challenge procedures, but the text of part 214 does not expressly state such. Given the importance of ensuring RWICs are trained in a railroad’s good faith challenge procedures, FRA believes good faith challenge procedures should be included as a required training and qualification topic in paragraph (a) of § 214.353. Thus, in this final rule FRA is adding the words “including the railroad’s procedures governing good faith challenges in §§ 214.311(b) and (c) and 214.313(d)” to existing paragraph (a)(1). While another railroad employee or supervisor other

than a RWIC may ultimately resolve a roadway worker’s good faith challenge to the on-track safety provided, an a RWIC is typically involved in that resolution and must at least know the railroad’s procedures governing the handling of such a challenge.

BMWED/BRS’s comment also suggested FRA amend paragraph (b) of this section to require all RWICs, regardless of craft, to be annually trained and qualified. As discussed further below, FRA believes the amendments already made to paragraph (a) of this section, and to § 214.343 as discussed above, address this issue. As amended by this final rule, § 214.353 clarifies that all RWICs, regardless of craft, must be trained annually on the items in § 214.353. As discussed in the Section-by-Section analysis for §§ 214.343, 214.345, 214.347, and 214.351 above, FRA is deferring to the training standards rulemaking’s three-year qualification interval for all roadway worker qualifications.

In the NPRM, FRA proposed an additional amendment to existing paragraph (a) of this section to address situations where employees other than roadway workers act as RWICs. FRA proposed to expressly require in paragraph (a) that any employee acting as a RWIC (e.g., a conductor or a brakemen), who provides for the on-track safety of roadway workers through the establishment of working limits or the assignment and supervision of watchmen/lookouts or flagmen be trained and qualified consistent with § 214.353. BMWED/BRS submitted a comment supporting this proposal and FRA is adopting it, as proposed, in this final rule. For a detailed discussion of this change, see the preamble to the NPRM. 77 FR 50356–50357.

Regarding the training and qualification requirements of paragraph (b) of this section, for the reasons explained in the Section-by-Section analysis of § 214.347 above, FRA is addressing the frequency of training and qualification requirements for RWICs the same way as the requirements applicable to lone workers, flagmen, and watchmen/lookouts (§§ 214.347, 214.349, and 214.351). While annual training for RWICs is still required under the existing regulation, the periodic qualification of RWICs will be controlled by the Training Standards Rule, which requires recurrent qualification every three calendar years.

Also related to the training and qualification requirements applicable to RWICs, in the NPRM, FRA requested comment on the practice of bifurcating certain RWIC duties (i.e., splitting of RWIC duties between two individuals).

Specifically, in the NPRM FRA indicated it was contemplating whether it should continue to be allow bifurcation of RWIC duties, such as when one employee obtains a track permit for another employee who is acting as the RWIC. FRA was considering adopting a requirement that would only permit the splitting of qualifications in situations where a conductor or other railroad employee serves as a pilot to a RWIC (or employee acting as a RWIC) who was not qualified on the physical characteristics of a particular territory where work was being performed. FRA considered such because every roadway work group already must have a RWIC, and under the amendment to paragraph (a) in this final rule discussed above, any employee acting as a roadway worker in charge must be trained on the substantive requirements listed in § 214.353.

AAR commented on this proposal suggesting another situation where the bifurcating of RWIC duties should be acceptable. AAR suggested that in situations where one employee obtains a working limits authority for a roadway work group, but is not responsible for any other aspect of the group's on-track safety, requiring the employee to be trained and tested on all the responsibilities of a RWIC would not serve any purpose. Consistent with AAR's comment, FRA notes existing Technical Bulletin G-05-04 allows one employee to obtain a track permit for another employee who is acting as the RWIC. FRA can also envision other operating situations where one employee's ability to obtain authority on behalf of an RWIC is desirable and necessary. For example, in the case of a large system gang, a local track inspector may obtain authority from the dispatcher for the system gang's RWIC. The BMWED/BRS comment also addressed this topic, indicating that since each roadway work group must have a RWIC qualified on physical characteristics under § 214.353, bifurcation was unnecessary and could cause confusion.

After further evaluating this issue and considering the comments, FRA concludes bifurcation of RWIC duties can be safely done in the two limited scenarios discussed above involving physical characteristics qualifications (pilot) and when obtaining track authority for an RWIC. FRA will continue to allow the practice of splitting RWIC duties in these scenarios. For gangs working across a large system, FRA recognizes it may not always be possible for an RWIC to be qualified on the physical characteristics, and using a

pilot who is qualified on the physical characteristics can help safely facilitate compliance with this section. As discussed more fully in the NPRM and Technical Bulletin G-05-04, FRA also does not take exception to providing a "limited" qualification for a RWIC who would only perform certain RWIC duties in certain situations. For example, a RWIC who was performing such duties on a railroad consisting entirely of non-controlled track could have a limited qualification only involving the RWIC being trained and qualified to establish working limits via the inaccessible track procedures (in addition to being trained on all other §§ 214.343, 214.345, and 214.353 requirements).

#### § 214.355 Training and Qualification in On-Track Safety for Operators of Roadway Maintenance Machines

Section 214.355 sets forth the on-track safety training and qualification requirements for roadway maintenance machine operators. In the NPRM, FRA requested comment on one potential change to this existing section in the final rule on how best to proceed regarding the appropriate time interval for "periodic" qualification under existing paragraph (b). The Working Group recommended consensus amendments that would have expressly required recurrent qualification every 24 months for roadway maintenance machine operators. As discussed in the preamble above for § 214.347, however, the RSAC consensus recommendation does not parallel the refresher qualification requirements in the statutorily mandated Training Standards Rule (minimum three calendar year interval).

FRA received comments in response to this request from SEPTA, BMWED/BRS, AAR, and two individuals. Those comments are summarized above in the preamble discussion for § 214.347. For the reasons also explained above, in this final rule, the Training Standards Rule requiring recurrent qualification at a minimum of every three calendar years will control.

FRA notes the Training Standards Rule included a provision addressing the training and qualification for operators of roadway maintenance machines equipped with a crane. 79 FR 66501. Those requirements are in a new § 214.357. FRA directs the public to the Training Standards Rule preamble's Section-by-Section analysis for an explanation of new § 214.357's requirements. *Id.* at 66474–66476.

#### Appendix A to Part 214—Schedule of Civil Penalties

FRA is amending appendix A of this part to add guidance on penalties for violations of new and amended sections of subpart C in this final rule. Appendix A specifies the civil penalty FRA will ordinarily assess for the violation of a particular provision of this rule. However, consistent with 49 CFR part 209, appendix A, FRA's Statement of Agency Policy Concerning Enforcement of the Federal Railroad Safety Laws, FRA reserves the right to assess a penalty up to the statutory maximum. Further, a penalty may be assessed against an individual only for a willful violation. FRA did not solicit public comment on appendix A as it is a statement of FRA policy.

#### X. Regulatory Impact and Notices

##### A. Executive Order 12866, Executive Order 13563 and DOT Regulatory Policies and Procedures

This final rule has been evaluated consistent with existing policies and procedures and determined to be a non-significant regulatory action under Executive Orders 12866 and 13563 and DOT policies and procedures. *See* 44 FR 11034, Feb. 26, 1979. FRA prepared and placed a RIA addressing the economic impact of this final rule in the Docket (No. FRA-2008-0086). Document inspection and copying facilities are available at Room W12-140 on the Ground level of the West Building, 1200 New Jersey Avenue SE., Washington, DC 20590.

As part of the RIA, FRA assessed quantitative measurements of the cost and benefit streams expected to result from the implementation of the final rule. Overall, the final rule would result in safety benefits and expected business benefits for the railroad industry. It would also, however, generate an additional burden on railroads mainly due to the additional requirements for job briefings under certain circumstances and various training requirements.

Table 1 summarizes the quantified costs and benefits expected to accrue over a 20-year period. It presents costs associated with expanded job briefing requirements under § 214.315 Supervision and Communication, the identification and implementation of redundant protections under § 214.319 Working Limits, Generally, railroad policy change under § 214.339 Audible Warning from Trains, and training of various types of employees under §§ 214.318, 214.345, 214.347, and 214.353.

The RIA also presents the quantified benefits expected to accrue over a 20-year period. These benefits are primarily cost savings or business benefits. They largely accrue due to time savings because of the proposed amendments, including the new exception for on-track snow blowing and weed spraying operations under § 214.317, new methods of using inaccessible track under § 214.327, and using individual train detection under § 214.337. Savings will also accrue due to the additional

flexibility provided by new § 214.318 allowing mechanical employees to utilize blue signal protection in some instances. All other amendments result in no cost or benefits because they represent current industry practice and/or the adoption of current FRA Technical Bulletins.

For the 20-year period analyzed, the estimated quantified costs to the railroad industry total \$20,965,962, discounted to \$11,491,330 (present value (PV), 7 percent) and \$15,832,099

(PV, 3 percent). For the same 20-year period, the estimated quantified benefits total \$53,109,702, discounted to \$28,132,247 (PV, 7 percent) and \$39,506,913 (PV, 3 percent). Net benefits total \$32,143,740, discounted to \$16,640,917 (PV, 7 percent) and \$23,674,814 (PV, 3 percent). This analysis demonstrates that the benefits for this final rule would exceed the costs.

**Table 2. Summary of Quantified Costs and Benefits**

Costs		Year 1	2 - 20	Total 20 year	7% PV	3% PV
214.315	Job Briefings	\$179,468	\$179,468	\$3,589,356	\$1,901,284	\$2,670,028
214.318	Training for Locom. & Car Shop Areas	226,601	226,601	4,532,015	2,400,612	3,371,247
214.319	Working Limits, generally	611,658	509,091	7,725,127	4,465,867	5,975,983
214.339	Audible Warning from Trains	29,105	0	29,105	27,200	28,257
214.345	Training on Safe Crossing of Tracks	90,640	90,640	1,812,806	960,245	1,348,499
214.347	Training on Access to Manual	13,596	13,596	271,921	144,037	202,275
214.353	Training RWIC	150,282	150,282	3,005,632	1,592,086	2,235,811
<b>Total</b>		<b>\$1,301,349</b>	<b>\$1,169,678</b>	<b>\$20,965,962</b>	<b>\$11,491,330</b>	<b>\$15,832,099</b>

**Note:** Dollars are discounted over a 20-year period.

*B. Regulatory Flexibility Act and Executive Order 13272; Initial Regulatory Flexibility Assessment*

The Regulatory Flexibility Act of 1980 (5 U.S.C. 601 *et seq.*) and Executive Order 13272 (67 FR 53461, Aug. 16, 2002) require agency review of proposed and final rules to assess their impacts on small entities. FRA developed the final rule consistent with Executive Order 13272, Proper Consideration of Small Entities in Agency Rulemaking, and DOT's procedures and policies to promote compliance with the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*) to ensure potential impacts of

rules on small entities are properly considered.

The Regulatory Flexibility Act requires an agency to review regulations to assess their impact on small entities. An agency must conduct a threshold analysis to determine if the proposed rule will or may have a significant economic impact on a substantial number of small entities (SEISNOSE) or not. Then, it must prepare an initial regulatory flexibility analysis (IRFA) unless it determines and certifies a rule is not expected to have a SEISNOSE.

As discussed earlier, FRA is amending its regulations on railroad

workplace safety to resolve interpretative issues that have arisen since the 1996 promulgation of the original RWP regulation. In particular, this final rule adopts certain terms, resolves miscellaneous interpretive issues, codifies certain FRA Technical Bulletins, adopts new requirements governing redundant signal protections and the movement of roadway maintenance machinery over signalized non-controlled track, amends certain qualification requirements for roadway workers, and codifies FAST Act mandates. FRA is also deleting three incorporations by reference of industry

standards in existing sections of part 214, subpart B that address Bridge Worker Safety Standards and instead is referencing existing OSHA regulations.

The small entity segment of the railroad industry faces little in the way of intramodal competition. Small railroads generally serve as “feeders” to the larger railroads, collecting carloads in smaller numbers and at lower densities than would be economical for the larger railroads. They transport those cars over relatively short distances and then turn them over to the larger systems which transport them relatively long distances to their ultimate destination, or for handoff back to a smaller railroad for final delivery. Although the relative interests of various railroads may not always coincide, the relationship between the large and small entity segments of the railroad industry are more supportive and co-dependent than competitive.

It is also extremely rare for small railroads to compete with each other. Small railroads generally serve smaller, lower-density markets and customers. They exist, and often thrive, doing business in markets where there is not enough traffic to attract the larger carriers designed to handle large volumes over distance at a profit. As there is usually not enough traffic to attract service by a large carrier, there is also not enough traffic to sustain more than one smaller carrier. In combination with the huge barriers to entry in the railroad industry (due to the need to own the right-of-way, build track, purchase a fleet, etc.), small railroads rarely find themselves in competition with each other. Thus, even to the extent the proposed rule may have an economic impact, it should have no impact on the intramodal competitive position of small railroads.

#### 1. Description of Regulated Entities and Impacts

The “universe” of the entities under consideration includes only those small entities that can reasonably be expected to be directly affected by the provisions of this rule. For the rule there is only one type of small entity that is affected: small railroads.

“Small entity” is defined in 5 U.S.C. 601. Section 601(3) defines a “small entity” as having the same meaning as “small business concern” under section 3 of the Small Business Act. This includes any small business concern that is independently owned and operated, and is not dominant in its field of operation. Section 601(4) likewise includes within the definition of “small entities” not-for-profit enterprises that are independently

owned and operated, and are not dominant in their field of operations.

The U.S. Small Business Administration (SBA) has authority to regulate issues related to small businesses, and stipulates in its size standards that a “small entity” in the railroad industry is a for profit “line-haul railroad” that has fewer than 1,500 employees, a “short line railroad with fewer than 500 employees, or a “commuter rail system” with annual receipts of less than seven million dollars. See “Size Eligibility Provisions and Standards,” 13 CFR part 121, subpart A.

Federal agencies may adopt their own size standards for small entities in consultation with SBA and in conjunction with public comment. Under that authority, FRA published a final statement of agency policy that formally establishes “small entities” or “small businesses” as being railroads, contractors, and hazardous materials shippers that meet the revenue requirements of a Class III railroad as set forth in 49 CFR 1201.1–1, which is \$20 million or less in inflation-adjusted annual revenues, and commuter railroads or small governmental jurisdictions that serve populations of 50,000 or less. See 68 FR 24891, May 9, 2003, codified at appendix C to 49 CFR part 209. The \$20 million limit is based on the Surface Transportation Board’s (STB) revenue threshold for a Class III railroad carrier. Railroad revenue is adjusted for inflation by applying a revenue deflator formula in accordance with 49 CFR part 1201. The same dollar limit on revenues is established to determine whether a railroad shipper or contractor is a small entity. FRA is using this definition for this rulemaking. FRA received no comments pertinent to its use in response to the NPRM.

Included in the entities impacted by this final rule are governmental jurisdictions or transit authorities—most of which are not small for purposes of this certification. There are two privately owned commuter railroads that would be considered small entities. However, both entities are owned by Class III freight railroads and, therefore, are already considered small entities for purposes of this certification.

#### Railroads

There are approximately 729 small railroads.<sup>22</sup> Class III railroads do not report to the STB, and the precise number of Class III railroads is difficult

<sup>22</sup> FRA data for 2014 shows there are 779 Railroads. Thus, 779 Total Railroads—7 Class I Railroads—12 Class II Railroads (includes Alaska RR)—31 Commuter/Amtrak (non-small) = 729 Small Railroads.

to ascertain due to conflicting definitions, conglomerates, and even seasonal operations. Potentially all small railroads (a substantial number) could be impacted by this regulation. However, because of certain characteristics these railroads typically have, there should be very little impact on most, if not all of them. A large number of these small railroads only have single-track operations. Some small railroads, such as the tourist and historic railroads, operate on the lines of other railroads that would bear the burden or impact of the final rule’s requirements. Finally, other small railroads, if they do have more than a single track, typically have operations infrequent enough such that the railroads have generally always performed the pertinent trackside work with the track and right-of-way taken out of service, or is conducted during hours that the track is not used.

Almost all commuter railroads do not qualify as small entities. This is likely because almost all passenger/commuter railroad operations in the United States are part of larger governmental entities whose jurisdictions exceed 50,000 in population. As noted above, two of these commuter railroads are privately owned and would be considered small. However, they are already considered to be small because they are owned by a Class III freight railroad. FRA is uncertain how many contractor companies would be involved with this issue. FRA is aware that some railroads hire contractors to conduct some of the functions of roadway workers on their properties. However, the costs for the burdens associated with the requirements of this final rule would get passed on to the pertinent railroad. Most likely the contracts would be written to reflect that, and the contractor would bear no additional burden for the proposed requirements. Since contractors would not be the entities directly impacted by any burdens, it is not necessary to assess them in the certification.

No other small businesses (non-railroads) will be impacted by this final rule.

The process used to develop most of this final rule provided outreach to small entities in two ways. First, the RSAC Working Group had at least one representative from a small railroad association, namely, ASLRRRA. Second, members of the RSAC itself include the ASLRRRA and other organizations that represent small entities. Thus, FRA concludes that small entities had an opportunity for input as part of the process to develop a consensus-based

RSAC recommendation made to the FRA Administrator.

#### Impacts

The impacts from this regulation are primarily a result of the requirements for certain changes to the existing roadway worker protection regulations, particularly regarding job briefings and training of roadway workers.

The RIA for this rulemaking estimates that for the 20-year period analyzed, the estimated quantified costs to the railroad industry total \$20,965,962, discounted to \$11,491,330 (present value (PV), 7 percent) and \$15,832,099 (PV, 3 percent). FRA believes nearly all of this cost will fall to railroads other than small railroads. Short line railroads, the vast majority of which are Class III railroads, represent an estimated 8 percent of the railroad industry. Since small railroads generally collect carloads in such small numbers

and low densities, at low speeds, they require much less track maintenance. Also, several parts of the new regulation do not apply to Class III railroads. Furthermore, generally, small railroads have single tracks that are not active around the clock. As such, road work can be done when the track is not active, greatly reducing the burden of having to provide roadway worker protection. As such, the cost of this rulemaking is very minimal to the small railroad segment of the industry. Eight percent of the total 20-year cost is \$1,677,277 (an average annual cost of \$115 per small railroad).<sup>23</sup> Although the rule may impact a substantial number of small entities, FRA is confident that this final rule does not impose a significant burden.

#### 2. Certification

Under the Regulatory Flexibility Act (5 U.S.C. 605(b)), FRA certifies this final

rule will not have a significant economic impact on a substantial number of small entities. FRA invited all interested parties to submit data and information regarding the potential economic impact that will result from the proposals in the NPRM. FRA did not receive any comments concerning this certification in the public comment process.

#### C. Paperwork Reduction Act

The information collection requirements in this final rule are being submitted upon publication in the **Federal Register** for Office of Management and Budget (OMB) approval under the Paperwork Reduction Act of 1995, 44 U.S.C. 3501 *et seq.* The sections that contain the new and current information collection requirements and the estimated time to fulfill each requirement are as follows:

CFR section	Respondent universe	Total annual responses	Average time per response	Total annual burden hours

All estimates include the time to review instructions; search existing data sources; gather or maintain the needed data; and review the information. For information or a copy of the paperwork package submitted to OMB, contact Mr. Robert Brogan, FRA Office of Safety, Information Clearance Officer, at 202–493–6292, or Ms. Kim Toone, FRA Office of Information Technology,

Information Clearance Officer, at 202–493–6132.

OMB must make a decision concerning the collection of information requirements this final rule between 30 and 60 days after publication of this document in the **Federal Register**. Therefore, a comment to OMB is best assured of having its full effect if OMB receives it within 30 days of publication.

FRA is not authorized to impose a penalty on persons for violating information collection requirements which do not display a current OMB control number. If required, FRA will obtain current OMB control numbers for any new information collection requirements resulting from this rulemaking action before the effective date of the final rule. The OMB control number, when assigned, will be

announced by separate notice in the **Federal Register**.

#### *D. Federalism Implications*

Executive Order 13132, “Federalism” (64 FR 43255, Aug. 10, 1999), requires FRA to develop an accountable process to ensure “meaningful and timely input by State and local officials in the development of regulatory policies that have federalism implications.” “Policies that have federalism implications” are defined in the Executive Order to include regulations that have “substantial direct effects on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government.” Under Executive Order 13132, the agency may not issue a regulation with federalism implications that imposes substantial direct compliance costs and that is not required by statute, unless the Federal government provides the funds necessary to pay the direct compliance costs incurred by State and local governments, or the agency consults with State and local government officials early in the process of developing the regulation. Where a regulation has federalism implications and preempts State law, the agency seeks to consult with State and local officials in the process of developing the regulation.

This final rule has been analyzed consistent with the principles and criteria in Executive Order 13132. This final rule would not have a substantial effect on the States or their political subdivisions; it would not impose any compliance costs; and it would not affect the relationships between the Federal government and the States or their political subdivisions, or the distribution of power and responsibilities among the various levels of government. Therefore, the consultation and funding requirements of Executive Order 13132 do not apply.

However, this final rule could have preemptive effect by operation of law under certain provisions of the Federal railroad safety statutes, specifically the former Federal Railroad Safety Act of 1970, repealed and recodified at 49 U.S.C. 20106. Section 20106 provides that States may not adopt or continue in effect any law, regulation, or order related to railroad safety or security that covers the subject matter of a regulation prescribed or order issued by the Secretary of Transportation (with respect to railroad safety matters) or the Secretary of Homeland Security (with respect to railroad security matters), except when the State law, regulation,

or order qualifies under the “essentially local safety or security hazard” exception to section 20106.

In sum, FRA has analyzed this final rule consistent with the principles and criteria in Executive Order 13132. As explained above, FRA has determined that this final rule has no federalism implications, other than the possible preemption of State laws under Federal railroad safety statutes, specifically 49 U.S.C. 20106. Accordingly, FRA has determined preparation of a federalism summary impact statement for this final rule is not required.

#### *E. Environmental Impact*

FRA has evaluated this final rule under the National Environmental Policy Act (NEPA; 42 U.S.C. 4321 *et seq.*), other environmental statutes, related regulatory requirements, and its “Procedures for Considering Environmental Impacts” (FRA’s Procedures) (64 FR 28545, May 26, 1999). FRA has determined this final rule is categorically excluded from detailed environmental review under section 4(c)(20) of FRA’s Procedures, “Promulgation of railroad safety rules and policy statements that do not result in significantly increased emissions of air or water pollutants or noise or increased traffic congestion in any mode of transportation.” *See* 64 FR 28547. Categorical exclusions (CEs) are actions identified in an agency’s NEPA implementing procedures that do not normally have a significant impact on the environment and, thus, do not require either an environmental assessment (EA) or environmental impact statement (EIS). *See* 40 CFR 1508.4.

In analyzing the applicability of a CE, the agency must also consider whether extraordinary circumstances are present that would warrant a more detailed environmental review through the preparation of an EA or EIS. *Id.* Under section 4(c) and (e) of FRA’s Procedures, FRA has further concluded no extraordinary circumstances exist with respect to this regulation that might trigger the need for a more detailed environmental review. The purpose of this rulemaking is to finalize a number of railroad worker safety practices developed by the RSAC, some required by the FAST Act, and additional rules to decrease railroad worker accidents and injuries. FRA does not anticipate any environmental impacts from these requirements and finds that there are no extraordinary circumstances present in connection with this final rule.

#### *F. Executive Order 12898 (Environmental Justice)*

Executive Order 12898, Federal Actions to Address Environmental Justice in Minority Populations and Low-Income Populations, and DOT Order 5610.2(a) (91 FR 27534, May 10, 2012) require DOT agencies to achieve environmental justice as part of their mission by identifying and addressing, as appropriate, disproportionately high and adverse human health or environmental effects, including interrelated social and economic effects, of their programs, policies, and activities on minority populations and low-income populations. The DOT Order instructs DOT agencies to address compliance with Executive Order 12898 and requirements within the DOT Order in rulemaking activities, as appropriate. FRA evaluated this final rule under Executive Order 12898 and the DOT Order and has determined it would not cause disproportionately high and adverse human health and environmental effects on minority or low-income populations.

#### *G. Executive Order 13175 (Tribal Consultation)*

FRA evaluated this final rule under the principles and criteria in Executive Order 13175, Consultation and Coordination with Indian Tribal Governments, dated November 6, 2000. The final rule would not have a substantial direct effect on one or more Indian tribes, would not impose substantial direct compliance costs on Indian tribal governments, and would not preempt tribal laws. Therefore, the funding and consultation requirements of Executive Order 13175 do not apply, and a tribal summary impact statement is not required.

#### *H. Unfunded Mandates Reform Act of 1995*

Under Section 201 of the Unfunded Mandates Reform Act of 1995 (Public Law 104–4, 2 U.S.C. 1531), each Federal agency “shall, unless otherwise prohibited by law, assess the effects of Federal regulatory actions on State, local, and tribal governments, and the private sector (other than to the extent that such regulations incorporate requirements specifically set forth in law).” Section 202 of the Act (2 U.S.C. 1532) further requires that

before promulgating any general notice of proposed rulemaking that is likely to result in the promulgation of any rule that includes any Federal mandate that may result in expenditure by State, local, and tribal governments, in the aggregate, or by the private sector, of \$100,000,000 or more (adjusted annually for inflation) in any 1

year, and before promulgating any final rule for which a general notice of proposed rulemaking was published, the agency shall prepare a written statement

detailing the effect on State, local, and tribal governments and the private sector. This final rule will not result in the expenditure, in the aggregate, of \$155,000,000 or more (adjusted annually for inflation) in any one year. Thus, preparation of such a statement is not required.

#### I. Energy Impact

Executive Order 13211 requires Federal agencies to prepare a Statement of Energy Effects for any "significant energy action." 66 FR 28355, May 22, 2001. Under the Executive Order, a "significant energy action" is defined as any action by an agency (normally published in the **Federal Register**) that promulgates or is expected to lead to the promulgation of a final rule or regulation, including notices of inquiry, advance notices of proposed rulemaking, and notices of proposed rulemaking: (1)(i) That is a significant regulatory action under Executive Order 12866 or any successor order, and (ii) is likely to have a significant adverse effect on the supply, distribution, or use of energy; or (2) that is designated by the Administrator of the Office of Information and Regulatory Affairs as a significant energy action. FRA evaluated this final rule consistent with Executive Order 13211. FRA has determined this final rule is not likely to have a significant adverse effect on the supply, distribution, or use of energy, and, thus, is not a "significant energy action" under Executive Order 13211.

#### J. Trade Impact

The Trade Agreements Act of 1979 19 U.S.C. 2501 *et seq.*) prohibits Federal agencies from engaging in any standards setting or related activities that create unnecessary obstacles to the foreign commerce of the United States. Legitimate domestic objectives, such as safety, are not considered unnecessary obstacles. The statute also requires consideration of international standards and, where appropriate, that they be the basis for U.S. standards. FRA has assessed the potential effect of this final rule on foreign commerce and believes its requirements are consistent with the Trade Agreements Act. The requirements imposed are safety standards, which, as noted, are not considered unnecessary obstacles to trade.

#### K. Privacy Act

Interested parties should be aware that anyone can search the electronic

form of all written comments received into any agency docket by the name of the individual submitting the document (or signing the document, if submitted on behalf of an association, business, labor union, etc.). You may review DOT's complete Privacy Act Statement in the **Federal Register** (65 FR 19477–19478, Apr. 11, 2000) or you may visit <http://www.dot.gov/privacy.html>.

#### L. Analysis Under 1 CFR Part 51

As 1 CFR 51.5 requires, FRA has summarized the standard incorporated by reference and shown its reasonable availability in the Section-by-Section analysis above.

#### List of Subjects in 49 CFR Part 214

Bridges, Incorporation by reference, Occupational safety and health, Penalties, Railroad safety, Reporting and recordkeeping requirements.

#### The Rule

For the reasons discussed in the preamble, FRA amends part 214 of chapter II, subtitle B of title 49, Code of Federal Regulations, as follows:

#### PART 214—[AMENDED]

- 1. The authority citation for part 214 is revised to read as follows:

**Authority:** 49 U.S.C. 20102–20103, 20107, 21301–21302, 21304, 28 U.S.C. 2461, note; and 49 CFR 1.89.

#### Subpart A—General

- 2. Amend § 214.7 as follows:
  - a. Add the definitions, in alphabetical order, for "controlled point", "interlocking, manual", "maximum authorized speed", "on-track safety manual", "roadway worker in charge";
  - b. Revise the definitions for "effective securing device" and "watchman/lookout".

The additions and revisions read as follows:

#### § 214.7 Definitions.

\* \* \* \* \*

**Controlled point** means a location where signals and/or other functions of a traffic control system are controlled from the control machine.

\* \* \* \* \*

**Effective securing device** means a vandal and tamper resistant lock, keyed for application and removal only by the roadway worker(s) for whom the protection is provided. In the absence of a lock, it is acceptable to use a spike driven firmly into a switch tie or a switch point clamp to prevent the use of a manually operated switch. It is also acceptable to use portable derails secured with specifically designed

metal wedges. Securing devices without a specially keyed lock shall be designed in such a manner that they require railroad track tools for installation and removal and the operating rules of the railroad must prohibit removal by employees other than the class, craft, or group of employees for whom the protection is being provided. Regardless of the type of securing device, the throwing handle or hasp of the switch or derail shall be uniquely tagged. If there is no throwing handle, the securing device shall be tagged.

\* \* \* \* \*

**Interlocking, manual** means an arrangement of signals and signal appliances operated from an interlocking machine and so interconnected by means of mechanical and/or electric locking that their movements must succeed each other in proper sequence, train movements over all routes being governed by signal indication.

\* \* \* \* \*

**Maximum authorized speed** means the highest speed permitted for the movement of trains permanently established by timetable/special instructions, general order, or track bulletin.

\* \* \* \* \*

**On-track safety manual** means the entire set of on-track safety rules and instructions maintained together in one manual designed to prevent roadway workers from being struck by trains or other on-track equipment. These instructions include operating rules and other procedures concerning on-track safety protection and on-track safety measures.

\* \* \* \* \*

**Roadway worker in charge** means a roadway worker who is qualified under § 214.353 to establish on-track safety for roadway work groups, and lone workers qualified under § 214.347 to establish on-track safety for themselves.

\* \* \* \* \*

**Watchman/lookout** means an employee who has been trained and qualified to provide warning to roadway workers of approaching trains or on-track equipment. Watchmen/lookouts shall be properly equipped to provide visual and auditory warning such as whistle, air horn, white disk, red flag, lantern, fuse. A watchman/lookout's sole duty is to look out for approaching trains/on-track equipment and provide at least fifteen seconds advanced warning to employees before arrival of trains/on-track equipment.

\* \* \* \* \*

■ 3. Revise § 214.113(b) to read as follows:

**§ 214.113 Head protection.**

\* \* \* \* \*

(b) Helmets required by this section shall conform to the requirements of 29 CFR 1910.135(b), as established by the U.S. Department of Labor, Occupational Safety and Health Administration.

■ 4. Revise § 214.115(b) to read as follows:

**§ 214.115 Foot protection.**

\* \* \* \* \*

(b) Foot protection equipment required by this section shall conform to the requirements of 29 CFR 1910.136(b), as established by the U.S. Department of Labor, Occupational Safety and Health Administration.

■ 5. Revise § 214.117(b) to read as follows:

**§ 214.117 Eye and face protection.**

\* \* \* \* \*

(b) Eye and face protection equipment required by this section shall conform to the requirements of 29 CFR 1910.133(b), as established by the U.S. Department of Labor, Occupational Safety and Health Administration.

\* \* \* \* \*

**Subpart C—Roadway Worker Protection**

■ 6. Revise § 214.301(c) to read as follows:

**§ 214.301 Purpose and scope.**

\* \* \* \* \*

(c) This subpart prescribes safety standards related to the movement of roadway maintenance machines where such movements affect the safety of roadway workers. Except as provided for in § 214.320, this subpart does not otherwise affect movements of roadway maintenance machines that are conducted under the authority of a train dispatcher, a control operator, or the operating rules of the railroad.

**§ 214.302 [Removed and Reserved]**

■ 7. Remove and reserve § 214.302.

**§ 214.305 [Removed and Reserved]**

■ 8. Remove and reserve § 214.305.

■ 9. Revise § 214.307 to read as follows:

**§ 214.307 On-track safety programs.**

(a) Each railroad subject to this part shall maintain and have in effect an on-track safety program which complies with the requirements of this subpart. New railroads must have an on-track safety program in effect by the date on which operations commence. The on-track safety program shall be retained at

a railroad's system headquarters and division headquarters, and shall be made available to representatives of the FRA for inspection and copying during normal business hours. Each railroad to which this part applies is authorized to retain its program by electronic recordkeeping in accordance with §§ 217.9(g) and 217.11(c) of this chapter.

(b) Each railroad shall notify, in writing, the Associate Administrator for Safety and Chief Safety Officer, Federal Railroad Administration, RRS-15, 1200 New Jersey Avenue SE., Washington, DC 20590, not less than one month before its on-track safety program becomes effective. The notification shall include the effective date of the program and the name, title, address and telephone number of the primary person to be contacted with regard to review of the program. This notification procedure shall also apply to subsequent changes to a railroad's on-track safety program.

(c) Upon review of a railroad's on-track safety program, the FRA Associate Administrator for Railroad Safety and Chief Safety Officer may, for cause stated, may disapprove the program. Notification of such disapproval shall be made in writing and specify the basis for the disapproval decision. If the Associate Administrator for Railroad Safety and Chief Safety Officer disapproves the program:

(1) The railroad has 35 days from the date of the written notification of such disapproval to:

(i) Amend its program and submit it to the Associate Administrator for Railroad Safety and Chief Safety Officer for approval; or

(ii) Provide a written response in support of its program to the Associate Administrator for Railroad Safety and Chief Safety Officer.

(2) FRA's Associate Administrator for Railroad Safety and Chief Safety Officer will subsequently issue a written decision either approving or disapproving the railroad's program.

(3) Failure to submit to FRA an amended program or provide a written response in accordance with this paragraph will be considered a failure to implement an on-track safety program under this subpart.

■ 10. Revise § 214.309 to read as follows:

**§ 214.309 On-track safety manual.**

(a) The applicable on-track safety manual (as defined by § 214.7) shall be readily available to all roadway workers. Each roadway worker in charge responsible for the on-track safety of others, and each lone worker, shall be

provided with and shall maintain a copy of the on-track safety manual.

(b) When it is impracticable for the on-track safety manual to be readily available to a lone worker, the employer shall establish provisions for such worker to have alternative access to the information in the manual.

(c) Changes to the on-track safety manual may be temporarily published in bulletins or notices. Such publications shall be retained along with the on-track safety manual until fully incorporated into the manual.

■ 11. In § 214.315, revise paragraphs (a)(3), (a)(4), (b), the first sentence of paragraphs (c) through (e) and add paragraph (a)(5) to read as follows:

**§ 214.315 Supervision and communication.**

(a) \* \* \*

(3) Information about any adjacent tracks, on-track safety for such tracks, if required by this subpart or deemed necessary by the roadway worker in charge, and identification of any roadway maintenance machines that will foul such tracks;

(4) A discussion of the nature of the work to be performed and the characteristics of the work location to ensure compliance with this subpart; and

(5) Information on the accessibility of the roadway worker in charge and alternative procedures in the event the roadway worker in charge is no longer accessible to the members of the roadway work group.

(b) A job briefing for on-track safety shall be deemed complete only after the roadway worker(s) has acknowledged understanding of the on-track safety procedures and instructions presented.

(c) Every roadway work group whose duties require fouling a track shall have one roadway worker in charge designated by the employer to provide on-track safety for all members of the group. \* \* \*

(d) Before any member of a roadway work group fouls a track, the roadway worker in charge designated under paragraph (c) of this section shall inform each roadway worker of the on-track safety procedures to be used and followed during the performance of the work at that time and location. \* \* \*

(e) Each lone worker shall communicate at the beginning of each duty period with a supervisor or another designated employee to receive an on-track safety job briefing and to advise of his or her planned itinerary and the procedures that he or she intends to use for on-track safety. \* \* \*

■ 12. Revise § 214.317 to read as follows:

**§ 214.317 On-track safety procedures, generally.**

(a) Each employer subject to the provisions of this part shall provide on-track safety for roadway workers by adopting a program that contains specific rules for protecting roadway workers that comply with the provisions of §§ 214.319 through 214.337.

(b) Roadway workers may walk across any track provided that they can safely be across and clear of the track before a train or other on-track equipment would arrive at the crossing point under the following circumstances:

(1) Employers shall adopt, and roadway workers shall comply with, applicable railroad safety rules governing how to determine that it is safe to cross the track before starting across;

(2) Roadway workers shall move directly and promptly across the track; and

(3) On-track safety protection is in place for all roadway workers who are actually engaged in work, including inspection, construction, maintenance or repair, and extending to carrying tools or material that restricts motion, impairs sight or hearing, or prevents an employee from detecting and moving rapidly away from an approaching train or other on-track equipment.

(c) On non-controlled track, on-track roadway maintenance machines engaged in weed spraying or snow removal may proceed under the provisions of § 214.301(c), under the following conditions:

(1) Each railroad shall establish and comply with an operating procedure for on-track snow removal and weed spray equipment to ensure that:

(i) All on-track movements in the affected area are informed of such operations;

(ii) All on-track movements shall operate at restricted speed as defined in § 214.7, except on other than yard tracks and yard switching leads, where all on-track movements shall operate prepared to stop within one-half the range of vision but not exceeding 25 mph;

(iii) A means for communication between the on-track equipment and other on-track movements is provided; and

(iv) Remotely controlled hump yard facility operations are not in effect, and kicking of cars is prohibited unless agreed to by the roadway worker in charge.

(2) Roadway workers engaged in such snow removal or weed spraying operations subject to this section shall retain an absolute right to use the provisions of § 214.327 (inaccessible track).

(3) Roadway workers assigned to work with this equipment may line switches (or derrails operated via a switch stand) for the machine's movement but shall not engage in any roadway work activity unless protected by another form of on-track safety.

(4) Each roadway maintenance machine engaged in snow removal or weed spraying under this provision shall be equipped with and utilize:

(i) An operative 360-degree intermittent warning light or beacon;

(ii) Work lights, if the machine is operated during the period between one-half hour after sunset and one-half hour before sunrise or in dark areas such as tunnels, unless equivalent lighting is otherwise provided;

(iii) An illumination device, such as a headlight, capable of illuminating obstructions on the track ahead in the direction of travel for a distance of 300 feet under normal weather and atmospheric conditions;

(iv) A brake light activated by the application of the machine braking system, and designed to be visible for a distance of 300 feet under normal weather and atmospheric conditions; and

(v) A rearward viewing device, such as a rearview mirror.

(d) Tunnel niches or clearing bays in existence prior to April 1, 2017 that are designed to permit roadway workers to occupy a place of safety when trains or other on-track equipment pass the niche or clearing bay, but are less than four feet from the field side of the nearest rail, may continue to be used as a place of safety provided:

(1) Such niches or clearing bays are visually inspected by the roadway worker in charge or lone worker prior to making the determination that the niche or clearing bay is suitable for use as a place of safety;

(2) There is adequate sight distance to permit a roadway worker or lone worker to occupy the place of safety in the niche or clearing bay at least 15 seconds prior to the arrival of a train or other on-track equipment at the work location in accordance with §§ 214.329 and 214.337; and

(3) The roadway worker in charge or lone worker shall have the absolute right to designate a place of safety as a location other than that of a tunnel niche or clearing bay described by this paragraph (d), or to establish working limits.

■ 13. Add § 214.318 to read as follows:

**§ 214.318 Locomotive servicing and car shop repair track areas.**

(a) In lieu of the requirements of this subpart, workers (as defined by § 218.5

of this chapter) within the limits of locomotive servicing and car shop repair track areas (as both are defined by § 218.5 of this chapter) may utilize procedures established by a railroad in accordance with part 218, subpart B, of this chapter (Blue Signal Protection) to perform duties incidental to inspecting, testing, servicing, or repairing rolling equipment when those incidental duties involve fouling a track that is protected by Blue Signal Protection. A railroad utilizing Blue Signal Protection in lieu of the requirements of this subpart must have rules in effect governing the applicability of those protections to the incidental duties being performed.

(b) Paragraph (a) of this section applies to employees of a contractor to a railroad if such incidental duties are performed under the supervision of a railroad employee qualified (as defined by § 217.4 of this chapter) on the railroad's rules and procedures implementing the Blue Signal Protection requirements.

(c) Any work performed within the limits of a locomotive servicing or car shop repair track area with the potential of fouling a track which requires a person qualified under § 213.7 of this chapter to be present to inspect or supervise such work must be performed in accordance with the requirements of this subpart.

■ 14. Revise § 214.319 to read as follows:

**§ 214.319 Working limits, generally.**

Working limits established on controlled track shall conform to the provisions of § 214.321 Exclusive track occupancy, § 214.323 Foul time, or § 214.325 Train coordination. Working limits established on non-controlled track shall conform to the provision of § 214.327 Inaccessible track.

(a) Working limits established under any procedure shall, in addition, conform to the following provisions:

(1) Only a roadway worker in charge who is qualified in accordance with § 214.353 shall establish or have control over working limits for the purpose of establishing on-track safety.

(2) Only one roadway worker in charge who is qualified in accordance with § 214.353 shall have control over working limits on any one segment of track.

(3) All affected roadway workers shall be notified before working limits are released for the operation of trains. Working limits shall not be released until all affected roadway workers have either left the track or have been afforded on-track safety through train approach warning in accordance with § 214.329.

(b) Each Class I or Class II railroad or each railroad providing regularly scheduled intercity or commuter rail passenger transportation that utilizes controlled track working limits as a form of on-track safety (under §§ 214.321 through 214.323) in signalized territory shall:

(1) By July 1, 2017, evaluate its on-track safety program and identify an appropriate method(s) of providing redundant signal protections for roadway work groups who depend on a train dispatcher or control operator to provide signal protection in establishing controlled track working limits. For purposes of this section, redundant signal protections means risk mitigation measures or safety redundancies adopted to ensure the proper establishment and maintenance of signal protections for controlled track working limits until such working limits are released by the roadway worker in charge. Appropriate redundant protections could include the use of various risk mitigation measures (or a combination of risk mitigation measures) such as technology, training, supervision, or operating-based procedures; or could include use of redundant signal protection, such as shunting, designed to prevent signal system-related incursions into established controlled track working limits; and

(2) By January 1, 2018, specifically identify, implement, and comply with the method(s) of providing redundant protections in its on-track safety program.

(c) Upon a railroad's request, FRA will consider an exemption from the requirements of paragraph (b) of this section for each segment of track(s) for which operations are governed by a positive train control system under part 236, subpart I, of this chapter. A request for approval to exempt a segment of track must be submitted in writing to the FRA Associate Administrator for Railroad Safety and Chief Safety Officer. The FRA Associate Administrator for Railroad Safety and Chief Safety Officer will review a railroad's submission and will notify a railroad of its approval or disapproval in writing within 90 days of FRA's receipt of a railroad's written request, and shall specify the basis for any disapproval decision.

■ 15. Add § 214.320 to read as follows:

**§ 214.320 Roadway maintenance machine movements over signalized non-controlled track.**

Working limits must be established for roadway maintenance machine movements on non-controlled track equipped with automatic block signal

systems over which trains are permitted to exceed restricted speed (for purposes of this section, on-track movements prepared to stop within on-half the range of vision but not exceeding 25 mph). This section applies unless the railroad's operating rules protect the movements of roadway maintenance machines in a manner equivalent to that provided for by limiting all train and locomotive movements to restricted speed, and such equivalent level of protection is first approved in writing by FRA's Associate Administrator for Railroad Safety and Chief Safety Officer.

■ 16. In § 214.321, revise paragraphs (a) introductory text, (b) introductory text, (b)(2), and (d) and add paragraphs (b)(4) and (e) to read as follows:

**§ 214.321 Exclusive track occupancy.**

\* \* \* \* \*

(a) The track within working limits shall be placed under the control of one roadway worker in charge by either:

\* \* \* \* \*

(b) An authority for exclusive track occupancy given to the roadway worker in charge of the working limits shall be transmitted on a written or printed document directly, by relay through a designated employee, in a data transmission, or by oral communication, to the roadway worker in charge by the train dispatcher or control operator in charge of the track.

\* \* \* \* \*

(2) The roadway worker in charge of the working limits shall maintain possession of the written or printed authority for exclusive track occupancy while the authority for the working limits is in effect. A data transmission of an authority displayed on an electronic screen may be used as a substitute for a written or printed document required under this paragraph. Electronic displays of authority shall comply with the requirements of § 214.322.

\* \* \* \* \*

(4) An authority shall specify a unique roadway work group number, an employee name, or a unique identifier. A railroad shall adopt procedures that require precise communication between trains and other on-track equipment and the roadway worker in charge or lone worker controlling the working limits in accordance with § 214.319. The procedures may permit communications to be made directly between a train or other on-track equipment and a roadway worker in charge or lone worker, or through a train dispatcher or control operator.

\* \* \* \* \*

(d) Movements of trains and roadway maintenance machines within working limits established through exclusive track occupancy shall be made only under the direction of the roadway worker in charge of the working limits. Such movements shall be at restricted speed unless a higher authorized speed has been specifically authorized by the roadway worker in charge of the working limits.

(e) Working limits established by exclusive track occupancy authority may occur behind designated trains moving through the same limits in accordance with the following provisions:

(1) The authority establishing working limits will only be considered to be in effect after it is confirmed by the roadway worker in charge or lone worker that the affected train(s) have passed the point to be occupied or fouled by:

(i) Visually identifying the affected trains(s); or

(ii) Direct radio contact with a crew member of the affected train(s); or

(iii) Receiving information about the affected train from the train dispatcher or control operator.

(2) When utilizing the provisions of paragraph (e)(1)(i) of this section, a railroad's operating rules shall include procedures prohibiting the affected train(s) from making a reverse movement into or within the limits being fouled or occupied.

(3) After the roadway worker in charge or lone worker has confirmed that the affected trains(s) have passed the point to be occupied or fouled, the roadway worker in charge shall record on the authority the time of passage and engine number(s) of the affected trains(s). If the confirmation is by direct communication with the train(s), or through confirmation by the train dispatcher or control operator, the roadway worker in charge shall record the time of such confirmation and the engine number(s) of the affected trains on the authority.

(4) A separate roadway work group afforded on-track safety by the roadway worker in charge of authority limits, and that is located away from the roadway worker in charge of authority limits, shall:

(i) Occupy or foul the track only after receiving permission from the roadway worker in charge to occupy the working limits after the roadway worker charge has fulfilled the provisions of paragraph (e)(1) of this section; and

(ii) Be accompanied by an employee qualified to the level of a roadway worker in charge who shall also have a copy of the authority and who shall

independently execute the required communication requirements of paragraphs (e)(1) and (3) of this section.

(5) Any subsequent train or on-track equipment movements within working limits after the passage of the affected train(s) shall be governed by paragraph (d) of this section.

■ 17. Add § 214.322 to read as follows:

**§ 214.322 Exclusive track occupancy, electronic display.**

(a) While it is in effect, all the contents of an authority electronically displayed shall be readily viewable by the roadway worker in charge that is using the authority to provide on-track safety for a roadway work group.

(b) If the electronic display device malfunctions, fails, or cannot display an authority while it is in effect, the roadway worker in charge shall either obtain a written or printed copy of the authority in accordance with § 214.321 (except that on-track roadway maintenance machine and hi-rail movements must stop) or establish another form of on-track safety without delay. In the event that a written or printed copy of the authority cannot be obtained or another form of on-track safety cannot be established after failure of an electronic display device, the roadway worker in charge shall instruct all roadway workers to stop work and occupy a place of safety and conduct an on-track safety job briefing to determine the safe course of action with the roadway work group.

(c) All authorized users of an electronic display system shall be uniquely identified to support individual accountability. A user may be a person, a process, or some other system that accesses or attempts to access an electronic display system to perform tasks or process an authority.

(d) All authorized users of an electronic display system must be authenticated prior to being granted access to such system. The system shall ensure the confidentiality and integrity of all internally stored authentication data and protect it from access by unauthorized users. The authentication scheme shall utilize algorithms approved by the National Institute of Standards and Technology (NIST), or any similarly recognized and FRA approved standards body.

(e) The integrity of all data must be ensured during transmission/reception, processing, and storage. All new electronic display systems implemented on or after July 1, 2017 shall utilize a Message Authentication Code (MAC) to ensure that all data is error free. The MAC shall utilize algorithms approved by NIST, or any similarly recognized

and FRA approved standards body. Systems implemented prior to July 1, 2017 may utilize a Cyclical Redundancy Code (CRC) to ensure that all data is error free provided:

(1) The collision rate for the CRC check utilized shall be less than or equal to 1 in  $2^{32}$ . Systems implemented prior to July 1, 2017 that do not utilize a CRC with a collision rate less than or equal to 1 in  $2^{32}$  must be retired or updated to utilize a MAC no later than July 1, 2018.

(2) MAC and CRC checks shall only be used to verify the accuracy of an electronic authority data message and shall not be used in an error correction reconstruction of the data. An authority must fail if the MAC or CRC checks do not match.

(f) Authorities transmitted to each electronic display device shall be retained in the device's non-volatile memory for not less than 72 hours.

(g) If any electronic display device used to obtain an authority is involved in an accident/incident that is required to be reported to FRA under part 225 of this chapter, the railroad or employer that was using the device at the time of the accident shall, to the extent possible, and to the extent consistent with the safety of life and property, preserve the data recorded by each such device for analysis by FRA. This preservation requirement permits the railroad or employer to extract and analyze such data, provided the original downloaded data file, or an unanalyzed exact copy of it, shall be retained in secure custody and shall not be utilized for analysis or any other purpose except by direction of FRA or the National Transportation Safety Board. This preservation requirement shall expire one (1) year after the date of the accident unless FRA or the National Transportation Safety Board notifies the railroad in writing that the data are desired for analysis.

(h) New electronic display systems implemented on or after July 1, 2017 shall provide Level 3 assurance as defined by NIST Special Publication 800-63-2, Electronic Authentication Guideline, "Computer Security," August 2013. Systems implemented prior to July 1, 2017 shall provide Level 2 assurance. Systems implemented prior to July 1, 2017 that do not provide Level 2 or higher assurance must be retired, or updated to provide Level 2 assurance, no later than July 1, 2018. The incorporation by reference of this NIST Special Publication was approved by the Director of the Federal Register in accordance with 5 U.S.C. 552(a) and 1 CFR part 51. You may obtain a copy of the incorporated document from the

National Institute of Standards and Technology, 100 Bureau Drive, Stop 8930, Gaithersburg, MD 20899-8930, <http://nvlpubs.nist.gov/nistpubs/SpecialPublications/NIST.SP.800-63-2.pdf>. You may inspect a copy of the document at the Federal Railroad Administration, Docket Clerk, 1200 New Jersey Avenue SE., Washington, DC, or at the National Archives and Records Administration (NARA). For information on the availability of this material at NARA, call (202) 741-6030, or go to: [http://www.archives.gov/federal\\_register/code\\_of\\_federal\\_regulations/ibr\\_locations.html](http://www.archives.gov/federal_register/code_of_federal_regulations/ibr_locations.html).

■ 18. In § 214.323, revise paragraphs (a), (b), and (c) and add paragraph (d) to read as follows:

**§ 214.323 Foul time.**

\* \* \* \* \*

(a) Foul time may be given orally or in writing by the train dispatcher or control operator only after that employee has withheld the authority of all trains or other on-track equipment to move into or within the working limits during the foul time period.

(b) Each roadway worker in charge to whom foul time is transmitted orally shall repeat the track number or identifier, track limits and time limits of the foul time to the issuing employee for verification before the foul time becomes effective.

(c) The train dispatcher or control operator shall not permit the movement of trains or other on-track equipment into working limits protected by foul time until the roadway worker in charge who obtained the foul time has reported clear of the track.

(d) The roadway worker in charge shall not permit the movement of trains or other on-track equipment into or within working limits protected by foul time.

■ 19. In § 214.325, revise the introductory text to read as follows:

**§ 214.325 Train coordination.**

Working limits established on controlled track by a roadway worker in charge through the use of train coordination shall comply with the following requirements:

\* \* \* \* \*

■ 20. In § 214.327, add paragraphs (a)(6), (7), and (8) to read as follows:

**§ 214.327 Inaccessible track.**

(a) \* \* \*

(6) A locomotive with or without cars placed to prevent access to the working limits at one or more points of entry to the working limits, provided the following conditions are met:

(i) The roadway worker in charge who is responsible for establishing working limits communicates with a member of the crew assigned to the locomotive and determines that:

(A) The locomotive is visible to the roadway worker in charge that is establishing the working limits; and  
(B) The locomotive is stopped.

(ii) Further movements of the locomotive shall be made only as permitted by the roadway worker in charge controlling the working limits;

(iii) The crew of the locomotive shall not leave the locomotive unattended or go off duty unless communication occurs with the roadway worker in charge and an alternate means of on-track safety protection has been established by the roadway worker in charge; and

(iv) Cars coupled to the locomotive on the same end and on the same track as the roadway workers shall be connected to the train line air brake system and such system shall be charged with compressed air to initiate an emergency brake application in case of unintended uncoupling. Cars coupled to the locomotive on the same track on the opposite end of the roadway workers shall have sufficient braking capability to control their movement.

(7) A railroad's procedure governing block register territory that prevents trains and other on-track equipment from occupying the track when the territory is under the control of a lone worker or roadway worker in charge. The roadway worker in charge or lone worker shall have the absolute right to render block register territory inaccessible under the other provisions of paragraph (a) of this section.

(8) Railroad operating rules that prohibit train or engine or other on-track equipment movements on a main track within yard limits or restricted limits until the train or engine or on-track equipment receives notification of any working limits in effect and prohibit the train or engine or on-track equipment from entering working limits until permission is received by the roadway worker in charge. Such working limits shall be delineated with stop signs (flags), and where speeds are in excess of restricted speed and physical characteristics permit, also with advance signs (flags).

\* \* \* \* \*

■ 21. Amend § 214.329 by revising paragraph (a) to read as follows:

**§ 214.329 Train approach warning provided by watchmen/lookouts.**

\* \* \* \* \*

(a) Train approach warning shall be given in sufficient time to enable each

roadway worker to move to and occupy a previously arranged place of safety not less than 15 seconds before a train moving at the maximum authorized speed on that track can pass the location of the roadway worker. The place of safety to be occupied upon the approach of a train may not be on a track, unless working limits are established on that track.

\* \* \* \* \*

■ 22. In § 214.331, add paragraph (e) to read as follows:

**§ 214.331 Definite train location.**

\* \* \* \* \*

(e) Each on-track safety program that provides for the use of definite train location shall discontinue such use by June 12, 2017.

■ 23. Revise § 214.333(c) to read as follows:

**§ 214.333 Informational line-ups of trains.**

\* \* \* \* \*

(c) Each on-track safety program that provides for the use of informational line-ups shall discontinue such use by June 12, 2017.

■ 24. Revise § 214.335 to read as follows:

**§ 214.335 On-track safety procedures for roadway work groups, general.**

(a) No employer subject to the provisions of this part shall require or permit a roadway worker who is a member of a roadway work group to foul a track unless on-track safety is provided by either working limits, train approach warning, or definite train location in accordance with the applicable provisions of § 214.319, § 214.321, § 214.323, § 214.325, § 214.327, § 214.329, § 214.331, or § 214.336.

(b) No roadway worker who is a member of a roadway work group shall foul a track without having been informed by the roadway worker in charge of the roadway work group that on-track safety is provided.

■ 25. In § 214.337, revise paragraph (c)(3) and add paragraph (g) to read as follows:

**§ 214.337 On-track safety procedures for lone workers.**

\* \* \* \* \*

(c) \* \* \*

(3) On track outside the limits of a manual interlocking, a controlled point (except those consisting of signals only), or a remotely controlled hump yard facility;

\* \* \* \* \*

(g) Individual train detection shall not be used to provide on-track safety for a

lone worker using a roadway maintenance machine, equipment, or material that cannot be readily removed by hand.

■ 26. Revise § 214.339 to read as follows:

**§ 214.339 Audible warning from trains.**

(a) Each railroad shall have in effect and comply with written procedures that prescribe effective requirements for audible warning by horn and/or bell for trains and locomotives approaching any roadway workers or roadway maintenance machines that are either on the track on which the movement is occurring, or about the track if the roadway workers or roadway maintenance machines are at risk of fouling the track. At a minimum, such written procedures shall address:

- (1) Initial horn warning;
- (2) Subsequent warning(s); and
- (3) Alternative warnings in areas where sounding the horn adversely affects roadway workers (e.g., in tunnels and terminals).

(b) Such audible warning shall not substitute for on-track safety procedures prescribed in this part.

■ 27. Revise § 214.343(c) to read as follows:

**§ 214.343 Training and qualification, general.**

\* \* \* \* \*

(c) Except as provided for in § 214.353, railroad employees other than roadway workers, who are associated with on-track safety procedures, and whose primary duties are concerned with the movement and protection of trains, shall be trained to perform their functions related to on-track safety through the training and qualification procedures prescribed by the operating railroad for the primary position of the employee, including maintenance of records and frequency of training.

\* \* \* \* \*

■ 28. In § 214.345, revise the introductory text and add paragraph (f) to read as follows:

**§ 214.345 Training for all roadway workers.**

Consistent with § 214.343(b), the training of all roadway workers shall include, as a minimum, the following:

\* \* \* \* \*

(f) Instruction on railroad safety rules adopted to comply with § 214.317(b).

■ 29. In § 214.347, add paragraph (a)(5) and revise paragraph (b) to read as follows:

**§ 214.347 Training and qualification for lone workers.**

\* \* \* \* \*

(a) \* \* \*

(5) Alternative means to access the information in a railroad's on-track safety manual when a lone worker's duties make it impracticable for the on-track safety manual to be readily available.

(b) Initial and periodic (as specified by § 243.201 of this chapter) qualification of a lone worker shall be evidenced by demonstrated proficiency.

■ 30. Revise § 214.349(b) to read as follows:

**§ 214.349 Training and qualification of watchmen/lookouts.**

\* \* \* \* \*

(b) Initial and periodic (as specified by § 243.201 of this chapter) qualification of a watchman/lookout shall be evidenced by demonstrated proficiency.

■ 31. Revise § 214.351(b) to read as follows:

**§ 214.351 Training and qualification of flagmen.**

\* \* \* \* \*

(b) Initial and periodic (as specified by § 243.201 of this chapter) qualification of a flagman shall be evidenced by demonstrated proficiency.

■ 32. In § 214.353, revise the section heading and paragraphs (a) introductory text, (a)(1), and (b) and add paragraph (a)(5) to read as follows:

**§ 214.353 Training and qualification of each roadway worker in charge.**

(a) The training and qualification of each roadway worker in charge, or any other employee acting as a roadway worker in charge (e.g., a conductor or a brakeman), who provides for the on-track safety of roadway workers through establishment of working limits or the assignment and supervision of watchmen/lookouts or flagmen shall include, at a minimum:

(1) All the on-track safety training and qualification required of the roadway workers to be supervised and protected, including the railroad's procedures governing good faith challenges in §§ 214.311(b) and (c) and 214.313(d).

\* \* \* \* \*

(5) The procedures required to ensure that the roadway worker in charge of the on-track safety of group(s) of roadway workers remains immediately accessible and available to all roadway workers being protected under the working limits or other provisions of on-track

safety established by the roadway worker in charge.

(b) Initial and periodic (as specified by § 243.201 of this chapter) qualification of a roadway worker in charge shall be evidenced by demonstrated proficiency.

■ 33. In § 214.355, revise the section heading and paragraph (b) to read as follows:

**§ 214.355 Training and qualification of each roadway worker in on-track safety for operators of roadway maintenance machines.**

\* \* \* \* \*

(b) Initial and periodic (as specified by § 243.201 of this chapter) qualification of a roadway worker to operate roadway maintenance machines shall be evidenced by demonstrated proficiency.

■ 34. In appendix A to part 214, add footnote number 2 to the table heading "Section" and, under subpart C, revise the entries for §§ 214.303(b), 214.307, 214.309, 214.315(a), 214.317, 214.319, 214.329(a), 214.339, and 214.353 and add entries for §§ 214.318, 214.320, 214.321(b)(4) and (e), 214.322, 214.323(c) and (d), 214.331(e), and 214.337(g) to read as follows:

**APPENDIX A TO PART 214—SCHEDULE OF CIVIL PENALTIES<sup>1</sup>**

	Section <sup>2</sup>	Violation	Willful violation
* * * * *			
<b>Subpart C—Roadway Worker Protection Rule</b>			
214.303 Railroad on-track safety programs, generally:			
(b) Failure of a railroad to include and use internal monitoring procedure .....		5,000	10,000
* * * * *			
214.307 On-track safety programs:			
(a)(i) Failure to adopt On-Track Safety Program .....		10,000	13,000
(ii) Failure to provide On-Track Safety Program to FRA upon request .....		1,000	5,000
(b) Failure to notify FRA of adoption or change to On-Track Safety Program .....		1,000	5,000
(c) Failure to amend or provide written response after disapproval of On-track Safety Program .....		10,000	20,000
214.309 On-track safety manual:			
(a) On-track Safety Manual not provided to prescribed employees .....		2,000	5,000
(b) Failure to establish provision for lone worker to have alternative access to On-track Safety Manual .....		5,000	10,000
(c) Failure to maintain entire set of on-track safety rules and instructions, including updates temporarily published in bulletins or notices, in one On-Track Safety Manual .....		2,000	5,000
* * * * *			
214.315 Supervision and communication:			
(a)(1) Complete failure of employer to provide on-track safety job briefing .....		5,000	10,000
(2)–(5) Partial failure of employer to provide on-track safety job briefing .....		2,000	4,000
* * * * *			
214.317 On-track safety procedures, generally:			
(a) On-track safety rules conflict with this part .....		5,000	10,000
(b) Failure to adopt or comply with rules governing safe crossing of track .....		2,000	5,000
(3) Failure to establish on-track safety if required .....		2,000	5,000
(c)(1) Failure to adopt or comply with operating procedure if this section is utilized in lieu of establishing working limits .....		3,000	5,000
(2) Failure to grant absolute right to establish working limits if requested by RWIC or lone worker .....		3,000	5,000

APPENDIX A TO PART 214—SCHEDULE OF CIVIL PENALTIES <sup>1</sup>—Continued

Section <sup>2</sup>	Violation	Willful violation
(3) Except as permitted, roadway worker fouling track without on-track safety .....	3,000	5,000
(4) Roadway maintenance machine not properly equipped or utilized .....	3,000	5,000
(d)(1) Failure to inspect tunnel niche or clearing bay .....	3,000	5,000
(2) Lack of adequate sight distance .....	3,000	5,000
(3) Failure to grant absolute right to establish other place of safety or to establish working limits if requested by RWIC or lone worker .....	5,000	10,000
214.318 Locomotive servicing and car shop repair track areas:		
(a)–(c) .....	3,000	5,000
214.319 Working limits, generally:		
(a)(1) Non-qualified RWIC of working limits .....	5,000	10,000
(a)(2) More than one RWIC of working limits on the same track segment .....	2,000	5,000
(a)(3)(i) Working limits released without notifying all affected roadway workers .....	5,000	10,000
(a)(3)(ii) Working limits released before all affected roadway workers are otherwise protected .....	5,000	10,000
(b)(1) Failure to adopt redundant protections in on-track safety program .....	5,000	10,000
(b)(2) Failure to comply with redundant protections identified in on-track safety program when controlled track working limits are established .....	5,000	10,000
214.320 Roadway maintenance machine movements over signalized non-controlled track .....	5,000	7,500
214.321 Exclusive track occupancy:		
* * * *		*
(b) * * *		
(4) (i) Failure to specify unique roadway work group number, employee name, or unique identifier .....	3,000	5,000
(ii) Failure to adopt procedure requiring precise communication between RWIC or lone worker and trains or other on-track equipment .....	3,000	5,000
* * * *		*
(e)(1)–(4) Failure to comply with occupancy behind requirements .....	5,000	10,000
214.322 Exclusive track occupancy, electronic display:		
(a) Contents of authority electronically displayed not readily viewable .....	3,000	5,000
(b) Failure to timely obtain written/printed authority or occupy place of safety if electronic display fails while authority is in effect .....	3,000	5,000
(c)–(h) .....	2,000	4,000
214.323 Foul time:		
* * * *		*
(c) Train dispatcher or control operator permitting movement of trains or other on-track equipment into working limits prior to RWIC reporting clear of track .....	5,000	10,000
(d) RWIC permitting movement of trains or on-track equipment into or within working limits .....	5,000	10,000
* * * *		*
214.329 Train approach warning provided by watchmen/lookouts:		
(a)(i) Failure to give timely warning of approaching train .....	5,000	10,000
(ii) Failure to use maximum authorized speed in formulating sight distance .....	3,000	5,000
(iii) Use of another track as a place of safety without establishing working limits on that track .....	3,000	5,000
* * * *		*
214.331 Definite train location:		
* * * *		*
(e) Failure to discontinue use of definite train location by required date .....	9,500	13,000
* * * *		*
214.337 On-track safety procedures for lone workers:		
* * * *		*
(g) Use of individual train detection while using machine, equipment, or material that cannot be readily removed by hand .....	2,000	4,000
214.339 Audible warning from trains:		
(a)–(b) Failure to adopt or comply with audible warning procedures .....	2,000	4,000
* * * *		*
214.353 Training and qualification of roadway workers in charge .....	2,000	4,000
* * * *		*

<sup>1</sup> A penalty may be assessed against an individual only for a willful violation. The Administrator reserves the right to assess a penalty of up to \$105,000 for any violation where circumstances warrant. See 49 CFR part 209, appendix A. Failure to observe any condition(s) of an exception set forth in paragraph (e) of §214.336 deprives the railroad or contractor of the benefit of the exception and makes the railroad or contractor, and any responsible individuals, liable for penalty under the particular regulatory provision(s) from which the exception would otherwise have granted relief.

<sup>2</sup>The penalty schedule uses section numbers from 49 CFR part 214. If more than one item is listed as a type of violation of a given section, each item is also designated by a “penalty code,” which is used to facilitate assessment of civil penalties, and which may or may not correspond to any subsection designation(s). For convenience, penalty citations will cite the CFR and the penalty code, if any. FRA reserves the right, should litigation become necessary, to substitute in its complaint the CFR citation in place of the combined CFR and penalty code citation, should they differ.

Issued in Washington, DC, on May 26,  
2016.

Federal Railroad Administration

49 CFR Part 219

Control of Alcohol and Drug Use: Coverage of Maintenance of Way (MOW) Employees and Retrospective Regulatory Review-Based Amendments; Final Rule

**DEPARTMENT OF TRANSPORTATION****Federal Railroad Administration****49 CFR Part 219**

[Docket No. FRA–2009–0039, Notice No. 3]

RIN 2130–AC10

**Control of Alcohol and Drug Use: Coverage of Maintenance of Way (MOW) Employees and Retrospective Regulatory Review-Based Amendments**

**AGENCY:** Federal Railroad Administration (FRA), Department of Transportation (DOT).

**ACTION:** Final rule.

**SUMMARY:** In response to Congress' mandate in the Rail Safety Improvement Act of 2008 (RSIA), FRA is expanding the scope of its drug and alcohol regulation to cover MOW employees. This rule also codifies guidance from FRA compliance manuals, responds to National Transportation Safety Board (NTSB) recommendations, and adopts substantive amendments based upon FRA's regulatory review of 30 years of implementation of this part.

The final rule contains two significant differences from FRA's July 28, 2014 Notice of Proposed Rulemaking (NPRM). First, it adopts part 214's definition of "roadway worker" to define "MOW employee" under this part. Second, because FRA has withdrawn its proposed peer support requirements, subpart K contains a revised version of the troubled employee identification requirements previously in subpart E.

**DATES:** This rule is effective June 12, 2017. Petitions for reconsideration must be received on or before August 9, 2016. Petitions for reconsideration will be posted in the docket for this proceeding. Comments on any submitted petition for reconsideration must be received on or before September 13, 2016.

**ADDRESSES:** Petitions for Reconsideration related to Docket No. FRA–2009–0039 may be submitted by any of the following methods: Web site: The Federal eRulemaking Portal, <http://www.regulations.gov>. Follow the online instructions for submitting comments. Fax: 202–493–2251.

Mail: Docket Management Facility, U.S. DOT, 1200 New Jersey Avenue SE., W12–140, Washington, DC 20590.

Hand Delivery: Room W12–140 on the Ground level of the West Building, 1200 New Jersey Avenue SE., Washington, DC between 9 a.m. and 5 p.m. Monday through Friday, except Federal holidays.

Instructions: All submissions must include the agency name and docket

number or Regulatory Identification Number (RIN) for this rulemaking. Please see the Privacy Act heading in the **SUPPLEMENTARY INFORMATION** section of this document for Privacy Act information related to any submitted comments or materials.

*Docket:* For access to the docket to read background documents or comments received, go to [www.regulations.gov](http://www.regulations.gov) or to Room W12–140 on the Ground level of the West Building, 1200 New Jersey Avenue SE., Washington, DC between 9 a.m. and 5 p.m. Monday through Friday, except Federal holidays.

A complete version of part 219 as amended in this final rule is available for review in the public docket of this rulemaking (docket no. FRA–2009–0039). Interested persons can review this document to learn how this rule affects part 219 as a whole.

**FOR FURTHER INFORMATION CONTACT:** Gerald Powers, Drug and Alcohol Program Manager, Office of Safety Enforcement, Federal Railroad Administration, 1200 New Jersey Avenue SE., Mail Stop 25, Washington, DC 20590 (telephone 202–493–6313), Patricia V. Sun, Trial Attorney, Office of Chief Counsel, Federal Railroad Administration, 1200 New Jersey Avenue SE., Mail Stop 10, Washington, DC 20590 (telephone 202–493–6060), [patricia.sun@dot.gov](mailto:patricia.sun@dot.gov); or Elizabeth A. Gross, Trial Attorney, Office of Chief Counsel, Federal Railroad Administration, 1200 New Jersey Avenue SE., Mail Stop 10, Washington, DC 20590 (telephone 202–493–1342), [elizabeth.gross@dot.gov](mailto:elizabeth.gross@dot.gov).

**I. Executive Summary**

In the first major updating of its drug and alcohol regulation (49 CFR part 219) since its inception in 1985, FRA is expanding the scope of part 219 to cover Maintenance-of-Way (MOW) employees. Historically, FRA has conducted only post-mortem post-accident toxicological (PAT) testing of MOW employees, since an MOW employee, unlike a covered service employee, has been subject to part 219 testing only when he or she has died as the result of a reportable railroad accident or incident. Even in this comparatively small sample of post-mortem results, however, FRA found a disproportionately high level of positive test results among deceased MOW employees compared to the PAT testing and random testing results of covered employees who are already wholly subject to part 219.

Congress, in the Rail Safety Act of 2008 (RSIA), recognized the substance abuse problem among MOW employees by directing FRA to make them fully subject to the policies and protections of part 219. Partly in response to comments received, FRA is adopting the definition of roadway worker in part 214 of this chapter to define who is an MOW employee for purposes of part 219. FRA will introduce MOW employees to random drug and alcohol testing at the same initial minimum random testing rates it initially applied to covered employees. FRA is also adding a new definition, "regulated employee," to encompass both covered and MOW employees.

In this rule, FRA is making MOW employees subject to all part 219 testing, namely, random testing, PAT testing, reasonable suspicion testing, reasonable cause testing, pre-employment testing, return-to-duty testing, and follow-up testing. Because many MOW employees work for multiple contractors or contract for short-term jobs, FRA is addressing not only the roles and responsibilities of railroads with respect to those employees who directly

perform MOW activities for them, but also the roles and responsibilities of contractors and subcontractors who provide MOW services to railroads on a contract basis. As has been its practice, FRA is holding railroads, contractors, and subcontractors equally responsible for ensuring that their employees who perform MOW activities are in compliance with the requirements of this rule. FRA is also continuing its practice of counting only a railroad's total number of covered employees to determine whether that railroad qualifies for certain exceptions as a small entity.

In addition, FRA has used this lookback at part 219 to conduct a complete retrospective regulatory review of the rule. As a result, FRA has largely restructured and rewritten large sections of this rule and incorporated longstanding compliance guidance, to

make part 219's requirements easier to read, find, and implement.

Finally, in response to widespread opposition from commenters, FRA is not adopting its proposal to require peer support programs. FRA is instead transferring part 219's requirements for troubled employee programs to a new subpart in a revised, expanded, and clarified format.

#### Costs and Benefits of Final Rule

The final rule will impose costs that are outweighed by the quantified safety benefits. For the 20-year period analyzed, the estimated costs that will be imposed on industry total approximately \$24.3 million (undiscounted), with discounted costs totaling \$14.2 million (Present Value (PV), 7 percent) and \$18.9 million (PV, 3 percent). The estimated quantified benefits for this 20-year period total approximately \$115.8 million

(undiscounted), with discounted benefits totaling \$57.4 million (PV, 7 percent) and \$83.6 million (PV, 3 percent).

The costs will primarily be derived from implementation of the statutory mandate to expand the scope of part 219 to cover MOW employees. The benefits will primarily accrue from the expected injury, fatality, and property damage avoidance resulting from the expansion of part 219 to cover MOW employees, as well as the PAT testing threshold increase. The table below summarizes the quantified costs and benefits expected to accrue over a 20-year period from adoption of the final rule and identifies the statutory costs and benefits (those required by the RSIA mandate to expand part 219 to MOW employees) and the discretionary costs and benefits (those that are due to the non-RSIA requirements).

	Statutory	Discretionary	Total
<b>Costs (20 year)</b>			
PAT Testing—Adding MOW .....	\$ 52,000 .....		\$ 52,000
PAT Testing—Impact Def + Xing .....		\$241,974 .....	241,974
Reasonable Suspicion Testing .....	842,398 .....		842,398
Pre-Employment Testing—Adding MOW .....	673,897 .....		673,897
Pre-Employment Testing—Sm, RR .....		29,904 .....	29,904
Random Testing .....	20,863,074 .....		20,863,074
Annual Reporting .....	160,911 .....		160,911
Recordkeeping Requirement .....	1,397,840 .....		1,397,840
Costs Subtotal .....	23,990,120	271,878	24,261,998
<b>Benefits (20 year)</b>			
Accident Reduction .....	115,369,281 .....		115,369,281
PAT Testing Threshold Reduction .....		388,295 .....	388,295
Benefits Subtotal .....	115,369,281	388,295	115,757,576
Net Benefit .....	91,379,161	116,417	91,495,578

## II. Rulemaking Proceedings

On July 28, 2014, in response to a Congressional mandate (*see* sec. 412 of the RSIA (Pub. L. 110–432, October 16, 2008)) and NTSB recommendation R–08–07, FRA published an NPRM (79 FR 48380) which proposed to expand the scope of part 219 to cover MOW employees. *See* 79 FR 43830. FRA also proposed to modify its post-accident toxicology (PAT) testing criteria and to replace its subpart E programs addressing troubled employees with a peer support program in new subpart K. The NPRM also proposed to adopt longstanding program guidance, and to clarify and restructure part 219 to make its requirements easier to understand and implement.

On September 15, 2014, in a jointly filed petition, the American Public Transportation Association (APTA), American Short Line and Regional Railroad Association (ASLRRA), Association of American Railroads (AAR), and National Railroad Construction and Maintenance Association, Inc. (NRCMA), requested a 60 day extension of the NPRM's comment period, which had been scheduled to close on September 26, 2014. FRA agreed to this request, and published a notice allowing commenters until November 25, 2014, to submit comments. (September 25, 2014, 79 FR 57495).

FRA received 16 comments during this extended comment period, including an AAR/ASLRRA (hereinafter referred to as the “Associations”) joint

submission, as well as comments from APTA, the NRCMA, the NTSB, SMART (the American Train Dispatchers Association, Brotherhood of Locomotive Engineers and Trainmen, Brotherhood of Maintenance of Way Employees Division, International Brotherhood of Electrical Workers; and Sheet Metal, Air, Rail and Transportation), Twin Cities & Western Railroad Company (TC&W), Drug Abuse Program Administrators Administration Worldwide (SAPAA), Pacific Southwest Railway Museum (PSRM), SAPlist.com, and Southeastern Pennsylvania Transportation Authority (SEPTA). Six individuals also submitted comments. (Although SMART had requested a public hearing in its November 28, 2014 comment, the deadline for filing such a request was 30 days after the

publication of the NPRM, or August 27, 2014).

In this final rule, FRA will not address comments that raised issues outside the scope of, or not specific to, the proposals in the NPRM, or comments submitted after the extended comment period had closed. In addition, the NPRM proposed to make this part more user-friendly, by reorganizing sections, re-designating paragraphs, updating terms, and amending language for consistency. Because FRA received no comment on these minor edits, FRA is not repeating the NPRM's discussion of them.

### III. Effective Date

FRA received only one comment concerning the rule's effective date. The Associations requested that the final rule become effective two years after its publication, to allow for the implementation of new testing policies and procedures, and for the creation of random testing pools for MOW employees. FRA notes, however, that many MOW employees are already subject to drug and alcohol testing under Federal authority, company authority, or both. For example, any MOW employee whose duties require the holding of a Commercial Driver's License (CDL) is subject to Federal Motor Carrier Safety Administration (FMCSA) testing requirements. MOW employees may also be subject to testing under company authority, often in a "look-alike" (a company testing program that mirrors FRA standards and procedures) program. This familiarity with drug and alcohol programs will facilitate the implementation of part 219 requirements for MOW employees.

Moreover, railroads have thirty years of experience implementing part 219 requirements for their covered service employees; while employers who are newly subject to part 219, such as contractors who provide MOW service to railroads, have service agents (e.g., random testing consortia and third party administrators) readily available to facilitate adoption and compliance with this part. Given the experience and resources railroads and contractors have to draw on, FRA believes a one year implementation window is reasonable for the requirements in this rule.

### IV. Maintenance-of-Way Employees and Contractors

#### A. Definitions

As proposed, FRA is expanding the scope of part 219 to cover employees and contractors who perform MOW activities. This rule also adopts FRA's proposal to define the term "employee"

to include employees, volunteers, and probationary employees of railroads and contractors (including subcontractors) to railroads, and to adopt the term "regulated service" to encompass both covered service and MOW activities. Performance of regulated service makes an individual a "regulated employee" subject to part 219, regardless of whether the individual is employed by a railroad or a contractor to a railroad.

In the NPRM, FRA requested comment on who should be subject to the expanded scope of this part. As alternatives, FRA asked whether part 219's definition of MOW employee should: (1) Be identical to the roadway worker definition in part 214, Roadway Workplace Safety; (2) include all employees subject to disqualification under 49 CFR 209.303, as recommended by the NTSB; or (3) incorporate a modified version of part 214's definition of roadway worker which would include certain roadway worker functions but not others, as proposed in the NPRM. Of those who commented on FRA's proposed definition of MOW activities, SEPTA stated that the definition of MOW activities in part 219 should be consistent with the definition of roadway worker duties in part 214. While the Associations supported FRA's proposed exclusions from MOW activities, they agreed with SEPTA's view that part 219's definition of MOW activities and § 214.7's definition of roadway worker duties should be consistent. SMART, however, commented that FRA's proposed MOW activities definition was both too inclusive and too exclusive, while the NRCMA unqualifiedly supported the proposed definition.

In its comments, the NTSB continued to advocate for adoption of Recommendation R-08-07, which recommended that FRA expand the scope of part 219 to include all employees subject to § 209.303. No other commenter supported so wide an expansion. As noted in the NPRM, § 209.303 encompasses many employees besides those who perform covered service and MOW activities, no matter how such activities are defined. As examples, § 209.303 includes employees who conduct tests and training, and mechanics who maintain locomotives, and freight and passenger cars, among others.

In *Skinner v. Railway Labor Executives' Assn.*, 489 U.S. 602 (1989), the Supreme Court held that an alcohol or drug test conducted under FRA authority is a Fourth Amendment search, and in its determination of who should be subject to part 219 testing, FRA must carefully balance public

safety interests against individual privacy rights. FRA has done so, and can find no overriding safety interest that would justify making every employee covered by § 209.303 subject to part 219 testing. In its comment to the NPRM, the NTSB cited no accidents or data to support adoption of R-08-07. To date, FRA has no data suggesting that the functions of testers, trainers, and mechanics are of such a safety-sensitive nature that employees who perform these functions should be subject to drug and alcohol testing. FRA therefore finds no compelling reason to expand the scope of part 219 to equal that of § 209.303.

Upon consideration of the other comments, however, FRA has reevaluated its proposed definition of MOW employee. Almost all commenters pointed out that an employee who performs activities on or near a railroad's roadbed or track is by definition one who performs work that could pose risks to the safety of both the employee and the public. As demonstrated by the high positive rate among MOW employee fatalities (detailed in the NPRM), the misuse of drugs or alcohol by these employees can have disastrous consequences. Congress determined when it enacted the RSIA, that an employee who performs MOW activities performs work that is sufficiently safety-sensitive to trigger FRA's drug and alcohol requirements. Adoption of the NPRM's proposed definition of MOW employee would have required railroads to maintain fine distinctions among MOW activities, since the performance of certain activities would make an employee subject to both parts 214 and 219, while the performance of others would make an employee subject only to part 214 or to part 219.

FRA's proposed MOW definition could have potentially required a railroad or contractor to establish three different categories of coverage, with the attendant administrative burdens necessary to sort and maintain such categories. In contrast, because the term "roadway worker" has been long established by part 214, the railroad industry is already familiar with its meaning and application. FRA is therefore adopting, for its definition of MOW employee, § 214.7's definition of roadway worker, which includes "any employee of a railroad or a contractor to a railroad, whose duties include inspection, construction, maintenance or repair of roadway track; bridges, roadway, signal and communications systems, electric traction systems, roadway facilities or roadway maintenance machinery on or near track

or with the potential of fouling a track, and flagmen and watchmen/lookouts as defined in this section.” By doing so, FRA is adopting the recommendation of the majority of commenters, who asserted that an individual subject to roadway worker protection under part 214 should also be a MOW employee subject to drug and alcohol testing under part 219.

#### *B. MOW Employees and the Small Railroad Exception*

Since the inception of its alcohol and drug program in 1985, FRA has counted the number of covered employees a railroad has (including covered service contractors and volunteers) as one factor in determining the railroad’s risk of alcohol and drug-related accidents. See 50 FR 31529, Aug. 2, 1985. Historically, a small railroad, defined by FRA as one that has 15 or fewer covered employees and no joint operations with other railroads, has proven less likely to have a drug and alcohol-related accident than a larger railroad. Therefore, FRA has always required a larger railroad (defined as one that has 16 or more covered employees or is engaged in joint operations) to implement all of part 219, while § 219.3 previously excepted a small railroad from the requirements of subpart D (reasonable suspicion and reasonable cause testing), subpart E (previously identification of troubled employees), subpart F (pre-employment testing), and subpart G (random alcohol and drug testing); these exceptions lessened part 219’s regulatory burden on small railroads.

As proposed, FRA is continuing its longstanding approach of counting only a railroad’s covered employees for purposes of determining whether the railroad qualifies for the small railroad exception (the railroad also cannot participate in any joint operations) because FRA believes this is the best measure of the risks posed by the railroad’s operations. FRA received no objections to this proposal.

#### *C. MOW Contractors and the Small Railroad Exception*

With respect to a contractor who performs MOW activities for a railroad, FRA is amending § 219.3 to apply part 219 to an MOW contractor to the same extent as it applies to the railroad for which the MOW contractor performs regulated service. As proposed, a contractor’s level of part 219 compliance will be determined by the size of the railroad for which it is performing regulated service, regardless of the size of the contractor itself. New language in the small railroad exception states that a contractor who performs

MOW activities exclusively for small railroads that are excepted from full compliance with part 219 will also be excepted from full compliance. For example, an MOW contractor with five employees who perform regulated service for a large railroad must implement a full part 219 program if the railroad for which it performs regulated service must do so, while an MOW contractor with 20 employees does not have to implement a full part 219 program if it performs regulated service for a small railroad that is excepted from full compliance with part 219.

FRA recognizes that an MOW contractor may perform regulated service for multiple railroads, some of which may not be required to comply fully with part 219. To simplify application, FRA is adding new language to the small railroad exception requiring an MOW contractor who performs regulated service for multiple railroads to implement a full part 219 program if the contractor performs regulated service for at least one large railroad fully subject to part 219. If an MOW contractor performs regulated service for at least one large railroad, it must incorporate all of its regulated employees into a full part 219 program, even if only some of these employees perform regulated service for large railroads, regardless of whether or not a particular employee is currently performing regulated service for a large or a small railroad. This approach allows an MOW contractor to flexibly allocate its employees between small and large railroads. To ensure that it does not encourage the hiring of MOW contractors in lieu of MOW employees, FRA is excluding both contractor employees who perform MOW activities and railroad employees who perform MOW activities, for purposes of the employee count to determine whether a railroad qualifies as a small railroad. Labor supported FRA’s decision.

#### *D. Railroad and Contractor Responsibility for Compliance*

FRA is adopting its proposal to hold both a railroad and its contractor(s) responsible for ensuring that any contractor employees who perform regulated service for the railroad are in compliance with part 219. In their comments, the Associations objected that the RSIA mandated that part 219 cover contractors who perform regulated service, but did not make railroads responsible for ensuring that compliance, and that a contractor who performs regulated service for more than one railroad would be required to comply with the drug and alcohol training requirements of multiple

railroads. The TC&W commented that FRA should audit the drug and alcohol compliance of contractors who perform regulated service.

FRA notes that making a railroad responsible for its contractor’s compliance, and making a contractor who performs regulated service responsible for its own compliance, are not new requirements, because existing § 219.9 makes every person—including a railroad, an independent contractor and an employee of an independent contractor—who violates or causes a violation of a part 219 requirement subject to a civil penalty. To avoid confusion, FRA is discussing a contractor’s options to ensure part 219 compliance for its regulated employees below, while the corresponding railroad options to ensure that its contractor employees who perform regulated service are in compliance will be discussed below in the section-by-section analysis of § 219.609.

A contractor who must establish a random testing program for its regulated service employees may do so through any of the following methods. As discussed in the NPRM, a contractor may choose to:

- Establish its own part 219 program and provide the railroad with documentation of its compliance with part 219. If a contractor chooses this option, FRA will not audit the contractor but will instead require the railroad to maintain the contractor’s documentation for FRA audit purposes. If the contractor’s documentation or program contains a deficiency or violation that the railroad could not have reasonably detected, FRA may use its enforcement discretion to take action solely against the contractor. As discussed earlier in the preamble, the extent of a regulated service contractor’s responsibilities will be determined by the size of the railroad(s) with which it contracts.

- Contract with a consortium to administer its part 219 program. The consortium may either place the contractor’s regulated employees in a stand-alone random testing pool or in a random testing pool with the regulated employees of other regulated service contractors. The contractor must then submit documentation of its membership in the consortium and its compliance with part 219 to the contracting railroad. As with the option described above, if the contractor’s documentation or program contains a deficiency or violation that the railroad could not have reasonably detected, FRA may use its enforcement discretion to take action only against the contractor. Upon request, FRA will

assist a railroad in reviewing the part 219 documentation of its regulated service contractors.

- Ensure that any employees who perform regulated service for a railroad are incorporated into the railroad's part 219 program.

To facilitate part 219 implementation for railroads and contractors, FRA has developed two sets of model drug and alcohol plans (including testing plans); a set for an entity subject to all of part 219 and another for an entity that qualifies for the small railroad exception. Both sets are currently available at FRA's Web site: <http://www.fra.dot.gov/Page/P0345>.

FRA had proposed an alternative two-pronged approach, which would require a contractor to provide a railroad with: (1) Written certification that all of its regulated employees are in compliance with part 219, and (2) a summary of its part 219 data at least every six months. The NRCMA commented that it was unnecessary to require certification of compliance with part 219, noting that railroad contracts routinely require a contractor to certify compliance with all relevant Federal, state, and local laws and regulations. The NCRMA also objected to providing summary data, commenting that this was both unnecessary and an undue administrative burden. FRA agrees, and has decided not to adopt these proposed requirements.

A railroad has the additional option of accepting a contractor's plan for random testing, regardless of whether that plan is managed by the contractor or by a consortium/third party administrator (C/TPA). If a railroad adopts this approach, the contractor must:

- Certify in writing to the railroad that all of its regulated employees are subject to part 219 (including, as applicable, random testing under subpart G, pre-employment drug testing under subpart F, and a previous employer background check as required by § 40.25); and

- Report, in an FRA model format, summary part 219 testing data to the railroad at least every six months.

The railroad should review this summary data since it remains responsible for monitoring the contractor's compliance.

#### *E. Pre-Employment Drug Testing of MOW Employees*

As proposed, FRA is exempting all current MOW employees from subpart F pre-employment drug testing (with certain limitations, pre-employment alcohol testing is authorized but not required). Only MOW employees hired after the effective date of this rule must

have a negative DOT pre-employment drug test result before performing regulated service for the first time. As with its initial minimum random testing rates, FRA used a similar approach to exempt current covered employees from pre-employment drug testing in 1986. Although these employees do not have to be pre-employment drug tested, current MOW employees are subject to FRA's initial minimum random drug testing rate of 50%.

FRA realizes that a large percentage of MOW employees may already have a negative pre-employment drug test result under the alcohol and drug testing regulations of another DOT agency; usually these MOW employees are required by their employers to hold a Commercial Driver's License (CDL), and are therefore subject to the regulations of both FRA and FMCSA. To hold a CDL, an individual must have a negative FMCSA pre-employment drug test. *See* § 382.301. To ease the compliance burden on both employees and employers, an employing railroad may use a negative pre-employment drug test conducted under the rules and regulations of another DOT agency to satisfy FRA's pre-employment drug test requirements for employees initially transferring into regulated service after the effective date of this rule. This amendment adopts previous FRA guidance on pre-employment drug testing.

#### *F. Initial MOW Employee Random Testing Rates*

This rule makes MOW employees subject to FRA random testing, with the exception of those who perform regulated service solely for a small railroad. For covered employees, FRA has annually set minimum random drug and alcohol testing rates determined by the overall railroad random testing violation rates for covered employees. FRA determines this overall rate from program data that railroads submit to its Management Information System (MIS). *See* 49 CFR 219.602 and 219.608. When FRA first established minimum random testing rates for covered employees, it set the initial minimums for drugs and alcohol at the top end of their respective ranges, at 50 percent for drugs and 25 percent for alcohol. At that time, FRA had no rail industry random testing data because the MIS had been newly established. FRA later lowered both minimum annual random testing rates to the bottom of their ranges after MIS data showed consistently low overall random testing violation rates for covered employees. These minimum rates, which have been unchanged since

2000, are 25 percent for drugs and 10 percent for alcohol in 2016.

Similarly, because MOW employees are being introduced to random testing, FRA has no overall railroad random testing violation rate data for these employees. To develop this data, FRA is setting the initial minimum random testing rates for MOW employees at 50 percent for drugs and 25 percent for alcohol, as it initially did for covered employees. A railroad must therefore create and maintain a separate random testing pool for its MOW employees, both to allow these employees to be tested at their own minimum random testing rates and, from those railroads required to file an MIS report, to establish a separate database. As it did with covered employees, FRA could lower these minimum random testing rates in the future if the data for MOW employees show consistently low overall random testing violation rates.

#### *G. MOW Employee Minimum Random Testing Pool Size*

As proposed, to maintain the deterrent effect of random testing for very small railroads and contractors, FRA is requiring each individual random testing pool established under subpart G to select and randomly test at least one entry per quarter, even if fewer tests are needed to meet FRA's minimum random testing rates. Conversely, the requirement to conduct at least four tests throughout the year does not excuse a railroad (or contractor to a railroad, or a C/TPA) from complying with FRA's minimum random testing rates. For example, a railroad that maintains a pool of 16 MOW employees must conduct at least eight, not four, random drug tests in a year to comply with a minimum random drug testing rate of 50%.

### **V. Restructuring of Part 219**

#### *A. Division of Reasonable Suspicion and Reasonable Cause Testing Into Subparts D and E*

Previously, the requirements for both reasonable suspicion and reasonable cause testing were found in subpart D. Because of their similar names and their location in the same subpart, railroads and employees often confused the two types of testing, even though reasonable suspicion and reasonable cause testing have very different requirements. To clarify the substantive differences between the two, the requirements for reasonable suspicion testing will remain in subpart D, while the requirements for reasonable cause testing have been moved to subpart E, which formerly addressed voluntary referral and co-

worker report policies (“Identification of Troubled Employees,” now found in subpart K). This differentiation is important since small railroads are required to conduct reasonable suspicion testing, but not reasonable cause testing. FRA received no objections to its proposal to divide reasonable suspicion and reasonable cause testing into two distinct subparts.

#### *B. Transfer of Revised and Retitled Troubled Employee Requirements to Subpart K*

To accommodate the placement of reasonable cause testing into subpart E, FRA has transferred a revised and retitled version of the “Identification of Troubled Employees” requirements previously in subpart E to new subpart K. (As noted above, this is in lieu of FRA’s proposal to require peer support programs in subpart K, which, for the reasons discussed below, FRA is not adopting).

#### **VI. Section-by-Section Analysis**

As discussed earlier, throughout most of part 219 FRA is substituting “regulated employee” and “regulated service” where the terms “covered employee” and “covered service” formerly appeared. “Regulated employee” and “regulated service” are terms-of-art encompassing all individuals and duties subject to part 219, including both covered service and MOW activities. The terms “covered employee” and “covered service,” however, are retained where necessary, such as in § 219.12, which addresses issues of overlap between part 219 and the HOS laws that apply only to covered employees.

#### **Authority Citation**

The authority citation for part 219 adds a reference to Section 412 of the RSIA, which mandated the expansion of part 219 to cover all employees of railroads and contractors or subcontractors to railroads who perform MOW activities.

#### **Subpart A—General**

##### *Section 219.1—Purpose and Scope*

This section now includes a reference to the new definition of “employee” in § 219.5, which includes any individual (including a volunteer or a probationary employee) who performs regulated activities for a railroad or a contractor to a railroad.

##### *Section 219.3—Application*

The small railroad exception in § 219.3(b)(2) has provided, in part, that a railroad with 15 or fewer covered employees that does not engage in joint

operations with another railroad is not subject to the requirements for reasonable suspicion or reasonable cause testing (both previously found in subpart D), identification of troubled employees (previously subpart E), pre-employment drug testing (subpart F), or random testing (subpart G).

FRA is modifying the small railroad exception so that small railroads are no longer excepted from the reasonable suspicion testing requirements of subpart D. Subpart D requires a railroad to conduct Federal reasonable suspicion testing whenever one or more trained supervisors reasonably suspects that an employee has violated an FRA prohibition against the use of alcohol or drugs. *See* § 219.300(a). FRA’s decision not to authorize small railroads to conduct FRA-authority reasonable cause testing (moved to subpart E of this rule) remains unchanged, however.

FRA is also amending the small railroad exception so that small railroads are no longer excepted from subpart F. As is already required for larger railroads, a small railroad must conduct a pre-employment drug test and obtain a negative result before allowing an individual to perform regulated service for the first time. *See* § 219.501(a). As with larger railroads, this requirement applies only to those regulated employees hired by a small railroad after the effective date of this final rule, because all regulated employees hired before the effective date of this rule are exempted from pre-employment drug testing.

FRA received no comments on the clarifications in this section, which are adopted without further comment.

#### *Section 219.5—Definitions*

As proposed, FRA is amending this section by adding, clarifying, and deleting definitions. Additional or clarified definitions include:

##### **Administrator**

FRA is defining “Administrator” to include the Administrator of the FRA or the Administrator’s delegate.

##### **Associate Administrator**

FRA is clarifying that “Associate Administrator” means both the FRA’s Associate Administrator for Railroad Safety and the Associate Administrator’s delegate.

##### **Contractor**

As proposed, FRA’s new definition of “contractor” includes both a contractor and a subcontractor performing functions for a railroad.

##### **DOT-Regulated Employee**

A “DOT-regulated employee” means a person who is subject to drug or alcohol testing, or both, under any DOT agency regulation, including an individual currently performing DOT safety-sensitive functions and an applicant for employment subject to DOT pre-employment drug testing.

##### **DOT Safety-Sensitive Duty or DOT Safety-Sensitive Function**

The performance of a “DOT safety-sensitive duty” or “DOT safety-sensitive function” makes a person subject to the drug testing and/or alcohol testing requirements of a DOT agency. The performance of regulated service is a DOT safety-sensitive duty or function under this part.

##### **Drug and Alcohol Counselor or DAC**

FRA is adopting this part’s definition for “Drug and Alcohol Counselor” or “DAC” from § 242.7 of its conductor certification rule.

##### **Employee**

An “employee” is any person, including a volunteer, and a probationary employee, who performs activities for a railroad or a contractor to a railroad.

##### **Evacuation**

Under § 219.201(a)(1)(ii)(A), one of the criteria for a “major train accident” requiring PAT testing is an evacuation. To qualify as an evacuation, an event must involve the relocation of at least one person who is not a railroad employee to a safe area to avoid exposure to a hazardous material release. This relocation would normally be ordered by local authorities and could be either mandatory or voluntary. This definition does not include the closure of public roadways for hazardous material spill containment purposes, unless that closure was accompanied by an evacuation order.

##### **Flagman or Flagger**

FRA is adopting its proposal to define a “flagman” (also known as a “flagger”) and “watchman/lookout” in § 219.5 as those terms are currently defined in § 214.7.

##### **Highway-Rail Grade Crossing**

FRA is adopting the definition of “highway-rail grade crossing” found in § 225.5 of its accident and incident reporting regulation, which includes all crossing locations within industry and rail yards, ports, and dock areas.

### Highway-Rail Grade Crossing Accident/ Incident

This definition is essentially identical to the description of highway-rail grade crossing impacts found in the definition for “accident/incident” in FRA’s accident and incident reporting regulation. See 49 CFR 225.5.

### Joint Operations

The phrase “rail operations” in this definition encompasses dispatching and other types of operations. As examples, even if Railroad A has fewer than sixteen covered employees, Railroad A is engaged in joint operations with Railroad B if it either dispatches trains for Railroad B and/or enters Railroad B’s yard to perform switching operations. Railroad A is also engaged in joint operations with Railroad B if they operate over the same track at different times of the day.

Railroad A is *not*, however, engaged in joint operations with Railroad B, if they operate over the same track but are physically separated (e.g., through a split rail derail or the removal of a section of rail), since this separation prevents Railroad A’s operations from overlapping with those of Railroad B. FRA is also excluding from joint operations certain minimal operations on the same track for the purposes of interchange, so long as these operations: (1) Do not exceed 20 mph; (2) are conducted under restricted speed; (3) proceed no more than three miles; (4) and, if extending into another railroad’s yard(s), operate into another railroad’s yard(s) solely to set out or pick up cars on a designated interchange track. FRA is excluding these minimal operations from its new “joint operations” definition because of their comparatively lesser safety risk.

### On-Track or Fouling Equipment

This new definition includes any railroad equipment positioned on or over the rails or fouling a track.

### Other Impact Accident

An “other impact accident” includes any accident/incident involving contact between on-track or fouling equipment that is not otherwise classified as another type of collision (e.g., a head-on collision, rear-end collision, side collision, raking collision, or derailment collision). This new definition also includes an impact in which a single car or cut of cars is damaged during operations involving switching, train makeup, setting out, etc.

### Person

As amended, this definition adopts the existing language in § 219.9 and

adds an independent contractor who provides goods or services to a railroad to the scope of whom or what is considered a “person” under this part (e.g., a service agent such as a collection site or laboratory) See 49 CFR part 40, subpart Q—Roles and Responsibilities of Service Agents. Service agents are already required to comply with both part 219 and part 40, so this amendment is a clarification that makes no substantive changes.

### Plant Railroad

For clarification, FRA has added language defining when an entity’s operations do *not* qualify for plant railroad status.

### Raking Collision

As newly defined, a “raking collision” occurs when there is a collision between parts, with the lading of a train on an adjacent track, or with a structure such as a bridge. A collision that occurs at a turnout is not a raking collision.

### Regulated Employee and Regulated Service

A regulated employee is any employee subject to this part: a covered employee, an MOW employee, and an employee of a railroad or a contractor to a railroad who performs covered service or MOW activities. Correspondingly, regulated service is any duty which makes an employee subject to this part.

### Side Collision

A side collision occurs when one consist strikes the side of another consist at a turnout, including a collision at a switch or at a railroad crossing at grade.

### Tourist, Scenic, Historic, or Excursion Operation That Is Not Part of the General Railroad System of Transportation

To be considered not part of the general railroad system of transportation, a tourist, scenic, historic, or excursion operation must be conducted only on track used exclusively for that purpose (i.e., there are no freight, intercity passenger, or commuter passenger railroad operations on the track).

### Watchman/Lookout

This definition is identical to that in § 214.7, subpart C of part 214, roadway worker protection.

Revised definitions include:

### Covered Employee

As revised, a “person” includes an employee, volunteer, and probationary

employee. FRA has also updated the reference to the hours of service laws (49 U.S.C. ch. 211). Neither change is substantive.

### Covered Service

FRA is adding examples of covered service and a reference to appendix A to 49 CFR part 228, Requirements of the Hours of Service Act: Statement of Agency Policy and Interpretation. No substantive changes are intended.

### FRA Representative

As proposed, the definition of “FRA representative” is amended to include the oversight contractor for FRA’s Drug and Alcohol Program and the staff of FRA’s Associate Administrator for Railroad Safety.

### Impact Accident

In its initial implementation of this part, FRA excepted derailment and raking collisions from its definition of “impact accident” because it formerly believed these types of collisions were not caused by human factors. (See 50 FR 31539 and 31542, Aug. 2, 1985 and 54 FR 39647, Sep. 27, 1989). FRA is removing these exceptions after learning that human factors such as fatigue and impairment can and do contribute to both derailment and raking collisions.

As additional clarification, FRA is excluding the impact of rail equipment with “naturally-occurring obstructions such as fallen trees, rock or snow slides, livestock, etc.” from its definition of an impact accident. FRA is also incorporating guidance stating that an impact with a derail does not qualify as an “impact with a deliberately-placed obstruction, such as a bumping post,” since bumping posts are usually permanently placed at the end of a line, while derails can easily be moved from place to place.

### Medical Facility

As amended, a “medical facility” is an independent (i.e., not maintained by the railroad) site which is able to collect blood and urine specimens for PAT testing and, if necessary, treat an employee who has been injured in a PAT testing event.

### Railroad Property Damage or Damage to Railroad Property

As proposed, the amended definition of “railroad property damage or damage to railroad property” means damage to railroad property, including damage to on-track equipment, signals, track, track structure, or roadbed; and labor costs, including hourly wages, transportation costs, and hotel expenses; but excluding damage to lading and the cost of

clearing a wreck; *except that* the cost of contractor services, of renting and operating machinery, and of any additional damage caused while clearing the wreck *is* included when calculating railroad property damage to determine whether PAT testing is required under FRA's regulations. These clarifications are meant to enable easier compliance with this part, and no substantive changes are intended.

#### Train Accident

As amended, the definition of "train accident" refers to rail equipment accidents under § 225.19(c) which include, but are not limited to, collisions, derailments, and other events involving the operation of on-track or fouling equipment.

#### Train Incident

As amended, a "train incident" is defined as an event involving the operation of on-track or fouling equipment that results in a casualty, but does not result in damage to railroad property exceeding the applicable reporting threshold.

#### Deleted Definitions

As proposed, FRA is deleting the definitions of "General Railroad System of Transportation," and "Train," since these terms have been superseded by newly added definitions and amendments in this rule. FRA received no comments on these deletions.

#### Section 219.11—General Conditions for Chemical Tests

In its comments, the NCRMA asked FRA to impose conditions on urine specimen collections conducted under this part (*e.g.*, that FRA require a railroad to transport an employee to a company owned or contracted facility, or that drinking water not be used during the urine specimen collection process). With the exception of its PAT testing program, which is discussed below, FRA is prohibited from doing so, because the Department's Procedures for Workplace Drug and Alcohol Testing Programs (49 CFR part 40 or part 40) control the procedures and facilities used in FRA (non-PAT) and other DOT agency testing. FRA is authorized to enforce railroad compliance with part 40 requirements, but may not impose new requirements of its own. Therefore, for example, FRA cannot specify that only non-drinking water sources be used during random testing, because part 40 already regulates collection site conditions.

Because it predates part 40, FRA PAT testing is exempt from part 40's requirements. FRA therefore has the

authority to set its own PAT testing protocols, which are found in appendix C to this part. PAT testing blood and urine specimens must be collected at an independent medical facility, such as a hospital or physician's office. By definition an independent medical facility cannot be railroad owned or controlled, and it meets the NCRMA's requests for privacy, heat, and sanitation during specimen collection.

New paragraph (a)(2) clarifies that a regulated employee who is required to participate in Federal testing under part 219 must be on duty and subject to performing regulated service at the time of a breath alcohol test or urine specimen collection. This requirement does not apply to pre-employment drug testing of applicants for regulated service positions.

#### Paragraph (b)

Paragraph (b)(1) clarifies that regulated employees must participate in Federal testing as required by part 219 and as implemented by a representative of the railroad or an employing contractor.

As proposed, in paragraph (b)(2), FRA is replacing the phrase "has sustained a personal injury" with "is suffering a substantiated medical emergency," to allow treatment for medical emergencies that do not involve a personal injury (*e.g.*, a stroke) to take priority over required FRA testing. A medical emergency must be an acute medical condition requiring immediate medical care, and a railroad may require an employee to submit proof that that he or she had experienced one by providing, within a reasonable time period after, verifiable documentation of the emergency from a credible outside professional.

#### Paragraph (g)

In addition to the PAT testing requirements of subpart C and the signs and symptoms of drug and alcohol influence, intoxication, and misuse, paragraph (g) now requires a supervisor to be trained on the signs and symptoms of certain prescription drugs that can have acute behavioral and apparent physiological effects. To facilitate this training, FRA is developing a module for both supervisors and employees that will cover the required material and be made available on its Web site. In lieu of the previous minimum of three hours of training, FRA is requiring a supervisor to be able to demonstrate an understanding of the course material, usually through a written or oral examination at the end of the course.

#### PAT and Reasonable Suspicion Testing

Paragraph (a) adopts FRA's long-established guidance that a railroad may exceed employee HOS limitations if all three of the following conditions are met: (1) The excess service was necessary and solely caused by the railroad's completion of PAT or reasonable suspicion testing; (2) the railroad used due diligence to minimize the excess service; and (3) the railroad collected the PAT or reasonable suspicion specimens within the time limits of § 219.203(d) (for PAT testing) or § 219.305 (for reasonable suspicion testing). The railroad must still submit an excess service report, however.

#### Reasonable Cause Testing

Reasonable cause testing, like PAT and reasonable suspicion testing, is triggered by the occurrence of a specified but unpredictable event (in this case, a train accident, train incident, or rule violation, the cause or severity of which may be linked to a safety issue involving alcohol or drug use by a regulated employee). For this reason, FRA will not pursue an HOS violation if any excess service was caused solely by a railroad's decision to conduct reasonable cause testing, provided the railroad used reasonable due diligence to complete the test and did so within the time limitations of § 219.407 (*i.e.*, within eight hours of the observation, event or supervisory notification that was the basis for the test). However, because reasonable cause testing, unlike both PAT and reasonable suspicion testing, is authorized, but not required by part 219, paragraph (b) correspondingly authorizes, but does not require, a railroad to exceed HOS limitations to complete reasonable cause testing. As with mandatory PAT and reasonable suspicion testing, a railroad must file an excess service report if it decides to exceed HOS limitations to conduct optional reasonable cause testing.

#### Random Testing

As proposed, paragraph (c) adopts FRA's longstanding guidance that completion of a random test does *not* excuse compliance with a regulated employee's HOS limits, *unless* the circumstances of the employee's test require the employee to provide a directly observed urine specimen. A directly observed urine collection must be performed whenever an employee's previous test results or current behavior indicate the possibility of specimen tampering (see § 40.67). As with PAT, reasonable suspicion, and reasonable cause tests, the occurrence of such

circumstances is unpredictable. FRA will therefore not pursue an HOS violation provided the railroad conducts the random test with due diligence and files an excess service report.

Paragraph (d)

As proposed, paragraph (d) clarifies that because follow-up tests, like random tests, are scheduled by the railroad, follow-up testing must be completed within a covered employee's HOS limits. A railroad may place an employee on duty solely for the purpose of a follow-up *drug* test any time the employee is subject to being called for duty; a railroad may place an employee on duty for a follow-up *alcohol* test only if the employee's return-to-duty agreement requires total abstinence from alcohol use, since legitimate alcohol use is allowed so long as it is in compliance with the prohibitions of § 219.101. A railroad that chooses to place an employee on duty solely for the purpose of follow-up testing must document why it did so and provide the documentation to FRA upon request.

Paragraph (c)

As proposed, a railroad can make this part's required educational materials available to its regulated employees by posting them continuously in an easily visible location at a designated reporting place, provided the railroad also supplies a copy to each labor organization representing a class or craft of regulated employees (if applicable). Alternatively, a railroad can make these materials available by posting them on a Web site accessible to all regulated employees; any distribution method that can ensure the accessibility of these materials to all regulated employees is acceptable.

For MOW employees only, however, FRA is initially requiring distribution of individual hard copies of educational materials, since these employees are being introduced to the requirements of part 219. This individual distribution requirement applies for three years after the effective date of this final rule, although it does not apply to an applicant for a regulated service position who refuses a pre-employment test or has a pre-employment test result indicating a part 219 violation.

*Section 219.25—Previous Employer Drug and Alcohol Checks*

This new section reminds railroads and contractors that they must comply with § 40.25, which requires an employer to conduct a search (for non-negative test results, e.g., positives, substitutions, and adulterations) of a new hire's past two years of drug and

alcohol test records before that individual can perform any DOT safety-sensitive functions. This requirement applies only to the railroad or contractor's direct employees (e.g., a railroad has no responsibility to conduct a background check on a contractor's direct employees, since that responsibility belongs to the contractor). A railroad must also comply with the prior drug and alcohol conduct requirements of § 240.119(c) for certified locomotive engineers and § 242.115(e) for certified conductors.

**Subpart B—Prohibitions**

*Section 219.101—Alcohol and Drug Use Prohibited*

Paragraph (a)(1)

In the NPRM, FRA had asked for comment on whether it should remove part 219.101's prohibitions against the on-duty possession of alcohol and controlled substances. FRA modeled these prohibitions after those in Rule G, a longstanding railroad operating rule which originally prohibited the on-duty use and possession of alcohol, and was later amended to include controlled substances as well. *See* 49 FR 24266, June 12, 1984.

Many commonly prescribed drugs, such as muscle relaxants and pain relievers, are controlled substances. As strictly read, § 219.101 prohibits the on-duty possession of not only illicit drugs but many prescription drugs with legitimate medical uses (with the exception of any controlled substance prescribed in accordance with § 219.103). Similarly, because § 219.101 prohibits the on-duty possession of alcohol, if strictly read, this section also bans the on-duty possession of any over-the-counter cough and cold remedy that contains alcohol. In the NPRM, FRA asked for comment on whether it should remove § 219.101's prohibitions against on-duty possession of controlled substances and alcohol because they could be construed to prohibit the possession of legal drugs and remedies on railroad property. FRA noted that no other DOT agency prohibits the on-duty possession of both controlled substances and alcohol, and that a railroad remains free to impose discipline for such possession under its own authority.

Labor commented that FRA should clarify its policy on prescription use, as did the NTSB. The NTSB opposed FRA's proposal to remove 219.101's prohibitions against the on-duty possession of controlled substances and alcohol, without explanation.

As proposed, FRA is therefore retaining but clarifying this prohibition, which, as amended, prohibits the use or

possession of controlled substances and alcohol by a regulated employee while “on duty and subject to performing regulated service for a railroad.” This prohibition applies not only when a regulated employee is actually performing regulated service, but also when the employee is subject to performing regulated service.

Paragraph (a)(4)

Paragraph (a)(4) prohibits an employee whose Federal test indicates an alcohol concentration of 0.02 or greater, but less than 0.04, from performing covered service until the start of his or her next regularly scheduled duty period, but not less than eight hours from the administration of the test. However, since an alcohol concentration of 0.02 or greater but less than 0.04 is not a violation of § 219.101, an alcohol test result in this range may not be used for locomotive engineer or conductor certification purposes under part 240 or part 242.

As proposed, FRA is adding new paragraph (a)(4)(ii) to clarify that a railroad is not prohibited from taking further action under its own authority against an employee whose Federal test result indicates an alcohol concentration 0.02 or greater but less than 0.04, since a result in this range indicates the presence of alcohol in the employee's system. Although Labor opposed allowing a railroad to impose discipline under its own authority in this circumstance, this is not a substantive change, since FRA guidance has long allowed this narrow exception.

Paragraph (a)(5)

Paragraph (a)(5) states that a Federal test result with an alcohol concentration below 0.02 is a negative result that a railroad may not use as evidence of alcohol misuse, either as evidence in a company proceeding or as a basis for subsequent testing under company authority. A railroad may conduct additional company testing only if it has an independent basis for doing so.

As proposed, FRA is amending this paragraph to adopt its previously stated policy that a railroad has an independent basis for a subsequent company authority alcohol test only when an employee continues to exhibit signs and symptoms of alcohol use after having had a negative FRA reasonable suspicion alcohol test result. If a railroad has an independent basis to conduct a subsequent alcohol test under company authority, the company test result stands independent of the prior FRA test result.

### Section 219.103—Use of Prescription and Over-the-Counter Drugs

In the NPRM, FRA asked railroads to submit comments on their 30 years of administering this section, which has been unchanged since the inception of part 219 in 1985. The NTSB, the sole responder, commented that this section did not adequately address the safety concerns raised by the use of prescription and over-the-counter (OTC) drugs, particularly diphenhydramine and other sedating antihistamines that could impair performance. In its comment, the NTSB reiterated R-13-01, in which it recommended that FRA address employees' underlying medical conditions by developing medical certification regulations, a recommendation that is beyond the scope of this rule.

In response to the NTSB's other concerns, however, FRA is developing a training module which will cover the more commonly used prescription and OTC drugs that could have adverse effects, including diphenhydramine. This module, which will be downloadable for free on FRA's Web site, will also contain general information on the best practices to follow when using prescription and OTC drugs. FRA will inform its regulated entities when this module is available for distribution.

### Section 219.104—Responsive Action

FRA is amending this section to clarify that: (1) With the exception of the right to a hearing, an applicant for regulated service who has refused to take a pre-employment test is entitled to all of the protections of this part; (2) the notice a railroad must provide to a regulated employee before removing him or her from regulated service must be in writing; and (3) a regulated employee is entitled to request a hearing under this section following an alleged violation of § 219.101 or § 219.102.

#### Paragraph (a)

Paragraph (a)(2) emphasizes that none of the requirements in this section apply to tests conducted under company authority. FRA is also removing the word "mandatory" because it is inaccurate, since neither reasonable cause nor pre-employment alcohol testing are mandated by part 219. If, however, a railroad does decide to conduct a reasonable cause or pre-employment alcohol test under FRA authority, a regulated employee or applicant for regulated service who refuses the test is subject to the consequences for refusals found in this section.

#### Paragraph (b)

Previously, paragraph (b) required a railroad, before "withdrawing" an employee from covered service, to provide notice to the employee of the reason for his or her withdrawal. This notice must be in writing, although a railroad may first notify an employee verbally, if the railroad provides written notice to the employee as soon as practicable. In its written removal notice, the railroad must include a statement prohibiting the employee from performing any DOT safety-sensitive functions until he or she has successfully completed the evaluation, referral, and treatment processes required for return-to-duty under part 40. FRA believes receipt of this information will discourage an employee from job hopping in an effort to avoid compliance with part 40's return-to-duty requirements. A railroad may use this notice to comply with § 40.287's requirement to provide each employee who violates a DOT drug and alcohol regulation with a listing of SAPs who are both readily available to the employee and acceptable to the railroad, by providing the contact information (name, address, telephone number, and, if applicable, email address) for each SAP on its list. (Of course, a railroad may also provide this information separately.)

#### Paragraph (c)

Previously, paragraph (c)(1) allowed an employee to request a hearing if the employee denied "that the test result is valid evidence of alcohol or drug use prohibited by this subpart." FRA has removed this phrase because the removal from duty and hearing procedures in this section also apply to violations of § 219.101 or § 219.102 that have *not* been detected through testing (e.g., a refusal or a violation of the prohibition against possessing alcohol). An employee may demand a hearing for any violation of § 219.101 or § 219.102, regardless of whether the alleged violation was based on a test result.

Similarly, FRA is amending paragraph (c)(4) to clarify that its statement that part 219 does not limit any procedural rights or remedies available (e.g., at common law or through an applicable bargaining agreement) to an employee, applies to all violations of part 219, not just those based on test results.

#### Paragraph (d)

As stated above, FRA PAT testing pre-dates part 40 and has always been excepted from DOT's testing procedures. Because the primary purpose of FRA PAT testing is accident

investigation, FRA has always tested a wider variety of specimens (*i.e.*, blood, post-mortem tissue specimens) for a wider variety of substances (e.g., barbiturates and benzodiazepines) than part 40 testing does. A regulated employee can therefore have a PAT test with a positive result that would not be detectable or duplicable under DOT procedures (e.g., a positive PAT blood test result for benzodiazepines). With respect to responsive action, however, PAT testing follows part 40 requirements, by requiring a negative return-to-duty test and a minimum of six negative follow-up tests for the substance of the original positive in the first 12 months after returning to regulated service (certified locomotive engineers and conductors have different follow-up testing minimums, *see* §§ 240.119(d)(2) and 242.115(f)(2)).

To ensure that any regulated employee who has had a positive PAT test result is in compliance with FRA's return-to-duty and follow-up requirements, in addition to Part 40 tests, FRA is allowing company tests to fulfill these requirements where necessary. If and only if, the substance of the employee's original PAT positive is not a drug listed in § 40.5's definition of "Drug," a railroad may conduct return-to-duty and follow-up tests for that substance under its own authority, provided the railroad's procedures mirror those of part 40 and the substance is on the company test's panel. FRA is allowing company testing in this limited circumstance because of the important role return-to-duty and follow-up tests play in maintaining an employee's abstinence from substance abuse in the first year following the employee's return to performing regulated service.

#### Paragraph (e)

FRA is adding new paragraph (e) to clarify when § 219.104's requirements do *not* apply.

The language formerly in paragraph (a)(3)(i), which stated that the requirements of this section do not apply to actions based on alcohol or drug testing that is not conducted under part 219, can now be found in paragraph (e)(1).

Paragraph (e)(2) clarifies that this section's requirements do *not* apply to Federal alcohol tests with a result less than 0.04. As mentioned above in FRA's discussion of § 219.101(a)(4), a Federal test result that is .02 or greater but less than .04 proves that an employee has recently used alcohol, but not that the employee is impaired. Because an employee who has a test result in this range is not in violation of § 219.101,

the only consequence allowed under this part is the removal of the employee from regulated service for a minimum of eight hours. All other actions following an alcohol test result below .04, including the administration of return-to-duty or follow-up tests, must therefore be conducted under a railroad's own authority.

Paragraph (e)(3) clarifies that although parts 240 and 242 require a substance abuse evaluation for a locomotive engineer or conductor who has had an off-duty conviction for, or a completed state action to, cancel, revoke, suspend, or deny a motor vehicle-driver's license for operating while under the influence of or impaired by alcohol or a controlled substance, an off-duty conviction or completed state action is not a violation of § 219.101 or § 219.102.

Paragraph (e)(4) clarifies that this section does not apply to an applicant who declines to participate in pre-employment testing before the test begins.

Similarly, paragraph (e)(5) clarifies that the hearing procedures in paragraph (c) of this section do not apply to an applicant who tests positive or refuses a DOT pre-employment test.

In contrast, paragraph (e)(6) clarifies that an applicant who has tested positive or refused a DOT pre-employment test must complete the return-to-duty requirements in paragraph (d) before performing DOT safety-sensitive functions subject to the drug and alcohol regulation of any DOT agency. Section 40.25(j) prohibits an employee who has tested positive or refused a test from performing any DOT safety-sensitive functions until and unless the employee documents successful completion of part 40's return-to-duty process.

#### *Section 219.105—Railroad's Duty To Prevent Violations*

##### *Paragraph (a)*

Paragraph (a) of this section provides that a railroad may not with "actual knowledge" permit an employee to remain or go on duty in covered service in violation of either § 219.101 or § 219.102. FRA is clarifying that a railroad's "actual knowledge" of such a violation is limited to the knowledge of a railroad manager or supervisor in the employee's chain of command. A manager or supervisor is considered to have actual knowledge of a violation when he or she: (1) Personally observes an employee violating part 219 by either using or possessing alcohol, or by using drugs (observing potential signs and symptoms of alcohol/drug use does not by itself constitute actual knowledge);

(2) learns from a § 40.25 background check of a previous employer's drug and alcohol records that an employee had a § 219.101 or § 219.102 violation and did not complete

§ 219.104's return-to-duty requirements; or (3) receives an employee's admission of prohibited alcohol possession or misuse or drug abuse.

##### *Paragraph (b)*

FRA is not amending paragraph (b) of this section. Instead, as guidance FRA is reprinting the 1989 preamble discussion which, in proposing this section, explained its purpose as:

to describe the limitations on railroad liability with respect to the prevention of the violations of the Subpart B prohibitions. . . . In summary, the provisions require the railroad to exercise a high degree of care to prevent violations, but do not impose liability where, despite such efforts, an individual employee uses alcohol or drugs in a manner that is prohibited (and the railroad is not aware of the conduct).

54 FR 39649, Sep. 27, 1989. While this paragraph places an affirmative duty on a railroad to use due diligence to prevent violations of § 219.101 or § 219.102, a railroad that can show it has done so has only limited liability under this part for violations of its prohibitions by individual employees. Since what constitutes due diligence under this provision varies on a case-by-case basis, a railroad that is uncertain about its applicability in a given situation should contact FRA for guidance.

##### *Paragraph (c)*

New paragraph (c) prohibits the design and implementation of any railroad drug and/or alcohol education, prevention, identification, intervention, or rehabilitation program or policy that circumvents or otherwise undermines the requirements of part 219. A railroad must make all documents, data, or other records related to such programs or policies available to FRA upon request.

##### *Paragraph (d)*

##### *Rule G Observations*

In its guidance, FRA required a railroad's supervisors to make and record each quarter a total number of "Rule G" observations equivalent, at a minimum, to the railroad's total number of covered employees. Each Rule G observation should be made sufficiently close to an employee to enable the supervisor to determine whether the employee was displaying signs and symptoms of impairment requiring a reasonable suspicion test.

In the NPRM, FRA requested comment on whether § 219.105 should adopt this guidance by requiring a specific number of Rule G observations; FRA was particularly interested in the safety benefits versus the costs and paperwork burdens of such a requirement. In response, the Associations commented that FRA's requirement for each supervisor to be trained in signs and symptoms of drug and alcohol abuse already ensured that railroad supervisors were automatically aware of what to look for when observing an employee's demeanor and behavior. Therefore, according to the Associations, requiring a specific number of what were essentially constant supervisory observations to be systematically recorded would be a paperwork exercise that added nothing to safety.

Because reasonable suspicion and reasonable cause testing share the same check box on DOT's drug and alcohol chain of custody forms, FRA's MIS data does not distinguish between tests conducted under mandatory reasonable suspicion authority and tests conducted under discretionary reasonable cause. While there is no direct correlation showing that Rule G observations increase or result in reasonable suspicion tests, FRA believes that each year's consistently low total of reasonable suspicion tests indicates the continuing need to focus supervisory attention on the use and importance of reasonable suspicion testing as deterrence. To make Rule G observations both more meaningful and less burdensome, new paragraph (d) adopts FRA's previous guidance requirements but: (1) Decreases the minimum annual number of observations supervisors must make and record from four to two times a railroad's total number of covered employees, and (2) requires each observation to be sufficiently up close and personal to determine if a covered employee is displaying signs and symptoms indicative of a violation of the prohibitions in this part. The latter requirement is intended to ensure that supervisory observations are of individuals rather than collective sweeps of multiple employees.

#### *Section 219.107—Consequences of Refusal*

This section requires an employee who has refused to provide breath or body fluid specimens when required by part 219 to be disqualified from performing covered service for nine months. As suggested by SAPlist.com, FRA is deleting the word "unlawful" from the title of this section, since it

implies that there are “lawful” refusals. This is not a substantive change.

#### Paragraph (b)

Paragraph (b) requires a railroad, before withdrawing an employee from regulated service, to provide notice to the employee of the reason for the withdrawal and the procedures in § 219.104(c) under which the employee may request a hearing. As proposed, FRA is clarifying that this notice must be in writing, although a railroad may initially provide an employee with verbal notice if the railroad provides written notice to the employee as soon as practicable.

#### Paragraph (c)

This section prohibits a railroad with notice that an employee has been withdrawn from regulated service from authorizing or permitting the employee to perform any regulated service on its behalf. The railroad may, however, authorize or permit the employee to perform non-regulated service.

### Subpart C—Post-Accident Toxicological Testing

#### Section 219.201—Events for Which Testing Is Required

#### Paragraph (a)

This section defines the types of accidents or incidents for which PAT testing is required and states that a railroad must make a good faith determination as to whether an event meets the criteria for PAT testing. Specifically, existing paragraph (a) requires a railroad to conduct PAT testing after the following qualifying events: (1) Major train accidents; (2) impact accidents; (3) fatal train incidents; and (4) passenger train accidents. As proposed, FRA is amending the definitions of these qualifying events and adding a new qualifying event that requires PAT testing, “Human-Factor Highway-rail Grade Crossing Accident/Incident.”

#### • Major Train Accidents

As proposed, FRA is clarifying that the fatality criteria for a major train accident is met by the death of “any person,” including an individual who is not an employee of the railroad.

Also as proposed, FRA is increasing the property damage threshold for major train accidents from \$1,000,000 to \$1,500,000 to account for inflation since January 1, 1995, when FRA last raised the damages threshold for major train accidents from \$500,000 to \$1,000,000. As noted by the AAR in its comment supporting this amendment, reducing the number of events qualifying as

major train accidents correspondingly reduces the number of employees subject to PAT testing, which reduces such railroad costs as lost opportunities and wages.

#### • Impact Accidents

See discussion in § 219.5 above.

#### Human-Factor Highway-Rail Grade Crossing Accident/Incident

In § 219.201(b), FRA prohibits PAT testing after a highway-rail grade crossing accident. FRA carved out this PAT testing exception after concluding that there was no justification for testing members of the train crew since they could not have played any role in the cause or severity of the highway-rail grade crossing accident. By the time a train crew spots a vehicle or other obstruction on the track, the weight and momentum of the train prevent the crew from stopping in time to avoid a collision.

FRA continues to believe that the members of a train crew should be excepted from PAT testing after the occurrence of a highway-rail grade crossing accident. As proposed, however, FRA is narrowing this blanket exception by adding a new qualifying event, “Human-factor highway-rail grade crossing accident/incident” in paragraph (a)(5), to allow the PAT testing of a signal maintainer, flagman, or other employee only if a railroad’s preliminary investigation indicates that the employee may have played a role in the cause or severity of the accident. This amendment responds to NTSB Recommendation R-01-17, in which the NTSB had recommended that FRA narrow its exception for highway-rail grade crossing accidents to require PAT testing of any railroad signal, maintenance, or other employee whose actions at or near a grade crossing may have contributed to the cause or severity of a highway-rail grade crossing accident.

New paragraph (a)(5)(i) contains the criteria for a “human-factor highway-rail grade crossing accident/incident.” This paragraph requires PAT testing after a highway-rail grade crossing accident/incident whenever there is reason to believe that a regulated employee has interfered with the normal functioning of a grade crossing signal system, in testing or otherwise, without first providing for the safety of highway traffic that depends on the normal functioning of such a system. Because this language is adapted from the prohibition against such interference in FRA’s grade crossing regulation (see 49 CFR 234.209), a grade crossing accident/incident involving a § 234.209

violation qualifies as a human-factor highway-rail grade crossing accident/incident for purposes of PAT testing.

Under paragraphs (a)(5)(ii) and (iii), PAT testing after a highway-rail grade crossing accident/incident is also required if the event involved violations of the flagging duties found in FRA’s grade crossing regulation. See 49 CFR 234.105(c), 234.106, and 234.107(c)(1)(i). The sections referenced in these paragraphs permit trains to operate through malfunctioning grade crossings if an appropriately equipped flagger, law enforcement officer, or crewmember provides warning for each direction of highway traffic. For example, when a false activation occurs, § 234.107(c)(1)(i) requires flagging by an appropriately equipped flagger if one is available. Under paragraphs (a)(5)(ii) and (iii), an employee who fails to comply with this flagging requirement is subject to PAT testing if a highway-rail grade crossing accident/incident then occurs. Under paragraph (a)(5)(iv), FRA is further narrowing its PAT testing exception for highway-rail grade crossing accident/incidents by requiring PAT testing if a fatality of a regulated employee is involved. As with fatal train incidents, a deceased regulated employee is subject to post-mortem PAT testing regardless of whether the employee was at fault. For example, a regulated employee who died while operating an on-rail truck that collided with a motor vehicle at a highway-rail grade crossing is subject to post-mortem PAT testing regardless of who was at fault for the collision.

Similarly, paragraph (a)(5)(v) requires PAT testing after a highway-rail grade crossing accident/incident if a violation of an FRA regulation or railroad operating rule by a regulated employee may have played a role in the cause or severity of the accident/incident. While paragraphs (a)(5)(i)–(iv) of this section specify the circumstances under which PAT testing is required for highway-rail grade crossing accidents/incidents involving human-factor errors, paragraph (a)(5)(v) serves as a catch-all provision that requires PAT testing for highway-rail grade crossing accidents/incidents that involve human-factor errors other than those specified in paragraphs (a)(5)(i)–(iv).

#### Paragraph (b)

As discussed above, FRA is narrowing this grade crossing exception to allow PAT testing for human-factor highway-rail grade crossing accident/incidents, and is amending the language in this paragraph accordingly.

SEPTA had asked FRA to clarify whether the contributing action of a

motor vehicle operator within a grade crossing could trigger the PAT testing of a MOW employee. Any employee involved in a highway-rail grade crossing accident is excepted from PAT testing *unless* a railroad's preliminary investigation indicates that the employee's actions may have contributed to the occurrence or severity of the accident; this general exception applies to all regulated employees and is not affected by the addition of MOW employees to this part.

*Section 219.203—Responsibilities of Railroads and Employees*

Paragraph (a)(1)

Paragraph (a)(1) requires a regulated employee whose actions may have played a role in the cause or severity of a PAT testing qualifying event (*e.g.*, an operator, dispatcher, or signal maintainer) to provide blood and urine samples for PAT testing, regardless of whether the employee was present or on-duty at the time or location of the qualifying event, as required by FRA's amended PAT testing recall provisions in paragraph (e) of this section.

Paragraph (a)(2)

Paragraph (a)(2) specifies that the remains of an on-duty employee who has been fatally injured in a qualifying PAT testing event must undergo post-mortem PAT testing if the employee dies within 12 hours of the event. This requirement applies regardless of whether the employee was performing regulated service, was at fault, or was a direct employee, volunteer, or contractor to a railroad. Part 219 already requires such fatality testing. *See* §§ 219.11(f) and 219.203(a)(4)(ii).

Paragraph (a)(3)

Paragraph (a)(3) specifies which regulated employees must be tested for major train accidents. In paragraph (a)(3)(i), FRA requires all crew members of *on-track equipment* involved in a major train accident to be PAT tested, regardless of fault—a requirement that already applies to all train crew members involved in a major train accident. *See* § 219.203(a)(3). In addition, paragraph (a)(3)(ii) requires a regulated employee who is not an assigned crew member of an involved train or other on-track equipment to be PAT tested, if it can be immediately determined that the regulated employee may have played a role in the cause or severity of the major train accident.

Paragraph (a)(4)

In paragraph (a)(4), which applies specifically to fatal train incidents, FRA proposed that an individual must die

within 12 hours of the incident to qualify for post-mortem PAT testing. The NTSB suggested that FRA instead define a PAT testing fatality as one that occurred within 30 days of the incident, to match its own definition and that of FMCSA's. FRA's proposed 12-hour time limit applies to the post-mortem *testing* of a fatality, however, not to the *reporting* of its occurrence, as the NTSB and FMCSA time limits do. The result of a post-mortem PAT test conducted up to 30 days later would fail to indicate an individual's condition at the time of an incident, and would have no probative value because any alcohol and most controlled substances present in the individual when the accident occurred would have metabolized long before the test was conducted. FRA is therefore adopting its proposal that post-mortem PAT testing is required only if an individual dies within 12 hours of an incident.

Paragraph (a)(5)

Paragraph (a)(5) specifies which regulated employees must be PAT tested following human-factor highway-rail grade crossing accidents/incidents. Under § 219.201(a)(5)(i), only a regulated employee who interfered with the normal functioning of a grade crossing signal system and whose actions may have contributed to the cause or severity of the event must be PAT tested. Paragraphs (a)(5)(ii) and (iii) clarify the testing requirements for human-factor highway-rail grade crossing accidents/incidents under § 219.201(a)(5)(ii) and (iii). If a grade crossing activation failure occurs, these paragraphs require PAT testing of a regulated employee responsible for flagging (either flagging highway traffic or acting as an appropriately equipped flagger as defined in § 234.5), if the employee either fails to flag or to ensure that the required flagging occurs, or if the employee contributes to the cause or severity of the accident/incident.

Paragraph (a)(5)(iv) states that only the remains of a fatally-injured regulated employee(s) involved in a human-factor highway-rail grade crossing accident/incident under § 219.201(a)(5)(iv) must be post-mortem PAT tested.

Paragraph (a)(5)(v) states that only a regulated employee who has violated an FRA regulation or railroad operating rule and whose actions may have contributed to the cause or severity of the event must be PAT tested in the event of a human-factor highway-rail grade crossing accident/incident.

Paragraph (a)(6)

Paragraph 219.203(a)(3) requires a railroad to exclude from PAT testing an employee involved in an impact accident or passenger train accident with injury, or a surviving employee involved in a fatal train incident, if the railroad can immediately determine that the employee had no role in the cause or severity of the event. If a railroad determines that an event qualifies for PAT testing, the railroad must consider the same immediately available information to determine whether an employee should be subject to or excluded from PAT testing.

Correspondingly, paragraph (a)(6) requires a railroad to make a PAT testing determination when an employee survives a human-factor highway-rail grade crossing accident/incident. There is no determination to be made, however, when a regulated employee has been involved in a major train accident or an employee has been fatally injured in a qualifying event while on-duty; in these circumstances the employee must be post-mortem PAT tested, as specified in paragraphs (a)(6)(i) and (ii).

Paragraph (b)—Railroad Responsibility

Paragraph (b)(1) requires a railroad to take all practicable steps to ensure that each regulated employee subject to PAT testing provides the required specimens. This includes a regulated employee who may not have been present or on-duty at the time of the PAT testing event, but who may have played a role in its cause or severity, since paragraph (e) of this section amends FRA's recall provisions to allow employee recall in such circumstances.

Paragraph (b)(3) adopts longstanding FRA guidance that FRA PAT testing takes precedence over any toxicological testing conducted by state or local law enforcement officials. *See* Interpretive Guidance Manual at 20.

Paragraph (c)—Alcohol Testing

Paragraph (c) allows a railroad to require a regulated employee who is subject to PAT testing to undergo additional PAT breath alcohol testing if the employee is still on, and has never left, railroad property.

Paragraph (d)—Timely Specimen Collection

New paragraph (d)(1) requires a railroad: (1) To make "every reasonable effort to assure that specimens are provided as soon as possible after the accident or incident," and, (2) if the railroad was unable to collect specimens within four hours of the qualifying event, to prepare and maintain a record

stating why the test was not promptly administered (the railroad is still required to collect the specimens as soon thereafter as possible, however, under § 219.203(b)(1)).

Previously, § 219.209(c) required a railroad to notify FRA's Drug and Alcohol Program Manager immediately by phone whenever a specimen collection took longer than four hours, and to prepare a written explanation for any delay in specimen collection beyond four hours; submission of that report, however, was required only upon request by FRA. As amended in § 219.203(d)(1), FRA is reiterating most of the requirements formerly in § 219.209(c), but is now requiring a railroad to submit its written report within 30 days after expiration of the month during which the qualifying event occurred.

#### Paragraph (e)—Employee Recall

As proposed, FRA eliminated its previous requirement that a qualifying PAT event had to have occurred during the employee's duty tour.

FRA has simplified its employee recall provisions by requiring a regulated employee to be immediately recalled and placed on duty for PAT testing if only two conditions are met: (1) The railroad could not retain the employee in duty status because the employee went off duty under normal carrier procedures before the railroad instructed the employee to remain on duty pending its testing determination; *and* (2) the railroad's preliminary investigation indicates a clear probability that the employee played a role in the cause or severity of the accident/incident. An employee who has been transported to receive medical care is considered to be on-duty for purposes of PAT testing. A railroad may also PAT test an employee who has failed to remain available for PAT testing as required.

Paragraph (e)(3) requires an employee to be recalled regardless of whether the qualifying event occurred while the employee was on duty, although a railroad is prohibited from recalling an employee if more than 24 hours has passed since the event. An employee who has been recalled for PAT testing must be placed on duty before he or she is PAT tested.

Paragraph (e)(4) specifies that both urine and blood specimens must be collected from an employee who has been recalled for PAT testing. An employee who left railroad property before being recalled can be PAT tested for drugs only, since the employee could have legitimately used alcohol after leaving. For this reason, a recalled

employee can be PAT tested for alcohol only if the employee never left the railroad's property and the railroad completely prohibits the use of alcohol on its property.

Paragraph (e)(5) requires a railroad to document its attempts to contact an employee who has to be recalled for PAT testing. If a railroad cannot contact and obtain a specimen from an employee subject to mandatory recall within 24 hours of a qualifying event, the railroad must notify and submit a narrative report to FRA as required by paragraph (d)(1). In its report, the railroad must show that it made a good faith effort to contact the employee, recall the employee, place the employee on duty, and obtain specimens from the employee.

#### Paragraph (f)—Place of Specimen Collection

Paragraph (f) states that an independent medical facility is required only for the mandatory collection of PAT urine and blood specimens since a breath alcohol PAT test (which is authorized, but not required) is not an invasive procedure. Section 219.203(c) authorizes a railroad to conduct FRA breath alcohol testing following a qualifying event, provided this testing does not interfere with the timely collection of urine and blood specimens (as specified in the PAT testing specimen collection procedures in appendix C to this part).

Although FRA still considers it a best practice for a railroad to pre-designate medical facilities for PAT testing, FRA has removed this requirement, which is impracticable for several reasons. First, because the prompt treatment of injured employees must take precedence over any railroad pre-designation, an emergency responder may take an injured employee to a closer but non-designated medical facility. Second, even if a railroad has pre-designated a medical facility, the facility's responding employees may not be aware of or honor this designation.

Paragraph (f)(1) states that a phlebotomist (a certified technician trained and qualified to draw blood in accordance with state requirements) is a "qualified medical professional" who may draw blood specimens for PAT testing. (A qualified medical professional does not need to meet the requirements of part 40, since part 40 does not apply to FRA PAT testing.) A qualified railroad or hospital contracted collector may also collect or assist in the collection of specimens, provided the medical facility has no objections.

Paragraph (f)(2) clarifies that employees who are subject to

performing regulated service are deemed to have consented to PAT testing under § 219.11(a), just as employees who perform covered service already are. For PAT testing only, FRA allows urine to be collected from an injured regulated employee who has already been catheterized for medical purposes, regardless of whether the employee is conscious. PAT testing is not subject to part 40's prohibition against collecting urine from an unconscious person.

#### Paragraph (g)—Obtaining Cooperation of Facility

In the NPRM, FRA had proposed replacing 1-800-424-8801 with 1-800-424-8802 as the contact number for the National Response Center (NRC). A railroad must contact the NRC when a treating medical facility refuses to collect blood specimens because an employee is unable to provide consent. A commenter suggested that FRA instead replace both 1-800-424-8801 and 1-800-424-8802 with 1-800-424-0201, a toll-free phone number specific to FRA. As the commenter noted, listing 1-800-424-0201 as the contact number for the NRC would make this part consistent with §§ 229.17, 230.22 and 234.7 of this chapter (respectively, Locomotive Safety Standards, Steam Locomotive Inspection and Maintenance Standards, and Grade Crossing Safety). FRA agrees, and is listing 1-800-424-0201 as its sole NRC contact number, in this paragraph, and in §§ 219.207(b) and 219.209(a)(1) of this part.

#### Section 219.205—Specimen Collection and Handling

##### Paragraph (c)

A railroad may no longer order a PAT testing kit directly from the designated FRA PAT testing laboratory (the laboratory specified in appendix B to part 219); the railroad must instead contact FRA's Drug and Alcohol Program Manager to request an order form to obtain a PAT testing kit from the laboratory. FRA will continue to follow its standard practice of making fatality PAT testing kits available only to Class I, Class II, and commuter railroads. If a small railroad has a PAT testing event involving a fatality to an on-duty employee, the small railroad should contact the National Railroad Response Center. FRA will then provide a fatality kit to a medical examiner or assist the small railroad in obtaining one from a larger railroad.

As proposed, FRA is removing paragraph (c)(3), which states that a limited number of shipping kits are

available at FRA's field offices, since FRA field offices no longer have these kits.

**Paragraph (d)**

For greater flexibility, FRA has amended this paragraph to allow a railroad to use other shipment methods besides air freight, provided the 24-hour delivery requirement is met. FRA is also allowing a railroad to hold specimens in a secure refrigerator for a maximum of 72 hours if a specimen's delivery cannot be ensured within 24 hours due to a suspension in delivery services.

**Paragraph (e)**

To ensure greater specimen security, FRA is prohibiting a railroad or medical facility from opening a specimen kit or a transport box after it has been sealed, even if it is later discovered that an error had been made either with the specimens or the chain of custody form. If such an error is discovered, the railroad or medical facility must make a contemporaneous written record of it and send that record to the laboratory, preferably with the transport box.

**Section 219.207—Fatality**

As discussed above, FRA is replacing 1-800-424-8801 and 1-800-424-8802, the phone numbers for the NRC previously listed in paragraph (b), with 1-800-424-0201. A railroad supervisor who is having difficulty obtaining post-mortem specimens from the local authority or custodian should call 1-800-424-0201 to notify the NRC duty officer.

In paragraph (d), FRA is clarifying that the information in "Appendix C to this part [which] specifies body fluid and tissue specimens for toxicological analysis in the case of a fatality," is also available in the "instructions included inside the shipping kits."

**Section 219.209—Reports of Tests and Refusals**

**Paragraph (a)(1)**

As discussed above, FRA is replacing 1-800-424-8802, the phone number previously listed in this paragraph for the NRC, with 1-800-424-0201. A railroad should call the latter number to notify the NRC of the occurrence of a qualifying post-accident event. The railroad must also notify the FRA Drug and Alcohol Manager; the contact number for doing so, 202-493-6313, is unchanged.

Previously, paragraph (a)(2)(v) of this section required a railroad reporting PAT tests and refusals to include the number, names, and occupations of the involved employees. To protect employee privacy interests and reduce

railroads, reporting burdens, FRA is requiring railroads to report only the number of employees tested.

Paragraph (b) required a railroad to provide a "concise narrative report" to FRA if, as a result of the non-cooperation of an employee or any other reason, the railroad was unable to obtain PAT testing specimens from an employee subject to PAT testing. As amended, a railroad must also notify FRA's Drug and Alcohol Program Manager immediately by phone of the failure. If a railroad representative is unable to speak directly to the FRA Drug and Alcohol Program Manager, the representative must leave a detailed voicemail explaining the circumstances and reasons for the railroad's failure to obtain PAT specimens. The purpose of this telephonic report is to assist both railroads and FRA in determining whether a refusal has occurred.

Paragraph (c) previously required a railroad to maintain records explaining why PAT testing was not performed within four hours of a qualifying event. FRA is deleting this requirement from § 219.209 because it is already addressed in § 219.203(d)(1), as discussed above in the section-by-section analysis for that section.

**Section 219.211—Analysis and Follow-Up**

Since part 40 does not apply to FRA PAT testing, FRA is amending paragraph (b) of this section to adopt part 40's prohibition on standing down (temporarily removing from service) an employee based solely upon a laboratory's confirmation of a non-negative test result, before the railroad's Medical Review Officer (MRO) has completed the result's verification. See § 40.21(a). As in part 40, a railroad may remove an employee from regulated service only after an MRO has verified that the employee has had a confirmed positive test, an adulterated test, or a substituted test.

As amended, paragraph (c) now provides the address of the FRA Associate Administrator for Railroad Safety.

For consistency throughout this part, in paragraph (e), FRA is substituting "Drug and Alcohol Program Manager" for "Alcohol/Drug Program Manager." Also, to enable employees to respond to their test results more easily, FRA is allowing responses to be sent by email.

Paragraph (g)(3) previously provided that FRA's PAT testing program does not authorize railroads to hold an employee out of service pending the receipt of the test results, "nor does it restrict a railroad from taking such action in an appropriate case." As

clarification, FRA is adding that a railroad must have additional information regarding an employee's actions or inaction, independent of the employee's involvement in a qualifying event, to justify holding the employee out of service under company authority. As with paragraph (b)'s prohibition against standing down an employee based solely on a confirmed laboratory test result, reports, an employee's involvement in a PAT testing event is not in itself a basis for a railroad's holding the employee out of regulated service.

**Section 219.213—Refusals; Consequences**

Paragraph (b) now requires a railroad to provide *written* notice to an employee who is being withdrawn from service under this part for refusing to provide a specimen for PAT testing. As with § 219.107, FRA is adopting *SAPlist.com*'s suggestion to delete the term "unlawful" from this section's heading, since it implies that there are "lawful" refusals. This is not a substantive change.

**Subpart D—Reasonable Suspicion Testing**

As proposed, reasonable suspicion testing remains in subpart D while reasonable cause testing is now in subpart E; this division underscores the importance of the differences between these types of tests, despite their similarity in names. (To accommodate this restructuring, the Identification of Troubled Employees requirements previously in subpart E have been moved to new subpart K.)

**Section 219.301—Mandatory Reasonable Suspicion Testing**

Paragraph (a) clarifies that a reasonable suspicion alcohol test is not required to confirm an on-duty employee's possession of alcohol.

Paragraph (c) requires all reasonable suspicion tests to comply with § 219.303 (which is generally consistent with the requirements previously found in § 219.300(b) and is discussed in more detail below).

Paragraph (d) requires a regulated employee to undergo reasonable suspicion testing if the employee's condition has stabilized within eight hours.

**Section 219.303—Reasonable Suspicion Observations**

This section contains the requirements for reasonable suspicion observations that were formerly in § 219.300(b).

**Paragraph (b)**

In paragraph (b), FRA clarifies that although two supervisors are required to make the required observations for reasonable suspicion drug testing, only one of these supervisors must be on-site and trained in accordance with § 219.11(g). This amendment incorporates long-standing FRA guidance, since two on-site trained supervisors are rarely available.

Before a reasonable suspicion drug test can take place, a trained on-site supervisor must describe the signs and symptoms that the on-site supervisor has observed of an employee's appearance and behavior to an off-site supervisor, who must confirm that these observations provide a reasonable basis to suspect the employee of drug abuse. Because of privacy concerns, this communication between supervisors may be made by telephone, but not by radio or email.

**Paragraph (c)**

New paragraph (c) prohibits a railroad from holding a regulated employee out of service from the time of the employee's reasonable suspicion test to the time of the railroad's receipt of the employee's verified test result (a practice known as "stand down"). A railroad may, however, use its own authority to hold an employee out of service during this period if the railroad has an independent basis for doing so (e.g., the employee is continuing to exhibit signs and symptoms of alcohol use).

**Paragraph (d)**

Paragraph (d) requires an on-site supervisor to document as soon as practicable the observed signs and symptoms that were the basis for the supervisor's decision to reasonable suspicion test a regulated employee. FRA is not adopting Labor's suggested alternate language, which essentially restates FRA's own without adding any clarification.

**Section 219.305—Prompt Specimen Collection; Time Limits****Paragraph (a)**

Paragraph (a) reiterates language formerly in § 219.302(a), which states consistent with the need to protect life and property, reasonable suspicion testing must be promptly conducted following the observations upon which the reasonable suspicion determination was based.

**Paragraph (b)**

Paragraph (b) requires a railroad to prepare and maintain a record

explaining the reasons for the delay whenever the railroad does not collect reasonable suspicion breath and/or urine specimens within two hours of the determination to test. If, however, a railroad has failed to collect reasonable suspicion testing specimens within eight hours of its determination to test, the railroad must discontinue its collection attempts and record why the test could not be conducted. The eight-hour deadline is met when the railroad has delivered the employee to a collection site where a collector is present and asked the collector to begin specimen collection.

Paragraph (b) also requires a railroad to submit its reasonable suspicion testing records upon request of the FRA Drug and Alcohol Program Manager.

**Paragraph (c)****Subpart E—Reasonable Cause Testing**

As discussed above, FRA is dividing reasonable suspicion and reasonable cause testing into separate subparts to emphasize that despite the similarity in names, the authority and criteria for mandatory reasonable suspicion testing is very different from that for discretionary reasonable cause testing. Formerly, reasonable suspicion and reasonable cause testing were both located in subpart D; reasonable suspicion testing remains in subpart D while reasonable cause testing is moved to subpart E. In addition, subpart E contains new rule violations tailored to the activities of MOW employees. FRA has re-designated the provisions of former subpart E as new subpart K.

**Section 219.401—Authorization for Reasonable Cause Testing**

Previously, a railroad had three options whenever the conditions for reasonable cause testing were met; the railroad could choose to: (1) Conduct a reasonable cause test under FRA authority, (2) conduct a reasonable cause test under its own (company) authority, or (3) not conduct a reasonable cause test. The railroad could switch among these choices without advance notice. For example, a railroad could conduct one employee's reasonable cause test under FRA authority, and another's under company authority, without any explanation. In many instances, an employee who had received a reasonable cause test was unsure as to what authority the test had been conducted under, while the lack of a consistency requirement led to frequent complaints about disparate treatment among employees.

FRA is now requiring a railroad to choose between using FRA authority or

company authority for reasonable cause testing. A railroad that chooses to use FRA authority must announce its choice to its employees and must use that FRA authority exclusively, by (1) providing notice of its selection of FRA authority in its educational materials; (2) specifying that FRA testing is authorized only after "train accidents" and "train incidents," as defined in § 219.5; and (3) adding new rule violations or other errors to § 219.403 as bases to test. Once a railroad has announced that it will be using FRA authority exclusively for reasonable cause testing, the railroad is prohibited from conducting reasonable cause tests under its own authority after an event listed in § 219.403. The railroad may always, however, use its own authority to test for events that are outside of the FRA criteria for reasonable cause testing listed in this subpart.

**Section 219.403—Requirements for Reasonable Cause Testing**

This section authorizes FRA reasonable cause testing after "train accidents" and "train incidents" as defined in § 219.5, but not after all part 225 reportable "accidents/incidents." As amended, railroads are authorized to conduct FRA reasonable cause testing for additional rule violations or other errors that reflect the expansion of part 219 to MOW workers, relate to signal systems and highway-rail grade crossing warning systems, and reflect recent amendments to 49 CFR part 218, Railroad Operating Practices.

**Paragraph (a)**

Section 219.301(b)(2) previously authorized reasonable cause testing following "an accident or incident reportable under part 225" when "a supervisory employee of the railroad has a reasonable belief, based on specific, articulable facts, that the employee's acts or omissions contributed to the occurrence or severity of the accident or incident." In this rule, FRA is clarifying that the terms "accident/incident" and "accident or incident reportable under part 225" in § 219.301(b)(2) do not authorize FRA reasonable cause testing after all part 225 reportable accidents/incidents.

As defined in § 225.5, the term "accident/incident" includes employee injuries and illnesses that conform with OSHA's recordkeeping/reporting requirements, but do not otherwise fall within FRA's railroad safety jurisdiction. See Accident Reporting Guide at 1–2 ("FRA's accident/incident reporting regulations that concern railroad occupational casualties should be maintained, to the extent practicable,

in general conformity with OSHA's recordkeeping and reporting regulations").

In its audits, FRA has found numerous instances where this confusion in terms has resulted in a railroad deciding to conduct an FRA reasonable cause test after every reportable injury, even if that injury was unconnected with the movement of on-track equipment (e.g., a slip, trip, or fall that was not related to the movement of on-track equipment where the railroad had no basis to believe that the employee's act or omission contributed to the injury (which is also a violation of existing § 219.301(b)(2)).

Furthermore, the § 225.5 definition of "accident/incident" includes occupational illnesses, such as carpal tunnel syndrome, carbon monoxide poisoning, noise-induced hearing loss, and dust diseases of the lungs, as well as circumstances such as a suicide attempt made by an on-duty employee, that do not authorize FRA reasonable cause testing. See *Accident Reporting Guide* at 33, and at Appendix E-2 through E-5.

To correct this confusion, FRA is specifying in § 219.403(a) that reasonable cause testing is authorized following "train accidents" and "train incidents," as defined by § 219.5, when a responsible railroad supervisor has a reasonable belief, based on specific, articulable facts, that the individual employee's acts or omissions contributed to the occurrence or severity of the train accident or train incident. By using the terms "train accident" and "train incident," FRA is attempting to limit the circumstances under which FRA reasonable cause testing is authorized to a subset of part 225 reportable accident/incidents. (A railroad may, of course, perform a reasonable cause test under its own authority for an accident/incident that does not qualify as a train accident or train incident.)

For consistency with the remainder of this subpart, FRA is also substituting the term "responsible railroad supervisor" for "supervisory employee."

#### Paragraph (b)

Paragraph (b) contains a list of rule violations and other errors that are grounds for FRA reasonable cause testing whenever a regulated employee is directly involved. The rule violations and other errors previously in § 219.301(b)(3) can now be found in paragraphs (b)(1)–(4), (b)(6)–(8), and (b)(10) of this section, without any substantive amendments. Paragraphs (b)(5), (b)(9), (b)(11)–(12), and (b)(13)–(18) contain additional rule violations

and other errors that are new grounds for FRA reasonable cause testing, as discussed below.

#### • Additional Rule Violations or Other Errors Related to Railroad Operating Practices

In paragraphs (b)(5) and (9), FRA is adding two new categories to the rule violations or other errors that are grounds for reasonable cause testing. These additional categories reflect recent amendments to 49 CFR part 218—Railroad Operating Practices.

In 2008, FRA amended part 218 to require railroads to adopt and comply with operating rules regarding shoving and pushing movements and the operation of switches. Many of these operating rule requirements for switches already provided bases for FRA reasonable cause testing, such as "[a]lignment of a switch in violation of a railroad rule, failure to align a switch as required for movement, operation of a switch under a train, or unauthorized running through a switch" and "[e]ntering a crossover before both switches are lined for movement or restoring either switch to normal position before the crossover movement is completed." § 219.301(b)(3)(iv) and (vii). Nevertheless, in paragraph (b)(5), FRA is authorizing reasonable cause testing if a regulated employee fails to restore and secure a main track switch when required.

Although § 218.99 requires a railroad to adopt specific operating rules governing shoving and pushing movements, FRA is authorizing reasonable cause testing only for § 218.99 violations that can pose significant safety concerns, as discussed below. For instance, a railroad is authorized to conduct FRA reasonable cause testing on a regulated employee who fails to provide point protection in accordance with § 218.99(b)(3), but is not authorized to do so if a regulated employee fails to conduct a job briefing.

#### • Additional Rule Violations or Other Errors Related to MOW Employees

Paragraphs (b)(13)–(17) authorize FRA reasonable cause testing for additional rules violations and errors related to the performance of MOW activities: Paragraph (b)(13) authorizes testing for the failure of a machine operator that results in a collision between a roadway maintenance machine and/or other on-track equipment or a regulated employee; paragraph (b)(14) authorizes testing for the failure of a roadway worker-in-charge to notify all affected employees when releasing working limits; paragraph (b)(15) authorizes testing for the failure of a flagman or

watchman/lookout to notify employees of an approaching train or other on-track equipment; paragraph (b)(16) authorizes testing for the failure to ascertain on-track safety before fouling a track; and paragraph (b)(17) authorizes testing for the improper use of individual train detection (ITD) in a manual interlocking or control point.

#### • Additional Rule Violations or Other Errors Related to Covered Service

As proposed, FRA is authorizing reasonable cause testing for three additional rule violations or other errors primarily addressing the actions of covered employees.

First, paragraph (b)(11) authorizes a railroad to conduct FRA reasonable cause testing if a regulated employee has interfered with the normal functioning of any grade crossing signal system or any signal or train control device without first taking measures to provide for the safety of highway traffic or train operations which depend on the normal functioning of such a device (e.g., by temporarily installing a jumper cable and failing to remove it after finishing repairs or testing). This includes the types of unlawful interference described in § 234.209 (grade crossing systems) and § 236.4 (signals).

Second, paragraph (b)(12) authorizes a railroad to conduct FRA reasonable cause testing if a regulated employee has failed to perform required stop-and-flag duties after a malfunction of a grade crossing signal system.

Third, paragraph (b)(18) authorizes a railroad to conduct FRA reasonable cause testing on a regulated employee whose failure to apply three point protection (by fully applying the locomotive and train brakes, centering the reverser, and placing the generator field switch in the off position) results in a reportable injury to a regulated employee.

A contracting company that performs regulated service for a railroad is authorized, but not required, to conduct FRA reasonable cause tests on its regulated employees. Conversely, a railroad is authorized to conduct FRA reasonable cause testing on its contractors when they are performing regulated service on the railroad's behalf.

#### Section 219.405—Documentation Requirements

Although reasonable cause testing remains discretionary, a railroad must create and maintain written documentation of the basis for a reasonable cause test if that test is conducted under FRA authority.

Accordingly, the railroad supervisor who made the determination that reasonable cause exists must promptly document the observations or facts (e.g., the amount of property damage, the rule that was violated, the role of the employee) that were the basis for this determination, although the documentation does not have to be completed before the FRA reasonable cause testing has been conducted.

#### Section 219.407—Prompt Specimen Collection; Time Limitations

This section clarifies that the eight-hour time period for conducting a reasonable cause test runs from the time a railroad supervisor is notified of the occurrence of the train accident, train incident, or rule violation that is the basis for the test.

#### Section 219.409—Limitations on Authority

##### Paragraph (a)

This paragraph contains an amended version of language that was previously in § 219.301(e). As amended, this paragraph states that: (1) If an event qualifies for mandatory PAT testing, a railroad is prohibited from conducting FRA reasonable cause tests in lieu of, or in addition to, the required PAT tests. Second, FRA is removing the word “compulsory,” which misleadingly implies that FRA reasonable cause testing is required, when it is optional but authorized in certain situations. Third, FRA is removing the second sentence of § 219.301(e), which, in part, stated that “breath test authority is authorized in any case where breath test results can be obtained in a timely manner at the scene of an accident and conduct of such tests does not materially impede the collection of specimens under Subpart C of this part.” FRA believes this sentence is confusing because FRA is proposing, in § 219.203(c), to allow only PAT breath alcohol testing, although such testing should be recorded on DOT’s alcohol custody and control form.

##### Paragraph (b)

For reasons similar to those discussed in § 219.211(b), paragraph (b) of this section prohibits a railroad from holding a regulated employee out of service pending the results of an FRA reasonable cause test. A railroad may, however, hold an employee out of service under its own authority.

##### Paragraph (c)

Paragraph (c) requires a supervisor to make a separate reasonable cause determination for each individual in a

train crew, rather than a collective decision to test the crew as a whole.

#### Subpart F—Pre-Employment Tests

##### Section 219.501—Pre-Employment Drug Testing

##### Paragraph (a)

A regulated railroad employee must have a negative Federal pre-employment drug test result for each railroad for which the employee performs regulated service. This requirement does not apply to contractor employees who perform regulated service for the railroad.

##### Paragraph (b)

As proposed, FRA is moving language previously in this paragraph to paragraph (e), where it will be discussed below.

Paragraph (b) now addresses the pre-employment drug testing requirements for contractor employees. In contrast to the pre-employment drug testing requirements for regulated employees discussed in paragraph (a) above, FRA is not requiring a contractor employee who performs regulated service for multiple railroads to have a negative Federal pre-employment drug test result for each railroad. Instead, each railroad only has to verify and document that the contractor employee has a negative Federal pre-employment drug test result on file with the contractor who is his or her direct employer. However, a contractor employee is required to have a new Federal pre-employment drug test if he or she switches direct employers by working for a different contractor who provides regulated service to railroads.

##### Paragraph (c)

A railroad is not required to conduct an FRA pre-employment drug test on an applicant or first-time transfer to regulated service if the railroad has already conducted a pre-employment drug test with a negative test result on the applicant or first-time transfer under the authority of another DOT agency. In most cases, this agency will be FMCSA, because railroads often require signal maintainers and MOW employees to hold a CDL as a condition of their employment, and a negative FMCSA pre-employment drug test result is one of the prerequisites to obtaining a CDL. See 49 CFR 382.301. This amendment increases a railroad’s hiring flexibility by allowing the railroad to transfer a CDL holder to first-time regulated service without having to conduct an FRA pre-employment drug test or having to wait for a negative test result (a railroad could, however, choose to

perform a new pre-employment drug test under its own authority). Since many MOW employees already hold CDLs because their jobs require the operation of railroad commercial motor vehicles, this limited exception will substantially lessen the number of pre-employment drug tests railroads will have to perform after the effective date of this final rule.

This exception applies, however, only when an applicant or first-time transfer’s negative DOT pre-employment drug test result is the result of a test conducted by the railroad itself. In other words, a CDL holder who performs regulated service for multiple railroads must have a separate negative pre-employment drug test result for each railroad. For example, a CDL holder who already has a negative DOT pre-employment drug test for Railroad A must still have a negative FRA pre-employment drug test result for Railroad B before he or she can begin performing regulated service for Railroad B.

##### Paragraph (d)

As proposed, new paragraph (d) specifies that an applicant must withdraw his or her application before the drug testing process begins if the applicant wants to decline a pre-employment drug test and have no record kept of that declination.

##### Paragraph (e)

In new paragraph (e), FRA exempts from pre-employment drug testing: (1) An employee who began performing MOW activities for a railroad before the effective date of this final rule; and (2) an employee who began performing regulated service for a small railroad (as defined in § 219.3(c)) before the effective date of this final rule. Both exemptions apply only so long as the employee continues to work for the same railroad that he or she was working for before the effective date of the final rule.

##### Section 219.502—Pre-Employment Alcohol Testing

This section addresses optional pre-employment alcohol testing.

##### Paragraph (a)(5)

Paragraph (a)(5) prohibits a railroad from permitting a regulated employee with an alcohol concentration of 0.04 or greater from performing regulated service until the employee has completed the return-to-duty process in § 219.104(d).

##### Paragraph (b)

Paragraph (b) of this section (addressing pre-employment alcohol

testing) previously contained language identical to § 219.501(b) (addressing pre-employment drug testing), which provides that, as used in subpart H, the term covered employee includes an applicant for pre-employment testing only. It also provided that no record may be maintained if an applicant declines to be tested and withdraws his or her application for employment. As discussed above in § 219.501(b), FRA has amended the language in § 219.502(b) to clarify that an individual must decline to participate in a pre-employment alcohol test by withdrawing his or her application before the testing process begins. As defined by DOT in § 40.243(a), the testing process begins when an individually wrapped or sealed mouthpiece is selected by the collector or the employee.

#### *Section 219.503—Notification; Records*

The first and second sentences of this section require railroads to provide medical review of pre-employment drug tests and to “notify” an applicant of the “results of the drug and alcohol test” as provided for by subpart H. FRA is amending both of these sentences to clarify that subpart H adopts the requirements found in part 40. FRA is also amending the second sentence to clarify that a railroad must provide written notice to an applicant who has had any type of non-negative FRA test result (*i.e.*, not just a positive, but also an adulteration, substitution, or refusal). A railroad is not required, however, to provide written notification to an applicant who has had a negative FRA pre-employment alcohol or drug test result.

FRA is also amending the third sentence of this section to clarify that a railroad must maintain a record of each application it denies because of the applicant’s non-negative FRA pre-employment test. A railroad must maintain a record for each individual who has had a non-negative test result on a FRA pre-employment test, even if the railroad denied the individual’s application for employment, because an individual who has had such a result must comply with the return-to-service and follow-up testing requirements of part 40 before he or she can begin performing DOT safety-sensitive functions for any employer regulated by a DOT agency. A railroad does not have to maintain a record, however, if an applicant withdraws his or her application to perform regulated service before the testing process begins.

#### *Section 219.505—Non-Negative Tests and Refusals*

Previously, this section prohibited an individual who “refuses” a pre-employment test from performing covered service based upon the application and examination with respect to which such refusal was made. As proposed, FRA has amended this section to specifically prohibit an individual who has refused or who had a non-negative (*i.e.*, a positive, adulterated, or substituted test result) pre-employment test result from performing DOT safety-sensitive functions for any DOT-regulated employer until the individual has completed the Federal return-to-duty process in § 219.104(d). As amended, this section conforms with § 40.25(e), which prohibits an employer who has information that an individual has violated a DOT agency drug or alcohol regulation from using that individual to perform DOT safety-sensitive functions until the employer receives information that the individual has complied with the return-to-duty requirements of part 40 or any DOT agency.

#### **Subpart G—Random Alcohol and Drug Testing Programs**

To achieve deterrence, a random testing program must ensure that each covered employee (including volunteers and probationary employees of a railroad or a contractor to a railroad), believes that he or she is subject to random testing without advance notice each time the employee is on duty and subject to performing covered service.

FRA received no objections to its proposal to subject an employee who performs MOW activities to the same random testing requirements as one who performs covered service. Accordingly, each railroad must submit for FRA approval a random testing plan that ensures each regulated employee believes he or she is subject to random testing without advance warning each time the employee is on-duty and subject to performing regulated service.

As proposed, FRA is revising and expanding subpart G, to clarify and consolidate requirements and to incorporate longstanding published FRA guidance. FRA received no comment on the majority of these changes, which are adopted as proposed without additional discussion.

#### **Subpart H—Drug and Alcohol Testing Procedures**

FRA received no comments on its minor editorial changes to this section, which are adopted as proposed.

#### **Subpart I—Annual Report**

##### *Section 219.800—Annual Reports*

FRA received no comments on its minor editorial changes to this section, which are adopted as proposed.

#### **Subpart J—Recordkeeping Requirements**

##### *Section 219.901—Retention of Alcohol and Drug Testing Records*

FRA received no comments on its proposals to ease recordkeeping burdens by consolidating requirements, removing others, and allowing still others to be maintained electronically. Accordingly, FRA is adopting these proposals without further discussion, except for proposed paragraph (c)(4)(iv), which contained an incorrect reference to prescription drug training records under § 219.103 and FRA has not adopted.

#### **Subpart K—Referral Programs**

For a variety of reasons, commenters found FRA’s proposal to replace its self-referral, co-worker report, and alternative policy requirements with peer support program requirements, to be both confusing and ill-advised. NCRMA and SMART (from this point forward collectively referred to as “Labor,” unless a comment was submitted by only one labor organization), in particular, raised objections and called for clarifications. As Labor noted, the concept of a voluntary peer referral program arose from “Operation Redblock,” a private rail industry initiative to address alcohol abuse. Labor expressed deep misgivings, both that FRA’s proposed peer support programs could harm these existing railroad programs, and that FRA’s proposal to audit each program would invade individual privacy and undermine employee trust in the program. Labor also criticized FRA’s proposal to allow an EAP counselor to function as an alternative to a trained drug and alcohol counselor, because an EAP counselor rarely has specific expertise in abuse and addiction issues. (Typically, an EAP program addresses a broad range of issues, such as marital or financial problems.) Similarly, Labor objected to using peer counselors, noting that a peer is usually a volunteer who provides empathy and advice based on his or her own drug and alcohol problems, without a counseling or medical degree.

The Associations suggested that FRA use the term “peer prevention” instead of “peer support” to emphasize that these programs should be proactive in nature. The Associations also warned

that FRA should audit and release aggregate program data only, because an employee could be discouraged from self-referring if the employee knew that his or her individual data would be subject to FRA examination. Like Labor, the Associations noted that a peer support group is usually composed of selected peers and volunteers rather than medical professionals; the Associations therefore supported allowing an employee who self-refers to have the option of receiving counseling and treatment from a Drug Abuse Counselor (DAC). Overall, the Associations found FRA's proposed subpart K flawed and redundant of the voluntary referral provisions already in § 219.403.

After consideration, FRA agrees that its proposal to mandate the establishment of peer support programs was unnecessary, since privately run railroad programs and FRA's own subpart E policies have both proven effective in identifying and helping employees with drug and alcohol abuse issues. FRA also agrees that its proposed peer support programs could interfere with, or possibly even be detrimental to, existing railroad self-referral programs. Therefore, instead of requiring the adoption of peer prevention programs, FRA is revising and moving its voluntary referral, co-worker report, and alternative policy requirements from subpart E (which has been revised to address reasonable cause testing) to new subpart K.

With the exception of its proposal for non-peer referral programs, which FRA is authorizing but not requiring under this rule, FRA is not adopting its proposal to require peer support programs. To correspond with this decision, FRA is retitling this subpart "Referral Programs" instead of the proposed "Peer Support Programs." As explained in the NPRM, FRA believes subpart E's previous title "Identification of Troubled Employees," to be outdated since the primary purpose of that subpart had always been to evaluate and treat, not merely identify, employees who have substance abuse issues. FRA is also, as proposed, substituting the more commonly used term "program" for "policy."

In addition, FRA is adopting the Associations' recommendation to simplify this rule by requiring all the evaluation, counseling, treatment, and recommendation required by this part to be performed by a DAC. As defined in 49 CFR 242.7, a DAC meets all the credentialing and qualifying requirements of a Substance Abuse Professional (SAP). Title 49 CFR 40.3 defines an SAP A SAP as an individual

who evaluates an employee who has violated a DOT drug and alcohol regulation and makes recommendations concerning education, treatment, follow-up testing, and aftercare. By definition, therefore, a SAP cannot perform a role in a voluntary referral program. In contrast, a DAC can treat and evaluate an employee enrolled in a voluntary referral program, since the DAC's involvement is not triggered by an employee's drug or alcohol violation. With this caveat, a DAC serves the same function in part this part as a SAP does in part 40.

As mentioned above, FRA is adding an option for a "non-peer referral" program, which authorizes, but does not require, a railroad to accept referrals from family members, supervisors, labor representatives, and other individuals who are not co-workers but who have knowledge of an employee's drug abuse problems. FRA received no objections to its proposal of this additional referral program. To accommodate this third program, FRA is retitling its required "co-worker report" program as a "co-worker referral" program so that henceforth these three programs—voluntary, co-worker, and non-peer—will collectively be referred to as "referral programs."

With the addition of the option for a non-peer program, FRA is reprinting requirements formerly found in subpart E, in a format that breaks these requirements down to make them easier to understand and implement. Both partially excepted small railroads and contractors are excluded from subpart K. Class III railroads that do not qualify for the small railroad exception must comply, however.

#### *Section 219.1001—Requirements for Referral Programs*

##### *Paragraph (b)*

This paragraph generally outlines the purposes of mandatory voluntary referral and co-worker referral programs. The descriptions of these programs are reworded from those previously in subpart E, and no substantive changes are intended.

##### *Paragraph (c)*

This paragraph generally outlines the purposes of optional non-peer referral and alternative programs. The description of an alternate program is reworded from the one previously in subpart E, and no substantive change is intended.

##### *Paragraph (c)(1)*

Although FRA is not otherwise adopting its proposal to require "peer

support groups," FRA is authorizing a railroad to establish a "non-peer referral" program if it chooses to do so. A "non-peer" is an individual who is not considered to be an employee's co-worker, such as a trained supervisor, representative of an employee's collective bargaining organization, or family member.

##### *Paragraphs (d)(1), (2), and (5)*

These paragraphs restate general conditions for referral programs previously found in subpart E. No substantive changes are intended.

##### *Paragraphs (d)(3)–(4)*

These paragraphs prohibit referral programs from interfering with the return-to-duty requirements in subpart B and the reasonable suspicion testing requirements in subpart D.

#### *Section 219.1003—Referral Program Conditions*

With the exception of the paragraphs discussed below, the required allowances, conditions, and procedures in this section were previously contained in subpart E.

##### *Paragraph (g)*

As proposed, FRA is removing its previous minimum of 45 days leave of absence to allow the DAC to determine the period of time an employee needs.

##### *Paragraph (h)(3)*

Formerly, only co-worker referrals allowed railroads to condition an employee's return to regulated service upon successful completion of a return-to-service medical evaluation. As proposed, a railroad may impose this condition on self-referrals and non-peer referrals as well.

##### *Paragraph (h)(4)*

As proposed, a railroad must return an employee to regulated service within five working days of a DAC's recommendation that the employee is fit to return.

##### *Paragraph (i)*

As proposed, this paragraph prohibits a person or entity from changing a DAC's evaluation of an employee or recommendation for assistance. Only the DAC who made the initial evaluation may modify that evaluation and any follow-up recommendations based upon new or additional information.

##### *Paragraph (j)*

As proposed, the confidentiality conditions in this paragraph, which had previously applied only to candidates

for locomotive certification and locomotive engineers, have been expanded to cover candidates for conductor certification and conductors. Similarly, these requirements no longer apply only to voluntary referrals; co-worker and non-peer referrals are also covered.

#### Paragraph (k)

As proposed, a regulated employee who enters a co-worker or non-peer referral for a verified violation of § 219.101 or § 219.102 must contact a DAC within a reasonable period of time, as specified by the railroad's programs. If a regulated employee does not contact a DAC within this time period, the railroad may investigate the employee's cooperation and compliance with the referral program.

#### Paragraph (l)

As proposed, paragraph (l) requires a DAC to complete a regulated employee's evaluation within 10 working days of the employee's entering a referral program and contacting the DAC. If more than one evaluation is required, the DAC must complete these evaluations within 20 working days. These time frames, which had previously applied only to co-worker referrals, now apply to voluntary and non-peer referrals as well.

#### Paragraph (m)

As proposed, a referral program may not require follow-up treatment, care, or testing that exceeds 24 months beyond the regulated employee's removal from service, unless the regulated employee had committed a substantiated part 219 violation.

#### Section 219.1005—Optional Provisions

This section describes provisions that a railroad is authorized, but not required to, include in its referral program. The inclusion of any of these provisions may be conditioned on the agreement of an affected labor organization.

Paragraph (a) permits a referral program to waive confidentiality if a regulated employee refuses to cooperate in a course of education, counseling, or treatment recommended by a DAC or if the railroad determines later, after investigation, that a regulated employee was involved in an alcohol or drug-related disciplinary offense growing out of subsequent conduct. This text was previously found in subpart E for voluntary referrals.

Paragraph (a) specifies that nothing in subpart K prevents a railroad or labor organization from adopting, publishing, and implementing referral program policies that offer more favorable

conditions to regulated employees with substance abuse problems, consistent with the railroad's responsibility to prevent violations of §§ 219.101 and 219.102. This language was previously found in subpart E.

Paragraph (b) requires an alternate program to have the concurrence of the recognized representatives of the regulated employees as shown by a collective bargaining agreement or other document describing the class or craft of employees to which the alternate program applies. This agreement must expressly reference subpart K and the intention of the railroad and the employee representatives that the alternate program applies in lieu of the programs required by subpart K. This language is similar to that previously found in subpart E.

Paragraph (c) requires a railroad to submit a copy of the agreement or other document described in paragraph (b), along with a copy of the alternate program described in paragraph (a), to the FRA Drug and Alcohol Program Manager for approval. FRA will review the program to see if it meets the general standards and intent of § 219.1003. If an alternate policy is amended or revoked, the railroad must notify FRA at least 30 days before the amendment or revocation's effective date. This last requirement was previously in subpart E.

Paragraph (d) specifies that § 219.1007 does not excuse a railroad from the requirement to adopt, publish, and implement § 219.1003 programs for any group of regulated employees not covered by an approved alternate program. A virtually identical provision was previously located in subpart E.

Paragraph (e) references § 219.105(c), which specifies that FRA has the authority to audit any railroad alcohol and/or drug use education, prevention, identification, and rehabilitation program (including, but not limited to, alternate referral programs), to ensure that the program is not designed or implemented to circumvent or otherwise undermine Federal requirements.

#### Appendix A

Appendix A to this part contains a schedule of civil penalties for use in enforcing this part's requirements. FRA has revised the penalty schedule to correspond to the restructuring of and addition of new sections to this part. Because such penalty schedules are statements of agency policy, notice and comment are not required before their issuance. See 5 U.S.C. 553(b)(3)(A). Nonetheless, FRA has revised the

penalty schedule consistent with the previous, public schedule.

#### VII. Regulatory Impact and Notices

##### A. Executive Orders 12866 and 13563 and DOT Regulatory Policies and Procedures

This final rule has been evaluated in accordance with existing policies and procedures and determined to be non-significant, under both Executive Orders 12866, and 13563, and DOT policies and procedures. See 44 FR 11034, Feb. 26, 1979. FRA has prepared and placed in the docket (No. FRA-2009-0039) a regulatory impact analysis (RIA) addressing the economic impact of this final rule. Document inspection and copying facilities are available at the DOT Central Docket Management Facility located in Room W12-140 on the Ground level of the West Building, 1200 New Jersey Avenue SE., Washington, DC 20590. Docket material is also available for inspection electronically through the Federal eRulemaking Portal at <http://www.regulations.gov>. As part of the RIA, FRA has assessed quantitative measurements of the cost and benefit streams expected to result from implementation of this final rule. Overall, the final rule will result in safety benefits and potential business benefits for the railroad industry. It will also, however, generate an additional burden on railroads and railroad contractors, mainly due to the expenses associated with increased drug and alcohol testing and program administration, particularly regarding MOW employees.

The costs will primarily be derived from implementation of the statutory mandate to expand the scope of part 219 to cover MOW employees. The benefits will primarily accrue from the expected injury, fatality, and property damage avoidance resulting from the expansion of part 219 to cover MOW employees, as well as the PAT testing threshold increase.

Table 1 summarizes the quantified costs and benefits expected to accrue from implementation of the final rule over a 20-year period. It presents costs associated with the various types of drug and alcohol testing in the final rule and details the statutory costs (those required by the RSIA mandate to expand part 219 to MOW employees), discretionary costs (those that are due to the non-RSIA requirements), and the total of the two types of costs. Table 1 also presents the quantified benefits expected to accrue over a 20-year period and details the statutory benefits (those that result from implementation of the

RSIA mandate to expand part 219 to MOW employees) and the discretionary benefits (those that are due to the non-RSIA requirements). The benefits include not only injury, fatality, and property damage avoidance (accident reduction benefits), but also the savings, or benefit, that will accrue from fewer

PAT tests being conducted due to FRA's increasing the property damage threshold for major train accidents.

For the 20-year period analyzed, the estimated quantified cost that will be imposed on industry totals approximately \$24.3 million (undiscounted), with discounted costs totaling \$14.2 million (Present Value

(PV), 7 percent) and \$18.9 million (PV, 3 percent). The estimated quantified benefits for this 20-year period total approximately \$115.8 million (undiscounted), with discounted benefits totaling \$57.4 million (PV, 7 percent) and \$83.6 million (PV, 3 percent).

	Statutory	Discretionary	Total
<b>Costs (20 year)</b>			
PAT Testing—Adding MOW .....	\$52,000		\$52,000
PAT Testing—Impact Def + Xing .....		\$241,974	241,974
Reasonable Suspicion Testing .....	842,398		842,398
Pre-Employment Testing—Adding MOW .....	673,897		673,897
Pre-Employment Testing—Sm, RR .....		29,904	29,904
Random Testing .....	20,863,074		20,863,074
Annual Reporting .....	160,911		160,911
Recordkeeping Requirement .....	1,397,840		1,397,840
<b>Costs Subtotal .....</b>	<b>23,990,120</b>	<b>271,878</b>	<b>24,261,998</b>
<b>Benefits (20 year)</b>			
Accident Reduction .....	115,369,281		115,369,281
PAT Testing Threshold Reduction .....		388,295	388,295
<b>Benefits Subtotal .....</b>	<b>115,369,281</b>	<b>388,295</b>	<b>115,757,576</b>
<b>Net Benefits .....</b>	<b>91,379,161</b>	<b>116,417</b>	<b>91,495,578</b>

Overall, the RIA demonstrates that the costs, both statutory and discretionary, associated with implementing the final rule are expected to be outweighed by the benefits resulting from reduced injuries, fatalities, and property damage attributable to drug and alcohol misuse by regulated employees. FRA has also found that the costs will be outweighed by injury and fatality mitigation alone, and benefits will further accrue due to reduced property damage. Specifically, the statutory requirements incur a discounted 20-year cost of \$14.1 million (PV, 7 percent) and \$18.6 million (PV, 3 percent). The discretionary portion of the costs to incur over the next 20-years is \$143,665 (PV, 7 percent) and \$202,023 (PV, 3 percent), with discounted 20-year benefits of \$205,574 (PV, 7 percent) and \$288,776 (PV, 3 percent).

#### *B. Regulatory Flexibility Act and Executive Order 13272; Initial Regulatory Flexibility Assessment*

FRA developed the final rule in accordance with Executive Order 13272 ("Proper Consideration of Small Entities in Agency Rulemaking") and DOT's procedures and policies to promote compliance with the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*) to ensure potential impacts of rules on small entities are properly considered. Furthermore, FRA invited all interested

parties to submit data and information regarding the Initial Regulatory Flexibility Analysis (IRFA) and did receive two comments about it during the public comment period.

The Regulatory Flexibility Act requires an agency to review regulations to assess their impact on small entities. An agency must conduct a regulatory flexibility analysis unless it determines and certifies that a rule is not expected to have a significant economic impact on a substantial number of small entities.

The final rule will apply to all employees of railroad carriers, contractors, or subcontractors to railroad carriers who perform maintenance-of-way activities. Based on information available, FRA estimates that less than 14 percent of the total railroad costs associated with implementing the final rule will be borne by small entities. This percentage is based directly upon the percentage of affected employees estimated to be working for small entities. Small entities were exempt from certain requirements of the prior rule, continue to be exempt from certain requirements of this final rule, and otherwise bear proportional burden for the requirements based upon the number of regulated employees each entity employs. Small entities will not incur greater costs per employee than the larger entities.

FRA generally uses conservative assumptions in its costing of rules; based on those assumptions, FRA estimates that the cost for the final rule will be approximately \$24 million for the next 20 years for the railroad industry. There are 695 railroads that are considered small for purposes of this analysis, and together they comprise approximately 93 percent of the railroads impacted directly by this final regulation. The 14 percent of the burden will be spread amongst the 695 entities, based proportionally upon the number of employees each has. Thus, although a substantial number of small entities in this sector will likely be impacted, the economic impact on them will likely be insignificant. This RFA is not intended to be a stand-alone document. To get a better understanding of the total costs for the railroad industry (which form the basis for the estimates in this RFA), or more cost detail on any specific requirement, please see the RIA that FRA has placed in the docket for this rulemaking.

#### **1. Description of Regulated Entities**

The "universe" of the entities considered in an RFA generally includes only those small entities that can reasonably expect to be directly regulated by this final action. The types of small entities potentially affected by this final rule are: (1) Small railroads;

(2) small contractors that engage in MOW operations; and (3) small contractors that provide HOS services (such as dispatching, signal, and train and engine services).

“Small entity” is defined in 5 U.S.C. 601(3) as having the same meaning as “small business concern” under Section 3 of the Small Business Act. This includes any small business concern that is independently owned and operated, and is not dominant in its field of operation. Section 601(4) likewise includes within the definition of “small entities” not-for-profit enterprises that are independently owned and operated, and are not dominant in their field of operation. The U.S. Small Business Administration (SBA) stipulates in its size standards that the largest a railroad business firm that is “for profit” may be and still be classified as a “small entity” is 1,500 employees for “Line Haul Operating Railroads” and 500 employees for “Switching and Terminal Establishments.” Additionally, 5 U.S.C. 601(5) defines as “small entities” governments of cities, counties, towns, townships, villages, school districts, or special districts with populations less than 50,000.

Federal agencies may adopt their own size standards for small entities in consultation with SBA and in conjunction with public comment. Pursuant to that authority, FRA has published a final statement of agency policy that formally establishes “small entities” or “small businesses” as being railroads, contractors, and hazardous materials shippers that meet the revenue requirements of a Class III railroad as set forth in 49 CFR 1201.1–1, which is \$20 million or less in inflation-adjusted annual revenues, and commuter railroads or small governmental jurisdictions that serve populations of 50,000 or less. (See 68 FR 24891; May 9, 2003, codified at appendix C to 49 CFR part 209.) The \$20 million limit is based on the STB’s revenue threshold for a Class III railroad. Railroad revenue is adjusted for inflation by applying a revenue deflator formula in accordance with 49 CFR 1201.1–1. FRA is using this definition for this rulemaking.

An estimated 1,095 entities will be affected by the rule. FRA estimates that there are approximately 400 MOW contractor companies and 695 small railroads on the general system. FRA estimates that 86 percent of employees that will be regulated under this rule work for these 74 railroads and contractors. Most railroads must comply with all provisions of part 219. However, as previously indicated, FRA has a “small railroad” definition

associated with part 219 that limits compliance requirements for railroads with 15 HOS employees or less and no joint operations to reduce burden on the smallest of railroads.

There are approximately 695 small railroads (as defined by revenue size). Class II and Class III railroads do not report to the STB, and although the number of Class II railroads is known, the precise number of Class III railroads is difficult to ascertain due to conflicting definitions, conglomerates, and even seasonal operations. Potentially, all small railroads could be impacted by this final regulation. Part 219 has a small railroad exception for all railroads with 15 or fewer covered employees, except when these railroads have joint operations with another railroad, therefore increasing risk. Thus a railroad with such characteristics shall be called a “partially excepted small railroad” in this analysis, and is a subsection of the “small entities” as defined by the STB and FRA, addressed above. Currently, there are 288 partially excepted small railroads and, as FRA is not amending to the substantive criteria of classification, there should be no change in the number of partially excepted small railroads associated with the final rule.

All commuter railroad operations in the United States are part of larger governmental entities whose jurisdictions exceed 50,000 in population.

As mentioned, all railroads must comply with all or limited subparts of part 219. For partially excepted small railroads, per FRA’s definition, the significant burden involves the costs of adding MOW employees to the existing testing programs, and adding reasonable suspicion and pre-employment drug testing (which they have not needed to comply with).

A significant portion of the MOW industry consists of contractors. FRA has determined that risk lies as heavily with contractors as with railroad employees, so contractors and subcontractors will be subject to the same provisions of part 219 as the railroads for which they do contract work. Whether contractors must comply with all or part of the provisions of part 219 will depend on the size of the largest railroad (assumed to have the largest risk) for which the contractor works.

FRA discussed with industry representatives how to ascertain the number of contractors that will be involved with this rulemaking. FRA is aware that some railroads hire contractors to conduct some or all of the MOW worker functions on their

railroads. Generally, the costs for the burdens associated with this rulemaking will get passed on from the contractor to the pertinent railroad. FRA has determined that there are approximately 400 MOW-related contractor companies who will be covered by the final rule. Of those, 370 are considered to be a “small entity.” FRA has sought estimates of the number of contractors that may be fully compliant and how many may be partially excepted, depending on the size of the largest railroad for which they work.

FRA expects that some HOS small contractors will be impacted based upon the compliance requirements for part 219 small railroads to now include reasonable suspicion testing and pre-employment drug testing. This burden is estimated to be minimal, as reasonable suspicion tests occur extremely infrequently on small railroads (average less than one time per year for all small railroads), and pre-employment drug tests, the least costly of all tests, will only be required for new employees.

No other small businesses (non-railroad related) are expected to be negatively impacted significantly by this rulemaking. Conversely, this final regulation will bring business to consortiums, collectors, testing labs, and other companies involved in the drug and alcohol program business.

Expanding the program to cover MOW employees will only have a small effect in terms of testing burden for railroads, based upon the cost of pre-employment drug testing for new employees and the testing of MOW employees. FRA estimates that 90 percent of small railroads already conduct pre-employment drug testing under their own company authority. Many of these contractors have employees with commercial drivers’ licenses (CDLs), and therefore fall under the drug and alcohol program requirements of the Federal Motor Carrier Safety Administration (FMCSA). Therefore, an estimated 40 percent of MOW contracted employees already participate in a DOT drug and alcohol testing program. Furthermore, FRA estimates that as many as 50–75 percent of all MOW contractor companies have some form of a drug and alcohol testing program, and that around 25 percent of these companies currently complete random testing (the most burdensome type of testing).

Consortia are companies that provide testing, random selection, collection, policy development, and training services to help employers stay compliant. Consortia alleviate much of the administrative burden of a testing

program and negotiate volume discounts on behalf of their clients. It is likely that all part 219 small railroads already have a compliant testing program for employees that have been covered under the regulation. It should also be noted that approximately 125 of the small railroads that will be impacted are subsidiaries of large short line holding companies with resources comparable to larger railroads. Additionally, many small railroads are members of ASLRRA, which was consulted throughout the development of this regulation. ASLRRA has helped create a consortium for its members in the past, and FRA will work to ensure that small entities, as well as large, have the ability to adhere to the regulation as easily as possible. The consortium market will be affected in a positive manner due to new business from this rulemaking; this is a secondary benefit not discussed in this RFA.

#### Significant Economic Impact Criteria

Previously, FRA sampled small railroads and found that revenue averaged approximately \$4.7 million (not discounted) in 2006. One percent of

that average annual revenue per small railroad is \$47,000. FRA realizes that some railroads will have lower revenue than \$4.7 million. However, FRA estimates that small railroads will not have any additional expenses over the next ten years to comply with the new requirements in this final regulation. Based on this, FRA concludes that the expected burden of this final rule will not have a significant impact on the competitive position of small entities, or on the small entity segment of the railroad industry as a whole.

#### Substantial Number Criteria

This final rule will likely burden all small railroads that are not exempt from its scope or application (see 49 CFR 219.3). Thus, as noted above this final rule will impact a substantial number of small railroads.

#### 2. Certification

Pursuant to the Regulatory Flexibility Act (5 U.S.C. 605(b)), FRA certifies that this final rule will not have a significant economic impact on a substantial number of small entities. FRA invited all interested parties to submit data and

information regarding the potential economic impact that will result from adoption of the proposals in the NPRM. FRA did receive comments concerning the initial regulatory flexibility analysis in the public comment process. The final rule addresses these concerns by continuing FRA's longstanding approach of counting only a railroad's covered employees for purposes of determining whether the railroad qualifies for the small railroad exception (the railroad also cannot participate in any joint operations) because FRA believes this is the best measure of the risks posed by the railroad's operations. FRA received no objections to this proposal and adopted in its final rule.

#### C. Paperwork Reduction Act

FRA is submitting the information collection requirements in this final rule for review and approval to the Office of Management and Budget (OMB) under the Paperwork Reduction Act of 1995, 44 U.S.C. 3501 *et seq.* The sections that contain the new and current information collection requirements and the estimated time to fulfill each requirement are as follows:

CFR Section	Respondent universe	Total annual responses	Average time per response	Total annual burden hours
219.4—Petition for Recognition of a Foreign Railroad's Workplace Testing Program.	2 Railroads .....	2 petitions .....	40 hours .....	80
219.7—Waivers .....	722 railroads + 400 MOW contractors.	4 waivers .....	2 hours .....	8

All estimates include the time for reviewing instructions; searching existing data sources; gathering or maintaining the needed data; and reviewing the information. For information or a copy of the paperwork package submitted to OMB, contact Mr. Robert Brogan, FRA Office of Railroad Safety, Information Collection Clearance Officer, at 202-493-6292, or Ms. Kim Toone, FRA Office of Information Technology, Information Clearance Officer, at 202-493-6132.

Organizations and individuals desiring to submit comments on the collection of information requirements should send them directly to the Office of Management and Budget, Office of Information and Regulatory Affairs, Washington, DC 20503, Attention: FRA Desk Officer. Comments may also be sent via email to the Office of Management and Budget at the following address: [oira\\_submissions@omb.eop.gov](mailto:oira_submissions@omb.eop.gov).

OMB is required to make a decision concerning the collection of information requirements contained in this final rule between 30 and 60 days after publication of this document in the **Federal Register**. Therefore, a comment to OMB is best assured of having its full effect if OMB receives it within 30 days of publication.

FRA cannot impose a penalty on persons for violating information collection requirements which do not display a current OMB control number, if required. FRA intends to obtain current OMB control numbers for any new information collection requirements resulting from this rulemaking action before the effective date of the final rule. The OMB control number, when assigned, will be announced by separate notice in the **Federal Register**.

#### D. Federalism Implications

Executive Order 13132, "Federalism" (64 FR 43255, Aug. 4, 1999), requires FRA to develop an accountable process to ensure "meaningful and timely input by State and local officials in the development of regulatory policies that have federalism implications." "Policies that have federalism implications" are defined in the Executive Order to include regulations that have "substantial direct effects on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government." Under Executive Order 13132, the agency may not issue a regulation with federalism implications that imposes substantial direct compliance costs and that is not

required by statute, unless the Federal government provides the funds necessary to pay the direct compliance costs incurred by State and local governments, or the agency consults with State and local government officials early in the process of developing the regulation. Where a regulation has federalism implications and preempts State law, the agency seeks to consult with State and local officials in the process of developing the regulation.

This final rule has been analyzed in accordance with the principles and criteria contained in Executive Order 13132. FRA has determined that the rule will not have substantial direct effects on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government. In addition, FRA has determined that this rule will not impose substantial direct compliance costs on State and local governments. Therefore, the consultation and funding requirements of Executive Order 13132 do not apply.

This rule complies with a statutory mandate and will not have a substantial effect on the States, on the relationship between the Federal government and the States, or on the distribution of power and responsibilities among the various levels of government. In addition, this rule will not have any federalism implications that impose substantial direct compliance costs on State and local governments.

However, FRA notes that this part could have preemptive effect by the operation of law under a provision of the former Federal Railroad Safety Act of 1970, repealed and codified at 49 U.S.C. 20106 (Sec. 20106). Sec. 20106 provides that States may not adopt or continue in effect any law, regulation, or order related to railroad safety or security that covers the subject matter of a regulation prescribed or order issued by the Secretary of Transportation (with respect to railroad safety matters) or the Secretary of Homeland Security (with respect to railroad security matters), except when the State law, regulation, or order qualifies under the "essentially local safety or security hazard" exception to Sec. 20106.

In sum, FRA has analyzed this rule in accordance with the principles and criteria contained in Executive Order 13132. As explained above, FRA has determined that this rule has no federalism implications, other than the possible preemption of State laws under 49 U.S.C. 20106 and 20119. Accordingly, FRA has determined that preparation of a federalism summary

impact statement for this rule is not required.

#### E. Environmental Impact

FRA has evaluated this final rule in accordance with the National Environmental Policy Act (NEPA; 42 U.S.C. 4321 *et seq.*), other environmental statutes, related regulatory requirements, and its "Procedures for Considering Environmental Impacts" (FRA's Procedures) (64 FR 28545, May 26, 1999). FRA has determined that this final rule is categorically excluded from detailed environmental review pursuant to section 4(c)(20) of FRA's NEPA Procedures, "Promulgation of railroad safety rules and policy statements that do not result in significantly increased emissions of air or water pollutants or noise or increased traffic congestion in any mode of transportation." See 64 FR 28547, May 26, 1999. Categorical exclusions (CEs) are actions identified in an agency's NEPA implementing procedures that do not normally have a significant impact on the environment and therefore do not require either an environmental assessment (EA) or environmental impact statement (EIS). See 40 CFR 1508.4.

In analyzing the applicability of a CE, the agency must also consider whether extraordinary circumstances are present that would warrant a more detailed environmental review through the preparation of an EA or EIS. *Id.* In accordance with section 4(c) and (e) of FRA's Procedures, the agency has further concluded that no extraordinary circumstances exist with respect to this regulation that might trigger the need for a more detailed environmental review. The purpose of this rulemaking is to expand the scope of FRA's drug and alcohol regulations to cover MOW workers as per Congress' mandate in the RSIA. Specifically, the rule adopts part 214's definition of "Roadway Worker" to define "MOW employee" under part 214, contains a revised version of the troubled employee identification requirements, and updates and restructures the rule to make it more user-friendly. FRA does not anticipate any environmental impacts from this or any other requirement of the final rule. FRA also finds that there are no extraordinary circumstances present in connection with this final rule.

#### F. Executive Order 12898 (Environmental Justice)

Executive Order 12898, Federal Actions to Address Environmental Justice in Minority Populations and Low-Income Populations, and DOT Order 5610.2(a) (91 FR 27534, May 10,

2012) require DOT agencies to achieve environmental justice as part of their mission by identifying and addressing, as appropriate, disproportionately high and adverse human health or environmental effects, including interrelated social and economic effects, of their programs, policies, and activities on minority populations and low-income populations. The DOT Order instructs DOT agencies to address compliance with Executive Order 12898 and requirements within the DOT Order in rulemaking activities, as appropriate. FRA has evaluated this final rule under Executive Order 12898 and the DOT Order and determined it will not cause disproportionately high and adverse human health and environmental effects on minority populations or low-income populations.

#### *G. Executive Order 13175 (Tribal Consultation)*

FRA has evaluated this final rule in accordance with the principles and criteria contained in Executive Order 13175, Consultation and Coordination with Indian Tribal Governments, dated November 6, 2000. The final rule would not have a substantial direct effect on one or more Indian tribes, would not impose substantial direct compliance costs on Indian tribal governments, and would not preempt tribal laws. Therefore, the funding and consultation requirements of Executive Order 13175 do not apply, and a tribal summary impact statement is not required.

#### *H. International Trade Impact Assessment*

The Trade Agreement Act of 1979 prohibits Federal agencies from engaging in any standards or related activities that create unnecessary obstacles to foreign commerce of the United States. Legitimate domestic objectives, such as safety, are not considered unnecessary obstacles. The statute also requires consideration of international standards and where appropriate, that they be the basis for U.S. standards.

This rulemaking is purely domestic in nature and is not expected to affect trade opportunities for U.S. firms doing business overseas or for foreign firms doing business in the United States.

#### *I. Unfunded Mandates Reform Act of 1995*

Pursuant to Section 201 of the Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4, 2 U.S.C. 1531), each Federal agency “shall, unless otherwise prohibited by law, assess the effects of Federal regulatory actions on State, local, and tribal governments, and the

private sector (other than to the extent that such regulations incorporate requirements specifically set forth in law).” Section 202 of the Act (2 U.S.C. 1532) further requires that “before promulgating any general notice of proposed rulemaking that is likely to result in the promulgation of any rule that includes any Federal mandate that may result in expenditure by State, local, and tribal governments, in the aggregate, or by the private sector, of \$100,000,000 or more (adjusted annually for inflation) in any one year, and before promulgating any final rule for which a general notice of proposed rulemaking was published, the agency shall prepare a written statement” detailing the effect on State, local, and tribal governments and the private sector. This rule will not result in the expenditure of more than \$100,000,000 (as adjusted annually for inflation) by the public sector in any one year, and thus preparation of such a statement is not required.

#### *J. Energy Impact*

Executive Order 13211 requires Federal agencies to prepare a Statement of Energy Effects for any “significant energy action.” 66 FR 28355 (May 22, 2001). Under the Executive Order, a “significant energy action” is defined as any action by an agency (normally published in the **Federal Register**) that promulgates or is expected to lead to the promulgation of a final rule or regulation, including notices of inquiry, advance notices of proposed rulemaking, and notices of proposed rulemaking, that: (1)(i) Is a significant regulatory action under Executive Order 12866 or any successor order; and (ii) is likely to have a significant adverse effect on the supply, distribution, or use of energy; or (2) is designated by the Administrator of the Office of Information and Regulatory Affairs as a significant energy action. FRA has evaluated this rule in accordance with Executive Order 13211, and determined that it will not have a significant adverse effect on the supply, distribution, or use of energy. Consequently, FRA has determined that this regulatory action is not a “significant energy action” within the meaning of Executive Order 13211.

#### *K. Privacy Act Information*

Anyone is able to search the electronic form of any written communications and comments received into any of our dockets by the name of the individual submitting the comment (or signing the document, if submitted on behalf of an association, business, labor union, etc.). See <http://www.regulations.gov/#!privacyNotice>

for the privacy notice of [www.regulations.gov](http://www.regulations.gov) or interested parties may review DOT’s complete Privacy Act Statement in the **Federal Register** published on April 11, 2000 (65 FR 19477). In accordance with 5 U.S.C. 553(c), DOT solicits comments from the public to better inform its rulemaking process. DOT posts these comments, without edit, including any personal information the commenter provides, to [www.regulations.gov](http://www.regulations.gov), as described in the system of records notice (DOT/ALL–14 FDMS), which can be reviewed at [www.dot.gov/privacy](http://www.dot.gov/privacy).

#### **List of Subjects in 49 CFR Part 219**

Alcohol abuse, Drug abuse, Drug testing, Penalties, Railroad safety, Reporting and recordkeeping requirements, Safety, Transportation.

#### **The Rule**

For the reasons stated above, FRA amends part 219 as follows:

#### **PART 219—CONTROL OF ALCOHOL AND DRUG USE**

- 1. The authority citation for part 219 is revised to read as follows:

**Authority:** 49 U.S.C. 20103, 20107, 20140, 21301, 21304, 21311; 28 U.S.C. 2461, note; Sec. 412, Div. A, Pub. L. 110–432, 122 Stat. 4889 (49 U.S.C. 20140, note); and 49 CFR 1.89.

#### **Subpart A—General**

- 2. Revise § 219.1(a) to read as follows:

##### **§ 219.1 Purpose and scope.**

(a) The purpose of this part is to prevent accidents and casualties in railroad operations that result from impairment of employees by alcohol or drugs.

\* \* \* \* \*

- 3. Revise § 219.3 to read as follows:

##### **§ 219.3 Application.**

(a) *General.* This part applies to all railroads and contractors, except as provided in paragraphs (b), (c), and (d) of this section, and except for:

(1) Railroads that operate only on track inside an installation that is not part of the general railroad system of transportation (*i.e.*, plant railroads, as defined in § 219.5);

(2) Tourist, scenic, historic, or excursion operations that are not part of the general railroad system of transportation, as defined in § 219.5; or

(3) Rapid transit operations in an urban area that are not connected to the general railroad system of transportation.

(b) *Annual report requirements.* (1) Subpart I of this part does not apply to

any domestic or foreign railroad that has fewer than 400,000 total annual employee work hours, including hours worked by all employees of the railroad, regardless of occupation, not only while in the United States, but also while outside the United States.

(2) Subpart I of this part does not apply to any contractor that performs regulated service exclusively for railroads with fewer than 400,000 total annual employee work hours, including hours worked by all employees of the railroad, regardless of occupation, not only while in the United States, but also while outside the United States.

(3) When a contractor performs regulated service for at least one railroad with fewer than 400,000 total annual employee hours, including hours worked by all employees of the railroad, regardless of occupation, not only while in the United States, but also while outside the United States, subpart I of this part applies as follows:

(i) A railroad with more than 400,000 total annual employee work hours must comply with subpart I regarding any contractor employees it integrates into its own alcohol and drug testing program under this part; and

(ii) If a contractor establishes its own independent alcohol and drug testing program that meets the requirements of this part and is acceptable to the railroad, the contractor must comply with subpart I if it has 200 or more regulated employees.

(c) *Small railroad exception.* (1) Subparts E and G of this part do not apply to small railroads, and a small railroad may not perform the Federal alcohol and drug testing authorized by these subparts. For purposes of this part, a small railroad means a railroad that:

(i) Has a total of 15 or fewer employees who are covered by the hours of service laws at 49 U.S.C. 21103, 21104, or 21105, or who would be subject to the hours of service laws at 49 U.S.C. 21103, 21104, or 21105 if their services were performed in the United States; and

(ii) Does not have joint operations, as defined in § 219.5, with another railroad that operates in the United States, except as necessary for purposes of interchange.

(2) An employee performing only MOW activities, as defined in § 219.5, does not count towards a railroad's total number of covered employees for the purpose of determining whether it qualifies for the small railroad exception.

(3) A contractor performing MOW activities exclusively for small railroads also qualifies for the small railroad exception (*i.e.*, is excepted from the

requirements of subparts E and G of this part). A contractor is not excepted if it performs MOW activities for at least one or more railroads that does not qualify for the small railroad exception under this section.

(4) If a contractor is subject to all of part 219 of this chapter because it performs regulated service for multiple railroads, not all of which qualify for the small railroad exception, the responsibility for ensuring that the contractor complies with subparts E and G of this part is shared between the contractor and any railroad using the contractor that does not qualify for the small railroad exception.

(d) *Foreign railroad.* (1) This part does not apply to the operations of a foreign railroad that take place outside the United States. A foreign railroad is required to conduct post-accident toxicological testing or reasonable suspicion testing only for operations that occur within the United States.

(2) Subparts F, G, and K of this part do not apply to an employee of a foreign railroad whose primary reporting point is outside the United States if that employee is:

(i) Performing train or dispatching service on that portion of a rail line in the United States extending up to 10 route miles from the point that the line crosses into the United States from Canada or Mexico; or

(ii) Performing signal service in the United States.

■ 4. In § 219.4, revise paragraphs (a)(1), (b)(1), and (b)(2) to read as follows:

**§ 219.4 Recognition of a foreign railroad's workplace testing program.**

(a) \* \* \*

(1) To be so considered, the petition must document that the foreign railroad's workplace testing program contains equivalents to subparts B, F, G, and K of this part:

\* \* \* \* \*

(b) \* \* \*

(1) Upon FRA's recognition of a foreign railroad's workplace alcohol and drug use program as compatible with the return-to-service requirements in subpart B of this part and the requirements of subparts F, G, and K of this part, the foreign railroad must comply with either the specified provisions of § 219.4 or with the standards of its recognized program, and any imposed conditions, with respect to its employees whose primary reporting point is outside the United States and who perform train or dispatching service in the United States. The foreign railroad must also, with respect to its final applicants for, or its employees seeking to transfer for the first time to,

duties involving such train or dispatching service in the United States, comply with either subpart F of this part or the standards of its recognized program.

(2) The foreign railroad must comply with subparts A (general), B (prohibitions, other than the return-to-service provisions in paragraph (d) of this section), C (post-accident toxicological testing), D (reasonable suspicion testing), I (annual report requirements), and J (recordkeeping requirements) of this part. Drug or alcohol testing required by these subparts (except for post-accident toxicological testing required by subpart C) must be conducted in compliance with all applicable provisions of the DOT Procedures for Workplace Drug and Alcohol Testing Programs (part 40 of this title).

\* \* \* \* \*

■ 5. Section 219.5 is amended by:

■ a. Revising the introductory text;

■ b. Adding new definitions of "Administrator", "Associate Administrator", "category of regulated employee", and "contractor" in alphabetical order;

■ c. Revising the definitions of "covered employee" and "covered service";

■ d. Adding new definitions of "DOT, The Department, or DOT agency", "DOT-regulated employee", "DOT safety-sensitive duties or DOT safety-sensitive functions", "Drug and Alcohol Counselor or DAC," "employee", "evacuation", "flagman or flagger" and "fouling a track" in alphabetical order;

■ e. Revising the definition of "FRA representative";

■ f. Removing the definition of "general railroad system of transportation";

■ g. Adding new definitions of "highway-rail grade crossing" and "highway-rail grade crossing accident/incident" in alphabetical order;

■ h. Revising the definition of "impact accident";

■ i. Adding new definitions of "joint operations" and "maintenance-of-way employee or MOW employee" in alphabetical order;

■ j. Revising the definition of "medical facility";

■ k. Adding new definitions of "non-peer", "on-track or fouling equipment", "other impact accident", "person", and "plant railroad" in alphabetical order;

■ l. Revising the definition of "railroad property damage or damage to railroad property";

■ m. Adding new definitions of "raking collision", "regulated employee", "regulated service", "responsible railroad supervisor", "side collision", and "tourist, scenic, historic, or

excursion operations that are not part of the general railroad system of transportation” in alphabetical order;  
 ■ n. Removing the definition of “train”;  
 ■ o. Revising the definitions of “train accident” and “train incident”; and  
 ■ p. Adding a new definition of “watchman/lookout” in alphabetical order.

The revisions and additions read as follows:

#### § 219.5 Definitions.

As used in this part only—

\* \* \* \* \*

*Administrator* means the Administrator of the Federal Railroad Administration or the Administrator's delegate.

*Associate Administrator* means the Associate Administrator for Railroad Safety, Federal Railroad Administration, or the Associate Administrator's delegate.

*Category of regulated employee* means a broad class of either covered service or maintenance-of-way employees (as defined in this section). For the purpose of determining random testing rates under § 219.625, if an individual performs both covered service and maintenance-of-way activities, he or she belongs in the category of regulated employee that corresponds with the type of regulated service comprising more than 50 percent of his or her regulated service.

\* \* \* \* \*

*Contractor* means a contractor or subcontractor performing functions for a railroad.

\* \* \* \* \*

*Covered employee* means an employee (as defined in this section to include an employee, volunteer, or probationary employee performing activities for a railroad or a contractor to a railroad) who is performing covered service under the hours of service laws at 49 U.S.C. 21101, 21104, or 21105 or who is subject to performing such covered service, regardless of whether the person has performed or is currently performing covered service. (An employee is not a “covered employee” under this definition exclusively because he or she is an employee for purposes of 49 U.S.C. 21106.) For the purposes of pre-employment testing only, the term “covered employee” includes a person applying to perform covered service in the United States.

*Covered service* means service in the United States as a train employee, a dispatching service employee, or a signal employee, as those terms are defined at 49 U.S.C. 21101, but does not include any period the employee is

relieved of all responsibilities and is free to come and go without restriction.

\* \* \* \* \*

*DOT, The Department, or DOT agency* means all DOT agencies, including, but not limited to, the Federal Aviation Administration (FAA), the Federal Railroad Administration (FRA), the Federal Motor Carrier Safety Administration (FMCSA), the Federal Transit Administration (FTA), the National Highway Traffic Safety Administration (NHTSA), the Pipeline and Hazardous Materials Safety Administration (PHMSA), the United States Coast Guard (USCG) (for purposes of part 40 coverage only), and the Office of the Secretary (OST). These terms include any designee of a DOT agency.

*DOT-regulated employee* means any person who is designated in a DOT agency regulation as subject to drug testing and/or alcohol testing. The term includes individuals currently performing DOT safety-sensitive functions designated in DOT agency regulations and applicants for employment subject to pre-employment testing. For purposes of drug testing conducted under the provisions of 49 CFR part 40, the term employee has the same meaning as the term “donor” as found on the Custody and Control Form and related guidance materials produced by the Department of Health and Human Services.

*DOT safety-sensitive duties or DOT-safety sensitive functions* means functions or duties designated by a DOT agency, the performance of which makes an individual subject to the drug testing and/or alcohol testing requirements of that DOT agency. For purposes of this part, regulated service has been designated by FRA as a DOT safety-sensitive duty or function.

\* \* \* \* \*

*Drug and Alcohol Counselor or DAC* means a person who meets the credentialing and qualification requirements described in § 242.7 of this chapter.

*Employee* means any individual (including a volunteer or a probationary employee) performing activities for a railroad or a contractor to a railroad.

*Evacuation* means the mandatory or voluntary relocation of at least one person who is not a railroad employee for the purpose of avoiding exposure to a hazardous material release. It does not include the closure of public transportation roadways for the purpose of containing a hazardous material release, unless the closure is accompanied by an evacuation order.

*Flagman or Flagger* means any person designated by the railroad to direct or

restrict the movement of trains past a point on a track to provide on-track safety for maintenance-of-way employees, while engaged solely in performing that function.

\* \* \* \* \*

*Fouling a track* means the placement of an individual or an item of equipment in such proximity to a track that the individual or equipment could be struck by a moving train or on-track equipment, or in any case is within four feet of the field side of the near running rail.

\* \* \* \* \*

*FRA representative* means the Associate Administrator for Railroad Safety of FRA and staff, the Associate Administrator's delegate (including a qualified State inspector acting under part 212 of this chapter), the Chief Counsel of FRA, the Chief Counsel's delegate, or FRA's Drug and Alcohol Program oversight contractor.

\* \* \* \* \*

*Highway-rail grade crossing* means:

(1) A location where a public highway, road, or street, or a private roadway, including associated sidewalks, crosses one or more railroad tracks at grade; or

(2) A location where a pathway explicitly authorized by a public authority or a railroad carrier that is dedicated for the use of non-vehicular traffic, including pedestrians, bicyclists, and others that crosses one or more railroad tracks at grade. The term “sidewalk” means that portion of a street between the curb line, or the lateral line of a roadway, and the adjacent property line or, on easements of private property, that portion of a street that is paved or improved and intended for use by pedestrians.

*Highway-rail grade crossing accident/incident* means any impact between railroad on-track equipment and a highway user at a highway-rail grade crossing. The term “highway user” includes pedestrians, as well as automobiles, buses, trucks, motorcycles, bicycles, farm vehicles, and all other modes of surface transportation motorized and un-motorized.

*Impact accident*, (1) Impact accident means a train accident, as defined in this section, consisting either of—

(i) A head-on or rear-end collision between on-track equipment;

(ii) A side collision, derailment collision, raking collision, switching collision, or “other impact accident,” as defined by this section;

(iii) Impact with a deliberately-placed obstruction, such as a bumping post (but not a derail); or

(iv) Impact between on-track equipment and any railroad equipment

fouling the track, such as an impact between a train and the boom of an off-rail vehicle.

(2) The definition of “impact accident” does not include an impact with naturally-occurring obstructions such as fallen trees, rock or snow slides, livestock, etc.

\* \* \* \* \*

*Joint operations* means rail operations conducted by more than one railroad on the same track (except for minimal joint operations necessary for the purpose of interchange), regardless of whether such operations are the result of contractual arrangements between the railroads, order of a governmental agency or a court of law, or any other legally binding directive. For purposes of this part only, minimal joint operations are considered necessary for the purpose of interchange when:

(1) The maximum authorized speed for operations on the shared track does not exceed 20 mph;

(2) Operations are conducted under operating rules that require every locomotive and train to proceed at a speed that permits stopping within one half the range of vision of the locomotive engineer;

(3) The maximum distance for operations on the shared track does not exceed 3 miles; and

(4) Any operations extending into another railroad’s yard are for the sole purpose of setting out or picking up cars on a designated interchange track.

*Maintenance-of-way employee or MOW employee* means a roadway worker as defined in § 214.7 of this chapter.

*Medical facility* means a hospital, clinic, physician’s office, or laboratory where post-accident toxicological testing specimens can be collected according to recognized professional standards, and where an individual’s post-accident medical needs can be attended to.

\* \* \* \* \*

*Non-peer* means a supervisor (other than a co-worker), labor organization representative, or family member of a regulated employee.

*On-track or fouling equipment* means any railroad equipment that is positioned on the rails or that is fouling the track, and includes, but is not limited to, the following: A train, locomotive, cut of cars, single car, motorcar, yard switching train, work train, inspection train, track motorcar, highway-rail vehicle, push car, crane, or other roadway maintenance machine, such as a ballast tamping machine, if the machine is positioned on or over the rails or is fouling the track.

*Other impact accident* means an accident or incident, not classified as a head-on, rear-end, side, derailment, raking, or switching collision, that involves contact between on-track or fouling equipment. This includes impacts in which single cars or cuts of cars are damaged during operations involving switching, train makeup, setting out, etc.

\* \* \* \* \*

*Person* means an entity of any type covered under 1 U.S.C. 1, including but not limited to the following: A railroad; a manager, supervisor, official, or other employee or agent of a railroad; any owner, manufacturer, lessor, or lessee of railroad equipment, track, or facilities; any independent contractor providing goods or services to a railroad, such as a service agent performing functions under part 40 of this title; and any employee of such owner, manufacturer, lessor, lessee, or independent contractor.

*Plant railroad* means a plant or installation that owns or leases a locomotive, uses that locomotive to switch cars throughout the plant or installation, and is moving goods solely for use in the facility’s own industrial processes. The plant or installation could include track immediately adjacent to the plant or installation if the plant railroad leases the track from the general system railroad and the lease provides for (and actual practice entails) the exclusive use of that trackage by the plant railroad and the general system railroad for purposes of moving only cars shipped to or from the plant. A plant or installation that operates a locomotive to switch or move cars for other entities, even if solely within the confines of the plant or installation, rather than for its own purposes or industrial processes, will not be considered a plant railroad because the performance of such activity makes the operation part of the general railroad system of transportation.

\* \* \* \* \*

*Railroad property damage or damage to railroad property* means damage to railroad property (specifically, on-track equipment, signals, track, track structure, or roadbed) and must be calculated according to the provisions for calculating costs and reportable damage in the FRA Guide for Preparing Accident/Incident Reports (see § 225.21 of this chapter for instructions on how to obtain a copy). Generally, railroad property damage includes labor costs and all other costs to repair or replace in-kind damaged on-track equipment, signals, track, track structures (including bridges and tunnels), or

roadbed. (Labor costs that must be accounted for include hourly wages, transportation costs, and hotel expenses.) It does not include the cost of clearing a wreck; however, additional damage to the above-listed items caused while clearing the wreck must be included in the damage estimate. It also includes the cost of rental and/or operation of machinery such as cranes and bulldozers, including the services of contractors, to replace or repair the track right-of-way and associated structures. Railroad property damage does not include damage to lading. Trailers/containers on flatcars are considered to be lading and damage to these is not to be included in on-track equipment damage. Damage to a flat car carrying a trailer/container, however, is included in railroad property damage. Railroads should refer directly to the FRA Guide for Preparing Accident/Incident Reports for additional guidance on what constitutes railroad property damage.

*Raking collision* means a collision between parts or lading of a consist on an adjacent track, or with a structure such as a bridge.

*Regulated employee* means a covered employee or maintenance-of-way employee who performs regulated service for a railroad subject to the requirements of this part.

*Regulated service* means covered service or maintenance-of-way activities, the performance of which makes an employee subject to the requirements of this part.

\* \* \* \* \*

*Responsible railroad supervisor* means any responsible line supervisor (e.g., a trainmaster or road foreman of engines) or superior official in authority over the regulated employees to be tested.

\* \* \* \* \*

*Side collision* means a collision at a turnout where one consist strikes the side of another consist.

\* \* \* \* \*

*Tourist, scenic, historic, or excursion operations that are not part of the general railroad system of transportation* means a tourist, scenic, historic, or excursion operation conducted only on track used exclusively for that purpose (i.e., there is no freight, intercity passenger, or commuter passenger railroad operation on the track).

*Train accident* means a rail equipment accident described in § 225.19(c) of this chapter involving damage in excess of the current reporting threshold (see § 225.19(e) of this chapter), including an accident involving a switching movement. Rail

equipment accidents include, but are not limited to, collisions, derailments, and other events involving the operations of on-track or fouling equipment (whether standing or moving).

*Train incident* means an event involving the operation of railroad on-track or fouling equipment that results in a casualty but in which railroad property damage does not exceed the reporting threshold.

\* \* \* \* \*

*Watchman/lookout* means an employee who has been annually trained and qualified to provide warning of approaching trains or on-track equipment. Watchmen/lookouts must be properly equipped to provide visual and auditory warning by such means as a whistle, air horn, white disk, red flag, lantern, or fusee. A watchman/lookout's sole duty is to look out for approaching trains/on-track equipment and provide at least fifteen seconds advanced warning to employees before the arrival of trains/on-track equipment.

■ 6. Revise § 219.9 to read as follows:

**§ 219.9 Responsibility for compliance.**

(a) *General.* Although the requirements of this part are stated in terms of the duty of a railroad, when any person, as defined by § 219.5, performs any function required by this part, that person (whether or not a railroad) shall perform that function in accordance with this part.

(b) *Joint operations.* (1) In the case of joint operations, primary responsibility for compliance with subparts C, D, and E of this part rests with the host railroad, and all affected employees must be responsive to direction from the host railroad that is consistent with this part. However, nothing in this paragraph restricts railroads engaged in joint operations from appropriately assigning responsibility for compliance with this part amongst themselves through a joint operating agreement or other binding contract. FRA reserves the right to bring an enforcement action for noncompliance with this part against the host railroad, the employing railroad, or both.

(2) When an employee of a railroad engaged in joint operations is required to participate in breath or body fluid testing under subpart C, D, or E of this part and is subsequently subject to adverse action alleged to have arisen out of the required test (or alleged refusal thereof), necessary witnesses and documents available to the other railroad engaged in the joint operations must be made available to the employee and his or her employing railroad on a reasonable basis.

(c) *Contractor responsibility for compliance.* As provided by paragraph (a) of this section, any independent contractor or other entity that performs regulated service for a railroad, or any other services under this part or part 40 of this title, has the same responsibilities as a railroad under this part with respect to its employees who perform regulated service or other service required by this part or part 40 of this title for the railroad. The entity's responsibility for compliance with this part may be fulfilled either directly by that entity or by the railroad treating the entity's regulated employees as if they were the railroad's own employees for purposes of this part. The responsibility for compliance must be clearly spelled out in the contract between the railroad and the other entity or in another document. In the absence of a clear delineation of responsibility, FRA may hold the railroad and the other entity jointly and severally liable for compliance.

■ 7. Add § 219.10 to read as follows:

**§ 219.10 Penalties.**

Any person, as defined by § 219.5, who violates any requirement of this part or causes the violation of any such requirement is subject to a civil penalty of at least \$650 and not more than \$25,000 per violation, except that: Penalties may be assessed against individuals only for willful violations; where a grossly negligent violation or a pattern of repeated violations has created an imminent hazard of death or injury, or has caused death or injury, a penalty not to exceed \$105,000 per violation may be assessed; and the standard of liability for a railroad will vary depending upon the requirement involved. See, e.g., § 219.105, which is construed to qualify the responsibility of a railroad for the unauthorized conduct of an employee that violates § 219.101 or § 219.102 (while imposing a duty of due diligence to prevent such conduct). Each day a violation continues constitutes a separate offense. See Appendix A to this part for a statement of agency civil penalty policy.

■ 8. Amend § 219.11 by revising paragraphs (a), (b)(1) and (2), and (c) through (h) to read as follows:

**§ 219.11 General conditions for chemical tests.**

(a)(1) Any regulated employee who is subject to performing regulated service for a railroad is deemed to have consented to testing as required in subparts B, C, D, E, F, G, and K of this part.

(2) A regulated employee required to participate in alcohol and/or drug

testing under this part must be on duty and subject to performing regulated service when the specimen collection is initiated and the alcohol testing/urine specimen collection is conducted (with the exception of pre-employment testing under subpart F of this part).

(b)(1) Each regulated employee must participate in such testing, as required under the conditions set forth in this part and implemented by a representative of the railroad or employing contractor.

(2) In any case where an employee is suffering a substantiated medical emergency and is subject to alcohol or drug testing under this part, necessary medical treatment must be accorded priority over provision of the breath or body fluid specimen(s). A medical emergency is an acute medical condition requiring immediate medical care. A railroad may require an employee to substantiate a medical emergency by providing verifiable documentation from a credible outside professional (e.g., doctor, dentist, hospital, or law enforcement officer) substantiating the medical emergency within a reasonable period of time.

\* \* \* \* \*

(c) A regulated employee who is required to be tested under subparts C, D, or E of this part and who is taken to a medical facility for observation or treatment after an accident or incident is deemed to have consented to the release to FRA of the following:

(1) The remaining portion of any body fluid specimen taken by the medical facility within 12 hours of the accident or incident that is not required for medical purposes, together with any normal medical facility record(s) pertaining to the taking of such specimen;

(2) The results of any laboratory tests for alcohol or any drug conducted by or for the medical facility on such specimen;

(3) The identity, dosage, and time of administration of any drugs administered by the medical facility before the time specimens were taken by the medical facility or before the time specimens were taken in compliance with this part; and

(4) The results of any breath tests for alcohol conducted by or for the medical facility.

(d) Any person required to participate in body fluid testing under subpart C of this part (post-accident toxicological testing) shall, if requested by a representative of the railroad or the medical facility, evidence consent to the taking of specimens, their release for toxicological analysis under pertinent

provisions of this part, and release of the test results to the railroad's Medical Review Officer by promptly executing a consent form, if required by the medical facility. A regulated employee is not required to execute any document or clause waiving rights that the employee would otherwise have against the railroad, and any such waiver is void. The employee may not be required to waive liability with respect to negligence on the part of any person participating in the collection, handling or analysis of the specimen or to indemnify any person for the negligence of others. Any consent provided consistent with this section may be construed to extend only to those actions specified in this section.

(e)(1) A regulated employee who is notified of selection for testing under this part must cease to perform his or her assigned duties and proceed to the testing site either immediately or as soon as possible without adversely affecting safety.

(2) A railroad must ensure that the absence of a regulated employee from his or her assigned duties to report for testing does not adversely affect safety.

(3) Nothing in this part may be construed to authorize the use of physical coercion or any other deprivation of liberty to compel breath or body fluid testing.

(f) Any employee performing duties for a railroad who is involved in a qualifying accident or incident described in subpart C of this part, and who dies within 12 hours of that accident or incident as the result thereof, is deemed to have consented to the removal of body fluid and/or tissue specimens necessary for toxicological analysis from the remains of such person, and this consent is implied by the performance of duties for the railroad (*i.e.*, a consent form is not required). This consent provision applies to all employees performing duties for a railroad, and not just regulated employees.

(g) Each supervisor responsible for regulated employees (except a working supervisor who is a co-worker as defined in § 219.5) must be trained in the signs and symptoms of alcohol and drug influence, intoxication, and misuse consistent with a program of instruction to be made available for inspection upon demand by FRA. Such a program shall, at a minimum, provide information concerning the acute behavioral and apparent physiological effects of alcohol, the major drug groups on the controlled substances list, and other impairing drugs. The program must also provide training on the qualifying criteria for post-accident

toxicological testing contained in subpart C of this part, and the role of the supervisor in post-accident collections described in subpart C and appendix C of this part.

(h) Nothing in this subpart restricts any discretion available to the railroad to request or require that a regulated employee cooperate in additional breath or body fluid testing. However, no such testing may be performed on urine or blood specimens provided under this part. For purposes of this paragraph (h), all urine from a void constitutes a single specimen.

\* \* \* \* \*

■ 9. Add § 219.12 to read as follows:

**§ 219.12 Hours-of-service laws implications.**

(a) A railroad is not excused from performing alcohol or drug testing under subpart C (post-accident toxicological testing) and subpart D (reasonable suspicion testing) of this part because the performance of such testing would violate the hours-of-service laws at 49 U.S.C. ch. 211. If a railroad establishes that a violation of the hours-of-service laws is caused solely because it was required to conduct post-accident toxicological testing or reasonable suspicion testing, FRA will not take enforcement action for the violation if the railroad used reasonable due diligence in completing the collection and otherwise completed it within the time limitations of § 219.203(d) (for post-accident toxicological testing) or § 219.305 (for reasonable suspicion testing), although the railroad must still report any excess service to FRA.

(b) A railroad may perform alcohol or drug testing authorized under subpart E (reasonable cause testing) of this part even if the performance of such testing would violate the hours-of-service laws at 49 U.S.C. ch. 211. If a railroad establishes that a violation of the hours-of-service laws is caused solely by its decision to conduct authorized reasonable cause testing, FRA will not take enforcement action for the violation if the railroad used reasonable due diligence in completing the collection and otherwise completed it within the time limitations of § 219.407, although the railroad must still report any excess service to FRA.

(c) A railroad must schedule random alcohol and drug tests under subpart G of this part so that sufficient time is provided to complete the test within a covered employee's hours-of-service limitations under 49 U.S.C. ch. 211. However, if a direct observation collection is required during a random test per the requirements of part 40 of

this title, then the random test must be completed regardless of the hours-of-service law limitations, although the railroad must still report any excess service to FRA. A railroad may not place a regulated employee on-duty for the sole purpose of conducting a random alcohol or drug test under subpart G of this part.

(d) A railroad must schedule follow-up tests under § 219.104 so that sufficient time is provided to complete a test within a covered employee's hours-of-service limitations under 49 U.S.C. ch. 211. If a railroad is having a difficult time scheduling the required number of follow-up tests because a covered employee's work schedule is unpredictable, there is no prohibition against the railroad placing an employee (who is subject to being called to perform regulated service) on duty for the purpose of conducting the follow-up tests; except that an employee may be placed on duty for a follow-up alcohol test only if he or she is required to completely abstain from alcohol by a return-to-duty agreement, as provided by § 40.303(b) of this title. A railroad must maintain documentation establishing the need to place the employee on duty for the purpose of conducting the follow-up test and provide this documentation for review upon request of an FRA representative.

■ 10. Revise § 219.23 to read as follows:

**§ 219.23 Railroad policies.**

(a) Whenever a breath or body fluid test is required of an employee under this part, the railroad (either through a railroad employee or a designated agent, such as a contracted collector) must provide clear and unequivocal written notice to the employee that the test is being required under FRA regulations and is being conducted under Federal authority. The railroad must also provide the employee clear and unequivocal written notice of the type of test that is required (*e.g.*, reasonable suspicion, reasonable cause, random selection, follow-up, etc.). These notice requirements are satisfied if:

(1) For all FRA testing except mandatory post-accident toxicological testing under subpart C of this part, a railroad uses the mandated DOT alcohol or drug testing form, circles or checks off the box corresponding to the type of test, and shows this form to the employee before testing begins; or

(2) For mandatory post-accident toxicological testing under subpart C of this part, a railroad uses the approved FRA form and shows this form to the employee before testing begins.

(b) Use of the mandated DOT alcohol or drug testing forms for non-Federal

tests or mandatory post-accident toxicological testing under subpart C of this part is prohibited (except for post-accident breath alcohol testing permitted under § 219.203(c)). Use of the approved FRA post-accident toxicological testing form for any testing other than that mandated under subpart C is prohibited.

(c) Each railroad must develop and publish educational materials, specifically designed for regulated employees that clearly explain the requirements of this part, as well as the railroad's policies and procedures with respect to meeting those requirements. The railroad must ensure that a copy of these materials is distributed to each regulated employee hired for or transferred to a position that requires alcohol and drug testing under this part. (This requirement does not apply to an applicant for a regulated service position who either refuses to provide a specimen for pre-employment testing or who has a pre-employment test with a result indicating a violation of the alcohol or drug prohibitions of this part.) A railroad may satisfy this requirement by either—

(1)(i) Continually posting the materials in a location that is easily visible to all regulated employees going on duty at their designated reporting place and, if applicable, providing a copy of the materials to any employee labor organization representing a class or craft of regulated employees of the railroad; or

(ii) Providing a copy of the materials in some other manner that will ensure regulated employees can find and access these materials explaining the critical aspects of the program (e.g., by posting the materials on a company Web site that is accessible to all regulated employees); or

(2) For a minimum of three years after June 12, 2017, also ensuring that a hard copy of these materials is provided to each maintenance-of-way employee.

(d) *Required content.* The materials to be made available to regulated employees under paragraph (c) of this section must, at a minimum, include clear and detailed discussion of the following:

(1) The position title, name, and means of contacting the person(s) the railroad designates to answer employee questions about the materials;

(2) The specific classes or crafts of employees who are subject to the provisions of this part, such as engineers, conductors, MOW employees, signal maintainers, or train dispatchers;

(3) Sufficient information about the regulated service functions those

employees perform to make clear that the period of the work day the regulated employee is required to be in compliance with the alcohol prohibitions of this part is that period when the employee is on duty and is required to perform or is available to perform regulated service;

(4) Specific information concerning regulated employee conduct that is prohibited under subpart B of this part (e.g., the minimum requirements of §§ 219.101, 219.102, and 219.103);

(5) The requirement that a railroad utilizing the reasonable cause testing authority provided by subpart E of this part must give prior notice to regulated employees of the circumstances under which they will be subject to reasonable cause testing;

(6) The circumstances under which a regulated employee will be tested under this part;

(7) The procedures used to test for the presence of alcohol and controlled substances, protect the regulated employee and the integrity of the testing processes, safeguard the validity of the test results, and ensure that those results are attributed to the correct employee;

(8) The requirement that a regulated employee submit to alcohol and drug tests administered in accordance with this part;

(9) An explanation of what constitutes a refusal to submit to an alcohol or drug test and the attendant consequences;

(10) The consequences for a regulated employee found to have violated subpart B of this part, including the requirement that the employee be removed immediately from regulated service, and the responsive action requirements of § 219.104;

(11) The consequences for a regulated employee who has a Federal alcohol test indicating an alcohol concentration of 0.02 or greater but less than 0.04; and

(12) Information concerning the effects of alcohol and drug misuse on an individual's health, work, and personal life; signs and symptoms of an alcohol or drug problem (the employee's or a co-worker's); and available methods of evaluating and resolving problems associated with the misuse of alcohol and drugs, and the names, addresses, and telephone numbers of DACs and counseling and treatment programs.

(e) Optional provisions. The materials supplied to employees may also include information on additional railroad policies with respect to the use or possession of alcohol and drugs, including any consequences for an employee found to have a specific alcohol concentration that are based on the railroad's company authority independent of this part. Any such

additional policies or consequences must be clearly and obviously described as being based on the railroad's independent company authority.

■ 11. Add § 219.25 to subpart A to read as follows:

**§ 219.25 Previous employer drug and alcohol checks.**

(a) As required by § 219.701(a) and (b), a railroad must conduct drug or alcohol testing under this part in compliance with part 40 of this title (except for post-accident toxicological testing under subpart C of this part). A railroad must therefore comply with § 40.25 of this title by checking the alcohol and drug testing record of any direct regulated employee (a regulated employee who is not employed by a contractor to the railroad) it intends to use for regulated service before the employee performs such service for the first time. A railroad is not required to check the alcohol and drug testing record of contractor employees performing regulated service on its behalf (the alcohol and drug testing record of those contractor employees must be checked by their direct employers).

(b) When determining whether a person may become or remain certified as a locomotive engineer or a conductor, a railroad must comply with the requirements in § 240.119(c) (for engineers) or § 242.115(e) (for conductors) of this chapter regarding the consideration of Federal alcohol and drug violations that occurred within a period of 60 consecutive months before the review of the person's records.

**Subpart B—Prohibitions**

■ 12. Revise § 219.101(a) to read as follows:

**§ 219.101 Alcohol and drug use prohibited.**

(a) *Prohibitions.* Except as provided in § 219.103—

(1) No regulated employee may use or possess alcohol or any controlled substance when the employee is on duty and subject to performing regulated service for a railroad.

(2) No regulated employee may report for regulated service, or go or remain on duty in regulated service, while—

(i) Under the influence of or impaired by alcohol;

(ii) Having 0.04 or more alcohol concentration in the breath or blood; or

(iii) Under the influence of or impaired by any controlled substance.

(3) No regulated employee may use alcohol for whichever is the lesser of the following periods:

(i) Within four hours of reporting for regulated service; or

(ii) After receiving notice to report for regulated service.

(4)(i) No regulated employee tested under the provisions of this part whose Federal test result indicates an alcohol concentration of 0.02 or greater but less than 0.04 may perform or continue to perform regulated service for a railroad, nor may a railroad permit the regulated employee to perform or continue to perform regulated service, until the start of the regulated employee's next regularly scheduled duty period, but not less than eight hours following administration of the test.

(ii) Nothing in this section prohibits a railroad from taking further action under its own independent company authority when a regulated employee tested under the provisions of this part has a Federal test result indicating an alcohol concentration of 0.02 or greater, but less than 0.04. However, while a Federal test result of 0.02 or greater but less than 0.04 is a positive test and may be a violation of a railroad's operating rules, it is not a violation of this section and cannot be used to decertify an engineer under part 240 of this chapter or a conductor under part 242 of this chapter.

(5) If an employee tested under the provisions of this part has a test result indicating an alcohol concentration below 0.02, the test is negative and is not evidence of alcohol misuse. A railroad may not use a Federal test result below 0.02 either as evidence in a company proceeding or as a basis for subsequent testing under company authority. A railroad may take further action to compel cooperation in other breath or body fluid testing only if it has an independent basis for doing so. An independent basis for subsequent company authority testing will exist only when, after having a negative Federal reasonable suspicion alcohol test result, the employee exhibits additional or continuing signs and symptoms of alcohol use. If a company authority test then indicates a violation of the railroad's operating rules, this result is independent of the Federal test result and must stand on its own merits.

\* \* \* \* \*

■ 13. Revise § 219.102 to read as follows:

**§ 219.102 Prohibition on abuse of controlled substances.**

No regulated employee may use a controlled substance at any time, whether on duty or off duty, except as permitted by § 219.103.

■ 14. Revise § 219.104 to read as follows:

**§ 219.104 Responsive action.**

(a) *Removal from regulated service.*

(1) If a railroad determines that a regulated employee has violated § 219.101 or § 219.102, or the alcohol or controlled substances misuse rule of another DOT agency, the railroad must immediately remove the employee from regulated service and the procedures described in paragraphs (b) through (d) of this section apply.

(2) If a regulated employee refuses to provide a breath or body fluid specimen or specimens when required to by the railroad under a provision of this part, a railroad must immediately remove the regulated employee from regulated service, and the procedures described in paragraphs (b) through (d) of this section apply. This provision also applies to Federal reasonable cause testing under subpart E of this part (if the railroad has elected to conduct this testing under Federal authority).

(b) *Notice.* Before or upon removing a regulated employee from regulated service under this section, a railroad must provide written notice to the employee of the reason for this action. A railroad may provide a regulated employee with an initial verbal notice so long as it provides a follow-up written notice to the employee as soon as possible. In addition to the reason for the employee's withdrawal from regulated service, the written notice must also inform the regulated employee that he may not perform any DOT safety-sensitive duties until he completes the return-to-duty process of part 40.

(c) *Hearing procedures.* (1) Except as provided in paragraph (e)(5) of this section, if a regulated employee denies that a test result or other information is valid evidence of a § 219.101 or § 219.102 violation, the regulated employee may demand and must be provided an opportunity for a prompt post-suspension hearing before a presiding officer other than the charging official. This hearing may be consolidated with any disciplinary hearing arising from the same accident or incident (or conduct directly related thereto), but the presiding officer must make separate findings as to compliance with §§ 219.101 and 219.102.

(2) The hearing must be convened within the period specified in the applicable collective bargaining agreement. In the absence of an agreement provision, the regulated employee may demand that the hearing be convened within 10 calendar days of the employee's suspension or, in the case of a regulated employee who is unavailable due to injury, illness, or other sufficient cause, within 10 days of

the date the regulated employee becomes available for the hearing.

(3) A post-suspension proceeding conforming to the requirements of an applicable collective bargaining agreement, together with the provisions for adjustment of disputes under sec. 3 of the Railway Labor Act (49 U.S.C. 153), satisfies the procedural requirements of this paragraph (c).

(4) With respect to a removal or other adverse action taken as a consequence of a positive test result or refusal in a test authorized or required by this part, nothing in this part may be deemed to abridge any procedural rights or remedies consistent with this part that are available to a regulated employee under a collective bargaining agreement, the Railway Labor Act, or (with respect to employment at will) at common law.

(5) Nothing in this part restricts the discretion of a railroad to treat a regulated employee's denial of prohibited alcohol or drug use as a waiver of any privilege the regulated employee would otherwise enjoy to have such prohibited alcohol or drug use treated as a non-disciplinary matter or to have discipline held in abeyance.

(d) A railroad must comply with the requirements for Substance Abuse Professional evaluations, the return-to-duty process, and follow-up testing contained in part 40 of this title.

(1) *Post-accident toxicology testing exception.* If a regulated employee has a post-accident toxicology test result under subpart C of this part that is positive for a drug not listed in § 40.5's definition of "Drugs," a railroad may conduct the employee's return-to-duty and follow-up tests under part 40, or may conduct the employee's return-to-duty and follow-up tests under its own authority to comply with the requirements of paragraph (d) of this section, so long as its testing procedures are otherwise identical to those of part 40, and include the specific drug for which the violation occurred, on an expanded drug testing panel.

(e) *Applicability.* (1) This section does not apply to actions based on breath or body fluid tests for alcohol or drugs that are conducted exclusively under authority other than that provided in this part (e.g., testing under a company medical policy, testing for cause wholly independent of the subpart E Federal authority of this part, or testing under a labor agreement).

(2) This section does not apply to Federal alcohol tests indicating an alcohol concentration of less than 0.04.

(3) This section does not apply to a locomotive engineer or conductor who has an off-duty conviction for, or a completed state action to cancel, revoke,

suspend, or deny a motor vehicle driver's license for operating while under the influence of or impaired by alcohol or a controlled substance. (However, this information remains relevant for the purpose of locomotive engineer or conductor certification, according to the requirements of parts 240 or 242 of this chapter.)

(4) This section does not apply to an applicant who declines to be subject to pre-employment testing and withdraws an application for employment before the test begins. The determination of when a drug or alcohol test begins is made according to the provisions found in subparts E and L of part 40 of this title.

(5) Paragraph (c) of this section does not apply to an applicant who tests positive or refuses a DOT pre-employment test.

(6) As provided by § 40.25(j) of this title, paragraph (d) of this section applies to any DOT-regulated employer seeking to hire for DOT safety-sensitive functions an applicant who tested positive or who refused a DOT pre-employment test.

■ 15. Revise § 219.105 to read as follows:

**§ 219.105 Railroad's duty to prevent violations.**

(a) A railroad may not, with actual knowledge, permit a regulated employee to go or remain on duty in regulated service in violation of the prohibitions of § 219.101 or § 219.102. As used in this section, the actual knowledge imputed to the railroad is limited to that of a railroad management employee (such as a supervisor deemed an "officer," whether or not such person is a corporate officer) or a supervisory employee in the offending regulated employee's chain of command. A railroad management or supervisory employee has actual knowledge of a violation when he or she:

(1) Personally observes a regulated employee use or possess alcohol or use drugs in violation of this subpart. It is not sufficient for actual knowledge if the supervisory or management employee merely observes the signs and symptoms of alcohol or drug use that require a reasonable suspicion test under § 219.301;

(2) Receives information regarding a violation of this subpart from a previous employer of a regulated employee, in response to a background information request required by § 40.25 of this title; or

(3) Receives a regulated employee's admission of prohibited alcohol possession or prohibited alcohol or drug use.

(b) A railroad must exercise due diligence to assure compliance with §§ 219.101 and 219.102 by each regulated employee.

(c) A railroad's alcohol and/or drug use education, prevention, identification, intervention, and rehabilitation programs and policies must be designed and implemented in such a way that they do not circumvent or otherwise undermine the requirements, standards, and policies of this part. Upon FRA's request, a railroad must make available for FRA review all documents, data, or other records related to such programs and policies.

(d) Each year, a railroad's supervisors must conduct and record a number of "Rule G" employee observations at a minimum equal to twice the railroad's total number of regulated employees. Each "Rule G" observation must be made sufficiently close to an individual regulated employee to determine whether the employee is displaying signs and symptoms indicative of a violation of the prohibitions of this part.

■ 16. Revise § 219.107 to read as follows:

**§ 219.107 Consequences of refusal.**

(a) A regulated employee who refuses to provide a breath or body fluid specimen or specimens when required to by the railroad under a provision of this part must be withdrawn from regulated service for a period of nine (9) months. Per the requirements of part 40 of this title, a regulated employee who provides an adulterated or substituted specimen is deemed to have refused to provide the required specimen and must be withdrawn from regulated service in accordance with this section.

(b) *Notice.* Before or upon withdrawing a regulated employee from regulated service under this section, a railroad must provide written notice to the employee of the reason for this action, and the procedures described in § 219.104(c) apply. A railroad may provide a regulated employee with an initial verbal notice so long as it provides a follow-up written notice as soon as possible.

(c) The withdrawal required by this section applies only to an employee's performance of regulated service for any railroad with notice of such withdrawal. During the period of withdrawal, a railroad with notice of such withdrawal must not authorize or permit the employee to perform any regulated service for the railroad.

(d) The requirement of withdrawal for nine (9) months does not limit any discretion on the part of the railroad to impose additional sanctions for the same or related conduct.

(e) Upon the expiration of the nine month period described in this section, a railroad may permit an employee to return to regulated service only under the conditions specified in § 219.104(d), and the regulated employee must be subject to return-to-duty and follow-up tests, as provided by that section.

**Subpart C—Post-Accident Toxicological Testing**

■ 17. In § 219.201, revise paragraphs (a) and (b) to read as follows:

**§ 219.201 Events for which testing is required.**

(a) *List of events.* Except as provided in paragraph (b) of this section, FRA post-accident toxicological tests must be conducted after any event that involves one or more of the circumstances described in paragraphs (a)(1) through (5) of this section:

(1) *Major train accident.* Any train accident (*i.e.*, a rail equipment accident involving damage in excess of the current reporting threshold) that involves one or more of the following:

(i) A fatality to any person;

(ii) A release of hazardous material lading from railroad equipment accompanied by—

(A) An evacuation; or

(B) A reportable injury resulting from the hazardous material release (*e.g.*, from fire, explosion, inhalation, or skin contact with the material); or

(iii) Damage to railroad property of \$1,500,000 or more.

(2) *Impact accident.* Any impact accident (*i.e.*, a rail equipment accident defined as an "impact accident" in § 219.5) that involves damage in excess of the current reporting threshold, resulting in—

(i) A reportable injury; or

(ii) Damage to railroad property of \$150,000 or more.

(3) *Fatal train incident.* Any train incident that involves a fatality to an on-duty employee (as defined in § 219.5) who dies within 12 hours of the incident as a result of the operation of on-track equipment, regardless of whether that employee was performing regulated service.

(4) *Passenger train accident.* Any train accident (*i.e.*, a rail equipment accident involving damage in excess of the current reporting threshold) involving a passenger train and a reportable injury to any person.

(5) *Human-factor highway-rail grade crossing accident/incident.* A highway-rail grade crossing accident/incident when it involves:

(i) A regulated employee who interfered with the normal functioning

of a grade crossing signal system, in testing or otherwise, without first taking measures to provide for the safety of highway traffic that depends on the normal functioning of such system, as prohibited by § 234.209 of this chapter;

(ii) A train crewmember who was, or who should have been, flagging highway traffic to stop due to an activation failure of the grade crossing system, as provided by § 234.105(c)(3) of this chapter;

(iii) A regulated employee who was performing, or should have been performing, the duties of an appropriately equipped flagger (as defined in § 234.5 of this chapter) due to an activation failure, partial activation, or false activation of the grade crossing signal system, as provided by § 234.105(c)(1) and (2), § 234.106, or § 234.107(c)(1)(i) of this chapter;

(iv) A fatality to any regulated employee performing duties for the railroad, regardless of fault; or

(v) A regulated employee who violated an FRA regulation or railroad operating rule and whose actions may have played a role in the cause or severity of the accident/incident.

(b) *Exceptions.* Except for a human-factor highway-rail grade crossing accident/incident described in paragraph (a)(5) of this section, no test may be required in the case of a collision between railroad rolling stock and a motor vehicle or other highway conveyance at a highway/rail grade crossing. No test may be required for an accident/incident the cause and severity of which are wholly attributable to a natural cause (e.g., flood, tornado, or other natural disaster) or to vandalism or trespasser(s), as determined on the basis of objective and documented facts by the railroad representative responding to the scene.

\* \* \* \* \*

■ 18. Revise § 219.203 to read as follows:

**§ 219.203 Responsibilities of railroads and employees.**

(a) *Employees tested.* A regulated employee subject to post-accident toxicological testing under this subpart must cooperate in the provision of specimens as described in this part and appendix C to this part.

(1) *General.* Except as otherwise provided for by this section, following each qualifying event described in § 219.201, a regulated employee directly involved in a qualifying event under this subpart must provide blood and urine specimens for toxicological testing by FRA. This includes any regulated employee who may not have been

present or on-duty at the time or location of the event, but whose actions may have played a role in its cause or severity, including, but not limited to, an operator, dispatcher, or signal maintainer.

(2) *Fatalities.* Testing of the remains of an on-duty employee (as defined in § 219.5) who is fatally injured in a qualifying event described in § 219.201 is required, regardless of fault, if the employee dies within 12 hours of the qualifying event as a result of such qualifying event.

(3) *Major train accidents.* For an accident or incident meeting the criteria of a major train accident in § 219.201(a)(1)—

(i) All assigned crew members of all trains or other on-track equipment involved in the qualifying event must be subjected to post-accident toxicological testing, regardless of fault.

(ii) Other surviving regulated employees who are not assigned crew members of an involved train or other on-track equipment (e.g., a dispatcher or a signal maintainer) must be tested if a railroad representative can immediately determine, on the basis of specific information, that the employee may have had a role in the cause or severity of the accident/incident. In making this determination, the railroad representative must consider any such information that is immediately available at the time the qualifying event determination is made under § 219.201.

(4) *Fatal train incidents.* For a fatal train incident under § 219.201(a)(3), the remains of any on-duty employee (as defined in § 219.5) performing duties for a railroad who is fatally injured in the event are always subject to post-accident toxicological testing, regardless of fault.

(5) *Human-factor highway-rail grade crossing accident/incidents.* (i) For a human-factor highway-rail grade crossing accident/incident under § 219.201(a)(5)(i), only a regulated employee who interfered with the normal functioning of a grade crossing signal system and whose actions may have contributed to the cause or severity of the event is subject to testing.

(ii) For a human-factor highway-rail grade crossing accident/incident under § 219.201(a)(5)(ii), only a regulated employee who was a train crew member responsible for flagging highway traffic to stop due to an activation failure of a grade crossing system (or who was on-site and directly responsible for ensuring that flagging was being performed), but who failed to do so, and whose actions may have contributed to

the cause or severity of the event, is subject to testing.

(iii) For a human-factor highway-rail grade crossing accident/incident under § 219.201(a)(5)(iii), only a regulated employee who was responsible for performing the duties of an appropriately equipped flagger (as defined in § 234.5 of this chapter), but who failed to do so, and whose actions may have contributed to the cause or severity of the event is subject to testing.

(iv) For a human-factor highway-rail grade crossing accident/incident under § 219.201(a)(5)(iv), only the remains of any fatally-injured employee(s) (as defined in § 219.5) performing regulated service for the railroad are subject to testing.

(v) For a human-factor highway-rail grade crossing accident/incident under § 219.201(a)(5)(v), only a regulated employee who violated an FRA regulation or railroad operating rule and whose actions may have contributed to the cause or severity of the event is subject to testing.

(6) *Exception.* For a qualifying impact accident, passenger train accident, fatal train incident, or human-factor highway-rail grade crossing accident/incident under § 219.201(a)(2) through (5), a surviving crewmember or other regulated employee must be excluded from testing if the railroad representative can immediately determine, on the basis of specific information, that the employee had no role in the cause or severity of the accident/incident. In making this determination, the railroad representative must consider any information that is immediately available at the time the qualifying event determination is made under § 219.201.

(i) This exception is not available for assigned crew members of all involved trains if the qualifying event also meets the criteria for a major train accident under § 219.201(a)(1) (e.g., this exception is not available for an Impact Accident that also qualifies as a major train accident because it results in damage to railroad property of \$1,500,000 or more).

(ii) This exception is not available for any on-duty employee who is fatally-injured in a qualifying event.

(b) *Railroad responsibility.* (1) A railroad must take all practicable steps to ensure that all surviving regulated employees of the railroad who are subject to FRA post-accident toxicological testing under this subpart provide blood and urine specimens for the toxicological testing required by FRA. This includes any regulated employee who may not have been

present or on-duty at the time or location of the event, but whose actions may have played a role in its cause or severity, including, but not limited to, an operator, dispatcher, or signal maintainer.

(2) A railroad must take all practicable steps to ensure that tissue and fluid specimens taken from fatally injured employees are subject to FRA post-accident toxicological testing under this subpart.

(3) FRA post-accident toxicological testing under this subpart takes priority over toxicological testing conducted by state or local law enforcement officials.

(c) *Alcohol testing.* Except as provided for in paragraph (e)(4) of this section, if the conditions for mandatory post-accident toxicological testing exist, a railroad may also require an employee to provide breath for testing in accordance with the procedures set forth in part 40 of this title and in this part, if such testing does not interfere with timely collection of required urine and blood specimens.

(d) *Timely specimen collection.* (1) A railroad must make every reasonable effort to assure that specimens are provided as soon as possible after the accident or incident, preferably within four hours. Specimens that are not collected within four hours after a qualifying accident or incident must be collected as soon thereafter as practicable. If a specimen is not collected within four hours of a qualifying event, the railroad must immediately notify the FRA Drug and Alcohol Program Manager at 202-493-6313 and provide detailed information regarding the failure (either verbally or via a voicemail). The railroad must also submit a concise, written narrative report of the reasons for such a delay to the FRA Drug and Alcohol Program Manager, 1200 New Jersey Ave. SE., Washington, DC 20590. The report must be submitted within 30 days after the expiration of the month during which the accident or incident occurred. This report may also be submitted via email to an email address provided by the FRA Drug and Alcohol Program Manager.

(2) The requirements of paragraph (d) of this section must not be construed to inhibit an employee who is required to be post-accident toxicological tested from performing, in the immediate aftermath of an accident or incident, any duties that may be necessary for the preservation of life or property. Where practical, however, a railroad must utilize other employees to perform such duties.

(3) If a passenger train is in proper condition to continue to the next station

or its destination after an accident or incident, the railroad must consider the safety and convenience of passengers in determining whether the crew should be made immediately available for post-accident toxicological testing. A relief crew must be called to relieve the train crew as soon as possible.

(4) A regulated employee who may be subject to post-accident toxicological testing under this subpart must be retained in duty status for the period necessary to make the determinations required by § 219.201 and this section and (as appropriate) to complete specimen collection.

(e) *Recall of employees for testing.* (1) Except as otherwise provided for in paragraph (e)(2) of this section, a regulated employee may not be recalled for testing under this subpart if that employee has been released from duty under the normal procedures of the railroad. An employee who has been transported to receive medical care is not released from duty for purposes of this section. Furthermore, nothing in this section prohibits the subsequent testing of an employee who has failed to remain available for testing as required (e.g., an employee who is absent without leave). However, subsequent testing does not excuse a refusal by the employee to provide the specimens in a timely manner.

(2) A railroad must immediately recall and place on duty a regulated employee for post-accident drug testing, if—

(i) The employee could not be retained in duty status because the employee went off duty under normal railroad procedures before being contacted by a railroad supervisor and instructed to remain on duty pending completion of the required determinations (e.g., in the case of a dispatcher or signal maintainer remote from the scene of an accident who was unaware of the occurrence at the time he or she went off duty); and

(ii) The railroad's preliminary investigation (contemporaneous with the determination required by § 219.201) indicates a clear probability that the employee played a role in the cause or severity of the accident/incident.

(3) If the criteria in paragraph (e)(2) of this section are met, a regulated employee must be recalled for post-accident drug testing regardless of whether the qualifying event happened or did not happen during the employee's tour of duty. However, an employee may not be recalled for testing if more than 24 hours have passed since the qualifying event. An employee who has been recalled must be placed on

duty for the purpose of accomplishing the required post-accident drug testing.

(4) Urine and blood specimens must be collected from an employee who is recalled for testing in accordance with this section. If the employee left railroad property before being recalled, however, the specimens must be tested for drugs only. A railroad is prohibited from requiring a recalled employee to provide breath specimens for alcohol testing, unless the regulated employee has remained on railroad property since the time of the qualifying event and the railroad has a company policy completely prohibiting the use of alcohol on railroad property.

(5) A railroad must document its attempts to contact an employee subject to the recall provisions of this section. If a railroad is unable, as a result of the non-cooperation of an employee or for any other reason, to obtain specimen(s) from an employee subject to mandatory recall within the 24-hour period after a qualifying event and to submit specimen(s) to FRA as required by this subpart, the railroad must contact FRA and prepare a concise narrative report according to the requirements of paragraph (d)(1) of this section. The report must also document the railroad's good faith attempts to contact and recall the employee.

(f) *Place of specimen collection.* (1) With the exception of Federal breath testing for alcohol (when conducted as authorized under this subpart), an employee must be transported to an independent medical facility for specimen collection. In all cases, blood may be drawn only by a qualified medical professional or by a qualified technician subject to the supervision of a qualified medical professional (e.g., a phlebotomist). A collector contracted by a railroad or medical facility may collect and/or assist in the collection of specimens at the medical facility if the medical facility does not object and the collector is qualified to do so.

(2) If an employee has been injured, a railroad must ask the treating medical facility to obtain the specimens. Urine may be collected from an injured employee (conscious or unconscious) who has already been catheterized for medical purposes, but an employee may not be catheterized solely for the purpose of providing a specimen under this subpart. Under § 219.11(a), an employee is deemed to have consented to FRA post-accident toxicological testing by the act of being subject to performing regulated service for a railroad.

(g) *Obtaining cooperation of facility.*

(1) In seeking the cooperation of a medical facility in obtaining a specimen

under this subpart, a railroad must, as necessary, make specific reference to the requirements of this subpart and the instructions in FRA's post-accident toxicological shipping kit.

(2) If an injured employee is unconscious or otherwise unable to evidence consent to the procedure and the treating medical facility declines to obtain blood and/or urine specimens after having been informed of the requirements of this subpart, the railroad must immediately notify the duty officer at the National Response Center (NRC) at (800) 424-8802, stating the employee's name, the name and location of the medical facility, the name of the appropriate decisional authority at the medical facility, and the telephone number at which that person can be reached. FRA will then take appropriate measures to assist in obtaining the required specimens.

(h) *Discretion of physician.* Nothing in this subpart may be construed to limit the discretion of a medical professional to determine whether drawing a blood specimen is consistent with the health of an injured employee or an employee afflicted by any other condition that may preclude drawing the specified quantity of blood.

■ 19. Revise § 219.205 to read as follows:

**§ 219.205 Specimen collection and handling.**

(a) *General.* Urine and blood specimens must be obtained, marked, preserved, handled, and made available to FRA consistent with the requirements of this subpart, the instructions provided inside the FRA post-accident toxicological shipping kit, and the technical specifications set forth in appendix C to this part.

(b) *Information requirements.* Basic information concerning the accident/incident and any treatment administered after the accident/incident is necessary to process specimens, analyze the significance of laboratory findings, and notify railroads and employees of test results. Accordingly, the railroad representative must complete the information required by Form FRA 6180.73 (revised) for shipping with the specimens. Each employee subject to testing must cooperate in completion of the required information on Form FRA F 6180.74 (revised) for inclusion in the shipping kit and processing of the specimens. The railroad representative must ask an appropriate representative of the medical facility to complete the remaining portion of the information on each Form 6180.74. A Form 6180.73 must be forwarded in the shipping kit

with each group of specimens. A Form 6180.74 must be forwarded in the shipping kit for each employee who provides specimens. A Form 6180.73 and either a Form 6180.74 or a Form 6180.75 (for fatalities) are included in the shipping kit. (See paragraph (c) of this section.)

(c) *Shipping kits.* (1) FRA and the laboratory designated in appendix B to this part make available for purchase a limited number of standard shipping kits for the purpose of routine handling of post-accident toxicological specimens under this subpart. Specimens must be placed in the shipping kit and prepared for shipment according to the instructions provided in the kit and appendix C to this part.

(2) Standard shipping kits may be ordered directly from the laboratory designated in appendix B to this part by first requesting an order form from FRA's Drug and Alcohol Program Manager at 202-493-6313. In addition to the standard kit for surviving employees, FRA also has distributed a post-mortem shipping kit to Class I, II, and commuter railroads. The post-mortem kit may not be ordered by other railroads. If a smaller railroad has a qualifying event involving a fatality to an on-duty employee, the railroad should advise the NRC at 1-800-424-8802 of the need for a post-mortem kit, and FRA will send one overnight to the medical examiner's office or assist the railroad in obtaining one from a nearby railroad.

(d) *Shipment.* Specimens must be shipped as soon as possible by pre-paid air express (or other means adequate to ensure delivery within 24 hours from time of shipment) to the laboratory designated in appendix B to this part. However, if delivery cannot be ensured within 24 hours due to a suspension in air express delivery services, the specimens must be held in a secure refrigerator until delivery can be accomplished. In no circumstances may specimens be held for more than 72 hours. Where express courier pickup is available, the railroad must ask the medical facility to transfer the sealed toxicology kit directly to the express courier for transportation. If courier pickup is not available at the medical facility where the specimens are collected or if for any other reason a prompt transfer by the medical facility cannot be assured, the railroad must promptly transport the sealed shipping kit holding the specimens to the most expeditious point of shipment via air express. The railroad must maintain and document a secure chain of custody of the kit(s) from its release by the medical

facility to its delivery for transportation, as described in appendix C to this part.

(e) *Specimen security.* After a specimen kit or transportation box has been sealed, no entity other than the laboratory designated in appendix B to this part may open it. If the railroad or medical facility discovers an error with either the specimens or the chain of custody form after the kit or transportation box has been sealed, the railroad or medical facility must make a contemporaneous written record of that error and send it to the laboratory, preferably with the transportation box.

**§ 219.207—[Amended]**

■ 20. Section 219.207 is amended by—

■ a. In paragraph (a), removing the word “and/or” and adding, in its place, the word “and”; removing the words “timely collected” and adding, in their place, “collected in a timely fashion”; removing the word “shipping” and adding, in its place, “post-mortem shipping”; and removing the words “if a person” and adding, in their place, “if the custodian is someone”;

■ b. In the introductory text of paragraph (b), removing “(800) 424-8801 or”;

■ c. In paragraph (c), removing the word “and/or” and adding, in its place, the word “and”; and

■ d. In paragraph (d), removing the word “specifies” and adding, in its place, the words “and the instructions included inside the shipping kits specify”.

■ 21. In § 219.209, revise paragraphs (a)(2)(iv), (a)(2)(v), and (b), and remove paragraph (c), to read as follows:

**§ 219.209 Reports of tests and refusals.**

(a) \* \* \*

(2) \* \* \*

(iv) Brief summary of the circumstances of the accident/incident, including basis for testing (e.g., impact accident with a reportable injury); and

(v) Number of employees tested.

(b) If a railroad is unable, as a result of non-cooperation of an employee or for any other reason, to obtain a specimen and provide it to FRA as required by this subpart, the railroad must immediately notify the FRA Drug and Alcohol Program Manager at 202-493-6313 and provide detailed information regarding the failure (either verbally or via a voicemail). The railroad must also provide a concise narrative written report of the reason for such failure and, if appropriate, any action taken in response to the cause of such failure. This report must be appended to the report of the accident/incident required to be submitted under part 225 of this chapter and must also

be mailed to the FRA Drug and Alcohol Program Manager at 1200 New Jersey Avenue SE., Washington, DC 20590.

■ 22. Section 219.211 is amended by—

- a. Adding a sentence at the end of paragraph (b);
- b. Revising the second sentence of paragraph (c) and the second sentence of paragraph (e); and
- c. Revising paragraph (g)(3).

The revisions and additions read as follows:

**§ 219.211 Analysis and follow-up.**

\* \* \* \* \*

(b) \* \* \* An employer is prohibited from temporarily removing an employee from the performance of regulated service based only on a report from the laboratory to the MRO of a confirmed positive test for a drug or drug metabolite, an adulterated test, or a substituted test, before the MRO has completed verification of the test result.

(c) \* \* \* The Medical Review Officer must promptly report the results of each review to the Associate Administrator for Railroad Safety, FRA, 1200 New Jersey Avenue SE., Washington, DC 20590. \* \* \*

(e) \* \* \* An employee wishing to respond may do so by email or letter addressed to the Drug and Alcohol Program Manager, Office of Railroad Safety, FRA, 1200 New Jersey Avenue SE., Washington, DC 20590 within 45 days of receipt of the test results. \* \* \*

\* \* \* \* \*

(g) \* \* \*

(3) This provision does not authorize holding any employee out of service pending receipt of PAT testing results. It also does not restrict a railroad from taking such action based on the employee's underlying conduct, so long as it is consistent with the railroad's disciplinary policy and is taken under the railroad's own authority.

\* \* \* \* \*

**§ 219.213 [Amended]**

■ 23. In § 219.213, paragraphs (a) and (b), revise all references to "covered service" to read "regulated service," and in paragraph (b), add "written" in front of the word "notice".

■ 24. Revise subpart D to read as follows:

**Subpart D—Reasonable Suspicion Testing.**

219.301 Mandatory reasonable suspicion testing.

219.303 Reasonable suspicion observations.

219.305 Prompt specimen collection; time limitations.

**Subpart D—Reasonable Suspicion Testing**

**§ 219.301 Mandatory reasonable suspicion testing.**

(a) Each railroad must require a regulated employee to submit to a breath alcohol test when the railroad has reasonable suspicion to believe that the regulated employee has violated any prohibition of subpart B of this part concerning use of alcohol. The railroad's determination that reasonable suspicion exists to require the regulated employee to undergo an alcohol test must be based on specific, contemporaneous, articulable observations concerning the appearance, behavior, speech, or body odors of the employee. A Federal reasonable suspicion alcohol test is not required to confirm the on-duty possession of alcohol.

(b) Each railroad must require a regulated employee to submit to a drug test when the railroad has reasonable suspicion to believe that the regulated employee has violated the prohibitions of subpart B of this part concerning use of controlled substances. The railroad's determination that reasonable suspicion exists to require the regulated employee to undergo a drug test must be based on specific, contemporaneous, articulable observations concerning the appearance, behavior, speech, or body odors of the employee. Such observations may include indications of the chronic and withdrawal effects of drugs.

(c) Reasonable suspicion observations made under this section must comply with the requirements of § 219.303.

(d) As provided by § 219.11(b)(2), in any case where an employee is suffering a substantiated medical emergency and is subject to alcohol or drug testing under this subpart, necessary medical treatment must be accorded priority over provision of the breath or body fluid specimens. However, when the employee's condition is stabilized, reasonable suspicion testing must be completed if within the eight-hour limit provided for in § 219.305.

**§ 219.303 Reasonable suspicion observations.**

(a) With respect to an alcohol test, the required observations must be made by a responsible railroad supervisor (defined by § 219.5) trained in accordance with § 219.11(g). The supervisor who makes the determination that reasonable suspicion exists may not conduct the reasonable suspicion testing on that regulated employee.

(b) With respect to a drug test, the required observations must be made by

two responsible railroad supervisors (defined by § 219.5), at least one of whom must be both on site and trained in accordance with § 219.11(g). If one of the supervisors is off site, the on-site supervisor must communicate with the off-site supervisor, as necessary, to provide him or her the information needed to make the required observation. This communication may be performed via telephone, but not via radio or any other form of electronic communication.

(c) This subpart does not authorize holding any employee out of service pending receipt of toxicological analysis for reasonable suspicion testing, nor does it restrict a railroad from taking such action based on the employee's underlying conduct, provided it is consistent with the railroad's policy and taken under the railroad's own authority.

(d) The railroad must maintain written documentation that specifically describes the observed signs and symptoms upon which the determination that reasonable suspicion exists is based. This documentation must be completed promptly by the trained supervisor.

**§ 219.305 Prompt specimen collection; time limitations.**

(a) Consistent with the need to protect life and property, testing under this subpart must be conducted promptly following the observations upon which the testing decision is based.

(b) If a test required by this subpart is not administered within two hours following a determination made under this section, the railroad must prepare and maintain on file a record stating the reasons the test was not administered within that time period. If an alcohol or drug test required by this subpart is not administered within eight hours of a determination made under this subpart, the railroad must cease attempts to administer the test and must record the reasons for not administering the test. The eight-hour requirement is satisfied if the individual has been delivered to the collection site (where the collector is present) and the request has been made to commence collection of the specimens within that period. The records required by this section must be submitted to FRA upon request of the FRA Drug and Alcohol Program Manager.

(c) A regulated employee may not be tested under this subpart if that individual has been released from duty under the normal procedures of a railroad. An individual who has been transported to receive medical care is not released from duty for purposes of

this section. Nothing in this section prohibits the subsequent testing of an employee who has failed to remain available for testing as required (*i.e.*, who is absent without leave).

■ 25. Revise subpart E to read as follows:

#### **Subpart E—Reasonable Cause Testing**

Sec.

219.401 Authorization for reasonable cause testing.

219.403 Requirements for reasonable cause testing.

219.405 Documentation requirements.

219.407 Prompt specimen collection; time limitations.

219.409 Limitations on authority.

#### **Subpart E—Reasonable Cause Testing**

##### **§ 219.401 Authorization for reasonable cause testing.**

(a) Each railroad may, at its own discretion, elect to conduct Federal reasonable cause testing authorized by this subpart. If a railroad chooses to do so, the railroad must use only Federal authority for all reasonable cause testing that meets the criteria of § 219.403. In addition, the railroad must notify its regulated employees of its decision to use Federal reasonable cause testing authority in the employee educational policy required by § 219.23(e)(5). The railroad must also provide written notification of its decision to FRA's Drug and Alcohol Program Manager, 1200 New Jersey Ave. SE., Washington, DC 20590.

(b) If a railroad elects to conduct reasonable cause testing under the authority of this subpart, the railroad may, under the conditions specified in this subpart, require any regulated employee, as a condition of employment in regulated service, to cooperate with breath or body fluid testing, or both, to determine compliance with §§ 219.101 and 219.102 or a railroad rule implementing the requirements of §§ 219.101 and 219.102. This authority is limited to testing after observations or events that occur during duty hours (including any period of overtime or emergency service). The provisions of this subpart apply only when, and to the extent that, the test in question is conducted in reliance upon the authority conferred by this section. A railroad may not require an employee to be tested under the authority of this subpart unless reasonable cause, as defined in this section, exists with respect to that employee.

##### **§ 219.403 Requirements for reasonable cause testing.**

Each railroad's decision process regarding whether reasonable cause

testing is authorized must be completed before the reasonable cause testing is performed and documented according to the requirements of § 219.405. The following circumstances constitute reasonable cause for the administration of alcohol and/or drug tests under the authority of this subpart.

(a) *Train accident or train incident.* A regulated employee has been involved in a train accident or train incident (as defined in § 219.5) reportable under part 225 of this chapter, and a responsible railroad supervisor (as defined in § 219.5) has a reasonable belief, based on specific, articulable facts, that the individual employee's acts or omissions contributed to the occurrence or severity of the accident; or

(b) *Rule violation.* A regulated employee has been directly involved in one or more of the following railroad or FRA rule violations or other errors:

(1) Noncompliance with a train order, track warrant, track bulletin, track permit, stop and flag order, timetable, signal indication, special instruction or other directive with respect to movement of railroad on-track equipment that involves—

(i) Occupancy of a block or other segment of track to which entry was not authorized;

(ii) Failure to clear a track to permit opposing or following movements to pass;

(iii) Moving across a railroad crossing at grade without authorization; or

(iv) Passing an absolute restrictive signal or passing a restrictive signal without stopping (if required);

(2) Failure to protect on-track equipment, including leaving on-track equipment fouling an adjacent track;

(3) Operation of a train or other speedometer-equipped on-track equipment at a speed that exceeds the maximum authorized speed by at least 10 miles per hour or by 50% of such maximum authorized speed, whichever is less;

(4) Alignment of a switch in violation of a railroad rule, failure to align a switch as required for movement, operation of a switch under on-track equipment, or unauthorized running through a switch;

(5) Failure to restore and secure a main track switch as required;

(6) Failure to apply brakes or stop short of a derail as required;

(7) Failure to secure a hand brake or failure to secure sufficient hand brakes, as required;

(8) Entering a crossover before both switches are lined for movement or restoring either switch to normal position before the crossover movement is completed;

(9) Failure to provide point protection by visually determining that the track is clear and giving the signals or instructions necessary to control the movement of on-track equipment when engaged in a shoving or pushing movement;

(10) In the case of a person performing a dispatching function or block operator function, issuance of a mandatory directive or establishment of a route that fails to provide proper protection for on-track equipment;

(11) Interference with the normal functioning of any grade crossing signal system or any signal or train control device without first taking measures to provide for the safety of highway traffic or train operations which depend on the normal functioning of such a device.

Such interference includes, but is not limited to, failure to provide alternative methods of maintaining safety for highway traffic or train operations while testing or performing work on the devices or on track and other railroad systems or structures which may affect the integrity of the system;

(12) Failure to perform stop-and-flag duties necessary as a result of a malfunction of a grade crossing signal system;

(13) Failure of a machine operator that results in a collision between a roadway maintenance machine and on-track equipment or a regulated employee;

(14) Failure of a roadway worker-in-charge to notify all affected employees when releasing working limits;

(15) Failure of a flagman or watchman/lookout to notify employees of an approaching train or other on-track equipment;

(16) Failure to ascertain that provision was made for on-track safety before fouling a track;

(17) Improper use of individual train detection in a manual interlocking or control point; or

(18) Failure to apply three point protection (fully apply the locomotive and train brakes, center the reverser, and place the generator field switch in the off position) that results in a reportable injury to a regulated employee.

##### **§ 219.405 Documentation requirements.**

(a) Each railroad must maintain written documentation that specifically describes the basis for each reasonable cause test it performs under Federal authority. This documentation must be completed promptly by the responsible railroad supervisor; although it does not need to be completed before the reasonable cause testing is conducted.

(b) For a rule violation, the documentation must include the type of

rule violation and the involvement of each tested regulated employee. For a train accident or train incident reportable under part 225 of this chapter, a railroad must describe either the amount of railroad property damage or the reportable casualty and the basis for the supervisor's belief that the employee's acts or omissions contributed to the occurrence or severity of the train accident or train incident.

**§ 219.407 Prompt specimen collection; time limitations.**

(a) Consistent with the need to protect life and property, testing under this subpart must be conducted promptly following the observations upon which the testing decision is based.

(b) If a test conducted pursuant to the authority of this subpart is not administered within two hours following the observations upon which the testing decision is based, the railroad must prepare and maintain on file a record stating the reasons the test was not conducted within that time period. If an alcohol or drug test authorized by this subpart is not administered within eight hours of the event under this subpart, the railroad must cease attempts to administer the test and must record the reasons for not administering the test. The eight-hour time period begins at the time a responsible railroad supervisor receives notice of the train accident, train incident, or rule violation. The eight-hour requirement is satisfied if the employee has been delivered to the collection site (where the collector is present) and the request has been made to commence collection of specimen(s) within that period. The records required by this section must be submitted to FRA upon request of the FRA Drug and Alcohol Program Manager.

(c) A regulated employee may not be tested under this subpart if that individual has been released from duty under the normal procedures of the railroad. An individual who has been transported to receive medical care is not released from duty for purposes of this section. Nothing in this section prohibits the subsequent testing of a regulated employee who has failed to remain available for testing as required (*i.e.*, who is absent without leave).

**§ 219.409 Limitations on authority.**

(a) The alcohol and/or drug testing authority conferred by this subpart does not apply with respect to any event that meets the criteria for post-accident toxicological testing required under subpart C of this part.

(b) This subpart does not authorize holding an employee out of service

pending receipt of toxicological analysis for reasonable cause testing because meeting the testing criteria is only a basis to inquire whether alcohol or drugs may have played a role in the accident or rule violation. However, this subpart does not restrict a railroad from holding an employee out of service based on the employee's underlying conduct, so long as it is consistent with the railroad's policy and the action is taken under the railroad's own authority.

(c) When determining whether reasonable cause testing is justified, a railroad must consider the involvement of each crewmember in the qualifying event, not the involvement of the crew as a whole.

**Subpart F—Pre-Employment Tests**

■ 26. Revise § 219.501 to read as follows:

**§ 219.501 Pre-employment drug testing.**

(a) Before an individual performs regulated service the first time for a railroad, the railroad must ensure that the individual undergoes testing for drugs in accordance with the regulations of a DOT agency. No railroad may allow a direct employee (a railroad employee who is not employed by a contractor to the railroad) to perform regulated service, unless that railroad has conducted a DOT pre-employment test for drugs on that individual with a result that did not indicate the misuse of controlled substance. This requirement applies both to a final applicant for direct employment and to a direct employee seeking to transfer for the first time from non-regulated service to duties involving regulated service. A regulated employee must have a negative DOT pre-employment drug test for each railroad for which he or she performs regulated service as the result of a direct employment relationship.

(b) Each railroad must ensure that each employee of a contractor who performs regulated service on the railroad's behalf has a negative DOT pre-employment drug test on file with his or her employer. The railroad must also maintain documentation indicating that it had verified that the contractor employee had a negative DOT pre-employment drug test on file with his or her direct employer. A contractor employee who performs regulated service for more than one railroad does not need to have a DOT pre-employment drug test for each railroad for which he or she provides service.

(c) If a railroad has already conducted a DOT pre-employment test resulting in

a negative for a regulated service applicant under the rules and regulations of another DOT agency (such as the Federal Motor Carrier Safety Administration), FRA will accept the result of that negative DOT pre-employment test for purposes of the requirements of this subpart.

(d) As used in subpart H of this part with respect to a test required under this subpart, the term regulated employee includes an applicant for pre-employment testing only. If an applicant declines to be tested and withdraws an application for employment before the pre-employment testing process commences, no record may be maintained of the declination.

(e) The pre-employment drug testing requirements of this section do not apply to covered employees of railroads qualifying for the small railroad exception (see § 219.3(c)) or maintenance-of-way employees who were performing duties for a railroad before June 12, 2017. However, a grandfathered employee must have a negative pre-employment drug test before performing regulated service for a new employing railroad after June 12, 2017.

■ 27. In § 219.502, revise paragraph (a) introductory text, (a)(1), (a)(2), (a)(5), and (b) to read as follows:

**§ 219.502 Pre-employment alcohol testing.**

(a) A railroad may, but is not required to, conduct pre-employment alcohol testing under this part. If a railroad chooses to conduct pre-employment alcohol testing, the railroad must comply with the following requirements:

(1) The railroad must conduct a pre-employment alcohol test before the first performance of regulated service by an employee, regardless of whether he or she is a new employee or a first-time transfer to a position involving the performance of regulated service.

(2) The railroad must treat all employees performing regulated service the same for the purpose of pre-employment alcohol testing (*i.e.*, a railroad must not test some regulated employees and not others.)

\* \* \* \* \*

(5) If a regulated employee's Federal pre-employment test indicates an alcohol concentration of 0.04 or greater, a railroad may not allow him or her to begin performing regulated service until he or she has completed the Federal return-to-duty process under § 219.104(d).

(b) As used in subpart H of this part with respect to a test authorized under this subpart, the term regulated

employee includes an applicant for pre-employment testing only. If an applicant declines to be tested before the testing process commences, no record may be maintained of the declination. The determination of when an alcohol test commences must be made according to the provisions of § 40.243(a) of this title.

■ 28. Revise § 219.503 to read as follows:

**§ 219.503 Notification; records.**

Each railroad must provide for medical review of drug test results according to the requirements of part 40 of this title, as provided in subpart H of this part. The railroad must also notify the applicant in writing of the results of any Federal drug and/or alcohol test that is a positive, adulteration, substitution, or refusal in the same manner as provided for employees in part 40 of this title and subpart H of this part. Records must be maintained confidentially and be retained in the same manner as required under subpart J of this part for employee test records, except that such records need not reflect the identity of an applicant who withdrew an application to perform regulated service before the commencement of the testing process.

■ 29. Revise § 219.505 to read as follows:

**§ 219.505 Non-negative tests and refusals.**

An applicant who has tested positive or refused to submit to pre-employment testing under this section may not perform regulated service for any railroad until he or she has completed the Federal return-to-duty process under § 219.104(d). An applicant may also not perform DOT safety-sensitive functions for any other employer regulated by a DOT agency until he or she has completed the Federal return-to-duty process under § 219.104(d). This section does not create any right on the part of the applicant to have a subsequent application considered; nor does it restrict the discretion of the railroad to entertain a subsequent application for employment from the same person.

■ 30. Revise subpart G to read as follows:

**Subpart G—Random Alcohol and Drug Testing Programs**

Sec.

219.601 Purpose and scope of random testing programs.

219.603 General requirements for random testing programs.

219.605 Submission and approval of random testing plans.

219.607 Requirements for random testing plans.

219.609 Inclusion of contractor employees and volunteers in random testing plans.

219.611 Random alcohol and drug testing pools.

219.613 Random testing selections.

219.615 Random testing collections.

219.617 Participation in random alcohol and drug testing.

219.619 Positive alcohol and drug test results and refusals; procedures.

219.621 Use of service agents.

219.623 Records.

219.625 FRA Administrator's determination of random alcohol and drug testing rates.

**Subpart G—Random Alcohol and Drug Testing Programs**

**§ 219.601 Purpose and scope of random testing programs.**

(a) *Purpose.* The purpose of random alcohol and drug testing is to promote safety by deterring regulated employees from misusing drugs and abusing alcohol.

(b) *Regulated employees.* Each railroad must ensure that a regulated employee is subject to being selected for random testing as required by this subpart whenever the employee performs regulated service on the railroad's behalf.

(c) *Contractor employees and volunteers.* A regulated employee who is a volunteer or an employee of a contractor to a railroad may be incorporated into the random testing program of more than one railroad if:

(1) The contractor employee or volunteer is not already part of a random testing program that meets the requirements of this subpart and has been accepted by the railroad for which he or she performs regulated service (as described in § 219.609); or

(2) The railroad for which the contractor employee or volunteer performs regulated service is unable to verify that the individual is part of a random testing program acceptable to the railroad that meets the requirements of this subpart.

(d) *Multiple DOT agencies.* (1) If a regulated employee performs functions subject to the random testing requirements of more than one DOT agency, a railroad must ensure that the employee is subject to selection for random drug and alcohol testing at or above the current minimum annual testing rate set by the DOT agency that regulates more than 50 percent of the employee's DOT-regulated functions.

(2) A railroad may not include a regulated employee in more than one DOT random testing pool for regulated service performed on its behalf, even if the regulated employee is subject to the random testing requirements of more than one DOT agency.

**§ 219.603 General requirements for random testing programs.**

(a) *General.* To the extent possible, each railroad must ensure that its FRA random testing program is designed and implemented so that each employee performing regulated service on its behalf should reasonably anticipate that he or she may be called for a random test without advance warning at any time while on duty and subject to performing regulated service.

(b) *Prohibited selection bias.* A random testing program may not have a selection bias or an appearance of selection bias, or appear to provide an opportunity for a regulated employee to avoid complying with this section.

(c) *Plans.* As required by §§ 219.603 through 219.609, each railroad must submit for FRA approval a random testing plan meeting the requirements of this subpart. The plan must address all regulated employees, as defined in § 219.5.

(d) *Pools.* Each railroad must construct and maintain random testing pools in accordance with § 219.611.

(e) *Selections.* Each railroad must conduct random testing selections in accordance with § 219.613.

(f) *Collections.* Each railroad must perform random testing collections in accordance with § 219.615.

(g) *Cooperation.* Each railroad and its regulated employees must cooperate with and participate in random testing in accordance with § 219.617.

(h) *Responsive action.* Each railroad must handle positive random tests and verified refusals to test in accordance with § 219.619.

(i) *Service agents.* Each railroad may use a service agent to perform its random testing responsibilities in accordance with § 219.621.

(j) *Records.* Each railroad must maintain records required by this subpart in accordance with § 219.623.

**§ 219.605 Submission and approval of random testing plans.**

(a) *Plan submission.* (1) Each railroad must submit for review and approval a random testing plan meeting the requirements of §§ 219.607 and 219.609 to the FRA Drug and Alcohol Program Manager, 1200 New Jersey Ave. SE., Washington, DC 20590. A railroad commencing start-up operations must submit its plan no later than 30 days before its date of commencing operations. A railroad that must comply with this subpart because it no longer qualifies for the small railroad exception under § 219.3 (due to a change in operations or its number of covered employees) must submit its plan no later than 30 days after it becomes

subject to the requirements of this subpart. A railroad may not implement a Federal random testing plan or any substantive amendment to that plan before FRA approval.

(2) A railroad may submit separate random testing plans for each category of regulated employees (as defined in § 219.5), combine all categories into a single plan, or amend its current FRA-approved plan to add additional categories of regulated employees, as defined by this part.

(b) *Plan approval notification.* FRA will notify a railroad in writing whether its plan is approved. If the plan is not approved because it does not meet the requirements of this subpart, FRA will inform the railroad of its non-approval, with specific explanations of any required revisions. The railroad must resubmit its plan with the required revisions within 30 days of the date of FRA's written notice. Failure to resubmit the plan with the necessary revisions will be a failure to submit a plan under this part.

(c) *Plan implementation.* Each railroad must implement its random testing plan no later than 30 days from the date of FRA approval.

(d) *Plan amendments.* (1) Each railroad must submit to FRA a substantive amendment to an approved plan at least 30 days before its intended effective date. A railroad may not implement any substantive amendment before FRA approval.

(2) Each railroad must provide a non-substantive amendment to an approved plan (such as the replacement or addition of service providers) to the FRA Drug and Alcohol Program Manager in writing (by letter or email) before its effective date. However, FRA pre-approval is not required.

(e) *Previously approved plans.* A railroad is not required to resubmit a random testing plan that FRA had approved before June 12, 2017, unless the railroad must amend the plan to comply with the requirements of this subpart. A railroad must submit new plans, combined plans, or amended plans incorporating new categories of regulated employees (*i.e.*, maintenance-of-way employees) for FRA approval at least 30 days before June 12, 2017.

#### **§ 219.607 Requirements for random testing plans.**

(a) *General.* A random testing plan that a railroad submits under this subpart must address and comply with the requirements of this subpart. The railroad must also comply with these requirements in implementing the plan.

(b) *Model random testing plan.* A railroad (or a contractor or service agent

that submits a part 219-compliant random testing plan to a railroad for submission as a part of the railroad's random testing plan) may complete, modify if necessary, and submit a plan based on the FRA model random testing plan that can be downloaded from FRA's Drug and Alcohol Program Web site.

(c) *Specific plan requirements.* Each random testing plan must contain the following items of information, each of which must be contained in a separate, clearly identified section:

(1) Total number of covered employees, including covered service contractor employees and volunteers;

(2) Total number of maintenance-of-way employees, including maintenance-of-way contractor employees and volunteers;

(3) Names of any contractors who perform regulated service for the railroad, with contact information;

(4) Method used to ensure that any regulated service contractor employees and volunteers are subject to the requirements of this subpart, as required by § 219.609;

(5) Name, address, and contact information for the railroad's Designated Employer Representative (DER) and any alternates (if applicable);

(6) Name, address, and contact information for any service providers, including the railroad's Medical Review Officers (MROs), Substance Abuse and Mental Health Services Administration (SAMHSA) certified drug testing laboratory(ies), Drug and Alcohol Counselors (DACs), Substance Abuse Professionals (SAPs), and C/TPA or collection site management companies. Individual collection sites do not have to be identified;

(7) Number of random testing pools and the proposed general pool entry assignments for each pool. If using a C/TPA, a railroad must identify whether its regulated employees are combined into one pool, contained in separate pools, or combined in a larger pool with other FRA or other DOT agency regulated employees, or both.

(8) Target random testing rates;

(9) Method used to make random selections, including a detailed description of the computer program or random number table selection process employed;

(10) Selection unit(s) for each random pool (*e.g.*, employee name or ID number, job assignment, train symbol) and whether the individual selection unit(s) will be selected for drugs, alcohol, or both;

(11) If a railroad makes alternate selections, under what limited

circumstances these alternate selections will be tested (see § 219.613);

(12) Frequency of random selections (*e.g.*, monthly);

(13) Designated testing window. A designated testing window extends from the beginning to the end of the designated testing period established in the railroad's FRA-approved random plan (see § 219.603), after which time any individual selections for that designated testing window that have not been collected are no longer active (valid); and

(14) Description of how the railroad will notify a regulated employee that he or she has been selected for random testing.

#### **§ 219.609 Inclusion of contractor employees and volunteers in random testing plans.**

(a) Each railroad's random testing plan must demonstrate that all of its regulated service contractor employees and volunteers are subject to random testing that meets the requirements of this subpart. A railroad can demonstrate that its regulated service contractor employees and volunteers are in compliance with this subpart by either:

(1) Directly including regulated service contractor employees and volunteers in its own random testing plan and ensuring that they are tested according to that plan; or

(2) Indicating in its random testing plan that its regulated service contractor employees and volunteers are part of a random testing program which is compliant with the requirements of this subpart, *e.g.*, conducted by a contractor or C/TPA ("non-railroad random testing program"). If a railroad chooses this option, the railroad must append to its own random testing plan one or more addenda describing the method it will use to ensure that the non-railroad random testing program is testing its regulated service contractor employees and volunteers according to the requirements of this subpart. A railroad may comply with this requirement by appending the non-railroad random testing program or a detailed description of the program and how it complies with this subpart.

(b) Each railroad's random testing plan(s) and any addenda must contain sufficient detail to fully document that the railroad is meeting the requirements of this subpart for all personnel performing regulated service on its behalf.

(c) If a railroad chooses to use regulated service contractor employees and volunteers who are part of a non-railroad random testing program, the railroad remains responsible for

ensuring that the non-railroad program is testing the regulated service contractor employees and volunteers according to the requirements of this subpart.

(d) FRA does not pre-approve contractor or service agent random testing plans, but may accept them as part of its approval process of a railroad's plan.

**§ 219.611 Random alcohol and drug testing pools.**

(a) *General.* Each railroad must ensure that its random testing pools include all regulated employees who perform regulated service on its behalf, except that a railroad's random testing pools do not have to include regulated employees who are part of a non-railroad random testing program that is compliant with the requirements of this subpart and that has been accepted by the railroad.

(b) *Pool entries.* Each railroad must clearly indicate who will be tested when a specific pool entry is selected.

(1) Pool entries may be employee names or identification numbers, train symbols, or specific job assignments, although all the entries in a single pool must be of generally consistent sizes and types.

(2) Pool entries must not allow a field manager or field supervisor to have discretion over which employee is to be tested when an entry is selected.

(3) Pool entries must be constructed and maintained so that all regulated employees have an equal chance of being selected for random testing for each selection draw.

(c) *Minimum number of pool entries.* A railroad (including a service agent used by a railroad to carry out its responsibilities under this subpart) may not maintain a random testing pool with less than four pool entries. Placeholder pool entries (entries that do not represent legitimate selections of regulated employees) are not permitted. A railroad or contractor with less than four regulated employees can comply with this requirement by having its regulated employees incorporated into a railroad or non-railroad random testing pool that contains more than four entries.

(d) *Pool construction.* (1) An individual who is not subject to the random testing requirements of FRA or another DOT agency may not be placed in the same pool as a regulated employee.

(2) A railroad may not include a regulated employee in more than one random testing pool established under the regulations of a DOT agency.

(3) A regulated employee may be placed in a random testing pool with

employees subject to the random testing requirements of another DOT agency, only if all entries in the pool are subject to testing at the highest minimum random testing rate required by the regulations of a DOT agency for any single member in the pool.

(4) A regulated employee does not have to be placed in separate pools for random drug and random alcohol testing selection.

(5) A regulated employee must be incorporated into a random testing pool as soon as possible after his or her hire or first transfer into regulated service.

(e) *Frequency of regulated service.* (1) A railroad may not place a person in a random testing pool for any selection period in which he or she is not expected to perform regulated service.

(2) A railroad employee who performs regulated service on average less than once a quarter is a de minimis safety concern for random testing purposes, and does not have to be in a random testing program. A railroad that chooses to random test de minimis employees must place them in a separate random testing pool from employees who perform regulated service on a regular basis (e.g., engineers, conductors, dispatchers, and signal maintainers).

(3) A railroad must make a good faith effort to determine the frequency of an employee's performance of regulated service and must evaluate the employee's likelihood of performing regulated service in each upcoming selection period.

(f) *Pool maintenance.* Pool entries must be updated at least monthly, regardless of how often selections are made, and a railroad must ensure that each of its random testing pools is complete and does not contain outdated or inappropriate entries.

(g) *Multiple random testing pools.* A railroad may maintain more than one random testing pool if it can demonstrate that its random testing program is not adversely impacted by the number and types of pools or the construction of pool entries, and that selections from each pool will meet the requirements of this subpart.

**§ 219.613 Random testing selections.**

(a) *General.* Each railroad must ensure that each regulated employee has an equal chance of being selected for random testing whenever selections are made. A railroad may not increase or decrease an employee's chance of being selected by weighting an entry or pool.

(b) *Method of selection.* (1) Each railroad must use a selection method that is acceptable to FRA and meets the requirements of this subpart, such as a computer selection program, proper use

of a random number table, or an alternative method which FRA has approved as part of the railroad's random testing plan.

(2) A selection method must be free of bias or apparent bias and employ objective, neutral criteria to ensure that every regulated employee has an equal statistical chance of being selected within a specified time frame. The selection method may not utilize subjective factors that permit a railroad to manipulate or control selections in an effort to either target or protect any employee, job, or operational unit from testing.

(3) The randomness of a selection method must be verifiable, and, as required by § 219.623, any records necessary to document the randomness of a selection must be retained for not less than two years from the date the designated testing window for that selection expired.

(c) *Minimum random testing rate.* (1) Each railroad must distribute random tests reasonably throughout the calendar year and make sufficient selections to ensure that each random testing pool meets the Administrator's minimum annual random testing rates as established according to § 219.625.

(2) Each railroad must continually monitor changes in its workforce to ensure that the required number of selections and tests are conducted each year.

(d) *Selection frequency.* Each railroad must select at least one entry from each of its random testing pools every three months.

(e) *Discarded selection draws.* Each selection draw must identify who will be subject to random testing. A railroad cannot discard a selection draw without an acceptable explanation (e.g., the selection was drawn from an incomplete or inaccurate pool). A railroad must document and retain records for all discarded selection draws, including the specific reason the selection draw was not used, as required by § 219.623.

(f) *Increasing random selections.* A railroad that is unable to complete a collection for each selection made during a designated testing period may increase the number of selections in a subsequent selection period to ensure that it meets the annual minimum random testing rate for the calendar year.

(g) *Selection snapshots.* Each railroad must capture and maintain an electronic or hard copy snapshot of each random testing pool at the time it makes a testing selection. A railroad must not re-create pool entries from records after the time of the original selection. The railroad must maintain this snapshot for

a period of two years, as required by subpart J of this part.

(h) *Multiple DOT agencies.* Each railroad must ensure that each regulated employee who performs functions subject to the random testing requirements of more than one DOT agency is subject to random selection at or above the current minimum annual testing rate set by the DOT agency that regulates more than 50 percent of the employee's DOT-regulated functions.

#### **§ 219.615 Random testing collections.**

(a) *Minimum random testing rates.* Each railroad must complete a sufficient number of random alcohol and drug testing collections from each of its random testing pools to meet the Administrator's minimum annual testing rates established in accordance with § 219.625.

(b) *Designated testing window.* Each railroad must complete the collection for a selected pool entry within the FRA-approved designated testing window for that selection. Once a designated testing window has closed, any selections not collected during that window are no longer valid and may not be subject to random testing.

(c) *Collection timing.* (1) A regulated employee may be subject to random testing only while on duty and subject to performing regulated service.

(2) Each railroad's random alcohol and drug testing collections must be unannounced and spread reasonably throughout the calendar year. Collections must also be distributed unpredictably throughout the designated testing window and must reasonably cover all operating days of the week (including operating weekends and holidays), shifts, and locations.

(3) Random alcohol test collections must be performed unpredictably and in sufficient numbers at either end of an operating shift to attain an acceptable level of deterrence throughout the entire shift. At a minimum, a railroad must perform 10% of its random alcohol tests at the beginning of shifts and 10% of its random alcohol tests at the end of shifts.

(4) If a regulated employee has been selected for both random drug and alcohol testing, a railroad may conduct these tests separately, so long as both required collections can be completed by the end of the employee's shift and the railroad does not inform the employee that an additional collection will occur later.

(d) *Collection scheduling.* While pool entries may be selected randomly, a railroad may schedule each random test collection during a designated testing window according to its approved plan.

(1) A railroad may schedule a collection based on the availability of the selected pool entry, the logistics of performing the collection, and any other requirements of this subpart.

(2) If a selected pool entry does not identify the selection by name (*i.e.*, train crews or job functions), a railroad may not use its scheduling discretion to deliberately target or protect a particular employee or work crew. Unless otherwise approved in a random testing plan, railroad field supervisors or field management personnel may not use discretion to choose or to change collection dates or times if that choice could intentionally alter who is to be tested.

(e) *Notification requirements.* (1) A railroad may notify a regulated employee that he or she has been selected for random testing only during the duty tour in which the collection is to be conducted, and only so far in advance as is reasonably necessary to ensure the employee's presence at the scheduled collection time and place.

(2) A railroad must make collections as soon as possible. Each collection must begin within two hours after the railroad has notified the employee of his or her selection for random testing, unless the railroad has an acceptable reason for the delay. A railroad should monitor each employee after notification and, whenever possible, arrange for the employee to be immediately escorted by supervisory or management personnel to the collection location.

(3) A railroad must inform a regulated employee that he or she has been selected for random testing at the time the employee is notified. Completion of the Federal Drug Testing Custody and Control Form (CCF) or the DOT Alcohol Testing Form (ATF) indicating the basis of the test satisfies this requirement, so long as the employee has been shown and directed to sign the CCF or ATF as required by §§ 40.73 and 40.241 of this title.

(f) *Incomplete collections.* A railroad must use due diligence to ensure that a random testing collection is completed for each selected pool entry, unless it has an acceptable explanation for not conducting the collection. All reasons for incomplete collections must be fully documented and are subject to inspection by FRA upon request.

(g) *Hours-of-service limitations.* (1) Except as provided by paragraph (g)(2) of this section, a railroad must immediately terminate a random collection and may not reschedule it if the collection is not completed within a covered employee's hours-of-service limitations.

(2) If a random collection requires a direct observation collection under § 40.67 of this title, the directly observed collection must immediately proceed until completed. A railroad must submit an excess service report, as required by part 228 of this chapter, if completion of the directly observed collection causes the covered employee to exceed his or her hours-of-service limitations.

#### **§ 219.617 Participation in random alcohol and drug testing.**

(a) *Railroad responsibility.* (1) A railroad must, under the conditions specified in this subpart and subpart H of this part, require a regulated employee selected for random testing to cooperate in alcohol and/or drug testing.

(2) If an employee is performing regulated service at the time he or she is notified of his or her selection for random testing, the railroad must ensure that the employee immediately ceases to perform regulated service and proceeds to the collection site without adversely affecting safety. A railroad must also ensure that the absence of an employee from his or her assigned duties to report for testing does not adversely affect safety. Once an employee begins the testing process, he or she may not be returned to regulated service until the testing process is complete.

(3) A railroad may excuse an employee who has been notified of or her selection for random testing only if the employee can substantiate that a medical emergency involving the employee or an immediate family member (*e.g.*, birth, death, or medical emergency) supersedes the requirement to complete the test. A medical emergency is defined in this part as an acute medical condition requiring immediate emergency care. To be eligible for exclusion from random testing, the employee must provide verifiable documentation of the emergency situation from a credible outside professional within a reasonable period of time (*e.g.*, a doctor, dentist, hospital, law enforcement officer, or school authority). A railroad may not test an employee who has been excused from testing under the same random selection.

(b) *Employee responsibility.* (1) A regulated employee subject to the random testing requirements of this subpart must cooperate with the selection and testing process, and must proceed to the testing site upon notification that he or she has been selected for random testing.

(2) A regulated employee must fully cooperate and comply with the urine drug collection and/or breath alcohol

testing procedures required by subpart H of this part, and provide the required specimen(s), and must, upon request, complete the required paperwork and certifications.

**§ 219.619 Positive alcohol and drug test results and refusals; procedures.**

Section 219.104 contains the procedures for administrative handling by the railroad or contractor in the event a urine specimen provided under this subpart is reported as a verified positive by the Medical Review Officer, a breath alcohol specimen is reported at 0.04 or greater by the Breath Alcohol Technician, or a refusal to test has occurred. The responsive action required in § 219.104 is not stayed pending the result of the testing of a split urine specimen or a challenge to any part of the testing process or procedure.

**§ 219.621 Use of service agents.**

(a) A railroad may use a service agent (such as a consortium/third party administrator (C/TPA)) to act as its agent to carry out any role in random testing specifically permitted under subpart Q of part 40 of this title, such as maintaining random pools, conducting random selections, and performing random urine drug collections and breath alcohol tests.

(b) A railroad may not use a service agent to notify a regulated employee that he or she has been selected for random testing. A regulated employee who has been selected for random testing must otherwise be notified of the selection by his or her employer. A service agent may also not perform any role that § 40.355 of this title specifically reserves to an employer, which, for purposes of this subpart, is defined as a railroad or a contractor performing railroad-accepted testing.

(c) A railroad is primarily responsible for compliance with the random alcohol and drug testing of this subpart, but FRA reserves the right to bring an enforcement action for noncompliance against the railroad, its service agents, its contractors, and/or its employees.

(d) If a railroad conducts random drug and/or alcohol testing through a C/TPA, the number of employees required to be tested may be calculated for each individual railroad belonging to the C/TPA, or may be based on the total number of regulated employees covered by the C/TPA in a larger combined railroad or DOT agency random pool. Selections from combined railroad random pools must meet or exceed the highest minimum annual percentage rate established under this subpart or

any DOT agency drug testing rule that applies to any member of that pool.

**§ 219.623 Records.**

(a) As provided by § 219.901, each railroad is required to maintain records related to random testing for a minimum of two years.

(b) Contractors and service agents performing random testing responsibilities under this subpart must provide records required by this subpart whenever requested by the contracting railroad or by FRA. A railroad remains responsible for maintaining records demonstrating that it is in compliance with the requirements of this subpart.

**§ 219.625 FRA Administrator's determination of random alcohol and drug testing rates.**

(a) *Notice.* Each year, the Administrator publishes a **Federal Register** notice announcing the minimum annual random alcohol and drug testing rates which take effect on January 1 of the following calendar year. These rates are based on the railroad industry's random testing violation rates for the preceding two consecutive calendar years, which are determined using annual railroad alcohol and drug program data required to be submitted to the FRA's Management Information System (MIS) under § 219.800.

(b) *Information.* Data from MIS reports provide the information used for this determination. In order to ensure reliability of the data, the Administrator may consider the quality and completeness of the reported data, obtain additional information or reports from railroads, or make appropriate modifications in calculating the industry positive rate.

(c) *Initial minimum annual random testing rates.* The Administrator has established an initial minimum annual random testing rate of 50 percent for drugs and 25 percent for alcohol for any new category of regulated employees added to those already being tested under this part.

(1) These initial testing rates are subject to amendment by the Administrator in accordance with paragraphs (d) and (e) of this section after at least 18 months of MIS data have been compiled for the new category of regulated employees.

(2) The Administrator will determine separate minimum annual random testing rates for each added category of regulated employees for a minimum of three calendar years after that category is incorporated into random testing under this part.

(3) The Administrator may move to combine categories of regulated

employees requiring separate determinations into a single determination once the categories' testing rates are identical for two consecutive years.

(d) *Drug testing rate.* The Administrator may set the minimum annual random drug testing rate for the railroad industry at either 50 percent or 25 percent.

(1) When the minimum annual percentage rate for random drug testing is 50 percent, the Administrator may lower the rate to 25 percent if the Administrator determines that the MIS data for two consecutive calendar years show that the reported random testing positive rate is less than 1.0 percent.

(2) When the minimum annual percentage rate for random drug testing is 25 percent, and the MIS data for any calendar year show that the reported random testing positive rate is equal to or greater than 1.0 percent, the Administrator will increase the minimum annual percentage rate for random drug testing to 50 percent.

(e) *Alcohol testing rate.* The Administrator may set the minimum annual random alcohol testing rate for the railroad industry at 50 percent, 25 percent, or 10 percent.

(1) When the minimum annual percentage rate for random alcohol testing is 50 percent or 25 percent, the Administrator may lower this rate to 10 percent if the Administrator determines that the MIS data for two consecutive calendar years show that the random testing violation rate is less than 0.5 percent.

(2) When the minimum annual percentage rate for random alcohol testing is 50 percent, the Administrator may lower the rate to 25 percent if the Administrator determines that the MIS data for two consecutive calendar years show that the random testing violation rate is less than 1.0 percent but equal to or greater than 0.5 percent.

(3) When the minimum annual percentage rate for random alcohol testing is 25 percent, and the MIS data for that calendar year show that the random testing violation rate for drugs is equal to or greater than 0.5 percent but less than 1.0 percent, the Administrator will increase the minimum annual percentage rate for random drug testing to 50 percent.

(4) When the minimum annual percentage rate for random alcohol testing is 10 percent or 25 percent, and the MIS data for any calendar year show that the random testing violation rate is equal to or greater than 1.0 percent, the Administrator will increase the minimum annual percentage rate for random alcohol testing to 50 percent.

## Subpart H—Drug and Alcohol Testing Procedures

### § 219.701 [Amended]

- 31. Revise § 219.701 by:
- a. In paragraphs (a) and (b), removing the phrase “B, D, F, and G” wherever it appears and adding, in its place, “B, D, E, F, G, and K (but only for co-worker or non-peer referrals that involve a violation of the prohibitions of this subpart)”; and
  - b. Removing paragraph (c).

## Subpart I—Annual Report

- 32. In § 219.800, revise the last sentence of paragraph (b) and the first sentence of paragraph (d) and add a new paragraph (f) to read as follows:

### § 219.800 Annual reports.

(b) \* \* \* For information on where to submit MIS forms and for the electronic version of the form, see: <http://www.fra.dot.gov/eLib/details/L02639>.

(d) As a railroad, if you have a regulated employee who performs multi-DOT agency functions (e.g., an employee drives a commercial motor vehicle and performs switchman duties for you), count the employee only on the MIS report for the DOT agency under which he or she is random tested.

(f) A railroad required to submit an MIS report under this section must submit separate reports for covered employees and MOW employees.

## Subpart J—Recordkeeping Requirements

- 33. Revise § 219.901 to read as follows:

### § 219.901 Retention of alcohol and drug testing records.

(a) *General.* (1) In addition to the records part 40 of this title requires keeping, a railroad must also maintain alcohol and drug misuse prevention program records in a secure location with controlled access under this section's requirements.

(2) A railroad must maintain for two years, rather than one year, the records to which § 40.333(a)(4) of this title applies (i.e., records of negative and cancelled drug test results and alcohol test results with a concentration of less than 0.02). A railroad may maintain legible and accessible scanned or electronic copies of these records for the second year.

(b) *Records maintained for a minimum of five years.* Each railroad

must maintain the following records for a minimum of five years:

- (1) A summary record or the individual files of each regulated employee's test results; and
- (2) A copy of the annual report summarizing the results of its alcohol and drug misuse prevention program (if required to submit the report under § 219.800(a)).

(c) *Records maintained for a minimum of two years.* Each railroad must maintain the following records for a minimum of two years:

- (1) Records related to the collection process:
  - (i) Collection logbooks, if used;
  - (ii) Documents relating to the random selection process, including the railroad's approved random testing plan and FRA's approval letter for that plan;
  - (iii) Documents generated in connection with decisions to administer Federal reasonable suspicion or reasonable cause alcohol or drug tests;
  - (iv) Documents generated in connection with decisions on post-accident testing; and
- (v) Documents verifying the existence of a medical explanation for the inability of a regulated employee to provide an adequate specimen;

(2) Records related to test results:

- (i) The railroad's copy of the alcohol test form, including the results of the test;
- (ii) The railroad's copy of the drug test custody and control form, including the results of the test;
- (iii) Documents related to any regulated employee's refusal to submit to an alcohol or drug test required under this part; and

(iv) Documents a regulated employee presented to dispute the result of an alcohol or drug test administered under this part;

(3) Records related to other violations of this part; and

(4) Records related to employee training:

- (i) Materials on alcohol and drug abuse awareness, including a copy of the railroad's policy on alcohol and drug abuse;
- (ii) Documentation of compliance with the requirements of § 219.23; and
- (iii) Documentation of training (including attendance records and training materials) the railroad provided to supervisors for the purpose of qualifying the supervisors to make a determination concerning the need for reasonable suspicion or post-accident alcohol and drug testing.

■ 34. Revise § 219.903 to read as follows:

### § 219.903 Access to facilities and records.

(a) Release of regulated employee information contained in records required to be maintained under § 219.901 must be in accordance with part 40 of this title and with this section. (For purposes of this section only, urine drug testing records are considered equivalent to breath alcohol testing records.)

(b) Each railroad must grant access to all facilities used to comply with this part to the Secretary of Transportation, United States Department of Transportation, or any DOT agency with regulatory authority over the railroad or any of its regulated employees.

(c) Each railroad must make available copies of all results for its drug and alcohol testing programs conducted under this part and any other information pertaining to the railroad's alcohol and drug misuse prevention program, when requested by the Secretary of Transportation or any DOT agency with regulatory authority over the railroad or regulated employee.

### § 219.905 [Removed and Reserved]

- 35. Remove and reserve § 219.905.
- 36. Add a new subpart K to read as follows:

## Subpart K—Referral Programs

Sec.

219.1001 Requirement for referral programs.

219.1003 Referral program conditions.

219.1005 Optional provisions.

219.1007 Alternate programs.

## Subpart K—Referral Programs

### § 219.1001 Requirement for referral programs.

(a) The purpose of this subpart is to help prevent the adverse effects of drug and alcohol abuse in connection with regulated employees.

(b) A railroad must adopt, publish, and implement the following programs:

(1) *Self-referral program.* A program designed to encourage and facilitate the identification of a regulated employee who abuses drugs or alcohol by providing the employee the opportunity to obtain counseling or treatment before the employee's drug or alcohol abuse manifests itself in a detected violation of this part; and

(2) *Co-worker referral program.* A program designed to encourage co-worker participation in preventing violations of this part.

(c) A railroad may adopt, publish, and implement the following programs:

(1) *Non-peer referral program.* A program designed to encourage non-peer participation in preventing violations of this part; and

(2) *Alternate program(s)*. An alternate program or programs meeting the specific requirements of § 219.1003 or complying with § 219.1007, or both.

(d) Nothing in this subpart may be construed to:

(1) Require payment of compensation for any period a regulated employee is restricted from performing regulated service under a voluntary, co-worker, or non-peer referral program;

(2) Require a railroad to adhere to a voluntary, co-worker, or non-peer referral program when the referral is made for the purpose, or with the effect, of anticipating or avoiding the imminent and probable detection of a rule violation by a supervising employee;

(3) Interfere with the subpart D requirement for Federal reasonable suspicion testing when a regulated employee is on duty and a supervisor determines the employee is exhibiting signs and symptoms of alcohol and/or drug use;

(4) Interfere with the requirements in § 219.104(d) for responsive action when a violation of § 219.101 or § 219.102 is substantiated; or

(5) Limit the discretion of a railroad to dismiss or otherwise discipline a regulated employee for specific rule violations or criminal offenses, except as this subpart specifically provides.

#### **§ 219.1003 Referral program conditions.**

(a) *General*. A referral program must specify the allowances, conditions, and procedures under which a self-referral, co-worker referral, and, if adopted, a non-peer referral, can occur, as follows:

(1) For a self-referral, a railroad must identify one or more designated DAC contacts (including telephone number and email (if available)) and any expectations regarding when the referral is allowed to take place (such as during non-duty hours, or while the employee is unimpaired, or both, as § 219.1005 permits);

(2) For a co-worker referral, a railroad may accept a referral under this subpart only if it alleges that the regulated employee was apparently unsafe to work with or in violation of this part or the railroad's drug and alcohol abuse rules. The employee must waive investigation of the rule charge and must contact the DAC within a reasonable period of time;

(3) For a non-peer referral, a railroad may remove a regulated employee from service only if a railroad representative confirms that the employee is unsafe to work with or in violation of this part or the railroad's drug and alcohol abuse rules. The employee must waive investigation of the rule charge and

must contact the DAC within a reasonable period of time.

(b) *Employment maintained*. A regulated employee who is affected by a drug or alcohol abuse problem may maintain an employment relationship with a railroad if:

(1) The employee seeks assistance through the railroad's voluntary referral program for his or her drug or alcohol abuse problem or a co-worker or a non-peer refers the employee for such assistance; and

(2) The employee successfully completes the education, counseling, or treatment program a DAC specifies under this subpart.

(c) *Employment action*. If a regulated employee does not choose to seek assistance through a referral program, or fails to cooperate with a DAC's recommended program, the disposition of the employee's relationship with the railroad is subject to normal employment action.

(d) *Qualified DAC evaluation*. (1) A DAC acceptable to the railroad must evaluate a regulated employee entering a self-referral, co-worker referral, or non-peer referral program;

(2) The DAC must meet any applicable state standards and comply with this subpart; and

(3) The DAC must determine the appropriate level of care (education, counseling, or treatment, or all three) necessary to resolve any identified drug or alcohol abuse problems.

(e) *Removal from regulated service*. A referral program must stipulate that a regulated employee a DAC has evaluated as having an active drug abuse disorder may not perform regulated service until the DAC can report that safety is no longer affected.

(f) *Confidentiality maintained*. Except as provided under paragraph (l) of this section, a railroad must treat a regulated employee's referral and subsequent handling (including education, counseling, and treatment) as confidential. Only personnel who administer the railroad's referral programs may have access to the identities of the individuals in these programs.

(g) *Leave of absence*. A railroad must grant a regulated employee the minimum leave of absence the DAC recommends to complete a primary education, counseling, or treatment program and to establish control over the employee's drug or alcohol abuse problem.

(h) *Return to regulated service*. (1) Except as §§ 219.1001(d)(4) and 219.1005 may provide, a railroad must return a regulated employee to regulated service upon the DAC's

recommendation that the employee has established control over his or her drug or alcohol abuse problem, has a low risk to return to drug or alcohol abuse, and has complied with any recommended return-to-service requirements.

(2) The DAC determines the appropriate number and frequency of required follow-up tests. The railroad determines the dates of testing.

(3) The railroad may condition an employee's return to regulated service on successful completion of a return-to-service medical evaluation.

(4) A railroad must return an employee to regulated service within five working days of the DAC's notification to the railroad that the employee is fit to return to regulated service, unless the employee has a disqualifying medical condition. (*i.e.*, the employee is at a low risk to return to drug or alcohol abuse).

(i) *Rehabilitation plan*. No person—whether an employing railroad, managed care provider, service agent, individual, or any person other than the DAC who conducted the initial evaluation—may change in any way the DAC's evaluation or recommendations for assistance. The DAC who made the initial evaluation may modify the employee's initial evaluation and follow-up recommendation(s) based on new or additional information.

(j) *Locomotive engineers and conductors*. Consistent with §§ 240.119(e) and 242.115(g) of this chapter, for a certified locomotive engineer, certified conductor, or a candidate for engineer or conductor certification, the referral program must state that confidentiality is waived (to the extent the railroad receives from a DAC official notice of the active drug abuse disorder and suspends or revokes the certification, as appropriate) if the employee at any time refuses to cooperate in a recommended course of counseling or treatment.

(k) *Contacting a DAC*. If a regulated employee does not contact a DAC within the railroad's specified time limits, the railroad may begin an investigation to assess the employee's cooperation and compliance with its referral program.

(l) *Time requirements for DAC evaluations*. Once a regulated employee has contacted the designated DAC, the DAC's evaluation must be completed within 10 working days. If the employee needs more than one evaluation, the evaluations must be completed within 20 working days.

(m) *Time limitations on follow-up treatment, care, or testing*. Any follow-up treatment, care, or testing established under a referral program must not

exceed 24 months beyond a regulated employee's initial removal from regulated service, unless the regulated employee's entry into the program involved a substantiated part 219 violation.

#### § 219.1005 Optional provisions.

A railroad's referral program may include any of the following provisions at the option of the railroad and with the approval of the labor organization(s) affected:

(a) The program may provide that the rule of confidentiality is waived if:

(1) The regulated employee at any time refuses to cooperate in a DAC's recommended course of education, counseling, or treatment; or

(2) The railroad determines, after investigation, that the regulated employee has been involved in a drug- or alcohol-related disciplinary offense growing out of subsequent conduct.

(b) The program may require successful completion of a return-to-service medical examination as a further condition of reinstatement in regulated service.

(c) The program may provide that it does not apply to a regulated employee whom the railroad has previously assisted under a program substantially consistent with this section.

(d) The program may provide that, in order to invoke its benefits, the regulated employee must report to the railroad's designated contact either:

(1) During non-duty hours (*i.e.*, at a time when the regulated employee is off duty); or

(2) While unimpaired and otherwise in compliance with the railroad's drug and alcohol rules consistent with this subpart.

#### § 219.1007 Alternate programs.

(a) Instead of the referral programs required under § 219.1001, a railroad is permitted to develop, publish, and implement alternate programs that meet the standards established in § 219.1001. Such programs must have the written concurrence of the recognized representatives of the regulated employees. Nothing in this subpart restricts a railroad or labor organization from adopting, publishing, and implementing programs that afford more favorable conditions to regulated employees troubled by drug or alcohol abuse problems, consistent with a railroad's responsibility to prevent violations of §§ 219.101, 219.102, and 219.103.

(b) The concurrence of the recognized representatives of the regulated employees in an alternate program may be evidenced by a collective bargaining agreement or any other document describing the class or craft of employees to which the alternate program applies. The agreement or other document must make express reference to this subpart and to the intention of the railroad and employee representatives that the alternate program applies instead of the program required by this subpart.

(c) The railroad must file the agreement or other document described in paragraph (b) of this section along with the requested alternate program it

submits for approval with the FRA Drug and Alcohol Program Manager. FRA will base its approval on whether the alternative program meets the § 219.1001 objectives. The alternative program does not have to include each § 219.1001 component, but must meet the general standards and intent of § 219.1001. If a railroad amends or revokes an approved alternate policy, the railroad must file a notice with FRA of such amendment or revocation at least 30 days before the effective date of such action.

(d) This section does not excuse a railroad from adopting, publishing, and implementing the programs § 219.1001 requires for any group of regulated employees not falling within the coverage of an appropriate, approved alternate program.

(e) Consistent with § 219.105(c), FRA has the authority to inspect the aggregate data of any railroad alcohol and/or drug use education, prevention, identification, and rehabilitation program or policy, including alternate peer support programs, to ensure that they are not designed or implemented in such a way that they circumvent or otherwise undermine Federal requirements, including the requirements in this part regarding peer support programs.

■ 37. Revise appendix A to read as follows:

#### Appendix A to Part 219—Schedule of Penalties

The following chart lists the schedule of civil penalties:

#### PENALTY SCHEDULE <sup>1</sup>

Section <sup>2</sup>	Violation	Willful violation
<b>Subpart A—General</b>		
219.3 Application:		
(a) Railroad or contractor does not have required program .....	\$5,000	\$7,500
(c) Railroad or contractor improperly tests under subpart E or G of this part .....	2,500	5,000
219.9 Responsibility for compliance:		
(b)(1) Host railroad failed to take responsibility for compliance or other railroad or contractor did not take responsive action of direction of host railroad during joint operations .....	5,000	7,500
219.11 General conditions for chemical tests:		
(b)(1) Employee unlawfully refuses to participate in testing .....	2,500	5,000
(b)(2) Employer fails to give priority to medical treatment .....	3,000	8,000
(b)(3) Employee fails to remain available .....	2,500	5,000
(d) Employee unlawfully required to execute a waiver of rights .....	2,500	5,000
(e)(1) Failure to direct employee to proceed to collection site as soon as possible without affecting safety .....	2,500	5,000
(e)(3) Railroad used or authorized the use of coercion to obtain specimens .....	5,000	7,500
(g) Failure to meet supervisory training requirements or program of instruction not available or program not complete .....	2,500	5,000
(h) Urine or blood specimens provided for Federal testing were used for non-authorized testing .....	2,500	5,000
219.12 Hours-of-service laws implications:		
(a)–(d) Failure to exceed Hours of Service to conduct required testing or exceeding HOS when not authorized to conduct testing .....	2,500	5,000
219.23 Railroad policies:		
(a) Failure to provide written notice of FRA test .....	1,000	4,000
(a)(1) Failure to provide written notice of basis for FRA test .....	1,000	4,000

PENALTY SCHEDULE <sup>1</sup>—Continued

Section <sup>2</sup>	Violation	Willful violation
(a)(2) Use of a non-approved FRA form for mandatory post-accident toxicological testing .....	1,000	4,000
(b) Improper use of Federal drug or alcohol testing form or use of Subpart C form for other test .....	1,000	4,000
(c) Failure to make required educational materials available .....	2,500	5,000
(d) Failure to provide required minimum educational content .....	2,500	5,000
(e) Non-Federal provisions are not clearly described as independent authority .....	2,500	5,000
219.25 Previous employer drug and alcohol checks:		
(a)(1) Failure to conduct previous employer drug and alcohol check or failure to provide response to previous employer when requested .....	2,500	5,000
(a)(2) Failure to perform and complete FRA and DOT-required background checks in a timely manner .....	2,500	5,000
(a)(3) Failure to document due diligence in completing FRA and DOT-required background checks .....	2,500	5,000
(b) Failure to comply with § 240.119(c) (for engineers) or § 242.115(e) (for conductors) of this chapter regarding the consideration of Federal alcohol and drug violations that occurred within a period of 60 consecutive months prior to the review of the person's records .....	2,500	5,000
<b>Subpart B—Prohibitions</b>		
219.101 Alcohol and drug use prohibited:		
(a) Railroad with actual knowledge of use, possession or impairment from alcohol or controlled substances permits employee to go on duty or remain on duty .....		10,000
219.103 Prescribed and over-the-counter drugs:		
(a) Failure to train employee properly on requirements .....	2,500	5,000
219.104 Responsive action:		
(a) Failure to remove employee from regulated service immediately .....	5,000	7,500
(b) Failure to provide written notice for removal .....	2,500	5,000
(c) Failure to provide prompt hearing within 10 calendar days .....	2,500	5,000
(d) Employee improperly returned to regulated service .....	5,000	7,500
(e) Failure to ensure certified locomotive engineers and conductors received required follow-up testing minimums as per § 240.119(d)(2) and § 242.115(f)(2) of this chapter .....	2,500	5,000
219.105 Railroad's duty to prevent violations:		
(a) Employee improperly permitted to remain in regulated service .....	7,500	10,000
(b) Failure to exercise due diligence to assure compliance with prohibition .....	5,000	7,500
(d) Failure to conduct and record minimum number of Rule G observations .....	2,500	5,000
219.107 Consequences of unlawful refusal:		
(a) Failure to disqualify an employee for nine months following a refusal .....	5,000	7,500
(b) Failure to provide written notice of withdrawal to employee .....	2,500	5,000
(c) Employee unlawfully returned to service .....	5,000	7,500
<b>Subpart C—Post-Accident Toxicological Testing</b>		
219.201 Events for which testing is required:		
(a) Failure to test after qualifying event (each regulated employee not tested is a violation) .....	5,000	7,500
(c)(1)(i) Failure to make good faith determination .....	5,000	7,500
(c)(1)(ii) Failure to provide requested decision report to FRA .....	2,500	5,000
(c)(2) Testing performed after non-qualifying event .....	5,000	10,000
219.203 Responsibilities of railroads and employees:		
(a)(1)(i) and (a)(2)(i) Failure to properly test/exclude from testing .....	5,000	7,500
(a)(1)(ii) and (a)(2)(ii) Non-regulated service employee tested .....	5,000	7,500
(b)(1) Delay in obtaining specimens due to failure to make every reasonable effort .....	2,500	5,000
(c) Independent medical facility not utilized .....	2,500	5,000
(d) Failure to report event or contact FRA when intervention required .....	1,000	3,000
(d)(1) Failure to collect specimens in a timely manner .....	2,500	5,000
(e)(2) Failure to recall employee for testing when conditions met .....	2,500	5,000
(e)(5) Failure to document why employee could not be recalled .....	2,500	5,000
(f)(1) Specimen collection not completed at an independent medical facility .....	2,500	5,000
219.205 Specimen collection and handling:		
(a) Failure to observe requirements with respect to specimen collection, marking and handling .....	2,500	5,000
(b) Failure to provide properly prepared forms with specimens .....	2,500	5,000
(d) Failure to promptly or properly forward specimens .....	2,500	5,000
219.207 Fatality:		
(a) Failure to collect specimens .....	5,000	7,500
(a)(1) Failure to ensure timely collection and shipment of required specimens .....	2,500	5,000
(b) Failure to request assistance when necessary .....	2,500	5,000
219.209 Reports of tests and refusals:		
(a)(1) Failure to provide telephonic report .....	1,000	2,000
(b) Failure to provide written report of refusal to test .....	1,000	2,000
(c) Failure to maintain report explaining why test not conducted within 4 hours .....	1,000	2,000
219.211 Analysis and follow-up:		
(c) Failure of the MRO to report MRO downgrades and/or verified non-negative results to FRA in a timely manner .....	2,500	5,000
(g)(3) Unauthorized withholding of regulated employee out of regulated service pending receipt of PAT testing results .....	2,500	5,000

PENALTY SCHEDULE <sup>1</sup>—Continued

Section <sup>2</sup>	Violation	Willful violation
<b>Subpart D—Reasonable Suspicion Testing</b>		
219.301 Mandatory reasonable suspicion testing:		
(a) Failure to conduct breath alcohol test when reasonable suspicion testing criteria met or conduct breath alcohol test under reasonable suspicion when criteria not met .....	5,000	7,500
(b) Failure to conduct drug test when reasonable suspicion testing criteria met or conduct drug test under reasonable suspicion when criteria not met .....	5,000	7,500
219.303 Testing when reasonable suspicion criteria not met:		
(a) Failure to use a trained supervisor when conducting a reasonable suspicion determination for alcohol .....	2,500	5,000
(b) Failure to use two supervisors, one of which must have been trained, when conducting a reasonable suspicion determination for drugs .....	2,500	5,000
(c) Improperly holding employee out of service .....	2,500	5,000
(d) Failure to provide adequate written documentation for the reasons for a reasonable suspicion test .....	2,500	5,000
219.305 Prompt specimen collections; time limitations:		
(a) Fail to promptly conduct test .....	2,500	5,000
(b) Failure to document why test not administered within time limits .....	2,500	5,000
(c) Improper recall of employee .....	2,500	5,000
<b>Subpart E—Reasonable Cause Testing</b>		
219.401 Authorization for reasonable cause testing:		
(a) Failure to declare which authority (Federal or company) is being used for reasonable cause testing .....	2,500	5,000
(b) Testing conducted after regulated employee is released from duty .....	2,500	5,000
219.403 Requirements for reasonable cause testing:		
(a) Testing when event did not meet the criteria for train accident or train incident .....	2,500	5,000
(b) Testing when event did not meet the criteria for rule violation .....	2,500	5,000
219.405 Documentation requirements:		
(a) Failure to provide adequate written documentation for the reasons for a reasonable cause test .....	1,000	2,500
(b) Failure to document specific type of rule violation and the involvement of each tested regulated employee .....	1,000	2,500
219.407 Prompt Specimen Collection; Time Limitations:		
(a) Failure to perform a test in a timely .....	2,500	5,000
(b) Failure to document why test not administered within time limits .....	1,000	2,500
(c) Improper recall of employee .....	2,500	5,000
219.409 Limitations on authority:		
(b) Improper withholding of regulated employee from regulated service pending test results .....	2,500	5,000
<b>Subpart F—Pre-Employment Tests</b>		
219.501 Pre-employment drug testing:		
(a) Failure to conduct a Federal pre-employment test before a final applicant or employee transfer performs regulated service .....	2,500	5,000
(b) Failure to conduct a Federal pre-employment test before an employee of a contractor performs regulated service .....	2,500	5,000
(e) Pre-employment testing of grandfathered regulated employee .....	1,000	2,500
219.502 Pre-employment alcohol testing:		
(a)(1) Failure to conduct alcohol testing of a regulated employee after choosing to perform Federal pre-employment alcohol testing .....	2,500	5,000
(a)(2) Failure to treat all regulated employees the same for purposes of Federal pre-employment alcohol testing .....	2,500	5,000
219.503 Notification; records:		
Failure to notify the applicant in writing of non-negative test results or refusal .....	1,000	2,500
<b>Subpart G—Random Alcohol and Drug Testing Programs</b>		
219.601 Purpose and scope of random testing programs:		
(b) Failure to ensure regulated employee is subject to random testing .....	2,500	5,000
(c) Contractor or volunteer not included in random testing while subject to performing regulated service ....	2,500	5,000
(d)(1) Regulated employee not subject to random testing at minimum rate set by agency covering more than 50% of employee's regulated functions .....	2,500	5,000
219.605 Submission and approval of random testing plans:		
(a)(1) Failure to obtain FRA approval of random testing program .....	2,500	5,000
(c) Failure to implement random testing plan within 30 days of notification of FRA approval .....	2,500	5,000
(d)(1) Failure to implement substantive plan amendment within 30 days of notification of FRA approval, or failure to obtain FRA approval before implementing substantive plan amendment before implementation .....	2,500	5,000
(d)(2) Failure to submit non-substantive plan amendment before implementation .....	2,500	5,000
219.607 Requirements for random testing plans:		
(a) Railroad implementation failed to comply with approved plan .....	2,500	5,000
(c) Failure to contain required plan elements .....	2,500	5,000
219.609 Inclusion of contractor employees and volunteers in random testing plans:		
(a) Failure to demonstrate that regulated service contractor employees and volunteers are subject to random testing .....	2,500	5,000

PENALTY SCHEDULE <sup>1</sup>—Continued

Section <sup>2</sup>	Violation	Willful violation
(c) Failure to ensure regulated service contractor and volunteers are tested in accordance with this subpart .....	2,500	5,000
219.611 Random drug and alcohol and drug testing pools:		
(a) Failure of railroad to ensure that all regulated employees including contractors and volunteers are included in random testing pools .....	2,500	5,000
(b)(2) Improper criteria for pool entries which allows for employer discretion over who is to be tested .....	2,500	5,000
(b)(3) Failure to construct and maintain pool entries that will ensure regulated employees have an equal chance of being selected randomly for each draw .....	2,500	5,000
(c) Maintaining a random testing pool with less than four pool entries .....	2,500	5,000
(d)(1) Failure to ensure that pools do not contain non-regulated employees .....	2,500	5,000
(d)(2) Regulated employee included in more than one DOT random pool .....	2,500	5,000
(d)(3) Failure to maintain pools and/or pool entries that meet FRA/DOT regulations .....	2,500	5,000
(d)(5) Failure to add or remove regulated employees to or from the proper random pool in a timely manner .....	2,500	5,000
(e)(2) Failure to remove employees who perform de minimis service from pools which include employees who perform regulated service on a regular basis .....	2,500	5,000
(f) Failure to have an effective mechanism to update and maintain pools .....	2,500	5,000
219.613 Random testing selections:		
(b)(1) Failure to use an FRA-acceptable selection procedure .....	2,500	5,000
(b)(2) Failure to ensure every regulated employee has an equal chance at being selected at each draw ...	2,500	5,000
(b)(3) Failure to have necessary documentation verifying the selection process for testing window .....	2,500	5,000
(c)(1) Failure to select pool entries at a rate which ensures compliance with FRA required random rates or fail to reasonably distribute selections throughout the selection year .....	2,500	5,000
(d) Railroad failed to select at least one entry from each of its random testing pools every three months ...	2,500	5,000
(e) Railroad discarded selection draws without an acceptable explanation .....	2,500	5,000
(g) Failure to capture and maintain electronic or hard copy snapshot of each random testing pool at the time it makes a testing selection .....	2,500	5,000
219.615 Random testing collections:		
(a) Failure to comply with minimum annual random collection testing rates .....	2,500	5,000
(b) Failure to test selections within the approved testing window .....	2,500	5,000
(c)(1) Testing a regulated employee while not on duty or testing a regulated employee not randomly selected or testing a non-regulated employee .....	2,500	5,000
(c)(2) Failure to distribute collections reasonably throughout all shifts, days of the week, weeks of the month, and months of the year .....	2,500	5,000
(c)(3) Failure to perform at least 10% of its random alcohol tests at the beginning of shifts and at least 10% of random alcohol tests at the end of shifts .....	2,500	5,000
(e)(1) Advance notification given to employees selected for testing .....	2,500	5,000
(e)(2) Fail to begin collection within two hours of notice of random selection without an acceptable reason for the delay .....	2,500	5,000
(f) Failure to test a selection without an FRA-acceptable reason .....	2,500	5,000
(g)(1) Fail to immediately terminate random collection due to hours of service expiration .....	2,500	5,000
219.617 Participation in random alcohol and drug testing:		
(a)(1) Failure to test regulated employee when properly selected for random test .....	2,500	5,000
(a)(2) Failure to restrict regulated employee from performing regulated service prior to completion of random testing .....	2,500	5,000
(a)(3) Improperly excused without substantiated medical emergency .....	2,500	5,000
219.621 Use of Service Agents:		
(g) Improper use a service agent to notify a regulated employee that they have been selected for random testing .....	2,500	5,000
219.623 Records		
(a) Failure of railroads to meet recordkeeping requirements .....	2,500	5,000
(g) Failure of contractors and service agents to provide required random testing records when requested by the contracting railroad or FRA .....	2,500	5,000
219.625 FRA Administrator's determination of random alcohol and drug rates		
(d) Failure to meet the required FRA random testing rate for drugs .....	2,500	5,000
(e) Failure to meet the required FRA random testing rate for alcohol .....	2,500	5,000

## Subpart H—Drug and Alcohol Testing Procedures

219.701 Standards for drug and alcohol testing:		
(a) Failure to comply with part 40 procedures in subpart B, D, E, F, G and K testing .....	5,000	7,500

## Subpart I—Annual Report

219.800 Annual Reports:		
(a) Failure to submit MIS report on time .....	2,500	5,000
(c) Failure to submit accurate MIS report .....	2,500	5,000
(d) Failure to include required data .....	2,500	5,000

## Subpart J—Recordkeeping Requirements

219.901 Retention of alcohol and drug testing records:		
--	--	--

PENALTY SCHEDULE <sup>1</sup>—Continued

Section <sup>2</sup>	Violation	Willful violation
(a) Failure to maintain records required to be kept by part 40 of this chapter .....	2,500	5,000
(b) Failure to maintain records required to be kept for five years .....	2,500	5,000
(c) Failure to maintain records required to be kept for two years .....	2,500	5,000
219.903 Access to facilities and records:		
(a) Failure to release records in this subpart in accordance with part 40 of this chapter .....	2,500	5,000
(b) Failure to permit access to facilities .....	2,500	5,000
(c) Failure to provide access to results of railroad alcohol and drug testing programs .....	2,500	5,000
<b>Subpart K—Referral Programs</b>		
219.1001 Requirement for referral programs:		
(b)(1) Failure to adopt or implement required self-referral program or alternate program that meets the requirements of this subpart .....	2,500	5,000
(b)(2) Failure to adopt or implement required co-worker referral program or alternate program that meets the requirements of subpart K of this part .....	2,500	5,000
(d) Violation of referral program prohibitions .....	2,500	5,000
219.1003 Referral program conditions:		
(a) Failure to comply with referral program conditions .....	2,500	5,000
(b) Failure to maintain employment .....	2,500	5,000
(c) Failure to disqualify regulated employee when referral conditions not met .....	2,500	5,000
(d) Use of unqualified DAC .....	2,500	5,000
(e) Allowing person evaluated as having active substance abuse disorder to perform regulated service .....	2,500	5,000
(f) Breach of confidentiality .....	2,500	5,000
(g) Failure to allow recommended leave of absence .....	2,500	5,000
(h)(1)–(3) Failure to meet return to service conditions .....	2,500	5,000
(h)(4) Failure to return to service when conditions met .....	2,500	5,000
(i) Improper modification to rehabilitation plan .....	2,500	5,000
(l) Failure to complete DAC evaluation within time limit .....	2,500	5,000
(m) Exceeding 24 month time limit on aftercare when not associated with a substantiated part 219 violation .....	2,500	5,000
219.1007 Alternate programs:		
(c) Failure to obtain FRA approval of alternate program .....	2,500	5,000

<sup>1</sup> A penalty may be assessed against an individual only for a willful violation. The FRA Administrator reserves the right to assess a penalty of up to \$105,000 for any violation, including ones not listed in this penalty schedule, where circumstances warrant. See 49 CFR part 209, appendix A.

<sup>2</sup> The penalty schedule uses section numbers from 49 CFR part 219; and if more than one item is listed as a type of violation of a given section, each item is also designated by a “penalty code,” which is used to facilitate assessment of civil penalties. For convenience, penalty citations will cite the CFR section and the penalty code, if any. FRA reserves the right, should litigation become necessary, to substitute in its complaint the CFR citation in place of the combined CFR and penalty code citation.

Issued in Washington, DC, on May 27, 2016.

Centers for Medicare & Medicaid Services

42 CFR Part 425

Medicare Program; Medicare Shared Savings Program; Accountable Care Organizations—Revised Benchmark Rebasing Methodology, Facilitating Transition to Performance-Based Risk, and Administrative Finality of Financial Calculations; Final Rule

**DEPARTMENT OF HEALTH AND HUMAN SERVICES****Centers for Medicare & Medicaid Services****42 CFR Part 425****[CMS–1644–F]****RIN 0938–AS67****Medicare Program; Medicare Shared Savings Program; Accountable Care Organizations—Revised Benchmark Rebasing Methodology, Facilitating Transition to Performance-Based Risk, and Administrative Finality of Financial Calculations****AGENCY:** Centers for Medicare & Medicaid Services (CMS), HHS.**ACTION:** Final rule.**SUMMARY:** Under the Medicare Shared Savings Program (Shared Savings Program), providers of services and

suppliers that participate in an Accountable Care Organization (ACO) continue to receive traditional Medicare fee-for-service (FFS) payments under Parts A and B, but the ACO may be eligible to receive a shared savings payment if it meets specified quality and savings requirements. This final rule addresses changes to the Shared Savings Program, including: Modifications to the program's benchmarking methodology, when resetting (rebasing) the ACO's benchmark for a second or subsequent agreement period, to encourage ACOs' continued investment in care coordination and quality improvement; an alternative participation option to encourage ACOs to enter performance-based risk arrangements earlier in their participation under the program; and policies for reopening of payment determinations to make corrections after financial calculations have been performed and ACO shared savings and

shared losses for a performance year have been determined.

**DATES:** *Effective date:* The provisions of this final rule are effective on August 9, 2016.

*Applicability dates:* In the **SUPPLEMENTARY INFORMATION** section of this final rule, we provide a table (Table 1) that lists key changes in this final rule that have an applicability date other than the effective date of this final rule.

**FOR FURTHER INFORMATION CONTACT:** Elizabeth November, (410) 786–8084. Email address: [aco@cms.hhs.gov](mailto:aco@cms.hhs.gov).

**SUPPLEMENTARY INFORMATION:** Table 1 lists key changes that have an applicability date other than 60 days after the date of publication of this final rule. By indicating that a provision is applicable to a performance year (PY) or agreement period, activities related to implementation of the policy may precede the start of the performance year or agreement period.

**TABLE 1—APPLICABILITY DATES OF SELECT PROVISIONS OF THE FINAL RULE**

Preamble section	Section title/description	Applicability date
II.A.2 .....	Integrating regional factors in resetting ACO benchmarks .....	Second or subsequent agreement periods beginning in 2017 and subsequent years.
II.A.2.e.3 .....	For factors based on National FFS expenditures used in establishing the ACO's historical benchmark: Use expenditures for assignable beneficiaries to determine trend factors and truncation thresholds.	Agreement periods beginning in 2017 and subsequent years. For 2014 starters electing the participation option to defer by 1 year entrance into a second agreement period under a two-sided model, 2015 starters, and 2016 starters/renewals, historical benchmarks will be adjusted for the 2017 performance year and any subsequent years in the current agreement period.
II.A.2.e.3 .....	For factors based on National FFS expenditures used in benchmark calculations and performance year expenditure calculations during the agreement period: Use expenditures for assignable beneficiaries to determine the annual benchmark update, and the truncation thresholds for determining performance year expenditures.	Performance year 2017 and subsequent performance years.
II.C .....	An additional participation option that would allow eligible Track 1 ACOs to defer by 1 year their entrance into a performance-based risk model (Track 2 or 3) for their second agreement period.	Second agreement period beginning in 2017 and subsequent years.

**I. Executive Summary and Background****A. Executive Summary****1. Purpose**

Section 1899 of the Social Security Act (the Act) established the Shared Savings Program, which promotes accountability for a patient population, fosters coordination of items and services under Medicare Parts A and B, and encourages investment in infrastructure and redesigned care processes for high quality and efficient health care service delivery. We published the proposed rule entitled “Medicare Program; Medicare Shared Savings Program; Accountable Care Organizations—Revised Benchmark Rebasing Methodology, Facilitating

Transition to Performance-Based Risk, and Administrative Finality of Financial Calculations” (2016 proposed rule), which appeared in the February 3, 2016 **Federal Register** (81 FR 5824). In the 2016 proposed rule, we proposed changes to the regulations for the Shared Savings Program that were promulgated in November 2011 and June 2015, and codified at 42 CFR part 425. Our intent in this rulemaking is to make refinements to the Shared Savings Program to address concerns raised by stakeholders regarding the benchmarking methodology, and to establish additional options for ACOs to enter performance-based risk arrangements, as well as to address policies for reopening of payment determinations to make corrections after financial calculations have been performed and ACO shared savings and shared losses for a performance year have been determined.

## 2. Summary of the Major Provisions

The policies adopted in this final rule are designed to improve program function and transparency in the following areas:

- Modifying the methodology for rebasing and updating ACO historical benchmarks when an ACO renews its participation agreement for a second or subsequent agreement period to incorporate regional expenditures, thereby making the ACO's cost target more independent of its historical expenditures and more reflective of FFS spending in its region.
- Applying a methodology for risk adjustment to account for the health status of the ACO's assigned population in relation to FFS beneficiaries in the ACO's regional service area in determining the regional adjustment that is applied to the ACO's rebased historical benchmark.
- Adding a participation agreement renewal option to encourage ACOs to enter performance-based risk arrangements earlier in their participation in the Shared Savings Program.
- Defining circumstances under which we would reopen payment determinations to make corrections after the financial calculations have been performed and ACO shared savings and shared losses for a performance year have been determined.

Although we proposed revisions to the methodology for adjusting ACO benchmarks to account for changes in ACO participant (TIN) composition, we will not finalize that proposal and are deferring any revisions to the methodology until future rulemaking. However, we are finalizing conforming

changes to the current methodology for adjusting ACO benchmarks for ACO Participant List changes, to specify that the regional adjustment to the ACO's rebased historical benchmark will be redetermined annually using the most recent certified ACO Participant List for the relevant performance year.

## 3. Summary of Costs and Benefits

As a result of this final rule, the median estimate of the financial impact of the Shared Savings Program for CYs 2017 through 2019 is net federal savings of \$110 million greater than what would have been saved if no changes were made. Although this is the best estimate of the financial impact of the Shared Savings Program during CYs 2017 through 2019, a relatively wide range of possible outcomes exists. While approximately two-thirds of the stochastic trials resulted in an increase in net program savings, the 10th and 90th percentiles of the estimated distribution show a net increase in costs of \$240 million to net savings of \$480 million, respectively.

Overall, our analysis projects that improvements in the accuracy of benchmark calculations, including through the introduction of a regional adjustment to the ACO's rebased historical benchmark, are expected to result in increased overall participation in the program. These changes are also expected to improve the incentive for ACOs to invest in effective care management efforts, increase the attractiveness of participation under performance-based risk in Track 2 or 3 for certain ACOs with lower beneficiary expenditures, and result in overall greater gains in savings on FFS benefit claims costs than the associated increase in expected shared savings payments to ACOs. We intend to monitor emerging results for effects on claims costs, changing participation (including risk for cost due to selective changes in participation), and unforeseen bias in benchmark adjustments due to diagnosis coding intensity shifts. Such monitoring will be used to inform future rulemaking, such as if the Secretary determines that a lower weight should be used in calculating the regional adjustment amount.

## B. Background

On March 23, 2010, the Patient Protection and Affordable Care Act (Pub. L. 111–148) was enacted, followed by enactment of the Health Care and Education Reconciliation Act of 2010 (Pub. L. 111–152) on March 30, 2010, which amended certain provisions of Public Law 111–148. Collectively known as the Affordable Care Act, these

public laws include a number of provisions designed to improve the quality of Medicare services, support innovation and the establishment of new payment models, better align Medicare payments with provider costs, strengthen Medicare program integrity, and put Medicare on a firmer financial footing.

Section 3022 of the Affordable Care Act amended Title XVIII of the Act (42 U.S.C. 1395 *et seq.*) by adding section 1899 to the Act to establish a Shared Savings Program. This program is a key component of the Medicare delivery system reform initiatives included in the Affordable Care Act and is a new approach to the delivery of health care. The purpose of the Shared Savings Program is to promote accountability for a population of Medicare beneficiaries, improve the coordination of FFS items and services, encourage investment in infrastructure and redesigned care processes for high quality and efficient service delivery, and promote higher value care. ACOs that successfully meet quality and savings requirements share a percentage of the achieved savings with Medicare. Consistent with the purpose of the Shared Savings Program, in establishing the program, we focused on developing policies aimed at achieving the three-part aim consisting of: (1) Better care for individuals; (2) better health for populations; and (3) lower growth in expenditures.

We published the final rule entitled “Medicare Program; Medicare Shared Savings Program: Accountable Care Organizations” (November 2011 final rule), which appeared in the November 2, 2011 **Federal Register** (76 FR 67802) to establish the program. We viewed this final rule as a starting point for the program, and because of the scope and scale of the program and our limited experience with shared savings initiatives under FFS Medicare, we built a great deal of flexibility into the program rules. We anticipated that subsequent rulemaking for the Shared Savings Program would be informed by lessons learned from our experience with the program as well as from testing through the Pioneer ACO Model and other initiatives conducted by the Center for Medicare and Medicaid Innovation (Innovation Center) under section 1115A of the Act.

Thereafter, we published a subsequent final rule entitled “Medicare Program; Medicare Shared Savings Program: Accountable Care Organizations” (June 2015 final rule), which appeared in the June 9, 2015 **Federal Register** (80 FR 32692). In that rule, we adopted policies designed to codify existing guidance, reduce

administrative burden, and improve program function and transparency in a number of areas, such as eligibility for program participation and data sharing. Additionally, we modified policies related to the financial model, in response to stakeholder feedback, to encourage greater and continued ACO participation, for example, by offering ACOs the opportunity to continue participating under the one-sided model for a second agreement period, modifying the existing two-sided performance-based risk track (Track 2), and offering an alternative two-sided performance-based risk track (Track 3). Track 3 includes prospective beneficiary assignment and a higher sharing rate for shared savings as well as the potential for greater liability for shared losses, among other features, informed by CMS' experience with the Pioneer ACO Model. We finalized new policies for resetting an ACO's financial benchmark in a second or subsequent agreement period, by adding back a portion of the ACO's savings generated during the previous agreement period and equally weighting the historical benchmark years, to encourage ACOs to seek to continue their participation in the program and to address stakeholder concerns about the benchmark rebasing methodology. We also stated our intention to address other modifications to program rules in future rulemaking in the near term including modifying the methodology for resetting benchmarks by incorporating regional trends and costs.

We are encouraged by the high degree of interest in participation in the Shared Savings Program. As of January 1, 2016, over 400 ACOs were participating in the Shared Savings Program. This includes 147 ACOs with 2012 and 2013 agreement start dates that entered into a new 3-year agreement effective January 1, 2016, to continue their participation in the program, and 100 ACOs that entered the program for a first agreement period beginning January 1, 2016. See Fact Sheet: CMS Welcomes New Medicare Shared Savings Program (Shared Savings Program) Participants, (January 11, 2016) available online at <https://www.cms.gov/Newsroom/MediaReleaseDatabase/Fact-sheets/2016-Fact-sheets-items/2016-01-11-2.html>.

We continue to look to experience gained by the Innovation Center in testing ACO models. In January 2016, we announced that 21 ACOs would be participating in the first performance year of the Next Generation ACO Model, a new ACO initiative being tested by the Innovation Center. The Next Generation ACO Model allows ACOs that are

experienced in coordinating care for populations of patients to assume higher levels of financial risk and reward than are available under the Pioneer ACO Model and Shared Savings Program. See HHS press release: New hospitals and health care providers join successful, cutting-edge federal initiative that cuts costs and puts patients at the center of their care (January 11, 2016) available online at <http://www.hhs.gov/about/news/2016/01/11/new-hospitals-and-health-care-providers-join-successful-cutting-edge-federal-initiative.html>.

In the 2016 proposed rule (81 FR 5824), we proposed further modifications to the program's regulations, addressing several policy areas that we believed should be revisited in light of the additional experience we have gained during program implementation, including the methodology for resetting benchmarks, participation options to encourage ACOs to enter performance-based risk tracks, and reopening of payment determinations to make corrections.

## II. Provisions of the Final Regulations and Responses to Public Comments

We received a total of 74 timely comments on the 2016 proposed rule (81 FR 5824). Stakeholders offered comments that addressed both high level issues related to the Shared Savings Program as well as our specific proposals and requests for comments. We extend our deep appreciation to the public for their interest in the program and the many thoughtful comments that were made in response to our proposed policies. In some instances, the public comments offered were outside the scope of the proposed rule, for example: Suggested revisions to the Shared Savings Program quality performance standard; suggestions for implementing the Skilled Nursing Facility (SNF) 3-day rule waiver for eligible Shared Savings Program ACOs; requests to modify the approach used to account for the costs of Critical Access Hospitals participating in Shared Savings Program ACOs; suggestions for limiting the liability of individual providers for shared losses incurred by ACOs; suggestions for modifying the financial incentives within the Shared Savings Program to encourage ACOs to use innovative treatments, technologies and diagnostics; suggestions for CMS to provide greater support for beneficiary engagement in their health care; and suggestions for the development of regulations pursuant to the Medicare Access and CHIP Reauthorization Act of 2015 (MACRA). These comments will not be addressed in this final rule, but we have shared them with the

appropriate subject matter experts in CMS. Summaries of the public comments that are within the scope of this rule and our responses to those comments are set forth in the various sections of this final rule under the appropriate headings. In this introduction to section II of this final rule, we address several global comments related to the Shared Savings Program. The remainder of this section of the final rule is organized to give an overview of each issue and the relevant proposals, to summarize and respond to public comments on the proposals, and to describe our final policy decisions based upon our review of the public comments received.

*Comment:* Some commenters are encouraged by the momentum of the program in attracting organizations and advancing our goal of transitioning providers away from traditional FFS to arrangements focused on value-based payments. However, some pointed to the statistics on the number of ACOs eligible for shared savings payments in the initial performance years of the Shared Savings Program and the attrition rate from the program as evidence of the need for changes to the program including: (1) Policy changes to provide greater rewards to ACOs for their cost reductions and quality improvements for Medicare beneficiaries; (2) policy options to reward organizations of differing provider compositions, sophistication and cost history; and (3) additional resources from CMS, such as more timely and actionable data, to support their success. Commenters addressing the sustainability of the program over the longer term often pointed to the intersections of various policy factors as being influential, most commonly the need for a benchmarking methodology that allows ACOs to continue to generate sufficient returns over time to support their care coordination and quality improvement activities to meet the program's goals, and the need for policies to reduce beneficiary churn in an ACO's assigned beneficiary population (for example, through prospective beneficiary assignment in all program Tracks and implementation of an attestation process for beneficiaries to voluntarily align to an ACO). Some commenters underscored the challenges for ACOs in moving FFS providers towards payment models based on value instead of volume and for already efficient organizations to realize further reward within the Shared Savings Program.

In general, some commenters pointed to the need for sufficient stability and predictability in the program to

effectively drive ACOs to enter performance-based risk models. Some commenters, including commenters representing rural providers, suggested CMS consider allowing ACOs to remain under a one-sided model for a long period, and perhaps even indefinitely, particularly ACOs that continue to generate savings.

*Response:* We thank all commenters for helping us continue to develop the Shared Savings Program. We appreciate commenters' support for the program generally, as well as their thoughtful remarks on overarching considerations for the future of the Shared Savings Program.

The ACOs participating in the Shared Savings Program are recognized as being a critical part of the Administration's goal to help drive Medicare and the health care system at large towards rewarding the quality of care as opposed to the quantity of care provided to beneficiaries. In January 2015, the Administration announced an ambitious goal of tying 30 percent of Medicare FFS payments to quality and value by 2016 and by 2018 making 50 percent of payments through alternative payment models, such as the Shared Savings Program (<https://www.cms.gov/Newsroom/MediaReleaseDatabase/Fact-sheets/2015-Fact-sheets-items/2015-01-26-3.html>). In March 2016, the Administration announced that it estimated having achieved this first goal, 11 months ahead of schedule, in part a result of entry by new ACOs in CMS ACO initiatives including the Shared Savings Program (<https://www.cms.gov/Newsroom/MediaReleaseDatabase/Fact-sheets/2016-Fact-sheets-items/2016-03-03-2.html>).

With these goals in mind, we believe this final rule will further strengthen the Shared Savings Program. In particular we believe it is critical to ensuring the sustainability of the program to make an ACO's benchmark incrementally less dependent on the ACO's historical spending and more reflective of spending in the ACO's region as the ACO continues in the program for multiple agreement periods. We also believe that the benchmarking methodology is only one of several factors that are important to ACOs' success in the Shared Savings Program. For example, we believe refinements to the Shared Savings Program's data sharing policies, finalized in the June 2015 final rule, including a streamlined process for ACOs to access Medicare beneficiary claims data and expanding the data that is made available through informational program reports, will facilitate ACOs' health care operations.

Further, we believe that ACOs are more likely to become successful in achieving the goals of the accountable care model over time, as indicated by performance results showing that ACOs with more experience in the program are more likely to generate shared savings (CMS Fact Sheet: Medicare ACOs Provide Improved Care While Slowing Cost Growth in 2014, available online at <https://www.cms.gov/Newsroom/MediaReleaseDatabase/Fact-sheets/2015-Fact-sheets-items/2015-08-25.html>).

We also recognize the needs of the Shared Savings Program are dynamic and will continue to change as CMS and ACOs gain more experience with the accountable care model being implemented on a national scale. We welcome and encourage stakeholders' engagement with CMS on future program improvements and policy considerations, including through the rulemaking process.

*Comment:* Some commenters requested that CMS address broader market dynamics, particularly in relation to aligning financial and quality targets between the Shared Savings Program and Medicare Advantage (MA). Several commenters pointed to this alignment as allowing for more equitable comparison between traditional FFS Medicare, MA and ACOs. Some pointed to the need for this alignment when indicating that Shared Savings Program ACOs and MA plans compete. A commenter explained that competition between traditional FFS Medicare, ACOs and MA plans would maximize value for Medicare beneficiaries and the Medicare program.

*Response:* We appreciate commenters' continued interest in developing the design of the Shared Savings Program to foster greater comparability between Medicare payment models. As explained in the June 2015 final rule, we continue to believe there are important distinctions between MA plans and the accountable care model in the Shared Savings Program. The Shared Savings Program is not a managed care program like MA. Under the Shared Savings Program, providers and suppliers receive traditional FFS Medicare payments, and Medicare FFS beneficiaries retain all rights and benefits under traditional Medicare, including the right to see any physician of their choosing. In addition, Medicare FFS beneficiaries do not enroll in the Shared Savings Program (see 80 FR 32696). However, in the 2016 proposed rule we acknowledged that one consideration in developing the proposed methodology for use of county-FFS data in calculating

expenditures for an ACO's regional service area was to align more closely with the MA ratesetting methodology (see 81 FR 5829). Although we have relied on our experience in other Medicare programs, including MA, to help develop program requirements and design elements for the Shared Savings Program, many Shared Savings Program requirements deviate from those in the other programs precisely because the intent of this program is not to recreate or replace MA or other Medicare programs (see 80 FR 32697).

As discussed elsewhere in this final rule, we are finalizing, with certain modifications, our proposal to determine an ACO's regional FFS expenditures based on the county FFS expenditures for the ACO's regional service area for populations of beneficiaries according to Medicare enrollment type (ESRD, disabled, aged/dual eligible, aged/non-dual eligible). Although this approach differs from the MA rate-setting methodology (with respect to calculation of values for the ESRD population, and the number of years of data used in the calculating county FFS expenditures), we believe it continues to be a substantial step towards aligning the Shared Savings Program benchmarking methodology with the MA rate-setting methodology.

#### *A. Modifications to the Benchmarking Methodology*

##### *1. Background on Establishing, Updating, and Resetting the Benchmark*

Section 1899(d)(1)(B)(ii) of the Act addresses how ACO benchmarks are to be established and updated. This provision specifies that the Secretary shall estimate a benchmark for each agreement period for each ACO using the most recent available 3 years of per beneficiary expenditures for Parts A and B services for Medicare FFS beneficiaries assigned to the ACO. Such benchmark shall be adjusted for beneficiary characteristics and such other factors as the Secretary determines appropriate and updated by the projected absolute amount of growth in national per capita expenditures for Parts A and B services under the original Medicare FFS program, as estimated by the Secretary. Such benchmark shall be reset at the start of each agreement period. In addition to the statutory benchmarking methodology established in section 1899(d) of the Act, section 1899(i)(3) of the Act grants the Secretary the authority to use other payment models, including payment models that would use alternative benchmarking methodologies, if the Secretary

determines that doing so would improve the quality and efficiency of items and services furnished under this title and the alternative methodology would result in program expenditures equal to or lower than those that would result under the statutory payment model.

In the November 2011 final rule establishing the Shared Savings Program, we adopted policies for establishing, updating and resetting the benchmark at § 425.602. Under this methodology, we use national FFS spending and trends as part of establishing, updating and resetting ACO-specific benchmarks. Specifically, we calculate a benchmark for each ACO using a risk-adjusted average of per capita Parts A and B expenditures for original Medicare FFS beneficiaries who would have been assigned to the ACO in each of the 3 calendar years prior to the start of the agreement period. In calculating an ACO's benchmark expenditures, we include individually beneficiary identifiable payments made under a demonstration, pilot or time limited program, and we make an adjustment to exclude IME payments and DSH and uncompensated care payments. We trend forward each of the first 2 benchmark years' per capita risk adjusted expenditures to third benchmark year (BY3) dollars based on the national average growth rate in Parts A and B per capita FFS expenditures verified by the CMS Office of the Actuary (OACT). In establishing the benchmark for an ACO's first agreement period, the first benchmark year is weighted 10 percent, the second benchmark year is weighted 30 percent, and the third benchmark year is weighted 60 percent. This weighting creates a benchmark that more accurately reflects the latest expenditures and health status of the ACO's assigned beneficiary population.

For each performance year, we adjust the ACO's historical benchmark for changes in the health status and demographic factors of the ACO's assigned beneficiaries (§ 425.604(a), § 425.606(a), § 425.610(a)). Consistent with section 1899(d)(1)(B)(ii) of the Act, we update the ACO's benchmark annually, based on our estimate of the projected absolute amount of growth in national per capita expenditures for Parts A and B services under the original FFS program. Additionally, as described further in section II.B of this final rule, we also adjust ACO historical benchmarks annually based on changes to the ACO's certified ACO Participant List. In making this adjustment, the historical benchmark period remains constant, but beneficiary assignment is

revised to reflect the influence of the ACO Participant List changes.

In trending forward the historical benchmark, adjusting for changes in beneficiary characteristics, and annually updating the benchmark by growth in national per capita Medicare FFS expenditures, we make calculations for populations of beneficiaries in each of the following Medicare enrollment types: ESRD, disabled, aged/dual eligible, aged/non-dual eligible. Furthermore, to minimize variation from catastrophically large claims, we truncate an assigned beneficiary's total annual Parts A and B FFS per capita expenditures at a threshold of the 99th percentile of national Medicare FFS expenditures for the applicable Medicare enrollment type (ESRD, disabled, aged/dual eligible, aged/non-dual eligible).

Under section 1899(d)(1)(B)(ii) of the Act and § 425.602(c) of the Shared Savings Program regulations, an ACO's benchmark must be reset at the start of each new agreement period. In the June 2015 final rule, we revised § 425.602(c) to specify that in resetting the historical benchmark for ACOs in their second or subsequent agreement period we: (1) Weight each benchmark year equally; and (2) make an adjustment to reflect the average per capita amount of savings earned by the ACO in its prior agreement period, reflecting the ACO's financial and quality performance, during that prior agreement period. The additional per capita amount is applied as an adjustment to the ACO's rebased historical benchmark for a number of assigned beneficiaries (expressed as person years) not to exceed the average number of assigned beneficiaries (expressed as person years) under the ACO's prior agreement period. If an ACO was not determined to have generated net savings in its prior agreement period, we do not make any adjustment to the ACO's rebased historical benchmark. We use performance data from each of the ACO's performance years under its prior agreement period in resetting the ACO's benchmark for its second or subsequent agreement period. In the June 2015 final rule, in which this adjustment was finalized, we stated that we believed it would be critical to revisit the policy of accounting for an ACO's savings generated in a prior agreement period when resetting its benchmark in conjunction with any future changes to the benchmarking methodology to incorporate regional FFS expenditures (see 80 FR 32791; see also 80 FR 32795 through 32796).

The June 2015 final rule also included a discussion of several options and

methods for incorporating regional factors when establishing, updating, and resetting the benchmark, and CMS committed to engaging in additional rulemaking around modifications to the Shared Savings Program's methodology for resetting benchmarks (see 80 FR 32791 through 32796; see also 79 FR 72839 through 72843 (discussing options for revising the methodology for resetting an ACO's historical benchmark)). The 2016 proposed rule expanded upon the issues discussed in the June 2015 final rule. The proposed changes (reviewed in greater detail within this final rule) focused on incorporating regional FFS expenditures into the methodology for establishing, adjusting, and updating an ACO's historical benchmark for its second or subsequent agreement period.

## 2. Integrating Regional Factors When Resetting ACOs' Benchmarks

### a. Overview

In the June 2015 final rule, we summarized comments received on three approaches to account for regional FFS expenditures in ACO benchmarks and technical issues related to these alternatives (80 FR 32791 through 32796). We committed to engaging in additional rulemaking to propose modifications to the Shared Savings Program's methodology for resetting ACO benchmarks. We signaled our anticipated policy direction by outlining an approach to rebasing that would account for regional expenditures and identified additional methodological issues we would need to address in implementing this approach (80 FR 32795 through 32796).

In the 2016 proposed rule, we acknowledged that any proposed changes to the benchmark rebasing policies would require consideration of tradeoffs among several criteria that were initially described in the June 2015 final rule (81 FR 5828):

- Strong incentives for ACOs to improve efficiency and to continue participation in the program over the long term.
- Benchmarks which are sufficiently high to encourage ACOs to continue to meet the three-part aim, while also safeguarding the Medicare Trust Funds against the possibility that ACOs' reset benchmarks become overly inflated to the point where ACOs need to do little to maintain or change their care practices to generate savings.
- Generating benchmarks that reflect ACOs' actual costs in order to avoid potential selective participation by (and excessive shared payments to) ACOs with high benchmarks.

Further, we explained the addition of the following guiding principles to our considerations for modifying the benchmarking methodology (81 FR 5828):

- **Transparency:** Developed based on identifiable sources of data, and where possible publicly available data and data sets, in order to allow stakeholders to understand and model impacts.
- **Predictability:** Enable ACOs to anticipate their updated benchmark targets and their likely performance under the program.
- **Simplicity:** Methodology can be explained in relatively simple terms and in sufficient detail to be readily understood by ACOs and stakeholders.
- **Accuracy:** Methodology generates benchmarks that are an accurate reflection of the ACOs' expenditures and relevant regional expenditures, and can be accurately implemented and calculated, validated and disseminated in a timely manner.
- **Maintain program momentum and market stability** by providing sufficient notice of methodological changes and phase-in of these changes.

Applying these principles, we proposed the following changes, to the methodology for resetting an ACO's benchmark for a second or subsequent agreement period beginning on or after January 1, 2017:

- Replace the national trend factors with regional trend factors for establishing the ACO's rebased historical benchmark, and remove the adjustment to explicitly account for savings generated under the ACO's prior agreement period.
- Make an adjustment when establishing the ACO's rebased historical benchmark, to reflect a percentage of the difference between regional FFS expenditures in the ACO's regional service area and the ACO's historical expenditures. A higher percentage would be used in calculating this adjustment to the ACO's rebased historical benchmark for the ACO's third agreement period and all subsequent agreement periods. We further proposed to apply this phased approach to transitioning to the use of a higher weight in the calculation of the regional adjustment for ACOs with 2012 and 2013 agreement start dates that elected to continue their participation in the program for a second 3-year agreement period effective January 1, 2016, beginning in their third agreement period (starting in 2019).
- Annually, update the rebased benchmark to account for changes in regional FFS spending, replacing the current update, which is based solely on

the absolute amount of projected growth in national FFS spending.

We proposed to define an ACO's regional service area to include any county where one or more assigned beneficiaries reside and to weight county-level FFS costs by the proportion of the ACO's assigned beneficiaries in the county. We proposed to calculate risk adjusted county FFS expenditures for the ACO's regional service area using the assignable beneficiary population, as a subset of the broader FFS population, residing in counties included in the ACO's regional service area. We proposed to align the calculation of regional FFS expenditures with the approach to calculating an ACO's benchmark and performance year expenditures. We also proposed a program-wide policy, to use beneficiaries eligible for ACO assignment instead of all FFS beneficiaries as the basis for program calculations using regional and national FFS expenditures. As part of the process of incorporating the revised rebasing methodology, we also proposed a number of technical changes to the program regulations to clarify the regulations text on the benchmarking methodology.

In the 2016 proposed rule we explained that the proposed approach to incorporating regional expenditures would make the ACO's cost target more independent of its historical expenditures and more reflective of FFS spending in its region (81 FR 5825). We also explained that adding the regional adjustment and replacing the current benchmark trend factor and annual update (calculated based on National FFS expenditures) with regional growth rates, would have mixed effects on ACOs overall by increasing or decreasing benchmarks for ACOs in various circumstances. For example, we explained that the proposed regional adjustment would likely benefit existing low spending ACOs operating in regions with relatively higher spending and/or higher growth in expenditures (81 FR 5834). We further explained that a phased-approach to transitioning to use of a higher weight in the calculation of the regional adjustment balanced our preference for quickly transitioning ACOs to a rebasing methodology that is more reflective of expenditures in the ACO's region than the ACO's historical expenditures with our concerns about the opportunity for arbitrage, and the potential for ACOs to alter their healthcare provider and beneficiary compositions or take other such actions in order to achieve more favorable performance relative to their region

without actually changing their efficiency (81 FR 5834 through 5836). We also explained that the use of regional trend factors in resetting ACO benchmarks and regional growth rates to update benchmarks annually would likely result in relatively higher benchmarks for ACOs that are low growth in their region compared to benchmarks for ACOs that are high growth relative to their region (81 FR 5838 through 5840).

We anticipated these changes would strengthen the incentives for ACOs to invest in infrastructure and care redesign necessary to improve quality and efficiency and meet the goals of the Shared Savings Program (81 FR 5859). However, we expressed uncertainty about the effect on the level of ACO participation, provider and supplier response to the financial incentives under the program, interactions with other value-based payment models and programs, and the ultimate effectiveness of the changes in care delivery (81 FR 5860).

In section II.A.2 of this final rule, we discuss our final actions on the proposals for modifying the Shared Savings Program benchmarking methodology. Table 2 summarizes the final actions discussed in this section of the final rule. We begin this discussion by addressing comments on broader considerations for revising the benchmarking methodology.

*Comment:* Most commenters addressed the proposed changes to the benchmarking methodology, with the majority expressing support, in general, for incorporating regional FFS expenditures into ACOs' benchmarks. Many commenters offered specific suggestions on the proposed policies.

Some commenters detailed concerns, more generally, about the sustainability of the current rebasing methodology. A principal concern raised by commenters is that the current rebasing methodology forces ACOs to continually beat their own performance, by using historical expenditures from the performance years under an ACO's prior agreement period to reset the benchmark. Commenters raised a variety of concerns about the effects of this approach, including: ACOs that have performed well in the past are penalized under this methodology, while those who have performed poorly are rewarded; ACOs with lower spending have relatively lower benchmarks (and less opportunity for reward) compared to those with higher historical spending, including ACOs operating in different markets (with differing spending trends) as well as ACOs operating within the same market; over time there will be

diminishing opportunities to produce savings, that are used in part to support ACO operations (including investments that result in the provision of high value care), and ACOs will ultimately be forced to leave the program or participation in the program will be discouraged more generally. Many commenters explained that making an ACO's benchmark more independent of its historical expenditures and performance and more reflective of FFS spending and the healthcare environment in the ACO's region would be an improvement over the current approach.

Several commenters recognized that incorporating regional factors when resetting ACO benchmarks accounts for geographic variation in healthcare utilization. While some commenters considered this a necessary methodological development to ensure the sustainability of the Shared Savings Program, a commenter specified that this would be antithetical to CMS' larger goal of decreasing variability in per beneficiary spending on a nationwide scale. A commenter suggested CMS delay finalizing the proposed changes in light of CMS' concerns (including the potential for arbitrage or behavioral changes by ACOs) and the uncertainties about the impact of the alternative rebasing methodology, and further suggested CMS revisit the proposed changes in future rulemaking, after further analysis and once the Merit-Based Incentive Payment System (MIPS) and Alternative Payment Model (APM) requirements are proposed. However, even among those commenters that raised concerns about the details of the proposed policies, very few suggested that CMS abandon altogether an approach for incorporating regional FFS expenditures into ACO benchmarks.

The discussion in the comments also reflects commenters' consideration of the tradeoffs CMS identified in the proposed rule related to providing sufficiently strong incentives for ACOs to improve efficiency and continue participation in the program, while guarding the Trust Funds against the possibility that over inflating certain ACOs' reset benchmarks would result in selective participation by and excessive payments to ACOs with high benchmarks. Commenters illuminated that the balance of these concerns is complicated due to the diversity of the program's participants and regional variations/market circumstances.

Many commenters recognized that the benchmarking methodology, including any changes adopted in this final rule, will be crucial for determining the profile/characteristics of organizations

that will have an incentive to enter and remain in the program over time. Comments discussed the effects of the proposed changes to the benchmarking methodology, including the following:

- Many commenters generally agreed that the proposed changes would encourage participation by ACOs that are historically efficient (low spending) in relation to their region, especially in high spending regions. Many commenters expressed support for the proposed policies to encourage participation by efficient ACOs. However, some commenters believe the resulting incentives would still be inadequate to encourage these ACOs to enter or remain in the program over the long term, citing concerns about diminishing returns when a component of the ACO's rebased historical benchmark continues to be based on expenditures under the ACO's prior agreement period and thereby reflects the ACO's past success.

- Some commenters expressed concern there may be little incentive for ACOs with spending equal to or higher than their region to enter the Shared Savings Program or continue participating under the proposals.

- Several commenters expressed concerns that the proposed changes could disadvantage certain ACOs, especially those in ACO-heavy markets and ACOs in existing low cost regions, as well as smaller ACOs comprised of geographically distant small- and mid-sized providers.

- Others expressed concern about the potential that the proposed changes would have unanticipated effects on particular organizations, pointing to the discussion in the proposed rule that "a wide range of potential outcomes" exist regarding financial performance under the proposed changes. Some commenters expressed uncertainty about the potential effects of the proposed changes and indicated that they lacked sufficient information to determine what outcomes they may have.

Some commenters addressed these concerns by suggesting CMS offer various benchmarking options to allow ACOs greater flexibility in determining the methodology that would be applied to determine their benchmark. Some commenters also suggested CMS stratify the regional benchmarking methodologies for historically low and high cost ACOs (in relation to their regions).

*Response:* We appreciate commenters' thoughtful remarks on the proposed changes to the benchmarking methodology, including the tradeoffs that we identified as relevant to the

consideration of any revisions to the methodology for resetting an ACO's historical benchmark for a second or subsequent agreement period. The discussion in the latter sections of this final rule reflect our continued consideration of these important issues during the development of the policies in this final rule, and we believe the policies we are finalizing represent a balance of these considerations. We also believe the policies we are finalizing are responsive to a principal concern among stakeholders, as reflected in the comments, about the way in which ACOs' past performance is reflected in their benchmarks over time.

As explained in the 2016 proposed rule, the policy modifications are designed to reduce the impact of past performance and better reflect regional expenditures. We continue to believe an approach that incorporates regional FFS expenditures into an ACO's rebased historical benchmark will have mixed effects, increasing or decreasing benchmarks for ACOs in various circumstances. However, we believe that taking an incremental approach to incorporating regional elements when resetting the ACO's benchmark offers a balance between requests for faster or slower phase-in of these changes, and is responsive to the circumstances of differently situated organizations as we transition to this revised approach. When taking these issues into consideration, on the whole, we believe that this approach is consistent with a sustainable vision for the future of the Shared Savings Program, under which a variety of organizations will have sufficient incentive to enter and continue in the program, working to achieve the program's goals of better care for individuals, better health for populations, and lower growth in expenditures.

While we acknowledge the variation across ACOs participating in the program, in terms of their patient populations, location, and organizational structure, among other factors, we do not believe it is desirable or operationally feasible to implement an approach that would allow each ACO to select from a menu of options for customizing the benchmark methodology that would apply in any given performance year or agreement period. Doing so would introduce considerable operational complexity into the program's benchmarking methodology. Further an approach that allows an ACO to choose the more favorable of several methodologies for establishing its cost target would exacerbate our concerns about the potential for benchmarks to become

overly inflated to the point where ACOs need to do little to maintain or change their care practices to generate savings. We are concerned that this flexibility could lead to opportunities for arbitrage and may dull incentives for ACOs to improve their performance under the Shared Savings Program.

*Comment:* Several commenters also, generally, agreed with the importance of transparency, predictability, simplicity, accuracy, and stability as guiding principles in developing a revised rebasing methodology, and provided feedback on how to accomplish these aims.

*Response:* We appreciate commenters' acknowledgement and support of the principles that guided our consideration of potential revisions to the methodology for resetting an ACO's historical benchmark for a second or subsequent agreement period. These principles also guided the development of our final policies, as reflected in the discussion throughout this section of this final rule.

*Comment:* A few commenters suggested alternative rebasing methodologies exceeding the scope of the modifications described in the proposed rule (for instance, allowing ACOs, particularly small and rural ACOs, to choose whether to move to the revised rebasing methodology; transitioning to pure regional benchmarks, or pure national benchmarks, or using a combination of ACO historical costs and blended regional/national costs in benchmarks; adopting the Next Generation ACO model methodology into the Shared Savings Program; and eliminating rebasing or reducing the frequency of rebasing). A commenter questioned whether CMS could establish a benchmark floor, an actuarial number beyond which CMS would not lower an ACO's benchmark. Another commenter suggested CMS adopt an option to allow Shared Savings Program ACOs to transition to a different payment model altogether such as a capitated payment model or population-based payments.

*Response:* Although we appreciate commenters' thoughtful recommendations for alternative methodologies for resetting the ACO's historical benchmark, and other approaches for improving the rewards under the Shared Savings Program, we consider these suggestions to be beyond the scope of this final rule, and decline at this time to adopt commenters' recommendations.

*Comment:* A commenter expressed concern about CMS' use of inconsistent terminology when describing the benchmarking methodology. In

particular, the commenter noted that CMS used the words "reset" or "rebase" interchangeably. The commenter also noted a lack of clarity regarding the use of "trend" or "trending." This commenter, pointing to the length of the program's rulemaking documents and the complexity of the policies discussed therein, encouraged CMS to be precise in its language.

*Response:* We thank the commenter for raising this concern about the language used in technical discussions within rulemaking for the Shared Savings Program. To clarify, we consider the references to reset/resetting and rebase/rebasing an ACO's historical benchmark to be synonymous (see for example, 76 FR 67912 (specifying ". . . the benchmark would be reset (or rebased) [at] the start of each agreement period.")) However, the use of the words trend and trending could have a meaning specific to the context in which the term is used. For example, we refer to the use of trend factors (or trending) when discussing the existing policy for restating BY1 and BY2 expenditures in terms of BY3 expenditures when establishing an ACO's historical benchmark. However, "trends" may refer more generally to historical Medicare spending and cost experience.

#### b. Regional Definition

As explained in the 2016 proposed rule (see 81 FR 5829 through 5830), we consider an ACO's region to be synonymous with the service area from which it derives its assigned beneficiaries. Furthermore, as discussed in this section of this final rule, issues related to the definition of an ACO's regional service area include: (1) The selection of the geographic unit of measure to define this area; and (2) identification of the population of beneficiaries to include in this area. Calculation of the FFS expenditures for this area is discussed in detail in sections II.A.2.b.2 and II.A.2.e.2 of this final rule.

A fundamental concept underlying our consideration of the definition of an ACO's regional service area is that this geographic definition bear a relationship to the area of residence of the ACO's assigned beneficiaries, as a means of accounting for the geographic spread of the ACO's assigned population. In some cases, an ACO's assigned beneficiary population may span multiple geographic boundaries, for example in cases where an ACO provides services to beneficiaries residing in multiple counties within a single state or multiple states. The approach of defining an ACO's regional service area

based on the area of residence of its assigned beneficiaries would therefore reflect regionally-related factors unique to the region the ACO serves, including the health status of the region's population, the geographic composition of the region (such as rural versus urban areas), and socio-economic differences within the regional population.

#### (1) Defining the ACO's Regional Service Area

In the 2016 proposed rule, we considered the geographic unit of measure to use in defining an ACO's regional service area for the purpose of determining the corresponding regional FFS expenditures to be used in calculations based on regional spending in the modified approach to establishing, adjusting and updating the ACO's rebased historical benchmark (see 81 FR 5829). We explained that these regional FFS expenditures would be used in determining the regional adjustment to an ACO's rebased historical benchmark and in calculating the growth rates in regional spending used in establishing and updating the ACO's rebased historical benchmark.

We proposed to determine an ACO's regional service area by the counties of residence of the ACO's assigned beneficiary population. We explained our belief that county-level data offers a number of advantages over the other options, including Core Based Statistical Areas (CBSAs), Metropolitan Statistical Area (MSAs), Combined Statistical Area (CSAs), States/territories, and Hospital Referral Regions (HRR). Our considerations included the following:

- Counties tend to be stable regional units compared to some alternatives, as the definition of county borders tends not to change.
- The agency has experience with identifying populations of beneficiaries by county of residence and calculating county-level rates based on their costs, including using county-level data to set cost targets for value based purchasing initiatives. CMS used counties to define the service areas of Physician Group Practice (PGP) demonstration sites (a predecessor of CMS' ACO initiatives) and used Parts A and B spending by county as part of setting benchmarks for these organizations. We also use county-level FFS expenditure data, in combination with other adjustments, to establish the benchmarks used for setting local MA rates.
- In terms of determining regional costs, smaller areas (such as counties) better capture regional variation in Medicare expenditures, and allow for more customized regional definitions for each ACO, but risk being dominated

by expenditures from a single ACO or group of ACOs, which could potentially reduce ACO benchmarks in clustered markets. We explained that we can guard against the potential bias from this effect by using a sufficiently large county-based population.

- Currently, we produce quarterly and annual reports for Shared Savings Program ACOs that include aggregate data on distribution of assigned beneficiary residence by county.

Consistent with this proposed definition of regional service area, we proposed to define regional costs as county FFS expenditures for the counties in which the ACO's assigned beneficiaries reside calculated using the methodology discussed in section II.A.2.e.2 of this final rule. We explained that use of county-level FFS data in calculating expenditures for an ACO's regional service area would permit ACOs to be viewed as being on the spectrum between traditional FFS Medicare and MA, a concept some commenters in response to the December 2014 proposed rule and stakeholders have urged CMS to articulate. Additionally, we noted that use of county FFS expenditure data, which are publicly available, would allow for increased transparency in ACO benchmark calculations and would ease ACOs' and stakeholders' access to data for use in modeling and predictive analyses.

These proposals were reflected in our proposed addition of a new definition of "ACO's regional service area" to § 425.20 and in a proposed new § 425.603 describing the calculations that would be used in resetting an ACO's historical benchmark for a second or subsequent agreement period. We sought comment on these proposals and on the alternatives for defining an ACO's regional service area, specifically use of CBSA, MSA, CSA or State/territory designations.

*Comment:* Many of the commenters addressing the regional definition favored the proposed use of counties of residence of an ACO's assigned beneficiaries as the geographic unit of measure in defining an ACO's regional service area. Commenters explaining their support for the proposal cited a variety of reasons, including: Counties provide a stable, clearly defined geographic unit; counties will be effective in capturing regional variation, and allow for greater customization of the ACO's regional definition; and use of county-level data will further align ACOs with MA and other CMS initiatives. Of the few comments on alternatives discussed in the proposed rule (CBSAs, MSAs, CSAs, HRRs, states/

territories), opinions tended to split for and against these approaches. A commenter pointed to the need for CMS to more consistently use the same geographic unit of measure for defining a region across its initiatives, preferring use of MSAs, which are also used by CMS in other payment systems and models. Several commenters raised alternatives not considered in the proposed rule. For instance, a commenter suggested CMS consider using a more sophisticated and granular methodology such as Primary Care Service Areas (PCSAs), pointing to consideration for use of this geographic unit in the Part B Drug Payment Model. Another commenter advised against using census regions.

*Response:* We are finalizing our proposal to define an ACO's regional service area by the counties of residence of the ACO's assigned beneficiary population. We continue to believe that using counties as the geographic unit of measure offers advantages over other approaches, as supported by some commenters. Counties tend to be stable geographic units. Use of counties in setting the ACO's regional service area more easily allows for the use of county FFS expenditures in calculating regional factors, an approach that will more closely align the Shared Savings Program methodology for incorporating regional FFS expenditures into ACO benchmarks with the MA rate-setting methodology. We have experience with use of county level data not only through MA but also previously with the PGP demonstration. In addition, we currently provide informational reports to Shared Savings Program ACOs that include aggregate data on distribution of assigned beneficiary residence by county. Given the short timeframe for implementing the changes in the benchmarking methodology described in this final rule, we believe this operational experience with use of county-level data within the Shared Savings Program will facilitate implementation of the revised methodology. We also believe that by using counties, rather than larger geographic units, we can more accurately reflect the geographic areas that the ACO serves. We decline at this time to use a different methodology to establish an ACO's regional service area, particularly alternatives that were not contemplated in the 2016 proposed rule, which may prove challenging to implement within a short period of time for the Shared Savings Program and without notice to ACOs and other stakeholders. We also recognize that CMS uses different geographic units of

measure across payment models, but continue to believe that use of counties, similar to the approach used in Medicare Advantage, is an appropriate methodology for the Shared Savings Program.

*FINAL ACTION:* We are finalizing our proposal to determine an ACO's regional service area by the counties of residence of the ACO's assigned beneficiary population. Furthermore, we are finalizing our proposal to define regional costs as county FFS expenditures for the counties in which the ACO's assigned beneficiaries reside calculated using the methodology discussed in greater detail in section II.A.2.e of this final rule. These final policies are reflected in the addition of a new definition of "ACO's regional service area" to § 425.20 and new § 425.603 describing the calculations that will be used in resetting an ACO's historical benchmark for a second or subsequent agreement period.

#### (2) Establishing the Beneficiary Population Used To Determine Expenditures for an ACO's Regional Service Area

In the 2016 proposed rule we explained that the population that is the basis for calculating regional FFS costs must be sufficiently large to produce statistically stable mean expenditure estimates (avoiding biases that result from small numbers), and must be representative of the demographic mix, health status and cost trends of the beneficiary population within the ACO's regional service area. Therefore, as discussed in section II.A.2.b.1 of this final rule, we proposed to define the ACO's regional service area to include any county where one or more of the ACO's assigned beneficiaries reside.

We also proposed to calculate county FFS expenditures using the expenditures for all assignable FFS beneficiaries (a subset of the broader FFS population) residing within the county, including ACO assigned beneficiaries. We stated that we believed that this approach would result in the most accurate and predictable regional expenditure factor for each ACO (81 FR 5831).

We detailed in a different section of the 2016 proposed rule proposals related to the definition of assignable FFS beneficiaries (81 FR 5843). (See also the discussion in section II.A.2.e of this final rule.) In discussing which expenditures should be included in these calculations, we explained that the overall FFS population includes beneficiaries who are not eligible for assignment to an ACO. Including expenditures for all FFS beneficiaries

would introduce bias into the calculation of the ACO's regional service area expenditures.

We also considered whether to include the ACO's assigned beneficiaries within the population used to determine expenditures for the ACO's regional service area. We concluded that attempting to identify regional FFS expenditures for only non-ACO beneficiaries (or customizing the calculation of regional FFS expenditures for each ACO by excluding its own beneficiaries) would add significant complexity and create potential bias. Furthermore, excluding the ACO's assigned beneficiaries from the population used to determine regional FFS expenditures may also produce biased results where an ACO tends to serve beneficiaries of a particular Medicare enrollment type, demographic or socio-economic status (for example, ACOs serving largely dual-eligible populations) and when an ACO tends to dominate (serve a large proportion of FFS beneficiaries) in a region.

We considered addressing the circumstance of ACOs that are dominant in their region, by expanding the scope of the ACO's region (for example, by including adjoining counties) to allow the ACO's regional service area to include a greater mix of beneficiaries who are not assigned to the ACO. However, we explained our belief that this approach may be challenging to apply consistently and accurately given the potential for variation of populations across and within regional areas, and would be a potentially cumbersome policy to maintain as ACOs continue to develop across the country. Therefore, we indicated we would monitor for cases where an ACO tends to serve a large proportion of FFS beneficiaries in its region, and consider the effect of these circumstances on ACO benchmarks. If warranted, we would explore developing adjustments to the definition of an ACO's regional service area to account for this circumstance in future rulemaking.

Further, we proposed to weight an ACO's regional expenditures relative to the proportion of its assigned beneficiaries in each county, determined by the number of the ACO's assigned beneficiaries residing in the county in relation to the ACO's total number of assigned beneficiaries. We explained that absent this weighting, we could overstate or understate the influence of the expenditures for a county where relatively few or many of an ACO's assigned beneficiaries reside.

These proposals on the calculation of county FFS expenditures and regional FFS expenditures were reflected in the

proposed new § 425.603. We sought comment on alternatives to the proposal to use assignable beneficiaries, including beneficiaries assigned to the ACO, in establishing the expenditures for an ACO's regional service area, such as using all Medicare FFS beneficiaries in determining these expenditures.

*Comment:* While some commenters expressed support for the proposal to include any county in which at least one assigned beneficiary resides in an ACO's regional service area, many other commenters opposed this proposal. Some commenters questioned whether including data from counties with small numbers of assigned beneficiaries sufficiently improves the accuracy of the benchmark to justify the added complexity and administrative burden. The most commonly suggested alternative was to specify a higher threshold for the minimum number of assigned beneficiaries residing in a county included in the ACO's regional service area. For instance, commenters suggested we include in the definition of the ACO's regional service area counties where at least 1 percent of an ACO's assigned beneficiaries reside. Commenters also pointed out that publicly available ACO assignment data files (made available to support modeling of the proposed policies) as well as the PGP Demonstration methodology, omitted counties with less than 1 percent of ACO assigned beneficiaries.

*Response:* We are finalizing our proposal to include in the definition of an ACO's regional service area any county where one or more beneficiaries assigned to the ACO reside. We continue to believe this approach is necessary to accurately reflect the diversity of the ACO's assigned beneficiary population and to provide a complete picture of the ACO's regional service area. Based on our initial modeling of this policy using preliminary assignment data for 433 ACOs participating in the program for performance year 2016, we observed that ACOs have on average about 7 percent of their assigned beneficiaries residing in counties in which less than 1 percent of the ACO's total assigned beneficiary population resides. In this analysis, we observed a median of approximately 6 percent of assigned beneficiaries residing in counties where less than 1 percent of the ACO's total assigned beneficiary population resides, a minimum of approximately 2 percent, and a maximum of approximately 44 percent. We also observed that for nearly 20 percent of these ACOs (78 of the 433) more than 10 percent of the ACO's assigned beneficiaries were

dispersed across counties in which less than 1 percent of the ACO's total assigned beneficiary population resides. Applying a threshold for including counties within the ACO's regional service area would likely affect ACOs differently depending on the size of the ACO's assigned beneficiary population residing in counties below the threshold because the remaining counties would need to be weighted proportionately higher, which could have a significant impact on the calculation of regional expenditures for an ACO. Further, we believe our approach to weighting county FFS expenditures, described later in this section of this final rule, will result in counties with very few assigned beneficiaries having a proportionately small effect on the expenditures for the ACO's regional service area.

*Comment:* The vast majority of commenters discussing the proposal to base regional FFS expenditures on assignable beneficiaries (instead of all FFS beneficiaries), favored an approach that would exclude from these calculations beneficiaries who would not meet the requirements for being assigned (such as non-utilizers of primary care services). A commenter expressed support for use of all Medicare beneficiaries from a particular region, instead of only assignable beneficiaries, in calculating regional expenditures. This commenter indicated that including expenditures for all Medicare FFS beneficiaries in these calculations accounts for beneficiaries seeking care within and outside the ACO, addresses concerns about smaller populations biasing the calculation, and is in line with other CMS initiatives that use calculations based on the entire Medicare population.

While some commenters favored the proposed inclusion of ACO assigned beneficiaries in the regional expenditure calculations, many opposed this proposal. Those opposed usually suggested that CMS exclude from these calculations either the ACO's assigned beneficiaries or all beneficiaries assigned to participants in any CMS ACO initiative (Shared Savings Program, Pioneer ACO Model, Next Generation ACO Model) or more broadly to participants in any alternative payment model. Commenters expressed concerns that including ACO beneficiaries' expenditures would skew regional expenditure calculations by reflecting ACOs' efforts to coordinate care and reduce expenditures for their assigned populations. Commenters indicated these concerns were more pronounced for ACOs that have significant market saturation, for

example, in cases where an ACO is dominant in its market, or where many ACOs have formed within the same market (referred to as “ACO-heavy” regions). A commenter expressed a concern which was also reflected in other comments, that this would create another dynamic where an ACO must compete against its own historical performance. Another commenter noted that inclusion of an ACO’s assigned population in a comparison group would be unusual in a commercial ACO contract.

Among the commenters expressing support for the inclusion of the ACO’s assigned beneficiaries in expenditure calculations for the ACO’s regional service area, some indicated that the approach would protect both ACOs and the Trust Funds. A commenter explained this approach would reduce the impact of the regional adjustment impact, particularly in less densely populated areas, but did not detail the reason for this belief. Another commenter specified that if ACOs are successful in limiting growth of expenditures, then including their beneficiaries in calculations of county FFS spending would serve to control the growth in calculated regional FFS spending, and ultimately allow the Medicare program to capture further savings as ACOs’ benchmarks move toward the regional average. Several commenters explained that removing the ACO’s assigned beneficiaries from the population used to determine regional FFS expenditures could bias results, but did not explain the nature of this potential bias. A commenter expressed concern that excluding the ACO’s assigned beneficiaries from the population used to determine regional FFS expenditures could effectively penalize ACOs for caring for the sickest patients, particularly if these ACOs are dominant in their markets. Some commenters also urged CMS to consider whether the proposed use of assignable beneficiaries in regional benchmark calculations could disadvantage rural ACOs, by showing artificially lower utilization rates in rural communities.

*Response:* We are finalizing as proposed the policy to include the expenditures for all assignable FFS beneficiaries (including ACO assigned beneficiaries) residing in the counties that make up the ACO’s regional service area in calculating county FFS expenditures.

We discuss in detail, in section II.A.2.e.3 of this final rule, the definition of assignable beneficiaries. Some commenters seemed to misunderstand the scope of beneficiaries included within the assignable population

(perceiving it as a broader population than the population currently used to calculate factors based on national FFS expenditures). To clarify, assignable FFS beneficiaries are a subset of the broader FFS population (see 81 FR 5843). The assignable beneficiary population, as defined in this final rule, would include any beneficiary receiving a primary care service from a primary care physician or from a physician with one of the primary specialty designations included in § 425.402(c). This primary care service must be one that is billed for under traditional FFS Medicare with a date of service during the 12-month assignment window as defined under § 425.20.

For the reasons discussed in the proposed rule, and as summarized previously in this section of the final rule, we continue to believe that including the ACO’s assigned beneficiaries within the assignable population used to calculate county FFS expenditures for the ACO’s regional service area will reduce the chance of bias in the calculations, particularly in the case of ACOs serving higher cost beneficiaries within the region. We believe that including the ACO’s assigned beneficiaries among the population used to calculate risk adjusted county level expenditures (applying full CMS–HCC risk adjustment, as discussed in section II.A.2.e.2 of this final rule) is critical to ensuring regional expenditures accurately reflect the cost and acuity of beneficiaries in the ACO’s region. Additionally, we have significant operational concerns with commenters’ suggestions that CMS remove each ACO’s assigned beneficiaries from the ACO’s regional service area. This approach would entail calculating county rates tailored for each ACO for each benchmark and performance year, as opposed to the proposed approach of calculating county rates program-wide and determining on an ACO-specific basis which county expenditures to use and how to weight these expenditures. We are deeply concerned that this alternative approach would not be transparent because of the highly individualized nature of the exclusions that would be required for each ACO’s county FFS expenditure calculations. In addition, we believe determining ACO-specific county-level FFS expenditures would be time intensive given the complexity of these calculations, and prevent timely provision of program reports based on these data to ACOs.

Furthermore, we continue to believe that the approach to determining county FFS expenditures based on assignable Medicare beneficiaries (as opposed to

all Medicare beneficiaries) may avoid bias in these calculations, including biases that may be more pronounced in certain geographic regions as a result of healthcare patterns and population demographics. In the 2016 proposed rule, we explained our belief that including expenditures for all FFS beneficiaries would introduce bias into the calculations of the ACO’s regional service area expenditures. We explained that regional FFS expenditures, which are calculated based on relatively smaller populations than the national FFS population currently used in benchmark calculations based on national FFS expenditures, may be more susceptible to the influence of this bias. For example, in counties where the health status of the overall beneficiary population leads more beneficiaries to be non-utilizers of services, a bias in the direction of relatively lower regional expenditures may be more pronounced. On the other hand, a bias in the direction of relatively higher regional expenditures may be more pronounced in counties where there are established patterns of accessing primary care services through specialists who are not the basis for assignment. We also noted that ultimately, such differences could factor more prominently in certain counties that are used to compute an ACO’s regional service area expenditures (see 81 FR 5830 and 5831). Thus, using only assignable beneficiaries in expenditure calculations avoids biases that could result from including non-utilizers, among other factors, and that would be present in calculations based on the larger Medicare FFS population.

*Comment:* Commenters concerned about the situation of ACOs that have a regional service area population that is too small (particularly as a result of excluding ACO assigned beneficiaries) suggested alternatives for expanding the ACO’s regional service area and encouraged CMS to adopt such an approach in the final rule (as opposed to monitoring the issue). Most commonly, commenters suggested including adjacent counties in the ACO’s regional definition (for example, citing the approach used in the Pioneer ACO model, or describing details of an alternative approach), as well as increasing the number of years of data included in the calculations (for example, using a 5-year rolling average for county-level spending estimates, along the lines of the approach used by MA). Some commenters suggested increasing the weight given to the counties that have a lower proportion of ACO assigned beneficiaries in relation

to the population of Medicare FFS beneficiaries. However, a commenter acknowledged that any methodology for expanding the scope of an ACO's region would be both cumbersome and challenging to apply consistently.

*Response:* We appreciate commenters' suggestions for alternative approaches to defining the ACO's regional service area. In section II.A.2.e.2 of this final rule, we address commenters' suggestions to use additional years of data to calculate county FFS expenditures. We decline at this time to adopt alternatives suggested by commenters for expanding the ACO's regional service area population, particularly in relation to requests to exclude ACO assigned beneficiaries from the assignable population. We do not believe these adjustments are necessary under the methodology we are finalizing for determining the ACO's regional service area using the assignable FFS beneficiary population, including ACO assigned beneficiaries. As we implement the revised rebasing methodology established with this final rule, we will consider the impact of including ACO assigned beneficiaries within the population used to calculate the regional FFS expenditures, including the potential for bias in regional FFS expenditure calculations for ACOs that are dominant in their regions and ACO-heavy regions. In the event we determine that any changes to are necessary to address these issues, we will address them in future rulemaking.

*Comment:* Although not discussed in the proposed rule, a few commenters made suggestions to include or exclude MA beneficiaries in the population used to determine expenditures for the ACO's regional service area.

*Response:* As an initial matter, we wish to clarify the following: (1) The assignable population under this final rule could include beneficiaries who are enrolled in MA during part of the 12-month assignment-window; and (2) the assignable population excludes beneficiaries who have no primary care services billed under traditional FFS Medicare and thus do not meet the definition of an "assignable beneficiary" under this final rule, such as beneficiaries who received services only through a MA plan for the entirety of the 12-month assignment window. Underlying our proposal to use assignable beneficiaries in calculating regional and national FFS expenditures was our intent to ensure these calculations were based on beneficiaries that have some chance of being assigned to the ACO. Accordingly, we decline at this time to include in regional FFS expenditure calculations beneficiaries

who have only received services through a MA plan during the 12-month assignment window used to determine assignable beneficiaries and who could not be eligible to be assigned to an ACO. However, we wish to clarify that some beneficiaries who meet the definition of "assignable beneficiary" adopted in this final rule will ultimately be excluded from assignment to an ACO for purposes of determining the ACO's benchmark or performance year expenditures because they fail to meet the assignment criteria specified under § 425.401(a).

*Comment:* Almost all commenters discussing the proposal to weight expenditures by the proportion of the ACO's assigned beneficiaries in each county supported the proposed approach. Commenters underscored the importance of this weighting for accurately reflecting expenditure levels in the ACO's market in regional calculations. Absent this weighting, CMS could over or understate the influence of expenditures for a county. A commenter indicated that the need to perform this weighting illustrated the inaccuracies and lack of precision with using county-level data, and recommended the use of an alternative methodology to define the ACO's regional service area (such as CBSAs, MSAs, and CSAs). Some commenters requested clarification of what the proposed methodology for establishing an ACO's regional service area would mean for ACOs that use a model of geographically distant providers to aggregate to the required minimum number of 5,000 assigned beneficiaries.

*Response:* We are finalizing as proposed the policy of weighting an ACO's regional expenditures relative to the proportion of its assigned beneficiaries in each county, determined by the number of the ACO's assigned beneficiaries residing in the county in relation to the ACO's total number of assigned beneficiaries. For the reasons discussed in the proposed rule and raised by commenters who supported this approach, we believe that weighting county-level FFS expenditures by the proportion of assigned beneficiaries in each county will accurately reflect expenditure levels in the ACO's market in regional FFS expenditure calculations.

We also note that the need to weight the expenditures is not necessarily specific to the choice of counties as the geographic unit in the regional definition. Some approach to weighting would be necessary in any methodology for calculating expenditures for an ACO's regional service area, since ACOs often serve beneficiaries in multiple counties within a state or across several

states as discussed in the 2016 proposed rule (81 FR 5831). As a result, we disagree with the comment indicating that use of weighting in a methodology for calculating regional FFS expenditures is somehow indicative of a lack of precision with using county-level data.

Further, in response to the request for clarification on the application of the weighting methodology to smaller ACOs with geographically dispersed ACO participants, we note that the methodology for determining an ACO's regional service area and calculating regional FFS expenditures will be applied consistently across ACOs, regardless of ACO size, composition, or geographic location.

We did not receive comments specifically addressing how county-level FFS expenditures should be weighted for purposes of determining regional FFS expenditures for the ACO's regional service area. In the proposed rule, we outlined an approach in the proposed § 425.603(f). However, following further consideration of this issue, we now believe that the proposed provision should be revised to more clearly reflect our intended approach. We wish to clarify that when determining expenditures for an ACO's regional service area, we intend to calculate each county's expenditures by enrollment type, and to weight these expenditures by the ACO's proportion of assigned beneficiaries in the county for the applicable enrollment type. We will then aggregate these values, across counties within the ACO's regional service area, for each population by Medicare enrollment type. This will result in a separate value for each of the four populations identified by Medicare enrollment type, representing county-weighted regional FFS expenditures for that Medicare enrollment type. We will apply to each of these aggregate expenditure values (specific to a Medicare enrollment type) a weight reflecting the ACO's overall proportion of assigned beneficiaries in that Medicare enrollment type, as determined in relation to its entire assigned population for the relevant benchmark or performance year in order to determine the ACO's risk adjusted regional expenditures for that enrollment type. We are making clarifying revisions to the provision at § 425.603(f) to reflect this approach.

*FINAL ACTION:* We are finalizing our proposal to define the ACO's regional service area to include any county where one or more assigned beneficiaries reside, and to reflect this policy through the addition of a new definition of "ACO's regional service

area” to § 425.20. We are finalizing several proposals, among others described elsewhere in this final rule, on the calculation of county FFS expenditures and an ACO’s regional FFS expenditures as reflected in new § 425.603 to: (1) Include expenditures for all assignable FFS beneficiaries (including ACO assigned beneficiaries) residing within the county to calculate the county’s FFS expenditures; and (2) weight an ACO’s regional expenditures relative to the ACO’s proportion of its assigned beneficiaries in each county, determined by the number of the ACO’s assigned beneficiaries residing in the county in relation to the ACO’s total number of assigned beneficiaries. As discussed in this section of this final rule, we are making revisions to § 425.603(f) to clarify the weighting of county-level expenditures by the ACO’s proportion of beneficiaries by Medicare enrollment type (ESRD, disabled, aged/dual eligible, aged/non-dual eligible) in each county for purposes of determining the ACO’s regional expenditures. We will monitor the effects of this methodology on calculations of regional FFS expenditures, particularly for bias in the calculations among ACOs that are dominant in their regions, as well as in ACO-heavy regions, and will address any necessary adjustments to this methodology through future rulemaking.

#### c. Applying Regional Expenditures to the ACO’s Rebased Benchmark

##### (1) Background

In the 2016 proposed rule (81 FR 5832), we summarized our discussion of benchmark alternatives in recent rulemaking, indicating there is an array of options for incorporating regional expenditures in ACO benchmarks. We explained our agreement with commenters on the previous rulemaking regarding the benefits of incorporating regional expenditures in rebased benchmarks, and indicated our interest in moving to an alternative rebasing approach that builds on the program’s existing benchmarking methodology established under the authority of section 1899(d)(1)(B)(ii) of the Act and codified in the Shared Savings Program regulations at § 425.602.

As we stated in the proposed rule, over 400 ACOs have voluntarily entered the Shared Savings Program under the financial models (Track 1 and Track 2) established in the November 2011 final rule and as modified by the June 2015 final rule (adding a choice of Track 3 for agreement periods beginning January 1, 2016). Furthermore, 147 ACOs with 2012 and 2013 agreement start dates

elect to continue their participation in the program for a second 3-year agreement period effective January 1, 2016, to which the current rebasing methodology, finalized in the June 2015 final rule applies. We explained that the value proposition of the program’s financial models, which is largely determined by the methodology used to establish ACO benchmarks, is an important consideration for organizations deciding whether to engage (or continue to engage) in this new approach to the delivery of health care. Therefore, in considering how to incorporate regional expenditures into the benchmarking methodology, we expressed our belief that building from the existing benchmarking methodology will help maintain the stability of the program and ultimately result in revised policies that are more easily understood by ACOs and program stakeholders, and more readily implemented by CMS.

Principally, we considered using the Secretary’s discretion under section 1899(d)(1)(B)(ii) of the Act to adjust the historical benchmark by “such other factors as the Secretary determines appropriate” in order to incorporate regional FFS expenditures into the rebased historical benchmark. In the 2016 proposed rule (81 FR 5832 through 5836), we discussed two approaches to calculating an adjustment to an ACO’s rebased historical benchmark to account for regional FFS expenditures for the ACO’s regional service area, and described how the adjustment would be applied to the rebased historical benchmark.

We discussed our belief that although the plain language of section 1899(d)(1)(B)(ii) of the Act demonstrates Congress’ intent that the benchmark established for a Shared Savings Program ACO would reflect the ACO’s historical expenditures in the 3 most recent years prior to the start of the ACO’s agreement period, Congress also recognized that this historical benchmark should be adjusted “for beneficiary characteristics and such other factors as the Secretary determines appropriate.” Therefore, to the extent an ACO’s rebased benchmark continues to be based on the ACO’s historical expenditures in the 3 years preceding the start of the new agreement period, we expressed our belief that adjusting those historical expenditures to account for regional FFS expenditures for the ACO’s regional service area falls within the Secretary’s discretion to make adjustments to the historical benchmark for “other factors” under section 1899(d)(1)(B)(ii) of the Act.

We explained that we currently make several adjustments to an ACO’s

historical benchmark under the Secretary’s discretion under section 1899(d)(1)(B)(ii) of the Act, including to: (1) Adjust benchmark year expenditures to exclude IME and DSH payments (§ 425.602(a)(1)(i)); (2) adjust the historical benchmark for the addition and removal of ACO participants (§ 425.602(a)(8)); (3) adjust the rebased historical benchmark to account for the average per capita amount of savings generated during the ACO’s previous agreement period (§ 425.602(c)(2)(ii)); and (4) adjust the historical benchmark for changes in demographics and health status of the ACO’s performance year assigned beneficiary population (§§ 425.604(a)(1) through (3), 425.606(a)(1) through (3), 425.610(a)(1) through (3)). We expressed our belief that it is appropriate to further adjust ACO historical benchmarks to reflect FFS expenditures in the ACO’s regional service area. Furthermore, in relation to the use of regional FFS expenditures in developing the ACO’s rebased benchmark, we explained our belief that it is appropriate to forgo making an additional adjustment to account for savings generated by the ACO in its prior agreement period (81 FR 5832).

##### (2) Adjusting the Reset ACO Historical Benchmark To Reflect Regional FFS Expenditures

In the 2016 proposed rule we described two options for calculating the regional FFS adjustment and the ACO’s rebased historical benchmark. The first option would be to calculate a regional adjustment based on a regionally-trended version of the ACO’s prior historical benchmark. The second option would be based on a regional average determined using county FFS expenditures (81 FR 5832 and 5833). We proposed to adopt the second option.

Specifically, we proposed to calculate the ACO’s rebased historical benchmark using the current rebasing methodology established in the June 2015 final rule under which an ACO’s rebased benchmark is calculated based on the 3 years prior to the start of its current agreement period. Consistent with the current policy we would equally weight the 3 benchmark years. However, in trending forward benchmark year (BY) 1 and BY2 expenditures to BY3 dollars, we proposed to use regional growth rates (instead of national growth rates) for Parts A and B FFS expenditures (81 FR 5833 and 5838).

Furthermore, in calculating the ACO’s rebased historical benchmark, we proposed not to apply the current adjustment to account for savings generated by the ACO under its prior agreement period. We explained our

observation that for ACOs generating savings, a rebasing methodology that accounts for regional FFS expenditures would generally leave a similar or slightly greater share of measured savings in an ACO's rebased benchmark for its ensuing agreement period. By contrast, for ACOs generating losses, a rebasing methodology that accounts for regional FFS expenditures would tend to carry forward a significant portion of measured losses into their rebased benchmarks and push benchmarks lower than the current rebasing policy. We expressed our belief that in transitioning to a benchmark rebasing methodology that incorporates an adjustment for regional FFS expenditures, it is important to forgo the current adjustment to account for shared savings generated by the ACO under its prior agreement period.

We proposed to calculate the regional FFS adjustment to the ACO's rebased historical benchmark based on a regional average determined using county FFS expenditures. The calculation of regional average expenditures would generally involve the following key steps:

- Calculate risk adjusted regional per capita FFS expenditures using county level Parts A and B expenditures for the ACO's regional service area for each Medicare enrollment type (ESRD, disabled, aged/dual eligible, aged/non-dual eligible); weighted based on the proportion of ACO assigned beneficiaries residing in each county for the most recent benchmark year. We also proposed a risk adjustment approach that would be used in these calculations to adjust for differences in health status between an ACO and its regional service area (81 FR 5846 through 5848; and as discussed in detail elsewhere within this section of this final rule).

- Weight the resulting regional expenditures by the proportion of assigned beneficiaries for the most recent benchmark year for each Medicare enrollment type (ESRD, disabled, aged/dual eligible, aged/non-dual eligible).

We described in detail and sought comment on the alternative option, under which we would calculate the regional FFS adjustment based on a regionally-trended version of the ACO's prior historical benchmark (81 FR 5833). In comparing the features of the two options, we expressed our belief that using regional average expenditures offered a preferred approach. While we believed both options would avoid penalizing ACOs that improve their spending relative to that of their region, the approach of using regional average

expenditures would not depend on older historical data in calculations as would be required under the alternative involving calculation of a regionally-trended amount. In general, from an operational standpoint, we anticipated that using a regional average as part of calculating regional FFS expenditures for an ACO's regional service area would be easier for ACOs and other stakeholders to understand as well as for us to implement in comparison to the alternative considered, and would more closely align with the MA ratesetting methodology.

We also considered how the adjustment based on regional FFS expenditures should be applied to the ACO's rebased historical benchmark. Our preferred approach was to use the following steps to adjust the ACO's rebased historical benchmark:

- Calculations of the ACO's rebased historical benchmark and regional average expenditures, as described previously in this section of the final rule, would result in average per capita values of expenditures for each Medicare enrollment type (ESRD, disabled, aged/dual eligible, aged/non-dual eligible).

- For each Medicare enrollment type (ESRD, disabled, aged/dual eligible, aged/non-dual eligible) we would determine the difference between the average per capita regional amount and the average per capita amount of the ACO's rebased historical benchmark. These values may be positive or negative. For example, for a particular Medicare enrollment type, if the value of the ACO's rebased historical benchmark is greater than the regional average amount, the difference between these values will be expressed as a negative number.

- Multiply the resulting difference, for each Medicare enrollment type by a percentage determined for the relevant agreement period. The value of this percentage is described in detail later in this section of the final rule. The products (one for each Medicare enrollment type) resulting from this step are the amounts of the regional adjustments that will be applied to the ACO's historical benchmark.

- Apply the adjustment to the ACO's rebased historical benchmark by adding the adjustment amount for the Medicare enrollment type to the truncated, trended and risk adjusted average per capita value of the ACO's rebased historical benchmark for the same Medicare enrollment type.

- Multiply the adjusted value of the ACO's rebased historical benchmark for each Medicare enrollment type by the proportion of the ACO's assigned

beneficiary population for that Medicare enrollment type, based on the ACO's assigned beneficiary population for benchmark year 3 of the rebased historical benchmark.

- Sum expenditures across the four Medicare enrollment types to determine the ACO's adjusted rebased historical benchmark.

In a separate section of the 2016 proposed rule, we considered issues related to risk adjustment when using regional expenditures in resetting ACO benchmarks, including considerations raised in prior rulemaking (see 81 FR 5846 through 5848). We discussed our concern that using CMS-HCC risk scores for an ACO's assigned beneficiary population in resetting the ACO's benchmark has the potential to benefit ACOs that have systematically engaged in coding initiatives during their prior agreement period. We explained that this effect would have been limited in the corresponding performance years due to the application of our current approach to risk adjusting during the agreement period according to the ACO's newly and continuously assigned beneficiary populations. We noted that initial financial performance results (for the performance years ending December 31, 2013 and 2014) do not show strong evidence that concerns about systematic coding practices by ACOs have materialized, but complete data are not yet available to analyze the effect of coding initiatives in the initial rebasing of ACO benchmarks, as initial program entrants (ACOs with 2012 and 2013 agreement start dates) only began their second agreement periods on January 1, 2016.

To balance our concerns regarding ACO coding practices with the recommendations of commenters received through earlier rulemaking, we proposed to risk adjust to account for the health status of the ACO's assigned population in relation to FFS beneficiaries in the ACO's regional service area as part of the methodology for determining the adjustment to the ACO's rebased historical benchmark to reflect regional FFS expenditures, and indicated we would rigorously monitor for the impact of coding initiatives on ACO benchmarks and make necessary refinements to the program's risk adjustment methodology through future rulemaking if program results show adverse impacts due to increased coding intensity. We outlined the methodology of the proposed risk adjustment approach. We indicated that we would compute for each Medicare enrollment type a measure of risk-adjusted regional expenditures that would account for the differences between the average CMS—

HCC risk scores of the ACO's assigned beneficiaries and the average CMS-HCC risk scores in the ACO's regional service area. This adjustment would also capture differences in patient mix between the ACO's assigned population and the FFS population in the ACO's regional service area. We noted our belief that this combined approach (risk adjustment in combination with monitoring for coding intensity) was reasonable given the lack of strong evidence to date that ACOs are engaging in more intensive coding practices and given a number of factors, described in the 2016 proposed rule (81 FR 5847 through 5848), that we believe would mitigate the potential impact of coding intensity on ACO financial calculations. We noted that the proposed approach would not apply in the calculation of benchmarks for ACOs in their first agreement period or in the second agreement period for ACOs that started the program in 2012 and 2013 and started a new agreement period on January 1, 2016. We also noted that for all ACOs we would continue to use the current methodology to adjust the ACO's benchmark annually to account for the health status and demographic factors of the ACO's performance year assigned beneficiaries (according to the newly and continuously assigned populations).

We sought comment on this proposed approach and on the alternatives considered that might be employed in the future to limit the impacts of intensive coding while still accounting for changes in health status within an ACO's assigned beneficiary population, including: (1) Applying the methodology currently used to adjust the ACO's benchmark annually to account for the health status and demographic factors of the ACO's performance year assigned beneficiaries (according to newly and continuously assigned populations) when rebasing the ACO's historical benchmark; or (2) developing a coding intensity adjustment by looking at risk score changes over time for beneficiaries assigned to the ACO for at least two consecutive years, as well as in each respective diagnosis collection year (similar to the population referred to as stayers under the MA methodology) relative to the greater FFS population.

In another section of the 2016 proposed rule, we proposed program-wide changes to the methodology used to adjust the ACO's benchmark for changes in ACO participant (TIN) composition (81 FR 5850 and 5851). In that discussion, we proposed to redetermine the regional FFS adjustment to account for changes to the

ACO's certified ACO Participant List. Specifically, we would redetermine the ACO's regional service area during the reference year (benchmark year 3 (BY3)) based on the residence of the ACO's assigned beneficiaries for the reference year determined using the new ACO Participant List. We would also use this assigned population to determine the ACO's proportion of beneficiaries by Medicare enrollment type (ESRD, disabled, aged/dual eligible, aged/non-dual eligible) to be used in calculating the regional adjustment. We would then redetermine the regional FFS adjustment to the ACO's rebased historical benchmark, based on regional average expenditures for the ACO's updated regional service area. In redetermining the regional FFS adjustment, we would also adjust for differences between the health status of the ACO's assigned beneficiaries determined using the new ACO Participant List and the population of assignable beneficiaries in the ACO's regional service area based on the reference year (BY3). Although we will discuss our proposed revisions to the methodology for adjusting benchmarks to account for changes in ACO participant composition in more detail in section II.B of this final rule, we believe it is appropriate to address the issue of redetermining the regional FFS adjustment based on changes in the ACO's participant composition in this section of this final rule.

Consistent with our proposal to incorporate an adjustment for regional expenditures into an ACO's rebased benchmark, we proposed to revise § 425.602 in order to limit the scope of the provision to establishing, adjusting, and updating the benchmark for an ACO's first agreement period. We proposed to explain how the benchmark would be reset for a subsequent agreement period, including the methodology for adjusting an ACO's rebased historical benchmark to reflect FFS expenditures in the ACO's regional service area in the ACO's second or subsequent agreement period starting on or after January 1, 2017, in a new provision of the Shared Savings Program regulations at § 425.603. We also proposed to include the risk adjustment approach to account for differences in health status between the ACO's assigned beneficiary population and the broader FFS population in the ACO's regional service area in the revised benchmark rebasing methodology under § 425.603. In addition, we proposed to specify in the new provision at § 425.603 that CMS will redetermine the regional

adjustment amount annually based on the ACO's assigned beneficiaries for BY3 determined using the most recent certified ACO Participant List for the relevant performance year.

Furthermore, we proposed to make conforming and clarifying revisions to the provisions of § 425.602, including to: Revise the title of the section; remove paragraph (c) and incorporate this paragraph in the new § 425.603; and add a paragraph that describes the adjustments made to the ACO's historical benchmark during an ACO's first agreement period to account for changes in severity and case mix for newly and continuously assigned beneficiaries as presently specified under § 425.604, § 425.606, and § 425.610. We also proposed to specify in § 425.20 that the acronym "BY" stands for benchmark year.

We sought comments on our proposals for incorporating regional expenditures into rebased ACO benchmarks and on the alternative approach of using a regionally-trended amount developed from the ACO's historical benchmark for a prior agreement period instead of regional average expenditures to adjust the ACO's rebased historical benchmark. In particular, we welcomed comments on the design of the approaches for calculating the regional adjustment to the ACO's rebased historical benchmark described in the 2016 proposed rule, as well as any concerns about implementing the regional adjustment.

*Comment:* A few commenters supported the proposal to eliminate the adjustment to the ACO's historical benchmark for savings achieved by the ACO in the previous agreement period. However, most commenters strongly opposed the proposal to discontinue the current adjustment to the ACO's rebased benchmark for savings generated in the prior agreement period. Commenters explained that eliminating the adjustment makes it harder for ACOs that have successfully met the goals of the program in a prior agreement period to achieve future savings. These commenters were critical of CMS' explanation that incorporating regional expenditures sufficiently offsets the loss of the adjustment for savings in the prior agreement period. Some commenters specified that removing the adjustment would undermine the sustainability of the program, citing concerns including the following:

- Further reducing benchmarks for ACOs with higher historical costs compared to their region that would be negatively affected by the introduction of a regional adjustment. Several commenters suggested that retaining the

adjustment could have the effect of more gradually lowering the rebased benchmarks for ACOs harmed by the integration of regional expenditures over subsequent agreement periods.

- Discouraging successful ACOs from remaining in the program as they face increasingly lower benchmarks and diminishing returns, with a commenter indicating that the current adjustment helps the many existing ACOs that have generated savings but not been eligible to share in those savings.

- The need to provide further incentives to retain ACOs with comparatively lower historical spending compared to their regions.

Some commenters pointed to CMS' rationale for the adjustment specified in earlier rulemaking as reason to retain it.<sup>1</sup> Several commenters pointed to the need to allow for additional time to evaluate the effects of the adjustment, which was applicable beginning in 2016, before changing the policy. Some commenters urged CMS to evaluate the rationale for accounting for savings in a prior agreement period separately from its consideration of incorporating regional cost data into benchmarks, believing these to be distinct issues that have distinguishable effects on ACOs. A commenter, urged that the adjustment be retained, pointing to the need for alignment between federal and state value based payment programs, citing as an example a state of New York initiative that has committed to including shared savings (or losses) when calculating its program benchmarks.

Many commenters favored CMS maintaining the current adjustment. Some commenters made suggestions, creating opposing alternatives, for CMS broadening or narrowing the amount of the adjustment. Although not discussed in the proposed rule, several

commenters suggested incrementally lowering the adjustment amount over time. For example, a commenter suggested adding a percentage of prior savings that would be reduced in relation to the proposed phase-in to a higher weight in calculating the regional adjustment. A commenter, anticipating that ACOs in efficient, low-cost areas will be harmed by the proposed transition to benchmarks reflecting regional expenditures, encouraged CMS to abandon the proposed benchmark rebasing changes, including the removal of the adjustment for prior savings and the proposed regional FFS adjustment to the ACO's rebased benchmark, and recommended CMS continue to explore alternative methodologies for rebasing ACO benchmarks.

Some comments regarding the adjustment for savings generated in a prior agreement period seemed to reflect commenters' misunderstanding of the methodology for calculating the adjustment described in the June 2015 final rule (see 80 FR 32788 through 32791). For example, some commenters incorrectly described the methodology as based on savings earned (indicating only the amount of shared savings payments to eligible ACOs) as opposed to savings generated (accounting for savings by ACOs that may have lowered expenditures, but not by enough to earn a shared savings payment). A commenter stated that the current adjustment accounts for half of the savings achieved by the ACO. However, the adjustment takes into account the ACO's final sharing rate, which depends on the ACO's track as well as its quality performance.

*Response:* We believe our intent to propose eliminating the adjustment for prior savings was made clear in the discussion in the June 2015 final rule of moving to a rebasing approach that accounts for regional FFS costs and trends. In outlining our preferred methodology, we specified we would calculate the ACO's rebased historical benchmark—based on the 3 most recent years prior to the start of the ACO's new agreement period—including equally weighting these benchmark years but excluding the addition of a portion of savings generated over the same 3 most recent years (80 FR 32796). We also specified that in a future rule we would put forward details on a revised rebasing approach that would address, among other issues, how the revised benchmark rebasing methodology using ACO and regional cost trends fits in with the existing approach for establishing the ACO's historical benchmark for its first agreement period and the modifications to the rebasing

methodology finalized in the June 2015 final rule. We also indicated that we would consider whether additional adjustment would be needed to transition ACOs to the revised benchmark rebasing methodology when they have been previously rebased under the methodology established with the June 2015 final rule (80 FR 32796).

We continue to believe that for ACOs generating savings, a rebasing methodology that accounts for regional FFS expenditures would generally leave a similar or slightly greater share of measured savings in an ACO's rebased benchmark for its ensuing agreement period. We disagree with comments suggesting that we either maintain the current adjustment without modification or broaden the scope of the adjustment for savings generated in the ACO's prior agreement period to make it more generous. We believe that as a result, benchmarks could become overly inflated for some ACOs (particularly those benefiting from the regional FFS adjustment) to the point where ACOs would need to do little to maintain or change their care practices to generate savings. Further, continued application of the current adjustment for savings generated in an ACO's prior agreement period, without modification, further ties an ACO's historical benchmark to its past performance, rather than making an ACO's benchmark more reflective of FFS spending in its region, an important aim of the revisions to the rebasing methodology in this final rule.

Therefore, as proposed, we will apply the revised rebasing methodology in the new regulation at § 425.603 to reset an ACO's historical benchmark for a second or subsequent agreement period beginning in 2017 and subsequent years, and will not include an adjustment for savings generated in the ACO's prior agreement period.

*Comment:* Most commenters discussing the regional adjustment to the ACO's rebased historical benchmark favored the proposed use of regional average expenditures in the calculation. Some commenters cited reasons for preferring the proposed approach instead of the alternative considered in the proposed rule, under which we would calculate the regional FFS adjustment using a regionally-trended amount based on an ACO's historical benchmark from a prior agreement period, including that the use of regional averages more closely aligns with the MA rate-setting methodology and would not depend on older historical data. A commenter explained that the reliance on older historical data under the regionally-trended approach would decrease the attainability and

<sup>1</sup> For example, in the June 2015 final rule we explained our belief that the adjustment for savings generated in the ACO's prior agreement period is important for encouraging ongoing program participation by ACOs that were successful in achieving the three-part aim in their first agreement, by lowering expenditures and improving both the quality of care provided to Medicare FFS beneficiaries and the overall health of those beneficiaries. Absent this adjustment, an ACO that previously achieved success in the program may elect to terminate its participation in the program rather than face a lower benchmark that reflects the lower costs for its patient population during the three most recent prior years (see 80 FR 32788). However, as noted elsewhere in this final rule, in the June 2015 final rule we stated our belief that it would be critical to revisit the policy of accounting for an ACO's savings generated in a prior agreement period when resetting its benchmark in conjunction with any future changes to the benchmarking methodology to incorporate regional FFS expenditures (see 80 FR 32791). See also discussion of the policy in the December 2014 proposed rule (79 FR 72838 through 72839).

accuracy of the resulting benchmarks over time. In particular, the commenter indicated that the: (1) Comparison of ACO assigned beneficiaries to non-ACO assigned beneficiaries will not remain stable over time as ACO participation in the Shared Savings Program grows or declines in a region; and (2) risk adjustment under this approach may not be adequate to account for changes in the ACO's composition over time in relation to its region.

A few commenters expressed support for the alternative (use of a regionally-trended amount) or a somewhat similar approach. For example, a commenter cited concerns that use of regional averages would disadvantage ACOs with historically high-cost providers, such as skilled nursing facilities, and ultimately incent ACOs to remove these providers as participants in order to generate savings below their benchmark. Another commenter, detailing findings based on extensive modeling, favored an approach under which the historical benchmark for the initial agreement period would be updated for subsequent agreement periods to account for regional spending growth and for compositional changes in ACO beneficiaries or providers without rebasing it to reflect the historical costs for the ACO from the most recent years prior to the start of the subsequent agreement period.

Some commenters addressed the anticipated effects of the regional FFS adjustment on benchmarks of ACOs with spending relatively lower and higher than their region. Commenters explained that the proposed approach rewards an ACO with lower spending than its region by increasing the ACO's benchmark value. For an ACO with higher spending than its region, the proposed approach was anticipated to decrease the ACO's benchmark value. Some commenters expressed particular concern about the latter group, explaining that the proposed policy could create a disincentive for continued participation by ACOs that were successful in earning shared savings payments in their initial agreement period, but have spending higher than the regional average for their regional service area.

**Response:** We are finalizing our proposal to calculate the regional adjustment to the ACO's historical benchmark as a percentage of the difference between the average per capita expenditure amount for the ACO's regional service area and the average per capita amount of the ACO's rebased historical benchmark for each Medicare enrollment type (ESRD, disabled, aged/dual eligible, aged/non-

dual eligible). We continue to believe there are benefits to using a regional average in calculating the adjustment, rather than the alternative approach of using a regionally-trended amount, including: greater alignment with the MA rate-setting methodology; lack of dependence on older historical data; greater transparency for ACOs and other stakeholders; and easier integration and alignment with our existing approach to adjusting the historical benchmark when an ACO makes ACO Participant List changes.

We agree with commenters that the regional FFS adjustment will have differing effects on an ACO's benchmark depending on whether the ACO's spending is relatively lower or higher than the spending for its regional service area. As discussed in this section of this final rule, we outlined our preferred approach to calculating the adjustment in the 2016 proposed rule (see 81 FR 5833 and 5834). We specified that we would determine the difference between the average per capita regional amount and the average per capita amount of the ACO's rebased historical benchmark for each Medicare enrollment type (ESRD, disabled, aged/dual eligible, aged/non-dual eligible). We indicated that the difference would be expressed as a negative number if the value of the ACO's rebased historical benchmark for a particular Medicare enrollment type is greater than the regional average amount for that enrollment type. The difference would be expressed as a positive number if the value of the ACO's rebased historical benchmark for a particular Medicare enrollment type is less than the regional average amount. We anticipate the regional adjustment value will differ by Medicare enrollment type for each ACO, and it will be possible to have a mix of positive and negative values for the regional adjustment amount across these Medicare enrollment types.

Generally, we anticipate several aspects of the revised rebasing methodology will mitigate concerns about the potential negative effects of the regional adjustment. First, as discussed in section II.A.2.b of this final rule, we believe the inclusion of ACO assigned beneficiaries in the calculation of regional FFS expenditures will be important in capturing the cost and health status of the beneficiary population served by the ACO. For example, for a high spending ACO operating in a lower spending region, including the ACO's assigned population in the regional FFS expenditures would likely result in a relatively higher regional adjustment value than if these beneficiaries were

excluded. Second, we anticipate the risk adjustment methodology used in calculating the regional FFS adjustment will help mitigate the incentive for ACOs to avoid relatively higher cost providers and higher cost, higher acuity beneficiaries. As discussed in section II.A.2.e.2 of this final rule, we will use CMS-HCC scores to risk adjust county FFS expenditures when determining expenditures for the ACO's regional service area, thereby accounting for the severity of health status and case mix of this population. Additionally, as discussed elsewhere in this section of this final rule, we are finalizing our proposal to account for the difference in health status between the ACO's population and the ACO's regional service area in calculating the regional FFS adjustment. Under this approach, if an ACO's population is healthier than the assignable beneficiaries in the ACO's regional service area, with lower average risk scores for the relevant period, the risk adjustment would reduce the amount of the regional FFS adjustment. Similarly, if the ACO's assigned beneficiary population is comparably sicker than the assignable beneficiaries in the ACO's regional service area, with higher average risk scores for the relevant period, the risk adjustment would increase the amount of the regional FFS adjustment. Third, we believe our proposed phase-in approach, as described in section II.A.2.c.3. of this final rule, will ease the transition to this revised methodology for ACOs with historical spending higher than that of their region.

With respect to a more technical consideration for calculating the regional FFS adjustment, we note that the proposed regulations text specified that in calculating the regional adjustment we would determine the ACO's regional expenditures for benchmark year 3. We did not receive comments specifically addressing this proposal. We are finalizing the policy of using benchmark year 3 data in calculating the regional average used to determine the regional FFS adjustment as proposed. We believe that calculating the regional adjustment based on data from the most recent year prior to the start of the ACO's new agreement period will ensure the adjustment reflects the most recent historical expenditures. Although there were no comments directed specifically to the number of years of data used in calculating the regional adjustment, we believe comments suggesting CMS consider use of additional years of data in calculating county FFS expenditures (described in section II.A.2.e.2 of this final rule) raise

an important issue. These comments provoked our consideration of the possibility of using additional years of data in calculating the regional average, including what factors to use to trend the multiple years of data in computing the regional average. We anticipate continuing to explore this issue as we gain experience with the methodology described in this final rule. For example, we will consider whether use of additional years of data would add greater precision to calculation of regional averages. In the event we determine that any changes to the methodology would be appropriate, we would address this issue in future rulemaking, particularly in advance of applying a higher weight (70 percent) in the regional adjustment calculation as discussed in section II.A.2.c.3. of this final rule.

*Comment:* Many commenters expressed support for CMS' proposal to adjust for an ACO's risk relative to that of assignable beneficiaries in its region when determining the regional adjustment to the rebased historical benchmark. A commenter expressed support generally for a risk adjustment approach that adequately accounts for the higher costs of ACOs that include providers and health systems that care for the sickest patients and are providing medically necessary care to chronically-ill populations. Further, a commenter recommended that in blending regional FFS spending with ACO historical spending, the per capita spending for each should be similarly risk adjusted.

However, a commenter disagreed with CMS' proposal to compute a measure of risk-adjusted regional expenditures for each Medicare enrollment type that would account for differences in the average CMS-HCC score of the ACO's assigned beneficiary population and the average CMS-HCC risk scores in the ACO's regional service area, describing this as a change in methodology. This commenter expressed concern about the accuracy of using averages in risk adjustment calculations.

Some commenters raised a variety of concerns about the Shared Savings Program's use of the CMS-HCC prospective risk adjustment model, or offered alternative risk adjustment approaches. For example, some commenters encouraged CMS to consider factors beyond CMS-HCC risk scores when performing risk adjustment in the Shared Savings Program, including socio-economic and/or socio-demographic factors. Some commenters questioned whether the CMS-HCC risk adjustment model could effectively account for increasing acuity in a

patient's condition over time, clinically complex patients, case mix among patient populations, and geographic variation. A commenter explained that concerns regarding the current risk adjustment methodology have the effect of discouraging participation in the program. A few commenters supported better aligning risk adjustment in the Shared Savings Program with MA, for example, suggesting that the Shared Savings Program adopt the proposed refinements to the MA risk adjustment model aimed at improving the accuracy of payments to plans serving low-income and dual eligible beneficiaries. Other commenters suggested greater transparency by CMS in regards to its use of CMS-HCC scores. For example commenters suggested making publicly available additional resources on the specifications of the CMS-HCC risk adjustment process and developing educational resources about improved coding for providers.

*Response:* We are finalizing our proposal to risk adjust to account for the health status of the ACO's assigned population in relation to FFS beneficiaries in the ACO's regional service area as part of the methodology for adjusting the ACO's rebased historical benchmark to reflect regional FFS expenditures in the ACO's regional service area as proposed. We will use full CMS-HCC risk scores in performing this adjustment. We agree with comments received in support of our proposal. We believe that failure to risk adjust regional FFS expenditures to reflect differences between the risk of the ACO's assigned beneficiary population and the risk of the broader FFS population in the ACO's regional service area would provide an incentive for ACOs to avoid serving sicker beneficiaries, an undesired result.

While the incorporation of risk-adjusted regional expenditures into historical benchmarks is a new approach, we disagree that the use of average risk scores when performing risk adjustment constitutes a change of methodology. Our current methodology risk-adjusts expenditures between years using mean CMS-HCC risk scores among an ACO's assigned beneficiaries within a particular enrollment type. We therefore believe that the approach for risk-adjusting the regional adjustment amount that we are adopting in this final rule is consistent with current risk-adjustment practices.

We appreciate the concerns raised by commenters and the suggestions offered for refining the Shared Savings Program's general risk adjustment methodology, which relies on the CMS-HCC prospective risk adjustment model.

We consider these suggestions beyond the scope of this final rule. We decline at this time to adopt commenters' suggestions for use of alternative risk adjustment models, for example accounting for socio-economic or socio-demographic factors outside of the CMS-HCC risk adjustment model. To the extent that new information, such as social determinants of health, is incorporated into the CMS-HCC risk adjustment model in the future, we will account for this when using risk scores in the Shared Savings Program methodology.

*Comment:* Few commenters directly addressed CMS' plan to rigorously monitor for coding intensity efforts in combination with the agency's proposal to risk adjust for the health status of an ACO's assigned beneficiaries relative to the FFS population in its regional service area. A few commenters appreciated CMS' concerns about the potential for upcoding and a commenter explicitly supported the agency's monitoring plans, noting that differences in coding practices between ACO clinicians and other FFS clinicians should be taken into account when blending regional FFS spending into ACO benchmarks to ensure equity.

A number of commenters expressed the belief that additional coding intensity adjustments are not justified, given the various mitigating factors cited by CMS in the 2016 proposed rule such as routine changes in the assignment of beneficiaries to the ACO from year to year, and the inability of ACOs to submit supplemental codes as occurs in MA. Some commenters specified that the proposed use of regional trend calculations in resetting the benchmark served as a mitigating factor as well. Another commenter warned that even if high levels of coding are observed, this could be the direct result of providing more comprehensive, patient-centered care and that provider efforts to care for complex, chronically ill patients should not be penalized.

Several commenters expressed opinions, sometimes conflicting, on what type of coding intensity adjustment CMS should adopt for the Shared Savings Program if some type of adjustment is deemed necessary. Several commenters supported an approach similar to that used in MA in which a coding intensity adjustment is developed based on beneficiaries assigned for at least 2 consecutive risk adjustment data years. Another commenter expressed opposition to adopting a MA-like approach because they believe it unfairly penalizes

physician organizations engaged in accurate coding practices.

Although CMS sought comment on whether the methodology currently used to adjust the ACO's benchmark annually to account for the health status and demographic factors of the ACO's performance year assigned beneficiaries (according to newly and continuously assigned populations) should also be applied when rebasing the ACO's historical benchmark, many commenters expressed their opposition to the current use of this methodology in adjusting an ACO's benchmark for each performance year and requested that the agency revise the policy. A chief concern raised by many commenters is that the approach does not accurately reflect the potential for individuals to become sicker and more expensive to care for over time (circumstances referred to by some commenters as resulting in a higher "disease burden"). Several commenters noted that it was unreasonable to assume that a provider organization, however effective, can manage a population such that patient conditions never worsen. Some commenters added that this policy particularly disadvantages ACOs that care for more complex patients, such as those that include tertiary care facilities or academic medical centers. A commenter noted that while it appreciated concerns about the potential for upcoding, it believed such concerns to be irrelevant relative to the negative impact it perceives the current policy for risk adjusting an ACO's benchmark for each performance year has on program participants.

A number of commenters also expressed the belief that the continued use of the newly/continuously assigned policy as a remedy for upcoding lacks justification. A commenter believed that CMS has not provided evidence that actual upcoding is occurring among ACOs, or that it would occur in the future. Another commenter opined that any adjustments for coding intensity should reflect actual, not perceived, coding intensity. Among other concerns raised about the methodology, a commenter opined that the approach transfers too much risk to ACOs and is responsible for deterring ACOs from entering two-sided risk models. Another commenter noted that the policy makes the role of the risk scores opaque to participating providers, making it difficult to anticipate how risk scores may affect performance.

In light of the previously noted concerns, many commenters urged CMS to allow risk scores to increase year-over-year within an agreement period

for the continuously assigned beneficiary population, or to allow them to increase within limits. A commenter recommended that if CMS is unwilling to allow risk scores to increase year-over-year for all ACOs, the agency should consider allowing increases for participants in two-sided risk models, which could encourage progression to higher levels of risk. Another commenter thought that CMS should, at a minimum, develop a list of conditions that are high cost and not subject to efforts to improve documentation and coding (for example, ESRD and cancer) and allow the CMS-HCC score for beneficiaries with these conditions to increase to reflect the increased illness of the beneficiary.

Some commenters suggested approaches for limiting the impact of intensive coding not discussed in the 2016 proposed rule. For example, some commenters recommended that if CMS deems a coding adjustment necessary, the agency should consider a method that compares CMS-HCC risk scores with changes in self-reported health status through the Consumer Assessment of Healthcare Providers and Systems (CAHPS) survey. Several other commenters thought CMS should consider approaches used by the Next Generation ACO model, including accounting for the difference in average CMS-HCC risk scores for the baseline and performance-year assigned beneficiaries, and limiting the change in an ACO's average risk score between the baseline and performance year to plus or minus 3 percent.

*Response:* We appreciate the suggestions made by commenters regarding the development of a coding intensity adjustment for the Shared Savings Program. We also appreciate commenters' feedback on the current policy for adjusting an ACO's historical benchmark for the health status of the ACO's performance year assigned population. At this time, we believe that continued use of this policy in the determination of an ACO's updated benchmark in combination with the use of full CMS-HCC risk adjustment in the calculation of the rebased historical benchmark strikes a balance between the need to recognize changes in beneficiary health status over time with the need to protect against intensive coding practices.

We plan to monitor for the impact of coding initiatives on ACO benchmarks, particularly as we gain more experience with the new rebasing methodology. In the event that a formal coding intensity adjustment is deemed necessary in the future, we would make necessary refinements to the program's risk

adjustment methodology through future rulemaking.

*FINAL ACTION:* We are finalizing our proposals to revise the methodology used to rebase ACO benchmarks for new agreement periods starting on or after January 1, 2017 to incorporate a regional FFS adjustment to the ACO's rebased historical benchmark. We are finalizing the proposed approach to calculating the regional FFS adjustment using average per capita expenditures for benchmark year 3 for assignable beneficiaries in the ACO's regional service area, and to risk adjust to account for the health status of the ACO's assigned population in relation to the assignable FFS beneficiaries in the ACO's regional service area in determining the regional FFS adjustment. We are also finalizing our proposal to add new § 425.603 that incorporates our policies for resetting, adjusting and updating the benchmark for a second or subsequent agreement period.

We did not receive any comments on the specific proposal to redetermine the regional FFS adjustment to account for changes to the ACO's certified ACO Participant List. We believe this redetermination is necessary to ensure that the regional FFS adjustment reflects the ACO's participant composition under the new ACO Participant List. Therefore, we are finalizing our proposal to redetermine the regional FFS adjustment, consistent with the current approach to adjusting an ACO's historical benchmark to account for changes in the ACO's certified ACO Participant List during the agreement period. This policy is also incorporated in new § 425.603.

We are also finalizing as proposed the conforming and clarifying revisions to the provisions of § 425.602, including to: Revise the title of the section; remove paragraph (c) and incorporate this paragraph in new § 425.603 to address the methodology for establishing, adjusting, and updating the historical benchmark for ACOs that entered a second agreement period in 2016; and to add a paragraph that describes the adjustments made to the ACO's historical benchmark during an ACO's first agreement period to account for changes in severity and case mix for newly and continuously assigned beneficiaries as presently specified under § 425.604, § 425.606, and § 425.610. We are also finalizing as proposed a change to § 425.20, to specify that the acronym "BY" stands for benchmark year.

### (3) Transitioning to a Higher Weight in Calculating the Adjustment for Regional FFS Expenditures

In the 2016 proposed rule, we considered both the potential positive and negative consequences of quickly transitioning to use of a greater weight (70 percent) in calculating the regional adjustment to ACOs' rebased historical benchmarks. We explained our belief that placing a greater weight on regional expenditures in adjusting an ACO's historical benchmark will encourage existing low spending ACOs in higher spending and/or higher growth regions to enter and continue their participation in the Shared Savings Program. We reiterated our view, expressed in the June 2015 final rule, that the benchmarking methodology should be revised to help ensure that an ACO that has previously achieved success in the program will be rebased under a methodology that encourages its continued participation in the program (see 80 FR 32788). Further, we again noted the importance of quickly moving to a benchmark rebasing approach that accounts for regional FFS expenditures and trends in addition to the ACO's historical expenditures and trends (see 81 FR 5834).

We also explained our concern that existing low spending ACOs operating in regions with relatively higher spending and/or higher growth in expenditures may be positioned to generate savings under the proposed revisions to the rebasing methodology because of the regional adjustment to their rebased historical expenditures rather than as a result of actual gains in efficiency, creating an opportunity for arbitrage. In particular, we expressed concern about the potential for ACOs to alter their healthcare provider and beneficiary compositions or take other such actions in order to achieve more favorable performance relative to their region without actually changing their efficiency. We anticipated these effects would be more pronounced the larger the percentage that is applied to the difference between the average expenditures for the ACO's regional service area and the ACO's rebased historical expenditures when calculating the regional adjustment. However, we expressed our belief that there is uncertainty around the magnitude of these possible negative consequences of adjusting the ACO's rebased benchmark based on regional expenditures in the ACO's regional service area which have yet to be observed. We noted that we believed these concerns are likely to be outweighed by the benefits of

encouraging more efficient care through a benchmark rebasing methodology that encourages continued participation by ACOs that are efficient relative to their regional service area by placing greater weight on regional expenditures when resetting the ACO's benchmark over subsequent agreement periods. We explained that the use of a higher percentage in calculating the regional adjustment would create strong incentives for higher spending ACOs to be more efficient relative to their regional service areas while also improving the quality of care provided to their beneficiaries. Furthermore, we explained that this approach would also ensure that ACOs' rebased benchmarks continue to reflect in part their historical spending.

To balance these concerns, we proposed to adopt a phased approach to transitioning to greater weights in calculating the adjustment amount, expressed as a percentage of the difference between regional average expenditures for the ACO's regional service area and the ACO's rebased historical expenditures. Under this approach we would increase the weight used in calculating the adjustment over time, making an ACO's benchmark gradually more reflective of expenditures in its region and less reflective of the ACO's own historical expenditures. This proposed phase-in approach included the following features:

- Maintain the current methodology for establishing the benchmark for an ACO's first agreement period in the Shared Savings Program based on the historical expenditures for beneficiaries assigned to the ACO with no adjustment for expenditures in the ACO's regional service area in order to provide continued stability to the program and the momentum for attracting new organizations. As over 400 ACOs have voluntarily entered the program under this methodology, we believe the current methodology is an important part of facilitating entry into the program by organizations located throughout the nation that have differing degrees of experience with accountable care models and have varying provider compositions.
- Increase the percentage used in calculating the regional adjustment amount, applied to the ACO's rebased historical benchmark, over subsequent agreement periods.

++ We proposed to calculate the regional adjustment in the ACO's second agreement period by applying a weight of 35 percent to the difference between regional average expenditures for the ACO's regional service area and

the ACO's rebased historical benchmark expenditures.

++ We proposed that in the ACO's third and subsequent agreement periods, the percentage used in this calculation would be set at 70 percent unless the Secretary determines a lower weight should be applied as specified through future rulemaking.

We discussed that in making a determination of whether a lower weight should be used in calculating the adjustment, the Secretary would assess what effects the regional adjustment (and other modifications to the program made under this rule) are having on the Shared Savings Program, considering factors such as, but not limited to: The effects on net program costs; the extent of participation in the Shared Savings Program; and the efficiency and quality of care received by beneficiaries. As part of this determination, the Secretary may also take into account other factors, such as the effect of implementation of the Medicare Access and CHIP Reauthorization Act of 2015 (MACRA) on the Shared Savings Program by incentivizing physicians and certain other practitioners to participate more broadly in alternative payment models (APMs).

We noted that such a determination could potentially occur in advance of the first application of this higher percentage. For example, the determination could be made in advance of the agreement period beginning January 1, 2020, which is the start of the third agreement period for ACOs that entered the program in January 2014 and the first group of ACOs to which the revised rebasing methodology being adopted in this final rule will apply. Any necessary modifications to program policies as a result of the Secretary's determination, such as reducing the long-term weight used in calculating the regional adjustment below 70 percent or making other program changes (for example, refinements to the risk adjustment methodology) would be proposed in future rulemaking, such as through the calendar year (CY) 2020 Physician Fee Schedule rule. Subsequently, we would periodically assess the effects of the regional adjustment over time and address any needed modifications to program policies in future rulemaking.

- For ACOs that started in the program in 2012 and 2013 and started their second agreement period on January 1, 2016, we proposed to apply this phased approach when rebasing for their third and fourth (and subsequent) agreement periods, as discussed in section II.A.2.f. of this final rule.

We explained our belief that this phased approach to moving to a higher percentage in calculating the adjustment for regional expenditures would give ACOs sufficient notice of the transition to benchmarks that reflect regional expenditures. Furthermore, we believed this approach to phasing in the use of a greater percentage to calculate the regional adjustment provides a smoother transition for ACOs to benchmarks reflective of regional FFS expenditures, giving ACOs more time to prepare for this change and therefore ultimately maintaining the stability of ACOs, the Shared Savings Program and the markets where ACOs operate. Accordingly, we proposed to incorporate these policies regarding the transition to greater weights in calculating the regional adjustment amount in the new regulation at § 425.603.

We sought public comment on our proposed approach to phase in the weight used in calculating the regional adjustment. We were particularly interested in understanding commenters' thoughts and suggestions about the percentage that should be used in calculating the adjustment for regional FFS expenditures. We also sought comment on the alternatives we considered in the proposed rule including: (1) Limiting the weight used in the calculation of the adjustment to 50 percent (instead of 70 percent) in the ACO's third and subsequent agreement period; (2) a more gradual transition to use of a higher percentage in calculating the adjustment (such as 35 percent in the second agreement period, 50 percent in the third agreement period, and 70 percent in the fourth and subsequent agreement period); and (3) a phase-in approach that uses regional (instead of national) FFS expenditures to trend benchmark year expenditures when establishing and updating the benchmark during an ACO's first agreement period (for agreement periods beginning on or after January 1, 2017). We also sought comment on alternative approaches to address our concerns about selective program participation and arbitrage opportunities that would facilitate our use of a higher percentage in calculating the amount of the adjustment.

*Comment:* A few commenters shared CMS' concerns about the potential for negative consequences that could result from transitioning to use of factors based on regional FFS expenditures in resetting ACO historical benchmarks, including selective participation creating an opportunity for arbitrage. These commenters were somewhat divided as to the ultimate outcome of

these changes. For example, a commenter explained that benchmarking ACOs against their region will have the effect of more seamlessly encouraging transformative physician care, while simultaneously discouraging agreements with entities unwilling or unable to make meaningful changes in care delivery. Further, this commenter encouraged CMS to implement safeguards that deter the negative consequences of transitioning to the use of factors based on regional FFS expenditures in resetting ACO benchmarks (for instance, protecting against ACOs that increase their spending to lock in a higher benchmark, and protecting against benchmarks becoming overly inflated to the point where ACOs need to do little to maintain or change their care practices to generate savings). Another commenter, concerned about discouraging participation by ACOs with expenditures higher than their regions and those with losses in their first agreement period, and behavioral responses by providers to the revised methodology (for example, ACO avoidance of high-cost beneficiaries), encouraged CMS to delay finalizing the proposed modifications. A commenter identified the availability of traditional FFS, under which providers and suppliers can continue to be paid based on the quantity of services provided (thereby maintaining their status quo for reimbursement rather than entering value based payment models), as being a greater concern for the Trust Funds than the potential threat of arbitrage by ACOs under the revised rebasing methodology. The commenter also noted that the fact that only a portion of ACOs have actually been eligible to share in savings to date is an indication that there is little reason for concern about arbitrage by ACOs. Another commenter counseled that the arbitrage concerns overestimate the flexibility of markets, pointing to the existence of ongoing relationships between healthcare providers, tied to a range of risk bearing contracts, as an example of a mitigating factor. A few commenters specifically encouraged CMS to engage in ongoing monitoring of the effects of the changes, if implemented, with a commenter suggesting CMS address arbitrage concerns by requiring additional reporting by ACOs regarding their use of shared savings payments.

*Response:* We greatly appreciate commenters' careful consideration of the concerns we specified in the 2016 proposed rule, including the participation incentives that could result from the transition to a rebasing

methodology that places a greater weight on a regional FFS adjustment over time. We decline to delay finalizing the changes to rebasing methodology altogether because of concerns about the potential negative effects that could result from these changes, as recommended by a commenter. For the reasons we described in the 2016 proposed rule (and reiterated in this final rule), we believe a phased approach to transitioning to a higher weight in calculating the regional adjustment offers the appropriate balance between our concerns about the potential negative effects of a revised rebasing approach that places a greater weight on regional FFS expenditures and the anticipated benefits of the revised rebasing policies for the sustainability of the program. Elsewhere in this section of this final rule, we discuss in detail issues related to the application of the revised rebasing methodology to ACOs with higher spending than their region. In addition, we will consider the concerns raised in the comments as we monitor the effects of the revised rebasing methodology and as we consider whether further modifications to the rebasing policies are necessary. Any changes to the rebasing methodology would be addressed in future rulemaking.

*Comment:* Most of the commenters discussing the phase-in of the weights used in calculating the adjustment, generally expressed support for taking an incremental approach to incorporating regional elements when resetting an ACO's benchmark. Some commenters expressed support for the proposed phased-approach to applying an increasing weight in calculating the regional adjustment: To initially calculate the adjustment using a 35 percent weight in rebasing the ACO's second agreement period benchmark and then increase to using a 70 percent weight for subsequent agreement periods. A commenter explained that the proposed phased approach to incorporating regional spending into the benchmark gives ACOs ample time to adjust to the methodological changes. Several commenters were supportive of monitoring the weight (percentage) used in calculating the regional adjustment over time, to assure balance is struck in setting benchmarks. A commenter expressed support for examining the results of the adjustment before switching to a higher weight for the regional spending component. A commenter emphasized the need to assess the effects of the modifications to the benchmarking methodology and to make needed revisions to the policies in

future rulemaking in order to ensure small entities and hospitals (more generally), particularly those in rural and underserved areas, are not placed at a disadvantage.

Many commenters urged CMS to provide more options and greater flexibility to ACOs (referred to by some as establishing a “glide path”) as they transition to benchmarks containing regional cost data. A few commenters cited the importance of this flexibility to encourage continued participation by small and rural ACOs. Commenters’ suggestions focused on allowing ACOs the choice of the proposed approach, as well as options for a faster or slower phase-in, ultimately reaching a weight of 70 percent, over the course of one to three agreement periods (beginning with the ACO’s first agreement period), including options for incremental increases in the weight used to calculate the regional adjustment within an agreement period.

Some commenters suggested that CMS apply the phase-in differently for individual ACOs depending on certain characteristics, such as their historical spending, financial performance in the program, or their participation in performance-based risk tracks (Tracks 2 and 3). Some commenters suggested phasing-in the weight differently depending on whether an ACO’s historical expenditures were above or below the regional average, encouraging adoption of faster phase-in options to more quickly benefit ACOs with low spending compared to their region, and slower phase-in options to mitigate the anticipated benchmark reductions for ACOs with high spending compared to their region. Commenters suggested allowing additional flexibility on the pace of the phase-in for high performing ACOs and ACOs entering a performance-based risk model (Track 2 or 3).

Many commenters suggested a variety of alternatives to afford ACOs greater choice over the timing of applicability (in particular for ACOs that entered the Shared Savings Program in 2012 and 2013 and started their second agreement period January 1, 2016, as discussed in greater detail in section II.A.2.f of this final rule), and the phase-in to the proposed maximum percentage (for example, within an agreement period).

Commenters supporting incorporation of regional cost data into an ACO’s benchmark for its first agreement period in the Shared Savings Program cited perceived benefits including: consistent application of the benchmarking methodology across the program; the potential to create more equitable benchmarks within a market (noting

that urban and suburban ACOs tend to have overlapping service areas); and attracting new participants to the Shared Savings Program. When discussing the weight that should be applied when calculating the regional adjustment for an ACO’s first agreement period, commenters suggested a range of options, typically with a maximum weight of either 30 or 35 percent. Some commenters suggested applying an increasing weight when calculating the adjustment for the ACO’s first agreement period, such as 10 percent in year 1, 20 percent in year 2, and 30 percent (or 35 percent) in year 3.

Several commenters suggested alternative approaches to the methodology proposed, such as: (1) Applying a 100 percent weight when calculating the regional FFS adjustment for ACOs with costs lower than their region, and zero percent weight when calculating the adjustment for ACOs with costs higher than their region; (2) an alternative methodology for calculating the adjustment that would both lower the weight on the regional component and slow its rate of increase; and (3) setting limits on the amount of reduction in the benchmark value that could occur as a result of the regional FFS adjustment.

*Response:* We are finalizing with modifications our proposal to phase-in a higher weight in calculating the regional adjustment over time starting in an ACO’s second agreement period beginning in 2017 and subsequent years and to apply this phased approach to ACOs that entered the program in 2012 and 2013 (that started a second agreement period on January 1, 2016) when rebasing for their third and subsequent agreement periods (as discussed in section II.A.2.f of this final rule). We are persuaded by commenters’ concerns that the phase-in outlined in the proposed rule would be too rapid for ACOs with relatively higher spending compared to their region, for which the regional FFS adjustment will be negative and result in lower benchmark values. We are especially concerned that the revised benchmarking methodology could result in attrition from the Shared Savings Program by ACOs that are striving to meet the program’s goals, including ACOs that have been previously successful in generating shared savings. We agree with comments suggesting a phase-in approach that applies differing weights in the regional adjustment calculation depending on whether an ACO’s historical expenditures were above or below the regional average for the same period. Specifically, we agree with the commenters that suggested use of a

lower weight in calculating the adjustment for ACOs with higher spending compared to their region.

Accordingly, we are finalizing an approach that will apply a lower weight in calculating the regional adjustment the first and second time that an ACO’s benchmark is rebased under the revised rebasing methodology, for those ACOs determined to have spending higher than their region. However, we will ultimately apply a weight of 70 percent in calculating the adjustment for all ACOs beginning no later than the third time the ACO’s benchmark is rebased using the revised methodology. Under this approach, we will make an initial determination about whether the ACO has higher spending compared to its regional service area as part of establishing the ACO’s rebased historical benchmark for the applicable agreement period. Consistent with the approach we are finalizing for redetermining the regional FFS adjustment when an ACO makes changes to its certified ACO Participant List within an agreement period, we will also redetermine whether the ACO has higher spending compared to its region, and therefore whether the lower weight should be used in calculating the regional adjustment.

The determination of whether to apply the lower weight in calculating the regional FFS adjustment will include the following steps:

- For each Medicare enrollment type (ESRD, disabled, aged/dual eligible, aged/non-dual eligible) we will determine the difference between the average per capita expenditure amount for the ACO’s regional service area and the average per capita amount of the ACO’s rebased historical benchmark. We will multiply the difference for each Medicare enrollment type by the proportion of the ACO’s assigned beneficiary population for that Medicare enrollment type, based on the ACO’s assigned beneficiary population for benchmark year 3 of the rebased historical benchmark.

- Take the sum of the differences weighted by the ACO’s proportion of assigned beneficiaries by Medicare enrollment type (determined in the previous step). As summarized in Table 2, the result of this step will determine the percentage weight applied in calculating the regional FFS adjustment:

++ If this sum is a net positive value, we will apply the proposed weights for calculating the regional FFS adjustment for the agreement period: 35 percent the first time the benchmark is rebased using the revised methodology; 70 percent the second time the benchmark

is rebased under this methodology, and in all subsequent agreement periods.

++ If this sum is a net negative value, we will apply a relatively lower weight in calculating the regional FFS adjustment in the first two rebasings for which the regional adjustment applies:

25 percent the first time the benchmark is rebased under the revised methodology; and 50 percent the second time the benchmark is rebased under this methodology. A weight of 70 percent will be used in the calculation

of the regional adjustment for ACOs that are determined to have higher spending compared to their regional service area during the third rebasing in which this regional adjustment is applied, and in all subsequent agreement periods.

TABLE 2—PERCENTAGE WEIGHT APPLIED IN CALCULATING THE REGIONAL FFS ADJUSTMENT

Agreement period (for example, 2014 starters renewing for 2017)	ACO's spending relative to its region	Weight used to calculate regional adjustment (percent)
Performance year within an agreement period to which regional adjustment is applied for the first time (for example, second agreement period beginning in 2017).	ACO spending is higher than its regional service area.	25
	ACO spending is lower than its regional service area.	35
Performance year within an agreement period to which regional adjustment is applied for the second time (for example, third agreement period beginning in 2020).	ACO spending is higher than its regional service area.	50
	ACO spending is lower than its regional service area.	70
Performance year within an agreement period to which regional adjustment is applied for the third time (for example, fourth agreement period beginning in 2023 and subsequent years).	ACO spending is higher than its regional service area.	70
	ACO spending is lower than its regional service area.	70

After making the determination of the weight to be applied in calculating the regional FFS adjustment, we follow the remaining steps for calculating the regional FFS adjustment described in section II.A.2.c.2 of this final rule:

- Multiply the difference between the average per capita expenditure amount for the ACO's regional service area and the average per capita amount of the ACO's rebased historical benchmark for each Medicare enrollment type by the applicable percentage shown in Table 2. This is the adjustment amount for each Medicare enrollment type.

- Apply the adjustment to the ACO's rebased historical benchmark by adding the adjustment amount for the Medicare enrollment type to the truncated, trended and risk adjusted average per capita value of the ACO's rebased historical benchmark for the same Medicare enrollment type.

- Multiply the adjusted value of the ACO's rebased historical benchmark for each Medicare enrollment type by the proportion of the ACO's assigned beneficiary population for that Medicare enrollment type, based on the ACO's assigned beneficiary population for benchmark year 3 of the rebased historical benchmark.

- Sum expenditures across the four Medicare enrollment types to determine the ACO's adjusted rebased historical benchmark.

We reiterate that, as we explained in the 2016 proposed rule, the Secretary will assess what effects the regional adjustment (and other modifications to the program made under this rule) are

having on the Shared Savings Program to determine whether a lower weight (than 70 percent) should be used in calculating the regional adjustment. Any necessary modifications to program policies as a result of the Secretary's determination, such as reducing the long-term weight used in calculating the regional adjustment below 70 percent or making other program changes would be proposed in future rulemaking.

We believe this phased approach represents a middle ground between the comments supporting the proposal, as well as recommendations for relatively faster or slower phase-in of the adjustment based on the historical costs of the ACO compared to its region. We chose the lower weights of 25 percent (compared to 35 percent) and 50 percent (compared to 70 percent) to balance providing a more gradual phase in to ACOs with higher spending compared to their region with our projected estimates of the impact of this policy on the Medicare Trust Funds. We believe these lower weights align with commenters' suggestions for application of a weight less than 35 percent (for example, between 10 percent and 30 percent), as well as our consideration of a more gradual phase-in of the adjustment by applying weights of 35 percent, 50 percent, and 70 percent in calculating the regional adjustment over the course of 3 agreement periods under the revised rebasing methodology as discussed in the 2016 proposed rule.

Incrementally lowering benchmarks for ACOs determined to have higher spending than their region over the

course of multiple agreement periods will afford these ACOs time to adapt to the revised rebasing methodology. This gradual phase in may be especially important for successful ACOs with relatively higher costs that may otherwise leave the program if faced with a more rapid phase-in to a rebased benchmark reflecting factors based on regional FFS expenditures. We decline to forgo applying the regional adjustment altogether to ACOs with costs higher than their region, as recommended by the comment suggesting use of a zero percent weight in calculating the regional adjustment for these ACOs. We believe such an approach, which would ensure that the benchmark for these ACOs would continue to be based largely on their own historical spending, would undermine the purpose of a policy that seeks to incrementally make an ACO's benchmark less dependent on its own historical spending and more reflective of spending in its regional service area.

We also continue to believe this phased approach mitigates our concerns about the opportunity for arbitrage that could result from establishing higher benchmarks for ACOs with relatively lower spending compared to their region; a concern that is heightened when considering a more rapid phase-in to a higher weight in calculating the regional adjustment. Specifically, an approach that would more quickly produce more generous benchmarks for ACOs could hasten organizations to alter their behavior or composition to

better position themselves to achieve favorable performance relative to their region under this methodology without actually changing their efficiency. For this reason, we decline to adopt alternative approaches recommended by commenters that would apply higher weights in the regional adjustment calculation for ACOs that are lower spending compared to their regions (such as applying a 100 percent weight in calculating the adjustment).

The approach we are finalizing recognizes that changes in the ACO's certified ACO Participant List during an agreement period could result in changes in the ACO's historical spending patterns and accordingly would result in a change to the weight used in calculating the regional adjustment. We believe this approach is responsive to commenters' requests for a flexible approach, particularly because it would ensure that we always apply the most advantageous weight in calculating the adjustment for each performance year within the agreement period according to whether the ACO's historical spending based on its most recent certified ACO Participant List is relatively higher or lower compared to spending in its regional service area.

We decline at this time to adopt commenters' suggestions to apply differing weights in the calculation of the regional adjustment depending on other characteristics of ACOs, such as past performance in the Shared Savings Program, or participation in a performance-based risk track. At this time, we believe the most significant consideration in determining the weight applied in the calculation of the regional adjustment is the level of the ACO's historical spending compared to its regional service area. Consistent with our decision to finalize the proposal to remove the adjustment for savings generated under the ACO's prior agreement period in calculating the ACO's rebased historical benchmark, as we discuss in section II.A.2.c.2 of this final rule, we also decline to otherwise account for an ACO's prior savings in determining the regional FFS adjustment that is applied to the ACO's rebased historical benchmark.

We are concerned that offering the broader flexibility suggested by commenters, including allowing ACOs to choose from a menu of options for when the revised rebasing methodology would apply and the weight that would be used to calculate the regional adjustment, may invite selective participation by those ACOs that would be most advantaged by the new benchmarking methodology, thereby increasing the opportunity for arbitrage.

As previously noted in this final rule, we do not believe it would be operationally feasible to apply customized benchmarking methodologies to ACOs across the program.

In contrast, we believe commenters make a convincing argument for a phased approach to incorporating regional factors into ACO benchmarks beginning with the ACO's initial agreement period in the Shared Savings Program. We find particularly persuasive the suggestion that this approach may offer the optimal glide-path for ACOs, and also result in greater consistency across program benchmark calculations. However, given the diversity of comments suggesting faster and slower phase-in of the regional adjustment, we believe it will be important to gain experience with the use of the regional adjustment as part of the rebasing methodology before seeking to adopt the adjustment as part of the methodology used to establish the ACO's first agreement period benchmark. Therefore, we plan to explore, the possibility of extending the phase-in by applying the regional adjustment to an ACO's first agreement period benchmark with a weight equal to or lower than 35 percent, in combination with using alternative factors to trend the ACO's historical benchmark (BY1 and BY2 to BY3) and to update the benchmark during the agreement period (discussed in section II.A.2.d. of this final rule). Any changes to the methodology used to establish an ACO's benchmark for its first agreement period would be addressed in future rulemaking.

**FINAL ACTION:** We are finalizing with modifications a phased approach to transitioning to greater weights in calculating the regional adjustment amount, which is expressed as a percentage of the difference between regional average expenditures for the ACO's regional service area and the ACO's rebased historical expenditures. This approach maintains the current methodology for establishing the benchmark for an ACO's first agreement period in the Shared Savings Program based on the historical expenditures for beneficiaries assigned to the ACO with no adjustment for expenditures in the ACO's regional service area, and the current methodology for resetting the historical benchmark for the second agreement period for ACOs that entered the program in 2012 and 2013 and started a new agreement period on January 1, 2016.

We will apply the regional adjustment to the ACO's rebased historical benchmark for ACOs entering a second

or subsequent agreement period in 2017 and subsequent years. We will use the following phased-approach to determine the weight used in calculating the adjustment, which includes applying a lower weight the first and second time the ACO's benchmark is rebased using the regional adjustment if the ACO is determined to have spending higher than its region:

- The first time that an ACO's benchmark is rebased using the regional adjustment:

- ++ CMS uses a weight of 35 percent of the difference between the average per capita expenditure amount for the ACO's regional service area and the ACO's rebased historical benchmark amount, if the ACO is determined to have lower spending than its regional service area;

- ++ The percentage used in this calculation will be set at 25 percent if the ACO is determined to have higher spending than its regional service area.

- The second time that an ACO's benchmark is rebased using the regional adjustment:

- ++ CMS uses a weight of 70 percent of the difference between the average per capita expenditure amount for the ACO's regional service area and the ACO's rebased historical benchmark amount if the ACO is determined to have lower spending than the ACO's regional service area, unless the Secretary determines a lower weight should be applied, as specified through future rulemaking;

- ++ The percentage used in this calculation will be set at 50 percent if the ACO is determined to have higher spending than the ACO's regional service area.

- The third or subsequent time that the ACO's benchmark is rebased using the regional adjustment, the percentage used in this calculation will be set at 70 percent unless the Secretary determines a lower weight should be applied, as specified through future rulemaking.

- If CMS adjusts the ACO's benchmark during the term of the agreement period to reflect the addition or removal of ACO participants or ACO providers/suppliers, CMS will redetermine whether the ACO is considered to have lower spending or higher spending compared to the ACO's regional service area for purposes of determining the percentage to be used in calculating the regional adjustment.

We are incorporating this phased approach to transitioning to greater weights in calculating the regional adjustment in new § 425.603.

As discussed in section II.A.2.f of this final rule, this phased approach will apply to ACOs that entered the program

in 2012 and 2013 and started their second agreement period on January 1, 2016, for the first time in calculating their rebased historical benchmark for their third agreement period (beginning in 2019).

d. Parity Between Establishing and Updating the Rebased Historical Benchmark

(1) Background

In the 2016 proposed rule we provided background on policies regarding the historical benchmark trend factors and annual benchmark updates during the agreement period, including our previous consideration of whether to base these trend and update factors on State, local or regional expenditures instead of national FFS expenditures (see 81 FR 5836 through 5838).

In the initial rulemaking to establish the Shared Savings Program, we identified the need to trend forward the expenditures in each of the 3 years making up the historical benchmark. As explained in earlier rulemaking, because the statute requires the use of the most recent 3 years of per-beneficiary expenditures for Parts A and B services for FFS beneficiaries assigned to the ACO to estimate the benchmark for each ACO, the per capita expenditures for each year must be trended forward to current year dollars before they are averaged using the applicable weights to obtain the benchmark (see 76 FR 19609). In the November 2011 final rule, we finalized an approach under § 425.602(a)(5) for trending forward benchmark expenditures based on national FFS Medicare growth rates for each of the following populations of beneficiaries: ESRD, disabled, aged/dual eligible, aged/non-dual eligible (76 FR 67924 and 67925). We also explained that making separate calculations for specific groups of beneficiaries—specifically the aged/dual eligible, aged/non-dual eligible, disabled, and ESRD populations—accounts for variation in costs of these groups of beneficiaries, resulting in more accurate calculations (76 FR 67924). We considered using national, State or local growth factors to trend forward historical benchmark expenditures (76 FR 19609 through 19610 and 76 FR 67924 through 67925).

Among other considerations, we explained that the anticipated net effect of using the same trending factor based on the national growth rate for all ACOs would be to provide a relatively higher benchmark for low growth/low spending ACOs and a relatively lower benchmark for high growth/high spending ACOs. ACOs in high cost, high

growth areas would therefore have an incentive to reduce their rate of growth more to bring their costs more in line with the national average; while ACOs in low cost, low growth areas would have an incentive to continue to maintain or improve their overall lower spending levels (see 76 FR 67925). We also explained that use of the national growth rate could also disproportionately encourage the development of ACOs in areas with historical growth rates below the national average (see 76 FR 19610). These ACOs would benefit from having a relatively higher benchmark, which would increase the chances for shared savings. On the other hand, ACOs in areas with historically higher growth rates above the national average would have a relatively lower benchmark, and might be discouraged from participating in the program (see 76 FR 19610).

In contrast, as we explained in the initial rulemaking to establish the Shared Savings Program, trending expenditures based on State or local area growth rates in Medicare Parts A and B expenditures may more accurately reflect the experience in an ACO's area and mitigate differential incentives for participation based on location (see 76 FR 19610). We considered, but did not finalize, an option to trend the benchmark by the lower of the national projected growth rate or the State or the local growth rate (see 76 FR 19610 and 76 FR 67925). This option balanced providing a more accurate reflection of local experience with not rewarding historical growth higher than the national average. We believed this method would instill stronger saving incentives for ACOs in both high growth and low growth areas (see 76 FR 19610).

Section 1899(d)(1)(B)(ii) of the Act states that the benchmark shall be updated by the projected absolute amount of growth in national per capita expenditures for Parts A and B services under the original Medicare FFS program, as estimated by the Secretary. Further, the Secretary's authority under section 1899(i)(3) of the Act, for implementing other payment models, allows for alternatives to using national expenditures for updating the benchmark, as long as the Secretary determines the approach improves the quality and efficiency of items and services furnished under Medicare and does not result in additional program expenditures.

In the initial rulemaking, we finalized our policy under § 425.602(b) to update the historical benchmark annually for each year of the agreement period based on the flat dollar equivalent of the

projected absolute amount of growth in national per capita expenditures for Parts A and B services under the original Medicare FFS program as specified under section 1899(d)(1)(B)(ii) of the Act. Further, consistent with the final policies for calculating the historical benchmark (among other aspects of the Shared Savings Program's financial models) the calculations for updating the benchmark are made for each of the following populations of beneficiaries: ESRD, disabled, aged/dual eligible, aged/non-dual eligible (76 FR 67926 and 67927). In developing this policy, we also considered using our authority under section 1899(i)(3) of the Act to update the benchmark by the lower of the projected absolute amount of growth in national per capita expenditures and the projected absolute amount of growth in local/state per capita expenditures (see 76 FR 19610 and 19611).

Among other considerations, we explained that using a flat dollar increase, which would be the same for all ACOs, provides a relatively higher expenditure benchmark for low growth, low spending ACOs and a relatively lower benchmark for high growth, high spending ACOs. Therefore, ACOs in high spending, high growth areas must reduce their rate of growth more (compared to ACOs in low spending, low growth areas) to bring their costs more in line with the national average (see 76 FR 19610). We also indicated that these circumstances could contribute to selective program participation by ACOs favored by the national flat-dollar update, and ultimately result in Medicare costs from shared savings payments that result from higher benchmarks rather than an ACO's care coordination activities (see 76 FR 19610 through 19611 and 19635). Incorporating more localized growth factors reflects the expenditure and growth patterns within the geographic area served by ACO participants, potentially providing a more accurate estimate of the updated benchmark based on the area from which the ACO derives its patient population (76 FR 19610).

In the June 2015 final rule, we discussed comments received on benchmark rebasing alternatives discussed in the December 2014 proposed rule that would include using regional FFS expenditures, instead of national FFS expenditures, to develop the historical benchmark trend factors and to update the benchmark during the agreement period (79 FR 72839; 79 FR 72841 through 72843; 80 FR 32792, 32794). We indicated our plan to consider further what additional

adjustments should be made to the benchmarking methodology when moving to a rebasing approach that accounts for regional FFS trends, including whether to incorporate regional FFS expenditures in updating an ACO's historical benchmark each performance year or to maintain the policy under which we update an ACO's benchmark based on the projected absolute amount of growth in national per capita expenditures for Parts A and B services under the original FFS program (80 FR 32796).

## (2) Regional Growth Rate as a Benchmark Trending Factor

We proposed to replace the national trend factors currently used for trending an ACO's BY1 and BY2 expenditures to BY3 in calculating an ACO's rebased historical benchmark with regional trend factors derived from a weighted average of risk adjusted FFS expenditures in the counties where the ACO's assigned beneficiaries reside. Further, we proposed to calculate and apply these trend factors for each of the following populations of beneficiaries: ESRD, disabled, aged/dual eligible, aged/non-dual eligible. We proposed to incorporate these changes in a new regulation at § 425.603.

To align with the proposed methodology for calculating regional FFS expenditures for an ACO's regional service area, we considered the following approach for calculating regional FFS trend factors:

- For each benchmark year, calculate risk adjusted county FFS expenditures for the ACO's regional service area. County FFS expenditures would be determined consistent with other proposals discussed in the 2016 proposed rule, by using total county-level FFS Parts A and B expenditures for assignable beneficiaries, excluding IME, DSH, and uncompensated care payments, but including beneficiary identifiable payments made under a demonstration, pilot or time limited program; regional expenditures would be calculated for each Medicare enrollment type (ESRD, disabled, aged/dual eligible, aged/non-dual eligible);

- For each benchmark year, compute a weighted average of risk adjusted county-level FFS expenditures using weights that reflect the proportion of an ACO's assigned beneficiaries residing in each county within the ACO's regional service area. Calculations would be done by Medicare enrollment type (ESRD, disabled, aged/dual eligible, aged/non-dual eligible) based on the ACO's benchmark year assigned population.

- Compute the average growth rates from BY1 to BY3, and from BY2 to BY3, using the weighted average of risk-adjusted county level FFS expenditures for the respective benchmark years, for each Medicare enrollment type.

We explained that we would apply these regional trend factors to the ACO's historical benchmark expenditures, which are also adjusted based on the CMS-HCC model, to account for the severity and case mix of the ACO's assigned beneficiaries in each benchmark year.

We discussed that using regional trend factors, instead of national trend factors to trend forward expenditures in the benchmark period, would further incorporate regional FFS spending and population dynamics specific to the ACO's regional service area in the ACO's rebased benchmark. We explained our belief that there are number of relevant considerations for moving to use of regional trend factors, including the following:

- Regional trend factors would more accurately reflect the cost growth experience in an ACO's regional service area compared to use of national trend factors.

- Regional trend factors would reflect the change in the health status of the FFS population that makes up the ACO's regional service area, the region's geographic composition (such as rural versus urban areas), and socio-economic differences that may be regionally related.

- Regional trend factors could better capture location-specific changes in Medicare payments (for example, the area wage index) compared to use of national trend factors.

We also considered how use of regional trend factors in resetting ACO benchmarks could affect participation by relatively high- and low-growth ACOs operating in regions with high and low growth in Medicare FFS expenditures. We anticipated the following:

- Using regional trend factors would result in relatively higher benchmarks for ACOs that are low growth in relation to their region compared to benchmarks for ACOs that are high growth relative to their region. Therefore, use of regional FFS trends could disproportionately encourage the development of and continued participation by ACOs with rates of growth below that of their region. These ACOs would benefit from having a relatively higher benchmark, which would increase their chances for shared savings. On the other hand, ACOs with historically higher rates of growth above the regional average would have a

relatively lower benchmark and may be discouraged from participating if they are not confident of their ability to bring their costs in line with costs in their region.

- In using regional growth rates specific to an ACO's regional service area and composition (by Medicare enrollment type), there would likely be significant variation in the growth rates between health care markets in different regions of the country and even between ACOs operating in the same markets. This approach would be a departure from the current methodology, which applies a single set of national growth factors calculated for each benchmark year by Medicare enrollment type (ESRD, disabled, aged/dual eligible, aged/non-dual eligible). However, ACOs familiar with the composition of their assigned population and cost trends in their regional service area may find they can more readily anticipate what these trend factors may be. We indicated that stakeholders may find it helpful to observe differences in county FFS expenditures using the data files made publicly available in conjunction with the 2016 proposed rule.

We sought comment on the proposed change to the rebased historical benchmark trend factor. We also considered and sought comment on several alternative approaches, including:

- Using regional trend factors for trending forward an ACO's BY1 and BY2 expenditures to BY3 in establishing and resetting historical benchmarks under the approach to resetting ACO benchmarks established with the June 2015 final rule (under which we equally weight the benchmark years, and account for savings generated under the ACO's prior agreement period), as an alternative to adopting the approach to adjusting rebased benchmarks to reflect FFS expenditures in the ACO's regional service area, as discussed in the 2016 proposed rule.

- Applying regional trend factors for trending forward BY1 and BY2 expenditures to BY3 in establishing the benchmark for an ACO's first agreement period under § 425.602(a), allowing this policy to be applied consistently program-wide beginning with an ACO's first agreement period.

*Comment:* Some commenters discussed issues relevant both to the proposal to replace national growth rates with regional growth rates for trending the rebased benchmark (BY1 and BY2 expenditures to BY3) and the proposed use of regional growth rates instead of a national flat dollar amount to update the benchmark each performance year. The following

summary reflects these more general considerations, while later in this section of this final rule we discuss comments specific to each of these proposals. Comments were somewhat divided between support for and concerns about the proposals on using regional FFS expenditures instead of national FFS expenditures in calculating trend and update factors. Broader considerations reflected in the comments, relevant to both proposals include the following:

- Among commenters supporting the proposed use of regional growth rates instead of factors based on national FFS expenditures in benchmark calculations, some believed this approach generally would result in benchmarks that better reflect the regional patterns in spending and costs. Additionally, several commenters explained that the use of national FFS expenditures as a component of the benchmark does not accurately reflect what is possible for ACOs to achieve, in terms of controlling growth in Medicare spending, within their geographic area or with respect to their assigned patient population.

- Some commenters disagreed with the proposed use of regional growth rates in benchmark calculations, perceiving that these modifications could negatively impact benchmarks by, for example: (1) Allowing individual provider anomalies to have a material impact on an ACO's benchmark; (2) lowering benchmarks (compared to the current methodology) for ACOs in low growth regions, with a commenter noting that ACOs in higher-growth areas would be rewarded with higher benchmarks; (3) lowering benchmarks in regions where ACOs have been successful in reducing growth in expenditures (particularly for successful ACOs that are dominant in a region, or ACO-heavy regions).

- Some commenters were concerned about the discussion in the proposed rule indicating that the proposed changes could have mixed effects, increasing and decreasing benchmarks for ACOs depending on their circumstances.

- Several commenters expressed support for adopting the use of regional trend and update factors across all ACOs, including ACOs within their first agreement period. A commenter explained that applying different methodologies in the first and subsequent agreement periods adds complexity and reduces predictability of the benchmark values.

A few commenters noted CMS' larger goal of reducing regional variation in health care utilization and costs. A

commenter expressed concern that using regional factors to formulate benchmarks for Shared Savings Program ACOs may exacerbate geographic variation and is antithetical to CMS' broader goal of reducing this variation. However, another commenter stated that use of regional expenditure growth rates rather than national expenditure growth rates in benchmark calculations will better facilitate CMS' goal of encouraging Shared Savings Program ACOs to transition to risk bearing arrangements.

*Response:* We appreciate commenters' support of the proposed use of growth rates based on regional FFS expenditures to trend forward BY1 and BY2 expenditures to BY3 when establishing the ACO's rebased historical benchmark and to annually update the ACO's rebased historical benchmark, as well as comments describing concerns with use of regional growth rates in these calculations. We agree with comments indicating the use of regional growth rates for the trend and update factors will have mixed effects on ACOs' rebased benchmarks, increasing or decreasing the benchmark values depending on the growth rates determined for the ACO's regional service area as we described in the 2016 proposed rule and reiterate in this final rule. As discussed in greater detail in section II.A.2.d.3 of this final rule, we plan to explore through future rulemaking alternative approaches to calculating the trend and update factors that may help mitigate concerns raised by some commenters about the potential disadvantages for some ACOs of transitioning from national to regional trend and update factors. We also plan to explore through future rulemaking suggestions by some commenters to begin to incorporate regional factors in the ACO's first agreement period.

On the whole, for the reasons described in the 2016 proposed rule and echoed in some comments, we believe these policy changes are an important step towards making an ACO's rebased historical benchmark more reflective of the ACO's regional service area including better reflecting the region's cost experience, location-specific Medicare payment changes, as well as the health status of the region's FFS population. We believe these changes to the methodology are responsive to stakeholders' requests that we incorporate regional FFS expenditures into the ACO's rebased historical benchmark, and therefore are critical to ensuring the sustainability of the program.

*Comment:* Commenters also offered suggestions specific to the proposed use

of regional growth rates for trending the rebased benchmark. Although some commenters were supportive of the proposed methodology for calculating the growth rates to be used as trend factors in establishing an ACO's rebased historical benchmark, a commenter conditioned support for use of regional trend factors on the ACO's spending being compared to spending for the regional Medicare FFS population excluding beneficiaries assigned to the ACO or any other ACO in the region. Some commenters disagreed with the proposed change from using national FFS expenditures to using regional FFS expenditures to calculate the trend factors used to establish an ACO's rebased historical benchmark, for reasons previously described in this section of this final rule.

*Response:* We are finalizing as proposed the use of regional growth rates to calculate the trend factor for establishing an ACO's rebased historical benchmark. We appreciate commenters' support for this approach, which we believe will more quickly transition the program to benchmark calculations reflecting spending, and spending growth, in the ACO's regional service area and is consistent with the approach we are finalizing for calculating the annual update to the ACO's rebased historical benchmark. For these reasons, we decline the suggestion by some commenters to continue using trend factors based on national FFS expenditures in establishing an ACO's rebased historical benchmark.

In section II.A.2.b of this final rule, we discuss comments suggesting exclusion of ACO assigned beneficiaries from the population used to determine expenditures for the ACO's regional service area, and the reasons why we believe it is appropriate to include ACO assigned beneficiaries when calculating regional FFS expenditures. For the same reasons, we believe it is appropriate to include expenditures for these ACO assigned beneficiaries when determining regional trend and update factors.

*Comment:* A few commenters recommended alternative approaches to using regional growth rates for trending benchmark expenditures to establish an ACO's rebased historical benchmark not discussed in the proposed rule. For example, a commenter suggested a methodology that would account for both national and regional FFS expenditure trends, expressing concern that replacing the national trend factor with only a regional trend factor would pose additional challenges for ACOs in low-cost regions to meet the benchmark. Another commenter suggested allowing

ACOs a choice of regional or national trend factors, explaining that this choice would allow each ACO to take into consideration the many competitive factors driving change within its local market.

*Response:* We decline to adopt any of the alternative approaches recommended by commenters for calculating the trend factors. Elsewhere in this section of this final rule we discuss concerns that use of regional growth rates in benchmark calculations for the trend factors and the annual update will result in relatively lower benchmarks for ACOs in regions where spending growth is limited compared to areas with higher spending growth. In section II.A.2.d.3 of this final rule, we discuss our plan to explore an alternative approach to calculating the annual update, and also the benchmark trend factors, using standardized national FFS expenditures. We believe this approach has the potential to address the concerns raised by the commenter that suggested using an approach to determining trend factors that accounts for both national and regional FFS expenditure trends. We also decline at this time to adopt the commenter's suggestion for an approach that (by design) would allow ACOs the choice between trend factors (national or regional). Such an approach could lead to opportunities for arbitrage and may dull incentives for ACOs to improve their performance under the Shared Savings Program, as well as create additional operational complexities for implementing the policy.

*Comment:* Some commenters supported using a similar approach to calculate both the trend factors used in establishing the ACO's rebased historical benchmark and the annual update to the rebased benchmark, as described in the 2016 proposed rule. A commenter expressed concern that the descriptions of the calculations for the proposed regional trend factors and annual update were based on different parameters but arrived at the same outcome.

*Response:* In the 2016 proposed rule (81 FR 5838 and 5839), we outlined the steps for calculating the regional growth rates for the regional trend factors used in establishing the ACO's rebased benchmark and for the annual update to the ACO's rebased benchmark. We appreciate the commenter's attention to the details in the descriptions of our proposed methodologies for trending and updating the benchmark. The methodologies used to calculate the growth rates for the trend factor and annual update are the same: for both the

trend factor and the annual update, we will determine risk-adjusted county FFS expenditures for the ACO's regional service area, calculated by Medicare enrollment type (ESRD, disabled, aged/dual eligible, aged/non-dual eligible) for the relevant reference years, and determine the percentage change in regional FFS expenditures for the ACO's regional service area. However, there are certain necessary differences in the reference years used for purposes of trending and updating the benchmark. Specifically, the trend factors represent the growth rates between the ACO's historical benchmark years (trend factor of BY1 and BY2 to BY3), whereas the annual update represents the growth rate between benchmark year 3 and the performance year. Therefore, both growth rates will reflect changes in expenditures for the ACO's regional service area (according to the counties of residence of the ACO's assigned beneficiaries) for each of the 2 reference years used in determining the applicable growth rate. We believe that the approaches are generally consistent and together they will result in a benchmark that consistently reflects the rate of growth in expenditures for the ACO's region.

**FINAL ACTION:** We are finalizing as proposed the use of regional growth rates, derived from a weighted average of risk adjusted FFS expenditures for the ACO's regional service area, determined by the counties where the ACO's assigned beneficiaries reside, to trend forward an ACO's BY1 and BY2 expenditures to BY3 in calculating an ACO's rebased historical benchmark. We will calculate and apply these trend factors for each of the following populations of beneficiaries: ESRD, disabled, aged/dual eligible, aged/non-dual eligible. We are incorporating this methodology at § 425.603(c)(5).

### (3) Updating the Reset Benchmark During the Agreement Period

Using the authority of section 1899(i)(3) of the Act, we proposed to include a provision in a new regulation at § 425.603 to specify that for ACOs in their second or subsequent agreement period whose rebased historical benchmark incorporates an adjustment to reflect regional expenditures, the annual update to the benchmark will be calculated as a growth rate that reflects growth in risk adjusted regional per beneficiary FFS spending for the ACO's regional service area. Further, we proposed to calculate and apply separate update factors based on risk adjusted regional FFS expenditures for each of the following populations of beneficiaries: ESRD, disabled, aged/dual

eligible, aged/non-dual eligible. We proposed that this approach would replace the annual update to the historical benchmark for each year of the agreement period based on the flat dollar equivalent of the projected absolute amount of growth in national per capita expenditures for Parts A and B services under the original Medicare FFS program under section 1899(d)(1)(B)(ii) of the Act. We explained our considerations in developing this proposal and sought comment on the proposed methodology.

We considered the following issues in developing our proposed modification to the methodology for updating the ACO's rebased historical benchmark:

- Using an update factor based on the regional FFS expenditures for the ACO's regional service area to update an ACO's rebased historical benchmark during the ACO's second or subsequent agreement period would align with our proposal to use regional FFS expenditures in developing the trend factors for the rebased historical benchmark (to trend BY1 and BY2 expenditures to BY3) and our proposal to adjust the ACO's rebased historical benchmark to reflect regional FFS expenditures.

- Updating the benchmark based on regional FFS expenditures annually, during the course of the agreement period, would result in a benchmark used to determine shared savings and shared losses for a performance year that reflects trends in regional FFS growth for the ACO's regional service area for the corresponding year. We explained that calculating the update factor using regional FFS expenditures would better capture the cost experience in the ACO's region, the health status and socio-economic dynamics of the regional population, and location-specific Medicare payments, when compared to using national FFS expenditures.

- Adopting this approach would require our use of authority under section 1899(i)(3) of the Act as it is a departure from the methodology for annually updating the benchmark specified under section 1899(d)(1)(B)(ii) of the Act.

We considered using the following approach to calculate the regional update amount for each Medicare enrollment type (ESRD, disabled, aged/dual eligible, aged/non-dual eligible):

- For each calendar year corresponding to a performance year, calculate risk adjusted county FFS expenditures for the ACO's regional service area. As described in the 2016 proposed rule, county FFS expenditures would be determined using total county-level FFS Parts A and B

expenditures for assignable beneficiaries, excluding IME, DSH, and uncompensated care payments, but including beneficiary identifiable payments made under a demonstration, pilot or time limited program, truncated and risk adjusted for each Medicare enrollment type (ESRD, disabled, aged/dual eligible, aged/non-dual eligible). The ACO's regional service area would be defined based on the ACO's assigned beneficiary population used to perform financial reconciliation for the relevant performance year.

- Compute a weighted average of risk adjusted county-level FFS expenditures with weights based on the proportion of an ACO's assigned beneficiaries residing in each county of the ACO's regional service area. Calculations would be done by Medicare enrollment type (ESRD, disabled, aged/dual eligible, aged/non-dual eligible) based on the ACO's assigned population used to perform financial reconciliation for the relevant performance year.

- Although not specified in the 2016 proposed rule, a necessary step in this calculation is computing the growth rates as the ratio of weighted average risk-adjusted county level FFS expenditures for the applicable 2 years. To clarify, we would determine the regional growth rates by comparing expenditures determined in the previous step for the relevant performance year with expenditures for BY3.

We considered whether to calculate a flat dollar equivalent of the projected absolute amount of growth in regional per capita expenditures for Parts A and B FFS services, or whether to calculate the percentage change in growth in regional FFS expenditures for the ACO's regional service area. We discussed issues related to use of a growth rate or a flat dollar amount in the initial rulemaking to establish the Shared Savings Program, including our view that a growth rate would more accurately reflect each ACO's historical experience, but could also perpetuate current regional differences in medical expenditures (see 76 FR 19609 through 19610 and 76 FR 67924). Based on the reasons discussed in the earlier rulemaking, we noted our belief that using growth rates to determine the annual update would more effectively capture changes in the ACO's regional service area expenditures and changes in the health status of the ACO's population in comparison to the health status of the population of the ACO's regional service area over time. We explained that using a growth rate to update ACOs' benchmarks would also result in proportionately larger updates

for higher spending ACOs in the region and lower updates for lower spending ACOs in the region and would strike a balance with the flat-dollar average regional expenditures used to adjust the ACOs historical benchmark.

We further described the anticipated effects of the proposed change to the methodology for calculating the update to an ACO's rebased historical benchmark, including:

- The use of an update factor based on regional FFS spending offers different incentives compared to an update factor reflecting only growth in national FFS spending. For instance, accounting for national FFS spending in an ACO's benchmark update would provide a relatively higher expenditure benchmark for low spending ACOs in low growth areas and a relatively lower benchmark for high spending ACOs in high growth areas. In contrast, accounting for changes in regional FFS spending between the benchmark and the performance year by updating the benchmark according to changes in regional FFS expenditures would ensure that the benchmark continues to reflect recent trends in FFS spending growth in the ACO's region throughout the duration of the ACO's agreement period.

- The use of an update factor based on regional FFS spending will likely result in significant variation in annual benchmark updates for individual ACOs, reflecting the cost experience in each ACO's individualized regional service area along with changes in the health status of the population of patients served by the ACO as well as changes in the types of Medicare entitlement status in the ACO's assigned beneficiary population. The degree of year-to-year change in expenditures will likely vary in both existing low- and high-growth regions and could also vary significantly from expectations. We explained, based on our past experience with calculating the 2012 national FFS growth factors (as used for interim reconciliation for the 2012 starters), the potential for negative updates and corresponding decreases in benchmark values.

We also considered how to apply the update to the ACO's rebased historical benchmark adjusted for expenditures in the ACO's regional service area. We specified that the update would be applied after all adjustments are made to the ACO's rebased benchmark. We detailed a sequence for these adjustments and the application of the update that would maintain the overall structure of the program's current methodology, and align with the other revisions to the methodology used to calculate an ACO's rebased historical

benchmark described in the 2016 proposed rule.

We explained it would be necessary to use the discretionary authority in section 1899(i)(3) of the Act to adopt a policy under which we would calculate the benchmark update using regional FFS expenditures. Section 1899(i)(3) of the Act authorizes the Secretary to use other payment models in place of the payment model outlined in section 1899(d) of the Act as long as the Secretary determines these other payment models will improve the quality and efficiency of items and services furnished to Medicare beneficiaries, without additional program expenditures. We explained our belief that updating an ACO's rebased historical benchmark based on regional FFS spending, rather than national FFS spending, would have positive effects for the Shared Savings Program and Medicare beneficiaries. As described in the regulatory impact analysis of the 2016 proposed rule, we noted the proposed changes to the payment model used in the Shared Savings Program, including updating the ACO's rebased historical benchmark based on regional FFS spending, were anticipated to increase overall participation in the program, improve incentives for ACOs to invest in effective care management efforts, and increase the accuracy of benchmarks in capturing the experience in an ACO's regional service area compared to the use of national FFS expenditures. Therefore, we believed these changes would result in improved quality of care furnished to Medicare beneficiaries, and greater efficiency of items and services furnished to these beneficiaries, as more ACOs enter and remain in the Shared Savings Program and continue to work to meet the program's three-part aim of better care for individuals, better health for populations and lower growth in expenditures.

We noted that section 1899(i)(3)(B) of the Act provides that the requirement that the other payment model not result in additional program expenditures "shall apply . . . in a similar manner as [subparagraph (b) of paragraph (2) of section 1899(i)] applies to the payment model under [section 1899(i)(2)]." Section 1899(i)(2) of the Act provides discretion for the Secretary to use a partial capitation model rather than the payment model described in section 1899(d) of the Act. Section 1899(i)(2)(B) of the Act provides that payments to an ACO for items and services for beneficiaries for a year under the partial capitation model shall be established in a manner that does not result in spending more for such ACO for such

beneficiaries than would otherwise be expended for such ACO for such beneficiaries for such year if the model were not implemented, as estimated by the Secretary.

We explained that we had not previously addressed this provision in rulemaking. We stated our belief that we could use a number of approaches to address this statutory requirement, for example: Through an initial estimation that the model does not result in additional expenditures that spans multiple years of implementation; by a periodic assessment that the model does not result in additional program expenditures; or by structuring the model in a way such that CMS could not spend more for an ACO for such beneficiaries than would otherwise be expended for such ACO for such beneficiaries for such year if the model were not implemented. However, because section 1899(i)(3)(B) of the Act states only that the requirement that the payment model not result in additional program expenditures must be applied in "a similar manner" to the requirement under section 1899(i)(2)(B) of the Act, we explained our belief that we have some discretion to tailor this requirement to the payment framework that is being adopted under the other payment model.

The regulatory impact analysis of the 2016 proposed rule discussed our analysis of the requirement under section 1899(i)(3)(B) of the Act that the other payment model must not result in additional program expenditures, and our initial assessment of the costs associated with a payment model that includes changes to the manner in which we update the benchmark during an ACO's agreement period. We compared all current policies and proposed policies to policies that could be implemented under section 1899(d)(1)(B)(ii) of the Act, and assessed that for the period spanning 2017 through 2019 there would be net federal savings. Therefore, we believed that the proposed alternative payment model under section 1899(i)(3) of the Act, which includes the use of regional FFS expenditures to update an ACO's rebased historical benchmark and the use of FFS expenditures of assignable beneficiaries to calculate the national benchmark update for ACOs in their first agreement period and those ACOs that started a second agreement period on January 1, 2016, as well as policies established using the authority of section 1899(i)(3) of the Act in earlier rulemaking, meets the requirement under section 1899(i)(3)(B) of the Act. We anticipated that the costs of this alternative payment model would be

periodically reassessed as part of the impact analysis for subsequent rulemaking regarding the payment models used under the Shared Savings Program. However, we explained that in the event we do not undertake additional rulemaking, we intend to periodically reassess whether a payment model established under authority of section 1899(i)(3) of the Act continues to improve the quality and efficiency of items and services furnished to Medicare beneficiaries, without resulting in additional program expenditures. If we determine the payment model no longer satisfies the requirements of section 1899(i)(3) of the Act, for example if the alternative payment model results in net program costs, we would undertake additional notice and comment rulemaking to make adjustments to our payment methodology to assure continued compliance with the statutory requirements.

We clarified that the current methodology for calculating the annual update would continue to apply in updating an ACO's historical benchmark during its first agreement period, as well as in updating the rebased historical benchmark for the second agreement period for ACOs that started in the program in 2012 or 2013, and entered their second agreement period on January 1, 2016. That is, for these ACOs, we would continue to update the historical benchmark annually for each year of the agreement period based on the flat dollar equivalent of the projected absolute amount of growth in national per capita expenditures for Parts A and B services under the original Medicare FFS program. Consistent with the discussion in section II.A.2.e.3 of this final rule, these calculations will be performed based on assignable beneficiaries.

We also discussed and sought comment on alternatives to the proposed approach, including: (1) Calculating the update factor as the flat dollar equivalent of the projected absolute amount of growth in regional per capita expenditures for Parts A and B services for the ACO's regional service area; and (2) using regional FFS expenditures, instead of national FFS expenditures, to update an ACO's historical benchmark beginning with its first agreement period.

*Comment:* In section II.A.2.d.2 of this final rule, we describe and respond to comments regarding the use of regional growth rates in trending the ACO's rebased historical benchmark and updating the ACO's rebased historical benchmark annually during the agreement period. Commenters also

offered suggestions specific to the proposed use of regional growth rates for updating the rebased benchmark. Some commenters expressed support for the proposed use of growth rates based on regional FFS expenditures to annually update the ACO's rebased historical benchmark. A commenter seemed to support this approach because it would yield larger update amounts for ACOs in higher growth regions, compared to the current use of an update factor based on national FFS expenditures.

Of the few comments discussing whether the annual update should be calculated using regional growth rates or regional flat dollar amounts, commenters expressed a preference for the use of regional growth rates. Some commenters explained their preference for CMS to use the same formula to determine the regional trend and update factors. Because CMS proposed that regional trend factors would be calculated as growth rates, these commenters opposed use of regional flat dollar amounts in calculating the annual update in order to assure a consistent methodology would be used to trend and update the ACO's rebased historical benchmark using factors based on regional FFS expenditures.

Some commenters opposed the proposed use of regional FFS expenditures, instead of national FFS expenditures, to determine the annual update to the ACO's rebased historical benchmark. Some commenters expressed concern that the proposed approach would have a variable impact on ACOs across the country, increasing and decreasing benchmarks for ACOs depending on the circumstances. A principal concern expressed by these commenters was that the proposed methodology would result in relatively lower update amounts for ACOs in low growth areas (including as a result of ACOs' success in lowering growth in expenditures) compared to the update amounts for ACOs in higher growth areas. A commenter further explained that the wrong incentives will result because for regions where there is a substantial amount of managed care, or a dominant, successful ACO, the rate of FFS spending growth per capita in the region would be limited and the update to ACO benchmarks would be lowered by the success of risk-based coordinated care. Another commenter indicated a similar concern specific to ACO-heavy regions, pointing to a discussion of the issue in the 2016 proposed rule regulatory impact analysis (81 FR 5859).

Some commenters suggested CMS forgo the proposed modification, and some recommended alternative

approaches to use of regional growth rates for updating the ACO's rebased benchmark, including the following:

- Several commenters (including MedPAC) expressed support for modifying the benchmark update methodology to better account for changes in factors outside the ACO's control that affect regional spending, but expressed concern about the proposal to move to use of regional FFS expenditures in calculating the annual update. MedPAC explained that ACOs' incentives to control spending growth would be limited if the update to the benchmark would be reduced by their success in reducing spending growth, particularly in circumstances where an ACO is dominant in its region. MedPAC suggested CMS investigate continuing to use a national update amount, and excluding IME, DSH and uncompensated care payments as provided under our current regulations, but also adjusting for changes in factors outside the ACO's control that affect regional spending such as area wage index changes (for example the region's hospital wage index). Along similar lines, another commenter suggested CMS adopt the Next Generation ACO model methodology. The Next Generation ACO Model is currently testing a benchmarking method that includes use of a prospectively calculated trend-adjustment factor, applied to baseline claims, which includes a national projected trend adjusted for regional changes in geographic adjustment factors (such as area wage index (AWI) and geographic practice cost index (GPCI)). See Next Generation ACO Model Benchmarking Methods (December 15, 2015), available online at <https://innovation.cms.gov/Files/x/nextgenaco-methodology.pdf>.
- Allow ACOs a choice between the higher of the national or regional update amount, particularly in the agreement period when the rebasing methodology including factors based on regional FFS expenditures is applied to the ACO for the first time.
- Reduce the frequency of, or eliminate altogether, the benchmark update.

**Response:** We are finalizing as proposed the use of regional growth rates to calculate the annual update to the ACO's rebased historical benchmark. We believe this approach will more quickly transition the program to benchmark calculations reflecting spending and spending growth in the ACO's regional service area.

However, we do share commenters' concerns about creating significant variation in the update amount across

ACOs participating in the Shared Savings Program. We are also concerned about the longer term effects on participation resulting from relatively lower benchmark updates for regions with lower growth rates, reflecting ACOs' success in lowering growth in expenditures in those regions or a more general pattern of lower growth in the regions. We considered the approach suggested by MedPAC, under which the benchmark update would be calculated using standardized national FFS expenditures, adjusted for factors including the area wage index, to be an elegant alternative to use of regional growth rates in calculating the benchmark update. We are not adopting this approach in this final rule because this option was not discussed in the proposed rule, and therefore ACOs and other stakeholders have not had an opportunity to comment on this approach. Further, we would need to undertake additional analysis and modeling of this approach before deciding whether to propose it.

We anticipate exploring an alternative approach to calculating the update similar to MedPAC's recommendation, and may address the details of this approach in future rulemaking. Under this approach we would consider standardizing national FFS expenditures, for example: By calculating the benchmark update using a national growth rate adjusted for factors including IME, DSH, uncompensated care, as well as the AWI and GPCI; or by removing all geographic based payments and other add on payments similar to the approach for standardizing claims under the Physician Value Based Payment Modifier and Hospital Value-Based Purchasing programs. See for example, Basics of Payment Standardization (June 2015) and Detailed Payment Standardization Methods (updated May 2015), available at <http://www.qualitynet.org/dcs/ContentServer?c=Page&pagename=QnetPublic%2FPage%2FQnetTier4&cid=1228772057350>. We also believe the Innovation Center's experience with the Next Generation ACO Model methodology will be informative when evaluating use of geographic adjustments within the Shared Savings Program benchmarking methodology.

We would also explore, through future rulemaking, how broadly to apply an alternative approach, including whether to apply the same methodology consistently in calculating both the trend factors and the annual update. We would also consider whether to apply the same methodology consistently

across the program for benchmark calculations, regardless of whether the ACO is participating in its first, or a subsequent agreement period. For example, we may consider calculating the trend and update factors using regional growth rates, as provided in this final rule, in benchmark calculations for an ACO's first agreement period. Alternatively, we may consider applying consistently across the program an alternative approach to calculating the regional trend and update factors, such as using standardized national FFS expenditures. Another consideration would be whether to apply an alternative approach to calculating the trend and update factors, such as using standardized national FFS expenditures, only in calculating an ACO's first agreement period benchmark, as a means of facilitating ACOs' transition to a benchmarking methodology in subsequent agreement periods that includes use of regional growth rates to trend and update the benchmark.

**FINAL ACTION:** Under the authority of section 1899(i)(3) of the Act, we are finalizing our proposal that for ACOs in their second or subsequent agreement period whose rebased historical benchmark incorporates an adjustment to reflect regional expenditures, the annual update to the benchmark will be calculated as a growth rate that reflects growth in risk adjusted regional per beneficiary FFS spending for the ACO's regional service area, for each of the following populations of beneficiaries: ESRD, disabled, aged/dual eligible, aged/non-dual eligible. We are incorporating this methodology at § 425.603(d). We note that this final provision includes some minor revisions to the proposed regulatory language in order to ensure that the final methodology for updating the rebased benchmark is described accurately and consistently.

We note that section IV.E of this final rule contains an updated assessment of all policies that are being implemented under the authority of section 1899(i)(3). Specifically, we compared all current policies along with the policies that are being adopted in this final rule to policies that could be implemented under section 1899(d)(1)(B)(ii) of the Act, and concluded that for the period from 2017 to 2019 there would be net federal savings. As discussed in the proposed rule, we anticipate that the costs of this alternative payment model will be periodically reassessed as part of the impact analysis for subsequent rulemaking regarding the payment models used in the Shared Savings Program. However, in the event we do

not undertake additional rulemaking, we intend to periodically reassess whether the payment model established under the authority of section 1899(i)(3) of the Act continues to improve the quality and efficiency of items and services furnished to Medicare beneficiaries, without resulting in additional program expenditures. If we determine the payment model no longer satisfies the requirements of section 1899(i)(3) of the Act, for example if the alternative payment model results in net program costs, we will undertake additional notice and comment rulemaking to make adjustments to our payment methodology to assure continued compliance with the statutory requirements. In adopting this approach, we believe that the alternative payment model under section 1899(i)(3) of the Act that is set forth in this final rule, which includes using regional FFS expenditures to update an ACO's rebased historical benchmark, using FFS expenditures of assignable beneficiaries to calculate the national benchmark update for ACOs in their first agreement period and those that started a second agreement period on January 1, 2016, as well as existing policies established using the authority of section 1899(i)(3) of the Act, meets the requirement of section 1899(i)(3)(B) of the Act.

e. Parity Between Calculation of ACO, Regional and National FFS Expenditures

(1) Background

In the November 2011 final rule, we established a methodology for determining ACO benchmark and performance year expenditures for Medicare FFS beneficiaries assigned to the ACO. Under that methodology, we take into account payments made from the Medicare Trust Funds for Parts A and B services for assigned Medicare FFS beneficiaries, including individually beneficiary identifiable payments made under a demonstration, pilot or time limited program, when computing average per capita Medicare expenditures under the ACO. We exclude IME payments and DSH and uncompensated care payments from both benchmark and performance year expenditures. This adjustment to benchmark expenditures falls under the Secretary's discretion established by section 1899(d)(1)(B)(ii) of the Act to adjust the benchmark for beneficiary characteristics and such other factors as the Secretary determines appropriate. However, section 1899(d)(1)(B)(i) of the Act only provides authority to adjust expenditures in the performance period for beneficiary characteristics and does

not provide authority to adjust for "other factors." Therefore, to remove IME and DSH payments from performance year expenditures, we used our authority under section 1899(i)(3) of the Act, which authorizes use of other payment models, in order to make this adjustment (see 76 FR 67920 through 67922). We allow for a 3-month run out of claims data and apply a claims completion factor (percentage), to more accurately determine an ACO's benchmark and performance year expenditures (76 FR 67837 and 67838). To minimize variation from catastrophically large claims we truncate an assigned beneficiary's total annual Parts A and B FFS per capita expenditures at the 99th percentile of national Medicare FFS expenditures as determined for each benchmark year and performance year (76 FR 67914 through 67916).

We perform many of these calculations separately for each of the following populations of beneficiaries: ESRD, disabled, aged/dual eligible, aged/non-dual eligible. For example, we calculate benchmark and performance year expenditures, determine truncation thresholds, and risk adjust ACO expenditures separately for each of these four Medicare enrollment types. As part of this methodology, we account for circumstances where a beneficiary is enrolled in a Medicare enrollment type for only a fraction of a year, through a process that results in a calculation of "person years" for a given year. We calculate the number of months that each beneficiary is enrolled in Medicare in each Medicare enrollment type, and divide by 12. When we sum the fraction of the year enrolled in Medicare for all the beneficiaries in each Medicare enrollment type, the result is total person years for the beneficiaries assigned to the ACO.

We currently apply these policies consistently across the program, as specified in the provisions for establishing, updating and resetting the benchmark under § 425.602, and for determining performance year expenditures under § 425.604 for Track 1 ACOs and under § 425.606 for Track 2 ACOs. Further, in developing Track 3, we determined that it would be appropriate to calculate expenditures consistently program-wide (see 80 FR 32776 through 32777). Accordingly, the provisions in § 425.602 governing establishing, updating, and resetting the benchmark also apply to ACOs under Track 3, and we adopted the same approach for determining performance year expenditures as is used in Track 1 and Track 2 in § 425.610 for Track 3 ACOs.

(2) Calculation of County FFS Expenditures

As part of our proposal to adjust the historical benchmark to reflect regional FFS expenditures, we expressed our belief that it is important to calculate FFS expenditures for an ACO's region in a manner consistent with the methodology used to calculate the ACO's benchmark and performance year expenditures. Several sections of the 2016 proposed rule discussed proposals related to calculating county FFS expenditures: one section described proposals for determining county FFS expenditures (see 81 FR 5831 and 5832); a separate section described related proposals for adjusting county FFS expenditure data to assure parity between regional FFS expenditure calculations and other program expenditure calculations (81 FR 5841 through 5843). Further, the discussion of the definition of the ACO's regional service area included a proposal to use statewide (instead of county level) values for the ESRD population (81 FR 5829 and 5830). We are consolidating our discussion of these proposals within this section of this final rule.

Consistent with our proposed definition of regional service area, we proposed to define regional costs as county FFS expenditures for the counties in which the ACO's assigned beneficiaries reside. We proposed that the calculations of county FFS expenditures would be undertaken separately according to the following populations of beneficiaries (identified by Medicare enrollment type): ESRD, disabled, aged/dual eligible, aged/non-dual eligible (see 81 FR 5830). We explained that consistent with the use of beneficiary person years in calculating ACO benchmark and performance year expenditures for each Medicare enrollment type, we would also calculate beneficiary person years when determining county FFS expenditures for each Medicare enrollment type (see 81 FR 5841 through 5843).

We proposed to compute per capita expenditures and average risk scores for the ESRD population at the state level, and to apply those state-level values to all counties in the state. We explained that this approach would address issues associated with small numbers of ESRD beneficiaries in certain counties that can lead to statistical instability in expenditures for this complex population, and is consistent with the approach used in MA. We explained that our concern about small numbers of ESRD beneficiaries was particularly acute for ACOs operating in rural areas

that tend to be more sparsely populated (see 81 FR 5830).

To increase predictability and stability, and avoid bias, we proposed to apply the same approach to calculating county FFS expenditures for factors based on regional expenditures as is currently used in calculating benchmark and performance year expenditures. We explained consistent application of program methodology in calculating FFS expenditures would result in more predictable and stable calculations across the program over time, for example as ACOs transition from a benchmarking methodology that incorporates factors based on national FFS expenditures to one that incorporates factors based on regional FFS expenditures. In addition, use of an alternative approach to calculating regional FFS expenditures could introduce bias because different types of payments could be included in or excluded from these expenditures, as compared to historical benchmark expenditures and performance year expenditures.

Therefore, we proposed to take the following steps in calculating county FFS expenditures used to determine expenditures for an ACO's regional service area:

- Determine county FFS expenditures based on the expenditures of the assignable population of beneficiaries in each county, where assignable beneficiaries are identified for the 12-month period corresponding to the applicable calendar year (see section II.A.2.e.3 of this final rule). We will make separate expenditure calculations according to the following populations of beneficiaries (identified by Medicare enrollment type): ESRD, disabled, aged/dual eligible, aged/non-dual eligible.

- Calculate assignable beneficiary expenditures using the payment amounts included in Parts A and B FFS claims with dates of service in the 12-month calendar year for the relevant benchmark or performance year, allowing for a 3-month claims run out and applying a completion factor. The completion factor will be calculated based on national FFS assignable beneficiary expenditures (see section II.A.2.e.3 of this final rule).

++ These calculations will exclude IME, DSH, and uncompensated care payments.

++ These calculations will take into consideration individually beneficiary identifiable payments made under a demonstration, pilot or time limited program.

- Truncate a beneficiary's total annual Parts A and B FFS per capita expenditures at the 99th percentile of

national Medicare FFS assignable beneficiary expenditures as determined for the relevant year, in order to minimize variation from catastrophically large claims (see section II.A.2.e.3 of this final rule). We would determine truncation thresholds separately for each of the four Medicare enrollment types (ESRD, disabled, aged/dual eligible, aged/non-dual eligible).

- Adjust county FFS expenditures for severity and case mix of assignable beneficiaries in the county using prospective CMS- Hierarchical Condition Category (HCC) risk scores. We would determine average risk scores separately for each of the four Medicare enrollment types (ESRD, disabled, aged/dual eligible, aged/non-dual eligible).

We explained our plan to make county level data used in Shared Savings Program calculations publicly available annually. For example, a publicly available data file would indicate for each county: Average per capita FFS assignable beneficiary expenditures and average risk scores for all assignable beneficiaries by Medicare enrollment type (ESRD, disabled, aged/dual eligible, aged/non-dual eligible). In response to requests from ACOs and other stakeholders for data to allow for modeling of the proposed changes to the benchmark rebasing methodology, CMS made new data files available through the Shared Savings Program Web site, to coincide with the issuance of the 2016 proposed rule (<https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/sharedsavingsprogram/Statutes-Regulations-Guidance.html>). These files included: average per capita county-level FFS spending and risk scores for three historical years; and ACO-specific data on the total number of assigned beneficiaries residing in each county where at least 1 percent of the ACO's assigned beneficiaries reside, for three historical years. We described these data files and considerations for their use, including comparability of ACO-specific data across programmatic datasets in the proposed rule (81 FR 5867 through 5868).

We proposed to incorporate this methodology for calculating county FFS expenditures in a new regulation at § 425.603. We sought comment on this proposed methodology as well as any additional factors we would need to consider in calculating risk adjusted county FFS expenditures for an ACO's regional service area.

*Comment:* The few commenters addressing the sections of the rule containing proposals for determining county FFS expenditures, as well as the related section describing parity between regional FFS expenditure

calculations and other program expenditure calculations, were generally supportive of the proposed approach. However, a commenter expressed concerns that the proposed approach to calculating regional expenditures will incorporate historical geographic payment disparities that have never been adequately addressed in fee schedule and wage index rulemaking. Commenters offered specific suggestions regarding the proposals, as described in the remaining comment and response summaries within this section of this final rule.

Several commenters expressed support for the proposal to calculate expenditures by Medicare enrollment type (ESRD, disabled, aged/dual eligible, aged/non-dual eligible). Commenters generally shared CMS' concern about small numbers of ESRD beneficiaries at the county-level. While a few commenters believed that the proposed use of state level data would adequately address this concern as well as align with the methodology used in MA, many commenters expressed uncertainty about whether using state-level data for the ESRD population would be the best solution. These commenters urged CMS to release additional data and further explain how use of state-level data is the optimal solution, with some suggesting CMS revisit this issue in future rulemaking. Commenters offered a variety of alternatives, including: approaches similar to alternatives for ensuring a sufficiently large regional population, and several approaches that would rely on an ACO's historical costs for its assigned ESRD population. Some commenters preferred use of county-level data for the ESRD population. A commenter suggested use of statewide values only if county level values did not meet a threshold of sufficient statistical stability. A commenter explained that applying state-level data for all counties within a state may skew results for certain ACOs, in particular those ACOs operating only in certain areas of a state.

*Response:* We are finalizing as proposed the use of county level data to determine regional FFS expenditures for the assignable beneficiary population in the ACO's regional service area. We will perform these calculations separately according to the following populations of beneficiaries (identified by Medicare enrollment type): ESRD, disabled, aged/dual eligible, aged/non-dual eligible. However, we are making a modification to the methodology for calculating county FFS expenditures.

Based on commenters' recommendations, we carefully

considered alternatives to the proposed approach of aggregating the expenditures for the ESRD population at the state level and applying this value consistently to each county within the State. Specifically, we reconsidered the option of using county-level data for the ESRD population, and determined that it would be appropriate to finalize a policy of calculating expenditures for the ESRD population at the county level. We believe there are a number of advantages of calculating expenditures for the ESRD population at the county level, consistent with the approach we proposed and are finalizing for determining county level expenditures for the other populations of beneficiaries (disabled, aged/dual eligible, aged/non-dual eligible). We believe a consistent approach to calculating expenditures for each Medicare enrollment type will be less operationally burdensome compared to an approach that calculates expenditures for the ESRD population differently than the expenditures for the disabled, aged/dual eligible, and aged/non-dual eligible populations. We also anticipate this consistency will allow for greater comparability between the values for each Medicare enrollment type to facilitate analysis by CMS and ACOs of expenditure trends for these populations over time. Further, this approach will reflect the variation in expenditures within states and the regional service areas that ACOs serve, a concept supported by comments underscoring the importance of reflecting regional spending variation in the methodology for resetting the ACO's historical benchmark.

We believe our concern about the small numbers of ESRD beneficiaries at the county level will be mitigated by certain factors. For one, while ESRD beneficiaries exhibit higher mean expenditures, they also exhibit significantly lower variation due in part to the stability of regular dialysis services for which payments are bundled in a highly standardized fashion. Second, we are finalizing an approach of weighting regional FFS expenditures by the proportion of assigned beneficiaries by Medicare enrollment in each county as discussed in section II.A.2.b.2 of this final rule. Specifically, for ACOs with a small proportion of ESRD beneficiaries within their assigned beneficiary population, the county-level ESRD expenditures will have a relatively low weight within the ACO's regional FFS expenditures. On the other hand, in the case of ACOs serving a large proportion of ESRD beneficiaries within a county, this

approach could accommodate commenters' requests that the regional FFS expenditures more directly reflect the historical costs for the ACO's assigned ESRD beneficiaries. Additionally, we believe that the methodology for truncating the assignable beneficiary expenditures used to determine county FFS expenditures at the 99th percentile of national Medicare FFS assignable beneficiary expenditures will help reduce the potential for variation in county expenditure values with respect to the ESRD population in the same way as for the disabled, aged/dual eligible and aged/non-dual eligible populations.

We appreciate commenters' support for a methodology for determining regional FFS expenditures for use in the Shared Savings Program benchmark rebasing methodology that aligns with the MA rate-setting methodology. Although the approach we are finalizing does not follow the MA methodology for aggregating expenditures for the ESRD population statewide, and applying these values to each county in the state, we believe our overall approach for calculating county level expenditures risk adjusted using CMS-HCC prospective risk scores is a substantial step towards aligning with the MA rate-setting approach.

We decline at this time to adopt an alternative approach that (by design) only bases regional FFS expenditures for the ESRD population on the ACO's assigned ESRD beneficiaries, because it would systematically tie an ACO's rebased historical benchmark to its past performance, rather than allowing an ACO's benchmark to be more reflective of FFS spending in its region.

With respect to the commenter's concern that the proposed methodology for calculating regional expenditures would incorporate geographic payment disparities, we recognize there are geographic variations in Medicare payments. However, it is beyond the scope of this final rule, as well as the Shared Savings Program in general, to address broader Medicare payment policies regarding geographic adjustments.

*Comment:* Some commenters suggested increasing the number of years of data included in the calculations of county FFS expenditures, for example, using a 5-year rolling average for county-level spending estimates, along the lines of the approach used by MA.

*Response:* We are finalizing without modification our proposal to calculate county FFS expenditures for assignable beneficiaries residing in a county using the payment amounts included in Parts

A and B FFS claims with dates of service in the 12-month calendar year for the relevant benchmark or performance year, allowing for a 3-month claims run out and applying a completion factor, and adjusted for other factors as described elsewhere in this section of this final rule. We believe that use of a single year of data in calculating county FFS expenditures will be approximately equivalent to using multiple years of data that have been trended using regional growth factors developed using historical FFS expenditures for the county. We believe using growth factors to trend forward historical county data would be approximately equivalent to the use of county level expenditures for the applicable year because each growth factor would be derived from the same historical county data it would be tasked with inflating.

*Comment:* Some commenters expressed support for the proposed adjustment to exclude IME, DSH and uncompensated care payments from the calculation of county FFS expenditures. Although a commenter suggested further normalizing payment methodologies to account for differences in payment policies for certain rural providers, for example rural health clinics (RHCs) and hospitals receiving the status of sole community hospital. A commenter also expressed support for including individually beneficiary identifiable payments made under a demonstration, pilot or time limited program in the determination of county FFS expenditures. This commenter underscored the importance of including these payments to give an accurate representation of actual FFS payments during the measurement period, and urged that we allow adequate time for other CMS payment demonstrations to complete final reconciliation to ensure that our calculation of county FFS expenditures accounts for actual FFS expenditures.

*Response:* We appreciate commenters' support for adjusting county FFS expenditures for IME, DSH and uncompensated care payments and for including individually beneficiary identifiable payments made under a demonstration, pilot, or time limited program, to remain consistent with the methodology used in calculating ACO and national FFS expenditures. We are finalizing these policies, as proposed.

Currently, the Shared Savings Program coordinates across initiatives within CMS to obtain the most recent available, final non-claims based beneficiary-identifiable payments for use in program financial calculations and informational reports.

We decline to adopt the commenter's recommendations to account for differences in cost and payment among providers and suppliers, such as RHCs and sole community hospitals, in calculating county FFS expenditures. As explained in response to related considerations in the November 2011 final rule, we continue to believe this approach would create an inaccurate and inconsistent picture of ACO spending and may limit innovations in ACOs' redesign of care processes or cost reduction strategies (76 FR 67919 and 67920).

*Comment:* A commenter expressed support, in general, for an approach that minimizes the impact of catastrophically large claims in the calculation of the benchmark. Several commenters offered alternatives to the proposal to truncate a beneficiary's total annual Parts A and B FFS per capita expenditures at the 99th percentile of national Medicare FFS assignable beneficiary expenditures as determined for the relevant year. A commenter disagreed with limiting the population used to calculate the truncation threshold to assignable beneficiaries (instead of all FFS beneficiaries). Another commenter, concerned about the potential for year-to-year variability in threshold amounts, suggested CMS explore approaches that would provide greater predictability for these values, such as fixed absolute dollar thresholds.

*Response:* We are finalizing without modification our proposal to truncate a beneficiary's total annual Parts A and B FFS per capita expenditures when determining county FFS expenditures, and to define the truncation threshold as the 99th percentile of national Medicare FFS assignable beneficiary expenditures as determined for the relevant year for the applicable Medicare enrollment type (ESRD, disabled, aged/dual eligible, aged/non-dual eligible). We do not believe the concern raised by the commenter about the increase in the truncation thresholds as a result of using expenditures for assignable beneficiaries instead of all FFS beneficiaries is sufficient to warrant modification to the proposal. We estimate that the approach of using expenditures for assignable beneficiaries would result in approximately a 0.1 percent increase in the amount of the truncation thresholds. We believe this differential is small and therefore does not warrant either a change in approach or a delay in adopting a policy change that we believe will result in less biased calculations. We also decline at this time to revise the methodology for calculating the thresholds to specify a fixed amount that would not vary based

on year-to-year changes in population and payment amounts, as suggested by a commenter. In the 2016 proposed rule we did not propose or seek comment on an alternative basis for truncating claims such as using a flat dollar amount (that does not vary year to year) instead of an annually determined percentile, and at this time we do not believe this alternative would be a preferred approach. As we explained in the November 2011 final rule, we believe that truncating claims at the 99th percentile (as opposed to alternative suggestions for differing threshold amounts) achieves an appropriate balance between limiting catastrophic costs and continuing to hold ACOs accountable for those costs that are likely to be within their control (see 76 FR 67914 and 67915).

*Comment:* A number of commenters expressed general support for CMS' proposed approach for calculating risk-adjusted county expenditures using CMS-HCC risk scores. While no commenters explicitly opposed this proposal, several commenters raised concerns about CMS-HCC risk adjustment more broadly and some offered suggestions for improving or refining the program's general risk adjustment methodology. For a more detailed description of these comments, see section II.A.2.c.2. of this final rule.

*Response:* We are finalizing our proposal to risk adjust county FFS expenditures by Medicare enrollment type, using the CMS-HCC risk scores. We appreciate the general support received from commenters on our proposed approach for calculating risk-adjusted county expenditures. We acknowledge the concerns raised by commenters about the program's general risk adjustment methodology, which relies on CMS-HCC risk scores, and appreciate the suggestions for improvement. As we gain more experience in the Shared Savings Program we will continue to evaluate the appropriateness and effectiveness of our risk adjustment methodology and, as necessary, will propose refinements through future notice and comment rulemaking.

*Comment:* While commenters applauded the release of data to support modeling of the proposed benchmarking changes, some voiced dissatisfaction with the data and pointed to concerns indicating a "persisting lack of transparency." For instance, some commenters believed that too little time was allowed for ACOs and other stakeholders to model the proposed changes, and that insufficient data were released (for example, requesting county level instead of statewide ESRD data,

and citing a lack of data to support modeling of the proposed revisions to the methodology for adjusting an ACO's benchmark for changes in ACO participant composition). Some comments included analyses based on publicly available data and other data sources, as described in more detail in section IV.G. of this final rule. Several commenters pointed to the complexity of the proposed changes and difficulty in accessing complete data to support modeling as reasons for CMS to provide resources and tools to help ACOs and other stakeholders understand the impact of the changes adopted in this final rule.

Some commenters applauded CMS' stated intention to release annual data files. Some commenters underscored the need for these annual files to be comprehensive (for example, ACO assigned beneficiary data should include counties with less than 1 percent of the assigned population to align with the definition of the ACO's regional service area, if finalized as proposed) and timely (for example, data should be made available in time to be used to support organizations' participation decisions). A commenter encouraged CMS to provide comparable data, to the extent feasible, for beneficiaries enrolled in MA plans, as a step towards aligning Medicare payments across ACOs and MA. A commenter further urged CMS to supply data related to benchmark calculations directly to ACOs, including data on the performance of other providers in the ACO's region, change over time, and risk adjustment.

*Response:* We appreciate commenters' feedback on the release of the data to support modeling of the proposed changes to the Shared Savings Program benchmark rebasing methodology. It is our goal to encourage transparency and understanding of program calculations. To this end we provided detailed descriptive information in the 2016 proposed rule on our proposed approach for implementing the proposed revisions to the rebasing methodology, and made publicly available informational data files as well as descriptive details on the parameters for and limitations in using these data.

We anticipate releasing annual data files to support our goal of transparency in program calculations, as well as to allow ACOs and other stakeholders to model impacts. We believe it is important for these data to be as complete and accurate as possible and, consistent with our methodology for performing financial reconciliation, will include claims data with a 3-month claims run out. As a result, we

anticipate releasing county-level expenditure and risk score data following the conclusion of the calendar year to which the data relate. We believe this dataset will provide ACOs and other program stakeholders the inputs needed to calculate the regional adjustment to their historical benchmark as well as to understand the level of county level expenditures in their regional service area, including any changes to that level once multiple years of data are available.

In addition, we plan to make public ACO-specific, aggregate data on counties of residence for the ACO's assigned population for each performance year so the public at large has a better understanding of the ACOs in various counties and regions across the country. We anticipate including these details on county of residence for ACO assigned beneficiaries as part of the annual Shared Savings Program public use files on ACO financial and quality performance.

In response to the commenter's request for release of comparable MA data, we note that MA rates and statistics are publicly available through the CMS Web site (available at <https://www.cms.gov/medicare/health-plans/medicareadvtspecratestats/>). We encourage stakeholders to review these data in combination with the informational data files that CMS plans to release related to the revised Shared Savings Program benchmark rebasing methodology we are finalizing in this final rule.

We also anticipate updating the operational guidance documents available to the public and ACOs, to facilitate understanding by ACOs, other stakeholders, and the public (more generally) of the changes to the Shared Savings Program's benchmarking methodology resulting from this final rule.

We recognize there may be additional opportunities to improve program transparency. Therefore, we thank the commenters for their suggestions and will continue to look for ways we can engage with ACOs and other program stakeholders.

**FINAL ACTION:** We are finalizing our proposed methodology for calculating county FFS expenditures in new § 425.603, with one modification. We are finalizing as proposed the use of county level data to determine regional FFS expenditures for the assignable beneficiary population in the ACO's regional service area, and to perform these calculations separately according to the following populations of beneficiaries (identified by Medicare enrollment type): ESRD, disabled, aged/

dual eligible, aged/non-dual eligible. However, we are not finalizing our proposal to aggregate the expenditures for the ESRD population at the state level and to apply this value consistently to each county within the State. Instead, we are finalizing a policy of calculating expenditures for the ESRD population at the county level. We are also finalizing our proposal to calculate county FFS expenditures in the same way that is currently used to calculate ACO expenditures in order to assure parity with the calculation of ACO benchmark and performance year expenditures as specified under the Shared Savings Program regulations.

### (3) Modifying the Calculation of National FFS Expenditures, Completion Factors, and Truncation Thresholds Based on Assignable Beneficiaries

In the 2016 proposed rule we explained our belief that it is timely to reconsider the beneficiary population that should be used in program calculations for the national FFS population at the same time as we are establishing our policies for determining regional FFS expenditures, including the beneficiary population that will be used in those calculations. Several elements of the existing Shared Savings Program financial calculations are based on expenditures for all Medicare FFS beneficiaries regardless of whether they are eligible to be assigned to an ACO, including: The national growth rates used to trend forward expenditures during the benchmark period; the projected absolute amount of growth in national per capita expenditures for Parts A and B services used to update the benchmark; the completion factors applied to benchmark and performance year expenditures; and the truncation thresholds set at the 99th percentile of national Medicare FFS expenditures. In calculating these factors based on national FFS expenditures, we take into account Parts A and B expenditures for all Medicare FFS beneficiaries, and exclude IME payments and DSH and uncompensated care payments to align with our methodology for calculating benchmark and performance year expenditures.

We explained our concern that using expenditures for all Medicare FFS beneficiaries, including beneficiaries ineligible for assignment, in calculating factors that are based on the expenditures of the broader FFS population as opposed to using only expenditures for the narrower population of FFS beneficiaries eligible for assignment to an ACO, can bias those calculations. There may be differences in the health status and

health care cost experience of Medicare beneficiaries excluded from the assignment "pre-step" compared to those who are eligible for assignment, based on their health conditions and the providers from whom they receive care. Thus, including the expenditures for non-assignable beneficiaries, such as non-utilizers of health care services, can result in lower overall per capita expenditures. These biases may have a more pronounced effect in calculations of regional FFS expenditures, which are based on relatively smaller populations of beneficiaries, as compared to calculations based on the national FFS population.

We described how we identify the pool of "assignable" Medicare beneficiaries (a subset of the larger population of Medicare FFS beneficiaries) as a pre-step to the two-step assignment process under § 425.402 for determining the beneficiaries who will be assigned to an ACO. We explained our preferred approach would be to apply a similar logic to identify the beneficiary population that would be used in program calculations for both national and regional FFS populations. As part of this pre-step, we determine if a beneficiary received at least one primary care service from a physician within the ACO whose services are used in assignment:

- For performance year 2016 and subsequent performance years, the beneficiary must have received a primary care service, as defined under § 425.20, with a date of service during the 12-month assignment window, as defined under § 425.20.
- The service must have been furnished by a primary care physician as defined under § 425.20 or by a physician with one of the primary specialty designations included in § 425.402(c). Therefore, beneficiaries who have not received any primary care service, or who have only received primary care services from physicians with a primary specialty code not specified in § 425.402(c) (see 80 FR 32753 through 32754, Table 5 Physician Specialty Codes Excluded From Assignment Step 2), or from non-physician practitioners are excluded from assignment to an ACO.

This pre-step is designed to satisfy the statutory requirement under section 1899(c) of the Act that beneficiaries be assigned to an ACO based on their use of primary care services furnished by physicians (80 FR 32756; § 425.402(b)(1)).

We discussed that one factor related to calculating expenditures for assignable beneficiaries is the assignment window used to identify

this population, with options including: The 12-month period used to assign beneficiaries to Track 1 and 2 ACOs based on a calendar year, and an off-set 12-month period used to assign beneficiaries prospectively to an ACO in Track 3. (See definition of assignment window under § 425.20 and related discussion in the June 2015 final rule at 80 FR 32699.) We expressed our belief that it is important to calculate regional and national FFS expenditures consistently across the three tracks of the program, so as not to advantage or disadvantage an organization simply on this basis. This consistency would help to ensure a level playing field in markets where multiple ACOs are present, and would also simplify program operations. Accordingly, we proposed to calculate county FFS expenditures and average risk scores, as well as factors based on national FFS expenditures, using the assignable beneficiary population identified using the assignment window for the 12-month calendar year corresponding to the benchmark or performance year. This is the same assignment window that is currently used to assign beneficiaries under Track 1 and Track 2. We specified our plan to monitor for observable differences in the health status (for example, as identified by CMS-HCC risk scores) and expenditures of the assignable beneficiaries identified using the 12-month calendar year assignment window, as compared to assignable beneficiaries identified using an assignment window that is the off-set 12-month period prior to the benchmark or performance year (for example, October through September preceding the calendar year). In the event that we conclude that additional adjustments (for instance, as part of risk adjusting county FFS expenditures) are necessary to account for the use of assignable beneficiaries identified using an assignment window that is different from the assignment window used to assign beneficiaries to the ACO, we would address this issue through future rulemaking.

We clarified that we will continue to apply an update based on national FFS expenditures to ACOs in their first agreement period and for ACOs that entered their second agreement period on January 1, 2016. However, to the extent that we were proposing to change our methodology in order to use only assignable beneficiaries instead of all Medicare FFS beneficiaries in calculating the benchmark update based on national FFS expenditures, we believed we would need to use the authority under section 1899(i)(3) of the

Act to adopt other payment models to implement this change.

Section 1899(d)(1)(B)(ii) of the Act states that the benchmark shall be updated by the projected absolute amount of growth in national per capita expenditures for Parts A and B services under the original Medicare FFS program, as estimated by the Secretary. The plain language of section 1899(d)(1)(B)(ii) of the Act demonstrates Congress' intent that the benchmark update be calculated based on growth in expenditures for the national FFS population, as opposed to a subset of this population. Therefore, in order to allow us to use only assignable beneficiaries in determining the amount of growth in per capita expenditures for Parts A and B services for purposes of determining the benchmark update for ACOs in their first agreement period and those ACOs that started a second agreement period on January 1, 2016, we believed it was necessary to rely upon our authority under section 1899(i)(3) of the Act. Section 1899(i)(3) of the Act authorizes the Secretary to use other payment models in place of the payment model outlined in section 1899(d) of the Act as long as the Secretary determines these other payment models will improve the quality and efficiency of items and services furnished to Medicare beneficiaries, without additional program expenditures.

We explained our belief that using our authority under section 1899(i)(3) of the Act to adopt a payment model that includes calculating the benchmark update for ACOs in their first agreement period and for ACOs that started a second agreement period on January 1, 2016, using national FFS expenditures for assignable beneficiaries, rather than for all FFS beneficiaries, would improve the quality and efficiency of items and services furnished to Medicare beneficiaries. We believed this approach would increase the accuracy of benchmarks, by determining the national update using a population that more closely resembles the population that could be assigned to ACOs. Further, we believed using assignable beneficiaries across all program calculations based on national and regional FFS expenditures would result in factors that are generally more comparable. As a result, these calculations will be more predictable and stable across the program over time, for example as ACOs transition from a benchmarking methodology that incorporates national FFS expenditures to one that incorporates factors based on regional FFS expenditures. Ultimately, we believed this policy could increase

overall participation in the program, thereby resulting in more organizations working to meet the program's three-part aim of better care for individuals, better health for populations and lower growth in expenditures.

As explained in section II.A.2.d.3 of this final rule, section 1899(i)(3)(B) of the Act also specifies that the other payment model must not result in additional program expenditures. We discussed our analysis of this requirement, and our initial assessment that for the period spanning 2017 through 2019 there would be net federal savings associated with a payment model under section 1899(i)(3) of the Act that includes the proposed changes to the manner in which we update the benchmark during an ACO's agreement period as part of the regulatory impact analysis for the proposed rule.

Taking these considerations into account, we believed applying a payment methodology that includes calculating the benchmark update consistently based on assignable FFS beneficiaries, instead of all FFS beneficiaries, would meet the requirements under section 1899(i)(3) of the Act that the payment model improve the quality and efficiency of items and services furnished to Medicare beneficiaries, without additional program expenditures. However, we also discussed our intention to revisit this determination periodically. If we determine the payment model no longer satisfies the requirements of section 1899(i)(3) of the Act, for example if the model results in net program costs, we would undertake additional notice and comment rulemaking to make adjustments to the model to assure continued compliance with the statutory requirements.

Accordingly, we proposed to use the authority under section 1899(i)(3) of the Act to revise the regulation at § 425.602(b)(1) to specify that the annual update to the benchmark will be based on the projected absolute amount of growth in national per capita expenditures for Parts A and B services under the original Medicare FFS program for assignable beneficiaries. We further proposed to specify in this provision of the regulations that we would identify assignable beneficiaries for the purpose of calculating the update based on national FFS expenditures using the 12-month calendar year corresponding to the year for which the update is being calculated. We sought comment on these proposed provisions.

We also proposed to make conforming changes to the regulations to specify that assignable Medicare FFS beneficiaries, identified based on the 12-

month period corresponding to the calendar year for which the calculations are being made, will be used to perform the following calculations: (1) Truncation thresholds for limiting the impact of catastrophically large claims on ACO expenditures under § 425.602(a)(4), § 425.604(a)(4), § 425.606(a)(4), § 425.610(a)(4); and (2) national growth rates used to trend forward expenditures during the benchmark period under § 425.602(a)(5). We specified that we would provide additional information through subregulatory guidance regarding the process for using assignable beneficiaries to perform these calculations, as well as the calculation of the claims completion factor applied under § 425.602(a)(1), § 425.604(a)(5), § 425.606(a)(5), § 425.610(a)(5).

Similarly, as discussed in sections II.A.2.b. and II.A.2.e.2 of this final rule, we proposed to specify in a new provision of the Shared Savings Program regulations at § 425.603 that would govern the methodology for resetting, adjusting, and updating an ACO's benchmark for a second or subsequent agreement period starting on or after January 1, 2017, that county FFS expenditures would be based on assignable Medicare FFS beneficiaries determined using the 12-month period corresponding to the calendar year for which the calculations are being made.

We proposed that regulatory changes regarding use of assignable beneficiaries in calculations based on national FFS expenditures would apply for the 2017 performance year and all subsequent performance years. Under this proposed provision, these changes would apply to ACOs that are in the middle of an agreement period, specifically ACOs that started their first agreement period in 2015 or 2016 and ACOs that started their second agreement period on January 1, 2016. We would adjust the benchmarks for these ACOs at the start of the first performance year in which these changes apply so that the benchmark for the ACO reflects the use of the same methodology that would apply in expenditure calculations for the corresponding performance year.

We sought comment on these proposals. We also sought comment on whether expenditures for all Medicare FFS beneficiaries should be used to calculate these elements for ACOs in their first agreement period or a second agreement period that started on January 1, 2016, while expenditures for assignable Medicare FFS beneficiaries are used to calculate these elements for an ACO's second and subsequent agreement period starting on or after January 1, 2017, in combination with

the use of the assignable beneficiary population to determine expenditures for the ACO's regional service area.

*Comment:* Among the comments addressing this aspect of our proposed methodology, almost all commenters were supportive of the proposal to use assignable beneficiaries, rather than all FFS beneficiaries, when calculating both national and regional expenditures. A commenter generally agreed with all proposed modifications described in the relevant section of the proposed rule (81 FR 5843 through 5845). As discussed in section II.A.2.b.2 of this final rule, some commenters disfavored including ACO assigned beneficiaries within the population of assignable beneficiaries that would be the basis for calculating these factors. As discussed in section II.A.2.e.2 of this final rule, a commenter disagreed with limiting the population to assignable beneficiaries (instead of all FFS beneficiaries) when calculating the truncation thresholds.

*Response:* We appreciate the commenters' support for our proposed approach. We are finalizing, with one modification, our proposal to calculate factors based on national and regional FFS expenditures using the population of assignable Medicare FFS beneficiaries, identified based on the 12-month period corresponding to the calendar year for which the calculations are being made. See previous discussion in this final rule of related comments and responses, specifically: Section II.A.2.b.2 for comments concerning the inclusion of ACO assigned beneficiaries within the assignable population; and section II.A.2.e.2 for discussion of the comment concerning calculation of truncation thresholds based on expenditures for assignable beneficiaries instead of the broader FFS population.

As specified in the 2016 proposed rule, we plan to monitor for observable differences in the health status (for example, as identified by CMS-HCC risk scores) and expenditures of the assignable beneficiaries identified using the 12-month calendar year assignment window, as compared to assignable beneficiaries identified using an assignment window that is the off-set 12-month period prior to the benchmark or performance year (for example, October through September preceding the calendar year). In the event that we conclude that additional adjustments (for instance, as part of risk adjusting county FFS expenditures) are necessary to account for the use of assignable beneficiaries identified using an assignment window that is different from the assignment window used to assign beneficiaries to the ACO, we

would address this issue through future rulemaking.

Although commenters did not discuss in detail their consideration of our proposal to determine completion factors based on assignable Medicare FFS beneficiaries instead of all Medicare FFS beneficiaries, we have reconsidered the need for this proposed change. The completion factors are determined based on multiple years of Medicare FFS claims submission data, and reflect claim submission patterns across the Medicare program. The concern about potential bias resulting from calculations based on beneficiaries that are not eligible for assignment, such as non-utilizers, is not prominent in the calculation of a claims completion factor. For instance, in the case of non-utilizers, there would be no relevant data to consider on the timing of receipt of claims data, because there would be no claims with dates of service for these beneficiaries in the relevant period examined for the purpose of calculating the completion factor. Further, in calculating the completion factors, the use of more comprehensive data based on the timing of submission of claims across the entire Medicare FFS population, as is reflected in our current approach, would result in the most accurate factors as compared to use of a subset of Medicare FFS beneficiaries (such as assignable beneficiaries under the Shared Savings Program) for these calculations. For these reasons, we are not finalizing our proposal to replace the current approach for calculating the claims completion factors using all Medicare FFS beneficiaries with an approach to calculating these factors based on assignable Medicare FFS beneficiaries at this time.

*Comment:* A commenter noted that beneficiaries receiving only services provided by allied providers (non-physician practitioners) are excluded from the proposed definition of assignable beneficiary. This commenter suggested that these providers be included in determining assignable beneficiaries because of the increasing role of non-physician practitioners in efforts to lower the cost of care for patients with low acuity healthcare needs.

*Response:* We continue to believe it is important to align the definition of assignable beneficiary with the statutory requirement that beneficiaries be assigned to an ACO based on their use of primary care services furnished by physicians and with the methodology for identifying assignable beneficiaries described in the 2016 proposed rule and also discussed earlier in this section of the final rule. Applying the same

definition of assignable beneficiary as is used in the assignment process will help to ensure that program calculations based on national and regional FFS expenditures reflect the expenditures and acuity of patients that could be assigned to ACOs. Therefore we decline at this time to adopt the commenter's suggestion to also use services furnished by non-physician providers as a basis for identifying assignable beneficiaries.

*Comment:* Several commenters addressed the timing of applicability of the revised methodology for determining factors based on national FFS expenditures using the assignable beneficiary population instead of all FFS beneficiaries. A commenter noted support for the proposal that this methodology would apply for the 2017 performance year and all subsequent performance years and would apply to ACOs that are in the middle of an agreement period. One comment, which seemed to reflect the commenter's misunderstanding of the proposed policy, interpreted the proposal as failing to address the applicability of the proposed changes to ACOs with 2014 agreement start dates.

*Response:* We are finalizing with modifications our proposal that regulatory changes regarding the use of assignable beneficiaries in calculations based on national FFS expenditures would apply for the 2017 performance year and all subsequent performance years. The proposed rule specified revisions to the provisions at § 425.602(b), § 425.604(a)(1) through (3), § 425.606(a)(1) through (3), and § 425.610(a)(1) through (3) in order to differentiate between the methodology that applied for performance years before 2017 and the methodology that would apply for the 2017 performance year and all subsequent performance years. We believe it is important to clarify the timing of applicability of these changes, which will be reflected in the regulations finalized with this final rule:

- In establishing or resetting an ACO's historical benchmark for agreement periods beginning in 2017 and subsequent years, we will apply the methodology for use of assignable beneficiaries in determining factors based on national FFS expenditures and regional FFS expenditures.

- In calculations made during a performance year, including updating an ACO's historical benchmark and determining an ACO's performance year expenditures, for performance year 2017 and subsequent years, we will apply the methodology for use of assignable beneficiaries in determining factors

based on national FFS expenditures and regional FFS expenditures.

- To ensure consistency in the way in which expenditure calculations are performed across the program, we will apply the revised methodology to ACOs that are in the middle of an agreement period, including: ACOs that started their first agreement period in 2015 or 2016; ACOs that entered the program in 2014 and elect the participation option established with this final rule to defer by 1 year entrance into a second agreement period under a two-sided model; and ACOs that started their second agreement period on January 1, 2016. We will adjust the benchmarks for these ACOs at the start of the 2017 performance year, the first performance year in which these changes apply, and in any subsequent years in the agreement period, so that the benchmarks established for these ACOs will reflect the use of the same methodology that will apply in expenditure calculations for the corresponding performance year, including determining the benchmark update and the ACO's expenditures for the performance year.

We wish to clarify that for any performance year prior to the applicability date for the regulatory change, we will continue to apply the current methodology under which factors based on national FFS expenditures are calculated using all FFS beneficiaries.

**FINAL ACTION:** We are finalizing our proposal to use assignable beneficiaries in all national and regional FFS calculations with one modification. We are not finalizing our proposal to determine completion factors based on assignable Medicare FFS beneficiaries, and will continue to determine these completion factors based on the timing of submission of claims across the entire Medicare FFS population. However, as proposed, we will limit the Medicare FFS population used in all other program calculations to "assignable" Medicare beneficiaries who meet the following requirements: (1) Received at least one primary care service, as defined under § 425.20, with a date of service during the 12-month assignment window; and (2) this primary care service was provided by a primary care physician, as defined under § 425.20, or by a physician with one of the primary specialty designations included in § 425.402(c). The assignable beneficiary population will be identified consistently across program tracks using the assignment window for the 12-month calendar year corresponding to the benchmark or performance year. This revised methodology will apply to

all ACOs, including those ACOs with 2015 and 2016 agreement start dates that are in the middle of an agreement period, as well as ACOs that entered the program in 2014 and elect the participation option established with this final rule to defer by 1 year entrance into a second agreement period under a two-sided model. We will adjust the benchmarks for these ACOs at the start of the 2017 performance year and in any subsequent years in the agreement period so that the benchmarks established for these ACOs will reflect the methodology used in expenditure calculations for the performance year. We will provide additional information through subregulatory guidance regarding the process for using assignable beneficiaries to perform these calculations. We will revise the regulations to reflect these changes as follows:

- Revise the regulation at § 425.602(b)(1) using the authority under section 1899(i)(3) of the Act to provide that the historical benchmark will be updated annually for each year of the agreement period based on the flat dollar equivalent of the projected absolute amount of growth in national per capita expenditures for Parts A and B services under the original Medicare FFS program for assignable beneficiaries identified for the 12-month calendar year corresponding to the year for which the update is calculated. As discussed in section II.A.2.d.3 of this final rule, section IV.E of this final rule contains an updated assessment of all policies that are being implemented under the authority of section 1899(i)(3) of the Act. We anticipate that the costs of this alternative payment model will be periodically reassessed as part of the impact analysis for subsequent rulemaking regarding the payment models used in the Shared Savings Program. However, in the event we do not undertake additional rulemaking, we intend to periodically reassess whether the payment model established under the authority of section 1899(i)(3) of the Act continues to improve the quality and efficiency of items and services furnished to Medicare beneficiaries, without resulting in additional program expenditures. If we determine the payment model no longer satisfies the requirements of section 1899(i)(3) of the Act, for example if the alternative payment model results in net program costs, we will undertake additional notice and comment rulemaking to make adjustments to our payment methodology to assure continued compliance with the statutory requirements.

- Make conforming changes to the regulations on: (1) Truncation thresholds for limiting the impact of catastrophically large claims on ACO expenditures under § 425.602(a)(4), § 425.604(a)(4), § 425.606(a)(4), § 425.610(a)(4); and (2) growth rates used to trend forward expenditures during the benchmark period under § 425.602(a)(5) to specify that assignable Medicare FFS beneficiaries identified based on the 12-month period corresponding the calendar year for which the calculation is being made will be used to perform these calculations.

- Specify in a new provision of the Shared Savings Program regulations at § 425.603 that county FFS expenditures that are used in the methodology for resetting, adjusting, and updating an ACO's benchmark will be based on assignable Medicare FFS beneficiaries determined using the 12-month period corresponding to the calendar year for which the calculations are being made.

#### f. Timing of Applicability of Revised Rebasing and Updating Methodology

In the 2016 proposed rule, we discussed an approach under which the revised rebasing methodology could be applied to new agreement periods beginning on or after January 1, 2017, in a manner that allows for a phase-in to a greater percentage in calculating the regional adjustment for all ACOs:

- All ACOs would have the benchmark for their first agreement period set and updated under the methodology under § 425.602(a) and (b).
- The 2014, 2015, and 2016 starters and subsequent cohorts entering their second agreement periods on or after January 1, 2017, would be rebased under the new methodology for adjusting an ACO's rebased historical benchmark to reflect expenditures in the ACO's regional service area, and the ACO's rebased benchmark would be updated during the agreement period by growth in regional FFS expenditures. In calculating the regional adjustment to the rebased historical benchmark for an ACO's second agreement period, the percentage applied to the difference between the ACO's regional service area expenditures and the ACO's rebased historical benchmark expenditures would be set at 35 percent. In an ACO's third or subsequent agreement period this percentage would be set at 70 percent unless the Secretary determines a lower weight should be applied, as specified through future rulemaking.

- With respect to the ACOs that started in the program in 2012 and 2013 and entered a second agreement period beginning in 2016, we applied the

current rebasing methodology, under which we equally weight the benchmark years and account for savings generated during the ACO's prior agreement period, in rebasing their historical benchmark for their second agreement period. We would apply the methodology specified under § 425.602(b) for updating the benchmark annually for each year of their second agreement period. We would apply the new rebasing policies, including the phase in of the percentage used in calculating the regional adjustment, to these ACOs for the first time in calculating their rebased historical benchmark for their third agreement period (beginning in 2019), as if the ACOs were entering their second agreement period. Accordingly, the 2012 and 2013 starters would have the same transition to the use of a higher percentage in calculating the regional adjustment as all other ACOs.

We explained that this approach to phasing in the application of the new methodology for adjusting an ACO's rebased historical benchmark to reflect regional FFS expenditures would give ACOs and other stakeholders greater opportunity to prepare for, understand the effects of, and adjust to the application of benchmarks that incorporate regional expenditures.

Therefore, we proposed to make these changes applicable to ACOs starting a second or subsequent agreement period on or after January 1, 2017. These changes would initially apply in resetting benchmarks for the second agreement period for all ACOs other than those ACOs that started in the program in 2012 and 2013 (who entered their second agreement period on January 1, 2016). Furthermore, we proposed that 2012 and 2013 starters would have the same transition to regional adjustments to their rebased historical benchmarks as all other ACOs: In calculating the regional adjustment to the ACO's rebased historical benchmark for its third agreement period (in 2019), the percentage applied to the difference between the ACO's regional service area expenditures and ACO's rebased historical benchmark expenditures would be set at 35 percent; in its fourth or subsequent agreement period this percentage would be set at 70 percent unless the Secretary determines a lower weight should be applied, as specified through future rulemaking. We requested comment on this proposed approach to phasing in the application of the revised rebasing and updating methodology.

*Comment:* A commenter expressed support for the proposed phase-in of the

new benchmark rebasing methodology based on an ACO's individual agreement renewal schedule rather than moving all ACOs to the new standard at one time. Many commenters opposed the proposal to phase-in the revised methodology to 2012 and 2013 starters beginning in their third agreement periods (starting January 1, 2019). Instead, commenters suggested options that would allow 2012 and 2013 starters the choice of the proposed approach or having the revised methodology apply during their second agreement period (for example, applying the methodology for performance year 2017 and onward, or allowing eligible ACOs to enter a new agreement period under the revised methodology that would begin in 2017). A commenter, in favor of applying the revised rebasing methodology to all ACOs in their second agreement period, suggested retroactively applying the changes to the first performance year (2016) of the 2012 and 2013 starters' second agreement period. Another commenter suggested allowing 2012 and 2013 starters that meet certain eligibility criteria (such as a quality performance threshold) to enter a new agreement period under the revised methodology beginning 2017, and permitting those ACOs participating under a performance-based risk model to have a weight greater than 35 percent applied in the calculation of the regional FFS adjustment. Alternatively, a commenter suggested applying the 70 percent weight (instead of 35 percent, as proposed) in calculating the regional adjustment for 2012 and 2013 starters beginning with their third agreement period.

Many commenters seemed to view the delay in applying the revised rebasing methodology to 2012 and 2013 starters until their third agreement period as a misfortune of timing. Commenters who perceived the proposed adjustment as beneficial explained that delaying application of the revised methodology would penalize 2012 and 2013 starters (or stated another way, unfairly advantage later entrants into the program) and perpetuate differences in benchmarks between ACOs in the same region. These commenters believed that this delay may cause attrition of these ACOs from the program. A commenter pointed out that applying the revised methodology to 2014 starters who begin a new agreement period in 2017, but delaying its application to 2012 and 2013 starters until 2019, could inadvertently lead to provider movement between ACOs depending on which benchmarking approach applies and is more financially favorable to the

ACO. A commenter suggested giving 2014 starters the option of delaying application of the revised methodology until their third agreement period, citing uncertainty about the policies to be finalized as these organizations decide whether to continue in the program.<sup>2</sup>

*Response:* In section II.A.2.c.3 of this final rule, we discuss our response to comments requesting broader flexibility to allow ACOs to choose from a menu of options on when the revised rebasing methodology would apply, and the weight with which the regional adjustment would be calculated.

ACOs that entered the Shared Savings Program in 2012 and 2013 renewed their agreements beginning January 1, 2016, with the understanding that the benchmark rebasing methodology finalized in the June 2015 final rule would be applied to their second agreement period. Under this rebasing methodology, described elsewhere in this final rule, we equally weight the ACO's historical benchmark years, and apply an adjustment for savings generated under the ACO's prior agreement period. While this methodology is substantially different from the rebasing approach we are establishing in this final rule, we are in fact applying to these ACOs a rebasing methodology that is intended to help mitigate the effects of an ACO's past successful performance on its current benchmark. The adjustment for savings generated in the ACO's prior agreement period increases the ACO's rebased historical benchmark by an amount that reflects the ACO's past financial and quality performance, and takes into account the size of the ACO's assigned beneficiary population. Equally weighting the benchmark years (corresponding to the three performance years of the prior agreement period) in resetting the ACO's historical benchmark mitigates reductions to the benchmark that would result from placing a higher weight on more recent prior benchmark years (corresponding to later years in the ACO's prior agreement period), in which ACOs are anticipated to show greater expenditure reductions. This methodology was designed to encourage continued participation in the Shared Savings Program and performance improvement by ACOs entering a second or subsequent agreement period, and therefore improve the overall sustainability of the program. These

goals are consistent with the goals for the policies adopted in this final rule that incorporate regional FFS expenditures into the rebasing methodology.

Additionally, the 2016 proposed rule did not address the possibility of applying the revised rebasing methodology to these ACOs' second agreement periods spanning January 1, 2016 through December 31, 2018. As a result, we do not believe it would be appropriate to adopt a policy in this final rule under which we would apply the revised methodology to these ACOs prior to the start of their third agreement period in 2019. Applying this revised methodology in the middle of an ACO's second agreement period could prove disruptive to ACOs that have structured their operations and legal arrangements (including the ACO's Participant Agreements with ACO participant TINs) to reflect the application of the current benchmarking methodology. We also believe that more immediate application of the revised policies to 2012 and 2013 starters during their second agreement periods could undermine the ability of these ACOs to adapt to this change, possibly causing organizations to terminate their participation prior to the end of their second agreement period.

Furthermore, we do not believe it would be possible to allow these ACOs to terminate their current agreement period in order to start a new agreement period under the revised rebasing methodology, as suggested by some commenters. Section 425.222 addresses the circumstances under which an ACO may re-apply to participate in the Shared Savings Program after the ACO's agreement has been terminated. Section 425.222(a) specifies that an ACO that has been terminated from the Shared Savings Program under §§ 425.218 or 425.220 may participate in the Shared Savings Program again only after the date on which the term of the original participation agreement would have expired if the ACO had not been terminated. We believe that this provision, without further modification, would prohibit CMS from allowing ACOs with 2012 and 2013 agreement start dates to terminate their current second agreement and re-enter the program under the revised benchmark rebasing methodology for a new second agreement period beginning January 1, 2017.

Taking these factors into consideration, we decline at this time to modify the Shared Savings Program regulations to offer the flexibility for 2012 and 2013 starters to terminate their agreements beginning January 1, 2016, and to reapply for a new second

agreement period beginning January 1, 2017, under the revised rebasing methodology that is being adopted in this final rule.

*Comment:* Some commenters suggested alternatives not discussed in the proposed rule. Some commenters urged incorporating greater regulatory flexibility to apply the revised methodology when establishing the benchmarks for ACOs transitioning to the Shared Savings Program after completing a contract period under another CMS alternative payment methodology, including the Pioneer and Next Generation ACO Models. For example, with respect to the proposed phase-in approach, some commenters specified that former Pioneer ACOs and Next Generation ACOs entering their first agreement period under the Shared Savings Program should be allowed the option to be considered as entering a second or subsequent agreement period in order to allow their benchmark to be established using the regional benchmarking approach. A commenter explained that moving back to a benchmark calculated using national FFS factors would be taking a step backwards in terms of the evolution of the ACO model and unnecessarily expose these ACOs to additional risk.

*Response:* We greatly appreciate commenters' thoughtful suggestions for the transition of ACOs from other CMS ACO initiatives into the Shared Savings Program. We did not propose or discuss related changes to the Shared Savings Program regulations in the 2016 proposed rule. We agree with commenters that many organizations participating under other CMS ACO initiatives (such as the Pioneer ACO model and the Next Generation ACO model), which use factors based on regional FFS expenditures in setting ACO benchmarks, may find it disadvantageous to enter the Shared Savings Program under the methodology used to establish an ACO's benchmark for its first agreement period, and would prefer to be treated as if they were entering the program in a second or subsequent agreement period in order to receive a benchmark established using the rebasing methodology adopted in this final rule. We believe there are complexities to this issue that would need to be explored further, including the determination of which organizations would be eligible to be treated as entering the Shared Savings Program under a later agreement period and the applicability of other program requirements that relate to the agreement period in which an ACO is participating, including the selection of risk track and the quality performance

<sup>2</sup> The application/renewal cycle for the January 1, 2017 Shared Savings Program start date began in spring 2016. See the Shared Savings Program Web site, How to Apply Web page, available at <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/sharedsavingsprogram/Application.html>.

standard. We anticipate considering these issues further in future rulemaking.

**FINAL ACTION:** We are finalizing our proposal to make the new benchmark rebasing policies described in this final rule, including the phase in of the percentage used in calculating the regional adjustment, applicable to ACOs entering into a second or subsequent agreement period in 2017 or subsequent years. With respect to ACOs that started in the program in 2012 and 2013 that have renewed their agreements for a second agreement period beginning in 2016:

- We applied the rebasing methodology established with the June 2015 final rule, under which we equally weight the benchmark years and account for savings generated during the ACO's prior agreement period, in rebasing their historical benchmark for their second agreement period (beginning in 2016). With the conforming changes made to the regulations text in this final rule, this methodology is incorporated in new § 425.603(b). We will apply the methodology specified under § 425.602(b) to update the benchmark

annually for each year of the second agreement period for these ACOs.

- We will apply the new rebasing policies, including the revised phase in of the percentage used in calculating the regional adjustment that we are adopting in this final rule, to these ACOs for the first time in calculating their rebased historical benchmark for their third agreement period (beginning in 2019), as if the ACOs were entering their second agreement period. Accordingly, the 2012 and 2013 starters will have the same transition to the use of a higher percentage in calculating the regional adjustment as all other ACOs.

TABLE 3—CHARACTERISTICS OF BENCHMARKING APPROACHES BY AGREEMENT PERIOD

Source of methodology	Agreement period	Historical benchmark trend factors (trend BY1, BY2 to BY3)	Adjustment to the historical benchmark for regional FFS expenditures (percentage applied in calculating adjustment)	Adjustment to the historical benchmark for savings in prior agreement period?	Adjustment to the historical benchmark for ACO participant list changes	Adjustment to the historical benchmark for health status and demographic factors of performance year assigned beneficiaries	Update to the historical benchmark for growth in FFS spending
November 2011 final rule.	First .....	National .....	No .....	No .....	Calculated using benchmark year assignment based on the ACO's certified ACO Participant List for the performance year.	Newly assigned beneficiaries adjusted using CMS-HCC model; continuously assigned beneficiaries adjusted using demographic factors alone unless CMS-HCC risk scores result in a lower risk score.	National
As modified by June 2015 final rule.	Second (beginning 2016).	National .....	No .....	Yes .....	Same as methodology for first agreement period.	Same as methodology for first agreement period.	National
As modified by this final rule: Rebasing Methodology for second or subsequent agreement periods beginning 2017 and subsequent years.	Second (third for 2012/2013 starters).	Regional .....	Yes (35 percent, or 25 percent if ACO is determined to have higher spending compared to its region).	No .....	Same as methodology for first agreement period; regional adjustment redetermined based on ACO's certified ACO Participant List for the performance year.	No change .....	Regional
	Third (fourth for 2012/2013 starters).	Regional .....	Yes (70 percent unless the Secretary determines a lower weight should be applied, as specified through future rulemaking, or 50 percent if ACO is determined to have higher spending compared to its region).	No .....	Same as methodology for second agreement period beginning 2017 and subsequent years.	No change .....	Regional
	Fourth and subsequent (fifth and subsequent for 2012/2013 starters).	Regional .....	Yes (70 percent unless the Secretary determines a lower weight should be applied, as specified through future rulemaking).	No .....	Same as methodology for second agreement period beginning 2017 and subsequent years.	No change .....	Regional

#### B. Adjusting Benchmarks for Changes in ACO Participant (TIN) Composition

In the initial rulemaking establishing the Shared Savings Program, we acknowledged that the addition or

removal of ACO participants or ACO providers/suppliers (identified by TINs and NPIs, respectively) during the term of an ACO's participation agreement could affect a number of different

aspects of the ACO's participation in the Shared Savings Program. The 2016 proposed rule provided detailed background on the regulatory and subregulatory history of how CMS sets

and adjusts benchmarks to reflect ACO participant composition (see 81 FR 5848–5850).

We explained that under the current methodology, we set an ACO's historical benchmark at the start of an agreement period based on the assigned population in each of the three benchmark years by using the ACO Participant List certified by the ACO. The ACO must submit a new certified ACO Participant List at the start of each new performance year. CMS adjusts an ACO's historical benchmark at the start of a performance year if the ACO Participant List that the ACO certified at the start of the new performance year differs from the one it certified at the start of the prior performance year. We use the updated certified ACO Participant List to assign beneficiaries to the ACO in the benchmark period (the 3 years prior to the start of the ACO's agreement period) in order to determine the ACO's adjusted historical benchmark. As a result of changes to the ACO's certified ACO Participant List, we may adjust the historical benchmark upward or downward. Under this methodology, the historical benchmarks for ACOs with ACO Participant List changes from one performance year to the next continue to reflect the ACOs' historical costs in relation to the current composition of the ACO.

During the program's initial performance years, we experienced a high volume of change requests from ACOs, both adding and removing ACO participants. We adjusted the historical benchmarks for 162 of 220 ACOs (74 percent) with 2012 and 2013 start dates for the 2014 performance year to reflect changes in ACO participants. For the 2015 performance year, we adjusted benchmarks for 245 of 313 ACOs (78 percent) with 2012, 2013 or 2014 start dates to reflect changes in ACO participants.

While the current methodology ensures that a benchmark that has been adjusted based on changes in the ACO's participant composition accurately reflects benchmark year assignment using the most recent certified ACO Participant List, a primary drawback is that this methodology is operationally burdensome. To adjust benchmarks to account for ACO Participant List changes made by ACOs for each new performance year, we must repeat the assignment process for all 3 benchmark years for each starter cohort. Furthermore, with the addition of Track 3, we will need to perform two assignment runs for each benchmark year for a starter cohort, given that assignment for Track 3 ACOs is based on an offset beneficiary assignment

window of the most recent 12-month period preceding the relevant calendar year for which data are available (for example, the period spanning October–September prior to the start of the benchmark year) that differs from the calendar year beneficiary assignment window used for Track 1 and Track 2 ACOs.

In light of the operational burden of adjusting benchmarks to reflect changes in ACO participants under the current policy, and the considerations associated with our proposals to adopt a benchmark rebasing methodology that requires additional calculations, we proposed to replace the current approach for calculating adjusted historical benchmarks for ACOs that make ACO Participant List changes with a more streamlined approach on a program-wide basis. The proposed approach would start with an ACO's historical benchmark based on the ACO's certified ACO Participant List for the most recent prior performance year and make adjustments using a ratio that is based on expenditures during a reference year for: (1) The ACO's beneficiaries assigned using both the ACO Participant List for the new performance year and the ACO Participant List for the most recent prior performance year (stayers); and (2) expenditures for the ACO's beneficiaries assigned using only the ACO Participant List for the new performance year (joiners) to obtain the overall adjusted benchmark. Calculations of the adjustment would be made, and applied to the historical benchmark, for each of the following populations of beneficiaries, according to Medicare enrollment type: ESRD, disabled, aged/dual eligible, aged/non-dual eligible. In the event an ACO's new ACO Participant List resulted in zero stayers, we proposed to continue to apply the current methodology for adjusting the ACO's historical benchmark for ACO Participant List changes.

We proposed to incorporate this adjustment to the historical benchmark for ACOs in their first agreement period and those ACOs that started a second agreement period on January 1, 2016, by adding a paragraph to § 425.602. In addition, we proposed to specify that the adjustment would apply to an ACO's rebased historical benchmark under the revised rebasing methodology

in a new provision of the Shared Savings Program regulations at § 425.603. We also proposed to add definitions for “stayers,” “joiners,” and “leavers” to § 425.20.

We stated in the proposed rule that we believe that this approach would offer the right balance between approximating the accuracy of the current methodology for adjusting historical benchmarks (which requires performing beneficiary assignment for all 3 of an ACO's historical benchmark years with the new ACO Participant List) and operational ease. Initial modeling suggested that benchmarks calculated using this alternative methodology are highly correlated with those calculated using the current methodology.

We also examined and sought comment on a second alternative under which we would calculate the average per capita expenditures for leavers in the reference year and use this value, along with the relative person years for leavers and stayers, to impute average per capita reference year expenditures for stayers from the historical benchmark. The imputed expenditures for stayers would then be combined with average per capita reference year expenditures for joiners to obtain the overall adjusted benchmark.

*Comment:* While a few commenters expressed support for the proposed methodology to streamline adjustments for ACO Participant List changes, many commenters felt that CMS did not provide adequate information for stakeholders to properly evaluate the proposal, noting that the agency did not provide detailed results of its own modeling or sufficient data to allow others to perform their own analyses. A number of commenters urged the agency to make additional information available and to postpone finalization of the proposal at this time.

*Response:* In light of commenters' suggestions that we allow additional time to analyze the proposal, we are not finalizing the proposed new streamlined methodology at this time. We continue to believe the proposed approach has the potential to reduce operational burden without sacrificing accuracy. Therefore, we anticipate revisiting this issue in future notice and comment rulemaking. We believe that delaying adoption of a new approach to adjust historical benchmarks for ACO Participant List changes will allow CMS to gain more experience in the program and will allow more opportunity for the agency and stakeholders to evaluate the merits and tradeoffs associated with the proposed methodology or other alternatives. To that end, we anticipate

making more information available to aid stakeholder evaluation of this approach through future notice and comment rulemaking.

*Comment:* Some commenters expressed concerns about the accuracy of a “proxy” measure for adjusting benchmarks, or the potential for some ACOs to see large differences between the proposed and current methodologies for adjusting an ACO’s benchmark for ACO Participant List changes, even if the two approaches produce similar results on average. Several commenters noted that differences of even one or two percentage points between the proposed and existing methodology could be quite substantial for an individual ACO. Some commenters also warned that using an expenditure ratio based on a single year of data could be less accurate or equitable than the current methodology that redetermines beneficiary assignment for each of an ACO’s three benchmark years. A commenter stated CMS should not use a proxy method for adjusting the benchmark and that the agency should not let expediency threaten the accuracy of the program.

*Response:* We appreciate the concerns raised by commenters regarding the accuracy of the proposed streamlined approach for adjusting historical benchmarks for ACO Participant List changes and the potential for the proposed approach to have varied effects across ACOs. We believe that delaying finalization of this proposal will allow stakeholders further opportunity to study the implications of this or other alternatives, which may assuage some of the concerns initially raised about this proposal.

We want to take this occasion to clarify a statement in the proposed rule that referred to a magnitude of change for most ACOs of between  $-2$  percent and  $+2$  percent. Some commenters seemed to interpret this statement as referring to differences between the current methodology for computing adjusted benchmarks and the proposed streamlined methodology. In fact, the statement referred to differences between benchmarks calculated using the current methodology but based on different ACO Participant Lists (previous performance year and updated). In our modeling, comparing adjusted benchmarks computed under the proposed and current methodologies for 88 ACOs that began the program in 2014 and made ACO Participant List Changes for performance year 2015, we found that for close to two-thirds of these ACOs, the difference between the two methods was within half of a percentage point in either direction. For

over 80 percent of these ACOs, the difference was within 1 percentage point. Only one ACO among the 88 saw a difference greater than two percentage points, with the proposed approach producing a benchmark that was 2.3 percent lower than the benchmark calculated under the current methodology. The mean difference between the two methods (proposed minus current) was  $-0.2$  percent and the median was  $-0.1$  percent.

*Comment:* Some commenters suggested other alternatives for CMS’ consideration in conjunction with the proposed approach. A few commenters indicated that if CMS did decide to finalize the proposal to streamline the calculation of adjusted benchmarks, the agency should broaden the set of circumstances under which the current methodology would apply. Some commenters suggested that, rather than reverting to the current methodology only in the unlikely instance of zero “stayers,” the agency should adopt a low-volume threshold for stayers, below which the current methodology would be used to adjust for ACO Participant List changes. Another commenter called for adjusting benchmarks for ACO Participant List changes more frequently, such as within 30 days of an ACO notifying CMS of an ACO participant’s resignation or removal from the list. Another commenter wanted to see the proposed methodology coupled with efforts by CMS to promote better data collection and information sharing.

Several commenters acknowledged that they understood CMS’ desire to reduce operational complexity, but they expressed concern that CMS proposed a proxy method for adjusting benchmarks for ACO Participant List changes without first addressing other aspects of the existing methodology that commenters perceived to be flawed. Some commenters detailed alternative approaches. For example, some commenters suggested that adjustments to the ACO’s benchmark for composition changes should be made for changes in ACO providers/suppliers, identified by National Provider Identifiers (NPIs), rather than for changes in ACO participants identified by TINs, or should account for changes in both NPIs and TINs. Their rationale was that only ACOs themselves can determine which physicians and non-physician practitioners are functioning as primary care providers and should be used in determining beneficiary assignment. Another commenter suggested that using NPIs instead of TINs could better account for changes in ACO composition over time. Some

commenters also felt that CMS should address instability and inaccuracies introduced into benchmarks by ACO Participant List changes when such changes result in a difference in the acuity of patients assigned to the ACO in the benchmark period versus those assigned to the ACO for the performance year. A few commenters noted that some ACOs have had artificially low benchmarks due to innocuous changes in TINs, such as restructurings, where CMS did not make a correction or accommodation. These commenters further explained, for example, that when an ACO introduces a new service line for complex patients within an existing TIN during an agreement period, there would be no history of treating such patients in the baseline period and the benchmark would be understated. Another commenter opined that CMS should perform additional analysis and policy development on the fundamentals of benchmarking before developing a proxy process for making adjustments to benchmarks.

*Response:* We appreciate the suggestions raised by commenters and will take them into consideration when revisiting this issue in future rulemaking. However, we note that some of the suggestions offered, for example adjusting benchmarks for ACO Participant List changes more frequently, would likely offset, if not negate, the expected reduction in operational burden associated with the streamlined approach, which was the primary rationale behind its development. Thus it will be important to weigh the tradeoffs posed by any suggested modifications.

Further, in the 2016 proposed rule, CMS did not contemplate changes to the underlying methodology used to assign beneficiaries to ACOs, including how ACO participants are defined for purposes of assignment, or to policies surrounding when or under what circumstances CMS will make adjustments or corrections to an ACO’s benchmark. We appreciate the concerns raised by commenters and will continue to review existing policies as we gain additional experience in the program. That being said, we do not believe that we should necessarily forgo opportunities to reduce administrative complexity in the near term if alternative methodologies have the potential to lower operational burden without sacrificing accuracy when calculating the adjustment for changes in the ACO’s certified ACO Participant List.

*FINAL ACTION:* After consideration of the public comments received and

the concerns raised by many commenters, at this time, we are not finalizing our proposal to replace the current approach for calculating adjusted historical benchmarks for ACOs that make ACO Participant List changes with a new program-wide approach that would adjust an ACO's historical benchmark using an expenditure ratio based on single reference year. Relatedly, we are not finalizing the proposed definitions of "stayers," "leavers," and "joiners" in § 425.20 at this time. Although we are not finalizing the proposal to adopt a more streamlined approach for adjusting historical benchmarks for ACO Participant List changes in this rule, we continue to believe this alternative approach has merit as a means for reducing operational burden without sacrificing accuracy in ACO benchmarks. As such, we anticipate revisiting this proposal in future notice and comment rulemaking, and making more information available at that time to aid stakeholder evaluation. However, we are finalizing as proposed clarifying revisions to the description of the current approach to calculating adjusted historical benchmarks for ACOs that make ACO Participant List changes at § 425.602(a)(8), to specify that the benchmark is adjusted to take into account the expenditures for beneficiaries who would have been assigned to the ACO in any of the 3 most recent years prior to the agreement period using the most recent certified ACO Participant List for the relevant performance year. In addition, we will include a similar provision in new § 425.603 to provide that the same adjustment for ACO Participant List changes will be made to an ACO's rebased historical benchmark.

### *C. Facilitating Transition to Performance-Based Risk*

#### *1. Overview*

As discussed in detail in the proposed rule (81 FR 5851 through 5853), we continue to believe that in order for the Shared Savings Program to be effective and sustainable over the long term, we need to further strengthen our efforts to transition the Shared Savings Program to a two-sided performance-based risk program in which ACOs share in both savings and losses. Currently, for its initial agreement period, an ACO applies to participate in a particular financial model or track of the program as specified under § 425.600(a). If the ACO's application is accepted, the ACO must remain under that financial model for the duration of its 3-year agreement. ACOs entering the program under the

one-sided shared savings model (Track 1) that meet eligibility criteria may continue their participation under this model for a second 3-year agreement period as specified under § 425.600(b). In response to suggestions from ACOs and other stakeholders, and based on our experience with the first group of ACOs eligible for renewal for a second agreement period starting in 2016 in which nearly all such ACOs applied to remain in Track 1 for an additional agreement period, we further considered whether it would be appropriate to offer an additional participation option to encourage ACOs to move more quickly from the one-sided shared savings model to a performance-based risk model when renewing their agreements.

#### *2. Additional Option for ACOs Participating Under Track 1 to Apply to Renew for a Second Agreement Period Under a Two-Sided Track*

To respond to stakeholder concerns and to provide additional flexibility for ACOs that are willing to accept performance-based risk arrangements, we proposed to add a participation option that would allow eligible Track 1 ACOs to defer by 1 year their entrance into a performance-based risk model (Track 2 or 3) by extending their first agreement period under Track 1 for a fourth performance year. ACOs that would be eligible to elect this proposed new participation option would be those ACOs eligible to renew for a second agreement period under Track 1 but instead are willing to move to a performance-based risk track 2 years earlier, after continuing under Track 1 for 1 additional year. This option would assist ACOs in transitioning to a two-sided risk track when they need only one additional year in Track 1 rather than a full 3-year agreement period in order to prepare to accept performance-based risk. The additional year could allow such ACOs to further develop necessary infrastructure to meet the program's goals, such as further developing their care management services, adopting additional mechanisms for measuring and improving quality performance, finalizing implementation and testing of electronic medical records, and performing data analytics. We proposed to make this option available to Track 1 ACOs whose first agreement period is scheduled to end on or after December 31, 2016. Under this proposal, ACOs that elect this new participation option would continue under their first agreement period for a fourth year, deferring benchmark rebasing as well as deferring entrance to a two-sided risk track if they are approved for renewal.

More specifically, we proposed to provide an additional option for ACOs participating under Track 1 to apply to renew for a second agreement period under a two-sided track (Track 2 or Track 3) under the renewal process specified at § 425.224. If the ACO's renewal request is approved, the ACO would be able to defer entering the new agreement period under a performance-based risk track for 1 year. Further, as a result of this deferral, we would also defer rebasing the ACO's benchmark for 1 year. At the end of this fourth performance year under Track 1, the ACO would transition to the selected performance-based risk track for a 3-year agreement period. Accordingly, we proposed to amend the participation agreement requirements at § 425.200 to provide that an ACO that defers entering its new agreement period will be able to continue participating under its first agreement for an additional year (for an agreement period that would total 4 years).

An ACO electing this option would still be required to undergo the renewal process specified at § 425.224 prior to the end of its initial agreement (PY 3) and meet all other renewal requirements including the requirement that the ACO demonstrate that it is capable of repaying shared losses as required to enter a performance-based risk track. Because the ACO would be committing under the renewal application to transition to a performance-based risk track following completion of PY 4 under Track 1, the ACO would be required to demonstrate as part of its renewal application that it has established an adequate repayment mechanism as specified at § 425.204(f) to assure CMS of its ability to repay losses for which it may be liable during the new agreement period. We proposed to make this option available to Track 1 ACOs whose first agreement period is scheduled to end on or after December 31, 2016. Therefore, this proposed option would be available to ACOs with 2014 start dates seeking to renew their participation agreements in order to enter their second agreement period beginning in 2017. Under this proposal, we would update the ACO's benchmark as specified at § 425.602(b) for performance year 4 of the initial participation agreement. However, we would defer resetting the benchmark as specified at proposed § 425.603 until the beginning of the ACO's second agreement period (that is, the ACO's first agreement period under the selected performance-based risk track). The benchmark would be reset under the policies in place for that time

period, including the regional adjustment we are finalizing in this rule. Also, we proposed that the quality performance standard that would apply for performance year 4 of the initial participation agreement would be the same as for the ACO's performance year 3, consistent with § 425.502(a)(2). Specifically, we proposed that during the fourth performance year of the ACO's first agreement period, the ACO must continue to report all measures and the ACO will be assessed on performance based on the quality performance standard in place for the third performance year of the ACO's first agreement period.

In addition, we proposed that if a Track 1 ACO finishing its initial agreement period chooses to elect this option during the renewal of its participation in the Shared Savings Program, the ACO would be required to transition to the selected performance-based risk track at the end of the fourth performance year under Track 1. The term of the second agreement period would be 3 performance years.

If such an ACO subsequently decides during the fourth performance year that it no longer wants to transition to the performance-based risk track it selected in its application for a second agreement period, then the currently established close-out procedures and payment consequences of early termination under § 425.221 would apply. For example, if the ACO voluntarily terminates its agreement under § 425.221(a), effective December 31 of its fourth performance year, and completes all required close-out procedures, then as specified by § 425.221(b), the ACO would be eligible to share in any shared savings for its fourth performance year.

In addition, to provide some incentive for ACOs to honor their commitment to participate early in a performance-based risk track, we proposed that if an ACO that has been approved for an extension of its initial agreement period terminates its participation agreement prior to the start of the first performance year of the second agreement period, then the ACO would be considered to have terminated its participation agreement for the second agreement period under § 425.220. Such an ACO would not be eligible to participate in the Shared Savings Program again until after the date on which the term of that second agreement period would have expired if the ACO had not terminated its participation, consistent with § 425.222.

In the proposed rule, we also noted that if an ACO that goes on to participate under a two-sided track

under this proposed option voluntarily terminates its agreement during its second agreement period, then the currently established close-out procedures and payment consequences of early termination under § 425.221 would apply. If an ACO terminates its agreement under its selected performance-based risk track and subsequently decides to reapply to participate in the Shared Savings Program, then the requirements under § 425.222 for re-application after termination would apply. For example, consistent with our current policy, such an organization would be required to apply to participate under a two-sided model and would have to wait the remaining duration of the agreement period before reapplying.

In developing this proposal to support our policy goal of providing additional flexibility to ACOs that are considering transitioning to two-sided risk, we also considered an alternative option that would permit the ACO to transition to a two-sided risk track during a subsequent 3-year agreement period under Track 1, instead of extending the first agreement period for an additional year. Under this alternative approach, we indicated that we would allow the ACO to remain in Track 1 for the first performance year of the second 3-year agreement period. The ACO would then be required to transition to Track 2 or 3 for the final 2 performance years of the agreement period. An ACO choosing this option would be required to satisfy all the requirements for a performance-based risk track at the time of renewal, including the requirement that the ACO demonstrate that it is capable of repaying shared losses as required to enter a performance-based risk track. Under this approach, we would rebase the ACO's benchmark as provided under proposed § 425.603, effective for the first year of the second 3-year agreement period. Further, we would calculate shared savings for the first year of the second 3-year agreement period under the one-sided model as specified at § 425.604. During the second and third performance years of the second agreement period, we would calculate shared savings and shared losses, as applicable, under either Track 2 (as determined at § 425.606) or Track 3 (as determined at § 425.610). We did not elect to propose this alternative option because we believed there could be a stronger incentive for some ACOs to transition to two-sided performance-based risk if we were to defer resetting the ACO's benchmark until the beginning of the ACO's second agreement period. Additionally, we

noted that the alternative approach could raise concerns about risk selection since an ACO could participate for the first performance year of the second agreement period under this alternative, learn midway through the second performance year that its expenditures for the first performance year were below the negative MSR, and withdraw from the program before being subjected to reconciliation under performance-based risk.

We welcomed comments on our proposal and the alternative approach, as well as on other possible alternatives to provide flexibility and encourage ACOs to enter into and honor their participation agreements under performance-based risk tracks, and any related issues.

*Comment:* Commenters generally supported the proposed new participation option, believing that this additional participation option could assist some ACOs with transitioning to a two-sided risk track more quickly by giving eligible ACOs an additional year to further develop the infrastructure needed to achieve success under a performance-based risk track. Some commenters thought the alternative approach, in which we would allow the ACO to remain in Track 1 for the first performance year of its second 3 year agreement period before transitioning to a performance-based risk track in year 2, should also be offered, and might even be advantageous for ACOs in some situations. For example, some commenters suggested that this alternative participation option could be advantageous if it were integrated with the APM requirements under MACRA; that is, if the first year of a new two-sided risk contract under the alternative option could qualify as being "more than nominal financial risk" and therefore enable the ACO's physicians and other eligible clinicians to receive bonus payments equal to 5 percent of their covered Medicare professional services. A number of commenters also indicated that it was difficult for them to fully evaluate the proposed option and the alternative approach without first having policies in place for implementing MACRA, so that it would be clearer whether these new participation options might qualify as an APM under MACRA.

To provide yet even more flexibility for ACOs prepared to accept performance-based risk, some commenters recommended that CMS allow ACOs to "move up" the risk tracks (that is, to move from Track 1 to Track 2 or 3, or move from Track 2 to Track 3) between performance years without being required to wait for the

start of a new agreement period. These commenters suggested that allowing an ACO to accept varying degrees of risk within an agreement period would position the ACO to best balance its exposure to and tolerance for financial risk and would create a true glide path for providers.

However, many commenters indicated that while they supported adding one or more additional participation options, they also cautioned that adding such participation options might not have much impact on ACOs' willingness to participate under a performance-based risk track. These commenters suggested that if a Track 1 ACO is uncertain about its ability to successfully manage financial risk, the ACO would more likely simply choose to continue under Track 1 for a second agreement period. Another commenter stated that the anticipated impact of the proposed regional benchmark rebasing methodology is not as significant as hoped for and therefore the proposal to facilitate transition to performance-based risk by extending an ACO's agreement period into a fourth year without rebasing is not a meaningful incentive. This commenter recommended that CMS consider lowering the minimum savings rate of two percent under § 425.604(b) as a way to support ACOs by improving the probability that they will be eligible to share in any savings they achieve as they transition to performance-based risk, particularly for ACOs that demonstrate a commitment to the Shared Savings Program through their years of participation and meet sufficient size requirements for statistical reliability.

A commenter expressed concern that adding the proposed additional participation option could slow the move away from FFS payment arrangements. This commenter believes that the ultimate goal is for providers to take on full financial responsibility for caring for a population of patients for a fixed payment. On balance, however, the commenter preferred the proposed alternative for transition to participation under Track 2 or Track 3, over the option to renew for an additional 3-year agreement period under Track 1, as previously finalized in the June 2015 rule.

*Response:* We appreciate the general support received from commenters on our proposal to provide an additional option for ACOs participating under Track 1 to apply to renew for a second agreement period under a two sided track (Track 2 or Track 3), under which the ACO, if approved by CMS, may

defer entering the new agreement period under a performance-based risk track, and extend participation under the initial participation agreement, for 1 year (that is, the initial agreement period would total 4 years). We acknowledge the concerns raised by commenters that this new participation option might not significantly affect ACOs' willingness to assume performance-based risk, but agree with commenters that such an option may influence some ACOs to transition to a performance-based risk track sooner than they otherwise might have.

As we gain experience with this new participation option in the Shared Savings Program, we will continue to evaluate the appropriateness and effectiveness of our incentives to encourage ACOs to transition to a performance-based risk track and, as necessary, may propose refinements through future notice and comment rulemaking. Although we are not adopting the alternative approach that we discussed in the proposed rule (that would permit the ACO to transition to a two-sided risk track during a subsequent 3-year agreement period under Track 1, instead of deferring entry into a new agreement period under a two-sided risk track and extending the first agreement period for an additional year), we may revisit it along with possible other approaches, including those suggested by commenters, in the future. As we gain additional experience under the Shared Savings Program, we may propose, if warranted, one or more additional participation options through future rulemaking to increase ACOs' willingness to assume performance-based risk. We would also note that the Department of Health and Human Services recently issued a Notice of Proposed Rulemaking that includes its proposals for implementation of the bonus payment for participants in eligible APMs under MACRA, 81 FR 28162 (May 9, 2016).

*Comment:* A commenter disagreed with our proposal that if an ACO that has been approved for an extension of its initial agreement period terminates its participation agreement prior to the start of the first performance year of the second agreement period, the ACO would be considered to have terminated its participation agreement for the second agreement period under § 425.220. We included this proposal because we believe it will provide an incentive for ACOs to honor their commitment to participate early in a performance-based risk track. The commenter believes that the proposed approach overlooks the fact that unanticipated changes can have a

material impact on an ACO's readiness to assume risk. To illustrate, this commenter suggested that a significant change in the ACO's Participant List could have a material impact on the ACO's readiness and ability to follow through on its prior commitment to transition to a performance-based risk track. To address such situations, this commenter recommended that CMS create a "hold harmless" provision for ACOs that choose to renew their participation under the new participation option but then subsequently decide they are unable to assume performance-based risk due to a material change in their structure. Under this suggested hold harmless provision, an ACO that is unable to honor its commitment to participate in a performance-based risk track should have its benchmark rebased, so that it can be treated as being in PY1 of its second agreement period under Track 1. This commenter encouraged CMS to work with stakeholders to define a comprehensive list of material events that would enable an ACO to qualify for the hold harmless provision.

*Response:* We are not persuaded that it is necessary to revise the proposal to include a "hold harmless" provision. We continue to believe it would be appropriate under this new participation option to provide an incentive for ACOs to honor their commitment to participate early in a performance-based risk track. We would expect that ACOs considering this new participation option would share their process and systems knowledge with potential new ACO participants to increase the likelihood that new ACO participants could be successfully integrated in to the ACO, but ultimately ACOs should make their own determination as to whether a TIN is ready to join it in assuming performance-based risk. Alternatively, if the change in the ACO's composition is due the loss of one or more key ACO participant TINs, we believe it would be appropriate for the ACO to make its own determination as to whether to honor its commitment to assume performance-based risk or terminate its participation agreement. Also, we already have an adjustment to the historical benchmark in place that accounts for changes in an ACO's certified ACO Participant List, as discussed in section II.B of this final rule. This policy allows for more accurate benchmarks that reflect the historical spending patterns of the ACO and its assigned beneficiaries. Therefore, we are finalizing as proposed the policy that, if an ACO that has been approved for an extension of its initial

agreement period terminates its participation agreement prior to the start of the first performance year of the second agreement period, the ACO will be considered to have terminated its participation agreement for the second agreement period under § 425.220. Such an ACO will not be eligible to participate in the Shared Savings Program again until after the date on which the term of that second agreement period would have expired if the ACO had not terminated its participation, consistent with § 425.222.

*Comment:* Commenters provided a variety of other suggestions that they believe might also encourage ACOs to transition to a performance-based risk track earlier. For example, a commenter preferring retrospective beneficiary assignment under Track 2 rather than prospective assignment under Track 3, suggested that Track 2 could be made more attractive to participants if CMS were to make enhancements that are currently available only under Track 3, such as the waiver of the SNF 3-Day Rule, available under Track 2. Similar to comments we received in prior rulemaking, a number of commenters requested that CMS allow ACOs to include partial or “split TINs” among their ACO participants to allow large organizations, such as academic medical centers and their faculty practice plans, to participate in the program under a performance-based risk track with a subset of their providers.

Another commenter urged CMS to create stronger incentives for ACOs to assume downside risk in Track 2 and Track 3, such as by reducing the final sharing rate for eligible ACOs under Track 1 to perhaps 20 percent for the second agreement period, to minimize the number of ACOs renewing under Track 1. Otherwise, the commenter suggests many Track 1 ACOs may decide that Track 1 benefits, including having no risk of shared losses, exceed the marginal reduction of their shared savings payments during the second renewal term. This commenter also believes that CMS should provide a clearer and more certain path for ACOs willing to share in risk by, for example, also offering prospective beneficiary assignment for ACOs moving to Track 2 and providing more timely Part D expenditure data for assigned beneficiaries. The commenter believes that these changes would help ACOs predict the expected baseline Medicare spending and savings and reduce uncertainty.

*Response:* Although we are not addressing these additional suggestions as part of this rulemaking, we will further consider these and other

suggestions from ACOs and other stakeholders that might encourage ACOs to enter performance-based risk arrangements earlier. As we discussed in the June 2015 final rule (80 FR 32810 and 32811), we appreciate the flexibilities that could be afforded to ACOs if a methodology could be developed that would permit ACOs to split ACO participants or ACO providers/suppliers into two different risk tracks. Under such a model, ACOs could progressively move providers participating in their organizations into risk in a step-wise fashion. Therefore, we continue to be interested in exploring operational processes that could permit such a design while also ensuring appropriate beneficiary protections. We intend to continue considering this issue and may revisit it in future rulemaking as infrastructure evolves to support this new alternative.

*FINAL ACTION:* We are finalizing our proposal to provide an additional option for ACOs participating under Track 1 to apply to renew for a second agreement period under a two-sided track (Track 2 or Track 3) under the renewal process specified at § 425.224. If the ACO's renewal request is approved, the ACO may defer entering the new agreement period under the performance-based risk track for 1 year and extend its first agreement period under Track 1 for a fourth performance year. Further, as a result of this deferral and extension, we will also defer rebasing the ACO's benchmark for 1 year. At the end of the fourth performance year under Track 1, the ACO will transition to the selected performance-based risk track for a 3-year agreement period. Accordingly, we are amending the participation agreement requirements at § 425.200 to provide that an ACO in its first agreement period under Track 1 that has applied and been approved for a second agreement period under a performance-based risk track that defers entering its new agreement period under the performance-based risk track will be able to continue participating under its first agreement for an additional year (for an agreement period that would total 4 years).

In addition, we are finalizing our proposal that if an ACO that has been approved for an extension of its initial agreement period terminates its participation agreement prior to the start of the first performance year of the second agreement period, then the ACO will be considered to have terminated its participation agreement for the second agreement period under § 425.220. Such an ACO will not be eligible to participate in the Shared Savings Program again until after the

date on which the term of that second agreement period would have expired if the ACO had not terminated its participation, consistent with § 425.222.

*D. Administrative Finality: Reopening Determinations of ACO Savings or Losses to Correct Financial Reconciliation Calculations, and a Conforming Change*

1. Overview

ACOs enter into agreements with CMS to participate in the Shared Savings Program, under which ACOs that meet quality performance requirements and reduce the Medicare Parts A and B expenditures for their assigned beneficiaries below their benchmark by a specified margin are eligible to share a percentage of savings with the Medicare program. Further, ACOs participating under a two-sided risk track, whose Medicare Parts A and B expenditures for their assigned beneficiaries exceed their benchmarks by a specified margin, are liable for sharing losses with CMS. After each performance year, CMS calculates whether an ACO has generated shared savings by comparing its actual expenditures for its assigned beneficiaries in the PY with its updated benchmark. Savings are generated if actual Medicare Parts A and B expenditures for assigned beneficiaries are less than the updated benchmark expenditures and shared with the ACO if they exceed the ACO's minimum savings rate, and the ACO meets the minimum quality performance standards and otherwise maintains its eligibility to participate in the Shared Savings Program. For an ACO under a two-sided risk track, losses are generated if actual Medicare Parts A and B expenditures for assigned beneficiaries are greater than the updated benchmark expenditures and the ACO is liable for shared losses if the losses exceed the ACO's minimum loss rate.

To date, we have announced 2 years of financial performance results for ACOs participating in the Shared Savings Program, in Fall 2014 for 220 ACOs with 2012 and 2013 start dates for PY 1 (concluding December 31, 2013), and in August 2015 for 333 ACOs with 2012, 2013 and 2014 start dates for PY 2014. As discussed in detail in the proposed rule (81 FR 5853 through 5854), several months after the release of PY 1 financial reconciliation results and shared savings payments to eligible ACOs, we discovered that there was an issue with one of the source input data fields used in the final financial reconciliation calculations. As a result,

the PY 1 shared savings payments were overstated for some ACOs and shared losses were understated for some other ACOs. We ultimately determined this issue resulted in an estimated 5 percent overstatement of PY 1 shared savings payments to ACOs and an understatement of shared losses (81 FR 5853 and 5854). The impact on individual ACOs varied depending on the extent to which services provided to the ACO's assigned beneficiaries were furnished by providers that receive DSH payments. The issue did not result in understated PY 1 shared savings payments or overstated PY 1 shared loss recoupments for any ACO.

The financial reconciliation calculation/methodology and the amount of shared savings an ACO might earn, including all underlying financial calculations, are not appealable. That is, the determination of whether an ACO is eligible for shared savings under section 1899(d) of the Act, and the amount of such shared savings, as well as the underlying financial calculations are precluded from administrative and judicial review under section 1899(g)(4) of the Act and § 425.800(a)(4). However, under § 425.314(a)(4), if as a result of any inspection, evaluation, or audit, it is determined that the amount of shared savings due to the ACO or the amount of shared losses owed by the ACO has been calculated in error, CMS reserves the right to reopen the initial determination and issue a revised initial determination. (See also the CMS Web site at <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/sharedsavingsprogram/Downloads/Reconsideration-Review-Process-Guidance.pdf>).

As noted in the proposed rule, we have not previously specified the actions that we would take under circumstances when we identify an error in a prior payment determination, such as the error that occurred in the calculation of PY 1 shared savings and shared losses. We are concerned that the current uncertainty regarding the timeframes and other circumstances in which we would reopen a payment determination to correct financial calculations under the Shared Savings Program could introduce financial uncertainty which could seriously limit an ACO's ability to invest in additional improvements (such as IT solutions and process development, staffing, population management, care coordination, and patient education) to increase quality and efficiency of care. This uncertainty could also limit an ACO's ability to get a clean opinion from its financial auditors, which could, for example, harm the ACO's ability to

obtain necessary capital for additional program improvements. This could be especially challenging for ACOs seeking to enter or continue under a two-sided performance-based risk track since under the requirements at § 425.204(f)(2), such an ACO must, as part of its application for a two-sided performance-based risk track, demonstrate its ability to repay shared losses to the Medicare program, which it may do by placing funds in escrow, obtaining a surety bond, establishing a line of credit (as evidenced by a letter of credit that the Medicare program can draw upon), or establishing a combination of such repayment mechanisms, that will ensure its ability to repay the Medicare program. These arrangements can often require that an ACO or its financial supporters or both make an assessment of the ACO's level of financial risk for possible repayments. We are particularly concerned that uncertainty regarding past financial results could discourage ACOs from moving more quickly from the one-sided shared savings track to a performance-based risk track when renewing their agreements.

We considered an approach under which we would always reopen a determination of ACO shared savings or shared losses to correct any issue that might arise with respect to a financial calculation, identified within 4 years after the release of final financial reconciliation results. We did not propose this option because we were concerned that this approach of correcting even very minor errors might result in significant operational burdens for ACOs and CMS, including multiple financial reconciliation re-runs and off-cycle payment/recoupment activities that could have the potential for significant and unintended operational consequences, and could jeopardize the certainty of performance results for both ACOs and CMS. We also considered whether to adopt a policy under which we would never correct for errors after performing the financial calculations and making initial determinations of ACO shared savings and shared losses. However, we did not propose this option because we believed it would be appropriate to reopen financial calculations in certain circumstances, such as in the case of fraud or similar fault as defined at § 405.902, or for errors with a significant impact on the computation of ACOs' shared savings/shared losses. Therefore, we proposed a finality policy for financial calculations and shared savings payments or shared loss recoupments in which we would allow for corrections, under certain

circumstances and within a defined timeframe, after financial calculations have been performed and the determination of ACO shared savings and shared losses has been made.

## 2. Circumstances for Reopening Initial Determinations and Final Agency Determinations of ACO Shared Savings or Shared Losses to Correct Financial Reconciliation Calculations

In developing the proposals in this section, we considered the following issues: (1) The type of issue/error that we would correct; (2) the timeframes for reopening a payment determination; and (3) whether we should establish a materiality threshold as an indicator of a material effect on shared savings and shared losses that would warrant a correction, and if so, at what level.

First, we proposed that CMS would have discretion to reopen a payment determination at any time in the case of fraud or "similar fault," as defined in § 405.902. It is longstanding policy in the Medicare program that a determination may be reopened at any time if it was procured by fraud or "similar fault," (see, for example, § 405.980(b)(3); 74 FR 65296, 65313 (December 9, 2009)). Second, we proposed that in certain circumstances we would reopen a payment determination for good cause. For consistency and to decrease program complexity, we proposed to follow the same approach to reopening for good cause as applies to the reopening of Parts A and B claims determinations under § 405.986. Specifically, we proposed that CMS would have the discretion to reopen a payment determination, within 4 years after the date of notification to the ACO of the initial determination of shared savings or shared losses for the relevant performance year, if there is good cause. We proposed that good cause may be established if there is new and material evidence that was not available or known at the time of the payment determination, and which may result in a different conclusion, or if the evidence that was considered in making the payment determination clearly shows on its face that an obvious error was made at the time of the payment determination.

We indicated that new and material evidence or an obvious error could come to CMS' attention through a variety of means, such as identification by CMS through CMS program integrity reviews or audits, or identification through audits conducted by independent federal oversight entities such as the Office of Inspector General (OIG) or the Government Accountability

Office (GAO). CMS program integrity reviews and audits include reviews and audits conducted by CMS' contractors. We proposed to establish a 4-year time period (that is, 4 years from initial notification of the payment determination) for reopening Shared Savings Program payment determinations for good cause to provide sufficient time to initiate and complete CMS program integrity reviews or audits by oversight entities like OIG or GAO and to evaluate errors identified through those processes. We proposed that good cause would not be established by changes in substantive law or interpretative policy. A change of legal interpretation or policy by CMS in a regulation, CMS ruling, or CMS general instruction, whether made in response to judicial precedent or otherwise, would not be a basis for reopening a payment determination under the proposal. Further, we proposed CMS would have sole discretion to determine whether good cause exists for reopening a payment determination under this section. Under the proposal, the determination of whether an error was made, whether a correction would be appropriate based on these proposed criteria, and the timing and manner of any correction would be within the sole discretion of CMS. We also indicated in the proposal that we did not intend to propose an exhaustive list of potential issues that would or would not constitute good cause, but instead intended to provide additional subregulatory guidance on this issue. We also noted that good cause would not be established by a reconsideration, appeal, or other administrative or judicial review of any determinations precluded under § 425.800.

In addition, we indicated we would not reopen a payment determination to consider, or otherwise consider as part of a reopening, additional claims information submitted following the end of the 3-month claims run out and the use of the completion factor. We would continue to use claims submitted prior to the end of the 3-month claims run out with a completion factor to calculate an ACO's per capita expenditures for each performance year, consistent with §§ 425.604(a)(5), 425.606(a)(5) and 425.610(a)(5). Also, consistent with established policy, under this proposed policy, we would not reopen a determination if an ACO's ACO participants submitted additional claims or submitted corrected claims after the 3-month claims run out period following the end of the performance year.

In order to provide an opportunity for CMS to consider updated information and make other adjustments to payment determinations across all ACOs, and to minimize program disruptions for ACOs resulting from multiple reopenings, we indicated that we would, to the extent feasible, make corrections for a given performance year in a unified reopening (as opposed to multiple reopenings). In addition, we indicated we would consider other ways to reduce operational burdens for both ACOs and CMS that could result from making payment adjustments.

In addition, in discussing the proposal regarding reopenings for good cause, we proposed that we would also consider whether the error is material and thus warrants a correction by reviewing the nature and particular circumstances of the error. We did not propose specific criteria for determining materiality but we indicated our intent to provide additional information for ACOs through subregulatory guidance, as appropriate. For example, in the case of technical errors by CMS such as CMS data source file errors and CMS computational errors, we stated we would consider limiting reopenings of payment determinations under the Shared Savings Program to issues/errors that have a material effect on the net amount of ACO shared savings and shared losses computed for the applicable performance year for all ACOs, and thus warrant a correction due to the magnitude of the error.

We also initially considered applying a materiality threshold for each ACO, rather than evaluating materiality based on the effect on total net shared savings and shared losses for all ACOs, in determining whether to exercise our reopening discretion to correct a CMS technical error. However, we indicated in the proposed rule that we believed it would be appropriate to limit reopenings to correct CMS technical errors that more widely affect the program rather than reopening determinations for specific issues for each of the hundreds of ACOs participating in the Shared Savings Program absent evidence of fraud or similar fault, or good cause established by evidence of other errors. Otherwise, a relatively broad scope and extended timeframe for reopening could seriously limit an ACO's ability to invest in additional improvements to increase quality and efficiency of care. This uncertainty could also limit an ACO's ability to get a clean opinion from its financial auditors, which could, for example, harm the ACO's ability to obtain necessary capital for additional program improvements. This could be

especially challenging for ACOs seeking to enter or continue under a two-sided performance-based risk track since under the requirements at § 425.204(f), such an ACO must, as part of its application for a two-sided performance-based risk track, demonstrate its ability to repay shared losses to the Medicare program, which it may do by placing funds in escrow, obtaining a surety bond, establishing a line of credit (as evidenced by a letter of credit that the Medicare program can draw upon), or establishing a combination of such repayment mechanisms, that will ensure its ability to repay the Medicare program. These arrangements can often require that an ACO and/or its financial supporters make an assessment of the ACO's level of financial risk for possible repayments. Uncertainty over past financial results could significantly affect an ACO's ability to obtain and maintain these arrangements with financial institutions, and thus discourage ACOs from moving more quickly from the one-sided shared savings track to a performance-based risk track when renewing their agreements. (81FR 5854).

Therefore, after considering these issues, we proposed to revise § 425.314 to remove paragraph (a)(4) and add a new paragraph (e) to specify the circumstances under which we would reopen a payment determination under §§ 425.604(f), 425.606(h), 425.610(h), 425.804, or 425.806. Specifically, we proposed that, if CMS determines that the amount of shared savings due to the ACO or the amount of shared losses owed by the ACO has been calculated in error, CMS may reopen the earlier payment determination and issue a revised initial determination. We proposed that a payment determination may be reopened: (1) At any time in the case of fraud or similar fault, as defined in § 405.902; or (2) not later than 4 years after the date of notification to the ACO of the initial determination of shared savings or shared losses for the relevant performance year under § 425.604(f), § 425.606(h) or § 425.610(h), for good cause. We proposed that good cause may be established when there is new and material evidence of an error or errors, that was not available or known at the time of the payment determination and may result in a different conclusion, or the evidence that was considered in making the payment determination clearly shows on its face that an obvious error was made at the time of the payment determination. Good cause would not be established by a change of legal

interpretation or policy by CMS in a regulation, CMS ruling or CMS general instruction, whether made in response to judicial precedent or otherwise. We would have sole discretion to determine whether good cause exists for reopening a payment determination under this section. Also, good cause would not be established by a reconsideration, appeal, or other administrative or judicial review of any determinations precluded under § 425.800.

Under the proposal, the determination of whether an error was made, whether a correction would be appropriate based on the proposed criteria, and the timing and manner of any correction would be within the sole discretion of CMS. We proposed that if CMS determines that the specified criteria were met and exercises its discretion to reopen, CMS would recompute the financial results for all ACOs affected by the error or errors. In light of this policy proposal, we indicated we would not reopen and revise the PY 1 payment determinations solely affected by the data source error described previously because we had not previously specified, either through regulations or program guidance, the criteria CMS would apply in determining whether to reopen a payment determination. However, we indicated we would reopen and revise these PY 1 payment determinations for other errors satisfying the proposed criteria for reopening for good cause or for fraud or similar fault (81 FR 5857). Finally, we proposed to amend § 425.800(a)(4), expressly to include a revised initial determination in the list of determinations that are precluded from administrative and judicial review.

We invited comments on this proposal, including the proposed criteria for reopening, on alternative approaches for defining the time period for reopenings of payment determinations, on the criteria for establishing good cause, whether the time period for reopenings for good cause should be longer or shorter than 4 years, and on any other criteria that we should consider for the final rule to address issues related to financial reconciliation calculations and the determination of ACO shared savings and shared losses.

*Comment:* Commenters generally appreciated efforts to further define parameters around reopening payment determinations within the Shared Savings Program. A few commenters concurred with the provisions as proposed; however, most commenters expressed concerns about one or more aspects of the proposal. In particular, many commenters suggested limiting the timeframe for good cause

redeterminations to a shorter period such as 2 years, instead of 4, to provide ACOs with more financial certainty. These commenters stated that requiring ACOs to repay CMS for errors made potentially several years earlier would pose an excessive administrative burden on both ACOs and the Medicare program, create financial uncertainty and could discourage ACOs from participating in the program.

*Response:* We believe a 4 year time frame for reopenings for good cause, which is based on the timeframe for reopening of Parts A and B claims determinations under § 405.986, would also be appropriate under the Shared Savings Program. We acknowledge that a shorter timeframe for good cause determinations might provide more financial certainty for ACOs. However, based on a review of comments, we continue to believe the proposed approach carefully balances a desire to provide more financial certainty for ACOs while also addressing program integrity and other concerns. We are especially concerned that a shorter time period could make it difficult for CMS to make corrections based on program integrity reviews or audits by OIG or GAO. Similarly, a longer time period might make it feasible for CMS to make additional corrections based on program integrity reviews or audits by OIG or GAO, but could provide less financial certainty for ACOs.

*Comment:* Many commenters are concerned that CMS reserves for itself sole discretion to determine whether good cause exists for reopening. These commenters requested that CMS include a specific “appeal process” or other process in which individual ACOs could submit information and data to CMS regarding errors and other anomalies.

*Response:* As discussed earlier in this section, the financial reconciliation calculation/methodology and the amount of shared savings an ACO might earn, including all underlying financial calculations, are not appealable. That is, the determination of whether an ACO is eligible for shared savings under section 1899(d) of the Act, and the amount of such shared savings, as well as the underlying financial calculations are precluded from administrative and judicial review under section 1899(g)(4) of the Act and § 425.800(a)(4). Accordingly, we are not establishing an appeal process for ACOs to submit information to us regarding errors they believe were made in the financial reconciliation calculation or in determining the amount of shared savings earned by the ACO. We believe it is appropriate that the determination

of whether an error was made, whether a correction would be appropriate based on these proposed criteria, and the timing and manner of any correction that would be made would be within the sole discretion of CMS. However, we also did not intend to imply that there would be no opportunity for ACOs to bring concerns about data errors or other anomalies to our attention. As noted in the June 2015 final rule (80 FR 32699), there are numerous existing processes through which ACOs can submit information and data to CMS regarding alleged data errors and other anomalies. For example, each ACO is assigned a CMS point of contact, we provide ACOs with a dedicated email box for ACOs to submit questions for subject matter experts to address, and we hold numerous webinars that include opportunities for ACOs to raise questions and concerns. CMS will consider information about potential errors or anomalies provided by ACOs in conducting its own reviews of prior payment determinations.

*Comment:* Some commenters requested that CMS propose the specific good cause criteria including a materiality threshold through rulemaking instead of through sub-regulatory guidance so that the criteria are transparent and available for public comment. Many commenters requested that CMS establish a policy for a materiality threshold at an individual ACO level instead of across all ACOs to recognize that although determinations may have an insignificant effect on the program as a whole, a negative impact could be financially devastating to an individual ACO. Many of these commenters suggested a lower materiality threshold for individual ACOs, such as one percent or two percent, although there were a few commenters that indicated five percent might be acceptable if the materiality threshold was applied at the individual ACO level. Some commenters requested that CMS consider adopting a tiered materiality threshold for ACOs of varying size, practice-mix, patient population, and overall level of sophistication. For example, according to this commenter, an error affecting a smaller or newer ACO or an ACO serving a high-need population should be subject to a lower materiality threshold. Some commenters believe it is important to maintain flexibility and that CMS should consider individual materiality thresholds for differing ACOs to help ACOs that are facing financial strain and duress.

*Response:* We appreciate the suggestions that commenters provided regarding issues related to the

materiality of a payment error and when CMS should reopen a payment determination for good cause. Based on a review of the comments, we believe that it would be appropriate to address issues related to the materiality of an error through subregulatory guidance rather than through regulations. We believe that both CMS and ACOs would benefit from gaining additional experience with issues related to reopenings of payment determinations in the Shared Savings Program before further considering whether additional regulations would be appropriate. However, we are concerned that it could be very complex and burdensome for CMS to tailor materiality considerations to the particular characteristics or circumstances of a given ACO, as suggested by some commenters. In considering when to reopen an error for good cause, we intend to strike a careful balance between important Medicare program integrity concerns that payments be made timely and accurately under the Shared Savings Program with our desire to minimize unnecessary operational burdens for ACOs and CMS, and to support the ACOs' ability to invest in additional improvements to increase quality and efficiency of care. To achieve this careful balance in objectives for reopenings to address CMS technical errors, we may consider whether the error satisfies a materiality threshold, such as 3 percent of the total amount of net shared savings and shared losses for all ACOs for the applicable performance year. As described in the 2016 proposed rule, we plan to provide additional information about how we may consider the materiality of an error in subregulatory guidance (see 81 FR 5856 through 5857). To illustrate, under such an approach, we could exercise our discretion to reopen the financial reconciliation for a performance year if we determined that a correction to address a CMS technical error would affect total net shared savings and shared losses (that is, the amount of shared savings after the amount of shared losses has been subtracted) for all ACOs for the affected performance year by 3 or more percent. We may consider a higher threshold, such as 5 percent, or a lower threshold, such as 1 or 2 percent. However, based on a review of guidance from the GAO for financial audits of federal entities, we believe that 3 percent could generally be a reasonable threshold for "material effect." The GAO guidance was developed to assist auditors in assessing material effect for planning the audit scope for federal entities to ensure that

financial statement audits achieve their intended outcomes of providing enhanced accountability over taxpayer-provided resources. This guidance has been used for a number of years by GAO financial auditors for performing financial statement audits of federal entities. (See the GAO Web site at [http://www.gao.gov/special.pubs/01765G/vol1\\_complete.pdf](http://www.gao.gov/special.pubs/01765G/vol1_complete.pdf).) Although ACOs are not federal entities, we believe it would be reasonable to consider the GAO guidance in determining when a technical error has a material effect across all ACOs, such that we should use our discretion to reopen for good cause. The Shared Savings Program is a relatively large federal program administered within HHS, including over 400 ACOs (as of January 1, 2016). Accordingly, we believe that the GAO guidance on federal entity audits, while not directly applicable, provides a relevant and appropriate resource in considering when errors in certain payment determinations under the Shared Savings Program are material and whether we should exercise our discretion to reopen for good cause.

*Comment:* Commenters did not directly address the PY1 payment determinations affected by the data source error described in the proposed rule. However, some commenters more broadly urged that CMS hold ACOs harmless for payment determination errors made by CMS. These commenters believe that ACOs "should not be penalized for CMS errors" because ACOs may have already used the affected funds to improve beneficiary care.

*Response:* Except as discussed in the proposed rule for the PY 1 data source error, we do not believe it would be appropriate to establish a finality policy to hold ACOs harmless for payment determination errors made by CMS. We acknowledge that from year to year, corrections could sometimes advantage individual ACOs and sometimes disadvantage individual ACOs. We anticipate that, over time, this approach would not likely have a biased effect on ACOs or Medicare expenditures since the impact of reopenings over time would be equally likely to increase/decrease net shared savings and losses. We also believe there would be program integrity concerns if we were to hold ACOs harmless for payment determination errors made by CMS.

*Comment:* A few commenters recommended that payment and recoupment activities associated with reopenings and revised initial payment determinations be administered as stand-alone activities rather than being combined with subsequent years'

savings or losses. Their rationale is that ACOs are still evolving and their compositions are changing, sometimes dramatically, from year to year; therefore, recalculation of the financial reconciliation should impact the ACO participants from the corresponding performance year, and not the ACO participants in a subsequent performance year.

*Response:* We indicated in the proposal that we would consider ways to minimize program disruptions for ACOs that could result from one or more reopenings. Our intent is to reduce operational burdens, when feasible, that might result if an ACO were subject to one or more reopenings. The net effect on payments as a result of a reopening will not be different whether we perform the reopening independently or in conjunction with payment reconciliation for another performance year. In either case, we would provide ACOs with details regarding any necessary adjustments in their shared savings or shared losses resulting from reopened financial calculations for each performance year affected. We expect that ACOs would have sufficient information to be able to internally attribute any changes in shared savings/shared losses for a prior performance year as the ACO believes appropriate and consistent with the ACO's agreements with its ACO participants. Therefore, to the extent feasible, we will make corrections in a unified reopening (as opposed to multiple reopenings) to correct errors for a given performance year. In addition, we will consider other ways to reduce operational burdens for both ACOs and CMS that could result from making payment adjustments. For example, if we determine that a correction needs to be made to a prior performance year's results for good cause, we would seek to potentially adjust shared savings payments to the ACO or shared loss recoupments from the ACO for a subsequent performance year. To illustrate, if an ACO that generated shared savings for the second performance year of its agreement period owed CMS money based on a correction made to the payment determination for the prior performance year, we might be able to deduct the amount owed prior to making the current year shared savings payments (subject to the general requirement, discussed in the proposed rule, for ACOs to repay monies owed to CMS within 90 days of notification of the obligation). In either case, we expect to be able to provide ACOs with sufficient details regarding these corrections that they will be able to attribute the

additional payment or recoupment arising from the reopening internally and, as applicable, distribute additional funds to or collect amounts from the appropriate ACO participants from the prior PY.

**FINAL ACTION:** We are finalizing the administrative finality policy as proposed. Specifically, we are finalizing that if CMS determines that the amount of shared savings due to an ACO or the amount of shared losses owed by an ACO has been calculated in error, CMS may reopen the earlier payment determination and issue a revised initial determination: (1) At any time in the case of fraud or similar fault, as defined in § 405.902; or (2) not later than 4 years after the date of notification to the ACO of the initial determination of shared savings or shared losses for the relevant performance year under § 425.604(f), § 425.606(h) or § 425.610(h), for good cause. Good cause may be established when there is new and material evidence of an error or errors, that was not available or known at the time of the payment determination and may result in a different conclusion, or the evidence that was considered in making the payment determination clearly shows on its face that an obvious error was made at the time of the payment determination. Good cause will not be established by a change of legal interpretation or policy by CMS in a regulation, CMS ruling or CMS general instruction, whether made in response to judicial precedent or otherwise. We will have sole discretion to determine whether good cause exists for reopening a payment determination. Also, good cause will not be established by a reconsideration, appeal, or other administrative or judicial review of any determinations precluded under § 425.800.

If we determine that the reopening criteria are met, we will recompute the financial results for all ACOs affected by the error or errors. We will not reopen and revise PY 1 payment determinations to address the data source error described previously. We will address issues regarding when an error is material such that it would be appropriate to exercise our discretion to reopen for good cause through subregulatory guidance.

We note that the current requirements for ACO repayment of shared losses after notification of the initial determination of shared losses will not be affected by any of the policies that we are adopting in this section of this final rule. As described under § 425.606(h)(3) (Track 2) and § 425.610(h)(3) (Track 3), if an ACO has shared losses, the ACO must make

payment in full to CMS within 90 days of receipt of notification. These current requirements will continue to apply for repayment by ACOs for shared losses. For example, an ACO will not be able to delay recoupment of any payments required under § 425.606(h)(3) or § 425.610(h)(3) by notifying CMS of a possible error that could merit reopening. Instead, if we later determine that a correction should be made, we would subsequently combine, if feasible, the revised calculation of shared savings or shared losses for the affected performance year with the financial reconciliation for the most recent performance year. For example, we would add any amount owed to the ACO as a result of the reopening, to any shared savings payments for which the ACO is eligible for the most recent performance year. Finally, we had proposed to include these administrative finality provisions as a revision to § 425.314 (Audits and record retention) by removing (a)(4) and adding a new paragraph (e) to specify the circumstances under which we would reopen a payment determination under §§ 425.604(f), 425.606(h), 425.610(h), 425.804, or 425.806. However, we now believe these administrative finality provisions are a sufficiently distinct topic from “audits and record retention” that it would be clearer to instead incorporate these administrative finality provisions in a new, separate section at § 425.315 (Reopening Determinations of ACO Savings or Losses to Correct Financial Reconciliation Calculations). Accordingly, we are revising § 425.314 by removing (a)(4) and are adding a new § 425.315 to specify the circumstances under which we would reopen a payment determination under §§ 425.604(f), 425.606(h), 425.610(h), 425.804, or 425.806.

### 3. Conforming Change

As discussed earlier in the overview for this section, the determination of whether an ACO is eligible for shared savings, and the amount of such shared savings, and the limit on the total amount of shared savings as well as the underlying financial calculations are excluded from administrative and judicial review under section 1899(g) of the Act. Accordingly, in the November 2011 final rule establishing the Shared Savings Program, we adopted the regulation at § 425.800 to preclude administrative and judicial review of the determination of whether an ACO is eligible for shared savings and the amount of shared savings under Track 1 and Track 2 (§ 425.800(a)(4)), and the limit on total amount of shared savings that may be earned under Track 1 and

Track 2 (§ 425.800(a)(5)). In the June 2015 final rule, we amended the Shared Savings Program regulations by adding a new provision at § 425.610 to establish a new performance-based risk option (Track 3) that includes prospective beneficiary assignment and a higher sharing rate. However, in the June 2015 final rule we inadvertently did not also update § 425.800 to include references to determinations under § 425.610 (Track 3) in the list of determinations under this part for which there is no reconsideration, appeal, or other administrative or judicial review. Therefore, we proposed a conforming change to amend § 425.800 to add determinations under § 425.610 (Track 3) to the list of determinations under § 425.800(a)(4) and (a)(5) for which there is no reconsideration, appeal, or other administrative or judicial review.

**Comment:** We did not receive comments on this proposed conforming change.

**Response:** We will finalize this conforming change to the regulations to include determinations for Track 3 ACOs to the list of determinations for which there is no reconsideration, appeal, or other administrative or judicial review.

**FINAL ACTION:** We are amending § 425.800 to add determinations under § 425.610 (Track 3) to the list of determinations under § 425.800(a)(4) and (a)(5) for which there is no reconsideration, appeal, or other administrative or judicial review.

## III. Collection of Information Requirements

As stated in section 3022 of the Affordable Care Act, Chapter 35 of title 44, United States Code, shall not apply to the Shared Savings Program. Consequently, the information collection requirements contained in this final rule need not be reviewed by the Office of Management and Budget.

## IV. Regulatory Impact Analysis

### A. Statement of Need

This final rule is necessary in order to make certain payment and policy changes to the Medicare Shared Savings Program established under section 1899 of the Act. The Shared Savings Program promotes accountability for a patient population, fosters the coordination of items and services under Medicare Parts A and B, and encourages investment in infrastructure and redesigned care processes for high quality and efficient service delivery. These changes are focused on calculations for resetting the financial benchmark for an ACO's second or subsequent agreement period,

thereby fulfilling a goal communicated in the Shared Savings Program June 2015 final rule (80 FR 32692), and further discussed in the 2016 proposed rule, to take into account regional expenditures when resetting an ACO's financial benchmark for a second or subsequent agreement period.

### *B. Overall Impact*

We examined the impacts of this rule as required by Executive Order 12866 on Regulatory Planning and Review (September 30, 1993), Executive Order 13563 on Improving Regulation and Regulatory Review (January 18, 2011), the Regulatory Flexibility Act (RFA) (September 19, 1980, Pub. L. 96–354), section 1102(b) of the Social Security Act, section 202 of the Unfunded Mandates Reform Act of 1995 (March 22, 1995; Pub. L. 104–4), Executive Order 13132 on Federalism (August 4, 1999) and the Congressional Review Act (5 U.S.C. 804(2)).

Executive Orders 12866 and 13563 direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity). Section 3(f) of Executive Order 12866 defines a “significant regulatory action” as an action that is likely to result in a rule: (1) Having an annual effect on the economy of \$100 million or more in any 1 year, or adversely and materially affecting a sector of the economy, productivity, competition, jobs, the environment, public health or safety, or state, local or tribal governments or communities (also referred to as “economically significant”); (2) creating a serious inconsistency or otherwise interfering with an action taken or planned by another agency; (3) materially altering the budgetary impacts of entitlement grants, user fees, or loan programs or the rights and obligations of recipients thereof; or (4) raising novel legal or policy issues arising out of legal mandates, the President's priorities, or the principles set forth in the Executive Order.

A regulatory impact analysis (RIA) must be prepared for major rules with economically significant effects (\$100 million or more in any 1 year). We estimate that this rulemaking is “economically significant” as measured by the \$100 million threshold, and hence also a major rule under the Congressional Review Act. Accordingly, we have prepared a RIA, which to the

best of our ability presents the costs and benefits of the rulemaking.

In keeping with our standard practice, the main analysis presented in this RIA compares the expected outcomes of the modifications finalized with this rulemaking to the expected outcomes under current regulations. We provide our analysis of the expected costs of the payment model under section 1899(i)(3) of the Act compared to the costs that would be incurred under the statutory payment model under section 1899(d) of the Act in section IV.E of this final rule.

### *C. Anticipated Effects*

#### *1. Effects on the Medicare Program*

The Shared Savings Program is a voluntary program involving an innovative mix of financial incentives for demonstrating quality of care and efficiency gains within FFS Medicare. As a result, the changes to the Shared Savings Program adopted in this final rule could result in a range of possible outcomes. While evaluation of the program's overall impact to date is ongoing, the quality and financial results of the first 2 performance years are within the range originally projected for the program in the November 2011 final rule (see Table 8, 76 FR 67963). Also, at this point, we have seen no evidence of selective ACO participation that would systematically bias overall program performance as measured by ACO benchmarks.

In the June 2015 final rule, we established a policy for rebasing an ACO's financial benchmark for a second or subsequent agreement period by weighting each benchmark year equally and taking into account savings generated by the ACO in the previous agreement period. We also discussed potential future modifications to the rebasing methodology that would account for regional FFS expenditures and remove the policy of adding savings generated by the ACO in the previous agreement period. In the 2016 proposed rule, we proposed modifications to the program's regulations, focused on incorporating regional expenditures into ACOs' rebased historical benchmarks. In this final rule, we are adopting an alternative benchmarking approach for ACOs starting a second agreement period in 2017 and subsequent years. The rebasing methodology promulgated in the June 2015 rule will apply to ACOs that entered a second agreement period in 2016. The revised rebasing methodology promulgated in this final rule will apply to these ACOs starting in their third agreement period. Under the revised benchmarking methodology adopted in this final rule, an ACO's

reset benchmark will be adjusted by a percentage of the difference between the average per capita expenditure amount for the ACO's regional service area and the ACO's rebased historical benchmark amount (described in section II.A.2.c of this final rule). Under the phased approach to using a higher percentage in calculating the adjustment for regional expenditures (described in section II.A.2.c.3 of this final rule): in the ACO's first agreement period in which the regional FFS adjustment is applied the percentage used in calculating the regional adjustment will be set as high as 35 percent; in the ACO's second agreement period in which the regional FFS adjustment is applied and subsequent agreement periods, the percentage will be set as high as 70 percent unless the Secretary determines a lower weight should be applied, as specified through future rulemaking. This approach will further limit the link between an ACO's performance in prior agreement periods and its benchmark in subsequent agreement periods by making the benchmark more reflective of costs in the ACO's regional service area. These changes are intended to strengthen the incentives for ACOs to invest in infrastructure and care redesign necessary to improve quality and efficiency and meet the goals of the Shared Savings Program. In response to comments, we are finalizing a modification that will moderate the phase-in of the regional FFS adjustment for ACOs that have higher costs than their region and for which the regional adjustment will reduce the ACO's benchmark. In such cases, the weight placed on the regional FFS adjustment will be reduced to 25 percent (down from 35 percent) in the first agreement period in which the regional FFS adjustment is applied, and 50 percent (down from 70 percent) in the second. By the third agreement period under the revised rebasing methodology, the weight placed on the regional FFS adjustment will be 70 percent for all ACOs, unless the Secretary determines a lower weight should be applied, as specified through future rulemaking.

Another key modification to the benchmark rebasing methodology involves refining certain calculations that currently rely on national FFS expenditures and corresponding trends so that they are instead determined according to county FFS trends observed in each ACO's unique assignment-weighted regional service area. Annual average per capita costs will be tabulated for assignable FFS beneficiaries in each county. For each ACO, a regional weighted average

expenditure will be found by applying ACO assigned-beneficiary weights to the average expenditures tabulated for each county. Changes in an ACO's regional service area average per capita expenditures (and relative risk reflected in associated HCC risk scores) will define a regional trend specific to each ACO's region. This regional trend will be utilized in two specific areas of the existing benchmark methodology to replace the: (1) National expenditure trend in calculations establishing the ACO's rebased historical benchmark; and (2) existing national "flat dollar" growth amount for updating the rebased historical benchmark for each performance year.

By replacing the national average FFS expenditure trend and "flat dollar" update with trends observed for county level FFS assignable beneficiaries in each ACO's unique assignment-weighted regional service area, benchmark calculations will be better structured to account for exogenous trend factors particular to each ACO's region and the pool of potentially-assignable beneficiaries therein (for example, higher trend due to a particularly acute flu season or an unusually large area wage index adjustment or change).

Although the policy will have mixed effects—increasing or decreasing benchmarks for ACOs in various circumstances—an overall increase in program savings will likely result from taking into account service-area trends in benchmark calculations. In some cases lower benchmarks will be produced, preventing shared savings payments to certain ACOs for whom national average trends and updates would have provided higher updated benchmarks. For other ACOs, such a policy will be more sensitive to regional circumstances outside of the ACO's control causing higher trends for the ACO's service area. In such cases, a higher benchmark could improve program cost savings in the long run by reducing the likelihood the ACO would choose to drop out of the program because a shared loss would otherwise have been assessed due to exogenous factors unrelated to the ACO's changes in care delivery.

In addition, applying the regional trend as a percentage (rather than "flat dollar") when updating the benchmark to a performance year basis is anticipated to further reduce program costs by improving the accuracy of updated benchmarks, particularly for ACOs that have historical benchmarks significantly below or above average. The November 2011 final rule discussed the risk that large nominal "flat dollar"

growth updates could compound over an agreement period to excessively inflate benchmarks for ACOs with relatively low historical benchmark cost and could lead to predictable bias and resulting cost for selective participation in the program (76 FR 67964). Such risk has not materialized in program experience to date, largely due to the historically low national program trend used to update ACO benchmarks through the first 3 years of the program. However, the per capita trend for the Medicare FFS program is anticipated to be higher in future years associated with the period governed by this final rule in contrast to the relatively moderate growth in cost experienced over the first 3 years of the program's implementation.<sup>3</sup> The changes to the methodology for updating the benchmark included in this final rule will apply regional trends to update ACO benchmarks and therefore prevent the increased program cost the current update methodology risks by employing an average "flat dollar" update that compounds over the 3 years of an ACO's agreement period.

Program participation and ACO beneficiary assignment are not homogeneously distributed geographically. ACOs tend to have service areas overlapping those of other ACOs in the same urban or suburban market(s). Therefore, to the extent that ACOs in these areas produce significant reductions in expenditures, a greater proportion of such savings will affect ACO-service-area trends than the average effect felt at the national program level, effectively reducing the average ACO's updated benchmark compared to what the use of a national trend alone would have produced. While such effect has the potential to reduce program costs by reducing net shared savings payments it could be seen as a disadvantage to participating organizations in "ACO-heavy regions" that manage to broadly increase efficiency at the overall regional market level.<sup>4</sup> However, on the whole, we anticipate this effect to be a reasonable

trade-off that will not prevent an overall improvement in the incentive for ACOs to improve efficiency in care delivery in the context of periodic benchmark rebasing as a result of the policies adopted in this final rule. As described previously in this rule, we acknowledge the potential advantages of alternative approaches to determining benchmark updates, for example utilizing the national growth rate adjusted for regional price variation, and we anticipate exploring such approaches in future rulemaking.

Additionally, we anticipate significant program savings will result from ending the policy from the June 2015 rule under which savings generated in the previous agreement period are taken into account when resetting the benchmark in an ACO's second or subsequent agreement period. However, savings from this modification are not wholly retained by the program but are largely redistributed to ACOs that are measured to have demonstrated efficiency in a more standardized way, using a regional FFS adjustment to their benchmarks. As commenters on the 2016 proposed rule noted, roughly two-thirds of ACOs in the 2014 public use data released in conjunction with the 2016 proposed rule showed lower expenditures than their county-weighted FFS averages and would therefore likely benefit from the regional FFS adjustment.

Changes to the existing benchmark calculations described previously are expected to benefit program cost savings by producing rebased benchmarks with improved accuracy (for example, reflecting regional trends rather than national average trends and 'flat dollar' updates) and of somewhat lower per capita cost on average (due to removing the effect of the savings adjustment to the rebased benchmark and because regional trend calculations typically reflect a higher proportion of ACO assigned beneficiary experience than national average trend calculations). However, such savings are expected to be partly offset by increasing shared savings payments to ACOs benefiting from the adjustment to the rebased historical benchmark to reflect a portion of the difference between the average per capita expenditure amount for the ACO's regional service area and the ACO's rebased historical benchmark amount. This trade-off reflects our intent to strengthen the reward for attainment of efficiency in an absolute sense, complementing the existing program's focus on rewarding improvement relative to an ACO's recent baseline.

<sup>3</sup> Traditional fee-for-service Medicare Part A and B annual per capita cost trend is expected to reach approximately 5 percent in 2019, as detailed in the 2017 Medicare Advantage Early Preview accessible at: <https://www.cms.gov/Medicare/Health-Plans/MedicareAdvtgSpecRateStats/Downloads/EarlyPreview2017GrowthRates.pdf>.

<sup>4</sup> Similarly, certain regions may be targeted for other care delivery reforms, for example certain Center for Medicare and Medicaid Innovation models. A downward bias on an ACO's benchmark could be felt to the extent that such activity reduces expenditures for beneficiaries in the ACO's region but not in a proportional way within the ACO's assigned population. Such scenarios are more likely when competing models are specifically targeted at beneficiaries not assigned to an ACO.

Making a regional adjustment to the ACO's rebased historical benchmark will strengthen an ACO's incentives to generate and maintain efficient care delivery over the long run by weakening the link between an ACO's prior performance and its future benchmark. This adjustment is expected to marginally increase program participation in agreement periods where risk (Track 2 or 3) is mandatory for an ACO since a significant portion of ACOs will have knowledge that a favorable baseline expenditure comparison to their FFS region will mitigate their risk of being assessed a shared loss in a subsequent agreement period. It is also expected to reduce the frequency with which ACOs in Track 2 or 3 drop out of the program during an agreement period because such ACOs will have somewhat greater certainty regarding the extent to which savings achieved in the prior agreement period will continue to be reflected in a rebased benchmark that incorporates a regional adjustment.

However, more predictable relationships, that is, an ACO's knowledge of its costs relative to FFS expenditures in its region, also create the risk of added cost to the Shared Savings Program by way of—(1) Increasing shared savings payments to ACOs exhibiting expenditures significantly below their region at baseline especially in cases where such differences are related to factors exogenous to efficiency in the delivery of care (where shared savings payments could be further inflated by increased selection of Track 3 over Track 2); (2) potentially losing participation from ACOs with expenditures high above their region at baseline—reducing the opportunity to impact beneficiary populations with the greatest potential for improvements in the cost and quality of care;<sup>5</sup> and (3) from structural shifts by ACOs in ways that would reduce assignment of relatively high cost beneficiaries and increase assignment of relatively healthy populations or shift the geography of their service area to similarly effect a more favorable benchmark adjustment. A primary uncertainty and significant potential concern is whether complex patients will continue to have their care successfully coordinated by ACO

providers/suppliers under the revised benchmark methodology. If the regional adjustment results in unattainable benchmarks for ACOs serving at-risk and medically complex populations then the program would likely exhibit decreasing participation from providers serving populations where the greatest potential for savings through better care coordination and quality improvement would otherwise be present and therefore we would expect significantly lower savings for the program than currently anticipated.

In addition to the uncertainty with respect to the relationship of the potential offsetting effects noted previously, there remains broader uncertainty as to the number of ACOs that will participate in the program (especially under performance-based risk in Track 2 or Track 3), provider and supplier response to financial incentives offered by the program, interactions with other value based models and programs from CMS and other payers, and the ultimate effectiveness of the changes in care delivery that may result as ACOs work to improve the quality and efficiency of patient care. Certain ACOs that have achieved shared savings in their first agreement period may find that they receive significantly lower benchmarks under these revisions (especially in cases where regional expenditures are much lower than expenditures for the ACO's assigned beneficiary population). Other ACOs may seek to maximize sharing in savings by selecting Track 3 if they have assigned beneficiaries with significantly lower expenditures at baseline relative to their region. These uncertainties continue to complicate efforts to assess the financial impacts of the Shared Savings Program and result in a wide range of potential outcomes regarding the net impact of the changes included in this final rule on Medicare expenditures.

To best reflect these uncertainties, we continue to utilize a stochastic model that incorporates assumed probability distributions for each of the key variables that will affect the overall financial impact of the Shared Savings Program. A summary of assumptions and assumption ranges utilized in the model includes the following:

- Approximately 100, 100, and 200 ACOs will consider renewing in 2017, 2018, and 2019, respectively.
- ACOs will choose not to renew if—
  - ++ Under the current policy: The ACO's gross loss in the prior performance year was 5 percent or greater; or
  - ++ Under the policies included in this final rule: The ACO's gross loss is

3 percent or greater in the prior performance year after accounting for the expected effect of the revised rebasing methodology (for example, considering differences between the ACO's spending and that of its region) and adjusting for ACO participant changes that result in baseline cost reduction of 2 percent on average (see discussion elsewhere in this final rule).

In either scenario, the thresholds are calibrated to approximate the level of baseline loss an ACO would correlate to an expected shared loss from its rebased benchmark. The magnitude of the loss is roughly equal to the revenue ACO participating physicians may have gained from the 5 percent incentive payment under MACRA<sup>6</sup> that is potentially available to physicians and certain other practitioners in certain ACOs for participation in the Shared Savings Program. The policies included in this final rule are assumed to result in a lower tolerance for renewal after a prior agreement period loss because the regional adjustment to the rebased benchmark is expected to be more consistent from year to year whereas the current rebasing methodology would be expected to generate a higher benchmark reflecting to a greater degree the actual spending from the prior agreement period that led to the prior loss. However, ACOs that do renew under the policies included in this final rule are expected to be more likely to remain in the program for the entire agreement period because the benchmark adjustment improves the likelihood that favorable changes to the methodology for rebasing the benchmark that led the ACO to renew its agreement will continue to be evidenced in future performance years.

- Renewing ACO will choose higher risk in Track 3 if—
  - ++ Under the current policies: The ACO's gross savings in prior performance year are 4 percent or greater; or
  - ++ Under the policies included in this final rule: The ACO's prior performance year gross savings adjusted by regional expenditures are 2 percent or greater.

In either scenario, similar to the renewal assumption, policies included in the final rule offer greater certainty that adjusted prior performance will correlate to future performance and therefore the threshold for selecting

<sup>5</sup> Early program results indicate that ACOs with expenditures significantly above their risk-adjusted FFS regional average have produced greater than average reductions in expenditures than ACOs with low baseline expenditures relative to their region; however it is not yet evident that such early savings achieved for such relatively high cost populations are likely to grow to an extent that their expenditures would reach parity with their region.

<sup>6</sup> The Medicare Access and CHIP Reauthorization Act of 2015 (MACRA) established new incentives to encourage physicians and certain other practitioners to participate in alternative payment models; pending final rulemaking, such incentive payments may equate to approximately 5 percent of physician fee schedule revenue to eligible clinicians participating in certain qualifying ACOs.

Track 3 is lower than what is assumed for the baseline scenario.

- Marginal gross savings will increase by between 0.0 percent to 1.0 percent for ACOs selecting higher performance-based risk in Track 3 and between 0.0 percent to 0.2 percent for all ACOs due to the adjusted rebasing methodology. These ranges were chosen to encompass a range of relative savings rates observed for performance-based risk accepted by ACOs participating in the Pioneer ACO Model relative to Shared Savings Program ACOs, the vast majority of which have elected to participate under the one-sided shared savings model (Track 1).

- ACOs experiencing a loss during the rebased agreement period are assumed to drop out prior to the second or third performance year if a shared loss from the prior performance year exceeds 2 percent. While Pioneer ACO Model experience would predict a lower tolerance for remaining in the program after a loss, 2 percent was chosen to approximate the incentive payment under MACRA that may be made available (pending final rulemaking) to physicians and certain other practitioners participating in ACOs in Track 2 and Track 3, which was not available to participants in Pioneer ACOs.

- ACOs will make adjustments to their ACO Participant Lists that reduce their cost relative to region by approximately 2 percent on average. This assumption is based on empirical analysis of 2015 ACO Participant List change requests and resulting impact on ACO baseline expenditures due to changes in assignment; the magnitude of bias is assumed to be greater for ACOs starting higher than their corresponding regional average expenditures and/or with a relatively small assigned beneficiary population and lower for ACOs starting below regional average expenditures and/or with a relatively large assigned beneficiary population.

- ACOs will achieve a mean quality score of 80 percent (based on analysis of Shared Savings Program ACO quality scores in 2013 and 2014).

- ACO savings will have an impact on regional expenditures and trends proportional to ACO assignment saturation of the FFS beneficiary population in the market.

Assumptions for ACO baseline costs, including variations in trends for ACOs and their relationship to their respective regions were determined by analyzing existing ACO expenditures and corresponding regional expenditures back to 2009, the first benchmark year used for the first wave of ACOs that entered the program in 2012. (Note, associated data for the 2012 through 2014 time period were released in conjunction with the 2016 proposed rule to assist commenters in modeling implications of the proposed policy changes.) The empirical time series data were randomly extrapolated to form baseline time series data through the end of the rebased agreement period by applying growth rates to ACOs and their regions by randomly sampling empirical growth rates for ACOs (and their respective regions) with similar characteristics in terms of size and relative cost to region.

Using a Monte Carlo simulation approach, the model randomly draws a set of extrapolated ACO baseline trends and specific values for each variable, reflecting the expected covariance among variables, and calculates the program's financial impact based on the specific set of assumptions. We repeated the process for a total of 1,000 random trials, tabulating the resulting individual cost or savings estimates to produce a distribution of potential outcomes that reflects the assumed probability distributions of the incorporated variables.

Table 4 details our estimate of the 3-year net impact of the policy changes included in this final rule on net FFS benefit claims costs, net shared savings payments to ACOs, and the resulting impact on net Federal cost. Projected impacts are detailed for the first 3 cohorts of ACOs that would be renewing agreements under these changes, renewing respectively for agreement periods starting in 2017, 2018, and 2019. During these agreement periods, a 35 percent weight would be placed on the benchmark expenditure adjustment for regional FFS expenditures (or a lower 25 percent weight in cases where the ACO's rebased costs are higher than its regional FFS average). In such agreement periods, total savings from these changes to the methodology for calculating and trending expenditures during the benchmark period in order to

establish and update the benchmark, as well as anticipated savings from marginally increased program participation and improved incentives for creating efficiency, are expected to be greater than the increase in cost of net shared savings payments due to selective participation in response to adjustments that are predictably significant (either favorable or unfavorable) upon examination of how expenditures for the ACO's historically assigned beneficiary population compare to the expenditure level for the ACO's regional service area at baseline. For this reason the net Federal impact is projected to be a savings (that is, a negative change in net Federal cost) for the first 3 years for each renewing cohort, and correspondingly a \$110 million net Federal savings for the first 3 calendar years of the projection window, 2017 through 2019. Such median impact on net Federal cost results from a projected increase in savings on net benefit claims costs of \$410 million partially offset by a \$300 million increase in net shared savings payments to ACOs. The last two rows of Table 4 enumerate the range of potential net Federal cost impacts our modeling projected, specifically the 10th percentile of simulation outcomes (a \$240 million net Federal increase in cost) and the 90th percentile (\$480 million net Federal savings). Overall, approximately two-thirds of trials resulted in combined net Federal savings over 2017 to 2019.

The estimate for this final rule reflects \$10 million higher net Federal cost than the impact estimated for the 2016 proposed rule. As a result of finalizing a phase-in approach that reduces the weight for the regional FFS adjustment during an ACO's first and second agreement periods under the revised rebasing methodology in cases where it decreases the ACO's rebased benchmark, we estimate: (1) An increase in shared savings payments net of shared losses of \$50 million over 2017 through 2019 compared to the corresponding estimate in the proposed rule, mainly because of increases to certain ACOs' rebased benchmarks; (2) a decrease in gross claims costs due to increased participation of \$40 million relative to the corresponding estimate in the 2016 proposed rule.

TABLE 4—ESTIMATED 3-YEAR IMPACT OF CHANGES (INCLUDING A MAXIMUM 35 PERCENT WEIGHT USED IN DETERMINING REGIONAL ADJUSTMENT AMOUNT) ON NET BENEFIT COSTS, NET PAYMENTS TO ACOs, AND OVERALL NET FEDERAL COSTS CYs 2017 THROUGH 2019

[Impacts are Median Results Unless Otherwise Noted]

Calendar year	2017	2018	2019	3-Year total
Impact on Net Claims Costs (\$Million):				
ACOs Renew 2017 .....	– 70	– 70	– 80	– 220
ACOs Renew 2018 .....	.....	– 60	– 70	– 130
ACOs Renew 2019 .....	.....	.....	– 60	– 60
All ACO Total .....	– 70	– 130	– 210	– 410
Impact on Net Shared Savings Pay (\$Million):				
ACOs Renew 2017 .....	50	40	40	130
ACOs Renew 2018 .....	.....	40	40	80
ACOs Renew 2019 .....	.....	.....	90	90
All ACO Total .....	50	80	170	300
Overall Impact on Net Federal Costs (\$Million):				
ACOs Renew 2017 .....	– 20	– 30	– 40	– 90
ACOs Renew 2018 .....	.....	– 20	– 30	– 50
ACOs Renew 2019 .....	.....	.....	30	30
All ACO Total .....	– 20	– 50	– 40	– 110
Low (10th %-ile) .....	20	50	170	240
High (90th %-ile) .....	– 70	– 160	– 250	– 480

The stochastic model and resulting financial estimates were prepared by the CMS Office of the Actuary (OACT). The median result of \$110 million increase in savings in net Federal cost is a reasonable “point estimate” of the impact of the changes included in this final rule on the Shared Savings Program during the period between 2017 through 2019. However, we emphasize the possibility of outcomes differing substantially from the median estimate, as illustrated by the estimate distribution. Accordingly, this RIA presents the costs and benefits of this final rule to the best of our ability. As further data emerge and are analyzed, we may improve the precision of future financial impact estimates.

To the extent that the Shared Savings Program will result in net savings or costs to Part B of Medicare, revenues from Part B beneficiary premiums will also be correspondingly lower or higher. In addition, because MA payment rates depend on the level of spending within traditional FFS Medicare, savings or costs arising from the Shared Savings Program will result in corresponding adjustments to MA payment rates. Neither of these secondary impacts has been included in the analysis shown.

#### a. Effects of the Final Rule in Subsequent Agreement Periods

For an ACO’s third agreement period (that is, the second rebased agreement period under the revised benchmarking

methodology, for example the 3-year period covering 2020 through 2022 for ACOs renewing for a second agreement period in 2017) the weight on the adjustment to the benchmark for regional FFS expenditures will increase to 70 percent (except in cases where the ACO’s rebased costs are higher than costs for its region in which case the weight will increase to 50 percent for the second rebased agreement period). Increasing the weight of the adjustment reduces the strength of the link between an ACO’s effect on the cost of care for its assigned beneficiaries and the benchmark calculated for an ensuing agreement period. Weakening this link may increase the incentive for ACOs to make investments in care delivery reforms because resulting potential savings will be more likely to be rewarded over multiple agreement periods rather than being ‘baked’ back into the benchmark at the next rebasing. On the other hand, efficiency gains will need to be significantly greater than those currently achieved by the ACOs participating in the program to result in budget neutrality by sufficiently offsetting increased shared savings payments to ACOs favored by a regional adjustment with a 70 percent weight. As discussed previously, we are setting the maximum weight of the regional adjustment at 70 percent for ACOs with lower costs than their region in their second agreement period under the revised benchmarking methodology,

and for all ACOs in their third and all subsequent agreement periods under this methodology, unless the Secretary determines a lower weight should be applied, as specified through future rulemaking. This determination, which could be made in advance of the agreement period beginning January 1, 2020, may be based on an assessment of the effects of the regional adjustment (and other modifications to the program made under this rule) on the Shared Savings Program such as: The effects on net program costs; the extent of participation in the Shared Savings Program; and the efficiency and quality of care received by beneficiaries.

ACOs demonstrate a wide range of differences in expenditures relative to risk adjusted expenditure levels for their region (for the sample of roughly 200 ACOs that started in the program in 2012 or 2013 the percentage by which ACO per capita expenditures exceed or are exceeded by their respective risk-adjusted regional per capita expenditures varies with a standard deviation of approximately 10 percent). Transitioning to a 70 percent weight to calculate the regional adjustment effectively down-weights the savings generated by the changes we are making to the existing benchmark calculation, since an ACO’s benchmark would have increased dependence on the regional FFS expenditures and correspondingly a decreasing dependence on the historical expenditures for the ACO. At the same

time, increasing the weight used to calculate the regional adjustment could result in selective participation and increases in shared savings payments to ACOs that have low beneficiary expenditures at baseline. If that were to happen, the overall anticipated cost of net shared savings payments would rise and outweigh the anticipated potential gains from additional care management and associated improvements in net benefit costs spurred by the improved incentives for efficiency generated by partially delinking ACO benchmarks from their own historical costs.

An element of the regional adjustment which becomes apparent when reviewing the accompanying data files and the performance of ACOs in 2013 and 2014 (for those roughly 200 ACOs that started in 2012 and 2013) is that ACOs that are above or below the regional service area expenditure amount used to adjust their rebased benchmark in 1 year tend to have a similar bias in the following year. Placing a 100 percent weight on the regional service area expenditure amount illustrates this. Of the 50 ACOs that were the furthest below their estimated regional service area expenditure level in 2013, all were at least 10 percent below and their average expenditures were roughly 15 percent below the expenditures for the region. In the subsequent year, 2014, none of these ACOs exceeded its regional service area expenditure level, and the average expenditure difference only moved by about 2 percentage points. Similar yet less glaring results occur in those ACOs above their regional service area expenditure level, with the 50 ACOs the furthest above their regional service area expenditure level having costs an average of approximately 10 percent above the regional service area expenditure level in 2013—an average difference for the group that only moved by about 2 percentage points the following year.

Of the approximately 150 ACOs that were more than 0.5 percent below their regional service area expenditure level, only about 10 percent were above their regional service area expenditure level in the following year. Again, ACOs above their regional service area expenditure level follow a similar pattern, though less drastic. Of the ACOs above their regional service area expenditure level by more than 0.5 percent, approximately 25 percent performed below their regional service area expenditure level in the following year. Notwithstanding the potential for behavioral changes, this illustrates that for a significant portion of existing ACOs, there is evidence of a bias when

compared to their regional service area expenditure level and that bias is likely to be predictable over time. We have accounted for cost associated with program selection for ACOs favored by such bias and considered attrition in participation by ACOs disfavored by such bias. However, for some ACOs of the latter condition, it may take multiple years to sufficiently redesign their care delivery processes in order to generate savings substantial enough to offset high expenditures relative to their region at baseline. We note that this analysis is based on data from the first 2 years of program operations, and longer term effects may emerge to mitigate bias for certain ACOs with high expenditures at baseline.

Additionally, the passage of MACRA established new incentives to encourage providers to participate in alternative payment models. Paying for value and incentivizing better care coordination and integration is a top priority for us, and we have been implementing policies that encourage a shift towards paying for value instead of volume. MACRA provides additional tools to encourage care integration and value-based payment. Although implementation of MACRA is ongoing and many details are still to be finalized through rulemaking, the incentives created by MACRA could result in increased market pressure on providers to participate in ACOs. This may lower the risk of selective participation and potentially lead to higher expected net Federal savings.

Emerging data will be monitored in order to provide additional information for updating projections as part of the use of a higher percentage (70 percent) in calculating the regional adjustment amount for ACOs entering a third or subsequent agreement period. For example, if ACOs respond by generating new efficiencies in care beyond those that are anticipated, and/or potential selective participation responses are lower than expected, then a 70 percent weight could potentially be associated with revised expectations regarding net costs or net savings. However, it is also possible that gains in efficiency will fail to materialize and/or selective participation and other behavioral responses will increase cost beyond the level that is currently anticipated; in such scenario, we would consider further rulemaking as necessary to protect the Medicare Trust Funds (for example, in order to apply a lower percent weight in calculating the regional adjustment amount).

#### b. Further Considerations

This final rule introduces regional expenditure trends and a regional adjustment to the rebased historical benchmark that includes prospective HCC risk adjustment to ensure trending and the regional adjustment appropriately account for differences in risk between an ACO's assigned beneficiary population and its regional service area assignable beneficiary population. Current program experience supports the hypothesis that the current approach of applying conditional reliance on demographic risk ratios for a continuously-assigned subset of beneficiaries for purposes of adjusting the historical benchmark to a performance year basis provides a reasonable balance between accounting for changes in risk of the population and limiting the risk that coding intensity shifts would artificially inflate ACO benchmarks. This final rule retains this policy for adjusting the historical benchmark to a performance year basis.

However, for the changes involving the use of regional expenditure trends (to trend forward the benchmark years and to update the ACO's rebased historical benchmark) and the adjustment to the rebased benchmark for expenditures in the ACO's regional service area, we are not implementing any additional explicit policy for limiting coding intensity sensitivity at this time (beyond what is described in section II.A of this final rule), but rely on the difference between the average prospective HCC scores for the ACO's assigned beneficiary population and its regional service area assignable beneficiary population. Regional trend calculations for the rebased historical base years are expected to mitigate the risk of sensitivity to potential coding intensity efforts by ACO providers/suppliers for several reasons. The benchmark years for the new agreement period correspond to performance years from a prior agreement period where incentives for coding intensity changes were already actively limited by the continuously assigned demographic alternative calculation. In addition, coding intensity shifts that are uniform over a prior agreement period would not affect the trending of historical expenditures from the first 2 years to the third year of such period because such historical adjustments are only sensitive to risk score changes between the first 2 years and the third year of such baseline period. The CMS-HCC model has been updated for 2016 in ways that reduce its sensitivity to subjective coding levels for chronic conditions that are known to have historically

accounted for differences in coding levels for MA beneficiaries relative to FFS Medicare. Lastly, ACOs tend to neighbor each other in markets where any ACO coding intensity shifts would then likely drive similar market-wide effects (including effects from market spillover affecting diagnosis codes submitted for patients receiving care from ACO providers/suppliers but who are not ultimately assigned to an ACO) that would tend to net out any coding shifts in the calculation of risk scores relative to the ACO's region. This final consideration also offers a degree of reassurance that the calculation of the adjustment reflecting the difference between an ACO's expenditures relative to its region would be less likely to be materially biased by ACO coding intensity shifts.

We intend to carefully monitor emerging program data to assess whether the overall benchmark methodology as revised remains appropriately balanced between sensitivity to real changes in assigned population risk and protection from making shared savings payments due to potential coding intensity shifts. Of particular concern for close monitoring (and potential future rulemaking changes, if necessary) are the unique circumstances related to the use of a prospective beneficiary assignment methodology in Track 3 and the associated benchmark calculations for Track 3 ACOs. Prospective assignment creates an overlap between the claims considered for purposes of determining beneficiary assignment to the ACO and the period in which diagnosis submissions from claims are utilized for calculating a beneficiary's prospective HCC score for the year during which the beneficiary will be assigned to the ACO. A related area for monitoring is whether regional FFS expenditures tabulated at a county level for assignable beneficiaries determined using the assignment methodology used in Track 1 and Track 2 would provide an unbiased comparison to a beneficiary population assigned under the prospective assignment methodology for Track 3. For these reasons, as part of our monitoring we will consider the potential necessity to undertake rulemaking in order to make adjustments to regional calculations for Track 3 ACOs to avoid biasing the results.

## 2. Effects on Beneficiaries

As explained in more detail previously, we believe the changes included in this final rule will provide additional incentive for ACOs to improve care management efforts and

maintain program participation. In addition, ACOs with low baseline expenditures relative to their region are more likely to transition to and sustain participation in a risk track (Tracks 2 or 3) in future agreement periods. Consequently, the changes in this final rule will also benefit beneficiaries through broader improvements in accountability and care coordination (such as through the use of the waiver of the 3-day stay SNF rule by Track 3 ACOs) than would occur under current regulations. Also, in this final rule we are finalizing a modified version of our proposal in order to provide a more gradual phase-in of the regional adjustment for ACOs with higher costs than their region. It is anticipated this modification will improve the ability of ACOs serving at-risk and medially complex populations to continue to participate and succeed in the program over the medium to long run.

Additionally, we intend to continue to analyze emerging program data to monitor for any potential unintended effect that the introduction of a regional adjustment to the ACO's rebased historical benchmark could potentially have on the incentive for ACOs to serve vulnerable populations (and for ACOs to maintain existing partnerships with providers and suppliers serving such populations). Further refinements that could be addressed in future rulemaking if monitoring ultimately revealed such problems could include reducing the percentage applied to the adjustment to the benchmark for regional expenditures, introducing additional adjustments (for example, enhancements or complements to the prospective CMS-HCC risk model) to control for exogenous factors impacting an ACO's costs relative to its region, or otherwise modifying the benchmark calculation to improve the balance between rewarding attainment and improvement in the efficiency and quality of care delivery for the full spectrum of beneficiaries enrolled in FFS Medicare.

## 3. Effects on Providers and Suppliers

We anticipate that including an adjustment to an ACO's historical benchmark reflecting a percentage of the difference between the ACO's regional service area average per capita expenditure amount and the ACO's rebased historical benchmark amount will provide an additional incentive for ACOs to make investments to improve care coordination. At the same time, this change in methodology also shifts the benchmark policy focus from rewarding improvement in trend relative to an ACO's original baseline to an incentive

that places more weight on attainment of efficiency—how an ACO compares in absolute expenditures to its region. Certain ACOs that joined the program from a high expenditure baseline relative to their region and that showed savings under the first agreement period benchmark methodology will likely expect lower benchmarks and greater likelihood of shared losses under a methodology that includes at least a 25 percent weight on the regional expenditure adjustment. Additionally, certain ACOs that joined the program with relatively low expenditures relative to their region may now expect significant shared savings payments even if they failed to generate shared savings in their first agreement period under the existing benchmark methodology.

## 4. Effect on Small Entities

The RFA requires agencies to analyze options for regulatory relief of small entities, if a rule has a significant impact on a substantial number of small entities. For purposes of the RFA, small entities include small businesses, nonprofit organizations, and small governmental jurisdictions. Most physician practices, hospitals, and other providers are small entities either by virtue of their nonprofit status or by qualifying as a small business under the Small Business Administration's size standards (revenues of less than \$7.5 to \$38.5 million in any 1 year; NAIC Sector-62 series). States and individuals are not included in the definition of a small entity. For details, see the Small Business Administration's Web site at <http://www.sba.gov/content/small-business-size-standards>. For purposes of the RFA, approximately 95 percent of physicians are considered to be small entities. There are over 1 million physicians, other practitioners, and medical suppliers that receive Medicare payment under the Physician Fee Schedule.

Although the Shared Savings Program is a voluntary program and payments for individual items and services will continue to be made on a FFS basis, we acknowledge that the program can affect many small entities and have developed our rules and regulations accordingly in order to minimize costs and administrative burden on such entities as well as to maximize their opportunity to participate. For example, networks of individual practices of ACO professionals are eligible to form an ACO. Also, the use of a MSR under Track 1, and, if elected by the ACO under Tracks 2 and 3, that varies by the size of the ACO's population that is calculated using a lower confidence

interval allows the MSRs (and, if applicable, MLRs) for smaller ACOs to be significantly lower than they would have been had CMS applied the higher confidence intervals used to derive MSRs (and MLRs) applicable to medium and large size ACOs. Further, eligible ACOs may remain under the one-sided model for a second agreement period to give them additional time to gain experience with the accountable care model before undertaking performance-based risk.

Small entities are both allowed and encouraged to participate in the Shared Savings Program, provided the ACO has a minimum of 5,000 assigned beneficiaries, thereby potentially realizing the economic benefits of receiving shared savings resulting from the utilization of enhanced and efficient systems of care and care coordination. Therefore, a solo, small physician practice or other small entity may realize economic benefits as a function of participating in this program and the utilization of enhanced clinical systems integration, which otherwise may not have been possible. We believe the policies included in this final rule, including facilitating the transition to performance-based risk (see section II.C of this final rule), may further encourage participation by small entities. For example, smaller entities (among others) that are risk averse but ready to transition to a performance-based risk track may elect the option that would defer by one year their entrance into a two-sided model. Once under a two-sided model, ACOs will have the opportunity for greater reward compared to participation under the one-sided model although they will be at risk for shared losses.

As detailed in this RIA, total median shared savings payments net of shared losses are expected to increase by \$300 million over the 2017 to 2019 period as a result of changes that will increase benchmarks for certain ACOs participating in the Shared Savings Program and therefore increase the average small entity's shared savings revenue. However, the impact on any single small entity may depend on its relationship to costs calculated for the counties comprising its regional service area.

#### 5. Effect on Small Rural Hospitals

Section 1102(b) of the Act requires us to prepare a regulatory impact analysis if a rule may have a significant impact on the operations of a substantial number of small rural hospitals. This analysis must conform to the provisions of section 604 of the RFA. For purposes of section 1102(b) of the Act, we define

a small rural hospital as a hospital that is located outside of a metropolitan statistical area and has fewer than 100 beds. Although the Shared Savings Program is a voluntary program, this final rule will have a significant impact on the operations of a substantial number of small rural hospitals. We are changing our regulations such that benchmark trend calculations and adjustments for ACOs that include rural hospitals as ACO participants will reflect FFS costs and trends in the ACO's regional service area. Overall, we expect the average ACO to receive greater shared savings revenue under these changes (\$300 million greater net sharing anticipated over 2017 through 2019). However, the impact on individual ACOs and their participating small rural hospitals may differ from the program average.

*Comment:* A commenter acknowledged that the impact on small entities and rural hospitals remains to be seen and suggested that CMS monitor the effects of the benchmarking changes to ensure that small entities and hospitals, particularly in rural and underserved areas, are not placed at a disadvantage.

*Response:* We appreciate the commenter's suggestion. This final rule describes a number of issues for monitoring and future consideration with respect to the changes being finalized to the methodology for resetting the ACO's benchmark, including: The approach to calculating regional FFS expenditures (in particular in relation to the methodology for defining the ACO's regional service area and use of assignable beneficiaries for determining county FFS expenditures), factors for consideration in relation to the weight applied in calculating the regional adjustment to the ACO's rebased historical benchmark, and the impact of coding initiatives on ACO benchmarks. This monitoring will include considerations relevant across the ACOs participating in the Shared Savings Program, which represent diverse interests by virtue of their ACO participant composition, patient populations, locations, and organizational structures, among other factors.

*Comment:* Although not discussing the specifics of data modeling, comments from stakeholders representing rural ACOs supported moving to the use of regional comparison data when resetting ACO benchmarks, indicating their belief that this approach creates a more meaningful comparison group and better reflects the health care environment in which the ACO operates.

*Response:* We appreciate commenters' feedback and also share commenters' beliefs that the revised rebasing methodology may benefit ACOs, including ACOs located in rural areas, by the increasing the weight on regional FFS expenditures in calculating the benchmark, and moving away from benchmarks based on the ACO's historical spending.

#### 6. Unfunded Mandates

Section 202 of the Unfunded Mandates Reform Act of 1995 (UMRA) also requires that agencies assess anticipated costs and benefits before issuing any rule whose mandates require spending in any 1 year of \$100 million in 1995 dollars, updated annually for inflation. In 2016, that is approximately \$146 million. This final rule does not include any mandate that would result in spending by state, local or tribal governments, in the aggregate, or by the private sector in the amount of \$146 million in any 1 year. Furthermore, participation in this program is voluntary and is not mandated.

#### D. Alternatives Considered

As indicated in the June 2015 final rule (see 80 FR 32795 through 32796), and as discussed in the 2016 proposed rule (see 81 FR 5833 through 5834), we also considered an alternative method for establishing benchmarks for subsequent agreement periods that would incorporate regional trends. Under such method we would apply the regional trend to inflate an ACO's historical benchmark from the prior (that is, first) agreement period to represent expenditures expected for the most recent base year preceding the ACO's subsequent agreement period. This approach would therefore be delinked from an ACO's performance over the prior agreement period (except to the extent an ACO's assigned population impacts its wider regional trend)—improving the incentive for ACOs to invest in efforts to improve efficiency. In contrast to the methodology for calculating a regional adjustment established with this rule, it would also retain sensitivity to baseline costs demonstrated by beneficiaries assigned to the ACO in the prior agreement period, potentially mitigating concerns regarding certain types of program selection and possibly providing a more incremental transition for ACOs familiar with the existing benchmark methodology.

Specifically it was estimated that blending an ACO's rebased benchmark with its prior (first) historical benchmark inflated by a regional trend

would produce an overall budget neutral change in net program cost for the subsequent agreement period if the blending were accomplished via a 70 percent weight on an ACO's trended prior benchmark and a 30 percent weight on its rebased benchmark. While such blend would reasonably be expected to result in an improvement in program incentives for ACOs to generate new efficiencies in care delivery despite rebasing concerns, other considerations impacted the decision to ultimately set forth the different approach detailed in this final rule.

Primarily, program experience to date indicates that many ACOs make significant changes to their provider composition over the course of an agreement period. Attempting to lock-in a first historical benchmark that would be trended to form 70 percent of the historical benchmark for future agreement periods would invariably be complicated and in many cases biased by changes in provider composition made years after the ACO's first entry into the program. Such operational complications and potential biases would invariably grow in magnitude for subsequent agreement periods, necessitating modifications to future rebasing, for example by reducing the weight on the regionally-trended component of the benchmark or requiring the regionally trended component always to be sourced from the rebased benchmark from the prior agreement period—changes that would likely dampen the incentive for ACOs to make significant investments in redesigning care in efficient ways. Furthermore, the rebasing methodology adopted in this final rule has the comparative advantage of linking the regional adjustment to an ACO's historical expenditures to its region's contemporary standardized cost as opposed to the level of cost (and associated efficiency) that happened to be exhibited in an ACO's prior historical benchmark period. Therefore, it was determined that the approach we are adopting in this final rule generally offers a less complicated and more consistent and equitable mechanism for adjusting ACO rebased benchmarks to reflect regional expenditures over the long term.

#### *E. Compliance With Requirements of Section 1899(i)(3)(B) of the Act*

As previously discussed in this final rule, certain policies, including both existing policies and new policies adopted in this final rule, rely upon the authority granted in section 1899(i)(3) of the Act to use other payment models that the Secretary determines will

improve the quality and efficiency of items and services furnished to Medicare FFS beneficiaries. Section 1899(i)(3)(B) requires that such other payment model must not result in additional program expenditures. Policies falling under the authority of section 1899(i)(3) of the Act include: Performance-based risk, refining the calculation of national expenditures used to update the historical benchmark to use the assignable subpopulation of total FFS enrollment, updating benchmarks with regional trends as opposed to national average absolute growth in per capita spending, and adjusting performance year expenditures to remove IME, DSH, and uncompensated care payments.

A comparison was constructed between the projected impact of the payment methodology that incorporates all changes and a hypothetical baseline payment methodology that excludes the elements described previously that require section 1899(i)(3) of the Act authority—most importantly performance based risk in Tracks 2 and 3 and updating benchmarks using regional trends. The hypothetical baseline was assumed to include adjustments allowable under section 1899(d)(1)(B)(ii) of the Act including the provision from the June 2015 final rule whereby an ACO's rebased benchmark might include an adjustment reflecting a portion of savings measured during the ACO's prior agreement period and the 35 percent weight used in calculating the regional adjustment to the ACO's rebased historical benchmark in this rule (or 25 percent weight should such regional adjustment be negative, as specified in this rule). The stochastic model and associated assumptions described previously in this section were adapted to reflect the agreement period spanning 2017 through 2019 for roughly 100 ACOs expected to renew in 2017. Such analysis estimated approximately \$130 million greater average net program savings under the alternative payment model that includes all policies that require the authority of section 1899(i)(3) than would be expected under the hypothetical baseline in total over the 2017 to 2019 agreement period cycle.

Furthermore, approximately 79 percent of stochastic trials resulted in greater or equal net program savings. The alternative payment model, as adopted in this final rule, is projected to result in both greater savings on benefit costs and net payments to ACOs. Participation in performance-based risk under Track 2 and Track 3 is assumed to improve the incentive for ACOs to increase the efficiency of care for

beneficiaries (similar to as assumed in the modeling of the impacts, described previously). Such added savings are partly offset by lower participation associated with the requirement to transition to performance-based risk. Correspondingly, net shared savings payments are also expected to be greater under the alternative payment model under section 1899(i)(3) of the Act than under the hypothetical baseline, mainly driven by the higher sharing rates and potentially lower minimum savings requirements in Track 2 and Track 3, but partly offset mainly by lower benchmarks resulting from ending the policy adopted in the June 2015 final rule of adding a portion of savings to the rebased benchmark, the use of more accurate regional benchmark updates, and new shared loss revenue.

Additionally, we projected a lower net federal savings of approximately \$10 million would result from using the hypothetical baseline described previously, but without the adjustment to account for a portion of savings generated during the ACO's prior agreement period, which we eliminated from the hypothetical baseline's rebased benchmarks. We believe ending the adjustment for savings generated in the ACO's prior agreement period will enable us to place a greater weight on the amount of the regional adjustment in the future, while not over crediting or penalizing an ACO for its prior performance (discussed in section II.A.2.c of this final rule). This alternative hypothetical baseline more closely resembles the future hypothetical baseline that would be used in our analysis of the application of a higher weight in calculating the regional adjustment in subsequent agreement periods (for example, if we undertake future rulemaking further amending the methodology for rebasing and updating the benchmark, as discussed previously in this final rule).

Relative savings projected for the ACOs starting a second agreement period in 2017 participation cycle are reasonably assumed to be proportional for ACOs starting a second agreement period in 2018 and 2019 because the assumptions and parameters would be the same or similar. Accordingly, the requirement under section 1899(i)(3)(B) of the Act that an alternative payment model not result in additional program expenditures is therefore satisfied for the period 2017 through 2019. As discussed elsewhere in this final rule, we will reexamine this projection in the future to ensure that the requirement under section 1899(i)(3)(B) of the Act that an alternative payment model not result in additional program

expenditures continues to be satisfied, taking into account, for example, increasing the weight placed on the regional adjustment to an ACO's rebased historical benchmark, which will increase to 70 percent for an ACO's second (or third for ACOs with higher costs than their region) and subsequent agreement periods under the revised rebasing methodology (unless the Secretary determines a lower weight

should be applied, as specified through future rulemaking). In the event that we conclude that the payment model established under section 1899(i)(3) of the Act no longer meets this requirement, we would undertake additional notice and comment rulemaking to make adjustments to the payment model to assure continued compliance with the statutory requirements.

#### F. Accounting Statement and Table

As required by OMB Circular A-4 under Executive Order 12866, in Table 5, we have prepared an accounting statement showing the change in net federal monetary transfers resulting from provisions of this final rule as compared to baseline.

TABLE 5—ACCOUNTING STATEMENT ESTIMATED IMPACTS  
[CYs 2017–2019]

Category	Primary estimate	Minimum estimate	Maximum estimate	Source citation (RIA, preamble, etc.)
Impact on Net Federal Cost From Finalized Changes to Medicare Shared Savings Program				
Annualized monetized: Discount rate: 7% .....	– 36.2 million .....	76.6 million .....	– 155.9 million .....	Table 4.
Annualized monetized: Discount rate: 3% .....	– 36.5 million .....	78.5 million .....	– 158.2 million.	
Notes: Amounts are expressed in 2016 dollars.	Negative values reflect reduction in federal net cost resulting from care management by ACOs. Estimates may be a combination of benefits and transfers. To the extent that the incentives created by Medicare payments change the amount of resources society uses in providing medical care, the more accurate categorization of effects would be as costs (positive values) or benefits/cost savings (negative values), rather than as transfers.			

#### G. Publicly Available Data

In response to requests from ACOs and other stakeholders for data to allow for modeling of proposed changes to the benchmark rebasing methodology, CMS made new data files available through the Shared Savings Program's Web site, to coincide with the issuance of the 2016 proposed rule (<https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/sharedsavingsprogram/Statutes-Regulations-Guidance.html>). These files included: Average per capita county-level FFS spending and risk scores for 3 historical years; and ACO-specific data, on the total number of assigned beneficiaries residing in each county where at least 1 percent of the ACO's assigned beneficiaries reside, for 3 historical years. A listing of all publicly available Shared Savings Program ACO data and ACO performance data sources maintained by CMS is available through the Shared Savings Program Web site (see the guide titled "Medicare Shared Savings Program Publicly available ACO data and ACO performance data sources maintained by CMS" available online at <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/sharedsavingsprogram/index.html>).

*Comment:* Some commenters modeled the proposed benchmarking changes using the publicly available data files released with the 2016 proposed rule, and other sources of Shared Savings Program performance data, and included remarks about their

findings within their comment letters. For example, several comments reflect estimates that approximately two-fifths to two-thirds of ACOs will have their benchmarks upwardly adjusted as a result of the revised rebasing methodology. A commenter described its analysis as indicating some ACOs will experience significant and unexpected swings in their reset historical benchmarks (when comparing the benchmark values resulting from the current methodology versus the revised methodology). Another commenter explained its analysis showed relatively high-cost ACOs face increasing headwinds as their benchmarks converge with their region, whereas relatively low-cost ACOs would have more favorable benchmarks. Another commenter specified that the 35 percent weight used to calculate the regional adjustment for an ACO's first agreement period under the revised rebasing methodology would result in a benchmark reduction of about 2 percent for ACOs with spending one standard deviation above the regional mean, and noted this would be substantial relative to estimated savings.

*Response:* We appreciate commenters' careful attention to the details of the 2016 proposed rule, modeling of the proposed policies, and informative comments including their analyses. We note that the analyses provided by commenters pertaining to the key change to the methodology—institution of a regional FFS adjustment to the

rebased benchmark—are generally in harmony with CMS' calculations in developing the rule and this impact analysis, providing reassurance that the data provided were a sufficient tool to allow the public to analyze the general impact of the new method for rebasing. We took into account commenters' observations regarding ACOs with high baseline costs for which a positive savings adjustment under the prior methodology will be replaced by a negative regional FFS adjustment. By reducing the weight applied to the regional FFS adjustment during the first two agreement periods under the revised rebasing methodology in cases where it lowers ACOs' benchmarks, this final rule will encourage continued participation by certain ACOs with significant potential to generate additional savings despite high baseline costs. We believe this change in policy from the proposed rule addresses concerns raised by commenters and illustrated in their analyses that the regional adjustment could disadvantage certain ACOs that have shown cost savings but may require longer than one agreement period to bring costs down toward the regional average in order to avoid a significant negative adjustment to their rebased benchmarks.

#### H. Conclusion

The analysis in this section, together with the remainder of this preamble, provides a regulatory impact analysis. As a result of this final rule, the median estimate of the financial impact of the

Shared Savings Program for CYs 2017 through 2019 is net federal savings of \$110 million greater than what would have been saved if no changes were made. Although this is the best estimate of the financial impact of the Shared Savings Program during CYs 2017 through 2019, a relatively wide range of possible outcomes exists. While approximately two-thirds of the stochastic trials resulted in an increase in net program savings, the 10th and 90th percentiles of the estimated distribution show a net increase in costs of \$240 million to net savings of \$480 million, respectively.

Overall, our analysis projects that improvements in the accuracy of benchmark calculations, including through the introduction of a regional adjustment to the ACO's rebased historical benchmark, are expected to result in increased overall participation in the program. These changes are also expected to improve the incentive for ACOs to invest in effective care management efforts, increase the attractiveness of participation under performance-based risk in Track 2 or 3 for certain ACOs with lower beneficiary expenditures, and result in overall greater gains in savings on FFS benefit claims costs than the associated increase in expected shared savings payments to ACOs. We intend to monitor emerging results for effects on claims costs, changing participation (including risk for cost due to selective changes in participation), and unforeseen bias in benchmark adjustments due to diagnosis coding intensity shifts. Such monitoring will be used to inform future rulemaking, such as if the Secretary determines that a lower weight should be used in calculating the regional adjustment amount.

In accordance with the provisions of Executive Order 12866, this rule was reviewed by the Office of Management and Budget.

#### List of Subjects in 42 CFR Part 425

Administrative practice and procedure, Health facilities, Health professions, Medicare, Reporting and recordkeeping requirements.

For the reasons set forth in the preamble, the Centers for Medicare & Medicaid Services amends 42 CFR part 425 as set forth below:

#### PART 425—MEDICARE SHARED SAVINGS PROGRAM

- 1. The authority citation for part 425 is revised to read as follows:

**Authority:** Secs. 1102, 1106, 1871, and 1899 of the Social Security Act (42 U.S.C. 1302, 1306, 1395hh, and 1395jj).

- 2. Amend § 425.20 by adding in alphabetical order definitions for “ACO's regional service area”, “Assignable beneficiary”, and “BY” to read as follows:

#### § 425.20 Definitions.

*ACO's regional service area* means all counties where one or more beneficiaries assigned to the ACO reside.

*Assignable beneficiary* means a Medicare fee-for-service beneficiary who receives at least one primary care service with a date of service during a specified 12-month assignment window from a Medicare-enrolled physician who is a primary care physician or who has one of the specialty designations included in § 425.402(c).

*BY* stands for benchmark year.

- 3. Amend § 425.200 as follows:

■ A. In paragraph (b)(2) introductory text by removing the phrase “all subsequent years” and adding in its place the phrase “through 2016”.

■ B. By adding paragraph (b)(3).

■ C. By adding paragraph (e).

The additions read as follows:

#### § 425.200 Participation agreement with CMS.

\* \* \* \* \*

(b) \* \* \*

(3) For 2017 and all subsequent years—

(i) The start date is January 1 of that year; and

(ii) The term of the participation agreement is 3 years, except the term of an ACO's initial agreement period under Track 1 (as described under § 425.604) may be extended, at the ACO's option, for an additional year for a total of 4 performance years if the conditions specified in paragraph (e) of this section are met.

\* \* \* \* \*

(e) *Optional fourth year.* (1) To qualify for a fourth performance year as described in paragraph (b)(3)(ii) of this section, the ACO must meet all of the following conditions:

(i) Is currently participating in its first agreement period under Track 1.

(ii) Has requested renewal of its participation agreement in accordance with § 425.224.

(iii) Has selected a two-sided model (as described under § 425.606 or § 425.610 of this part) in its renewal request.

(iv) Has requested an extension of its current agreement period and a 1-year

deferral of the start of its second agreement period in a form and manner specified by CMS.

(v) CMS approves the ACO's renewal, extension, and deferral requests.

(2) An ACO that is approved for renewal, extension, and deferral that terminates its participation agreement before the start of the first performance year of the second agreement period is—

(i) Considered to have terminated its participation agreement for the second agreement period under § 425.220; and

(ii) Not eligible to participate in the Shared Savings Program again until after the date on which the term of that second agreement period would have expired if the ACO had not terminated its participation, consistent with § 425.222.

#### § 425.314 [Amended]

- 4. Amend § 425.314 by removing paragraph (a)(4).

- 5. Add § 425.315 to read as follows:

#### § 425.315 Reopening Determinations of ACO Shared Savings or Shared Losses to Correct Financial Reconciliation Calculations.

(a) *Reopenings.* (1) If CMS determines that the amount of shared savings due to the ACO or the amount of shared losses owed by the ACO has been calculated in error, CMS may reopen the initial determination or a final agency determination under subpart I of this part and issue a revised initial determination:

(i) At any time in the case of fraud or similar fault as defined in § 405.902; or

(ii) Not later than 4 years after the date of the notification to the ACO of the initial determination of savings or losses for the relevant performance year under § 425.604(f), § 425.606(h) or § 425.610(h), for good cause.

(2) Good cause may be established when—

(i) There is new and material evidence that was not available or known at the time of the payment determination and may result in a different conclusion; or

(ii) The evidence that was considered in making the payment determination clearly shows on its face that an obvious error was made at the time of the payment determination.

(3) A change of legal interpretation or policy by CMS in a regulation, CMS ruling or CMS general instruction, whether made in response to judicial precedent or otherwise, is not a basis for reopening a payment determination under this section.

(4) CMS has sole discretion to determine whether good cause exists for reopening a payment determination under this section.

(b) [Reserved]

■ 6. Amend § 425.602 by:

- A. Revising the section heading.
- B. Revising paragraphs (a)(4), (5), and (8).
- C. Adding paragraph (a)(9).
- D. Revising paragraphs (b)(1) and (2).
- E. Removing paragraph (c).

The revisions and additions read as follows:

**§ 425.602 Establishing, adjusting, and updating the benchmark for an ACO's first agreement period.**

(a) \* \* \*

(4) Truncation of expenditures:

(i) For agreement periods beginning before 2017—

(A) Truncates an assigned beneficiary's total annual Parts A and B fee-for-service per capita expenditures at the 99th percentile of national Medicare fee-for-service expenditures as determined for each benchmark year in order to minimize variation from catastrophically large claims; and

(B) For the 2017 performance year and any subsequent performance years in agreement periods beginning in 2014, 2015 and 2016, the benchmark is adjusted to reflect the use of assignable beneficiaries in determining the 99th percentile of Medicare fee-for-service expenditures for purposes of truncating expenditures for assigned beneficiaries during each benchmark year as specified in paragraph (a)(4)(ii) of this section.

(ii) For agreement periods beginning in 2017 and subsequent years, truncates an assigned beneficiary's total annual Parts A and B fee-for-service per capita expenditures at the 99th percentile of national Medicare fee-for-service expenditures for assignable beneficiaries identified for the 12-month calendar year corresponding to each benchmark year in order to minimize variation from catastrophically large claims.

(5) Trending expenditures:

(i) For agreement periods beginning before 2017—

(A) Using CMS Office of the Actuary national Medicare expenditure data for each of the years making up the historical benchmark, determines national growth rates and trends expenditures for each benchmark year (BY1 and BY2) to the third benchmark year (BY3) dollars.

(B) To trend forward the benchmark, CMS makes separate calculations for expenditure categories for each of the following populations of beneficiaries:

- (1) ESRD.
- (2) Disabled.
- (3) Aged/dual eligible Medicare and Medicaid beneficiaries.
- (4) Aged/non-dual eligible Medicare and Medicaid beneficiaries.

(C) For the 2017 performance year and any subsequent performance years in agreement periods beginning in 2014, 2015 and 2016, the benchmark is adjusted to reflect the use of assignable beneficiaries to perform each of these calculations as specified in paragraph (a)(5)(ii) of this section.

(ii) For agreement periods beginning in 2017 and subsequent years—

(A) Using CMS Office of the Actuary national Medicare expenditure data for each of the years making up the historical benchmark, determines national growth rates for assignable beneficiaries identified for the 12-month calendar year corresponding to each benchmark year, and trends expenditures for each benchmark year (BY1 and BY2) to the third benchmark year (BY3) dollars.

(B) To trend forward the benchmark, CMS makes separate calculations for expenditure categories for each of the following populations of beneficiaries:

- (1) ESRD.
- (2) Disabled.
- (3) Aged/dual eligible Medicare and Medicaid beneficiaries.
- (4) Aged/non-dual eligible Medicare and Medicaid beneficiaries.

\* \* \* \* \*

(8) The benchmark is adjusted to take into account the expenditures for beneficiaries who would have been assigned to the ACO in any of the 3 most recent years prior to the agreement period using the most recent certified ACO participant list for the relevant performance year.

(9) The historical benchmark is further adjusted at the time of reconciliation for a performance year to account for changes in severity and case mix for newly and continuously assigned beneficiaries using prospective HCC risk scores and demographic factors as described under §§ 425.604(a)(1) through (3), 425.606(a)(1) through (3), and 425.610(a)(1) through (3).

(b) \* \* \*

(1) For performance years before 2017, CMS updates the historical benchmark annually for each year of the agreement period based on the flat dollar equivalent of the projected absolute amount of growth in national per capita expenditures for Parts A and B services under the original Medicare fee-for-service program.

(i) CMS updates the fixed benchmark by the projected absolute amount of growth in national per capita expenditures for Parts A and B services under the original Medicare fee-for-service program using data from CMS' Office of the Actuary.

(ii) To update the benchmark, CMS makes expenditure calculations for separate categories for each of the following populations of beneficiaries:

- (A) ESRD.
- (B) Disabled.
- (C) Aged/dual eligible Medicare and Medicaid beneficiaries.
- (D) Aged/non-dual eligible Medicare and Medicaid beneficiaries.

(2) For the 2017 performance year and subsequent performance years, CMS updates the historical benchmark annually for each year of the agreement period based on the flat dollar equivalent of the projected absolute amount of growth in national per capita expenditures for Parts A and B services under the original Medicare fee-for-service program for assignable beneficiaries identified for the 12-month calendar year corresponding to the year for which the update is calculated.

(i) CMS updates the fixed benchmark by the projected absolute amount of growth in national per capita expenditures for Parts A and B services under the original Medicare fee-for-service program for assignable beneficiaries identified for the 12-month calendar year corresponding to the year for which the update is being calculated using data from CMS' Office of the Actuary.

(ii) To update the benchmark, CMS makes expenditure calculations for separate categories for each of the following populations of beneficiaries:

- (A) ESRD.
- (B) Disabled.
- (C) Aged/dual eligible Medicare and Medicaid beneficiaries.
- (D) Aged/non-dual eligible Medicare and Medicaid beneficiaries.

■ 7. Add § 425.603 to read as follows:

**§ 425.603 Resetting, adjusting, and updating the benchmark for a subsequent agreement period.**

(a) An ACO's benchmark is reset at the start of each subsequent agreement period.

(b) For second agreement periods beginning in 2016, CMS establishes, adjusts, and updates the rebased historical benchmark in accordance with § 425.602(a) and (b) with the following modifications:

(1) Rather than weighting each year of the benchmark using the percentages provided at § 425.602(a)(7), each benchmark year is weighted equally.

(2) An additional adjustment is made to account for the average per capita amount of savings generated during the ACO's previous agreement period. The adjustment is limited to the average number of assigned beneficiaries (expressed as person years) under the ACO's first agreement period.

(c) For second or subsequent agreement periods beginning in 2017 and subsequent years, CMS establishes the rebased historical benchmark by determining the per capita Parts A and B fee-for-service expenditures for beneficiaries who would have been assigned to the ACO in any of the 3 most recent years before the agreement period using the certified ACO participant list submitted before the start of the agreement period as required under § 425.118. CMS does all of the following:

(1) Calculates the payment amounts included in Parts A and B fee-for-service claims using a 3-month claims run out with a completion factor. The calculation—

(i) Excludes IME and DSH payments; and

(ii) Considers individually beneficiary identifiable payments made under a demonstration, pilot or time limited program.

(2) Makes separate expenditure calculations for each of the following populations of beneficiaries:

(i) ESRD.

(ii) Disabled.

(iii) Aged/dual eligible Medicare and Medicaid beneficiaries.

(iv) Aged/non-dual eligible Medicare and Medicaid beneficiaries.

(3) Adjusts expenditures for changes in severity and case mix using prospective HCC risk scores.

(4) Truncates an assigned beneficiary's total annual Parts A and B fee-for-service per capita expenditures at the 99th percentile of national Medicare fee-for-service expenditures for assignable beneficiaries identified for the 12-month calendar year corresponding to each benchmark year in order to minimize variation from catastrophically large claims.

(5) Trends forward expenditures for each benchmark year (BY1 and BY2) to the third benchmark year (BY3) dollars using regional growth rates based on expenditures for the ACO's regional service area as determined under paragraphs (e) and (f) of this section, making separate expenditure calculations for each of the following populations of beneficiaries:

(i) ESRD.

(ii) Disabled.

(iii) Aged/dual eligible Medicare and Medicaid beneficiaries.

(iv) Aged/non-dual eligible Medicare and Medicaid beneficiaries.

(6) Restates BY1 and BY2 trended and risk-adjusted expenditures in BY3 proportions of the following populations of beneficiaries:

(i) ESRD.

(ii) Disabled.

(iii) Aged/dual eligible Medicare and Medicaid beneficiaries.

(iv) Aged/non-dual eligible Medicare and Medicaid beneficiaries.

(7) Weights each benchmark year equally.

(8) The ACO's benchmark will be adjusted in accordance with § 425.118(b) for the addition and removal of ACO participants or ACO providers/suppliers during the term of the agreement period. To adjust the benchmark, CMS does the following:

(i) Takes into account the expenditures for beneficiaries who would have been assigned to the ACO in any of the 3 most recent years prior to the agreement period using the most recent certified ACO participant list for the relevant performance year.

(ii) Redetermines the regional adjustment amount under paragraph (c)(9) of this section, according to the ACO's assigned beneficiaries for BY3 resulting from the most recent certified ACO participant list for the relevant performance year.

(9) Adjusts the historical benchmark based on the ACO's regional service area expenditures, making separate calculations for the following populations of beneficiaries: ESRD, disabled, aged/dual eligible Medicare and Medicaid beneficiaries, and aged/non-dual eligible Medicare and Medicaid beneficiaries. CMS does all of the following:

(i) Calculates an average per capita amount of expenditures for the ACO's regional service area as follows:

(A) Determines the counties included in the ACO's regional service area based on the ACO's BY3 assigned beneficiary population.

(B) Determines the ACO's regional expenditures as specified under paragraphs (e) and (f) of this section for BY3.

(C) Adjusts for differences in severity and case mix between the ACO's assigned beneficiary population and the assignable beneficiary population for the ACO's regional service area identified for the 12-month calendar year that corresponds to BY3.

(ii) Calculates the adjustment as follows:

(A) Determines the difference between the average per capita amount of expenditures for the ACO's regional service area as specified under paragraph (c)(9)(i) of this section and the average per capita amount of the ACO's rebased historical benchmark determined under paragraphs (c)(1) through (8) of this section, for each of the following populations of beneficiaries:

(1) ESRD.

(2) Disabled.

(3) Aged/dual eligible Medicare and Medicaid beneficiaries.

(4) Aged/non-dual eligible Medicare and Medicaid beneficiaries.

(B) Applies a percentage, determined as follows:

(1) The first time an ACO's benchmark is rebased using the methodology described under paragraph (c) of this section, CMS calculates the regional adjustment as follows:

(i) Using 35 percent of the difference between the average per capita amount of expenditures for the ACO's regional service area and the average per capita amount of the ACO's rebased historical benchmark, if the ACO is determined to have lower spending than the ACO's regional service area;

(ii) Using 25 percent of the difference between the average per capita amount of expenditures for the ACO's regional service area and the average per capita amount of the ACO's rebased historical benchmark, if the ACO is determined to have higher spending than the ACO's regional service area.

(2) The second time that an ACO's benchmark is rebased using the methodology described under paragraph (c) of this section, CMS calculates the regional adjustment to the historical benchmark as follows:

(i) Using 70 percent of the difference between the average per capita amount of expenditures for the ACO's regional service area and the average per capita amount of the ACO's rebased historical benchmark, unless the Secretary determines a lower weight should be applied, if the ACO is determined to have lower spending than the ACO's regional service area;

(ii) Using 50 percent of the difference between the average per capita amount of expenditures for the ACO's regional service area and the average per capita amount of the ACO's rebased historical benchmark, if the ACO is determined to have higher spending than the ACO's regional service area.

(3) The third or subsequent time that an ACO's benchmark is rebased using the methodology described under paragraph (c) of this section, CMS calculates the regional adjustment to the historical benchmark using 70 percent of the difference between the average per capita amount of expenditures for the ACO's regional service area and the average per capita amount of the ACO's rebased historical benchmark, unless the Secretary determines a lower weight should be applied.

(4) To determine if an ACO has lower or higher spending compared to the ACO's regional service area, CMS does the following:

(i) Multiplies the difference between the average per capita amount of expenditures for the ACO's regional service area and the average per capita amount of the ACO's rebased historical benchmark for each population of beneficiaries (ESRD, Disabled, Aged/dual eligible Medicare and Medicaid beneficiaries, Aged/non-dual eligible Medicare and Medicaid beneficiaries) as calculated under paragraph (c)(9)(ii)(A) of this section by the applicable proportion of the ACO's assigned beneficiary population (ESRD, Disabled, Aged/dual eligible Medicare and Medicaid beneficiaries, Aged/non-dual eligible Medicare and Medicaid beneficiaries) for benchmark year 3 of the rebased historical benchmark.

(ii) Sums the amounts determined in paragraph (c)(9)(ii)(B)(4)(i) of this section across the populations of beneficiaries (ESRD, Disabled, Aged/dual eligible Medicare and Medicaid beneficiaries, Aged/non-dual eligible Medicare and Medicaid beneficiaries).

(iii) If the resulting sum is a net positive value, the ACO is considered to have lower spending compared to the ACO's regional service area. If the resulting sum is a net negative value, the ACO is considered to have higher spending compared to the ACO's regional service area.

(iv) If CMS adjusts the ACO's benchmark for the addition or removal of ACO participants or ACO providers/suppliers during the term of the agreement period as specified in paragraph (c)(8) of this section, CMS redetermines whether the ACO is considered to have lower spending or higher spending compared to the ACO's regional service area for purposes of determining the percentage used in calculating the adjustment in paragraphs (c)(9)(ii)(B)(1) and (2) of this section.

(10) The historical benchmark is further adjusted at the time of reconciliation for a performance year to account for changes in severity and case mix for newly and continuously assigned beneficiaries using prospective HCC risk scores and demographic factors as described under §§ 425.604(a)(1) through (3), 425.606(a)(1) through (3), and 425.610(a)(1) through (3).

(d) For second or subsequent agreement periods beginning in 2017 and subsequent years, CMS updates the rebased historical benchmark under paragraph (c) of this section, annually for each year of the agreement period by the growth in risk adjusted regional per beneficiary FFS spending for the ACO's regional service area by doing all of the following:

(1) Determining the counties included in the ACO's regional service area based on the ACO's assigned beneficiary population used to determine financial reconciliation for the relevant performance year.

(2) Determining growth rates based on expenditures for counties in the ACO's regional service area calculated under paragraphs (e) and (f) of this section, for the performance year compared to BY3 for each of the following populations of beneficiaries:

- (i) ESRD.
- (ii) Disabled.
- (iii) Aged/dual eligible Medicare and Medicaid beneficiaries.
- (iv) Aged/non-dual eligible Medicare and Medicaid beneficiaries.

(3) Updating the benchmark by making separate calculations for each of the following populations of beneficiaries:

- (i) ESRD.
- (ii) Disabled.
- (iii) Aged/dual eligible Medicare and Medicaid beneficiaries.
- (iv) Aged/non-dual eligible Medicare and Medicaid beneficiaries.

(e) For second or subsequent agreement periods beginning in 2017 and subsequent years, CMS does all of the following to determine risk adjusted county fee-for-service expenditures for use in calculating the ACO's regional fee-for-service expenditures:

(1)(i) Determines average county fee-for-service expenditures based on expenditures for the assignable population of beneficiaries in each county, where assignable beneficiaries are identified for the 12-month calendar year corresponding to the relevant benchmark or performance year.

(ii) Makes separate expenditure calculations for each of the following populations of beneficiaries:

- (A) ESRD.
- (B) Disabled.
- (C) Aged/dual eligible Medicare and Medicaid beneficiaries.
- (D) Aged/non-dual eligible Medicare and Medicaid beneficiaries.

(2) Calculates assignable beneficiary expenditures using the payment amounts included in Parts A and B fee-for-service claims with dates of service in the 12-month calendar year for the relevant benchmark or performance year, using a 3-month claims run out with a completion factor. The calculation—

- (i) Excludes IME and DSH payments; and
- (ii) Considers individually beneficiary identifiable payments made under a demonstration, pilot or time limited program.

(3) Truncates a beneficiary's total annual Parts A and B fee-for-service per

capita expenditures at the 99th percentile of national Medicare fee-for-service expenditures for assignable beneficiaries identified for the 12-month calendar year that corresponds to the relevant benchmark or performance year, in order to minimize variation from catastrophically large claims.

(4) Adjusts fee-for-service expenditures for severity and case mix of assignable beneficiaries in the county using prospective CMS-HCC risk scores. The calculation is made according to the following populations of beneficiaries:

- (i) ESRD.
- (ii) Disabled.
- (iii) Aged/dual eligible Medicare and Medicaid beneficiaries.
- (iv) Aged/non-dual eligible Medicare and Medicaid beneficiaries.

(f) For second or subsequent agreement periods beginning in 2017 and subsequent years, CMS calculates an ACO's risk adjusted regional expenditures by—

(1) Weighting the risk-adjusted county-level fee-for-service expenditures determined under paragraph (e) of this section according to the ACO's proportion of assigned beneficiaries in the county, determined by the number of the ACO's assigned beneficiaries in the applicable population (according to Medicare enrollment type) residing in the county in relation to the ACO's total number of assigned beneficiaries in the applicable population (according to Medicare enrollment type) for the relevant benchmark or performance year for each of the following populations of beneficiaries:

- (i) ESRD.
- (ii) Disabled.
- (iii) Aged/dual eligible Medicare and Medicaid beneficiaries.
- (iv) Aged/non-dual eligible Medicare and Medicaid beneficiaries.

(2) Aggregating the values determined under paragraph (f)(1) of this section for each population of beneficiaries (according to Medicare enrollment type) across all counties within the ACO's regional service area; and

(3) Weighting the aggregate expenditure values determined for each population of beneficiaries (according to Medicare enrollment type) under paragraph (f)(2) of this section by a weight reflecting the proportion of the ACO's overall beneficiary population in the applicable Medicare enrollment type for the relevant benchmark or performance year.

■ 8. Amend § 425.604 as follows:

■ A. In paragraphs (a)(1) and (a)(2)(i) and (ii) by removing the phrase “adjust for changes” and adding in its place the

phrase “adjust the benchmark for changes”.

■ B. In paragraph (a)(3) introductory text by removing the phrase “In adjusting for health status” and adding in its place the phrase “In adjusting the benchmark for health status”.

■ C. Redesignating paragraph (a)(4) as paragraph (a)(4)(i).

■ D. In newly redesignated paragraph (a)(4)(i) by removing the phrase “To minimize variation” and adding in its place the phrase “For performance years before 2017 to minimize variation”.

■ E. Adding paragraph (a)(4)(ii).

The addition reads as follows:

**§ 425.604 Calculation of savings under the one-sided model.**

(a) \* \* \*

(4) \* \* \*

(ii) For the 2017 performance year and subsequent performance years, to minimize variation from catastrophically large claims, CMS truncates an assigned beneficiary’s total annual Parts A and B fee-for-service per capita expenditures at the 99th percentile of national Medicare fee-for-service expenditures as determined for the applicable performance year for assignable beneficiaries identified for the 12-month calendar year corresponding to the performance year.

\* \* \* \* \*

■ 9. Amend § 425.606 as follows:

■ A. In paragraphs (a)(1) and (a)(2)(i) and (ii) by removing the phrase “adjust for changes” and adding in its place the phrase “adjust the benchmark for changes”.

■ B. In paragraph (a)(3) introductory text by removing the phrase “In adjusting for health status” and adding in its place the phrase “In adjusting the benchmark for health status”.

■ C. Redesignating paragraph (a)(4) as paragraph (a)(4)(i).

■ D. In newly redesignated paragraph (a)(4)(i) by removing the phrase “To

minimize variation” and adding in its place the phrase “For performance years before 2017 to minimize variation”.

■ E. Adding paragraph (a)(4)(ii).

The addition reads as follows:

**§ 425.606 Calculation of shared savings and losses under Track 2.**

(a) \* \* \*

(4) \* \* \*

(ii) For the 2017 performance year and subsequent performance years, to minimize variation from catastrophically large claims, CMS truncates an assigned beneficiary’s total annual Parts A and B fee-for-service per capita expenditures at the 99th percentile of national Medicare fee-for-service expenditures as determined for the applicable performance year for assignable beneficiaries identified for the 12-month calendar year corresponding to the performance year.

\* \* \* \* \*

■ 10. Amend § 425.610 as follows:

■ A. In paragraphs (a)(1) and (a)(2)(i) and (ii) by removing the phrase “adjust for changes” and adding in its place the phrase “adjust the benchmark for changes”.

■ B. In paragraph (a)(3) introductory text by removing the phrase “In adjusting for health status” and adding in its place the phrase “In adjusting the benchmark for health status”.

■ C. Redesignating paragraph (a)(4) as paragraph (a)(4)(i).

■ D. In newly redesignated paragraph (a)(4)(i) by removing the phrase “To minimize variation” and adding in its place the phrase “For performance years before 2017 to minimize variation”.

■ E. Adding paragraph (a)(4)(ii).

The addition reads as follows:

**§ 425.610 Calculation of shared savings and losses under Track 3.**

(a) \* \* \*

(4) \* \* \*

(ii) For the 2017 performance year and subsequent performance years, to minimize variation from catastrophically large claims, CMS truncates an assigned beneficiary’s total annual Parts A and B fee-for-service per capita expenditures at the 99th percentile of national Medicare fee-for-service expenditures as determined for the applicable performance year for assignable beneficiaries identified for the 12-month calendar year corresponding to the performance year.

\* \* \* \* \*

**§ 425.800 [Amended]**

■ 11. Amend § 425.800 as follows:

■ A. In paragraph (a)(4) by—

■ i. Removing the phrase “The determination of whether” and adding in its place the phrase “The initial determination or revised initial determination of whether”.

■ ii. Removing the phrase “including the determination” and adding in its place the phrase “including the initial determination or revised initial determination”.

■ iii. Removing the cross-reference “§ 425.602, § 425.604, and § 425.606” and adding in its place the cross-reference “§§ 425.602, 425.604, 425.606, and 425.610”.

■ B. In paragraph (a)(5) by removing the cross-reference “§ 425.604 and 425.606” and adding in its place “§§ 425.604, 425.606, and 425.610”.

Dated: May 27, 2016.

**Andrew M. Slavitt,**

*Acting Administrator, Centers for Medicare & Medicaid Services.*

Dated: June 3, 2016.

**Sylvia M. Burwell,**

**Expatriate Health Plans, Expatriate Health Plan Issuers, and Qualified Expatriates; Excepted Benefits; Lifetime and Annual Limits; and Short-Term, Limited-Duration Insurance**

**AGENCY:** Internal Revenue Service, Department of the Treasury; Employee Benefits Security Administration, Department of Labor; Centers for Medicare & Medicaid Services, Department of Health and Human Services.

**ACTION:** Proposed rule.

**SUMMARY:** This document contains proposed regulations on the rules for expatriate health plans, expatriate health plan issuers, and qualified expatriates under the Expatriate Health Coverage Clarification Act of 2014 (EHCCA). This document also includes proposed conforming amendments to certain regulations to implement the provisions of the EHCCA. Further, this document proposes standards for travel insurance and supplemental health insurance coverage to be considered excepted benefits and revisions to the definition of short-term, limited-duration insurance for purposes of the exclusion from the definition of individual health insurance coverage. These proposed regulations affect expatriates with health coverage under expatriate health plans and sponsors, issuers and administrators of expatriate health plans, individuals with and plan sponsors of travel insurance and supplemental health insurance coverage, and individuals with short-term, limited-duration insurance. In addition, this document proposes to

amend a reference in the final regulations relating to prohibitions on lifetime and annual dollar limits and proposes to require that a notice be provided in connection with hospital indemnity and other fixed indemnity insurance in the group health insurance market for it to be considered excepted benefits.

**DATES:** Comments are due on or before August 9, 2016.

**ADDRESSES:** Comments, identified by “Expatriate Health Plans and other issues,” may be submitted by one of the following methods:

*Hand delivery or mail:* Written comment submissions may be submitted to CC:PA:LPD:PR (REG–135702–15), Internal Revenue Service, P.O. Box 7604, Ben Franklin Station, Washington, DC 20044. Comment submissions may be hand-delivered Monday through Friday between the hours of 8 a.m. and 4 p.m. to CC:PA:LPD:PR (REG–135702–15).

*Federal eRulemaking Portal:* <http://www.regulations.gov>. Follow the instructions for submitting comments.

Comments received will be posted without change to [www.regulations.gov](http://www.regulations.gov) and available for public inspection. Any comment that is submitted will be shared with the Department of Labor (DOL) and Department of Health and Human Services (HHS). Warning: Do not include any personally identifiable information (such as name, address, or other contact information) or confidential business information that you do not want publicly disclosed. All comments may be posted on the Internet and can be retrieved by most Internet search engines. No deletions, modifications, or redactions will be made to the comments received, as they are public records.

**FOR FURTHER INFORMATION CONTACT:** Concerning the proposed regulations, with respect to the treatment of expatriate health plan coverage as minimum essential coverage under section 5000A of the Internal Revenue Code, John Lovelace, at 202–317–7006; with respect to the provisions relating to the health insurance providers fee imposed by section 9010 of the Affordable Care Act, Rachel Smith, at 202–317–6855; with respect to the definition of expatriate health plans, expatriate health insurance issuers, and qualified expatriates, and the provisions relating to the market reforms (such as excepted benefits, and short-term, limited-duration coverage), R. Lisa Mojiri-Azad of the IRS Office of Chief Counsel, at 202–317–5500, Elizabeth Schumacher or Matthew Litton of the Department of Labor, at 202–693–8335,

Jacob Ackerman of the Centers for Medicare & Medicaid Services, Department of Health and Human Services, at 301–492–4179. Concerning the submission of comments or to request a public hearing, Regina Johnson. (202) 317–6901 (not toll-free numbers).

**Customer Service Information:**

Individuals interested in obtaining information from the Department of Labor concerning employment-based health coverage laws may call the EBSA Toll-Free Hotline, at 1–866–444–EBSA (3272) or visit the Department of Labor’s Web site (<http://www.dol.gov/ebsa>). In addition, information from HHS on private health insurance for consumers can be found on the Centers for Medicare & Medicaid Services (CMS) Web site ([www.cms.gov/ccioo](http://www.cms.gov/ccioo)) and information on health reform can be found at [www.HealthCare.gov](http://www.HealthCare.gov).

**SUPPLEMENTARY INFORMATION:****I. Background**

This document contains proposed amendments to Department of the Treasury (Treasury Department) regulations at 26 CFR part 1 (Income taxes), 26 CFR part 46 (Excise taxes, Health care, Health insurance, Pensions, Reporting and recordkeeping requirements), 26 CFR part 54 (Pension and excise taxes), 26 CFR part 57 (Health insurance providers fee), and 26 CFR part 301 (relating to procedure and administration) to implement the rules for expatriate health plans, expatriate health plan issuers, and qualified expatriates under the Expatriate Health Coverage Clarification Act of 2014 (EHCCA), which was enacted as Division M of the Consolidated and Further Continuing Appropriations Act, 2015, Public Law 113–235 (128 Stat. 2130). This document also contains proposed amendments to DOL regulations at 29 CFR part 2590 and HHS regulations at 45 CFR part 147, which are substantively identical to the amendments to 26 CFR part 54.

The EHCCA generally provides that the requirements of the Affordable Care Act<sup>1</sup> (ACA) do not apply with respect to expatriate health plans, expatriate health insurance issuers for coverage under expatriate health plans, and employers in their capacity as plan sponsors of expatriate health plans, except that: (1) An expatriate health plan shall be treated as minimum essential coverage under section

<sup>1</sup> The Patient Protection and Affordable Care Act, Public Law 111–148, was enacted on March 23, 2010, and the Health Care and Education Reconciliation Act, Public Law 111–152, was enacted on March 30, 2010. They are collectively known as the “Affordable Care Act.”

5000A(f) of the Internal Revenue Code of 1986, as amended (the Code) and any other section of the Code that incorporates the definition of minimum essential coverage; (2) the employer shared responsibility provisions of section 4980H of the Code continue to apply; (3) the health care reporting provisions of sections 6055 and 6056 of the Code continue to apply but with certain modifications relating to the use of electronic media for required statements to enrollees; (4) the excise tax provisions of section 4980I of the Code continue to apply with respect to coverage of certain qualified expatriates who are assigned (rather than transferred) to work in the United States; and (5) the annual health insurance providers fee imposed by section 9010 of the ACA takes into account expatriate health insurance issuers for certain purposes for calendar years 2014 and 2015 only.

This document also contains proposed amendments to 26 CFR part 54, 29 CFR part 2590, and 45 CFR parts 146 and 148, which would specify conditions for travel insurance, supplemental health insurance coverage, and hospital indemnity and other fixed indemnity insurance to be considered excepted benefits. Excepted benefits are exempt from the requirements that generally apply under title XXVII of the Public Health Service Act (PHS Act), part 7 of the Employee Retirement Income Security Act of 1974, as amended (ERISA), and Chapter 100 of the Code. In addition, this document contains proposed amendments to (1) the definition of “short-term, limited-duration insurance,” for purposes of the exclusion from the definition of “individual health insurance coverage” and (2) the definition of “essential health benefits,” for purposes of the prohibition on annual and lifetime dollar limits in 26 CFR part 54, 29 CFR 2590, and 45 CFR parts 144 and 147.

This document clarifies an exemption set forth in 45 CFR 153.400(a)(1)(iii) related to the transitional reinsurance program. Section 1341 of the Affordable Care Act provides for the establishment of a transitional reinsurance program in each State to help pay the cost of treating high-cost enrollees in the individual market in the 2014 through 2016 benefit years. Section 1341(b)(3)(B) of the ACA and 45 CFR 153.400(a)(1) require contributing entities to make reinsurance contributions for major medical coverage that is considered to be part of a commercial book of business.

This document also contains proposed conforming amendments to 45 CFR part 158 that address the separate

medical loss ratio (MLR) reporting requirements for expatriate policies that are not expatriate health plans under the EHCCA.

### **General Statutory Background and Enactment of ACA**

The Health Insurance Portability and Accountability Act of 1996 (HIPAA), Public Law 104–191 (110 Stat. 1936), added title XXVII of the PHS Act, part 7 of ERISA, and Chapter 100 of the Code, which impose portability and nondiscrimination rules with respect to health coverage. These provisions of the PHS Act, ERISA, and the Code were later augmented by other consumer protection laws, including the Mental Health Parity Act of 1996, the Paul Wellstone and Pete Domenici Mental Health Parity and Addiction Equity Act of 2008, the Newborns’ and Mothers’ Health Protection Act, the Women’s Health and Cancer Rights Act, the Genetic Information Nondiscrimination Act of 2008, the Children’s Health Insurance Program Reauthorization Act of 2009, Michelle’s Law, and the ACA.

The ACA reorganizes, amends, and adds to the provisions of part A of title XXVII of the PHS Act relating to group health plans and health insurance issuers in the group and individual markets. For this purpose, the term “group health plan” includes both insured and self-insured group health plans.<sup>2</sup> The ACA added section 715(a)(1) of ERISA and section 9815(a)(1) of the Code to incorporate the provisions of part A of title XXVII of the PHS Act (generally, sections 2701 through 2728 of the PHS Act) into ERISA and the Code to make them applicable to group health plans and health insurance issuers providing health insurance coverage in connection with group health plans.

### **Expatriate Health Plans, Expatriate Health Plan Issuers and Qualified Expatriates**

Prior to the enactment of the EHCCA, employers, issuers and covered individuals had expressed concerns about the application of the ACA market reform rules to expatriate health plans and whether coverage under expatriate health plans was minimum essential coverage for purposes of section 5000A of the Code. To address these concerns on an interim basis, on March 8, 2013, the Departments of Labor, HHS, and the Treasury (collectively, the

Departments<sup>3</sup>) issued Affordable Care Act Implementation Frequently Asked Questions (FAQs) Part XIII, Q&A–1, providing relief from the ACA market reform requirements for certain expatriate group health insurance coverage.<sup>4</sup> For plan years ending on or before December 31, 2015, the FAQ provides that, with respect to expatriate health plans, the Departments will consider the requirements of subtitles A and C of title I of the ACA to be satisfied if the plan and issuer comply with the pre-ACA version of title XXVII of the PHS Act. For purposes of the relief, an expatriate health plan is an insured group health plan with respect to which enrollment is limited to primary insureds who reside outside of their home country for at least six months of the plan year and any covered dependents, and its associated group health insurance coverage. The FAQ also states that coverage provided under an expatriate group health plan is a form of minimum essential coverage under section 5000A of the Code. On January 9, 2014, the Departments issued Affordable Care Act Implementation FAQs Part XVIII, Q&A–6 and Q&A–7, which extended the relief of Affordable Care Act Implementation FAQs Part XIII, Q&A–1 for insured expatriate health plans to subtitle D of title I of the ACA and also provided that the relief from the requirements of subtitles A, C, and D of title I of the ACA would apply for plan years ending on or before December 31, 2016.<sup>5</sup>

Subsequently, the EHCCA was enacted on December 16, 2014. Section 3(a) of the EHCCA provides that the ACA generally does not apply to expatriate health plans, employers with respect to expatriate health plans but solely in their capacity as plan sponsors of these plans, and expatriate health insurance issuers with respect to coverage offered by such issuers under expatriate health plans. Under section 3(b) of the EHCCA, however, the ACA continues to apply to expatriate health plans with respect to the employer shared responsibility provisions of section 4980H of the Code, the reporting requirements of sections 6055 and 6056

<sup>3</sup> Note, however, that in sections under headings listing only two of the three Departments, the term “Departments” generally refers only to the two Departments listed in the heading.

<sup>4</sup> Frequently Asked Questions about Affordable Care Act Implementation (Part XIII), available at <http://www.dol.gov/ebsa/pdf/faq-aca13.pdf> and [http://www.cms.gov/CCIIO/Resources/Fact-Sheets-andFAQs/ACA\\_implementation\\_faq13.html](http://www.cms.gov/CCIIO/Resources/Fact-Sheets-andFAQs/ACA_implementation_faq13.html).

<sup>5</sup> Frequently Asked Questions about Affordable Care Act Implementation (Part XVIII), available at <https://www.dol.gov/ebsa/faqs/faq-aca18.html> and [https://www.cms.gov/CCIIO/Resources/Fact-Sheets-andFAQs/aca\\_implementation\\_faqs18.html](https://www.cms.gov/CCIIO/Resources/Fact-Sheets-andFAQs/aca_implementation_faqs18.html).

<sup>2</sup> The term “group health plan” is used in title XXVII of the PHS Act, part 7 of ERISA, and Chapter 100 of the Code, and is distinct from the term “health plan,” as used in other provisions of title I of the ACA. The term “health plan” does not include self-insured group health plans.

of the Code, and the excise tax provisions of section 4980I of the Code. Section 3(b) of the EHCCA further provides that an expatriate health plan offered to primary enrollees described in sections 3(d)(3)(A) and (B) of the EHCCA shall be treated as an eligible employer sponsored plan under section 5000A(f)(2) of the Code, and that an expatriate health plan offered to primary enrollees described in section 3(d)(3)(C) of the EHCCA shall be treated as a plan in the individual market under section 5000A(f)(1)(C) of the Code. Section 3(c) of the EHCCA sets forth rules for expatriate health plans with respect to the annual health insurance providers fee imposed by section 9010 of the ACA.

Sections 4375 and 4376 of the Code impose the Patient-Centered Outcomes Research Trust Fund (PCORTF) fee only with respect to individuals residing in the United States. Final regulations regarding the PCORTF fee exempt any specified health insurance policy or applicable self-insured group health plan designed and issued specifically to cover employees who are working and residing outside the United States from the fee. The exclusion from the ACA for expatriate health plans, employers with respect to expatriate health plans but solely in their capacity as plan sponsors of these plans, and expatriate health insurance issuers with respect to coverage offered by such issuers under expatriate health plans would apply to the PCORTF fee to the extent an expatriate health plan was not already excluded from the fee.

Section 1341 of the ACA establishes a transitional reinsurance program to help stabilize premiums for non-grandfathered health insurance coverage in the individual health insurance market from 2014 through 2016. Section 1341(b)(3)(B) of the ACA and the implementing regulations at 45 CFR 153.400(a)(1) require health insurance issuers and certain self-insured group health plans (“contributing entities”) to make reinsurance contributions for major medical coverage that is considered to be part of a commercial book of business. This language has been interpreted to exclude “expatriate health coverage.”<sup>6</sup> As such, HHS regulation at 45 CFR 153.400(a)(1)(iii) provides that a contributing entity must make reinsurance contributions for lives covered by its self-insured group health plans and health insurance coverage, except to the extent that such plan or coverage is expatriate health coverage,

as defined by the Secretary of HHS, or for the 2015 and 2016 benefit years only, is a self-insured group health plan with respect to which enrollment is limited to participants who reside outside of their home country for at least six months of the plan year and any covered dependents of such participants. As noted in the March 8, 2013 Affordable Care Act Implementation FAQs Part XIII, Q&A–1, the FAQ definition of “expatriate health plan” was extended to the definition of “expatriate health coverage” under 45 CFR 153.400(a)(1)(iii).

Section 3(a) of the EHCCA provides that the ACA generally does not apply to expatriate health plans, employers with respect to expatriate health plans but solely in their capacity as plan sponsors of expatriate health plans, and expatriate health insurance issuers with respect to coverage offered by such issuers under expatriate health plans. Accordingly, under the EHCCA, the transitional reinsurance program contribution obligation under section 1341 of the ACA does not apply to expatriate health plans.

Section 5000A of the Code, as added by section 1501 of the ACA, provides that, for each month, taxpayers must have minimum essential coverage, qualify for a health coverage exemption, or make an individual shared responsibility payment when filing a federal income tax return. Section 5000A(f)(1)(B) of the Code provides that minimum essential coverage includes coverage under an eligible employer-sponsored plan. Section 5000A(f)(2) of the Code and 26 CFR 1.5000A–2(c) provide that an eligible employer-sponsored plan means, with respect to an employee, group health insurance coverage that is a governmental plan or any other plan or coverage offered in the small or large group market within a State, or a self-insured group health plan. Under section 5000A(f)(1)(C) of the Code, minimum essential coverage includes coverage under a health plan offered in the individual market within a State.

Section 3(b)(1)(A) of the EHCCA provides that an expatriate health plan that is offered to primary enrollees who are qualified expatriates described in sections 3(d)(3)(A) and 3(d)(3)(B) of the EHCCA is treated as an eligible employer-sponsored plan within the meaning of section 5000A(f)(2) of the Code. Section 3(b)(1)(B) of the EHCCA provides that, in the case of an expatriate health plan that is offered to primary enrollees who are qualified expatriates described in section 3(d)(3)(C) of the EHCCA, the coverage is treated as a plan in the individual

market within the meaning of section 5000A(f)(1)(C) of the Code, for purposes of sections 36B, 5000A and 6055 of the Code.

Under section 6055 of the Code, as added by section 1502 of the ACA, providers of minimum essential coverage must file an information return with the Internal Revenue Service (IRS) and furnish a written statement to covered individuals reporting the months that an individual had minimum essential coverage. Under section 6056 of the Code, as added by section 1514 of the ACA, an applicable large employer (as defined in section 4980H(c)(2) of the Code and 26 CFR 54.4980H–1(a)(4) and 54.4980H–2) must file an information return with the IRS and furnish a written statement to its full-time employees reporting details regarding the minimum essential coverage, if any, offered by the employer. Under both sections 6055 and 6056 of the Code, reporting entities may satisfy the requirement to furnish statements to covered individuals and employees, respectively, by electronic means only if the individual or employee affirmatively consents to receiving the statements electronically.<sup>7</sup>

Under section 4980H of the Code, as added by section 1513 of the ACA, an applicable large employer that does not offer minimum essential coverage to its full-time employees (and their dependents) or offers minimum essential coverage that does not meet the standards for affordability and minimum value will owe an assessable payment if a full-time employee is certified as having enrolled in a qualified health plan on an Exchange with respect to which a premium tax credit is allowed with respect to the employee.

Section 3(b)(2) of the EHCCA provides that the reporting requirements of sections 6055 and 6056 of the Code and the provisions of section 4980H of the Code relating to the employer shared responsibility provisions for applicable large employers continue to apply with respect to expatriate health plans and qualified expatriates. Section 3(b)(2) of the EHCCA provides a special rule for the use of electronic media for statements required under sections 6055 and 6056 of the Code. Specifically, the required statements may be provided to a primary insured for coverage under an expatriate health plan using electronic media unless the primary insured has explicitly refused to consent to receive the statement electronically.

<sup>6</sup> See HHS Notice of Benefit and Payment Parameters for 2014 (78 FR 15410) (March 11, 2013) and HHS Notice of Benefit and Payment Parameters for 2016 (80 FR 10750) (February 27, 2015).

<sup>7</sup> See 26 CFR 1.6055–2(a)(2)(i) and 301.6056–2(a)(2)(i).

Section 4980I of the Code, as added by section 9001 of the ACA, imposes an excise tax if the aggregate cost of applicable employer-sponsored coverage provided to an employee exceeds a statutory dollar limit. Section 3(b)(2) of the EHCCA provides that section 4980I of the Code continues to apply to applicable employer-sponsored coverage (as defined in section 4980I(d)(1) of the Code) of a qualified expatriate (as described in section 3(d)(3)(A)(i) of the EHCCA) who is assigned (rather than transferred) to work in the United States.

Section 9010 of the ACA imposes a fee on covered entities engaged in the business of providing health insurance for United States health risks. Section 3(c)(1) of the EHCCA excludes expatriate health plans from the health insurance providers fee imposed by section 9010 of the ACA by providing that, for calendar years after 2015, a qualified expatriate (and any spouse, dependent, or any other individual enrolled in the plan) enrolled in an expatriate health plan is not considered a United States health risk. Section 3(c)(2) of the EHCCA provides a special rule solely for purposes of determining the health insurance providers fee imposed by section 9010 of the ACA for the 2014 and 2015 fee years.

Section 162(m)(6) of the Code, as added by section 9014 of the ACA, in general, limits to \$500,000 the allowable deduction for remuneration attributable to services performed by certain individuals for a covered health insurance provider. For taxable years beginning after December 31, 2012, section 162(m)(6)(C)(i) of the Code and 26 CFR 1.162–31(b)(4)(A) provide that a health insurance issuer is a covered health insurance provider if not less than 25 percent of the gross premiums that it receives from providing health insurance coverage during the taxable year are from minimum essential coverage. Section 3(a)(3) of the EHCCA provides that the provisions of the ACA (including section 162(m)(6) of the Code) do not apply to expatriate health insurance issuers with respect to coverage offered by such issuers under expatriate health plans.

Section 3(d)(2) of the EHCCA provides that an expatriate health plan means a group health plan, health insurance coverage offered in connection with a group health plan, or health insurance coverage offered to certain groups of similarly situated individuals, provided that the plan or coverage meets a number of specific requirements. Section 3(d)(2)(A) of the EHCCA provides that substantially all of the primary enrollees of an expatriate

health plan must be qualified expatriates. For this purpose, primary enrollees do not include individuals who are not nationals of the United States and reside in the country of their citizenship. Section 3(d)(2)(B) of the EHCCA provides that substantially all of the benefits provided under a plan or coverage must be benefits that are not excepted benefits. Section 3(d)(2)(C) of the EHCCA provides that the plan or coverage must provide coverage for inpatient hospital services, outpatient facility services, physician services, and emergency services that are comparable to the emergency services coverage that was described in or offered under 5 U.S.C. 8903(1) for the 2009 plan year.<sup>8</sup> Also, coverage for these services must be provided in certain countries. For qualified expatriates described in section 3(d)(3)(A) of the EHCCA (category A) and qualified expatriates described in section 3(d)(3)(B) of the EHCCA (category B), coverage for these services must be provided in the country or countries where the individual is working, and such other country or countries as the Secretary of HHS, in consultation with the Secretary of the Treasury and the Secretary of Labor, may designate. For qualified expatriates who are members of a group of similarly situated individuals described in section 3(d)(3)(C) of the EHCCA (category C), the coverage must be provided in the country or countries that the Secretary of HHS, in consultation with the Secretary of the Treasury and the Secretary of Labor, may designate.

Section 3(d)(2)(D) of the EHCCA provides that a plan qualifies as an expatriate health plan under the EHCCA only if the plan sponsor reasonably believes that benefits under the plan satisfy a standard at least actuarially equivalent to the level provided for in section 36B(c)(2)(C)(ii) of the Code (that is, “minimum value”). Section 3(d)(2)(E) of the EHCCA provides that dependent coverage of children, if offered under the expatriate health plan, must continue to be available until the individual attains age 26 (unless the individual is the child of a child receiving dependent coverage). Section 3(d)(2)(G) of the EHCCA provides that an expatriate health plan must satisfy the provisions of title XXVII of the PHS Act, Chapter 100 of the Code, and part 7 of subtitle B of title I of ERISA, that would otherwise apply if the ACA had

not been enacted. These provisions are sometimes referred to as the HIPAA portability and nondiscrimination requirements.

Section 3(d)(1) of the EHCCA provides that an expatriate health insurance issuer means a health insurance issuer that issues expatriate health plans. Section 3(d)(2)(F)(i) of the EHCCA provides that an expatriate health plan or coverage must be issued by an expatriate health plan issuer, or administered by an administrator, that together with any person in the issuer's or administrator's controlled group: (1) Maintains network provider agreements that provide for direct claims payments (directly or through third-party contracts), with health care providers in eight or more countries; (2) maintains call centers (directly or through third-party contracts) in three or more countries and accepts calls in eight or more languages; (3) processes at least \$1 million in claims in foreign currency equivalents each year; (4) makes global evacuation/repatriation coverage available; (5) maintains legal and compliance resources in three or more countries; and (6) has licenses to sell insurance in more than two countries. In addition, section 3(d)(2)(F)(ii) of the EHCCA provides that the plan or coverage must offer reimbursement for items or services under such plan or coverage in the local currency in eight or more countries.

Section 3(d)(3) of the EHCCA describes three categories of qualified expatriates. A category A qualified expatriate, under section 3(d)(3)(A) of the EHCCA, is an individual whose skills, qualifications, job duties, or expertise has caused the individual's employer to transfer or assign the individual to the United States for a specific and temporary purpose or assignment tied to the individual's employment and who the plan sponsor has reasonably determined requires access to health insurance and other related services and support in multiple countries, and is offered other multinational benefits on a periodic basis (such as tax equalization, compensation for cross-border moving expenses, or compensation to enable the expatriate to return to the expatriate's home country). A category B qualified expatriate, under section 3(d)(3)(B) of the EHCCA, is a primary insured who is working outside the United States for at least 180 days during a consecutive 12-month period that overlaps with the plan year. A category C qualified expatriate, under section 3(d)(3)(C) of the EHCCA, is an individual who is a member of a group of similarly situated individuals that is formed for the

<sup>8</sup> These are emergency services comparable to emergency services offered under a government-wide comprehensive health plan under the Federal Employees Health Benefits (FEHB) program prior to the enactment of the ACA.

purpose of traveling or relocating internationally in service of one or more of the purposes listed in section 501(c)(3) or (4) of the Code, or similarly situated organizations or groups, provided the group is not formed primarily for the sale of health insurance coverage and the Secretary of HHS, in consultation with the Secretary of the Treasury and the Secretary of Labor, determines the group requires access to health insurance and other related services and support in multiple countries.

Section 3(d)(4) of the EHCCA defines the United States as the 50 States, the District of Columbia, and Puerto Rico.

Section 3(f) of the EHCCA provides that, unless otherwise specified, the requirements of the EHCCA apply to expatriate health plans issued or renewed on or after July 1, 2015.

#### IRS Notice 2015–43

On July 20, 2015, the Treasury Department and the IRS issued Notice 2015–43 (2015–29 IRB 73) to provide interim guidance on the implementation of the EHCCA and the application of certain provisions of the ACA to expatriate health insurance issuers, expatriate health plans, and employers in their capacity as plan sponsors of expatriate health plans. The Departments of Labor and HHS reviewed and concurred with the interim guidance of Notice 2015–43. Comments were received in response to Notice 2015–43, and these comments have been considered in drafting these proposed regulations. The relevant portions of Notice 2015–43 and the related comments are discussed in the Overview of Proposed Regulations section of this preamble.<sup>9</sup>

#### IRS Notices 2015–29 and 2016–14

On March 30, 2015, the Treasury Department and the IRS issued Notice 2015–29 (2015–15 IRB 873) to provide guidance implementing the special rule of section 3(c)(2) of the EHCCA for fee years 2014 and 2015 with respect to the health insurance providers fee imposed by section 9010 of the ACA. Notice 2015–29 defines expatriate health plan by reference to the definition of expatriate policies in the MLR final rule issued by HHS<sup>10</sup> (MLR final rule definition) solely for the purpose of applying the special rule for fee years 2014 and 2015. The Treasury Department and the IRS determined that the MLR final rule definition of expatriate policies was sufficiently broad to cover potential expatriate

health plans described in section 3(d)(2) of the EHCCA. The MLR final rule defines expatriate policies as predominantly group health insurance policies that provide coverage to employees, substantially all of whom are: (1) Working outside their country of citizenship; (2) working outside their country of citizenship and outside the employer's country of domicile; or (3) non-U.S. citizens working in their home country.

On January 29, 2016, the Treasury Department and the IRS issued Notice 2016–14 (2016–7 IRB 315) to provide guidance implementing the definition of expatriate health plan for fee year 2016 with respect to the health insurance providers fee imposed by section 9010 of the ACA. Like Notice 2015–29, Notice 2016–14 provides that the definition of expatriate health plan will be the same as provided in the MLR final rule definition, solely for the purpose of the health insurance providers fee imposed by section 9010 of the ACA for fee year 2016.<sup>11</sup>

The Consolidated Appropriations Act, 2016, Public Law 114–113, Division P, Title II, § 201, Moratorium on Annual Fee on Health Insurance Providers (the Consolidated Appropriations Act), suspends collection of the health insurance providers fee for the 2017 calendar year. Thus, health insurance issuers are not required to pay the fee for 2017.

#### Excepted Benefits

Sections 2722 and 2763 of the PHS Act, section 732 of ERISA, and section 9831 of the Code provide that the respective requirements of title XXVII of the PHS Act, part 7 of ERISA, and Chapter 100 of the Code generally do not apply to the provision of certain types of benefits, known as “excepted benefits.” These excepted benefits are described in section 2791(c) of the PHS Act, section 733(c) of ERISA, and section 9832(c) of the Code.

There are four statutorily enumerated categories of excepted benefits. One category, under section 2791(c)(1) of the PHS Act, section 733(c)(1) of ERISA, and section 9832(c)(1) of the Code, identifies benefits that are excepted in all circumstances, including automobile insurance, liability insurance, workers compensation, and accidental death and dismemberment coverage. Under section 2791(c)(1)(H) of the PHS Act (and the parallel provisions of ERISA and the Code), this category of excepted benefits also includes “[o]ther similar insurance coverage, specified in regulations, under which benefits for

medical care are secondary or incidental to other insurance benefits.”

The second category of excepted benefits is limited excepted benefits, which may include limited scope vision or dental benefits, and benefits for long-term care, nursing home care, home health care, or community-based care. Section 2791(c)(2)(C) of the PHS Act, section 733(c)(2)(C) of ERISA, and section 9832(c)(2)(C) of the Code authorize the Secretaries of HHS, Labor, and the Treasury (collectively, the Secretaries) to issue regulations establishing other, similar limited benefits as excepted benefits. The Secretaries exercised this authority previously with respect to certain health flexible spending arrangements.<sup>12</sup> To be an excepted benefit under this second category, the statute provides that these limited benefits must either: (1) Be provided under a separate policy, certificate, or contract of insurance; or (2) otherwise not be an integral part of a group health plan, whether insured or self-insured.<sup>13</sup>

The third category of excepted benefits, referred to as “noncoordinated excepted benefits,” includes both coverage for only a specified disease or illness (such as cancer-only policies), and hospital indemnity or other fixed indemnity insurance. These benefits are excepted under section 2722(c)(2) of the PHS Act, section 732(c)(2) of ERISA, and section 9831(c)(2) of the Code only if all of the following conditions are met: (1) The benefits are provided under a separate policy, certificate, or contract of insurance; (2) there is no coordination between the provision of such benefits and any exclusion of benefits under any group health plan maintained by the same plan sponsor; and (3) the benefits are paid with respect to any event without regard to whether benefits are provided under any group health plan maintained by the same plan sponsor. In the group market, the regulations further provide that to be hospital indemnity or other fixed indemnity insurance, the insurance must pay a fixed dollar amount per day (or per other time period) of hospitalization or illness (for example, \$100/day) regardless of the amount of expenses incurred.<sup>14</sup>

Since the issuance of these regulations, the Departments have released FAQs to address various requests for clarification as to what types of coverage meet the conditions

<sup>12</sup> 26 CFR 54.9831–1(c)(3)(v), 29 CFR 2590.732(c)(3)(v), 45 CFR 146.145(b)(3)(v).

<sup>13</sup> PHS Act section 2722(c)(1), ERISA section 732(c)(1), Code section 9831(c)(1).

<sup>14</sup> 26 CFR 54.9831–1(c)(4)(i), 29 CFR 2590.732(c)(4)(i), 45 CFR 146.145(b)(4)(i).

<sup>9</sup> See 26 CFR 601.601(d)(2)(ii)(B).

<sup>10</sup> 45 CFR 158.120(d)(4).

<sup>11</sup> See 26 CFR 601.601(d)(2)(ii)(B).

necessary to be hospital indemnity or other fixed indemnity insurance that are excepted benefits. Affordable Care Act Implementation FAQs Part XI, Q&A–7 clarified that group health insurance coverage in which benefits are provided in varying amounts based on the type of procedure or item, such as the type of surgery actually performed or prescription drug provided is not a hospital indemnity or other fixed indemnity insurance excepted benefit because it does not meet the condition that benefits be provided on a per day (or per other time period, such as per week) basis, regardless of the amount of expenses incurred.<sup>15</sup>

The fourth category, under section 2791(c)(4) of the PHS Act, section 733(c)(4) of ERISA, and section 9832(c)(4) of the Code, is supplemental excepted benefits. Benefits are supplemental excepted benefits only if they are provided under a separate policy, certificate, or contract of insurance and are Medicare supplemental health insurance (also known as Medigap), TRICARE supplemental programs, or “similar supplemental coverage provided to coverage under a group health plan.” The phrase “similar supplemental coverage provided to coverage under a group health plan” is not defined in the statute or regulations. However, the Departments’ regulations clarify that one requirement to be similar supplemental coverage is that the coverage “must be specifically designed to fill gaps in primary coverage, such as coinsurance or deductibles.”<sup>16</sup>

In 2007 and 2008, the Departments issued guidance on the circumstances under which supplemental health insurance would be considered excepted benefits under section 2791(c)(4) of the PHS Act (and the parallel provisions of ERISA, and the Code).<sup>17</sup> The guidance identifies several factors the Departments will apply when evaluating whether supplemental health insurance will be considered to be “similar supplemental coverage provided to coverage under a group health plan.” Specifically the Departments’ guidance provides that

supplemental health insurance will be considered an excepted benefit if it is provided through a policy, certificate, or contract of insurance separate from the primary coverage under the plan and meets all of the following requirements: (1) The supplemental policy, certificate, or contract of insurance is issued by an entity that does not provide the primary coverage under the plan; (2) the supplemental policy, certificate, or contract of insurance is specifically designed to fill gaps in primary coverage, such as coinsurance or deductibles, but does not include a policy, certificate, or contract of insurance that becomes secondary or supplemental only under a coordination of benefits provision; (3) the cost of the supplemental coverage is 15 percent or less of the cost of primary coverage (determined in the same manner as the applicable premium is calculated under a COBRA continuation provision); and (4) the supplemental coverage sold in the group health insurance market does not differentiate among individuals in eligibility, benefits, or premiums based upon any health factor of the individual (or any dependents of the individual).

On February 13, 2015, the Departments issued Affordable Care Act Implementation FAQs Part XXIII, providing additional guidance on the circumstances under which health insurance coverage that supplements group health plan coverage may be considered supplemental excepted benefits.<sup>18</sup> The FAQ states that the Departments intend to propose regulations clarifying the circumstances under which supplemental insurance products that do not fill in cost-sharing under the primary plan are considered to be specifically designed to fill gaps in primary coverage. Specifically, the FAQ provides that health insurance coverage that supplements group health coverage by providing coverage of additional categories of benefits (as opposed to filling in cost-sharing gaps under the primary plan) would be considered to be designed to “fill in the gaps” of the primary coverage only if the benefits covered by the supplemental insurance product are not essential health benefits (EHB) in the State in which the product is being marketed. The FAQ further states that, until regulations are issued and effective, the Departments will not take enforcement action under certain conditions for failure to comply with the applicable insurance market reforms

with respect to group or individual health insurance coverage that provides coverage of additional categories of benefits that are not EHBs in the applicable State. States were encouraged to exercise similar enforcement discretion.

### Short-Term, Limited-Duration Insurance Coverage

Short-term limited duration insurance is a type of health insurance coverage that is designed to fill in temporary gaps in coverage when an individual is transitioning from one plan or coverage to another plan or coverage. Although short-term, limited-duration insurance is not an excepted benefit, it is similarly exempt from PHS Act requirements because it is not individual health insurance coverage. Section 2791(b)(5) of the PHS Act provides that the term “individual health insurance coverage” means health insurance coverage offered to individuals in the individual market, but does not include short-term, limited-duration insurance. The PHS Act does not define short-term, limited-duration insurance. Under existing regulations, short-term, limited-duration insurance means “health insurance coverage provided pursuant to a contract with an issuer that has an expiration date specified in the contract (taking into account any extensions that may be elected by the policyholder without the issuer’s consent) that is less than 12 months after the original effective date of the contract.”<sup>19</sup>

### Prohibition on Lifetime and Annual Limits

Section 2711 of the PHS Act, as added by the ACA, generally prohibits group health plans and health insurance issuers offering group or individual health insurance coverage from imposing lifetime and annual dollar limits on EHB, as defined in section 1302(b) of the ACA. These prohibitions apply to both grandfathered and non-grandfathered health plans, except the annual limits prohibition does not apply to grandfathered individual health insurance coverage.

Under the ACA, self-insured group health plans, large group market health plans, and grandfathered health plans are not required to offer EHB, but they generally cannot place lifetime or annual dollar limits on covered services that are considered EHB. The Departments’ regulations provide that, for plan years (in the individual market, policy years) beginning on or after January 1, 2017, a plan or issuer that is

## II. Overview of the Proposed Regulations

### A. Expatriate Health Plans

#### In General

Section 3(a) of the EHCCA provides that the ACA generally does not apply to expatriate health plans, employers with respect to expatriate health plans but solely in their capacity as plan sponsors of expatriate health plans, and expatriate health insurance issuers with respect to coverage offered by such issuers under expatriate health plans. Consistent with this provision, the proposed regulations provide that the market reform provisions enacted or amended as part of the ACA, included in sections 2701 through 2728 of the PHS Act and incorporated into section 9815 of the Code and section 715 of ERISA, do not apply to an expatriate health plan, an employer, solely in its capacity as plan sponsor of an expatriate health plan, and an expatriate health insurance issuer with respect to coverage under an expatriate health plan. Similarly, section 162(m)(6) of the Code does not apply to an expatriate health insurance issuer with respect to premiums received for coverage under an expatriate health plan. In addition, under the EHCCA, the PCORTF fee under sections 4375 and 4376 of the Code and the transitional reinsurance program fee under section 1341 of the ACA do not apply to expatriate health plans. The EHCCA excludes expatriate health plans from the health insurance providers fee imposed by section 9010 except that the EHCCA provides a special rule solely for purposes of determining the fee for the 2014 and 2015 fee years. The EHCCA also designates certain coverage by an expatriate health plan as minimum essential coverage under section 5000A(f) of the Code, and provides special rules for the application of the reporting rules under sections 6055 and 6056 of the Code to expatriate health plans.

### Definition of Expatriate Health Insurance Issuer

Consistent with sections 3(d)(1) and (d)(2)(F) of the EHCCA, the proposed regulations define “expatriate health insurance issuer” as a health insurance issuer (as defined under 26 CFR 54.9801–2, 29 CFR 2590.701–2 and 45 CFR 144.103) that issues expatriate health plans and satisfies certain requirements.<sup>21</sup> The requirements for the issuer to be an expatriate health insurance issuer include that, in the course of its normal business operations, the issuer: (1) Maintains network provider agreements that provide for direct claims payments with health care providers in eight or more countries; (2) maintains call centers in three or more countries, and accepts calls from customers in eight or more languages; (3) processed at least \$1 million in claims in foreign currency equivalents during the preceding calendar year; (4) makes global evacuation/repatriation coverage available; (5) maintains legal and compliance resources in three or more countries; and (6) has licenses or other authority to sell insurance in more than two countries, including the United States. For purposes of meeting the \$1 million threshold for claims processed in foreign currency equivalents, the proposed regulations provide that the dollar value of claims processed is determined using the Treasury Department’s currency exchange rate in effect on the last day of the preceding calendar year.<sup>22</sup> Comments are requested regarding whether use of the calendar year as the basis for measuring the dollar amount of claims processed presents administrative challenges, and how the resulting challenges, if any, may be addressed. The proposed regulations provide that each of the applicable requirements may be satisfied by two or more entities (including one entity that is the health

<sup>21</sup> Section 3(d)(1) of the EHCCA provides that the term “expatriate health insurance issuer” means a health insurance issuer that issues expatriate health plans; section 3(d)(5)(A) of the EHCCA provides that the term “health insurance issuer” has the meaning given in section 2791 of the PHS Act. The definition of health insurance issuer in section 9832(b)(2) of the Code and section 733(b)(2) of ERISA and underlying regulations are substantively identical to the definition under section 2791 of the PHS Act and its underlying regulations.

As discussed in the section of this preamble entitled “Definition of Expatriate Health Plan” a health insurance issuer as defined in section 2791 of the PHS Act is limited to an entity licensed to engage in the business of insurance in a State and subject to State law that regulates insurance.

<sup>22</sup> The most recent Treasury Department currency exchange rate can be found at <https://www.fiscal.treasury.gov/jsreports/rpt/treasRptRateExch/currentRates.htm>.

insurance issuer) that are members of the health insurance issuer’s controlled group or through contracts between the expatriate health insurance issuer and third parties.

### Definition of Expatriate Health Plan

Consistent with section 3(d)(2) of the EHCCA, the proposed regulations define “expatriate health plan” as a plan offered to qualified expatriates and that satisfies certain requirements. With respect to qualified expatriates in categories A or B, the plan must be a group health plan (whether or not insured). In contrast, with respect to qualified expatriates in category C, the plan must be health insurance coverage that is not a group health plan. In addition, consistent with section 3(d)(2)(A) of the EHCCA, the proposed regulations require that substantially all primary enrollees in the expatriate health plan must be qualified expatriates. The proposed regulations define a primary enrollee as the individual covered by the plan or policy whose eligibility for coverage is not due to that individual’s status as the spouse, dependent, or other beneficiary of another covered individual. However, notwithstanding this definition, an individual is not a primary enrollee if the individual is not a national of the United States and the individual resides in his or her country of citizenship. Further, the proposed regulations provide that, for this purpose, a “national of the United States” has the meaning used in the Immigration and Nationality Act (8 U.S.C. 1101 et. seq.) and 8 CFR parts 301 to 392, including U.S. citizens. Thus, for example, an individual born in American Samoa is a national of the United States at birth for purposes of the EHCCA and the proposed regulations.

Comments in response to Notice 2015–43 requested clarification of the “substantially all” enrollment requirement, with one comment suggesting that 93 percent of the enrollees would be an appropriate threshold. In response to the request for clarification, the proposed regulations provide that a plan satisfies the “substantially all” enrollment requirement if, on the first day of the plan year, less than 5 percent of the primary enrollees (or less than 5 primary enrollees if greater) are not qualified expatriates (effectively a 95 percent threshold). Consistent with section 3(d)(2)(B) of the EHCCA, the proposed regulations further provide that substantially all of the benefits provided under an expatriate health plan must be benefits that are not excepted benefits as described in 26

<sup>20</sup> 26 CFR 54.9815–2711(c), 29 CFR 2590.715–2711(c), 45 CFR 147.126(c).

CFR 54.9831–1(c), 29 CFR 2590.732(c), 45 CFR 146.145(b) and 148.220, as applicable. The Departments intend that the first day of the plan year approach, which has been used in other contexts, will be simple to administer.<sup>23</sup> Moreover, the 95% threshold has been used in certain other circumstances in applying a “substantially all” standard.<sup>24</sup> The Departments solicit comment on this regulatory approach and whether the current regulatory language is sufficient to protect against potential abuses, or whether any further anti-abuse provision is necessary.

Consistent with section 3(d)(2)(C) of the EHCCA, the proposed regulations also require that an expatriate health plan cover certain types of services. Specifically, an expatriate health plan must provide coverage for inpatient hospital services, outpatient facility services, physician services, and emergency services (comparable to emergency services coverage that was described in and offered under section 8903(1) of title 5, United States Code for plan year 2009). Coverage for such services must be available in certain countries depending on the type of qualified expatriates covered by the plan. The statute authorizes the Secretary of HHS, in consultation with the Secretary of the Treasury and Secretary of Labor, to designate other countries where coverage for such services must be made available to the qualified expatriate.

Consistent with section 3(d)(2)(D) of the EHCCA, the proposed regulations provide that in the case of an expatriate health plan, the plan sponsor must reasonably believe that benefits provided by the plan satisfy the minimum value requirements of section 36B(c)(2)(C)(ii) of the Code.<sup>25</sup> For this purpose, the proposed regulations provide that the plan sponsor is permitted to rely on the reasonable representations of the issuer or administrator regarding whether benefits offered by the group health plan or issuer satisfy the minimum value requirements unless the plan sponsor knows or has reason to know that the benefits fail to satisfy the minimum value requirements. Consistent with section 3(d)(2)(D) of the EHCCA, in the case of an expatriate health plan that provides dependent coverage of children, the proposed regulations provide that such coverage must be

available until the individual attains age 26, unless the individual is the child of a child receiving dependent coverage. Additionally, consistent with section 3(d)(2)(F)(ii) of the EHCCA, the plan or coverage must offer reimbursements for items or services in the local currency in eight or more countries.

Consistent with section 3(d)(2)(F) of the EHCCA, the proposed regulations also provide that the policy or coverage under an expatriate health plan must be issued by an expatriate health insurance issuer or administered by an expatriate health plan administrator. With respect to qualified expatriates in categories A or B (generally, individuals whose travel or relocation is related to their employment with an employer), the coverage must be under a group health plan (whether insured or self-insured). With respect to qualified expatriates in category C (generally, groups of similarly situated individuals travelling for certain tax-exempt purposes), the coverage must be under a policy issued by an expatriate health insurance issuer.

Finally, consistent with section 3(d)(2)(G) of the EHCCA, the proposed regulations provide that an expatriate health plan must satisfy the provisions of Chapter 100 of the Code, part 7 of subtitle B of title I of ERISA and title XXVII of the PHS Act that would otherwise apply if the ACA had not been enacted. Among other requirements, those provisions limited the ability of a group health plan or group health insurance issuer to impose preexisting condition exclusions (which are now prohibited for grandfathered and non-grandfathered group health plans and health insurance coverage offered in connection with such plans, and non-grandfathered individual health insurance coverage under the ACA), including a requirement that the period of any preexisting condition exclusion be reduced by the length of any period of creditable coverage the individual had without a 63-day break in coverage.

Prior to the enactment of the ACA, HIPAA and underlying regulations also generally required that plans and issuers provide certificates of creditable coverage when an individual ceased to be covered by a plan or policy and upon request. Following the enactment of the ACA, the regulations under these provisions have eliminated the requirement for providing certificates of creditable coverage beginning December 31, 2014, because the requirement is generally no longer relevant to plans and participants as a result of the prohibition on preexisting condition exclusions. The Departments recognize that reimposing the requirement to

provide certificates of creditable coverage on expatriate health plans would only be useful in situations in which an individual transferred from one expatriate health plan to another and that reimposing the requirement on all health plans would require certificates that would be unnecessary except in limited cases, such as for an individual who ceased coverage with a health plan or policy and began coverage under an expatriate health plan that imposed a preexisting condition exclusion. Because reimposing the requirement to provide certificates of creditable coverage would be inefficient and overly broad, and relevant in only limited circumstances, the proposed regulations do not require expatriate health plans to provide certificates of creditable coverage. However, expatriate health plans imposing a preexisting condition exclusion must still comply with certain limitations on preexisting condition exclusions that would otherwise apply if the ACA had not been enacted. Therefore, the proposed regulations require expatriate health plans to ensure that individuals who enroll in the expatriate health plan are provided an opportunity to demonstrate creditable coverage to offset any preexisting condition exclusion. For example, an email from the prior issuer (or former plan administrator or plan sponsor) providing information about past coverage could be sufficient confirmation of prior creditable coverage.

Comments in response to Notice 2015–43 requested clarification of the treatment of health coverage provided by a foreign government. Specifically, comments requested that health coverage provided by a foreign government be treated as minimum essential coverage under section 5000A of the Code, and that, for purposes of the employer shared responsibility provision of section 4980H of the Code, an offer of such coverage be treated as an offer of minimum essential coverage for certain foreign employees working in the United States. These issues are generally beyond the scope of these proposed regulations. Under the existing regulations under section 5000A(f)(1)(E) of the Code, there are procedures for health benefits coverage not otherwise designated under section 5000A(f)(1) of the Code as minimum essential coverage to be recognized by the Secretary of HHS, in coordination with the Secretary of the Treasury, as minimum essential coverage. The Secretary of HHS has provided that coverage under a group health plan

<sup>23</sup> 26 CFR 54.9831–1(b), 29 CFR 2590.732(b), 45 CFR 146.145(b).

<sup>24</sup> See e.g., 26 CFR 1.460–6(d)(4)(i)(D)(1).

<sup>25</sup> For this purpose, generally “minimum value” takes into account the provision of “essential health benefits” as defined in section 1302(b)(1) of the Affordable Care Act.

provided through insurance regulated by a foreign government is minimum essential coverage for expatriates who meet specified conditions.<sup>26</sup> Furthermore, plan sponsors of health coverage that is not recognized as minimum essential coverage through statute, regulation, or guidance may submit an application to CMS for minimum essential coverage recognition pursuant to 45 CFR 156.604.<sup>27</sup> For a complete list of coverage recognized by CMS as minimum essential coverage under section 5000A(f)(1)(E) of the Code, see <https://www.cms.gov/CCIIO/Programs-and-Initiatives/Health-Insurance-Market-Reforms/minimum-essential-coverage.html>.

Comments also requested that policies sold by non-United States health insurance issuers be treated as minimum essential coverage under section 5000A of the Code, or as expatriate health plans. Section 3(d)(5)(A) of the EHCCA specifies that the terms “health insurance issuer” and “health insurance coverage” have the meanings given those terms by section 2791 of the PHS Act. Section 2791 of the PHS Act (and parallel provisions in section 9832(b) of the Code and section 733(b) of ERISA) define those terms by reference to an entity licensed to engage in the business of insurance in a State and subject to State law that regulates insurance. Under section 2791 of the PHS Act, the term “State” means each of the several States, the District of Columbia, Puerto Rico, the Virgin Islands, Guam, American Samoa, and the Northern Mariana Islands. Consistent with those provisions, these proposed regulations limit an expatriate health insurance issuer to a health insurance issuer within the meaning of those sections (and that meets the other requirements set forth in the proposed regulations). As such, a non-United States health insurance issuer does not qualify as an expatriate health insurance issuer within the meaning of the EHCCA, and coverage issued by a non-United States issuer that is not otherwise minimum essential coverage

is not minimum essential coverage pursuant to the EHCCA.

#### Definition of Expatriate Health Plan Administrator

The proposed regulations define “expatriate health plan administrator,” with respect to self-insured coverage, as an administrator of self-insured coverage that generally satisfies the same requirements as an “expatriate health insurance issuer.”

#### Definition of Qualified Expatriate

Consistent with section 3(d)(3) of the EHCCA, the proposed regulations define “qualified expatriate” as one of three types of individuals. The first type of qualified expatriate, a category A expatriate, is an individual who has the skills, qualifications, job duties, or expertise that has caused the individual’s employer to transfer or assign the individual to the United States for a specific and temporary purpose or assignment that is tied to the individual’s employment with the employer. A category A expatriate may only be an individual who: (1) The plan sponsor has reasonably determined requires access to health coverage and other related services and support in multiple countries, (2) is offered other multinational benefits on a periodic basis (such as tax equalization, compensation for cross-border moving expenses, or compensation to enable the individual to return to the individual’s home country), and (3) is not a national of the United States. The proposed regulations provide that an individual who is not expected to travel outside the United States at least one time per year during the coverage period would not reasonably “require access” to health coverage and other related services and support in multiple countries. Furthermore, under the proposed regulations, the offer of a one-time *de minimis* benefit would not meet the standard for the “periodic” offer of “other multinational benefits.”

Section 3(d)(3)(B) of the EHCCA provides that a second type of qualified expatriate, a category B expatriate, is an individual who works outside the United States for a period of at least 180 days in a consecutive 12-month period that overlaps with the plan year. A comment requested that the regulations clarify that the 12-month period could either be within a single plan year, or across two consecutive plan years. Consistent with the statutory language, the proposed regulations provide that a category B expatriate is an individual who is a national of the United States and who works outside the United States for at least 180 days in a

consecutive 12-month period that is within a single plan year, or across two consecutive plan years. Section 3(d)(2)(C)(ii) of the EHCCA requires an expatriate health plan provided to category B expatriates to cover certain specified services, such as inpatient and outpatient services, in the country in which the individual is “present in connection” with his employment. The Departments request comments on whether it would be helpful to provide further administrative clarification of this statutory language regarding the country or countries in which the services must be provided, and, if so, whether there are facts or circumstances that will present particular challenges in applying this rule.

Finally, consistent with section 3(d)(3)(C) of the EHCCA, the proposed regulations provide that a third type of qualified expatriate, a category C expatriate, is an individual who is a member of a group of similarly situated individuals that is formed for the purpose of traveling or relocating internationally in service of one or more of the purposes listed in section 501(c)(3) or (4) of the Code, or similarly situated organizations or groups, and meets certain other conditions.<sup>28</sup> A category C expatriate does not include an individual in a group that is formed primarily for the sale or purchase of health insurance coverage. To qualify as this type of qualified expatriate, the Secretary of HHS, in consultation with the Secretary of the Treasury and the Secretary of Labor, must determine that the group requires access to health coverage and other related services and support in multiple countries. The proposed regulations clarify that a category C expatriate does not include an individual whose international travel or relocation is related to employment. Thus, an individual whose travel is employment-related may be a qualified expatriate only in category A or B. The proposed regulations also provide that, in the case of a group organized to travel or relocate outside the United States, the individual must be expected to travel or reside outside the United States for at least 180 days in a consecutive 12-month period that overlaps with the policy year (or in the case of a policy year that is less than 12 months, at least

<sup>26</sup> See CMS Insurance Standards Bulletin Series. CCIIO Sub-Regulatory Guidance: Process for Obtaining Recognition as Minimum Essential Coverage (Oct. 31, 2013), available at <https://www.cms.gov/CCIIO/Resources/Regulations-and-Guidance/Downloads/mec-guidance-10-31-2013.pdf>.

<sup>27</sup> See CMS Insurance Standards Bulletin Series. CCIIO Sub-Regulatory Guidance: Process for Obtaining Recognition as Minimum Essential Coverage (Oct. 31, 2013), available at <https://www.cms.gov/CCIIO/Resources/Regulations-and-Guidance/Downloads/mec-guidance-10-31-2013.pdf>. See also CMS Insurance Standards Bulletin Series. CCIIO Sub-Regulatory Guidance: Minimum Essential Coverage.

<sup>28</sup> Code section 501(c)(3) describes an organization formed for religious, charitable, scientific, public safety, literary, or educational purposes, or to foster national or international amateur sports competition, or for the prevention of cruelty to children or animals, and not for political candidate campaign or legislative purposes or propaganda. Code section 501(c)(4) describes an organization operated exclusively for the promotion of social welfare.

half of the policy year), and in the case of a group organized to travel or relocate within the United States, the individual must be expected to travel or reside in the United States for not more than 12 months. The proposed regulations provide that a group of category C expatriates must also meet the test for having associational ties under section 2791(d)(3)(B) through (F) of the PHS Act (42 U.S.C. 300gg–91(d)(3)(B) through (F)).

For purposes of section 3(d)(3)(C)(iii) of the EHCCA, the proposed regulations provide that the Secretary of HHS, in consultation with the Secretary of the Treasury and the Secretary of Labor, has determined that, in the case of a group of similarly situated individuals that meets all of the criteria in the proposed regulations, the group requires access to health coverage and other related services and support in multiple countries.

Comments in response to Notice 2015–43 requested that category C expatriates not be limited to individuals expected to travel or reside in the United States for 12 or fewer months. While the EHCCA does not include a time limit for category C expatriates, section 3(e) of the EHCCA provides that the Departments “may promulgate regulations necessary to carry out this Act, including such rules as may be necessary to prevent inappropriate expansion of the exclusions under the Act from applicable laws and regulations.” In the group market, the EHCCA and the proposed regulations define a category A expatriate with respect to a “specific and temporary purpose or assignment” tied to the individual’s employment in the United States. It is the view of HHS, in consultation with the Departments of Labor and the Treasury, that similar safeguards are necessary in the individual market to prevent inappropriate expansion of the exception for category C expatriates.

Comments are requested on all aspects of the proposed definition of a category C expatriate. Comments are also requested on the time limit for category C expatriates being expected to travel or reside in the United States, and what standards, if any, may be adopted in lieu of the 12-month maximum that would ensure that the definition does not permit inappropriate expansion of the exception. For example, comments are requested on whether a “specific and temporary purpose” standard should be adopted for category C expatriates, consistent with the standard for category A expatriates, or whether category C expatriates should be expected to seek medical care outside

the United States at least one time per year in order to be considered to reasonably require access to health coverage and other related services and support in multiple countries. Comments are also requested on the proposed standard with respect to category C expatriates being expected to travel or reside outside the United States for at least 180 days in a consecutive 12-month period that overlaps with the policy year, and whether there are fact patterns in which the 12-month period could either be within a single policy year, or across two consecutive policy years.

#### **Definitions of Group Health Plan and United States**

Consistent with section 3(d)(5)(A) of the EHCCA, for purposes of applying the definition of expatriate health plan, “group health plan” means a group health plan as defined under 26 CFR 54.9831–1(a)(1), 29 CFR 2590.732(a)(1) or 45 CFR 146.145(a)(1), as applicable. Consistent with section 3(d)(4) of the EHCCA, the proposed regulations define “United States” to mean the 50 States, the District of Columbia and Puerto Rico.

#### **Section 9010 of the ACA**

Section 3(c)(1) of the EHCCA provides that, for purposes of the health insurance providers fee imposed by section 9010 of the ACA, a qualified expatriate enrolled in an expatriate health plan is not a United States health risk for calendar years after 2015. Section 3(c)(2) of the EHCCA provides a special rule applicable to calendar years 2014 and 2015. The Treasury Department and the IRS issued Notices 2015–29 and 2016–14 to address the definition of expatriate health plan for purposes of the health insurance providers fee imposed by section 9010 for the 2014, 2015, and 2016 fee years. No fee is due in the 2017 fee year because the Consolidated Appropriations Act suspends collection of the health insurance providers fee imposed by section 9010 of ACA for 2017.

These proposed regulations provide that, for any fee that is due on or after the date final regulations are published in the **Federal Register**, a qualified expatriate enrolled in an expatriate health plan as defined in these proposed regulations is not a United States health risk. These proposed regulations also authorize the IRS to specify in guidance in the Internal Revenue Bulletin the manner of determining excluded premiums for qualified expatriates in expatriate health plans. Until the date the final regulations are published in

the **Federal Register**, taxpayers may rely on these proposed regulations with respect to any fee that is due beginning with the 2018 fee year.

#### **Federal Tax Provision: Section 162(m)(6) of the Code**

Section 162(m)(6) of the Code, as added by section 9014 of the ACA, in general, limits to \$500,000 the allowable deduction for remuneration attributable to services performed by certain individuals for a covered health insurance provider. For taxable years beginning after December 31, 2012, section 162(m)(6)(C)(i) of the Code and 26 CFR 1.162–31(b)(4)(A) provide that a health insurance issuer is a covered health insurance provider if not less than 25 percent of the gross premiums that it receives from providing health insurance coverage during the taxable year are from minimum essential coverage. Section 3(a)(3) of the EHCCA provides that the provisions of the ACA (which include section 162(m)(6) of the Code) do not apply to expatriate health insurance issuers with respect to coverage offered by such issuers under expatriate health plans. Consistent with this rule, the proposed regulations exclude from the definition of the term “premium” for purposes of section 162(m)(6) of the Code amounts received in payment for coverage under an expatriate health plan. As a result, those amounts received are included in neither the numerator nor the denominator for purposes of determining whether the 25 percent standard under section 162(m)(6)(C)(i) of the Code and 26 CFR 1.162–31(b)(4)(A) is met, and they have no impact on whether a particular issuer is a covered health insurance provider.

#### **Federal Tax Provision: Section 4980I of the Code**

Section 3(b)(2) of the EHCCA provides that section 4980I of the Code applies to employer-sponsored coverage of a qualified expatriate who is assigned, rather than transferred, to work in the United States. As amended by section 101 of Division P of the Consolidated Appropriations Act, section 4980I of the Code first applies to coverage provided in taxable years beginning after December 31, 2019. Comments in response to Notice 2015–43 requested additional guidance on what it means for an employer to assign rather than transfer an employee. These proposed regulations do not address the interaction of the EHCCA and section 4980I of the Code because the Treasury Department and the IRS anticipate that this issue will be addressed in future

guidance promulgated under section 4980I of the Code.

**Federal Tax Provision: Section 5000A of the Code and Minimum Essential Coverage**

The proposed regulations provide that, beginning January 1, 2017, coverage under an expatriate health plan that provides coverage for a qualified expatriate qualifies as minimum essential coverage for all participants in the plan. If the expatriate health plan provides coverage to category A or category B expatriates, the coverage of any participant in the plan is treated as an eligible employer-sponsored plan under section 5000A(f)(2) of the Code. If the expatriate health plan provides coverage to category C expatriates, the coverage of any enrollee in the plan is treated as a plan in the individual market under section 5000A(f)(1)(C) of the Code.

**Federal Tax Provision: Sections 6055 and 6056 of the Code**

Section 3(b)(2) of the EHCCA permits the use of electronic media to provide the statements required under sections 6055 and 6056 of the Code to individuals for coverage under an expatriate health plan unless the primary insured has explicitly refused to receive the statement electronically. The proposed regulations provide that, for an expatriate health plan, the recipient is treated as having consented to receive the required statement electronically unless the recipient has explicitly refused to receive the statement in an electronic format. In addition, the proposed regulations provide that the recipient may explicitly refuse either electronically or in a paper document. For a recipient to be treated as having consented under this special rule, the furnisher must provide a notice in compliance with the general disclosure requirements under sections 6055 and 6056 that informs the recipient that the statement will be furnished electronically unless the recipient explicitly refuses to consent to receive the statement in electronic form. The notice must be provided to the recipient at least 30 days prior to the due date for furnishing of the first statement the furnisher intends to furnish electronically to the recipient. Absent receipt of this notice, a recipient will not be treated as having consented to electronic furnishing of statements. Treasury and IRS request comments on further guidance that will assist issuers and plan sponsors in providing this notice in the least burdensome manner while still ensuring that the recipient has sufficient information and

opportunity to opt out of the electronic reporting if the recipient desires. For example, Treasury and the IRS specifically request comments on whether the ability to provide this notice as part of the enrollment materials for the coverage would meet these goals.

**Federal Tax Provision: PCORTF Fee**

The proposed regulations provide that the excise tax under sections 4375 and 4376 of the Code (the PCORTF fee) does not apply to an expatriate health plan as defined at 26 CFR 54.9831-1(f)(3). Section 4375 of the Code limits the application of the fee to policies issued to individuals residing in the United States. Existing regulations under sections 4375, 4376, and 4377 of the Code exclude coverage under a plan from the fee if the plan is designed specifically to cover primarily employees who are working and residing outside the United States. A comment requested clarification about the existing PCORTF fee exemption for plans that primarily cover employees working and residing outside the United States. Consistent with the provisions of the EHCCA, the proposed regulations expand the exclusion from the PCORTF fee to also exclude an expatriate health plan regardless of whether the plan provides coverage for qualified expatriates residing or working in or outside the United States if the plan is an expatriate health plan.

**Section 1341 of the ACA: Transitional Reinsurance Program**

A comment also requested that the current exclusion under the PCORTF fee regulations for individuals working and residing outside the United States be applied to the transitional reinsurance fee under section 1341 of the ACA. Existing regulations relating to section 1341 of the ACA include an exception for certain expatriate health plans,<sup>29</sup> including expatriate group health coverage as defined by the Secretary of HHS and, for the 2015 and 2016 benefit years, self-insured group health plans with respect to which enrollment is limited to participants who reside outside their home country for at least six months of the plan year, and any covered dependents. HHS solicits comment on whether amendments are needed to 45 CFR 153.400(a)(1)(iii) to clarify the alignment with the EHCCA and exempt all expatriate plans from the requirement to make reinsurance contributions.

<sup>29</sup> 45 CFR 153.400(a)(1)(iii).

**Section 2718 of the PHS Act: MLR Program**

Section 2718 of the PHS Act, as added by sections 1001 and 10101 of the ACA, generally requires health insurance issuers to provide rebates to consumers if issuers do not achieve specified MLRs, as well as to submit an annual MLR report to HHS. The proposed regulations provide that expatriate policies described in 45 CFR 158.120(d)(4) continue to be subject to the reporting and rebate requirements of 45 CFR part 158, but update the description of expatriate policies in 45 CFR 158.120(d)(4) to exclude policies that are expatriate health plans under the EHCCA. Given this modification, issuers may find that the number of expatriate policies that remain subject to MLR requirements is low, and that it is administratively burdensome and there is no longer a qualitative justification for continuing separate reporting of such policies. Therefore, comments are requested on whether the treatment of expatriate policies for purposes of the MLR regulations should be amended so that expatriate policies that do not meet the definition of expatriate health plan under the EHCCA would not be required to be reported separately from other health insurance policies.

Section 833(c)(5) of the Code, as added by section 9016 of the ACA, and amended by section 102 of Division N of the Consolidated and Further Continuing Appropriations Act, 2015 (Pub. L. 113-235, 128 Stat. 2130), provides that section 833(a)(2) and (3) do not apply to any organization unless the organization's MLR for the taxable year was at least 85 percent. In describing the MLR computation under section 833(c)(5), the statute and implementing regulations provide that the elements in the MLR computation are to be "as reported under section 2718 of the Public Service Health Act." Accordingly, the proposed regulations under section 2718 of the PHS Act would effectively apply the EHCCA exemption to section 833(c)(5) of the Code by carving out expatriate health plans under the EHCCA from the section 833(c)(5) requirements as well.

**Excepted Benefits**

*Supplemental Health Insurance Coverage*

The proposed regulations incorporate the guidance from the Affordable Care Act Implementation FAQs Part XXIII addressing supplemental health insurance products that provide categories of benefits in addition to those in the primary coverage. Under the proposed regulations, if group or

individual supplemental health insurance coverage provides benefits for items and services not covered by the primary coverage (referred to as providing “additional categories of benefits”), the coverage would be considered to be designed “to fill gaps in primary coverage,” for purposes of being supplemental excepted benefits if none of the benefits provided by the supplemental policy are an EHB, as defined for purposes of section 1302(b) of the ACA, in the State in which the coverage is issued. Conversely, if any benefit provided by the supplemental policy is an EHB in the State where the coverage is issued, the insurance coverage would not be supplemental excepted benefits under the proposed regulations. This standard is proposed to apply only to the extent that the supplemental health insurance provides coverage of additional categories of benefits. Supplemental health insurance products that both fill in cost sharing in the primary coverage, such as coinsurance or deductibles, and cover additional categories of benefits that are not EHB, also would be considered supplemental excepted benefits under these proposed regulations provided all other criteria are met.

#### Travel Insurance

The Departments are aware that certain travel insurance products may include limited health benefits. However, these products typically are not designed as major medical coverage. Instead, the risks being insured relate primarily to: (1) The interruption or cancellation of a trip (2) the loss of baggage or personal effects; (3) damages to accommodations or rental vehicles; or (4) sickness, accident, disability, or death occurring during travel, with any health benefits usually incidental to other coverage.

Section 2791(c)(1)(H) of the PHS Act, section 733(c)(1)(H) of ERISA, and section 9832(c)(1)(H) of the Code provide that the Departments may, in regulations, designate as excepted benefits “benefits for medical care that are secondary or incidental to other insurance benefits.” Pursuant to this authority, and to clarify which types of travel-related insurance products are excepted benefits under the PHS Act, ERISA, and the Code, the proposed regulations provide that certain travel-related products that provide only incidental health benefits are excepted benefits. The proposed regulations define the term “travel insurance” as insurance coverage for personal risks incident to planned travel, which may include, but is not limited to, interruption or cancellation of a trip or

event, loss of baggage or personal effects, damages to accommodations or rental vehicles, and sickness, accident, disability, or death occurring during travel, provided that the health benefits are not offered on a stand-alone basis and are incidental to other coverage. For this purpose, travel insurance does not include major medical plans that provide comprehensive medical protection for travelers with trips lasting 6 months or longer, including, for example, those working overseas as an expatriate or military personnel being deployed. This definition is consistent with the definition of travel insurance under final regulations for the health insurance providers fee imposed by section 9010 of the ACA issued by the Treasury Department and the IRS,<sup>30</sup> which uses a modified version of the National Association of Insurance Commissioners (NAIC) definition of travel insurance.

#### Hospital Indemnity and Other Fixed Indemnity Insurance

These proposed regulations also include an amendment to the “noncoordinated excepted benefits” category as it relates to hospital indemnity and other fixed indemnity insurance in the group market. Since the issuance of final regulations defining excepted benefits, the Departments have become aware of some hospital indemnity and other fixed indemnity insurance policies that provide comprehensive benefits related to health care costs. In addition, although hospital indemnity and other fixed indemnity insurance under section 2791 of the PHS Act, section 733 of ERISA, and section 9832 of the Code is not intended to be major medical coverage, the Departments are aware that some group health plans that provide coverage through hospital indemnity or other fixed indemnity insurance policies that meet the conditions necessary to be an excepted benefit have made representations to participants that the coverage is minimum essential coverage under section 5000A of the Code. The Departments are concerned that some individuals may incorrectly understand these policies to be comprehensive major medical coverage that would be considered minimum essential coverage.

To avoid confusion among group health plan enrollees and potential enrollees, the proposed regulations revise the conditions necessary for hospital indemnity and other fixed indemnity insurance in the group market to be excepted benefits so that

any application or enrollment materials provided to enrollees and potential enrollees at or before the time enrollees and potential enrollees are given the opportunity to enroll in the coverage must include a statement that the coverage is a supplement to, rather than a substitute for, major medical coverage and that a lack of minimum essential coverage may result in an additional tax payment. The proposed regulations include specific language that must be used by group health plans and issuers of group health insurance coverage to satisfy this notice requirement, which is consistent with the notice requirement for individual market fixed indemnity coverage under regulations issued by HHS.<sup>31</sup> The Departments request comments on this proposed notice requirement as well as whether any additional requirements should be added to prevent confusion among enrollees and potential enrollees regarding the limited coverage provided by hospital indemnity and other fixed indemnity insurance. The Departments anticipate that conforming changes will be made in the final regulations to ensure the notice language in the individual market is consistent with the notice language in the group market, and solicit comments on this approach.

Additionally, the Departments have become aware of hospital indemnity or other fixed indemnity insurance policies that provide benefits for doctors’ visits at a fixed amount per visit, for prescription drugs at a fixed amount per drug, or for certain services at a fixed amount per day but in amounts that vary by the type of service. These types of policies do not meet the condition that benefits be provided on a per day (or per other time period, such as per week) basis. Accordingly, the proposed regulations clarify this standard by stating that the amount of benefits provided must be determined without regard to the type of items or services received. The proposed regulations add two examples demonstrating that group health plans and issuers of group health insurance coverage that provide coverage through hospital indemnity or fixed indemnity insurance policies that provide benefits based on the type of item or services received do not meet the conditions necessary to be an excepted benefit. The first example would incorporate into regulations guidance previously provided by the Departments in Affordable Care Act Implementation FAQs Part XI, which clarified that if a policy provides benefits in varying amounts based on the type of procedure

<sup>30</sup> 26 CFR 57.2(h)(4).

<sup>31</sup> 45 CFR 148.220(b)(4)(iv).

or item received, the policy does not satisfy the condition that benefits be provided on a per day (or per other time period, such as per week) basis. The second example demonstrates that a hospital indemnity or other fixed indemnity insurance policy that provides benefits for certain services at a fixed amount per day, but in varying amounts depending on the type of service, does not meet the condition that benefits be provided on a per day (or per other time period, such as per week) basis. The Departments request comments on these examples specifically, as well as on the requirement that hospital indemnity and other fixed indemnity insurance in the group market that are excepted benefits must provide benefits on a per day (or per other time period, such as per week) basis in an amount that does not vary based on the type of items or services received. The Departments also request comments on whether the conditions for hospital indemnity or other fixed indemnity insurance to be considered excepted benefits should be more substantively aligned between the group and individual markets. For example, the requirements for hospital indemnity or other fixed indemnity insurance in the individual market could be modified to be consistent with the group market provisions of these proposed regulations by limiting payment strictly on a per-period basis and not on a per-service basis.

### Specified Disease Coverage

The Departments have been asked whether a policy covering multiple specified diseases or illnesses may be considered to be excepted benefits. The statute provides that the noncoordinated excepted benefits category includes “coverage of a specified disease or illness” if the coverage meets the conditions for being offered as independent, noncoordinated benefits, and the Departments’ implementing regulations identify cancer-only policies as one example of specified disease coverage.<sup>32</sup> The Departments are concerned that individuals who purchase a specified disease policy covering multiple diseases or illnesses (including policies that cover one overarching medical condition such as “mental illness” as opposed to a specific condition such as depression) may incorrectly believe they are purchasing comprehensive medical coverage when, in fact, these policies may not include many of the important consumer protections under the PHS

Act, ERISA, and the Code. The Departments solicit comments on this issue and on whether, if such policies are permitted to be considered excepted benefits, protections are needed to ensure such policies are not mistaken for comprehensive medical coverage. For example, the Departments solicit comments on whether to limit the number of diseases or illnesses that may be covered in a specified disease policy that is considered to be excepted benefits or whether issuers should be required to disclose that such policies are not minimum essential coverage under section 5000A(f) of the Code.

### Short-Term, Limited-Duration Insurance

Under existing regulations, short-term, limited-duration insurance means “health insurance coverage provided pursuant to a contract with an issuer that has an expiration date specified in the contract (taking into account any extensions that may be elected by the policyholder without the issuer’s consent) that is less than 12 months after the original effective date of the contract.”<sup>33</sup> Before enactment of the ACA, short-term, limited-duration insurance was an important means for individuals to obtain health coverage when transitioning from one job to another (and from one group health plan to another) or in a similar situation. But with the guaranteed availability of coverage and special enrollment period requirements in the individual health insurance market under the ACA, short-term, limited-duration insurance is no longer the only means to obtain transitional coverage.

The Departments recently have become aware that short-term, limited-duration insurance is being sold to address situations other than the situations that the exception was initially intended to address.<sup>34</sup> In some instances individuals are purchasing this coverage as their primary form of health coverage and, contrary to the intent of the 12-month coverage limitation in the current definition of short-term, limited-duration insurance, some issuers are providing renewals of the coverage that extend the duration beyond 12 months. The Departments are concerned that these policies, because they are exempt from market reforms, may have significant limitations, such as lifetime and annual dollar limits on

EHBs and pre-existing condition exclusions, and therefore may not provide meaningful health coverage. Further, because these policies can be medically underwritten based on health status, healthier individuals may be targeted for this type of coverage, thus adversely impacting the risk pool for ACA-compliant coverage.

To address the issue of short-term, limited-duration insurance being sold as a type of primary coverage, the proposed regulations revise the definition of short-term, limited-duration insurance so that the coverage must be less than three months in duration, including any period for which the policyholder renews or has an option to renew with or without the issuer’s consent. The proposed regulations also provide that a notice must be prominently displayed in the contract and in any application materials provided in connection with enrollment in such coverage with the following language: THIS IS NOT QUALIFYING HEALTH COVERAGE (“MINIMUM ESSENTIAL COVERAGE”) THAT SATISFIES THE HEALTH COVERAGE REQUIREMENT OF THE AFFORDABLE CARE ACT. IF YOU DON’T HAVE MINIMUM ESSENTIAL COVERAGE, YOU MAY OWE AN ADDITIONAL PAYMENT WITH YOUR TAXES.

This change would align the definition more closely with the initial intent of the regulation: To refer to coverage intended to fill temporary coverage gaps when an individual transitions between primary coverage. Further, limiting the coverage to less than three months improves coordination with the exemption from the individual shared responsibility provision of section 5000A of the Code for gaps in coverage of less than three months (the short coverage gap exemption), 26 CFR 1.5000A–3. Under current law, individuals who are enrolled in short-term, limited-duration coverage instead of minimum essential coverage for three months or more are generally not eligible for the short coverage gap exemption. The proposed regulations help ensure that individuals who purchase short-term, limited-duration coverage will still be eligible for the short coverage gap exemption (assuming other requirements are met) during the temporary coverage period.

In addition to proposing to reduce the length of short-term, limited-duration insurance to less than three months, the proposed regulations add the words “with or” in front of “without the issuer’s consent” to address the Departments’ concern that some issuers are taking liberty with the current

<sup>33</sup> 26 CFR 54.9801–2, 29 CFR 2590.702–2, 45 CFR 144.103.

<sup>34</sup> See e.g., Mathews, Anna W. “Sales of Short-Term Health Policies Surge,” *The Wall Street Journal* April 10, 2016, available at <http://www.wsj.com/articles/sales-of-short-term-health-policies-surge-1460328539>.

<sup>32</sup> 26 CFR 54.9831–1(c)(4), 29 CFR 2590.732(c)(4), 45 CFR 146.145(b)(4) and 148.220(b)(3).

definition of short-term, limited-duration insurance either by automatically renewing such policies or having a simplified reapplication process with the result being that such coverage lasts much longer than 12 months and serves as an individual's primary coverage but does not contain the important protections of the ACA. As indicated above, this type of coverage should only be sold for the purpose of providing coverage on a short-term basis such as filling in coverage gaps as a result of transitioning from one group health plan to another. The addition of the words "with or" clarifies that short-term, limited-duration insurance must be less than 3 months in total taking into account any option to renew or to reapply for the same or similar coverage.

The Departments seek comment on this proposal, including information and data on the number of short-term, limited-duration insurance policies offered for sale in the market, the types of individuals who typically purchase this coverage, and the reasons for which they purchase it.

#### **Definition of EHB for Purposes of the Prohibition on Lifetime and Annual Limits**

On November 18, 2015, the Departments issued final regulations implementing section 2711 of the PHS Act.<sup>35</sup> The final regulations provide that, for plan years beginning on or after January 1, 2017, a plan or issuer that is not required to provide EHBs must define EHB, for purposes of the prohibition on lifetime and annual dollar limits, in a manner consistent with any of the 51 EHB base-benchmark plans applicable in a State or the District of Columbia, or one of the three FEHBP base-benchmarks, as specified under 45 CFR 156.100.

The final regulations under section 2711 of the PHS Act include a reference to selecting a "base-benchmark" plan, as specified under 45 CFR 156.100, for purposes of determining which benefits cannot be subject to lifetime or annual dollar limits. The base-benchmark plan selected by a State or applied by default under 45 CFR 156.100, however, may not reflect the complete definition of EHB in the applicable State. For that reason, the Departments propose to amend the regulations at 26 CFR 54.9815–2711(c), 29 CFR 2590.715–2711(c), and 45 CFR 147.126(c) to refer to the provisions that capture the complete definition of EHB in a State. Specifically, the Departments propose to replace the phrase "in a manner

consistent with one of the three Federal Employees Health Benefit Program (FEHBP) options as defined by 45 CFR 156.100(a)(3) or one of the base-benchmark plans selected by a State or applied by default pursuant to 45 CFR 156.100" in each of the regulations with the following: "In a manner that is consistent with (1) one of the EHB-benchmark plans applicable in a State under 45 CFR 156.110, and includes coverage of any additional required benefits that are considered essential health benefits consistent with 45 CFR 155.170(a)(2); or (2) one of the three Federal Employees Health Benefit Program (FEHBP) options as defined by 45 CFR 156.100(a)(3), supplemented, as necessary, to meet the standards in 45 CFR 156.110." This change reflects the possibility that base-benchmark plans, including the FEHBP plan options, could require supplementation under 45 CFR 156.110, and ensures the inclusion of State-required benefit mandates enacted on or before December 31, 2011 in accordance with 45 CFR 155.170, which when coupled with a State's EHB-benchmark plan, establish the definition of EHB in that State under regulations implementing section 1302(b) of the ACA.<sup>36</sup> The Departments seek comment on the requirement that, when one of the FEHBP plan options is selected as the benchmark, it would be supplemented, as needed, to ensure coverage in all ten statutory EHB categories, and the benchmark plan options that should be available for this purpose.

#### **Proposed Applicability Date and Reliance**

Except as otherwise provided herein, these proposed regulations are proposed to be applicable for plan years (or, in the individual market, policy years) beginning on or after January 1, 2017. Issuers, employers, administrators, and individuals are permitted to rely on these proposed regulations pending the applicability date of final regulations in

the **Federal Register**. To the extent final regulations or other guidance is more restrictive on issuers, employers, administrators, and individuals than these proposed regulations, the final regulations or other guidance will be applied without retroactive effect and issuers, employers, administrators, and individuals will be provided sufficient time to come into compliance with the final regulations.

#### **III. Economic Impact and Paperwork Burden**

##### *A. Summary—Department of Labor and Department of Health and Human Services*

As stated above, the proposed regulations would provide guidance on the rules for expatriate health plans, expatriate health plan issuers, and qualified expatriates under the EHCCA. The EHCCA generally provides that the requirements of the ACA do not apply with respect to expatriate health plans, expatriate health insurance issuers for coverage under expatriate health plans, and employers in their capacity as plan sponsors of expatriate health plans.

The proposed regulations address how certain requirements relating to minimum essential coverage under section 5000A of the Code, the health care reporting provisions of sections 6055 and 6056 of the Code, and the health insurance providers fee imposed by section 9010 of the ACA continue to apply subject to certain provisions while providing that the excise tax under sections 4375 and 4376 of the Code do not apply to expatriate health plans.

The proposed regulations also propose amendments to the Departments' regulations concerning excepted benefits, which would specify the conditions for supplemental health insurance products that are designed "to fill gaps in primary coverage" by providing additional categories of benefits (as opposed to filling in gaps in cost sharing) to constitute supplemental excepted benefits, and clarify that certain travel-related insurance products that provide only incidental health benefits constitute excepted benefits. The proposed regulations also require that, to be considered hospital indemnity or other fixed indemnity insurance in the group market, any application or enrollment materials provided to participants at or before the time participants are given the opportunity to enroll in the coverage must include a statement that the coverage is a supplement to, rather than a substitute for, major medical coverage and that a lack of minimum essential

<sup>36</sup> In the HHS Notice of Benefit and Payment Parameters for 2016 published February 27, 2015 (80 FR 10750), HHS instructed States to select a new base-benchmark plan to take effect beginning with plan or policy years beginning in 2017. The new final EHB base-benchmark plans selected as a result of this process are publicly available at [downloads.cms.gov/ccio/](http://downloads.cms.gov/ccio/) *Final%20List%20of%20BMPs\_15\_10\_21.pdf*. Additional information about the new base-benchmark plans, including plan documents and summaries of benefits, is available at [www.cms.gov/CCIO/Resources/Data-Resources/ehb.html](http://www.cms.gov/CCIO/Resources/Data-Resources/ehb.html). The definition of EHB in each of the 50 states and the District of Columbia is based on the base-benchmark plan, and takes into account any additions to the base-benchmark plan, such as supplementation under 45 CFR 156.110, and State-required benefit mandates in accordance with 45 CFR 155.170.

<sup>35</sup> 80 FR 72192.

coverage may result in an additional tax payment. Further, the regulations clarify that hospital indemnity and other fixed indemnity insurance must pay a fixed dollar amount per day (or per other time period, such as per week) regardless of the type of items or services received.

The regulations also propose revisions to the definition of short-term, limited-duration insurance so that the coverage has to be less than 3 months in duration (as opposed to the current definition of less than 12 months in duration), and that a notice must be prominently displayed in the contract and in any application materials provided in connection with the coverage that provides that such coverage is not minimum essential coverage.

The proposed regulations also include amendments to 45 CFR part 158 to clarify that the MLR reporting requirements do not apply to expatriate health plans under the EHCCA.

Finally, the proposed regulations propose to amend the definition of “essential health benefits” for purposes of the prohibition of annual and lifetime dollar limits for group health plans and health insurance issuers that are not required to provide essential health benefits.

The Departments are publishing these proposed regulations to implement the protections intended by the Congress in the most economically efficient manner possible. The Departments have examined the effects of this rule as required by Executive Order 13563 (76 FR 3821, January 21, 2011), Executive Order 12866 (58 FR 51735, September 1993, Regulatory Planning and Review), the Regulatory Flexibility Act (RFA) (September 19, 1980, Pub. L. 96–354), the Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4), Executive Order 13132 on Federalism, and the Congressional Review Act (5 U.S.C. 804(2)).

#### *B. Executive Orders 12866 and 13563—Department of Labor and Department of Health and Human Services*

Executive Order 12866 (58 FR 51735) directs agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects; distributive impacts; and equity). Executive Order 13563 (76 FR 3821, January 21, 2011) is supplemental to and reaffirms the principles, structures, and definitions governing regulatory review as established in Executive Order 12866.

Section 3(f) of Executive Order 12866 defines a “significant regulatory action” as an action that is likely to result in a final rule—(1) having an annual effect on the economy of \$100 million or more in any one year, or adversely and materially affecting a sector of the economy, productivity, competition, jobs, the environment, public health or safety, or state, local or tribal governments or communities (also referred to as “economically significant”); (2) creating a serious inconsistency or otherwise interfering with an action taken or planned by another agency; (3) materially altering the budgetary impacts of entitlement grants, user fees, or loan programs or the rights and obligations of recipients thereof; or (4) raising novel legal or policy issues arising out of legal mandates, the President’s priorities, or the principles set forth in the Executive Order.

A regulatory impact analysis (RIA) must be prepared for rules with economically significant effects (for example, \$100 million or more in any 1 year), and a “significant” regulatory action is subject to review by the OMB. The Departments have determined that this regulatory action is not likely to have economic impacts of \$100 million or more in any one year, and therefore is not significant within the meaning of Executive Order 12866. The Departments expect the impact of these proposed regulations to be limited because they do not require any additional action or impose any requirements on issuers, employers and plan sponsors.

#### 1. Need for Regulatory Action

Consistent with the EHCCA, enacted as Division M of the Consolidated Clarification Continuing Appropriations Act, 2015 Public Law 113–235 (128 Stat. 2130), these proposed regulations provide that the market reform provisions enacted as part of the ACA generally do not apply to expatriate health plans, any employer solely in its capacity as a plan sponsor of an expatriate health plan, and any expatriate health insurance issuer with respect to coverage under an expatriate health plan. Further, the proposed regulations define the benefit and administrative requirements for expatriate health issuers, expatriate health plans, and qualified expatriates and provide clarification regarding the applicability of certain fee and reporting requirements under the Code.

Consistent with section 2 of the EHCCA, these proposed regulations are necessary to carry out the intent of Congress that (1) American expatriate

health insurance issuers should be permitted to compete on a level playing field in the global marketplace; (2) the global competitiveness of American companies should be encouraged; and (3) in implementing the health insurance providers fee imposed by section 9010 of the ACA and other provisions of the ACA, the unique and multinational features of expatriate health plans and the United States companies that operate such plans and the competitive pressures of such plans and companies should continue to be recognized.

In response to feedback the Departments have received from stakeholders, the proposed regulations would also clarify the conditions for supplemental health insurance and travel insurance to be considered excepted benefits. These clarifications will provide health insurance issuers offering supplemental insurance coverage and travel insurance products with a clearer understanding of whether these types of coverage are subject to the market reforms under title XXVII of the PHS Act, part 7 of ERISA, and Chapter 100 of the Code. The proposed regulations also would amend the definition of short-term, limited-duration insurance and impose a new notice requirement in response to recent reports that this type of coverage is being sold for purposes other than for which the exclusion for short-term, limited-duration insurance was initially intended to cover.

#### 2. Summary of Impacts

These proposed regulations would implement the rules for expatriate health plans, expatriate health insurance issuers, and qualified expatriates under the EHCCA. The proposed regulations also outline the conditions for travel insurance and supplemental insurance coverage to be considered excepted benefits, and revise the definition of short-term, limited-duration insurance.

Based on the NAIC 2014 Supplemental Health Care Exhibit Report,<sup>37</sup> which generally uses the definition of expatriate coverage in the MLR final rule at 45 CFR 158.120(d)(4),<sup>38</sup> there are an estimated

<sup>37</sup> NAIC, 2014 Supplemental Health Care Exhibit Report, Volume 1 (2015), available at [http://www.naic.org/documents/prod\\_serv\\_statistical\\_hcs\\_zb.pdf](http://www.naic.org/documents/prod_serv_statistical_hcs_zb.pdf).

<sup>38</sup> Section 45 CFR 158.120(d)(4) defines expatriate policies as predominantly group health insurance policies that provide coverage to employees, substantially all of whom are: (1) Working outside their country of citizenship; (2) working outside their country of citizenship and outside the employer’s country of domicile; or (3) non-U.S. citizens working in their home country.

eight issuers (one issuer in the small group market and seven issuers in the large group market) domiciled in the United States that provide expatriate health plans for approximately 270,349 enrollees. While the Departments acknowledge that some expatriate health insurance issuers and employers in their capacity as plan sponsor of an expatriate health plan may incur costs in order to comply with certain provisions of the EHCCA and these proposed regulations, as discussed below, the Departments believe that these costs will be relatively insignificant and limited.

The vast majority of expatriate health plans described in the EHCCA would qualify as expatriate health plans under the transitional relief provided in the Departments' Affordable Care Act Implementation FAQs Part XVIII, Q&A-6 and Q&A-7. The FAQs provide that expatriate health plans with plan years ending on or before December 31, 2016 are exempt from the ACA market reforms and provide that coverage provided under an expatriate group health plan is a form of minimum essential coverage under section 5000A of the Code. The EHCCA permanently exempts expatriate health plans with plan or policy years beginning on or after July 1, 2015 from the ACA market reform requirements and provides that coverage provided under an expatriate health plan is a form of minimum essential coverage under section 5000A of the Code.

Because the Departments believe that most, if not all, expatriate health plans described in the EHCCA would qualify as expatriate health plans under the Departments' previous guidance, and the proposed regulations codify the provisions of the EHCCA by making the temporary relief in the Departments' Affordable Care Act Implementation FAQs Part XVIII, Q&A-6 and Q&A-7 permanent for specified expatriate health plans, the Departments believe that the proposed regulations will result in only marginal, if any, impact on these plans. Furthermore, the Departments believe the proposed regulations outlining the conditions for travel insurance and supplemental insurance coverage to be considered excepted benefits are consistent with prevailing industry practice and will not result in significant cost to health insurance issuers of these products.

The Departments believe that any costs incurred by issuers of short-term, limited-duration insurance and hospital indemnity and other fixed indemnity insurance to include the required notice in application or enrollment materials will be negligible since the Departments

have provided the exact text for the notice. Further, the Departments note that issuers of hospital indemnity and other fixed indemnity insurance in the individual market already provide a similar notice.

As a result, the Departments have concluded that the impacts of these proposed regulations are not economically significant. The Departments request comments on the assumptions used to evaluate the economic impact of these proposed regulations, including specific data and information on the number of expatriate health plans.

#### *C. Paperwork Reduction Act*

##### *1. Department of the Treasury*

The collection of information in these proposed regulations are in 26 CFR 1.6055-2(a)(8) and 301.6056-2(a)(8). The collection of information in these proposed regulations relates to statements required to be furnished to a responsible individual under section 6055 of the Code and statements required to be furnished to an employee under section 6056 of the Code. The collection of information in these proposed regulations would, in accordance with the EHCCA, permit a furnisher to furnish the required statements electronically unless the recipient has explicitly refused to consent to receive the statement in an electronic format. The collection of information contained in this notice of proposed rulemaking will be taken into account and submitted to the Office of Management and Budget in accordance with the Paperwork Reduction Act of 1995 (44 U.S.C. 3507(d)) in connection with the next review of the collection of information for IRS Form 1095-B (OMB # 1545-2252) and IRS Form 1095-C (OMB # 1545-2251).

Comments on the collection of information should be sent to the Office of Management and Budget, Attn: Desk Officer for the Department of the Treasury, Office of Information and Regulatory Affairs, Washington, DC 20503, with copies to the Internal Revenue Service, Attn: IRS Reports Clearance Officer, SE:CAR:MP:T:T:SP, Washington, DC 20224. Comments on the collection of information should be received by August 9, 2016. Comments are sought on whether the proposed collection of information is necessary for the proper performance of the IRS, including whether the information will have practical utility; the accuracy of the estimated burden associated with the proposed collection of information; how the quality, utility, and clarity of the information to be collected may be

enhanced; how the burden of complying with the proposed collection of information may be minimized, including through the application of automated collection techniques and other forms of information technology; and estimates of capital or start-up costs and costs of operation, maintenance, and purchase of service to provide information. Comments on the collection of information should be received by August 9, 2016.

An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a valid control number assigned by the Office of Management and Budget.

Books or records relating to a collection of information must be retained as long as their contents may become material in the administration of any internal revenue law. Generally, tax returns and tax return information are confidential, as required by 26 U.S.C. 6103.

##### *2. Department of the Treasury, Department of Labor, and Department of Health and Human Services*

The proposed regulations provide that to be considered hospital or other fixed indemnity excepted benefits in the group market for plan years beginning on or after January 1, 2017, a notice must be included in any application or enrollment materials provided to participants at or before the time participants are given the opportunity to enroll in the coverage, indicating that the coverage is a supplement to, rather than a substitute for major medical coverage and that a lack of minimum essential coverage may result in an additional tax payment. The proposed regulations also provide that to be considered short-term, limited-duration insurance for policy years beginning on or after January 1, 2017, a notice must be prominently displayed in the contract and in any application materials, stating that the coverage is not minimum essential coverage and that failure to have minimum essential coverage may result in an additional tax payment. The Departments have provided the exact text for these notice requirements and the language will not need to be customized. The burden associated with these notices is not subject to the Paperwork Reduction Act of 1995 in accordance with 5 CFR 1320.3(c)(2) because they do not contain a "collection of information" as defined in 44 U.S.C. 3502(11).

#### *D. Regulatory Flexibility Act*

The Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*) (RFA) imposes

certain requirements with respect to Federal rules that are subject to the notice and comment requirements of section 553(b) of the Administrative Procedure Act (5 U.S.C. 551 *et seq.*) and that are likely to have a significant economic impact on a substantial number of small entities. Unless an agency certifies that a proposed rule is not likely to have a significant economic impact on a substantial number of small entities, section 603 of RFA requires that the agency present an initial regulatory flexibility analysis at the time of the publication of the notice of proposed rulemaking describing the impact of the rule on small entities and seeking public comment on such impact. Small entities include small businesses, organizations and governmental jurisdictions.

The RFA generally defines a “small entity” as (1) a proprietary firm meeting the size standards of the Small Business Administration (SBA) (13 CFR 121.201); (2) a nonprofit organization that is not dominant in its field; or (3) a small government jurisdiction with a population of less than 50,000. (States and individuals are not included in the definition of “small entity.”) The Departments use as their measure of significant economic impact on a substantial number of small entities a change in revenues of more than 3 to 5 percent.

These proposed regulations are not likely to impose additional costs on small entities. According to SBA size standards, entities with average annual receipts of \$38.5 million or less would be considered small entities for these North American Industry Classification System codes. The Departments believe that, since the majority of small issuers belong to larger holding groups, many if not all are likely to have non-health lines of business that would result in their revenues exceeding \$38.5 million. Therefore, the Departments certify that the proposed regulations will not have a significant impact on a substantial number of small entities. In addition, section 1102(b) of the Social Security Act requires agencies to prepare a regulatory impact analysis if a rule may have a significant economic impact on the operations of a substantial number of small rural hospitals. This analysis must conform to the provisions of section 604 of the RFA. These proposed regulations would not affect small rural hospitals. Therefore, the Departments have determined that these proposed regulations would not have a significant impact on the operations of a substantial number of small rural hospitals.

#### *E. Special Analysis—Department of the Treasury*

Certain IRS regulations, including this one, are exempt from the requirements of Executive Order 12866, as supplemented and reaffirmed by Executive Order 13563. Therefore, a regulatory impact assessment is not required. It also has been determined that section 553(b) of the Administrative Procedure Act (5 U.S.C. Chapter 5) does not apply to these regulations. For applicability of RFA, see paragraph D of this section III.

Pursuant to section 7805(f) of the Code, these regulations have been submitted to the Chief Counsel for Advocacy of the Small Business Administration for comment on their impact on small business.

#### *F. Unfunded Mandates Reform Act*

For purposes of the Unfunded Mandates Reform Act of 1995 (2 U.S.C. 1501 *et seq.*), as well as Executive Order 12875, these proposed rules do not include any Federal mandate that may result in expenditures by State, local, or tribal governments, or the private sector, which may impose an annual burden of \$146 million adjusted for inflation since 1995.

#### *G. Federalism—Department of Labor and Department of Health and Human Services*

Executive Order 13132 outlines fundamental principles of federalism. It requires adherence to specific criteria by Federal agencies in formulating and implementing policies that have “substantial direct effects” on the States, the relationship between the national government and States, or on the distribution of power and responsibilities among the various levels of government. Federal agencies promulgating regulations that have these federalism implications must consult with State and local officials, and describe the extent of their consultation and the nature of the concerns of State and local officials in the preamble to the final regulation.

In the Departments’ view, these proposed regulations do not have federalism implications, because they do not have direct effects on the States, the relationship between the national government and States, or on the distribution of power and responsibilities among various levels of government.

#### *H. Congressional Review Act*

These proposed regulations are subject to the Congressional Review Act provisions of the Small Business Regulatory Enforcement Fairness Act of

1996 (5 U.S.C. 801 *et seq.*), and, if finalized, will be transmitted to the Congress and to the Comptroller General for review in accordance with such provisions.

#### *I. Statement of Availability of IRS Documents*

IRS Revenue Procedures, Revenue Rulings notices, and other guidance cited in this document are published in the Internal Revenue Bulletin (or Cumulative Bulletin) and are available from the Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402, or by visiting the IRS Web site at <http://www.irs.gov>.

#### **IV. Statutory Authority**

The Department of the Treasury regulations are proposed to be adopted pursuant to the authority contained in sections 7805 and 9833 of the Code.

The Department of Labor regulations are proposed pursuant to the authority contained in 29 U.S.C. 1135, and 1191c; Secretary of Labor’s Order 1–2011, 77 FR 1088 (Jan. 9, 2012).

The Department of Health and Human Services regulations are proposed to be adopted pursuant to the authority contained in sections 2701 through 2763, 2791, and 2792 of the PHS Act (42 U.S.C. 300gg through 300gg–63, 300gg–91, and 300gg–92), as amended.

#### **List of Subjects**

##### *26 CFR Part 1*

Income taxes.

##### *26 CFR Part 46*

Excise taxes, Health care, Health insurance, Pensions, Reporting and recordkeeping requirements.

##### *26 CFR Part 54*

Pension and excise taxes.

##### *26 CFR Part 57*

Health insurance providers fee.

##### *26 CFR Part 301*

Procedure and administration.

##### *29 CFR Part 2590*

Continuation coverage, Disclosure, Employee benefit plans, Group health plans, Health care, Health insurance, Medical child support, Reporting and recordkeeping requirements.

##### *45 CFR Parts 144, 146 and 147*

Health care, Health insurance, Reporting and recordkeeping requirements.

##### *45 CFR Part 148*

Administrative practice and procedure, Health care, Health

insurance, Penalties, Reporting and recordkeeping requirements.

**45 CFR Part 158**

Health insurance, Medical loss ratio, Reporting and rebate requirements.

**John Dalrymple,**

*Deputy Commissioner for Services and Enforcement, Internal Revenue Service.*

Signed this 1st day of June 2016.

**Phyllis C. Borzi,**

*Assistant Secretary, Employee Benefits Security Administration, Department of Labor.*

Dated: June 2, 2016.

**Andrew M. Slavitt,**

*Acting Administrator, Centers for Medicare & Medicaid Services.*

Dated: June 3, 2016.

**Sylvia M. Burwell,**

*Secretary, Department of Health and Human Services.*

**DEPARTMENT OF THE TREASURY**

**Internal Revenue Service**

**Proposed Amendments to the Regulations**

Accordingly, 26 CFR parts 1, 46, 54, 57, and 301 are proposed to be amended as follows:

**PART 1—INCOME TAXES**

■ 1. The authority citation for part 1 continues to read in part as follows:

**Authority:** 26 U.S.C. 7805.\* \* \*

■ 2. Section 1.162–31 is amended by adding paragraph (b)(5)(v) to read as follows:

**§ 1.162–31 The \$500,000 deduction limitation for remuneration provided by certain health insurance providers.**

\* \* \* \* \*

(b) \* \* \*

(5) \* \* \*

(v) *Expatriate health plan coverage.*

For purposes of this section, amounts received in payment for expatriate health plan coverage, as defined in § 54.9831–1(f)(3), are not premiums.

\* \* \* \* \*

■ 3. Section 1.5000A–2 is amended by adding paragraphs (c)(1)(i)(D) and (d)(3) to read as follows:

**§ 1.5000A–2 Minimum essential coverage.**

\* \* \* \* \*

(c) \* \* \*

(1) \* \* \*

(i) \* \* \*

(D) A group health plan that is an expatriate health plan within the meaning of § 54.9831–1(f)(3) of this chapter if the requirements of § 54.9831–1(f)(3)(i) of this chapter are met by providing coverage for qualified

expatriates described in § 54.9831–1(f)(6)(i) or (ii) of this chapter.

\* \* \* \* \*

(d) \* \* \*

(3) *Certain expatriate health plans.* An expatriate health plan within the meaning of § 54.9831–1(f)(3) of this chapter that is not an eligible employer-sponsored plan under paragraph (c)(1)(i)(D) of this section is a plan in the individual market.

\* \* \* \* \*

■ 4. Section 1.6055–2 is amended by adding paragraph (a)(8) to read as follows:

**§ 1.6055–2 Electronic furnishing of statements.**

(a) \* \* \*

(8) *Special rule for expatriate health plan coverage—(i) In general.* In the case of an individual covered under an expatriate health plan (within the meaning of § 54.9831–1(f)(3) of this chapter), the recipient is treated as having consented under paragraph (a)(2) of this section unless the recipient has explicitly refused to consent to receive the statement in an electronic format. The refusal to consent may be made electronically or in a paper document. A recipient's request for a paper statement is treated as an explicit refusal to receive the statement in electronic format. A furnisher relying on this paragraph (a)(8) must satisfy the requirements of paragraphs (a)(3) through (7) of this section, except that the statement required under paragraph (a)(3) must be provided at least 30 days prior to the time for furnishing under § 1.6055–1(g)(4)(i)(A) of this chapter of the first statement that the furnisher intends to furnish electronically to the recipient, and the other requirements of paragraph (a)(3) are modified to reflect that the statement will be furnished electronically unless the recipient explicitly refuses to consent to receive the statement in an electronic format.

(ii) *Manner and time of notifying recipient.* The IRS may specify in other guidance published in the Internal Revenue Bulletin the manner and timing for the initial notification of recipients that the statement required under paragraph (a)(3) of this section will be furnished electronically unless the recipient explicitly refuses to consent to receive the statement in an electronic format. See § 601.601(d)(2)(ii)(B) of this chapter.

(iii) *Effective/applicability date.* The provisions of this paragraph (a)(8) apply as of January 1, 2017.

\* \* \* \* \*

**PART 46—EXCISE TAXES, HEALTH CARE, HEALTH INSURANCE, PENSIONS, REPORTING AND RECORDKEEPING**

■ 5. The authority citation for part 46 continues to read as follows:

**Authority:** 26 U.S.C. 7805.

■ 6. Section 46.4377–1 is amended by redesignating paragraph (c) as paragraph (d) and adding new paragraph (c) to read as follows:

**§ 46.4377–1. Definitions and special rules.**

\* \* \* \* \*

(c) *Treatment of expatriate health plans.* For policy years and plan years that end after January 1, 2017, the fees imposed by sections 4375 and 4376 do not apply to an expatriate health plan within the meaning of § 54.9831–1(f)(3).

\* \* \* \* \*

**PART 54—PENSION AND EXCISE TAXES**

■ 7. The authority citation for part 54 continues to read in part as follows:

**Authority:** 26 U.S.C. 7805\* \* \*

■ 8. Section 54.9801–2 is amended by:

- a. Adding in alphabetical order definitions for “expatriate health insurance issuer”, “expatriate health plan”, and “qualified expatriate;”
- b. Revising the definition of “short-term, limited-duration insurance”; and
- c. Adding in alphabetical order a definition for “travel insurance”.

The additions and revisions read as follows:

**§ 54.9801–2 Definitions.**

\* \* \* \* \*

*Expatriate health insurance issuer* means an expatriate health insurance issuer within the meaning of § 54.9831–1(f)(2).

*Expatriate health plan* means an expatriate health plan within the meaning of § 54.9831–1(f)(3).

\* \* \* \* \*

*Qualified expatriate* means a qualified expatriate within the meaning of § 54.9831–1(f)(6).

*Short-term, limited-duration insurance* means health insurance coverage provided pursuant to a contract with an issuer that:

- (1) Has an expiration date specified in the contract (taking into account any extensions that may be elected by the policyholder with or without the issuer's consent) that is less than 3 months after the original effective date of the contract; and
- (2) Displays prominently in the contract and in any application materials provided in connection with

enrollment in such coverage in at least 14 point type the following: “THIS IS NOT QUALIFYING HEALTH COVERAGE (“MINIMUM ESSENTIAL COVERAGE”) THAT SATISFIES THE HEALTH COVERAGE REQUIREMENT OF THE AFFORDABLE CARE ACT. IF YOU DON’T HAVE MINIMUM ESSENTIAL COVERAGE, YOU MAY OWE AN ADDITIONAL PAYMENT WITH YOUR TAXES.”

\* \* \* \* \*

*Travel insurance* means insurance coverage for personal risks incident to planned travel, which may include, but is not limited to, interruption or cancellation of trip or event, loss of baggage or personal effects, damages to accommodations or rental vehicles, and sickness, accident, disability, or death occurring during travel, provided that the health benefits are not offered on a stand-alone basis and are incidental to other coverage. For this purpose, the term travel insurance does not include major medical plans that provide comprehensive medical protection for travelers with trips lasting 6 months or longer, including, for example, those working overseas as an expatriate or military personnel being deployed.

\* \* \* \* \*

■ 9. Section 54.9815–2711 is amended by revising paragraph (c) to read as follows:

**§ 54.9815–2711 No lifetime or annual limits.**

\* \* \* \* \*

(c) *Definition of essential health benefits.* The term “essential health benefits” means essential health benefits under section 1302(b) of the Patient Protection and Affordable Care Act and applicable regulations. For this purpose, a group health plan or a health insurance issuer that is not required to provide essential health benefits under section 1302(b) must define “essential health benefits” in a manner that is consistent with—

(1) One of the EHB-benchmark plans applicable in a State under 45 CFR 156.110, and includes coverage of any additional required benefits that are considered essential health benefits consistent with 45 CFR 155.170(a)(2); or

(2) One of the three Federal Employees Health Benefit Program (FEHBP) options as defined by 45 CFR 156.100(a)(3), supplemented, as necessary, to meet the standards in 45 CFR 156.110.

\* \* \* \* \*

**§ 54.9831–1 [Amended]**

■ 10. Section 54.9831–1 is amended in paragraph (b)(1) by removing the reference “54.9812–1T” and adding in

its place the reference “54.9812–1, 54.9815–1251 through 54.9815–2719A,” and in paragraph (c)(1) by removing the reference “54.9811–1T, 54.9812–1T” with the phrase “54.9811–1, 54.9812–1, 54.9815–1251 through 54.9815–2719A”.

■ 11. Section 54.9831–1 is amended:

■ a. In paragraph (c)(2)(vii) by removing “and” at the end;

■ b. In paragraph (c)(2)(viii) by adding “and” at the end;

■ c. Adding paragraph (c)(2)(ix);

■ d. Revising paragraph (c)(4)(i);

■ e. Adding paragraph (c)(4)(ii)(D);

■ f. Revising paragraphs (c)(4)(iii) and (c)(5)(i)(C); and

■ g. Adding paragraph (f).

The revisions and additions read as follows:

**§ 54.9831–1 Special rules relating to group health plans.**

\* \* \* \* \*

(c) \* \* \*

(2) \* \* \*

(ix) Travel insurance within the meaning of § 54.9801–2 of this section.

\* \* \* \* \*

(4) *Noncoordinated benefits—(i) Excepted benefits that are not coordinated.* Coverage for only a specified disease or illness (for example, cancer-only policies) or hospital indemnity or other fixed indemnity insurance is excepted only if the coverage meets each of the conditions specified in paragraph (c)(4)(ii) of this section.

(ii) \* \* \*

(D) To be hospital indemnity or other fixed indemnity insurance, the insurance must pay a fixed dollar amount per day (or per other time period, such as per week) of hospitalization or illness (for example, \$100/day) without regard to the amount of expenses incurred or the type of items or services received and—

(1) The plan or issuer must provide, in any application or enrollment materials provided to participants at or before the time participants are given the opportunity to enroll in the coverage, a notice that prominently displays in at least 14 point type the following language: “THIS IS A SUPPLEMENT TO HEALTH INSURANCE AND IS NOT A SUBSTITUTE FOR MAJOR MEDICAL COVERAGE. THIS IS NOT QUALIFYING HEALTH COVERAGE (“MINIMUM ESSENTIAL COVERAGE”) THAT SATISFIES THE HEALTH COVERAGE REQUIREMENT OF THE AFFORDABLE CARE ACT. IF YOU DON’T HAVE MINIMUM ESSENTIAL COVERAGE, YOU MAY OWE AN ADDITIONAL PAYMENT WITH YOUR TAXES.”

(2) If participants are required to reenroll (in either paper or electronic form) for renewal or reissuance, the notice described in paragraph (c)(4)(ii)(D)(1) of this section must be displayed in the reenrollment materials that are provided to the participants at or before the time participants are given the opportunity to reenroll in the coverage.

(3) If a notice satisfying the requirements of this paragraph (c)(4)(ii)(D) is timely provided to a participant, the obligation to provide the notice is satisfied for both the plan and the issuer.

(iii) *Examples.* The rules of this paragraph (c)(4) are illustrated by the following examples:

*Example 1. (i) Facts.* An employer sponsors a group health plan that provides coverage through an insurance policy. The policy provides benefits only for hospital stays at a fixed percentage of hospital expenses up to a maximum of \$100 a day.

(ii) *Conclusion.* In this *Example 1*, because the policy pays a percentage of expenses incurred rather than a fixed dollar amount per day (or per other time period, such as per week), the policy is not hospital indemnity or other fixed indemnity insurance that is an excepted benefit under this paragraph (c)(4). This is the result even if, in practice, the policy pays the maximum of \$100 for every day of hospitalization.

*Example 2. (i) Facts.* An employer sponsors a group health plan that provides coverage through an insurance policy. The policy provides benefits for doctors’ visits at \$50 per visit, hospitalization at \$100 per day, various surgical procedures at different dollar rates per procedure, and prescription drugs at \$15 per prescription.

(ii) *Conclusion.* In this *Example 2*, for doctors’ visits, surgery, and prescription drugs, payment is not made on a per-period basis, but instead is based on whether a procedure or item is provided, such as whether an individual has surgery or a doctor visit or is prescribed a drug, and the amount of payment varies based on the type of procedure or item. Because benefits related to office visits, surgery, and prescription drugs are not paid based on a fixed dollar amount per day (or per other time period, such as per week), as required under paragraph (c)(4) of this section, the policy is not hospital indemnity or other fixed indemnity insurance that is an excepted benefit under this paragraph (c)(4).

*Example 3. (i) Facts.* An employer sponsors a group health plan that provides coverage through an insurance policy. The policy provides benefits for certain services at a fixed dollar amount per day, but the dollar amount varies by the type of service.

(ii) *Conclusion.* In this *Example 3*, because the policy provides benefits in a different amount per day depending on the type of service, rather than one specific dollar amount per day regardless of the type of service, the policy is not hospital indemnity or other fixed indemnity insurance that is an excepted benefit under this paragraph (c)(4).

(5) \* \* \*

(i) \* \* \*

(C) *Similar supplemental coverage provided to coverage under a group health plan.* To be similar supplemental coverage, the coverage must be specifically designed to fill gaps in the primary coverage. The preceding sentence is satisfied if the coverage is designed to fill gaps in cost sharing in the primary coverage, such as coinsurance or deductibles, or the coverage is designed to provide benefits for items and services not covered by the primary coverage and that are not essential health benefits in the State where the coverage is issued, or the coverage is designed to both fill such gaps in cost sharing under, and cover such benefits not covered by, the primary coverage. Similar supplemental coverage does not include coverage that becomes secondary or supplemental only under a coordination-of-benefits provision.

\* \* \* \* \*

(f) *Expatriate health plans and expatriate health insurance issuers—(1) In general.* With respect to coverage under an expatriate health plan, the requirements of section 9815 of the Code and implementing rules and regulations (incorporating sections 2701 through 2728 of the Public Health Service Act) do not apply to—

(i) An expatriate health plan (as defined in paragraph (f)(3) of this section),

(ii) An employer, solely in its capacity as plan sponsor of an expatriate health plan, and

(iii) An expatriate health insurance issuer (as defined in paragraph (f)(2) of this section) with respect to coverage under an expatriate health plan.

(2) *Definition of expatriate health insurance issuer—(i) In general.* Expatriate health insurance issuer means a health insurance issuer, within the meaning of § 54.9801–2, that issues expatriate health plans and that in the course of its normal business operations—

(A) Maintains network provider agreements that provide for direct claims payments, with health care providers in eight or more countries;

(B) Maintains call centers in three or more countries, and accepts calls from customers in eight or more languages;

(C) Processed at least \$1 million in claims in foreign currency equivalents during the preceding calendar year, determined using the Treasury Department's currency exchange rate in effect on the last day of the preceding calendar year;

(D) Makes global evacuation/repatriation coverage available;

(E) Maintains legal and compliance resources in three or more countries; and

(F) Has licenses or other authority to sell insurance in more than two countries, including in the United States.

(ii) *Additional rules.* For purposes of meeting the requirements of this paragraph (f)(2), two or more entities, including one entity that is the expatriate health insurance issuer, that are members of the expatriate health insurance issuer's controlled group (as determined under § 57.2(c) of this chapter) are treated as one expatriate health insurance issuer. Alternatively, the requirements of this paragraph (f)(2) may be satisfied through contracts between an expatriate health insurance issuer and third parties.

(3) *Definition of expatriate health plan.* Expatriate health plan means a plan that satisfies the requirements of paragraphs (f)(3)(i) through (iii) of this section.

(i) *Substantially all qualified expatriates requirement.* Substantially all primary enrollees in the expatriate health plan must be qualified expatriates. For purposes of this paragraph (f)(3)(i), the primary enrollee is the individual covered by the plan or policy whose eligibility for coverage is not due to that individual's status as the spouse, dependent, or other beneficiary of another covered individual. Notwithstanding the foregoing, an individual is not a primary enrollee if the individual is not a national of the United States and the individual resides in his or her country of citizenship. A plan satisfies the requirement of this paragraph (f)(3)(i) for a plan or policy year only if, on the first day of the plan or policy year, less than 5 percent of the primary enrollees (or less than 5 primary enrollees if greater) are not qualified expatriates.

(ii) *Substantially all benefits not excepted benefits requirement.* Substantially all of the benefits provided under the plan or coverage must be benefits that are not excepted benefits described in § 54.9831–1(c).

(iii) *Additional requirements.* To qualify as an expatriate health plan, the plan or coverage must also meet the following requirements:

(A) The plan or coverage provides coverage for inpatient hospital services, outpatient facility services, physician services, and emergency services (comparable to emergency services coverage that was described in and offered under section 8903(1) of title 5, United States Code for plan year 2009) in the following locations—

(1) In the case of individuals described in paragraph (f)(6)(i) of this section, in the United States and in the country or countries from which the individual was transferred or assigned, and such other country or countries the Secretary of Health and Human Services, in consultation with the Secretary of the Treasury and Secretary of Labor, may designate;

(2) In the case of individuals described in paragraph (f)(6)(ii) of this section, in the country or countries in which the individual is present in connection with his employment, and such other country or countries the Secretary of Health and Human Services, in consultation with the Secretary of the Treasury and Secretary of Labor, may designate; or

(3) In the case of individuals described in paragraph (f)(6)(iii) of this section, in the country or countries the Secretary of Health and Human Services, in consultation with the Secretary of the Treasury and Secretary of Labor, may designate.

(B) The plan sponsor reasonably believes that benefits provided by the plan or coverage satisfy the minimum value requirements of section 36B(c)(2)(C)(ii). For this purpose, a plan sponsor is permitted to rely on the reasonable representations of the issuer or administrator regarding whether benefits offered by the issuer or group health plan satisfy the minimum value requirements unless the plan sponsor knows or has reason to know that the benefits fail to satisfy the minimum value requirements.

(C) In the case of a plan or coverage that provides dependent coverage of children, such coverage must be available until an individual attains age 26, unless an individual is the child of a child receiving dependent coverage.

(D) The plan or coverage is:

(1) In the case of individuals described in paragraph (f)(6)(i) or (ii) of this section, a group health plan (including health insurance coverage offered in connection with a group health plan), issued by an expatriate health insurance issuer or administered by an expatriate health plan administrator. A group health plan will not fail to be an expatriate health plan merely because any portion of the coverage is provided through a self-insured arrangement.

(2) In the case of individuals described in paragraph (f)(6)(iii) of this section, health insurance coverage issued by an expatriate health insurance issuer.

(E) The plan or coverage offers reimbursements for items or services in

local currency in eight or more countries.

(F) The plan or coverage satisfies the provisions of Chapter 100 and regulations thereunder as in effect on March 22, 2010. For this purpose, the plan or coverage is not required to comply with section 9801(e) (relating to certification of creditable coverage) and underlying regulations. However, to the extent the plan or coverage imposes a preexisting condition exclusion, the plan or coverage must ensure that individuals with prior creditable coverage who enroll in the plan or coverage have an opportunity to demonstrate that they have creditable coverage offsetting the preexisting condition exclusion.

(iv) *Example.* The rule of paragraph (f)(3)(i) of this section is illustrated by the following example:

*Example.* (i) *Facts.* Business has health plan X for 250 U.S. citizens working outside of the United States in Country Y. All of the U.S. citizens working in Country Y satisfy the requirements to be qualified expatriates under § 54.9831-1(f)(6)(ii). In addition to the 250 U.S. citizens, Business employs 100 citizens of Country Y who reside in Country Y and do not satisfy the requirements to be qualified expatriates under § 54.9831-1(f)(6)(ii). Health plan X covers both the U.S. citizens and citizens of Country Y.

(ii) *Conclusion.* Health plan X satisfies the requirement of § 54.9831-1(f)(3)(i) that substantially all primary enrollees of an expatriate health plan be qualified expatriates because 100 percent of the primary enrollees are qualified expatriates. The 100 citizens of Country Y who reside in Country Y are not treated as primary enrollees for purposes of the substantially all requirement of § 54.9831-1(f)(3)(i) because they are not nationals of the United States and they reside in the country of their citizenship.

(4) *Definition of expatriate health plan administrator—(i) In general.* Expatriate health plan administrator means an administrator that in the course of its regular business operations—

(A) Maintains network provider agreements that provide for direct claims payments, with health care providers in eight or more countries,

(B) Maintains call centers, in three or more countries, and accepts calls from customers in eight or more languages,

(C) Processed at least \$1 million in claims in foreign currency equivalents during the preceding calendar year, determined using the Treasury Department's currency exchange rate in effect on the last day of the preceding calendar year,

(D) Makes global evacuation/repatriation coverage available,

(E) Maintains legal and compliance resources in three or more countries, and

(F) Has licenses or other authority to sell insurance in more than two countries, including in the United States.

(ii) *Additional rules.* For purposes of meeting the requirements of this paragraph (f)(4), two or more entities, including one entity that is the expatriate health plan administrator, that are members of the expatriate health plan administrator's controlled group (as determined under § 57.2(c) of this chapter) are treated as one expatriate health plan administrator. Alternatively, the requirements of this paragraph (f)(4) may be satisfied through contracts between an expatriate health plan administrator and third parties.

(5) *Definition of group health plan.* Group health plan, for purposes of this section, means a group health plan as defined in § 54.9831-1(a).

(6) *Definition of qualified expatriate.* Qualified expatriate, for purposes of this section, means an individual who is described in paragraph (f)(6)(i), (ii), or (iii) of this section.

(i) *Individuals transferred or assigned by their employer to work in the United States.* An individual is described in this paragraph (f)(6)(i) only if such individual has the skills, qualifications, job duties, or expertise that has caused the individual's employer to transfer or assign the individual to the United States for a specific and temporary purpose or assignment that is tied to the individual's employment with such employer. This paragraph (f)(6)(i) applies only to an individual who the plan sponsor has reasonably determined requires access to health coverage and other related services and support in multiple countries, and is offered other multinational benefits on a periodic basis (such as tax equalization, compensation for cross-border moving expenses, or compensation to enable the individual to return to the individual's home country), and does not apply to any individual who is a national of the United States. For purposes of this paragraph (f)(6)(i), an individual who is not expected to travel outside the United States at least one time per year during the coverage period would not reasonably require access to health coverage and other related services and support in multiple countries. Furthermore, the offer of a one-time *de minimis* benefit would not meet the standard for the offer of other multinational benefits on a periodic basis.

(ii) *Individuals working outside the United States.* An individual is

described in this paragraph (f)(6)(ii) only if the individual is a national of the United States who is working outside the United States for at least 180 days in a consecutive 12-month period that overlaps with a single plan year, or across two consecutive plan years.

(iii) *Individuals within a group of similarly situated individuals.* (A) An individual is described in this paragraph (f)(6)(iii) only if:

(1) The individual is a member of a group of similarly situated individuals that is formed for the purpose of traveling or relocating internationally in service of one or more of the purposes listed in section 501(c)(3) or (4), or similarly situated organizations or groups. For example, a group of students that is formed for purposes of traveling and studying abroad for a 6-month period is described in this paragraph (f)(6)(iii);

(2) In the case of a group organized to travel or relocate outside the United States, the individual is expected to travel or reside outside the United States for at least 180 days in a consecutive 12-month period that overlaps with the policy year (or in the case of a policy year that is less than 12 months, at least half the policy year);

(3) In the case of a group organized to travel or relocate within the United States, the individual is expected to travel or reside in the United States for not more than 12 months;

(4) The individual is not traveling or relocating internationally in connection with an employment-related purpose; and

(5) The group meets the test for having associational ties under section 2791(d)(3)(B) through (F) of the PHS Act (42 U.S.C. 300gg-91(d)(3)(B) through (F)).

(B) This paragraph (f)(6)(iii) does not apply to a group that is formed primarily for the sale or purchase of health insurance coverage.

(C) If a group of similarly situated individuals satisfies the requirements of this paragraph (f)(6)(iii), the Secretary of Health and Human Services, in consultation with the Secretary and the Secretary of Labor, has determined that the group requires access to health coverage and other related services and support in multiple countries.

(7) *Definition of United States.* Solely for purposes of this paragraph (f), United States means the 50 States, the District of Columbia, and Puerto Rico.

(8) *National of the United States.* For purposes of this paragraph (f), national of the United States, when referring to an individual, has the meaning used in the Immigration and Nationality Act (8 U.S.C. 1101 *et seq.*) and includes U.S.

citizens and non-citizen nationals. Thus, for example, an individual born in American Samoa is a national of the United States at birth.

■ 12. Section 54.9833–1 is amended by adding a sentence at the end to read as follows:

**§ 54.9833–1 Effective dates.**

\* \* \* Notwithstanding the previous sentence, the definition of “short-term limited duration insurance” in §§ 54.9801–2 and 5.9831–1(c)(5)(i)(C) and (f) apply for policy years and plan years beginning on or after January 1, 2017.

**PART 57—HEALTH INSURANCE PROVIDERS FEE**

■ 13. The authority citation for part 57 continues to read in part as follows:

**Authority:** 26 U.S.C. 7805; sec. 9010, Pub. L. 111–148 (124 Stat. 119 (2010)). \* \* \*

■ 14. Section 57.2 is amended by revising paragraph (n) to read as follows:

**§ 57.2 Explanation of terms.**

\* \* \* \* \*

(n) *United States health risk.*—(1) *In general.* The term *United States health risk* means the health risk of any individual who is—

(i) A United States citizen;

(ii) A resident of the United States (within the meaning of section 7701(b)(1)(A)); or

(iii) Located in the United States (within the meaning of paragraph (i) of this section) during the period such individual is so located.

(2) *Qualified expatriates, spouses, and dependents.* The term *United States health risk* does not include the health risk of any individual who is a qualified expatriate (within the meaning of § 54.9831–1(f)(6)) enrolled in an expatriate health plan (within the meaning of § 54.9831–1(f)(3)). For purposes of this paragraph, a qualified expatriate includes any spouse, dependent, or any other individual enrolled in the expatriate health plan.

\* \* \* \* \*

■ 15. Section 57.4 is amended by adding a sentence to the end of paragraph (b)(2) and adding paragraph (b)(3) to read as follows:

**§ 57.4 Fee calculation.**

\* \* \* \* \*

(b) \* \* \*

(2) \* \* \* This presumption does not apply to excluded premiums for qualified expatriates in expatriate health plans as described in § 57.2(n)(2).

(3) *Manner of determining excluded premiums for qualified expatriates in*

*expatriate health plans.* The IRS may specify in other guidance published in the Internal Revenue Bulletin the manner of determining excluded premiums for qualified expatriates in expatriate health plans as described in § 57.2(n)(2).

\* \* \* \* \*

■ 16. Section 57.10 is amended by revising paragraph (a) and adding paragraph (c) to read as follows:

**§ 57.10 Effective/applicability dates.**

(a) *In general.* Except as provided in paragraphs (b) and (c) of this section, §§ 57.1 through 57.9 apply to any fee that is due on or after September 30, 2014.

\* \* \* \* \*

(c) *Qualified expatriates in expatriate health plans.* Section 57.2(n)(2), the last sentence of § 57.4(b)(2), and § 57.4(b)(3) apply to any fee that is due on or after the date the final regulations are published in the **Federal Register**. Until the date the final regulations are published in the **Federal Register**, taxpayers may rely on these rules for any fee that is due on or after September 30, 2018.

**PART 301—PROCEDURE AND ADMINISTRATION**

■ 17. The authority citation for part 301 continues to read in part as follows:

**Authority:** 26 U.S.C. 7805 \* \* \*

■ 18. Section 301.6056–2 is amended by adding paragraph (a)(8) to read as follows:

**§ 301.6056–2. Electronic furnishing of statements.**

(a) \* \* \*

(8) *Special rule for expatriate health plan coverage.*—(i) *In general.* In the case of an individual covered under an expatriate health plan (within the meaning of § 54.9831–1(f)(3) of this chapter), the recipient is treated as having consented under paragraph (a)(2) of this section unless the recipient has explicitly refused to consent to receive the statement in an electronic format. The refusal to consent may be made electronically or in a paper document. A recipient's request for a paper statement is treated as an explicit refusal to receive the statement in electronic format. A furnisher relying on this paragraph (a)(8) must satisfy the requirements of paragraphs (a)(3) through (7) of this section, except that the statement required under paragraph (a)(3) must be provided at least 30 days prior to the time for furnishing under § 301.6056–1(g)(4)(i)(A) of this chapter of the first statement that the furnisher intends to furnish electronically to the

recipient, and the other requirements of paragraph (a)(3) are modified to reflect that the statement will be furnished electronically unless the recipient explicitly refuses consent to receive the statement in an electronic format.

(ii) *Manner and time of notifying recipient.* The IRS may specify in other guidance published in the Internal Revenue Bulletin the manner and timing for the initial notification of recipients that the statement required under paragraph (a)(3) of this section will be furnished electronically unless the recipient explicitly refuses to consent to receive the statement in an electronic format. See § 601.601(d)(2)(ii)(B) of this chapter.

(iii) *Effective/applicability date.* The provisions of this paragraph (a)(8) apply as of January 1, 2017.

\* \* \* \* \*

**DEPARTMENT OF LABOR**

**Employee Benefits Security Administration**

**29 CFR Chapter XXV**

For the reasons stated in the preamble, the Department of Labor proposes to amend 29 CFR part 2590 as set forth below:

**PART 2590—RULES AND REGULATIONS FOR GROUP HEALTH PLANS**

■ 19. The authority citation for part 2590 is revised to read as follows:

**Authority:** 29 U.S.C. 1027, 1059, 1135, 1161–1168, 1169, 1181–1183, 1181 note, 1185, 1185a, 1185b, 1191, 1191a, 1191b, and 1191c; sec. 101(g), Pub. L. 104–191, 110 Stat. 1936; sec. 401(b), Pub. L. 105–200, 112 Stat. 645 (42 U.S.C. 651 note); sec. 512(d), Pub. L. 110–343, 122 Stat. 3881; sec. 1001, 1201, and 1562(e), Pub. L. 111–148, 124 Stat. 119, as amended by Pub. L. 111–152, 124 Stat. 1029; Division M, Pub. L. 113–235, 128 Stat. 2130; Secretary of Labor's Order 1–2011, 77 FR 1088 (Jan. 9, 2012).

■ 20. Section 2590.701–2 is amended by:

■ a. Adding in alphabetical order definitions for “expatriate health insurance issuer”, “expatriate health plan”, and “qualified expatriate”;

■ b. Revising the definition of “short-term, limited-duration insurance”; and

■ c. Adding in alphabetical order a definition for “travel insurance”.

The additions and revisions read as follows:

**§ 2590.701–2 Definitions.**

\* \* \* \* \*

*Expatriate health insurance issuer* means an expatriate health insurance issuer within the meaning of § 2590.732(f)(2).

*Expatriate health plan* means an expatriate health plan within the meaning of § 2590.732(f)(3).

\* \* \* \* \*

*Qualified expatriate* means a qualified expatriate within the meaning of § 2590.732(f)(6).

*Short-term, limited-duration insurance* means health insurance coverage provided pursuant to a contract with an issuer that:

(1) Has an expiration date specified in the contract (taking into account any extensions that may be elected by the policyholder with or without the issuer's consent) that is less than 3 months after the original effective date of the contract; and

(2) Displays prominently in the contract and in any application materials provided in connection with enrollment in such coverage in at least 14 point type the following: "THIS IS NOT QUALIFYING HEALTH COVERAGE ("MINIMUM ESSENTIAL COVERAGE") THAT SATISFIES THE HEALTH COVERAGE REQUIREMENT OF THE AFFORDABLE CARE ACT. IF YOU DON'T HAVE MINIMUM ESSENTIAL COVERAGE, YOU MAY OWE AN ADDITIONAL PAYMENT WITH YOUR TAXES."

\* \* \* \* \*

*Travel insurance* means insurance coverage for personal risks incident to planned travel, which may include, but is not limited to, interruption or cancellation of trip or event, loss of baggage or personal effects, damages to accommodations or rental vehicles, and sickness, accident, disability, or death occurring during travel, provided that the health benefits are not offered on a stand-alone basis and are incidental to other coverage. For this purpose, the term travel insurance does not include major medical plans that provide comprehensive medical protection for travelers with trips lasting 6 months or longer, including, for example, those working overseas as an expatriate or military personnel being deployed.

\* \* \* \* \*

■ 21. Section 2590.715–2711 is amended by revising paragraph (c) to read as follows:

**§ 2590.715–2711 No lifetime or annual limits.**

\* \* \* \* \*

(c) *Definition of essential health benefits.* The term "essential health benefits" means essential health benefits under section 1302(b) of the Patient Protection and Affordable Care Act and applicable regulations. For this purpose, a group health plan or a health insurance issuer that is not required to

provide essential health benefits under section 1302(b) must define "essential health benefits" in a manner that is consistent with—

(1) One of the EHB-benchmark plans applicable in a State under 45 CFR 156.110, and includes coverage of any additional required benefits that are considered essential health benefits consistent with 45 CFR 155.170(a)(2); or

(2) One of the three Federal Employees Health Benefit Program (FEHBP) options as defined by 45 CFR 156.100(a)(3), supplemented, as necessary, to meet the standards in 45 CFR 156.110.

\* \* \* \* \*

■ 22. Section 2590.732 is amended:

■ a. In paragraph (c)(2)(vii) by removing "and" at the end;

■ b. In paragraph (c)(2)(viii) by adding "and" at the end;

■ c. Adding paragraph (c)(2)(ix);

■ d. Revising paragraph (c)(4)(i);

■ e. Adding paragraph (c)(4)(ii)(D);

■ f. Revising paragraphs (c)(4)(iii) and (c)(5)(i)(C); and

■ g. Adding paragraph (f).

The revisions and additions read as follows:

**§ 2590.732 Special rules relating to group health plans.**

\* \* \* \* \*

(c) \* \* \*

(2) \* \* \*

(ix) Travel insurance, within the meaning of § 2590.701–2 of this part.

\* \* \* \* \*

(4) *Noncoordinated benefits*—(i) *Excepted benefits that are not coordinated.* Coverage for only a specified disease or illness (for example, cancer-only policies) or hospital indemnity or other fixed indemnity insurance is excepted only if the coverage meets each of the conditions specified in paragraph (c)(4)(ii) of this section.

(ii) \* \* \*

(D) To be hospital indemnity or other fixed indemnity insurance, the insurance must pay a fixed dollar amount per day (or per other time period, such as per week) of hospitalization or illness (for example, \$100/day) without regard to the amount of expenses incurred or the type of items or services received and—

(1) The plan or issuer must provide, in any application or enrollment materials provided to participants at or before the time participants are given the opportunity to enroll in the coverage, a notice that prominently displays in at least 14 point type the following language: "THIS IS A SUPPLEMENT TO HEALTH INSURANCE AND IS NOT A

SUBSTITUTE FOR MAJOR MEDICAL COVERAGE. THIS IS NOT QUALIFYING HEALTH COVERAGE ("MINIMUM ESSENTIAL COVERAGE") THAT SATISFIES THE HEALTH COVERAGE REQUIREMENT OF THE AFFORDABLE CARE ACT. IF YOU DON'T HAVE MINIMUM ESSENTIAL COVERAGE, YOU MAY OWE AN ADDITIONAL PAYMENT WITH YOUR TAXES."

(2) If participants are required to reenroll (in either paper or electronic form) for renewal or reissuance, the notice described in paragraph (c)(4)(ii)(D)(1) of this section must be displayed in the reenrollment materials that are provided to the participants at or before the time participants are given the opportunity to reenroll in the coverage.

(3) If a notice satisfying the requirements of this paragraph (c)(4)(ii)(D) is timely provided to a participant, the obligation to provide the notice is satisfied for both the plan and the issuer.

(iii) *Examples.* The rules of this paragraph (c)(4) are illustrated by the following examples:

*Example 1. (i) Facts.* An employer sponsors a group health plan that provides coverage through an insurance policy. The policy provides benefits only for hospital stays at a fixed percentage of hospital expenses up to a maximum of \$100 a day.

(ii) *Conclusion.* In this *Example 1*, because the policy pays a percentage of expenses incurred rather than a fixed dollar amount per day (or per other time period, such as per week), the policy is not hospital indemnity or other fixed indemnity insurance that is an excepted benefit under this paragraph (c)(4). This is the result even if, in practice, the policy pays the maximum of \$100 for every day of hospitalization.

*Example 2. (i) Facts.* An employer sponsors a group health plan that provides coverage through an insurance policy. The policy provides benefits for doctors' visits at \$50 per visit, hospitalization at \$100 per day, various surgical procedures at different dollar rates per procedure, and prescription drugs at \$15 per prescription.

(ii) *Conclusion.* In this *Example 2*, for doctors' visits, surgery, and prescription drugs, payment is not made on a per-period basis, but instead is based on whether a procedure or item is provided, such as whether an individual has surgery or a doctor visit or is prescribed a drug, and the amount of payment varies based on the type of procedure or item. Because benefits related to office visits, surgery, and prescription drugs are not paid based on a fixed dollar amount per day (or per other time period, such as per week), as required under paragraph (c)(4) of this section, the policy is not hospital indemnity or other fixed indemnity insurance that is an excepted benefit under this paragraph (c)(4).

*Example 3. (i) Facts.* An employer sponsors a group health plan that provides coverage

through an insurance policy. The policy provides benefits for certain services at a fixed dollar amount per day, but the dollar amount varies by the type of service.

(ii) *Conclusion.* In this *Example 3*, because the policy provides benefits in a different amount per day depending on the type of service, rather than one specific dollar amount per day regardless of the type of service, the policy is not hospital indemnity or other fixed indemnity insurance that is an excepted benefit under this paragraph (c)(4).

(5) \* \* \*

(i) \* \* \*

(C) *Similar supplemental coverage provided to coverage under a group health plan.* To be similar supplemental coverage, the coverage must be specifically designed to fill gaps in the primary coverage. The preceding sentence is satisfied if the coverage is designed to fill gaps in cost sharing in the primary coverage, such as coinsurance or deductibles, or the coverage is designed to provide benefits for items and services not covered by the primary coverage and that are not essential health benefits in the State where the coverage is issued, or the coverage is designed to both fill such gaps in cost sharing under, and cover such benefits not covered by, the primary coverage. Similar supplemental coverage does not include coverage that becomes secondary or supplemental only under a coordination-of-benefits provision.

\* \* \* \* \*

(f) *Expatriate health plans and expatriate health insurance issuers—(1) In general.* With respect to coverage under an expatriate health plan, the requirements of section 715 of ERISA and implementing rules and regulations (incorporating sections 2701 through 2728 of the Public Health Service Act) do not apply to—

(i) An expatriate health plan (as defined in paragraph (f)(3) of this section),

(ii) An employer, solely in its capacity as plan sponsor of an expatriate health plan, and

(iii) An expatriate health insurance issuer (as defined in paragraph (f)(2) of this section) with respect to coverage under an expatriate health plan.

(2) *Definition of expatriate health insurance issuer—(i) In general.*

Expatriate health insurance issuer means a health insurance issuer, within the meaning of § 2590.701–2, that issues expatriate health plans and that in the course of its normal business operations—

(A) Maintains network provider agreements that provide for direct claims payments, with health care providers in eight or more countries;

(B) Maintains call centers in three or more countries, and accepts calls from customers in eight or more languages;

(C) Processed at least \$1 million in claims in foreign currency equivalents during the preceding calendar year, determined using the Treasury Department's currency exchange rate in effect on the last day of the preceding calendar year;

(D) Makes global evacuation/repatriation coverage available;

(E) Maintains legal and compliance resources in three or more countries; and

(F) Has licenses or other authority to sell insurance in more than two countries, including in the United States.

(ii) *Additional rules.* For purposes of meeting the requirements of this paragraph (f)(2), two or more entities, including one entity that is the expatriate health insurance issuer, that are members of the expatriate health insurance issuer's controlled group (as determined under 26 CFR 57.2(c)) are treated as one expatriate health insurance issuer. Alternatively, the requirements of this paragraph (f)(2) may be satisfied through contracts between an expatriate health insurance issuer and third parties.

(3) *Definition of expatriate health plan.* Expatriate health plan means a plan that satisfies the requirements of paragraphs (f)(3)(i) through (iii) of this section.

(i) *Substantially all qualified expatriates requirement.* Substantially all primary enrollees in the expatriate health plan must be qualified expatriates. For purposes of this paragraph (f)(3)(i), the primary enrollee is the individual covered by the plan or policy whose eligibility for coverage is not due to that individual's status as the spouse, dependent, or other beneficiary of another covered individual. Notwithstanding the foregoing, an individual is not a primary enrollee if the individual is not a national of the United States and the individual resides in his or her country of citizenship. A plan satisfies the requirement of this paragraph (f)(3)(i) for a plan or policy year only if, on the first day of the plan or policy year, less than 5 percent of the primary enrollees (or less than 5 primary enrollees if greater) are not qualified expatriates.

(ii) *Substantially all benefits not excepted benefits requirement.* Substantially all of the benefits provided under the plan or coverage must be benefits that are not excepted benefits described in § 2590.732(c).

(iii) *Additional requirements.* To qualify as an expatriate health plan, the

plan or coverage must also meet the following requirements:

(A) The plan or coverage provides coverage for inpatient hospital services, outpatient facility services, physician services, and emergency services (comparable to emergency services coverage that was described in and offered under section 8903(1) of title 5, United States Code for plan year 2009) in the following locations—

(1) In the case of individuals described in paragraph (f)(6)(i) of this section, in the United States and in the country or countries from which the individual was transferred or assigned, and such other country or countries the Secretary of Health and Human Services, in consultation with the Secretary of the Treasury and Secretary of Labor, may designate;

(2) In the case of individuals described in paragraph (f)(6)(ii) of this section, in the country or countries in which the individual is present in connection with his employment, and such other country or countries the Secretary of Health and Human Services, in consultation with the Secretary of the Treasury and Secretary of Labor, may designate; or

(3) In the case of individuals described in paragraph (f)(6)(iii) of this section, in the country or countries the Secretary of Health and Human Services, in consultation with the Secretary of the Treasury and Secretary of Labor, may designate.

(B) The plan sponsor reasonably believes that benefits provided by the plan or coverage satisfy the minimum value requirements of Internal Revenue Code section 36B(c)(2)(C)(ii). For this purpose, a plan sponsor is permitted to rely on the reasonable representations of the issuer or administrator regarding whether benefits offered by the issuer or group health plan satisfy the minimum value requirements unless the plan sponsor knows or has reason to know that the benefits fail to satisfy the minimum value requirements.

(C) In the case of a plan or coverage that provides dependent coverage of children, such coverage must be available until an individual attains age 26, unless an individual is the child of a child receiving dependent coverage.

(D) The plan or coverage is:

(1) In the case of individuals described in paragraph (f)(6)(i) or (ii) of this section, a group health plan (including health insurance coverage offered in connection with a group health plan), issued by an expatriate health insurance issuer or administered by an expatriate health plan administrator. A group health plan will not fail to be an expatriate health plan

merely because any portion of the coverage is provided through a self-insured arrangement.

(2) In the case of individuals described in paragraph (f)(6)(iii) of this section, health insurance coverage issued by an expatriate health insurance issuer.

(E) The plan or coverage offers reimbursements for items or services in local currency in eight or more countries.

(F) The plan or coverage satisfies the provisions of this part as in effect on March 22, 2010. For this purpose, the plan or coverage is not required to comply with section 701(e) (relating to certification of creditable coverage) and underlying regulations. However, to the extent the plan or coverage imposes a preexisting condition exclusion, the plan or coverage must ensure that individuals with prior creditable coverage who enroll in the plan or coverage have an opportunity to demonstrate that they have creditable coverage offsetting the preexisting condition exclusion.

(iv) *Example.* The rule of paragraph (f)(3)(i) of this section is illustrated by the following example:

*Example.* (i) *Facts.* Business has health plan X for 250 U.S. citizens working outside of the United States in Country Y. All of the U.S. citizens working in Country Y satisfy the requirements to be qualified expatriates under § 2590.732(f)(6)(ii). In addition to the 250 U.S. citizens, Business employs 100 citizens of Country Y who reside in Country Y and do not satisfy the requirements to be qualified expatriates under § 2590.732(f)(6)(ii). Health plan X covers both the U.S. citizens and citizens of Country Y.

(ii) *Conclusion.* Health plan X satisfies the requirement of § 2590.732(f)(3)(i) that substantially all primary enrollees of an expatriate health plan be qualified expatriates because 100 percent of the primary enrollees are qualified expatriates. The 100 citizens of Country Y who reside in Country Y are not treated as primary enrollees for purposes of the substantially all requirement of § 2590.732(f)(3)(i) because they are not nationals of the United States and they reside in the country of their citizenship.

(4) *Definition of expatriate health plan administrator*—(i) *In general.* Expatriate health plan administrator means an administrator that in the course of its regular business operations—

(A) Maintains network provider agreements that provide for direct claims payments, with health care providers in eight or more countries,

(B) Maintains call centers, in three or more countries, and accepts calls from customers in eight or more languages,

(C) Processed at least \$1 million in claims in foreign currency equivalents

during the preceding calendar year, determined using the Treasury Department's currency exchange rate in effect on the last day of the preceding calendar year,

(D) Makes global evacuation/repatriation coverage available,

(E) Maintains legal and compliance resources in three or more countries, and

(F) Has licenses or other authority to sell insurance in more than two countries, including in the United States.

(ii) *Additional rules.* For purposes of meeting the requirements of this paragraph (f)(4), two or more entities, including one entity that is the expatriate health plan administrator, that are members of the expatriate health plan administrator's controlled group (as determined under 26 CFR 57.2(c)) are treated as one expatriate health plan administrator. Alternatively, the requirements of this paragraph (f)(4) may be satisfied through contracts between an expatriate health plan administrator and third parties.

(5) *Definition of group health plan.* Group health plan, for purposes of this section, means a group health plan as defined in § 2590.732(a).

(6) *Definition of qualified expatriate.* Qualified expatriate, for purposes of this section, means an individual who is described in paragraph (f)(6)(i), (ii) or (iii) of this section.

(i) *Individuals transferred or assigned by their employer to work in the United States.* An individual is described in this paragraph (f)(6)(i) only if such individual has the skills, qualifications, job duties, or expertise that has caused the individual's employer to transfer or assign the individual to the United States for a specific and temporary purpose or assignment that is tied to the individual's employment with such employer. This paragraph (f)(6)(i) applies only to an individual who the plan sponsor has reasonably determined requires access to health coverage and other related services and support in multiple countries, and is offered other multinational benefits on a periodic basis (such as tax equalization, compensation for cross-border moving expenses, or compensation to enable the individual to return to the individual's home country), and does not apply to any individual who is a national of the United States. For purposes of this paragraph (f)(6)(i), an individual who is not expected to travel outside the United States at least one time per year during the coverage period would not reasonably require access to health coverage and other related services and support in multiple countries.

Furthermore, the offer of a one-time *de minimis* benefit would not meet the standard for the offer of other multinational benefits on a periodic basis.

(ii) *Individuals working outside the United States.* An individual is described in this paragraph (f)(6)(ii) only if the individual is a national of the United States who is working outside the United States for at least 180 days in a consecutive 12-month period that overlaps with a single plan year, or across two consecutive plan years.

(iii) *Individuals within a group of similarly situated individuals.* (A) An individual is described in this paragraph (f)(6)(iii) only if:

(1) The individual is a member of a group of similarly situated individuals that is formed for the purpose of traveling or relocating internationally in service of one or more of the purposes listed in Internal Revenue Code section 501(c)(3) or (4), or similarly situated organizations or groups. For example, a group of students that is formed for purposes of traveling and studying abroad for a 6-month period is described in this paragraph (f)(6)(iii);

(2) In the case of a group organized to travel or relocate outside the United States, the individual is expected to travel or reside outside the United States for at least 180 days in a consecutive 12-month period that overlaps with the policy year (or in the case of a policy year that is less than 12 months, at least half the policy year);

(3) In the case of a group organized to travel or relocate within the United States, the individual is expected to travel or reside in the United States for not more than 12 months;

(4) The individual is not traveling or relocating internationally in connection with an employment-related purpose; and

(5) The group meets the test for having associational ties under section 2791(d)(3)(B) through (F) of the PHS Act (42 U.S.C. 300gg–91(d)(3)(B) through (F)).

(B) This paragraph (f)(6)(iii) does not apply to a group that is formed primarily for the sale or purchase of health insurance coverage.

(C) If a group of similarly situated individuals satisfies the requirements of this paragraph (f)(6)(iii), the Secretary of Health and Human Services, in consultation with the Secretary and the Secretary of the Treasury, has determined that the group requires access to health coverage and other related services and support in multiple countries.

(7) *Definition of United States.* Solely for purposes of this paragraph (f),

United States means the 50 States, the District of Columbia, and Puerto Rico.

(8) *National of the United States*. For purposes of this paragraph (f), national of the United States, when referring to an individual, has the meaning used in the Immigration and Nationality Act (8 U.S.C. 1101 *et seq.*) and includes U.S. citizens and non-citizen nationals. Thus, for example, an individual born in American Samoa is a national of the United States at birth.

■ 23. Section 2590.736 is amended by adding a sentence at the end to read as follows:

**§ 2590.736 Applicability dates.**

\* \* \* Notwithstanding the previous sentences, the definition of “short-term, limited-duration insurance” in §§ 2590.701–2 and 2590.732(c)(5)(i)(C) and (f) apply for plan years beginning on or after January 1, 2017.

**DEPARTMENT OF HEALTH AND HUMAN SERVICES**

**45 CFR Chapter 1**

For the reasons stated in the preamble, the Department of Health and Human Services proposes to amend 45 CFR parts 144, 146, 147, 148, and 158 as set forth below:

**PART 144—REQUIREMENTS RELATING TO HEALTH INSURANCE COVERAGE**

■ 24. The authority citation for part 144 continues to read as follows:

**Authority:** Secs. 2701 through 2763, 2791, and 2792 of the Public Health Service Act, 42 U.S.C. 300gg through 300gg–63, 300gg–91, and 300gg–92.

■ 25. Section 144.103 is amended by:

- a. Adding in alphabetical order definitions for “expatriate health insurance issuer”, “expatriate health plan”, and “qualified expatriate”;
- b. Revising the definition of “short-term, limited-duration insurance”; and
- c. Adding in alphabetical order a definition for “travel insurance”.

The additions and revision read as follows:

**§ 144.103 Definitions.**

\* \* \* \* \*

*Expatriate health insurance issuer* means an expatriate health insurance issuer within the meaning of § 147.170(b) of this subchapter.

*Expatriate health plan* means an expatriate health plan within the meaning of § 147.170(c) of this subchapter.

\* \* \* \* \*

*Qualified expatriate* means a qualified expatriate within the meaning of § 147.170(f) of this subchapter.

*Short-term, limited-duration insurance* means health insurance coverage provided pursuant to a contract with an issuer that:

(1) Has an expiration date specified in the contract (taking into account any extensions that may be elected by the policyholder with or without the issuer’s consent) that is less than 3 months after the original effective date of the contract; and

(2) Displays prominently in the contract and in any application materials provided in connection with enrollment in such coverage in at least 14 point type the following: “THIS IS NOT QUALIFYING HEALTH COVERAGE (“MINIMUM ESSENTIAL COVERAGE”) THAT SATISFIES THE HEALTH COVERAGE REQUIREMENT OF THE AFFORDABLE CARE ACT. IF YOU DON’T HAVE MINIMUM ESSENTIAL COVERAGE, YOU MAY OWE AN ADDITIONAL PAYMENT WITH YOUR TAXES.”

\* \* \* \* \*

*Travel insurance* means insurance coverage for personal risks incident to planned travel, which may include, but is not limited to, interruption or cancellation of trip or event, loss of baggage or personal effects, damages to accommodations or rental vehicles, and sickness, accident, disability, or death occurring during travel, provided that the health benefits are not offered on a stand-alone basis and are incidental to other coverage. For this purpose, the term travel insurance does not include major medical plans that provide comprehensive medical protection for travelers with trips lasting 6 months or longer, including, for example, those working overseas as an expatriate or military personnel being deployed.

\* \* \* \* \*

**PART 146—REQUIREMENTS FOR THE GROUP HEALTH INSURANCE MARKET**

■ 26. The authority citation for part 146 continues to read as follows:

**Authority:** Secs. 2702 through 2705, 2711 through 2723, 2791, and 2792 of the Public Health Service Act (42 U.S.C. 300gg–1 through 300gg–5, 300gg–11 through 300gg–23, 300gg–91, and 300gg–92).

■ 27. Section 146.145 is amended by:

- a. Adding paragraph (b)(2)(ix);
- b. Revising paragraph (b)(4)(i);
- c. Adding paragraph (b)(4)(ii)(D); and
- d. Revising paragraph (b)(5)(i)(C).

The additions and revisions read as follows:

**§ 146.145 Special rules relating to group health plans.**

\* \* \* \* \*

(b) \* \* \*

(2) \* \* \*

(ix) Travel insurance, within the meaning of § 144.103 of this subchapter.

\* \* \* \* \*

(4) *Noncoordinated benefits*—(i) *Excepted benefits that are not coordinated*. Coverage for only a specified disease or illness (for example, cancer-only policies) or hospital indemnity or other fixed indemnity insurance is excepted only if the coverage meets each of the conditions specified in paragraph (b)(4)(ii) of this section.

(ii) \* \* \*

(D) To be hospital indemnity or other fixed indemnity insurance, the insurance must pay a fixed dollar amount per day (or per other time period, such as per week) of hospitalization or illness (for example, \$100/day) without regard to the amount of expenses incurred or the type of items or services received and—

(1) The plan or issuer must provide, in any application or enrollment materials provided to participants at or before the time participants are given the opportunity to enroll in the coverage, a notice that prominently displays in at least 14 point type the following language: “THIS IS A SUPPLEMENT TO HEALTH INSURANCE AND IS NOT A SUBSTITUTE FOR MAJOR MEDICAL COVERAGE. THIS IS NOT QUALIFYING HEALTH COVERAGE (“MINIMUM ESSENTIAL COVERAGE”) THAT SATISFIES THE HEALTH COVERAGE REQUIREMENT OF THE AFFORDABLE CARE ACT. IF YOU DON’T HAVE MINIMUM ESSENTIAL COVERAGE, YOU MAY OWE AN ADDITIONAL PAYMENT WITH YOUR TAXES.”

(2) If participants are required to reenroll (in either paper or electronic form) for renewal or reissuance, the notice described in paragraph (b)(4)(ii)(D)(1) of this section must be displayed in the reenrollment materials that are provided to the participants at or before the time participants are given the opportunity to reenroll in the coverage.

(3) If a notice satisfying the requirements of this paragraph (b)(4)(ii)(D) is timely provided to a participant, the obligation to provide the notice is satisfied for both the plan and the issuer.

(iii) *Examples*. The rules of this paragraph (b)(4) are illustrated by the following examples:

*Example 1. (i) Facts*. An employer sponsors a group health plan that provides coverage through an insurance policy. The policy

provides benefits only for hospital stays at a fixed percentage of hospital expenses up to a maximum of \$100 a day.

(ii) *Conclusion.* In this *Example 1*, because the policy pays a percentage of expenses incurred rather than a fixed dollar amount per day (or per other time period, such as per week), the policy is not hospital indemnity or other fixed indemnity insurance that is an excepted benefit under this paragraph (b)(4). This is the result even if, in practice, the policy pays the maximum of \$100 for every day of hospitalization.

*Example 2.* (i) *Facts.* An employer sponsors a group health plan that provides coverage through an insurance policy. The policy provides benefits for doctors' visits at \$50 per visit, hospitalization at \$100 per day, various surgical procedures at different dollar rates per procedure, and prescription drugs at \$15 per prescription.

(ii) *Conclusion.* In this *Example 2*, for doctors' visits, surgery, and prescription drugs, payment is not made on a per-period basis, but instead is based on whether a procedure or item is provided, such as whether an individual has surgery or a doctor visit or is prescribed a drug, and the amount of payment varies based on the type of procedure or item. Because benefits related to office visits, surgery, and prescription drugs are not paid based on a fixed dollar amount per day (or per other time period, such as per week), as required under paragraph (b)(4) of this section, the policy is not hospital indemnity or other fixed indemnity insurance that is an excepted benefit under this paragraph (b)(4).

*Example 3.* (i) *Facts.* An employer sponsors a group health plan that provides coverage through an insurance policy. The policy provides benefits for certain services at a fixed dollar amount per day, but the dollar amount varies by the type of service.

(ii) *Conclusion.* In this *Example 3*, because the policy provides benefits in a different amount per day depending on the type of service, rather than one specific dollar amount per day regardless of the type of service, the policy is not hospital indemnity or other fixed indemnity insurance that is an excepted benefit under this paragraph (b)(4).

(5) \* \* \*

(i) \* \* \*

(C) *Similar supplemental coverage provided to coverage under a group health plan.* To be similar supplemental coverage, the coverage must be specifically designed to fill gaps in the primary coverage. The preceding sentence is satisfied if the coverage is designed to fill gaps in cost sharing in the primary coverage, such as coinsurance or deductibles, or the coverage is designed to provide benefits for items and services not covered by the primary coverage and that are not essential health benefits in the State where the coverage is issued, or the coverage is designed to both fill such gaps in cost sharing under, and cover such benefits not covered by, the primary coverage. Similar supplemental

coverage does not include coverage that becomes secondary or supplemental only under a coordination-of-benefits provision.

\* \* \* \* \*

## PART 147—HEALTH INSURANCE REFORM REQUIREMENTS FOR THE GROUP AND INDIVIDUAL HEALTH INSURANCE MARKETS

■ 28. The authority citation for part 147 continues to read as follows:

**Authority:** Secs. 2701 through 2763, 2791, and 2792 of the Public Health Service Act (42 U.S.C. 300gg through 300gg–63, 300gg–91, and 300gg–92), as amended.

■ 29. Section 147.126 is amended by revising paragraph (c) to read as follows:

### § 147.126 No lifetime or annual limits.

\* \* \* \* \*

(c) *Definition of essential health benefits.* The term “essential health benefits” means essential health benefits under section 1302(b) of the Patient Protection and Affordable Care Act and applicable regulations. For this purpose, a group health plan or a health insurance issuer that is not required to provide essential health benefits under section 1302(b) must define “essential health benefits” in a manner that is consistent with—

(1) One of the EHB-benchmark plans applicable in a State under 45 CFR 156.110, and includes coverage of any additional required benefits that are considered essential health benefits consistent with 45 CFR 155.170(a)(2); or

(2) One of the three Federal Employees Health Benefit Program (FEHBP) options as defined by 45 CFR 156.100(a)(3), supplemented, as necessary, to meet the standards in 45 CFR 156.110.

\* \* \* \* \*

■ 30. Section 147.170 is added to read as follows:

### § 147.170 Expatriate health plans and expatriate health insurance issuers.

(a) *In general.* With respect to coverage under an expatriate health plan, the requirements of (including any amendment made by) the Patient Protection and Affordable Care Act and of title I and subtitle B of title II of the Health Care and Education and Reconciliation Act of 2010, and implementing rules and regulations do not apply to—

(1) An expatriate health plan (as defined in paragraph (c) of this section),

(2) An employer, solely in its capacity as plan sponsor of an expatriate health plan, and

(3) An expatriate health insurance issuer (as defined in paragraph (b) of

this section) with respect to coverage under an expatriate health plan.

(b) *Definition of expatriate health insurance issuer—(1) In general.*

Expatriate health insurance issuer means a health insurance issuer, within the meaning of § 144.103 of this subchapter, that issues expatriate health plans and that in the course of its normal business operations—

(i) Maintains network provider agreements that provide for direct claims payments, with health care providers in eight or more countries;

(ii) Maintains call centers in three or more countries, and accepts calls from customers in eight or more languages;

(iii) Processed at least \$1 million in claims in foreign currency equivalents during the preceding calendar year, determined using the Treasury Department's currency exchange rate in effect on the last day of the preceding calendar year;

(iv) Makes global evacuation/repatriation coverage available;

(v) Maintains legal and compliance resources in three or more countries; and

(vi) Has licenses or other authority to sell insurance in more than two countries, including in the United States.

(2) *Additional rules.* For purposes of meeting the requirements of this paragraph (b), two or more entities, including one entity that is the expatriate health insurance issuer, that are members of the expatriate health insurance issuer's controlled group (as determined under 26 CFR 57.2(c)) are treated as one expatriate health insurance issuer. Alternatively, the requirements of this paragraph (b) may be satisfied through contracts between an expatriate health insurance issuer and third parties.

(c) *Definition of expatriate health plan.* Expatriate health plan means a plan that satisfies the requirements of paragraphs (c)(1) through (3) of this section.

(1) *Substantially all qualified expatriates requirement.* Substantially all primary enrollees in the expatriate health plan must be qualified expatriates. For purposes of this paragraph (c)(1), the primary enrollee is the individual covered by the plan or policy whose eligibility for coverage is not due to that individual's status as the spouse, dependent, or other beneficiary of another covered individual.

Notwithstanding the foregoing, an individual is not a primary enrollee if the individual is not a national of the United States and the individual resides in his or her country of citizenship. A plan satisfies the requirement of this

paragraph (c)(1) for a plan or policy year only if, on the first day of the plan or policy year, less than 5 percent of the primary enrollees (or less than 5 primary enrollees if greater) are not qualified expatriates.

(2) *Substantially all benefits not excepted benefits requirement.*

Substantially all of the benefits provided under the plan or coverage must be benefits that are not excepted benefits described in § 146.145(b) and § 148.220 of this subchapter.

(3) *Additional requirements.* To qualify as an expatriate health plan, the plan or coverage must also meet the following requirements:

(i) The plan or coverage provides coverage for inpatient hospital services, outpatient facility services, physician services, and emergency services (comparable to emergency services coverage that was described in and offered under section 8903(1) of title 5, United States Code for plan year 2009) in the following locations—

(A) In the case of individuals described in paragraph (f)(1) of this section, in the United States and in the country or countries from which the individual was transferred or assigned, and such other country or countries the Secretary of Health and Human Services, in consultation with the Secretary of the Treasury and Secretary of Labor, may designate;

(B) In the case of individuals described in paragraph (f)(2) of this section, in the country or countries in which the individual is present in connection with his employment, and such other country or countries the Secretary of Health and Human Services, in consultation with the Secretary of the Treasury and Secretary of Labor, may designate; or

(C) In the case of individuals described in paragraph (f)(3) of this section, in the country or countries the Secretary of Health and Human Services, in consultation with the Secretary of the Treasury and Secretary of Labor, may designate.

(ii) The plan sponsor reasonably believes that benefits provided by the plan or coverage satisfy the minimum value requirements of section 36B(c)(2)(C)(ii) of the Internal Revenue Code. For this purpose, a plan sponsor is permitted to rely on the reasonable representations of the issuer or administrator regarding whether benefits offered by the issuer or group health plan satisfy the minimum value requirements unless the plan sponsor knows or has reason to know that the benefits fail to satisfy the minimum value requirements.

(iii) In the case of a plan or coverage that provides dependent coverage of children, such coverage must be available until an individual attains age 26, unless an individual is the child of a child receiving dependent coverage.

(iv) The plan or coverage is:

(A) In the case of individuals described in paragraphs (f)(1) or (f)(2) of this section, a group health plan (including health insurance coverage offered in connection with a group health plan), issued by an expatriate health insurance issuer or administered by an expatriate health plan administrator. A group health plan will not fail to be an expatriate health plan merely because any portion of the coverage is provided through a self-insured arrangement.

(B) In the case of individuals described in paragraph (f)(3) of this section, health insurance coverage issued by an expatriate health insurance issuer.

(v) The plan or coverage offers reimbursements for items or services in local currency in eight or more countries.

(vi) The plan or coverage satisfies the provisions of title XXVII of the Public Health Service Act (42 U.S.C. 300gg *et seq.*) and regulations thereunder as in effect on March 22, 2010. For this purpose, the plan or coverage is not required to comply with section 2701(e) (relating to certification of creditable coverage) and underlying regulations. However, to the extent the plan or coverage imposes a preexisting condition exclusion, the plan or coverage must ensure that individuals with prior creditable coverage who enroll in the plan or coverage have an opportunity to demonstrate that they have creditable coverage offsetting the preexisting condition exclusion.

(v) Example. The rule of paragraph (c)(1) of this section is illustrated by the following example:

*Example.* (i) *Facts.* Business has health plan X for 250 U.S. citizens working outside of the United States in Country Y. All of the U.S. citizens working in Country Y satisfy the requirements to be qualified expatriates under § 147.170(f)(2). In addition to the 250 U.S. citizens, Business employs 100 citizens of Country Y who reside in Country Y and do not satisfy the requirements to be qualified expatriates under § 147.170(f). Health plan X covers both the U.S. citizens and citizens of Country Y.

(ii) *Conclusion.* Health plan X satisfies the requirement of § 147.170(c)(1) that substantially all primary enrollees of an expatriate health plan be qualified expatriates because 100 percent of the primary enrollees are qualified expatriates. The 100 citizens of Country Y who reside in Country Y are not treated as primary

enrollees for purposes of the substantially all requirement of § 147.170(c)(1) because they are not nationals of the United States and they reside in the country of their citizenship.

(d) *Definition of expatriate health plan administrator—*(1) *In general.* Expatriate health plan administrator means an administrator that in the course of its regular business operations—

(i) Maintains network provider agreements that provide for direct claims payments, with health care providers in eight or more countries,

(ii) Maintains call centers, in three or more countries, and accepts calls from customers in eight or more languages,

(iii) Processed at least \$1 million in claims in foreign currency equivalents during the preceding calendar year, determined using the Treasury Department's currency exchange rate in effect on the last day of the preceding calendar year,

(iv) Makes global evacuation/repatriation coverage available,

(v) Maintains legal and compliance resources in three or more countries, and

(vi) Has licenses or other authority to sell insurance in more than two countries, including in the United States.

(2) *Additional rules.* For purposes of meeting the requirements of this paragraph (d), two or more entities, including one entity that is the expatriate health plan administrator, that are members of the expatriate health plan administrator's controlled group (as determined under 26 CFR 57.2(c)) are treated as one expatriate health plan administrator. Alternatively, the requirements of this paragraph (d) may be satisfied through contracts between an expatriate health plan administrator and third parties.

(e) *Definition of group health plan.* Group health plan, for purposes of this section, means a group health plan as defined in § 146.145(a) of this subchapter.

(f) *Definition of qualified expatriate.* Qualified expatriate, for purposes of this section, means an individual who is described in paragraph (f)(1), (2), or (3) of this section.

(1) *Individuals transferred or assigned by their employer to work in the United States.* An individual is described in this paragraph (f)(1) only if such individual has the skills, qualifications, job duties, or expertise that has caused the individual's employer to transfer or assign the individual to the United States for a specific and temporary purpose or assignment that is tied to the individual's employment with such

employer. This paragraph (f)(1) applies only to an individual who the plan sponsor has reasonably determined requires access to health coverage and other related services and support in multiple countries, and is offered other multinational benefits on a periodic basis (such as tax equalization, compensation for cross-border moving expenses, or compensation to enable the individual to return to the individual's home country), and does not apply to any individual who is a national of the United States. For purposes of this paragraph (f)(1), an individual who is not expected to travel outside the United States at least one time per year during the coverage period would not reasonably require access to health coverage and other related services and support in multiple countries. Furthermore, the offer of a one-time *de minimis* benefit would not meet the standard for the offer of other multinational benefits on a periodic basis.

(2) *Individuals working outside the United States.* An individual is described in this paragraph (f)(2) only if the individual is a national of the United States who is working outside the United States for at least 180 days in a consecutive 12-month period that overlaps with a single plan year, or across two consecutive plan years.

(3) *Individuals within a group of similarly situated individuals.* (i) An individual is described in this paragraph (f)(3) only if:

(A) The individual is a member of a group of similarly situated individuals that is formed for the purpose of traveling or relocating internationally in service of one or more of the purposes listed in section 501(c)(3) or (4) of the Internal Revenue Code, or similarly situated organizations or groups. For example, a group of students that is formed for purposes of traveling and studying abroad for a 6-month period is described in this paragraph (f)(3);

(B) In the case of a group organized to travel or relocate outside the United States, the individual is expected to travel or reside outside the United States for at least 180 days in a

consecutive 12-month period that overlaps with the policy year (or in the case of a policy year that is less than 12 months, at least half the policy year);

(C) In the case of a group organized to travel or relocate within the United States, the individual is expected to travel or reside in the United States for not more than 12 months;

(D) The individual is not traveling or relocating internationally in connection with an employment-related purpose; and

(E) The group meets the test for having associational ties under section 2791(d)(3)(B) through (F) of the Public Health Service Act (42 U.S.C. 300gg–91(d)(3)(B) through (F)).

(ii) This paragraph (f)(3) does not apply to a group that is formed primarily for the sale or purchase of health insurance coverage.

(iii) If a group of similarly situated individuals satisfies the requirements of this paragraph (f)(3), the Secretary, in consultation with the Secretary of the Treasury and the Secretary of Labor, has determined that the group requires access to health coverage and other related services and support in multiple countries.

(g) *Definition of United States.* Solely for purposes of this section, United States means the 50 States, the District of Columbia, and Puerto Rico.

(h) *National of the United States.* For purposes of this section, national of the United States, when referring to an individual, has the meaning used in the Immigration and Nationality Act (8 U.S.C. 1101 *et seq.*) and includes U.S. citizens and non-citizen nationals. Thus, for example, an individual born in American Samoa is a national of the United States at birth.

(i) *Applicability date.* The provisions of this section apply for plan years (in the individual market, policy years) beginning on or after January 1, 2017.

#### **PART 148—REQUIREMENTS FOR THE INDIVIDUAL HEALTH INSURANCE MARKET**

■ 31. The authority citation for part 148 continues to read as follows:

**Authority:** Secs. 2701 through 2763, 2791, and 2792 of the Public Health Service Act (42 U.S.C. 300gg through 300gg–63, 300gg–91, and 300gg–92), as amended.

■ 32. Section 148.220 is amended by adding paragraph (a)(9) to read as follows:

#### **§ 148.220 Excepted benefits.**

\* \* \* \* \*

(a) \* \* \*

(9) Travel insurance, within the meaning of § 144.103 of this subchapter.

\* \* \* \* \*

#### **PART 158—ISSUER USE OF PREMIUM REVENUE: REPORTING AND REBATE REQUIREMENTS**

■ 33. The authority citation for part 158 continues to read as follows:

**Authority:** Section 2718 of the Public Health Service Act (42 U.S.C. 300gg–18), as amended.

■ 34. Section 158.120 is amended by revising paragraph (d)(4) to read as follows:

#### **§ 158.120 Aggregate Reporting.**

\* \* \* \* \*

(d) \* \* \*

(4) An issuer with group policies that provide coverage to employees, substantially all of whom are: Working outside their country of citizenship; working outside of their country of citizenship and outside the employer's country of domicile; or non-U.S. citizens working in their home country, must aggregate and report the experience from these policies on a national basis, separately for the large group market and small group market, and separately from other policies, except that coverage offered by an issuer with respect to an expatriate health plan (within the meaning of § 147.170(c) of this subchapter) is not subject to the reporting and rebate requirements of 45 CFR part 158.

#### Fish and Wildlife Service

Migratory Bird Hunting; Proposed 2017–18 Migratory Game Bird Hunting Regulations (Preliminary) With Requests for Indian Tribal Proposals; Notice of Meetings; Proposed Rule

**DEPARTMENT OF THE INTERIOR****Fish and Wildlife Service****50 CFR Part 20**

[Docket No. FWS-HQ-MB-2016-0051;  
FF09M21200-156-FXMB1231099BPP0]

RIN 1018-BB40

**Migratory Bird Hunting; Proposed  
2017-18 Migratory Game Bird Hunting  
Regulations (Preliminary) With  
Requests for Indian Tribal Proposals;  
Notice of Meetings**

**AGENCY:** Fish and Wildlife Service,  
Interior.

**ACTION:** Proposed rule; availability of  
supplemental information.

**SUMMARY:** The U.S. Fish and Wildlife Service (hereinafter the Service or we) proposes to establish annual hunting regulations for certain migratory game birds for the 2017-18 hunting season. We annually prescribe outside limits (frameworks) within which States may select hunting seasons. This proposed rule provides the regulatory schedule, announces the Service Migratory Bird Regulations Committee (SRC) and Flyway Council meetings, describes the proposed regulatory alternatives for the 2017-18 duck hunting seasons, and requests proposals from Indian tribes that wish to establish special migratory game bird hunting regulations on Federal Indian reservations and ceded lands. Migratory game bird hunting seasons provide opportunities for recreation and sustenance; aid Federal, State, and tribal governments in the management of migratory game birds; and permit harvests at levels compatible with migratory game bird population status and habitat conditions.

**DATES:** *Comments:* Following subsequent **Federal Register** notices, the public will be given an opportunity to submit comments on this proposed rule and the subsequent proposed frameworks by January 15, 2017. Tribes must submit proposals and related comments on or before December 1, 2016.

*Meetings:* The SRC will conduct an open meeting on June 15, 2016, to identify and discuss preliminary issues concerning the 2017-18 migratory bird hunting regulations. The meeting will commence at approximately 11:00 a.m. EDT. The SRC will meet to consider and develop proposed regulations for the 2017-18 migratory game bird hunting seasons on October 25-26, 2016. Meetings on both days will commence at approximately 8:30 a.m.

**ADDRESSES:** You may submit comments on the proposals by one of the following methods:

- *Federal eRulemaking Portal:* <http://www.regulations.gov>. Follow the instructions for submitting comments on Docket No. FWS-HQ-MB-2016-0051.

- *U.S. mail or hand-delivery:* Public Comments Processing, Attn: FWS-HQ-MB-2016-0051; Division of Policy, Performance, and Management Programs; U.S. Fish and Wildlife Service, MS: BPHC; 5275 Leesburg Pike, Falls Church, VA 22041.

We will not accept emailed or faxed comments. We will post all comments on <http://www.regulations.gov>. This generally means that your entire submission—including any personal identifying information—will be posted on the Web site. See the Public Comments section, below, for more information.

*Meetings:* The June 15, 2016, SRC meeting will be available to the public in the Rachel Carson conference room at 5275 Leesburg Pike, Falls Church, VA 22041. The October 25-26, 2016, SRC meeting will be at the U.S. Fish and Wildlife Service, 5600 American Boulevard, Bloomington, MN 55437.

**FOR FURTHER INFORMATION CONTACT:** Ron W. Kokel at: Division of Migratory Bird Management, U.S. Fish and Wildlife Service, Department of the Interior, MS: MB, 5275 Leesburg Pike, Falls Church, VA 22041; (703) 358-1714.

**SUPPLEMENTARY INFORMATION:**

**New Process for the Annual Migratory Game Bird Hunting Regulations**

As part of DOI's retrospective regulatory review, we developed a schedule for migratory game bird hunting regulations that is more efficient and provides hunting season dates much earlier than was possible under the old process. The new process makes planning much easier for the States and all parties interested in migratory bird hunting. Beginning last year with the development of the 2016-17 hunting seasons, we are using a new schedule for establishing our annual migratory game bird hunting regulations. We combine the previously used early- and late-season regulatory processes into a single process, and make decisions for harvest management based on predictions derived from long-term biological information and established harvest strategies to establish migratory bird hunting seasons much earlier than the system we used for many years. Under the new process, we develop proposed hunting season frameworks for a given year in the fall

of the prior year. We then finalize those frameworks a few months later, thereby enabling the State agencies to select and publish their season dates in early summer.

This proposed rule is the first in a series of rules for the establishment of the 2017-18 hunting seasons.

**Background and Overview**

Migratory game birds are those bird species so designated in conventions between the United States and several foreign nations for the protection and management of these birds. Under the Migratory Bird Treaty Act (16 U.S.C. 703-712), the Secretary of the Interior is authorized to determine when "hunting, taking, capture, killing, possession, sale, purchase, shipment, transportation, carriage, or export of any \* \* \* bird, or any part, nest, or egg" of migratory game birds can take place, and to adopt regulations for this purpose. These regulations are written after giving due regard to "the zones of temperature and to the distribution, abundance, economic value, breeding habits, and times and lines of migratory flight of such birds" and are updated annually (16 U.S.C. 704(a)). This responsibility has been delegated to the Service as the lead Federal agency for managing and conserving migratory birds in the United States. However, migratory game bird management is a cooperative effort of State, Tribal, and Federal governments.

The Service develops migratory game bird hunting regulations by establishing the frameworks, or outside limits, for season lengths, bag limits, and areas for migratory game bird hunting. Acknowledging regional differences in hunting conditions, the Service has administratively divided the Nation into four Flyways for the primary purpose of managing migratory game birds. Each Flyway (Atlantic, Mississippi, Central, and Pacific) has a Flyway Council, a formal organization generally composed of one member from each State and Province in that Flyway. The Flyway Councils, established through the Association of Fish and Wildlife Agencies (AFWA), also assist in researching and providing migratory game bird management information for Federal, State, and Provincial governments, as well as private conservation entities and the general public.

The process for adopting migratory game bird hunting regulations, located at 50 CFR part 20, is constrained by three primary factors. Legal and administrative considerations dictate how long the rulemaking process will last. Most importantly, however, the

biological cycle of migratory game birds controls the timing of data-gathering activities and thus the dates on which these results are available for consideration and deliberation.

For the regulatory cycle, Service biologists gather, analyze, and interpret biological survey data and provide this information to all those involved in the process through a series of published status reports and presentations to Flyway Councils and other interested parties. Because the Service is required to take abundance of migratory game birds and other factors into consideration, the Service undertakes a number of surveys throughout the year in conjunction with Service Regional Offices, the Canadian Wildlife Service, and State and Provincial wildlife-management agencies. To determine the appropriate frameworks for each species, we consider factors such as population size and trend, geographical distribution, annual breeding effort, the condition of breeding and wintering habitat, the number of hunters, and the anticipated harvest. After frameworks are established for season lengths, bag limits, and areas for migratory game bird hunting, States may select season dates, bag limits, and other regulatory options for the hunting seasons. States may always be more conservative in their selections than the Federal frameworks, but never more liberal.

#### Service Migratory Bird Regulations Committee Meetings

The SRC will meet October 25–26, 2016, to review information on the current status of migratory game birds and develop 2017–18 migratory game bird regulations recommendations for these species. In accordance with Departmental policy, these meetings are open to public observation. You may submit written comments to the Service on the matters discussed.

#### Announcement of Flyway Council Meetings

Service representatives will be present at the individual meetings of the four Flyway Councils this August, September and October. Although agendas are not yet available, these meetings usually commence at 8 a.m. on the days indicated.

*Atlantic Flyway Council:* October 6–7, Hyatt Regency, 225 East Coastline Drive, Jacksonville, FL.

*Mississippi Flyway Council:* August 25–26, Hyatt Regency, 311 South 4th Street, Louisville, KY.

*Central Flyway Council:* September 22–23, Sheraton Steamboat Resort, 2200 Village Inn Court, Steamboat Springs, CO.

*Pacific Flyway Council:* September 30, Sun Valley Resort, 1 Sun Valley Road, Sun Valley, ID.

#### Notice of Intent To Establish Open Seasons

This document announces our intent to establish open hunting seasons and daily bag and possession limits for certain designated groups or species of migratory game birds for 2017–18 in the contiguous United States, Alaska, Hawaii, Puerto Rico, and the Virgin Islands, under §§ 20.101 through 20.107, 20.109, and 20.110 of subpart K of 50 CFR part 20.

For the 2017–18 migratory game bird hunting season, we will propose regulations for certain designated members of the avian families Anatidae (ducks, geese, and swans); Columbidae (doves and pigeons); Gruidae (cranes); Rallidae (rails, coots, moorhens, and gallinules); and Scolopacidae (woodcock and snipe). We describe these proposals under **Proposed 2017–18 Migratory Game Bird Hunting Regulations (Preliminary)** in this document. We published definitions of waterfowl flyways and mourning dove management units, and a description of the data used in and the factors affecting the regulatory process, in the March 14, 1990, **Federal Register** (55 FR 9618).

#### Regulatory Schedule for 2017–18

This document is the first in a series of proposed, supplemental, and final rulemaking documents for migratory game bird hunting regulations. We will publish additional supplemental proposals for public comment in the **Federal Register** as population, habitat, harvest, and other information become available. Major steps in the 2017–18 regulatory cycle relating to open public meetings and **Federal Register** notifications are illustrated in the diagram at the end of this proposed rule. All publication dates of **Federal Register** documents are target dates.

All sections of this and subsequent documents outlining hunting frameworks and guidelines are organized under numbered headings. These headings are:

1. Ducks
  - A. General Harvest Strategy
  - B. Regulatory Alternatives
  - C. Zones and Split Seasons
  - D. Special Seasons/Species Management
    - i. September Teal Seasons
    - ii. September Teal/Wood Duck Seasons
    - iii. Black Ducks
    - iv. Canvasbacks
    - v. Pintails
    - vi. Scaup
    - vii. Mottled Ducks
    - viii. Wood Ducks
    - ix. Youth Hunt

- x. Mallard Management Units
- xi. Other
2. Sea Ducks
3. Mergansers
4. Canada Geese
  - A. Special Early Seasons
  - B. Regular Seasons
  - C. Special Late Seasons
5. White-Fronted Geese
6. Brant
7. Snow and Ross's (Light) Geese
8. Swans
9. Sandhill Cranes
10. Coots
11. Moorhens and Gallinules
12. Rails
13. Snipe
14. Woodcock
15. Band-tailed Pigeons
16. Doves
17. Alaska
18. Hawaii
19. Puerto Rico
20. Virgin Islands
21. Falconry
22. Other

Later sections of this and subsequent documents will refer only to numbered items requiring your attention. Therefore, it is important to note that we will omit those items requiring no attention, and remaining numbered items will be discontinuous and appear incomplete.

The proposed regulatory alternatives for the 2017–18 duck hunting seasons are contained at the end of this document. We plan to publish final regulatory alternatives in late July. We plan to publish proposed season frameworks in mid-December 2016. We plan to publish final season frameworks in late February 2017.

#### Review of Public Comments

This proposed rulemaking contains the proposed regulatory alternatives for the 2017–18 duck hunting seasons. This proposed rulemaking also describes other recommended changes or specific preliminary proposals that vary from the 2016–17 regulations and issues requiring early discussion, action, or the attention of the States or tribes. We will publish responses to all proposals and written comments when we develop final frameworks for the 2017–18 season. We seek additional information and comments on this proposed rule.

#### Consolidation of Notices

For administrative purposes, this document consolidates the notice of intent to establish open migratory game bird hunting seasons and the request for tribal proposals with the preliminary proposals for the annual hunting regulations-development process. We will publish the remaining proposed and final rulemaking documents separately. For inquiries on tribal

guidelines and proposals, tribes should contact the following personnel:

Region 1 (Idaho, Oregon, Washington, Hawaii, and the Pacific Islands)—Nanette Seto, U.S. Fish and Wildlife Service, 911 NE. 11th Avenue, Portland, OR 97232-4181; (503) 231-6164.

Region 2 (Arizona, New Mexico, Oklahoma, and Texas)—Greg Hughes, U.S. Fish and Wildlife Service, P.O. Box 1306, Albuquerque, NM 87103; (505) 248-7885.

Region 3 (Illinois, Indiana, Iowa, Michigan, Minnesota, Missouri, Ohio, and Wisconsin)—Tom Cooper, U.S. Fish and Wildlife Service, 5600 American Blvd. West, Suite 990, Bloomington, MN 55437-1458; (612) 713-5101.

Region 4 (Alabama, Arkansas, Florida, Georgia, Kentucky, Louisiana, Mississippi, North Carolina, Puerto Rico and Virgin Islands, South Carolina, and Tennessee)—Laurel Barnhill, U.S. Fish and Wildlife Service, 1875 Century Boulevard, Room 324, Atlanta, GA 30345; (404) 679-4000.

Region 5 (Connecticut, Delaware, Maine, Maryland, Massachusetts, New Hampshire, New Jersey, New York, Pennsylvania, Rhode Island, Vermont, Virginia, and West Virginia)—Pam Toschik, U.S. Fish and Wildlife Service, 300 Westgate Center Drive, Hadley, MA 01035-9589; (413) 253-8610.

Region 6 (Colorado, Kansas, Montana, Nebraska, North Dakota, South Dakota, Utah, and Wyoming)—Casey Stemler, U.S. Fish and Wildlife Service, P.O. Box 25486, Denver Federal Building, Denver, CO 80225; (303) 236-8145.

Region 7 (Alaska)—Pete Probasco, U.S. Fish and Wildlife Service, 1011 East Tudor Road, Anchorage, AK 99503; (907) 786-3423.

Region 8 (California and Nevada)—Eric Davis, U.S. Fish and Wildlife Service, 2800 Cottage Way, Sacramento, CA 95825-1846; (916) 414-6727.

## Requests for Tribal Proposals

### Background

Beginning with the 1985-86 hunting season, we have employed guidelines described in the June 4, 1985, **Federal Register** (50 FR 23467) to establish special migratory game bird hunting regulations on Federal Indian reservations (including off-reservation trust lands) and ceded lands. We developed these guidelines in response to tribal requests for our recognition of their reserved hunting rights, and for some tribes, recognition of their authority to regulate hunting by both tribal and nontribal members throughout their reservations. The guidelines include possibilities for:

(1) On-reservation hunting by both tribal and nontribal members, with

hunting by nontribal members on some reservations to take place within Federal frameworks, but on dates different from those selected by the surrounding State(s);

(2) On-reservation hunting by tribal members only, outside of usual Federal frameworks for season dates, season length, and daily bag and possession limits; and

(3) Off-reservation hunting by tribal members on ceded lands, outside of usual framework dates and season length, with some added flexibility in daily bag and possession limits.

In all cases, tribal regulations established under the guidelines must be consistent with the annual March 10 to September 1 closed season mandated by the 1916 Convention Between the United States and Great Britain (for Canada) for the Protection of Migratory Birds (Convention). The guidelines are applicable to those tribes that have reserved hunting rights on Federal Indian reservations (including off-reservation trust lands) and ceded lands. They also may be applied to the establishment of migratory game bird hunting regulations for nontribal members on all lands within the exterior boundaries of reservations where tribes have full wildlife-management authority over such hunting, or where the tribes and affected States otherwise have reached agreement over hunting by nontribal members on non-Indian lands.

Tribes usually have the authority to regulate migratory game bird hunting by nonmembers on Indian-owned reservation lands, subject to our approval. The question of jurisdiction is more complex on reservations that include lands owned by non-Indians, especially when the surrounding States have established or intend to establish regulations governing migratory bird hunting by non-Indians on these lands. In such cases, we encourage the tribes and States to reach agreement on regulations that would apply throughout the reservations. When appropriate, we will consult with a tribe and State with the aim of facilitating an accord. We also will consult jointly with tribal and State officials in the affected States where tribes may wish to establish special hunting regulations for tribal members on ceded lands. It is incumbent upon the tribe and/or the State to request consultation as a result of the proposal being published in the **Federal Register**. We will not presume to make a determination, without being advised by either a tribe or a State, that any issue is or is not worthy of formal consultation.

One of the guidelines provides for the continuation of tribal members' harvest of migratory game birds on reservations where such harvest is a customary practice. We do not oppose this harvest, provided it does not take place during the closed season required by the Convention, and it is not so large as to adversely affect the status of the migratory game bird resource. Since the inception of these guidelines, we have reached annual agreement with tribes for migratory game bird hunting by tribal members on their lands or on lands where they have reserved hunting rights. We will continue to consult with tribes that wish to reach a mutual agreement on hunting regulations for on-reservation hunting by tribal members.

Tribes should not view the guidelines as inflexible. We believe that they provide appropriate opportunity to accommodate the reserved hunting rights and management authority of Indian tribes while also ensuring that the migratory game bird resource receives necessary protection. The conservation of this important international resource is paramount. Use of the guidelines is not required if a tribe wishes to observe the hunting regulations established by the State(s) in which the reservation is located.

### Details Needed in Tribal Proposals

Tribes that wish to use the guidelines to establish special hunting regulations for the 2017-18 migratory game bird hunting season should submit a proposal that includes:

(1) The requested migratory game bird hunting season dates and other details regarding the proposed regulations;

(2) Harvest anticipated under the proposed regulations; and

(3) Tribal capabilities to enforce migratory game bird hunting regulations.

For those situations where it could be shown that failure to limit Tribal harvest could seriously impact the migratory game bird resource, we also request information on the methods employed to monitor harvest and any potential steps taken to limit level of harvest.

A tribe that desires the earliest possible opening of the migratory game bird season for nontribal members should specify this request in its proposal, rather than request a date that might not be within the final Federal frameworks. Similarly, unless a tribe wishes to set more restrictive regulations than Federal regulations will permit for nontribal members, the proposal should request the same daily bag and possession limits and season

length for migratory game birds that Federal regulations are likely to permit the States in the Flyway in which the reservation is located.

#### *Tribal Proposal Procedures*

We will publish details of tribal proposals for public review in later **Federal Register** documents. Because of the time required for review by us and the public, Indian tribes that desire special migratory game bird hunting regulations for the 2017–18 hunting season should submit their proposals no later than December 1, 2016. Tribes should direct inquiries regarding the guidelines and proposals to the appropriate Service Regional Office listed above under the caption

**Consolidation of Notices.** Tribes that request special migratory game bird hunting regulations for tribal members on ceded lands should send a courtesy copy of the proposal to officials in the affected State(s).

#### **Public Comments**

The Department of the Interior's policy is, whenever practicable, to afford the public an opportunity to participate in the rulemaking process. Accordingly, we invite interested persons to submit written comments, suggestions, or recommendations regarding the proposed regulations. Before promulgation of final migratory game bird hunting regulations, we will take into consideration all comments we receive. Such comments, and any additional information we receive, may lead to final regulations that differ from these proposals.

You may submit your comments and materials concerning this proposed rule by one of the methods listed in the **ADDRESSES** section. We will not accept comments sent by email or fax or to an address not listed in the **ADDRESSES** section. Finally, we will not consider hand-delivered comments that we do not receive, or mailed comments that are not postmarked, by the date specified in the **DATES** section. We will post all comments in their entirety—including your personal identifying information—on <http://www.regulations.gov>. Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you can ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so. Comments and materials we

receive, as well as supporting documentation we used in preparing this proposed rule, will be available for public inspection on <http://www.regulations.gov>, or by appointment, during normal business hours, at the U.S. Fish and Wildlife Service, Division of Migratory Bird Management, 5275 Leesburg Pike, Falls Church, VA 22041.

For each series of proposed rulemakings, we will establish specific comment periods. We will consider, but may not respond in detail to, each comment. As in the past, we will summarize all comments we receive during the comment period and respond to them after the closing date in any final rules.

#### **National Environmental Policy Act (NEPA) Consideration**

The programmatic document, “Second Final Supplemental Environmental Impact Statement: Issuance of Annual Regulations Permitting the Sport Hunting of Migratory Birds (EIS 20130139),” filed with the Environmental Protection Agency (EPA) on May 24, 2013, addresses NEPA compliance by the Service for issuance of the annual framework regulations for hunting of migratory game bird species. We published a notice of availability in the **Federal Register** on May 31, 2013 (78 FR 32686), and our Record of Decision on July 26, 2013 (78 FR 45376). We also address NEPA compliance for waterfowl hunting frameworks through the annual preparation of separate environmental assessments, the most recent being “Duck Hunting Regulations for 2016–17,” with its corresponding March 10, 2016, finding of no significant impact. In addition, an August 1985 environmental assessment entitled “Guidelines for Migratory Bird Hunting Regulations on Federal Indian Reservations and Ceded Lands” is available from the address indicated under the caption **FOR FURTHER INFORMATION CONTACT**.

#### **Endangered Species Act Consideration**

Before issuance of the 2017–18 migratory game bird hunting regulations, we will comply with provisions of the Endangered Species Act of 1973, as amended (16 U.S.C. 1531–1543; hereinafter the Act), to ensure that hunting is not likely to jeopardize the continued existence of any species designated as endangered or threatened or modify or destroy its critical habitat and is consistent with conservation programs for those species. Consultations under section 7 of the Act may cause us to change proposals in

this and future supplemental proposed rulemaking documents.

#### **Regulatory Planning and Review (Executive Orders 12866 and 13563)**

Executive Order (E.O.) 12866 provides that the Office of Information and Regulatory Affairs (OIRA) will review all significant rules. OIRA has reviewed this rule and has determined that this rule is significant because it would have an annual effect of \$100 million or more on the economy.

E.O. 13563 reaffirms the principles of E.O. 12866 while calling for improvements in the nation's regulatory system to promote predictability, to reduce uncertainty, and to use the best, most innovative, and least burdensome tools for achieving regulatory ends. The executive order directs agencies to consider regulatory approaches that reduce burdens and maintain flexibility and freedom of choice for the public where these approaches are relevant, feasible, and consistent with regulatory objectives. E.O. 13563 emphasizes further that regulations must be based on the best available science and that the rulemaking process must allow for public participation and an open exchange of ideas. We have developed this rule in a manner consistent with these requirements.

An economic analysis was prepared for the 2013–14 season. This analysis was based on data from the 2011 National Hunting and Fishing Survey, the most recent year for which data are available (see discussion in **Regulatory Flexibility Act** section below). We will use this analysis again for the 2017–18 season. This analysis estimated consumer surplus for three alternatives for duck hunting (estimates for other species are not quantified due to lack of data). The alternatives are (1) issue restrictive regulations allowing fewer days than those issued during the 2012–13 season, (2) issue moderate regulations allowing more days than those in alternative 1, and (3) issue liberal regulations identical to the regulations in the 2012–13 season. For the 2013–14 season, we chose Alternative 3, with an estimated consumer surplus across all flyways of \$317.8–\$416.8 million. We also chose Alternative 3 for the 2009–10, the 2010–11, the 2011–12, the 2012–13, the 2014–15, the 2015–16, and the 2016–17 seasons. The 2013–14 analysis is part of the record for this rule and is available at <http://www.regulations.gov> at Docket No. FWS–HQ–MB–2016–0051.

#### **Regulatory Flexibility Act**

The annual migratory bird hunting regulations have a significant economic

impact on substantial numbers of small entities under the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*). We analyzed the economic impacts of the annual hunting regulations on small business entities in detail as part of the 1981 cost-benefit analysis. This analysis was revised annually from 1990–95. In 1995, the Service issued a Small Entity Flexibility Analysis (Analysis), which was subsequently updated in 1996, 1998, 2004, 2008, and 2013. The primary source of information about hunter expenditures for migratory game bird hunting is the National Hunting and Fishing Survey, which is conducted at 5-year intervals. The 2013 Analysis was based on the 2011 National Hunting and Fishing Survey and the U.S. Department of Commerce's County Business Patterns, from which it was estimated that migratory bird hunters would spend approximately \$1.5 billion at small businesses in 2013. Copies of the Analysis are available upon request from the Division of Migratory Bird Management (see **FOR FURTHER INFORMATION CONTACT**) or from <http://www.regulations.gov> at Docket No. FWS-HQ-MB-2016-0051.

### Clarity of the Rule

We are required by Executive Orders 12866 and 12988 and by the Presidential Memorandum of June 1, 1998, to write all rules in plain language. This means that each rule we publish must:

- (a) Be logically organized;
- (b) Use the active voice to address readers directly;
- (c) Use clear language rather than jargon;
- (d) Be divided into short sections and sentences; and
- (e) Use lists and tables wherever possible.

If you feel that we have not met these requirements, send us comments by one of the methods listed in the **ADDRESSES** section. To better help us revise the rule, your comments should be as specific as possible. For example, you should tell us the numbers of the sections or paragraphs that are unclearly written, which sections or sentences are too long, the sections where you feel lists or tables would be useful, etc.

### Small Business Regulatory Enforcement Fairness Act

This proposed rule is a major rule under 5 U.S.C. 804(2), the Small Business Regulatory Enforcement Fairness Act. For the reasons outlined above, this rule would have an annual effect on the economy of \$100 million or more. However, because this rule would establish hunting seasons, we do

not plan to defer the effective date under the exemption contained in 5 U.S.C. 808(1).

### Paperwork Reduction Act

This proposed rule does not contain any new information collection that requires approval under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*). We may not conduct or sponsor and you are not required to respond to a collection of information unless it displays a currently valid OMB control number. OMB has reviewed and approved the information collection requirements associated with migratory bird surveys and assigned the following OMB control numbers:

- 1018–0019—North American Woodcock Singing Ground Survey (expires 5/31/2018).
- 1018–0023—Migratory Bird Surveys (expires 6/30/2017). Includes Migratory Bird Harvest Information Program, Migratory Bird Hunter Surveys, Sandhill Crane Survey, and Parts Collection Survey.

### Unfunded Mandates Reform Act

We have determined and certify, in compliance with the requirements of the Unfunded Mandates Reform Act, 2 U.S.C. 1502 *et seq.*, that this proposed rulemaking would not impose a cost of \$100 million or more in any given year on local or State government or private entities. Therefore, this rule is not a “significant regulatory action” under the Unfunded Mandates Reform Act.

### Civil Justice Reform—Executive Order 12988

The Department, in promulgating this proposed rule, has determined that this proposed rule will not unduly burden the judicial system and that it meets the requirements of sections 3(a) and 3(b)(2) of E.O. 12988.

### Takings Implication Assessment

In accordance with E.O. 12630, this proposed rule, authorized by the Migratory Bird Treaty Act, does not have significant takings implications and does not affect any constitutionally protected property rights. This rule would not result in the physical occupancy of property, the physical invasion of property, or the regulatory taking of any property. In fact, this rule would allow hunters to exercise otherwise unavailable privileges and, therefore, reduce restrictions on the use of private and public property.

### Energy Effects—Executive Order 13211

E.O. 13211 requires agencies to prepare Statements of Energy Effects when undertaking certain actions.

While this proposed rule is a significant regulatory action under E.O. 12866, it is not expected to adversely affect energy supplies, distribution, or use. Therefore, this action is not a significant energy action and no Statement of Energy Effects is required.

### Government-to-Government Relationship With Tribes

In accordance with the President's memorandum of April 29, 1994, “Government-to-Government Relations with Native American Tribal Governments” (59 FR 22951), E.O. 13175, and 512 DM 2, we have evaluated possible effects on Federally-recognized Indian tribes and have determined that there are no effects on Indian trust resources. However, in this proposed rule, we solicit proposals for special migratory bird hunting regulations for certain Tribes on Federal Indian reservations, off-reservation trust lands, and ceded lands for the 2017–18 migratory bird hunting season. The resulting proposals will be contained in a separate proposed rule. By virtue of these actions, we have consulted with Tribes affected by this rule.

### Federalism Effects

Due to the migratory nature of certain species of birds, the Federal Government has been given responsibility over these species by the Migratory Bird Treaty Act. We annually prescribe frameworks from which the States make selections regarding the hunting of migratory birds, and we employ guidelines to establish special regulations on Federal Indian reservations and ceded lands. This process preserves the ability of the States and tribes to determine which seasons meet their individual needs. Any State or Indian tribe may be more restrictive than the Federal frameworks at any time. The frameworks are developed in a cooperative process with the States and the Flyway Councils. This process allows States to participate in the development of frameworks from which they will make selections, thereby having an influence on their own regulations. These rules do not have a substantial direct effect on fiscal capacity, change the roles or responsibilities of Federal or State governments, or intrude on State policy or administration. Therefore, in accordance with E.O. 13132, these regulations do not have significant federalism effects and do not have sufficient federalism implications to warrant the preparation of a federalism summary impact statement.

### Authority

The rules that eventually will be promulgated for the 2017–18 hunting season are authorized under 16 U.S.C. 703–711, 16 U.S.C. 712, and 16 U.S.C. 742 a–j.

Dated: May 19, 2016.

**Karen Hyun,**

*Deputy Assistant Secretary for Fish and Wildlife and Parks.*

### Proposed 2017–18 Migratory Game Bird Hunting Regulations (Preliminary)

Pending current information on populations, harvest, and habitat conditions, and receipt of recommendations from the four Flyway Councils, we may defer specific regulatory proposals. No changes from the 2016–17 frameworks are being proposed at this time. Other issues requiring early discussion, action, or the attention of the States or tribes are contained below:

#### 1. Ducks

Categories used to discuss issues related to duck harvest management are: (A) General Harvest Strategy, (B) Regulatory Alternatives, (C) Zones and Split Seasons, and (D) Special Seasons/Species Management. Only those containing substantial recommendations are discussed below.

##### A. General Harvest Strategy

We propose to continue using adaptive harvest management (AHM) to help determine appropriate duck-hunting regulations for the 2017–18 season. AHM permits sound resource decisions in the face of uncertain regulatory impacts and provides a mechanism for reducing that uncertainty over time. We use AHM to evaluate four alternative regulatory levels for duck hunting based on the population status of mallards. (We enact other hunting regulations for species of special concern, such as canvasbacks, scaup, and pintails).

Atlantic, Mississippi, Central, and Pacific Flyways

The prescribed regulatory alternative for the Atlantic, Mississippi, Central, and Pacific Flyways is based on the status of mallards that contributes primarily to each Flyway. In the Atlantic Flyway, we set hunting regulations based on the population status of mallards breeding in eastern North America (Federal survey strata

51–54 and 56, and State surveys in the Northeast and the mid-Atlantic region). In the Central and Mississippi Flyways, we set hunting regulations based on the status and dynamics of mid-continent mallards. Mid-continent mallards are those breeding in central North America (Federal survey strata 13–18, 20–50, and 75–77, and State surveys in Minnesota, Wisconsin, and Michigan). In the Pacific Flyway, we set hunting regulations based on the status and dynamics of western mallards. Western mallards are those breeding in Alaska and the northern Yukon Territory (as based on Federal surveys in strata 1–12), and in California and Oregon (as based on State-conducted surveys).

For the 2017–18 season, we recommend continuing to use independent optimization to determine the optimal regulatory choice for each mallard stock. This means that we would develop regulations for eastern mallards, mid-continent mallards and western mallards independently, based upon the breeding stock that contributes primarily to each Flyway. We detailed implementation of this AHM decision framework for western and mid-continent mallards in the July 24, 2008, **Federal Register** (73 FR 43290) and for eastern mallards in the July 20, 2012, **Federal Register** (77 FR 42920).

Supplemental Environmental Impact Statement (SEIS) Changes to the AHM Process

Beginning with the 2016–17 season, migratory bird hunting regulations are based on predictions from models derived from long-term biological information or the most recently collected monitoring data, and established harvest strategies. Since 1995, the Service and Flyway Councils have applied the principles of adaptive management to inform harvest management decisions in the face of uncertainty while trying to learn about system (bird populations) responses to harvest regulations and environmental changes. Prior to the timing and process changes necessary for implementation of SEIS 2013, the annual AHM process began with the observation of the system's status each spring followed by an updating of model weights and the derivation of an optimal harvest policy that was then used to inform a regulatory decision (*i.e.*, breeding population estimates were used with a policy matrix to determine optimal regulatory decisions). The system then evolves over time in response to the decision and natural variation in population dynamics. The following spring, the monitoring programs observe the status of the system and the iterative

decision-making process continues forward in time. However, with the changes in decision timing specified by the SEIS, the post-survey AHM process will not be possible because monitoring information describing the system will not be available at the time the decision must be made. As a result, the optimization framework used to derive the current harvest policy can no longer calculate current and future harvest values as a function of the current system and model weights. To address this issue, we adjusted the optimization procedures to calculate harvest values conditional on the last observation of the system and regulatory decision.

Results and analysis of our work is contained in a technical report that provides a summary of revised methods and assessment results based on updated AHM protocols developed in response to the preferred alternative specified in the SEIS. The report describes necessary changes to optimization procedures and decision processes for the implementation of AHM for midcontinent, eastern and western mallards, northern pintails, and scaup decision frameworks.

Results indicate that the necessary adjustments to the optimization procedures and AHM protocols to account for changes in decision timing are not expected to result in major changes to expected management performance for mallard, pintail, and scaup AHM. In general, pre-survey (or pre-SEIS necessary changes) harvest policies were similar to harvest policies based on new post-survey (or post-SEIS necessary changes) AHM protocols. We found some subtle differences in the degree to which strategies prescribed regulatory changes in the pre-survey policies with a reduction in the number of cells indicating moderate regulations. In addition, pre-survey policies became more liberal when the previous regulatory decisions were more conservative. These patterns were consistent for each AHM decision-making framework. Overall, a comparison of simulation results of the pre- and post-survey protocols did not suggest substantive changes in the frequency of regulations or in the expected average population size. These results suggest that the additional form of uncertainty that the change in decision timing introduces is not expected to limit our expected harvest management performance with the adoption of the pre-survey AHM protocols.

A complete copy of the AHM report can be found on <http://www.regulations.gov> or at <http://www.fws.gov/migratorybirds/pdf/>

management/AHM/  
SEIS&AHMReportFinal.pdf.

#### Final 2017–18 AHM Protocol

We will detail the final AHM protocol for the 2017–18 season in the supplemental proposed rule, which we will publish in late July (see **Schedule of Biological Information Availability, Regulations Meetings and Federal Register Publications for the 2017–18 Seasons** at the end of this proposed rule for further information). We will propose a specific regulatory alternative for each of the Flyways to use for their 2017–18 seasons after information becomes available in late August 2016.

#### B. Regulatory Alternatives

The basic structure of the current regulatory alternatives for AHM was adopted in 1997. In 2002, based upon recommendations from the Flyway Councils, we extended framework dates in the “moderate” and “liberal” regulatory alternatives by changing the opening date from the Saturday nearest October 1 to the Saturday nearest September 24, and by changing the closing date from the Sunday nearest January 20 to the last Sunday in January. These extended dates were made available with no associated penalty in season length or bag limits. At that time we stated our desire to keep these changes in place for 3 years to allow for a reasonable opportunity to monitor the impacts of framework-date extensions on harvest distribution and rates of harvest before considering any subsequent use (67 FR 12501; March 19, 2002).

For 2017–18, we propose to utilize the same regulatory alternatives that are in effect for the 2016–17 season (see accompanying table for specifics of the regulatory alternatives). Alternatives are specified for each Flyway and are designated as “RES” for the restrictive, “MOD” for the moderate, and “LIB” for the liberal alternative.

#### C. Zones and Split Seasons

Zones and split seasons are “special regulations” designed to distribute hunting opportunities and harvests according to temporal, geographic, and demographic variability in waterfowl and other migratory game bird populations. For ducks, States have been allowed the option of dividing their allotted hunting days into two (or in some cases three) segments to take advantage of species-specific peaks of abundance or to satisfy hunters in different areas who want to hunt during the peak of waterfowl abundance in their area. However, the split-season option does not fully satisfy many States

who wish to provide a more equitable distribution of harvest opportunities. Therefore, we also have allowed the establishment of independent seasons in up to four zones within States for the purpose of providing more equitable distribution of harvest opportunity for hunters throughout the State.

In 1978, we prepared an environmental assessment (EA) on the use of zones to set duck hunting regulations. A primary tenet of the 1978 EA was that zoning would be for the primary purpose of providing equitable distribution of duck hunting opportunities within a State or region and not for the purpose of increasing total annual waterfowl harvest in the zoned areas. In fact, target harvest levels were to be adjusted downward if they exceeded traditional levels as a result of zoning. Subsequent to the 1978 EA, we conducted a review of the use of zones and split seasons in 1990. In 2011, we prepared a new EA analyzing some specific proposed changes to the zone and split-season guidelines. The current guidelines were then finalized in 2011 (76 FR 53536; August 26, 2011).

Currently, every 5 years, States are afforded the opportunity to change the zoning and split-season configuration within which they set their annual duck hunting regulations. The next regularly scheduled open season for changes to zone and split-season configurations was in 2016, for use during the 2016–20 period. However, as we discussed in the September 23, 2014, **Federal Register** (79 FR 56864), the April 13, 2015, **Federal Register** (80 FR 19852), and the August 6, 2015, **Federal Register** (80 FR 47388), we implemented significant changes to the annual regulatory process as outlined in the 2013 SEIS. As a result, the previously identified May 1, 2016, due date for zone and split-season configuration changes that was developed under the old regulatory process was too late for those States wishing to change zone and split-season configurations for implementation in the 2016–17 season. Under the new regulatory schedule implemented last year, we published the proposed rule for all migratory bird seasons the following fall in early December. A final rule tentatively would be published about 75 days after the proposed rule (but no later than April 1). This new schedule precluded inclusion of some States’ new zone descriptions in the 2016–17 proposed rule as had been done in past open seasons. Thus, we utilized a two-phase approach. For those States able to change zone and split-season configurations in time for the 2016–17 season, we included new configuration

and zone descriptions in the 2016–17 hunting regulations. States that do not send in new zone and split-season configuration changes at that time had until the previously identified May 1, 2016, deadline. Those changes will be implemented in the 2017–18 hunting season. The next scheduled open season would remain in 2021 for the 2021–25 seasons, and all States will then resume on the same 5-year schedule regardless of how long their previous zone-split configuration was in place.

For the current open season, the guidelines for duck zone and split-season configurations will be as follows:

#### Guidelines for Duck Zones and Split Seasons

The following zone and split-season guidelines apply only for the regular duck season:

(1) A zone is a geographic area or portion of a State, with a contiguous boundary, for which independent dates may be selected for the regular duck season.

(2) Consideration of changes for management-unit boundaries is not subject to the guidelines and provisions governing the use of zones and split seasons for ducks.

(3) Only minor (less than a county in size) boundary changes will be allowed for any grandfathered arrangement, and changes are limited to the open season.

(4) Once a zone and split option is selected during an open season, it must remain in place for the following 5 years.

Any State may continue the configuration used in the previous 5-year period. If changes are made, the zone and split-season configuration must conform to one of the following options:

(1) No more than four zones with no splits,

(2) Split seasons (no more than 3 segments) with no zones, or

(3) No more than three zones with the option for 2-way (2-segment) split seasons in one, two, or all zones.

#### Grandfathered Zone and Split Arrangements

When we first implemented the zone and split guidelines in 1991, several States had completed experiments with zone and split arrangements different from our original options. We offered those States a one-time opportunity to continue (“grandfather”) those arrangements, with the stipulation that only minor changes could be made to zone boundaries. If any of those States now wish to change their zone and split arrangement:

(1) The new arrangement must conform to one of the 3 options identified above; and

(2) The State cannot go back to the grandfathered arrangement that it previously had in place.

#### Management Units

We will continue to utilize the specific limitations previously established regarding the use of zones and split seasons in special management units, including the High Plains Mallard Management Unit. We note that the original justification and objectives established for the High Plains Mallard Management Unit provided for additional days of hunting opportunity at the end of the regular duck season. In order to maintain the integrity of the management unit, current guidelines prohibit simultaneous zoning and/or 3-way split seasons within a management unit and the remainder of the State. Removal of this limitation would allow additional proliferation of zone and split configurations and compromise the original objectives of the management unit.

#### *D. Special Seasons/Species Management*

#### iv. Canvasbacks

From 1994–2015, we followed a canvasback harvest strategy whereby if canvasback population status and production are sufficient to permit a harvest of one canvasback per day nationwide for the entire length of the regular duck season, while still attaining an objective of 500,000 birds the following spring, the season on canvasbacks should be opened. A partial season would be allowed if the estimated allowable harvest was below that associated with a 1-bird daily bag limit for the entire season. If neither of these conditions can be met, the harvest strategy calls for a closed season on canvasbacks nationwide. In 2008 (73 FR 43290; July 24, 2008), we announced our decision to modify the canvasback harvest strategy to incorporate the option for a 2-bird daily bag limit for canvasbacks when the predicted

breeding population the subsequent year exceeds 725,000 birds.

Since the existing harvest strategy relies on information that will not yet be available at the time we need to establish proposed frameworks under the new regulatory process, the canvasback harvest management strategy is not usable for the 2016–17 season and beyond. At this time we do not have a new harvest strategy to propose for use in the future. Thus, as we did for the 2016–17 season, we will review the most recent information on canvasback populations, habitat conditions, and harvests with the goal of compiling the best information available for use in making a harvest management decision. We will share these results with the Flyways during their fall meetings, with the intention of adopting a decision-making approach in October for the 2017–18 seasons. Over the next year, we will continue to work with the Flyway technical committees and councils to develop a new biologically based process for informing harvest management decisions for use in subsequent years.

#### 16. Doves

As we discussed in the April 13 (80 FR 19852), July 21 (80 FR 43266), and August 6 (80 FR 47388), 2015, **Federal Registers**, 2016 was the next open season for changes to dove zone and split configurations for the 2016–20 period. The current guidelines were approved in 2006 (see July 28, 2006, **Federal Register**, 71 FR 43008), for the use of zones and split seasons for doves with implementation beginning in the 2007–08 season. While the initial period was for 4 years (2007–10), we further stated that beginning in 2011, zoning would conform to a 5-year period.

As discussed above under **C. Zones and Split Seasons** for ducks, because of unintentional and unanticipated issues with changing the regulatory schedule for the 2016–17 season, we decided that a two-phase approach was appropriate. For those States able to change zone and split-season configurations in time for the 2016–17 season, we included that new configuration and zone descriptions in the 2016–17 hunting

seasons. For those States unable to do so last year, we will accept zone and split-season configuration changes until the previously identified May 1, 2016, deadline. We will implement these changes in the 2017–18 hunting season. The next normally scheduled open season will be in 2021 for the 2021–25 seasons.

For the current open season, the guidelines for dove zone and split-season configurations will be as follows:

#### *Guidelines for Dove Zones and Split Seasons in the Eastern and Central Mourning Dove Management Units*

(1) A zone is a geographic area or portion of a State, with a contiguous boundary, for which independent seasons may be selected for dove hunting.

(2) States may select a zone and split option during an open season. The option must remain in place for the following 5 years except that States may make a one-time change and revert to their previous zone and split configuration in any year of the 5-year period. Formal approval will not be required, but States must notify the Service before making the change.

(3) Zoning periods for dove hunting will conform to those years used for ducks, e.g., 2016–20.

(4) The zone and split configuration consists of two zones with the option for 3-way (3-segment) split seasons in one or both zones. As a grandfathered arrangement, Texas will have three zones with the option for 2-way (2-segment) split seasons in one, two, or all three zones.

(5) States that do not wish to zone for dove hunting may split their seasons into no more than 3 segments.

For the 2016–20 period, any State may continue the configuration used in 2011–15. If changes are made, the zone and split-season configuration must conform to one of the options listed above. If Texas uses a new configuration for the entirety of the 5-year period, it cannot go back to the grandfathered arrangement that it previously had in place.

Daily Bag	3	6	6	3	6	6	3	6	6	4	7	7
<b>Species/Sex Limits within the Overall Daily Bag Limit</b>												
Mallard (Total/Female)	3/1	4/2	4/2	2/1	4/1	4/2	3/1	5/1	5/2	3/1	5/2	7/2

- (a) In the High Plains Mallard Management Unit, all regulations would be the same as the remainder of the Central Flyway, with the exception of season length. Additional days would be allowed under the various alternatives as follows: restrictive - 12, moderate and liberal - 23. Under all alternatives, additional days must be on or after the Saturday nearest December 10.
- (b) In the Columbia Basin Mallard Management Unit, all regulations would be the same as the remainder of the Pacific Flyway, with the exception of season length. Under all alternatives except the liberal alternative, an additional 7 days would be allowed.
- (c) In Alaska, framework dates, bag limits, and season length would be different from the remainder of the Pacific Flyway. The bag limit (depending on the area) would be 5-8 under the restrictive alternative, and 7-10 under the moderate and liberal alternatives. Under all alternatives, season length would be 107 days and framework dates would be Sep. 1 - Jan. 26.

**LIST OF PUBLIC LAWS**

---

**Note:** No public bills which have become law were received by the Office of the Federal Register for inclusion

in today's **List of Public Laws**.

Last List June 8, 2016

---

**Public Laws Electronic Notification Service (PENS)**

---

**PENS** is a free electronic mail notification service of newly

enacted public laws. To subscribe, go to <http://listserv.gsa.gov/archives/publaws-l.html>

**Note:** This service is strictly for E-mail notification of new laws. The text of laws is not available through this service. **PENS** cannot respond to specific inquiries sent to this address.
