Discussion at the DOT public meetings highlighted the importance of conducting GPS/GNSS receiver acquisition testing which had always been planned as part of the DOT GPS Adjacent Band Compatibility Assessment, but was not feasible due to time constraints during the radiated test conducted at WSMR in April. The goal of the additional lab testing to be conducted at Zeta Associates in Fairfax, Virginia and MITRE Corporation in Bedford, Massachusetts, is:

- (1) Receiver characterization for comparison with results obtained in April at the anechoic chamber at the U.S. Army Research Laboratory;
- (2) Evaluation of Out Of Band Emission (OOBE) interference at prescribed and proposed levels with Long Term Evolution (LTE) uplink and downlink signals;
- (3) GPS/GNSS signal acquisition characterization.

The same instrumentation will be used for these conducted tests at the Zeta Associates laboratory as for the radiated test at the U.S. Army Research Laboratory at WSMR, utilizing the same GNSS playback system and interference generation equipment with modifications to support OOBE and acquisition test requirements;

- (4) Antenna characterizations.

The acquisition test will be conducted using 10 MHz LTE signals at four frequencies:

- Base station frequencies of 1525 MHz and 1550 MHz
- Hand-set frequencies of 1620 MHz and 1645 MHz
