

second alternative, the Iowa Street 66 kV Underground Alternative, would place a small portion of the subtransmission line underground. The third alternative, the Phased Build Alternative, would retain some of the existing towers, use a different conductor type, and have smaller capacity than the proposed Project.

The Final EIS evaluates the potential impacts of the project and alternatives on air quality, biological resources, cultural resources, water resources, geological resources and hazards, land use, noise, paleontological resources, public health, socioeconomic, soils, traffic and transportation, visual resources, wilderness characteristics, and other resources. Mitigation measures are included to conserve priority habitat in the region, including requirements to restore, compensate, and minimize native vegetation and habitat loss; not allow for a net loss for jurisdictional waters and wetlands; and ensure compliance with two regional Multiple Species Habitat Conservation Plans.

In accordance with Department of the Interior regulations (43 CFR 46.425), the BLM identified a preferred alternative in the Final EIS based on feedback on the Draft Joint Environmental Impact Report (EIR)/EIS from the public and cooperating agencies. The BLM preferred alternative is the Proposed Action with incorporation of the Tower Relocation Alternative and the Iowa Street 66 kV Underground Alternative.

The BLM will prepare a Record of Decision (ROD) for the proposed project after a 30-day period following publication of the NOA.

Comments on the Draft Joint EIR/EIS received from the public and internal BLM review were considered and incorporated as appropriate into the Final EIS. Public comments resulted in the addition of clarifying text, but did not significantly change the analysis or conclusions presented in the Draft EIR/EIS.

Authority: 40 CFR 1506.6, 40 CFR 1506.10.

Thomas Pogacnik,
Deputy State Director.
