Procedures for Providing Public Input: Public comment for consideration by EPA's federal advisory committees and panels has a different purpose from public comment provided to EPA

program offices. Therefore, the process for submitting comments to a federal advisory committee is different from the process used to submit comments to an EPA program office. Federal advisory committees and panels, including scientific advisory committees, provide independent advice to the EPA. Interested members of the public may submit relevant information on the topic of this advisory activity, for the group conducting the activity, for the SAB to consider during the advisory process. Input from the public to the SAB will have the most impact if it provides specific scientific or technical information or analysis for SAB committees and panels to consider or if it relates to the clarity or accuracy of the technical information. Members of the public wishing to provide comment should contact the DFO directly.

Oral Statements: In general, individuals or groups requesting an oral presentation on a public teleconference will be limited to three minutes and an oral presentation at the face-to-face meeting will be limited to five minutes. Interested parties wishing to provide comments should contact Dr. Diana Wong, DFO (preferably via email), at the contact information noted above, by November 10, 2016 to be placed on the list of public speakers for the teleconference and by December 5, 2016 to be placed on the list of public speakers for the face-to-face meeting.

Written Statements: Written statements will be accepted throughout the advisory process; however, for timely consideration by Committee/ Panel members, statements should be supplied to the DFO (preferably via email) at the contact information noted above by November 10, 2016 for the teleconference and by December 5, 2016 for the face-to-face meeting. It is the SAB Staff Office general policy to post written comments on the Web page for the advisory meeting or teleconference. Abstract: Collectively, oil and gas facilities are the largest industrial emitters of methane in the U.S. While a great deal of information is available on the oil and gas industry and has to date provided a strong technical foundation to support the Agency's recent actions, the EPA is now seeking more specific information that would be of critical use in addressing existing source emissions pursuant to Clean Air Act (CAA) section 111(d). Taking into account the large number of sources that a national regulation development effort would need to consider, and the potential for taking a different approach to addressing co-located existing sources than was taken with new and modified sources, the EPA requires information that will enable the development of effective standards for this entire industry under CAA section 111(d).

There will be two parts to the information collection. Part 1, referred to as the operator survey, is specifically designed to obtain information from onshore oil and gas production facilities to better understand the number and types of equipment at production facilities. Part 2, referred to as the detailed facility survey, will be sent to selected oil and gas facilities across the different industry segments. Part 2 will collect detailed, unit-specific information on emission sources at the facility and any emission control devices or management practices used to reduce emissions. Due to the large number of potentially affected facilities, Part 2 uses a statistical sampling method
