We will continue to evaluate all standard fees at least every two years to ensure we capture the full costs associated with providing information for nonprogram-related purposes. We require nonrefundable advance payment of the standard fee by check, money order, or credit card. We do not accept cash. Only one form of payment is acceptable in the full amount of the standard fee. If we revise any of the standard fees, we will publish another notice in the Federal Register. For other non-program requests for information not addressed here or within the current schedule of standardized administrative fees, we will continue to charge fees calculated on a case-by-case basis to recover our full cost of supplying the information. No other changes will apply to the schedule of standardized administrative fees announced in the Federal Register on August 22, 2012.

**DEPARTMENT OF STATE**

**[Public Notice: 9742]**

E.O. 13224 Designation of Anas El Abboubi, aka Anas el-Aboubi, aka Anas al-Aboubi, aka Anas Al Italy, aka Abu Rawaha the Italian, aka Abu the Italian, aka Rawaha al Itali, aka Mc Khalif, aka McKhalif, aka Mc Khaliph, aka Anas Shakur, aka Anas Abdu Shukur as a Specially Designated Global Terrorist

Acting under the authority of and in accordance with section 1(b) of Executive Order 13224 of September 23, 2001, as amended by Executive Order 13268 of July 2, 2002, and Executive Order 13284 of January 23, 2003, I hereby determine that the individual known as Anas El Aboubi, also known as Anas el-Aboubi, also known as Anas al-Aboubi, also known as Anas Al Italy, also known as Abu Rawaha the Italian, also known as Abu the Italian, also known as Rawaha al Italy, also known as Mc Khalif, also known as McKhalif, also known as Mc Khaliph, also known as Anas Shakur, also known as Anas Abdu Shukur, committed, or poses a significant risk of committing, acts of terrorism that threaten the security of U.S. nationals or the national security, foreign policy, or economy of the United States.

Consistent with the determination in section 10 of Executive Order 13224 that prior notice to persons determined to be subject to the Order who might have a constitutional presence in the United States would render ineffectual the blocking and other measures authorized in the Order because of the ability to transfer funds instantaneously, I determine that no prior notice needs to be provided to any person subject to this determination who might have a constitutional presence in the United States, because to do so would render ineffectual the measures authorized in the Order.

This notice shall be published in the Federal Register.

Dated: September 8, 2016.

John F. Kerry,
Secretary of State.

**DEPARTMENT OF STATE**

**[Public Notice: 9743]**

**Shipping Coordinating Committee; Notice of Public Meeting**

The Shipping Coordinating Committee (SHC) will conduct an open meeting at 9:00 a.m. on November 15, 2016, in Room 7N15–01, of the Douglas A. Munro Coast Guard Headquarters Building at St. Elizabeth’s, 2703 Martin Luther King Jr. Avenue SE., Washington, DC 20593. The primary purpose of the meeting is to prepare for the ninety-seventh session of the International Maritime Organization’s (IMO) Maritime Safety Committee to be held at the IMO Headquarters, United Kingdom, November 21–25, 2016.

The agenda items to be considered include:

—Adoption of the agenda; report of credentials
—Decisions of other IMO bodies
—Consideration and adoption of amendments to mandatory instruments
—Measures to enhance maritime security
—Goal-based new ship construction standards
—Mandatory instrument and/or provisions addressing safety standards for the carriage of more than 12 industrial personnel on board vessels engaged on international voyages
—Navigation, communications, search and rescue (report of the third session of the Sub-Committee)
—Ship systems and equipment (report of the third session and urgent matters emanating from the third session of the Sub-Committee)
—Implementation of IMO instruments (report of the third session of the Sub-Committee)
—Carriage of cargoes and containers (urgent matters emanating from the third session of the Sub-Committee)
—Implementation of the STCW Convention
—Capacity building for the implementation of new measures
—Formal safety assessment
—Piracy and armed robbery against ships
—Unsafe mixed migration by sea
—Implementation of instruments and related matters
Surface Transportation Board

[Docket No. FD 34797 (Sub--No. 1)]

AGENCY: Surface Transportation Board.

ACTION: Notice of intent to prepare an environmental impact statement; notice of scoping meeting; and request for comments on draft scope.

SUMMARY: On June 24, 2016, New England Transrail, LLC (NET) filed a petition for exemption with the Surface Transportation Board (Board) pursuant to 49 U.S.C. 10502 and 10901 in Docket No. FD 34797 (Sub--No. 1). NET intends to acquire, construct and operate various rail lines and construct and operate transloading facilities, where goods and materials are transferred from rail to truck, in the towns of Wilmington and Woburn, Massachusetts. NET proposes to acquire 5,727 feet of existing track, to rehabilitate or construct a combined 10,838 feet of track, and to operate as a rail carrier over the total 16,565 feet of track on and adjacent to property currently owned by the Olin Corporation at 51 Eames Street in Wilmington.

NET anticipates moving goods and materials (e.g., bricks, newspaper, steel, glycols, biofuels, liquid natural gas, vegetable oils, wood chips, sand, and gravel) and transloading them from rail cars directly onto trucks, into holding tanks, or into a warehouse on site for temporary storage.

Because this project has the potential to result in significant environmental impacts, the Board’s Office of Environmental Analysis (OEA) has determined that the preparation of an Environmental Impact Statement (EIS) is appropriate pursuant to the National Environmental Policy Act of 1969 (NEPA), as amended (42 U.S.C. 4321 et seq.). The purpose of this Notice of Intent is to inform stakeholders—including members of the public; Tribes; federal, state, and local agencies; environmental groups; potential shippers and other parties—interested in or potentially affected by the proposed project of the decision to prepare an EIS. OEA will hold a public scoping meeting as part of the NEPA process. Oral and written comments submitted during scoping will assist OEA in issuing a Final Scope of Study that defines the range of actions, alternatives, and impacts to be considered in the EIS. The date and location for the public meeting, along with the Draft Scope of Study for review and comment, are provided below.

Background

I. The Prior Proceedings. In December 2003, NET filed its original petition for exemption for authority to acquire, construct and operate track to use in conjunction with a reload facility at the Olin site in Docket No. FD 34391. OEA conducted an environmental review and issued an Environmental Assessment (EA) in August 2004 and a Post-EA in December 2004. After issuance of the Post-EA, a number of parties informed the Board that NET had modified its proposed project to include, among other changes, the processing of municipal solid waste (MSW) at the facility without notifying OEA and that therefore, the environmental review was incomplete.

In May 2005, the Board issued a decision dismissing the case without prejudice to NET filing a new petition or application based on its current project plans. The Board concluded that the project had changed significantly from the proposal presented in the petition and that NET had not informed OEA of the changes until after the environmental review had been completed. Because the petition was modified to the point that analysis already performed by the Board became substantially deficient and required extensive revision, the Board found that it was appropriate to terminate the proceeding.

In December 2005, NET filed its petition for exemption in a new docket, Docket No. FD 34797, for acquisition, construction, and operation authority. NET outlined its plans to rehabilitate the existing track on the property and to construct new sections of track to support a facility to handle construction and demolition debris (C&D) and MSW. Following NET’s filing, opposing parties argued that some or all of NET’s planned activities would not constitute “rail transportation,” and in 2006, a coalition of parties asked the Board to address the threshold issue of the extent of this agency’s jurisdiction over the proposed project. Additionally, in 2006, the U.S. Environmental Protection Agency (EPA) added the project site to the National Priorities List (NPL) under the Comprehensive Environmental Response, Compensation, and Liability Act.

3 Generally, Board authorization is not required for proposals by existing carriers to acquire or construct rail facilities and “excepted” ancillary track (e.g., industrial or side tracks used to support line-haul services). 49 U.S.C. 10906; Nicholson v. ICC, 711 F.2d 364, 367–8 (D.C. Cir. 1983); but see Effingham R.R—Pet., for Declaratory Order Constr. at Effingham, Ill., 2 S.T.B. 606, 609–10 (1997) (Board has licensing authority over proposal by new carrier to construct and operate over § 10906 track that would constitute its entire operation).

OEA was formerly known as the Board’s Section of Environmental Analysis (SEA).

OEA was formerly known as the Board’s Section of Environmental Analysis (SEA).

Act (CERCLA or Superfund). EPA suggested that, in order to fully address the proposal’s effect on potentially contaminated soil and groundwater, the Board defer issuing even a preliminary analysis under NEPA of the potential environmental impacts of NET’s proposal until EPA had completed the relevant portion of its Remedial Investigation and Feasibility Study (RI/FS) of the site.

In July 2007, the Board issued a decision finding that NET would, if authorized, become a rail carrier subject to the Board’s jurisdiction and thus would need authority to acquire, construct and operate the track. The Board also addressed the extent to which the handling of C&D and MSW would come within the scope of the Board’s jurisdiction, but the issue was not decided because the Board deferred environmental review until EPA had completed the relevant portion of its RI/FS Study at the site.5 In May 2016, the Board lifted the deferral after EPA submitted a letter stating that the facts no longer supported continuing to defer the Board’s environmental review in the case.6 The Board also directed NET to file an updated petition for exemption in a new sub-docket detailing its current plans for the site.7

II. The Instant Proceeding.

On June 24, 2016, NET filed an updated petition for exemption outlining its current proposal with the Board in Docket No. FD 34797 (Sub–No. 1).8 As stated above, NET proposes to acquire, construct and operate track and to construct and operate transloading facilities on and adjacent to the Olin site. NET plans to move goods and materials, including bricks, newspaper, steel, glycols, biofuels, liquid natural gas, vegetable oils, wood chips, sand, and gravel and transload them from rail cars directly onto trucks, into holding tanks, or into a warehouse on site for temporary storage. This Notice of Intent initiates the EIS process and scoping for this proceeding.

Date and Location of Public Scoping Meeting: The public scoping meeting will be held at the following location on the date listed:

- October 25, 2016; 5:30–8:00 p.m. at Wilmington Middle School, 25 Carter Lane, Wilmington, MA 01887

The scoping meeting will be held in an open house format for the first half hour followed by a brief presentation by OEA. After the presentation, interested parties will be provided an opportunity for public comment at an open microphone for the balance of the scoping meeting. A court reporter will transcribe the public comments.

The meeting location complies with the Americans with Disabilities Act of 1990 (42 U.S.C. 12101 et seq.). Persons that need special accommodations should telephone OEA’s toll-free number for this project at 877–573–8930.

OEA invites written public comments on all aspects of the Draft Scope of Study and is providing a 60-day public comment period which begins on September 30, 2016. These written comments may be submitted (1) during the scoping meetings, or (2) by mailing or submitting comments electronically using the filing instructions below. Comments should be submitted by November 29, 2016 to assure full consideration during the scoping process. OEA will issue a Final Scope of Study after the close of the scoping comment period

Summary of the Board’s Environmental Review Process: The NEPA process is intended to assist the Board and the public in identifying and assessing the potential environmental consequences of a proposed action before a decision on the proposed action is made. OEA is responsible for ensuring that the Board complies with NEPA and related environmental statutes. The first stage of the EIS process is scoping. Scoping is an open process for determining the range of actions, alternatives and the potential scope of environmental issues to be addressed in the EIS. As part of the scoping process, OEA has developed, and has made available for public comment in this notice, a Draft Scope of Study for the EIS. A scoping meeting will be held in the project area to provide further opportunities for public involvement and input during the scoping process at the time and location set out above. In addition to comments on the Draft Scope of Study, interested parties are encouraged to comment on potential alternatives for the proposed project, including the no-action alternative.

To assist OEA in identifying a range of reasonable and feasible alternatives that could meet the purpose and need for the proposed project, OEA requested detailed information from NET on the alternative sites that were examined as part of project site selection in a letter dated August 29, 2016. NET states in its response, dated September 7, 2016, that it examined alternative sites in Tewksbury, MA, and another in North Billerica, MA. NET determined that the Tewksbury site would be too small for the development of a multi-commodity freight facility. NET also found the North Billerica site unsuitable because of its location away from the center of the region and concerns regarding highway accessibility. OEA invites the public to comment on any potential, reasonable and feasible alternatives that could meet the purpose and need for NET’s proposed project.

At the conclusion of the scoping comment period, OEA will issue a Final Scope of Study for the EIS. After issuing the Final Scope of Study, OEA will prepare a Draft EIS for the project. The Draft EIS will address the environmental issues and concerns identified during the scoping process and assess all reasonable and feasible alternatives, including the no-action alternative. The Draft EIS will also contain OEA’s preliminary recommendations for environmental mitigation measures. Upon completion, the Draft EIS will be made available for review and comment by the public, government agencies, and other interested parties. OEA will prepare a Final EIS that considers and responds to comments on the Draft EIS. In reaching its decision in this case, the Board will consider the Draft EIS, the Final EIS, all environmental comments received, and OEA’s final recommendations regarding environmental mitigation measures.

EPA is participating as a cooperating agency in this EIS based on its special expertise of environmental matters at the site and jurisdiction by law consistent with 40 CFR 1501.6. Throughout the development of the EIS, OEA will coordinate with EPA as the CERCLA process progresses for the project site. In addition, OEA will be consulting with various federal, state and local agencies with specific knowledge of the potential environmental impacts that may be associated with the proposed project. OEA is also initiating government-to-government consultation with potentially affected tribes, including but not limited to: Narragansett Indian Tribe, Mashpee Wampanoag Tribe, and Wampanoag Tribe of Gay Head (Aquinnah).

Filing Environmental Comments: Scoping comments submitted by mail should be addressed to: Danielle Gosselin, Office of Environmental Analysis, Surface Transportation Board, 395 E Street SW., Washington, DC 20423–0001, Attention: Docket No. FD 34797 (Sub–No. 1). Comments may also be submitted electronically via email through the

project email address, NewEnglandTransrailEIS@icf.com. Please refer to Docket No. FD 34797 (Sub–No. 1) in all correspondence, including emails regarding this project.

Scoping Comments are due by November 29, 2016.

FOR FURTHER INFORMATION CONTACT: Danielle Gosselin by mail at Office of Environmental Analysis, Surface Transportation Board, 395 E Street SW., Washington, DC 20423–0001, or call OEA’s toll-free number for the project at 877–573–8930. Assistance for the hearing impaired is available through the Federal Information Relay Service (FIRS) at 1–800–877–8339. The Web site for the Board is www.stb.gov. For further information about the proposed project, the Board’s environmental review process, or this EIS, you may also visit the Board-sponsored project Web site at www.newenglandtransrail.eis.com. The project Web site includes a map of the project area including NET’s proposed project.

Draft Scope of Study for the EIS

Purpose and Need

According to NET, the principal purpose of the proposed project is to add rail transloading capacity close to the center of the Boston metropolitan area. Further, NET states that the proposed facility would allow for lower rail rates and improved service scheduling for customers. The project involves a request by NET for a license or approval from the Board. The proposed project is not a federal government-proposed or sponsored project. Thus, the project’s purpose and need should be informed by both the applicant’s goals and the agency’s enabling statute, here, 49 U.S.C. 10901. Section 10901 provides that the Board must approve a construction request unless it finds that the construction is “inconsistent with the public convenience and necessity.” Therefore, the statute creates a presumption that rail construction is in the public interest and will be approved.

Proposed Action and Alternatives

NET’s proposed project involves the acquisition of 5,727 feet of existing track, the rehabilitation and construction of a combined 10,838 feet of new track, and operation as a rail carrier over the total 16,565 feet of track. Other major elements of the proposed project would include demolishing existing buildings, constructing transloading facilities and warehouses, and moving goods and materials and transloading them from rail cars directly onto trucks, into holding tanks, or into a warehouse on site for temporary storage.

NET estimates that it would operate two round trip trains per day with approximately 30 rail cars. NET also estimates that approximately 400 round trip vehicle trips per day (365 truck trips per day and 35 employee vehicle trips) could be generated at the height of operations. Train operations are expected to occur between 11:00 p.m. and 6:00 a.m., and truck deliveries are expected to occur outside weekday morning and evening commuter peak hours.

The EIS will analyze and compare the potential impacts of (1) acquisition, construction and operation for the proposed project, (2) any reasonable and feasible alternatives that could allow NET to meet its purpose and need, and (3) the no-action alternative (denial of the application).

Environmental Impact Analysis

Proposed Acquisition, Construction and Operation

Analyses in the EIS will address the proposed activities associated with the acquisition, construction and operation of the project and their potential environmental impacts, as appropriate.

Impact Categories

The EIS will analyze potential direct, indirect, and cumulative impacts \(^9\) of NET’s proposed acquisition, construction and operation activities, or in the case of the no-action alternative, the absence of these activities.

Impact areas addressed will include an analysis of transportation systems, safety, land use, recreation, biological resources, water resources, including wetlands and other waters of the U.S., geology and soils, air quality and climate, noise and vibration, energy resources, and socioeconomics as they relate to physical changes in the environment, cultural and historic resources, aesthetics and environmental justice. Other categories of potential impacts may also be included as a result of comments received during the scoping process or on the Draft EIS. The EIS will include a discussion of each of these categories as they currently exist in the project area and will address the potential direct, indirect, and cumulative impacts of each alternative being studied in detail on each category, as described below.

1. Transportation Systems

The EIS will:

a. Evaluate the potential impacts resulting from the proposed project on the existing transportation network in the project area.

b. Propose mitigation measures to avoid, minimize or eliminate potential project impacts to transportation systems, as appropriate.

2. Safety

The EIS will:

a. Describe existing road/rail grade crossing safety and analyze the potential for an increase in accidents related to the proposed operation, as appropriate.

b. Describe existing rail operations and analyze the potential for increased probability of train accidents, as appropriate.

c. Evaluate the potential for disruption and delays to the movement of emergency vehicles.

d. Propose mitigation measures to avoid, minimize or eliminate potential project impacts to safety, as appropriate.

3. Land Use

The EIS will:

a. Evaluate the potential impacts of each alternative on existing land use patterns within the project area and identify those land uses that would be potentially impacted by the proposed project.

b. Analyze the potential impacts associated with each alternative to land uses identified within the project area.

c. Evaluate consistency with Coastal Zone Management Program, as applicable.

d. Propose mitigation measures to avoid, minimize or eliminate potential project impacts to land use, as appropriate.

4. Recreation

The EIS will:

a. Evaluate existing conditions and the potential impacts of the proposed project on recreational areas and opportunities for recreational activities provided in the project area.

b. Propose mitigation measures to avoid, minimize or eliminate potential project impacts on recreational areas and opportunities for recreational activities, as appropriate.

5. Biological Resources

The EIS will:

a. Evaluate the existing biological resources within the project area, including vegetative communities, wildlife, fisheries, wetlands, and federal
and state threatened or endangered species, and the potential impacts to these resources resulting from the proposed project.
b. Propose mitigation measures to avoid, minimize, eliminate, or compensate for potential impacts to biological resources, as appropriate.

6. Water Resources
The EIS will:
a. Describe the existing surface water and groundwater resources within the project area, including lakes, rivers, streams, ponds, wetlands, and floodplains and analyze the potential impacts on these resources.
b. Describe the permitting requirements with regard to wetlands, river crossings, water quality, floodplains, and erosion control.
c. Propose mitigation measures to avoid, minimize, eliminate, or compensate for potential project impacts to water resources, as appropriate.
d. Describe EPA’s CERCLA process as it relates to on and off-site water resources.

7. Geology and Soils
The EIS will:
a. Describe the geology, soils, and seismic conditions found within the project area, including unique or problematic geologic formations or soils, prime farmland, and hydric soils, and analyze the potential impacts on these resources resulting from each alternative.
b. Evaluate any potential measures to avoid or construct through unique or problematic geologic formations or soils.
c. Propose mitigation measures to avoid, minimize or eliminate potential project impacts to geology and soils, as appropriate.
d. Describe EPA’s CERCLA process as it relates to geology and soils.

8. Air Quality and Climate
The EIS will:
a. Evaluate the air emissions from the potential operation of the proposed project including potential greenhouse gas emissions, as appropriate.
b. Evaluate the potential air quality impacts resulting from the proposed project construction activities.
c. Evaluate the potential impacts of the proposed project on global climate change and the potential impacts of global climate change on the proposed project.
d. Propose mitigation measures to avoid, minimize or eliminate potential project impacts, as appropriate.

9. Noise and Vibration
The EIS will:
a. Describe the potential noise and vibration impacts during the proposed project construction.
b. Describe the potential noise and vibration impacts of the proposed project operation.
c. Propose mitigation measures to avoid, minimize or eliminate potential project impacts to sensitive noise receptors, as appropriate.

10. Energy Resources
The EIS will:
a. Describe and evaluate the potential impact of the proposed project on the distribution of energy resources in the project area.
b. Propose mitigation measures to avoid, minimize or eliminate potential project impacts to energy resources, as appropriate.

11. Socioeconomics
The EIS will:
a. Analyze the effects of the potential temporary influx of construction workers and creation of permanent rail facilities jobs to the project area.
b. Propose mitigation measures to avoid, minimize or eliminate potential project-related adverse impacts to social and economic resources, as appropriate.

12. Cultural and Historic Resources
The EIS will:
a. Identify historic buildings, structures, sites, objects, or districts eligible for listing on or listed on the National Register of Historic Places (historic properties) within the area of potential effects for each alternative. The cultural resources identified will be categorized into three major groups: Tribal resources, archaeological resources, and built resources.
b. Propose mitigation measures to avoid, minimize or eliminate potential project impacts to cultural resources, as appropriate.
c. Propose mitigation measures to avoid, minimize or eliminate potential project impacts to historic properties, as appropriate.
d. Identify prehistoric-era and historic-era archaeological resources by using professionals who meet the Secretary of the Interior Professional Qualifications Standards (SOIPQS) in the discipline of archaeology, and analyze potential project impacts to them.
e. Identify built resources by using professionals who meet the SOIPQS in the disciplines of history or architectural history, and analyze potential project impacts to them.
f. Propose measures to avoid, minimize, or mitigate potentially adverse project impacts to tribal resources, built resources, and archaeological resources that are historic properties, as appropriate.

13. Aesthetics
The EIS will:
a. Describe the potential impacts of the proposed project on any areas identified or determined to be of high visual quality.
b. Propose mitigation measures to avoid, minimize or eliminate potential project impacts on aesthetics, as appropriate.

14. Environmental Justice
The EIS will:
a. Evaluate the potential impacts resulting from the proposed project on local and regional minority and low-income populations.
b. Propose mitigation measures to avoid, minimize or eliminate potential project impacts on environmental justice populations, as appropriate.

Decided: September 27, 2016.

By the Board, Victoria Rutson, Director, Office of Environmental Analysis

Jeffrey Herzig,
Clearance Clerk.

SURFACE TRANSPORTATION BOARD

[Docket No. FD 36062]

Lehigh Railway, LLC—Lease Exemption Containing Interchange Commitment—Norfolk Southern Railway Company

Lehigh Railway, LLC (LRWY), a Class III rail carrier, has filed a verified notice of exemption under 49 CFR 1150.41 to continue to lease from Norfolk Southern Railway Company (NSR), and to operate, approximately 56.0 miles of rail line between milepost IS 269.5 at Athens, Pa., and milepost IS 213.5 at Meehoopany, Pa., in Bradford and Wyoming Counties, Pa., including any sidings, sidetracks, yards, or facilities presently owned by NSR that are accessed via the line.

LRWY states that LRWY and NSR have entered into an amended lease agreement 1 (Amended Lease) which served to renew the original lease agreement (Original Lease) that the parties had previously entered into on

1 LRWY filed a confidential, complete version of the Amended Lease with its notice of exemption to be kept confidential by the Board under 49 CFR 1104.14(a) without need for the filing of an accompanying motion for protective order under 49 CFR 1104.14(h).
October 28, 2008. According to LRWY, the Amended Lease extends the term of the Original Lease to December 31, 2023, and includes other changes. As required under 49 CFR 1150.43(h)(1), LRWY has disclosed in its verified notice that the Amended Lease contains an interchange commitment in the form of lease credits. LRWY states that these credits were part of the Original Lease and the terms of the credits in the Amended Lease remain unchanged. LRWY has provided additional information regarding the interchange commitment, as required by 49 CFR 1150.43(h). LRWY notes that it will continue to be the operator of the line.

LRWY certifies that the projected annual revenues as a result of the proposed transaction will not result in LRWY's becoming a Class II or Class I rail carrier and will not exceed $5 million.

The transaction may be consummated on or after October 15, 2016, the effective date of the exemption (30 days after the verified notice of exemption was filed). If the verified notice contains false or misleading information, the exemption is void ab initio. Petitions to revoke the exemption under 49 U.S.C. 1150.43(h) may be filed at any time. The filing of a petition to revoke will not automatically stay the effectiveness of the exemption. Petitions to stay must be filed by October 7, 2016 (at least seven days prior to the date the exemption becomes effective).

An original and 10 copies of all pleadings, referring to Docket No. FD 36062, must be filed with the Surface Transportation Board, 305 E Street SW., Washington, DC 20423–0001. In addition, a copy of each pleading must be served on applicant's representative, Kevin M. Sheys, Nossaman LLP, 1666 K Street NW., Suite 500, Washington, DC 20006.

According to LRWY, this action is categorically excluded from environmental review under 49 CFR 1105.6(c).

Board decisions and notices are available on our Web site at www.STB.GOV.

Decided: September 27, 2016.

By the Board, Rachel D. Campbell, Director, Office of Proceedings.

Kenyatta Clay, Clearance Clerk.

[FR Doc. 2016–23695 Filed 9–29–16; 8:45 am]

BILLING CODE 4915–01–P

DEPARTMENT OF TRANSPORTATION
Federal Highway Administration

Notice of Final Federal Agency Actions on Proposed Highway in California

AGENCY: Federal Highway Administration (FHWA), DOT.

ACTION: Notice of limitation on claims for judicial review of actions by the California Department of Transportation (Caltrans), pursuant to 23 U.S.C. 327.

SUMMARY: The FHWA, on behalf of Caltrans, is issuing this notice to announce actions taken by Caltrans, that are final within the meaning of 23 U.S.C. 139(f)(1). The actions relate to a proposed highway project, located on Interstate 80 between post miles 1.9 to 6.1 and on State Route 65 between post miles R4.8 to R7.3 in the County of Placer, State of California. Those actions grant licenses, permits, and approvals for the project.

DATES: By this notice, the FHWA, on behalf of Caltrans, is advising the public of final agency actions subject to 23 U.S.C. 139(f)(1). A claim seeking judicial review of the Federal agency actions on the highway project will be barred unless the claim is filed on or before February 27, 2017. If the Federal law that authorizes judicial review of a claim provides a time period of less than 150 days for filing such claim, then that shorter time period still applies.

FOR FURTHER INFORMATION CONTACT: For Caltrans: Adele Pommerenck, Senior Environmental Planner, California Department of Transportation—District 3, 703 B Street, Marysville, California, 95901, during normal business hours from 8:00 a.m. to 5:00 p.m., telephone (530) 741–4215 or email adele.pommerenck@dot.ca.gov.

SUPPLEMENTARY INFORMATION: Effective July 1, 2007, the Federal Highway Administration (FHWA) assigned, and the California Department of Transportation (Caltrans) assumed, environmental responsibilities for this project pursuant to 23 U.S.C. 327. Notice is hereby given that the Caltrans, has taken final agency actions subject to 23 U.S.C. 139(f)(1) by issuing licenses, permits, and approvals for the following highway project in the State of California: improve the Interstate 80/ State Route 65 [I–80/ SR 65] interchange in Placer County, California, to reduce future traffic congestion, improve operations and safety, and comply with current Caltrans and local agency design standards. The project limits consist of I–80 from the Douglas Boulevard interchange to the Rocklin Road interchange (post miles 1.9–6.1) and SR 65 from the I–80 separation to the Pleasant Grove Boulevard interchange (post miles R4.8–R7.3) in the cities of Roseville and Rocklin. The total length of the project is 2.5 miles along SR 65 and 4.2 miles along I–80. The actions by the Federal agencies, and the laws under which such actions were taken, are described in the Final Environmental Assessment (FEA) for the project, approved on 9/8/16, in the FHWA Finding of No Significant Impact (FONSI) issued on 9/8/16, and in other documents in the FHWA project records. The FEA, FONSI and other project records are available by contacting Caltrans at the addresses provided above. This notice applies to all Federal agency decisions as of the issuance date of this notice and all laws under which such actions were taken, including but not limited to:

1. Council on Environmental Quality Regulations

DEPARTMENT OF TRANSPORTATION
Federal Highway Administration

Environmental Impact Statement; Hartford County, Connecticut

AGENCY: Federal Highway Administration (FHWA), DOT.

ACTION: Notice of intent.

SUMMARY: The FHWA is issuing this notice to advise the public that an environmental impact statement will be prepared for a proposed highway project in Hartford County, Connecticut.

FOR FURTHER INFORMATION CONTACT: Amy D. Jackson-Grove, Division Administrator, Federal Highway Administration, 628–2 Hebron Avenue, Suite 303, Glastonbury, CT 06033, Telephone: (860) 659–6703.

SUPPLEMENTARY INFORMATION: The FHWA is cooperating with the Connecticut Department of Transportation (CTDOT), will prepare an environmental impact statement (EIS) on a proposal for transportation improvements on I–94 between Flatbush Avenue (Interchange 45) and I–91 (Interchange 53) in Hartford, Connecticut. The approximate length of the proposed project area is 2.5 miles. The purpose of the proposed project, as currently defined, is to address structural deficiencies, improve traffic operations and safety, and improve mobility on and along the I–84 corridor within the project limits, while maintaining access for the City of Hartford and adjacent communities. The EIS will study a reasonable range of alternatives to address the proposed project’s purpose and need. Alternatives under consideration include (1) No Build Alternative; (2) Elevated Highway Alternative (3) Lowered Highway Alternative; (4) Tunnel 84 Hartford. An Internet Web site has been established to provide information on the proposed project and can be accessed at http://www.i84hartford.com. Public scoping is underway.

Agencies, Tribes, and the public are encouraged to submit written comments on the purpose and need, scope of alternatives and impacts. The draft EIS will be available for public and agency review and comment prior to a public hearing. Public notice of the draft EIS and the date and time of the public hearing(s) will be posted on the project Web site and in local newspapers.

To ensure that the full range of issues related to this proposed action are addressed and all significant issues identified, comments and suggestions are invited from all interested parties. Comments or questions concerning this proposed action and the EIS should be directed to the FHWA at the address provided above.

(Catalog of Federal Domestic Assistance Program Number 20.205, Highway Research, Planning, and Construction. The regulations implementing Executive Order 12372 regarding intergovernmental consultation on Federal programs and activities apply to this program.)

Issued on: September 20, 2016.

Amy Jackson-Grove,
Division Administrator, Glastonbury, Connecticut.

DEPARTMENT OF TRANSPORTATION
Federal Motor Carrier Safety Administration

[FMCSA Docket No. FMCSA–[2016–0216]]

Qualification of Drivers; Exemption Applications; Diabetes Mellitus

AGENCY: Federal Motor Carrier Safety Administration (FMCSA), DOT.

ACTION: Notice of final disposition.

SUMMARY: FMCSA confirms its decision to exempt 46 individuals from its rule prohibiting persons with insulin-treated diabetes mellitus (ITDM) from operating commercial motor vehicles (CMVs) in interstate commerce. The exemptions enable these individuals to operate CMVs in interstate commerce.

DATES: The exemptions were effective on September 10, 2016. The exemptions expire on September 10, 2018.

FOR FURTHER INFORMATION CONTACT: Ms. Christine A. Hydock, Chief, Medical Programs Division, (202) 366–4001, fmcsamedical@dot.gov, FMCSA, Department of Transportation, 1200 New Jersey Avenue SE., Room W64–113, Washington, DC 20590–0001. Office hours are from 8:30 a.m. to 5 p.m. e.t., Monday through Friday, except Federal holidays.

SUPPLEMENTARY INFORMATION:

I. Electronic Access

You may see all the comments online through the Federal Document Management System (FDMS) at: http://www.regulations.gov.

Docket: For access to the docket to read background documents or comments, go to http://www.regulations.gov and/or Room W12–140 on the ground level of the West Building, 1200 New Jersey Avenue SE., Washington, DC, between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

Privacy Act: In accordance with 5 U.S.C. 553(c), DOT solicits comments from the public to better inform its rulemaking process. DOT posts these comments, without edit, including any personal information the commenter provides, to www.regulations.gov, as described in the system of records notice (DOT/ALL–14 FDMS), which can be reviewed at www.dot.gov/privacy.

II. Background

On August 10, 2016, FMCSA published a notice of receipt of Federal diabetes exemption applications from 46 individuals and requested comments from the public (81 FR 52947). The public comment period closed on September 9, 2016, and no comments were received.

FMCSA has evaluated the eligibility of the 46 applicants and determined that granting the exemptions to these individuals would achieve a level of safety equivalent to or greater than the level that would be achieved by complying with the current regulation 49 CFR 391.41(b)(3).

Diabetes Mellitus and Driving Experience of the Applicants

The Agency established the current requirement for diabetes in 1970 because several risk studies indicated that drivers with diabetes had a higher rate of crash involvement than the general population. The diabetes rule provides that “A person is physically qualified to drive a commercial motor vehicle if that person has no established medical history or clinical diagnosis of diabetes mellitus currently requiring
insulin for control” (49 CFR 391.41(b)(3)).

FMCSA established its diabetes exemption program, based on the Agency’s July 2000 study entitled “A Report to Congress on the Feasibility of a Program to Qualify Individuals with Insulin-Treated Diabetes Mellitus to Operate in Interstate Commerce as Directed by the Transportation Act for the 21st Century.” The report concluded that a safe and practicable protocol to allow some drivers with ITDM to operate CMVs is feasible. The September 3, 2003 (68 FR 52441), Federal Register notice in conjunction with the November 8, 2005 (70 FR 67777), Federal Register notice provides the current protocol for allowing such drivers to operate CMVs in interstate commerce.

These 46 applicants have had ITDM over a range of 1 to 42 years. These applicants report no severe hypoglycemic reactions resulting in loss of consciousness or seizure, requiring the assistance of another person, or resulting in impaired cognitive function that occurred without warning symptoms, in the past 12 months and no recurrent (2 or more) severe hypoglycemic episodes in the past 5 years. In each case, an endocrinologist verified that the driver has demonstrated a willingness to properly monitor and manage his/her diabetes mellitus, received education related to diabetes management, and is on a stable insulin regimen. These drivers report no other disqualifying conditions, including diabetes-related complications. Each meets the vision requirement at 49 CFR 391.41(b)(10).

The qualifications and medical condition of each applicant were stated and discussed in detail in the August 10, 2016, Federal Register notice and they will not be repeated in this notice.

III. Discussion of Comments

FMCSA received no comments in this proceeding.

IV. Basis for Exemption Determination

Under 49 U.S.C. 31136(e) and 31315, FMCSA may grant an exemption from the diabetes requirement in 49 CFR 391.41(b)(3) if the exemption is likely to achieve an equivalent or greater level of safety than would be achieved without the exemption. The exemption allows the applicants to operate CMVs in interstate commerce.

To evaluate the effect of these exemptions on safety, FMCSA considered medical reports about the applicants’ ITDM and vision, and reviewed the treating endocrinologists’ medical opinion related to the ability of the driver to safely operate a CMV while using insulin.

Consequently, FMCSA finds that in each case exempting these applicants from the diabetes requirement in 49 CFR 391.41(b)(3) is likely to achieve a level of safety equal to that existing without the exemption.

V. Conditions and Requirements

The terms and conditions of the exemption will be provided to the applicants in the exemption document and they include the following: (1) That each individual submit a quarterly monitoring checklist completed by the treating endocrinologist as well as an annual checklist with a comprehensive medical evaluation; (2) that each individual reports within 2 business days of occurrence, all episodes of severe hypoglycemia, significant complications, or inability to manage diabetes; also, any involvement in an accident or any other adverse event in a CMV or personal vehicle, whether or not it is related to an episode of hypoglycemia; (3) that each individual provide a copy of the ophthalmologist’s or optometrist’s report to the medical examiner at the time of the annual medical examination; and (4) that each individual provide a copy of the annual medical certification to the employer for retention in the driver’s qualification file, or keep a copy in his/her driver’s qualification file if he/she is self-employed.

The driver must also have a copy of the certification when driving, for presentation to a duly authorized Federal, State, or local enforcement official.

VI. Conclusion

Based upon its evaluation of the 46 exemption applications, FMCSA exempts the following drivers from the diabetes requirement in 49 CFR 391.41(b)(10), subject to the requirements cited above 49 CFR 391.64(b):

- Dale E. Bliss (WI)
- Charles W. Bobbitt, III (WA)
- Thomas Buckmaster (FL)
- Dustin L. Campbell (MD)
- Keith A. Cederberg (MN)
- Carlos A. Chapa (TX)
- David E. Colorado (UT)
- Francis J. Crawford (NY)
- James W. Creech (IN)
- Kirk A. Devitis (NJ)
- Melinda L. Echols (WA)
- Justin W. Garriott (WY)
- David J. Goergen (MN)
- Pedro L. Gonzalez (MA)
- Jeffrey K. Hagen (WI)
- Charles D. Hall (CA)
- Daniel O. Haysley (IL)
- Eugene R. Huelskamp (OH)
- Dennis S. Hughes (TX)
- Bonita K. Hunt (NC)
- John M. Isley (NC)
- John T. Jameson (MO)
- Jeffrey A. Kidd (MD)
- Craig T. Kite (OH)
- Donald E. Knowles (IA)
- Kevin E. Lester (VA)
- Eric T. Maier (CA)
- Javier Melendez (TX)
- Brenda L. Mitchell (KY)
- Terry L. Neiman (PA)
- Peter Z. Pull (FL)
- Joaquim Pedro (NY)
- Vernon Piper (NY)
- Angelo Renieris (NY)
- Sean A. Rivera (AZ)
- Kevin L. Ross (AK)
- James R. Sauceda (NM)
- Kevin Stead (NJ)
- Jacob P. Trommer (OH)
- Nicholas D. Wall (SD)
- Tony B. Wetherell (MN)
- Mark A. Williams (GA)
- Steven M. Wilson (IL)
- Don E. Wood, Jr. (TX)
- Kirk M. Wright (NE)
- Charles P. Zenns (NY)

In accordance with 49 U.S.C. 31136(e) and 31315 each exemption is valid for two years unless revoked earlier by FMCSA. The exemption will be revoked if the following occurs: (1) The person fails to comply with the terms and conditions of the exemption; (2) the exemption has resulted in a lower level of safety than was maintained before it was granted; or (3) continuation of the exemption would not be consistent with the goals and objectives of 49 U.S.C. 31136(e) and 31315. If the exemption is still effective at the end of the 2-year period, the person may apply to FMCSA for a renewal under procedures in effect at that time.

Issued on: September 22, 2016.

Larry W. Minor,
Associate Administrator for Policy.

DEPARTMENT OF TRANSPORTATION
Federal Motor Carrier Safety Administration

[FMCSA Docket No. FMCSA–2015–0321]

Qualification of Drivers; Exemption Applications; Epilepsy and Seizure Disorders

AGENCY: Federal Motor Carrier Safety Administration (FMCSA), DOT.

ACTION: Notice of final disposition.

SUMMARY: FMCSA announces its decision to exempt 22 individuals from
the requirement in the Federal Motor Carrier Safety Regulations (FMCSRs) that interstate commercial motor vehicle (CMV) drivers have “no established medical history or clinical diagnosis of epilepsy or any other condition which is likely to cause loss of consciousness or any loss of ability to control a CMV.” The exemptions enable these individuals who have had one or more seizures and are taking anti-seizure medication to operate CMVs in interstate commerce.

DATES: The exemptions were effective on April 11, 2016. The exemptions expire on April 11, 2018.

FOR FURTHER INFORMATION CONTACT: Christine A. Hydock, Chief, Medical Programs Division, (202) 366–4001, fmcsamedical@dot.gov, FMCSA, Department of Transportation, 1200 New Jersey Avenue SE., Room W64–224, Washington, DC 20590–0001.

Office hours are from 8:30 a.m. to 5 p.m. e.t., Monday through Friday, except Federal holidays. If you have questions regarding viewing or submitting material to the docket, contact Docket Services, telephone (202) 366–9826.

SUPPLEMENTARY INFORMATION:

Electronic Access

You may see all the comments online through the Federal Document Management System (FDMS) at: http://www.regulations.gov.

Docket: For access to the docket to read background documents or comments, go to http://www.regulations.gov and/or Room W12–140 on the ground level of the West Building, 1200 New Jersey Avenue SE., Washington, DC, between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

Privacy Act: In accordance with 5 U.S.C. 553(c), DOT solicits comments from the public to better inform its rulemaking process. DOT posts these comments, without edit, including any personal information the commenter provides, to http://www.regulations.gov, as described in the system of records notice (DOT/ALL–14 FDMS), which can be reviewed at http://www.dot.gov/privacy.

I. Background

On March 9, 2016, FMCSA published a notice announcing receipt of applications from 31 individuals requesting an exemption from the epilepsy prohibition in 49 CFR 391.41(b)(8) and requested comments from the public (81 FR 12553). The public comment period ended on April 8, 2016, and three comments were received.

FMCSA has evaluated the eligibility of these applicants and determined that granting exemptions to 22 of 31 individuals would achieve a level of safety equivalent to or greater than the level that would be achieved by complying with the current regulation 49 CFR 391.41(b)(8). On April 11, 2016 the remaining nine applicants received a letter of final disposition regarding his/her exemption request. Those decision letters fully outlined the basis for the denial. A notice announcing this decision was published on September 9, 2016 (81 FR 62556).

The physical qualification standard for drivers regarding epilepsy found in 49 CFR 391.41(b)(8) states that a person is physically qualified to drive a CMV if that person:

Has no established medical history or clinical diagnosis of epilepsy or any other condition which is likely to cause the loss of consciousness or any loss of ability to control a CMV.

In addition to the regulations, FMCSA has published advisory criteria 2 to assist medical examiners in determining whether drivers with certain medical conditions are qualified to operate a CMV in interstate commerce. [49 CFR part 391. APPENDIX A TO PART 391—MEDICAL ADVISORY CRITERIA, section H. Epilepsy: § 391.41(b)(8), paragraphs 3, 4, and 5.]

II. Discussion of Comments

FMCSA received three comments in this proceeding. An anonymous commenter and Jake B expressed general support for allowing well controlled individuals with a history of seizures to drive commercially. Deb Carlson of the Minnesota Department of Public Safety expressed support for two applicants included in the notice, Richard Wenner and Dennis Zayic.

III. Basis for Exemption Determination

Under 49 U.S.C. 31136(e) and 31315(b), FMCSA may grant an exemption from the epilepsy/seizure standard in 49 CFR 391.41(b)(8) if the exemption is likely to achieve an equivalent or greater level of safety than would be achieved without the exemption. The exemption allows the applicants to operate CMVs in interstate commerce.

In reaching the decision to grant these exemption requests, FMCSA considered the 2007 recommendations of the Agency’s Medical Expert Panel (MEP).

The January 15, 2013, Federal Register notice (78 FR 3069) provides the current MEP recommendations, which is the criteria the Agency uses to grant seizure exemptions.

The Agency’s decision regarding these exemption applications is based on an individualized assessment of each applicant’s medical information, including the root cause of the respective seizure(s) and medical information about the applicant’s seizure history, the length of time that has elapsed since the individual’s last seizure, the stability of each individual’s treatment regimen and the duration of time on or off of anti-seizure medication. In addition, the Agency reviewed the treating clinician’s medical opinion related to the ability of the driver to safely operate a CMV with a history of seizure and each applicant’s driving record found in the Commercial Driver’s License Information System (CDLIS) for commercial driver’s license (CDL) holders, and interstate and intrastate inspections records found in the Motor Carrier Management Information System (MCMIS). For non-CDL holders, the Agency reviewed the driving records from the State Driver’s Licensing Agency (SDLA).

These 22 applicants have been seizure-free over a range of 7 to 35 years while taking anti-seizure medication and maintained a stable medication treatment regimen for the last two years. In each case, the applicant’s treating physician verified his or her seizure history and supports the ability to drive commercially. A summary of each applicant’s seizure history was discussed in the March 9, 2016, Federal Register notice (81 FR 12553).

The Agency acknowledges the potential consequences of a driver experiencing a seizure while operating a CMV. However, the Agency believes the drivers granted this exemption have demonstrated that they are unlikely to have a seizure and their medical condition does not pose a risk to public safety.

Consequently, FMCSA finds that in each case exempting these applicants from the epilepsy/seizure standard in 49 CFR 391.41(b)(8) is likely to achieve a level of safety equal to that existing without the exemption.

IV. Conditions and Requirements

The terms and conditions of the exemption are provided to the applicants in the exemption document and includes the following: (1) Each driver must remain seizure-free and maintain a stable treatment during the two-year exemption period; (2) each driver must submit annual reports from

http://www.dot.gov/
their treating physicians attesting to the stability of treatment and that the driver has remained seizure-free; (3) each driver must undergo an annual medical examination by a certified Medical Examiner, as defined by 49 CFR 390.5; and (4) each driver must provide a copy of the annual medical certification to the employer for retention in the driver’s qualification file, or keep a copy of his/her driver’s qualification file if he/she is self-employed. The driver must also have a copy of the exemption when driving, for presentation to a duly authorized Federal, State, or local enforcement official.

V. Preemption

During the period the exemption is in effect, no State shall enforce any law or regulation that conflicts with this exemption with respect to a person operating under the exemption.

VI. Conclusion

Based upon its evaluation of the 22 exemption applications, FMCSA exempts the following drivers from the epilepsy/seizure standard, 49 CFR 391.41(b)(8), subject to the requirements cited above:

- Travis Earl Baird (OK)
- Robert P. Brackett (ME)
- Brian R. Checkley, Jr. (NJ)
- James Clark (PA)
- Kelly Frederick (LA)
- William Gessner (PA)
- Jerry L. Henderson (IN)
- Clarence D. Jones (VA)
- Preston Romayne Kanagy (TN)
- James Randall King (CT)
- Scott A. Lowe (MA)
- Roger Lynn Neal (MO)
- Thomas Victor Oconnor (FL)
- Scott William Reaves (TX)
- Steven Shirley (UT)
- Matthew Jack Staley (CO)
- Michael A. Sypolt (WV)
- Peter M. Thompson (FL)
- Mohammad S. Warrad (IA)
- Richard James Wenner (MN)
- John Charles Wolfe (PA)
- Dennis Raymond Zayic (MN)

In accordance with 49 U.S.C. 31315(b)(1), each exemption is valid for two years unless revoked earlier by FMCSA. The exemption will be revoked if the following occurs: (1) The individual fails to comply with the terms and conditions of the exemption; (2) the exemption has resulted in a lower level of safety than was maintained prior to being granted; or (3) continuation of the exemption would not be consistent with the goals and objectives of 49 U.S.C. 31136 and 31315.

Issued on: September 23, 2016.

Larry W. Minor,
Associate Administrator for Policy.

DEPARTMENT OF TRANSPORTATION
Federal Motor Carrier Safety Administration

[Docket No. FMCSA–2015–0322]

Denial of Exemption Applications; Epilepsy and Seizure Disorders

AGENCY: Federal Motor Carrier Safety Administration (FMCSA), DOT.

ACTION: Notice of denial.

SUMMARY: FMCSA announces its decision to deny applications from 10 individuals who requested an exemption from the Federal Motor Carrier Safety Regulations (FMCSRs) prohibiting persons with a clinical diagnosis of epilepsy or any other condition that is likely to cause a loss of consciousness or any loss of ability to operate a commercial motor vehicle (CMV) from operating CMVs in interstate commerce.

FOR FURTHER INFORMATION CONTACT: Ms. Christine A. Hydock, Chief, Medical Programs Division, (202) 366-4001, fmcsamedical@dot.gov, FMCSA, Department of Transportation, 1200 New Jersey Avenue SE., Room W64–224, Washington, DC 20590–0001. Office hours are 8:30 a.m. to 5 p.m., e.t., Monday through Friday, except Federal holidays. If you have questions regarding viewing or submitting material to the docket, contact Docket Services, telephone (202) 366–9826.

SUPPLEMENTARY INFORMATION:

I. Electronic Access

You may see all the comments online through the Federal Document Management System (FDMS) at: http://www.regulations.gov. Docket: For access to the docket to read background documents or comments, go to http://www.regulations.gov and/or Room W12–140 on the ground level of the West Building, 1200 New Jersey Avenue SE., Washington, DC, between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

Privacy Act: In accordance with 5 U.S.C. 553(c), DOT solicits comments from the public to better inform its rulemaking process. DOT posts these comments, without edit, including any personal information the commenter provides, to http://www.regulations.gov, as described in the system of records notice (DOT/ALL–14 FDMS), which can be reviewed at http://www.dot.gov/privacy.

II. Background

On May 9, 2016, FMCSA published a notice announcing receipt of applications from 27 individuals requesting an exemption from the prohibition against persons with a clinical diagnosis of epilepsy or any other condition that is likely to cause a loss of consciousness or any loss of ability to operate a CMV in interstate commerce and requested comments from the public (81 FR 28131). The public comment period closed on June 8, 2016, and three comments were received. One commenter supports granting seizure exemptions in general. One commenter expressed concern for the risk of seizure while driving and the Minnesota Department of Public Safety expressed support for three of the applicants and concern about health issues and the driving record of an applicant Shaen Smith. In response to this comment, Mr. Smith has been seizure-free over 18 years and meets the physical qualification standards to drive commercially. His five-year driving record includes no violations or accidents and the Agency has reviewed his ten-year driving history and concludes that he meets the requisite level of safety to drive commercially within the terms and conditions of his exemption.

FMCSA has evaluated the eligibility of these applicants and concluded that granting 10 of the 27 exemptions would not provide a level of safety that would be equivalent to or greater than the level of safety that would be obtained by complying with the regulation 49 CFR 391.41(b)(8). A final notice announcing a decision on the remaining 17 requests will be published at a later date.

III. Basis for Exemption Determination

Under 49 U.S.C. 31136(e) and 31315(b), FMCSA may grant an exemption from the Federal epilepsy standard for a renewable two-year period if it finds “such exemption is likely achieve a level of safety that is equivalent to or greater than the level that would be achieved absent such exemption.” The Agency’s decision regarding these exemption applications is based on an individualized assessment of each applicant’s medical information, including the root cause of the respective seizure(s) and medical information about the applicant’s seizure history, the length of time that has elapsed since the individual’s last seizure, the stability of each individual’s
treatment regimen and the duration of time on or off of anti-seizure medication. The Agency considered the 2007 recommendations of the Agency’s Medical Expert Panel (MEP). The January 15, 2013, Federal Register notice (78 FR 3069) provides the current MEP recommendations which is the criteria the Agency uses to make decisions regarding seizure exemptions.

IV. Conclusion

The Agency has determined that these 10 applicants do not satisfy the criteria eligibility or meet the terms and conditions for a Federal exemption and granting these exemptions would not provide a level of safety that would be equivalent to or greater than, the level of safety that would be obtained by complying with the regulation 49 CFR 391.41(b)(8). Therefore, the applicants in this notice have been denied an exemption from the physical qualification standards in 49 CFR 391.41(b)(8).

Each applicant has, prior to this notice, received a letter of final disposition regarding his/her exemption request. Those decision letters fully outlined the basis for the denial and constitutes final action by the Agency. This notice summarizes the Agency’s recent denials as required under 49 U.S.C. 31315(b)(4) by publishing names periodically and reasons for denial. The following 10 applicants do not meet the minimum time requirement for being seizure-free, either on or off of anti-seizure medication:

- William E. Beaver
- Paul V. Carlson
- Tommy Joe Cox
- William Garvin
- Jeremiah Gonzales
- Roderick Haslip
- Doug William Outfleet
- David J. Parris
- Shawn E. Sands
- Robert B. Skinner

Issued on: September 22, 2016.
Larry W. Minor, Associate Administrator for Policy.

[Docket No. FMCSA–2016–0221]

Qualification of Drivers; Exemption Applications; Diabetes Mellitus

AGENCY: Federal Motor Carrier Safety Administration (FMCSA).

ACTION: Notice of applications for exemptions; request for comments.

SUMMARY: FMCSA announces receipt of applications from 39 individuals for exemption from the prohibition against persons with insulin-treated diabetes mellitus (ITDM) operating commercial motor vehicles (CMVs) in interstate commerce. If granted, the exemptions would enable these individuals with ITDM to operate CMVs in interstate commerce.

DATES: Comments must be received on or before October 31, 2016.

ADDRESSES: You may submit comments bearing the Federal Docket Management System (FDMS) Docket No. FMCSA–2016–0221 using any of the following methods:

- Mail: Docket Management Facility; U.S. Department of Transportation, 1200 New Jersey Avenue SE., West Building Ground Floor, Room W12–140, Washington, DC 20590–0001.
- Hand Delivery: West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE., Washington, DC, between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

Instructions: Each submission must include the Agency name and the docket numbers for this notice. Note that all comments received will be posted without change to http://www.regulations.gov, including any personal information provided. Please see the Privacy Act heading below for further information.

Docket: For access to the docket to read background documents or comments, go to http://www.regulations.gov at any time or Room W12–140 on the ground level of the West Building, 1200 New Jersey Avenue SE., Washington, DC, between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The Federal Docket Management System (FDMS) is available 24 hours each day, 365 days each year. If you want acknowledgment that we received your comments, please include a self-addressed, stamped envelope or postcard or print the acknowledgement page that appears after submitting comments on-line.

Privacy Act: In accordance with 5 U.S.C. 553(c), DOT solicits comments from the public to better inform its rulemaking process. DOT posts these comments, without edit, including any personal information the commenter provides, to www.regulations.gov, as described in the system of records notice (DOT/ALL–14 FDMS), which can be reviewed at www.dot.gov/privacy.

FOR FURTHER INFORMATION CONTACT: Ms. Christine A. Hydock, Chief, Medical Programs Division, (202) 366–4001, fmcsamedical@dot.gov, FMCSA, Department of Transportation, 1200 New Jersey Avenue SE., Room W64–113, Washington, DC 20590–0001. Office hours are 8:30 a.m. to 5 p.m., e.t., Monday through Friday, except Federal holidays.

SUPPLEMENTARY INFORMATION:

I. Background

Under 49 U.S.C. 31136(e) and 31315, FMCSA may grant an exemption from the Federal Motor Carrier Safety Regulations for a 2-year period if it finds “such exemption would likely achieve a level of safety that is equivalent to or greater than the level that would be achieved absent such exemption.” The statute also allows the Agency to renew exemptions at the end of the 2-year period. The 39 individuals listed in this notice have recently requested such an exemption from the diabetes prohibition in 49 CFR 391.41(b)(3), which applies to drivers of CMVs in interstate commerce. Accordingly, the Agency will evaluate the qualifications of each applicant to determine whether granting the exemption will achieve the required level of safety mandated by statute.

II. Qualifications of Applicants

Thomas A. Alcon

Mr. Alcon, 32, has had ITDM since 2016. His endocrinologist examined him in 2016 and certified that he has had no severe hypoglycemic reactions resulting in loss of consciousness, requiring the assistance of another person, or resulting in impaired cognitive function that occurred without warning in the past 12 months and no recurrent (2 or more) severe hypoglycemic episodes in the last 5 years. His endocrinologist certifies that Mr. Alcon understands diabetes management and monitoring, has stable control of his diabetes using insulin, and is able to drive a CMV safely. Mr. Alcon meets the requirements of the vision standard at 49 CFR 391.41(b)(10). His optometrist examined him in 2016 and certified that he does not have diabetic retinopathy. He holds a Class A CDL from New Mexico.

John K. Bottkol

Mr. Bottkol, 51, has had ITDM since 2014. His endocrinologist examined him in 2016 and certified that he has had no
severe hypoglycemic reactions resulting in loss of consciousness, requiring the assistance of another person, or resulting in impaired cognitive function that occurred without warning in the past 12 months and no recurrent (2 or more) severe hypoglycemic episodes in the last 5 years. His endocrinologist certifies that Mr. Bottkol understands diabetes management and monitoring, has stable control of his diabetes using insulin, and is able to drive a CMV safely. Mr. Bottkol meets the requirements of the vision standard at 49 CFR 391.41(b)(10). His optometrist examined him in 2016 and certified that he does have diabetic retinopathy.

Donald J. Brinkman

Mr. Brinkman, 61, has had ITDM since 2016. His endocrinologist examined him in 2016 and certified that he has had no severe hypoglycemic reactions resulting in loss of consciousness, requiring the assistance of another person, or resulting in impaired cognitive function that occurred without warning in the past 12 months and no recurrent (2 or more) severe hypoglycemic episodes in the last 5 years. His endocrinologist certifies that Mr. Brinkman understands diabetes management and monitoring, has stable control of his diabetes using insulin, and is able to drive a CMV safely. Mr. Brinkman meets the requirements of the vision standard at 49 CFR 391.41(b)(10). His optometrist examined him in 2016 and certified that he does not have diabetic retinopathy. He holds a Class A CDL from Florida.

John D. Colpitts

Mr. Colpitts, 35, has had ITDM since 1984. His endocrinologist examined him in 2016 and certified that he has had no severe hypoglycemic reactions resulting in loss of consciousness, requiring the assistance of another person, or resulting in impaired cognitive function that occurred without warning in the past 12 months and no recurrent (2 or more) severe hypoglycemic episodes in the last 5 years. His endocrinologist certifies that Mr. Colpitts understands diabetes management and monitoring, has stable control of his diabetes using insulin, and is able to drive a CMV safely. Mr. Colpitts meets the requirements of the vision standard at 49 CFR 391.41(b)(10). His optometrist examined him in 2016 and certified that he does not have diabetic retinopathy. He holds a Class A CDL from Colorado.

Salvatore A. Corrao

Mr. Corrao, 65, has had ITDM since 2015. His endocrinologist examined him in 2016 and certified that he has had no severe hypoglycemic reactions resulting in loss of consciousness, requiring the assistance of another person, or resulting in impaired cognitive function that occurred without warning in the past 12 months and no recurrent (2 or more) severe hypoglycemic episodes in the last 5 years. His endocrinologist certifies that Mr. Corrao understands diabetes management and monitoring, has stable control of his diabetes using insulin, and is able to drive a CMV safely. Mr. Corrao meets the requirements of the vision standard at 49 CFR 391.41(b)(10). His optometrist examined him in 2016 and certified that he does not have diabetic retinopathy. He holds a Class A CDL from Massachusetts.

Patrick R. Dawson

Mr. Dawson, 52, has had ITDM since 2016. His endocrinologist examined him in 2016 and certified that he has had no severe hypoglycemic reactions resulting in loss of consciousness, requiring the assistance of another person, or resulting in impaired cognitive function that occurred without warning in the past 12 months and no recurrent (2 or more) severe hypoglycemic episodes in the last 5 years. His endocrinologist certifies that Mr. Dawson understands diabetes management and monitoring, has stable control of his diabetes using insulin, and is able to drive a CMV safely. Mr. Dawson meets the requirements of the vision standard at 49 CFR 391.41(b)(10). His ophthalmologist examined him in 2016 and certified that he has stable nonproliferative diabetic retinopathy. He holds a Class A CDL from New York.

Steven M. Dunham

Mr. Dunham, 58, has had ITDM since 2010. His endocrinologist examined him in 2016 and certified that he has had no severe hypoglycemic reactions resulting in loss of consciousness, requiring the assistance of another person, or resulting in impaired cognitive function that occurred without warning in the past 12 months and no recurrent (2 or more) severe hypoglycemic episodes in the last 5 years. His endocrinologist certifies that Mr. Dunham understands diabetes management and monitoring, has stable control of his diabetes using insulin, and is able to drive a CMV safely. Mr. Dunham meets the requirements of the vision standard at 49 CFR 391.41(b)(10). His ophthalmologist examined him in 2016 and certified that he does not have diabetic retinopathy.
He holds an operator’s license from New Hampshire.

James H. Elliott

Mr. Elliott, 46, has had ITDM since 1980. His endocrinologist examined him in 2016 and certified that he has had no severe hypoglycemic reactions resulting in loss of consciousness, requiring the assistance of another person, or resulting in impaired cognitive function that occurred without warning in the past 12 months and no recurrent (2 or more) severe hypoglycemic episodes in the last 5 years. His endocrinologist certifies that Mr. Elliott understands diabetes management and monitoring, has stable control of his diabetes using insulin, and is able to drive a CMV safely. Mr. Elliott meets the requirements of the vision standard at 49 CFR 391.41(b)(10). His optometrist examined him in 2016 and certified that he does not have diabetic retinopathy. He holds an operator’s license from Massachusetts.

Richard L. Farris

Mr. Farris, 60, has had ITDM since 2016. His endocrinologist examined him in 2016 and certified that he has had no severe hypoglycemic reactions resulting in loss of consciousness, requiring the assistance of another person, or resulting in impaired cognitive function that occurred without warning in the past 12 months and no recurrent (2 or more) severe hypoglycemic episodes in the last 5 years. His endocrinologist certifies that Mr. Farris understands diabetes management and monitoring, has stable control of his diabetes using insulin, and is able to drive a CMV safely. Mr. Farris meets the requirements of the vision standard at 49 CFR 391.41(b)(10). His ophthalmologist examined him in 2016 and certified that he has stable nonproliferative diabetic retinopathy. He holds an operator’s license from Ohio.

Frank A.W. Emrath

Mr. Emrath, 61, has had ITDM since 2016. His endocrinologist examined him in 2016 and certified that he has had no severe hypoglycemic reactions resulting in loss of consciousness, requiring the assistance of another person, or resulting in impaired cognitive function that occurred without warning in the past 12 months and no recurrent (2 or more) severe hypoglycemic episodes in the last 5 years. His endocrinologist certifies that Mr. Emrath understands diabetes management and monitoring, has stable control of his diabetes using insulin, and is able to drive a CMV safely. Mr. Emrath meets the requirements of the vision standard at 49 CFR 391.41(b)(10). His optometrist examined him in 2016 and certified that he does not have diabetic retinopathy. He holds a Class A CDL from Wisconsin.

Kirk M. Faria

Mr. Faria, 24, has had ITDM since 1993. His endocrinologist examined him in 2016 and certified that he has had no severe hypoglycemic reactions resulting in loss of consciousness, requiring the assistance of another person, or resulting in impaired cognitive function that occurred without warning in the past 12 months and no recurrent (2 or more) severe hypoglycemic episodes in the last 5 years. His endocrinologist certifies that Mr. Faria understands diabetes management and monitoring, has stable control of his diabetes using insulin, and is able to drive a CMV safely. Mr. Faria meets the requirements of the vision standard at 49 CFR 391.41(b)(10). His optometrist examined him in 2016 and certified that he does not have diabetic retinopathy. He holds a Class A CDL from Pennsylvania.

Matthew D. Homan

Mr. Homan, 38, has had ITDM since 2011. His endocrinologist examined him in 2016 and certified that he has had no severe hypoglycemic reactions resulting in loss of consciousness, requiring the assistance of another person, or resulting in impaired cognitive function that occurred without warning in the past 12 months and no recurrent (2 or more) severe hypoglycemic episodes in the last 5 years. His endocrinologist certifies that Mr. Homan understands diabetes management and monitoring, has stable control of his diabetes using insulin, and is able to drive a CMV safely. Mr. Homan meets the requirements of the vision standard at 49 CFR 391.41(b)(10). His ophthalmologist examined him in 2016 and certified that he has stable nonproliferative diabetic retinopathy. He holds an operator’s license from Michigan.

Donna J. Jones

Ms. Jones, 59, has had ITDM since 2016. Her endocrinologist examined her in 2016 and certified that she has had no severe hypoglycemic reactions resulting in loss of consciousness, requiring the assistance of another person, or resulting in impaired cognitive function that occurred without warning in the past 12 months and no recurrent (2 or more) severe hypoglycemic episodes in the last 5 years. Her endocrinologist certifies that Ms. Jones understands diabetes management and monitoring has stable control of her diabetes using insulin, and is able to drive a CMV safely. Ms. Jones meets the requirements of the vision standard at 49 CFR 391.41(b)(10). Her optometrist examined her in 2016 and certified that she does not have diabetic retinopathy. She holds a Class B CDL from Illinois.

Jamison G. Land

Mr. Land, 37, has had ITDM since 2015. His endocrinologist examined him in 2016 and certified that he has had no severe hypoglycemic reactions resulting in loss of consciousness, requiring the assistance of another person, or resulting in impaired cognitive function that occurred without warning in the past 12 months and no recurrent (2 or more) severe hypoglycemic episodes in the last 5 years. His endocrinologist certifies that Mr. Land understands diabetes management and monitoring, has stable control of his diabetes using insulin, and is able to drive a CMV safely. Mr. Land meets the requirements of the vision standard at 49 CFR 391.41(b)(10). His optometrist examined him in 2016 and certified that he does not have diabetic retinopathy. He holds a Class A CDL from Virginia.

Richard H. Leger

Mr. Leger, 43, has had ITDM since 2016. His endocrinologist examined him in 2016 and certified that he has had no severe hypoglycemic reactions resulting in loss of consciousness, requiring the assistance of another person, or resulting in impaired cognitive function that occurred without warning in the past 12 months and no recurrent (2 or more) severe hypoglycemic episodes in the last 5 years. His endocrinologist certifies that Mr. Leger understands diabetes management and monitoring, has stable control of his diabetes using insulin, and is able to drive a CMV safely. Mr. Leger meets the requirements of the vision standard at 49 CFR 391.41(b)(10). His optometrist examined him in 2016 and certified that he has stable nonproliferative diabetic retinopathy. He holds a Class A CDL from Pennsylvania.
impaired cognitive function that occurred without warning in the past 12 months and no recurrent (2 or more) severe hypoglycemic episodes in the last 5 years. His endocrinologist certifies that Mr. McDaniel understands diabetes management and monitoring, has stable control of his diabetes using insulin, and is able to drive a CMV safely. Mr. McDaniel meets the requirements of the vision standard at 49 CFR 391.41(b)(10). His ophthalmologist examined him in 2016 and certified that he does not have diabetic retinopathy. He holds a Class A CDL from Michigan.

Clay A. McDaniel

Mr. McDaniel, 21, has had ITDM since 1997. His endocrinologist examined him in 2016 and certified that he has had no severe hypoglycemic reactions resulting in loss of consciousness, requiring the assistance of another person, or resulting in impaired cognitive function that occurred without warning in the past 12 months and no recurrent (2 or more) severe hypoglycemic episodes in the last 5 years. His endocrinologist certifies that Mr. McDaniel understands diabetes management and monitoring, has stable control of his diabetes using insulin, and is able to drive a CMV safely. Mr. McDaniel meets the requirements of the vision standard at 49 CFR 391.41(b)(10). His ophthalmologist examined him in 2016 and certified that he does not have diabetic retinopathy. He holds a Class A CDL from Indiana.

Solomon J. Mayfield

Mr. Mayfield, 45, has had ITDM since 2012. His endocrinologist examined him in 2016 and certified that he has had no severe hypoglycemic reactions resulting in loss of consciousness, requiring the assistance of another person, or resulting in impaired cognitive function that occurred without warning in the past 12 months and no recurrent (2 or more) severe hypoglycemic episodes in the last 5 years. His endocrinologist certifies that Mr. Mayfield understands diabetes management and monitoring, has stable control of his diabetes using insulin, and is able to drive a CMV safely. Mr. Mayfield meets the requirements of the vision standard at 49 CFR 391.41(b)(10). His optometrist examined him in 2016 and certified that he does not have diabetic retinopathy. He holds a Class A CDL from Louisiana.

Calvin W. McDaniel

Mr. McDaniel, 62, has had ITDM since 2015. His endocrinologist examined him in 2016 and certified that he has had no severe hypoglycemic reactions resulting in loss of consciousness, requiring the assistance of another person, or resulting in impaired cognitive function that occurred without warning in the past 12 months and no recurrent (2 or more) severe hypoglycemic episodes in the last 5 years. His endocrinologist certifies that Mr. McDaniel understands diabetes management and monitoring, has stable control of his diabetes using insulin, and is able to drive a CMV safely. Mr. McDaniel meets the requirements of the vision standard at 49 CFR 391.41(b)(10). His optometrist examined him in 2016 and certified that he does not have diabetic retinopathy. He holds a CDL from Georgia.

Steven D. Mellott

Mr. Mellott, 68, has had ITDM since 2011. His endocrinologist examined him in 2016 and certified that he has had no severe hypoglycemic reactions resulting in loss of consciousness, requiring the assistance of another person, or resulting in impaired cognitive function that occurred without warning in the past 12 months and no recurrent (2 or more) severe hypoglycemic episodes in the last 5 years. His endocrinologist certifies that Mr. Mellott understands diabetes management and monitoring, has stable control of his diabetes using insulin, and is able to drive a CMV safely. Mr. Mellott meets the requirements of the vision standard at 49 CFR 391.41(b)(10). His ophthalmologist examined him in 2016 and certified that he has stable nonproliferative diabetic retinopathy. He holds a Class A CDL from Ohio.

Sean R.T. Murray

Mr. Murray, 43, has had ITDM since 2014. His endocrinologist examined him in 2016 and certified that he has had no severe hypoglycemic reactions resulting in loss of consciousness, requiring the assistance of another person, or resulting in impaired cognitive function that occurred without warning in the past 12 months and no recurrent (2 or more) severe hypoglycemic episodes in the last 5 years. His endocrinologist certifies that Mr. Murray understands diabetes management and monitoring, has stable control of his diabetes using insulin, and is able to drive a CMV safely. Mr. Murray meets the requirements of the vision standard at 49 CFR 391.41(b)(10). His optometrist examined him in 2016 and certified that he does not have diabetic retinopathy. He holds a Class A CDL from Kansas.

Michael K. Piirto

Mr. Piirto, 49, has had ITDM since 2008. His endocrinologist examined him in 2016 and certified that he has had no severe hypoglycemic reactions resulting in loss of consciousness, requiring the assistance of another person, or resulting in impaired cognitive function that occurred without warning in the past 12 months and no recurrent (2 or more) severe hypoglycemic episodes in the last 5 years. His endocrinologist certifies that Mr. Piirto understands diabetes management and monitoring, has stable control of his diabetes using insulin, and is able to drive a CMV safely. Mr. Piirto meets the requirements of the vision standard at 49 CFR 391.41(b)(10). His optometrist examined him in 2016 and certified that he does not have diabetic retinopathy. He holds a Class B CDL from Indiana.

William A. Pope, Jr.

Mr. Pope, 45, has had ITDM since 2016. His endocrinologist examined him
in 2016 and certified that he has had no severe hypoglycemic reactions resulting in loss of consciousness, requiring the assistance of another person, or resulting in impaired cognitive function that occurred without warning in the past 12 months and no recurrent (2 or more) severe hypoglycemic episodes in the last 5 years. His endocrinologist certifies that Mr. Rentschler understands diabetes management and monitoring, has stable control of his diabetes using insulin, and is able to drive a CMV safely. Mr. Rentschler meets the requirements of the vision standard at 49 CFR 391.41(b)(10). His optometrist examined him in 2016 and certified that he does not have diabetic retinopathy. He holds a Class A CDL from Wyoming.

**Phillip A. Rentschler**

Mr. Rentschler, 59, has had ITDM since 2016. His endocrinologist examined him in 2016 and certified that he has had no severe hypoglycemic reactions resulting in loss of consciousness, requiring the assistance of another person, or resulting in impaired cognitive function that occurred without warning in the past 12 months and no recurrent (2 or more) severe hypoglycemic episodes in the last 5 years. His endocrinologist certifies that Mr. Rentschler understands diabetes management and monitoring, has stable control of his diabetes using insulin, and is able to drive a CMV safely. Mr. Rentschler meets the requirements of the vision standard at 49 CFR 391.41(b)(10). His optometrist examined him in 2016 and certified that he does not have diabetic retinopathy. He holds a Class A CDL from Iowa.

**Craig A. Squib**

Mr. Squib, 54, has had ITDM since 1989. His endocrinologist examined him in 2016 and certified that he has had no severe hypoglycemic reactions resulting in loss of consciousness, requiring the assistance of another person, or resulting in impaired cognitive function that occurred without warning in the past 12 months and no recurrent (2 or more) severe hypoglycemic episodes in the last 5 years. His endocrinologist certifies that Mr. Squib understands diabetes management and monitoring, has stable control of his diabetes using insulin, and is able to drive a CMV safely. Mr. Squib meets the requirements of the vision standard at 49 CFR 391.41(b)(10). His optometrist examined him in 2016 and certified that he does not have diabetic retinopathy. He holds a Class A CDL from Pennsylvania.
He holds an operator’s license from Idaho.

**Daniel R. Violette**

Mr. Violette, 60, has had ITDM since 2015. His endocrinologist examined him in 2016 and certified that he has had no severe hypoglycemic reactions resulting in loss of consciousness, requiring the assistance of another person, or resulting in impaired cognitive function that occurred without warning in the past 12 months and no recurrent (2 or more) severe hypoglycemic episodes in the last 5 years. His endocrinologist certifies that Mr. Violette understands diabetes management and monitoring, has stable control of his diabetes using insulin, and is able to drive a CMV safely. Mr. Violette meets the requirements of the vision standard at 49 CFR 391.41(b)(10). His optometrist examined him in 2016 and certified that he does not have diabetic retinopathy. He holds a Class A CDL from Pennsylvania.

**Robert C. Williams**

Mr. Williams, 43, has had ITDM since 1989. His endocrinologist examined him in 2016 and certified that he has had no severe hypoglycemic reactions resulting in loss of consciousness, requiring the assistance of another person, or resulting in impaired cognitive function that occurred without warning in the past 12 months and no recurrent (2 or more) severe hypoglycemic episodes in the last 5 years. His endocrinologist certifies that Mr. Williams understands diabetes management and monitoring, has stable control of his diabetes using insulin, and is able to drive a CMV safely. Mr. Williams meets the requirements of the vision standard at 49 CFR 391.41(b)(10). His ophthalmologist examined him in 2016 and certified that he does not have diabetic retinopathy. He holds an operator’s license from Oregon.

**David W. Wiltrout**

Mr. Wiltrout, 64, has had ITDM since 2013. His endocrinologist examined him in 2016 and certified that he has had no severe hypoglycemic reactions resulting in loss of consciousness, requiring the assistance of another person, or resulting in impaired cognitive function that occurred without warning in the past 12 months and no recurrent (2 or more) severe hypoglycemic episodes in the last 5 years. His endocrinologist certifies that Mr. Wiltrout understands diabetes management and monitoring, has stable control of his diabetes using insulin, and is able to drive a CMV safely. Mr. Wiltrout meets the requirements of the vision standard at 49 CFR 391.41(b)(10). His optometrist examined him in 2016 and certified that he does not have diabetic retinopathy. He holds an operator’s license.

**III. Request for Comments**

In accordance with 49 U.S.C. 31136(e) and 31315, FMCSA requests public comment from all interested persons on the exemption petitions described in this notice. We will consider all comments received before the close of business on the closing date indicated in the date section of the notice.

FMCSA notes that section 4129 of the Safe, Accountable, Flexible and Efficient Transportation Equity Act: A Legacy for Users requires the Secretary to revise its diabetes exemption program established on September 3, 2003 (68 FR 52441). The revision must provide for individual assessment of drivers with diabetes mellitus, and be consistent with the criteria described in section 4018 of the Transportation Equity Act for the 21st Century (49 U.S.C. 31305).

Section 4129 requires: (1) Elimination of the requirement for 3 years of experience operating CMVs while being treated with insulin; and (2) establishment of a specified minimum period of insulin use to demonstrate stable control of diabetes before being allowed to operate a CMV.

In response to section 4129, FMCSA made immediate revisions to the diabetes exemption program established by the September 3, 2003 notice. FMCSA discontinued use of the 3-year driving experience and fulfilled the requirements of section 4129 while continuing to ensure that operation of CMVs by drivers with ITDM will achieve the requisite level of safety required of all exemptions granted under 49 U.S.C. 31136(e).

Section 4129 also directed FMCSA to ensure that drivers of CMVs with ITDM are not held to a higher standard than other drivers, with the exception of limited operating, monitoring and medical requirements that are deemed medically necessary.

The FMCSA concluded that all of the operating, monitoring and medical requirements set out in the September 3, 2003 notice, except as modified, were in compliance with section 4129(d). Therefore, all of the requirements set out in the September 3, 2003 notice, except as modified by the notice in the Federal Register on November 8, 2005 (70 FR 67777), remain in effect.

### IV. Submitting Comments

You may submit your comments and material online or by fax, mail, or hand delivery, but please use only one of these means. FMCSA recommends that you include your name and a mailing address, an email address, or a phone number in the body of your document so that FMCSA can contact you if there are questions regarding your submission.

To submit your comment online, go to [http://www.regulations.gov](http://www.regulations.gov) and in the search box insert the docket number FMCSA—2016–0221 and click the search button. When the new screen appears, click on the blue “Comment Now!” button on the right hand side of the page. On the new page, enter information required including the specific section of this document to which each comment applies, and provide a reason for each suggestion or recommendation. If you submit your comments by mail or hand delivery, submit them in an unbound format, no larger than 8½ by 11 inches, suitable for copying and electronic filing. If you submit comments by mail and would like to know that they reached the facility, please enclose a stamped, self-addressed postcard or envelope.

We will consider all comments and material received during the comment period. FMCSA may issue a final determination at any time after the close of the comment period.

## V. Viewing Comments and Documents

To view comments, as well as any documents mentioned in this preamble, go to [http://www.regulations.gov](http://www.regulations.gov) and in the search box insert the docket number FMCSA—2016–0221 and click “Search.” Next, click “Open Docket Folder” and you will find all documents and comments related to this notice.

Issued on: September 22, 2016.

Larry W. Minor,
Associate Administrator for Policy.

### DEPARTMENT OF TRANSPORTATION

Federal Railroad Administration

[Docket No. FRA–2011–0027, Notice No. 9]

Northeast Corridor Safety Committee; Notice of Meeting

**AGENCY:** Federal Railroad Administration (FRA), Department of Transportation (DOT).

**ACTION:** Announcement of Northeast Corridor Safety Committee (NECSC) meeting.
SUMMARY: FRA announces the seventh meeting of the NECSC, a Federal Advisory Committee mandated by Section 212 of the Passenger Rail Investment and Improvement Act of 2008 (PRIIA). The NECSC is made up of stakeholders operating on the Northeast Corridor, and the purpose of the NECSC is to provide annual recommendations to the Secretary of Transportation. The NECSC meeting topics will include presentations on system safety, the Tier III passenger equipment rulemaking, Amtrak 160 mph waiver requests, split rail derails on track leading to the Northeast Corridor, drug and alcohol issues, and a general discussion of safety issues. This agenda is subject to change.

DATES: The NECSC meeting is scheduled to commence at 9:30 a.m. on Tuesday, October 18, 2016, and will adjourn by 4:30 p.m.

ADDRESSES: The NECSC meeting will be held at the National Housing Center located at 1201 15th Street NW., Washington, DC 20005. The meeting is open to the public on a first-come, first-served basis, and is accessible to individuals with disabilities. Sign and oral interpretation can be made available if requested 10 calendar days before the meeting.

FOR FURTHER INFORMATION CONTACT: Mr. Kenton Kilgore, NECSC Administrative Officer/Coordinator, FRA, 1200 New Jersey Avenue SE., Mailstop 25, Washington, DC 20590, (202) 493–6286; or Mr. Larry Woolverton, Executive Officer for Safety Analysis, FRA, 1200 New Jersey Avenue SE., Mailstop 25, Washington, DC 20590, (202) 493–6212.

SUPPLEMENTARY INFORMATION: The NECSC is mandated by a statutory provision in Section 212 of the PRIIA (codified at 49 U.S.C. 24905(f)). The NECSC is chartered by the Secretary of Transportation and is an official Federal Advisory Committee established in accordance with the provisions of the Federal Advisory Committee Act, as amended, 5 U.S.C. Title 5—Appendix.

Issued in Washington, DC, on September 26, 2016.

Robert C. Lauby,
Associate Administrator for Railroad Safety, Chief Safety Officer.

BILLING CODE 4910–06–P

DEPARTMENT OF THE TREASURY
Office of Foreign Assets Control
Sanctions Actions Pursuant to Executive Order 13224

AGENCY: Office of Foreign Assets Control, Treasury.

ACTION: Notice.

SUMMARY: The Treasury Department’s Office of Foreign Assets Control (OFAC) is removing the name of two entities, whose property and interests in property were blocked pursuant to Executive Order 13224, from the list of Specially Designated Nationals and Blocked Persons (SDN List).

DATES: OFAC’s actions described in this notice were effective on August 16, 2016.

SUPPLEMENTARY INFORMATION:
Electronic Availability
The SDN List and additional information concerning OFAC sanctions programs are available from OFAC‘s Web site (www.treas.gov/ofac).

Notice of OFAC Actions
The following entities are removed from the SDN List, effective as of August 16, 2016.

Entities
1. INTERNATIONAL ISLAMIC RELIEF ORGANIZATION INDONESIA BRANCH OFFICE (a.k.a. AL IGATHA AL-ISLAMIYA; a.k.a. EGASSA; a.k.a. HAYAT AL-AGHATHA AL-ISLAMI AL-ALAMIYA; a.k.a. HAYAT AL-IGATHA; a.k.a. BILLING CODE 4810–AL–P

DEPARTMENT OF THE TREASURY

Internal Revenue Service

Proposed Collection; Comment Request for Obligations of States and Political Subdivisions Statutory Elections

AGENCY: Internal Revenue Service (IRS), Treasury.

ACTION: Notice and request for comments.

SUMMARY: The Department of the Treasury, as part of its continuing effort to reduce paperwork and respondent burden, invites the general public and other Federal agencies to take this opportunity to comment on proposed and/or continuing information collections, as required by the Paperwork Reduction Act of 1995, Public Law 104–13 (44 U.S.C. 3506(c)(2)(A)). Currently, the IRS is soliciting comments concerning, obligations of states and political subdivisions.

DATES: Written comments should be received on or before November 29, 2016 to be assured of consideration.

ADDRESSES: Direct all written comments to Tuawana Pinkston, Internal Revenue Service, Room 6526, 1111 Constitution Avenue NW., Washington, DC 20224.

FOR FURTHER INFORMATION CONTACT: Requests for additional information or copies of the regulations should be directed to Kerry Dennis, at Internal Revenue Service, Room 6526, 1111 Constitution Avenue NW., Washington, DC 20224, or through the internet at Kerry.Dennis@irs.gov.

SUPPLEMENTARY INFORMATION:

Title: Obligations of States and Political Subdivisions.

OMB Number: 1545–1730.

Regulation Project Number: TD 8941.

Abstract: Section 421(f)(4) of the Internal Revenue Code of 1986 permits a person engaged in the local furnishing of electric energy or gas that uses facilities financed with exempt facility bonds under section 142(a)(8), and that expands its service area in a manner inconsistent with the requirements of sections 142(a)(8) and 142(f) to make an election to ensure that those bonds will continue to be treated as tax-exempt bonds. The final regulations (1.142(f)–1) set forth the required time and manner of making this statutory election.

Current Actions: There is no change to this existing regulation.

Type of Review: Extension of a currently approved collection.

Affected Public: Business or other for-profit organizations, and state, local or tribal governments.

Estimated Number of Respondents: 15.

Estimated Time per Respondent: 1 hour.

Estimate Total Annual Burden Hours: 15.

The following paragraph applies to all of the collections of information covered by this notice:

An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless the collection of information displays a valid OMB control number. Books or records relating to a collection of information must be retained as long as their contents may become material in the administration of any internal revenue law. Generally, tax returns and tax return information are confidential, as required by 26 U.S.C. 6103.

Request for Comments: Comments submitted in response to this notice will be summarized and/or included in the request for OMB approval. All comments will become a matter of public record. Comments are invited on:

(a) Whether the collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility;
(b) the accuracy of the agency’s estimate of the burden of the collection of information; (c) ways to enhance the quality, utility, and clarity of the information to be collected; (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology; and (e) estimates of capital or start-up costs and costs of operation, maintenance, and purchase of services to provide information.

Approved: September 21, 2016.

Tuawana Pinkston,

IRS Reports Clearance Officer.

DEPARTMENT OF THE TREASURY

Internal Revenue Service

Proposed Collection; Comment Request for Form 1363

AGENCY: Internal Revenue Service (IRS), Treasury.

ACTION: Notice and request for comments.

SUMMARY: The Department of the Treasury, as part of its continuing effort to reduce paperwork and respondent burden, invites the general public and other Federal agencies to take this opportunity to comment on proposed and/or continuing information collections, as required by the Paperwork Reduction Act of 1995. Currently, the IRS is soliciting comments concerning Form 1363, Export Exemption Certificate.

DATES: Written comments should be received on or before November 29, 2016 to be assured of consideration.

ADDRESSES: Direct all written comments to Tuawana Pinkston, Internal Revenue Service, Room 6526, 1111 Constitution Avenue NW., Washington, DC 20224.

FOR FURTHER INFORMATION CONTACT: Requests for additional information or copies of the form and instructions should be directed to Kerry Dennis, Internal Revenue Service, Room 6526, 1111 Constitution Avenue NW., Washington, DC 20224, or through the internet, at Kerry.Dennis@irs.gov.

SUPPLEMENTARY INFORMATION:

Title: Export Exemption Certificate.
OMB Number: 1545–0685.
Form Number: Form 1363.

Abstract: Internal Revenue Code section 427(b)(2) exempts exported property from the excise tax on transportation of property. Regulation § 49.4271–1(d)(2) authorizes the filing of Form 1363 by the shipper to request tax exemption for a shipment or a series of shipments. The information on the form is used by the IRS to verify shipments of property made tax-free.

Current Actions: There are no changes being made to this form at this time.

Type of Review: Extension of a Revision of a currently approved collection.

Affected Public: Business or other for-profit organizations and individuals or households.

Estimated Number of Respondents: 100,000.
Estimated Time per Respondent: 4 hours, 15 minutes.
Estimated Total Annual Burden Hours: 425,000.

The following paragraph applies to all of the collections of information covered by this notice:

An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless the collection of information displays a valid OMB control number. Books or records relating to a collection of information must be retained as long as their contents may become material in the administration of any internal revenue law. Generally, tax returns and tax return information are confidential, as required by 26 U.S.C. 6103.

Request for Comments: Comments submitted in response to this notice will be summarized and/or included in the request for OMB approval. All comments will become a matter of public record. Comments are invited on: (a) Whether the collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency’s estimate of the burden of the collection of information; (c) ways to enhance the quality, utility, and clarity of the information to be collected; (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology; and (e) estimates of capital or start-up costs and costs of operation, maintenance, and purchase of services to provide information.

Approved: September 19, 2016.

IRS Reports Clearance Officer.

DEPARTMENT OF THE TREASURY
Internal Revenue Service
Proposed Collection: Comment Request for Form 8703
AGENCY: Internal Revenue Service (IRS), Treasury.
ACTION: Notice and request for comments.

SUMMARY: The Department of the Treasury, as part of its continuing effort to reduce paperwork and respondent burden, invites the general public and other Federal agencies to take this opportunity to comment on proposed and/or continuing information collections, as required by the Paperwork Reduction Act of 1995, Public Law 104–13 (44 U.S.C. 3506(c)(2)(A)). Currently, the IRS is soliciting comments concerning Form 8703, Annual Certification of a Residential Rental Project.

DATES: Written comments should be received on or before November 29, 2016 to be assured of consideration.

ADDRESSES: Direct all written comments to Tuawana Pinkston, Internal Revenue Service, Room 6526, 1111 Constitution Avenue NW., Washington, DC 20224.

FOR FURTHER INFORMATION CONTACT: Requests for additional information or copies of the form and instructions should be directed to Kerry Dennis, at Internal Revenue Service, Room 6526, 1111 Constitution Avenue NW., Washington, DC 20224, or through the internet at Kerry.Dennis@irs.gov.

SUPPLEMENTARY INFORMATION:
Title: Annual Certification of a Residential Rental Project.
OMB Number: 1545–1038.
Form Number: 8703.
Abstract: Form 8703 is used by the operator of a residential rental project to provide annual information that the IRS will use to determine whether a project continues to be a qualified residential rental project under Internal Revenue Code section 142(d). If so, and certain other requirements are met, bonds issued in connection with the project are considered “exempt facility bonds” and the interest paid on them is not taxable to the recipient.

Current Actions: There is no change in the paperwork burden previously approved by OMB. This form is being submitted for renewal purposes only.

Approved: September 16, 2016.

DEPARTMENT OF THE TREASURY

Submission for OMB Review; Comment Request

September 27, 2016.

The Department of the Treasury will submit the following information collection request to the Office of Management and Budget (OMB) for review and clearance in accordance with the Paperwork Reduction Act of 1995, Public Law 104–13, on or after the date of publication of this notice.

DATES: Comments should be received on or before October 31, 2016 to be assured of consideration.

ADDRESSES: Send comments regarding the burden estimates, or any other aspect of the information collection, including suggestions for reducing the burden, to (1) Office of Information and Regulatory Affairs, Office of Management and Budget, Attention: Desk Officer for Treasury, New Executive Office Building, Room 10235, Washington, DC 20503, or email at OIRA_Submission@OMB.EOP.gov and (2) Treasury PRA Clearance Officer, 1750 Pennsylvania Ave. NW., Suite 8117, Washington, DC 20220, or email at PRA@treasury.gov.

FOR FURTHER INFORMATION CONTACT: Copies of the submissions may be obtained by emailing PRA@treasury.gov, calling (202) 622–1295, or viewing the entire information collection request at www.reginfo.gov.

SUPPLEMENTARY INFORMATION:

Internal Revenue Service (IRS)

OMB Control Number: 1545–0889.

Type of Review: Extension of a currently approved collection.

Title: Disclosure Statement (Form 8275), and Regulation Disclosure Statement (Form 8275–R).

Form: Forms 8275, 8275–R.

Abstract: Taxpayers and tax return preparers use Form 8275 to disclose items or positions that are not otherwise adequately disclosed on a tax return to avoid certain penalties.

Affected Public: Businesses or other for-profits.

Estimated Total Annual Burden Hours: 100.

OMB Control Number: 1545–2075.

Type of Review: Extension of a currently approved collection.

Title: Form 13614–NR—Nonresident Alien Intake and Interview Sheet.

Form: Form 13614.

Abstract: The completed form is used by screeners, preparers, or others involved in the tax return preparation process to more accurately complete tax returns of international students and scholars. These persons need assistance having their returns prepared so they can fully comply with the law.

Affected Public: Individuals or households.

Estimated Total Annual Burden Hours: 141,260.

OMB Control Number: 1545–2158.

Type of Review: Extension of a currently approved collection.

Title: Notice 2010–54: Production Tax Credit for Refined Coal.

Abstract: This notice sets forth interim guidance pending the issuance of regulations relating to the tax credit under § 45 of the Internal Revenue Code (Code) for refined coal.

Affected Public: Businesses or other for-profits.

Estimated Total Annual Burden Hours: 1,500.

Brenda Simms,
Treasury PRA Clearance Officer.

Part II

Department of Health and Human Services

Administration for Children and Families

45 CFR Part 98

Child Care and Development Fund (CCDF) Program; Final Rule
DEPARTMENT OF HEALTH AND HUMAN SERVICES

Administration for Children and Families

45 CFR Part 98

RIN 0970–AC67

Child Care and Development Fund (CCDF) Program

AGENCY: Office of Child Care (OCC), Administration for Children and Families (ACF), Department of Health and Human Services (HHS).

ACTION: Final rule.

SUMMARY: This final rule makes regulatory changes to the Child Care and Development Fund (CCDF) based on the Child Care and Development Block Grant Act of 2014. These changes strengthen requirements to protect the health and safety of children in child care; help parents make informed consumer choices and access information to support child development; provide equal access to stable, high-quality child care for low-income children; and enhance the quality of child care and the early childhood workforce.

DATES: Effective: November 29, 2016. Compliance date: States and Territories are expected to be in full compliance by the end of the Fiscal Year (FY) 2016—2018 CCDF Plan period. ACF will determine compliance with provisions in this final rule through review and approval of the FY 2019—2021 CCDF Plans that become effective October 1, 2018 and through the use of federal monitoring of progress in accordance with section 98.90 prior to that date.

For Tribal Lead Agencies, ACF will determine compliance through review and approval of the FY 2020—2022 Tribal CCDF Plans that become effective October 1, 2019. See further discussion of effective and compliance dates in the background section of this rule.

FOR FURTHER INFORMATION CONTACT: Andrew Williams, Office of Child Care at 202–401–4795 (not a toll-free call). Deaf and hearing impaired individuals may call the Federal Dual Party Relay Service at 1–800–877–8339 between 8 a.m. and 7 p.m. Eastern Time.

I. Executive Summary

Overview. On November 19, 2014, President Barack Obama signed the Child Care and Development Block Grant (CCDBG) Act of 2014 (Pub. L. 113–186) into law following its passage in the 113th Congress. The CCDBG Act, as amended (42 U.S.C. 9858 et seq.), and hereinafter referred to as the “Act”), along with Section 418 of the Social Security Act (42 U.S.C. 618) authorizes the Child Care and Development Fund (CCDF), which is the primary Federal funding source devoted to providing low-income families who are working or participating in education or training activities with help paying for child care and improving the quality of child care for all children.

The bipartisan CCDBG Act of 2014 made sweeping statutory changes that require significant reforms to State and Territory CCDBG programs to raise the health, safety, and quality of child care and provide more stable child care assistance to families. It expanded the purposes of CCDF for the first time since 1996, ushering in a new era for child care in this country. Since 1996, a significant body of research has demonstrated the importance of early childhood development and how stable, high-quality early experiences can positively influence that development and contribute to children’s futures. In particular, low-income children stand to benefit the most from a high-quality early childhood experience. Research has also shown the important role of child care financial assistance in helping parents afford reliable child care in order to obtain and maintain stable employment or pursue education. The reauthorized Act recognizes CCDF as an integral program to promote both the healthy development of children and parents’ pathways to economic stability.

In Fiscal Year (FY) 2014, CCDF provided child care assistance to 1.4 million children from nearly 1 million low-income working families in an average month. The Congressional reauthorization of CCDBG made clear that the prior law was inadequate to protect the health and safety of children in care and that more needs to be done to increase the quality of CCDF-funded child care. It also recognized the central importance of access to subsidy continuity in supporting parents’ ability to achieve financial stability and children’s ability to develop nurturing relationships with their caregivers, which creates the foundation for a high-quality early learning experience.

Purpose of this regulatory action. The majority of CCDBG regulations at 45 CFR parts 98 and 99 were last revised in 1998 (with the exception of some more recent updates related to State match and error reporting). This regulatory action is needed to update the regulations to accord with the reauthorized Act and to reflect what has been learned since 1998 about child care quality and child development.

Legal authority. This final rule is being issued under the authority granted to the Secretary of Health and Human Services by the CCDBG Act of 1990, as amended, (42 U.S.C. 9858 et seq.) and Section 418 of the Social Security Act (42 U.S.C. 618).

Major provisions of the final rule. The final rule addresses the CCDBG Act of 2014, which includes provisions to: (1) Protect the health and safety of children in child care; (2) help parents make informed consumer choices and access information to support child development; (3) provide equal access to stable, high-quality child care for low-income children; and (4) enhance the quality of child care and the early childhood workforce.

Protect Health and Safety of Children in Child Care

This rule provides details on the health and safety standards established in the CCDBG Act of 2014, including health and safety training.
comprehensive background checks, and monitoring. The Act requires States to monitor providers receiving CCDF funds (including those that are license-exempt), at least annually, to determine whether health and safety practices and standards are being followed in the child care setting, including a pre-licensure visit for licensed providers. Regular monitoring of child care settings is necessary to ensure compliance with appropriate standards that protect the health and safety of children. However, this rule allows Lead Agencies to develop alternative monitoring requirements for CCDF-funded care provided in the child’s home and exempts relative caregivers from the monitoring and training requirements at the option of Lead Agencies. This flexibility allows Lead Agencies to address the unique characteristics of these care arrangements.

In this final rule, we address the Act’s background check requirements by requiring all child care staff members (including prospective staff members) of all licensed, regulated, or registered child care providers and all child care providers eligible to deliver CCDF services to have a comprehensive background check, unless they are related to all children in their care. We extend the background check requirement to all adults residing in family child care homes. All parents, regardless of whether they receive CCDF assistance, deserve this basic protection of knowing that those individuals who have access to their children do not have prior records of behavior that could endanger their children.

The Act requires Lead Agencies to establish standards and training in 10 topic areas related to health and safety that are fundamental for any child care setting, such as first aid, CPR, and safe sleep practices. We added recognizing and reporting child abuse and neglect to this list. The Act also requires Lead Agencies to maintain records of substantiated parental complaints about child care. The final rule requires Lead Agencies to designate a hotline or similar process for parental complaints. Child care providers are required to report serious injuries or deaths that occur in child care settings in order to inform regulatory or other policy changes to improve health and safety.

Help Parents Make Informed Consumer Choices and Access Information To Support Child Development

The Act expanded requirements for the content of consumer education available to parents receiving CCDF assistance, the public, and where applicable, child care providers. By adding providers, Congress recognized the positive role trusted caregivers can play in communicating and partnering with parents on a daily basis regarding their children’s development and available resources in the community. Effective consumer education strategies are important to inform parental choice of child care and to engage parents in the development of their children in child care settings—a new purpose of the CCDF added by the CCDBG Act of 2014. States and territories have the opportunity to consider how information can be best provided to low-income parents through their interactions with CCDF, partner agencies, and child care providers, as well as through electronic means such as a Web site. Parents face great challenges in finding reliable information and making informed consumer choices about child care for their children.

The Act requires Lead Agencies to make available via a consumer-friendly and easily accessible Web site information on policies and procedures regarding: (1) Licensing of child care providers; (2) conducting background checks and the offenses that keep a provider from being allowed to care for children; and (3) monitoring of child care providers. This is done through a single Web site that is easy for families to navigate and provides widest possible access to individuals who speak languages other than English and persons with disabilities. This Web site must give parents access to CCDF information about the quality of their chosen providers. The final rule also requires Lead Agencies to provide CCDF parents with a consumer statement in hard copy or electronically (such as referral to the consumer education Web site) with specific information about the child care provider they select.

The Act requires Lead Agencies to make results of monitoring available in a consumer-friendly and easily accessible manner. We require posting a minimum of three years of results. If full reports are not in plain language, Lead Agencies must post a plain language summary for each report in addition to the full monitoring and inspection report. Parents should not have to parse through administrative code or understand advanced legal terms to determine whether safety violations have occurred in a child care setting.

Congress added a number of content areas that will support parents in their role as their child’s first and most important teacher. In keeping with a new purpose of the CCDF program at Section 658A(b)(3) of the Act to promote involvement by parents and family members in the development of their children in child care settings, Section 658C(2)(E)(i) of the Act requires Lead Agencies to make available information related to best practices in child development and State policies regarding child social and emotional development, including any State policies relevant to preventing expulsion of children under age five from child care settings.

The reauthorized Act also requires Lead Agencies to provide information that can help parents identify other financial benefits and services that may support their pathway to economic stability. Families eligible for child care assistance are often eligible for other supports, and the Act specifies that Lead Agencies provide families with information on several public benefit programs, including Temporary Assistance for Needy Families (TANF), Supplemental Nutrition Assistance Program (SNAP), Medicaid, and the Children’s Health Insurance Program (CHIP). In addition, the Act requires Lead Agencies to provide information on the programs and services that are part of Individuals with Disabilities Education Act (IDEA), such as early intervention and special education services, and that parents are given information on how to obtain a developmental screening for their child. Low-income parents deserve to have easy access to the full range of information, programs, and services that can support them in their parenting efforts. To ensure equal access for persons with limited English proficiency and for persons with disabilities, the final rule requires Lead Agencies to provide child care program information in multiple languages and alternative formats.

Provide Equal Access to High-Quality Child Care for Low-Income Children

Congress established requirements to provide more stable child care financial assistance to families, including extending children’s eligibility for child care to a minimum of 12 months, regardless of increases in parents’ earnings (as long as income remains at or below the Federal eligibility limit) and temporary changes in participation in work, training, or education. This will enable parents to maintain employment or complete education programs, and supports both family financial stability and the relationship between children and their caregivers. Under the reauthorized Act, Lead Agencies that choose to end assistance prior to 12 months, due to a non-temporary change in a parent’s work,
training, or education participation, must continue assistance for a minimum of 3 months to allow parents to engage in job search, resume work, or attend an education or training program, as soon as possible.

This final rule establishes a set of policies intended to stabilize families’ access to child care assistance and, in turn, help stabilize their employment or education and their child’s care arrangement. These policies also have the potential to stabilize the revenue of child care providers who receive CCDF funds, as they experience more predictable, reliable, and timely payments for services. This rule reduces reporting requirements for families and prevents them from unduly losing their assistance. Parents often find it difficult to navigate administrative processes and paperwork required to maintain their eligibility, and state policies can be inflexible to changes in a family’s circumstances. These provisions also make it easier for Lead Agencies to align CCDF policies with other programs serving low-income children. For example, more than half of children receiving CCDF-funded child care are in families with incomes under the federal poverty line, and therefore qualify for Head Start. Children once found eligible for Head Start may remain in the program until they age out, which promotes stability for families and for the Head Start program. The provisions here promote stability of child care programs and allow for greater alignment between child care services and Head Start for families in poverty who rely on child care subsidy to participate in work or education/job training.

Families may be determined to be ineligible within the minimum 12-month eligibility period if their income exceeds 85 percent of state median income (SMI) (taking into account irregular fluctuations in income) or, at Lead Agency option, the family experiences a non-temporary cessation in job, training, or education. We clarify that additional State-imposed eligibility criteria apply only at the time of initial eligibility determination and redetermination and provide examples of changes in parents’ scheduling and conditions of employment that meet the statutory intent of stabilizing assistance for families through changes in circumstance. Lead Agencies that set their income eligibility threshold below 85 percent of SMI must allow parents who otherwise qualify for CCDF assistance to continue receiving assistance, at subsequent redeterminations, until their income exceeds a second tier of eligibility set at a level sufficient for the family to reasonably afford quality child care without assistance, based on the typical household budget of a low-income families. This approach promotes continuity of care for children while allowing for wage growth for families to move on a path toward economic stability.

All too often, getting and keeping CCDF assistance is overly burdensome for parents, resulting in short durations of assistance and churning on and off CCDF as parents lose assistance and then later return. This instability disrupts parental employment and education, harms children, and runs counter to nearly all of CCDF’s purposes. This full set of provisions that facilitates easier and sustained access to assistance is necessary to strengthen CCDF as a two-generation program that supports work, training, and education, as well as access to high-quality child care.

Congress reaffirmed the core principle that families receiving CCDF-funded child care should have equal access to child care that is comparable to that of non-CCDF families. The Act requires Lead Agencies to set provider payment rates based on a valid market rate survey or alternative methodology. To allow for equal access, the final rule requires Lead Agencies to set base payment rates at least at a level sufficient to cover the costs to providers of the health, safety, quality, and staffing requirements included in the Act and the final rule. The Act also requires Lead Agencies to take into account the cost of higher quality when setting rates. We reaffirm our long-standing position that setting payment rates at the 75th percentile of a recent market rate survey remains an important benchmark for gauging equal access. Below market payment rates limit access to high-quality care for children receiving CCDF-funded care and violate the equal access provision that is central to CCDF. Higher provider payment rates are necessary to ensure that providers receiving CCDF funds have the means to provide high-quality care for our country’s low-income children.

The final rule provides details on the statutory requirements for Lead Agencies to pay providers in a timely manner based on generally-accepted payment practices for non-CCDF providers and that Lead Agencies delink provider payments from children’s absences to the extent practicable. We establish a new Federal benchmark for affordable family co-payments of seven percent of family income and allow Lead Agencies more flexibility to waive co-payments for vulnerable families. Under this rule, Lead Agencies may increase family co-payments only at redetermination or during a period of graduated phase-out when families’ incomes have increased above the Lead Agency’s initial income eligibility threshold. In addition, if a Lead Agency allows providers to charge amounts more than the required family co-payments, the Lead Agency must provide a rationale for this practice, including how charging such additional amounts will not negatively impact a family’s ability to receive care they might otherwise receive taking into consideration a family’s co-payment and the provider’s payment rate.

This final rule requires Lead Agencies to take into consideration children’s development and learning and promote continuity of care when authorizing child care services; offer increased flexibility for determining eligibility of vulnerable children; and clarify that Lead Agencies are not required to restrict a child’s care to the hours of a parent’s work or education. These changes are important to make the program more child-focused and ensure that the most vulnerable children have access to and benefit from high-quality care. These provisions may be implemented broadly in ways that best support the goals of Lead Agencies.

**Enhance the Quality of Child Care and the Early Childhood Workforce**

The final rule provides detail on the statutory requirement to increase spending on initiatives that improve the quality of care. The Act increases the share of CCDF funds directed towards quality improvement activities, authorizes a new set-aside for infant-toddler care, and drives investments towards increasing the supply of high-quality care for infants and toddlers, children with special needs, children experiencing homelessness, and other vulnerable populations including children in need of nontraditional hour care and children in poor communities. The Act requires States and Territories to submit an annual report on quality activities, including measures created by the Lead Agency to evaluate progress on quality improvement. This final rule requires Lead Agencies to report data on their progress on those measures. The Act also increases quality through more robust program standards, including training and professional development standards for caregivers, teachers, and directors to help those working with children promote their social, emotional, physical, and cognitive development.

The final rule clarifies the Act’s training requirements by requiring that
child care caregivers, teachers, and directors of CCDF providers receive training prior to caring for children, or during an orientation period not to exceed three months, and on an annual basis. In order for the health and safety requirements to be implemented, and because these are areas that the Lead Agency will monitor, this final rule requires that the pre-service or orientation training include the ten basic health and safety topics identified in the Act, as well as recognizing and reporting child abuse and neglect (in order to comply with child abuse reporting requirements) and training in child development for eligible children from birth to 13 years of age.

Lead Agencies must provide for a progression of professional development that may include postsecondary education. The final rule identifies six key components of a professional development State framework, and we encourage, to the extent practicable, that ongoing training yields continuing education units or is credit-bearing. These components advance expert recommendations to improve the knowledge and competencies of those who care for young children, which is central to children’s learning experiences and the quality of child care.

In addition, the Act includes a number of provisions to improve access to high-quality child care for children experiencing homelessness. The Act requires Lead Agencies to establish a grace period that allows children experiencing homelessness (and children in foster care) to receive CCDF services while allowing their families (including foster families) a reasonable time to comply with immunization and other health and safety requirements. The final rule requires Lead Agencies to help families by coordinating with licensing agencies and other relevant State and local agencies to provide referrals and support to help families experiencing homelessness comply with immunization and health and safety requirements. This final rule also requires Lead Agencies to use the definition of homeless applicable to school programs from the McKinney-Vento Act to align with other Federal early childhood programs (42 U.S.C. 11434a).

This final rule indicates the extent to which CCDF provisions apply to tribes, since this was not specified in the Act itself. Starting in early 2015, OCC began a series of formal consultations with Tribal leaders to determine how the provisions in the reauthorized Act should apply to Tribes and Tribal organizations. We heard from many Tribal leaders and CCDF Administrators asking for flexibility to implement child care programs that meet the individual needs of their communities. The final rule is intended to preserve Tribal Lead Agency flexibility, in a manner consistent with the CCDF dual goals of promoting families’ financial stability and fostering healthy child development. We differentiate and exempt some Tribal grantees from a progressive series of CCDF provisions based on three categories of CCDF grant allocations: Large, medium and small. We are also allowing Tribes flexibility to consider any Indian child in the Tribe’s service area to be eligible to receive CCDF funds, regardless of the family’s income or work, education, or training status, if a Tribe’s median income is below a threshold established by the Secretary. However, the Tribe’s provision of services still must be directed to those with the highest need.

Costs, benefits and transfer impacts. Changes made by the CCDBG Act of 2014 and this final rule have the most direct benefit for the 1.4 million children and their parents who use CCDF assistance to pay for child care. Many of the Act’s changes will also positively impact children who do not directly participate in CCDF. Many children who receive no direct assistance from CCDF will benefit from more rigorous health and safety standards, provider inspections, criminal background checks for child care staff, and accessible consumer information and education for their parents and providers. The attention to quality goes beyond health and safety. Caregivers, teachers, and directors of CCDF providers will be supported in their ongoing professional development. Under the Act, States and Territories must direct an increasingly greater share of their CCDF grant towards activities that improve the quality of child care, including a new share dedicated to improving the quality of infant and toddler care. Low-income parents who receive CCDF assistance will benefit from more stable financial assistance as they work toward economic stability and their children will benefit from relationships that are more continuous with their caregivers. Providers will benefit from improved provider payment rates (by certificate or grant or contract), as well as payment practices that support their financial stability. These include timely payments so that providers can sustain their operations and quality and paying providers for a reasonable number of absent days. The positive impacts of the reauthorization Act and this rule will benefit children, families, providers, and employers now and into the future.

The cost of implementing changes made by the Act and this rule vary depending on a State’s specific situation. There are a significant number of States, Territories, and Tribes that have already implemented many of these policies. ACF conducted a regulatory impact analysis to estimate costs and benefits of provisions in this final rule, including the new statutory requirements, taking into account current State practices. We evaluated major areas of policy change, including monitoring and inspections (including a hotline for parental complaints), background checks, training and professional development, consumer education (including the Web site and consumer statement), quality spending, minimum 12-month eligibility and related provisions, increased subsidies, and supply building.

Based on our analysis, annualized costs associated with these provisions, averaged over a ten year period, would be $235.2 million and the annualized amount of transfers is approximately $839.1 million (both estimated using a 3 percent discount rate), which amounts to a total annualized impact of $1.16 billion. Of that amount, approximately $1.15 billion is directly attributable to the CCDBG Act of 2014, with an annualized cost of only $4 million (or 0.3% of the total estimated impact) directly attributable to discretionary provisions of this regulation. While this analysis does not attempt to fully quantify the many benefits of the reauthorization and this rule, we do conduct a breakeven analysis to compare requirements clarified through this regulation against a potential reduction in child fatalities and injuries. Further detail and explanation can be found in the regulatory impact analysis.

II. Background

a. Child Care and Development Fund. Nearly 13 million young children, under age 5, regularly rely on child care to support their healthy development and school success. (Census Bureau, Who’s Minding the Kids? Child Care Arrangements, Spring 2011). Additionally, more than 10 million children participate in a range of school-age programs, before- and after-school and during summers and school breaks. (AFSers School Alliance, America After 3PM: Afterschool Programs in Demand, 2014). CCDF is the primary Federal funding source devoted to providing low-income families with access to child care and before- and after school care and improving the quality of care and, thus, is an integral part of the
nation’s child care and early education system. Each year, more than $5 billion in Federal CCDF funding is allocated to State, Territory and Tribal grantees. Combined with State funds and transfers from the Temporary Assistance for Needy Families (TANF) program, States and Territories spend nearly $9 billion annually to support child care services to low-income families and to improve the quality of child care. More than $1 billion of this spending is directed towards supporting child care quality improvement activities designed to create better learning environments and more effective caregivers and teachers in child care centers and family child care homes across the country.

CCDF was created 20 years ago, upon the enactment of the Personal Responsibility and Work Opportunity Reconciliation Act (PRWORA) in 1996 (Pub. L. 104–193), in which Congress replaced the former Aid to Families with Dependent Children with the framework of TANF block grants, and established a new structure of consolidated funding for child care. This funding, provided under section 418 of the Social Security Act (42 U.S.C. 618), combined with funding from the Child Care and Development Block Grant (CCDBG) Act of 1990 (42 U.S.C. 9858 et seq.), was designated by HHS as the Child Care and Development Fund (CCDF).

The CCDBG Act of 2014 was the first reauthorization of CCDBG since 1996. The reauthorized Act affirms the importance of CCDF as a two-generation program that supports parents’ financial success and children’s healthy development. Since PRWORA, the focus of CCDF has shifted from one largely dedicated to the goal of enabling low-income parents to work to one that includes a focus on promoting positive child development as we have learned a great deal about the value of high-quality child care for young children. While low-income parents continue to need access to child care in order to work and gain economic independence, policymakers and the public now recognize that the quality of child care arrangements is also critically important.

Sixteen years ago, HHS (in collaboration with other federal agencies and private partners) funded the National Academies of Sciences to evaluate and integrate the research on early childhood development and the role of early experiences. (National Research Council and Institute of Medicine, From Neurons to Neighborhoods: The Science of Early Childhood Development, Board on Children, Youth, and Families, Commission on Behavioral and Social Sciences and Education, 2000.) An overarching conclusion was that early experiences matter for healthy child development. Nurturing and stimulating care given in the early years of life builds optimal brain architecture that allows children to maximize their enormous potential for learning. On the other hand, hardship in the early years of life can lead to later problems. Interventions in the first years of life are capable of helping to shift the odds for those at risk of poor outcomes toward more positive outcomes. A multi-site study conducted by the Frank Porter Graham Child Development Institute found that, “... children who experienced higher quality care are more likely to have more advanced language, academic, and social skills,” and, “... children who have traditionally been at risk of not doing well in school are affected more by the quality of child care experiences than other children.” (E. Peisner-Feinberg, M. Burchinal, et al., The Children of the Cost, Quality, and Outcomes Study Go to School: Executive Summary, University of North Carolina at Chapel Hill, Frank Porter Graham Child Development Center, 1999).

Evidence continues to mount regarding the influence that children’s earliest experiences have on their later success and the role child care can play in shaping those experiences. The most recent findings from the National Institute of Child Health and Human Development (NICHD) showed that the quality of child care children received in their preschool years had small but statistically significant associations with their academic success and behavior into adolescence. (NICHD, Study of Early Child Care and Youth Development, 2010). Recent follow-up studies to the well-known Abecedarian Project, which began in 1972 and has followed participants from early childhood through young adulthood, found that adults who had participated in a high-quality early childhood education program experienced better educational, employment, and health outcomes. Abecedarian Project participants had significantly more years of education than their control group peers, were four times more likely to earn college degrees, and had lower risk of cardiovascular and metabolic diseases in their mid-30s. (Campbell, Pungello, Burchinal, et al., Adult Outcomes as a Function of an Early Childhood Educational Program: An Abecedarian Project Follow-Up, Frank Porter Graham Child Development Institute, Developmental Psychology, 2012 and Campbell, Conti, Heckman et al, Early Childhood Investments Substantially Boost Adult Health, Science 28 March 2014, Vol. 343).

Research also confirms that consistent time spent in afterschool activities during the elementary school years is linked to narrowing the gap in math achievement, greater gains in academic and behavioral outcomes, and reduced school absences. (Auger, Pierce, and Vandell, Participation in Out-of-School Settings and Student Academic and Behavioral Outcomes, presented at the Society for Research in Child Development Biennial Meeting, 2013). An analysis of over 70 after-school program evaluations found that evidence-based programs designed to promote personal and social skills were successful in improving children’s behavior and school performance. (Durlak, Weissberg, and Pachan, The Impact of Afterschool Programs that Seek to Promote Personal and Social Skills in Children and Adolescents, American Journal of Community Psychology 2010). Afterschool programs also promote youth safety and family stability by providing supervised settings during hours when children are not in school. Parents with school-aged children in unsupervised arrangements face greater stress that can impact the family’s well-being and successful participation in the workforce. (Barnett and Gareis, Parental After-School Stress and Psychological Well-Being, Journal of Marriage and the Family, 2006).

CCDF often operates in conjunction with other programs including Head Start, Early Head Start, State pre-kindergarten, and before-and after-school programs. States and Territories have flexibility to use CCDF to provide children enrolled in these programs full-day, full-year care, which is essential to supporting low-income working parents. CCDF also funds quality improvements for settings beyond those that serve children receiving subsidies. CCDF has helped lay the groundwork for development of State early learning systems. Lead Agencies have used CCDF funds to make investments in professional development systems to ensure a well-qualified and effective early care and education workforce. Lead Agencies have provided scholarships for child care teachers and worked closely with higher education, especially community colleges, to increase the number of teachers with training or a degree in early childhood or youth development. Lead Agencies have used CCDF funds to build quality rating and improvement systems (QRIS) to provide consumer education information to parents, help providers...
raise quality, and create a more systemic approach to child care quality improvement efforts and accountability. These investments have likely also generated benefits for children enrolled in unsubsidized child care programs.

Child care is a core early learning and care program and plays an important role within a broad spectrum of early childhood programs supporting young children. The Administration has consistently sought to support State, Territory, and Tribal efforts to improve the coordination and alignment of early childhood programs through multiple efforts, including the Race to the Top–Early Learning Challenge and the Early Head Start-Child Care Partnerships. Most recently, ACF published Caring for our Children Basics (www.acf.hhs.gov/sites/default/files/ecd/caring_for_our_children_basics.pdf), a set of recommendations intended to create a common framework to align basic health and safety efforts across all early childhood settings. This final rule builds on the alignment and coordination work that has been advanced by the Administration. For example, Lead Agencies are required to collaborate with multiple entities, including State Advisory Councils on Early Childhood Education and Care, authorized by the Head Start Act, or similar coordinating bodies. In addition, minimum 12-month eligibility periods will make it easier to align child care assistance with eligibility periods for other programs, such as Early Head Start, Head Start, and State prekindergarten. Policies that stabilize access to child care assistance for families and bring financial stability to child care providers will play an important role in supporting the success of Early Head Start-Child Care Partnerships.

According to a recent report by the President’s Council of Economic Advisors, investments in early childhood development will reap economic benefits now and in the future. Immediate benefits include increased parental earnings and employment. Future benefits come when children who experience high-quality early learning opportunities are prepared for success in school and go on to earn higher wages as adults. (Council of Economic Advisors, Executive Office of the President of the United States, The Economics of Early Childhood Investments, 2014). Decades of research show that the experiences babies and toddlers have in their earliest years shape the architecture of the brain and have long-term impacts on human development. At the same time, increasing the employability and stability of parents reduces the impact of poverty on children and sustains our nation’s workforce and economy. Studies have shown that access to reliable child care contributes to increased employment and earnings for parents. (National Research Council and Institute of Medicine, From Neurons to Neighborhoods: The Science of Early Childhood Development, Board on Children, Youth, and Families, Commission on Behavioral and Social Sciences and Education, 2000 and Council of Economic Advisors, The Economics of Early Childhood Investments). In short, high-quality child care is a linchpin to the creation of an educational system that successfully supports the country’s workforce development, economic security, and global competitiveness. Successful implementation of the CCDBG Act of 2014 will ensure that child care is not only safe, but also supports children’s healthy development and their future academic achievement and success.

b. Statutory authority. This final rule is being issued under the authority granted to the Secretary of Health and Human Services by the CCDBG Act of 1990, as amended (42 U.S.C. 9858 et seq.) and Section 418 of the Social Security Act (42 U.S.C. 618).

c. Effective dates. This final rule will become effective 60 days from the date of its publication, except for provisions with a later effective date as defined in the Act (discussed further below). Compliance with provisions in the Act will be determined through ACF review and approval of CCDF Plans, including State Plan amendments, as well as using Federal monitoring, including on-site monitoring visits as necessary. Lead Agencies must comply with the provisions of the Act, as revised by the CCDBG Act of 2014. Compliance with key statutorily required implementation dates outlined in Program Instruction CCDF–ACF–PI–2015–02 (http://www.acf.hhs.gov/programs/occ/resource/pi-2015-02), dated January 9, 2015, remain in effect. In some cases, the CCDBG Act of 2014 specifies a particular date when a provision is effective. Where the Act does not specify a date, the new requirements became effective upon the date of enactment of the Act, and ACF guidance established September 30, 2016 as the deadline for States and Territories to implement the new statutory requirement(s). As discussed below, Tribes and Tribal organizations have different implementation and compliance timelines.
We recognize that States and Territories prepared their FY 2016–2018 CCDF Plans, which were due in March 2016, prior to the issuance of this final rule. States and Territories were to comply with the Act based on their reasonable interpretation of the requirements in the revised Act. With the issuance of this final rule, any State or Territory that does not fully meet the requirements of the Act, as interpreted by these regulations, will need to revise its policies and procedures to come into compliance. Plan amendments for substantial changes must be submitted within 60 days of the effective date of the change, and ACF will track compliance. The Act and this final rule also provide guidance on the process that allows the Secretary to consider whether to approve requests for temporary extensions from States and Territories through waivers. If a State or Territory receives an extension via waiver, ACF still expects full compliance with the Act, as interpreted by this final rule, by the end of the current triennial Plan period (FY 2016–2018). ACF will use federal monitoring in accordance with section 98.90.

Tribal Lead Agencies will submit new 3-year Plans for FY 2020–2022, with an effective date of October 1, 2019, and ACF will use those Plans to determine compliance with the Act, as interpreted by this rule. Tribes may also submit requests, for HHS to consider, seeking temporary extensions via waivers. Tribes that have consolidated CCDF with other employment, training and related programs under Public Law (Pub. L. 102–477), are not required to submit separate CCDF Plans, but will be required to submit amendments to their Public Law 102–477 Plans, along with associated documentation, in accordance with this timeframe to demonstrate compliance with the Act, as interpreted by this final rule.

This final rule is being published well in advance of the October 1, 2018 deadline for States and Territories (and October 1, 2019 deadline for Tribes) to ensure there is enough time to demonstrate compliance with all the statutory interpretations in this final rule. As a result, there is sufficient time for all States, Territories, and Tribes to demonstrate compliance with this rule’s interpretations no later than these deadlines. We are not inclined to approve any requests for temporary extensions/waivers due to legislative or transitional purposes in order to comply with this rule’s interpretations because the compliance deadlines already provide adequate time.

III. Development of Regulation

After enactment of the CCDBG Act of 2014, the Office of Child Care (OCC) and the Office of the Deputy Assistant Secretary for Early Childhood Development in ACF conducted outreach to engage with a variety of stakeholders to understand better the implications of its provisions. OCC created a CCDF reauthorization page on its Web site to provide public information and an email address to receive questions. OCC received approximately 650 questions and comments through this email address. OCC leadership and staff participated in more than 21 listening sessions with approximately 675 people representing diverse national, State, and local stakeholders regarding the Act, held webinars, and gave presentations at national conferences. Participants included State human services agencies, child care caregivers and providers, parents with children in child care, child care resource and referral agencies, national and State advocacy groups, national stakeholders including faith-based communities, after-school and school-age caregivers and providers, child care researchers, State and local early childhood organizations, provider associations, labor unions, and Head Start grantees. In addition, OCC held five meetings with State and Territory CCDF administrators and a series of consultations with Tribal leaders to describe the Act and to gather input from Federal grantees with responsibility for operating the CCDF program.

ACF published a notice of proposed rulemaking (NPRM) in the Federal Register on December 24, 2015, (80 FR 80466) proposing revisions to CCDF regulations consistent with the reauthorized Act and research on child safety, health, and child development in child care and school-age child care. We provided a 60-day comment period during which interested parties could submit comments in writing by mail or electronically.

ACF received 150 comments on the proposed rule (public comments on the proposed rule are available for review on www.regulations.gov), including comments from State human services and education agencies, national advocacy groups, State and local early childhood organizations, child care resource and referral agencies, faith-based organizations, provider associations, Tribes and Tribal organizations, labor unions, child care providers, and individuals of the public, and a joint letter by two members of the U.S. Congress. We were pleased to receive comments from 41 State and local governments, 1 Territory, and 15 Tribes and Tribal organizations. A number of stakeholders coordinated comments and policy recommendations so that their comments were signed by multiple entities, and there were some membership organizations whose comments were by signed by their individual members. Public comments informed the development of content for this final rule.

Use of terms. Terminology used to refer to child care settings and the individuals who provide care for children varies throughout the early childhood and afterschool fields. In this rule, the terms caregiver, teacher, and director refer to individuals. The term provider refers to the entity providing child care services. This may be a child care program, such as a child care center, or an individual in the case of family child care or in-home care. Complete descriptions of these terms are included in Subpart A of this rule.

Overview of changes made by CCDBG Act of 2014. The changes included in this final rule provide detail on major provisions of the CCDBG Act of 2014 to: (1) Protect the health and safety of children in child care; (2) help parents make informed consumer choices and access information to support child development; (3) provide equal access to stable, high-quality child care for low-income children; and (4) enhance the quality of child care and the early childhood workforce.

First, Congress established minimum health and safety standards including mandatory criminal background checks, at least annual monitoring of providers, and health and safety training. Children in CCDF-funded child care will now be cared for by caregivers who have had basic training in health and safety practices and child development. Parents will know that individuals who care for their children do not have prior criminal records that indicate potential endangerment of their children. Health and safety is a necessary foundation for quality child care that supports early learning and development. Research shows that licensing and regulatory requirements for child care affect the quality of care and child development. (Adams, G., Tout, K., Zaslow, M., Early care and education for children in low-income families: Patterns of use, quality, and potential policy implications, Urban Institute, 2007).

Second, Congress increased consumer education requirements for States and Territories and requirements need transparent information about health and safety practices, monitoring
results, and the quality of child care providers. Parents will now be able to easily view on a Web site the standards a child care provider meets and their record of compliance. Most States and Territories administering the CCDF program have already begun building a quality rating and improvement system (QRIS), which make strategic investments to provide pathways for providers to reach higher quality standards. Our rule builds on the reauthorization and Lead Agency efforts to inform parents about the quality of providers by requiring that the consumer education Web site include provider-specific quality information, if available, such as from a QRIS, and that Lead Agencies provide parents receiving CCDF with information about the quality of their chosen provider.

Third, low-income parents need access to stable, high-quality child care for their children, and the Act affirms that they should have equal access to settings that are comparable to those accessible to non-CCDF families. This final rule details the Act’s continuity of care provisions, such as extending eligibility for child care for a minimum of 12 months regardless of a parent’s temporary change in employment or participation in education or training. Continuity of services contributes to improved job stability and is important to a family’s financial health. Family economic stability is undermined by policies that result in unnecessary disruptions to receipt of a subsidy due to administrative barriers or other processes that make it difficult for parents to maintain their eligibility and thus fully benefit from the support it offers. Continuity also is of vital importance to the healthy development of young children, particularly the most vulnerable. Disruptions in services can stunt or delay socio-emotional and cognitive development, and make it harder for children to develop trusting relationships with their caregivers. Safe, stable environments allow young children the opportunity to develop the relationships and trust necessary to comfortably explore and learn from their surroundings. Research has demonstrated a relationship between child care stability and social competence, behavior outcomes, cognitive outcomes, language development, school adjustment, and overall child well-being. (Adams, Rohacek, and Danziger, Child Care Instability, The Urban Institute, 2010.) This area includes a number of changes, including requirements for limiting administrative burdens on parents and enabling families to retain their child care assistance as their income increases in order to move towards economic success.

The final rule also addresses the Act’s equal access provisions by requiring that base payment rates be established at least at a level that enables child care providers to meet the health, safety, quality, and staffing requirements in the final rule, ensuring that co-payments are affordable for families, and establishing provider payment practices that support access to high-quality child care. Finally, this final rule addresses increased quality set-asides in the reauthorized Act, which enhance the quality of child care and the early childhood workforce. States and Territories will report on their investments in quality activities, which will now be a greater share of CCDF spending. They will also expand quality investments in infant-toddler care. High-quality care for children under age 3 is the most expensive and hardest care to find during the most formative years. (National Survey of Early Care and Education, 2015, www.acf.hhs.gov/sites/default/files/ope/es_price_of_care_todepre_041715_2.pdf) The Act requires States and Territories to have training and professional development standards in effect for CCDF caregivers, and we build on this requirement by outlining the components of a professional development framework. Research shows the fundamental importance of the caregiver in a high-quality early learning setting, and this rule helps ensure that early childhood professionals have access to the knowledge and skills they need to best support young children and their development.

In developing this rule, we were mindful of CCDF’s purpose to allow Lead Agencies maximum flexibility in developing child care policies and programs. In some areas, the final rule adds flexibility to allow Lead Agencies to tailor policies that better meet the needs of the low-income families they serve. For example, the rule provides more flexibility for Lead Agencies to determine when it is appropriate to waive a family’s co-pay requirement. In many areas, the rule adds new requirements as dictated by the updated Act or because they advance the revised purposes of the CCDF program. Changes in the Act, and in this final rule, affect the State, Territorial, and Tribal agencies that administer the CCDF program. The Act requires changes across many areas: Child care licensing, subsidy, quality, workforce, and eligibility, and requires coordination across State agencies. Achieving the full visions of reauthorization will be challenging, but this effort is necessary to improve child care in this country for the benefit of our children. ACF has and will continue to consult with State, Territorial, and Tribal agencies and provide technical assistance throughout implementation.

This final rule generally maintains the structure and organization of the current CCDF regulations. The preamble in this final rule discusses the changes to current regulations and contains certain clarifications based on ACF’s experience in implementing the prior final rules. Where language of previous regulations remains unchanged, the preamble explanation and interpretation of that language published with all prior final rules also is retained, unless specifically modified in the preamble to this rule.

IV. General Comments and Cross-Cutting Issues

This final rule includes substantive changes in multiple areas spanning nearly every subpart of CCDF regulations. We received comments on a large majority of the proposed changes, and made significant revisions in this final rule in response to comments. For example, we deleted a proposal that would have required Lead Agencies to make some use of grants and contracts, revised the provision providing a graduated phase-out for certain families, and made a number of adjustments to equal access provisions. We discuss specific comments in the section-by-section analysis later in this final rule.

In general, public response to the proposed rule was positive. There was widespread support for the recognition of the dual purposes of the CCDF program—to support both parental pathways to economic security and stability and children’s development. As noted by a joint set of comments by State child care administrators, “we share a common interest in increasing access to opportunities for high-quality early care and education for children and recognize the important developmental growth that occurs in early years.” However, many of the commenters had concerns about costs and said more funding is needed to implement the changes. Developing this final rule required balancing both positive and negative comments, and we tried to be thoughtful about looking at the whole by considering the added-value of different provisions. Below we summarize these general comments as well other crosscutting issues raised by commenters.
General Comments

We received a few comments arguing that we lacked authority under the Act to establish some of the final rule's requirements. In developing this final rule, ACF was careful to stay within the authority provided by the reauthorized Act and cognizant of areas where our authority was limited and further changes would require Congressional action. We reviewed previously-existing regulations and identified areas under the CCDBG Act of 2014 where we could incorporate the tremendous amount of recent research on early brain development and best policies and practices to improve access to and the quality of child care being implemented.

Many commenters were concerned about the financial tensions between the objective of the CCDF program—to provide access to child care for as many low-income families as possible so they can work and build financial stability, and to make sure children are in safe, quality child care settings. Many of these same commenters had concerns about costs and said more funding is needed to implement the statutory and regulatory changes. A letter submitted by 80 national and State organizations cautioned: “We note that CCDBG has been severely underfunded in recent years, resulting in large numbers of eligible children unserved and low provider payment rates, among other consequences. Achieving the goals of the Act to improve the health, safety, and quality of child care and the stability of child care assistance will require additional resources. Congress made a down payment on funding in the recent FY 2016 omnibus budget; however, additional investments will be necessary to ensure the success of the reauthorized Act and to address the gaps that already exist in the system.”

Several States and local governments voiced concern about the costs to implement the Act and the rule. They raised concerns about sufficiency of funding to meet requirements within the given period, and that insufficient funding could necessitate serving fewer eligible children.

We recognize that the CCDBG Act of 2014 makes many changes, and that States, Territories, and Tribes are budgeting with a limited amount of funding. Lead Agencies are faced with making difficult tradeoffs about where to direct scarce resources. Over time, some States have struggled to maintain the number of children and families served with child care subsidies, and caseloads have declined at an all-time low in 2014. Additionally, the average CCDF subsidy per child is extremely low, approximately $4,800 annually in FY 2014. In inflation adjusted terms, the value of the child care subsidy (per child) has decreased in real dollars by about 20 percent since 2003, while the caseload has declined somewhat over that same period. This is a reflection of the tradeoffs that some States have had to consider due to limited federal and state funding under tight budget constraints, resulting in the erosion of the value of the subsidy and its ability to help families obtain high-quality care. On the other hand, there are States that have made different choices, such as providing an adequate subsidy value as they focused on serving children in settings where training and regulation is in place and oversight is sufficient.

This final rule attempts to bring a basic level of quality to all children whose care is supported with taxpayer funds. We will continue to pursue the goal of preserving and expanding access to quality child care for the many families who are currently unable to access a subsidy due to lack of funding. However, we view this final rule as a critical opportunity to ensure that the subsidized care families’ access is of sufficient quality. The Act supports this goal of ensuring quality of care by requiring that providers serving CCDF children have background checks, receive basic training in health and safety, and are monitored on a regular basis. Like Lead Agencies, we have considered these difficult tradeoffs, but we believe that the final rule strikes the appropriate balance of both supporting quality and affordability, and not ensuring one at the expense of the other. We will continue to pursue increased federal funding to increase access to high-quality, affordable child care. We believe that the policies in this final rule appropriately balance a reasonable cost burden while still achieving the goals (and resulting benefits) outlined in the Act and the rule.

We seriously considered concerns about cost, and recognize that the Act and final rule contain provisions that will require some States, Territory, and Tribal Lead Agencies to re-direct CCDF funds to implement specific provisions. Yet, the vast majority of the costs associated with this rule and outlined in the regulatory impact analysis are required by the law itself, and we support these critical investments as our guiding principle has been, and remains, that we cannot in good conscience continue to use any federal taxpayer dollars to support sub-standard child care for our nation’s most vulnerable and disadvantaged children. The CCDBG Act of 2014 clearly spells out that its purpose is to improve the health, safety and quality of child care and to increase access to high-quality child care. Many Lead Agencies have already implemented some or most of the provisions in this final rule. In addition, each year, more than $5 billion in federal CCDF funding is allocated to State, Territory and Tribal grantees. The activities to implement requirements in this final rule are allowable costs in the CCDF program. Changes made by this final rule represent a commitment to shoring up quality and accountability in the CCDF program now, to provide a stronger foundation for future growth and investment.

Several States commented on wanting more flexibility to meet some of the requirements. Our approach was to look at the provisions of this final rule in their entirety and identify areas where more flexibility is appropriate. While many Lead Agencies have made great strides to fashion the program in a way that emphasizes child development and increasing access to high-quality care, implementation of the CCDF program across the country varies greatly. The previous lack of substantive federal requirements in areas such as health and safety, consumer education, and eligibility policy means there is no uniform national standard that families can count on. All families receiving CCDF assistance, regardless of where they live, should have basic assurances about the safety and quality of services they receive.

This final rule provides more flexibility in areas that were not addressed by the reauthorized Act. For example, it allows Lead Agencies to establish their own criteria for waiving copays, gives flexibility to waive income and work requirements for vulnerable children, and provides the option for alternative monitoring strategies for in-home providers. In addition, there were several areas where we declined to impose a federal standard, even while some commenters asked us to go further. We also eliminated or revised a few proposals from the NPRM in response to comments.

In addition, we took into consideration a number of comments that asked for more flexibility for Tribes. We continue to balance flexibility for Tribes to address the unique needs of their communities with the need to ensure accountability and quality child care for all children. In response to comments received from Tribes, we have made changes to how this final rule applies to them, including clarifying implementation periods and adding in flexibility around the background check requirements. This
The final rule addresses all comments from Tribes and tribal organizations in the preamble discussion for Subpart I.

Finally, we received comments from some States and Tribes on the effective date of the final rule, indicating that time is needed to take administrative or legislative action, or to otherwise fully implement the provisions. While States should have already been proceeding with implementation of reauthorization requirements based on their reasonable interpretation of the reauthorized Act, we recognize that some States may need time to make adjustments to their policies and procedures based on this final rule. Therefore, we have provided delayed compliance dates, discussed in more detail earlier in this preamble, to allow States, Territories and Tribes time to fully implement this rule.

V. Section-by-Section Discussion of Comments and Regulatory Provisions

We received comments about changes we proposed to specific subparts of the regulation. Below, we identify each subpart, summarize the comments, and respond to them accordingly.

Subpart A—Goals, Purposes, and Definitions

§ 98.1 Purposes

The CCDBG Act of 2014 amended and expanded the Act’s previous “goals” and renamed them “purposes”. The final rule makes changes to regulatory language at 45 CFR 98.1 to describe the revised purposes of the CCDF program, according to the updated Act.

Comment: We received multiple comments from national and State organizations and child care worker organizations asking us to explicitly highlight compensation as an integral strategy to retaining a high-quality early childhood workforce in this section and in several other sections of the regulation.

Response: We agree and § 98.1(b)(8) of the final rule provides that, in providing a progression of professional development and promoting retention of quality early childhood caregivers, teachers, and directors, an important strategy is financial incentives and compensation improvements to align with § 98.44. We note that several States are working to improve compensation to support caregivers, teachers, and directors, generally linked to attaining higher professional credentials and education and as a strategy to retain educators who have these credentials and degrees in early childhood programs. Turnover remains a significant issue in child care, and investments in professional development and training should be coupled with improvements in compensation so that children benefit from teachers with those higher levels of knowledge and skill.

§ 98.2 Definitions

The final rule makes technical changes to definitions at § 98.2 and adds six new definitions. Below we discuss any comments we received to these proposals.

First, the final rule makes technical changes by deleting the definition for group home child care provider. Some States, Territories, and Tribes do not consider group homes to be a separate category of care when administering their CCDF programs or related efforts, such as child care licensing. According to the National Association for Regulatory Administration, at least 13 States do not license group homes as a separate category. Some States and Territories use alternative terminology (e.g., large family child care homes), while others treat all family child care homes similarly regardless of size. Due to this variation, we are deleting the separate definition for group home child care provider, which requires a number of technical changes to the definitions section. We did not receive comments on this section.

Under this final rule, the categories of care are defined to include center-based child care, family child care, and in-home care (i.e., an individual caring for a child in the child’s home).

This final rule also makes conforming changes to the definitions for categories of care, eligible child care provider, and family child care provider.

The final rule amends the definition for eligible child care provider at § 98.2 to delete a group home child care provider. The revised definition defines an eligible child care provider as a center-based child care provider, a family child care provider, an in-home child care provider, or other provider of child care services for compensation.

The final rule also amends the definition for family child care provider at § 98.2 to include larger family homes or group homes. The new definition revises family child care provider to include one or more individuals who provide child care services. The remainder of the definition stays the same, specifying that services are for fewer than 24 hours per day per child, in a private residence other than the child’s residence, unless care in excess of 24 hours is due to the nature of the parent(s)’ work.

Lead Agencies may continue to provide CCDF services for children in large family child care homes or group homes, and this is allowable and recognized by the revised definition of family child care provider, which now includes care in private residences provided by more than one individual. This change eliminates group homes as a separately defined category of care for purposes of administering the CCDF—thereby allowing States, Territories, and Tribes to more easily align their practices with Federal requirements. The rule does not require that States and Territories eliminate group homes from their categories of care or change the way they categorize providers for the purposes of analyzing or setting provider payment rates.

The final rule makes one additional change to a pre-existing definition as called for by new statutory language. We are amending the definition of Lead Agency so that it may refer to a State, Territorial or Tribal entity, or a joint interagency office, designated or established under §§ 98.10 and 98.16(a) as indicated at Section 658P(9) of the Act. While the NPRM proposed amending the definition of eligible child, we decided a revision is unnecessary and have reverted to the pre-existing definition that references eligibility requirements at § 98.20.

Finally, the final rule adds five new terms to the definitions due to statutory changes and to include terms commonly used in the child care profession.

Caregiver

The definition of caregiver in the Act and prior regulations remains unchanged.

Comment: One child care worker organization raised concerns that the term “caregiver” is outdated, and requested deletion of the term.

Response: The final rule does not delete or alter the definition of “caregiver” that is included in the Act. The final rule, however, adds definitions for “teacher” and “director” to recognize the roles in child care and early childhood education as a professional field. The definitions for these terms are based on a white paper recommending revisions to the U.S. Department of Labor’s Standard Occupational Classification. (Proposed Revisions to the Definitions for the Early Childhood Workforce in the Standard Occupational Classification, White Paper Commissioned by the Administration for Children and Families, U.S. Department of Health and Human Services, prepared by the Workgroup on the Early Childhood Workforce and Professional Development and Promoting Retention of Quality Early Childhood Care Providers).

Teacher

The final rule defines teacher as ‘a lead teacher, teacher, teacher assistant or teacher aide who is employed by a child care provider for compensation on a regular basis, or a family child care provider, and whose responsibilities and activities are to organize, guide and implement activities in a group or individual basis, or to assist a teacher or lead teacher in such activities, to further the cognitive, social, emotional, and physical development of children from birth to kindergarten entry and children in school-age child care.’ We recognize that the responsibilities and qualifications for lead teachers, teachers, and teacher assistants are different as set by child care licensing, State early childhood professional development systems, and State teacher licensure policies and have added these definitions for simplification in relation to requirements in the Act and this rule. We strongly encourage States and Territories to recognize differentiated roles and qualifications in their requirements and systems.

Director

The final rule defines director as ‘a person who has primary responsibility for the daily operations management for a child care provider, which includes a family child care provider, and which may serve children from birth to kindergarten entry and/or school-age children.’

Comment: Several comments from national and State organizations and child care worker organizations expressed support for the new definitions for teacher and director and asked for a reorganization of certain words in the proposed definition to ensure that they include family child care providers.

Response: We agree with the comments, and the final rule makes the requested changes.

Child With a Disability

We define child with a disability as: A child with a disability as defined in section 602 of the Individuals with Disabilities Education Act (20 U.S.C. 1401); a child who is eligible for early intervention services under part C of the Individuals with Disabilities Education Act (20 U.S.C. 1431 et seq.); a child who is less than 13 years of age and who is eligible for services under section 504 of the Rehabilitation Act of 1973 (29 U.S.C. 794); and a child with a disability, as defined by the State. This definition is identical to the definition found at Section 658P(3) of the Act.

Comment: We received comments from national organizations for individuals with disabilities on the definition of “child with a disability” asking to delete the “or” and an open-ended ability of the State to define the term.

Response: The final rule’s definition is identical to the definition set forth in the Act, which allows States, Territories, and Tribes to include other developmental delays and disabilities if they choose. Consistent with the statute, we are changing “or” (which was proposed in the NPRM) to “and” to indicate that a child meeting at least one of any of the four parts of the definition (i.e., section 602 of IDEA, part C of IDEA, section 504 of the Rehabilitation Act, or definition of State, Territory or Tribe) would be considered a child with a disability.

English Learner

The final rule reiterates Section 658P(5)’s definition of English learner as an individual who is limited English proficient, as defined in section 9101 of the Elementary and Secondary Education Act of 1965 (20 U.S.C. 7801) or section 637 of the Head Start Act (42 U.S.C. 9832).

Child Experiencing Homelessness

The final rule’s definition of a child experiencing homelessness is adopted from section 725 of Subtitle VII–B of the McKinney-Vento Act (42 U.S.C. 11434a). While a definition of child experiencing homelessness was not included in the reauthorized CCDBG Act, we understand the intent of Congress was to apply the McKinney-Vento definition here based on a letter sent to HHS Secretary Sylvia Burwell in February 2015 from Senate and House members.

Comment: Several comments expressed support for using the definition in the McKinney-Vento Act, section VII–B. One commenter sought to augment the definition to refer to several other federal laws that can be used to support children experiencing homelessness.

Response: Using the McKinney-Vento Act’s definition, without modification here, will lead to better consistency in identifying children and in information collection. This definition is also used by Head Start and education programs.
language at § 98.11(a)(3) to specify that, while the content of the written agreements may vary based on the role the agency is asked to assume or the type of project undertaken, agreements must, at a minimum, include tasks to be performed, a schedule for completing tasks, a budget that itemizes categorical expenditures consistent with CCDF requirements at § 98.65(h), and indicators or measures to assess performance. Many Lead Agencies administer the CCDF program through the use of sub-recipients that have taken on significant programmatic responsibilities, including providing services on behalf of the Lead Agency. For example, some Lead Agencies operate primarily through a county-based system, while others devolve decision-making and administration to local workforce boards, school readiness coalitions or community-based organizations such as child care resource and referral agencies. Through working with grantees to improve program integrity, ACF has learned that the quality and specificity of written agreements vary widely, which hampers accountability and efficient administration of the program. These changes represent minimum, common-sense standards for the basic elements of those agreements, while allowing latitude in determining specific content. The Lead Agency is ultimately responsible for ensuring that all CCDF-funded activities meet the requirements and standards of the program, and thus has an important role to play to ensure written agreements with sub-recipients appropriately support program integrity and financial accountability. We are cognizant that some States and Territories lack strong requirements to ensure there is transparency in cases where a sub-recipient contracts with a network of family child care providers to serve children receiving CCDF. This rule places a strong emphasis on implementation of provider-friendly payment practices, including a payment agreement or authorization of services for all payments received by child care providers. When a local entity contracts with a family child care network for services, we agree that there should be a clear understanding from the outset regarding payment rates for providers, any fees the provider may be subject to, and payment policies. Finally, § 98.11(b)(5) adds a reference to the HHS regulations requiring Lead Agencies to oversee the expenditure of funds by sub-recipients and contractors, in accordance with 75 CFR 351 to 353. The final rule changes the term “subgrantee” in the proposed rule to “subrecipients” in this final rule as a technical correction. These regulations implement the Office of Management and Budget’s Uniform Administrative Requirements for Federal awards (see ACF, Uniform Administrative Requirements, Cost Principles, and Audit Requirements, Program Instruction: CCDF–ACF–PI–2015–01, January 2015.) Section 658D(b)(1)(A) of the Act provides Lead Agencies with broad authority to administer the program through other governmental or non-governmental agencies. In addition, CCDF Lead Agencies must comply with requirements for monitoring and management of sub-recipients, including government-wide grant requirements issued by the Office of Management and Budget (OMB) at 2 CFR 200.330 to 200.322 and adopted by HHS at 45 CFR 75.351 to 75.353, which address reporting, auditing and other requirements related to sub-recipients. This final rule adds language at § 98.11 to improve the quality and specificity of written agreements to promote program integrity and efficient administration at all levels. We received three comments on this section. Comment: One child care worker organization commented that these requirements should apply in all instances where CCDF funds are sub-granted or passed through to an entity, including arrangements between intermediary entities and individual child care providers. Response: This provision applies only to written agreements between lead Agencies and first-level sub-recipients (and not to agreements between first-level sub-recipients and lower-level sub-recipients). The regulation states that the agreement must specify the roles and responsibilities of the Lead Agency and the other agencies—indicating that the Lead Agency is a party to the agreement. This language is intended to be broad as sub-entities may fulfill any number of different roles or projects, including implementing quality improvement activities, determining eligibility for families, or providing consumer education on behalf of the Lead Agency. We strongly encourage lower-level agreements to have similar provisions, but prefer to leave this as an area of flexibility to give State and local agencies discretion over the details, given the wide-range of conditions and circumstances involved. Also, we note that regulations at 98.67(c)(2) require Lead Agencies to have in place fiscal control and accountability procedures that permit the tracking of categorical expenditures consistent with such funds have not been used in violation of the CCDF rules. Therefore, Lead Agencies that devolve program administration to first, second, and third-level entities necessarily must be concerned with the integrity and transparency of all written agreements involving CCDF funds. The comment also urged ACF to compile and disseminate best practices for written agreements between entities that administer CCDF monies and providers and that the State or local agency develop a model written agreement for networks. This is an area where ACF anticipates providing more technical assistance to assist States in developing model written agreements focused on cases where a sub-recipient contracts with a network of family child care providers to serve children receiving CCDF.

Comment: We received a comment from one State that some of the items for written agreements do not seem applicable to the administration of child care subsidies. For example, including a schedule for completing tasks does not seem applicable since the tasks of administering child care subsidies are ongoing and do not have end dates. States may have existing methods of ensuring compliance with administration requirements for the program, and should be offered flexibility in how tasks and expenditures are overseen and monitored. Conversely, we received a comment from a child care worker organization in support of requiring a written agreement between a Lead Agency and another agency that must include, at minimum, tasks to be performed, a schedule for completing tasks, a budget which itemizes categorical expenditures consistent with CCDF requirements at 98.65(h), and indicators or measures to assess performance.

Response: We have maintained the language in this section. Lead Agencies can adopt the required elements, as appropriate, to fit the circumstances. For example, in the schedule for tasks, they can indicate the tasks that are ongoing.

§ 98.14 Plan Process

Coordination. Section 658E(c)(2)(O) of the Act added language to previously-existing requirements for coordination of programs that benefit Indian children requiring Lead Agencies to also coordinate the provision of programs that serve infants and toddlers with disabilities, children experiencing homelessness, and children in foster care. We include all children with disabilities, not just infants and toddlers, in the regulatory language,
given the critical importance of serving that population of children.

Lead Agencies also are required to consult and coordinate services with agencies responsible for public health, public education, employment services/workforce development, and TANF. The CCDBG Act of 2014 added a requirement for the Lead Agency to develop the Plan in coordination with State Advisory Councils on Early Childhood Education and Care, which are authorized by the Head Start Act (42 U.S.C. 9831 et seq.) at Section 685E(c)(2)(R).

In this final rule, we amend § 98.14(a)(1) to add the State Advisory Council on Early Childhood Education and Care or similar coordinating body, as well as additional new entities with which Lead Agencies are required to coordinate the provision of child care services. We have added parenthetical language to paragraph (a)(1)(iii) to specify that coordination with public education should also include agencies responsible for pre-kindergarten programs, if applicable, and early intervention and preschool educational services provided under Parts B and C of the Individuals with Disabilities Education Act (IDEA) (20 U.S.C. 1400).

Other coordinating entities include agencies responsible for child care licensing; Head Start collaboration; Statewide after-school network or other coordinating entity for out-of-school time care; emergency management and response; the Child and Adult Care Food Program (CACFP); Medicaid and the State children's health insurance program; mental health services agencies; services for children experiencing homelessness, including State Coordinators for the Education of Children and Youth Experiencing Homelessness; and, to the extent practicable, local liaisons designated by local educational agencies (LEAs) in the State as required by the McKinney-Vento Act (42 U.S.C. 11432) and the Department of Housing and Urban Development’s Continuum of Care and Emergency Solutions Grants. In the final rule, we added other relevant nutrition programs in addition to CACFP.

Over time, the CCDF program has become an essential support in local communities to provide access to early care and education in before- and after-school settings and to improve the quality of care. Many Lead Agencies already work collaboratively to develop a coordinated system of planning that includes a governance structure composed of representatives from the public and private sector, parents, schools, community-based organizations, child care, Head Start and Early Head Start, child welfare, family support, public health, and disability services. Local coordinating councils or advisory boards also often provide input and direction on CCDF-funded programs.

This type of coordination frequently is facilitated through entities such as State Advisory Councils on Early Childhood Education and Care. In both Head Start and CCDF, collaboration efforts extend to linking with other key services for young children and their families, such as medical, dental and mental health care; nutrition; services to children with disabilities; child support; refugee resettlement; adult education and postsecondary education; family literacy and English language acquisition; and employment training. These comprehensive services are crucial in helping families progress towards economic stability and in helping parents provide a better future for their young children.

Implementation of the requirements of the CCDBG Act of 2014 will require leadership and coordination between Lead Agencies and other child- and family-serving agencies, services, and supports at the State and local levels, including those identified above. For example, in many States, child care licensing is administered in a different agency than CCDF. In those States, implementation of the inspection and monitoring requirements included in the Act necessitates coordination across agencies.

Comment: One State noted that it has multiple agencies that serve children experiencing homelessness and asked for a change in the language.

Response: We recognize that there are many agencies that have responsibilities for serving children experiencing homelessness. The examples of agencies in this provision are not meant to be an exhaustive list. Each Lead Agency will need to identify the appropriate agencies that are responsible for providing services to children experiencing homelessness to comply with the coordination requirement.

Comment: We received multiple comments from national and State organizations supportive of the list of coordinating partners. We received a few comments suggesting additional coordinating partners to be named in this final rule, including child care resource and referral agencies, specific types of mental health providers, child care provider organizations, and child care providers who are faith-based or use a distinctive early childhood education approach.

Response: New paragraph 98.14(a)(1)(xiv) includes child care resource and referral agencies, as recommended by commenters. Recognizing that functions typically performed by resource and referral agencies in some instances may be performed by other types of entities, we expanded the regulatory language to also include child care consumer education organizations and providers of early childhood education and professional development. Lead Agencies have the flexibility, and are encouraged, to engage with a wide variety of cross-sector partners when developing the CCDF Plan. Some of the coordinating partners suggested by commenters, such as providers using distinctive approaches to teaching, and faith-based organizations are already assumed to be included in pre-existing regulations at § 98.14(a)(1), which requires coordination with child care and early childhood development programs.

Combined funding. Section 98.14(a)(3) reiterates the statutory requirement that any Lead Agency that combines funding for CCDF services with any other early childhood programs shall provide a description in the CCDF Plan of how the Lead Agency will combine and use the funding according to Section 658E(c)(2)(O) of the Act. Lead Agencies have the option of combining funding for CCDF child care services with programs operating at the Federal, State, and local levels for children in preschool programs. Tribal early childhood programs, and other early childhood programs, including those serving infants and toddlers with disabilities, children experiencing homelessness, and children in foster care. Combining funds could include blending, layering, or pooling multiple funding streams in an effort to expand and/or enhance services for children and families. For example, Lead Agencies may use multiple funding sources to offer grants or contracts to programs to deliver high-quality child care services; a Lead Agency may allow county or local governments to use coordinated funding streams; or policies may be in place that allow local programs to layer funding sources to provide full-day, full-year child care that meets Early Head Start, Head Start or State/Territory pre-kindergarten standards in addition to child care licensing requirements. As per the OMB Circular A–133 Compliance Supplement 2015, https://www.whitehouse.gov/omb/circulars/a133_compliance_supplement_2015, CCDF funds may be used in collaborative efforts with Head
Start programs to provide comprehensive child care and development services for children who are eligible for both programs. In fact, the coordination and collaboration between Head Start and CCDF is strongly encouraged by sections 640(g)(1)(D) and (E), 640(h), 641(d)(2)(H)(v), and 642(e)(3) of the Head Start Act in the provision of full working day, full calendar year of early care and learning and comprehensive services.

In order to implement such collaborative programs, which share, for example, space, equipment or materials, grantees may blend several funding streams so that services are provided seamlessly for the child and family. The same strategy applies to State-funded preschool programs where, working with CCDF funds, eligible children can benefit from a full-day and full-year program. Lead Agencies can layer Early Head Start and CCDF funds for the same child as long as there is no duplication in payments for the exact same part of the service. This is an option that some Lead Agencies are already implementing. Early Head Start-Child Care Partnerships grants, which allow Early Head Start programs to collaborate with local child care centers and family child care providers serving infants and toddlers from low-income families, offer a new important opportunity to implement this strategy to expand access to high-quality child care for infants and toddlers. We do note that, when CCDF funds are combined with other funds, § 98.67 continues to require Lead Agencies to have in place fiscal control and accounting procedures sufficient to prepare required reports and trace funds to a level of expenditure adequate to establish that such funds have been used on allowable activities.

**Public-private partnerships.** This final rule adds paragraph (a)(4) to § 98.14 in accordance with Section 658E(c)(2)(P) of the Act, which requires Lead Agencies to demonstrate in their Plan how they encourage public-private partnerships to leverage existing child care and early education service delivery systems and to increase the supply and quality of child care services for children under age 13, such as by implementing voluntary shared services alliance models (i.e., cooperative agreements among providers to pool resources to pay for shared fixed costs and operation). Public-private partnerships may include partnerships among State/Territory and public agencies, Tribal organizations, private entities, faith-based organizations and/or community-based organizations.

**Public availability of Plans.** The final rule adds language at § 98.14(c)(3) that requires the Lead Agency to post the content of the Plan that it proposes to submit to the Secretary on a Web site as part of the public hearing process. A new § 98.14(d) requires Lead Agencies to make their CCDF Plan and any Plan amendments publicly available. Ideally, Plans and Plan amendments are available on the Lead Agency Web site or other appropriate State/Territory Web sites (such as the consumer education Web site required at § 98.33(a)) to ensure that there is transparency for the public, and particularly for parents seeking assistance, about how the child care program operates. This is especially important for Plan amendments, given that Lead Agencies often make substantive changes to program rules or administration during the Plan period (now three years) through submission of Plan amendments (subject to ACF approval), but were not previously required to proactively make those amendments available to the public.

**Comment:** We received comments from disabilities organizations to insert “early intervention” to describe Part C and “preschool” before “Part B” for clarity.

**Response:** We agree with a comment recommending a technical fix to language at § 98.14(a)(1)(iii). The Act includes Part C and B of the Individuals with Disabilities Education Act (IDEA) for coordination. Part C provides early intervention services and Part B provides preschool as well as elementary and secondary educational services. The final rule adds “early intervention and preschool” to describe the educational services under IDEA.

**Comment:** We received several comments from provider and child care worker organizations supporting the requirement that Lead Agencies make draft and final Plans and Plan amendments publicly available. We received one comment that Lead Agencies should make the Plan available in the language of the community and another comment asking for a timeframe for States and Territories to make these items public.

**Response:** In paragraphs (c)(3) and (d) of this section, the final rule adds language that the Plan and any amendments to the Plan, as well as approved requests for temporary relief as discussed at § 98.19, must be made available on a Web site. The final rule does not require that the Plan be made available in multiple languages.

However, we strongly encourage States to meet the needs of families with limited English proficiency and to work with families and community groups to give them a voice in program planning and policymaking, for example, by organizing outreach meetings with interpreters, recruiting multilingual eligibility staff, and translating provider-focused documents to ensure a diverse group of providers. CCDF Plans are long, technical documents and there could be significant costs associated with translating them into multiple languages. The CCDF Plan asks States to indicate whether they provide information or services in other non-English languages and most States indicate that they have procedures in place to translate program materials and provide technical assistance to providers. Lead Agencies may decide it is more cost effective to prioritize translating provider contracts, consumer education information, or other key documents that are integral to service delivery than to translate the Plan itself, if resources are limited. We also urge States to publish these items as soon as possible, within a timeframe determined by the Lead Agency, for the greatest transparency to families, providers, and the public.

**§ 98.15 Assurances and Certifications**  
Section 658E(c) of the Act requires Lead Agencies to provide assurances and certifications in its Plan. The final rule adds new assurances based on new statutory language.

The final rule provides that Lead Agencies are required to provide an assurance that training and professional development requirements comply with § 98.44 and are applicable to caregivers, teachers, and directors working for child care providers receiving CCDF funds. They are also required to provide assurance that, to the extent practicable, enrollment and eligibility policies support the fixed costs of providing child care services by delinking provider payment rates from an eligible child’s occasional absences in accordance with § 98.45(l). Both of these requirements are discussed in detail in later sections of this rule.

Section 98.15(a)(9) of this final rule adopts the statutory requirement at Section 658E(c)(2)(G) of the Act for Lead Agencies to provide an assurance that they will maintain or implement early learning and developmental guidelines that are developmentally appropriate for all children from birth to kindergarten entry, describing what children should know and be able to do, and covering the essential domains of early childhood development (cognition, including language arts and numeracy; social, emotional and physical development; and approaches toward learning) for use
Section 98.15(b) requires Lead Agencies to include certifications in its CCDF Plan. We are adding new requirements, as proposed in the NPRM, to reflect the following new statutory requirements:  

- To develop the CCDF plan in consultation with the State Advisory Council on Early Childhood Education and Care (or similar coordinating body);  
- to collect and disseminate to parents of eligible children, the general public, and, where applicable, child care providers, consumer education information that will promote informed child care choices and information on developmental screenings, as required by § 98.33;  
- to make public the result of monitoring and inspections reports, as well as the number of deaths, serious injuries, and instances of substantiated child abuse that occurred in child care settings as required by § 98.33(a);  
- to require caregivers, teachers, and directors of child care providers to comply with the State’s, Territory’s or Tribe’s procedures for reporting child abuse and neglect as required by section 106(b)(2)[B](i) of the Child Abuse Prevention and Treatment Act (42 U.S.C. 5106a(b)(2)[B](i)), if applicable, or other child abuse reporting procedures and laws in the service area, as required by § 98.41(e);  
- to have in effect monitoring policies and practices pursuant to § 98.42; and  
- to ensure payment practices of child care providers receiving CCDF funds reflect generally-accepted payment practices of child care providers that serve children who do not receive CCDF assistance, pursuant to § 98.45(l).  

These requirements are discussed later in this final rule. The final rule also removes “or area served by Tribal Lead Agency” from § 98.15(b)(6), as re-designated, because the rule includes distinct requirements for Tribes to enforce health and safety standards for child care providers. Section 98.15(b)(12), as re-designated, updates the reference to § 98.43, which is now § 98.45. All other paragraphs in this section remain unchanged.  

The final rule adds a new paragraph (b)(13) requiring Lead Agencies to certify in the CCDF Plan that they have in place policies to govern the use and disclosure of confidential and personally identifiable information about children and families receiving CCDF-funded assistance and child care providers receiving CCDF funds. Previously, there were no Federal requirements or regulation governing confidentiality in CCDF, although there are Federal requirements governing information that the CCDF agency may have in its files, such as child abuse and neglect information. The Federal Privacy Act is the primary source of Federal requirements related to client confidentiality (5 U.S.C. 552a note); however, the Privacy Act generally applies to Federal agencies, and is not applicable to State and local government agencies, with some exceptions, such as computer matching issues and requirements related to the disclosure and protection of Social Security numbers. (ACF has previously issued guidance: Clarifying policy regarding limits on the use of Social Security Numbers under the CCDF and the Privacy Act of 1974, Program Instruction: ACYF–PI–CC–00–04, 2000, which remains in effect as of the effective date of this rule.)  

This final rule requires that Lead Agencies have policies in place to govern the use and disclosure of confidential and personally identifiable information (PII) about children and families receiving CCDF-funded assistance and child care providers, which should include their staff, receiving CCDF funds. We offer Lead Agencies discretion to determine the specifics of such privacy policies because we recognize many Lead Agencies already have policies in place, and it is not our intention to make them revise such policies, provided the State’s policy complies with existing Federal confidentiality requirements. Further, many Lead Agencies are working on data sharing across Federal and State programs and it is not our intention to make these efforts more challenging by introducing a new set of confidentiality requirements. This regulatory addition is not intended to preclude the sharing of individual, case-level data among Federal and State programs that can improve the delivery of services. The ACF Confidentiality Toolkit may be a useful resource for States in addressing privacy and security in the context of information sharing (https://www.acf.hhs.gov/sites/default/files/assets/acf_confidentiality_toolkit_final_08_12_2014.pdf).  

It is important that personal information not be used for purposes outside of the administration or enforcement of CCDF, or other Federal, State or local programs, and that when information is shared with outside entities (such as academic institutions for the purpose of research) there are safeguards in place to ensure for the non-disclosure of Personally-Identifiable Information, which is information that can be used to link to, or identify, a specific individual. It is at the Lead Agency’s discretion whether
they choose to comply with this provision by writing and implementing CCDF-specific confidentiality rules or by ensuring that CCDF data is subject to existing Federal or State confidentiality rules. Further, nothing in this provision should preclude a Lead Agency from making publicly available provider-specific information on the level of quality of a provider or the results of monitoring or inspections as described in § 98.33.

Comment: We received comments from private and faith-based providers on § 98.15(a)(9) requesting language to name certain pedagogical approaches and other distinctive approaches to teaching in multiple sections, including Lead Agency certification and assurances regarding the State’s early learning guidelines.

Response: We decline to add this language because the request speaks to teaching practices rather than content of what children should learn and be able to do. Further, the Act prohibits the Secretary from requiring any specific curricula, teaching philosophy, or pedagogical approach. We encourage Lead Agencies to coordinate on the Plan development and its implementation with the full range of providers, including those who use distinctive curricula or teaching practices that are grounded in research of child development and learning.

Comment: Two States and a local government raised concerns that the provision in § 98.15(a)(11)—making available code or software for child care information systems or technology developed with CCDF funds be made available upon request by other agencies—could negatively affect their ability to procure vendors for information systems. The commenters suggested that the provision raised the risk of violating licensing agreements and intellectual property law and asked for clarification whether this provision applies to technology partially funded by CCDF. One comment asked for clarifying statements whether the regulation applies to systems partially funded by CCDF; whether the systems must be shared inter-state or intra-state; and that the child, program, and contractor data itself would be protected under applicable State and federal laws.

Response: We have modified the language in this provision to provide that the assurance for sharing upon request will be made “to the extent practicable and appropriate.” We also added language to clarify that the CCDF-funded code and software should be shared with other public agencies, “including public agencies in other States.” We considered the

As a general practice, the reuse and availability of IT code and software allows States to leverage software development funding more effectively. Subsidy child care data systems are being developed using CCDF funding. Thus, this provision applies to code and software developed fully or partially with CCDF funds. As to sharing with other public agencies within the State and across State borders, we expect the widest reuse of IT artifacts as possible. Lastly, data would be protected under applicable federal and State laws. The majority of information system definitions typically include several layers, such as users, business rules, hardware, software, and data. There is specific mention of code and software in the provision, which does not include data.

§ 98.16 Plan Provisions

Submission and approval of the CCDF Plan is the primary mechanism by which ACF works with Lead Agencies to ensure program implementation meets Federal regulatory requirements. All provisions that are required to be included in the CCDF Plan are outlined in § 98.16. Many of the additions to this section correspond to changes throughout the regulations, which we provide explanation and responses to comment for later in this rule. For provisions that do not cross-reference other sections of the rule, we respond to comments here. Paragraph (a) of § 98.16 continues to require that the Plan specify the Lead Agency.

General comments: We received supportive comments from national and State organizations on the following subsections: Emergency and disaster planning (aa); outreach to English language learner children and children with disabilities and providers who are English language learners (dd); supporting providers in successful family engagement (gg); and responding to complaints to the national hotline (hh).

Comment: We received comments from a child care worker organization requesting the addition of “higher compensation” as a strategy in several subsections of § 98.16.

Response: The final rule includes compensation improvements in the goals and purposes section and in the professional development and training sections. We agree that in raising standards, Lead Agencies should consider multiple strategies for raising compensation commensurate with caregivers, teachers, and directors attaining higher level credentials and education to retain highly knowledgeable and skilled educators and leaders. We also encourage Lead Agencies to consider strategies throughout the Plan that can bolster compensation, such as setting reimbursement rates, building the supply of quality child care, and using the quality set-aside dollars specifically to improve compensation in a field that remains undercompensated even when earning higher education and credentials comparable to their counterparts in the public education system.

Written agreements. A new § 98.16(b), which was proposed in the NPRM, corresponds with changes at § 98.11(a)(3) discussed earlier, related to administration of the program through written agreements with other entities. In the CCDF Plan, the change requires the Lead Agency to include a description of processes it will use to monitor administrative and implementation responsibilities undertaken by agencies other than the Lead Agency including descriptions of written agreements, monitoring, and auditing procedures, and indicators or measures to assess performance. This is consistent with the desire to strengthen program integrity within the context of current Lead Agency practices that devolve significant authority for administering the program to sub-recipients. Prior paragraphs (b) through (f) are re-designated as paragraphs (c) through (g). All paragraphs remain unchanged with the exception of paragraph (e), as re-designated, which has been revised by adding “and the provision of services” to clarify that the Plan’s description of coordination and consultation processes should address the provision of services in addition to the development of the Plan. We address comments in discussion of § 98.11.
and demonstrate that eligibility determination and redetermination processes promote continuity of care for children and stability for families receiving CCDF services, including a minimum 12-month eligibility redetermination period in accordance with §98.21(a); a graduated phase out for families whose income exceeds the Lead Agency’s threshold to initially qualify for CCDF assistance, but does not exceed 85 percent of State median income, pursuant to §98.21(b); processes that take into account irregular fluctuation in earnings, pursuant to §98.21(c); procedures and policies to ensure that parents are not required to unduly disrupt their employment, training, or education to complete eligibility redetermination, pursuant to §98.21(d); limiting any requirements to report changes in circumstances in accordance with §98.21(e); policies that take into account children’s development and learning when authorizing child care services pursuant to §98.21(f); and other policies and practices such as timely eligibility determination and processing of applications. Comments on this topic are discussed later.

**Child care services.** Section 98.16(i)(2), as re-designated, is amended to reference §98.30(e)(1)(iii). Section 98.16(i)(5), as re-designated, is amended to require that all eligibility criteria and priority rules, including those at §98.46, are described in the CCDF Plan. The remaining subparagraphs remain unchanged.

**Consumer education.** Section 98.16(j), as re-designated, incorporates statutory changes to provide comprehensive consumer and provider education, including the posting of monitoring and inspection reports, pursuant to §98.33, changes which are discussed later in this rule.

**Co-payments.** Section 98.16(k), as re-designated, requires Lead Agencies to include a description of how co-payments are affordable for families, pursuant to §98.45(k), including a description of any criteria established by the Lead Agency for waiving contributions for families. This change is discussed in more detail later in the rule.

**Health and safety standards and monitoring.** The final rule adds a provision at §98.16(l), as re-designated, requiring Lead Agencies to provide a description of any exemptions to health and safety requirements for relative providers made in accordance with §98.41(a)(2), which is discussed later in this rule. We received no comments and have retained this language as proposed in the NPRM.

The final rule adds three new paragraphs, (m) through (o), as proposed in the NPRM, requiring Lead Agencies to describe the child care standards for child care providers receiving CCDF funds, that includes group size limits, child-staff ratios, and required qualifications for caregivers, teachers, and directors, in accordance with §98.41(d); monitoring and other enforcement procedures to ensure that child care providers comply with applicable health and safety requirements pursuant to §98.42; and criminal background check requirements, policies, and procedures, including the process in place to respond to other States’, Territories’, and Tribes’ requests for background check results in order to accommodate the 45-day timeframe, in accordance with §98.43.

Comment: We received one comment on §98.16(m) that the States should not be required to provide in their Plan the group size, child-staff ratios and required qualifications. **Response:** Although the Act does not allow the Secretary to establish standards for group size, child-staff ratios, and required qualifications, there is nothing that prohibits the Secretary from requesting this information in the Plan. This final rule does not establish group size, ratios, or qualifications. However, this is helpful information in understanding the conditions of care children are experiencing and the child care workforce.

**Training and Professional Development.** The final rule adds §98.16(p) requiring Lead Agencies to describe training and professional development requirements for caregivers, teachers, and directors of child care providers who receive CCDF funds in accordance with §98.44. We received no comments and have retained the proposed language. Paragraph (q), as re-designated, remains unchanged.

**Payment rates.** The final rule revises §98.16(c), as re-designated, to include the option of using an alternative methodology to set provider payment rates. This provision is described later in this final rule. It also deletes the word “biennial” as the reauthorized Act requires the market rate survey to be conducted every three years.

The final rule revises paragraph (s), as re-designated, to include a detailed description of the State’s hotline for complaints and process for substantiating and responding to complaints, including whether the State considers monitoring as part of its process for responding to complaints for both CCDF and non-CCDF providers.

This provision is described later in the rule at §98.32. Paragraph (t), as re-designated (previously paragraph (u)), remains unchanged.

The final rule revises §98.16(u), as re-designated (previously paragraph (o)), to include in the description of the licensing requirements, any exemption to licensing requirements that is applicable to child care providers receiving CCDF funds; a demonstration of why this exemption does not endanger the health, safety, or development of children; and a description of how the licensing requirements are effectively enforced, pursuant to §98.42. We received no comments on this section.

**Building supply and quality.** The final rule adds a new §98.16(x) based on statutory language at Section 658E(c)(2)(M) of the Act, which requires the Lead Agency to describe strategies to increase the supply and improve the quality of child care services for children in underserved areas, infants and toddlers, children with disabilities, and children who receive care during nontraditional hours. As described in the Act, strategies may include alternative payment rates to child care providers, the provision of direct contracts or grants to community-based organizations, offering child care certificates to parents, or other means determined by the Lead Agency. For grants or contracts to be effective at increasing the supply of high-quality care, they should be funded at levels that are sufficient to meet any higher quality standards associated with that care. Along with increased rates and contracts, we encourage Lead Agencies to consider other strategies, including training and technical assistance to child care providers to increase quality for these types of care. We recommend States, Territories, and Tribes consider the recommendations of different strategies in the Information Memorandum from the Administration for Children and Families, Building the Supply of High-Quality Child Care (November 6, 2015).

The final rule at §98.16(x) adds that the Plan must: Identify shortages in the supply of high-quality child care providers; list the data sources used to identify supply shortages; and describe the method of tracking progress to support equal access and parental choice. In the NPRM, a similar requirement to identify supply shortages was included in the section on grants and contracts (which has been deleted in the final rule). We have moved this requirement to §98.16(x) since identification of supply gaps of high-quality care is a critical step of building...
supply and quality for certain populations, as required by the Act. To identify supply shortages, the Lead Agency may analyze available data from market rate surveys, alternative methodologies (if applicable), child care resource and referral agencies, facilities studies and other community needs assessments, Head Start needs assessments, and other sources. ACF recommends that the Lead Agency examine all localities in its jurisdiction, recognizing that each local child care market has unique characteristics—for example, many rural areas face supply shortages. Further, we recommend that the Lead Agency’s analysis consider all categories of care, recognizing that a community with an adequate supply of one category of care (e.g., centers) may face shortages for another category (e.g., family child care).

Comment: We received a comment from a child care worker organization asking us to include compensation from a child care worker organization in child care. Taken together, this means Lead Agencies should focus on building the supply of child care.

Significant concentrations of poverty and unemployment. A new § 98.16(y), as proposed in the NPRM, requires Lead Agencies to describe how they prioritize increasing access to high-quality child care and development services for children of families in areas that have significant concentrations of poverty and unemployment and that do not have sufficient numbers of such programs, pursuant to § 98.46(b). This provision is discussed later in this rule.

Response: We received a comment from a national organization in support of this provision and a recommendation that the Plan describe how the Lead Agency will develop programs and services that are culturally and linguistically relevant and support a diverse child care workforce.

Emergency preparedness. The final rule adds a new § 98.16(aa) to the regulation, as proposed in the NPRM, based on Section 658E(c)(2)(U) of the Act, to require the Lead Agency to demonstrate how the Lead Agency will address the needs of children, including the need for safe child care, before, during and after a state of emergency declared by the Governor or a major disaster or emergency (as defined by section 102 of the Robert T. Stafford Disaster Relief and Emergency Assistance Act, 42 U.S.C. 5122) through a Statewide Child Care Disaster Plan (or Disaster Plan for a Tribe’s service area). The Disaster Plan must be developed in collaboration with the State/Territory human services agency, the State/Territory emergency management agency, the State/Territory licensing agency, local and State/Territory child care resource and referral agencies, and the State/Territory Advisory Council on Early Childhood Education and Care, or similar coordinating body. Tribes must have similar Disaster Plans, for their Tribal service area, developed in consultation with relevant agencies and partners. The Disaster Plan must include guidelines for continuation of child care subsidies and child care services, which may include the provision of emergency and temporary child care services and temporary operating standards for child care during and after a disaster; coordination of post-disaster recovery of child care services; and requirements that providers receiving CCDF funds and other child care providers, as determined appropriate by the Lead Agency, have in place procedures for evacuation, relocation, relocation sub-place, lock-down, communication and reunification with families, continuity of operations, accommodations of infants and toddlers, children with disabilities, and children with chronic medical conditions; and procedures for staff and volunteer emergency preparedness training and practice drills, including training requirements for caregivers of providers receiving CCDF.

Comment: We received a comment from a multi-state private provider company asking us to modify the language that the strategies to increase supply should be directed to supplying high-quality child care.

Response: We think that the Act and this final rule will raise the quality of child care, especially for CCDF-funded child care. The statutory language focuses on improving the supply and quality of care. Taken together, this means Lead Agencies should focus on building the supply of high-quality care.

We urge Lead Agencies, as they consider setting the rate for certificates and grants or contracts, to examine compensation as a factor in quality and in recruiting and retaining knowledgeable and skilled staff to work in child care, particularly in hard-to-serve communities.

Comment: One national organization urged us to include supply building strategies that reflect the linguistic and cultural characteristics of the families and children. We think that the Act and language in other provisions.

Response: High-quality child care respects and supports linguistic and cultural diversity of children and their families. As well, the building of supply in underserved areas, to serve more infants and toddlers, and to respond to the needs of families who need child care during non-traditional hours will include communities and children who are English language learners. Section 98.16(dd) addresses outreach to English language learner families and facilitates participation of providers who are English language learners in the subsidy system. The final rule also recognizes the importance of home culture and language in other provisions.

Comment: We received a comment from a multi-state private provider company asking us to modify the language that the strategies to increase supply should be directed to supplying high-quality child care.

Response: We think that the Act and this final rule will raise the quality of child care, especially for CCDF-funded child care. The statutory language focuses on improving the supply and quality of care. Taken together, this means Lead Agencies should focus on building the supply of high-quality care.

Significant concentrations of poverty and unemployment. A new § 98.16(y), as proposed in the NPRM, requires Lead Agencies to describe how they prioritize increasing access to high-quality child care and development services for children of families in areas that have significant concentrations of poverty and unemployment and that do not have sufficient numbers of such programs, pursuant to § 98.46(b). This provision is discussed later in this rule.

Comment: We received a comment from a national organization in support of this provision and a recommendation that the Plan describe how the Lead Agency will develop programs and services that are culturally and linguistically relevant and support a diverse child care workforce.

Response: We decline to add language to § 98.16(y) but we do address issues of cultural and linguistically responsive child care services in the diversity of the child care workforce in other sections of this final rule.

Business practices. This final rule adds a new § 98.16(z) reiterating the statutory requirement for Lead Agencies to describe how they develop and implement strategies to strengthen the business practices of child care providers to expand the supply, and improve the quality of, child care services. Some child care providers need support on business and management practices in order to run their child care businesses more effectively and devote more time and attention to quality improvements.

Improved business practices can benefit caregivers and children. An example of a key business practice is providing paid sick leave for caregivers to keep children healthy. Without paid time off, caregivers may come to work sick and risk spreading illnesses to children in care. We also encourage child care providers to provide paid sick leave because it promotes better health for child care employees, which is important to maintaining a stable workforce as well as consistency of care for children. According to The Council of Economic Advisors, “[P]aid sick leave also induces a healthier workforce by encouraging workers to stay home when they are sick.” (The Economics of Paid and Unpaid Leave, The Council of Economic Advisors, June 2014.)

Shared services is another business practice strategy, particularly for a network of family child care providers or small child care centers. The final rule adds a new § 98.16(aa) to the regulation, as proposed in the NPRM, based on Section 658E(c)(2)(U) of the Act, to require the Lead Agency to demonstrate how the Lead Agency will address the needs of children, including the need for safe child care, before, during and after a state of emergency declared by the Governor or a major disaster or emergency (as defined by section 102 of the Robert T. Stafford Disaster Relief and Emergency Assistance Act, 42 U.S.C. 5122) through a Statewide Child Care Disaster Plan (or Disaster Plan for a Tribe’s service area). The Disaster Plan must be developed in consultation with the State/Territory human services agency, the State/Territory emergency management agency, the State/Territory licensing agency, local and State/Territory child care resource and referral agencies, and the State/Territory Advisory Council on Early Childhood Education and Care, or similar coordinating body. Tribes must have similar Disaster Plans, for their Tribal service area, developed in consultation with relevant agencies and partners. The Disaster Plan must include guidelines for continuation of child care subsidies and child care services, which may include the provision of emergency and temporary child care services and temporary operating standards for child care during and after a disaster; coordination of post-disaster recovery of child care services; and requirements that providers receiving CCDF funds and other child care providers, as determined appropriate by the Lead Agency, have in place procedures for evacuation, relocation, relocation sub-place, lock-down, communication and reunification with families, continuity of operations, accommodations of infants and toddlers, children with disabilities, and children with chronic medical conditions; and procedures for staff and volunteer emergency preparedness training and practice drills, including training requirements for caregivers of providers receiving CCDF.

Comment: We received a comment from a multi-state private provider company asking us to modify the language that the strategies to increase supply should be directed to supplying high-quality child care.

Response: We think that the Act and this final rule will raise the quality of child care, especially for CCDF-funded child care. The statutory language focuses on improving the supply and quality of care. Taken together, this means Lead Agencies should focus on building the supply of high-quality care.

Significant concentrations of poverty and unemployment. A new § 98.16(y), as proposed in the NPRM, requires Lead Agencies to describe how they prioritize increasing access to high-quality child care and development services for children of families in areas that have significant concentrations of poverty and unemployment and that do not have sufficient numbers of such programs, pursuant to § 98.46(b). This provision is discussed later in this rule.

Comment: We received a comment from a national organization in support of this provision and a recommendation that the Plan describe how the Lead Agency will develop programs and services that are culturally and linguistically relevant and support a diverse child care workforce.

Response: We decline to add language to § 98.16(y) but we do address issues of cultural and linguistically responsive child care services in the diversity of the child care workforce in other sections of this final rule.

Business practices. This final rule adds a new § 98.16(z) reiterating the statutory requirement for Lead Agencies to describe how they develop and implement strategies to strengthen the business practices of child care providers to expand the supply, and improve the quality of, child care services. Some child care providers need support on business and management practices in order to run their child care businesses more effectively and devote more time and attention to quality improvements.

Improved business practices can benefit caregivers and children. An example of a key business practice is providing paid sick leave for caregivers to keep children healthy. Without paid time off, caregivers may come to work sick and risk spreading illnesses to children in care. We also encourage child care providers to provide paid sick leave because it promotes better health for child care employees, which is important to maintaining a stable workforce as well as consistency of care for children. According to The Council of Economic Advisors, “[P]aid sick leave also induces a healthier workforce by encouraging workers to stay home when they are sick.” (The Economics of Paid and Unpaid Leave, The Council of Economic Advisors, June 2014.)

Shared services is another business practice strategy, particularly for a network of family child care providers or small child care centers. The final rule adds a new § 98.16(aa) to the regulation, as proposed in the NPRM, based on Section 658E(c)(2)(U) of the Act, to require the Lead Agency to demonstrate how the Lead Agency will address the needs of children, including the need for safe child care, before, during and after a state of emergency declared by the Governor or a major disaster or emergency (as defined by section 102 of the Robert T. Stafford Disaster Relief and Emergency Assistance Act, 42 U.S.C. 5122) through a Statewide Child Care Disaster Plan (or Disaster Plan for a Tribe’s service area). The Disaster Plan must be developed in consultation with the State/Territory human services agency, the State/Territory emergency management agency, the State/Territory licensing agency, local and State/Territory child care resource and referral agencies, and the State/Territory Advisory Council on Early Childhood Education and Care, or similar coordinating body. Tribes must have similar Disaster Plans, for their Tribal service area, developed in consultation with relevant agencies and partners. The Disaster Plan must include guidelines for continuation of child care subsidies and child care services, which may include the provision of emergency and temporary child care services and temporary operating standards for child care during and after a disaster; coordination of post-disaster recovery of child care services; and requirements that providers receiving CCDF funds and other child care providers, as determined appropriate by the Lead Agency, have in place procedures for evacuation, relocation, relocation sub-place, lock-down, communication and reunification with families, continuity of operations, accommodations of infants and toddlers, children with disabilities, and children with chronic medical conditions; and procedures for staff and volunteer emergency preparedness training and practice drills, including training requirements for caregivers of providers receiving CCDF.

Comment: We received a comment from a multi-state private provider company asking us to modify the language that the strategies to increase supply should be directed to supplying high-quality child care.

Response: We think that the Act and this final rule will raise the quality of child care, especially for CCDF-funded child care. The statutory language focuses on improving the supply and quality of care. Taken together, this means Lead Agencies should focus on building the supply of high-quality care.
clarified that the Plan must apply, at a minimum, to CCDF providers and may apply to other providers (such as all licensed providers) at the Lead Agency option. We also added language on post-disaster recovery.

In past disasters, the provision of emergency child care services and rebuilding and restoring of child care facilities and infrastructure emerged as an essential service. The importance of the need to improve emergency preparedness and response in child care was highlighted in an October 2010 report released by the National Commission on Children and Disasters. The Commission’s report included two primary sets of recommendations for child care: (1) To improve disaster preparedness capabilities for child care; and (2) to improve capacity to provide child care services in the immediate aftermath and recovery from a disaster (2010 Report to the President and Congress, National Commission on Children and Disasters, p. 81, October 2010). Child care has also been recognized by the Federal Emergency Management Agency (FEMA) as an essential service and an important part of disaster response and recovery. (FEMA Disaster Assistance Fact Sheet 9580.107, Public Assistance for Child Care Services Fact Sheet, 2013).

Maintaining the safety of children in child care programs during and after disaster or emergency situations necessitates planning in advance by State/Territory agencies and child care providers. The reauthorization of the CCDBG Act, and this final rule, implement the key recommendation of the National Commission on Children and Disasters by requiring a child care-specific Statewide Disaster Plan. ACF has previously issued guidance (CCDF–ACF–IM–2011–01) recommending that Disaster Plans include five key components: (1) Planning for continuation of services to CCDF families; (2) coordinating with emergency management agencies and key partners; (3) regulatory requirements and technical assistance for child care providers; (4) provision of temporary child care services after a disaster, and (5) rebuilding child care after a disaster. The guidance recommends that disaster plans for child care incorporate capabilities for shelter-in-place, evacuation and relocation, communication and reunification with families, staff training, continuity of operations, accommodation of children with disabilities and chronic health needs, and preparedness drills. ACF intends to provide updated guidance and technical assistance to States, Territories, and Tribes as they move forward with implementing Disaster Plans as required by the reauthorization. We received no comments on this provision and have retained the language as proposed in the NPRM.

Payment practices. The final rule adds new § 98.16(bb), requiring Lead Agencies to describe payment practices applicable to child care providers receiving CCDF, pursuant to § 98.45(l), including practices to ensure timely payment for services, to delink provider payments from children’s occasional absences to the extent practicable, and to reflect generally-accepted payment practices. This is discussed later in this rule. We received no comments on this provision but have made a conforming citation when referencing section 98.45(l). The rest of the language is retained as proposed in the NPRM.

Program integrity. The final rule adds new § 98.16(cc), requiring Lead Agencies to describe processes in place to describe internal controls to ensure integrity and accountability; processes in place to investigate and recover fraudulent payments and to impose sanctions on clients or providers in response to fraud; and procedures in place to document and verify eligibility, pursuant to § 98.68. This change corresponds to a new program integrity section included in subpart G of the regulations, which is discussed later in this rule.

Outreach and services for families and providers with limited English proficiency and persons with disabilities. The final rule adds new § 98.16(dd) to require that the Lead Agency describe how it provides outreach and services to eligible families with limited English proficiency and persons with disabilities, and facilitate participation of child care providers with limited English proficiency and disabilities in CCDF. Currently, the Plan requires Lead Agencies to describe how they provide outreach and services to eligible limited English proficient families and providers. In the FY 2016–2018 CCDF Plans, States and Territories reported a number of strategies to overcome language barriers. Forty-nine States and Territories have bilingual caseworkers or translators, 45 have applications in multiple languages, and 19 offer provider contracts or agreements in multiple languages. The final rule requires Lead Agencies to develop policies and procedures to clearly communicate program information such as requirements, consumer education information, and eligibility information, to families and child care providers of all backgrounds.

Comment: One comment requested language in the Plan to require a description of how Lead Agencies will develop child care services and programs that are culturally and linguistically relevant to the children and families that they serve, and how it will implement recruitment and workforce development strategies that will seek to increase the number of child care providers who are representative of the communities in which they serve.

Response: This concern is addressed in § 98.16(dd). We strongly agree that Lead Agencies should support children and families whose native language is not English, and providers who may be English language learners. The Migration Policy Institute’s recent study shows that a large segment of the child care workforce, like the children and families they serve, are English language learners and come from a range of cultures. There is a strong body of research on the importance of child care providers respecting and supporting children’s home language and culture in order to promote learning achievement.

Suspension and expulsion policies. The final rule adds a new § 98.16(ee) to require that the Lead Agency describe its policies to prevent suspension, expulsion, and denial of services due to behavior of children from birth to age five in child care and other early childhood programs receiving CCDF funds, which must be disseminated as part of consumer and provider education efforts in accordance with § 98.33(b)(1)(v).

Comment: We received several comments from national organizations supporting the attention to reducing or eliminating the high rates of suspension and expulsion of young children. We received a comment from one State expressing concern that it will be difficult to enforce such policies. National organizations representing children with disabilities urged language prohibiting the use of suspension and expulsion. They raise concerns that such practices have excluded children with disabilities.

Response: We added in the rule that the Lead Agency must describe policies to prevent suspension and expulsion. Recent data demonstrates a high rate of suspensions and expulsions of children as young as preschool, practices that are associated with negative educational and life outcomes. The data also demonstrates a greater prevalence of suspension and expulsion of children of color and boys. These disturbing trends come from the early childhood and education fields to prevent suspension and expulsion while
ensuring the safety and well-being of young children (themselves and others) in early learning settings. Furthermore, if administered in a discriminatory manner, suspensions and expulsions of children may violate Federal civil rights laws. In addition, early childhood programs must comply with applicable legal requirements governing the discipline of a child for misconduct caused by, or related to, a child’s disability, including, as applicable, implementing reasonable modifications to policies, practices, or procedures to ensure that children with disabilities are not suspended or expelled because of their disability-related behaviors unless a program can demonstrate that making such modifications would result in a fundamental alteration in the nature of a service, program, or activity.

The Child Care and Development Block Grant (CCDBG) Act of 2014 also allows States to target CCDF quality enhancement funds to professional development that includes effective behavior management strategies and training on strategies to promote social-emotional development. These kinds of supports, both through formal coursework, and field-based, ongoing support in the form of coaching, mentoring, or mental health consultation, have been demonstrated to reduce the challenging behavior in children that is associated with expulsions.

We strongly encourage States and child care providers (including school age providers) to utilize the guidance, policy statements, and resources made available by federal agencies. For school-age children, the following resources are available:

• Supporting and responding to behavior: Evidence-based classroom strategies for teachers: https://www.osepideasthatwork.org/evidencebasedclassroomstrategies/
• Positive Behavioral Interventions & Supports (PBIS) National Technical Assistance Center: https://www.pbis.org/
• Rethinking Discipline 101: Why it matters (webinar): https://www.youtube.com/watch?v=Qg-kI11w1s8

With regard to young children, we urge States and child care providers to consider the recommendations in the Policy Statement on Expulsion and Suspension Policies in Early Childhood Settings issued by the Secretaries of Health and Human Services and Education at https://www2.ed.gov/policy/gen/guid/school-discipline/policy-statement-ecce-expulsions-suspensions.pdf.

Reports of serious injuries or death in child care. The final rule adds a new § 98.16(ff) to require the Lead Agency to designate a State, Territorial, or Tribal entity to which child care providers must submit reports of any serious injuries or deaths of children occurring in child care, regardless of whether or not they receive CCDF assistance. Comments are discussed later under the related requirement at § 98.42(b)(4).

Family engagement. The final rule adds new § 98.16(gg) to require the Lead Agency to describe how it supports child care providers in the successful engagement of families in children’s learning and development. We received no comments on this provision and have left the language unchanged in the final rule.

Complaints received through the national hotline and Web site. The final rule adds new § 98.16(hh) to require the Lead Agency to describe how it will respond to complaints received through the national hotline and Web site, as required by (Section 658L(b)(2)) of the authorized Act. The description must include the designee responsible for receiving and responding to those complaints for both licensed and license-exempt child care providers. The final rule adds new § 98.16(ii) to require the Lead Agency to send complaints received through the national hotline and Web site to the appropriate Lead Agency to make sure that they are responded to quickly, especially when a child’s health or safety is at risk. This provision is aimed at building those connections and ensuring that a process is in place for addressing complaints regarding both licensed and license-exempt child care providers. We received no comments and have left language unchanged in final rule.

Finally, the final rule re-designates paragraph (v) as paragraph (ii) with no other changes. We received no comments on this provision and have retained the language as proposed in the NPRM.

§ 98.17 Period Covered by Plan

This section describes the term of the Plan, which is now three years. We received no comments on this section.

§ 98.18 Approval and Disapproval of Plans and Plan Amendments

This section of the regulations describes processes and timelines for CCDF Plan approvals and disapprovals, as well as submission of Plan amendments. CCDF Plans are submitted triennially and prospectively describe how the Lead Agency will implement the program. To make a substantive change to a CCDF program after the Plan has been approved, a Lead Agency must submit a Plan amendment to ACF for approval. The purpose of Plan amendments is to ensure that grantee expenditures continue to be made in accordance with the statutory and regulatory requirements of CCDF, if the grantee makes changes to the program during the three-year Plan period.

Advance written notice. In conjunction with the change discussed at § 98.14(d) to make the Plan and any Plan amendments publicly available, the final rule adds a provision at § 98.18(b)(2) to require Lead Agencies to provide advance written notice to affected parties, specifically parents and child care providers, of changes in the program made through an amendment that adversely affect income eligibility, payment rates, and/or sliding fee scales so as to reduce or terminate benefits. The notice should describe the action to be taken (including the amount of any benefit reduction), the reason for the reduction or cessation, and the effective date of the action.

Comment: Two States expressed concerns that the provisions on advance written notice would be administrative burdens. One State asked that its requirements for posting for administrative rule changes meet this requirement. The State also asked for clarification whether the advance written notice is separately required for any Plan amendment. By contrast, child care worker organizations submitted comments in support of this provision and requested additional requirements. They asked us to go further and require a public review and comment process for Plan amendments prior to Lead Agency submission to the federal government. They note that States prepared their three-year CCDF plans prior to the release of the final regulations, and thus there is a likelihood that many Plans will have to be modified in significant ways to fully meet the rule.

Response: The Lead Agency may choose to issue notification of adverse programmatic changes in a variety of ways, including a mailed letter or email sent to all participating child care providers and families. We are providing Lead Agencies with the flexibility to determine an appropriate time period for advance notice, depending on the type of policy change being implemented or the effective date of that policy change. Advance notice adds transparency to the Plan amendment process and provides a mechanism to ensure that affected parties remain informed of any substantial changes to a Lead Agency’s CCDF Plan that may affect their ability to participate in the child
care program. We note that while we encourage Lead Agencies to provide written notice of any changes that affect income eligibility, payment rates, and/or sliding fee scales, we only require written notice of those that adversely impact parents or providers. We do not require the Lead Agency to hold a formal public hearing or solicit comments on each Plan amendment, as is required by regulations at §96.14(c) for the submission of the CCDF Plan. However, we encourage solicitation of public input whenever possible and consider this regulatory change to be consistent with the spirit and intent of the CCDF Plan public hearing provision. We encourage Lead Agencies to ensure that advanced written notice is provided in multiple languages, as appropriate, so that all parents and child care providers have access and can plan for changes. As noted above, the final rule adds a provision at §96.16(dd) to require Lead Agencies to include in the Plan a description of processes to provide outreach and services to CCDF families and providers with limited English proficiency.

Comment: A comment submitted by a group of providers asked for a required time limit on when advance notice is provided to them. A large, multi-state child care provider requested at least 30 days advance written notice to parties.

Response: We decline to require a specific time period for the Lead Agency to provide written notice. We do urge Lead Agencies to provide this information as soon as possible because of the consequences to families and providers.

§ 98.19 Requests for Temporary Relief From Requirements

Section 658I(c) of the Act indicates that Lead Agencies are allowed to submit a request to the Secretary to waive one or more requirements contained in the Act on a temporary basis: To ensure that effective delivery of services are not interrupted by conflicting or duplicative requirements; to allow for a period of time for a State legislature to enact legislation to implement the provisions of the Act or this part; or in response to extraordinary circumstances, such as a natural disaster or financial crisis. We are extending the waiver option to rules under this part as well. Prior to the enactment of the CCDBG Act of 2014, there was no waiver authority within the CCDF program.

Through the changes in this final rule, we provide guidance and clarity on: The eligibility of States, Territories, and Tribes to request a waiver; what provisions are not eligible for waivers; and how the waiver request and approval (or disapproval) process works. In addition to outlining the requirements detailed in the CCDBG Act of 2014, §98.19 includes clarifying provisions to provide greater understanding of the intent and implementation of the waiver process as temporary.

This section of the rule details the process by which the Secretary may temporarily waive one or more of the requirements contained in the Act or this part, with the exception of State Match and Maintenance of Effort requirements, consistent with the requirements described in section 658I(c)(1) of the Act. In order for a waiver application to be considered, the waiver request must: Describe circumstances that prevent the State, Territory, or Tribe from complying with any statutory or regulatory requirements of this part; demonstrate that the waiver, by itself, contributes to or enhances the State’s, ‘Territory’s, or Tribe’s ability to carry out the purposes of this part; show that the waiver will not contribute to inconsistency with the objectives of the Act; and meet the additional requirements in this section as described.

The final rule delineates the types of waivers that States, Territories, and Tribes can request into two distinct types: (1) Transitional and legislative waivers and (2) waivers for extraordinary circumstances. States, Territories, and Tribes may apply for temporary transitional and legislative waivers meeting the requirements described in this section that provide temporary relief from conflicting or duplicative requirements preventing implementation, or for a temporary extension in order for a State, Territorial, or Tribal legislature to enact legislation to implement the provisions of this subchapter.

Transitional and legislative waivers are designed to provide States, Territories, and Tribes at most one full legislative session to enact legislation to implement the provisions of the Act or this part, and are limited to a one-year initial period and at most, an additional one-time, one-year renewal from the date of approval of the extension (which may be appropriate for a State with a two-year legislative cycle, for example).

Waivers for extraordinary circumstances address temporary circumstances or situations, such as a natural disaster or financial crisis. Extraordinary circumstance waivers are limited to a period of no more than two years from the date of approval, and at most, an additional one-year renewal from the date of approval of the extension.

Both types of waivers are probationary, subject to the decision of the Secretary to terminate a waiver at any time if the Secretary determines, after notice and opportunity for a hearing, that the performance of a State, Territory, or Tribe granted relief under this subsection has been inadequate, or if such relief is no longer necessary to achieve its original purposes. In the final rule, we added language to specify that such a hearing would be based on the rules of procedure in 45 CFR part 99—which contains existing hearing procedures governing CCDF that logically extend to the waiver process.

In order to request a waiver, the Lead Agency must submit a written request, indicating which type of waiver the State, Territory, or Tribe is requesting and why. The request must also provide detail on the provision(s) from which the State, Territory, or Tribe is seeking temporary relief and how relief from that sanction or provision, by itself, will improve delivery of child care services for children and families. If a transitional waiver, the Lead Agency should describe the steps being taken to address the barrier to implementation (i.e., a timeline for legislative action). Furthermore, the Act emphasizes the importance of children’s health and safety. Importantly, in the written request, the State, Territory, or Tribe must certify and demonstrate that the health, safety, and well-being of children served through assistance received under this part will not be compromised as a result of the temporary waiver.

Within 90 days of submission of the request, the Secretary will notify the State, Territory, or Tribe of the approval or disapproval. If rejected, the Secretary will provide the State, Territory, or Tribe, the Committee on Education and the Workforce of the House of Representatives, and the Committee on Health, Education, Labor, and Pensions of the Senate of the reasons for the disapproval and give the State, Territory, or Tribe the opportunity to amend the request. If approved, the Secretary will notify and submit a report to the Committee on Education and the Workforce of the House of Representatives and the Committee on Health, Education, Labor, and Pensions of the Senate on the circumstances of the waiver including each specific sanction or provision waived, the reason as given by the State, Territory, or Tribe of the need for a waiver and the expected impact of the waiver on children served under this program.
No later than 30 days prior to the expiration date of the waiver, a State, Territory, or Tribe, at its option, may make a formal written request to re-certify the provisions described in this section, which must explain the necessity of additional time for relief from such sanction(s) or provisions. The State, Territory, or Tribe also must demonstrate progress toward implementation of the provision or provisions. The Secretary may approve or disapprove a request from a State, Territory, or Tribe for a one-time renewal of an existing waiver under this part for a period no longer than one year. The Secretary will adhere to the same approval or disapproval process for the renewal request as the initial request. Lastly, this final rule makes conforming technical amendments to the pre-existing procedures for a Lead Agency to appeal any ACF disapproval of a Plan or Plan amendment at §98.18 to indicate that the appeal process also applies to any appeal of a disapproved request for temporary relief under §98.19.

Comment: We received comments from many national and State organizations and a State supporting our limitation on the types and number of categories of waivers. For example, a child care worker organization wrote, “To prevent the States from backing out on investing in health, safety and quality standards, we commend the proposal for limiting waivers to reasons concerning transition, legislative action and extraordinary circumstances.” A few States and a national organization had comments on the time limitation on waivers, with some commenters noting that the Act allows waivers for up to three years. A national organization asked for a three-year term for waivers of any type. Two States expressed concern that the two-year period for legislative and transitional waivers may not provide sufficient time for State legislatures to act, particularly legislatures in a few States that only convene in alternating years. Another State asked for a longer time frame to encompass the need for changing forms and processes reflecting newly adopted rules. A few States requested clarification on whether certain circumstances fall under the transitional and legislative category or extraordinary circumstances category.

Response: The final rule establishes parameters to ensure that States can move quickly to make any necessary legislative or transitional changes. The vast majority of State legislatures meet annually; only four States have a legislature that meets every other year. They have the potential to be approved for a one-year waiver followed by the possibility of being approved for a one-year renewal. Providing a longer base time period for a waiver could lead to delays in making the necessary legislative or transition changes.

Comment: One State commented that 90 days is too long for a decision by the Secretary and requested ACF to make a decision on a waiver application within 30 days.

Response: The Act says that the Secretary shall inform the State of approval or disapproval of the request within 90 days after the receipt of a State’s request under this subsection. This final rule maintains a 90-day window, which is consistent with the period for reviewing Plan amendments for approval or rejection.

Comment: One State asked for clarification on the start date of the waiver.

Response: We refer Lead Agencies to the Office of Child Care’s Program Instruction published December 17, 2015 (CCDF–ACF–PI–2015–09) which states: “If a State or Territory is not going to be in compliance with one or more provisions by the deadline required in the Act, then the State/Territory must request a temporary extension/waiver. Once the requirement(s) has been met, the Lead Agency must submit a Plan amendment to ACF for approval.” Until such time, the Secretary should make every effort to be in compliance. The start date of a waiver may vary depending on the circumstances. For example, a legislative or transitional waiver will typically start on the date corresponding with the federal statutory or regulatory deadline for compliance with the relevant requirement (i.e., the requirement for which the Lead Agency is receiving a temporary extension). The start date for a waiver for extraordinary circumstances will typically be related to the timing of those circumstances (e.g., natural disaster or financial crisis).

Comment: One State asked if ACF would consider delaying the need for a Plan amendment for a minimum of six months in circumstances when the State is submitting a request for a waiver for extraordinary circumstances.

Response: Lead Agencies need not submit the waiver request and Plan amendment together. Lead Agencies must submit temporary relief or waiver request at least 90 days before an effective date. Lead Agencies must submit Plan amendments within 60 days of a substantial change in the Lead Agency’s program. We refer Lead Agencies to Child Care’s Program Instruction published December 17, 2015 (CCDF–ACF–PI–2015–09). We recognize that requests for extension due to extraordinary circumstances will require a case-by-case decision on when the Plan amendment(s) needs to be submitted.

Comment: One State asked if it may submit a single application that combines multiple waiver requests.

Response: We have accepted submissions that combine multiple waivers. Each waiver request, however, must address separately each factor required by the Act.

Comment: Some States remarked on the need for extensions in order to make changes to the electronic systems to implement the rule. One State asked if this would fall into the category of an “extraordinary circumstance.”

Response: Requests for a waiver relating to electronic system changes should be submitted under the “legislative or transitional” category.

Comment: One State recommended a third type of waiver when a State’s current law may meet or exceed the intent of the regulations, and also in the case of experimental, pilot or demonstration projects, so long as children’s health, safety, and well-being are not compromised and the waiver improves efficiency and effectiveness.

Response: We decline to add a third category of waiver. States and Territories have been innovative in a number of ways with CCDF, such as quality rating and improvement systems and scholarships for child care providers to enroll in college. Waivers are not necessary for States to create pilot or demonstration projects so long as those projects do not jeopardize children’s health, safety and well-being and do not contradict requirements in the Act and this final rule. Further, multiple national and State groups supported limiting the waivers to the two types in the rule. The final rule adds language indicating that these waivers are conditional, dependent on progress towards implementation of the final rule. We think this adds important clarification to the expectation that these waivers are temporary and that Lead Agencies are expected to make progress toward full implementation. Other changes to this section proposed by the NPRM have been adopted in the final rule.

Subpart C—Eligibility for Services

This subpart establishes parameters for a child’s eligibility for CCDF assistance and for Lead Agencies’ eligibility and re-determination procedures. Congress made significant changes to CCDF to authorize stable financial assistance and continuity of care through CCDF
eligibility policies, including establishing minimum 12-month eligibility for all children. In this subpart, the final rule restates these changes and provides additional clarification where appropriate.

§ 98.20 A Child’s Eligibility for Child Care Services

A child’s eligibility for child care services: This final rule clarifies at § 98.20(a) and § 98.20(b)(4) that eligibility criteria apply only at the time of eligibility determination or re-determination based on statutory language at Section 658E(c)(2)(N)(i) of the Act, which establishes a minimum 12-month eligibility period by affirmatively stating that the child will be considered to meet all eligibility requirements for such assistance and will receive such assistance, for not less than 12 months before the State or local entity re-determines the eligibility of the child. (We discuss minimum 12-month eligibility at greater length below in § 98.31 (Eligibility Determination Processes.) We received no comments on this provision and have retained the proposed language in this final rule.

Income eligibility. This final rule revises § 98.20(a)(2), adding a sentence to clarify that the State median income (SMI) used to determine the eligibility threshold level must be based on the most recent SMI data that is published by the U.S. Census Bureau. This clarification ensures the eligibility thresholds are based on the most current and valid data. It is important for Lead Agencies to use current data as, once determined eligible, children may continue to receive CCDF assistance until their household income exceeds 85 percent of SMI for a family of the same size, pursuant to § 98.21(a)(1) discussed further below, or at Lead Agency option, the family experiences a non-temporary cessation of work, training, or education. Using the most recent SMI data also allows for consistency for cross-State comparisons and a better understanding of income eligibility thresholds nationally.

SMI data may not be available from the Census Bureau for some Territories, in which case an alternative source (subject to ACF approval through the CCDF State/Territory Plan process) may be used. Tribes are already allowed to use Tribal median income (TMI) (pursuant to § 98.81(b)(1)) and this will continue to be allowable under this rule. ACF also recognizes that some Lead Agencies establish eligibility thresholds that vary by geographic area and that some Lead Agencies use Area median income (AMI) to calculate income eligibility for different regions in order to account for cost of living variations across geographic areas. Lead Agencies may use AMI in their calculations, but must also report the threshold in terms of SMI in their Plan, and ensure that thresholds based on AMI are at or below 85 percent of SMI.

Comment: One State commented about the timelines necessary to comply with this provision, noting that “States should be given up to one year to update income limits and copays after the publication of new State Median Incomes.” In this State, “Income limits and copays are updated in October each year. The date that new State Median Incomes are published varies each year. Because of this variation it is important that States be given up to one year to make updates.”

Response: Compliance with this provision will be determined through the State plan submission, which will occur every three years. The intent of the policy is to ensure that State income thresholds reflect the most recent information available, but we understand that Lead Agencies will require time to update their policies and will allow for a reasonable timeframe for compliance. In this instance, updating within the year would be considered reasonable.

Comment: In the proposed rule, we asked for comment on whether ACF should provide additional guidance and specificity on the SMI used to determine eligibility. The Act does not specify whether States should use the SMI with a single year estimate, a two-year average, or a three-year average (which is used by the Low Income Home Energy Assistance Program (LIHEAP)).

Some commenters requested that States retain the flexibility to “define methodology and data sources in calculating SMI.” Other commenters requested additional clarification, most specifically on what to do when a State’s median income unexpectedly decreases. A number of commenters asked that States be “encouraged to use 3-year estimates of State median income to determine income eligibility to reduce the large year-to-year fluctuations that the single year estimates tend to generate in some States.” Others went further, specifically asking ACF to revise regulatory language to include that in “cases where a State’s median income decreases; in such cases, a State should be required to maintain its income limit, rather than reducing it.”

Response: While we agree with the sentiment behind the suggestion of maintaining eligibility even if a State’s median income decreases, the final rule maintains State flexibility in this area to allow States to determine which SMI estimate to use for eligibility determinations. If a State’s median income decreases as a result of a single year estimate, the State would have the option of using, and we strongly encourage it to consider, the 3-year estimate to lessen that impact of any single year fluctuation. This could mitigate some of the impacts of unexpected decreases, and, by aligning with LIHEAP, another benefit program which families may also be accessing, make it easier for families to manage income requirements across programs. It should be noted, however, that regardless of which measure the State chooses to use, it would still be bound by the upper income limit of 85% of SMI for a family of the same size.

Asset limit. Section 658P(4)(B) of the Act revised the definition of eligible child at so that in addition to being at or below 85 percent of SMI for a family of the same size, a member of the family must certify that the family assets do not exceed $1,000,000 (as certified by a member of such family). The final rule includes this requirement at § 98.20(a)(2)(ii). We interpret this language in paragraph (2)(ii) of this section to mean that this requirement can be met solely through self-certification by a family member, with no further need for additional documentation. This new requirement provides assurance that CCDF funds are being used for families with the greatest need, but is not intended to impose an additional burden on families. This final rule does not define “family assets,” but instead allows the Lead Agency flexibility to determine what assets to count toward the asset limit.

Comment: One commenter had concerns that the “very high maximum asset level draws attention to the notion that CCDF funding could be given to families that are quite a distance from poverty.” The commenter also claimed that “if there is any basis for the importance of a $1 million ceiling, self-certification by a family member seems to negate the accuracy of tracking this.”

Response: The asset limit was established by the CCDBG Act of 2014. The high level is not meant to indicate that families far above poverty should be served, but rather provide a mechanism to ensure that funding does not inadvertently go to families with high asset levels that are not reflected in their income calculations. Further, clarification that self-certification is sufficient to meet this requirement and that there is no need for additional documentation does not unnecessarily impair the accuracy of this requirement, but is important to honor the intent of
the requirement while minimizing any unnecessary burden on families. The final rule retains language in this provision as proposed in the NPRM.

Protective services. Section 658P(4) of the Act indicates that, for CCDF purposes, an eligible child includes a child who is receiving or needs to receive protective services. This final rule adds language at § 98.20(a)(3)(ii) to clarify that the protective services category may include specific populations of vulnerable children as identified by the Lead Agency. Children do not need to be formally involved with child protective services or the child welfare system in order to be considered eligible for CCDF assistance under this category. The Act references children who “need to receive protective services,” demonstrating that the intent of this language was to provide services to at-risk children, not to limit this definition to serve children already in the child protective services system.

It is important to note that including additional categories of vulnerable children in the definition of protective services is only relevant for the purposes of CCDF eligibility and does not mean that those children should automatically be considered to be in official protective service situations for other programs or purposes. It is critical that policies be structured and implemented so these children are not identified as needing formal intervention by the CPS agency, except in cases where that is appropriate for reasons other than the inclusion of the child in the new categories of vulnerable child for purposes of CCDF eligibility. We received limited comments on this section and discuss these below.

Similarly, this final rule removes the requirement that case-by-case determinations of income and co-payment fees for this eligibility category must be made either in consultation with a child protective services (CPS) worker. While consulting with a CPS worker is no longer a requirement, it is not prohibited; a Lead Agency may consult with or involve a CPS caseworker as appropriate. We encourage collaboration with the agency responsible for children in protective services, especially when a child also is receiving CCDF assistance.

These changes provide Lead Agencies with additional flexibility to offer services to those who have the greatest need, including high-risk populations, and reduce the burden associated with eligibility determinations for vulnerable families.

Under previous regulations at § 98.20(a)(3)(ii)(B), at the option of the Lead Agency, this category could already include children in foster care. The regulations already allowed that children deemed eligible based on protective services may reside with a guardian or other person standing “in loco parentis” and that person is not required to be working or attending job training or education activities in order for the child to be eligible. In addition, the prior regulations already allowed grantees to waive income eligibility and co-payment requirements as determined necessary on a case-by-case basis, by, or in consultation with, an appropriate protective services worker for children in this eligibility category. This final rule clarifies, for example, that a family living in a homeless shelter may not meet certain eligibility requirements (e.g., work or income requirements), but, because the child is in a vulnerable situation, could be considered eligible and benefit from access to high-quality child care services.

We note that this new provision does not require Lead Agencies to expand their definition of protective services. It merely provides the option to include other high-needs populations in the protective services category solely for purposes of CCDF, as many Lead Agencies already choose to do.

We did not receive many comments on this policy, but those who did comment were supportive of this clarification and appreciative of the “discretion to include specific populations of vulnerable children, especially if they do not need to be formally involved with CPS or child welfare system.” The regulatory language proposed in the NPRM is retained in this final rule.

Additional eligibility criteria. Under pre-existing regulations, Lead Agencies are allowed to establish eligibility conditions or priority rules in addition to those specified through Federal regulation so long as they do not discriminate, limit parental rights, or violate priority requirements (these are described in full at § 98.20(b)). This final rule revises this section in paragraph 98.20(b)(4) to add that any additional eligibility conditions or priority rules established by the Lead Agency cannot impact eligibility other than at the time of eligibility determination or re-determination. This revision was made to be consistent with the aforementioned change to § 98.20(a) which says that eligibility criteria apply only at the time of determination or re-determination that the same would be true of additional criteria established at the Lead Agency’s option.

The final rule adds paragraph (c), clarifying that only the citizenship and immigration status of the child, the primary beneficiary of CCDF, is relevant for the purposes of determining eligibility under PRWORA and that a Lead Agency, or other administering agency, may not condition eligibility based upon the citizenship or immigration status of the child’s parent. Under title IV of PRWORA, CCDF is considered a program providing Federal public benefits and thus is subject to requirements to verify citizenship and immigration status of beneficiaries. In 1998, ACF issued a Program Instruction (ACYF–PI–CC–98–08) which established that “only the citizenship status of the child, who is the primary beneficiary of the child care benefit, is relevant for eligibility purposes.” This proposal codifies this policy in regulation and clarifies that Lead Agencies are prohibited from considering the parent’s citizenship and immigration status.

ACF has previously clarified through a program instruction (ACYF–PI–CC–98–09) that when a child receives Early Head Start or Head Start services that are supported by CCDF funds and subject to the Head Start Performance Standards, the PRWORA verification requirements do not apply. Verification requirements also do not apply to child care settings that are subject to public educational standards. These policies remain in effect.

All comments received were supportive of the clarification on citizenship and this policy will remain in this final rule. One national organization commented that “ensuring that the citizenship or immigration status of a child’s parent does not impact their ability to access CCDF-funded child care maintains the program’s focus on ensuring access to high-quality child care services for vulnerable populations. Given that this policy was previously contained in sub-regulatory guidance to States, we are very appreciative of ACF’s proposal to codify it within the CCDF program regulations.”

§ 98.21 Eligibility Determination Processes

In this final rule, § 98.21 addresses the processes by which Lead Agencies determine and re-determine a child’s eligibility for services. In response to comment, this final rule includes a new § 98.21(a)(5) which describes limited additional circumstances for which assistance may be terminated prior to the end of the minimum 12-month eligibility period, which will be discussed in greater detail below.
Minimum 12-month eligibility.

Section 98.21 reiterates the statutory change made in Section 658E(c)(2)(N)(i) of the Act, which establishes minimum 12-month eligibility periods for all CCDF families, regardless of changes in income (as long as income does not exceed the Federal threshold of 85 percent of SMI) or temporary changes in participation in work, training, or education activities. Under the Act, Lead Agencies may not terminate CCDF assistance during the 12-month period if a family has an increase in income that exceeds the Lead Agency’s income eligibility threshold but not the Federal threshold, or if a parent has a temporary change in work, education or training.

We note that, during the minimum 12-month eligibility period, Lead Agencies may not end or suspend child care authorizations or provider payments due to a temporary change in a parent’s work, training, or education status. In other words, once determined eligible, children are expected to receive a minimum of 12 months of child care services, unless family income rises above 85% of SMI or, at Lead Agency option, the family experiences a non-temporary cessation of work, education, or training.

As the statutory language states that a child determined eligible will not only be considered to meet all eligibility requirements, but also “will receive such assistance,” Lead Agencies may not offer authorization periods shorter than 12 months as that would functionally undermine the statutory intent that a family who meets the eligibility threshold and who has an increase in income above 85% of SMI or, at Lead Agency option, the family experiences a non-temporary cessation of work, education, or training.

We note that, despite the language that the child “will receive such assistance,” the receipt of such services remains at the option of the family. The Act does not require the family to continue receiving services nor does it force the family to remain with a provider if the family no longer chooses to receive such services. Lead Agencies would not be responsible for paying for care that is no longer being utilized. This is discussed further in the new §98.21(a)(5).

Comment: Comments were generally supportive of the statutory change to a minimum 12-month eligibility period, though there were concerns about the costs and possible impacts on enrollment patterns. Those in support emphasized that this change “would make it easier for families to access and retain more stable child care assistance and increase continuity of care for children.” These commenters considered this a significant improvement to the previous law which

Response: While we recognize the logistical challenges that States will experience as they are transitioning to minimum 12-month eligibility, we re-emphasize that this is a statutory requirement. We also think these longer periods of assistance will ensure that families derive greater benefit from the assistance and that this policy creates more opportunity for families to work towards economic stability. Any policy decision will have significant tradeoffs, and while the total number of families served may decrease as families stay on longer, this effect would be due to a decrease in churn, meaning that the number of children and families served at any given point would not be affected by families staying on longer. We think that the added benefit of continuity of services provided by reducing churn will have a positive overall impact on children and families and be a more effective use of federal dollars.

However, we do recognize that during the minimum 12-month redetermination periods, it may be necessary to collect some information to complete the redetermination process in time. We allow such practices, so long as it is limited (e.g. a few days or weeks in advanced as a way to circumvent the minimum 12-month period. Even if information is collected
not being used, so if a family voluntarily changes their care arrangement to use less care, the State can adjust their payments accordingly. We do want to reemphasize, however, that as this rule makes it clear that authorizations do not have to be tied to a family’s work, training, or education schedule, even if the parents’ schedule changes, in the interest of child development and continuity, the child must be allowed the option to stay with their care arrangement.

Definition of temporary: This final rule defines “temporary change” at §98.21(a)(1)(iii) to include, at a minimum: (1) Any time-limited absence from work for employed parents due to reasons such as need to care for a family member or an illness; (2) any interruption in work for a seasonal worker who is not working between regular industry work seasons; (3) any student holiday or break for a parent participating in training or education; (4) any reduction in work, training or education hours, as long as the parent is still working or attending training or education; and (5) any cessation of work or attendance at a training or education program that does not exceed three months or a longer period of time established by the Lead Agency.

The above circumstances represent temporary changes to the parents’ schedule or conditions of employment, but do not constitute permanent changes to the parents’ status as being employed or attending a job training or educational program. This definition is in line with Congressional intent to stabilize assistance for working families. Lead Agencies must consider all changes on this list to be temporary, but should not be limited by this definition and may consider additional changes to be temporary. The final rule modifies language proposed in the NPRM at §98.21(a)(1)(iii)(A), which addresses absences from employment. Whereas the NPRM stipulated that the definition of temporary had to include family leave (including parental leave) or sick leave, the final rule modifies this to say any time-limited absence from work for an employed parent due to reasons such as need to care for a family member or an illness. This change was made to acknowledge that while a parent may have a legitimate reason for an absence, there may be circumstances where leave is not granted by the employer. This language ensures that even if official leave has not been granted, CCDF assistance should still be continued. To clarify, this new language still accounts for family leave (or parental leave), which will now be included under the need to care for a family member.

Section 98.21(a)(iii)(F) clarifies that a child must retain eligibility despite any change in age, including turning 13 years old during the eligibility period. This is consistent with the statutory requirement that a child shall be considered to meet all eligibility requirements until the next re-determination. This allows Lead Agencies to avoid terminating access to CCDF assistance immediately upon a child’s 13th birthday in a manner that may be detrimental to positive youth development and academic success or that might abruptly put the child at-risk if a parent cannot be with the child before or after school.

Comment: Commenters were supportive of this clarification, one stating that “taken together, these provisions protect children from losing access to child care because their parent experiences a temporary change in employment status, small increase in income, or being within the State,” and another commenter stated that they found it particularly helpful “that ACF declares eligibility is maintained when a parent is using sick leave or parental leave or is on a student holiday break from classes.”

However, one comment indicated that the State “would incur significant costs if allowed children to stay on after they turn 13,” and recommended “State discretion to do this pending available funds.”

Response: Given that there were few comments opposing this new policy allowing children to remain eligible after they turn 13, we are keeping this provision in this final rule. Additionally, given the nature of funding for CCDF, this “significant cost” is more accurately characterized as a reallocation of expenses rather than new costs. For the small subset of CCDF children who will turn 13 during their eligibility period, there is value in allowing them to retain eligibility, and that the benefits of such policies outweigh the potential challenges. We also note that if the family chooses to stop utilizing care prior to the end of the eligibility period (e.g., the school year ends and there are no plans for care during the summer), then the State would no longer be obligated to pay for the care that is not being used.

At §98.21(a)(iii)(G), this final rule requires that a child retain eligibility despite any change in residency within the State, Territory, or Tribal service area. This provides stability for families who, under current practice, may lose child care assistance despite maintaining their State, Territory or Tribal residency. This may require coordination between localities within States, Territories, or Tribes or necessitate some Lead Agencies to change practices for allocating funding. This level of coordination is essential, as the State, Territory, or Tribe is the entity responsible for CCDF assistance.

Comment: We received a number of comments in this area, some that were supportive of this policy and its importance for ensuring that families retain their benefits, and others, particularly States that are county-administered, that were concerned about the implementation of this requirement. A number of States indicated that “due to the unique administrative structure of [county administered] States, with delegated authority to local entities for administration of programs and services, the transference of eligibility, from one part of the State to another, poses uniquely difficult situations when each locality has a distinctive financial situation. For example, the States are unsure how to handle continuity of services and maintenance of 12-month eligibility during situations where a family moves out of the county where they initially became eligible and into a county that is out of funding and has a wait list.” Some commenters asked for further clarification, particularly as it related to which county would be responsible for the ongoing payment, “If a child is eligible for 12 months, does the originating county continue payments or the receiving county? Or, should the State reserve funding to address the inter-county movement of families?” This commenter further emphasized that “given the financial impact, additional guidance is needed with regard to how 12-month eligibility is funded.”

This also raised the issue of what happens when a family moves out of State. One commenter said, “There are also situations where a customer moves out of State. In some instances, they move without notifying the Lead Agency. [This] Lead Agency recommends that the rule is amended to allow Lead Agencies to terminate benefits prior to 12-months if it is discovered that a family moved out of State.”

Response: Given the number of comments on this issue, we carefully considered the various factors in play and are keeping the policy on retaining eligibility if a family moves within the State, but are adding new language that would allow a Lead Agency to terminate eligibility prior to the end of the eligibility period if the family moves out of the State.
While we understand some of the unique challenges facing county-administered States, given that the CCDF block grant is a block grant to the State, it is reasonable for the State to develop policies that allow a family to retain their eligibility as long as they remain within the State. The question of whether the receiving or originating county should pay for the assistance is a question best left up to the State.

These are logistical and implementation issues that will vary depending on each State’s approach to administering the program. However, we do emphasize that this does not prohibit counties from establishing different eligibility criteria to take into account local variation. As for a family that moves out of the State, we agree that this would be considered appropriate grounds for termination. We have added a new section at § 98.21(a)(5) describing additional limited circumstances that would allow a Lead Agency to extend assistance prior to the end of the minimum 12-month eligibility period. We discuss this in more detail below, but the new regulatory language at § 98.21(a)(5)(i) allows Lead Agencies to terminate assistance due to a change in residency outside of the State, Territory, or Tribal service area. However, while the final rule allows Lead Agencies to terminate for this reason, this is a permissive policy and not a requirement. Neighboring States/Territories/Tribes can still develop agreements to allow families to retain their eligibility if they cross State/Territory/Tribal boundaries. For example, in large metropolitan areas where daily commutes and neighborhoods regularly cross State boundaries, or Tribal populations which may move outside the Tribal service area but remain within a State boundary, it may be appropriate to develop such agreements. We encourage Lead Agencies to develop policies to meet the needs of their families and match the realities of their population’s geographic and economic mobility. Nothing in this rule prohibits Lead Agencies from establishing eligibility periods longer than 12 months or lengthening eligibility periods prior to a re-determination. We encourage (but do not require) Lead Agencies to consider how they can use this flexibility to align CCDF eligibility policies with other programs serving low-income families, including Head Start, Early Head Start, Medicaid, or SNAP. For example, once determined eligible, children in Head Start remain eligible until the end of the succeeding program year. Children in Early Head Start are considered eligible until they age out of the program.

Consistent with existing ACF guidance (ACYF-P1Q-CC–99–02) a Lead Agency could establish eligibility periods longer than 12 months for children enrolled in Head Start and receiving CCDF in order to align eligibility periods between programs. Similarly, Lead Agencies are encouraged to establish longer eligibility periods during an infant or toddler’s enrollment in Early Head Start or in other collaborative models, such as Early Head Start-Child Care Partnerships.

Operationalizing alignment across programs can be challenging, particularly if families enroll in programs at different times. While the Lead Agency must ensure that eligibility is not re-determined prior to 12 months, it could align with other benefit programs by “resetting the clock” on the eligibility period to extend the child’s CCDF eligibility by starting a new 12-month period if the Lead Agency receives information, such as information pursuant to eligibility determinations or re-certifications in other programs, that confirms the child’s eligibility and current co-payment rate. Alignment promotes conformity across Federal programs, such as SNAP, and can simplify eligibility and reporting processes for families and administering agencies. However, it should be noted that a Lead Agency cannot terminate assistance for a child prior to the end of the minimum 12-month period if the recertification process of another program reveals a change in the family’s circumstances, unless those changes impact CCDF eligibility (e.g., a change in income over 85 percent of SMI or, at the option of the Lead Agency, a non-temporary change in the work, job training, or educational status of the parent). We retained the language in section 98.21(a)(1) as proposed in the NPRM.

Continued assistance. In 98.21(a)(2) of this final rule, if a parent experiences a non-temporary job loss or cessation of education or training, Lead Agencies have the option—but are not required—to terminate assistance prior to the minimum 12 months. Per the Act, prior to terminating assistance, the Lead Agency must provide a period of continued assistance of at least three months to allow parents to engage in job search activities. By the end of the minimum three-month period of continued assistance, if the parent is engaged in an eligible work, education, or training activity, assistance should not be terminated and the child should either continue receiving assistance until the next scheduled re-determination or be re-determined eligible for an additional minimum 12-month period. This final rule clarifies that assistance must be provided at least at the same level during the period. This clarification is important because reducing levels of assistance during this period would undermine the statutory intent to provide stability for families during times of increased need or transition.

It is important to note that the Act allows Lead Agencies to continue child care assistance for the full minimum 12-month eligibility period even if the parent experiences a non-temporary job loss or cessation of education or training. The default policy is that a child remains eligible for the full minimum 12-month eligibility period, but the Lead Agency has the option to terminate assistance under these particular conditions. A Lead Agency may choose not to terminate assistance for any families prior to a re-determination at 12 months.

If a Lead Agency chooses to terminate assistance under these conditions after at least three months of continuous assistance, it has the option of doing so for all CCDF families or for only a subset of CCDF families. For example, a Lead Agency could choose to allow priority families (e.g., children with special needs, children experiencing homelessness) to remain eligible through their eligibility period despite a parent’s loss of work or cessation of attendance at a job training or educational program, but terminate assistance (after a period of continued assistance) for families who do not fall in a priority category. Or, a Lead Agency may choose to allow families in certain types of care, such as high-quality care, to remain eligible regardless of a parent’s work or education activity.

While the Lead Agency must provide continued assistance for at least three months, there is no requirement to document that the parent is engaged in a job search or other activity related to resuming attendance in an education or training program during that time. In fact, we strongly discourage such notice as they may create an additional burden on families and be inconsistent with the purposes of CCDF.

If a Lead Agency does choose to terminate assistance under these circumstances, it must allow families that have been terminated to reapply as soon as they are eligible again instead of making the family wait until their original eligibility period would have ended in order to reapply.

A policy that provides continuous eligibility, regardless of non-temporary changes, reduces the burden on families and the administrative burden on Lead Agencies by minimizing reporting and
the frequency of eligibility adjustments. Retention of eligibility during periods of family instability (such as losing a job) can alleviate some of the stress on families, facilitate a smoother transition back into the workforce, and support children’s development by maintaining continuity in their child care. Moreover, studies show that the same families that leave CCDF often return to the program after short periods of ineligibility. A report published by the Assistant Secretary for Planning and Evaluation (ASPE) at HHS, Child Care Subsidy Duration and Caseload Dynamics: A Multi-State Examination, found that “many families receive subsidies sporadically over time and frequently return to the subsidy programs after they exit.” Short periods of subsidy receipt can be the result of a variety of factors, including eligibility policies and procedures. The “churning” present in CCDF demonstrates that families often lose their child care assistance for conditions that are temporary, which is detrimental for the family and child and inefficient for the Lead Agency.

Lead Agencies considering the option to terminate assistance in response to “non-temporary” changes are encouraged to use administrative data to understand the extent to which CCDF families currently cycle on and off the program, to make a determination as to whether it is in the interest of anyone (child, parent, or agency) to terminate assistance to families who may ultimately return to the program. Some Lead Agencies include in their definition of allowable work activities a period of job search and allow children to initially qualify for CCDF assistance based on their parent(s) seeking employment. It is not our intention to discourage Lead Agencies from allowing job search activities as qualifying work. Therefore, consistent with language included in the preamble to the NPRM, new regulatory language at § 98.21(a)(2)(iii) addresses this circumstance. This is consistent with the intent of the Act to allow Lead Agencies the option to end assistance prior to a re-determination if the parent(s) has not secured employment or educational or job training activities, as long as assistance has been provided for no less than three months. In other words, if a child qualifies for child care assistance based on a parent’s job search, the Lead Agency has the option to end assistance after a minimum of three months if the parent has still not found employment, although assistance must continue if the parent becomes employed during the job search period. Even if the parent does not find employment within three months, Lead Agencies could choose to provide additional months of job search to families as well or to continue assistance for the full minimum 12-month eligibility period.

Comment: Commenters were supportive of this policy. One State indicated while “continuity will have a fiscal impact,” they thought that “allowing States the option to terminate assistance prior to 12 months, with a minimum of 3 months of continued assistance is reasonable.” Other States voiced appreciation for the clarification that States have the “discretion to continue assistance to a subset of families such as those within a certain priority or type of care.”

There was a request for clarification regarding how often the minimum 3-month period of continued assistance could apply within a particular eligibility period. The commenter asked “if, within the 12-month eligibility period, an individual experiences more than one occasion of permanent job loss or education, do they have to get 3 months of job search each time, and with each new loss?” These commenters asked for clarification about “whether there are any limitations to how many times within a single 12-month eligibility period a person is entitled to a 3-month job search period.” This was raised as a concern because of the potential negative impact it could have on a parent’s motivation “to truly reestablish employment or education if they are able to “work” for one day every three months and still continue to receive services.”

Response: A plain reading of the statutory language does not provide a limit to the number of times a family could receive the period of continued assistance. Given that the 3-month period of continued assistance is at the State option and that the default policy (as stated above) is for families to retain their eligibility until the end of the eligibility period, it would be inconsistent to put a limit on how many times this could apply. Since the intent of this provision is to allow the parent some time to resume work, or resume attendance at a job training or educational activity, a parent who has successfully found new employment or resumed another qualifying activity within the minimum 3-month period should not be penalized by losing their child care assistance (and possibly undermining the stability of newfound employment, training, or education). Especially given the often unstable nature of employment in long low income communities, this will provide some measure of stability in instances where families, despite their best efforts, cycle in and out of employment. In these instances, when the home life may be in flux, a level of stability in the child’s care arrangement becomes that much more valuable.

Additional circumstances for termination: In the proposed rule, we asked for comment on whether there are any additional circumstances other than those discussed above under which a Lead Agency should be allowed to end a child’s assistance (after providing three months of continued assistance) prior to the minimum 12-month period. Commenters were reminded that since these regulations must comply with statutory requirements, any suggestions had to remain within the bounds of the Act in order to be considered.

Based on feedback from States and various stakeholders (received prior to the publication of the proposed rule), ACF had already considered possible exceptions to the minimum 12-month eligibility period for certain populations, such as children in families receiving TANF and children in protective services, but had decided that such special considerations would be in conflict with the Act, which clearly provides 12-month eligibility for all children.

Comment: We had a number of comments in this area. Commenters provided suggestions for reasons that a State should be able to terminate assistance prior to the end of the eligibility period, including: Non-use of subsidy, fraud or intentional program violations, moving out of the State, changes in household composition, protective services status (some emergency assistance that may not be required for a full eligibility period), change in priority group, and failure to cooperate with mandatory child support.

Response: We agreed with commenters on the need to provide some additional allowances in this area because there were legitimate reasons why a Lead Agency may need to terminate assistance prior to the end of the eligibility period. Therefore, in response to comments, the final rule adds a new § 98.21(a)(5), which describes additional limited circumstances that would allow a Lead Agency to end assistance prior to the end of the minimum 12-month eligibility period.

This new regulatory language states that notwithstanding paragraph (a)(1), the Lead Agency may discontinue assistance prior to the next re-determination, in the following circumstances where there have been: (i) Excessive unexplained absences despite multiple
attempts by the Lead Agency or designated entity to contact the family and provider, including notification of possible discontinuation of assistance; (A) If the Lead Agency chooses this option, it shall define the number of unexplained absences that shall be considered excessive; (ii) A change in residency outside of the State, Territory, or Tribal service area; or (iii) Substantiated fraud or intentional program violations that invalidate prior determinations of eligibility.

We have determined that these three were compelling reasons for which Lead Agencies would be justified in acting. Regarding termination due to excessive unexplained absences, we stress that every effort should be made to contact the family prior to terminating benefits. Such efforts should be made by the Lead Agency or designated entity, which may include coordinated efforts with the provider to contact the family. If a State chooses to terminate for this reason, the Lead Agency must define how many unexplained absences would constitute an “excessive” amount and therefore grounds for early termination. The definition of excessive should not be used as a mechanism for prematurely terminating eligibility and must be sufficient to allow for a reasonable number of absences. It is ACF’s view that unexplained absences should account for at least 15 percent of a child’s planned attendance before such absences are considered excessive. This 15 percent aligns generally with Head Start’s attendance policy and ACF will consider it a benchmark when reviewing and monitoring this requirement.

As discussed above, we are allowing States to terminate eligibility if the family moves outside of the State, Territory, or Tribal service area. This was not explicitly discussed in the proposed rule, but the discussion about maintaining eligibility when moving within State revealed the need for clarification in this area. Given that the CCDF program is a block grant with the State, it would make sense for the family’s benefit to be able to travel across those borders. As discussed above, this is a permissive policy and not a requirement. We encourage Lead Agencies to develop agreements where appropriate to accommodate parental movement, particularly in areas where appropriate and necessary to meet the needs of families. And as a reminder, as stated in §98.21(a)(ii)(G), States cannot terminate assistance if a family is moving within the State.

For changes in household composition, this is already allowed, in so far as the Lead Agency can require families to report such changes if they would result in a change that would raise the family’s income level above 85% of SMI. Fraud or intentional program violation would also be a legitimate reason to terminate assistance if such fraud invalidates the prior eligibility determination or redetermination. One commenter stated that it “is critical to have processes and procedures in place to limit improper payments and other fraudulent activities,” and therefore recommended including a provision in the final rule that families could lose eligibility if they misrepresented circumstances at the initial determination and/or provided fraudulent information. Early termination of benefits is justified when there has been substantiated fraud or intentional program violation and such a family would not have been eligible. We caution that this does not change the limitations on what a State can require a family to report during the eligibility period. However, in instances where programs integrity efforts reveal fraud or intentional program violations, under this final rule, the State would be able to terminate eligibility.

Co-payments. Section 98.21(a)(3) clarifies that a Lead Agency cannot increase family co-payment amounts within the minimum 12-month eligibility period as raising co-payments within the eligibility period would not be consistent with the statutory requirement that the child receive such assistance for not less than 12 months. Protecting co-payments levels within the eligibility period provides stability for families and reduces administrative burden for Lead Agencies. This final rule includes an exception to this rule for families that are eligible as part of the graduated phase-out provision discussed below.

In addition, the final rule requires the Lead Agency to allow families the option to report changes, particularly because we want to permit families to report those changes that could be beneficial to the family’s co-payment or subsidy level. The Lead Agency must act upon any reported changes if doing so would reduce the family’s co-payment or increase the subsidy. The Lead Agency is prohibited from acting on the family’s self-reported changes if it would reduce the family’s benefit, such as increasing the co-payment or decreasing the subsidy.

The limitation on raising co-payments, by protecting the child’s benefit level for the minimum 12-month eligibility period, is consistent with the statutory requirement at 658E(c)(2)(N) of the Act that, once deemed eligible, a child shall receive such assistance, for not less than 12 months. Raising co-payments earlier than the 12-month period could potentially destabilize the child’s access to assistance and has the unintended consequence of forcing working parents to choose between advancing in the workplace and child care assistance. This is discussed further below in the section on reporting changes in circumstances.

Comment: Comments received in this area were mixed. In general, States wanted to retain the ability to increase co-payments throughout the year, while national organizations and other stakeholders thought that keeping copayments stable during the year was a worthwhile policy for families.

Those who supported this policy cited studies that showed that “high co-payments are a major reason that families leave the subsidy program.” Commenters also referenced a Senate Health, Education, Labor, and Pensions Committee Report on the CCDBG Act, which notes that “the committee does not want to discourage families engaged in work from pursuing greater opportunities in the form of increased wages or earnings.” The committee strongly believes that if families are truly to achieve self-sufficiency that CCDBG cannot perversely incentivize families to forgo modest raises or bonuses for fear of losing assistance under the CCDBG program.

Those in favor of retaining the ability to increase co-pays pointed to the implications, primarily financial, should they be unable to adjust co-payments. One stated that they would be forced to “charge the highest co-payment amounts allowed in order to manage the fiscal liability” and another pointed out that such a policy “limits the Department’s ability to utilize co-payments as a means of managing State fiscal resources,” and an inability to do so would “result in serving fewer children and families and may force waitlists.”

Other commenters stated that they thought increasing co-payment amounts during the eligibility period would not negatively affect a family’s subsidy or co-payment and would not be unduly burdensome. This commenter reasoned that “in most cases, income changes reported are fairly small, and even if that change moves the family up on the co-pay schedule, the incremental change in the co-pay will likely be less than $4 per week.” Commenters also pointed out that increasing co-payment amounts was beneficial to families to help them transition off public assistance and thus avoid the cliff effect that comes with losing the subsidy.
Response: While we recognize the States’ positions, for the following reasons, we are declining to change this for this final rule. Regarding the use of co-payments to manage budgets and wait lists, such ongoing incremental changes are to the overall detriment of participating families and ultimately undermine the effectiveness of the program. One of the commenters above mentioned that these co-payment increases are usually minor and would not impact the family’s financial situation. Given this incremental financial benefit to the State, the administrative burden to both the family (notification with every change in income) and the State (having to track and adjust co-payments with minor changes for families throughout the year) outweighs the benefit gained. Additionally, a small increase (such as the $4 increase mentioned above) may seem incremental from a policy perspective, but may represent a significant burden on low-income families managing the daily expenses of food, clothing, diapers, etc.

As for using co-payments to mitigate the impact of the cliff effect, this is an area where we agree. This is why § 98.21(e)(3) allows Lead Agencies to increase co-payments for families eligible due to the graduated phase-out provision. Since the graduated phase-out period (which will be discussed in the next section) was specifically designed to help families transition as their income rises, it is appropriate that co-payments be adjusted.

Graduated phase-out. New statutory language at Section 658E(c)(2)(N)(iv) of the Act requires Lead Agencies to have policies and procedures in place to allow for the provision of continued child care assistance at the time of re-determination for children of parents who are working or attending a job training or educational program and whose income has risen above the Lead Agency’s initial income eligibility threshold to qualify for assistance but remains at or below 85 percent of State median income. Lead Agencies retain the authority to establish their initial income eligibility threshold at or below 85 percent of SMI. If a Lead Agency’s initial eligibility threshold is set at 85 percent of SMI, it would be exempt from this requirement.

The proposed rule would have required Lead Agencies that set their initial income eligibility level below 85 percent of SMI (for a family of the same size) to provide for a graduated phase-out of assistance by establishing two-tiered eligibility (an initial, entry-level income threshold and a higher exit-level income threshold for families already receiving assistance) with the exit threshold set at 85 percent of SMI. States would have had the option of either allowing the family to remain income eligible until the family exceeded 85% of SMI or for a limited period of not less than an additional 12 months.

The purpose of this graduated phase-out provision is to promote continuity of care and is consistent with the statutory requirement that families retain child care assistance during an eligibility period as their income increases. However, as discussed below, in response to comment, the final rule makes two significant changes to this requirement: (1) Offering additional flexibility on setting the second tier of eligibility, and (2) removing the possible time limit on eligibility.

Comment: We received mixed comment on the proposed graduated phase-out requirement. While commenters were supportive of improving continuity for families, a number of commenters indicated that they thought setting the two tiered system with the exit threshold at 85% of SMI was too restrictive. Commenters also raised similar concerns about the cost of this provision and the impact that it could potentially have on the demographics of CCDF families served. One commenter said that “the down side of this otherwise sensible policy idea is that, absent sufficient resources, lower income families may be denied access to subsidies while higher income families continue to benefit. It’s a difficult tradeoff.”

Response: Given the comments that we received in this area, and in recognition of the difficult trade-offs inherent in this policy, the final rule revises language proposed by the NPRM for the graduated phase-out provision. This final rule still requires Lead Agencies to establish two-tiered eligibility thresholds, but the graduated phase-out requirement at § 98.21(b) now says that the second tier of eligibility used at the time of eligibility re-determination) will be set at 85 percent of SMI for a family of the same size, but that the Lead Agency has the option of establishing a second tier lower than 85% of SMI as long as that level is above the Lead Agency’s initial eligibility threshold, takes into account the typical household budget of a low income family, and provides justification that the eligibility threshold is (1) sufficient to accommodate increases in family income that promote and support family economic stability; (2) a family will continue accessing child care services without unnecessary disruption.

This revision from what was proposed in the NPRM will give Lead Agencies additional flexibility to establish their second tier of eligibility. However, it is important to note that once deemed eligible, the family shall be considered eligible for a full minimum 12-month eligibility period even if their income exceeds the second eligibility level during the eligibility period, as long as it does not exceed 85 percent of SMI.

While the revised regulatory language offers Lead Agencies some flexibility to set the second tier of eligibility, we still strongly encourage that Lead Agencies establish this second tier at 85 percent of SMI (as a number of States have already done). Not only does this maximize continuity of subsidy receipt for the family, linking the exit threshold to the Federal eligibility limit is the most straightforward approach for families to navigate and for Lead Agencies to implement. However, ACF also understands that there are significant trade-offs associated with establishing the second tier at 85% of SMI, including how many low-income families can be served in the program.

As a result, the final rule provides Lead Agencies flexibility to set their second tier below 85% of SMI, provided they show that their exit threshold takes into account typical family expenses, such as housing, food, health care, diapers, transportation, etc., and is set at an income level that promotes and supports family economic stability and reasonably allows a family to continue accessing child care services without unnecessary disruption. Lead Agencies setting their second tier below 85% of SMI must take into account a number of factors to determine whether the family’s increase in income is a substantial enough change to justify a loss of assistance without causing a “cliff effect.” For example, the Lead Agency would need to show that there is a difference between the first and second eligibility tiers and that this difference is sufficient to accommodate increases in income over time that are typical for low-income workers. ACF encourages Lead Agencies setting their second tier below 85% SMI to also consider how families that lose their subsidy will access ongoing child care and potential impacts on families’ economic security.

Additionally, when determining a family’s ability to afford child care, the Lead Agency should be mindful that this final rule uses seven percent of family income as a benchmark for affordable child care. While Lead Agencies have flexibility in establishing their sliding fee scales and determining what constitutes a cost barrier for
families, seven percent level is a recommended benchmark and any calculations about affordability should either incorporate this benchmark or provide justification for how families can afford to spend a higher percentage of their income on child care.

Furthermore, to ensure Lead Agencies are fully taking into consideration the financial obligations of families, Lead agencies must also collect data on any amounts providers charge families more than the required family co-payment in instances where the provider’s price exceeds the subsidy payment. The State allows for such a practice, and to demonstrate a rationale for the allowance to charge families any additional amounts. This is mentioned in greater detail below in response to comments received specifically on the policies set forth in the proposed rule related to charging amounts above the co-payment. As for other concerns about the potential impact of the graduated phase-out provision, there are already several factors that will mitigate the possible negative impacts of this policy.

First of all, the graduated phase-out provision provides some level of stability by protecting income growth, but there will still be natural attrition from the program due to other factors. Families have to go through redetermination every 12 months (or a longer period set by the Lead Agency) and be deemed otherwise eligible for the program. Families will also cycle out of the program through the Lead Agency option to terminate assistance due to job loss or cessation of education/training (after at least three months of continued assistance). According to analyses of CCDF administrative data, the current levels of attrition over time are steady and dramatic. Approximately 24 percent of families receive services for longer than a year, only about 10 percent receive it for 2 years, and the decline continues until approximately only 1 percent still receives the subsidy after 5 years. (Unpublished HHS tabulations based on CCDF administrative data reported by States on the ACF–801) We expect policies put into place to promote continuity will lengthen eligibility, but due to external factors, there will continue to be a turnover in the CCDF population.

In addition, the financial impact of this policy may be contained because: (1) The average cost of subsidy tends to naturally decline over time as the child’s age increases, and (2) this final rule allows the Lead Agency to increase co-pays during the graduated phase-out period. CCDF administrative data shows that per child costs decline as the child ages. This is due to the fact that school-age care is typically part-time for much of the year and less expensive than care provided for younger children. Therefore, the cost of the subsidy for families who remain on the program will naturally decline, which will free up resources for new enrollment.

As discussed further below, this final rule at section 98.21(b)(3) allows Lead Agencies to adjust co-payments during the graduated phase-out period. Over time, this would result in more cost sharing with families and free up State funds to allow other children to enter the subsidy system. As co-pays rise for parents with increasing incomes, families will naturally choose to leave the program.

Comment: There were objections to the second option of the proposed graduated phase-out proposal, which would have allowed Lead Agencies to offer a period of graduated phase-out for a limited period of not less than an additional 12 months. A number of commenters oppose “any provision that allows or encourages States to set arbitrary time limits on child care assistance,” and said that “income, rather than time spent in the program, is a far better measure of families’ need for continued assistance.”

Response: We agree with this concern and have removed the provision from this final rule. The option was included in the proposed rule to provide some parameters around the graduated phase-out provision, but we recognize now that the introduction of a time limit to the program could have unintended consequences and runs counter to the goals of the program, including to support parents trying to achieve independence from public assistance. And as described above, there are factors already in play within the graduated phase-out provision that will naturally limit the fiscal impact of this over time. That, combined with the new flexibility on establishing the second eligibility threshold, makes the previous option of “a limited period of not less than an additional 12 months” unnecessary.

We have also added language at § 98.21(b)(2) to clarify that once determined eligible under the graduated phase-out provision, the family is considered eligible under the same conditions described in § 98.20 and § 98.21, with the exception of the co-payment restrictions at § 98.21(a)(3). Pursuant to § 98.21(a)(3), Lead Agencies are prohibited from increasing family co-payments within the minimum 12-month period. However, in subparagraph (b)(2) of this section, Lead Agencies will be permitted to adjust family co-payment amounts during the graduated phase-out period to help families transition off of child care assistance as they become better able to afford the cost of care.

Lead Agencies have the option to gradually increase co-payments for families with children eligible under the graduated phase-out provision and may require additional reporting on changes to do so. However, this final rule further clarifies that such additional reporting requirements must not constitute an undue burden, pursuant to the conditions in (e)(2)(ii) and (e)(2)(iii). Such requirements must not require an office visit in order to fulfill notification requirements, and must offer a range of notification options (e.g., phone, email, online forms, extended submission hours) to accommodate the needs of parents.

While such co-payment policies should help families gradually transition off of assistance, ACF encourages Lead Agencies to ensure that co-payment increases are gradual in proportion to a family’s income growth and do not constitute too high a cost burden for families so as to ensure stability as family income increases. Lead Agencies must remain in compliance with the statutory requirement at Section 658E(c)(5) that the State’s sliding fee scale is not a barrier to families receiving CCDF assistance.

Income eligibility policies play an important role in promoting pathways to financial stability for families. Currently, 16 Lead Agencies use two-tiered income eligibility. However, even with higher exit-level eligibility thresholds in these States/Territories, a small increase in earnings may result in families becoming ineligible for assistance before they are able to afford the full cost of care. While there are many factors that determine how a State sets their eligibility thresholds, an unintended consequence of low eligibility thresholds is that low income parents may pass up raises or job advancement in order to retain their subsidy, which undermines a key goal of CCDF to help parents achieve independence from public assistance. This rule allows low-income families to continue child care assistance as their income grows in order to support financial stability. Irregular fluctuations in earnings. In § 98.21(c), we reiterate statutory language at Section 658E(c)(2)(N)(i)(II) of the Act which requires Lead Agencies to establish processes for initial determination and redetermination of eligibility that take into account parents’ irregular fluctuations in earnings. We
clarify that temporary increases in income should not affect eligibility or family co-payments, including monthly income fluctuations that show temporary increases, which if considered in isolation, may incorrectly indicate that a family is above the federal threshold of 85 percent of SMI, when in actuality their annual income remains at or below 85 percent of SMI. Lead Agencies retain broad flexibility to set their policies and procedures for income calculation and verification. There are several approaches Lead Agencies may take to account for irregular fluctuations in earnings. Lead Agencies may average family earnings over a period of time (e.g., 12 months) to better reflect a family’s financial situation; Lead Agencies may adjust documentation requirements to better account for average earnings, for example, by requesting the earnings statement that is most representative of the family’s income, rather than the most recent statement; or Lead Agencies may choose to discount temporary increases in income provided that a family demonstrates that an isolated increase in pay (e.g., short-term overtime pay, lump sum payments such as tax credits, etc.) is not indicative of a permanent increase in income.

We did not receive substantive comment in this section and are therefore retaining the proposed language in this final rule. Undue disruption. In accordance with Section 658E(c)(2)(N)(i)(II) of the Act, the final rule adds § 98.21(d), which requires the Lead Agency to establish procedures and policies to ensure that parents, especially parents receiving TANF assistance, are not required to unduly disrupt their education, training, or employment in order to complete the eligibility re-determination process. This provision of the Act seeks to protect parents from losing assistance for failure to meet renewal requirements that place unnecessary burdens or burdens on families, such as requiring parents to take leave from work in order to submit documentation in person or requiring parents to resubmit documents that have not changed (e.g., children’s birth certificates).

To meet this provision, Lead Agencies could offer a variety of family-friendly mechanisms through which parents could submit required documentation (e.g., phone, email, online forms, extended submission hours, etc.). Lead Agencies could also consider strategies that inform families, and their providers, of an upcoming re-determination that is required of the family. Lead Agencies could consider only asking for information necessary to make an eligibility determination or only asking for information that has changed and not asking for documentation to be re-submitted if it has been collected in the past (e.g., children’s birth certificates; parents’ identification, etc.) or is available from other electronic data sources (e.g., verified data from other benefit programs). Lead Agencies can pre-populate renewal forms and have parents confirm that information is accurate.

In general, ACF strongly encourages Lead Agencies to adopt reasonable policies for establishing a family’s eligibility that minimize burdens on families. Given the new eligibility provisions established by reauthorization, Lead Agencies are encouraged to re-evaluate processes for verifying and tracking eligibility to simplify eligibility procedures and reduce duplicative requirements across programs. Simplifying and streamlining eligibility processes along with other changes in the subpart may require significant change within the CCDF program. Lead Agencies should provide appropriate training and guidance to ensure that caseworkers and other relevant child care staff (including those working for designated entities) clearly understand new policies and are implementing them correctly. Comments received in this section were supportive of the proposed policies and we are therefore keeping these provisions in this final rule. Reporting changes in circumstance. Currently, many Lead Agencies have policies in place to monitor eligibility on an ongoing basis to ensure that at any given point in time a family is eligible for services, often called change-reporting or interim-reporting. As the revised statute provides that children may retain eligibility through most changes in circumstance, it is our belief that comprehensive reporting of changes in circumstance is not only unnecessary but runs counter to CCDF’s goals of promoting continuity of care and supporting families’ financial stability. Additionally, there are challenges associated with interim monitoring and reporting, including costs to families trying to balance work or education and family obligations and costs to Lead Agencies administering the program. Overly burdensome reporting requirements can also result in increased procedural errors, as even parents who remain eligible may face difficulties complying with onerous reporting rules.

Lead Agencies should significantly reduce change reporting requirements for families within the eligibility period, and limit the reporting requirements to changes that impact federal CCDF eligibility. Section 98.21(e) of final rule requires Lead Agencies to specify in their Plans any requirements for families to notify the Lead Agency (or its designee) of changes in circumstances between eligibility periods, and describe efforts to ensure such requirements do not place an undue burden on eligible families that could impact continued eligibility between re-determinations.

Under § 98.21(e)(1), the Lead Agency must require families to report a change at any point during the minimum 12-month period only when the family’s income exceeds 85% of SMI, taking into account irregular income fluctuations. At the option of the Lead Agency, the Lead Agency may require families to report changes where the family has experienced a non-temporary cessation of work, training, or education. Section 98.21(e)(2) specifies that any notification requirements may not constitute an undue burden on families and that compliance with requirements must include a range of notification options (e.g., phone, email, online forms, extended submission hours) and not require an in-person office visit. This includes parents who are working, as well as those participating in job training or educational programs.

The final rule also limits notification requirements only to items that impact a family’s eligibility (e.g., income changes over 85 percent of SMI, and at Lead Agency option, the status of the child’s parent as working or attending a job training or educational program) or those that are necessary for the Lead Agency to contact the family or pay providers (e.g., a family’s change of address or a change in the parent’s choice of provider). Lead Agencies may examine additional eligibility criteria at the time of the next re-determination. Section 98.21(e)(4) requires Lead Agencies to allow families the option of reporting information on an ongoing basis, particularly to allow families to report information that would be beneficial to their assistance (such as an increase in work hours that necessitates additional child care hours or a loss of earnings that could result in a reduction of the family co-payment). While we encourage limiting reporting requirements for families, it was not our intent to limit the family’s ability to report changes in circumstances, particularly in cases where they may have entered into more stressful or vulnerable situations or would be eligible for additional assistance. Moreover, if a family voluntarily reports changes on an
ongoing basis to the Lead Agency that do not make the family ineligible, the Lead Agency must act on these provisions if it would increase the family’s benefit, but cannot act on any information that would reduce the family’s benefit. (We do note, however, that a Lead Agency may adjust the subsidy amount in accordance with its payment rate schedule in the event that a family voluntarily changes child care providers during the eligibility period). All of the above provisions apply to any entities that perform eligibility functions in the CCDF program on the Lead Agency’s behalf.

Finally, some Lead Agencies currently use electronic data from other State/ Territory and Federal databases to verify or monitor CCDF eligibility. Lead Agencies may continue this practice, which is particularly useful in reducing the burden on families at the time of initial determination or re-determination. However, Lead Agencies should ensure any such data that is acted upon during the minimum 12-month eligibility period conform to the above requirements for change reporting and all CCDF rules.

We recognize that some States currently send interim reporting forms to families during the eligibility period to request that families verify or update information. Some States use such interim reporting to align with processes in other programs, such as semi-annual SNAP simplified change reporting. Such periodic reporting forms are contrary to the spirit of the Act, which provides for minimum 12-month eligibility between redeterminations. In the NPRM, we asked for comments on whether States should have the option for 6-month interim reporting forms for CCDF, and if such reports are allowed, the best way to structure them so as to promote continuity of services for the minimum 12-month eligibility period for eligible families, consistent with the Act. We also asked for comment on whether States should be able to adjust co-payments or otherwise act on verified information (e.g., updated income information) received from other programs or sources.

As discussed earlier, acting on information received pursuant to eligibility determinations or recertifications in other programs allows CCDF Lead Agencies to extend a child’s eligibility by “resetting the clock” and starting a new 12-month period. We asked for comments on whether the benefits of this approach outweigh the impact of any co-payment increases, if allowed, during the minimum 12-month period, and whether those benefits would be a reason to allow Lead Agencies to act on verified information from other programs.

Comment: Comments received in this area were mixed, mostly between States who value interim and six-month reporting as a mechanism for working with families and ensuring that their information is still accurate, and other commenters who prioritized stability for the family and minimizing administrative burden.

One State commented that six month reporting was necessary “to ensure that a need for care still exists and to review any changes that may benefit the client.” Another said that it “utilizes a 6 month review form for parents to report changes in circumstances.” This process, according to the State, “does not require the parent to show up in person and thus does not constitute an undue burden on families.”

Another area of concern for States was alignment with other programs. There was concern that if a State cannot act on information through interim reporting and “if these changes cannot be applied, the program will need to be de-linked from other eligibility programs. This would impose a significant administrative burden and will be costly.”

Other commenters had concerns about the impact that interim reporting would have on families and were particularly wary of any such reporting undermining the minimum 12-month eligibility established by the Act. One commenter pointed out that the process “can be overly burdensome to poor and low-income families, adds an additional administrative cost and, as noted in the proposed rules, is not in keeping with the spirit of the Act’s minimum 12-month eligibility period.”

Response: Despite concerns to the contrary, limiting interim reporting and, in particular, prohibiting 6-month reporting is essential to maintaining the advances made by the CCDBG Act of 2014. We are concerned that 6-month interim checks will lead to de-facto redeterminations, with many families potentially losing subsidy for failure to submit interim reports (even if they otherwise continue to meet eligibility requirements). Additionally, because the Act specifies that, once determined to be eligible, a child will be considered to meet all eligibility requirements for such assistance and will receive such assistance, for not less than 12 months, there is no longer sufficient rationale for verifying information (such as a need for care) or tracking changes within the eligibility period. The Act now specifically mandates that children will be considered to meet eligibility requirements, so tracking changes would be not only unnecessary, but in conflict with the Act. While some States indicate that interim reporting is not burdensome to families, the fact remains that, if a family did not complete a report, they would most likely be terminated from assistance. This is counter to the minimum 12-month redetermination period established by the Act.

However, for the purposes of adjusting co-payments, in section 9621(o)(3) we do allow Lead Agencies to require additional reporting on changes in family income for families in the graduated phase-out category. This should alleviate some of the concern from States and allow some measure of reporting, but limited to those families who have already exceeded the State’s initial eligibility threshold.

Research and experience in the field suggests that administrative burden is a barrier to continuity; the Act requires that redetermination processes should not unduly disrupt parents’ employment. A literature review of research on child care subsidies found, “According to an experimental study in Illinois and analyses of administrative data in six other States, the length of subsidy spells is associated with the timing of subsidy redetermination, with shorter redetermination periods being associated with longer subsidy spells and subsidy spells tending to end at the time of redetermination.” (Forry, et al., Child Trends, December 2013) We are therefore keeping this final rule consistent with what was proposed in the NPRM.

For commenters concerned about limitations on interim reporting being a barrier to linking with other programs, we want to emphasize that these limits refer to CCDF reporting requirements. If a family is participating in another benefit program that has interim reporting requirements, nothing in this final rule prohibits those programs from interim reporting. This would, however, limit the Lead Agency’s ability to act, for CCDF purposes, on information gathered through another program’s reporting. We recognize the possible logistical challenges of alignment, and will make technical assistance providers with experience in this area available to work with and support Lead Agencies in maintaining alignment with other programs while implementing these new requirements.

For those commenters who expressed a desire for interim reporting so that families could report beneficial changes, we agree that this final rule requires that Lead Agencies must allow families the option to voluntarily report changes...
on an ongoing basis. This ensures that a family will not be limited in their ability to report, particularly in instances that would be to their benefit.

Program integrity. It is important to ensure that CCDF funds are effectively and efficiently targeted towards eligible low-income families. Policies to promote continuity, such as lengthening eligibility periods and allowing a child to remain eligible between re-determination periods, are consistent with and support a strong commitment to program integrity. ACF expects Lead Agencies to have rigorous processes in place to detect fraud and improper payments, but these should be reasonably balanced with family-friendly practices.

In order to remain consistent with the requirements in this subpart, § 98.21(a)(4) affirmatively states that, because a child meeting eligibility requirements at the most recent eligibility determination or re-determination is considered eligible between re-determinations as described in § 98.21(a)(1), any payment for such a child shall not be considered an error or improper payment under Subpart K due to the family’s circumstances. This clarifies that compliance with the policies in this Subpart do not constitute an error and Lead Agencies will not be held accountable for payments within these parameters.

When implementing their CCDF programs, Lead Agencies must balance ensuring compliance with eligibility requirements with other considerations, including administrative feasibility, program integrity, promoting continuity of care for children, and aligning child care with Head Start, Early Head Start, and other early childhood programs. These changes are intended to remove any uncertainty regarding applicability of Federal eligibility requirements for CCDF and the threat of potential penalties or disallowances that otherwise may inhibit a Lead Agencies’ ability to balance these priorities in a way that best meets the needs of children.

Some Lead Agencies currently use “look back” and recoupment policies as part of eligibility re-determinations. These review a family’s eligibility for the prior eligibility period to see if the family was ineligible during any portion of that time and recoup benefits for any period where the family had been ineligible. However, there is no Federal requirement for Lead Agencies to recoup CCDF overpayments, except in instances of fraud. We strongly discourage such efforts. While they may impose a financial burden on low-income families that is counter to CCDF’s long-term goal of promoting family economic stability. The Act affirmatively states an eligible child will be considered to meet all eligibility requirements for a minimum of 12 months regardless of increases in income (as long as income remains at or below 85 percent of SMI) or temporary changes in parental employment or participation in education and training. Therefore, there are very limited circumstances in which a child would not be considered eligible after an initial eligibility determination. We encourage Lead Agencies instead to focus program integrity efforts on the largest areas of risk to the program, which tend to be intentional violations and fraud involving multiple parties.

Existing regulations at § 98.60 indicate that Lead Agencies shall recover child care payments that are the result of fraud from the responsible party. While the final rule does not define the term fraud and leaves flexibility to Lead Agencies, fraud in this context typically involves knowing and willful misrepresentation of information to receive a benefit. We urge Lead Agencies to carefully consider what constitutes fraud, particularly in the case of individual families.

Taking into consideration children’s development and learning. This final rule affirms that both the child’s development and the parent’s need to work or attend school or training are factors in the child care needs of each family. This rule amends § 98.21 to add paragraph (f) to require that Lead Agencies take into consideration children’s development and learning and promote continuity of care when authorizing child care services. There are myriad ways in which this provision could be incorporated into Lead Agencies’ eligibility, intake, authorization, and CCDF policies and practices. ACF intends to work with Lead Agencies to provide technical assistance and identify a variety of strategies to fit different eligibility processes. As an example, in serving a preschool-aged child (i.e., age 3 or 4), the Lead Agency may consider whether or not the child has access to a high-quality preschool setting and how CCDF can make enrollment in a high-quality preschool more likely.

Lead Agencies could partner with Head Start, pre-kindergarten, or other high-quality programs to build an intentional package of arrangements for the child that allows for attendance at preschool and a second arrangement that accommodates the parent’s work schedule. For preschool-aged children and toddlers, a Lead Agency may want to coordinate services with Early Head Start, while also maintaining a secondary child care arrangement to preserve the relationship with a familiar caregiver, as it is particularly important for infants and toddlers to build and maintain secure relationships with caregivers. A Lead Agency could also offer parents the choice to select high-quality infant slots that are funded through contracts or grants. For children of all ages, providing more intensive case management for families with children with multiple risk factors can increase the likelihood that the family will find a stable, quality child care provider that is willing to work with other service providers in assisting the child and family.

The intent of this provision is that the Lead Agency has some mechanism in place to consider the child’s development and learning, but a Lead Agency has broad flexibility to determine how this is done. At a minimum, we expect Lead Agencies to collect sufficient information during the CCDF intake process in order to make necessary referrals for services. For example, a Lead Agency could ensure there is an automatic referral of eligible children to Early Head Start or Head Start. A Lead Agency could also include in their eligibility determination process a question about whether or not the child has an Individualized Education Program (IEP) or Individual Family Service Plan (IFSP), so that the parent could be provided with information on providers that are equipped to provide services that meet the child’s individual needs.

ACF encourages Lead Agencies to engage in public-private partnerships so that responsibility for implementing this provision does not fall solely on CCDF eligibility workers. Partnerships with child care resource and referral agencies, early intervention agencies, and others may mean that a few well-chosen questions during the intake process prompt the eligibility worker (or automated system if the process is online) to direct the family to appropriate resources. The requirement does not require a developmental screening of every child as part of the eligibility process; however, child care agencies should partner to ensure that children in the CCDF subsidy system can access appropriate screening and follow-up.

We recognize that, given constraints on funding, limited human resource capacity, and the inadequate supply of high-quality care, a perfect arrangement will not be found in all cases. Rather, we expect Lead Agencies to consider how they can best meet the developmental and learning needs of
children in their policies and practices and to encourage partnerships among high-quality providers, child care resource and referral agencies, and case management partners to strengthen CCDF’s capacity to fulfill its child development mission for families.

Comment: While comments in this area were supportive of the addition of child development, there were some concerns regarding implementation. One commenter pointed out that, in their State, “parents apply online for child care assistance and are not required to have an interview. The proposed requirement would result in adding a list of additional questions to the application for services. Eligibility workers process multiple programs (TANF, SNAP, Medicaid, Child Care) and do not have the expertise in this area. The questions would need to be automatically screened and referrals sent. This would require extensive programming changes.”

Response: As stated above, the intent of this provision is that the Lead Agency has some mechanism in place to consider the child’s development and learning, but a Lead Agency has broad flexibility to determine how this is done. In one of the examples given, eligibility for Early Head Start or Head Start, this could be determined through information already collected during the eligibility process. It may be necessary for the State to add additional questions to fulfill this requirement (for instance, the IEP or IFSP question mentioned above) However, given the broad flexibility that they have in this area, we will work with the State to implement these changes within a reasonable timeline and provide technical assistance where appropriate to support these efforts. We have retained the language in § 98.21(f) from the NPRM.

No requirement to limit authorized care to parent schedule. The final rule clarifies at § 98.21(g) that Lead Agencies are not required to limit authorized child care services strictly based on the work, training, or educational schedule of the parent(s) or the number of hours the parent(s) spend in work, training, or educational activities. Tying child care subsidy authorizations closely to parental work, education, or training hours may limit access to high-quality settings and does not support the fixed costs of providing care. In particular, it creates challenges for parents with variable schedules and inhibits their children from accessing a consistent child care arrangement. This provision clarifying “the hours of child care to a parent’s hours of work is not required. In some cases, such “matching” works against the interests of the parent or child.

Lead Agencies are encouraged to authorize adequate hours to allow children to participate in a high-quality program, which may be more hours than the parent is working in or education or training. For example, if most local high-quality early learning programs offer only full-time slots, a child whose parent is working part-time may need authorization for full-time care.

Commenters were supportive of this policy, and the final rule therefore retains it.

Subpart D—Program Operations (Child Care Services) Parental Rights and Responsibilities

Two of the Act’s purposes are: (1) To promote parental choice to empower working parents to make their own decisions regarding the child care services that best suit their family’s needs; and (2) to encourage States to provide consumer education information to help parents make informed choices about child care services and to promote involvement by parents and family members in the development of their children in child care settings. Subpart D of the regulations describes parental rights and responsibilities and provisions related to parental choice, including parental access to their children, requirements that Lead Agencies maintain a record of parental complaints, and consumer education activities conducted by Lead Agencies to increase parental awareness of the range of child care options available to them.

This final rule makes a number of changes to this subpart, including, establishment of a hotline for parents to submit complaints about child care providers, establishment of a consumer education Web site with provider-specific information including monitoring and inspection reports, ensuring parents and providers receive information about developmental screenings for children, and requiring Lead Agencies to affirmatively provide CCDF parents with a consumer statement with specific information about the child care provider they select.

§ 98.30 Parental Choice

This final rule includes a technical change to delete group home child care from the variety of child care categories at § 98.30(e) from which parents receiving a certificate for child care service must be able to choose. This is a consumer choice consistent with revisions at § 98.2 removing group home child care from the definition of categories of care and eligible child care provider. As discussed earlier, instead the final rule modifies the definition of family child care provider to include one or more individuals to be inclusive of group home child care within this category. Lead Agencies may continue to use the category of group homes, but we are no longer requiring it as a separate category for federal reporting purposes. We did not receive comments on this provision and the final rule retains the language from the NPRM.

In-home care. This final rule revises § 98.30(0)(2) to explicitly allow for Lead Agencies to adopt policies that may limit parental access to in-home care. This change aligns with previously-existing policy as discussed in the preamble to the 1998 Final Rule. Specifically, the preamble documented Lead Agencies’ “complete latitude to impose conditions and restrictions on in-home care.” (63 FR 39950) As discussed in the 1998 preamble, monitoring the quality of care and the appropriateness of payments to in-home providers poses special challenges for Lead Agencies.

Comment: The few comments we received on this provision were generally supportive. One State commented that it would not prohibit or limit in-home care because it is often chosen in that State to provide care for families with non-traditional work hours.

Response: To clarify, this provision does not limit or prohibit a State from allowing parents to choose in-home care. Rather, it provides Lead Agencies with the flexibility to limit the use of that care. We understand there are many factors that may lead parents to choose in-home care, including the need for care at non-traditional hours or care for children with special needs, and urge Lead Agencies to consider those factors when deciding whether to put limitations on in-home care. It is crucial that parents have access to the types of care necessary for them to work and for their children to be in a safe and enriching environment. While this change codifies Lead Agencies’ ability to impose limits on the use of in-home care, it does not allow for Lead Agencies to flately prohibit the use of in-home care. As this is longstanding policy, we do not expect the change to have a significant impact on families or Lead Agencies. We have retained the language proposed in the NPRM.

Parental choice and child care quality. Regulations at § 98.30(f) prohibit Lead Agencies from incurring the costs of a safety or regulatory requirement that significantly restrict parental choice by
expressly or effectively excluding any category or type of provider, as defined at \$ 98.2, or any type of provider within a category of care. Section 98.2 defines categories of care as center-based child care, family child care, and in-home care (i.e., a provider caring for a child in the child’s own home). Types of providers are defined as non-profit, for-profit, sectarian, and relative providers.

This final rule adds paragraph (g) at \$ 98.30 to clarify that, as long as parental choice provisions at paragraph (f) of this section are met, parental choice provisions should not be construed as prohibiting a Lead Agency from establishing policies that require child care providers that serve children receiving subsidies to meet higher standards of quality, such as those identified in a quality rating and improvement system or other transparent system of quality indicators pursuant.

In order to be meaningful, the parental choice requirements included in this section should give parents access to child care arrangements across a range of providers that foster healthy development and learning for children. Many Lead Agencies have invested a significant amount of CCDF funds to implement quality rating and improvement systems (QRIS) to promote high-quality early care and education programs, and some have expressed concerns that the previously existing regulatory language related to parental choice inhibited their ability to link the child care subsidy program to these systems. In order to fully leverage their investments, Lead Agencies are seeking to increase the number of children receiving CCDF subsidies that are enrolled with providers participating in the quality improvement system. ACF published a Policy Interpretation Question (CCDF–ACF–PIQ–2011–01) clarifying that parental choice provisions within regulations do not automatically preclude a Lead Agency from implementing policies that require child care providers serving subsidized children to meet certain quality requirements, including those specified within a quality improvement system. As long as certain conditions are met to protect a parent’s ability to choose from a variety of categories and types of care, a Lead Agency could require that, in order to provide care to children receiving subsidies, the provider chosen by the parent must meet requirements associated with a specified level in a quality improvement system. This final rule incorporates the policy interpretation into regulation at \$ 98.30(g).

Comment: We received very few comments on this area. Faith-based and private education organizations recommended we delete the provision because it “potentially eliminates essential distinctions among providers and thus robs parents of choice.”

Response: We declined to accept this comment and have left the provision as proposed in the NPRM. As a Lead Agency may make different allowances as they implement this policy, we do not think it will limit parental choice. There are certain tenants that the Lead Agency should follow when establishing these policies to ensure that parents continue to have access to the full range of providers. We encourage Lead Agencies to assess the availability of care across categories and types, and availability of care for specific subgroups (e.g., infants, school-age children, children who need weekend or evening care) and within rural and underserved areas, to ensure that eligible parents have access to the full range of categories of care and types of providers before requiring them to choose providers that meet certain quality levels. Should a Lead Agency choose to implement a quality improvement system that does not include the full range of providers, the Lead Agency would need to have reasonable exceptions to the policy to allow parents to choose a provider that is not eligible to participate in the quality improvement system (e.g., relative care). As an example, a Lead Agency may implement a system that incorporates only center-based and family child care providers. In cases where a parent selects a center-based or family child care provider, the Lead Agency may require that the provider meet a specified level or rating. However, the policy also must allow parents to choose other categories, such as in-home care, and types of child care providers, such as relative providers, that may not be eligible to participate in the quality improvement system. This is particularly important for geographic areas where an adequate supply of high-quality child care is not available, or where a parent has scheduling, transportation, or other issues that prevent the use of a preferred provider within the system.

In addition, this final rule includes \$ 98.30(h) to clarify that Lead Agencies may provide parents with information and incentives that encourage the selection of high-quality child care without violating parental choice provisions. This provision allows, but does not require, Lead Agencies to adopt policies that incentivize parents to choose high-quality providers as determined by a system of quality indicators. Lead Agencies are not required to adopt policies that encourage or incentivize parents to choose high-quality providers; however, we strongly encourage that they do adopt these policies.

Comment: We only received a few comments on the proposed provision. Faith-based and private education organizations recommended deleting the provision as it “substitutes the Lead Agency’s interpretation of what constitutes ‘high-quality’ child care for the parent’s interpretation.” Another commenter supported keeping the provision but requested ACF provide examples of how Lead Agencies can use information and incentives to help parents choose high-quality providers.

Response: This provision codifies previously existing policy and provides Lead Agencies with needed tools to help support parents as they look for quality child care settings. Therefore, we have chosen to keep the provision as proposed in the NPRM. We want to emphasize that Lead Agencies are not required to implement these policies. Lead Agencies have the flexibility to determine what types of information and incentives to use to encourage parents to choose high-quality providers. One option is to lower parental co-payments for parents that choose a high-quality provider. We encourage Lead Agencies, or their partners such as child care resource and referral agencies, to use information from a QRIS or other system of quality indicators to make recommendations and help parents make informed child care decisions, for example, by listing the highest rated providers at the top of a referral list and providing information about the importance of high-quality child care. Lead Agencies are not limited to these examples and should design information sharing and incentives in a way that best fits the families they serve with CCDF.

\$ 98.31 Parental Access

This final rule makes a technical change at \$ 98.31 to specify that Lead Agencies shall provide a detailed description “in the Plan” of how they ensure that providers allow parents to have unlimited access to their children while the children are in care. This corresponds to the provision at \$ 98.16(t). We received one comment from a national organization expressing support for this provision and have retained the proposed rule language.

\$ 98.32 Parental Complaints

Hotline for parental complaints.

Section 658E(c)(2)(C) of the Act requires Lead Agencies to maintain a record of
substantiated parental complaints, make information regarding such parental complaints available to the public on request, and provide a detailed description of how such a record is maintained and made available. This final rule adds § 98.32(a), which requires Lead Agencies to establish or designate a hotline or similar reporting process for parents to submit complaints about child care providers. In connection with this change we have added a provision at § 98.33(d), to require Lead Agencies to include the hotline number or other reporting process in the consumer statement for CCDF parents, pursuant to this requirement. Lead Agencies should identify the capability for the parental complaint hotline to be accessible to persons with limited English proficiency and persons with disabilities, such as through the provision of interpretation services and auxiliary aids.

Lead Agencies vary in how they meet the previously-existing requirement to keep a record of and make public substantiated parental complaints. According to an analysis of FY 2014–2015 CCDF Plans, as well as State child care and licensing Web sites, 18 States have a parental complaint hotline that covers all CCDF providers, 22 States have a parental complaint hotline that covers some child care providers, and 16 States and Territories do not have a parental complaint hotline.

The Department of Defense (DOD) military child care program runs a national complaint hotline. The Military Child Care Act of 1989 (Pub. L. 101–189) required the creation of a national 24 hour, toll-free hotline that allows parents to submit concerns. However, DOD found the hotline to be an important tool in engaging parents in child care. In addition, complaints received through the hotline have helped DOD identify the capability for the parental complaint hotline to be accessible to persons with limited English proficiency and persons with disabilities, such as through the provision of interpretation services and auxiliary aids.

Lead Agencies vary in how they meet the previously-existing requirement to keep a record of and make public substantiated parental complaints. According to an analysis of FY 2014–2015 CCDF Plans, as well as State child care and licensing Web sites, 18 States have a parental complaint hotline that covers all CCDF providers, 22 States have a parental complaint hotline that covers some child care providers, and 16 States and Territories do not have a parental complaint hotline.

The Department of Defense (DOD) military child care program runs a national complaint hotline. The Military Child Care Act of 1989 (Pub. L. 101–189) required the creation of a national 24 hour, toll-free hotline that allows parents to submit concerns. However, DOD found the hotline to be an important tool in engaging parents in child care. In addition, complaints received through the hotline have helped DOD identify problematic child care programs. For example, information that was submitted through the hotline led to an investigation and the closure of some child care facilities in the early 1990s. (Campbell, N., Appelbaum, J., Martinson, K., *Be All That We Can Be: Lessons from the Military for Improving Our Nation’s Child Care System*, National Women’s Law Center, 2000)

We strongly encourage the Lead Agency to widely publicize the process for submitting a complaint about a provider and to consider requiring child care providers to publicly post the process of reporting the hotline number and/or URL for the web-based complaint system, in their center or family child care home to increase parental awareness. Other areas for posting may be on the Web site required by Section 658E(c)(2)(E) of the Act and § 98.33(a), through a child care resource and referral network, at local agencies where parents apply for benefits, or other consumer education materials distributed by the Lead Agency.

We also strongly encourage Lead Agencies to implement a single point of entry (e.g., one toll-free hotline number) as the most straightforward way for parents to file a complaint. There should not be a burden for the parent in finding the correct hotline number or Web page address. Many parents may not know whether the provider is licensed or license-exempt, for example, and therefore will not know which hotline to call if there are separate contact points for providers. Lead Agencies that choose to combine existing lines or devolve responsibility to local agencies should set-up a single point of entry with a process to immediately refer the call to the appropriate agency.

**Comment:** A few States requested clarification about whether the hotline had to be monitored 24 hours a day.

**Response:** Lead Agencies have a great deal of flexibility in how they implement the parental complaint hotline. To be most useful, parents should be able to file a complaint at any time. We strongly recommend, but do not require, that a telephonic hotline be operational 24 hours a day, or at minimum include a voicemail system that allows parents to leave complaints when an operator is not available. Lead Agencies may also choose to have a web-based system that allows for 24-hour complaint submission.

**Comment:** One State opposed the requirement to implement a hotline or similar process for parents to submit complaints. The State argued that the reauthorized statute required a national hotline to be created and “the State can include the national toll-free hotline information as the ‘single contact number’. . . if necessary”.

**Response:** Section 658L(b)(2) of the Act requires HHS to create a national hotline for submitting complaints. HHS is currently working on designing and implementing this hotline as a tool for parents to submit concerns. However, the CCDBG Act of 2014 did not change the requirement that States keep and make available a record of substantiated complaints. Maintaining and sharing substantiated complaints continues to be a statutory requirement and establishes a process for parents to file complaints is an important part of meeting that requirement. As this is a separate process from the national hotline, States still must have a means for collecting parental complaints. In addition, States and localities are in a much better position to react quickly to complaints, which can be critical when there are immediate concerns about a child’s safety. By requiring States and Territories to have a parental complaint system, ACF aims to ensure that parents have the tools necessary to ensure their children are in safe environments. Therefore, we have retained the language in the proposed rule.

Furthermore, the requirement provides enough flexibility that States likely already have the infrastructure in place to operationalize a hotline or other reporting mechanism, and therefore we do not expect it will be a burden. We want to emphasize that the Lead Agency may choose a different agency at the State, Territory, Tribal, or local level to manage the parental complaint system or find ways to combine the process for collecting parental complaints with already existing hotlines. For example, in some States and Territories, the licensing agency handles complaints of licensed providers and a different agency handles license-exempt providers. Lead Agencies may choose to devolve management of a complaint system to the local level in order to facilitate more prompt and timely follow-up. We leave it to the discretion of the Lead Agency to determine the best way to manage the hotline.

**Process for Substantiating and Responding to Complaints.** This final rule requires Lead Agencies at § 98.32(d)(1) to describe in their Plans their processes for substantiating and responding to complaints, including whether the State, Territory or Tribe uses monitoring as part of its process for responding to complaints for both CCDF and non-CCDF providers. We encourage Lead Agencies to have a complaint response plan in place that includes appropriate time frames for following up on a complaint depending on the urgency or severity of the parent’s concern and other relevant factors. States, Territories and Tribes must have a process for substantiating complaints, and we strongly recommend that this include unannounced inspections and monitoring visits, particularly in instances where there is a potential threat to safety, health, or well-being of children.

**Comment:** In the NPRM, we requested comments about requiring Lead Agencies at § 98.42 to use unannounced monitoring visits to respond to complaints related to health and safety of the child. As discussed later, many
commenters supported States being required to conduct inspections in response to complaints. However, others felt that we should leave how Lead Agencies respond to complaints to the discretion of the State.

Response: This final rule does not require Lead Agencies to use a specific process for responding to complaints. However, it is important that the public know how a Lead Agency responds to and substantiates a complaint. This is especially true because of the long-standing statutory requirement for States to keep a record of any substantiated complaints made about a child care provider. In order to meet that requirement, Lead Agencies must have some process for examining complaints when they are submitted. Therefore, this final rule requires States to provide additional information in their Plans about how they respond to complaints, including whether or not the response includes monitoring visits of CCDF- and non-CCDF-lead providers.

§ 98.33 Consumer and Provider Education

In the 2014 reauthorization, Congress expanded the requirements related to consumer and provider education. Section 658E(c)(2)(E) of the Act requires Lead Agencies to collect and disseminate, through child care resource and referral organizations or other means as determined by the Lead Agency, to parents of eligible children, the general public, and, where applicable, providers, consumer education information that will promote informed child care services. In addition, Section 658E(c)(2)(D) requires monitoring and inspection reports of child care providers to be made available electronically. This focus on consumer education as a crucial part of parental choice has laid the foundation for a more transparent system, helping parents to better understand their child care options and encouraging providers to improve the quality of their services. Every interaction parents have with the subsidy system is an opportunity to engage them in consumer education to help them make informed decisions about their child care providers, as well as provide resources that promote child development. This final rule requires consumer education services be directly included as part of the intake and eligibility process for families applying for child care assistance. Parents of eligible children often lack the information necessary to make informed decisions about their child care arrangements. Some working families may face additional barriers when trying to find information about child care providers, such as limited access to the internet, limited literacy skills, limited English proficiency, or disabilities. Lead Agencies can play an important role in bridging the gap created by these barriers by providing information directly to families receiving CCDF subsidies to ensure they fully understand their child care options and are able to assess the quality of providers.

When implementing consumer and provider education provisions, we recommend Lead Agencies consider three target audiences: Parents, the general public, and child care providers. While some components are aimed at ensuring parents have the information they need to choose a child care provider, others are equally important for caregivers who interact with parents on a regular basis and can serve as trusted sources of information.

Lead Agencies should ensure that all materials are consumer-friendly and easily accessible; this includes using plain language, considering the abilities, languages, and literacy levels of the targeted audiences. Lead Agencies should consider translation of materials into multiple languages, as well as the use of “taglines” on consumer education materials for frequently encountered non-English languages and to inform persons with disabilities how they can access auxiliary aids or services and receive information in alternate formats at no cost.

Consumer education Web site. This final rule amends paragraph (a) of § 98.33 to require Lead Agencies to collect and disseminate consumer education information to parents of eligible children, the general public, and providers through a consumer-friendly and easily accessible Web site. The Web site must, at a minimum, include seven components: (1) Lead Agency policies and procedures, (2) information on availability of child care providers, (3) quality of child care providers, (4) provider-specific monitoring and inspection reports, (5) aggregate number of deaths and serious injuries (for each provider category and licensing status) and instances of substantiated child abuse in child care settings each year, (6) referral to local child care resource and referral organizations, and (7) directions on how parents can contact the Lead Agency, its designee, and other programs to better understand information on the Web site. The specifics of each component are discussed in detail below.

This final rule requires the Web site to be accessible and easily accessible. To ensure that the Web site is accessible for all families, it must provide for the widest possible access to services for families who speak languages other than English and persons with disabilities. Lead Agencies must ensure the Web site meets all Federal and State laws regarding accessibility, including the Americans with Disabilities Act (ADA) of 1990 (42 U.S.C. 12101, et seq.), to ensure individuals with disabilities are not excluded, denied services, segregated or otherwise treated differently because of the absence of auxiliary aids and services. We recommend Lead Agencies follow the guidelines laid out by section 508 of the Rehabilitation Act of 1973, as amended (29 U.S.C. 794d), when designing their Web sites. Section 508 requires that individuals with disabilities, who are members of the public seeking information or services from a Federal agency, have access to and use of information and data that is comparable to that provided to the public who are not individuals with disabilities. The US Department of Justice has provided guidance and resources on how to create an accessible site at http://www.ada.gov/Websites2.htm.

Parents should be able to access all the consumer information they need to make an informed child care choice through a simple, single online source. We encourage Lead Agencies to review current systems and redesign if needed to allow for a single point of entry, especially if the systems are funded with CCDF funds. However, we recognize that Lead Agencies have made significant investments in databases and other web-based applications. For many States/Territories, the CCDF Lead Agency and the licensing agency may not be the same, leading to multiple data systems with different ownership. We do not intend to require completely new systems be built. Rather, the Web site is a single starting point for parents to access the various sources of public information required by the Act, including health and safety information, licensing history, and other related provider information. In the case where this information is already available on multiple Web sites, such as in a locally-administered State where each county has its own Web site, the Lead Agency could choose to create a single consumer-friendly Web page that connects to each of these Web sites, provided that each of the Web sites meets all the criteria at § 98.33(a).

Similarly, if there are two Web sites, one that includes licensed providers and another that includes CCDF providers, we strongly encourage Lead Agencies to...
create a single Web site through which parents can access information.

The first required component of the consumer education Web site is a description of Lead Agency policies and procedures relating to child care. This includes explaining how the Lead Agency licenses child care providers, including the rationale for exempting providers from licensing requirements, as described at § 98.40; the procedure for conducting monitoring and inspections of child care providers, as described at § 98.42; policies and procedures related to criminal background checks for staff members of child care providers, as described at § 98.43; and the offenses that prevent individuals from being employed by a child care provider or receiving CCDF funds. The information about Lead Agency policies and procedures included on the consumer education Web site should be in plain language.

The second required component is a localized list of all providers that is searchable by provider and differentiates whether they are licensed or license-exempt providers. This information must include all licensed child care providers, and at the discretion of the State, all license-exempt child care providers serving children receiving CCDF assistance, other than those only providing care for children to whom they are related. This means that the Lead Agency may choose to not include license-exempt family child care homes in the zip code search. When making information public, Lead Agencies should ensure that the privacy of individual caregivers and children is maintained, consistent with State, local, and tribal laws. Lead Agencies must ensure that this localized list includes a clear indicator if a serious injury or death due to a substantiated health and safety violation has occurred at that provider. This clear indicator should link to the monitoring and inspection report (or plain language summary of the report) that provides more detail and context on the serious injury or death that occurred. As described in more detail below, it is crucial that parents are able to clearly identify if a provider had a violation that led to the death of a child or a serious injury. We expect that providers with serious violations (e.g., leading to a child’s death) will no longer be operating once a State, Territory or Tribe takes compliance action.

While not required, we recommend that Lead Agencies include additional information with provider profiles, beyond what is required by statute, including contact information, enrollment capacity, years in operation, education and training of caregivers, and languages spoken by caregivers. We also suggest that the quality information and monitoring reports be included in the initial search results.

The third required component is provider-specific quality information as determined by the Lead Agency, in accordance with Section 658E(c)(2)(E)(i)(II) of the Act, for all child care providers for whom they have this information on the Web site. Lead Agencies may choose the best method for differentiating the quality levels of child care providers. In this rule, we are not requiring that Lead Agencies have a QRIS. However, we strongly encourage Lead Agencies to use a QRIS, or other transparent system of quality indicators, to collect the quality information required at § 98.33(a)(3). Lead Agencies that have a QRIS should use information from the QRIS to provide parents with provider-specific quality information. By transparent system of quality indicators we mean a method of clear, research-based indicators that are appropriate for different types of providers, including child care centers and family child care homes, and appropriate for providers serving different age groups of children, including infants, toddlers, preschool, and school-age children. The system should help families easily understand whether a provider offers services meeting Lead Agency-determined best practices and standards to promote children’s development, or is meeting a nationally recognized, research-based set of criteria, such as a Desert Child Start or national accreditation. We encourage Lead Agencies to incorporate mandatory licensing requirements as the foundation of any system of quality indicators, as a baseline of information for parents. By building on licensing structures, Lead Agencies may have an easier transition to a more sophisticated system that differentiates between indicators of quality.

Because not all eligible and licensed non-relative child care providers may be included in a transparent system of quality indicators, this final rule clarifies that provider-specific quality information must only be posted on the consumer Web site if it is available for the individual provider, which is a caveat included in statute. We recognize that it takes time to build a comprehensive system that is inclusive of a large number of providers across a wide geographic area. However, in order for the quality information provided on the Web site to be meaningful and useful to parents it should include as many providers as possible. We are not requiring a specific participation rate, but the public should have contextual information regarding the extent of participation by providers in a system of quality indicators.

In designing a mechanism for differentiating child care quality, we suggest considering the following key principles: Provide outreach to targeted audiences; ensure indicators are research-based and incorporate the use of validated observational tools when feasible; ensure assessments of quality include program standards that are developmentally appropriate for different age groups; incorporate feedback from child care providers and families; make linkages between consumer education and other family-specific issues such as care for children with special needs; engage community partners; and establish partnerships that build upon the strengths of child care resource and referral programs and other public agencies that serve low-income parents.

The majority of States/Territories reported in their CCDF Plans that they have at least started to implement a QRIS. HHS has established a Priority Performance Goal to track the number of States that implement a QRIS meeting recommended benchmarks, and, as of FY 2015, 32 States/Territories met the benchmark, and 28 States/Territories have made progress on implementing a high-quality QRIS that meets HHS benchmarks since the goal was established in FY 2011. While ACF encourages Lead Agencies to implement a systemic framework for evaluating, improving, and communicating the level of quality in child care programs, we are not limiting Lead Agencies to a QRIS as the only mechanism for collecting the required quality information. Lead Agencies have the flexibility to implement more limited, alternative systems of quality indicators. For example, Lead Agencies could choose to use a profile or report card of information about a child care provider that could include compliance with State/Territory licensing or health and safety requirements, information about ratios and group size, average teacher training or credentials, type of curriculum used, any private accreditations held, and presence of caregivers to work with young English learners or children with special needs. Lead Agencies could also build on existing professional development registries or other training systems to provide parents with information about caregiver training.

The fourth Web site requirement is that Lead Agencies must post provider-specific results of monitoring and inspection reports, including those
reports that are due to major substantiated complaints (as defined by the Lead Agency) about a provider’s failure to comply with health and safety requirements and other Lead Agency policies. The definition of “major substantiated complaint” varies across the country. Therefore, we are not requiring a standard definition. However, this final rule requires Lead Agencies to explain how they define it on their consumer education Web sites. This requirement ensures that the results of monitoring and inspection requirements at § 98.42 are available to parents when they are deciding on a child care provider.

In following the statutory language at Section 658E(c)(2)(D) of the Act, Lead Agencies must post the monitoring and inspections results for child care providers, as defined at § 98.2. This means that the Web site must include any provider subject to the monitoring requirements at § 98.42, as well as all licensed child care providers and all child care providers eligible to deliver CCDF services. Lead Agencies are required to post inspection reports for child care providers that do not receive CCDF, if available. However, if information is not available, such as if a provider is not being inspected and there is no inspection report, States are not required to actively seek the information.

This final rule requires Lead Agencies to post full monitoring and inspection reports. In order for inspection results to be consumer-friendly and easily accessible, Lead Agencies must use plain language for parents and child care providers and caregivers to understand. Often monitoring and inspection reports are long and include jargon and references to codes or regulations without any explanation. Reports that include complicated references and lack explanation are not consumer-friendly, limiting a parent’s ability to make an informed decision about a child care provider. In the case that full reports are not in plain language, Lead Agencies must post a plain language summary or interpretation in addition to the full monitoring and inspection report.

Lead Agencies must post reports in a timely manner and include information about the date of inspection, information about any corrective actions taken by the Lead Agency and child care provider, where applicable, and prominently display any health and safety violations, including any fatalities or serious injuries that occurred at that child care provider. While this final rule does not define “consumer-friendly and easily accessible”, it is crucial parents be able to clearly identify if a provider had a violation that led to the death of a child or a serious injury. To ensure this information is easily accessible, this final rule requires Lead Agencies to clearly and prominently display any health and safety violations, including any fatalities or serious injuries taking place at the provider. Prominently displaying this information helps parents to access critical information quickly and without having to sift through other information or click through multiple pages. We recommend this information be the first item, after the provider name and identifying information, included on the report, and be highlighted in a way that makes it easy for parents to see, such as through a different or bold font or a special text box. As stated earlier in the rule, the localized list of providers should include a clear indicator if a serious injury or death occurred at the provider due to a substantiated health and safety violation, and this indicator should link to the monitoring and inspection report that contains greater detail and contextual information about the serious injury or death.

Lead Agencies must also post, at a minimum, three years of results, where available. A single year of results could mask patterns and is insufficient for a parent to judge the safety of the environment. We do not expect Lead Agencies to post reports retrospectively or prior to the effective date of this provision (November 19, 2017). Finally, while not required, if earlier reports are available, we encourage Lead Agencies to post them on the Web site in order to provide more information for parents.

Posting results and corrective actions in a timely manner is crucial to ensuring parents have updated information when making their provider decisions. The final rule does not define “timely.” We are leaving it to the discretion of the Lead Agency to determine a reasonable amount of time based on the needs of its families and its capacity for updating. However, we do recommend Lead Agencies update results as soon as possible and no later than 90 days after an inspection or corrective action is taken.

This final rule also requires Lead Agencies to establish a process for correcting inaccuracies in the reports. Lead Agencies have discretion to determine the best process for ensuring that all the information included in the monitoring and inspection results is accurate. We recommend the work with child care providers to design and implement a process, and widely distribute the process to child care providers.

The fifth required component of the consumer education Web site is posting of the aggregate number of deaths, serious injuries, and instances of substantiated child abuse that occurred in child care settings each year, for eligible child care providers. This requirement is associated with the provider setting and therefore it should include information about any child in the care of a provider eligible to receive CCDF, not just children receiving subsidies. The information on deaths and serious injuries must be separately delineated by category of provider (e.g. centers, family child care homes) and licensing status (i.e., licensed or license-exempt). The information should include: (1) The total number of children in care by provider category/licensing status; (2) the total number of deaths of children in care by provider category/licensing status; and (3) the total number of serious injuries in care by provider category/licensing status. We are not defining serious injuries or substantiated child abuse in this rule. We encourage Lead Agencies to use their State or Territory child welfare agency’s definition of substantiated child abuse for consistent reporting across programs. We encourage Lead Agencies to include the data with the results of an annual review of all serious injuries and deaths occurring in child care, as required at § 98.53(f)(4).

The sixth required component of the consumer education Web site is the ability to refer to local child care resource and referral organizations, which is also a requirement of the national Web site discussed later in this final rule. The Web site should include contact information, as well as any links to Web sites for any local child care resource and referral organizations.

The final required component of the consumer education Web site is information on how parents can contact the Lead Agency, or its designee, or other programs that can help the parent understand information included on the consumer education Web site. The consumer education Web site required by § 98.33(a) represents a significant step in making it easier for parents to access information about the child care system and potential child care providers. However, the amount of information may be difficult to understand or find. In addition, parents searching for child care may prefer to speak with a person directly as they make decisions about their child’s care. Therefore, the Web site includes information about how to contact the Lead Agency, or its designee, such as a
Commenters expressed support for the proposed consumer education requirements. In general, they felt strongly about the importance of increased access to information for parents and new opportunities for family engagement both by the Lead Agency and the child care provider.

Comment: The majority of commenters supported including all licensed child care providers on the consumer education Web site. However, commenters were mixed on whether license-exempt providers receiving CCDF should be included. Organizations representing school-age child care programs, family child care providers, and private child care providers felt it was important that license-exempt providers be included on the Web site because they may include more formal types of care, like afterschool programs based in schools and are often exempt. One commenter said “Because many States offer exemptions from licensing for school-aged care centers, it will be important to make these centers and their information available to parents by ensuring that Web sites are not limited to licensed care, moreover expanding the Web site to all eligible providers/centers further provides parents with choice.” Further, as another commenter pointed out, “In many States, license-exempt providers are also family child care providers who view themselves in this profession but cannot get licensed by their State even if they wanted to.” For these providers, they may want to be on the Web site, and a policy exempting all license-exempt providers might not work in their best interest.

On the other hand, several commenters, including States, national advocacy organizations, and unions representing child care workers, suggested providing Lead Agencies with flexibility about which providers must be included on the Web site. Their concerns centered on the fact that not all providers, especially license-exempt family child care homes, are a part of the child care market and therefore may not want to be available for to care for children they do not know. Alternatively, they may be at capacity and unable to accept additional children. One comment signed by several national organizations said “We believe that including license-exempt providers would serve to advertise their services to parents looking for child care options. These providers are often not in the business of child care and only care for individuals with whom they have a prior relationship.” A State also noted that “this might serve to advertise the providers’ services to parents looking for care when the care is an informal situation.” A few States also expressed concerns about privacy for these providers as they are providing care in their homes.

Response: The proposed rule included all licensed and eligible child care providers, other than those only serving children to whom they were related, in all of the provider-specific posting requirements, including the zip-code search. However, the commenters raise valid points about how some providers may not actually be a part of the market. Therefore, the final rule gives Lead Agencies the flexibility to decide which license-exempt CCDF providers are included in the localized list at § 98.33(a)(2). We strongly encourage Lead Agencies not to have a blanket policy regarding including these providers in the zip-code search, but rather suggest being mindful about the different types of license-exempt providers in their State, as well as mindful of providers that might want to be included in searches for marketing purposes.

However, we have not extended this flexibility to the provider-specific quality information at § 98.33(a)(3), as the statute and this final rule include the caveat that quality information must be included only if it is available for that child care provider. If a Lead Agency has quality information based on a QRIS or other transparent system of quality indicators, then this information should be available to parents and the general public, regardless of the provider’s licensing status. We understand that some States do not include license-exempt child care providers in their QRIS, and this rule continues to allow States the flexibility to only include licensed child care providers in their QRIS, and this rule continues to allow States the flexibility to only include licensed child care providers in their quality ratings. However, if the QRIS includes license-exempt providers, this quality information must be posted on the Web site for those providers with ratings.

We also have not extended this flexibility to monitoring and inspections results required at § 98.33(a)(4), and are requiring Lead Agencies to post provider-specific information for all licensed and eligible child care providers, unless the provider is related to all the children in their care. This is more consistent with the requirements of the Act and critical to ensuring that parents have the information they need to make an informed child care decision. These providers are required to be monitored on an annual basis. Therefore, the Lead Agency will have the report already, limiting additional burden. In addition, research suggests that online publishing of licensing violations and complaints impacts provider behavior. One study found that after inspection reports were posted online, there was an improvement in the quality of care, specifically the classroom environment and improved management at child care centers serving low-income children receiving child care subsidies. (Witte, A. and Queralt, M., What Happens When Child Care Inspections and Complaints Are Made Available on the Internet? National Bureau of Economic Research, 2004) While the zip-code search may be more about marketing and referrals to child care providers, the monitoring and inspection reports are about ensuring parents know the health and safety records of their child care provider, as well as about transparency of public dollars.

Response: We appreciated commenters providing additional
details about how reports are currently handled and how the proposed five-year requirement would interact with their policies. Based on these comments, we have changed the proposed regulation at § 98.33(a)(4)(iii) and now require that Lead Agencies include a minimum of either three years of results. This will balance the need for parents to have access to a comprehensive health and safety history of their provider with evolving State policies regarding monitoring and inspections.

Comment: Several national organizations commented that creating a plain language summary of individual monitoring and inspection reports would create a burden for Lead Agencies. Instead, they recommended “permitting States the alternative of posting an interpretation—for example, a plain language glossary of terms that could help parents interpret monitoring results”.

Response: It is important to have individual monitoring and inspection reports easily accessible to both parents and providers. Expecting a parent to have to consult a separate guide or glossary in order to understand a monitoring and inspection report creates an additional burden to information. Therefore, we declined to allow a guide to take the place of the plain language summary. We encourage Lead Agencies to consider simplifying and translating their monitoring and inspection reports in order to create more consumer-friendly documents. This will help to ease any additional burden that might be created by having to create a plain language summary of the report.

Comment: Commenters, including national organizations and child care worker organizations, recommended that we add a regulatory requirement that Lead Agencies create an appeals process for findings included in the monitoring reports. Some commenters noted that sometimes reports have errors, and Lead Agencies should have a process to correct these errors to ensure proper information for both providers and parents. Others said providers should have time to appeal a finding before the report or finding is posted on the Web site.

Response: We agreed that Lead Agencies should have a process in place for quickly correcting errors on the Web site, and have made this a regulatory requirement at § 98.33(a)(4). However, we declined to add a regulatory requirement for States to have an appeals process for monitoring findings or to require a delay in posting this information while an appeal is in process. We leave it to the discretion of the Lead Agency to work with providers to determine the best approach.

We strongly support Lead Agencies implementing policies that are fair to providers, including protections related to the consumer education Web site. We recommend, but do not require, that Lead Agencies establish an appeals process for providers that receive violations, consistent with their own State laws and policies governing administrative appellate proceedings. This appeals process should include timeframes for filing the appeal, for the investigation, and for removal of any violations from the Web site determined on appeal to be unfounded. Lead Agencies also must ensure that the consumer education Web site is updated regularly. Some Lead Agencies currently allow providers to review monitoring and inspection results prior to posting on a public Web site. Nothing in this rule should be taken as prohibiting that practice moving forward. However, the requirement that information be posted in a timely manner means that Lead Agencies may need to limit the amount of time providers have to review the results prior to posting.

Comment: In the proposed rule, we requested comment on § 98.33(a) about whether the preamble to this final rule should set 90 days as a benchmark for timely posting of results. Commenters universally supported ACF not including a definition of “timely” in the regulatory language. We received many comments with a range of suggestions for how to define “timely”. Several commenters, including many national organizations, said that 90 days was too long and recommended a 30-day benchmark. On the other hand, several States commented that while they are usually able to post reports within a few days, they can take up to 90 days when there are other agencies that need to be involved.

Response: We appreciated commenters providing feedback on this benchmark. We have chosen to leave it as proposed in the NPRM as a recommended 90 day benchmark, and are not adding a requirement to the regulatory language. We expect reports to be posted as quickly as possible, but believe 90 days is reasonable considering the complexities related to the monitoring and inspection process and reports.

Comment: We proposed to require that States post provider-specific information on the number of serious injuries and deaths that occurred in that provider setting. While a couple commenters supported inclusion of this provision, the vast majority, including States, national organizations, and child care worker organizations, were strongly opposed to the proposal. Most of the commenters noted, as we did in the preamble to the proposed rule, that not all serious injuries and deaths that occur in child care are the fault of the child care provider, and any provider-specific information would need to include additional details about what happened. However, as one State said, “Providing information on the context of the situation would be labor intensive and may potentially violate the child and families’ privacy. However, providing no context would be unfair to providers.” Several States also commented that “Where a provider’s conduct related to an injury or other incident fails to meet licensing requirements, the incident will result in an enforcement action that is publicly posted.” Another State said “If the child care provider or a staff member is found to be responsible for a child’s death, the child care provider would not continue to be registered, licensed, or employed at a licensed child care facility. Information on specific incidents would be available through the substantiated complaint information already required for the public Web site.”

Response: Based on comments, we have chosen not to include the proposed requirement to post provider-specific information on serious injuries and deaths in this final rule, though nothing in this rule should be seen as prohibiting Lead Agencies from including this information on their Web sites if they so choose. However, we continue to have concerns about a parent’s ability to quickly access information about whether a death or serious injury had occurred at a specific child care provider. To balance the concerns of the commenters with the need for parents to be able to easily access this information, we have revised § 98.33(a)(4) to require that monitoring and inspection reports and summaries prominently display information about health and safety violations, including fatalities and serious injuries, that occurred at that child care provider. Parents will be able to access this important information more quickly if it is highlighted at the beginning of the report, as opposed to buried amongst other inspection items. Further, including this information as part of the monitoring and inspection report avoids providing information about deaths and serious injuries without the context necessary for parents to make an informed decision.

Additional consumer education. This final rule incorporates statutory requirements at Section 658E(c)(E)(i) of the Act by adding paragraph (b) at
§ 98.33, which requires Lead Agencies to provide additional consumer education to eligible parents, the general public, and, where applicable, child care providers. The consumer education may be done through child care resource and referral organizations or other means as determined by the Lead Agency, and can be delivered through the consumer education Web site at § 98.33(a). We strongly encourage Lead Agencies to use additional means to provide this information including through direct conversations with case workers, information sessions for parents and child care providers, outreach and counseling available at intake from eligibility workers, and to and through child care providers to parents.

This final rule requires consumer education to include: Information about the availability of child care services through CCDF, other programs for which families might be eligible, and the availability of financial assistance to obtain child care services; other programs for which families and receiving CCDF may be eligible; programs carried out under Section 619 and Part C of the Individuals with Disabilities Education Act (IDEA) (20 U.S.C. 1419, 1431 et seq.); research and best practices concerning children’s development, including meaningful parent and family engagement and physical health and development; and policies regarding the social-emotional behavioral health of children.

The first required piece of information is about the availability of child care services through CCDF and other programs that parents may be eligible for, as well as any other financial assistance that may be available to help parents obtain child care services. Lead Agencies should provide information about any other Federal, State/Territory/ Tribal, or local programs that may pay for child care or other early childhood education programs, such as Head Start, Early Head Start and State-funded pre-kindergarten that would meet the needs of parents and children. This information should also detail how other forms of child care assistance, including CCDF, are available to cover additional hours the parent might need due to their work schedule.

The second requirement is for consumer education to include information about other assistance programs for which families receiving child care assistance may be eligible. These programs include: Temporary Assistance for Needy Families (TANF) (42 U.S.C. 601 et seq.); Head Start and Early Head Start (42 U.S.C. 9831 et seq.); Low-Income Home Energy Assistance Program (LIHEAP) (42 U.S.C. 8621 et seq.); Supplemental Nutrition Assistance Program (SNAP) (7 U.S.C. 2011 et seq.); Special Supplemental Nutrition Program for Women, Infants, and Children (WIC) (42 U.S.C. 1786); Child and Adult Care Food Program (CACFP) (42 U.S.C. 1766); and Medicaid and the State Children’s Health Insurance Programs (CHIP) (42 U.S.C. 1396 et seq., 1397aa et seq.).

In providing consumer education, Lead Agencies may consider the most appropriate and effective ways to reach families, which may include information in multiple languages and partnerships with other agencies and organizations, including child care resource and referral. Lead Agencies should also coordinate with workforce development entities that have direct contacts with parents in need of child care. Some Lead Agencies co-locate services for families in order to assist with referrals or enrollment in other programs.

Families eligible for child care assistance are often eligible for other programs and benefits but many parents lack information on accessing the full range of programs available to support their children. More than half of infants and toddlers in CCDF have incomes below the federal poverty level, making them eligible for Early Head Start. Lead Agencies can work with Early Head Start programs, including those participating in Early Head Start-Child Care Partnerships, to direct children who are eligible for Early Head Start to available programs. Currently only approximately 5% of eligible children receive Early Head Start, and less than half of eligible children are served by Head Start.

Despite considerable overlap in eligibility among the major work support programs, historically, many eligible working families have not received all public benefits for which they qualify. For example, more than 40 percent of children who are likely to be eligible for both SNAP and Medicaid or CHIP fail to participate in both programs (Rosenbaum, D. and Dean, S. Improving the Delivery of Key Work Supports: Policy & Practice Opportunities at A Critical Moment, Center on Budget and Policy Priorities, 2011). A study using 2001 data found that only 5 percent of low-income working families obtained Medicaid or CHIP, SNAP, and child care assistance (Mills, G., Compton, J. and Golden, O., Assessing the Evidence about Work Support Benefits and Low-Income Families, Urban Institute, 2011).

In addition, consumer education on the assistance programs listed at § 98.33(b)(1)(ii), Lead Agencies must provide outreach to families experiencing homelessness in accordance with § 98.31(c). As part of their outreach to families experiencing homelessness, we encourage Lead Agencies to provide consumer education about housing assistance programs when providing consumer information on other assistance programs.

In addition to informing families about the availability of these programs, some Lead Agencies have streamlined parents’ access to other benefits and services by coordinating and aligning eligibility criteria or processes and/or documentation or verification requirements across programs. This benefits both families and administering agencies by reducing administrative burden and inefficiencies. Lead Agencies also coordinate to share data across programs so families do not have to submit the same information to multiple programs. Finally, Lead Agencies have created online Web sites or portals to allow families to screen for eligibility and potentially apply for multiple programs. We recommend Lead Agencies consider alignment strategies that help families get improved access to all benefits for which they are eligible.

Thirdly, consumer education must include information about programs for children with disabilities carried out under Part B Section 619 and Part C of the Individuals with Disabilities Education Act (IDEA) (20 U.S.C. 1419, 1431 et seq.).

The fourth piece of required consumer education is information about research and best practices concerning children’s development, and meaningful parent and family engagement. It must also include information about physical health and development, particularly healthy eating and physical activity. This information may be included on the consumer education Web site, as well as be provided through brochures, in person meetings, from caseworkers, and other trainings.

While this information is important for parents and the general public, we encourage Lead Agencies to target this information to child care providers as well. Each of these components is crucial for caregivers to understand in order to provide an enriching learning environment and build strong relationships with parents. Lead Agencies may choose to include information about family engagement frameworks in their provider education. Many States and communities have employed these frameworks to promote caregiver skills and knowledge through
their QRIS, professional development programs, or efforts to build comprehensive early childhood systems. States have used publicly-available tools, including from the Office of Head Start. The Head Start Parent, Family, and Community Engagement framework is a research-based approach to program change that shows how different programs can work together as a whole—across systems and service areas—to support parent and family engagement and children’s learning and development. This framework will be revised by joint technical assistance center for use by States and Territories and for child care providers. In addition, the U.S. Department of Health and Human Services and U.S. Department of Education in 2016 released a policy statement on family engagement from the early years to the early grades, including resources for States, early childhood programs, and others to build capacity to effectively partner with families.

Understanding research and best practices concerning children’s development is an essential component for the health and safety of children, both in and outside of child care settings. Caregivers should be knowledgeable of important developmental milestones not only to support the healthy development of children in their care, but also so they can be a resource for parents and provide valuable parent education. Knowledge of developmental stages and milestones also reduces the odds of child abuse and neglect by establishing more reasonable expectations about normative development and child behavior. This requirement is associated with the requirement at § 98.44(b)(1) that orientation or pre-service for child care caregivers, teachers and directors include training on child development.

Lastly, consumer education must include provision of information about policies regarding social-emotional behavioral health of children, which may include positive behavioral health intervention and support models for birth to school-age or as age-appropriate, and policies to prevent suspension and expulsion of children birth to age five in child care and other early childhood programs as described in the Plan at § 98.16(ee).

Social-emotional development is fostered through securely attached relationships; and learning, by extension, is fostered through frequent cognitively enriching social interactions within those securely attached relationships. Studies indicate that securely attached children are more advanced in their cognitive and language development, and show greater achievement in school. In 2015, ACF issued an information memorandum detailing research and policy options related to children’s social-emotional development. (CCDF–ACF–IM–2015–01, http://www.acf.hhs.gov/sites/default/files/ccdf/acf_im_2015_01.pdf). By providing consumer education on social-emotional behavioral health policies, Lead Agencies are helping parents, the general public, and caregivers understand the importance of social-emotional and behavioral health and how the Lead Agency is encouraging the support of children’s ability to build healthy and strong relationships.

In conjunction with this consumer education requirement, this rule adds § 98.16(ee) which requires Lead Agencies to provide a description of their policies to prevent suspension, expulsion, and denial of services due to behavior of children birth to age five in child care and other early childhood programs receiving CCDF assistance. Ensuring that parents and providers understand suspension and expulsion policies for children birth to age five is particularly important. Data on suspension and expulsion in early childhood education settings is somewhat limited and focused on rates at publicly-funded prekindergarten programs. One national study that looked at almost 4,000 State-funded prekindergarten classes found that the overall rate of expulsion in State-funded prekindergarten classes was more than three times the national rate of expulsion for students in Kindergarten through Twelfth Grade (Gilliam, W. Prekindergarteners Left Behind: Expulsion Rates in State Prekindergarten Programs. Foundation for Child Development, 2005). Data from the U.S. Department of Education showed that more than 8,000 preschool students were reported as suspended at least once during the 2011–2012 school year, with Black children and boys disproportionately being suspended more than once (U.S. Department of Education Office of Civil Rights Data Snapshot: Early Childhood Education, March 2014. http://www2.ed.gov/about/offices/list/ocr/docs/crscd-early-learning-snapshot.pdf). In 2014, the U.S. Departments of Health and Human Services and Education jointly released a policy statement addressing expulsion and suspension in early learning settings and highlighting the importance of social-emotional and behavioral health (https://www.acf.hhs.gov/sites/default/files/ecd/expulsion_suspension_final.pdf). The policy statement affirms the Departments’ attention to social-emotional and behavioral health and includes several recommendations to States and early childhood programs, including child care programs, to assist in their efforts. It strongly encourages States to establish statewide policies, applicable across settings, including publicly and privately funded early childhood programs, to promote children’s social-emotional and behavioral health and to eliminate or severely limit the use of expulsion, suspension, and other exclusionary discipline practices.

Comment: Commenters were supportive of the additional consumer education information. We received a few comments from national organizations regarding the requirement that Lead Agencies provide information about policies related to suspension and expulsion of children ages birth to five. These commenters requested regulatory language that more specifically either prohibited the use of suspension and expulsion for these age groups or at least discouraged their use. One State commented that a statewide policy prohibiting providers from expelling or suspending children would be very difficult to enforce.

Response: In response to these comments, the regulatory language at § 98.33(b)(1)(v) requires consumer education about policies to prevent suspension and expulsion. A similar change was made in the plan section at § 98.16(ee). While we cannot require States to create policies that limit or prohibit suspension and expulsion of young children, we urge States to move in that direction. We received no other comments on § 98.33(b) and have retained the rest of the language as proposed in the NPRM.

Information about developmental screenings. Section 658E(c)(2)(E)(ii) of the Act requires Lead Agencies to provide consumer education about developmental screenings to parents, the general public, and, when applicable, child care providers. Specifically, such information should include (1) information on existing resources and services the Lead Agency can use in conducting developmental screenings and providing referrals to services for children who receive child care assistance; and (2) a description of how a family or eligible child care provider may use those resources and services to obtain developmental screenings for children who receive child care assistance and may be at risk for cognitive or other developmental delays, including social, emotional, physical, or linguistic delays. The
information about the resources may include the State or Territory’s coordinated use of the Early and Periodic Screening, Diagnosis, and Treatment program under the Medicaid program carried out under title XIX of the Social Security Act (42 U.S.C. 1396 et seq.) and developmental screening services available under section 619 and part C of the IDEA (20 U.S.C. 1419, 1431 et seq.).

This final rule adds new paragraph (c) at § 98.33, which requires Lead Agencies to provide information on developmental screenings as part of their consumer education efforts during the intake process for families receiving CCDF assistance and to caregivers, teachers, and directors through training and education. Information on developmental screenings, as other consumer education information, should be accessible for individuals with limited English proficiency and individuals with disabilities.

Educating parents and caregivers on what resources are available for developmental screenings, as well as how to access these screenings, is crucial to ensuring that developmental delays or disabilities are identified early. Some children may require a more thorough evaluation by specialists and additional services and supports. Lead Agencies should ensure that all providers are knowledgeable on how to access resources to support developmental and behavioral screening, and make appropriate referrals to specialists, as needed, to ensure that children receive the services and supports they need as early as possible.

Comment: Commenters supported the requirement to provide information about developmental screenings to parents and providers. One advocacy organization recommended that we require that all children receive a developmental screening within 45 days of enrollment in order to align with Head Start standards.

Response: As we do not have the authority to require all children receiving CCDF to have a developmental screening, we declined to add the requirement to this final rule. While we are not requiring that all children receive a developmental screening, we strongly recommend that Lead Agencies develop strategies to ensure all children receive a developmental and behavioral screening within 45 days of enrollment in CCDF, which aligns with Head Start standards. With regular screenings, families, teachers, and other professionals are assured that young children get the services and supports they need, as early as possible to help them thrive alongside their peers. Birth to 5; Watch Me Thrive, a coordinated Federal effort to encourage universal developmental and behavioral screening for children and to support their families and caregivers, has information and resources at www.acf.hhs.gov/programs/ecd/watch-me-thrive. In addition to research-based developmental and behavioral screenings, Lead Agencies should encourage parents and child care providers to use the tools and resources developed by the Centers for Disease Control and Prevention as part of their “Learn the Signs, Act Early.” campaign. These resources help parents and child care providers to become familiar with and keep track of the developmental milestones of children. These resources are available at http://www.cdc.gov/ncbddd/actearly/. The resources provided through this campaign are not a substitute for regular developmental screenings, but help to improve early identification of children with autism and other developmental disabilities so children and families can get the services and support they need as early as possible. We received no other comments on this provision and have retained the language in § 98.33(c) as proposed in the NPRM.

This final rule adds new paragraph (d) to § 98.33, which requires Lead Agencies to provide families receiving CCDF assistance with easily understandable information on the child care provider they choose, including health and safety requirements met by the provider, any licensing or regulatory requirements met by the provider, date the provider was last inspected, any history of violations of these requirements, and any quality standards met by the provider. Lead Agencies also should provide information necessary for parents and providers to understand the components of a comprehensive background check, and whether the child care staff members of their provider have received such a check. The consumer statement must also include information about the hotline for parents about possible health and safety violations and information describing how CCDF assistance is designed to promote equal access to comparable child care in accordance with § 98.45.

If a parent chooses a provider that is legally-exempt from regulatory requirements or exempt from CCDF health and safety requirements (e.g., relatives at the Lead Agency option), the Lead Agency or its designee should explain the exemption to the parent. Lead Agencies that choose to use an alternative monitoring system for in-home providers, as described at § 98.42(b)(2)(v)(B), should describe this process for parents that choose in-home care. When a parent chooses a relative or in-home child care provider, the Lead Agency should explain to the parent the health and safety policies associated with relative or in-home care. The Lead Agency should provide the parents with resources about health and safety trainings should the parent wish for the relative to obtain training regardless of the exemption.

There is a great deal of variation in how Lead Agencies handle intake for parents receiving child care subsidies. Therefore, we allow flexibility for Lead Agencies to implement the consumer statement in the way that best fits both their administrative needs and the needs of the parents. This means that the consumer statement may be presented as a hard copy or electronically. When providing this information, a Lead Agency may provide it by referring to the Web site required by § 98.33(a). In such cases, the Lead Agency should ensure that parents have access to the Internet or provide access on-site in the subsidy office. While we recognize the need for Lead Agency flexibility in this area, we have concerns about relying solely on electronic consumer statements. Parents may not have access to the Internet or may have questions about the consumer statement that need to be answered by a person. If a parent is filing an application online, we encourage the inclusion of a phone number, directed to either the Lead Agency or another organization such as a child care resource and referral agency, to ensure parents can have their questions answered. We also recommend that intake done over the phone should include the offer to either email or mail the consumer statement to the parent; and, that information on consumer statements should be accessible by individuals with limited English proficiency and individuals with disabilities.

We realize, in some cases, a parent has chosen their provider prior to the intake process. If the parent comes in with a provider already chosen, the parent should be given the consumer statement on that provider. When a parent has not chosen a child care provider prior to intake, Lead Agencies should ensure that the parent receives information about available child care providers and general consumer education information required at § 98.33(a), (b), and (c). This information should include a description of health and safety requirements and licensing or regulatory requirements for child care.
providers, processes for ensuring requirements are met, as well as information about the background check process for child care staff members of providers, and what offenses may preclude a provider from serving children.

We strongly recommend that Lead Agencies provide parents receiving TANF and child care assistance, whether through CCDF or TANF, with the necessary support and consumer education in choosing child care. We strongly encourage social service agencies, child care licensing agencies, child care resource and referral agencies, and other related programs to work closely to ensure that parents receiving TANF are provided with the information and support necessary for them to make informed child care decisions.

Comment: We received mixed comments on the requirement to provide a consumer statement to families receiving child care assistance. Organizations representing child care resource and referral agencies and those representing private child care providers supported the requirement with one commenter saying “This provision of information will further help support the selection of high-quality care for children that promotes their health and safety.” We also received several comments from States and national organizations recommending we delete the proposed consumer statement because it is duplicative of the requirements for the consumer education Web site and created additional burdens for the States.

Response: We agree that there is a lot of overlap between the consumer statement and the Web site, as we designed it that way to avoid additional work for Lead Agencies. It seems we were unclear in our description in the proposed rule. We do not expect Lead Agencies to create a whole new document or information item. Rather, the Lead Agency can point parents to the provider’s profile on the Web site or print it out for a parent who may be doing intake in person. We also do not expect the consumer statements to be used to try to change the mind of a parent that has already chosen a provider. It is meant to ensure that parents have a comprehensive understanding of the requirements of providers and the health and safety record of their provider. For these reasons, we have retained the proposed rule language related to the consumer statement.

While there is a lot of overlap, the consumer statement provides targeted consumer education to subsidy parents who are specifically clients of the agency, and we have a special interest in helping them select child care, because we know from research that low-income children have the most to gain from high-quality child care and because care is publicly subsidized. Most Lead Agencies have a direct relationship with families receiving child care subsidies, thus they have an opportunity to provide these parents with the consumer statement and more targeted consumer education.

We encourage Lead Agencies to provide parents receiving CCDF assistance with updated information on their child care provider on a periodic basis, such as by providing an updated consumer statement at the time of the family’s next eligibility redetermination. Ties between the CCDF Lead Agency and the licensing agency can help to ensure that families are notified when providers are seriously out-of-compliance with health and safety requirements, and that placement of children and payment of CCDF funds do not continue where children’s health and safety may be at-risk.

Linkages to national Web site. Section 658L(b)(2) of the Act requires the Secretary to operate a national Web site and hotline for consumer education and submission of complaints. The Act allows for the national Web site to provide the information either directly or through linkages to State databases. As it is not feasible or sensible for HHS to recreate databases many States have already created, we intend to use electronic transfers between federal, State and local systems to provide information needed by parents to make informed choices about the highest quality early childhood settings available that meet the needs of the families in their communities. In response to this requirement and comments we received on the proposed rule, §98.33(e) of the final rule adds a requirement for Lead Agencies to provide linkages to databases related to the consumer education requirements at paragraph (a), including a zip-code based list of licensed and license-exempt child care providers, information about the quality of an available child care provider, if available, and health and safety records including monitoring and inspection reports.

Comment: In the proposed rule, we requested comment about the best way to link the required national Web site with the States’ consumer education Web sites to avoid duplication and maximize coordination. We received a few comments from States about how to link the systems. One State suggested we “simply link all State provider Web sites to the Federal page.” A couple States requested clarification about what the linkages might be, with one commenting that “If the national Web site required a data transfer from our State system, we have concerns about the cost and time needed to coordinate implementation of this transfer.”

Response: By requiring the opening of linkages to databases, as provided for in the Act, we expect to be able to easily use existing State data to update the national site without creating new requirements or burdens for the Lead Agencies. Creating direct linkages to State and Territory databases gives ACF the ability to pull required child care data, such as available providers and health and safety records, in a way that allows for an effective customer experience and user interface. This requirement is the best way to provide a seamless presentation of the items required in the Act.

The purpose of the national Web site is to provide families with easy to understand resources that help families in locating local child care providers and understanding local licensing and health and safety requirements. We plan to build the Web site around existing databases at the State level. As Web site best practices promote the reduction of redirecting users to multiple Web sites, using database linkages as opposed to linking to State Web sites provides a better user experience for families. In addition, the Act requires the national Web site to be searchable by zip code. Linking to sites would not allow for a search throughout the national Web site, and would not meet the requirements of the statute.

CCDF plan. This final rule includes a technical change at §98.33(g), as redesignated, to change the reference to a biennial Plan to a triennial Plan as established by Section 658E(b) of the Act. We did not receive comments on this provision.

Subpart E—Program Operations (Child Care Services) Lead Agency and Provider Requirements

Subpart E of the regulations describes Lead Agency and provider requirements related to applicable State/Territory and local regulatory and health and safety requirements, monitoring and inspections, and criminal background checks. It addresses training and professional development requirements for caregivers, teachers, and directors working for CCDF providers. It also includes provisions requiring the Lead Agency to ensure that payment rates to
providers serving children receiving subsidies ensure equal access to the child care market, to establish a sliding fee scale that provides for affordable cost-sharing for families receiving assistance, and to establish priorities for receipt of child care services.

§ 98.40 Compliance With Applicable State/Territory and Local Regulatory Requirements

Section 658E(c)(2)(F) of the Act maintains the requirement that every Lead Agency has in effect licensing requirements applicable to child care services within its jurisdiction. If any types of CCDF providers are exempt from licensing requirements, the Act now requires Lead Agencies to describe why such licensing exemption does not endanger the health, safety, or development of children who receive services from child care providers who are exempt from such requirements. The final rule includes a corresponding change at § 98.40(a)(2), and provides clarification that the Lead Agency’s description must include a demonstration of how these exemptions do not endanger children and that such descriptions and demonstrations must include any exemptions based on provider category, type, or setting; length of day; providers not subject to licensing because the number of children served falls below a Lead Agency-defined threshold; and any other exemption to licensing requirements. This relates to the corresponding CCDF Plan provision at § 98.16(u).

To clarify, this requirement does not compel the Lead Agency to offer exemptions from licensing requirements to providers. Rather, it requires that, if the Lead Agency chooses to do so, it must provide a rationale for that decision. We also note that these exemptions refer to exemptions from licensing requirements, but that license-exempt CCDF providers continue to be subject to the health, safety, and fire standards applicable to all CCDF providers in the Act. The only allowable exception to CCDF health and safety requirements is for providers who care only for their own relatives, which we discuss further below. In response to the NPRM, we received support for the requirement that Lead Agencies describe licensing exemptions and demonstrate that exemptions do not endanger the health, safety, or development of children in their care. We have therefore retained the NPRM language in this final rule.

§ 98.41 Health and Safety Requirements

Section 658E(c)(2)(i)(i) of the Act requires Lead Agencies to have in effect health and safety requirements for providers and caregivers caring for children receiving CCDF assistance that relate to ten health and safety topics: (i) Prevention and control of infectious diseases (including immunization); (ii) prevention of sudden infant death syndrome and use of safe sleeping practices; (iii) administration of medication, consistent with standards for parental consent; (iv) prevention and response to emergencies due to food and allergic reactions; (v) building and physical premises safety, including identification of and protection from hazards that can cause bodily injury such as electrical hazards, bodies of water, and vehicular traffic; (vi) prevention of shaken baby syndrome and abusive head trauma; (vii) emergency preparedness and response planning for emergencies resulting from a natural disaster, or a man-caused event (such as violence at a child care facility); (viii) handling and storage of hazardous materials and the appropriate disposal of biocontaminants; (ix) appropriate precautions in transporting children, if applicable; and (x) first aid and cardiopulmonary resuscitation (CPR). To clarify, biocontaminants include blood, body fluids or excretions that may spread infectious disease.

Section 658E(c)(2)(i)(ii) of the Act says that health and safety topics may include requirements relating to nutrition, access to physical activity, or any other subject area determined by the State to be necessary to promote child development or to protect children’s health and safety—which the final rule restates at § 98.41(a)(1)(xii). While these topics are optional in this final rule, we strongly encourage Lead Agencies to include them in basic health and safety requirements. Educating caregivers on appropriate nutrition, including age-appropriate feeding, and physical activity for young children is essential to prevent long-term negative health implications and assist children in reaching developmental milestones. This final rule also adds “caring for children with special needs” as an optional topic on this list.

Lead Agencies are responsible for establishing standards in the above areas for CCDF providers and should require providers to develop policies and procedures that comply with these standards. We encourage Lead Agencies to adopt these standards for all caregivers and providers regardless of whether they currently receive CCDF funds. The Act requires health and safety training on the above topics to be completed pre-service or during an orientation period and on an ongoing basis. This training requirement is discussed in greater detail in § 98.44 on training and professional development. ACF released Caring for Our Children Basics (CfoC Basics, http://www.acf.hhs.gov/programs/ecd/caring-for-our-children-basics). CfoC Basics is a set of recommendations, which is intended to create a common framework to align basic health and safety efforts across all early childhood settings. CfoC Basics represent minimum, baseline standards for health and safety. CfoC Basics is based on Caring for Our Children: National Health and Safety Performance Standards; Guidelines for Early Care and Education Programs, 3rd Edition, produced with the expertise of researchers, physicians, and practitioners (American Academy of Pediatrics, American Public Health Association, National Resource Center for Health and Safety in Child Care and Early Education. (2011). Caring for Our children: National health and safety performance standards; Guidelines for early care and education programs. 3rd edition, American Academy of Pediatrics; Washington, DC: American Public Health Association.)

We recommend that Lead Agencies looking for guidance on establishing health and safety standards consult ACF’s CfoC Basics. The list of health and safety topics required by the Act is aligned with, but not fully reflective of, health and safety recommendations from both CfoC Basics as well as Caring for Our Children: National Health and Safety Performance Standards. Lead Agencies can be confident that if their standards are aligned with CfoC Basics, they will be considered to have adequate minimum standards. Lead Agencies are encouraged, however, to go beyond these baseline standards to develop a comprehensive and robust set of health and safety standards that cover additional areas related to program design, caregiver safety, and child developmental needs, using the full Caring for Our Children: National Health and Safety Performance Standards guidelines.

This final rule reiterates these new health and safety requirements at § 98.41(a) and provides clarifications that include specifying that the health and safety requirements be appropriate to the age of the children served in addition to the provider setting. Lead Agency requirements should reflect necessary content, within the required topic areas, depending on the provider’s particular circumstances. For
example, prevention of sudden infant death syndrome and safe sleep training is only necessary if a caregiver cares for infants. Similarly, if an individual is caring for children of different ages, training in pediatric first-aid and CPR should include elements that take into account that practices differ for infants and older children. For providers that care for school-age children, Lead Agencies may need to develop requirements that are appropriate for that stage of development (i.e., that recognize the greater need for older children’s autonomy while maintaining health and safety). In this final rule, we also clarify that, in addition to having these requirements in effect, they must be implemented and enforced, and that these requirements are subject to monitoring pursuant to §98.42. This is intended to help ensure that requirements are put into practice and that providers are held accountable for meeting them. The required health and safety topics are included at §98.41(a)(1). Lead Agencies will continue to have flexibility to determine how they will implement requirements and whether additional or more stringent requirements are appropriate for their State. Further, if existing licensing or regulatory requirements for CCDF providers established by the Lead Agency address the areas specified in this rule, then no additional requirements are necessary.

Comment: Although there was some concern regarding cost to implement, we received strong support for the inclusion of health and safety requirements, specific to the age of children served, for providers and caregivers caring for children receiving CCDF. For example, there was support for the inclusion of prevention of shaken baby syndrome and abusive head trauma; building and physical premises safety; emergency preparedness; prevention of sudden infant death syndrome and use of safe sleeping practices; and recognition and reporting of child abuse and neglect. There was also support for the inclusion of options such as nutrition, physical activity, and caring for children with special needs. There was a recommendation to clarify that the first aid and CPR requirement include reference to pediatrics. There were also recommendations to include the prevention of child maltreatment, quality sleep promotion, age-appropriate screen time promotion, and partnership with child care health consultants in the list of required health and safety topics.

While we received support for the requirement that license-exempt providers who receive CCDF must adhere to the health and safety requirements applicable to all CCDF providers in the Act, there was some concern with cost of implementation and barriers due to State statute. However, the federal statute clearly requires these standards apply to license-exempt providers.

Finally, we received a number of comments supporting the reference to CfoC Basics to aid in implementation if States so choose. Some commenters made the additional request that the individual health and safety topics in the regulation include specific references to the relevant standards in CfoC Basics. A few comments went further and asked that CfoC Basics be required for use by all CCDF providers.

Response: We agree that there is value in including child maltreatment to the list of topics, so the final rule amends §98.41(a)(1)(vi) to include the prevention of child maltreatment to the provision that requires the prevention of shaken baby and abusive head trauma. We also agree that additional specificity for the type of first aid and CPR training is valuable and so the final rule amends §98.41(a)(1)(x) to specify that the requirement of first aid and CPR must pertain to pediatrics.

While we do recognize the value in topics related to quality sleep, age-appropriate screen time, and partnership with child care health consultants, we declined to add these to the required list of health and safety topics. The list of health and safety topics is meant to provide a baseline of health and safety for child care, but does not preclude Lead Agencies from adding additional requirements. Lead Agencies should consider whether additional topics, such as those mentioned above and others, are necessary to promote child development or protect health and safety under §98.41(a)(1)(xii)(D).

While we appreciate the support for CfoC Basics, we respectfully disagree with providing references to specific CfoC Basics standards within health and safety topics. Providing the complete CfoC Basics as reference allows the regulations to stay current as CfoC Basics is updated in the future. With respect to the request to CfoC Basics be made a requirement, while CfoC Basics is a valuable resource for Lead Agencies to utilize, we want to maintain Lead Agency flexibility as they implement these standards.

Immunizations and Tribal programs. This final rule amends the regulatory language at §98.41(a)(1)(i)(A) regarding immunization requirements for children “States and Territories” to “Lead Agencies” to be inclusive of Tribes. Minimum Tribal health and safety standards under effect currently address immunization in a manner that is consistent with the requirements of this section. As a result, there is no longer a compelling reason to continue to exempt Tribes from this requirement. The final rule makes a corresponding change to the regulations at §98.83(d) in Subpart I. We discuss this and other changes regarding health and safety requirements as they pertain to Tribes in our discussion of Subpart I.
The intent of this provision was to reduce barriers to enrollment given the uniquely challenging circumstances of homeless and foster children, not to undermine children’s health and safety. The intent was not for those children to be permanently exempt from immunization and other health and safety requirements. For that reason, § 98.41(a)(1)(i)(C)(4) requires Lead Agencies to coordinate with licensing agencies and other relevant State/Territorial/Tribal and local agencies to provide referrals and support to help families experiencing homelessness and foster children comply with immunization and other health and safety requirements. This will help children, once enrolled and receiving CCDF services, to obtain necessary services and the proper documentation in a timely fashion. We received support for this proposal, and the final rule retains it.

Comment: There was support for the inclusion of a grace period for children experiencing homelessness and children in foster care in addition to the requirement that Lead Agencies help refer and support those children’s families in obtaining immunizations. However, there was concern for the establishment of grace periods without oversight. Concerns were raised that the proposed rule allowed too much flexibility for Lead Agencies to establish grace periods without parameters, possibly negating group immunity protections that vaccinations are intended to provide. Conversely, there was concern that timeframes could be too restrictive and create barriers that the reauthorized Act intended to remove.

Response: In response to comments, we have amended the final rule to include language that now requires Lead Agencies to establish grace periods in consultation with the State, Tribal, or Territorial health agency. This provision is included at § 98.41(a)(1)(i)(C)(1). This will provide some valuable safeguards to health and safety of children in care while also allowing some considerations for the logistical challenges of the most vulnerable children and families.
VerDate Sep<11>2014 21:18 Sep 29, 2016 Jkt 238001 PO 00000 Frm 00051 Fmt 4701 Sfmt 4700 E:\FR\FM\30SER2.SGM 30SER2

While States have flexibility in setting group size and child-staff ratios, these standards are often inter-related. For example, using square footage per child by itself does not ensure an appropriate determination of group size. While we are not establishing a Federal requirement for group size and child-staff ratios, there are resources that Lead Agencies can use when developing their standards. CfoC Basics recommends:

Appropriate ratios should be kept during all hours of program operation. Children with special health care needs or who require more attention due to certain disabilities may require additional staff on-site, depending on their special needs and the extent of their disabilities. In center-based care, child-staff ratios should be determined by the age of the majority of children and the needs of children present. For children 23 months and younger, a ratio of four of the younger children per one child care provider should be maintained. For children 24 to 35 months, a ratio of four to six children per provider should be maintained. For children who are three years old, a maximum ratio of 9:1 should be preserved. If all children in care are four to five years of age, a maximum ratio of 10:1 should be maintained.

In family child care homes, the caregivers’ children as well as any other children in the home temporarily requiring supervision should be included in the child-staff ratio. In family child care settings where there are mixed age groups that include infants and toddlers, a maximum ratio of 6:1 should be maintained and no more than two of these children should be 24 months or younger. If all children in care are under 36 months of age, a maximum ratio of 4:1 should be maintained and no more than two of these children should be 18 months or younger. If all children in care are three years old, a maximum ratio of 7:1 should be preserved. If all children in care are four to five years of age, a maximum ratio of 8:1 should be maintained.

As stated earlier, these represent baseline recommendations and Lead Agencies should not feel limited by them. ACF also encourages Lead Agencies to consider the group size and child-staff ratios outlined in Caring for Our Children: National Health and Safety Performance Standards and the Head Start and Early Head Start standards for child-staff ratios, especially in light of partnerships between family child care and Head Start. The Head Start program performance standards set forth ratios and group size requirements for the center-based-and family child care options for Head Start and Early Head Start providers. Early Head Start requires a ratio of one teacher for every four infants and toddlers in center based programs with a maximum group size of eight, or a maximum group size of nine if there are three teachers.

A Head Start family child care provider working alone may have a maximum group size of six, with no more than two children under two years old. A family child care provider may care for up to four children under three years old with a maximum group size of four, with no more than two of these children under 18 months of age. When there is a teacher and an assistant, the maximum group size is 12 children, with no more than four children under two years old.

Head Start requires a ratio two teachers in center-based programs with a maximum group size of 17 children for three year olds and 20 children for four year olds.

Another resource for determining appropriate child-staff ratios and group sizes is NFPA 101: Life Safety Code from The National Fire Protection Association (NFPA), which recommends that small family child care homes with one caregiver serve no more than two children incapable of self-preservation. For large family child care homes, the NFPA recommends that no more than three children younger than 2 years of age be cared for where two caregivers are caring for up to 12 children (National Fire Protection Association, NFPA 101: Life Safety Code, 2009).

In response to the NPRM, commenters were supportive of giving Lead Agencies the latitude to establish their own requirements for child-staff ratios and group size specific to setting type and age of children served. For example, one comment stated that they “appreciate ACF’s acknowledgement of the role provider-child ratios and group size standards play in ensuring an environment conducive to safety and learning, and the role of low ratios in stronger relationships with caregivers, a key element of quality. While ACF does not have the statutory authority to set specific ratios and size limits, we appreciate that ACF highlighted the examples in CFOC Basics, as well as Head Start, as examples for consideration.”

Compliance with Child Abuse Reporting Requirements. Section 658E(c)(2)(L) of the Act requires Lead Agencies to certify in their Plan that child abuse and neglect reporting procedures for reporting child abuse and neglect as required by section 106(b)(2)(B)(i) of the Child Abuse Prevention and Treatment Act (CAPTA) (42 U.S.C. 5106a(b)(2)(B)(i)). That provision of CAPTA requires that the State has in effect and is enforcing a State law, or has in effect and is operating a statewide program, relating to child abuse and neglect that includes provisions or procedures for an individual to report known and suspected instances of child abuse and neglect, including a State law for mandatory reporting by individuals required to report such instances. Thus, Lead Agencies must certify that caregivers, teachers, and directors of child care providers will be required to report child abuse and neglect as individuals or mandatory reporters, whether or not the State explicitly identifies these persons as mandatory reporters.

Because the CAPTA requirement above is not applicable to Tribes or, in some circumstances, to Territories, the final rule expands upon this provision at § 98.41(e) by requiring Lead Agencies to certify that caregivers, teachers, and directors of child care providers within the State (or service area) will comply with the State’s, Territory’s or Tribe’s child abuse reporting requirements as required by section 106(b)(2)(B)(i) of CAPTA, if applicable, or other child abuse reporting procedures and laws in the service area. Territories and Tribes may have their own reporting procedures and mandated reporter laws. Also, some Tribes may work with States to use the State’s reporting procedures. Further, the Federal Indian Child Protection and Family Violence Prevention Act requires mandated reporters to report child abuse occurring in Indian country to local child protective services agency or a local law enforcement agency (18 U.S.C. 1169). While State, Territory, and Tribal laws about when and to whom they report vary, child care providers and staff are often considered mandatory reporters of child abuse and neglect responsible for notifying the proper authorities in accordance with applicable laws and procedures. Regardless, the provision is intended for the Lead Agency to ensure that caregivers, teachers, and directors follow all relevant child abuse and neglect reporting procedures and laws, regardless of whether a child care caregiver or provider is considered a mandatory reporter under existing child abuse and neglect laws. We note that this requirement applies to caregivers, teachers, and directors of all child care providers, regardless of whether they receive CCDF funds. We did not receive comments on this provision and have
made no changes to the proposed rule language.

To support this statutory requirement, we have added recognition and reporting of child abuse and neglect to the list of health and safety topics at § 98.41(a)(1)(xii) to ensure that caregivers, teachers, and directors are properly trained to be able to recognize the manifestations of child maltreatment. According to the FY 2016–2018 CCDF Plans, 49 States and Territories have a pre-service training requirement on mandatory reporting of suspected abuse or neglect for staff in child care centers and 25 States and Territories require pre-service training in this area for family child care.

Comment: As mentioned earlier, we received support for the inclusion of the recognition and reporting of child abuse and neglect in the list of required health and safety topics.

Response: We have retained this provision in accordance with Section 658E(c)(2)(L) of the Act. Child abuse and neglect can be used to educate and establish child abuse and neglect prevention and recognition measures for children, parents, and caregivers. While caregivers, teachers, and directors are not expected to investigate child abuse and neglect, it is important that all of these individuals are aware of common physical and emotional signs and symptoms of child maltreatment.

§ 98.42 Enforcement of Licensing and Health and Safety Requirements

The majority of the language we proposed in section 98.42 is new, based on requirements added in the CCDBG Act of 2014. States receiving CCDF funds are required to have child care licensing systems in place and must ensure child care providers serving children receiving subsidies meet certain health and safety requirements.

Procedures to ensure compliance with licensing and health and safety requirements. Previous regulations required that the Lead Agency must have procedures in effect to ensure that child care providers of CCDF services within the service area served by the Lead Agency, comply with all applicable State, local, or Tribal requirements. This final rule retains the proposed rule language and clarifies at § 98.42(a) that these requirements must include the health and safety requirements described in § 98.41. We received no comments on this section.

Monitoring requirements. Section 658E(c)(2)(k) of the Act requires that Lead Agencies conduct monitoring visits for all child care providers receiving CCDF funds, including

license-exempt providers (except, at Lead Agency option, those that only serve relatives). The Act requires Lead Agencies to certify that licensed CCDF providers receive one pre-licensure inspection for compliance with health, safety, and fire standards and at least one, annual, unannounced licensing inspection for compliance with licensing standards, including health, safety, and fire standards. License-exempt CCDF providers (except, at Lead Agency option, those serving relatives) must receive at least one annual inspection for compliance with health, safety, and fire standards at a time determined by the Lead Agency. The final rule restates these requirements at § 98.42(b). For existing licensed providers already serving CCDF children, we will consider the Lead Agency to have met the pre-licensure requirement through completion of the first, annual on-site inspection.

Section 98.42(b)(2) of the final rule clarifies that annual inspections for both licensed and license-exempt CCDF providers includes, but is not be limited to, those health and safety requirements described in § 98.41. The final rule also clarifies that Tribes are subject to the monitoring requirements, unless a Tribal Lead Agency requests an alternative monitoring methodology in its Plan and provides adequate justification, subject to ACF approval, pursuant to § 98.83(d)(2).

Pre-licensure inspections. The vast majority of States and Territories already require inspections for all child care providers prior to licensure, which we strongly encourage. Only one State does not require pre-licensure inspections for child care centers, and seven States do not require pre-licensure inspections for family child care. This final rule interprets the pre-licensure inspection requirement as an indication that an on-site inspection is necessary for licensed child care providers prior to providing CCDF-funded child care. Therefore, any licensed provider that did not previously receive a pre-licensure inspection must be inspected prior to caring for a child receiving CCDF.

Comment: We received strong support for pre-licensure inspections as a condition for licensure as well as meeting the pre-licensure inspection requirement through the first annual on-site inspection for existing licensed CCDF providers and those in States that do not currently require pre-licensure visits. However, there was concern that the first annual inspection of existing licensed providers who provide CCDF-funded care would not take place in a timely manner and families would not receive needed care.

Response: Because monitoring of licensing and regulatory requirements does not go into effect until November 19, 2016, per Section 658E(c)(2), we expect existing CCDF providers to have received their annual on-site inspection before phase in of the pre-licensure inspection requirement. This visit will meet the pre-licensure inspection requirement and allow for providers to continue serving CCDF children without interruption.

The Act and this final rule require annual inspections of licensed child care providers receiving CCDF funds. Research supports the use of regular, unannounced inspections for monitoring compliance with health and safety standards and protecting children. A recent series of Department of Health and Human Services’ (HHS) Office of Inspector General (OIG) audits identified deficiencies with health and safety protections for children in child care with CCDF providers in several States, including in Arizona, Connecticut, Florida, Louisiana, Maine, Michigan, Minnesota, Pennsylvania, Puerto Rico, and South Carolina. For example, an OIG audit in one State examined the monitoring of 20 family child care home providers that participate in the CCDF program and found 17 in violation of at least one licensing requirement, including four providers who did not comply with background check requirements.

Inspections only of licensed CCDF providers. The majority of commenters supported the goal of extending unannounced, annual inspections to all licensed providers. However, several commenters, including States and a municipality, expressed concerns about the high costs related to the proposal, especially considering the other costs associated with the monitoring requirements included in the Act. One State said it "understands the concern ACF poses regarding not inspecting all providers on the same inspection frequency; however, cost is a legitimate and real barrier to implementing a rule that would require annual inspection of all providers in States where this is not already in practice." Comments also reflected concerns about the logistics of implementing the proposed requirement. Child care providers, national/State/local organizations, child care worker organizations, and advocates supported unannounced, annual inspections for all licensed providers. Commenters agreed with ACF’s concerns that requiring inspections only of licensed CCDF providers, and not all licensed providers, could result in a bifurcated system in which children receiving CCDF do not have access to the full range of licensed child care providers.

Response: In light of the significant number of concerns related to the cost of broader coverage, the final rule keeps § 98.42(b) as proposed and does not require the expansion of annual inspections to licensed child care providers not serving children receiving CCDF. However, ACF continues to be concerned that if all licensed child care providers are not subject to at least annual inspections, CCDF families would be restricted from accessing a portion of the provider population (those that have not been inspected annually), effectively denying children access to some providers, limiting parental choice, and resulting in a bifurcated system. Therefore, we strongly encourage Lead Agencies to use annual inspections as a means for monitoring all licensed child care providers.

Future inspections of license-exempt providers. This provision is addressed in section 98.42(b)(2)(ii) of this final rule, which clarifies that the annual monitoring applies to license-exempt providers that are eligible to provide CCDF services. The Act does not require that inspections for license-exempt CCDF providers be unannounced, but ACF strongly encourages some use of unannounced visits, as they have been found effective in promoting compliance with health and safety requirements among providers who have a history of low compliance with State child care regulations. (R. Fiene, Unannounced vs. announced inspections in monitoring child care programs, Pennsylvania Office of Children, Youth and Families, 1996; American Academy of Pediatrics, American Public Health Association, National Resource Center for Health and Safety in Child Care and Early Education; Caring for Our Children: National health and safety performance standards: Guidelines for early care and education programs. 3rd edition.) However, there may be situations in which a Lead Agency cannot be sure that a provider and children will be present (e.g., when a provider is caring for a child whose parent has a variable work schedule). In such situations, advance notification of a visit may be necessary. The Lead Agency may also choose to inform providers before monitoring staff depart for unannounced visits that involve significant travel, such as those in rural areas, to avoid staff visits when the provider or children are not present.

Lead Agencies are encouraged to make reasonable efforts to conduct visits during the hours providers are caring for children and ensure that providers who care for children on the evenings and weekends are monitored so that the supply of non-traditional hour care is not reduced. ACF intends to provide technical assistance to CCDF Lead Agencies on best practices for monitoring license-exempt programs, including the use of unannounced inspections.

Comment: We received comments from a few States that indicated concerns for requiring inspections of license-exempt programs due to cost and conflicts with State statute. One commenter stated that “conducting monitoring visits to license-exempt programs will be challenging for our licensing staff since we will not have jurisdiction over these programs.”

Response: The annual inspection of license-exempt providers who receive CCDF for compliance with health, safety, and fire standards is required by the Act. In cases where there is a conflict with State statute, the State will need to take legislative action in order to comply. If additional time is necessary to make this change, this final rule includes a waiver provision at § 98.19(b) that allows the Lead Agency to apply for a temporary extension that provides transitional relief from conflicting or duplicative requirements preventing implementation, or an extended period of time in order for a State, territorial, or tribal legislature to enact legislation to implement the provisions of this subchapter.

Process for responding to complaints. Section 658E(c)(2)(C) of the Act requires Lead Agencies to maintain a record of substantiated parental complaints, and § 98.32 of the final rule requires Lead Agencies to establish a reporting process for parental complaints. A logical extension of these requirements is for Lead Agencies to respond to complaints, including monitoring where appropriate, in particular those of greatest concern to children’s health and safety. Unannounced inspections allow for an investigation of the situation and, if the threat is substantiated, may prevent future incidences. In the NPRM, we had not proposed a requirement for monitoring in response to complaints but sought comments on whether this final rule should include a requirement for Lead Agencies to conduct unannounced inspections in response to complaints and whether this requirement should apply to providers receiving CCDF funds or additional providers.
Comment: In general, there was support from national organizations for States to conduct inspections in response to complaints received about incidents in child care that impact children’s health and safety. For example, one submission recommended that this final rule “include a requirement for States to conduct inspections in response to complaints received about incidents in child care that impact children’s health and safety. Inclusion of such a requirement is a logical step given that States are required to have a hotline in place for the public to report complaints. States should have in place a system to determine those complaints that indicate a risk to children’s health and safety and investigate accordingly.” However, there was also concern from national, State and local organizations; child care resource and referral agencies; and States about conducting unannounced inspections for all complaints and recommended that unannounced visits be conducted in response to complaints of imminent danger to children, as defined by the State. Many felt that States should have the ability to develop State-specific procedures for monitoring in response to complaints, including the triggers for unannounced visits.

Response: Consistent with the NPRM, we decline to require monitoring inspections in response to complaints. However, this final rule at § 98.32(d)(1) requires Lead Agencies to describe in their CCDF Plans how they respond to and substantiate complaints, including whether or not the State uses monitoring in its process of responding to complaints for both CCDF and non-CCDF providers. This requirement corresponds to the Plan question included at § 98.16(s).

Coordination of monitoring. Section 98.42(b)(2)(iii) of the final rule requires Lead Agencies to coordinate, to the extent practicable, with other Federal, State/Territory, and local entities that conduct similar on-site monitoring. Possible partners include licensing, QRIS, Head Start, and the Child and Adult Care Food Program (CACFP). Coordinating with other monitoring agencies can be beneficial to both agencies as they prevent duplication of services. As an example of current interagency coordination, one State holds monthly meetings with representation from its licensing division, CCDF Lead Agency, CACFP, and other public agencies with child care monitoring responsibilities. These divisions/conferences identify areas of overlap in monitoring and coordinate accordingly to leverage combined resources and minimize duplication of efforts. It is important that any shared costs be properly allocated between the organizations participating and benefiting from the partnership.

To the extent that other agencies provide an on-site monitoring component that may satisfy or partially satisfy the new monitoring requirement under the Act and this final rule, the Lead Agency is encouraged to pursue collaboration, which may include sharing information and data as well as coordinating resources. However, the Lead Agency is ultimately responsible for meeting these requirements and ensuring that any collaborative monitoring efforts satisfy all CCDF requirements. In response to the NPRM, there was strong support for coordination of monitoring across programs with other Federal, State/Territory, and local entities that conduct similar on-site monitoring; therefore, we have retained this provision in this final rule.

Differential monitoring. Section 98.42(b)(2)(iv)(A) of the final rule gives Lead Agencies the option of using differential monitoring, or a risk-based monitoring approach, provided that the monitoring visit is representative of the full complement of health and safety standards and is conducted for all applicable providers annually, as required in statute.

A white paper developed by HHS’s Office of the Assistant Secretary for Planning and Evaluation, found the following:

Many States are using differential monitoring to make monitoring more efficient. As opposed to ‘one size fits all’ systems of monitoring, differential monitoring determines the frequency and depth of needed monitoring from an assessment of the provider’s history of compliance with standards and regulations. Providers who maintain strong records of compliance are inspected less frequently, while providers with a history of non-compliance may be subject to more frequent and unannounced inspections. In some States, more frequent inspections are conducted for providers who are on a corrective action plan, or after a particularly egregious violation. (Trivedi, P.A. (2015). Innovation in monitoring in early care and education: Options for states. Washington, DC: Office of the Assistant Secretary for Planning and Evaluation, U.S. Department of Health and Human Services).

Differential monitoring often involves monitoring programs using monitoring tools or protocols that investigate a subset of requirements to determine compliance. There are two methods used to identify rules for differential monitoring:

- Key Indicators: An approach that focuses on identifying and monitoring those rules that statistically predict compliance with all the rules; and
- Risk Assessment: An approach that focuses on identifying and monitoring those rules that place children at greater risk of mortality or morbidity if violations or citations occur.

The key indicators approach is often used to determine the rules to include in an abbreviated inspection. A risk assessment approach is often used to classify or categorize rule violations and can be used to identify rules where violations pose a greater risk to children, distinguish levels of regulatory compliance, or determine enforcement actions based on categories of violations. Note that monitoring strategies that rely on sampling of providers or allow for a monitoring frequency of less than once per year for providers are not allowable as every child care provider must receive at least one inspection annually, in accordance with the Act. However, differential monitoring key indicator approaches can be used in annual monitoring visits, provided that the content covered during each visit is representative of the full complement of health and safety requirements.

ACF encourages Lead Agencies to consider the use of differential monitoring as a method for determining the scheduling and priority for unannounced monitoring visits. This may be based on an assessment of the child care provider’s past level of compliance with health and safety requirements, information received that could indicate violations, or the occurrence of a monitoring visit from another program. Differential monitoring allows Lead Agencies to prioritize monitoring of providers that have previously been found out of compliance or the subject of parental complaints or that have not been monitored through other programs.

Lead Agencies should use data to make necessary adjustments to differential monitoring or the frequency of monitoring visits over time. For example, if widespread or significant compliance issues are found under existing monitoring protocols, the Lead Agency could consider increasing the frequency of monitoring visits. As discussed in Innovations in Monitoring, Lead Agencies should be intentional and cautious in their use of differential monitoring and not replace routine inspection of all licensed providers, including those with no compliance records. We encourage Lead Agencies to follow the recommendations below
when implementing key indicators and/or risk-based approaches:

- Assess resources available in the federal TA system that can assist with undertaking a key indicator or statistical/risk-based approach;
- Conduct comprehensive unabbreviated inspections of all facilities at least every three years;
- Have a monitoring protocol/instrument in use and at least one year's worth of data from monitoring visits in place prior to determining key indicators;
- Combine a key indicator system with a risk-based approach, to ensure that resources are well-targeted to the providers that are out of compliance in the most crucial areas for the protection of children;
- Continue to do full inspections with providers that (1) have not maintained a regular license for the past two consecutive years, (2) have had recent changes in their director, (3) have had complaints that have been substantiated in the past 12 months, (4) have recently experienced sanctions, and (5) have a past history of repeated violations;
- Conduct validation studies by comparing compliance data from comprehensive reviews to compliance data from key indicator reviews;
- Consider and develop a different set of key indicators for different types of child care settings (e.g., center-based versus family child care).

As there was strong support for the use of differential monitoring as a method for annual inspections, we are retaining this provision in this final rule.

Monitoring in-home care. At § 98.42(b)(2)(iv)(B), this final rule requires that that Lead Agencies have the option to develop alternate monitoring requirements for care provided in the child's home that are appropriate to the setting. A child's home may not meet the same standards as other child care facilities and this provision gives Lead Agencies flexibility in conducting more streamlined and targeted inspections. For example, Lead Agencies may choose to monitor in-home providers on basic health and safety requirements such as training and background checks. Lead Agencies could choose to focus on health and safety risks that pose imminent danger to children in care. This flexibility cannot be used to bypass the monitoring requirement altogether. States should develop procedures for notifying parents of monitoring protocols and consider whether it would be appropriate to obtain parental permission prior to entering the home for inspection purposes.

Comment: In response to the NPRM, there was support from States and national organizations for Lead Agencies to have the option to develop alternative monitoring requirements for in-home care. Some felt that, when care is provided in the child's home, certain aspects of health and safety are the responsibility of the parents and not under the child care provider's control. One comment said that “the fact that there are public dollars being invested does indicate that the Lead Agency should be empowered to do what is necessary to ensure that the child care experience that is being funded is developmentally appropriate, safe, clean and is equal to what a family not eligible for CCDF funding might expect.”

However, a number of comments believed care provided in a child's home should be exempt from on-site monitoring. In-home monitoring raises privacy concerns for families, as well as the potential for unintended consequences. They believed that imposing monitoring requirements on in-home care may lead States to further restrict the use of in-home care by families receiving assistance (as permitted by § 98.16(i)(2)), including among those who need it. The frequent use of care in the child's own home may do so because of circumstances that severely limit their access to other options—circumstances such as a child's serious disability or a parent's work schedule that requires overnight care. Lead Agencies should be permitted to exempt in-home care for providers who are seriously ill or have been exposed to other children or families. They believed care provided in a child's home setting is provided in the child's home, certain aspects of health and safety in early care and education settings, as well as the consideration of health and safety requirements in § 98.41, it follows that the training of inspectors may include these standards.

The final rule also clarifies that inspectors be trained in health and safety requirements appropriate to the provider setting and type of children served. Inspecting care for children of different ages, and in different settings, may require specialized training in order to understand differences in care. We encourage Lead Agencies to consider the cultural and linguistic diversity of caregivers when addressing inspector competencies and training.

Caring for Our Children: National Health and Safety Performance Standards recommends that licensing inspectors have “pre-qualified” education and experience about the types of child care they will be assigned to inspect and in the concepts and principles of licensing and inspections. When hired, the standards recommend at least 50 clock hours of competency-based orientation training and 24 annual clock hours of competency-based continuing education. There was significant support for specialized training of licensing inspectors in health and safety in early care and education settings, as well as the consideration of cultural and linguistic diversity of caregivers when addressing inspector competencies and trainings, which we have retained in this final rule.

Licensing inspector-provider ratios. Section 658E(c)(2)(K)(i)(III) of the Act requires Lead Agencies to have policies in place to ensure the ratio of inspectors to providers is sufficient to ensure visits occur in accordance with Federal, State, and local law. The final rule expands on this requirement at § 98.42(b)(3) to ensure applicability with Federal, State, Territory, Tribal, and local law. The public comment period was extended that there was support for this requirement. Large caseloads make it difficult for
provision of health and safety requirements and data collection. The Act added Section 658H on requirements for comprehensive criminal background checks, which are a basic safeguard essential to protect the safety of children in child care and reduce children’s risk of harm. Parents have the right to be confident that their children’s caregivers, and others who come into contact with their children, do not have a record of violent offenses, sex offenses, child abuse or neglect, or other behaviors that would disqualify them from caring for children. A GAO report found several cases in which individuals convicted of serious sex offenses had access to children in child care facilities as employees, because they were not subject to a criminal history check prior to employment (Overview of Relevant Employment Laws and Cases of Sex Offenders at Child Care Facilities, GAO–11–757, GAO, 2011).

Comprehensive background checks have been a long-standing ACF policy priority. According to an analysis of the FY 2016–2018 CCDF Plans, all States and Territories require that child care center staff undergo at least one type of criminal background check, and approximately 45 require an FBI fingerprint check for centers. Fifty-five States and Territories require family child care providers to have a criminal background check, and approximately 45 require an FBI fingerprint check. For some States and Territories, these requirements are currently limited to licensed providers, rather than all providers that serve children receiving CCDF subsidies.

The reauthorization added Section 658H on requirements for comprehensive criminal background checks, which are a basic safeguard essential to protect the safety of children in child care and reduce children’s risk of harm. Parents have the right to be confident that their children’s caregivers, and others who come into contact with their children, do not have a record of violent offenses, sex offenses, child abuse or neglect, or other behaviors that would disqualify them from caring for children. A GAO report found several cases in which individuals convicted of serious sex offenses had access to children in child care facilities as employees, because they were not subject to a criminal history check prior to employment (Overview of Relevant Employment Laws and Cases of Sex Offenders at Child Care Facilities, GAO–11–757, GAO, 2011).

Comprehensive background checks have been a long-standing ACF policy priority. According to an analysis of the FY 2016–2018 CCDF Plans, all States and Territories require that child care center staff undergo at least one type of criminal background check, and approximately 45 require an FBI fingerprint check for centers. Fifty-five States and Territories require family child care providers to have a criminal background check, and approximately 45 require an FBI fingerprint check. For some States and Territories, these requirements are currently limited to licensed providers, rather than all providers that serve children receiving CCDF subsidies.

The Act defines relatives and, therefore, we are unable to expand the scope of who may be considered for exemption due to statutory language. However, as there is an option in the final rule to develop alternative monitoring requirements for in-home providers at § 98.42(b)(2)(v), Lead Agencies may choose to explore this flexibility when care is provided in the child’s home by individuals who are not included in the list for exemption but the Lead Agency believes merit special considerations.

§ 98.43 Criminal Background Checks
Background check effective dates. The Act requires that States and Territories shall meet the requirements for the provision of criminal background checks for child care staff members not later than the last day of the second full fiscal year after the date of enactment of the Child Care and Development Block Grant Act of 2014. This delayed effective date requires States and Territories to come into compliance with the background check requirements by September 30, 2017.

Comment: Several States requested clarifying language be added to the preamble around the statutory effective dates for the background check requirements.

Response: A State must have policies and procedures in place that meet the background check requirements not later than September 30, 2017. In addition, in accordance with Section 658H(d)(2), staff members who were employed prior to the enactment of the CCDBG Act of 2014 must have submitted requests for background checks that meet all the requirements by September 30, 2017. Section 658H(d)(4), the Act provides that a provider need not submit a new request for a child care staff member if the staff member received a background check meeting all the required components under the Act within the past five years while employed by, or seeking employment by, a child care provider within the State. If a staff member employed prior to the CCDBG Act of 2014 satisfies all of those requirements, then it is not necessary for a provider to submit a new request until five years following the background check completion. It will be important to evaluate the current background check requirements to ensure that all new requirements are satisfied, including the disqualification factors. If the current background check requirements do not satisfy the new requirements or results of the current background checks are not maintained, then new background checks would need to be conducted.

We strongly encourage States to establish policies and procedures well in advance of the September 30, 2017, effective date, in order to allow sufficient time to clear the backlog of existing providers and staff members that must be checked prior to the deadline. It is also important to note that the HHS Secretary may grant the State an extension of up to one year to complete the background check requirements, as long as the State demonstrates a good faith effort to comply with this transition is separate from the transitional waiver described earlier in the preamble. States applying for an extension must be able to describe their current implementation efforts and present a timeline for compliance within one year, by September 30, 2018. ACF will release specific guidance to States interested in an extension. In addition, the reauthorized Act establishes a penalty for noncompliance. For any year that a State fails to substantially comply, ACF shall withhold up to 5 percent of the State’s CCDF funds for each year until coming into compliance.

Background check implementation. Section 658H(a) of the Act requires that States shall have in effect requirements, policies, and procedures to require and conduct criminal background checks for child care staff members (including prospective child care staff members) of child care providers. Having procedures in place to conduct background checks on child care staff members will require coordination across public agencies. The CCDF Lead Agency must work with other agencies, such as the Child Welfare office and the State Identification Bureau, to ensure the checks are conducted in accordance with the Act. In recognition of this effort, § 98.43(a)(1) clarifies that these requirements involve multiple State, Territorial, or Tribal agencies. We discuss the comments we received on this provision further below.

Tribes and background checks. In the final rule, Tribal Lead Agencies are also subject to the background check requirements described in this section, with some flexibility as discussed later in Subpart I.

Applicability of background checks requirements. The statutory language identifying which providers must conduct background checks on child care staff members is unclear. It is our interpretation of the Act that all licensed, regulated, and registered child care providers and all child care providers eligible to deliver CCDF services (with the exception of those individuals who are related to all children for whom child care services are provided) are subject to the Act's background check requirements. Section 98.43(a)(1)(i) of the final rules applies this requirement to all licensed, regulated, or registered providers, regardless of whether they receive CCDF funds and all license-exempt CCDF providers (with the exception of individuals who are related, as defined in the definition of eligible child care provider, to all children for whom child care services are provided).

Comment: Overall, the comments, from national organizations and multiple States, supported broadly applying the background check requirements to all licensed, regulated, or registered child care providers and all child care providers eligible to deliver CCDF services. One State and one Territory submitted comments disagreeing with our interpretation.

Response: ACF was pleased by the support for broad applicability of the background check requirements. We acknowledge that the statutory language is not clear about the universe of staff and providers subject to the background check requirement; however, our interpretation aligns with the general intent of the statute to improve the overall safety of child care services and programs. Furthermore, there is justification for applying this requirement in the broadest terms for two important reasons. First, all parents using child care deserve this basic protection of having confidence that those who are trusted with the care of their children do not have criminal backgrounds that may endanger the well-being of their children. Second, limiting those child care providers who are subject to background checks has the potential to severely restrict parental choice and equal access for CCDF children, two fundamental tenets of CCDF. If not all child care providers are subject to comprehensive background checks, providers could opt not to serve CCDF children, thereby restricting access. Creating a bifurcated system in which CCDF children have access to only a portion of child care providers who meet applicable standards would be incongruous with the purposes of the Act and would not serve to advance the important goal of serving more low-income children in high-quality care.

Comment: One comment suggested adding regulatory language to capture all State definitions of provider groups. The comment stated, “Some States may use words, such as ‘certified’ or ‘listed care’ that should not be exempt from a comprehensive check merely because the words ‘licensed, regulated, or registered’ are not used. For example, legislation is currently pending in at least one State that would eliminate the category of care called ‘voluntarily registered’ and replace it with a voluntary ‘list.’”

Response: It is not necessary to insert additional regulatory language to address other State definitions of provider groups. As described earlier, the background check requirements apply to licensed, regulated, or registered providers, regardless of whether they receive CCDF funds as well as all providers eligible to deliver CCDF services. Our interpretation of the law applies these requirements broadly
and includes providers who are “certified” or “listed.”

Definition of child care staff member. Section 658H(i) of the Act defines a child care staff member as someone (other than an individual who is related to all children for whom child care services are provided) who is employed by the child care provider for compensation or whose activities involve unsupervised access to children who are cared for by the child care provider. Section 98.43(a)(2)(ii) of the final rule includes contract and self-employed individuals in the definition of child care staff members, as they may have direct contact with children. In addition, we require individuals, age 18 or older, residing in a family child care home to be defined as child care staff members and, therefore, subject to background checks, as well as the disqualifying crimes and appeals processes.

Comment: In the NPRM, at § 98.43(a)(2)(ii), we defined child care staff member to mean “an individual age 18 and older.” We received a letter from Senator Alexander and Congressman Kline asking us to revise this regulatory language to reflect current State practice. The letter stated, “The NPRM defines those staff required to receive a background check as individuals 18 and older, yet a number of State laws allow individuals younger than 18 to be employed by providers. To ensure the maximum amount of safety while still respecting individual States’ employment laws, we request the Department to review this requirement or assistance to States on conducting background checks for both staff aged 18 and older, and those younger than 18 to ensure all States are able to comply with the background checks required in the Act.”

Response: ACF agreed with the concerns described in the letter. The reference to “age 18 or older” is removed from the final rule. This change better aligns with the original statutory language and removes the unintentional limitation placed on the definition of child care staff member. The original statutory language requires any individual, regardless of age, who is employed by a child care provider for compensation to complete comprehensive background checks.

Comment: Several comments continued to ask for clarification on who is included in the definition of child care staff member. A letter from Senator Alexander and Congressman Kline advised, “The scope of the NPRM’s definition of ‘child care staff member’ for the purposes of a required background check is unclear. We ask for clarification for providers so they may know definitively if an individual who receives ‘compensation, including contract employees or self-employed individuals’ is required to automatically receive a background check, or if such individuals should additionally have duties listed under subparagraph (B). As written, the definition is unclear if these requirements are mutually exclusive and would trigger a background check on their own regard or if a ‘child care staff member’ would need to fit both such requirements. We ask you also to review the administrative burden this definition could place on providers. While retaining the highest safety measures for children, we urge the Department to review this requirement and listen to comments from centers and providers to ensure their obligation captures individuals who may have unsupervised access to children but is not duplicative of State requirements or overly burdensome.”

Response: The Act states that a child care staff member means an individual (other than an individual who is related to all children for whom child care services are provided) who is employed by a child care provider for compensation; or whose activities involve the care or supervision of children for a child care provider or unsupervised access to children who are cared for or supervised by a child care provider. This definition, like the definition of child care provider, is broad. It encompasses not only caregivers, teachers, or directors, but also janitors, bookkeepers, and other employees of a child care provider who may not regularly engage with children, but whose placement at the facility gives them the opportunity for unsupervised access. Given that these individuals are employed by a child care provider, they are included in the statute’s definition. Therefore, it is important that they also complete a comprehensive background check in order to ensure and protect children’s safety.

The final rule adds the terms “contract employees” and “self-employed individuals” to the definition of “child care staff member.” These terms are meant to clarify the definition, particularly for family child care providers. Many family child care providers are self-employed individuals who own their own businesses. The final rule specifically requires any individual residing in a family child care home age 18 or older to complete a background check. We discuss this requirement in greater detail below. These individuals may also have unsupervised access to children, so completing a background check is a necessary safeguard to protect the children in care. The definition of child care staff member generally covers any individual who is employed by the child care provider and any individual who may have unsupervised access to children in care.

Comment: The comments were mixed on whether other adults in a family child care home should be subject to the background checks requirements. Several national organizations and States wrote in support, while child care worker organizations, a few national organizations, and one State did not support the provision. One State wrote, “We currently require background reviews on all household members 18 years or older and have found multiple individuals whose presence could place children at risk.”

Response: As illustrated by the State’s comment, requiring other adults in family child care homes to complete background checks is vital to ensuring children’s health and safety. A majority of States already require other adults in family child care homes to receive background checks. Forty-three States require some type of background check of family members 18 years of age or older that reside in the family child care home (Leaving Child Care to Chance: NACCRRA’s Ranking of State Standards and Oversight for Small Family Child Care Homes, National Association of Child Care Resource and Referral Agencies, 2012). Although these individuals may not be directly responsible for caring for children, they have ample opportunity for unsupervised access to children. For this reason, as proposed in the NPRM, we are specifically requiring other adults in family child care homes to complete the background check requirements. Because these individuals are included in the definition of child care staff member, they are subject to the same disqualifications and appeals processes described in the Act and the regulations. We strongly discourage States from identifying any additional disqualifying crimes for residents of family child care homes, and encourage them to consider that casting too wide a net could have adverse effects on the supply of family child care providers and other consequences for individuals returning from incarceration. As described later in the preamble, we also strongly encourage States to implement a waiver review process that meets the recommendations of the U.S. Equal Employment Opportunity Commission for any additional disqualifying crimes (U.S. Equal Employment Opportunity Commission, Enforcement Guidance on

Comment: In the NPRM, ACF asked for comment on whether additional individuals in the family child care homes should be subject to the background check requirements. There was only lukewarm support for requiring background checks for minors in family child care homes. Several States recommended checking individuals over ages 12, 13, or 16 to mirror current State policy and practice.

Response: ACF is declining to require background checks for individuals under age 18 in family child care homes. However, States that check individuals younger than age 18 may continue checking all background check components permitted by State law. The Adam Walsh Child Protection and Safety Act of 2006 (42 U.S.C. 16901) requires States to include in their sex offender registries juveniles convicted as adults and juveniles who are convicted of an offense similar or more serious than aggravated sexual abuse. We allow States the flexibility to follow current State laws and registry policies to check those individuals younger than 18 in family child care homes; however, we strongly encourage States to implement a waiver process that meets the recommendations of the U.S. Equal Employment Opportunity Commission for any additional disqualifying crimes (U.S. Equal Opportunity Commission, Enforcement Guidance on the Consideration of Arrest and Conviction Records in Employment Decisions under Title VII of the Civil Rights Act of 1964, http://www.eeoc.gov/laws/guidance/upload/arrest_conviction.pdf).

Comment: A few comments asked for clarification around volunteers. One State wrote, “In many circumstances, a parent volunteer (for activities such as field trips) would fit into the definition of child care staff member (‘activities involve the care or supervision of children’ and they may be unsupervised for periods of time) and therefore [would] require them to meet all background check requirements. This requirement could prevent some parents from involvement in enrichment activities, particularly because of the cost associated with the background checks.”

Response: Volunteers who provide infrequent and irregular service that is supervised or monitored volunteers who are supervised do not meet the definition of child care staff member. Volunteers who come into a child care facility to help with a classroom party, read to students, or assist with recess are not caring for or supervising children for a child care provider. Rather, volunteers in the situations described above are providing additional assistance under supervision of the primary caregiver.

Volunteers are not specifically included in the Act, nor have we specifically included them in the regulation. We are allowing States the discretion to create their own policies and screening processes for volunteers. However, it is ACF’s view that volunteers who have not had background checks may not be left with children unsupervised. Volunteers who have unsupervised access to children must have background checks that comply with the statute. These volunteers will be subject to the same disqualifications and appeals process as described in the Act and regulations. As with other adults in the household, we strongly discourage States from adding additional disqualifications outside the Act. We also encourage Lead Agencies to require that volunteers who have not had background checks be easily identified by children and parents, for example through visible name tags or clothing.

Components of a criminal background check. The Act outlines five components of a criminal background check: (1) A search of the State criminal and sex offender registry in the State where the staff member resides and each State where the staff member has resided for the past five years; (2) A search of the State child abuse and neglect registry in the State where the staff member resides and each State where the staff member has resided for the past five years; (3) A search of the National Crime Information Center; (4) A Federal Bureau of Investigation (FBI) fingerprint check using the Integrated Automated Fingerprint Identification System; and (5) A search of the National Sex Offender Registry.

After extensive consultation with the FBI and other subject-matter experts, we made technical changes to address duplication among these components. In the final rule, we are consolidating the list of required components in the regulations at § 98.43(b) to:

(1) A Federal Bureau of Investigation fingerprint check using Next Generation Identification;
(2) A search of the National Crime Information Center’s National Sex Offender Registry; and
(3) A search of the following repositories, registries, or databases in the State where the child care staff member resides and each State where such staff member resided during the preceding 5 years:
   i. State criminal registry or repository, with the use of fingerprints being required in the State where the staff member resides, and optional in other States;
   ii. State sex offender registry or repository; and
   iii. State-based child abuse and neglect registry and database.

It is our understanding that there is some duplication among the National Crime Information Center’s (NCIC) National Sex Offender Registry (NSOR), the FBI fingerprint searches, and the searches of State criminal, sex offender, and child abuse and neglect registries. An FBI fingerprint check provides access to national criminal history record information across State lines on people arrested for felonies and some misdemeanors under State, Federal, or Tribal law. However, there are instances where information is contained in State databases, but not in the FBI database.

A search of the State criminal records and a FBI fingerprint check returns the most complete record and better addresses instances where individuals are not forthcoming regarding their past residences or committed crimes in a State in which they did not reside. In addition to gaps in the FBI fingerprint and the State criminal records, there are a number of instances in which an individual may be listed in the State sex offender registry and not in NSOR, and vice versa. For example, some States have statutes that disallow the removal of offenders, regardless of offender status, while in the NSOR, the agency owning the record is required to remove the offender from active status once his/her sentencing is completed. In addition, federal, juvenile, and international sex offender records may be included in the NSOR; whereas, State laws may prohibit the use of this information in the State sex offender registry. Because of these discrepancies, it is important to check the State sex offender registries in addition to an FBI fingerprint check and a check of the NCIC’s NSOR. It is our belief that the Act requires such thorough background check to ensure that offenders do not slip through the cracks to be given access to children.

Comment: Commenters, including several national organizations, child care worker organizations, and a couple of States, argued that an FBI fingerprint check should be considered a sufficient check of the National Crime Information Center (NCIC) and the National Sex Offender Registry. We do not believe it checks the fingerprint records of several NCIC files, including the NSOR.
Response: Based on consultation with the FBI, we understand that the comments are partially correct. The FBI fingerprint check using Next Generation Identification (NGI) (formerly the Integrated Automated Fingerprint Identification System—IAFIS) will provide a person’s criminal history record information which will incorporate data from three NCIC person files, including the NSOR, provided certain identifying information has been entered into the NSOR record. The change in the language from IAFIS to NGI is a technical change and should not impact Lead Agency background check processes. The NGI is the biometric identification system that has now replaced the older IAFIS.

There is significant overlap between the FBI fingerprint check and the NSOR check (via the NCIC), yet there are a number of individuals in the NSOR who are not identified by solely conducting an FBI fingerprint search. The FBI links fingerprint records to the NSOR records via a Universal Control Number, but a small percentage of cases are missing the fingerprints. In some cases, individuals were not fingerprinted at the time of arrest, or the prints were rejected by the FBI for poor quality. This small percentage of records can be accessed through a name-based search of the NCIC. A number of those individuals may also be identified by a search of the State sex offender registries, but it is impossible to know whether there is complete overlap. In the absence of verification of complete duplication, it is important to require separate searches of an FBI fingerprint check and a name-based search of the NCIC’s NSOR. Because Congress included each of these searches in the Act, it is our belief that the intent is for the background check to be as comprehensive and thorough as possible.

Comment: In the NPRM, we requested comments on the feasibility of a search of the NCIC and the level of burden required by the Lead Agency. We received comments from 12 States and two State police departments that all emphasized that without further guidance from the FBI, name-based searches of the NCIC and NSOR will be extremely difficult because these databases are limited to law enforcement purposes only.

Response: The comments are correct. The NCIC is a law enforcement tool consisting of 21 files, including the NSOR. The 21 files contain seven property files that help track missing property and 14 person files with information relevant to law enforcement (e.g., missing persons or wanted persons). State criminal records are not stored in the NCIC. The only file with information that would aid in determining whether an individual could be hired as a child care employee is the NSOR. The other files do not contain information on the disqualifying crimes listed in the Act. Further, the FBI has advised that a general search of the NCIC database will return records that cannot be made privy to individuals outside of law enforcement (i.e., the Known or Appropriately Suspected Terrorist File). Therefore, we are clarifying that a check of the NCIC will only need to search the NSOR file.

The comments call out a number of potential challenges, also identified by ACF, in requiring an NCIC check. It is our understanding that an NCIC check has not been included in any other non-criminal background check law applicable to States to date, and so, resolving these challenges is in many ways uncharted territory.

First, access to the NCIC, including, in some cases, fingerprint records, will require computers capable of searching the NCIC, is limited, and it is primarily available to law enforcement agencies. Therefore, to conduct this check, Lead Agencies will have to partner with a State, Tribal, or local law enforcement agency. Because the NCIC has not been used this way, we do not know of examples of other State agencies partnering in this way or what such partnerships would entail. We also do not know the implications for Lead Agencies that use third-party vendors to conduct background checks. Third-party vendors do not have authorized access to conduct name-based checks of the NCIC for noncriminal justice purposes.

Secondly, the NCIC is a name-based check, rather than fingerprint based. Hit verification of name-based checks may be labor intensive, especially when searching for individuals with common names. While we are concerned about the burden on Lead Agencies to conduct this check, we recognize that the NCIC was included in the statute, and we are concerned about the potential for missing sex offenders by not conducting a comprehensive search.

Because of the challenges identified by both the commenters and ACF, we will not begin to determine compliance with the requirement to search the NCIC’s NSOR until after guidance is issued by ACF and the FBI. ACF has been working closely with the FBI to find solutions for State access. We plan to release guidance that will be shared with both State Lead Agencies and State Identification Bureaus. We expect that Lead Agencies will be required to partner with local law enforcement to perform NCIC checks of the NSOR. This guidance will give States further instruction in how to search the NCIC’s NSOR and how to utilize the results. We understand that States may not be able to begin implementing the check of the NCIC’s NSOR until the specific guidance is released. ACF will address implementation timeframes for this particular search in the future guidance.

Lead Agencies should begin to form partnerships with local law enforcement and State Identification Bureaus in order to meet the requirement to check the NCIC’s NSOR database.

Comment: Several commenters, including States and a State police department, suggested requiring a search of the National Sex Offender Public Web site (NSOPW) instead of a search of the NSOR.

Response: A search of the NSOPW does not satisfy the statutory requirement for a search of the NSOR, and therefore, we declined to make any changes in the final rule. ACF does encourage an additional search of the NSOPW at www.nsopw.gov, although it is not required. The NSOPW acts as a pointer for each State, Territory, and Tribally-run sex offender registry. The registries are updated and kept in real time and may be searched by name, but other identifying information may be limited in these records.

Comment: In the NPRM, we proposed to require that the search of the State criminal records would include a fingerprint check in the State where the individual resides and the States the individual has resided for the past five years. However, State commenters, including State police departments, recommended removing the requirement to search other States’ criminal repositories using fingerprints. The comments emphasized that the technology does not exist to allow States to send fingerprints electronically to check other States’ repositories. A law enforcement representative wrote, “For State Identification Bureaus that are the ones sending the prints on to the FBI, it could be easy; however, requests coming from other States would be a very manual process—hard copy cards, scanned in, and mailed responses back. We have no way of disseminating results back to every other State via an automated means.”

Response: ACF is removing the proposal to check other States’ criminal repositories using fingerprints. It was not our intent to create an additional burden for States. Instead, in the final rule, we are requiring States to do a name-based check of the criminal repository only in the State where the individual resides. Use of fingerprints is
optional in other States where the individual resided within the past five years. Fingerprint searches reduce instances of false positives and also help capture records filed under aliases. We do not believe that a fingerprint search of the State repository is an additional burden. States can use the same set of fingerprints to check both the State criminal history check and the FBI fingerprint check. When conducting searches of other States' criminal repositories, the State may utilize a name-based search, instead of a fingerprint.

Comment: The Act requires States to check the State criminal registry or repository; sex offender registry or repository; and child abuse and neglect registry and database for every State where a child care staff member has lived in for the past five years. Based on our preliminary conversations with States, the requirement to conduct cross-State background checks of the three different repositories is another unexplored area for Lead Agencies. In the NPRM, we asked for comments on whether States have any best practices or strategies to share and how ACF can support Lead Agencies in meeting the cross-State background check requirements.

Comments we received from national organizations and States reinforced that these cross-State checks are indeed new territory for Lead Agencies. These comments offered a variety of suggestions of how ACF can support States in meeting the cross-State background check requirements, including introducing an electronic information exchange system, drafting a standard Memorandum of Understanding, maintaining a national contacts list, and studying the viability of cross-State background checks at the regional level.

Response: ACF is continuing to work closely alongside our technical assistance partners to learn how we can support and help facilitate these cross-State checks. In the months since the CCDBG Act of 2014 was enacted and the NPRM was published, we have been engaged in Regional level calls with States to understand supports needed to overcome barriers to the required cross-State checks. We have also been reaching out to other Federal partners to explore existing systems and opportunities to collaborate. We have not found an existing system that would support States in conducting all of the cross-State checks.

We appreciate the suggestions from the comments and have already begun work toward bringing some of them to fruition. We know States want tools and guidance to complete these checks. ACF has recently announced a pilot project to develop a National Interstate Background Check Clearinghouse to support Lead agencies in meeting the cross-State background check requirements. The goal of this system is to enable Lead Agencies to exchange background check information securely with other State, Territory, and Tribal Lead Agencies. ACF is also working on developing a national CCDF information sharing agreement as part of this project. We ask that States continue to make a good faith effort toward complying with these checks and that States work to build partnerships across State lines.

While ACF is still working to understand how we can support cross-State background checks, this rule also requires a couple of provisions to help create transparency around the process. At § 98.43(a)(1)(iii), Lead Agencies are required to have requirements, policies, and procedures in place to respond as expeditiously as possible to other States', Territories', and Tribes' requests for background check results in order to accommodate the 45 day timeframe. The final rule also requires Lead Agencies to include the process by which another Lead Agency may submit a background check request on the Lead Agency's consumer education Web site, along with all of the other background check policies and procedures. In addition, this final rule requires, at § 98.16(o), that Lead Agencies describe in their Plans the procedures in place to respond to other States, Territory, or Tribal requests for background check results within the 45 day timeframe. ACF will use this question in the Plan to help ensure compliance with the background check requirements in the Act. These provisions are intended to minimize confusion about the correct contact information for background check requests and to ensure that there are processes in place for timely responses. Having policies and procedures in place to respond to outside background check requests is a first step toward an effective cross-State background check system.

Comment: We heard from a number of States that are closed-record States, which means they cannot release an individual’s background check records or information to other States. One State explained that it is, “a closed record State and does not release criminal history information to any out-of-state entity for civil purposes, one of which is determining employment eligibility. This is a fundamental tenant of being a closed record State.” However, there is a process by which an individual residing in another State may obtain his/her fingerprint-based personal criminal background history from [the State’s] Bureau of Criminal Identification and Information (Bureau) within the Office of State Police and provide it to a Lead Agency in another State.”

Response: States need to have a methodology in place to respond to other States' requests for background check results. ACF does not expect to penalize States that have made a good faith effort to request information from other States. For States with closed-record laws or policies, we understand that this requirement may be in direct opposition with State law. States will need to either change their laws to allow for the exchange of background check information for child care staff members or create other solutions. Although the Act requires States to be in compliance by September 30, 2017, States (including closed-record States) may request an extension of up to one year in order to make the necessary legislative or other changes to share background check information across State lines. ACF is currently working with our technical assistance partners to understand the impact of closed-record laws.

Although ACF discourages this practice, a closed-record State may utilize a process similar to what the State commenter describes above. The closed-record State may give the background check results directly to the individual to relay to the requesting State. States are required to respond to other States’ requests for background check requests, and when a State is giving the results directly to an individual, that State must have a process in place to inform the requesting State. This practice increases the potential for fraud relating to the results and also places the burden on the individual. States should carefully consider these factors and the impact they could have on the supply of child care providers. ACF encourages States to find other solutions, whenever possible.

We encourage State partnerships and agreements, whenever possible, in order to meet the requirements of the Act. One potential solution may be for the closed-record States to determine whether the individual is eligible or ineligible for employment given the State background check results. The closed-record State could disclose this determination with the requesting State, without revealing the background check information. We do recognize that this is an imperfect solution, since States use different definitions and criteria for disqualification, particularly in the case of child abuse and neglect findings.
However, States may use this solution to comply with the statutory requirements, as long as States also comply with the requirements related to the appeals process. If the individual is deemed ineligible by a closed-record State, then the closed-record State is also responsible for notifying the individual and following the requirements at § 98.43(e)(2)(iii). The closed-record State must provide information related to each disqualifying crime in a report to the individual. The closed-record State must also send information on the opportunity to appeal and adhere to the appeals process described at § 98.43(e)(3).

Comment: Comments from States and national organizations asked ACF to provide clarity around what to do if a State does not respond to another State’s request for results from the State’s criminal repository, sex offender registry, and child abuse and neglect registry.

Response: ACF is declining to add the suggested regulatory language. The Act includes, as the final component of a comprehensive background check, the search of the State child abuse and neglect registries in the State where the individual lives and the States where the individual has resided for the past five years. States, including those that do not have formal child abuse and neglect registries, are expected to comply with this requirement. We recognize that implementation of this critically important component of protecting children will vary across States. Every State has procedures for maintaining records of child abuse and neglect, but only 41 States, the District of Columbia, American Samoa, Guam, and Puerto Rico require central registries by statute. The type of information contained in central registries and department records differ from State to State. Some States maintain all investigated reports of abuse and neglect in the central registry, while others maintain only substantiated or indicated reports. The length of time the information is held and the conditions for expunction also vary. Access to information maintained in registries also varies by State, and some States may need to make internal changes to meet the requirement for a search of the State’s own child abuse and neglect registry. Approximately 31 States and the District of Columbia allow or require a check of the central registry or department records for individuals applying to be child or youth care providers. (Establishment and Maintenance of Central Child Abuse Registries, Children’s Bureau, July 2014).

Comment: We received a number of requests for guidance on what information from child abuse and neglect registries States need to make employment decisions and how to interpret that information. Simply being part of a State-based child abuse and neglect registry is not a disqualification under the Act, so just knowing that an individual is on their child abuse and neglect registry. One State wrote, “In the course of abuse/neglect investigations in our State, we do not offer up-front due process for findings made against an individual. If a background check is requested on the individual in the course of employment in child care in [the State] or as part of a foster care/adoption application in [the State], our agency uses that opportunity to offer a hearing in front of an administrative law judge through the State Office of Administrative Hearings. If an individual chooses to contest the finding(s), the process can be lengthy. It requires our agency to schedule and prepare for a hearing, including contacting appropriate witnesses and
providing opposing council (if one exists) with redacted case files.”

Response: We understand the issue the commenters are raising relates to procedures that some State child welfare agencies have on due process for individuals in state child abuse and neglect registries that may delay the Lead Agency in providing information about an individual who is seeking employment with a child care provider. The Act requires States to carry out background checks requests, including searches of State-based child abuse and neglect registries, as quickly as possible, in not less than 45 days. States that have a due process approach as described by the commenters may not be able to meet the 45 day timeframe for providing the registry information for child care employment purposes. As such, we encourage the Lead Agencies to work with their child welfare agencies to assist them in understanding the statutory requirements to meet the 45 day timeframe. ACF is working on joint guidance to be released by the Children’s Bureau and the Office of Child Care to ensure that both the State Lead Agencies and State child welfare agencies are aware of their roles in the background check process.

Comment: In the NPRM, ACF requested comment from States about whether cross-State background check systems for foster or adoptive parents could be used to support cross-State background checks for prospective child care staff members as well. Comments varied. Two States believe that their foster and adoptive parent systems would be able to support cross-State background checks for child care staff members. However, the national association of State child care administrators expressed concern about this suggestion: “Administrators understand that these data are housed in the child welfare agency and use of and compliance with this proposal would vary.”

Response: The cross-State background check requirement has similarities to language at Section 152(a)(1)(C) of the Adam Walsh Child Protection and Safety Act of 2006 (42 U.S.C. 671(a)(1)(C)) for foster or adoptive parents. That law requires a State to check any child abuse and neglect registry maintained by the State for information on any prospective foster or adoptive parent and on any other adult living in the home of such a prospective parent, and request any other State in which any such prospective parent or other adult has resided in the preceding five years to enable the State to check any child abuse and neglect registry maintained by such State for such information, before the prospective foster or adoptive parent may be finally approved for placement of a child. We encourage Lead Agencies to reach out to the State Child Welfare or Protective Services to explore whether the process in place for foster or adoptive parents could also be used to support a process for child care staff members.

Disqualifications. The Act specifies a list of disqualifications for child care providers and staff members who are serving children receiving CCDF assistance. Unlike the other requirements in the background check section, the Act only applies the restriction against employing ineligible child care staff members to child care providers receiving CCDF assistance. These employment disqualifications specifically do not apply to child care staff members of licensed providers who do not serve children receiving CCDF subsidies. This gives Lead Agencies the flexibility to impose similar restrictions upon child care providers who are licensed, regulated, or registered and do not receive CCDF funds.

The list of disqualifications from the Act includes a list of felonies and misdemeanors that disqualify an individual from being employed as a child care staff member. We understand that States define crimes differently, but our expectation is that States will match the equivalent crimes to those on this list. These disqualification requirements appear at § 98.43(a)(1)(ii) and § 98.43(c). We are not adding any additional disqualifications to the final rule.

Even though the Act includes a specific list of disqualifications, it also allows Lead Agencies to prohibit individuals’ employment as child care staff members based on their convictions for other crimes that may impact their ability to care for children. If a Lead Agency does disqualify an individual’s employment, they must, at a minimum, give the child care staff members or prospective staff members the same rights and remedies described in § 98.43(e). This language from Section 658H(b) of the Act is restated in the final rule at § 98.43(h). In the final rule, we also added language to link this paragraph to the list of disqualifications at § 98.43(c)(1).

We strongly encourage Lead Agencies that chose to consider other crimes as disqualifying crimes for employment to ensure that a robust waiver and appeals process is in place. As discussed later, a waiver and appeals process should conform to the recommendations of the U.S. Equal Employment Opportunity Commission. We are also retaining the ability to waive findings based on factors as inaccurate information, certificate of rehabilitation, age when offense was committed, time since offense, and whether the nature of offense is a threat to children. (U.S. Equal Employment Opportunity Commission, Enforcement Guidance on the Consideration of Arrest and Conviction Records in Employment Decisions under Title VII of the Civil Rights Act of 1964, http://www.eeoc.gov/laws/guidance/upload/arrest_conviction.pdf). Moreover, we strongly discourage Lead Agencies from considering additional disqualifying crimes. Casting too wide a net could have adverse effects on the supply of family child care providers and other consequences for individuals returning from incarceration. The disqualifications described in the Act are appropriate to determine whether an individual should be able to care for children.

Comment: A couple of States requested clarification on the length of time an individual would be ineligible if convicted of one of the disqualifying crimes listed in the Act. One State said, “the State’s Supreme Court rendered a decision that precludes the State from imposing lifetime employment bans. Enforcing the regulation as proposed will require the program office to challenge that decision. Additionally the proposed regulation appears to go beyond what the statute provides and encroaches on the State’s police powers to decide who can be licensed in the State.”

Response: ACF is not requiring any additional disqualifications or parameters around disqualifications that are not already required by the Act. The Act includes a list of disqualifications at Section 658H(c), with a list of disqualifying crimes at Sections 658H(c)(1)(D) and (E). With the exception of a felony conviction of a drug-related offense committed during the preceding five years, all of the felony and violent misdemeanor convictions listed by the Act are lifetime bans against employment by a child care provider delivering CCDF services. The Act does not allow any DFc provider delivering CCDF services to grandfather in current child care staff members who have been convicted of one of the crimes described in the Act. States do have the option to individually review drug-related felony convictions that were committed during the preceding five years. As discussed later in the preamble, we encourage States to conduct these reviews in accordance with guidance from the U.S. Equal Employment Opportunity Commission.

Comment: Several comments from national organizations and child care worker organizations urged ACF to
redact self-disclosure language that originally appeared in the preamble of the NPRM. A letter co-signed by 80 national organizations, wrote, “Given the complexity of the background checks as prescribed and the specific disqualifying crimes established in Act, we recommend that ACF not encourage self-disclosure as it could prevent employment of a qualified child care staff member or prospective staff member. Individuals with a criminal history completely unrelated to their ability to care for and have responsibility for the safety and well-being of children, as well as those with no record whatsoever who might be intimidated, could inaccurately assume that they would not be eligible for employment. It could also violate a child care staff member’s right to privacy with his or her employer.”

Response: We agreed with the commenters and have removed the self-disclosure language from the preamble.

Frequency of Background Checks. Section 658H(d) of the Act requires child care providers to submit requests for background checks for each staff member. The requests must be submitted prior to when the individual becomes a staff member and must be completed at least once every five years. These requirements are included in the regulations at § 98.43(d)(1) and (2). For staff members employed prior to the enactment of the CCDBG Act of 2014, the provider must request a background check prior to September 30, 2017 (the last day of the second full fiscal year after the date of enactment) and at least once every five years.

Although not a requirement, we encourage Lead Agencies to enroll child care staff members in rap back programs. A rap back program works as a subscription notification service. An individual is enrolled in the program, and the State Identification Bureau receives a notification if that individual is arrested or convicted of a crime. States can specify which events trigger a notification. Rap back programs provide authorizing agencies with notification of subsequent criminal and, in limited cases, civil activity of enrolled child care staff members so that background check information is not out of date. However, unless the rap back program includes all the components of a comprehensive background check under the Act, the Lead Agency is responsible for ensuring that child care staff members complete all other components at least once every five years.

Section 658H(d)(4) of the Act specifies instances in which a child care provider is not required to submit a background check for a staff member. Staff members do not need background check requests if they satisfy three requirements: (1) The staff member received a background check that included all of the required parts within the past five years while employed by, or seeking employment by, another child care provider in the State; (2) the State gave a qualifying result to the first provider for the staff member; and (3) the staff member is employed by a child care provider within the State or has been separated from employment from a child care provider for less than 180 days. These requirements are included in the final rule at § 98.43(d)(3). Lead Agencies should consider how to facilitate tracking this type of information and maintaining records of individual providers so that unnecessary checks are not repeated.

Comment: We received several comments from States asking whether staff members’ background checks could be re-assessed when they seek employment by another child care provider in the State. One State wrote, “We allow a child care staff to carry forward his or her fingerprint-based background check from one child care operation to another, as long as the person maintains a name-based recheck every 24 months. However, our agency also has a process where we re-assess an individual with certain criminal or abuse/neglect history for each child care operation in which he/she would like to work. [The State] looks at a variety of factors, including details about the role the individual will be working in and the compliance history of the specific child care operation, and makes a determination of overall risk given the results of the background check.”

Response: If a staff member meets the three requirements described in the Act, then the child care provider does not need to submit a background check request. However, States do have the option of creating more stringent requirements, such as requiring background to be performed with greater frequency or when a staff member changes the place of employment. Where possible, ACF encourages States to keep processes in place, like the one described by the State, that allow them to make nuanced decisions about individuals’ employment eligibility and that carefully consider extenuating circumstances related to the individual’s background check records.

Provisional Employment. The Act requires child care providers to submit background check results prior to a staff member’s employment but does not describe instances of provisional employment while waiting for the results of the background check. We received many comments on this issue in the 2013 NPRM, with commenters expressing concern that the background check requirements could prevent parents from accessing the provider of their choice, if the provider’s staff has not already received a background check. Parents often need to access child care immediately, for example, as they start new jobs, and commenters were worried that this could lead to delays in accessing care.

In recognition of the possible logistical constraints and barriers to parents accessing the care they need, § 98.43(d)(4) of the final rule allows prospective staff members to provide services to children while under supervision and on a provisional basis, after completing either the FBI fingerprint check or the search of the State criminal repository, using fingerprints in the State where the staff member resides.

Comment: In the NPRM, we proposed that a prospective staff member could begin work for a child care provider after the background check request was submitted, as long as that staff member was continually supervised by someone who had already completed the background check requirements. Although several commenters supported the idea of provisional employment, others were concerned that the provision as proposed did not protect children’s health and safety.

Response: We agreed with the commenters. The final rule allows a prospective staff member to begin work while under supervision after completing the FBI fingerprint check or the search of the State criminal repository using fingerprints in the State where the staff member resides. Until all the background check components have been completed, the prospective staff member must be supervised at all times by someone who has already received a qualifying result on a background check within the past five years. States may pose additional requirements beyond this minimum. We note that the new regulatory language aligns with the requirements in the Head Start Performance Standards and hope the language allows for better partnerships between the two programs.

In addition, we encourage Lead Agencies to require child care providers to inform parents about background check policies and any provisional hires they may have. Allowing provisional hiring does offer more flexibility, but it is also important that Lead Agencies ensure that any provisional status is
limited in scope and implemented with transparency.

**Comment:** Several commenters asked ACF to clarify what should happen to provisional employees if all of the required background check components are not completed by the end of the statutory 45 day timeframe.

**Response:** A State must process, at the very least, either the FBI fingerprint check or the search of the State criminal repository, using fingerprints in the State where the staff member resides, before a child care staff member may begin work. As described in further detail later in the preamble, we expect all of the checks to be completed in the timeframe established by the Act. However, the final rule gives Lead Agencies the discretion to make decisions in the limited cases in which not all of the required components are completed.

**Completion of Background Checks.** Once a child care provider submits a background check request, Section 658H(e)(1) of the Act requires the Lead Agency to carry out the request as quickly as possible. The process must not take more than 45 days after the request was submitted. These requirements are included in the final rule at § 98.43(e)(1).

**Comment:** Many comments from State continue to be concerned with being able to meet the statutory 45-day timeframe, especially for cross-State checks. Several comments asked ACF for an exception to the 45-day timeframe in those cases.

**Response:** The Act does not give ACF the authority to grant States exceptions to the 45-day timeframe. While we expect checks to be completed in the timeframe established by the Act, we will allow Lead Agencies to create their own procedures in the event that all of the components of a background check are not complete within the required 45 days. As described earlier in the preamble, prospective child care staff members are required to complete either the FBI fingerprint check or the search of the State criminal repository, using fingerprints in the State where the staff member resides, before they begin work.

Lead Agencies must work together with the relevant State/Territory entities to minimize delays. After the FBI receives electronic copies of fingerprints, they typically process background check results within 24 hours. There can be delays when the submitted fingerprint image quality is poor. Some States use hard copy fingerprints that must be made electronically and then submitted to the FBI, which can lead to delays. We encourage Lead Agencies to adopt electronic fingerprinting, which allows for background check results to be processed more quickly.

We encourage Lead Agencies to leverage existing resources to build and automate their background check systems. One potential resource for States is the National Background Check Program (NBCP), as established by Section 6201 of the Patient Protection and Affordable Care Act, which aims to create a nationwide system for conducting comprehensive background checks on applicants for employment in the long-term care (LTC) industry. The NBCP is an open-ended funding opportunity that can award up to $3 million dollars (with a $1 million dollar State match) to each State to support building State background check infrastructure. The Centers for Medicare & Medicaid Services (CMS) administers the NBCP and since 2010, has awarded over $63 million in grant funds to participating States to design, implement, and operate background check programs that meet CMS’s criteria.

**Privacy of results.** Section 658H(e)(2) of the Act requires the Lead Agency to make determinations regarding a child care staff member’s eligibility for employment. The Lead Agency must provide the results of the background check to the child care provider in a statement that indicates only whether the staff member is eligible or ineligible, without revealing specific disqualifying information. If the staff member is ineligible, the Lead Agency must provide information about each specific disqualifying crime to the staff member, as well as information on how to appeal the results of the background check to challenge the accuracy and completeness. In the final rule, we clarify the language at § 98.43(e)(2)(i) to specifically require that when an individual is sent the information on the disqualifying crimes, the State must, at the same time, provide information on the opportunity to appeal. This change is discussed in greater detail below. In order for a Lead Agency to conduct FBI fingerprint checks, it must have statutory authority to authorize the checks. The Act may be used an authority to conduct FBI background checks, but Lead Agencies may continue to use other statutes as authorities to conduct FBI background checks on child care staff as well. Most Lead Agencies currently use Public Law 92–544 or the National Child Protection Act/Volunteers for Children Act (NCPA/VCA) (42 U.S.C. 5119a) as the authority to conduct background checks. Public Law 92–544, enacted in 1972, gave the FBI authority to conduct background checks for employment and licensing purposes. The majority of States are using Public Law 92–544 as authority to conduct background checks, but a few States use the NCPA/VCA.

Public Law 92–544 is similar to the Act and only allows the State to notify the provider whether an individual is eligible or ineligible for employment. Similarly, the NCPA/VCA requires dissemination of the results to a governmental agency, unless the State has implemented a Volunteer and Employee Criminal History System (VECHS) program. Thus, a major difference between the Act and the NCPA/VCA with a VECHS program is in the protection of privacy of results. Through the NCPA/VCA VECHS program, Lead Agencies may share an individual’s specific background check results with the child care provider, provided the individual has given consent. Lead Agencies have the flexibility to continue to use these statutes as authority to complete the FBI fingerprint check, as long as the employment determination process required by the Act is followed. That is, Lead Agencies must make employment eligibility determinations in accordance with the requirements in the Act, but they also may exercise the flexibility allowed through the NCPA/VCA VECHS program to share results of background checks with child care providers. Comments from States that utilize differing statutes were supportive of this flexibility.

**Appeals and review process.** Section 658H(e)(3) of the Act requires Lead Agencies to have a process for child care staff members (including prospective staff members) to appeal the results of a background check by challenging the accuracy or completeness of the information contained in their criminal background report. An appeals process is an important aspect of ensuring due process for staff members and allows them to challenge the accuracy of the background check results. According to the Act, each child care staff member should be given notice of the opportunity to appeal and receive instructions about how to complete the appeals process if the child care staff member wishes to challenge the accuracy or completeness of their background report. The Lead Agency must complete the appeals process in a timely manner. The Lead Agency must work with other agencies that are in charge of background check information and results, such as the Child Welfare office and the State Identification Bureau, to ensure the appeals process is conducted in accordance with the Act.
The appeals requirements appear at § 98.43(e)(3) of the final rule.

Section 658H(e)(4) of the Act allows for a review process specifically for staff members convicted of drug-related felonies committed during the previous five years. States may use this review process, also known as a waiver process, to determine those staff members convicted of drug-related felonies committed during the previous five years to be eligible for employment by a CCDF provider. The review process is different from the appeals process because it allows the Lead Agency to consider extenuating circumstances on a case-by-case basis. The Act’s review process requirements appear at § 98.43(e)(4) of the final rule.

Comment: A comment, co-signed by several national organizations, wrote advocating for more protections governing the appeals process for individuals who challenge inaccurate background checks. The letter advised, “[T]he regulations fail to include adequate requirements governing appeals that seek to demonstrate that the background check information relied upon was inaccurate or incomplete. Given the CCDF program’s reliance on the FBI background check system, which routinely generate[s] faulty information, ACF should adopt more robust appeals rights to protect those workers—mostly workers of color—who, through no fault of their own, often have inaccurate records in the federal and State criminal history information systems. Thus, the following features of a fair and effective appeal process should be incorporated into the ACF regulations:

1. In response to an appeal filed by a worker challenging the accuracy of the background check report, the State should immediately make the background check report available in order for the worker to validate the State’s information and properly prepare an appeal.

2. The burden should be on the State to make a genuine effort to track down missing disposition information related to disqualifying offenses, not on the worker. Often, the worker is not in a position to locate information on an arrest that may have occurred in another State or may no longer be readily accessible in court or law enforcement systems due to the age of the offense.

3. The worker should be provided at least 60 days to prepare the appeal, and a longer period of time (up to 120 days) if the State requires the individual to produce official documentation of a record. The worker should also allow for a ‘good cause’ extension of time to file the appeal or supporting material.

4. Once the State has received the appeal information from the worker, it should issue a written decision within a specific period of time (not to exceed 30 days).

5. In the case of a negative determination, the decision should indicate the State’s efforts to verify the accuracy of the information challenged by the worker. The decision should also indicate any additional appeal rights available to the worker, as well as information on how the individual can correct the federal or State records at issue in the case.

6. The State should collect and periodically report data on the number of appeals filed, the outcome of the appeals, and the State’s decision processing times.”

Response: ACF strongly agrees with the worker protections described in this comment. While background checks are a necessary safeguard to protect children in child care, we are also mindful of the disproportionate impact that they can have on low-income individuals of color. A robust and effective appeals process, that incorporates the elements described above, is critical to protect prospective child care staff members who have inaccurate or incomplete background check records. As such, we made changes to the regulatory language at § 98.43(e)(2)(ii) and § 96.43(e)(3) to incorporate many of these protections, while still preserving some State flexibility.

At § 98.43(e)(2)(ii), the final rule requires that when a staff member receives a disqualifying result from the State, that information should be accompanied by information on the opportunity to appeal. The State must provide information about each specific disqualifying crime to the staff member, and that information should allow the staff member to decide whether to challenge the accuracy and completeness of the background checks results. Each child care staff member will be given clear instructions about how to complete the appeals process. The instructions should include the process for appeals, with clear steps individuals may take to appeal and the timeline for each of these steps.

Although we are not requiring a specific timeframe, we do recommend that States allow staff members a reasonable amount of time at least 60 days to prepare the appeal.

If the staff member chooses to file an appeal, then, at § 98.43(e)(3)(iii), the final rule requires the State to attempt to verify the disparity of the information challenged by the child care staff member, including making an effort to locate any missing disposition information related to the disqualifying crime. As the comment notes, child care staff members may not be able to access court or law enforcement records, so the burden should be on the State to recover them.

The Act requires that the appeals process must be completed in a timely manner. Although the final rule does not require a specific timeframe, we recommend that States issue a decision within 30 days of the appeal. The final rule, at § 98.43(e)(3)(v), requires that every staff member who submits an appeal will receive a written decision from the State. In the case of a negative determination, the decision should indicate the State’s efforts to verify the accuracy of information challenged by the child care staff member, as well as any additional appeals rights available to the child care staff member. The final rule does not require that States collect and report data on the number of appeals filed, the outcome of the appeals, or the State’s decision processing times. However, States should consider tracking and publishing this information. This information can be used to gage the speed and effectiveness of the appeals process, and States may be able to use it to make improvements to their appeals process over time.

Comment: A letter from Senator Alexander and Congressman Kline asked ACF to provide guidance on the obligations of a child care provider during the appeals process: “The NPRM strongly encourages lead agencies that choose to consider crimes other than those listed in the Act as disqualifying crimes for employment to ensure a robust waiver and appeals process is in place; however, it is unclear what the obligations of a provider are during the appeals process timeframe. We support the highest level of safety assurances for parents and children, as well as legal assurances for providers, and again we ask the Department to carefully consider the comments from providers and centers to ensure these provisions are easy to follow without causing great disruption to the delivery of care for children.”

Response: The Act does not address the obligations of child care providers while staff members or prospective staff members are engaged in the appeals process. In addition, ACF did not receive any comments from child care providers addressing this issue. Therefore, ACF opts not to include additional regulatory language in order to allow States to determine how that will continue to protect children’s health and safety without causing great
disruption to the delivery of care for children. States are responsible for determining the most appropriate obligations for providers during the appeals process, and must inform providers about those obligations during an appeals process. States have the option of allowing child care providers to employ staff members or prospective staff members while they are involved in the appeals process. We encourage States to consult the U.S. Equal Employment Opportunity Commission's guidance (U.S. Equal Employment Opportunity Commission, Enforcement Guidance on the Consideration of Arrest and Conviction Records in Employment Decisions under Title VII of the Civil Rights Act of 1964, http://www.eeoc.gov/laws/guidance/upload/arrest_conviction.pdf). In addition, we note Section 658H(e)(5) of the Act, which is reiterated at § 98.43(e)(5), requires that nothing in this section shall be construed to create a private right of action if a provider has acted in accordance with this section. If a child care provider acts in accordance with the requirements of the Act, private parties may not bring a lawsuit.

Comment: Comments from national organizations and child care worker organizations urged ACF to include new regulatory language requiring the individualized review for drug-related felonies described at § 98.43(e)(4) to follow the U.S. Equal Employment Opportunity Commission’s (EEOC) guidelines. A letter co-signed by several national organizations stated, “Communities of color, and women of color in particular, have suffered immeasurably as a result of the collateral consequences of an arrest or conviction for a drug offense. Indeed, women now represent the fastest growing segment of the criminal justice system, due largely to drug offenses, not violent crime. In fact, 24 percent of all incarcerated women were convicted of drug-related offenses. As the ACLU concluded in their analysis of the issue, ‘[w]omen of all races use drugs at approximately the same rate; people of color are arrested and imprisoned at much higher rates.’ We urge ACF to emphasize in the preamble that the States should adopt robust waivers procedure as applied to disqualifying drug offenses. In addition, ACF should specifically incorporate the EEOC guidelines in the regulations (Section 98.43(e)(4)), which would provide specific direction to the States beyond simply referencing Title VII.”

Response: Section 658H(e)(4) of the Act, which is reiterated at § 98.43(e)(4) of the final rule, allows Lead Agencies to conduct a review process through which the Lead Agency may determine that a child care staff member (including a prospective child care staff member) convicted of a disqualifying felony drug-related offense, committed during the preceding five years, may be eligible for employment by a provider receiving CCDF funds. The law also requires that the review process must be consistent with Title VII of the Civil Rights Act of 1964 (42 U.S.C. 2000e et seq.), which prohibits employment discrimination based on race, color, religion, sex and national origin. ACF interprets the statutory reference to Title VII of the Civil Rights Act to mean that Lead Agencies must conduct the review processes in accordance with the EEOC’s current guidance on the use of criminal background checks in employment decisions, which requires individualized consideration of the nature of the conviction, age at the time of the conviction, length of time since the conviction, and relationship of the conviction to the ability to care for children, or other extenuating circumstances.

Lead Agencies should consult the EEOC’s current guidance on the consideration of criminal records in employment decisions to ensure compliance with Title VII’s prohibition against employment discrimination (U.S. Equal Employment Opportunity Commission, Enforcement Guidance on the Consideration of Arrest and Conviction Records in Employment Decisions under Title VII of the Civil Rights Act of 1964, http://www.eeoc.gov/laws/guidance/upload/arrest_conviction.pdf). As described in the comment, members of low-income communities of color are disproportionately charged and convicted of drug-related offenses. Establishing a robust process for an individualized review that follows EEOC guidance is important to protect these individuals. This process allows Lead Agencies to consider extenuating circumstances and to make nuanced decisions to deem an individual to be eligible for employment.

Comment: A letter co-signed by several national organizations also asked ACF to require an individualized review that complies with the EEOC guidance for any other disqualifying crimes added by the Lead Agency. The letter wrote, “This ‘individualized assessment’ of mitigating factors is a critical component of a fair background check process, as detailed in the EEOC guidance. It simply provides an opportunity for a prospective hire to explain why she is qualified for the position and does not pose a risk to child safety and well-being, even if she may have an otherwise disqualifying offense on her record. Individualized assessments are also particularly important for victims of domestic violence, who are often charged and convicted of a broad range of offenses, many of which are directly related to the abuse they experience. Accordingly, we urge ACF to incorporate the language of the EEOC guidance into Section 98.43(h)(1) of the CCDF regulations, thus mandating that the States take into account the individual’s work history, evidence of rehabilitation, and other compelling factors that mitigate against disqualifying the individual from child care employment based on a conviction record.”

Response: As described above, ACF interprets consistency with Title VII of the Civil Rights Act to mean that Lead Agencies must follow the EEOC guidelines. As such, we strongly encourage Lead Agencies to follow recommendations to implement an individualized assessment and waiver process in particular for any other disqualifying crimes not listed in the Act. In addition to challenging the record for accuracy and completeness, an individualized review allows the Lead Agency to consider other relevant information, and to provide waivers where appropriate. The EEOC recommends reviewing the following evidence: “the facts or circumstances surrounding the offense or conduct; the number of offenses for which the individual was convicted; older age at the time of conviction; or release from prison; evidence that the individual performed the same type of work, post-conviction, with the same or a different employer, with no known incidents of criminal conduct; the length and consistency of employment history before and after the offense or conduct; rehabilitation efforts (e.g., education/training); employment or character references and any other information regarding fitness for the particular position; and whether the individual is bonded under a federal, State, or local bonding program.”

Background check fees. Lead Agencies have the flexibility to determine who pays for background checks (e.g., the provider, the applicant, or the Lead Agency) but Section 658H(f) of the Act requires that the fees charged for completing a background check may...
not exceed the actual cost of processing and administration. The cost of conducting background checks varies across States and Territories. The current FBI fee is $14.75 to conduct a national fingerprint check (subject to change). According to FY 2014–2015 CCDF State Plan data, most Lead Agencies report low costs to check State registries.

ACF recognizes the important role that fees play in sustaining a background check system. While States and Territories cannot profit from background check fees, we do not want to prevent fees that support the necessary infrastructure. Fees cannot exceed costs and result in return to State general funds, but they can be used to build and maintain background check infrastructure. Further, we expect that Lead Agencies using third party contractors to conduct background checks will ensure that these contractors are not charging excessive fees that would result in huge profits. ACF does not want background check fees to be a barrier or burden for entry into the child care workforce.

Comment: Comments from national organizations and child care worker organizations asked ACF to clarify whether CCDF funds could be used to cover the costs of background checks. One child care worker organization wrote, “We urge ACF to additionally clarify that States are permitted to use CCDBG funding to cover the cost of background checks. Further, we expect that Lead Agencies using third party contractors to conduct background checks will ensure that these contractors are not charging excessive fees that would result in huge profits. ACF does not want background check fees to be a barrier or burden for entry into the child care workforce.”

Response: We agree with the comments. The intent of the Act is not to create additional burdens for certain provider groups. At Lead Agency discretion, CCDF funds may be used to pay the costs of background checks, including legally exempt and family child care providers, and their household members, so that the cost of the background checks is not a barrier for these providers.”

Consumer education Web site. The Act requires States and Territories to ensure that their background check policies and procedures are published on their Web sites. We require that States and Territories also include information on the process by which a child care provider or other State or Territory may submit a background check request in order to increase transparency about the process.

Comments on this provision, located at § 98.43(g) of the final rule, were largely supportive. The background check policies and procedures should be included on the consumer education Web site discussed in detail in Subpart D at § 98.33(a).

§ 98.44 Training and Professional Development

Section 658E(c)(2)(G) of the Act requires Lead Agencies to describe in their CCDF Plan their training and professional development requirements designed to enable child care providers to promote the social, emotional, physical and cognitive development of children and to improve the knowledge and skills of caregivers, teachers, and directors in working with children and their families, which are applicable to child care providers receiving CCDF assistance. At § 98.44 we create a cohesive approach to the Act’s provisions for training and professional development at Section 658E(c)(2)(G), provider training on health and safety at Section 658E(c)(2)(I)(i)(II), and provider qualifications at Section 658E(c)(2)(H)(i)(III). This rule builds on the pioneering work of States on professional development and reflects current State policies.

We received comments from States concerned about the resources needed to meet these requirements and the capacity of professional development providers to fulfill the demand. We recognize that the Act and the rule require more attention to training and professional development; however, the knowledge and skill of caregivers, teachers, and directors is at the heart of quality experiences for children. Caregiver, teacher and director. As discussed earlier, we have added definitions for “teacher” and “director” to § 98.2. Adding these terms promotes professional recognition for early childhood and school-age care teachers and directors and aligns with terms used in the field. The Act uses the terms “caregiver” and “provider” and we maintain the use of those terms throughout this section as appropriate. We also use the terms “teacher” and “director” to recognize the different professional roles and their differentiated needs for training and professional development. For example, teachers provide direct services to children and need knowledge of curricula and health, safety, and developmentally appropriate practices. In addition, directors need skills to manage and support staff and perform other administrative duties. For simplicity sake, we have included teacher assistants or aides in the same term as teacher. Training and professional development should be tailored to the role or job responsibilities but all caregivers, teachers, and directors need the foundational knowledge of health, safety, and child development.

Collaboration. The Act requires the Lead Agency to consult with the State Early Care and Education Advisory Committee on this section of the Plan. We encourage Lead Agencies to collaborate as well with entities that set State teacher standards and certificates, entities that award early childhood education credentials, institutions of higher education, child care providers and early childhood education professional associations.

Framework and progression of professional development. At § 98.44(a), we require that Lead Agencies describe in their CCDF Plan the State or Territory framework for training, professional development and postsecondary education based on statutory language at Section 658E(c)(2)(G)(i). The Act requires the framework to be developed in consultation with the State Advisory Council on Early Childhood Education and Care (SAC). We received many comments supporting an outline of the six framework components.

The final rule at § 98.44(a)(3) describes the components of a professional development framework. We deleted language in the NPRM that proposed these components be addressed in the framework “to the extent practicable” since each State’s framework should address these components to some extent—but we recognize that each State may be in a different stage of development of implementation. We received many comments supporting our identification of six components of a framework, described below. These are based on recommendations by the National Child Care Information Center and the National Center on Child Care Professional Development Systems and Workforce Initiatives (former technical assistance projects of the Office of Child Care), and national early childhood professional associations, including the National Association for the Education of Young Children. The recent report of the National Academies of Sciences’ expert panel on the early childhood workforce speaks to the intentional and multifaceted system of supports that will be needed to ensure that every caregiver, teacher, and director can provide high-quality development and learning to the diversity of children in child care and early childhood programs. (Institute of Medicine and National Research Council, 2015. Transforming the workforce for children birth through age 8: A unifying foundation. Washington, DC: The National Academies Press) The six components are: Professional standards
and competencies, career pathways, advisory structures, articulation, workforce information, and financing. These components are discussed below. In the CCDF Plans, the majority of States and Territories indicated that they have implemented the same components of a professional development framework system. We provide for flexibility on the strategies, breadth and depth with which States and Territories will develop and implement a framework that includes these components. A comment from a national organization said, "The proposed rule’s focus on professional development, including its specification of six components for Lead Agencies’ professional development frameworks (based on the National Academies of Sciences expert panel report on the early childhood workforce), is a critical advance toward the professionalization of the early childhood workforce. This, in sum, is a key ingredient for quality."

1. Core knowledge and competencies. Caregivers, teachers, and directors need a set of knowledge and skills to be able to provide high-quality child care and school-age care. The foundational core knowledge—what all early childhood professionals should know and be able to do—should be supplemented with specialized competencies and professional development that recognizes different professional roles, ages of children being served, and special needs of children. According to the FY 2016–2018 CCDF Plans, 44 States and Territories have fully implemented core knowledge and competencies aligned to professional standards.

2. Career pathways. Section 658E(c)(2)(G)(iii)(I) of the Act requires Lead Agencies to create a progression of professional development, which may include encouraging postsecondary education. This progression is in essence a career pathway, also known as a career lattice or career ladder. The National Academies of Sciences’ report, Transforming the Early Childhood Workforce: A Unifying Framework, calls for States to implement “phased, multiyear pathways to transition to a minimum bachelor’s degree requirement with specialized knowledge and competencies” for all early childhood teachers working with children from birth through age eight. (Institute of Medicine (IOM) and National Research Council (NRC). 2015. Transforming the workforce for children birth through age 8: A unifying foundation. Washington, DC: The National Academies Press). According to the FY 2016–2018 CCDF Plans, nearly all States and Territories have developed a career pathway that includes qualifications, specializations, and credentials by professional role. Although we do not require that States set any particular credential as a licensing qualification or a point on the career pathway, the pathway should form a transparent, efficient sequence of stackable, and portable credentials from entry level that can build to more advanced professional competency recognition, and at each step, aligned to improved compensation. One model of professional development is the Registered Apprenticeship, providing job-embedded professional development and coursework that leads to a Child Development Associate (CDA) credential. In many apprenticeships, this is done through an agreement with the community college to carry credit toward an Associate degree. The costs of tuition, books, and the CDA evaluation fee are covered by the apprenticeship. The CDA is often a first professional step on an early childhood education career ladder that can lead to better compensation and a pathway to higher levels of education.

3. Advisory structures. Because professional development and training opportunities and advancement may cut across multiple agencies, it is important to have a formal communication and coordination effort. For example, professional development resources for individuals providing special education services for preschools and infants and toddlers may not be administered by the CCDF Lead Agency. The State higher education board or board of education generally makes policies for higher education institutions. Many States use the SACs as an advisory body for professional development systems policy and coordination. [Administration for Children and Families, U.S. Department of Health and Human Services, Early Childhood State Advisory Councils Final Report, 2015] We encourage the advisory body to include representatives of different types of professional development providers (such as higher education, entities that grant teacher certification, certificates as in early childhood education, child care resource and referral, QRIS coaches and technical assistance providers) as well as CCDF providers through membership on the advisory or participation in subcommittees or advisory groups.

4. Articulation. Articulation of coursework, when one higher education institution matches its courses or coursework requirements with other institutions, prevents students from repeating coursework when changing institutions or advancing toward a higher degree. Transfer agreements, another type of articulation, allow the credit earned for an associate degree to count toward credits for a baccalaureate degree. States and Territories can encourage articulation and transfer agreements between two- and four-year higher education degree programs, as well as articulation with other credentials and demonstrated competencies specifically as it pertains to early childhood education degree programs. We require that, to the extent practicable, professional development and training awards continuing education units or is credit-bearing. We encourage professional development that is credit-bearing where these credits readily transfer to a degree or certificate program. In their FY 2016–2018 Plans, 52 States and Territories reported having articulation agreements in place across and within institutions of higher education and 47 States and Territories reported having articulation agreements that translate training and/or technical assistance into higher education credit.

5. Workforce information. It is important to collect and evaluate data to identify gaps in professional development accessibility, affordability, and quality. Information may be gathered from different sources, such as child care resource and referral agencies, scholarship granting entities, higher education institutions, Head Start Program Information Report data, and early childhood workforce registries. Information about the characteristics of the workforce, access to and availability of different types of training and professional development, compensation, and turnover can help the advisory body and other stakeholders make policy and financing decisions.

6. Financing. Financing of the framework and of individuals to access training and professional development, including postsecondary education, is critical. Many Lead Agencies use CCDF funds to finance the professional development infrastructure and the costs of training and professional development, including postsecondary education, for caregivers, teachers, and directors. States and Territories report using their SAC grants and Race to the Top-Early Learning Challenge grants to leverage and expand CCDF funds for workforce improvement and retention. Twenty-eight States/Territories reported that they used SAC grants to complete a workforce study; 29 States/Territories used SAC grants to create or enhance their Core Knowledge and Competencies framework; and 18 States/Territories used SAC grants to develop or enhance their workforce registries. We encourage Lead Agencies...
to leverage CCDF funds with other public and private resources to accelerate professional development efforts.

We received multiple comments from national and State organizations that they were pleased to see the framework and its description in the preamble. We received comments from a national organization and early childhood worker organizations to add language to the preamble to expand the description of some of the components, and we have adopted some of these modifications in the preamble.

Section 658E(c)(2)(G)(ii)(III) of the Act allows the Lead Agency to engage training providers in aligning training opportunities with the State’s training framework, which the rule restates at § 98.44(a)(2). The rule adds professional development providers, including higher education and education as well as training opportunities to ensure that all appropriate types of professional development, including formal education and on-the-job training needed for career progression, are included. We encourage the participation of the full range of training and professional development providers, including higher education and entities that grant teacher certification, certificates and credentials in early childhood education, to align with the framework. Training and professional development may be provided through institutions of higher education, child care resource and referral agencies, worker organizations, early childhood professional association and other entities. This alignment may lead to a more coherent and accessible sequence of professional development for individuals to meet Lead Agency requirements and progress in their professional development and to maximize the use of professional development resources.

Qualifications. Section 658E(c)(2)(H)(ii)(III) of the Act requires Lead Agencies to set qualifications for CCDF providers. The final rule reiterates that requirement at § 98.44(a)(4) and clarifies that such qualifications should be designed to enable caregivers, teachers, and directors to promote the full range of children’s development: Social, emotional, physical, and cognitive development. The Act and its description in the preamble. We recommend a variety of topics in child development. The Act and this rule require a variety of topics in child development for ongoing professional development, which should not be considered an exhaustive list.

Quality, diversity, stability and retention of the workforce. Section 658E(c)(2)(G)(ii)(II) of the Act also requires assurances in the Plan that training and professional development will improve the quality of, and stability within, the child care workforce. Section 98.44(a)(7) requires the Lead Agency to describe in its plan how it will improve the quality, diversity, stability and retention of caregivers, teachers, and directors. We do not specify how a Lead Agency will evaluate or document changes in the child care workforce. A majority of States have established registries where early childhood caregivers, teachers, and directors can document their professional development. These registries also help provide information on the characteristics of the early childhood workforce in the State. There are a number of other sources of workforce information available to Lead Agencies, such as participants in State-provided trainings, scholarship programs for early childhood teachers for postsecondary education, quality rating and improvement systems, and workforce surveys. A minimum best practice should be that caregivers, teachers, and directors document training and professional development in the personnel files of the facility.

Response: We received comments from multiple national and state organizations, including organizations representing child care workers, asking us to explicitly include higher compensation as an example of a retention strategy.

Response: We strongly agree that retaining caregivers, teachers, and directors who attain more professional knowledge and skill is important to raising the quality of children’s experiences in child care and school-age care settings. The final rule adds compensation improvements as an example along with higher qualifications at § 98.44(a)(7). There are examples of States that implement compensation
improvements that connect higher compensation with increasing levels of education in their career pathways, and that explicitly build such improvements into their quality rating and improvement systems. We urge States and Territories to implement strategies to raise the compensation of caregivers, teachers, and directors as they raise qualification standards. Given the amount of public and private investment in professional development and the length of time individuals are working in child care, it is important to retain the caregivers, teachers, and directors who have benefitted from those professional investments in order to create continuity of high-quality teaching and care for children.

**Aligning training and professional development with the professional development framework.** Section 98.44(b) of the final rule requires Lead Agencies to describe in the Plan their requirements for training and professional development for caregivers, teachers, and directors of CCDF programs that, to the extent practicable, align with the State or Territory’s training and professional development framework required by § 98.44(a). There is a continuum of professional development from pre-service and orientation training through increasing levels of knowledge and skill.

**Pre-service or orientation health and safety training.** Section 658E(c)(2)(I)(i)(XI) of the Act requires Lead Agencies to set minimum health and safety training, to be completed pre-service or during an orientation period in addition to ongoing training, appropriate to the provider setting involved that addresses the specific topic areas listed in the final rule at § 98.41(a)(1). All caregivers, teachers, and directors in programs receiving CCDF funds must receive this training. Many States and Territories already have pre-service and orientation training requirements for licensed providers. We have placed this requirement in the professional development section of the rule because we see preliminary health and safety training requirements as a part of a continuum of professional development. We require that pre-service or orientation training include the major domains of child development in addition to the Act’s requirement for health and safety training.

Understanding child development is integral to providing high-quality child care.

The Act allows an orientation period during which staff can fulfill the training requirement. Lead Agencies will have broad flexibility to determine what training is required “pre-service” and what training may be completed during an “orientation” period. We require pre-service or orientation training be completed within three months of caring for children as recommended by CfoC Basics. During those three months, caregivers and teachers who provide direct care for children must be supervised until training is completed in pediatric first aid and CPR, safe sleep practices, standards precautions to prevent communicable disease, poison prevention, and shaken baby syndrome/abuse head trauma.

We encourage providers to document completion of the pre-service or orientation training so that caregivers, teachers, and directors do not need to repeat foundational training when they change employment. This documentation can be useful for the State’s or Territory’s licensing agency and career pathway.

We expect variability in how Lead Agencies align with the professional development framework required by § 98.44(a). There are a number of low- or no-cost resources available, including online resources, which cover many of these trainings. Several of these are available at ACF’s Web site, Early Educator Central at [https://earlyeducatorcentral.acf.hhs.gov/coursework](https://earlyeducatorcentral.acf.hhs.gov/coursework). We do not advocate the exclusive use of online trainings. A mixed delivery training system that includes both online and in-person trainings can meet the varied needs of child care caregivers, teachers, and directors. We encourage Lead Agencies to permit individuals to use certificates and credentials that include a demonstration of competence in any or all of the health, safety, and child development topics to fulfill, partially or in full, the training requirements.

**Comment: Many comments supported the increased attention to training and professional development as a key component of quality child care. However, several States also noted that currently they do not require pre-service or orientation in all of the required health and safety topics, and that resources to pay for and provide the training is a challenge. One comment asked for additional clarification regarding whether the pediatric First Aid and CPR requirement applies to all child care personnel or to the provider itself (e.g., ensuring at least one provider personnel is certified and on premises at any given time). Another comment expressed concern that training in pediatric CPR and First Aid without certification would not wholly lead to liability issues in the event that First Aid is provided or CPR is administered by personnel who have been trained in these areas but not certified.**

**Response: We recognize that there is a need for resources to offset the costs of training and for building capacity to deliver it. However, licensing requirements for health and safety must go hand in hand with training to ensure that all caregivers, teachers, and directors understand how to preserve the health and safety of children in their care. As stated in the preamble, States and Territories have flexibility in how they will provide the training and comply with this provision. The Administration for Children and Families has provided several no-cost or low-cost trainings at the Web site [http://eclkc.ohs.acf.hhs.gov/hslc/tta-system/health/ccdfbg-require-health-safety-training.html](http://eclkc.ohs.acf.hhs.gov/hslc/tta-system/health/ccdfbg-require-health-safety-training.html).**

With regard to flexibility and demonstrating competence, we recognize that some training for pre-service or orientation will not result in certification and others that will, such as pediatric First Aid and CPR. We remind States and Territories that they must set requirements for ongoing, annual professional development and must address certain topics beyond health and safety as outlined in the Act. All of these trainings and professional development opportunities should be aligned with the State’s training and professional development framework, contribute to a progression of professional learning, and reflect current research and best practices to promote the social, emotional, physical and cognitive development of children.

**Comment: One comment focused on infants and toddlers and the need to ensure that caregivers, teachers and directors are supervised until they have training in critical areas of health and safety. The comment cautioned that “babies and toddlers and other young children cannot wait three months to be in safe care.”**

**Response: Because SIDS and other training are so important to health and safety, § 98.44(b)(I)(i) of the final rule requires supervisors supervise during the pre-service or orientation period.**

**Comment: We received a comment requesting more references to school-age caregivers.**

**Response: The final rules adds specific references to school-age care at § 98.44(a) and § 98.44(a)(4). The definitions of the terms caregiver, teacher, and director as defined in the final rule include school-age care. CCDF serves children from birth to age 13 years and we expect States to apply these training and professional development provisions to the caregivers, teachers, and directors.**
serving children in that age span. The final rule also promotes training and professional development that is appropriate to the setting and the age of children served.

Comment: We received support for a three-month period for pre-service or orientation from a number of national and State organizations. A State and an organization representing child care workers asked for a sixth-month period for pre-service or orientation training citing concerns about the resources to provide training and the capacity of training providers to meet the demand.

Response: We have maintained at § 98.44(b) the three-month window and encourage Lead Agencies to consider how credentials and certificates earned by caregivers, teachers, and directors prior to caring for children can fulfill these requirements. The Act requires specific health and safety protections in licensing, and for these to be implemented, caregivers, teachers, and directors should have foundation training in them. We added child development, but did not specify the depth and breadth of training in this area for the pre-service or orientation period and note that there is a requirement for ongoing, annual professional development as well. The combination of online and in-person resources in these topics, and that this is pre-service or orientation level training, should allow caregivers, teachers and directors to fulfill this requirement in this time frame. As we describe elsewhere in the preamble, ACF’s Web site provides free or low-cost online resources on many of these topics.

Comment: We received a few comments asking from national organizations to add topics for pre-service or orientation training, such as violence/trauma, nutrition and physical activity, mathematics, arts, and behavior management. National disabilities groups requested the addition of communication to the early learning and development domains. We received comments from faith-based and private providers requesting language in several places that training and professional development would accommodate distinctive approaches, and specified certain methods, curricula, and philosophies.

Response: The Act and this final rule require pre-service or orientation training in health and safety and we have added child development. The Act and this rule also specify areas for ongoing professional development, outlined in a manner, knowledge and application of the State’s early learning and developmental guidelines (where applicable), the State’s health and safety standards, and social-emotional behavior intervention models, which may include positive behavior intervention and support models. We provide States with the flexibility in how to meet these requirements and promote ongoing professional learning in these more specific areas. Further, the final rule does not limit the type of training provider or the approach to teaching except that it should be research-based. Further, we encourage Lead Agencies to reach out to the full range of the types of providers when developing this section of the Plan and in aligning the professional development opportunities to the State’s professional development framework and the progression of professional development or career pathway.

Comment: We received comments from representatives of family child care providers and child care workers organizations requesting language that the training be appropriate to the setting as well as the age of children served. Response: All caregivers, teachers, and directors should have the foundational health, safety and child development training, as well as ongoing professional development that help them advance on an early childhood career pathway. We agree that training should also be meaningful for the setting in which the care is provided, and have added language to the final rule at § 98.44(b)(1) and § 98.44(b)(2) that training and professional development should be appropriate to the setting and age of children served, recognizing that family child care providers may benefit from training and professional development that reflects a different type of care than center-based programs, such as mixed age grouping and health and safety in a home environment.

Comment: We received comments asking for training and professional development in cultural and linguistic appropriate practices to support the diversity of children in child care. Response: Section 98.44(a)(6) of the final rules provides that the training must reflect current research and best practices, including culturally and linguistically appropriate practices. We also note that the Act and this final rule encourage professional development related to different ages and populations of children, including English language learners.

Ongoing professional development. Section 658E(c)(2)(G)(iii) of the Act requires each Lead Agency’s Plan to include the number of hours of training for eligible providers and caregivers to engage in annually, as determined by the Lead Agency. Section § 98.44(b)(2) of the final rule reiterates this by requiring Lead Agencies to establish the minimum annual requirement for hours of training and professional development for caregivers, teachers and directors of CCDF providers. While Lead Agencies have flexibility to set the number of hours. Caring for Our Children recommends that teachers and caregivers receive at least 30 clock hours of pre-service training and a minimum of 24 clock hours of ongoing training annually. (American Academy of Pediatrics, American Public Health Association, National Resource Center for Health and Safety in Child Care and Early Education. 2011. Caring for our children: National health and safety performance standards; Guidelines for early care and education programs. 3rd edition. Elk Grove Village, IL: American Academy of Pediatrics; Washington, DC: American Public Health Association.)

The Act also specifies that the ongoing professional development must: Incorporate knowledge and application of the Lead Agency’s early learning and developmental guidelines (where applicable) and the Lead Agency’s health and safety standards; incorporate social-emotional behavior intervention models, which may include positive behavior intervention and support models; be accessible to providers supported by Tribal organizations or Indian Tribes that receive CCDF assistance; and be appropriate for different populations of children, to the extent practicable, including different ages of children, English learners, and children with disabilities.

Continuing education units and credit-bearing professional development. The final rule requires Lead Agencies to describe in the Plan the requirements for ongoing, accessible professional development aligned to a progression of professional development that, to the extent practicable, awards continuing education units or is credit-bearing. While we encourage credit-bearing professional development that transfers to a program or certificate, we also acknowledge that there remains work in States and
Territories to create transfer and articulations agreements.

Comment: We received comments relating to cultural linguistic diversity of the workforce and best practices with children and families.

Response: The final rule includes a provision that the States and Territories address in their framework improving the quality, diversity, stability and retention of caregivers, teachers, and directors. We urge States and Territories to examine and address diversity of the workforce at each step of the career pathway. Ensuring the diversity of the workforce— at all levels of the career pathway— should be interpreted broadly, such as demographic characteristics of race, gender, age, native language, among other characteristics.

Comment: There were a large number of comments from national and State organizations and child care worker organizations requesting an explicit reference to higher compensation throughout this section.

Response: We strongly agree that the compensation of many child care staff and program leaders is not reflective of the importance of the work. As required qualifications rise, there needs to be commensurate increases in compensation in order to retain a workforce with the specialized knowledge and skills to support children’s positive development, health, and safety. Many States have initiatives that support child care providers with financial support as well as academic advisement to gain more formal education and credentials, with some compensation improvement. Thus, the final rule at § 98.44(a)(7) provides that improving the quality, stability, diversity and retention of the child care workforce includes financial incentives and compensation improvements.

Section 98.53(a)(1)(vii) regarding the uses of the quality set-aside includes the ability to use those resources for these financial incentives and compensation improvements.

Comment: We received a comment from a national early childhood organization asking for additional language that would emphasize that the credit-bearing professional development readily transfers to a degree or certificate program.

Response: We require the Plan to address a State framework that includes career pathways and articulation agreements. We encourage the promotion of credit-bearing professional development that is readily transferable, but also recognize that there remains work to be done to implement transfer agreements. Some caregivers, teachers, and directors may already have a degree and a certificate and do not need transferable credit-bearing coursework, but as professionals, should be required to have appropriate ongoing, accessible professional development to deepen their knowledge and skills.

§ 98.45 Equal Access

Consistent with Section 658E(c)(4) of the Act, § 98.45 of this final rule requires the Lead Agency to: (1) Certify in its CCDF Plan that payment rates for CCDF subsidies are sufficient to ensure equal access for eligible children to child care services that are comparable to child care services provided to children whose parents are not eligible to receive child care assistance; and (2) provide a summary of the facts the Lead Agency used to determine that payment rates are sufficient to ensure equal access. This final rule modifies the key elements in the previous regulation used to determine that a CCDF program provides equal access for eligible families, and includes additional elements consistent with statutory provisions on equal access and rate setting at Section 658E(c)(4) of the Act and payment practices at Section 658E(c)(2)(S).

Under § 98.45(b) of this final rule, the summary of data and facts now includes: (1) Choice of the full range of providers, including the extent to which child care providers participate in the CCDF subsidy system; (2) adequate payment rates, based on the most recent market rate survey or alternative methodology; (3) base payment rates that enable child care providers to meet the health, safety, quality, and staffing requirements in the rule; (4) the cost of higher-quality child care, including how payment rates for higher-quality care relate to the estimated cost of that care; (5) affordable co-payments, a rationale for the Lead Agency’s policy on whether child care providers may charge additional amounts to families above the required family co-payment (informed by data collected by the State and with regard to a working family’s ability to pay such mandatory fees without restricting access to care they would otherwise access taking into consideration the family co-payment, payment rate for the provider, and the cost of care), and the extent to which CCDF providers charge such amounts; (6) payment practices that support equal access to a range of providers; (7) how and on what factors the Lead Agency differentiates payment rates; and (8) any additional facts considered by the Lead Agency. All of these changes are discussed further below.

Based on Section 658E(c)(4)(B) of the Act, § 98.45(c) of this final rule requires Lead Agencies to conduct, no earlier than two years before the submission of their CCDF Plan, a statistically valid and reliable market rate survey or an alternative methodology, such as a cost estimation model.

Statistically Valid and Reliable Market Rate Survey. A market rate survey is an examination of prices, and Lead Agencies have flexibility to use data collection methodologies other than a survey (e.g., administrative data from resource and referral agencies or other sources) so long as the approach is statistically valid and reliable. ACF is not defining statistically valid and reliable within the regulatory language but is establishing a set of benchmarks, largely based on CCDF-funded research to identify the components of a valid and reliable market rate survey. (Grobe, D., Weber, R., Davis, E., Kreader, L., and Pratt, C., Study of Market Prices: Validating Child Care Market Rate Surveys, Oregon Child Care Research Partnership, 2006)

ACF will consider a market rate survey to be statistically valid and reliable if it meets the following benchmarks:

• Includes the priced child care market. The survey includes child care providers within the priced market (i.e., providers that charge parents a price established through a long arm’s length transaction). In an arm’s length transaction, the parent and the provider do not have a prior relationship that is likely to affect the price charged. For this reason, some unregulated, license-exempt providers, particularly providers who are relatives or friends of the child’s family, are generally not considered part of the priced child care market and therefore are not included in a market rate survey. These providers typically do not have an established price that they charge the public for services, and the amount that the provider charges is often affected by the relationship between the family and the provider. In addition, from a practical standpoint, many Lead Agencies are unable to identify a comprehensive universe of license-exempt providers because individuals frequently are not included on lists maintained by licensing agencies, resource and referral agencies, or other sources. In the absence of findings from a market rate survey, Lead Agencies often use other facts to establish payment rates for providers outside of the priced market (e.g., license-exempt providers); for example, many Lead Agencies set these payment rates as a percentage of the rates for providers in the priced market.
• Provides complete and current data. The survey uses data sources (or combinations of sources) that fully capture the universe of providers in the priced child care market. The survey should use lists or databases from multiple sources, including licensing, resource and referral, and the subsidy program, if necessary, for completeness. In addition, the survey should reflect up-to-date information for a specific time period (e.g., all of the prices in the survey are collected within a three-month time period).
• Represents geographic variation. The survey includes providers from all geographic parts of the State, Territory, or Tribal service area. It also should collect and analyze data in a manner that links prices to local geographic areas.
• Uses rigorous data collection procedures. The survey uses good data collection procedures, regardless of the method (mail, telephone, or web-based survey; administrative data). This includes a list from a high percentage of providers (generally, 65 percent or higher is desirable and below 50 percent is suspect). Some research suggests that relatively low response rates in certain circumstances may be as valid as higher response rates. (Curtin R., Presser S., Singer E., The Effects of Response Rate Changes on the Index of Consumer Sentiment, Public Opinion Quarterly, 2000; Keeter S., Kennedy C., Dimock M., Best J., Craighill P., Gauging the Impact of Growing Nonresponse on Estimates from a National RDD Telephone Survey, Public Opinion Quarterly, 2006) Therefore, in addition to looking at the response rate, it is necessary to implement strong sample designs and conduct analyses of potential response bias to ensure that the full universe of providers in the child care market is adequately represented in the data and findings. Lead Agencies should consider surveying in languages in addition to English based on the languages used by child care providers, and other strategies to ensure adequate responses from key populations.
• Analyzes data in a manner that captures market differences. The survey should examine the price per child care slot, recognizing that all child care facilities should not be weighted equally because some serve more children than others. This approach best reflects the experience of families who are searching for child care. When analyzing data from a sample of providers, as opposed to the complete universe, the sample should be appropriately weighted so that the sample slots are treated proportionally to the overall sample frame. The survey should collect and analyze price data separately for each age group and category of care to reflect market differences.

The purpose of the market rate survey is to guide Lead Agencies in setting payment rates within the context of market conditions so that rates are sufficient to provide equal access to the full range of child care services, including high-quality child care. However, the child care market itself often does not reflect the actual costs of providing child care and especially of providing high-quality child care designed to promote healthy child development. Financial constraints of parents prevent child care providers from setting their prices to cover the full cost of high-quality care, which is unaffordable for many families. As a result, a market rate survey may not provide sufficient information to assess the actual cost of quality care. Therefore, it’s often important to consider a range of data, including, but not limited to, market rates, to understand prices in the child care market.

Comment: One national organization recommended requiring that surveys be conducted by a neutral third party.
Response: We have not added this requirement because we do not want to hamper Lead Agencies’ ability to administer the survey according to the available processes that work best for their jurisdiction. Many States currently administer the survey through a partner with expertise in survey design and implementation—such as a postsecondary educational institution or research firm. Some States, however, have an in-house unit with the necessary expertise. Regardless of the approach, the survey must meet the benchmarks for validity and reliability outlined above, and must be conducted in a manner that provides transparency—including the required pre-survey consultation with stakeholders and the preparation and dissemination of the detailed report containing results.

Alternative Methodology. The reauthorized Act allows a Lead Agency to base payment rates on an alternative methodology, such as a cost estimation model, in lieu of a market rate survey. The final rule at § 98.45(c)(2) requires that any alternative methodology be approved in advance by ACF. ACF plans to issue uniform procedures and timeframes regarding approval of alternative methodologies. A cost estimation model or such alternative approach in which a Lead Agency can estimate the cost of providing care at varying levels of quality based on resources a provider needs to remain financially solvent. The Provider Cost of Quality Calculator (https://www.ecequalitycalculator.com/Login.aspx) is a publicly available web-based tool that calculates the cost of quality-based on site-level provider data for any jurisdiction. Many States, working with the Alliance for Early Childhood Finance and Augenblick, Palaich and Associates (APA), contributed to the development of the cost calculator methodology that preceded the online tool, and was funded by the Office of Child Care through the technical assistance network. The tool helps policymakers understand the costs associated with delivering high-quality child care and can inform payment rate setting.

Comment: National organizations and child care worker organizations supported the proposal to require ACF advance approval of alternative methodologies.
Response: The final rule maintains this provision, recognizing that alternative methodologies are a new, unproven approach (in comparison to the long-standing use of market rate surveys). To obtain ACF approval, the Lead Agency must demonstrate how the alternative methodology provides a sound basis for setting payment rates that promote equal access and support a basic level of health, safety, quality, and staffing, as discussed below. Advance ACF approval is only necessary if the Lead Agency plans to replace the market rate survey with an alternative methodology. Advance approval is not required if the Lead Agency plans to implement both a market rate survey and an alternative methodology. ACF will provide non-regulatory guidance to Lead Agencies regarding the process for proposing an alternative methodology, including criteria and a timeline for approval. We will also consider whether to provide a list of recommended methodologies, which may include modeling and other approaches. The Act specifically mentions cost estimation models, and we anticipate that such models would account for key factors that impact the cost of providing care—such as: Staff salaries and benefits, training and professional development, curricula and supplies, group size and ratios, enrollment levels, facility size, and other costs.

Additional Facts Demonstrating Equal Access. Section 98.45(d) of the final rule requires that the market rate survey or alternative methodology reflect variations by geographic location, category of provider, and child’s age.
Section 658E(c)(4)(B)(i) of the Act applies this requirement to market rate surveys, but the final rule extends it to alternative methodologies as well. Lead Agencies must include in their Plans how and why they differentiate their rates based on these factors. The final rule also requires Lead Agencies to track through the market rate survey or alternative methodology, or through a separate source, information on the extent to which: (1) Child care providers are participating in the CCDF subsidy program and any barriers to participation, including barriers related to payment rates and practices; and (2) CCDF child care providers charge amounts to families more than the required family co-payment, including data on the size and frequency of any such amounts. Under § 98.45(b), this information must be included as part of the Lead Agency’s summary of data and facts in the Plan that demonstrate equal access.

Comment: The NPRM had proposed that the market rate survey include information on the extent to which child care providers are participating in the CCDF subsidy program and any barriers to participation, including barriers related to payment rates and practices. National organizations and child care worker organizations supported the proposal and recommended that that the information be required of all States, whether conducting a market rate survey or alternative methodology. Two States shared concerns about the associated administrative burden and cost, but one of the States said the information would be useful.

Response: In response to comments, the final rule requires that all Lead Agencies track information on the extent of provider participation in CCDF and barriers to participation. Low payment rates as well as late or delayed payments and other obstacles may force some providers to stop serving or limit the number of children receiving subsidies in their care. Other providers may choose to not serve CCDF children at all. (Adams, G., Rohacek, M., and Snyder, K., Child Care Voucher Programs: Provider Experiences in Five Counties, 2008). The final rule allows flexibility for States to track this information through the most efficient process—whether through the market rate survey, alternative methodology, or another source. As suggested by commenters, we recommend that States track not only the number of providers participating in CCDF, but also the number/portion of children (served by each provider) who receive subsidies, and whether the provider places any limits on the number.

Public Consultation and Input. Based on Section 658E(c)(4)(B)(i) of the Act, § 98.45(e) requires the Lead Agency to consult with the State’s Early Childhood Advisory Council or similar coordinating body, child care directors, local child care resource and referral agencies, and other appropriate entities prior to conducting a market rate survey or alternative methodology. Under the rule, Lead Agencies must also consult with organizations representing child care caregivers, teachers, and directors. Under § 98.45(f)(2)(iv), when setting payment rates, Lead Agencies must take into consideration the views and comments of the public obtained through required consultation (under paragraph (e)) and other means determined by the Lead Agency.

Comment: Child care worker organizations supported the proposal in the NPRM providing for consultation with organizations representing child care workers but requested additional provisions to ensure an adequate voice for child care workers in the process for setting payment rates. One national child care worker organization and its member affiliates recommended a separate public hearing specifically focused on rate setting and worker compensation levels.

Response: The final rule retains the provision at § 98.45(e) requiring consultation with worker organizations prior to the market rate survey or alternative methodology. We are not requiring a separate public hearing to allow Lead Agency flexibility to determine the best mechanism for obtaining public input; some Lead Agencies may be able to address rate setting through the public hearing already required at § 98.14(c). In response to comments, however, § 98.45(f)(2)(iv) requires Lead Agencies to take into consideration the views and comments of the public when setting rates. The final rule also requires the Lead Agency to respond to stakeholder comments in its detailed report (discussed below).

Detailed Report. Section 98.45(f)(1) of the final rule reflects the statutory requirement for a Lead Agency to prepare and make widely available a detailed report containing results of its survey or alternative methodology. Section 658E(c)(4)(B)(i) of the Act requires this report be available 30 days after completion of the survey or alternative methodology. Because we considered the separation of the report to be part of completing a survey, the rule indicates that Lead Agencies have 30 days from completion of the report to make the information available. ACF expects Lead Agencies to complete this report well in advance of the Plan submission deadline in order to allow enough time to for review and input by stakeholders and the public.

In addition to the results of the market rate survey or alternative methodology, a Lead Agency must indicate in its report the estimated cost of care necessary to support child care providers’ implementation of the health, safety, quality, and staffing requirements at §§ 98.41, 98.42, 98.43, and 98.44, including any relevant variation by geographic location, category of provider, or age of child. As part of the summary of data and facts demonstrating equal access, we will ask Lead Agencies in their Plans to indicate the estimated cost of care necessary to support child care providers’ implementation of these health, safety, quality, and staffing requirements.

Under § 98.45(f)(1), a Lead Agency’s report must also include the estimated cost of care necessary to support higher-quality child care, as defined by the Lead Agency using a quality rating and improvement system or other system of quality indicators, at each level of quality. Under § 98.45(b), this information must be included as part of the Lead Agency’s summary of data and facts in the Plan that demonstrate equal access. The report must also include the Lead Agency’s response to stakeholder views and comments.

Comment: One State indicated that the 30-day timeframe for making the report public would be difficult to meet due to the time needed to complete a rigorous analysis of the data and provide a meaningful report.

Response: Under the rule, the 30-day timeframe for posting the report on the Internet begins after the report is completed.

Setting Payment Rates. Section § 98.45(f)(2) establishes the parameters for setting payment rates based on the market rate survey or alternative methodology and on other factors. Paragraph (f)(2)(i) requires the Lead Agency to set rates in accordance with the most recent market rate survey or alternative methodology.

Comment: National organizations, child care worker organizations, child care providers, and one State supported the proposal to require use of the current survey or methodology to set rates. Six States opposed the proposal or expressed concerns. They said that, without increased Federal resources, this is an unfunded mandate and increased rates will lead to serving fewer children due to significant costs.
Response: The final rule retains this provision at §98.45(f)(2)(i) because the Act requires the use of the most recent survey or methodology. Section 658E(c)(4)(B)(iii) of the Act requires Lead Agencies to set payment rates in accordance with the results of the market rate survey or alternative methodology, which must be conducted every three years. We interpret this statutory provision to mean that Lead Agencies must use results of the most recent market rate survey or alternative methodology. The intent of the new statutory requirement to conduct a market rate survey or alternative methodology every three years is that it be used to set payment rates, not treated as an obligatory paperwork exercise. Payment rates should reflect the current child care market. Setting payment rates based on older market rate surveys or alternative methodologies that reflect outdated prices or costs results in insufficient payment rates that do not reflect current market conditions and undermine the statutory requirement of equal access. This final rule effectively requires Lead Agencies to reevaluate their payment rates at least every three years. This process will vary based on State laws and rules. In a number of States, action by the State legislature is necessary to change payment rates; however, it is unclear whether State legislatures are adequately engaged in reviewing current market rate survey results. A hearing in the State legislature at least every three years based on the results of the most current survey or methodology, or other similar process, may be necessary in these States to meet this requirement. Where updated data from a market rate survey or alternative methodology indicates that prices or costs have increased, Lead Agencies must raise their rates as a result. Moreover, we encourage Lead Agencies to consider annual increases in rates that keep pace with regular increases in the costs of providing child care.

Comment: The preamble to the NPRM indicated that the 75th percentile remains an important benchmark for gauging equal access. National organizations, child care worker organizations, and child care providers strongly supported retaining the 75th percentile as a benchmark. One large multi-State child care provider said that “current rates set by Lead Agencies do not promote quality and equal access” and “a business offering a similar discount on services isn’t staying in business long, is covering costs through another way, is providing an inferior service.” Six States opposed the benchmark or had concerns. They said that, without increased funding, expectations for the 75th percentile would result in major reductions in the number of children served. Some commenters questioned the use of the 75th percentile as a universal standard, saying that other factors, such as quality, should be considered.

Response: We restate the continued importance of the 75th percentile as a benchmark for gauging equal access by Lead Agencies conducting a market rate survey. Established as a benchmark for CCDF by the preamble to the 1998 Final Rule (63 FR 39959), Lead Agencies and other stakeholders are familiar with this rate as a proxy for equal access. To establish payments at the 75th percentile, rates within categories from the market rate survey are arranged from lowest to highest. The 75th percentile is the number separating the 75 percent of lowest rates from the 25 percent that are highest. Setting rates at the 75th percentile demonstrates that CCDF families have access to at least three-quarters of all available child care. Retaining this benchmark also allows for accountability and comparability across States using a market rate survey approach, which can be useful in gauging equal access and monitoring trends in rates and access to quality care over time.

Currently, nearly all Lead Agencies set rate ceilings that are below the 75th percentile and, in many cases, significantly below that benchmark. This is of great concern to ACF both because inadequate rates may violate the statutory requirement for equal access and because CCDF is serving a large number of vulnerable children who would benefit from access to high-quality care and for whom payment rates even higher than the 75th percentile may be necessary to afford access to such care. Low rates simply do not provide sufficient resources to cover costs associated with the provision of high-quality care or to attract and retain qualified caregivers, teachers, and directors. Low rates may also impact the willingness of child care providers to serve CCDF children thereby restricting access. Currently, even in States and Territories that pay higher rates for higher-quality care, base rates are so inadequate that even the highest payment levels are often below the 75th percentile. While rates vary by category of care, locality, and other factors, nine States include rates that are set below the 25th percentile and five States have not adjusted their rates in over five years according to CY2016-2018 CCDF Plans. This means that CCDF families are unable to access a significant portion of the child care market.

We agree with commenters that rates must consider a range of factors, and we anticipate that payment rates will differ by types of care, ages of children and geographic location, among other factors. Regardless, we expect that Lead Agencies will ensure that rates for all provider categories and age groups similarly provide equal access for children served by CCDF. Consideration of quality factors is discussed further below.

We understand the States’ concern about potential caseload decline; however, the Act mandates that payment rates support equal access. While we are not requiring that Lead Agencies pay providers at the 75th percentile, we strongly discourage Lead Agencies from paying providers less than the 75th percentile. ACF intends to enhance its monitoring of rates through the CCDF Plan approval process. Lead Agencies that set their base rates at the 75th percentile of the most recent market rate survey will be assured approval by ACF that rates provide equal access (assuming that the Lead Agency also demonstrates compliance with the other equal access components, including how the rates enable child care providers to meet health, safety, quality, and staffing requirements in accordance with §98.45(f)(2)(iii). ACF will apply scrutiny in its review to rates set below that threshold, as well as to rates that appear to be below a level to meet minimum quality standards based on alternate methodologies. Finally, any alternative methodology or market rate survey that results in stagnant or reduced payment rates will result in further increased scrutiny by ACF in its review, and the Lead Agency will need to provide a justification for how such rates result in improving access to higher-quality child care.

Comment: The NPRM proposed to require that payment rates must provide access to care that is of comparable quality to care with incomes above 85 percent of State median income (SMI). The preamble to the NPRM added that Lead Agencies with rates below the 75th percentile would be required to demonstrate that their rates allow CCDF families to purchase care of comparable quality to care that is available to families with incomes above 85 percent of SMI; this would include data on the quality of care that CCDF families can purchase and that is available to families above 85 percent of SMI. We received a letter from Senator Alexander and Congressman Kline objecting that this proposal was an unfunded mandate that would create a large paperwork and
administrative burden. National organizations and child care worker organizations said that this data comparison would not be meaningful enough to justify burdening States. They also indicated that little evidence exists that families above 85 percent of SMI are accessing care of higher quality compared to families below 85 percent of SMI.

Response: In light of the significant and widespread concerns, we have not included this provision in the final rule. However, the final rule includes additional provisions to strengthen the consideration of quality of care as an important factor in ensuring equal access (discussed further below).

Supporting Providers’ Implementation of Health, Safety, Quality, and Staffing Requirements. Section 98.45(f)(2)(ii) requires Lead Agencies to set base payment rates, at a minimum, at levels sufficient for child care providers to meet health, safety, quality, and staffing requirements as described in the rule—consistent with the Lead Agency’s summary of data and facts in the Plan under §98.45(b)(3) and information included in its detailed report under §98.45(f)(1)(ii)(A).

Comment: Numerous commentators supported the proposal, including national organizations, child care worker organizations, child care resource and referral agencies, and child care providers. Some child care worker organizations wanted to go further and also require a separate analysis related to adequate compensation for child care workers, including for home-based providers. Two commenters supported the proposal, but wanted to clarify that this provision does not stand on its own, but must be considered along with the other equal access components at §98.45.

Response: We are retaining the provision, with revisions in response to comments. Base payment rates, at a minimum, should be sufficient to ensure compliance with applicable licensing and regulatory requirements, health and safety standards, training and professional development standards, and appropriate child to staff ratio, group size limits, and caregiver qualification requirements (that Lead Agencies define) as required by the Act. In light of the requirements for child to staff ratio, group size limits, and caregiver qualifications, we have added “staffing” to the regulatory language to reflect that base payment rates should be sufficient for providers to meet health, safety, quality, and staffing requirements. We are not requiring a separate calculation of rates that would be sufficient to support adequate compensation of child care workers, but strongly agree that worker compensation should be considered as part of the broader analysis of the cost of meeting health, safety, quality, and staffing requirements in order to attract skilled, trained, and adequately-compensated caregivers, teachers, and directors for the provision of CDF-funded care. We also agree with commenters that Lead Agencies must demonstrate equal access through all components included in § 98.45.

Comment: Four States opposed or expressed concerns about this proposal, objecting to the additional administrative burden on States and providers of conducting the analysis necessary to determine if base rates are sufficient to support health, safety, quality, and staffing requirements—particularly in light of the vast variation across providers and communities. One State noted that price and cost are significantly different concepts, and conflating them creates confusion about the expectation. The State said that “base” payment rate was not defined in the Act or regulations, and objected to raising base rates rather than raising rates for higher-quality providers. Another State said the proposal was a back-door way to essentially require a cost estimation model rather than a market rate survey.

Response: OCC plans to provide technical assistance to help Lead Agencies conduct this analysis, and the free, web-based Provider Cost of Quality Calculator is available. While the NPRM referred to both cost and price in this provision, we agree that cost and price are two different concepts and, for purposes of clarity, have eliminated the reference to price in the final rule. Lead Agencies should ensure that base payment rates are sufficient to support the cost to the provider (rather than price) of health, safety, quality and, staffing requirements. Base rates are the lowest, foundational rates before any differentials are added (e.g., for higher quality or other purposes). Lead Agencies that choose to conduct a market rate survey (rather than an alternative methodology) are still required to comply with this provision, but may conduct an analysis that is more narrowly focused on ensuring that base payment rates are adequate to cover the cost of health, safety, quality, and staffing—rather than a full alternative methodology (e.g., cost estimation model) that would need to look more broadly at costs. We also agree with commenters that, beyond base rates, it is important to raise rates for higher-quality providers (discussed further below).

Cost of Higher Quality. The final rule includes §98.45(f)(2)(iii) in accordance with the statutory requirement at Section 658E(c)(4)(B)(iii)(II) of the Act to take into consideration the cost of providing higher-quality care than was provided prior to the reauthorization when setting payment rates. Under the rule, a Lead Agency may define higher-quality care using a quality rating improvement system or other system of quality indicators. The Lead Agency must consider how payment rates compare to the estimated cost of care at each level of higher quality—consistent with the summary of data and facts in the Plan at §98.45(b)(4) and information in the Lead Agency’s detailed report at §98.45(f)(1)(ii)(B). Within these parameters, Lead Agencies may take different approaches to setting rates for higher-quality care, including increasing base payment rates, using pay differentials or higher rates for higher-quality care, or other strategies, such as direct grants or contracts that pay higher rates for child care services that meet higher-quality standards. ACF acknowledges that rates above the benchmark of 75th percentile may be required to support the costs associated with high-quality care. In order for providers to offer high-quality care that meets the needs of children from low-income families, they need sufficient funds to be able to recruit and retain qualified staff, use intentional approaches to promoting learning and development using curriculum and engaging families, and provide safe and enriching physical environments.

Response: We agree with the commenter’s recommended approach, which is consistent with the statutory requirement at section 658E(c)(4)(B)(iii)(II) for Lead Agencies to take into consideration the cost of providing higher-quality child care services when setting payment rates. This approach is also an important companion to the provision requiring that base rates support the basic health, safety, quality, and staffing provisions required by the Act and this rule, as it is important to also consider how rates support higher-quality care.
Therefore, § 98.45(b)(4) of the final rule requires the Lead Agency’s summary of data and facts in the CCDF Plan to include how its payment rates that apply to higher-quality care, as defined by the Lead Agency using a quality rating and improvement system or other system of quality indicators, relate to the estimated cost of care at each level of quality. To ensure transparency, the Lead Agency’s detailed report required under § 98.45(f)(1), like the market rate survey or alternative methodology results, must also include the estimated cost of higher-quality care at each level of quality, as defined by the Lead Agency using a quality rating and improvement system or other system of quality indicators (and including any relevant variation by geographic location, category of provider, or age of child).

Finally, when setting payment rates, § 98.45(f)(2)(iii) of the final rule requires the Lead Agency to take into consideration the cost of providing higher-quality child care services, including consideration of the estimated cost at each level of higher quality. ACF intends to provide technical assistance to help Lead Agencies conduct the analysis necessary to comply with these provisions, and, as previously mentioned, the Provider Cost of Quality Calculator is available as a tool.

Comment: The preamble to the 1998 Final Rule reminded Lead Agencies of the general principle that Federal subsidy funds cannot pay more for services than is charged to the public for the same service (63 FR 39959). In the 2015 NPRM, we clarified that, while this principle remains in effect, Lead Agencies may pay amounts above the provider’s private-pay rate to support quality. A number of commenters supported this clarification. National organizations and child care worker organizations suggested going further to clarify that States must set base payment rates at a level sufficient to support implementation of health, safety, quality, and staffing requirements even if such rates are higher than private-pay rates (which is important for poor communities with depressed child care markets).

Response: In this final rule, we maintain the clarification that Lead Agencies may pay amounts above the provider’s private-pay rate to support quality. A Lead Agency also may pay a higher payment rate to the provider’s cost of doing business at a given level of quality. For example, an analysis of the cost of providing high-quality care (i.e., at the top levels of a QRIS) using a cost estimation model or other method could show the cost of providing the service is greater than the price charged in the market. Recognizing that private pay rates are often not sufficient to support high-quality, many Lead Agencies have already implemented tiered subsidy payments that support quality. Payments may exceed private pay rates if they are designed to pay providers for additional costs associated with offering higher-quality care or types of care that are not produced in sufficient amounts by the market (e.g., non-standard hour care, care for children with disabilities or special health care needs, etc.).

We also agree with commenters that, as required by § 98.45(f)(2)(ii), Lead Agencies must set base payment rates at a level sufficient to support implementation of health, safety, and quality requirements even if such rates are higher than private-pay rates.

Comment: One commenter, an organization that operates child care programs, requested clarification that child care providers can charge reduced prices or give scholarships to non-CCDF children without impacting the private-pay level used to determine the subsidy amount.

Response: We agree that child care providers may receive CCDF payment for an eligible child at the level of the full private-pay price, even if some private-pay children receive scholarships or reduced prices. For example, if a provider’s private-pay price is $200 per week and some private-pay children receive a scholarship of $50 per week, the families receiving scholarships would pay $150 per week (i.e., the difference between the private-pay price and the scholarship). The provider, however, would still be eligible for CCDF subsidy reimbursement up to $200 per week under Federal rules as long as such scholarships are bona fide.

Tribes. In accordance with §§ 98.81(b)(6) and 98.83(d)(1), we exempt Tribal grantees from the requirement to conduct a market rate survey or alternative methodology and related rate-setting requirements. However, in their CCDF Plans, Tribes must still describe their payment rates, how they are established, and how they support health, safety, quality, and staffing requirements and, where applicable, cultural and linguistic appropriateness. Tribes, at their option, may still conduct a market rate survey or alternative methodology or use the State’s market rate survey or alternative methodology when setting payment rates.

Other Provisions. The rule at § 98.45(f)(2)(v) reflects language at Section 658E(c)(4)(C) of the Act, which requires Lead Agencies to set payment rates without reducing the number of families receiving assistance, to the extent practicable. ACF recognizes the limitations of Lead Agencies’ abilities to increase rates under resource constraints and that Lead Agencies must balance competing priorities. We recognize that greater budgetary resources are needed to serve all children eligible for CCDF. While we do not want to see a reduction in children served, it is our belief that current payment rates for CCDF-funded care in many cases do not support equal access to a minimum level of quality for CCDF children and should be increased.

The final rule at § 98.45(g) redesignates and revises former § 98.43(c). The previous regulations prohibited Lead Agencies from differentiating payment rates based on a family’s eligibility status or circumstance. This provision was intended to prevent Lead Agencies from establishing different payment rates for child care for low-income working families as payments for children from TANF families or families in education or training. Such a prohibition remains relevant; differentiating payment rates based on an eligibility status (such as receiving TANF or participation in education or training) would violate the equal access provision. In order to clarify that this prohibition does not conflict with the ability of Lead Agencies to differentiate payments based on the needs of particular children, for example, paying higher rates for higher-quality care for children experiencing homelessness, this final rule removes the word “circumstance” in paragraph (g) so that this provision only refers to the conditions of eligibility and not the needs or circumstance of children.

Setting lower payment rates based on the eligibility status of the child is not consistent with Congress’ intent to allow for differentiation of rates. Further, establishing different payment rates for low-income families and TANF families does not further the goals of the Act or support access to high-quality care for low-income children. Commenters on the NPRM supported this provision.

The rule at § 98.45(i) redesignates and revises the former § 98.43(e) to add “if the Lead Agency acts in accordance with” this regulation, to the pre-existing language that nothing in this section shall be construed to create a private right of action in accordance with statutory language.

Based on Section 658E(c)(4)(C) of the Act, § 98.45(g) states that Lead Agencies may not be prevented from differentiating payment rates based on
geographic location of child care providers, age or particular needs of children (such as children with disabilities and children served by child protective services), whether child care providers provide services during weekend or other non-traditional hours; or a Lead Agency’s determination that differential payment rates may enable a parent to choose high-quality child care. Section 98.45(i)(2) adds children experiencing homelessness to the statute’s list of children with particular needs; this addition was supported by homeless advocates who commented on the NPRM. Paying higher rates for higher-quality care is an important strategy as it provides resources necessary to cover the costs of quality improvements in child care programs. Lead Agencies should also consider differentiating rates for care that is in low supply, such as infant-toddler care and care during nontraditional hours, as an incentive for providers.

Response: Section 638E(c)(5) requires Lead Agencies to establish and periodically revise a sliding fee scale that provides for cost-sharing for families receiving CCDF funds. The reauthorization added language that cost-sharing should not be a barrier to families receiving CCDF assistance. In this final rule, we have moved the regulatory language on sliding fee scales (previously § 98.42) under the equal access section (§ 98.45), recognizing affordable co-payments as an important aspect of equal access.

The final rule amends the previous regulatory language, now § 98.45(k), by adding language that the cost-sharing should not be a barrier to families receiving assistance. Further, the final rule provides that Lead Agencies may not use the cost, price of care, or subsidy payment rate as a factor in setting co-payment amounts. In addition to allowing Lead Agencies to waive co-payments for families below poverty and children that receive or need to receive protective services (as allowed under prior regulation), the final rule also allows Lead Agencies to waive contributions from families that meet other criteria established by the Lead Agency.

Comment: The NPRM proposed a new Federal benchmark for affordable parent fees of seven percent of family income. National organizations and advocates wrote in support of the proposal. Seven States and one municipal agency objected or expressed concerns, arguing that implementation would be costly and result in fewer children served. Two of the States said that co-payments higher than seven percent were reasonable for some families to allow for gradual transitioning to the full cost of care.

Response: We retain the seven percent benchmark in this final rule. Lead Agencies have flexibility in establishing their sliding fee scales and determining what constitutes a cost barrier for families, but the seven percent level is a recommended benchmark. This new Federal benchmark revises the prior benchmark, created in the preamble to the 1998 Final Rule, of 10 percent of family income as an affordable co-payment. As in the past, we are declining from defining affordable in regulation but we are revising this established benchmark through this preamble. It is our view that a fee that is no more than seven percent of a family’s income is a better measure of affordability. According to the U.S. Census Bureau, the percent of monthly income families spend on child care on average has stayed constant between 1997 and 2011 (most recent data available), at around seven percent. Poor families on average spend approximately four times the share of their income on child care compared to higher income families. (Who’s Minding the Kids? Child Care Arrangements: Spring 2011, U.S. Census Bureau, 2013.) As CCDF assistance is intended to offset the disproportionately high share of income that low-income families spend on child care in order to support parents in achieving economic stability, it is our belief that CCDF families should not be expected to pay a greater share of their income on child care than reflects the national average. For the majority of CCDF families receiving assistance, this new Federal benchmark would not result in a change in the amount of copay charged. The average percentage of family income spent on CCDF co-payments, among families with a co-payment, is seven percent.

Under § 98.21(a)(3), Lead Agencies cannot increase family co-payments within the minimum 12-month eligibility period unless the family’s income is in a graduated phase-out of eligibility as described at § 98.21(b)(2). When designing fee scales, we encourage Lead Agencies to consider how their fee scales address affordability for families at all income levels. Lead Agencies should ensure that small increases in earnings during the graduated phase-out period do not trigger large increases in co-payments that are unaffordable for families, in order to ensure stability for families as they improve their economic circumstance and transition off child care assistance.

Comment: National organizations and child care providers supported the NPRM’s proposal to prohibit basing co-payment amounts on cost of care or amount of subsidy payment. Two States objected, saying the proposal was prescriptive and contrary to longstanding State practice.

Response: In the final rule, we include this provision at § 98.45(k)(2). This corrects a contradiction between the 1992 and 1998 preamble discussions. The 1992 preamble stated that “Grantees may take into account the cost of care in establishing a fee scale,” (57 FR 34380), while the 1998 preamble states that “As was stated in the preamble to the regulations published on August 4, 1992, basing fees on the cost or category of care is not allowed.” (63 FR 39960). The final rule corrects this discrepancy by stating that Lead Agencies may not base their co-payment amounts on the cost of care or subsidy amount. This is consistent with existing practice for the majority of States, and is essential to preserving equal access and parental choice because basing co-payments on cost or subsidy amount incentivizes families to decrease cost sharing and impedes access to higher cost care.

Comment: National organizations and two States endorsed the NPRM’s proposal to allow Lead Agencies to waive co-payments for families meeting criteria set by the Lead Agency. One of the States said “this flexibility will better support efforts to provide services to vulnerable populations.”

Response: We retain this provision in the final rule at § 98.45(k)(4), and add “at Lead Agency discretion” to clarify that the Lead Agency may choose whether or not to waive co-payments. Lead Agencies have often requested more flexibility to waive co-payments beyond just those families at or below the poverty level and children in need of protective services. This change increases flexibility to determine waiver criteria that the Lead Agency believes would best serve subsidy families. For example, a Lead Agency could use this flexibility to target particularly vulnerable populations, such as homeless families, migrant workers, victims of human trafficking, or families receiving TANF. Lead Agencies may choose to waive co-payments for children in Head Start and Early Head Start, including children served by ACF-funded Early Head Start-Child Care Partnerships, which is an important alignment strategy. Head Start and Early Head Start are provided at no cost to eligible families, who cannot be required to pay any fees for Head Start services. Waiving CCDF fees for families served by both Head Start and CCDF can support continuity for families. While we are allowing Lead
Agencies to define criteria for waiving co-payments, the criteria must be described and approved in the CCDF Plan. Lead Agencies may not use this revision as an authority to eliminate the co-payment requirement for all families receiving CCDF assistance. We continue to expect that Lead Agencies will have co-payment requirements for a substantial number of families receiving CCDF subsidies.

Comment: The NPRM proposed to require that Lead Agencies prohibit child care providers receiving CCDF funds from charging parents additional mandatory fees above the family co-payment based on the Lead Agencies’ sliding fee scale. Numerous commenters strongly objected to this proposal, including the letter from Senator Alexander and Congressman Kline, 13 States, national organizations, child care worker organizations, child care providers, and child care resource and referral agencies. Commenters said the proposal, while well-intentioned, would be a serious restraint on parental choice and impede access to affordable, high-quality care. They were also concerned about the fiscal impact on child care providers, and anticipated that it would no longer be economically-feasible for many of them to keep slots open for CCDF children. Some of the commenters said the proposal would diminish socio-economic diversity in child care programs, and would be difficult to administer and enforce. One commenter, who opposed the proposal, suggested an alternative that would require Lead Agencies to estimate the size of the total family share (including co-payment and any additional amounts paid by the family) in order to frame to issue and inform future policy solutions.

Response: We withdrew our proposal in response to the strong negative reaction and specific issues raised by commenters. However, we remain concerned that, according to the 2016–2018 Plans, 42 Lead Agencies have policies allowing providers to charge families the difference between the maximum payment rate and their private-pay rate. Requiring families to pay above the established co-payment may make care unaffordable for families and may be a barrier to families receiving assistance. It masks the true cost of care to the family and whether co-pays are reasonable. Such policies require families to make up the difference for Lead Agencies’ low payment rates. Due to these concerns, we have added new requirements at § 98.45(b)(5) that require the Lead Agency to include in its Plan a rationale for its policy on whether child care providers may charge additional amounts to families above the required family co-payment, including a demonstration that the policy promotes affordability and access. The Lead Agency must also provide an analysis of the interaction between any such additional amounts with the required family co-payments, and of the ability of subsidy payment rates to provide access to care without additional fees. In addition, under § 98.45(d)(2)(ii), mentioned earlier, Lead Agencies must track through the market rate survey or alternative methodology, or through a separate source, information on the extent to which CCDF providers charge such additional amounts, including data on the size and frequency of any such amounts disaggregated by category and licensing status of provider. This information will provide greater transparency on the scope of the issue and a basis for future decisions by policymakers and administrators.

Provider Payment Practices. The final rule at § 98.45(l) requires the Lead Agency to define in the Plan that it has established certain payment practices applicable to all CCDF child care providers, including practices related to timeliness, paying for absence days, and other generally-accepted payment practices. The NPRM proposed benchmarks in these key areas (discussed in more detail below), and asked for comment on whether the proposed benchmarks or other benchmarks should be included in the final rule.

Comment: National organizations, child care worker organizations, child care resource and referral agencies, and child care providers supported the proposed benchmarks. According to a coalition of national organizations, “Congress established a principle that payment practices under CCDBG should not differ from common practices for private-pay parents. Therefore, we support the benchmarks included in the NPRM. . . .” States opposed the benchmarks and asked for more flexibility.

Response: We retain the benchmarks for provider payment practices (with some modifications in response to comments, as discussed below) in light of the critical role of payment practices in ensuring equal access. At the same time, the final rule allows flexibility for Lead Agencies to choose from several options within each key area of payment practices (i.e., timeliness, absence policies, and generally-accepted practices). In addition to payment rates, policies governing provider payments are an important aspect of ensuring equal access and supporting the ability of providers to provide high-quality care. When payment practices result in unstable, unreliable payments (as was often the case prior to reauthorization), it is difficult for providers to meet fixed costs of providing child care (such as rent, utilities and salaries) and to plan for investments in quality. Surveys and focus groups with child care providers have found that some providers experience problems with late payments, including issues with receiving the full payment on time and difficulties resolving payment disputes. 

(Adams, G., Roback, M., and Snyder, K., Child Care Voucher Programs: Provider Experiences in Five Counties, 2008) This research also found that delayed payments creates significant financial hardships for the impacted providers, and forces some providers to stop serving or limit the number of children receiving child care subsidies.

Response: We added language to the final rule to specify that the payment practices described in § 98.45(l) apply to all CCDF child care providers. It is important to ensure that the practices apply uniformly to all categories of providers in order to ensure parental choice for families.

Timeliness. The final rule at § 98.45(l)(1) requires Lead Agencies to ensure timeliness of payment. This provision is based on Section 658E(c)(4)(iv) of the Act, which requires Lead Agencies to describe how they will provide for the timely payment for child care services provided by CCDF funds. Under the rule, Lead Agencies must ensure timely provider payments by either paying prospectively prior to the delivery of services or paying providers retrospectively within no more than 21 calendar days of the receipt of a complete invoice for services.

Comment: While many commenters supported the proposal, a few (two States and a municipality) expressed concern about the option for prospective payments—suggesting that it would lead to improper payments and costly recoupment activities, and that it would be costly and unnecessary to redesign State payment systems.

Response: We do not believe prospective payments will lead to a higher incidence of improper payments, particularly if the Lead Agency has adequate policies allowing payment for
absence days. As discussed elsewhere in this rule, recoupment for improper payments is not required by Federal rules, except in cases of fraud. We strongly encourage Lead Agencies to pay prospectively where possible, but the final rule still allows the option for paying on a reimbursable basis within 21 days.

Comment: One State and a locality in that State indicated that 21 days was not long enough, and requested expanding to 30 days. One commenter requested clarifying that the timeframe referred to calendar days. One commenter asked that providers be able to assess late fees to Lead Agencies that miss the deadline.

Response: Given that most States did not specifically object to the 21-day timeframe, the final rule retains it. The final rule clarifies that the timeframe refers to calendar days. The rule does not include a provision regarding late fees, but OCC intends to monitor State performance and may take compliance action if necessary. The final rule provides a maximum period of time but we encourage Lead Agencies to provide payment sooner if possible. We do not expect this requirement to be burdensome for Lead Agencies.

According to their FY2016–2018 CCDF Plans, 39 States/Territories had an established timeframe for provider payments ranging from 3 to 35 days, the majority of which were shorter than 21 days. We encourage administrative improvements such as automated billing and payment mechanisms, including direct deposit and web-based electronic time and attendance systems, to help facilitate timely payments to providers.

Comment: A few commenters (three States and a city) requested exceptions to the timeframe for certain cases, including cases where there is a late or incomplete bill or cases where there is an investigation for potentially fraudulent activity or risk assessment occurring. One commenter argued that the timeframe should apply to all invoices.

Response: We agree that the timeframe should not begin until a complete invoice is received, and the final rule at § 98.45(l)(1)(ii) reflects this. We also recognize that there may be some limited instances, such as cases involving a fraud investigation, when the 21-day timeframe is not met. However, because these instances should be rare exceptions to the rule, a change to the regulatory provision governing most payments is not warranted.

Absence days. Section 98.45(l)(2) provides three examples for how Lead Agencies could meet the statutory requirement at section 658E(c)(2)(S)(ii) of the Act to support the fixed costs of providing child care services by delinking provider payment rates from an eligible child’s occasional absences due to holidays or unforeseen circumstances such as illness, to the extent practicable. This may include: (1) By paying providers based on a child’s enrollment, rather than attendance; (2) by providing a full payment to providers as long as a child attends for 85 percent of the authorized time; or (3) by providing full payment to providers as long as a child is absent for five or fewer days in a four week period. We recognize that these three examples represent different levels of stringency; however, the final rule provides flexibility in acknowledgement of the ways that States structure their policies. Lead Agencies that do not choose one of these three approaches must describe their approach in the State Plan, including how the approach is not weaker than one of the three listed above.

Prior to reauthorization, many States closely linked provider payments to the hours a child attends care. A child care provider was not paid for days or hours when a child was absent, resulting in a loss of income. Generally-accepted payment practices typically require parents who pay privately for child care to pay their provider a set fee based on their child’s enrollment, often in advance of when services are provided. Payments are not altered due to a child’s absence in part because the child’s teacher still serves in the same capacity with the same salary even if a particular child does not attend on a given day.

We are establishing 85 percent, or five or fewer days, as a benchmark for when providers should receive a full payment, regardless of the reason for the absence (e.g., whether it is approved or unapproved). We selected 85 percent (or five or fewer days) as a threshold based in part on Head Start policy, which currently requires center-based programs to maintain a monthly 85 percent attendance rate and to analyze absenteeism if monthly average daily attendance falls below that threshold. New proposed Head Start Performance Standards, issued in June 2015, would require programs to take actions (which could include additional home visits or the provision of support services) to increase child attendance when children have four or more consecutive unexcused absences or are frequently absent. While Head Start policy informed the development of this rule, the final rule’s provisions differ in several ways. The final rule does not require CCDF child care providers to take action to address individual or systemic absenteeism, although Lead Agencies may encourage CCDF providers to take this approach and consider how child care providers may be supported in addressing high rates of absenteeism among families. Chronic absenteeism from high-quality programs is a concern because it may lessen the impact on children’s school readiness and may signal that a family is in need of additional supports.

The Act and final rule require Lead Agencies to implement this provision “to the extent practicable.” We interpret this language as setting a limit on the extent to which Lead Agencies must act, rather than providing a justification for not acting at all. The final rule does not require Lead Agencies to pay for all days when children are absent, although that would most closely mirror private-pay practices; however, each Lead Agency is expected to implement a policy that accomplishes the goals of the Act. A refusal to implement all such policies as being “impracticable” will not be accepted.

Comment: Many commenters supported the provision regarding absence days, including the letter from Senator Alexander and Congressman Kline, national organizations, child care providers, and one State. The commenters recognized that providing more stability in subsidy payments will increase provider participation and parental choice.

Response: We agree, and the final rule retains the provision in the final rule as proposed in the NPRM.

Comment: Three States and one municipality raised concerns or questions, objecting to the cost and administrative burden. One State said that it had recently invested in an attendance system that issues full payment based on an 80% benchmark.

Response: The final rule allows for significant Lead Agency flexibility by providing three options, in addition for the opportunity to justify an alternative approach in the Plan. Lead Agencies retain discretion to allow for additional excused and/or unexcused absences (above the level of 85 percent, or 5 or fewer days) and to provide for the full payment for services in those circumstances. We recognize that many Lead Agencies have invested in electronic time and attendance systems linked to provider payments. These systems may be used to track whether a child is enrolled and attending care; however, Lead Agencies should ensure that such systems do not link attendance and payment so tightly as to violate this provision.
identified examples of approaches that Lead Agencies may want to use for absence policies. Some States recommended greater flexibility in crafting absence policies that may be based on different periods of time (e.g., 3-, 6- or 12-month periods), tiered attendance strata (e.g., full-time, half-time), or other methods (e.g., waivers and exceptions based on medical conditions). Other commenters supported only the three options without any additional choices. One State asked for clarification on what will be required for States to justify an alternative approach in lieu of the three identified options.

Response: The final rule accommodates the flexibility requested by State commenters. In addition to the three identified approaches, a Lead Agency may justify an alternative approach in its Plan. For example, a Lead Agency may choose an alternative time period for measuring absences (e.g., 1, 3, 6, 12 months, etc.). In its Plan, the Lead Agency would need to demonstrate that its alternative approach delinks payment from a child’s absences at least to the same extent as providing full payment for 85 percent attendance or five of fewer absences in a month.

Comment: A few commenters requested allowing flexibility for program closure days, including holidays, inclement weather, and professional development days.

Response: We are sympathetic to this suggestion, and encourage Lead Agencies to adopt policies that provide payment for program closure days. However, we stop short of a requirement because the statutory provision focused on delinking payments from a child’s absences rather than program closures.

Comment: One State asked whether States will be given the option of authorizing paid absences only for specific need categories (e.g., children with chronic illnesses or court-ordered visitation), or be allowed to consider absence policies that discourage under-utilization.

Response: The absence policies must apply to all CCDF children and providers and may not be limited to specific need categories because the goal is to provide consistency and stability of payments consistent with generally-accepted practices in the private-pay market. The identified thresholds (85 percent, or five or fewer days) already acknowledge that children should be attending for a large majority of the time, thereby guarding against under-utilization.

Generally-accepted payment practices. Consistent with section 658E(c)(2)(S) of the Act, § 98.45(l)(3) of the final rule requires CCDF payment practices to reflect generally-accepted payment practices of child care providers that serve children who do not receive CCDF-funded assistance. This provision is designed to support stability of funding and encourage more child care providers to serve children receiving CCDF funds. Unless a Lead Agency is to be able to prove that the following policies are not generally-accepted in its particular State, Territory, or service area, or among particular categories or types of providers, Lead Agencies must: (1) Pay providers based on established part-time or full-time rates, rather than paying for hours of service or smaller increments of time; and (2) Pay for reasonable, mandatory registration fees that the provider charges to private-paying parents.

Lead Agencies should ensure that payment practices for each category or type of provider reflect generally-accepted payment practices for such providers in order to ensure that families have access to a range of child care options. We note that these benchmarks represent minimum generally-accepted practices. Lead Agencies may consider additional policies that are fair to providers, promote the financial stability of providers, and encourage more providers to serve CCDF eligible children. Such policies may include: Providing information on payment practices in multiple languages to promote the participation of diverse child care providers; implementing dedicated phone lines, web portals, or other access points for providers to easily reach the subsidy agency for questions and assistance regarding payments; and periodically surveying child care providers to determine their satisfaction with payment practices and timeliness, and to identify potential improvements.

Comment: Two States provided comments regarding part-time and full-time rates. One State requested that it be allowed to determine payment according to the time increment (e.g., daily, weekly, etc.) that the provider uses to charge for services according to its rate structure. The other State requested an allowance to continue its current practice of paying a weekly rate when more than 35 hours of care is provided per week, or a daily rate when at least five hours of care is provided per day.

Response: The final rule allows Lead Agencies the flexibility to define part-time and full-time. However, the final rule prohibits Lead Agencies from paying for hours of service or smaller increments of time. Therefore, a Lead Agency may not pay in increments smaller than daily part-time and daily full-time rates. We encourage Lead Agencies to pay part-time and full-time rates on a weekly or monthly basis.

Comment: The NPRM proposed to require paying for mandatory fees that the provider charges to private-paying parents, such as fees for registration (unless the Lead Agency provides evidence that such practice is generally-accepted in the State or service area). Several commenters, including eight States, objected—saying the provision would be administratively burdensome and costly, and would require revisions to automated payment systems and/or manual entry with the potential for errors. Commenters also said that it was unclear which mandatory fees were included (e.g., fees for transportation, meals, supplies, late pick-up, etc.), and objected that the provision did not include a cap or require fees to be reasonable.

Response: The final rule narrows and clarifies this provision in response to comments. The regulation at § 98.45(l)(3)(ii) limits the required payment to mandatory registration fees, which includes initial and annual registration fees, rather than including other types of fees. The rule also indicates that the registration fees must be “reasonable” so that a Lead Agency may establish a cap on fees that are beyond the bounds of fees typically charged, or establish an annual limit on the number of registration fees paid in a year (such as three registration fees a year) for families that change or start new providers. This requirement aligns with the statutory provision regarding generally-accepted payment practices as the payment of registration fees is generally-accepted in the private-pay market.

Other payment practices. In addition, there are certain other generally-accepted payment practices that the final rule requires of all Lead Agencies. Section 98.45(l)(4) through (6) requires Lead Agencies to: Ensure that child care providers receive payment for any services in accordance with a payment agreement or authorization for services; ensure that child care providers receive prompt notice of changes to a family’s eligibility status that may impact payment; and establish timely appeal and resolution processes for any payment inaccuracies and disputes. While these practices are unique to the subsidy system, they are analogous to generally-accepted payment practices in
the private pay market, such as establishing contracts between providers and parents and providing adequate advance notice of changes that impact payments. The appeals and resolution process is important in fairness to providers.

Comment: Child care worker organizations requested that the payment agreements or authorization for services must be in writing and include basic standards or content.

Response: The final rule at § 98.45(l)(4) specifies that the payment agreement or authorization for services must be “written” and include, at a minimum, information regarding provider payment policies, including rates, schedules, and fees charged to providers, and the dispute resolution process.

Comment: Regarding the proposed requirement for a Lead Agency to ensure child care providers receive prompt notice of any changes to a family’s eligibility status that may impact payment, one major child care provider requested additional parameters to ensure the notice is timely.

Response: In response to this comment, the final rule at § 98.45(l)(5) specifies that the notice be sent to providers no later than the day on which the Lead Agency becomes aware that such changes to eligibility status will occur.

§ 98.46 Priority for Services

The CCDBG Act of 2014 included several provisions to increase access to CCDF services for children and families experiencing homelessness. Consistent with the spirit of these additions, the final rule adds “children experiencing homelessness” to the Priority for Services section at § 98.46.

Lead Agencies have flexibility as to how they offer priority to these populations, including by prioritizing enrollment, waiving co-payments, paying higher rates for access to high-quality care, or using grants or contracts to reserve slots for priority populations. Section 658E(c)(3)(B)(ii) of the Act requires ACF to report to Congress on whether Lead Agencies are prioritizing services to children experiencing homelessness, children with special needs, which may include any vulnerable populations as defined by the Lead Agency, and children experiencing homelessness.

Comment: Another commenter requested additional clarification about whether “priority is given to all homeless children based on the McKinney Vento definition (shall) or can lead agencies choose to make portions of the definition a priority?”

Priority must be given to children experiencing homelessness as defined in this final rule at § 98.2: A child who is homeless as defined in section 725 of Subtitle VII–B of the McKinney-Vento Act (42 U.S.C. 11434a). There are a variety of ways in which a State can demonstrate priority that could include some variation and targeting within the definition of homeless, provided that some priority for services is extended for the population experiencing homelessness as defined.

Comment: One commenter raised a concern that prioritizing services to children experiencing homelessness may have the “unintended consequence [of] segregating populations of children in contracted programs which is counter to the McKinney-Vento law.”

Response: We appreciate that this concern was raised and welcome the opportunity to provide some additional clarification. We emphasize that while children experiencing homelessness should be prioritized, it is not our intent to serve them in separate segregated programs. Some States do use grants and contracts in a targeted manner to ensure that there are slots available in areas with high concentrations of poverty and wide-spread instances of homelessness. This is a valuable prioritization of this population. Implementation of the requirement will not be as clear and robust as it needs to be to reach the children and families who are the intended beneficiaries.”

While the CCDF State Plan Preprint already includes a question about meeting priority categories, we agree that this should be included in the regulatory language. Therefore, the final rules revises prior language at 98.16(i), which formerly required reporting on additional eligibility criteria, priority rules, and definitions pursuant to 98.20(b), and expands it to require reporting on a description of any eligibility criteria, priority rules, and definitions established pursuant to §§98.20 and 98.46.

By adding the reference to 98.46, Lead Agencies must now include a description in their State Plans of how they are providing priority to children of families with very low family income (considering family size), children with special needs, which may include any vulnerable populations as defined by the Lead Agency, and children experiencing homelessness.
strategy that can strengthen a State’s ability to serve its most vulnerable populations and is a practice encouraged by § 98.50 of the final rule. Lead Agencies can use such a strategy to target resources while also remaining consistent with the spirit of McKinney Vento Act’s “Prohibition on Segregating Homeless Students,” which says that States shall not segregate such child or youth in a separate school, or in a separate program within a school, based on such child’s or youth’s status as homeless (42 U.S.C. 11434a, Section 722(e)(3) Subtitle VII–B).

Subpart F—Use of Child Care and Development Funds

Subpart F of CCDF regulations establishes allowable uses of CCDF funds related to the provision of child care services, activities to improve the quality of child care, administrative costs, Matching fund requirements, restrictions on the use of funds, and cost allocation.

§ 98.50 Child Care Services

This final rule specifies that paragraph (a), as re-designated, is describing use of funds for direct child care services. This clarifies that the reference to “a substantial portion of funds” at paragraph (g), as re-designated, applies to direct services, as opposed to other types of activities.

Section 658C(a)(2) of the Act increases the percentage of total CCDF funds (including mandatory funding) that Lead Agencies must spend on activities to improve the quality of child care services. Paragraphs (b), (d), (e), and (f), respectively, require Lead Agencies to spend a minimum of nine percent of funds (phased in over five years) on activities to improve the quality of care and three percent (beginning in FY 2017) to improve the quality of care for infants and toddlers; not more than five percent for administrative activities; not less than 70 percent of the Mandatory and Matching funds to meet the needs of families receiving TANF, and families transitioning from TANF, and families at-risk of becoming dependent on TANF; and, after setting aside funds for quality and administrative activities, at least 70 percent of remaining Discretionary funds on direct services.

Grants and contracts. In the NPRM, ACF proposed to revise § 98.50(a)(3) to require States and Territories to use at least some grants and contracts for the provision of direct services, with the extent determined by the Lead Agency after consideration of shortages of supply of high-quality care and other factors as determined by the State.

However, based on feedback from some members of Congress, States, and other stakeholders, we have chosen not to keep the proposed change to require the use of some grants or contracts and are making no changes to § 98.50(a)(3), as re-designated. While this final rule does not require States and Territories to use grants and contracts for direct services, we strongly encourage Lead Agencies to use grants and contracts to address the limited supply of high-quality child care options. They are a critical aspect of an effective CCDF system, and using grants and contracts in combination with certificates can play a role in building the supply and availability of child care, particularly high-quality care, for underserved populations and areas. While the majority of States and Territories rely solely on certificates to provide child care assistance to eligible families, some States and Territories have reported in their CCDF Plans using grants and contracts to increase the supply of specific types of child care. These include contracts to fund programs to serve children with special needs, targeted geographic areas, infants and toddlers, and school-age children. Grants and contracts also are used to provide wrap-around services to children enrolled in Head Start and prekindergarten to provide full-day, full-year care and to fund programs that provide comprehensive services. Additionally, Lead Agencies report using grants and contracts to fund child care programs that provide high-quality child care services.

Comment: We received a strong response to the proposed requirement. States and faith-based and private education organizations were strongly opposed, arguing it would inhibit State flexibility and parental choice and went against the intent of the Act. For example, one State said, “States understand the child care environment in which they operate. It may not always be the case that establishing grants or contracts is an effective way to increase access to quality care”. Another said, “Each State and local area should have the flexibility to offer direct child care services through the use of certificates only”. In addition, a letter from Senator Alexander and Congressman Kline said “Requiring the use of grants or contracts by States and Territories, limiting parents’ ability to directly select the provider right for their family, is concerning as it reduces options, restricts parental choice, diminishes local control, and requires States to substantially change their operating procedures, as well as directly contradicts congressional intent.”

Specifically commenters said it violated the intent of Section 658Q(b) of the CCDBG Act which says nothing in this subchapter shall be construed in a manner (1) to favor or promote the use of grants and contracts for the receipt of child care services under this subchapter over the use of child care certificates; or (2) to disfavor or discourage the use of such certificates for the purchase of child care services, including those services provided by private or non-profit entities, such as faith-based providers.

Response: As discussed earlier, we have chosen not to keep the proposed requirement to use at least come grants and contracts for direct services. The proposed requirement to use grants and contracts was not meant to limit or discourage the use of certificates to provide assistance to families. However, after considering feedback from some members of Congress, States, and other stakeholders, we have chosen not to change the regulatory language at § 98.50(a)(3), as re-designated, giving States and Territories the ability to choose whether or not they use grants or contracts to provide direct services.

Comment: Numerous national organizations and child care worker organizations supported the use of grants and contracts to build the supply of high-quality care, stating “Grants and contracts can be an effective means of ensuring that child care providers have the stable funding that they need to meet high-quality standards.” In addition, a comment submitted by a group of child care resource and referral agencies said, “the use of contracts expands the choices for care that parents have by ensuring low-income families have access to higher quality care.”

Response: While this final rule does not require the use of grants and contracts for direct services, we continue to think a system that includes certificates, grants or contracts, and private-pay families is the most sustainable option for the CCDF program and for child care providers. Certificates play a critical role in supporting parental choice; however, demand-side mechanisms like certificates are only fully effective when there is an adequate supply of child care. Multiple research studies have shown a lack of supply of certain types of child care and for certain localities. Child care supply in many low-income and rural communities is often low, particularly for infant and toddler care, school-age children, children with disabilities, and families with non-traditional work schedules.
Grants or contracts can play a role in building the supply and availability of child care, particularly high-quality care, in underserved areas and for special populations in order to expand parental choice. For example, Lead Agencies may use grants or contracts to incentivize providers to open in an area they might not otherwise consider, or to serve children for whom care is more costly. Grants and contracts are paid directly to the provider so long as slots are adequately filled, which is a more predictable funding source than vouchers or certificates. Stable funding offers providers incentive to pay the fixed costs associated with providing high-quality child care, such as adequate salaries to attract qualified staff, or to provide higher cost care, such as for infants and toddlers or children with special needs, or to locate in low-income or rural communities.

If a Lead Agency chooses to use grants and contracts to provide direct services, we recommend considering the ability of the child care market to sustain high-quality child care providers in certain localities for specific populations. Grants and contracts may help lessen the effects of larger economic changes that may impact the child care market. A recession may cause high-quality child care centers to close. However, because of the significant start-up costs associated with establishing a high-quality child care facility, the supply of child care may take longer to return to the market, making it difficult for parents to find child care. Contracting slots during a recession helps to preserve access to high-quality child care for low-income families and stabilize the income of providers, helping them survive the recession and continue to benefit the community. (Warner, M., Recession, Stimulus and the Child Care Sector: Understanding Economic Dynamics, Calculating Impact, 2009) Grants or contracts can also be used to support two-generation programs for community college students, teen parents, or meet other State priorities such as for homeless children. Grants or contracts can improve accountability by giving the Lead Agency more access to monitor a child care provider’s compliance with health and safety requirements and appropriate billing practices.

When considering whether to use grants or contracts, Lead Agencies are encouraged to contract with multiple types of settings, including child care centers and staff family child care networks or systems. Family child care networks or systems are groups of associated family child care providers who pool funds to share some operating and staffing costs who provide supports to providers often to manage their businesses and enhance quality. Contracting directly with family child care networks allows for more targeted use of funds with providers that benefit from additional supports that may improve quality. Research shows affiliation with a staffed family child care network is a strong predictor of quality in family child care homes, when providers receive visits, training, materials, and other supports from the network through a specially trained coordinator. (Bromer, J. et al., Staffed Support Networks and Quality in Family Child Care: Findings from the Family Child Care Network Impact Study, Erikson Institute, 2008)

Expenditures on activities to improve the quality of child care. Both the quality activity set-aside and the set-aside for infants and toddlers at § 98.50(b) apply to the State and Territory’s full CCDF award, which includes Discretionary, Mandatory, and Federal and State shares of Matching funds. Non-Federal maintenance-of-effort funds are not subject to the quality and infant and toddler set-asides. These amounts are minimum requirements. States and Territories may reserve a larger amount of funding than is required at paragraphs (b)(1) and (2) for these activities. Note that the phase-in of the increase in the quality set-aside at § 98.50(b) only applies to States and Territories. The regulatory language at § 98.50(b) provides that the quality expenditure requirement is out of the aggregate amount of funds expended by a State or Territory. The phase-in and applicability of the quality set-aside for Tribal grantees is at § 98.53(g) and discussed in Subpart I of this final rule.

This final rule at § 98.53(c) lays out specific requirements related to the quality activities funds. First, this rule requires the use of the quality funds to align with an assessment of the Lead Agency’s need to carry out such services. As part of this assessment, we expect Lead Agencies to review current and prior year initiatives and in many cases areas targeted for improvement will not change dramatically from year to year. (Response: Lead Agencies have the flexibility to design an assessment of quality activities that best meets their needs, including how often they do the assessment. We recommend, but do not require, it be done at least every three years to support the CCDF State Plan. We also recommend Lead Agencies include measures and outcomes when quality investments are made to facilitate assessment and ensure that funds are used in an intentional and effective manner.

Comment: A national organization suggested the regulation include a set-aside to improve the quality of care for school-age children and programs.

Response: School-age care is critical to meeting the needs of working families, and we strongly support Lead Agencies continuing to invest quality funds into activities that improve the school-age programs. The allowable quality activities continue to provide opportunities for Lead Agencies to invest in improving the quality of care for school-aged children. However, as the CCDBG Act of 2014 did not include a permanent set-aside for school-age quality activities, we decline to require such a set-aside in this final rule.

Comment: Faith-based and private education organizations requested we revise the regulatory language to require that quality funds be used “in a manner that accommodates a variety of distinctive approaches to early childhood education, such as faith-based, Montessori, and Waldorf programs.”

Response: We declined to add this to the regulatory language. Lead Agencies may choose to follow those parameters when deciding how to use their quality funds, but we do not want to limit their flexibility by including...
additional requirements related to their quality funds. Further, regulatory language at § 98.53(a)(3)(vii) related to the use of quality funds for QRIS or other systems of quality indicators already provides for funds to be used in a way that “accommodate a variety of distinctive approaches to early childhood education and care, including but not limited to, those practices in faith-based settings, community-based settings, child-centered settings, or similar settings that offer a distinctive approach to early childhood development.” It is more appropriate to include this requirement under the QRIS activity than as a general requirement related to quality spending. We have kept the proposed regulatory language.

Funding for Direct Services. At § 98.50, this final rule includes a technical change at paragraph (e) to clarify that the provision applies to the Mandated and Federal and State share of Matching funds. This change simply formalizes previously existing policy. Paragraph (h) has been re-designated without changes.

Paragraph (f) incorporates statutory language and requires Lead Agencies to use at least 70 percent of any Discretionary funds left after the Lead Agency sets aside funding for quality and administrative activities to fund direct services.

This final rule includes a technical change at § 98.50(g), as re-designated, that requires Lead Agencies to spend a substantial portion of the funds remaining after applying provisions at paragraphs (a) through (f) of this section to provide direct child care services to low-income families who are working or attending training or education.

Comment: We received one comment asking for clarification about how the change at paragraph (g) might impact services for certain groups, including “children categorized as protective service cases (for CCDF purposes) whose parents are not working or in education or training.”

Response: The provision at paragraph (g) is a long standing regulatory requirement based on statutory language. The proposed clarification that the funding apply to direct services, which has been retained in this final rule, is based on previously existing policy, and we do not expect it to have an impact on how Lead Agencies deliver services. We did not receive other comments on these provisions and have kept the proposed regulatory language.

§ 98.51 Services for Children Experiencing Homelessness
This final rule includes a new section at § 98.51 that reiterates new statutory language at §658E(c)(2)(E) of the Act, which requires Lead Agencies to spend at least some CCDF funds on activities that improve access to quality child care services for children experiencing homelessness. This requires Lead Agencies to have procedures for allowing children experiencing homelessness to be determined eligible and enroll prior to completion of all required documentation.

The final rule also clarifies that if a child experiencing homelessness is found ineligible, any CCDF payments made prior to the final eligibility determination will not be considered errors or improper payments and any payments owed to a child care provider for services should be paid. Lead Agencies are expected to provide training and technical assistance on identifying and serving children and families experiencing homelessness and outreach strategies.

Comment: Commenters were very supportive of this new section on services to children experiencing homelessness. One national organization was “particularly pleased to see the clear indication that if a family experiencing homelessness is determined to be ineligible after full documentation is obtained, providers still will be paid. This is an important strategy for removing barriers to child care for this population, as many child care providers may be hesitant to accept homeless families into their program for fear of not being paid for services rendered.” They were also supportive of the policy clarification that “...training and technical assistance is not limited to child care providers only, but is to be directed to Lead Agency staff as well. This will better ensure that children can be identified at the point of application and that administrators and policy makers are better educated on the unique needs of this population.”

§ 98.52 Child Care Resource and Referral System

Section 658E(c)(2)(E) of the Act allows, but does not require, Lead Agencies to use CCDF funds for child care resource and referral services to assist with consumer education and specifies functions of such entities. Consistent with this provision, this final rule at § 98.52 incorporates statutory language that allows Lead Agencies to spend funds to establish or support a system of local or regional child care resource and referral organizations that is coordinated, to the extent determined by the Lead Agency, by a statewide public or private nonprofit, community-based or regionally based, local child care resource and referral organization.

Paragraph (b) specifies a list of resource and referral activities that should be carried out at the direction of the Lead Agency. Therefore, if the Lead Agency does not need the child care resource and referral organization to carry out a certain activity, the organization does not have to carry out that activity.

Comment: Commenters expressed support for child care resource and referral agencies and the important role they can play in helping families access child care and providing consumer education about quality child care to parents of children receiving subsidies and the general public. A national organization representing many child care resource and referral agencies recommended “the community relationships that have been built over the past decades by State and local child care resource and referral agencies can be utilized as a foundation for any initiatives designed to improve the information provided to consumers, as well as expanding the reach of the services.” While most comments related to this provision were generally about the work of child care resource and referral agencies, one commenter expressed concern about language included in the proposed regulation that would give Lead Agencies discretion to decide which of the activities at paragraph (b) would be required if a Lead Agency chose to fund child care resource and referral agencies. The commenter noted, “These are important and interrelated functions. There is the possibility under the proposed regulations that States may pursue a checklist.”

Response: We strongly agree with commenters that child care resource and referral organizations can play a critical role in helping parents access high-quality child care. Child care resource and referral organizations should assist Lead Agencies in meeting the expanded requirements to provide information to families and help meet the new purpose of increasing family engagement. When determining partnerships with local resource and referral agencies, we recommend Lead Agencies give consideration to the expanded requirements for consumer education at § 98.33 and how best to meet those requirements, including whether existing child care resource and referral agencies and/or additional partners can assist in reaching low-income parents of
children receiving subsidies, providers, and the general public.

The activities at paragraph (b) lay out a strong framework for how Lead Agencies and child care resource and referral agencies can work together. However, Lead Agencies need flexibility in how they choose to work with different organizations, including child care resource and referral agencies, and we have chosen to leave the regulatory language as proposed in the NPRM.

§ 98.53 Activities To Improve the Quality of Child Care

As noted above, the CCDBG Act of 2014 increased the percent of expenditures Lead Agencies must spend on quality activities. We strongly encourage Lead Agencies to develop a carefully considered framework for quality expenditures that takes into account the activities specified by the Act, and uses data on gaps in quality of care and the workforce, as well as effective quality enhancement efforts, to target these resources. Lead Agencies should also coordinate quality activities with the statutory requirement to spend at least three percent of expenditures on improving quality and access for infants and toddlers, beginning in FY 2017.

Section 658G(b) of the Act includes a list of 10 allowable quality activities and requires Lead Agencies to spend their quality funds on at least one of the 10 activities. This final rule incorporates and expands on the list of allowable activities at § 98.53(a). In addition, we removed language included in the proposed rule at § 98.53(a) that said quality funds had to be used to “increase the number of low-income children in high-quality child care” and replaced it with “improve the quality of child care services for all children, regardless of CCDF receipt, in accordance with paragraph (d)” This ensures consistency with the provision at § 98.53(d) that clarifies quality activities are not restricted to CCDF children. Below we include an explanation and response to comments on the allowable quality activities.

1. Supporting the training, professional development, and postsecondary education of the child care workforce as part of a progression of professional development. This final rule includes professional development as an allowable quality improvement expenditure at § 98.53(a)(1). The Act references the section of the Plan requiring assurances related to training and professional development, which is elaborated on in the rule at § 98.44. We encourage Lead Agencies to align the uses of funds for training, professional development, and postsecondary education with the State or Territory’s framework and progression of professional development to maximize resources. Training and professional development may be provided through institutions of higher education, child care resource and referral agencies, worker organizations, early childhood professional associations, and other entities. Additional areas for investments in training and professional development, are included with additional detail at § 98.53(a)(1)(i) through (vii) as follows:

(a) Offering training, professional development and post-secondary education that relate to the use of scientifically-based, developmentally, culturally, and age-appropriate strategies to promote all of the major domains of child development and learning, including those related to nutrition and physical activity and specialized training for working with populations of children, including different age groups, English learners, children with disabilities, and Native Americans and Native Hawaiians, to the extent practicable, in accordance with the Act.

(b) Incorporating the effective use of data to guide program improvement and improve opportunities for caregivers, teachers and directors to advance on their progression of training, professional development, and postsecondary education. We expanded upon the statutory language to include opportunities for caregivers, teachers and directors to advance professionally as there are a variety of data collected (such as information from licensing inspectors, quality rating and improvement systems, or accreditation assessments) that can guide program improvement by helping providers make adjustments in the physical environment and teaching practices.

(c) Including effective, age-appropriate behavior management strategies and training, including positive behavior interventions and support models for birth to school-age, that promote positive social and emotional development and reduce challenging behaviors, including reducing suspensions and expulsions of children under age five for such behaviors.

(d) Providing training and outreach on engaging parents and families in culturally and linguistically appropriate ways to expand their knowledge, skills, and capacity to become meaningful partners in supporting their children’s positive development.

(e) Providing training in nutrition and physical activity needs of young children.

(f) Providing training or professional development for caregivers, teachers and directors regarding the early neurological development of children; and

(g) Connecting caregivers, teachers and directors of child care providers with available financial aid to help them pursue relevant postsecondary education, or delivering other financial resources directly through programs that provide scholarships and compensation improvements for education attainment and retention.

2. Improving upon the development or implementation of the early learning and development guidelines. We restate at § 98.53(a)(2) statutory language to allow the use of CCDF quality funds to provide technical assistance to eligible child care providers on the development or implementation of early learning and development guidelines. Lead Agencies should coordinate quality activities with the early learning guidelines and development guidelines should be developmentally appropriate for all children from birth to kindergarten entry, describing what such children should know and be able to do, and cover the essential domains of early childhood development. Most States and Territories already have such guidelines, but may need to update them or better integrate them into their professional development system required at § 98.44. Section 658E(c)(G) of the Act requires Lead Agencies to describe training and professional development, including the ongoing professional development on early learning guidelines. In June 2015, ACF released the newly revised Head Start Early Learning Outcomes Framework: Ages Birth to Five (HSELOF, 2015). The HSELOF provides research-based expectations for children’s learning and development across five domains from birth to age five. As States and Territories undertake revisions to their early learning guidelines, we encourage them to crosswalk their guidelines with the HSELOF to ensure they are comprehensive and aligned. Coordinating between State/Territory early learning and development guidelines and the HSELOF can help build connections between child care programs and Early Head Start/Head Start programs. We also encourage Lead Agencies to consider expanding learning and development guidelines for school-age children, either through linkages to programs already in place through the State department of education or local educational agencies (LEAs), or by adapting current early learning and development guidelines to
Developing, implementing, or enhancing a tiered quality rating and improvement system (QRIS). We incorporate this allowable activity at § 98.53(a)(3). The Act lists seven characteristics of a QRIS that Lead Agencies may choose to incorporate when developing a QRIS with quality funds, which we expand upon:

(a) Support and assess the quality of child care providers in the State, Territory, or Tribe. QRIS should include training and technical assistance to child care providers to help them improve the quality of care and on-site quality assessments appropriate to the setting.

(b) Build on licensing standards and other regulatory standards for such providers. We encourage Lead Agencies to incorporate their licensing standards and other regulatory standards as the first level or tier in their QRIS. Making licensing the first tier facilitates incorporating all licensed providers into the QRIS.

(c) Be designed to improve the quality of different types of child care providers and services. We encourage Lead Agencies to implement QRIS that are applicable to all child care sectors and address the needs of all children, including children of all ages, families of all cultural-socio-economic backgrounds, and practitioners. One way to provide support for different types of care is providing quality funds to support staffed family child care networks that can provide coaching and support to individual family child care providers to improve the quality in those settings.

(d) Describe the safety of child care facilities. Health and safety are the foundations of quality, and should not be treated as wholly separate requirements. Including the safety of child care facilities as part of a QRIS helps to reinforce this connection.

(e) Build the capacity of early childhood programs and communities to support parents’ and families’ understanding of the early childhood system and the ratings of the programs in which the child is enrolled. This capacity may be built through a robust consumer and provider education system, as described at § 98.33. Lead Agencies should provide clear explanations of quality ratings to parents. In addition to the Web site, Lead Agencies may have providers post their quality rating or have information explaining the rating system available at child care centers and family child care homes. This information should also be accessible to parents with low literacy or limited English proficiency.

(f) Provide, to the maximum extent practicable, financial incentives and other supports designed to expand the full diversity of child care options and help child care providers improve the quality of services. Research has found that initial supports and significant financial incentives are needed to make the quality improvements necessary for providers to move up levels in the QRIS. In order to ensure that providers continue to improve their quality and help move more low-income children into high-quality child care, we recommend Lead Agencies to make these incentives a focus of investment; and

(g) Accommodate a variety of distinctive approaches to early childhood education and care, including but not limited to, those practices in faith-based settings, community-based settings, child-centered settings, or similar settings that offer a distinct approach to early childhood development. Parental choice is a very important part of the CCDF program, and parents often consider a variety of factors, including religious affiliation, when choosing a child care provider. Lead Agencies should take these factors into account when setting quality standards and levels in their QRIS, as well as designing how the information will be made available to the public.

4. Improving the supply and quality of child care programs and services for infants and toddlers. The Act includes improving the supply and quality of child care programs and services for infants and toddlers as an allowable quality activity, which we reiterate at § 98.53(a)(4). Lead Agencies may use any quality funds for infant and toddler quality activities, in addition to the required three percent infant and toddler quality set-aside. Lead Agencies are encouraged to pay special attention to what is needed to enhance the supply of high-quality care for infants and toddlers in developing their quality investment framework and conduct activities in the main and targeted set asides to use resources most effectively. The Act and rule state that allowable activities may include:

(a) Establishing or expanding high-quality community or neighborhood-based family and child development centers, which may serve as resources to child care providers in order to improve the quality of early childhood services provided to infants and toddlers from low-income families. To help eligible child care providers improve their capacity to offer high-quality, age-appropriate care to infants and toddlers from low-income families. We interpret this provision to encourage the provision of resources to high-quality child care providers or other qualified community-based organizations that serve as hubs of support to providers in the community (by providing coaching or mentoring opportunities, facilitating efficient shared services, lending libraries, etc.).

(b) Establishing or expanding the operation of community or neighborhood-based family child care networks. As discussed earlier, staffed family child care networks can help improve the quality of family child care providers. Lead Agencies may choose to use the quality funds to help networks cover overhead and quality enhancement costs, such as providing access to coaches or health consultants, substitutes in order for staff to attend professional development, and peer activities.

(c) Promoting and expanding child care providers’ ability to provide developmentally appropriate services for infants and toddlers, such as primary caregiving, continuity, responsive care, and foundations for future cognitive development.

(d) If applicable, developing infant and toddler components within the Lead Agency’s QRIS for child care providers for infants and toddlers, or the development of infant and toddler components in the child care licensing regulations or early learning and development guidelines. Adopting standards specifically for infants and toddlers may be necessary to ensure the systemic support needed for individually-responsive care.

(e) Improving the ability of parents to access transparent and easy to understand consumer education about high-quality infant and toddler care as described at § 98.33; and

(f) Carrying out other activities determined by the Lead Agency to improve the quality of infant and toddler care provided, and for which there is evidence that the activities will lead to improved infant and toddler health and safety, infant and toddler cognitive and physical development, or infant and toddler well-being, including providing health and safety training (including training in safe sleep practices, first aid, and cardiopulmonary resuscitation for providers and caregivers).

5. Establishing or expanding a statewide system of child care resource and referral services. Section § 98.53(a)(5) of the final rule reiterates statutory language to include establishing or expanding a statewide
system of child care resource and referral services as an allowable quality activity. While § 98.52 includes a list of activities that child care resource and referral agencies should carry out if they are funded by Lead Agencies, Lead Agencies do not have to limit their resource and referral-related quality funds to those activities. 

6. Facilitating compliance with health and safety. The final rule restates statutory language at § 98.53(a)(6) to include facilitating compliance with Lead Agency requirements for inspection, monitoring, training, and health and safety, and with licensing standards. While it is likely Lead Agencies will need to use quality funding for implementation and enforcement of the new minimum health and safety requirements for child care providers in the Act, we urge them to consider expenditures on this purpose foundational to enhancing quality, and consider how these investments are a part of the States’ progress in improving the quality of child care services. For example, Lead Agencies should consider linking quality expenditures for health and safety training to the quality framework discussed earlier in this preamble, such that a Lead Agency may establish a QRIS that ties eligibility for providers to participate directly to licensing as the base level.

7. Evaluating and assessing the quality and effectiveness of child care programs and services offered, including evaluating how such programs positively impact children. The statutorily-allowable list of quality activities includes at § 98.53(a)(7) evaluating and assessing the quality and effectiveness of child care programs and services offered, including evaluating how such programs positively impact children. This final rule at § 98.53(f)(3) requires Lead Agencies to report on the measures they will use to evaluate progress in improving the quality of child care programs and services. Including evaluation as an allowable quality activity recognizes that evaluating progress may take additional investments, for which Lead Agencies may use quality funds. A good evaluation design can provide information critical to improving a quality initiative at many points in the process, and increase the odds of its ultimate success. (Government Accountability Office, Child Care: States Have Undertaken A Variety of Quality Improvement Initiatives, but More Evaluations of Effectiveness Are Needed, GAO–02–877).

8. Supporting child care providers in the voluntary pursuit of accreditation by a national accrediting body with demonstrated, valid, and reliable program standards of high-quality. The final rule restates statutory language at § 98.53(a)(8) supporting child care providers in the voluntary pursuit of accreditation by a national accrediting body with demonstrated, valid and reliable program standards of high-quality as an allowable quality activity. Accreditation is one way to differentiate the quality of child care providers. In order to gain accreditation, child care centers and family child care homes must meet certain quality standards outlined by accrediting organizations. Meeting these standards involves upfront investments and changes to programs or child-to-staff ratios which increase financial costs to programs. Quality funds can help providers cover these costs.

9. Supporting efforts to develop or adopt high-quality program standards relating to health, mental health, nutrition, physical activity, and physical development. The final rule restates statutory language at § 98.53(a)(9) supporting Lead Agency or local efforts to develop or adopt high-quality program standards relating to health, mental health, nutrition, physical activity, and physical development for children as an allowable quality activity. We recommend Lead Agencies look to Head Start for strong program standards in comprehensive services and consider how these standards may be translated into State and local strategies to deliver a similar array of services to families and children in child care. Half of children receiving CCDF are under the Federal Poverty Line and would qualify for Head Start. This could include adding the standards to licensing, encouraging standards through QRIS, or embedding them in the requirements of grants or contracts for direct services. We encourage Lead Agencies that choose to use their quality funds for this activity to focus on research-based standards and work with specialists to develop age-appropriate standards in these areas.

10. Carrying out other activities, including implementing consumer education provisions, determined by the Lead Agency. This final rule restates statutory language at § 98.53(a)(10) that carrying out other activities, including implementing consumer education provisions at § 98.33, determined by the Lead Agency to improve the quality of child care services provided and for which measurement of outcomes relating to improvement of provider preparedness, child safety, child well-being, or entry to kindergarten is possible, are considered allowable quality activities. This tenth allowable activity provides Lead Agencies flexibility to invest in quality activities that best suit the needs of parents, children, and providers in their area. Over the years, Lead Agencies have been innovative in how they spent their quality funds, creating novel ways for improving quality of care, such as QRIS, that are now widely used tools for quality improvement. Therefore, we encourage Lead Agencies to experiment with the types of quality activities in which they invest. However, it is critical that Lead Agencies ensure that these new quality activities are focused and represent a smart investment of limited resources, which is why any activity that falls in the “other” category must have measurable outcomes that relate to provider preparedness, child safety, child well-being, or entry to kindergarten. Lead Agencies are encouraged to establish research-based measures for evaluating the outcomes of these quality activities. Lead Agencies will report on these measures and activities on an annual basis through the Quality Progress Report at § 98.53(f).

Comment: Several commenters, including national organizations and child care worker organizations, requested that supporting increased compensation for child care workers be included as an allowable use of quality funds. One commenter said, “Predicated upon the research-based connection between quality and compensation, ACF should be explicitly and abundantly clear about States’ ability to use quality dollars to directly support increased compensation for early childhood educators.” Another comment signed by several organizations recommended we “clarify that these resources are presented as additional funding options, but in no way preclude the use of CCDBG funds for such purposes of scholarships or compensation.” Response: We agree low pay for child care workers is a significant issue and impacts the quality of teachers and...
directors that choose to work in child care. As we know that teacher-child interaction is one of the most important determinants of quality, it only makes sense that CCDF quality funds be allowed to be used to help access programs that may help to increase a child care worker's compensation. In response, § 98.53(a)(1)(vii) of the final rule provides that quality funds may be used to deliver financial resources to child care caregivers, teachers, and directors directly through programs that provide scholarships and compensation improvements for education attainment. These resources may include programs designed to increase wages through educational scholarships, education-based salary supplements, and training to current child care staff that will lead to a nationally-recognized credential and/or college credit in early childhood education.

Comment: Several national organizations and child care worker organizations requested we clarify that quality funds may be used for enhanced or differential payment rates for child care providers to cover the higher costs of providing high-quality care or care to infants and toddlers. One comment signed by several national organizations said “Because the base cost of providing quality for infants and toddlers is higher than that for older children, regulations should clarify that enhanced rates, even if not connected to a QRIS, are an allowable quality improvement strategy.” In contrast, one commenter representing several child care resource and referral agencies recommended prohibiting quality funds from being used to support enhanced or differential payment rates because “given the need to increase rates overall throughout the states, [enhanced rates] would crowd out quality activities designed to strengthen the workforce, which we think are already underfunded.”

Response: We recognize that certain types of care are more expensive to provide, including high-quality care and care for infants and toddlers. Lead Agencies have used their quality funds to provide differential rates to child care providers meeting higher levels of quality, either based on state QRIS ratings or other indicators of quality. These enhanced rates both incentivize providers to meet higher-quality standards and supports the increase costs for providers often associated with quality improvements. This final rule continues to allow differential payment rates for higher-quality care as an allowable use of quality funds. However, we have concerns about quality funds being used to increase rates without consideration for the quality of care. The reauthorized Act clearly moves away from the idea that quality funds may be used to simply increase access and instead increase access to high-quality child care. We strongly discourage the use of quality funds for direct services, including enhanced rates for infant and toddler care regardless of quality, and suggest that in the limited circumstances when quality funds are used for this purpose, the rates still be tied in some way to high-quality care.

Comment: A few commenters, including professional organizations, suggested adding to § 98.53(b)(3)(viii): “Build on existing research-based, national accreditation by creating an entry point for accredited providers at an appropriate level higher than level one. Embedding accreditation into the QRIS supports a continuous quality improvement process and facilitates incorporating more and higher-quality providers into the QRIS.”

Response: We declined to add this language to the regulation. We understand that national accreditations are often a marker for higher-quality child care, and some Lead Agencies already consider how these accreditations match up with the requirements of their QRIS or other system of quality indicators. This final rule in no way limits a Lead Agency’s ability to continue this practice. However, adding this to regulatory language may have the impact of limiting a Lead Agency’s flexibility in designing its QRIS. We have chosen to leave how accreditation is incorporated into a QRIS to the discretion of the Lead Agency.

Quality activities not restricted to CCDF children. This final rule clarifies at § 98.53 paragraph (d) that activities to improve the quality of child care are not restricted to children meeting eligibility requirements under § 98.20 or to the child care providers serving children receiving subsidies. Thus, CCDF quality funds may be used to enhance the quality and increase the supply of child care for all families, including those who receive no direct assistance. To ensure consistency, this final rule also removed language included in the proposed rule at § 98.53(a) that said the funds had to be used to “increase the number of low-income children in high-quality child care.” This final rule instead says the Lead Agency must expend funds from each fiscal year’s allotment on quality activities pursuant to § 98.50(b) and § 98.83(g) in accordance with an assessment of need by the Lead Agency. These funds must be used to carry out at least one of the listed quality activities.

Comment: The few comments we received on the provision supported the proposed changes. A local child care resource and referral organization said, “We are fully supportive of the clarification and from our experience on the ground within communities, we see that the broader use of quality dollars is making a difference within communities.” However, one commenter expressed concern that this policy could lead to an increase in quality expenditures at the expense of direct services funding.

Response: This provision clarifies existing policy regarding CCDF quality expenditures, and we do not expect it to cause a shift in how Lead Agencies spend their funds. Lead Agencies continue to have the flexibility to determine how much of their allocation is spent on quality improvements, provided that they meet the expenditure minimums at § 98.50(b) and any targeted expenditure requirements at § 98.53(e). Therefore, we kept the proposed regulatory language.

Targeted funds and quality minimum. This final rule adds paragraph (e) at § 98.53 to codify longstanding ACF policy that targeted funds for quality improvement and other activities included in appropriations law may not count towards meeting the minimum quality spending requirement, unless otherwise specified by Congress. Beginning in FY 2000, Congress included in annual appropriations law for CCDF discretionary funds a requirement for Lead Agencies to spend portions of such funds on specified quality activities. Changes to the minimum quality spending requirement and the addition of a set-aside for infant and toddler care included in reauthorization may lead to changes or removal of targeted funds from annual appropriations law. However, we have chosen to include this provision to formalize the policy, in the event that targeted funds are included in future appropriations.

Reporting on quality activities. Sections 658G(c) and (d) of the Act require Lead Agencies to report total expenditures on quality activities, certify that those expenditures met the minimum quality expenditure requirement, and describe the quality activities funded. This final rule incorporates these reporting requirements into the regulation at § 98.53(f), requiring Lead Agencies to prepare and submit annual reports to the Secretary, including a quality progress report and expenditure report. The reports must be made publicly available, preferably on the Lead Agency’s consumer education Web site.
required at § 98.33(a). This final rule also requires that Lead Agencies detail the measures used to evaluate progress in improving the quality of child care programs and services, and data on the extent to which investments have shown improvements on the measures. Additionally, Lead Agencies must describe any changes to regulations, enforcement mechanisms, or other policies addressing health and safety based on an annual review and assessment of serious child injuries and any deaths occurring in child care programs serving children. While Lead Agencies are required to include child care programs serving children receiving CCDF in their reporting, we encourage the inclusion of other regulated and unregulated child care centers and family child care homes, to the extent possible, in keeping with the overall purpose of CCDF to enable more low-income children to access high-quality child care.

Currently, States and Territories report their categorical expenditures through the ACF–696 reporting form. This form is used to determine if the Lead Agency has met the minimum quality expenditure amount and is referenced at § 98.65(g) in this rule. We expect to continue to use the ACF–696 form to determine whether a Lead Agency has met expenditure requirements at § 98.50(b), including both the quality set-aside and the set-aside to improve quality for infants and toddlers.

We will capture information on the quality activities and the measures and data used to determine progress in improving the quality of child care services through a Quality Progress Report. This report replaces the Quality Performance Report that was an appendix to the Plan. The Quality Performance Report has played an important role in increasing transparency on quality spending. The new Quality Progress Report will continue to gather detailed information about quality activities, but include more specific data points to reflect the new quality activities required by the Act and this final rule. The Quality Progress Report will be a new annual data collection and will require a public comment and response period as part of the Paperwork Reduction Act process, which will give Lead Agencies and others the opportunity to comment on the specifics of the report.

As part of the Quality Progress Report, States and Territories will be required to describe any changes to regulations, enforcement mechanisms, or other policies addressing health and safety based on an annual review and assessment of any serious injuries and deaths occurring in child care programs serving children receiving CCDF assistance, and, to the extent possible, in other regulated and unregulated child care centers and family child care homes. This provision complements § 98.41(d)(4), discussed earlier in the preamble, which requires child care providers to report to a designated State or Territorial entity any serious injuries or deaths of children occurring in child care. States and Territories must consider any serious injuries and deaths reported by providers and other information as part of their annual review and assessment. This report also works in conjunction with the requirements at § 98.33(a)(4) that Lead Agencies post the annual aggregate number of deaths and serious injuries to their consumer education Web sites.

This provision requires Lead Agencies to list and describe the annual number of child injuries and fatalities in child care and to describe the results of an annual review of all serious child injuries and deaths occurring in child care. The primary purpose of this change is the prevention of future tragedies. Sometimes, incidents of child injury or death in child care are preventable. For example, one State reviewed the circumstances surrounding a widely-publicized, tragic death in child care and identified several opportunities to improve State monitoring and enforcement that might otherwise have identified the very unsafe circumstances surrounding the child’s death and prevented this tragedy. The State moved quickly to make several changes to its monitoring procedures. It is important to learn from these tragedies to better protect children in the future. Lead Agencies should review all serious child injuries and deaths in child care, including lapses in health and safety (e.g., unsafe sleep practices for infants, transportation safety, issues with physical safety of facilities, etc.) to help identify appropriate responses, such as training needs.

The utility of this assessment is reliant upon the Lead Agency obtaining accurate, detailed information about any child injuries and deaths that occur in child care. Therefore, ACF strongly encourages Lead Agencies to work with the State or Territory entity responsible for child care licensing in conducting the review and also with the established Child Death Review systems and with the National Center for the Review and Prevention of Child Death (www.childdeathreview.org). The National Center for the Review and Prevention of Child Death, which is funded by the Maternal and Child Health Bureau in the Health Resources and Services Administration (HRSA), reports there are more than 1,200 State and local teams in all 50 States and the District of Columbia, and emerging teams in Guam and the Navajo Nation. (National Center for the Review and Prevention of Child Death, Keeping Kids Alive: A Report on the Status of Child Death Review in the United States, 2013) The Child Death Review system is a process in which multidisciplinary teams of people meet to share and discuss case information on deaths in order to understand how and why children die so that they can take action to prevent other deaths. These review systems vary in scope and in the types of death reviewed, but every review panel is charged with making both policy and practice recommendations that are usually submitted to the State governor and are publicly available. The National Center for the Review and Prevention of Child Death provides support to local and State teams throughout the child death review process through training and technical assistance designed to strengthen the review and the prevention of future deaths.

Lead Agencies also may work in conjunction with the National Commission to Eliminate Child Abuse and Neglect Fatalities, established in 2013 by the Protect Our Kids Act. (Pub. L. 112–275). The Commission, consisting of 12 members appointed by the President and Congress, published its report Within Our Reach: A National Strategy to Eliminate Child Abuse and Neglect Fatalities (http://eliminatechildabusefatalities.sites.usa.gov/files/2016/03/CECANF-final-report.pdf) in 2016. Over two years, the Commission held hearings in 11 jurisdictions to hear from State leaders, local and tribal leaders, child protection and safety staff, advocates, parents, and other stakeholders. The report outlines a strategy to protect children at highest risk of fatality from abuse and neglect. Although this Commission only studied a subsection of child deaths, it is important that Lead Agencies work with the agencies charged with reviewing and implementing these recommendations and take them into consideration as they examine serious injuries and deaths occurring in child care settings.

The only comment received on this provision was positive and said, “This requirement will help prevent future incidents and ensure States use this feedback proactively to protect children”. We have kept the proposed regulatory language.
VerDate Sep<11>2014 21:18 Sep 29, 2016 Jkt 238001 PO 00000 Frm 00092 Fmt 4701 Sfmt 4700 E:\FR\Fm30SER2.SGM 30SER2

This final rule adds a fifth component to the QPR, which requires Lead Agencies to report how they responded to complaints received through the national hotline and Web site required by Section 658L(b)(2) of the Act. As discussed earlier, §98.16(hh) requires Lead Agencies report in their CCDF plans how they will respond to complaints received through the national hotline and Web site. The addition of this component to the QPR allows for HHS to gather information on how Lead Agencies handled the complaints they received. Adding this question to the QPR allows for HHS to ensure that complaints received through the national hotline and Web site have been addressed in a way deemed appropriate by the Lead Agency, provided the response meets health and safety requirements. As the QPR will be going through a new OMB clearance process under the Paperwork Reduction Act, Lead Agencies and other stakeholders will have the opportunity to comment on specific questions related to this regulatory requirement.

§ 98.54 Administrative Costs
Section 658E(c)(3) of the Act and regulations at §98.54(a), as re-designated, prohibit Lead Agencies from spending more than five percent of CCDF funds for administrative activities, such as salaries and related costs of administrative staff and travel costs. Paragraph 98.54(c) provides that this limitation applies only to States and Territories (note that a 15 percent limitation applies to Tribes under §98.83(g)). This final rule at §98.54(b) formally adds a list of activities that should not be counted towards the limitation on administrative expenditures. As stated in the preamble to the 1998 CCDF Final Rule, the Conference Agreement that accompanied the Personal Responsibility and Work Opportunity Reconciliation Act of 1996 (H. Rep. 104–725 at 411) indicated that these activities should not be considered administrative costs. This list is incorporated into the regulation itself for clarity and easy reference. We did not receive any comments on this provision and kept the proposed regulatory language.

Administrative costs and sub-recipients. New paragraph §98.54(e) clarifies that if a Lead Agency enters into agreements with sub-recipients for operation of the CCDF program, the amount of the contract or grant attributable to administrative activities as described above (§98.83(g) for Tribes) shall be counted towards the administrative cost limit. Previously existing CCDF regulation at §98.54(a) provides a listing of activities that may constitute administrative costs and defines administrative costs to include administrative services performed by grantees or sub-grantees or under agreements with third-parties. We have received questions from Lead Agencies to clarify whether activities performed through sub-recipients or contractors are subject to the five percent administrative cost limitation. While we do not as a technical matter separately apply the administrative cap to funds provided to each subrecipient, the Lead Agency must ensure that the total amount of CCDF funds expended on administrative activities—regardless of whether expended by the Lead Agency directly or via sub-grant, contract, or other mechanism—does not exceed the administrative cost limit.

Comment: A couple States submitted comments requesting clarification about which activities the cap applied to and how the change might impact their current sub-contracts. For example, one State commented that applying the five percent administrative cap to contracted centers would cause a significant number of providers to close.

Response: The administrative expenditure cap applies to activities related to administering the CCDF program. Administrative activities at §98.54(a), as re-designated, include, but are not limited to: (1) Salaries and related costs of the staff of the Lead Agency or other agencies engaged in the administration and implementation of the program pursuant to §98.11; (2) travel costs for official business in carrying out the program; (3) administrative services, including such services as accounting services, performed by grantees or sub-grantees or under agreements with third parties; (4) audit services as required at §98.65; (5) other costs for goods and services required for the administration of the program, including rental or purchase of equipment, utilities, and office supplies; and, (6) indirect costs as determined by an independent cost agreement or cost allocation plan pursuant to §98.57, as re-designated.

The administrative cost cap only applies to activities related to administering the CCDF program in a State, Territory, or Tribe. It does not apply to administration of child care services in an individual child care center or family child care home. Any costs related to administration of services by a provider, even if that provider is being paid through a contract or sub-contract, are considered direct services. Paragraph 98.54(c) provides a listing of activities that do not as a technical matter separately apply the administrative cost cap. We have kept the proposed regulatory language.

§ 98.56 Restrictions on the Use of Funds
CCDF regulations at §98.56(b)(1), as re-designated, indicate that States and local agencies may not spend CCDF funds for the purchase or improvement of land or for the purchase, construction, or permanent improvement of any building or facility. However, funds may be expended for minor remodeling, and for upgrading child care facilities to assure that providers meet State and local child care standards, including applicable health and safety requirements. States and Territories may use CCDF funds for minor renovations related to meeting the requirements of the Americans with Disabilities Act (ADA) of 1990 (42 U.S.C. 12101, et seq.). However, funds may not be used for major renovation or construction for purposes of meeting the requirements of the ADA. Tribal Lead Agencies may request approval to use CCDF funds for construction and major

67528 Federal Register / Vol. 81, No. 190 / Friday, September 30, 2016 / Rules and Regulations
This final rule adds language at § 98.56(b)(1) to indicate that improvements or upgrades to a facility that are not specified under the definitions of construction or major renovation at § 98.2 may be considered minor remodeling and are, therefore, not prohibited. This final rule formally incorporates ACF’s long-standing interpretation into regulatory language.

Subpart G—Financial Management

The focus of subpart G is to ensure proper financial management of the CCDF program, both at the Federal level by HHS and the Lead Agency level. The final rule changes to this section include: Addressing the amount of CCDF funds the Secretary may set-aside for technical assistance, research and evaluation, a national toll-free hotline and Web site; incorporating targeted funds that have been included in appropriations language (but were not in the previous regulations); inclusion of the details of required financial reporting by Lead Agencies; and clarifying requirements related to obligations. Lastly, the final rule added a new section on program integrity.

§ 98.60 Availability of Funds

Technical assistance, research and evaluation; national toll-free hotline and Web site. Prior to reauthorization, the Act allowed the Secretary to provide technical assistance to help Lead Agencies carry out the CCDF requirements. Pursuant to pre-existing regulations, the Secretary withheld one quarter of one percent of a fiscal year’s appropriation for technical assistance. The reauthorization added greater specificity to the Act regarding the provision of technical assistance.

Specifically, Section 658I(a)(3) of the Act requires the Secretary to provide technical assistance, such as technical assistance to improve the business practices of child care providers, (which may include providing technical assistance on a reimbursable basis) which shall be provided by qualified experts on practices grounded in scientifically valid research, where appropriate. Section 658I(a)(4) requires the Secretary to disseminate, for voluntary informational purposes, information on practices that scientifically valid research indicates are most successful in improving the quality of programs that receive CCDF assistance. Section 658G requires the Secretary to offer technical assistance which may include technical assistance through the use of grants or cooperative agreements, on activities funded by quality improvement expenditures.

In addition, Sections 658O(a)(4), and 658O(a)(5) of the Act indicate that the Secretary shall reserve up to 1/2 of 1 percent of the amount appropriated for the Act to support these technical assistance and dissemination activities. Additionally, section 658O(a)(3) of the Act indicates that the Secretary may reserve up to $1.5 million for the operation of a national toll-free hotline and Web site. Annual appropriations law has provided funding for a national hotline and Web site in prior years, but this funding has now been authorized through the Act with an expanded scope and requirements. In this final rule at § 98.60(b), we do not specify a particular funding amount for technical assistance, research and evaluation, or the national hotline and Web site. Rather, we say that “a portion” of CCDF funds will be made available for these purposes.

Because appropriations law has addressed the amount of funding for some of these activities in the past, we want to leave flexibility to accommodate any future decisions by Congress. As we indicate in the regulatory language, funding for these activities is subject to the availability of appropriations, and will be made in accordance with relevant statutory provisions and the apportionment of funds from the Office of Management and Budget.

Obligations. The final rule adds a new provision at § 98.60(d)(7) to clarify that the transfer of funds from a Lead Agency to a third party or sub-recipient counts as an obligation, even when these funds are used for issuing child care certificates. Some Lead Agencies contract with local units of government or non-governmental third parties, such as child care resource and referral agencies, to administer their CCDF programs. The functions included in these contracts could include eligibility determination, subsidy authorization, and provider payments. The contracting of some of these duties to a third party has led to many policy questions as to whether CCDF funds that are used by third parties to administer certificate programs are considered obligated at the time the subgrant or contract is executed between the Lead Agency and the third party pursuant to regulation at § 98.60(d)(5), or rather at the time the voucher or certificate is issued to a family pursuant to pre-existing regulation at § 98.60(d)(6).

The preamble to the August 4, 1992, CCDBG Regulations (57 FR 34395) helps clarify the intent of § 98.60(d). It states, “The requirement that State and Territorial grantees obligate their funds [within obligation timeframes] applies only to the State or Territorial grantee. The requirement does not extend to the Grantee’s sub-grantees or contractors unless State or local laws or procedures require obligation in the same fiscal year.” It follows that, in the absence of State or local laws or procedure to the contrary, § 98.60(d)(6) would not apply when the issuance of a voucher or certificate is administered by a third party because the funds used to issue the vouchers or certificates would have already been obligated by the Lead Agency. Based on this language, we have interpreted the obligation to take place at the time of contract execution between the Lead Agency and the third party. The addition of the added paragraph (d)(7) simply codifies pre-existing ACF policy, and does not change pre-existing obligation and liquidation requirements. Note that a local office of the Lead Agency, and certain other entities specified in regulation at § 98.60(d)(5) are not considered third parties. A third party must be a wholly separate organization and cannot be subordinate or superior offices of the Lead Agency, or under the same governmental organization as the Lead Agency.

The final rule adds several technical changes at § 98.60(d). It updates a reference to HHS regulations on expenditures and obligations at § 98.60(d)(4)(ii) to reflect new rules issued by HHS that implement the Office of Management and Budget’s Uniform Administrative Requirements for Federal awards. The final rule includes § 98.60(6)(d)(8) to clarify that the provision regarding the obligation of funds used for certificates applies specifically in instances where the Lead Agency issues child care certificates. Additionally, the final rule adds a technical change at § 98.60(h) to eliminate a reference to § 98.51(a)(2)(ii), which has been deleted. This technical change does not change the meaning or the substance of paragraph (h), which specifies that repayment of loans made to child care providers as part of a quality improvement activity may be made in cash or in services provided in-kind.
Comment: One State suggested that we modify the term “certificate” related to payment of services in § 98.60(a)(6) and (7) of this final rule. The commenter said that the Act’s definition of the term ‘certificate’ indicates that disbursement is issued by a grantee directly to a parent, implying that the parent then uses this to pay a child care provider—a sort of arm’s length transaction common in a market based system. The commenter stated that this does not match the certificate payment process in many States—where payment is made to the provider rather than the parent. Furthermore, the commenter stated that the term “grantee”, used in the definition of “certificate”, is synonymous with “Lead Agency” or with their designee. The commenter suggested either defining “grantee” or, replacing use of “grantee” where it occurs with “Lead Agency” or their designee for consistency.

Response: We declined to modify the regulatory definition for the term “certificate,” also commonly known as “voucher.” The Act’s definition is largely based on statutory language. In the Act, the term “child care certificate” means a certificate (that may be a check, or other disbursement) that is issued directly to a parent who may use such certificate only as payment for child care services. However, we recognize that many States in fact make payments directly to child care providers on the parents’ behalf for purposes of administrative ease, which is allowable as long as other requirements regarding certificate (including the parental choice provisions). We agree that the term “grantee” in this definition has the same meaning as the term “Lead Agency” or designee.

§ 98.61 Allotments From Discretionary Funds

Tribal funds. To address amended section 658O(a)(2) of the Act, this final rule revises § 98.61(c) to indicate that Indian Tribes and Tribal organizations will receive an amount “not less than” two percent of the amount appropriated for the Child Care and Development Block Grant (i.e., CCDF Tribal Discretionary Funds). Under prior law and regulation, Tribes received “up to” two percent. Under the reauthorized Act, the Secretary may only reserve an amount greater than 2 percent for Tribes if two conditions are met: (1) The amount appropriated is greater than the amount appropriated in FY 2014, and (2) the amount allotted to States is not less than the amount allotted in FY 2014. It is important to note that reauthorization of the Act allows for a potential increase in the Tribal Discretionary funds, but it does not affect the Tribal Mandatory funds. Tribes may only be awarded up to 2 percent of the Mandatory Funds, per Section 418(a)(4) of the Social Security Act (42 U.S.C. 618(a)(4)). Recognizing the needs of Tribal communities, ACF increased the Tribal CCDF Discretionary set-aside from 2 percent to 2.5 percent for FY 2015, and to 2.75 percent for FY 2016. We encourage Tribes to use any increased funds for activities included in reauthorization, such as health and safety, continuity of care, and consumer education. ACF has consulted with Tribes regarding future funding levels and plans to make that determination on an annual basis, taking into consideration the overall appropriation level as well as unique Tribal needs and circumstances, including the need for sufficient funding to provide care that address culture and language in Tribal communities.

Targeted funds. This final rule adds § 98.61(f) to reference funds targeted through annual appropriations law. In prior years since FY 2000, annual appropriations law has required the use of specified amounts of CCDF funds for targeted purposes (e.g., quality, infant and toddler quality, school-age care and resource and referral). The reauthorized Act includes increased quality spending requirements; however, we include this regulatory provision in the event that Congress provides for additional targeted funds in the future. The new paragraph (f) is for clarification so that the regulations provide a complete picture of CCDF funding parameters. New paragraph (f) provides that Lead Agencies shall expend any funds set-aside for targeted activities as directed in appropriations law.

Audits and financial reporting. The final rule adds a technical change at § 98.65(a), regarding the requirement for the Lead Agency to have an audit conducted in accordance with the Single Audit Act Amendments of 1996. This paragraph replaces a reference to OMB Circular A-133 with a reference to 45 CFR part 75, subpart F, which is the new HHS regulation implementing the audit provisions in the Office of Management and Budget’s Uniform Administrative Requirements for Federal awards.

The final rule adds regulatory language at § 98.65(g), which previously provided that the Secretary shall require financial reports as necessary, to now specify that States and Territories must submit quarterly expenditure reports for each fiscal year. Currently, States and Territories submit quarterly expenditure reports via the ACF-696; however, the prior regulations did not describe this reporting in detail. Revised paragraph (b) requires States and Territories to include the following information on expenditures of CCDF grant funds, including Discretionary (which includes any reallocated funds and funds transferred from the TANF block grant), Mandatory, and Matching funds; and State Matching and Maintenance-of-Effort (MOE) funds: (1) Child care administration; (2) Quality activities, including any sub-categories of quality activities as required by ACF; (3) Direct services; (4) Non-direct services including: (i) Computerized information systems, (ii) Certificate program cost/eligibility determination, (iii) All other non-direct services; and (6) Such other information as specified by the Secretary.

We added greater specificity to the regulation in light of the important role expenditure data play in ensuring compliance with the quality expenditure requirements at § 98.51(a), administrative cost cap at § 98.52(a), and obligation and liquidation deadlines at § 98.60(d). Additional expenditure data provide us with important details about how Lead Agencies are spending both their Federal and State CCDF funds, including what proportion of funds are being spent on direct services to families and how much has been invested in quality activities. These reporting requirements do not create an additional burden on Lead Agencies because we are simply updating the regulations to reflect current expenditure reporting processes.

Tribal financial reporting. This final rule adds a new provision at § 98.65 that requires Tribal Lead Agencies to submit annual expenditure reports to the Secretary via the ACF-696T. As with State and Territorial grantees, these expenditure reports help us to ensure that Tribal grantees comply with obligation and liquidation deadlines at § 98.60(e), the fifteen percent administrative cap at § 98.83(g), and the quality expenditure requirement at § 98.51(a). This reporting requirement is current practice.

§ 98.68 Program Integrity

The final rule adds a new section § 98.68, which requires Lead Agencies to have effective procedures and practices that ensure integrity and accountability in the CCDF program. These regulatory changes formalize the implementation process of the CCDF Plan, which require Lead Agencies to report in these areas. The Plan now includes questions on internal controls, monitoring sub-recipients, approach to identify fraud
and payment errors, methods of investigation and collection of identified fraud, and sanctions for clients and providers who engage in fraud. ACF has been working with State, Territorial, and Tribal CCDF Lead Agencies to strengthen program integrity to ensure that funds are maximized to benefit eligible children and families. For example, ACF issued a Program Instruction (CCDF–ACF–PI–2010–06) that provides stronger policy guidance on preventing waste, fraud, and abuse and has worked with States to conduct case record reviews to reduce administrative errors. The requirements in this section build on these efforts and are designed to reduce errors in payment and minimize waste, fraud, and abuse to ensure that funds are being used for allowable program purposes and for eligible beneficiaries. In the final rule, section § 98.68(a) requires Lead Agency internal controls to include processes to ensure sound fiscal management, processes to identify areas of risk, processes to train child care providers and staff of Lead Agency and other agencies engaged in the administration of CCDF about program requirements and integrity, and regular evaluation of internal control activities. Examples of internal controls include practices that identify and prevent errors associated with recipient eligibility and provider payment such as: Checks and balances that ensure accuracy and adherence to procedures; automated checks for red flags or warning signs; and established protocols and procedures to ensure consistency and accountability. We have also added language to the final rule to indicate that such internal controls should be undertaken while maintaining continuity of services. In other words, Lead Agencies must ensure that internal controls designed to limit errors and improper payments do not result in undue administrative burdens for families that would interfere with continued, stable subsidy receipt for eligible families. In addition, § 98.68(b)(1) of this final rule requires Lead Agencies to include in their Plan the processes that are in place to identify fraud and other program violations associated with recipient eligibility and provider payment. These processes may include, but are not limited to, record matching and database linkages, review of attendance and billing records, quality control or quality assurance reviews, and staff training on monitoring and audit processes.

The provision at § 98.68(b)(2) of the final rule requires Lead Agencies to establish internal controls to investigate and recover fraudulent payments and impose sanctions on clients or providers in response to misuse of CCDF program funds. Lead Agencies are required to describe in their Plan the processes that are in place to identify fraud or other program violations. The Lead Agencies’ requirements mandated under § 98.68(b)(2) build on pre-existing requirements at § 98.60(h)(1) to reduce errors in payment and minimize waste, fraud, and abuse to ensure that funds are being used for allowable program purposes and for eligible beneficiaries. Similarly, the provision at § 98.68(c) requires Lead Agencies to describe in their Plans the procedures that are in place for documenting and verifying that children meet eligibility criteria at the time of eligibility determination and redetermination. Lead Agencies should, at a minimum, verify or maintain documentation of the child’s age, family income, and require proof that parents are engaged in eligible activities. Income documentation may include, but is not limited to, pay stubs, tax records, child support enforcement documentation, alimony court records, government benefit letters, and receipts for self-employed applicants. Documentation of participation in eligible activities may include school registration records, class schedules, or job training forms. Lead Agencies are encouraged to use automated verification systems and electronic recordkeeping practices to reduce paperwork.

Comment: A child care worker organization and a national organization supported the new paragraph in section 98.68(a) of this final rule, but wanted to add further language that would require Lead Agencies to describe in their Plan, the processes that are in place to make sure that child care providers are trained and knowledgeable about program violations and administrative rules.

Response: We agree and the final rule incorporates this language at § 98.68(a)(3). In order to ensure program integrity in a fair, consistent, and effective manner, it is essential for child care providers to be trained and knowledgeable about program rules, while maintaining quality of care and continuity of CCDF services. In addition, we have expanded this provision to require training for staff of the Lead Agency and other agencies engaged in administration of the CCDF about program requirements and integrity. It is essential for CCDF staff, especially frontline caseworkers who determine eligibility and authorize services, to be trained in program rules and program integrity efforts.

Subpart H—Program Reporting Requirements

§ 98.71 Contents of Reports

Section 98.71 of the final rule describes administrative data elements that Lead Agencies are required to report to ACF, including basic demographic data on the children served, the reason they are in care, and the general type of care. The majority of changes to reporting requirements described in this final rule have already been implemented through the Office of Management and Budget’s information collection process under the Paperwork Reduction Act. The Office of Child Care issued revised forms and instructions for the ACF–800 (annual aggregate report) and ACF–801 (monthly case-level report) in January 2016. This final rule makes conforming changes in the regulation.

The ACF–801 report includes a data element on the total monthly family income and family size used for determining eligibility. Previous regulations at § 98.71(a)(1) do not include family size. Therefore, this final rule amends the regulatory language at § 98.71(a)(1) to align the regulations with the reporting requirements in effect. This does not represent any change in how Lead Agencies previously reported family income.

In addition, the final rule adds a new provision at § 98.71(a)(2), which requires Lead Agencies to report zip code data on both the family and the child care provider records. These new elements will allow States and Territories and ACF to identify the communities where CCDF families and providers are located, including the type and quality level of providers. Sections 658E(a)(2)(M) and 658E(a)(2)(Q) of the Act require States and Territories to address the needs of certain populations regarding supply and access to high-quality child care services in underserved areas including areas that have significant concentrations of poverty and unemployment. In comments, one national organization strongly supported this provision because it will enable policymakers to assess where families and providers reside and the level of quality available in their communities.

This final rule adds a new element at § 98.71(a)(11) that requires Lead Agencies to report. In addition to the total monthly family co-payment, any amount charged by the provider to the family more than the co-payment in
instances where the provider’s price exceeds the subsidy payment, if applicable. Unlike all the other new data elements in this rule, this element has not yet been added to the ACF–801 form, but will be added through the Paperwork Reduction Act clearance process. For more information about the importance of this data element, see the related discussion on equal access (§ 98.45) earlier in the preamble.

Section 658K(a)(1)(E) of the Act prohibits the monthly case-level report from containing personally identifiable information. As a result, this final rule amends language at § 98.71(a)(14) by deleting Social Security Numbers (SSNs) and instead requiring a unique identifying number from the head of the family unit receiving assistance and from the child care provider. It is imperative that the unique identifier assigned to each head of household be used consistently over time—regardless of whether the family transitions on and off subsidy, or moves within the State or Territory. This will allow Lead Agencies and ACF to identify unique families over time in the absence of the Social Security Number (SSN). A Lead Agency may still use personally identifiable information, such as SSNs, for its own purposes, but this information cannot be reported on the ACF–801. Furthermore, pursuant to the Privacy Act (5 U.S.C. 552a note), Lead Agencies cannot require families to disclose SSNs as a condition of receiving CCDF services. The final rule adds a new provision at § 98.71(a)(16) to require Lead Agencies to report new data element on the primary language spoken in the child’s home, using responses that are consistent with data reporting requirements for the Head Start program. The reauthorized Act includes provisions that support services to English learners. Section 658E(c)(2)(G) of the Act requires Lead Agencies to assure that training and professional development of child care providers address needs of certain populations to the extent practicable, including English learners. Lead Agencies must also take into consideration the cost of providing higher-quality care when setting payment rates pursuant to § 98.44(f)(iii). To ensure that the CCDF program is providing meaningful access to high-quality care, it is essential for Lead Agencies to have data on the quality of CCDF providers. Prior paragraph (a)(16) is re-designated as paragraph (a)(22) but otherwise is unchanged. Several national organizations submitted comments in support of this provision.

The final rule also adds a new provision at § 98.71(b)(5) to report the number of child fatalities by type of care, as required by section 658K(a)(2)(F) of the Act. This should include the number of fatalities occurring among children while in the care and facility of child care providers serving CCDF children (regardless of whether the child who dies was receiving CCDF). Prior paragraph (b)(5) is re-designated as paragraph (b)(6) but otherwise is unchanged. The final rule revises paragraph (c), regarding reporting requirements for Tribal Lead Agencies to specify that the Tribal Lead Agency’s annual report shall include such information as the Secretary will require. We intend to
revisit requirements for all Tribal Lead Agencies, pursuant to the changes in Subpart I. Proposed reporting requirements will be subject to public comment under the Paperwork Reduction Act.

Comment: In general, commenters supported revisions to this section. Specifically, commenters appreciated the additional reporting of various data elements to improve the quality and transparency of the program reporting requirements. Some commenters recommended that Lead Agencies be required to post all reports submitted to ACF on the Lead Agency Web site in a timely manner (e.g., within 30 days), while always respecting family confidentiality.

Response: The final rule adds a new provision at § 98.71(d) to require State and Territorial Lead Agencies make available on a Web site in a timely manner aggregate annual administrative data reports via the ACF–800 under § 98.71(b), quarterly financial reports under § 98.71(i), and annual quality progress reports under § 98.53(f). We understand the value of having reports submitted by Lead Agencies available via the Lead Agencies’ Web sites in a timely manner for purposes of transparency regarding administration of the program.

We declined to require Lead Agencies to post case level reports on their Web site. Pursuant to section 638K(a)(1)(E) of the Act and § 98.71(a)(13) of this final rule, we are concerned about the potential confidentiality issues that may arise related to case-level reporting on ACF–801. We want to protect the confidentiality of families and children who receive CCDF assistance.

Furthermore, we post State-by-State tables of CCDF administrative data on the Office of Child Care Web site. In addition, each year we post an updated dataset of the administrative reports on our collaborative research Web site www.researchconnections.org for use and analysis by researchers.

Comment: Many national organizations supported the provision at § 98.71(a)(18) to require Lead Agencies to report the language spoken at home on the ACF–801. However, one commenter said that the requirements in the Act and the NPRM to provide services and take reasonable steps to provide access to individuals with limited English proficiency can be accomplished without placing additional burdens on States and families to report the language spoken at home. The commenter also stated that Lead Agencies are already aware of the typical languages spoken by families in the community and can design training services to meet the needs of the local community without placing this additional reporting burden on parents.

Response: We declined to remove the provision at § 98.71(a)(18) of this final rule to require Lead Agencies to submit data reporting on language spoken at home on ACF–801. Retaining this reporting requirement is necessary to obtain adequate national longitudinal data on the languages spoken by families at home, so Lead Agencies and child care providers can tailor their services to meet the needs of the families they serve, and to allow for transparency and oversight to ensure adequate access for these families.

Comment: Some national organizations supported the provision we added at § 98.71(a)(17) of this final rule that requires Lead Agencies to report whether a child receiving CCDF has a disability. Some commenters were disappointed with the definition of “child with a disability” in the Act that gives Lead Agencies the flexibility to include child-specific definition. One commenter recommended that the data collection distinguish whether the child has a disability in accordance with (a) IDEA; or (b) ADA or Section 504 of the Rehabilitation Act.

Response: While we appreciated commenters’ support and input on approaches for Lead Agencies to report disability data, we declined to further clarify the type of disability that Lead Agencies must report. We expect Lead Agencies to follow the Act’s definition of “child with a disability”. Under the Act, “child with a disability” means (1) A child with a disability, as defined in section 602 of the Individuals with Disabilities Education Act (20 U.S.C. 1401); (2) A child who is eligible for early intervention services under part C of the Individuals with Disabilities Education Act (20 U.S.C. 1431 et seq.); (3) A child who is less than 13 years of age and who is eligible for services under section 504 of the Rehabilitation Act of 1973 (29 U.S.C. 794); and (4) A child with a disability, as defined by the State involved.

Comment: One State commented about the information technology costs associated with the implementation of the provisions in section § 98.71 of this final rule.

Response: As mention earlier, the Office of Child Care has already implemented the majority of new data reporting requirements through the Paperwork Reduction Act information collection clearance process. For many of the new data elements, we have provided a phased-in implementation period to allow for States and Territories to make necessary changes to their automated systems. Lead Agencies may use CCDF funds to upgrade their data reporting systems to meet the new requirements.

Subpart I—Indian Tribes

This subpart addresses requirements and procedures for Indian Tribes and Tribal organizations applying for or receiving CCDF funds. This section describes provisions of Subpart I and serves as the Tribal summary impact statement as required by Executive Order 13175. CCDF currently provides funding to approximately 260 Tribes and Tribal organizations that administer child care programs for approximately 520 federally-recognized Indian Tribes, either directly or through consortium arrangements. Tribal CCDF programs are intended for the benefit of Indian children, and these programs serve only Indian children. With few exceptions, Tribal CCDF grantees are located in rural and economically challenged areas. In these communities, the CCDF program plays a crucial role in offering child care options to parents as they move toward economic stability, and in promoting learning and development for children. In many cases, Tribal child care programs also emphasize cultural and economic development.

The Act is not explicit in how its provisions apply to Tribes. ACF traditionally issues regulations to define how the Act applies to Tribes. This final rule is the result of several months of consultation on the reauthorized Act and on the 2015 NPRM with Tribes, as well as past consultations and Tribal comments on our 2013 NPRM. We heard from many Tribal leaders and CCDF Administrators asking for flexibility to implement child care programs that meet the needs of individual communities. The requirements in this final rule are designed to increase Tribal Lead Agency flexibility, while balancing the CCDF dual goals of promoting families’ financial stability and fostering healthy child development.

Tribal consultation and comments. ACF is committed to consulting with Tribes and Tribal leadership to the extent practicable and permitted by law, prior to promulgating any regulation that has Tribal implications. As this rule has been developed, ACF has engaged with Tribes through multiple means. The requirements in this final rule were informed by past consultations, listening sessions, and meetings with Tribal representatives on related topics.
Starting in early 2015, we began a series of formal consultations, conducted in accordance with the ACF Tribal Consultation Policy (76 FR 55678) with Tribal leaders to determine how the provisions in the Act should apply to Tribes and Tribal organizations. In addition to an informal listening session in February 2015, from March to May 2015, OCC held three formal conference calls and an in-person consultation session with Tribal leaders and Tribal CCDF administrators to discuss the impact of reauthorization on Tribes. Tribes and Tribal organizations were informed of these consultations and conference calls through letters to Tribal leaders. Much of the testimony and dialogue focused on the vast differences among Tribes and Tribal organizations.

After the proposed rule was published, OCC conducted a formal, in-person consultation with Tribal leadership in January 2016 during the public comment period. Tribal CCDF administrators and staff were also invited to attend. We included the written testimonies we received as formal comments on the proposed rule. In addition, we held conference calls, including Regional calls with Tribal CCDF Administrators, and disseminated materials specifically addressed to Tribes to describe the impact of the proposed rule. Throughout, we encouraged Tribes to submit written comments during the public comment period. We received 15 comments from Tribes and Tribal organizations, many of which were co-signed by multiple Tribes. We will address these comments in this subpart.

This rule was informed by these conversations and comments. We continue to balance flexibility for Tribes to address the unique needs of their communities with the need to ensure accountability and quality child care for children. In response to the comments we received from Tribes, we have made changes to how the final rule applies to Tribes, including clarifying implementation periods and adding in flexibility around the background check requirements. Below we discuss broader contextual issues, including how provisions located outside of Subpart I apply to Tribes, before moving on to a discussion of changes to Sections 98.80, 98.81, 98.82, 98.83, and 98.84.

102–477 programs. We note that Tribes continue to have the option to consolidate their CCDF funds under a plan authorized by the Indian Employment, Training and Related Services Demonstration Act of 1992 (Pub. L. 102–477). This law permits Tribal governments to integrate a number of their federally-funded employment, training, and related services programs into a single, coordinated comprehensive program. ACF publishes annual program instructions providing directions for Tribes wishing to consolidate CCDF funds under an Indian Employment, Training, and Related Services plan. This program instruction will include information on how this final rule impacts the 102–477 Plan. The Department of the Interior has lead responsibility for administration of Public Law 102–477 programs.

**Dual eligibility of Indian children.** Consensus data indicates over 60 percent of American Indian and Alaskan Native families do not reside on reservations or other Native lands; therefore, significant numbers of eligible Indian children and families are served by State Lead Agencies. Eligible Indian children who reside in Tribal service areas continue to have dual eligibility to receive child care services from either the State or Tribal CCDF program, in accordance with pre-existing regulation, at §98.80(d). Section 6580(c)(5) of the Act mandates that, for child care services funded by CCDF, the eligibility of Indian children for a Tribal program does not affect their eligibility for a State program.

**Implementation.** The NPRM did not discuss implementation timelines specific to Tribal Lead Agencies. The CCDBG Act of 2014 included effective dates for States and Territories, but these effective dates do not apply to Tribes.

**Comment:** Many Tribal commenters emphasized that Tribes need an appropriate timeline for implementation of the final rule. The national association of tribal child care programs recommended a 24 to 36 month implementation period.

**Response:** We agreed with the commenters. Although many Tribes have already begun moving forward, this final rule represents a shift in the Tribal CCDF requirements. ACF will determine compliance with provisions in this final rule through review and approval of the FY 2020–2022 Tribal CCDF Plans that become effective October 1, 2019. Using the next Plan cycle to gauge compliance will give Tribes approximately three years (or close to 36 months) to implement the new provisions in the final rule. This will provide more opportunities for consultation and technical assistance to Tribes to assist in development of the CCDF Plan. Tribes may submit Plan amendments, as necessary, if they wish to change their policies prior to the beginning of the next Plan period.

Tribes that have consolidated CCDF with other employment, training and related programs under Public Law (Pub. L. 102–477), are not required to submit separate CCDF Plans, but will be required to submit amendments to their Public Law 102–477 Plans, along with associated documentation, in accordance with this timeframe to demonstrate compliance with the final rule.

**Comment:** The CCDBG Act of 2014 included phased-in increases to the quality expenditure requirements (§98.50(b)(1)), so that States and Territories must spend at least seven percent of their CCDF funds on quality improvement activities starting in FY 2016 and increasing to nine percent by 2020. Starting in FY 2017, States and Territories must also spend three percent on quality improvement activities for infants and toddlers (§98.50(b)(2)). Commenters also asked for Tribal-specific implementation timelines to the quality expenditure requirements.

**Response:** We agreed with the commenters. As the timeframe for States and Territories exists in regulatory language at §98.50(b), in the final rule, we added new regulatory language at §98.83(g) to give Tribes a longer phase-in period. As described later in the preamble, all Tribes, regardless of their CCDF allocation amount, are subject to the quality expenditure requirements. Tribes receiving large and medium allocations are also subject to the three percent infant and toddler quality spending requirement.

Because the quality spending requirements are new to Tribes that were previously exempt, ACF is allowing a phased-in timeframe starting with four percent in FY 2017. In FY 2018 and 2019, the quality expenditure requirements will increase to seven percent and then, to eight percent in FY 2020 and 2021. Finally, starting in FY 2022, Tribes will be required to spend nine percent on quality improvement activities. Tribes with large and medium allocations will be subject to the three percent infant and toddler quality requirement starting in FY 2019.
This phase-in mimics timeframes allowed to States and Territories by the CCDBG Act of 2014 and gives Tribes time to plan for the quality increases each year.

Funding. Tribal CCDF funding is comprised of two funding sources: (1) Discretionary Funds, authorized by the Act and annually appropriated by Congress; and (2) Tribal Mandatory Funds, provided under Section 418(a)(4) of the Social Security Act (42 U.S.C. 618(a)(4)). Reauthorization of the Act allows for a potential increase in the Tribal Discretionary funds, but does not affect the Tribal Mandatory funds. Tribes may only be awarded up to two percent of the Mandatory Funds, per the Social Security Act.

Comment: In the NPRM, ACF asked for comment on the Tribal CCDF Discretionary set-aside, including the process to be used to determine the amount of the Discretionary set-aside. We received a number of comments from Tribes and Tribal organizations asking for a Tribal Discretionary set-aside of not less than five percent.

Response: According to Section 658O(a)(2) of the Act, Tribes will receive not less than two percent of the Discretionary CCDF funding. The Secretary may reserve an amount greater than two percent for Tribes if two conditions are met: (1) The amount appropriated is greater than the amount appropriated in FY 2014, and (2) the amount allotted to States is not less than the amount allotted in FY 2014. Given that the Act provides two conditions that must be met in order to raise the Tribal Discretionary set-aside, we cannot permanently raise the set-aside to five percent.

ACF does recognize the needs of Tribal communities and increased the Tribal CCDF Discretionary set-aside from two percent to 2.5 percent in FY 2015 and up to 2.75 percent in FY 2016. These increased set-asides raised the total Tribal CCDF Funding from $107 million in FY 2014 to $134 million in FY 2016. We encouraged Tribes to use the increased funding on activities included in reauthorization, such as health and safety, continuity of care, and consumer education, in order to implement this final rule. ACF will continue consulting with Tribes when determining the Discretionary set-aside each year.

Tribal CCDF framework. Tribes shall be subject to the CCDF requirements in Part 98 and 99 based on the size of their CCDF allocation. CCDF Tribal allocations vary from less than $25,000 to over $12 million. We recognize that Tribes receiving smaller CCDF grants may not have sufficient resources or infrastructure to effectively operate a program that complies with all CCDF requirements. Therefore, in the final rule, there are now three categories of CCDF Tribal grants, with thresholds established by the Secretary: Large allocations, medium allocations, and small allocations. Each category is paired with different levels of CCDF requirements, with those Tribes receiving the largest allocations expected to meet most CCDF requirements. Tribes receiving smaller allocations are exempt from specific provisions in order to account for the size of the grant awards (see table below).

</table>

Commenters were generally supportive of the new Tribal CCDF framework that was proposed in the NPRM. Given the broad range in Tribal CCDF allocation amounts, the tribal framework allows CCDF requirements to be better scaled to the size of a Tribe’s allocation.
Comment: In the NPRM, ACF proposed that grants over $1 million would be considered large allocations. Grants between $250,000 and $1 million would be considered medium allocations. Finally, grants of less than $250,000 would be considered small allocations. We did not propose to set the allocation thresholds through regulation so that they could be updated or revised at a later date through consultation and notice. A few commenters recommended lower dollar thresholds than the NPRM had proposed for the delineations among small, medium, and large allocations. 

Response: Although we considered lowering the thresholds between the allocation amounts, we are not making changes to the allocation thresholds in this final rule. Using the FY 2016 Tribal allocations, large allocations (CCDF grants over $1 million) include 34 Tribal grantees; medium allocations (CCDF grants between $250,000 and $1 million) include 72 Tribal grantees; and small allocations (CCDF grants less than $250,000) include 153 Tribal grantees. Although these thresholds are not regulatory and can be adjusted in the future, we wanted to set thresholds that could be stable over time as the program grows.

Comment: ACF received several questions from commenters asking how Tribes will transition between allocation amounts if their CCDF allocation increases from a small allocation to a medium allocation or a medium allocation to a large allocation.

Response: In the past, Tribes have been given one year from the time they receive their grant award to make programmatic changes and to submit Plan amendments to transition from exempt to non-exempt. But because there are significantly more requirements between the allocation thresholds (particularly between small and medium allocations), Tribes will need more time to make programmatic changes to comply with the new requirements.

If a Tribe’s allocation increases enough to move from a small allocation to a medium allocation (or a medium allocation to a large allocation), the Tribe will be informed, as before, through their grant award letter. In most cases, the Tribe will have until the next Plan cycle to make changes and submit a new Plan that reflects the allocation threshold. The Tribe may also submit Plan amendments in order to make these changes more quickly. Tribes that cross an allocation threshold during the last year of their Plan cycle will have a transition period of at least one year and therefore, if necessary, may come into compliance through Plan amendments after the next Plan cycle has started. During this transition period, ACF will work closely with the Tribal Lead Agency to provide technical assistance and support.

Comment: Several commenters asked for clarity in how the new framework would apply to Tribal consortia. Some commenters asked that consortia, regardless of the size of their allocation, be held to the same standard as Tribes receiving large allocations. Other commenters emphasized that because consortia divide their funds among participating Tribes or Native villages, the allocation size does not necessarily correlate with the capacity of the participating Tribes.

Response: We declined to set separate requirements for Tribal consortia. The framework will apply to consortia in the same way that it applies to other Tribes and Tribal organizations. Requirements are set by CCDF allocation size.

Comment: We agreed with the comments. As described later in the preamble, Tribes receiving small allocations should be required “to establish some basic eligibility criteria for families receiving CCDF funded child care. We encourage OCC to clearly indicate that, even within these flexible eligibility parameters, including children from all federally recognized Tribes in the definition of ‘Indian children’ for child count purposes and then prioritizing services to members of the Tribal Lead Agency’s Tribe would not be allowable.”

Response: We declined to set separate requirements for Tribal consortia. The framework will apply to consortia in the same way that it applies to other Tribes and Tribal organizations. Requirements are set by CCDF allocation size.

Comment: A couple commenters asked for additional requirements for Tribes receiving small allocations. One commenter wrote that Tribes receiving small allocations should be required “to establish some basic eligibility criteria for families receiving CCDF funded child care. We encourage OCC to clearly indicate that, even within these flexible eligibility parameters, including children from all federally recognized Tribes in the definition of ‘Indian children’ for child count purposes and then prioritizing services to members of the Tribal Lead Agency’s Tribe would not be allowable.”

Response: We agreed with the comments. As described later in the preamble, Tribes receiving small allocations are exempt from the majority of the CCDF eligibility requirements, but if they are providing direct services, they will need to describe their eligibility criteria in their Plans. In addition, at § 98.83(f)(8), we are requiring them to define the terms “Indian child” and “Indian reservation or tribal service area” for purposes of determining eligibility.

Definition of homelessness. In the final rule, Tribes are subject to the regulatory definition at § 98.2 of a child experiencing homelessness, as well as the requirement at § 98.46(a)(3) to give priority for services to children experiencing homelessness.

Comment: Many commenters asked that Tribes be given flexibility to define homelessness for their communities because the definition in the McKinney-Vento Act, which is used in these regulations to meet the needs of Tribal communities. One Tribe wrote recommending “that Tribes should self-determine the definition of ‘homeless’ allowing for informal custody of family members without court guardianship documents.”

Response: We understand that homelessness and lack of adequate housing are significant concerns in many Tribal communities. However, the definition from the McKinney-Vento Act is broad that therefore already allows significant flexibility for prioritizing CCDF services. Using the McKinney-Vento definition will make it easier to align with other programs, like Head Start or the State CCDF, that already use McKinney-Vento as the standard.

Eligibility for services. Tribal Lead Agencies receiving large or medium allocations are subject to the new and revised provisions around eligibility for services in Subpart C of this final rule— including, but not limited to, changes regarding: The 12-month re-determination periods at § 98.21(a); the continued assistance provisions at § 98.21(a)(2); and the graduated phase-out at § 98.21(b).

Comment: In the NPRM, we proposed that Tribes receiving large or medium allocations would be subject to the requirement at § 98.21(a) establishing that all Lead Agencies shall re-determine a child’s eligibility for child care services no sooner than 12 months following the initial determination or most recent re-determination. Tribal comments were divided around this issue. Several commenters voiced concerns about the 12-month re-determination periods, and many commenters explained that Tribes need more flexibility to best serve their communities.

However, other commenters praised the 12-month re-determination requirements. One tribal child care program wrote, “I applaud the minimum 12-month eligibility change; our program adopted this in 2015, and it has allowed enrolled children to maintain consistency in their child care settings. Parents have expressed relief that they are not in danger of losing their child care benefits if they move or experience a change in employment, school, or job training. Additionally, this change has removed burdensome and invasive tracking of parents’ status by eligibility staff and the resulting withdrawal and re-enrollment of families.” Another tribal child care program wrote, “12-month eligibility periods with payments to child care providers on a regular basis will accomplish the intent of the law. If Tribes use the 3-month job search, it should not significantly affect wait lists. It should save staff time of CCDF
grantees to not process the paperwork for a more frequent eligibility period, allowing more funding for direct services.”

Response: We recognize that there are unique circumstances in Tribal communities; however, the importance of continuity of care and reducing the administrative burden on families served outweighs the commenters’ concerns. As discussed earlier in Subpart C, 12-month re-determination periods provide stability and continuity in the program that benefits both children and families. Continuity of subsidy receipt not only supports financial self-sufficiency by offering working families stability to establish a strong financial foundation, it also prepares children for school by creating stable conditions necessary for healthy child development and early learning. We know that the relationship between children and their caregivers is an essential aspect of quality, and policies that minimize temporary disruption to subsidy receipt also support stability in a child’s care arrangement.

As described earlier in Subpart C, during the minimum 12-month eligibility period, Tribal Lead Agencies may not end or suspend child care authorizations or provider payments due to a temporary change in a parent’s work, training, or education status, which includes seasonal work. In other words, once determined eligible, children are expected to receive a minimum of 12 months of child care services, unless family income rises above 85 percent of Guaranteed Median Income (GMI) or, at Lead Agency option, the family experiences a non-temporary cessation of work, education, or training.

We note that Tribal Lead Agencies are also subject to the continued assistance provision at § 98.21(a)(2) so that if a parent experiences a non-temporary job loss or cessation of education or training, Tribal Lead Agencies have the option—but are not required—to terminate assistance prior to 12 months. Prior to terminating assistance, the Tribal Lead Agency must provide a period of continued assistance of at least three months to allow parents to engage in job search activities. This provision is described in greater detail in Subpart C.

Comment: Tribes receiving large or medium allocations are subject to the requirement at § 98.21(b) for a graduated phase-out. This requirement applies to Tribal Lead Agencies that set their initial income eligibility level below 85 percent of GMI. In those instances, the Tribal Lead Agency will be required to establish two-tiered eligibility thresholds, with the second tier of eligibility set at 85 percent of SMI or a family of the same size, but with the option of establishing a second tier lower than 85% of SMI as long as that level is above the Lead Agency’s initial eligibility threshold, takes into account the typical household budget of a low income family, and provides justification that the eligibility threshold is (1) sufficient to accommodate increases in family income that promote and support family economic stability; and (2) reasonably allows a family to continue accessing child care services without unnecessary disruption. Therefore, at redetermination, children who meet all other non-income related eligibility criteria would be considered eligible for a CCDF subsidy if their income exceeds the initial eligibility threshold but is still below the second eligibility threshold. This is discussed in greater detail above in the preamble discussion on graduated phase-out at § 98.21(b). We only received one comment on this provision from a Tribe who asked us to limit the graduated phase-out period to three months to mirror the period for job search.

Response: We declined to make any Tribal-specific changes to graduated phase-out provision. Income eligibility policies play an important role in promoting pathways to financial stability for families. In addition, the vast majority of Tribes already set their initial income eligibility levels at 85 percent of GMI. For these Tribes, the graduated phase-out provision does not apply.

Consumer Education. Tribal Lead Agencies receiving large or medium allocations are generally subject to the new and revised provisions around consumer education in Subpart D of this final rule—including, including but not limited to, changes regarding: The parental complaint hotline at § 98.32(a) and the consumer education provisions at § 98.33.

Many Tribal commenters recommended that Tribal Lead Agencies be allowed to use a method for accepting and resolving parental complaints other than through a parental complaint hotline. These commenters believe that a hotline will create an administrative and financial burden, and especially because in smaller communities, there are issues with unfounded accusations and confidentiality issues.

Response: We strongly encourage Tribal Lead Agencies to establish policies that provide for thorough tribally-directed investigations, confidentiality protections, and due process related to accepting and resolving parent complaints. Tribal Lead Agencies should partner with other Tribal agencies that may have jurisdiction or expertise. Concerns about the possibility of ultimately unfounded accusations and confidentiality do not overcome the need to have a system in place to ensure children are safe, secure, and healthy. Parents should know who to contact if they have a concern, particularly if they feel there is an imminent threat that could result in danger to a child or children. Having a hotline ensures that parents have a reliable mechanism to report complaints. Although ACF encourages it, the hotline is not required to be operated for 24 hours or in multiple languages.

In the final rule, we also allow Lead Agencies to use similar reporting processes, like a secure Web site or email address, to collect parental complaints. In addition to providing an accessible mechanism for parental complaints, the Tribal Lead Agency must take appropriate and timely actions to investigate and resolve complaints. Tribes may continue to receive written complaints in addition to a hotline or Web site. Simply making the phone number of the Tribal child care office widely available and documenting of responses to parental complaints is adequate. Other than more widely publicizing the phone number, in some situations, no other action may be required. Tribes also have the option of coordinating with States to use the State-designated hotline for parental complaints.

Comment: One commenter worried that requiring Tribes receiving large or medium allocations to collect and disseminate consumer education as required at § 98.33 would be a significant administrative burden.

Response: We declined to exempt Tribes with large or medium allocations from the consumer education requirements. As discussed in Subpart D, parents often lack information regarding specific requirements that individual child care providers may or may not meet. Parents choosing a provider should be able to do so with access to any relevant information that the Tribe may have about that provider, including any health and safety, licensing or regulatory requirements met by the provider, the date the provider was last inspected, and history of violations, and compliance actions taken against a provider.

As proposed in the NPRM and discussed later in the preamble, all Tribes are exempt from the consumer education Web site and all requirements that specifically relate to the Web site. Tribal Lead Agencies have the flexibility
to use a variety of approaches to disseminate consumer education, including the use of brochures, Tribal newsletters, or social media. Consumer education services should be directly included as part of the intake and eligibility process for families applying for child care assistance.

Health and Safety. In keeping with the goals of this final rule and the intent of the Act, ensuring the health and safety of children in child care and promoting quality to support child development are of the utmost importance. As such, all Tribes, including those with small allocations, are subject to the health and safety requirements at § 98.41 (as well as the monitoring and background check requirements, discussed later in this preamble), and all Tribes are required to meet the quality spending requirements at § 98.83(g) and § 98.53.

All Tribes are required to meet the requirements at § 98.41(a), which include requirements around a list of health and safety topics; health and safety training; setting group size limits and ratios; and compliance with child abuse reporting requirements. These health and safety requirements create a baseline essential to protecting children in child care. (In addition, as discussed below, all Tribes are subject to the immunization requirements that previously only applied to States and Territories.)

In the NPRM, we proposed to require Tribes receiving small allocations to be subject to the health and safety requirements, only if they were providing direct services. However, in the final rule, we are removing the reference to direct services. Regardless of whether they are providing direct services, Tribal Lead Agencies need to ensure any child care program receiving CCDF dollars meets the health and safety standards at § 98.41 (as well as the monitoring and background check requirements.)

The Act, at Section 6580(c)(2)(I)(D) of the Act continues to require HHS to develop minimum child care standards for Indian Tribes and Tribal organizations receiving funds under CCDF. After three years of consultation with Tribes, Tribal organizations, and Tribal child care programs, health and safety standards were first published in 2000. The standards were updated and reissued in 2005. The HHS minimum standards are voluntary guidelines that represent the baseline from which all programs should operate to ensure that children are cared for in healthy and safe environments and that their basic needs are met. Many Tribes already exceed the minimum Tribal standards issued by HHS, and some have used the minimum standards as the starting point for developing their own more specific standards. These minimum standards will need to be revised and updated to align with new requirements of the Act and this final rule. In the preamble to Subpart E, ACF recommends that Lead Agencies consult the recently published Caring for Our Children Basics (CfoC Basics) for guidance on establishing health and safety standards.

Comment: In the NPRM, we requested comment on whether the CfoC Basics should replace the current HHS minimum standards as the new health and safety guidelines for Tribes.

Comment: Overall, the commenters were supportive of the new requirements around health and safety. One commenter asked that individual Tribes be granted exemptions to specific requirements if the Tribe provides an adequate plan for addressing health and safety with limited resources.

Response: We declined to allow Tribes to request exemptions to the health and safety requirements at § 98.41. As stated earlier, we view these requirements to be a baseline for health and safety. Health and safety is the foundation of quality in child care, and health promotion in child care settings can improve children’s development. These changes will make significant strides in strengthening standards to ensure the basic safety, health, and well-being of children receiving a child care subsidy.

Comment: One commenter wrote recommending that “States be required to communicate, coordinate and collaborate with any Tribe in their jurisdiction for training opportunities and resources” and provide documentation of the same. States should fund participation as much as possible.” The commenter also asked that Tribal monitoring inspectors also have access to the State inspectors’ training opportunities.

Response: The Act already requires States to make training and professional development opportunities accessible to Tribal caregivers, teachers, and directors. The training should also be appropriate for Native American children. These requirements, located in Subpart E at §§ 98.44(b)(2)(vi) and 98.44(b)(2)(iv)(D), give States the obligation to communicate, coordinate, and collaborate with Tribes on training opportunities. We also strongly encourage States to make training opportunities accessible to Tribal monitoring inspectors, when appropriate. States and Tribal Lead Agencies should document this collaboration in the CCDF Plans.

§ 98.80 General Procedures and Requirements

Section 98.80 provides an introduction to the general procedures and requirements for CCDF Tribal grantees. As discussed above, ACF modified § 98.80(a) so that Tribes are subject to CCDF requirements based on the size of their total CCDF allocation. Please see the earlier discussion of the Tribal CCDF Framework for more information and a discussion of the comments received.

§ 98.81 Application and Plan Procedures

Section 98.81 addresses the application and Plan procedures for Tribal CCDF grantees, and much of the new regulatory language in this section, particularly the Plan exemptions listed at § 98.81(b)(6) and § 98.81(b)(9), reflects the changes made in Section 98.80 (General procedures and requirements) and Section 98.83 (Requirements for Tribal programs). These exemptions will be discussed in greater detail later in the preamble. Tribes receiving large or medium allocations will continue to fill out a traditional Tribal CCDF Plan, described at § 98.81(b), and Tribes receiving small allocations will fill out an abbreviated Plan, described at § 98.81(c). The Plan periods will now be three years, as required by the Act.

Categorical eligibility. At § 98.81(b)(1), the regulations require that the Plan filled out by Tribes receiving large or medium allocations must include the basis for determining family eligibility. The final rule adds language at § 98.81(b)(1)(f) to allow a Tribe, whose Tribal Median Income (TMI) is below a level established by the Secretary, the option of considering any Indian child in the Tribe’s service area to be eligible
to receive CCDF funds, regardless of the family’s income, work, or training status, provided that provision for services still goes to those with the highest need. We are setting the threshold at 85 percent of State Median Income (SMI). Using 85 percent of SMI mirrors other thresholds set by the Act and allows the majority of CCDF Tribes to exercise this option, if they choose. We are not setting this threshold through regulation to allow the level to be updated in the future though consultation and notice. 

Comment: We received mixed support for the categorical eligibility provision. NICCA commented that they appreciated “... the flexibility this provides to Tribes to determine how to provide quality, consistent early childhood services to best meet their communities’ needs.” Other commenters worried that this provision would increase waitlists and would increase the potential for fraud or the prioritization of Tribal Council members’ children. 

Response: If Tribes choose to take advantage of this option, then they can create opportunities to align CCDF programs with other Tribal early childhood programs, including Tribal home visiting, Early Head Start, and Head Start. This provision also allows Tribes to better take advantage of Early Head Start-Child Care Partnership grants. There are limited resources in Tribal communities, and we wanted to create the flexibility within the CCDF program to more easily align with other early childhood programs. 

However, we do acknowledge the commenters’ concerns. In response, the final rule requires Tribes that take this option ensure that provision for services still goes to those with the highest need. Tribal Lead Agencies will describe in their Plans how they are ensuring those families with the greatest need are receiving CCDF services. We also note that, while Tribes can determine any Indian child eligible regardless of the family’s income, work, or training status, other requirements, such as the sliding fee scale, still apply. 

In addition, if a Tribe chooses to take this option, the Tribe’s CCDF Plan must show a comparison of TMI and SMI by family size. The Tribe will also need to include in the Plan the documentation of the TMI data source. Tribes may use tribally-collected income data, but we strongly recommend that Tribes use Census data. The data should be the most recent TMI and SMI data available. We will provide technical assistance in documenting the Tribe’s TMI to Tribes that choose this option.

Income eligibility. The final rule moves previously-existing regulatory language from § 98.80(f) to § 98.81(b)(1)(ii). Under this revised provision, if a Tribe chooses not to exercise the option for categorical eligibility at § 98.81(b)(1)(i) or has a TMI higher than 85 percent of SMI, then the Tribe would determine eligibility for services in accordance with § 98.20(a)(2). That is, Tribes will set income eligibility requirements that do not exceed 85 percent of SMI or TMI. Tribes will continue to have the option of using either 85 percent of SMI or 85 percent of TMI. 

Comment: Several Tribes and tribal organizations were worried that moving this provision would limit Tribes’ flexibly to make decisions about income eligibility. 

Response: Moving this provision does not affect current policy. Tribes continue to have the flexibility to set income eligibility requirements for their program and communities. In accordance with § 98.20(a)(2), a family’s income may not exceed 85 percent of SMI or TMI. 

Payment rates. The final rule exempts all Tribes from the requirement to use a market rate survey or alternative methodology to set provider payment rates (discussed later in this preamble). However, at § 98.81(b)(5), we require that Plans submitted by Tribes receiving large or medium allocations include a description of the Tribe’s payment rates; how they are established; and how they support quality, and where applicable, cultural and linguistic appropriateness. While market rate surveys or alternative methodologies do not necessarily make sense for Tribal communities, it is important for Tribal Lead Agencies to have rates sufficient to provide equal access to the full range of child care services, including high-quality child care. We did not receive comments on this provision. 

Plan exemptions. At § 98.81(b)(6), ACF adds eight new Plan exemptions for Tribes receiving large or medium allocations. In the NPRM, we proposed that such Tribal Lead Agencies would be exempt from including in their Plans descriptions of the market rate survey or alternative methodology; the licensing requirements applicable to child care services; and the early learning guidelines. We are keeping three additional exemptions in the final rule, as well as adding five additional exemptions. Tribal Lead Agencies are also exempt from including in their Plans the certification to develop the CCDF Plan in consultation with the State Advisory Council; the identification of the public or private entities designated to receive private funds; the descriptions relating to Matching funds; and the description of how the Lead Agency prioritizes increasing access to high-quality child care in areas with high concentrations of poverty. These requirements do not apply to Tribal communities, and these exemptions mirror changes made in Section 98.83. They are discussed in further detail later in the preamble. 

At § 98.81(b)(9), Plans for Tribes receiving medium allocations are exempt from the requirements relating to a description of the child care certificate program, unless the Tribe chooses to include those services. This exemption corresponds with the exemption in Section 98.83(e) discussed later in the preamble. 

Plans for Tribes receiving small allocations. Tribes receiving small allocations (less than $250,000) are exempt from the majority of CCDF requirements. These Tribes are only subject to core CCDF requirements, described later in Section 98.83(f). As such, at § 98.81(c), we require that these Tribes fill out an abbreviated CCDF Plan, tailored to these core requirements. A shorter Plan application is more aligned with the level of funding that these Tribes receive. All of the Plan exemptions described in § 98.81(b) for Tribes receiving large or medium allocations will also apply to Tribes receiving small allocations. ACF will release a Program Instruction defining the elements that will be included in the abbreviated Plan for Tribes receiving small allocations. 

§ 98.82 Coordination 

Section 98.82 requires Tribal Lead Agencies to coordinate with State CCDF programs and with other Federal, State, local, and Tribal child care and child development programs. Tribal Lead Agencies must also coordinate with the entities listed at § 98.12 and § 98.14. 

Comment: One commenter asked us to clarify in the regulatory language that Tribal Lead Agencies need to coordinate, to the extent practicable, with the entities listed at § 98.12 and § 98.14. 

Response: We agreed with the commenter. The preamble language from our NPRM made it clear that our expectation is that Tribal Lead Agencies should coordinate to the extent practicable, so we added the regulatory language to clarify this expectation in the final rule. This addition does not change pre-existing policy; it serves as a clarification of the regulatory language. 

The regulations at § 98.82 require Tribal Lead Agencies to coordinate with the entities described at § 98.14 in the
development of their Plans and the provision of services, to the extent practicable. This list includes newly added child care licensing, Head Start collaboration, State Advisory Councils on Early Childhood Education and Care or similar coordinating bodies, statewide afterschool networks, emergency management and response, CACFP, services for children experiencing homelessness, Medicaid, and mental health services. We do recognize that Tribes may not always have access or connections with these entities. Many of these agencies, especially the State Advisory Councils and the statewide afterschool networks, interact primarily on the State level. Others, including child care licensing and Head Start, may not exist in the Tribe’s service area.

Tribes should coordinate with these agencies to the extent possible. The Tribal Plan pre-print will ask Tribes to describe their efforts to coordinate with all the entities listed at § 98.14, but if coordination is not applicable, then the Tribes may simply say so in their Plans. We will support Tribal Lead Agency efforts to coordinate with these entities and plan to provide technical assistance to both Tribes and States to promote Tribal access and participation.

Tribes should also take note of two new provisions in the Act, reiterated in this final rule, which require State coordination with Tribes. First, at § 98.10(f), State Lead Agencies must collaborate and coordinate with the Tribes, at the Tribes’ option, in a timely manner in the development of the State Plan. States must be proactive in reaching out to the Tribal officials for collaboration and are required to describe how they collaborated and coordinated with Tribes in their State Plans.

Second, State Lead Agencies must have training and professional development in place designed to enable child care providers to promote the social, emotional, physical, and cognitive development of children and to improve the knowledge and skills of child care caregivers, teachers, and directors in working with children and their parents. Section 98.44(b)(2)(vi) requires that this training and professional development be accessible to caregivers, teachers, and directors of CCDF child care providers supported through Indian Tribes or Tribal organizations. Section 98.44(b)(2)(iv)(D) provides that the training and professional development should also, to the extent practicable, be appropriate for Native American children. Tribes should work with States to help ensure that these statutory requirements are met. Tribal CCDF programs should also coordinate with other childhood development programs located in the Tribal service area, including any programs that support the preservation and maintenance of native languages.

§ 98.83 Requirements for Tribal Programs

Section 98.83 addresses specific requirements for Tribal CCDF programs. In recognition of the unique social and economic circumstances in many Tribal communities, Tribal Lead Agencies are exempt from a number of CCDF requirements. At paragraph (d)(1), we exempt all Tribes, regardless of allocation size, from: A consumer education Web site at § 98.33(a); the requirements for licensing applicable to child care services at § 98.40; the professional development framework at § 98.44(a); the market rate survey or alternative methodology and the related requirements at § 98.45(b)(2); the requirement that Lead Agencies prioritize increasing access to high-quality child care in areas of high concentrations of poverty; and the quality progress report at § 98.53(f). Tribes that receive medium or small CCDF allocations are also exempt from the requirements of operating a certificate program at § 98.30(a) and (d). Tribes that receive small allocations are exempt from the majority of the new CCDF requirements to give these Tribes more flexibility in how they spend their CCDF funds. Finally, two provisions apply to all Tribes, unless the Tribe describes an alternative in its Plan: Monitoring of child care providers and facilities at § 98.42(b)(2) and conducting background checks at § 98.43.

We are also removing previously-existing language on immunizations so that Tribes must now assure that children receiving CCDF services are age-appropriately immunized. We added regulatory language to add clarity to the previously-existing exemptions; this language does not change the previous policy. ACF added two new paragraphs at (d)(2) and (d)(3) giving Tribes more flexibility around the monitoring inspections requirements and the requirement for comprehensive background checks. At paragraph (e), ACF exempts Tribes receiving medium or small CCDF allocations from the requirement to operate a certificate program. At paragraph (f), ACF adds more flexibility for Tribes receiving small allocations by only subjecting them to core CCDF requirements.

Service area. The final rule includes a technical addition at § 98.83(b) to clarify that Tribes (with the exception of Tribes without reservations located in Alaska, California, or Oklahoma) must operate their CCDF programs on or near Indian reservations. Long-standing ACF policy guidance clarifies that a Tribe’s service area must be “on or near the reservation,” and therefore must be within a reasonably close geographic proximity to the delineated borders of a Tribe’s reservation. Tribes that do not have reservations must establish service areas within reasonably close geographic proximity to the area where the Tribe’s population resides. ACF will not approve an entire State as a Tribe’s service area. This policy clarification does not affect States’ jurisdiction over child care licensing. Tribal service areas are also addressed in the regulations at § 98.81(b)(2)(ii), and the same policy guidance applies.

Comment: One commenter asked ACF to delete the exception for Alaska, California, and Oklahoma because several Tribes in these States now have reservations.

Response: We declined to remove this exception from the regulatory language. Although there are reservations in Alaska, California, and Oklahoma, the majority of Tribes in these States do not have reservations. Tribes located in these three States that have an established reservation area should define their service area to be “on or near” the reservation.

Consumer education Web site. All Tribes are exempt from the requirement for a consumer education Web site at § 98.33(a) because of the administrative cost of building a Web site, as well as the lack of reliable high-speed internet in some Tribal areas. Furthermore, in some instances, the small number of child care providers in the Tribe’s service area may not warrant the development and maintenance of a Web site. However, where appropriate, we encourage Tribes to implement Web sites for consumer education and to work with entities, such as States or child care resource and referral agencies that maintain provider-specific information on a Web site. For example, in cases where Tribal child care providers are licensed by the State, information about compliance with health and safety requirements should be available on the State’s Web site. We did not receive any comments on this exemption.

 Licensing for child care services. ACF is exempting all Tribes from the requirement to have in effect licensing requirements applicable to child care services at § 98.40. This is a pre-existing statutory and regulatory requirement re-affirmed by the reauthorized Act. The majority of CCDF Tribal grantees do not have their own licensing
requirements. Many Tribes certify in their Plans that they have adopted their State’s licensing standards, but these requirements may not be appropriate for Tribal communities. In addition, requiring Tribes to have licensing requirements is counter to Section 658O(c)(2)(D) of the Act, which requires that in lieu of any licensing and regulatory requirements under State or local law, the Secretary, in consultation with Indian Tribes and Tribal organizations, shall develop minimum child care standards that shall be applicable to Indian Tribes and Tribal organization receiving assistance under this subchapter. Tribes may instead use the voluntary guidelines issued by HHS, described earlier in the preamble. We did not receive any comments on this exemption.

Training and professional development framework. We are exempting Tribes from the requirement at §98.44(a) to describe in their CCDF Plan the State framework for professional development. This requirement is State-specific and not relevant for Tribes.

We do note, as discussed in greater detail earlier in the preamble, that States are required to communicate, coordinate, and collaborate with Tribes around training and professional development opportunities to make sure that tribal providers have access to training opportunities. Ongoing State professional development must be accessible to caregivers supported through Indian Tribes and Tribal organizations. The trainings must also be, to the extent practicable, appropriate for populations of Native American and Native Hawaiian children.

Market rate survey or alternative methodology. Section 98.83(d)(1)(iv) of the final rule exempts all Tribes from conducting a market rate survey or alternative methodology and all of the related requirements. In many Tribal communities, the child care market is extremely limited. Also, many Tribes are located in rural, isolated areas, making a market rate survey or alternative methodology difficult. Furthermore, §98.83(e) of the final rule exempts Tribes receiving CCDF allocations of $1 million or less (medium and small allocations) from operating a certificate program. Therefore, these Tribes are not required to offer the full range of child care services. For these Tribes especially, market rate surveys are not relevant.

Despite exempting Tribes from these requirements, setting payment rates to support the cost of providing equal access to child care services. Tribes receiving large or medium allocations will be asked in their Plans how rates were set and how these rates support quality. We did not receive any comments on this exemption.

Increasing access to high-quality in concentrations of poverty. The final rule exempts all Tribes from the requirement at §98.46(b) to prioritize increasing access to high-quality child care and development services for children and families in areas that have significant concentrations of poverty and unemployment and that do not have a sufficient number of such programs.

Comment: In the NPRM, Tribes were subject to this requirement, and several commenters did not believe that it was appropriate for Tribal communities.

Response: We agreed with the commenters. Given the poverty that exists on many Tribal reservations and service areas, we decided this requirement was redundant for Tribes. In addition, this exemption aligns with another pre-existing policy that exempts Tribes from the requirement to give priority for services to children of families with very low family income.

Although Tribes are exempt from this requirement, we note that Tribes receiving large and medium allocations are subject to the requirements at §98.46(a)(2) and (3). These Tribal Lead Agencies must give priority for services to children with special needs, which may include any vulnerable populations as defined by the Lead Agency and to children experiencing homelessness.

Quality Progress Report. At §98.83(d)(1)(vii), Tribal Lead Agencies are exempt from completing the Quality Progress Report (QPR) at §98.53(f), which is a revised version of the former Plan appendix, the Quality Performance Report. In the future, we are planning to add additional questions on quality improvement activities to the Tribal Plan, ACF–700, and ACF–696T, but we will discuss these changes with Tribes and provide opportunity for public comment.

The QPR includes a report describing any changes to State regulations, enforcement mechanisms, or other policies addressing health and safety based on an annual review and assessment of serious child injuries and any deaths occurring in child care programs. Under this provision, Tribes are exempt from completing the QPR, including the review and assessment of serious injuries and deaths.

Notwithstanding, we encourage Tribal Lead Agencies to complete a similar process to the one described in the QPR and to review the reported serious injuries or deaths and make policy or programmatic changes that could potentially save a child’s life.

Immunization requirement. Consistent with the final rule’s overall focus on promoting high-quality care that supports children’s learning and development, §98.83(d) of the final rule removes the reference to §98.41(a)(1)(i). This change extends coverage of CCDF health and safety requirements related to immunization so that the requirements apply to Tribes, whereas previously Tribes were exempt. At the time the previous regulations were issued in 1998, minimum Tribal health and safety standards had not yet been developed and released by HHS. However, the minimum Tribal standards have subsequently been developed and released, and the standards address immunization in a manner that is consistent with the requirements at §98.41(a)(1)(i). As a result, there is no longer a compelling reason to continue to exempt Tribes from this regulatory requirement. Many Tribes have already moved forward with implementing immunization requirements for children receiving CCDF assistance. By extending the requirement to Tribes, we will ensure that Indian children receiving CCDF assistance are age-appropriately immunized as part of efforts to prevent and control infectious diseases.

Comment: Commenters expressed concern about the new immunization requirement and asked for grace period to implement the requirement.

Response: As described earlier in the preamble, ACF will not be begin determining compliance with the final rule until the next Plan cycle with the FY 2020–2022 CCDF Plans. Tribal Lead Agencies will be able to use that time before that Plan cycle to work toward implementing the immunization requirements. In addition, as with States and Territories, Tribes have flexibility to determine the method to implement the immunization requirement. For example, they may require parents to provide proof of immunization as part of CCDF eligibility determinations, or they may require child care providers to maintain proof of immunization for children enrolled in their care. We also note, as indicated in the regulation, Lead Agencies have the option to exempt the following groups: (1) Children who are cared for by relatives; (2) children who receive care in their own homes; (3) children whose parents object on religious grounds; and (4) children whose medical condition requires that immunizations not be given. In determining which immunizations will be required, a Tribal Lead Agency has the option to apply its own immunization recommendations or standards. Many Tribes may choose to
adopt recommendations from the Indian Health Service or the State’s public health agency.

Monitoring inspections. In the final rule, all Tribes, regardless of allocation size, are subject to the monitoring requirements at § 98.42(b)(2), which reflect the requirements in the Act. However, we allow Tribal Lead Agencies to describe an alternative monitoring approach in their Plans, subject to ACF approval, and must provide adequate justification for the approach. Section 658E(c)(2)(K) of the Act requires at least one pre-licensure inspection and annual unannounced monitoring inspection, provided that the Tribe has not proposed an alternative strategy in the Plan. On the other hand, if the Tribal child care provider is not licensed by the State or the Tribe, then that provider is subject to annual monitoring on health, safety, and fire standards. These monitoring requirements are discussed in greater detail in Subpart E of the preamble.

Comprehensive background checks. Tribal Lead Agencies are subject to the background check requirements at § 98.43. A comprehensive background check includes: An FBI fingerprint check; a search of the National Crime Information Center’s National Sex Offender Registry; and a search of the following registries in the State where the child care staff member lives and each State where the staff member has lived for the past five years: State child abuse and neglect registry, the State sex offender registry, and the State criminal registry using fingerprints, State sex offender registry, and the State child abuse and neglect registry, as described at § 98.43(b).

We note that, in order to conduct an FBI fingerprint check using Next Generation Identification, Lead Agencies must act under an authority granted by a Federal statute. States, as described in Subpart E, may choose among three federal laws that grant authority for FBI background checks for child care staff. These three statutes are: The Act, Public Law 92–544, and the National Child Protection Act/Volunteers for Children Act. These three laws give States the authority to conduct FBI fingerprint checks, but none of them specifically grant that same authority to Tribes. In order for Tribes to conduct FBI background checks, they may use the Indian Child Protection and Family Violence Prevention Act, which, to date, only covers those individuals who are being considered for employment by the Tribe in positions that have regular contact with, or control over, Indian children. Otherwise, Tribes will need to coordinate with States to complete the FBI background check using a State’s authority under an approved Public Law 92–544 statute or under procedures established pursuant to the National Child Protection Act/Volunteers for Children Act (NCPA/VCA). We understand that this may present difficulties for Tribes, especially for those that do not currently have a partnership with the State. Therefore, in the final rule at § 98.83(d)(3), we are allowing Tribes to describe an alternative background check approach in their Plans, subject to ACF approval, and must describe an adequate justification for the approach.

Comment: Commenters were very supportive of the requirements for background checks for child care staff members. One Tribe wrote that it “supports criminal background checks performed on all types of child care providers and household members over 18 years of age. We think in the safety of our children and persons responsible for their care.” Commenters also described the substantial amounts of time and money needed to complete the checks. They worried about jurisdictional issues between Tribes and States, making it difficult for Tribes to gain access to all of the required checks. In addition, other commenters felt that particular elements, such as some of the disqualifying crimes may not be appropriate for Tribes. One Tribe said, “Tribes should . . . determine whether particular crimes meet qualifications and as sovereign nations, should have the flexibility to implement a waiver and appeals process for some of the crimes listed in § 98.43(c)(1).”

Response: We agree with the commenters that comprehensive background checks are important for ensuring children’s health and safety in child care. We applaud the commenters’ support of these requirements. However, we also acknowledge the significant challenges that face Tribes in being able to comply. As such, Tribes will be allowed to describe an alternative approach in their Plans and describe how the approach continues to protect the health and safety of children. ACF will not approve approaches with blanket exemptions or waivers to the background check requirements. We expect to allow some flexibility around the components of a comprehensive background check, particularly when there are jurisdictional issues between States and Tribes or when conducting background checks on other adults residing in family child care homes. Tribes should coordinate with States as much as possible in order to obtain access to the FBI and State databases. However, without an authorizing statute, we felt that Tribes may need flexibility to propose alternative checks that ensure children’s health and safety.

When a Tribe is conducting background checks on other adults in a family child care home, we have heard through our consultation sessions that many Tribal families reside in households with several generations. Requiring all members of the household to complete all five components of a
comprehensive background check could be burdensome for the family and for the Tribal Lead Agency. Therefore, the Tribal Lead Agency could also use an alternative strategy to conduct background checks on other individuals in a family child care home. Tribes may expect that Tribal Lead Agencies will conduct some components of a background check for these individuals.

We may also grant flexibility to Tribes around the disqualifying crimes. We will not approve any approaches that ask for flexibility around violent crimes or crimes against children. Tribes may also request flexibility around the requirement to carry out background check requests within 45 days. In many cases, Tribes must rely on State systems, which may extend the background check process.

We expect Tribes to comply with the background check requirements to the best of their abilities and will continue to work with Tribes to provide guidance, support, and technical assistance. Background checks continue to be a vital instrument in safeguarding children’s health and safety. Tribal alternative approaches must be able to justify how they are appropriately comprehensive and protect the health and safety of children in child care.

Certificate program. At § 98.83(e) of this final rule, Tribes that receive medium or small allocations are exempt from operating a certificate program. We recognize that small Tribal grantees may not have sufficient resources or infrastructure to effectively operate a certificate program. In addition, many smaller Tribes are located in less-populated, rural communities that frequently lack the well-developed child care market and supply of providers that is necessary for a certificate program. Tribes that receive large allocations will still be required to offer all categories of care through a certificate program.

Under the previous regulations, Tribes receiving smaller CCDF grants were exempt from operating a certificate program. The dollar threshold for determining which Tribes were exempt from operating a certificate program was established by the Secretary. It was set at $500,000 in 1998 and has not changed. By exempting Tribes receiving medium or small allocations from operating a certificate program, we are effectively raising the dollar threshold to $1 million. As discussed earlier, we consider medium allocations to be grants between $250,000 and $1 million and small allocations to be grants of less than $250,000. This expands the number of Tribes that are exempt from operating a certificate program. This higher threshold will allow Tribes with smaller CCDF allocations to focus on implementing the new requirements in this final rule, specifically concentrating on the health and safety and quality requirements. Please see the earlier discussion of the Tribal CCDF framework for more information and a discussion of the comments received.

Small allocations requirements. Tribes receiving the smallest CCDF allocations should not be subject to the same requirements as the Tribes receiving larger grant awards. Therefore, in this final rule, ACF is exempting Tribes receiving small allocations (less than $250,000) from the majority of the CCDF requirements to give these Tribes more flexibility in how they spend their CCDF funds and to focus these funds on health and safety and quality spending. At § 98.83(f), we require that Tribal Lead Agencies receiving small allocations spend their CCDF funds in alignment with the goals and purposes of CCDF as described in § 98.1. These Tribal Lead Agencies must also comply with the health and safety requirements, monitoring requirements, background checks requirements, and quality spending requirements. The regulatory language at § 98.83(f) defines the only CCDF provisions that apply to Tribes with small allocations.

These limited requirements allow Tribes with small allocations the flexibility to spend their CCDF funds in ways that would most benefit their communities. Tribes could choose to spend all of their CCDF funds on quality activities, or they could invest all of their funds into a Tribal CCDF-operated center. These Tribes are also required to meet the health and safety requirements, including the monitoring and background check requirements, as discussed earlier. In addition, Tribes with small allocations need to define Indian child and Indian reservation or tribal service area as they relate to eligibility. Tribes that receive small allocations also continue to be required to meet the fiscal, audit, and reporting requirements in the rule. To align with these limited CCDF requirements, Tribes with small allocations will complete an abbreviated Plan, as discussed earlier. This approach balances increased flexibility with accountability, and ACF encourages these Tribes to focus their CCDF spending on ensuring health and safety and quality for children in child care.

Comment: One commenter asked ACF to remove language at § 98.83(f)(11) that allows ACF to require "any other requirement established by the Secretary.

Response: We are pleased that Tribal commenters supported the quality spending requirements. A couple of commenters were concerned that spending increasing percentages of CCDF funds on quality improvement activities would limit the funds for direct services and suggested that the minimum quality percentages should be based on the size of a Tribe’s allocation. We reserve the option to require additional requirements described in this final rule. If ACF chooses to exercise this option, we will inform Tribes in advance and will engage in formal consultation.

Quality improvement activities. All Tribes and Tribal organizations are subject to the quality spending and quality improvement activities requirements described at § 98.83(g) and § 98.53. The old regulations at § 98.83(f) exempted Tribes and Tribal organizations with smaller allocations (total CCDF allocations less than $500,000) from the requirement to spend four percent on quality activities. We amended § 98.83(f) by deleting paragraph (3) so that all Tribes, regardless of their allocation size, are now required to meet quality spending requirements included at § 98.83(g).

The Act requires State and Territory Lead Agencies to spend increasing minimum amounts on quality activities, reaching nine percent in FY 2020. As described earlier, Tribal Lead Agencies have a slightly different phase-in period, so that Tribes will be spending increasing amounts to reach nine percent by FY 2022. In addition, Tribal Lead Agencies receiving large or medium allocations must spend at least three percent on quality activities to support infants and toddlers. Tribes with small allocations are exempt from this requirement. The minimum quality expenditures are considered baselines; Tribal Lead Agencies may spend a larger percentage of funds on quality, as described at § 98.83(g)(3).

Comment: Overall, Tribal commenters supported the quality spending requirements.
There are a wide range of quality improvement activities that Tribes have the flexibility to implement, and the scope of these efforts can be adjusted based on the resources available so that even smaller Tribal Lead Agencies can effectively promote the quality of child care. Most Tribal Lead Agencies are likely already engaged in activities that count as quality improvement. We will provide technical assistance to help Tribes identify current activities that may count towards meeting the quality spending requirement, as well as appropriate new opportunities for quality spending.

The revisions to § 98.53 (Activities to Improve the Quality of Child Care), discussed earlier in this preamble, provide a systemic framework for organizing, guiding, and measuring progress of quality improvement activities. We recognize that this systemic framework may be more relevant for States than for many Tribes, given the unique circumstances of Tribal communities. However, Tribes may implement selected components of the quality framework at § 98.53, such as training for caregivers, teachers, and directors or grants to improve health and safety.

The revisions to § 98.53 in no way restrict Tribes’ ability to spend CCDF quality dollars on a wide range of quality improvement activities. As is currently the case, these activities could include: Child care resource and referral activities; consumer education; grants or loans to assist providers; training and technical assistance for providers and caregivers; improving salaries of caregivers, teachers and directors; monitoring or enforcement of health and safety standards; and other activities to improve the quality of child care, including native language lessons and cultural curriculum development. While Tribes have broad flexibility, to the dollar possible, Tribes should plan strategically and systemically when implementing their quality initiatives in order to maximize the effectiveness of those efforts.

In addition, we encourage strong Tribal-State partnerships that promote Tribal participation in States’ systemic initiatives, as well as State support for Tribal initiatives. For example, Tribes and States can work together to ensure that quality initiatives in the State are culturally relevant and appropriate for Tribes, and to encourage Tribal child care providers to participate in State initiatives, such as QRIS and professional development systems.

Comment: Two commenters suggested that Tribes should be exempt from the three percent infant and toddler quality spending requirement because some Tribes only deliver after-school or school age services.

Response: In the final rule, Tribes receiving large and medium allocations are subject to the requirement to spend three percent on quality activities for infants and toddlers. Tribes have previously been exempt from the targeted fund requirement relating to infants and toddlers under annual appropriations law. However, infants and toddlers are an underserved population, and therefore, it is important that quality dollars are directed to increase the quality of their care. In addition, in accordance with § 98.16(x), Tribes receiving large and medium allocations are expected to describe in their Plans the strategies used to increase supply and improve the quality of child care services for children in underserved areas, infants and toddlers, children with disabilities, and children who receive care during nontraditional hours. Tribal Lead Agencies can use infant and toddler quality dollars as a strategy to increase supply and improve the quality of child care service for infants and toddlers.

The final rule exempts small allocation Tribes from this requirement because many of these Tribes have built programs around school age and after-school care. However, we do strongly encourage these Tribes to consider spending quality funds to support infants and toddlers.

Base amount. In the NPRM, OCC proposed to increase the base amount from $20,000 to $30,000, starting in FY 2017, to account for inflation that has eroded the value of the base amount since it was originally established in 1998. Each year, Tribal CCDF grantees’ CCDF allocations are based on a Discretionary base amount, as well as a Discretionary and Mandatory amount based on the number of children submitted in the child count.

Comment: We received mixed comments on whether the base amount should be raised to $30,000. Several commenters suggested that a cap should be placed on the total base amount that Tribal consortia can receive in order for a more equitable distribution of funds. Other commenters were concerned that the increased base amount would decrease the per child amount.

Response: We will be going forward with our proposal to increase the base amount starting in FY 2017. Tribal commenters were correct that an increase in the Discretionary base amount will result in a lower Discretionary amount than would occur without the change in base amount. An increase in the base amount benefits smaller Tribes and consortia. Larger Tribes will receive less funding then they would have in the absence of this change.

We also intend, to the extent possible, to increase the Tribal set-aside to hold all Tribes harmless so that no Tribe will receive a decrease in funds.

The base amount is not included in regulation and does not require regulatory change. ACF may continue to adjust the base amount in the future, following consultation with Tribes.

Comment: Commenters asked for clarification in how the Discretionary base amount interacts with the new requirement that Tribes receiving large and medium allocations must spend 70 percent of their CCDF Discretionary funds (after reserving the required amount for quality activities) on direct services.

Response: The final rule includes language at § 98.83(h) exempting the base amount from the 70 percent direct services requirement. The existing policy exempts the base amount from the administrative cost limitation and the quality expenditure requirements.

As noted by the commenters, Tribes receiving large and medium allocations are subject to the requirement at § 98.50(f) that requires Lead Agencies to reserve from their CCDF Discretionary funds the required minimum quality expenditures. From the leftover funds, these Tribal Lead Agencies must spend not less than 70 percent to fund direct services. This requirement is described at greater length in the preamble of Subpart F. Tribes receiving small allocations are exempt from this requirement.

§ 98.84 Construction and Renovation of Child Care Facilities

Section 98.84 describes the procedures and requirements around Tribal construction or renovation of child care facilities. The CCDBG Act of 2014 reaffirmed Tribes’ ability to request to use CCDF funds for construction or renovation purposes. Section 6580C(c)(6)(C) of the Act continues to disallow the use of CCDF funds for construction or renovation if it will result in a decrease in the level of child care services. However, the Act now allows for a waiver for this clause if the decrease in the level of child care services is temporary. A Tribe will also need to submit a plan to ACF demonstrating that, after the construction or renovation is completed, the level of child care services will return to the level of child care services that will improve. In order for a Tribe to use CCDF funds on
construction or renovation while decreasing the level of direct services, the Tribe must certify that, after the construction is completed, the number of children served will increase or the quality of care will increase. The final rule reiterates this language from the Act at § 98.84(b)(3).

Comment: One commenter asked ACF to define through regulation a definition for the length of time that a decrease in direct services may be considered temporary.

Response: We declined to define a temporary decrease in the level of direct services in this final rule. ACF will issue a revised Program Instruction to describe the application process for using CCDF funds on construction or renovation. This Program Instruction will also be updated to reflect the new requirements in the Act and will address the length of time that a decrease in direct services may be considered temporary. The Program Instruction is used by ACF to expand upon and further describe the statutory and regulatory requirements. In the event that the CCDF regulations do not address a specific issue, then we look to Head Start and HHS’s generally-accepted construction and renovation guidelines.

Subpart J—Monitoring, Non-Compliance, and Complaints

Subpart J contains provisions regarding HHS monitoring of Lead Agencies to ensure compliance with CCDF requirements, processes for examining complaints and for determining non-compliance, and penalties and sanctions for non-compliance. In this final rule we added several technical changes at § 98.92 to align the regulations with the penalties and sanctions requirements in effect for determining non-compliance.

§ 98.92 Penalties and Sanctions

Previously-existing regulations allow HHS to impose penalties and other appropriate sanctions for a Lead Agency’s failure to substantially comply with the Act, the implementing regulations, or the Plan. Such penalties and sanctions may include the disallowance or withholding of CCDF funds in accordance with § 98.92. These regulations remain in effect.

In addition, the final rule adds a new provision at § 98.92(b) in accordance with two penalties added by the reauthorization of the Act. New section 658E(c)(3)(B)(ii) requires HHS to annually prepare a report that contains a determination about whether each Lead Agency uses CCDF funding in accordance with priority for services provisions. These priority provisions are reiterated at § 98.46(a) of these regulations, and require Lead Agencies to give priority to children with special needs, children from families with very low incomes, and children experiencing homelessness. The Act requires HHS to impose a penalty on any Lead Agency failing to meet the priority for services requirements. A new regulatory provision at § 98.92(b)(3) implements this penalty.

In accordance with the Act, the final rule provides that a penalty of five percent of the CCDF Discretionary Funds shall be withheld for any Fiscal Year the Secretary determines that the Lead Agency has failed to give priority for service in accordance with § 98.44. This penalty will be withheld no earlier than the first full Fiscal Year following the determination to apply the penalty, and the penalty will not be applied if the Lead Agency corrects its failure to comply and amends its CCDF Plan within six months of being notified of the failure. The Secretary may waive a penalty for one year in the event of extraordinary circumstances, such as a natural disaster. The second new penalty was added by section 658H(j)(3) of the Act and is related to the new criminal background check requirements. This final rule adds this penalty through new regulatory language at § 98.92(b)(4). In accordance with the Act, the final rule provides that a penalty of five percent of the CCDF Discretionary Funds for a Fiscal Year shall be withheld if the Secretary determines that the State, Territory, or Tribe has failed to comply substantially with the criminal background check requirements at § 98.43. This penalty will be withheld no earlier than the first full Fiscal Year following the determination to apply the penalty, and this penalty will not be applied if the State, Territory or Tribe corrects the failure before the penalty is to be applied or if it submits a plan for corrective action that is acceptable to the Secretary.

Subpart K—Error Rate Reporting

On September 5, 2007, ACF published a Final Rule that added subpart K to the CCDF regulations. This subpart established requirements for the reporting of error rates in the expenditure of CCDF grant funds by the 50 States, the District of Columbia, and Puerto Rico. The error reports are designed to implement provisions of the Improper Payments Information Act of 2002 (Pub. L. 107–301) and the subsequent Improper Payments Elimination and Recovery Act (Pub. L. 111–204). This final rule retains the error reporting requirements at subpart K. In addition to the regulatory requirements at subpart K, details regarding the error rate reporting requirements are contained in forms and instructions that are established through the Office of Management and Budget’s (OMB) information collection process. These program integrity efforts help ensure that limited program dollars are going to low-income eligible families for which assistance is attended.

§ 98.100 Error Rate Reporting

Interaction with eligibility requirements. This final rule includes regulatory language at § 98.100(d) defining an improper payment to clarify that, because a child meeting eligibility requirements at the most recent eligibility determination or redetermination is considered eligible between redeterminations as described in § 98.20(a)(1), any payment for such a child shall not be considered an error or improper payment due to a change in the family’s circumstances, as set forth at § 98.21(a) and (b). Several State commenters supported this provision.

We added the reference to § 98.21(b) in the final rule to include the graduated phase-out period. If a State chooses to adjust co-payments during the graduated phase-out, failure to properly do so may potentially result in improper payments.

Corrective action plan. This final rule adds § 98.102(c) to require that any Lead Agency with an improper payment rate that exceeds a threshold established by the Secretary must submit a comprehensive corrective action plan, as well as subsequent reports describing progress in implementing the plan. This is a conforming change to match new requirements for corrective action plans that were contained in the recent revisions to the forms and instructions. The corrective action plan must be submitted within 60-days of the deadline for submission of the Lead Agency’s standard error rate report required by § 98.102(b).

VI. Regulatory Process Matters

a. Regulatory Flexibility Act

The Regulatory Flexibility Act (RFA), as amended by the Small Business Regulatory Enforcement Fairness Act, (5 U.S.C. 605(b)) requires federal agencies to determine, to the extent feasible, a rule’s economic impact on small entities, explore regulatory options for reducing any significant economic impact on a substantial number of such entities, and explain their regulatory approach. This final rule will not result in a significant economic impact on a
substantial number of small entities. This rule is intended to implement provisions of the Act, and is not duplicative of other requirements. The reauthorization of the Act and these implementing regulations are intended to better balance the dual purposes of the CCDF program by adding provisions that ensure that healthy, successful child development is a consideration for the CCDF program (e.g., preserving continuity in child care arrangements; ensuring that child care providers meet basic standards for ensuring the safety of children, etc.).

The primary impact of the Act and this final rule is on State, Territory, and Tribal CCDF grantees because the rule articulates a set of expectations for how grantees are to satisfy certain requirements in the Act. To a lesser extent the rule would indirectly affect small businesses and organizations, particularly family child care providers, as discussed in more detail in the Regulatory Impact Analysis below. In particular, requirements for comprehensive criminal background checks and health and safety training in areas such as first-aid and CPR may have an impact on child care providers caring for children receiving CCDF subsidies. However, the rule will not have a significant economic impact on a substantial number of child care providers.

The estimated cost of a comprehensive criminal background check is $55 per check. For the required health and safety training, a number of low-cost or free training options are available. Many States use CCDF quality dollars or other funding to fully or partially cover the costs of background checks and trainings. The health and safety provisions in the rule will primarily affect those CCDF providers currently exempt from State licensing that are not relatives—which account for only about 22 percent of CCDF providers nationally. Finally, we note that the final rule contains many provisions that will benefit child care providers by providing more stable funding through the subsidy program (e.g., eligibility provisions that promote continuity and improved payment practices).

b. Executive Orders 12866 and 13563

Executive Orders 12866 and 13563 direct federal agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity). The Orders require federal agencies to submit significant regulatory actions to the Office of Management and Budget (OMB) for approval. Section 3(f)(1) of Executive Order 12866 defines “significant regulatory actions”, generally as any regulatory action that is likely to result in a rule that may: (1) Have an annual effect on the economy of $100 million or more or adversely affect in a material way the economy, a sector of the economy, productivity, competition, jobs, the environment, public health or safety, or State, local, or Tribal governments or communities; (2) create a serious inconsistency or otherwise interfere with an action taken or planned by another agency; (3) materially alter the budgetary impact of entitlements, grants, user fees, or loan programs or the rights and obligations of recipients thereof; or (4) raise novel legal or policy issues arising out of legal mandates, the President’s priorities, or the principles set forth in the Executive Order.

We estimate that the reauthorized Act and this NPRM will have an annual effect on the economy of more than $100 million. Therefore, this final rule represents a significant regulatory action within the meaning of section 3(f)(1) of Executive Order 12866. Given both the directives of Executive Orders 12866 and 13563 and the importance of understanding the benefits, costs, and savings associated with these proposed changes, we describe the costs and benefits associated with the proposed changes and available regulatory alternatives below in the Regulatory Impact Analysis.

c. Regulatory Impact Analysis

We have conducted a Regulatory Impact Analysis (RIA) to estimate and describe expected costs and benefits resulting from the reauthorized Act and this final rule. This included evaluating State-by-State policies in major areas of policy change, including monitoring and inspections (including a hotline for parental complaints), background checks, training and professional development, consumer education (including Web site and consumer statement), quality spending, minimum 12-month eligibility and related provisions, increased subsidies, and supply building (see Table 1).

The State policies described in this RIA, including information from the FY 2014–2015 CCDF Plans, represent policies that were in place prior to the reauthorization of the Act. This is consistent with Office of Management and Budget (OMB) Circular A–4 which indicates that in cases where substantial portions of a rule simply restate statutory requirements that would be self-implementing, even in the absence of the regulatory action, the RIA should use a pre-statute baseline (i.e., comparison point for determining impacts).

In conducting the analysis, we also took into account the statutory effective dates for various provisions. A number of States have already begun changing their policies toward compliance with the CCDBG Act of 2014, which was enacted in November of 2014, but data on those changes is not yet available and are not factored into this analysis.

Need for regulatory action. CCDF has far reaching implications for America’s low-income children, and the reauthorized Act and this final rule shine a new light on the role that child care plays in child development and making sure children are ready for school. The Act and this final rule take important steps toward ensuring that children’s health and safety is being protected in child care settings. Both the Department of Health and Human Services’ (HHS) Office of Inspector General (OIG) and the Government Accountability Office (GAO) have identified serious deficiencies with health and safety protections for children in child care. Prior to reauthorization of the Act, there was a wide range of health and safety standards across States. For example, ten States lacked even the most basic first aid and CPR training requirements, and in some cases, this approach to health and safety did not include vital standards in areas such as safe sleep practices and recognition and reporting of suspected child abuse and neglect.

In addition, without any federal monitoring requirement prior to CCDBG reauthorization, 24 States allowed license-exempt family child care providers to self-certify that they met health and safety requirements without any documentation or other verification. As mentioned earlier, the importance of monitoring was highlighted in a recent series of Department of Health and Human Services’ (HHS) Office of Inspector General (OIG) audits that identified deficiencies with health and safety protections for children in child care with CCDF providers in several States, including in Arizona, Connecticut, Florida, Louisiana, Maine, Michigan, Minnesota, Pennsylvania, Puerto Rico, and South Carolina. As discussed throughout this final rule, minimum health and safety standards included in the reauthorized Act and this rule are essential to help prevent children from being exposed to child care settings that put their health and safety at risk. The importance of such standards and the inherent risks are discussed at length in Caring for Our Children (Caring for Our Children: National Health and Safety Performance Standards; Guidelines for Early Care and Education Programs, 3rd Edition, which was produced with the expertise of researchers, physicians, and practitioners. (American Academy of Pediatrics, American Public Health Association, National Resource Center for Health and Safety in Child Care and Early Education. (2011). Parental choice is a foundational tenet of the CCDF program—to ensure parents are empowered to make their own decisions regarding the child care that best meets their family’s needs. Prior to reauthorization, CCDF rules required Lead Agencies to promote informed child care choices by collecting and disseminating consumer education information to parents and the general public. Over the years, economists have researched and written about the problem of information asymmetry in the child care market and the resulting impact both on the supply of high-quality care and a parent’s ability to access high-quality care. (Blau, D., The Child Care Problem: An Economic Analysis, 2001; Mocan, N., The Market for Child Care, National Bureau of Economic Research, 2002) In order for parental choice to be meaningful, parents need to have access to information about the choices available to them in the child care market and have some way to gauge the level of quality of providers. The Act and this final rule strengthen consumer education requirements to make information about child care providers more accessible and transparent for parents and the general public.

Stable relationships between a child and their caregiver are an essential aspect of quality. Yet, under current policies, clients may “churn” on and off of CCDF assistance every few months, even when they remain eligible. Some studies show that many families appear to remain eligible for the subsidies after they leave the program, suggesting that child care subsidy durations also are likely influenced by factors unrelated to employment (Grobe, D., R.B. Weber and E.E. Davis (2006). Why do they leave?: Child care subsidy use in Oregon.). Congress and ACF are concerned that State subsidy policies can make it overly burdensome for parents to keep their subsidy, or are not flexible enough to allow for temporary or minor changes in a family’s circumstances. This is supported by a study that featured a series of interviews with State and local child care administrators and identified a number of administrative practices that appear to reduce the duration of child care subsidy usage (Adams, G., K. Snyder and J.R. Sandfort, Navigating the child care subsidy system: Policies and practices that affect access and retention. Urban Institute, 2002). Through interviews with “state and local child care administrators and key experts, and focus groups with caseworkers, parents, and providers” in 12 States, the study found that families often faced considerable administrative burden when trying to apply for or recertify their eligibility status. For example, families sometimes had to interact with more than one agency during the application process, had to make more than one trip to an administrative office, and sometimes had to wait for weeks or months to get an appointment with a social worker. In addition, families receiving Temporary Assistance for Needy Families (TANF) sometimes had additional difficulties with redetermination because of the temporary nature of their employment or training activities. The study also found that agencies had different policies regarding the ways in which families could recertify their eligibility status including mail, phone, or fax. Parents often find it difficult to navigate administrative processes and paperwork required to maintain their eligibility when policies are inflexible to changes.
in a family’s circumstances. Policies that make it difficult for parents to keep their subsidy threat the employment stability of parents and can disrupt children’s continuity of care. This final rule establishes a number of family-friendly policies that benefit CCDF families by promoting continuity in subsidy receipt and child care arrangements.

Changes made by the CCDBG Act of 2014 and this final rule, consistent with the revised purposes of the Act, are needed to: Protect the health and safety of children in child care; help parents make informed consumer choices and access information to support child development; provide equal access to stable, high-quality child care for low-income children; and enhance the quality of child care and the early childhood workforce.

Commenters on the proposed rule who had overall reservations about the cost of the Act were typically concerned with the impact of redirecting limited funds to new requirements, including the potential loss of child care slots if funding is diverted from direct services. One commenter said that “few States have a budget environment capable of absorbing the estimated costs of compliance.” Others pointed to a need for additional resources in order to fully realize the expectations of the CCDBG reauthorized Act and this final rule. One commenter representing a State child care program said that “in order to advance the worthy goals of the CCDBG Act of 2014, the federal government must either provide sufficient federal resources to fund the envisioned transformation in a prescriptive manner, incrementally increase prescriptive compliance as adequate funds become available to reach the goals or allow States to use available resources with maximum flexibility to achieve results.” Some States did submit their own cost calculations and some focused on the financial impact of providing minimum 12-month eligibility and other family-friendly policies. While we do address the potential impact of these policies below, these are not considered costs for the purposes of this analysis, but rather are considered a reallocation of resources rather than a new cost.

A number of national organizations expressed these funding concerns indicating that “achieving the goals of the CCDBG Act to improve the health, safety, and quality of child care and the stability of child care assistance will require additional resources. Congress made a down payment on funding in the recently passed 2016 omnibus budget; however, additional investments will be necessary to ensure the success of the new law and to address the gaps that already exist in the system.”

Concerns about costs and tradeoffs are vital to the conversation about implementing the Act and this regulation. Throughout this final rule, we address the individual concerns raised about specific provisions and make adjustments where necessary. Whereas all policies have been discussed in detail in the body of the preamble above, this Regulatory Impact Analysis focuses on quantifying those policies that would have an impact on the overall cost to society of the Act and the final rule. As detailed below, the large majority of costs are related to items explicitly required by the Act. There are places in the final rule where we clarify language from the Act to ensure that the program is implemented in a way that is consistent with the intent of the law.

For the purposes of estimating the costs of these new requirements, the analysis makes a number of assumptions. As provided in the proposed rule, we welcomed comment on all aspects of the analysis, but throughout the narrative, we specifically requested comment in areas where there is uncertainty. While, as stated above, a number of commenters did express general concerns about the overall cost of the proposal, few provided specific comments on the assumptions made by the Regulatory Impact Analysis. Those specific comments that we did receive are included in the analysis below and largely supported the underlying assumptions of our original analysis.

One overarching assumption that is consistent across all the estimates is that we are assuming that the current caseload of children in the CCDF program (which is a monthly average of approximately 1.4 million children) remains constant. Due to inflation and the potential for erosion in the value of the subsidy over time, funding increases will be necessary to maintain the caseload and avoid slot loss; however, those changes are not reflected in this RIA since they are not directly associated with the Act or the final rule. While the estimate cannot fully predict how States and Territories will design policies in response to these new requirements or who would be responsible for paying certain costs, we do recognize that absent additional funding, these costs will impact the CCDF caseload. This point is discussed in greater detail below.

A. Analysis of Costs

In our analysis of costs, we considered any claims on resources that would be made that would not have occurred absent the rule. This includes new requirements that are merely reiterating changes made in the reauthorized CCDBG Act of 2014, which were effective upon the date of enactment of November 19, 2014. This RIA discusses the potential impact of the following major provisions in the statute and in the final rule:

- Monitoring and inspections (including State hotlines for parental complaints);
- background checks;
- health and safety training;
- consumer education (Web site and consumer statement);
- minimum 12-month eligibility periods;
- administrative and IT/infrastructure costs; and
- increased subsidy rates per child associated with improving continuity and equal access.

We conducted a State-by-State analysis of these major provisions. It should be noted that due to insufficient data, the health and safety portions of this cost estimate in the NPRM did not include Territories and Tribes. This omission was not meant to minimize the fact that requirements of the Act and the final rule will still have a significant programmatic and financial impact on Territories and Tribes. In the proposed rule, we invited public comment on the anticipated financial impact of the Act and the proposed rule on Territories and Tribes, but did not receive enough additional information to conduct a thorough analysis of costs for Territories and Tribes. However, to account for these costs in the RIA, we estimating the cost using the percentage of funding allocated to Territories and Tribes and applying that percentage to the cost estimate for States. For Territories, their funding allocation amounts to 0.5 percent and for Tribes, this is 2.0 percent of CCDF funding. By applying these percentages to the cost estimate for States, we are assuming that the combined cost of meeting the new requirement for Territories and Tribes also equals approximately 2.5% of the cost for States. It should be noted that the overall Tribal allocations amounts to slightly more than 2.0 percent due to funding level changes included in the CCDBG Act, but given that Tribes are not subject to all new requirements and have significant flexibility in some areas (particularly for medium and small allocation Tribes), we believe that 2.0 percent is a reasonable percentage to use for this estimate. The total annual money and opportunity cost for Territories and Tribes (using a 3 percent discount rate) is approximately $7.5 million. This is an estimated total of $66
million dollars over the full ten year period of the cost estimate. Additionally, for Territories and Tribes the estimated transfer costs related to increased supply building would be $20.9 million per year (using a 3 percent discount rate) or an estimated total of $184.3 million over the full ten year period of the cost estimate.

In order to determine State practices prior to the passage of the CCDBG Act of 2014, we relied on information from State-submitted FY 2014–2015 CCDF Plans, as well as the 2011–13 Child Care Licensing Study (prepared by the National Association for Regulatory Administration). We used data on requirements within a State by child care setting type (center, family home, group home, child’s home) and licensing status, to project costs based on specific features of a State’s requirements as reported at the time. If a State already met or exceeded an individual requirement, we assumed no additional cost associated with the final rule. When possible, if a State partially met the requirement we applied a partial implementation cost. For example, a State that has an annual monitoring requirement for its licensed centers would be assigned no additional cost to implement that specific part of the regulatory requirement.

For example, some States already conduct comprehensive background checks that include all components of a comprehensive background check required by law except an FBI fingerprint check. Prorated costs were assigned (assumptions about partial costs are explained in greater detail in the discussions below). The final rule offers significant flexibility in implementing various provisions, therefore in the RIA we identified a range of implementation options to establish lower and upper bound estimates and chose a middle-of-the-road approach in assessing costs.

This RIA takes statutory effective dates into account within a 10-year window. The analysis and accounting statements distinguish between average annual costs in years 1–5 during which some of the provisions will be in varying stages of implementation and the average annual ongoing costs in years 6–10 when all the requirements would be fully implemented (10-year annualized costs and total present value costs will also be presented throughout). Some costs will be higher during the initial period due to start-up costs, such as building a consumer Web site, and costs associated with bringing current child care into compliance with health and safety requirements. However, significant costs, such as the requirement to renew background checks every five years, would not be realized until later. These compounding requirements, including the cost of increasing subsidy rates, account for the escalation in costs in the out years of the analysis.

Throughout this RIA, we calculate two kinds of costs: Money costs and opportunity costs (Note: The analysis also considers “transfers”, which are discussed in the section on Estimated Impacts of Increased Subsidy; see Table 8 below for additional details). Any new requirements that have budgetary impacts on States or involve an actual financial transaction are referred to as money costs. For example, there is a fee associated with conducting a background check, which is a money cost regardless of who pays for the fee. For purposes of this analysis, we examined what additional resource claims would be made as a result of the reauthorized Act and final rule regardless of who incurs the cost or from what source it is paid (which varies widely by State). In some instances, money costs will be incurred by the State and may require States to redistribute how they use CCDF funds in a way that has a budgetary impact. In other cases, money costs will be incurred by child care providers or parents.

Alternatively, claims that are made for resources where no exchange of money occurs are identified as opportunity costs. Opportunity costs are monetized based on forgone earnings and would include, for example, a caregiver’s time to attend health and safety trainings when they might otherwise be working.

Each year, more than $5 billion in federal funding is allocated to State, Territory, and Tribal CCDF grantees. Activities in the final rule are all allowable costs within the CCDF program and we expect many activities to be paid for using CCDF funds. For example, although some States may supplement funding, others may choose to redistribute funding from a current use to address start-up costs or new priorities. As discussed above, we received a number of comments from States in response to the proposed rule that, in the absence of additional funding, meeting requirements in the final rule would result in a reduction in the CCDF caseload. Therefore, we anticipate some money costs will result in this type of re-distributive budgetary impact within the CCDF program.

However, to make the costs of the rule concrete, we provide analysis on the expected impacts. For example, if the child care caseload were to remain constant. While we recognize that there may be a decrease in caseload due to the financial realities of the new requirements, applying that decrease in caseload to underlying assumptions of this analysis would only lessen the estimated cost, which would result in a probable underestimate. While the costs estimated in this analysis represent the costs required, (regardless of who pays for the requirement) to meet the new requirements for the current monthly caseload of 1.4 million children, it is not, and should not be interpreted as, our projection of future caseload.

Overall, based on our analysis, annualized costs associated with these provisions averaged over a ten year window, are $225.52 million (plus an additional $59.2 million in opportunity costs) and the annualized amount of transfers is approximately $839.1 million (all estimated using a 3 percent discount rate), which amounts to a total annualized impact on States, Territories, and Tribes of approximately $1.16 billion.

This RIA represents all of the changes made between the NPRM and the final rule and other methodological refinements—with some changes increasing costs (follow-up monitoring visits, adding in an estimate for Tribes and Territories) and others decreasing the costs (removing the required use of grants and contracts). The result is an estimated increase of about $33 million per year in money costs and an increase in total annual impact from $1.1 billion in the NPRM to $1.16 billion in the final rule.

Of that amount, approximately $1.15 billion is directly attributable to the statute, with only an annualized cost of approximately $4 million (or approximately 0.3% of the total estimated impact) directly attributable to the discretionary provision of this regulation that extends the background check requirement. This RIA includes an additional estimated cost of $38 million per year for follow-up monitoring visits that was not accounted for in the version of the RIA that appeared in the NPRM. However, this is considered a natural outgrowth of the statutorily-required inspections and therefore not included in the discretionary amount because it is not attributable to a new requirement in the regulation. Compliance with these requirements will be determined through the CCDF State Plan process. Therefore, throughout this analysis we have phased in these discretionary requirements with the full costs taking effect in FY 2019 (to align with the next round of plans, which will become effective October 2018).
While this analysis does not attempt to fully quantify the many benefits of the reauthorization and this final rule, we describe the benefits qualitatively in detail and conduct a breakeven analysis to compare requirements clarified through this regulation against a potential reduction in child fatalities and injuries. Further detail and explanation on the impact of each of the provisions is available below.

Per the new requirements in the Act, this final rule includes several provisions focused on improving the health and safety of child care. We estimated costs associated with the following three requirements:

- Monitoring and inspections at § 98.42; comprehensive background checks at § 98.43; and health and safety training at § 98.41(a)(2).

Implementation costs of health and safety provisions, specifically the start-up costs, will depend primarily on the number of child care providers in a State and current State practice in areas covered by the final rule. We used data from the FY 2014 ACF–800 administrative data report to estimate that approximately 269,000 providers caring for children receiving CCDF subsidies would be subject to CCDF health and safety requirements. In addition to these CCDF providers, this analysis also includes approximately 110,000 licensed providers who are not currently receiving CCDF subsidies but would be subject to the monitoring (added in the final rule) and background check and certain reporting requirements.

These figures exclude relative care providers since States may exempt these providers from CCDF health and safety requirements. According to OCC’s 2014 administrative data, there are approximately 115,000 relative care providers receiving CCDF assistance. States vary widely on what they require of relatives, with 18 States/Territories requiring that relative providers meet all health and safety requirements, 4 exempting relatives for all requirements, and 34 indicating that relative providers were exempt from some but not all requirements.

It is difficult to forecast State behavior in response to new requirements since Lead Agencies have the option to exempt relatives from these requirements. Even those States that currently apply requirements to relatives may keep those requirements at current levels rather than expanding to meet new requirements. As a hypothetical, if States were to apply half of all the new health and safety requirements to half of the current number of relative providers, the annualized cost (using a 2% discount rate) would be approximately $40 million (averaged over a 10 year window). However, since applying the new requirements to relatives is not a legal requirement and we anticipate that many States will choose to maintain their relative exemptions, we are not including costs associated with relative providers in the accounting statement for this regulatory impact analysis. We did request comment on the extent to which Lead Agencies anticipate applying new requirements to relative providers and only one State responded to this request, indicating that they did “not plan to extend the new requirements to those homes where an exemption already exists.”

It should be noted that, based on a longitudinal analysis of OCC’s administrative data, the number of child care providers serving CCDF children has declined by nearly 50 percent between 2004 and 2014, an average decrease of 4 percent per year. The greatest decline occurred in settings legally operating without regulation, specifically family child care; however, both regulated and license-exempt child care centers also saw declines. This analysis is based on current provider counts, but assuming that the number of CCDF providers will continue to steadily decrease, this estimate of the number of providers, and resulting costs associated with implementing health and safety provisions, may be an overestimate.

Many States’ licensing requirements for child care providers already meet or exceed certain components of the minimal health and safety requirements for CCDF providers in this final rule. For example, training in first-aid and CPR and background checks are commonly included as part of State licensing, with approximately 40 States already meeting this requirement for licensed providers (centers, group home, and family child care).

Many licensed CCDF providers already meet many of the other health and safety requirements as well. For example, more than 40 States already require annual monitoring of all their licensed providers, with even more already requiring pre-inspections of their licensed providers. In the case of licensed centers, more than 45 States already require pre-inspections. For those States whose licensing requirements do not meet CCDF health and safety requirements, there will be costs incurred. However, the largest cost will be incurred for those CCDF providers that are currently exempt from State licensing that are not relatives—approximately 85,000 providers nationally. (Table 2 below provides a national picture of the types of CCDF providers.) We used an expanded State-by-State version of this table to estimate costs for meeting health and safety requirements. As stated above, the final rule allows States to exempt relatives from health and safety requirements, including background checks, health and safety training, and monitoring. Therefore, ACF did not attribute any cost associated with these requirements to relative CCDF providers.

**Table 2—Summary of CCDF Providers [FY2014]**

**Monitoring and pre-inspections.** The Act requires that States conduct monitoring visits for all CCDF providers including all license-exempt providers (except, at Lead Agency option, those that serve relatives). While States must have monitoring policies and practices in effect (for both licensed and license-exempt CCDF providers) no later than
November 19, 2016, the full cost of this requirement will not be in effect until 2017. Therefore, we are projecting some period of phase-in, with 25% of providers subject to monitoring in 2015 and an additional 50% (a total of 75%) subject to monitoring requirements in 2016. The costs of these requirements will be fully realized from 2017 on.

The Act specified different monitoring requirements for providers who are licensed and providers who are license-exempt.

- **For Licensed CCDF Child Care Providers**—States must conduct one pre-licensure inspection for health, safety, and fire standards and at least annual, unannounced inspections for licensed CCDF providers.
  - **For License-Exempt Providers** (except, at Lead Agency option, those serving relatives)—States must conduct at least annual inspections for license-exempt CCDF providers for compliance with health, safety, and fire standards at a time determined by the State.

  For this estimate, if a State reported that they conduct at least one annual monitoring visit for licensed CCDF providers (pre-licensure inspections are discussed separately below), we assumed no additional cost for those providers because it met or exceeded the frequency required by the Act and final rule. The majority of States already monitor licensed CCDF providers annually (more than 40 across all settings—centers, family child care, and group homes). A subset of States that currently have annual monitoring requirements do not conduct unannounced visits. However, we did not assign a cost for States changing their policy from announced to unannounced monitoring. We acknowledge that there may be an administrative cost to such a change, but for the purposes of this estimate, we consider that to be included in the overall administrative cost allocation discussed below. We asked for public comment on specific costs associated with moving from announced to unannounced inspections, but did not receive any.

  This cost estimate takes into account three major components of the new monitoring requirements: (1) Annual monitoring of both licensed and license-exempt CCDF providers, (2) Pre-inspections for licensed CCDF providers, and (3) a Hotline for parental complaints.

  The annual monitoring estimate includes the following variables analyzed on a State-by-State basis:
  - **Current State Practice:** We collected the number of CCDF providers within each State that would newly require an annual monitoring visit. We then estimated the number of new licensing inspectors and supervisors that would be required to monitor the projected number of providers newly subject to monitoring, based on a projected caseload of child care providers for each licensing staff.
  - **Current Provider Counts:** Using 2014 CCDF administrative data, we collected the number of CCDF providers within each setting for each State.

  Using these data we arrived at an estimate of the number of CCDF providers within each State that would newly require an annual monitoring visit. To estimate the actual cost, we calculated the cost of employing (salary and overhead) the estimated number of necessary new licensing staff (inspectors and supervisors).

  The Act requires States to have a ratio of licensing inspectors to child care providers and facilities that is sufficient to conduct effective inspections on a timely basis, but there is no federally required ratio. The current range of annual caseloads per licensing inspector is large, from 1:33 to 1:231. We used the following range to estimate the impact:
    - **Lower bound:** 50th percentile of current licensing caseloads (weighted by the number of providers in each State), which produced an adjusted caseload of 1:126 providers per monitoring staff.
    - **Upper bound:** A 1:50 ratio of providers to monitoring staff, as recommended by the National Association of Regulatory Administration.

  Our final cost estimate represents the midpoint between the lower and upper bound estimate. To calculate the number of required supervisory staff, we assumed a ratio of one supervisor per seven monitoring staff, which is the current average across States as reported in the NARA 2011-13 Child Care Licensing Study.

  To generate the actual cost associated with this staffing increase, we multiplied the number of new staff by salary and overhead costs for full-time equivalent (FTE) staff based on Bureau of Labor Statistics (BLS) data from the National Occupation and Wage Estimates from May 2013. The same FTE costs were applied to all States. The salary applied was $42,090 for each monitoring line staff (see Community and Social Service Specialists, All Other: Code 21–1099) and $65,750 for each supervisor (see Social and Community Service Managers; Code 11–9151), which was then multiplied by 2 to account for benefits and overhead.

  (Data from the Bureau of Economic Analysis’s National Income and Product Accounts shows that in 2013, wages and salaries are approximately 50 percent of total compensation.) Using this methodology, the annualized money cost of meeting the annual monitoring requirements is $172.9 million, estimated using a 3 percent discount rate. The estimated present value cost of meeting this requirement over the 10 year period examined in this rule, using a 3% discount rate, is approximately $1.5 billion.

  While not required by the Act or the final rule, we anticipate that annual monitoring in States could result in additional follow-up visits if problems were identified in the initial visit. Because we did not have data on this with which to estimate potential impacts, we asked for comment in the NPRM on the percentage of providers that would require a follow-up visit as a result of new annual monitoring visits. In response to this request, one State estimated that approximately 23% of all providers would require a new annual visit once the annual monitoring visit requirement goes into effect and another estimated that “approximately 20% of new annual monitoring inspections” would result in follow-up inspections. Despite not being an explicit requirement of the rule or statute, we believe that follow-up visits would be a natural result of the new statutory inspection requirements and therefore including this potential cost in the final cost estimate. Assuming a 20% follow-up rate, the associated costs could be approximately $40.6 million per year (estimated using a 3% discount rate).

  Opportunity costs for the monitoring requirements account for the fact that to successfully pass a monitoring visit, there would presumably be a number of administrative costs (in terms of time; an opportunity cost) for providers and caregivers. For example, providers must read the new rules, change their current practices to comply, and obtain and track paperwork to make sure they are in compliance. For the purposes of this following analysis, we made several assumptions about the amount of time required to prepare for and comply with the monitoring requirement, but we welcome comment on these assumptions. To calculate the opportunity cost of these visits, we assumed that time spent doing administrative tasks equals the length of the monitoring visit plus an additional 1.5 and 2.0 hours of preparation per
hour of the visit, for family child care and center providers respectively.

Based on one State reporting that their monitoring visits for licensure took between 2.5 and 5 hours, we used 2.5 hours as the basis for our lower bound and 4 hours as the basis for our upper bound. We used 4 hours instead of 5 for our upper bound estimate because 5 hours is the amount reported for a licensing visit, but what is required in the final rule is generally less extensive than what is generally required for licensure. As such, our lower bound estimate uses 6.25 and 7.5 hours of preparation for family child care and center providers, respectively, and our upper bound uses 10 and 12 hours of preparation for family child care and center providers, respectively.

Two States provided their estimated time spent on monitoring. One State estimated that they currently “expend 10 hours of staff time per visit” and another cited a study they conducted in 2006 that found “day care licensing staff indication of 9.35 hours is spent preparing for, traveling to, and conducting a monitoring inspection.” Since both of these figures are within the range of the assumptions used for our analysis, we are keeping the assumptions the same for the final rule.

According to BLS, for child care workers, one hour equals $18.80 after accounting for benefits and overhead (we include overhead because administrative preparation time would most likely occur during work hours). We estimated the opportunity cost of preparation time for monitoring to be an average of $8.1 million annually (estimated using a 3% discount rate) during the two-year phase-in period (assumes States begin to ramp-up monitoring, but not fully implemented) and an annualized opportunity cost of $14.3 million (estimated using a 3% discount rate) over the entire 10 year window. Note that the phase-in period discussed here covers a two year period and is different from the phase in period in the table below, which shows a phase-in period of 5 years (after which all requirements would be fully implemented).

Some proportion of providers will require remedial work to meet CCDF health and safety requirements after an annual visit. For example, a provider may be out of compliance with building safety or not have up-to-date immunization records, and costs in terms of time as well as material resources would be necessary to come into compliance. However, it is difficult to quantify because the specific remediation required will vary by provider and other circumstances.

Therefore, we did not attempt to monetize the cost of providers’ remediation efforts. In addition, there are also benefits to be reaped (in terms of child health and safety) as providers make changes to come into compliance with health and safety requirements as a result of this rule, but that are not quantified in this analysis.

Next we estimate cost of pre-licensure inspections required of licensed CCDF providers by the Act. Using the same methodology that we used for annual monitoring, we determined how many States already met this requirement and used CCDF administrative data to determine the number of licensed providers (by setting type) that did not previously but would now require pre-licensure visits. The final rule allows States to grandfather all existing providers—thus there is no start-up cost or backlog of providers that need a pre-inspection. There are not good data to estimate how many new providers a State would need to pre-inspect on an annual basis, but anecdotal evidence suggests the number is relatively small. Of the States that do not currently require pre-inspections (1 for centers, 6 for group homes, and 7 for family child care), we estimated (based on information shared by a few States) that a lower bound of five percent of family child care and four percent of center care would be new each year (lower bound). For the upper bound, we estimate that 12 percent of family child care and 7 percent of child care centers would be new each year.

Using a caseload of 88 providers per monitoring staff (the midpoint of the 50th percentile of current caseload data and the recommended caseload of 50:1), and using the same salary and benefits data as the monitoring estimates, the ongoing average annual pre-inspection costs are estimated to be approximately $0.7 million (estimated using a 3% discount rate), but would not begin until 2017. The estimated present value cost of meeting this requirement over the 10 year period examined in this rule, using a 3% discount rate, is approximately $6.2 million.

Monetized caregiver time to prepare for pre-inspections is considered an opportunity cost and is estimated to be approximately $200,000 annually, a relatively small amount because this only applies to new licensed providers in the few States that don’t already require pre-licensure inspections. Though some of the opportunity cost would be incurred prior to the actual inspection visit, for the purposes of this estimate, we consider all costs for pre-inspections as beginning after the end of the phase-in period. We used the same methodology used to calculate annual inspections to determine the opportunity cost of pre-inspections.

However, recognizing that preparing for an initial licensing inspection may require additional time, we used the midpoint of the estimate time for an annual visit and doubled it for an estimated 16.25 hours for family child care and group homes and 19.5 hours for centers. We asked for comment on these assumptions, but did not receive specific information on the amount of time required to prepare for and participate in a pre-inspection (rather than a regular inspection).

This cost analysis also includes the “parental complaint hotline” as part of the monitoring requirements. The final rule requires at § 98.32(a) that Lead Agencies establish or designate a hotline or similar reporting method for parents to submit complaints about child care providers. Lead Agencies have flexibility in how they implement this requirement, including whether the system is telephonic or through a similar reporting process, whether the hotline is toll-free, and whether the hotline is managed at the State or local level. Based on an examination of several States that already have comparable hotlines in place, this estimate for the parental complaint hotline includes multiple components that might be associated with the implementation and maintenance of a telephonic hotline.

These components include the one-time purchase of an automatic call distribution (ACD) system at $45,000; the use of a digital channel on a T1 line ranging from $204 to $756 per year; 2,000 minutes of incoming call time at $0.06 per minute; and salary and benefits for one FTE to manage the hotline at $67,000. States vary in how they collect parental complaints. According to an analysis of the FY 2014–2015 CCDF Plans and review of State child care and licensing Web sites, 18 States/Territories have a parental complaint hotline that covers all CCDF providers. 22 States/Territories have a parental complaint hotline that covers some child care providers, and 16 States/Territories do not have a parental complaint hotline. (Note that unlike the other health and safety provisions, this estimate does include Territories).

States that had hotlines for both licensing and CCDF were considered as meeting the full requirement for a parental complaint hotline and had no additional costs. States that only had one hotline (e.g., only for licensed providers) were only considered as partially meeting the requirement for the hotline and had 0.5 FTEs applied. The full
amount was applied to States that did not have anything in place that met the requirements of the hotline.

We used a range of options to estimate the impact of the parental complaint hotline requirement based on the cost of the TI line and whether the hotline is toll-free and chose the mid-point as the primary estimate. Using this methodology, the estimated present value cost of meeting this requirement over the 10 year period examined in this rule, using a 3% discount rate, is approximately $16.6 million. Average annual costs during the phase-in period are estimated to be approximately $2.6 million during the first year (different than the phase-in figure in Table 3 below) and an average of $1.8 million for each year after. The estimate assumed slightly higher startup costs during the first year because States and Territories may need to purchase and install an ACD system.

**Comprehensive background checks.** The CCDBG Act of 2014 added a new section at 658H on requirements for comprehensive, criminal background checks that draw on federal and State information sources. The Act outlines five components of a criminal background check, which we restate in § 98.43 of the final rule. There are several aspects of the background check requirements that must be taken into account in a cost estimate. This includes the background checks for existing child care staff members (who do not already have them), the new federal requirement that child care staff members receive a background check every five years, background checks for other adults living in family child care homes, and checks with other States if a child care staff member has lived in another State. This cost estimate does not take into account the cost of the requirement at § 98.43(b)(2) for a search of the National Sex Offender Registry (NSOR) file of the National Crime Information Center (NCIC). ACF is currently in discussions with the FBI to determine the logistics behind States meeting this requirement and plans to issue guidance about how States, Territories, and Tribes can search the NSOR file. We asked for comment on the cost of meeting this requirement and one State estimated a one-time cost of $3 million to meet this requirement. Another State noted that “the amount of security that will be required and the system changes that will be necessary to meet these security requirements has not been specifically identified” but that “automation would be costly, and the labor cost for a non-automated solution would be very high as well.” While helpful, we did not feel that we received sufficient information to extrapolate across a nationwide analysis, so are retaining the caveat that this cost estimate does not include a search of the NSOR file of the NCIC.

Similar to the methodology used for monitoring, the first step of the cost estimate was to determine current State practice. This is important because there would not be a new cost for States with requirements in place. One State provided a related comment, stating that since they already require FBI fingerprint checks of employees in child care centers, they do “not anticipate that the additional types of background checks will result in a significant increase in the number of persons being flagged as risky.” This State’s current requirements also include checks for family child care homes, but since this was a recently implemented requirement, they acknowledge that “child care homes will feel the financial impact of running background checks on additional applicants more significantly than a center-based operation.”

To account for existing State practice such as the one mentioned above and the resulting variation in cost, we used CCDF 2014–15 State Plan data (which included State-by-State data on four distinct background check components organized by provider type) to determine which States already met certain components of the background check requirement. After identifying the areas where States would need to implement new requirements we applied the provider counts to determine the number of child care staff members that would need to meet these new background check requirements.

Because our administrative data on the number of CCDF providers represent the number of child care programs serving CCDF children, not the individual child care staff members in these settings that would need to receive a background check, we estimate the number of individual child care staff members that would be affected by this provision by applying a multiplier to each provider type (centers, family home, and group home).

We are requiring individuals, age 18 or older, residing in a family child care home be subject to background checks because it is reasonable to assume that these individuals may have unsupervised access to children. Because we are including these individuals in the definition of child care staff members, they will be subject to the same requirements and will be
allowed the same appeals process as employees.

To generate an estimated number of staff per child care center, we used data from the National Survey of Early Care and Education (NSECE), which indicated that the median number of children per center nationally is approximately 50. We then used the following data sources: (1) AFC–801 CCDF administrative data, which provides a detailed breakdown of the number of CCDF children by age group; and (2) Caring for our Children, which has a recommended staff-child ratio for centers by age group. (Caring for Our Children’s recommended staff-child ratios are an overestimate because not all States have adopted the standard.)

Using these figures, a weighted average was generated that takes into account the national age-distribution of CCDF children served and recommended child-staff ratios for an average center and a baseline multiplier of 11 staff members per child care center receiving CCDF-funded subsidies, 8 of whom are caregivers and 3 are additional staff members or individuals who may have unsupervised contact with children.

We estimated the number of other adult household members residing in family child care homes (persons other than the caregiver) and relevant staff members and added this to our cost estimate. We assumed each family child care group home provider had an average of 1 additional household member. (This assumption is informed by consultation with State administrators, who stated that most frequently there is 1 other adult over the age of 18 in a family child care home that must undergo a background check).

Using these multipliers, we estimated the cost for background checks for staff members newly subject to the requirements. This includes both the cost of obtaining the background check and the opportunity cost for child care staff members to meet the required components. The opportunity cost represents the value of time (measured as foregone earnings) of child care staff members during the time they spend to complete a background check.

Many States already require some, if not most, of the background check components. To determine the existing need, we compared the requirements described in this final rule against current background check requirements, as reported in the CCDF 2014–2015 Plans. According to the Plan information, nearly 30 States require that licensed child care center staff undergo a criminal background check that includes a fingerprint. More States already have requirements for a State criminal background check without a fingerprint, but for this estimate, we only counted States that required a fingerprint as meeting the requirement. For licensed centers, more than 40 already require an FBI fingerprint check, nearly all already require a check with a child abuse and neglect registry, and more than 35 require a check with a sex offender registry. Nearly 30 States require licensed family child providers to have a State criminal background check that includes a fingerprint, more than 40 already require an FBI fingerprint check, more than 30 require a check with the child abuse and neglect registry, and more than 35 require a check against a sex offender registry.

Fewer States meet the background check requirements for unlicensed CCDF providers. According to our State Plan data, only fewer than 25 States already have FBI fingerprint check requirements in place for their unlicensed providers and only six require those providers to have a State background check that includes an FBI fingerprint.

Using this data, we identified gaps in existing State policies as compared to the newly-required background check components. These gaps were matched with CCDF AFC–800 administrative data showing the number of providers per setting type by State, and then using the methodology above calculated the number of child care staff members requiring background checks.

As mentioned above, there are two costs of a background check: the fee to conduct the check and the time it takes for individuals to get the check. With regard to the fee, Lead Agencies have flexibility to determine who pays for background checks. According to the FY 2014–2015 CCDF Plans, approximately 30 States require the child care provider to pay for the background check, approximately 10 States indicated the cost was split, and fewer than 10 States indicated they pay the fees associated with the cost of conducting a background check. However, regardless of how costs are assigned, an impact analysis must include the overall monetary and opportunity cost impacts.

We do anticipate that there will be costs associated with enhancing or building systems to process background checks and appeals, we believe that this cost is accounted for here in two areas: (1) The cost estimate is based on a fee for conducting the background check, which is applied to each individual. This fee includes costs associated with processing the background check; and (2) With an opportunity cost and a 5% information technology (IT) startup cost to all of these new requirements (discussed below). Between these two items, we think that this estimate sufficiently accounts for potential costs of running the background check system.

In their CCDF Plans, Lead Agencies described their costs associated with conducting background checks, including cost information on individual components of the background check. This information, combined with information we received from the FBI regarding costs of FBI fingerprint checks, was used to derive an estimated average cost of each background check component for a total of $55 for each set of four background checks. We applied this cost (or a partial cost) to the number of individuals in need of some or all of the background check components, determined after identifying State-by-State practices for different types of providers.

Next, we estimated the average annual ongoing cost of administering background checks to new child care staff members (as opposed to start-up costs associated with bringing existing staff members into compliance). Child care provider departure rates cited in the literature vary widely from as low as 10 percent to 20 percent (The Early Childhood Care and Education Workforce: Challenges and Opportunities, Institute of Medicine and the National Research Council, 2012). We used these as the lower and upper bounds, respectively for our estimated turnover rate. We then reduced this estimate by another 10 percent to account for the fact that the Act requires some portability of background checks for certain staff members in a State, meaning that if a staff member has already passed a background check within the past five years, then that individual is not required to get another background check when changing employment from one child care provider to another.

Based on this approach, the estimated present value cost of meeting these background check requirements (for existing and new providers) over the 10 year period examined in this rule, using a 3% discount rate, is approximately $58.6 million. AFC estimated that during the three year phase-in period background check fees would have an average annual money cost of $10.8 million (also estimated using a 3% discount rate), as States bring existing providers into compliance. (Note again that this phase-in period is different than the five year period indicated in the table below). We estimate the average annual money costs associated with background checks for new staff members of approximately $4
million (estimated using a 3% discount rate).

The Act requires that all child care staff members receive a background check every five years. Through the 2014–15 CCDF State Plans, States report on how frequently licensed providers are required to receive each component of the background check. This data was available both by individual background check component and by provider type. If a State already required that a particular background check be renewed every five years (or more frequently), we did not include it in this cost estimate. While we know that States have similar policies in place for unlicensed providers, we do not have data for this subset of the provider population. Therefore, we considered the renewal of background checks for unlicensed providers to be a fully new cost to all States, understanding that this is more likely than not an overestimate.

Since not all background checks will be conducted in the same year, we spread these costs evenly over a five year period to show that the costs would not be incurred all at once. We recognize that in practice these costs may not be evenly distributed over the five year period, depending on how States choose to conduct background checks during the initial implementation period. However, any uneven distribution of costs over time only negligibly affects the total dollar amount. The estimated present value cost of renewing background checks for all individuals over the 10 year period examined in this rule, using a 3% discount rate, is approximately $55.4 million, with the average annual ongoing money costs of this five year renewal requirement (once it begins in year six of the ten year window) to be $6.3 million. However, since provider counts have been in steady decline (as discussed earlier), this may be an overestimate.

Another feature of the background check requirement is that States are required to check the State-based criminal, sex offender, and child abuse and neglect registries for any States where an individual resided during the preceding five years. One State specifically noted that they did “anticipate that there will be additional costs associated with background checks for out-of-State providers, particularly when obtaining out-of-State information,” and that in their case, “that cost would be passed down to the provider, therefore some providers may opt out of participating in the subsidized child care program.” It should be restated, however, that while this analysis estimates the cost of each requirement, it does not take into account who will ultimately assume the cost.

To estimate how many individuals would require an additional State background check, we used data from the U.S. Census Bureau, which conducts a Current Population Survey that includes data on Migration and Geographic Mobility (Current Population Survey Data on Migration/Geographic Mobility, U.S. Census Bureau). Mobility data on employed individuals (inclusive of all races and genders) ages 25 to 64 show an out of State mobility rate of approximately two percent. Given that this data measures mobility in a given year and our requirement is for a five year window, we use a 10% mobility rate for this calculation. We assume that 10% of all child care staff members will require a check with another State and assign a prorated cost of the background checks minus the FBI check accordingly. We estimate the average annual ongoing money costs of this requirement to check other States to be less than a million dollars. Next, to estimate opportunity cost, we monetized child care staff member time spent obtaining a comprehensive background check, such as completing paperwork or other activities necessary to complete the check. We assumed that a check of the child abuse neglect registry takes 30 minutes, and that the other three components of a comprehensive background check take 1 hour combined (or 20 minutes each) for a total of 1.5 hours. We also assumed that each hour is worth $12.80, assuming $10 per hour for a child care staff member multiplied by 1.28 to account for benefits. (We derived these hours and benefit rates from the Employer Cost for Employee Compensation database, Bureau of Labor Statistics, which we then adjusted to reflect the number of child care providers that are self-employed) ACF estimated average annual opportunity costs (using a 3% discount rate) for all the background check components of $6.3 million during the 3 year phase in period and an annualized cost of $7.1 million over the 10 year window. This is a total present value of approximately $62.4 million over ten years (using a 3% discount rate).

More extensive background checks will lead to greater numbers of job applicants and other associated people being flagged as risky, thus leading to additional types of cost. For example, a hiring search would need to be extended if the otherwise top candidate is revealed by a background check to be unsuitable to work with children. These costs that result from background checks are correlated with benefits; indeed, if this category of costs is zero, then the background check provisions of this final rule would have no benefits. However, due to lack of data, we have not attempted to quantify either this type of costs or the associated benefits.

Caregiver, teacher and director training. The Act and this final rule require Lead Agencies to establish training requirements for caregivers, teachers, and directors of CCDF providers. The Act (section 658E(c)(2)(I)) and the final rule (§ 98.44) require training and professional development, including training on child development.

For this analysis, we estimated costs in the following areas: Current number of CCDF caregivers, teachers, and directors (using FY 2014 data) to meet new pre-service or orientation training requirements; on-going training for caregivers, teachers, and directors (which includes new incoming caregivers); and pre-service or orientation training for new caregivers, teachers, and directors.

To establish a baseline, ACF used information reported by States in their FY 2014–2015 CCDF Plans and information from the 2011–13 Child Care Licensing Study to determine—for each of the training areas—which trainings were already required by State policy for the following providers: Centers, family homes, and group homes. The available data allowed us to distinguish between requirements for licensed providers and unlicensed providers, allowing us to further refine the cost estimate. Once current requirements for each State were identified, we were able to determine which new trainings would be required, and then apply the cost of receiving the balance of trainings.

We reviewed the health and safety training delivery models in multiple States with a range of available training requirements to get a better sense of the range of costs for training. We found a wide range, from training provided at no-cost, to training packages that cost up to $170. Using these figures as a basis, a lower bound of $60 and an upper bound of $140 was established for the total training package per caregiver. This range is informed by the fact that many no-cost online training courses have already been developed, and thus are truly no cost, but even States taking advantage of no-cost online trainings would most likely have to use additional trainings with costs associated in order to meet all the requirements.

Training costs were broken into three components: First-aid & CPR training, child development training, and then a package of all other basic health and safety requirements. For the purposes of this estimate, we created these groupings to better reflect the available cost information that we gathered through our research. First-aid and CPR are the most commonly offered trainings, so their costs were easier to identify. One State did point to these particular trainings as an area of concern due to the ongoing costs that they think “would be paid by providers.” We discuss our rationale for these trainings (which are required by statute) in the preamble above, but do recognize that there is a cost to this requirement and this cost estimate reflects such costs.

We separated child development training from the rest of the package to reflect the fact that the delivery of trainings in this area are more likely to be tied to broader on-going professional development curricula or programs, and may have a higher cost. Breaking the trainings down in this way allowed us to apply a prorated amount, based on what was currently required by States.

This training requirement only applies to child care providers receiving CCDF subsidies. However, as with the background check estimate, another factor in the calculation was the number of caregivers, teachers and directors per provider that would need to receive the training, since the ACF–800 data captures the number of child care providers serving CCDF children not individual caregivers, teachers, or directors in these settings that would need to receive training. To compensate we applied a multiplier to each setting type (centers, family home, and group home). We used the same methodology described in the background check section above (based on data from the NSECE, ACF–801, and Caring for our Children child-staff ratios), to create a weighted average of nine caregivers/teachers/directors per child care center. Unlike the background check requirement, the training would only apply to those providing care for children. For family child care homes, we estimate that one caregiver per site would be required to receive training, and two caregivers per group home.

Next, we assumed that some caregivers, teachers, and directors may already have training in some of the topics, though they were not previously required, and reduced the total estimate by 10 percent. After applying these assumptions, to gaps in current State practice, we were able to estimate the present value cost of compliance with the new pre-service and orientation training requirement. A basic explanation of the calculation is the number of trainings required for compliance (by State and by provider type) multiplied by number of individuals trained multiplied by the cost per training (up to $140 per individual). We also assumed that some portion of individuals will have already received trainings that could apply to the new requirements, so we reduced the final estimate by ten percent. Using a 3% discount rate, the estimated cost is an annualized value of $7 million, or a total of approximately $61 million over the 10 year period examined in this rule. We estimated that during the phase-in period, the required pre-service or orientation health and safety training has an annual average money cost of $18.8 million for the initial two year phase-in period and $3.0 million in subsequent years. The higher cost in the initial years is due to the high cost of bringing current providers into compliance during the phase-in period while in subsequent years, the pre-service and orientation trainings would only apply to new providers.

To estimate the ongoing cost of providing health and safety training in

</table>
the required topic areas pursuant to the Act to newly entering caregivers, teachers, and directors of CCDF providers who would not otherwise have been required to receive training, we had to predict turnover within the provider population. We took the midpoint of the turnover number we used for background checks—15 percent. Since, according to the NSECE, many caregivers new to a care setting are not new to the profession, we further reduced that estimate by 20 percent to account for the fact that some new caregivers, teachers, and directors will be coming from other CCDF care settings, and thus bring their training credentials with them. (Number and Characteristics of Early Care and Education (ECE) Teachers and Caregivers: Initial Findings from the National Survey of Early Care and Education (NSECE), OPRE Report #2013–38)

To generate a cost of ongoing training, based on anecdotal evidence from State administrators, we assumed that ongoing trainings (e.g., maintaining competencies and certificates) would be the equivalent of approximately 20% of the total cost of pre-service and orientation training to the entire CCDF provider population and used that as our annual estimate. We estimated that on an ongoing basis, average annualized money costs for training would be $6.2 million (estimated using a 3% discount rate). The estimated present value cost of this requirement over the 10 year period examined in this rule is approximately $54 million (again using a 3% discount rate).

Next we monetized caregiver/teacher/director time spent completing the requisite health and safety trainings ( opportunity costs). The National Center on Child Care Professional Development Systems and Workforce Initiatives funded by ACF reported that the training topics together would require a minimum of 20 hours. However, most caregivers will require only a subset of the training topics (e.g., SIDS training is only for caregivers that serve infants; transportation and child passenger safety is only as applicable). Using that as a baseline, for the purposes of this calculation we used a lower bound estimate of 15 hours and an upper bound of 30 hours to complete the required trainings. We used the midpoint of these two estimates for the final estimate. We assumed that each hour of staff time equals $12.80, the same as we did for background checks ($10 for child care caregivers multiplied by 1.28 to account for benefits, but not overhead). (Employer Cost for Employee Compensation database, Bureau of Labor Statistics, adjusted to reflect the number of child care providers that are self-employed)

We then applied a 10 percent reduction to those figures to account for caregivers who have fulfilled some training requirements that were not previously required. Using these assumptions, during the initial two year phase-in period (different than the 5 year phase-in period indicated in the table below) the average annual opportunity cost of monetized caregiver time on trainings is estimated to be approximately $63.2 million. The average annual opportunity cost for the entire 10 year period is estimated to be $37.6 million, with a total present value of $330.0 million over the 10 year period (using a 3% discount rate).

Administrative and information technology (IT) startup. Compliance with these health and safety provisions will require States to incur administrative costs and develop or expand their information technology systems and capacity. One State noted in their comment that the new requirements “will require significant modifications to our licensing system. This significant burden on our IT resources will require more staff resources than we have available and will also require State monetary resources that are not currently available.”

Given that there will be significant variation at the State level on these costs, rather than attempt to quantify the related costs for each provision, we applied a percentage of the total health and safety money costs (minus the costs for the hotline for parental complaints, which already includes administrative and IT costs in its calculation) to estimate the costs of both administrative and IT/infrastructure costs. This analysis assumes 5 percent for administrative costs and an additional 5 percent for IT/infrastructure costs. Since the annualized amount of all total health and safety money costs (minus the hotline for parental complaint) is approximately $202.2 million, five percent of that would be approximately $10.0 million per year (using a 3% discount rate).

Our 5 percent estimate for Administrative costs is based on Sec. 658E(c)(3)(C) of the Act, which places a 5 percent limit on administrative costs, by stating that not more than 5 percent of the aggregate amount of funds available to the State to carry out this subchapter by a State in each fiscal year may be expended for administrative costs incurred by such State to carry out all of its functions and duties under this
subchapter. According to the most recently available data collected through the ACF–696 financial reports, of the 56 States and Territories, only 4 were using the full 5 percent allowed for administrative costs.

The 5 percent estimate for IT/Infrastructure costs is based on OCC’s expenditure data (ACF–696), which shows that Lead Agencies reported using a total of $68 million or approximately 1 percent of expenditures on computer information systems. Given the expected increase in IT costs associated with implementing the new rule, including possible costs associated with consultation, we increased that to 5 percent, which we considered a reasonable estimate given current expenditure levels.

The estimated present value cost of both administrative costs and IT/Infrastructure costs amounts to an annualized cost of approximately $10.0 million each, which would result in a cost of $88.2 million over the 10 year period examined in this rule, using a 3% discount rate.

2. Consumer Education Provisions

The Act and the final rule includes several provisions related to improving transparency for parents and helping them to make better informed child care choices. Some of these provisions may require new investments by the States, Territories, and Tribes, including a consumer education Web site at § 98.33(a) and a consumer statement at § 98.33(d). Greater discussion of each of the provisions can be found at Subpart D. All costs associated with implementation of consumer education requirements are considered money costs (as opposed to opportunity costs) since they would involve an actual money transaction.

**Consumer education Web site.** The final rule, per the Act, amends paragraph (a) of § 98.33 to require Lead Agencies to create a consumer-friendly and easily accessible Web site as part of their consumer education activities. The Web site must at a minimum include six main components: (1) Lead Agency policies and procedures, (2) provider-specific information for all licensed child care providers, and at the discretion of the Lead Agency, all eligible child care providers (other than an individual who is related to all children for whom child care services are provided), (3) results of monitoring and inspection reports for all eligible child care providers (other than an individual who is related to all children for whom services are provided), (4) aggregate number of deaths, serious injuries, and instances of substantiated child abuse in child care settings each year for eligible providers, (5) referral to local child care resource and referral organizations, and (6) directions on how parents can contact the Lead Agency, or its designee, and other programs to help the parent understand information included on the Web site. We established our estimate based on current State practice and the market price of building a Web site that fulfills the requirements in this final rule.

ACF conducted a comprehensive review of State Web sites and found 35 States and Territories already have Web sites that meet at least some of the new requirements. Based on an analysis of current State consumer education Web sites, we assumed that any of the States that did not meet any of the new requirements would have all new costs. For States that met some of the requirements, we determined the percentage of work needed for the Web site to meet the requirements and multiplied the percentage of work needed by the cost estimate for building and implementing a consumer education Web site. Components of a Web site that we looked for and included in our estimate were: The scope of the Web site in terms of which providers were included; health and safety requirements; posting the date of last inspection, including any history of violations or compliance actions taken against a provider; information on the quality of the provider; and aggregate data on number of fatalities, serious injuries, and substantiated cases of child abuse that occurred in child care. From this review, we determined the amount of work needed for all States and Territories to build and implement the requirements of the consumer education Web site. We also consulted several organizations familiar with building Web sites to establish an upper and lower bounds for the estimate based on the final rule that covered the full range of implementation, from planning and initial set-up to beta testing. The upper and lower bound estimates include features that would make the Web site more user-friendly but may not be included in the final rule, including...
advanced search functions, such as a map feature, to make it easier for parents to find care. Building and implementing a new Web site requires some start-up costs, so the cumulative estimated costs are higher during the initial five-year phase-in period. We established a lower bound estimate to include the web developer costs of planning, creating supporting documentation, site and infrastructure set-up, static page creation, initial data imports, the creation of basic and advanced search functions and data management systems, and testing. The upper bound adds development and improvement activities to modernize the Web site as technologies change. Ongoing annual costs include quality control and maintenance, providing customer support, and monthly data updates to the Web site. All of these estimates include salaries and overhead for the Web site developers and staff, weighted by the number of CCDF providers in each State.

Based on our research, we used the same salary and overhead information ($67,000 for line staff) for all States. However, there will be different levels of effort depending on the number of providers in a State, so we assumed different FTEs based on the total number of child care providers in a State: States with more than 8,000 providers (3.0 FTE), States with between 3,000 and 8,000 providers (2.50 FTE), and States with less than 3,000 providers (2.0 FTE). 11 States had over 8,000 providers; 16 States and Territories had between 3,000 and 8,000 providers; and 29 States and Territories had fewer than 3,000 providers.

Over the five-year phase-in period, we estimated an average annual money cost (estimated using a 3% discount rate) for just the building and maintenance of Web sites of $12.8 million and ongoing money costs of $11.8 million annually thereafter.

The consumer education Web site requires a list of available providers and provider-specific monitoring reports, including any corrective actions taken. The costs associated with collecting the information necessary to provide this information on the Web site is included in other parts of this RIA. For example, this RIA includes an estimate for the cost of implementing monitoring and inspection requirements. There may also be effort associated with translating information from monitoring and inspection reports for an online format. However, since the monitoring cost assumption therapy for monitoring staff and supervisors, it is reasonable to assume that the duties of these employees would include processing licensing information/findings. However, one of the components of the consumer education Web site at § 98.33(a)(2)(ii) is information about the quality of the provider as determined by the State through a QRIS or other transparent system of quality indicators, if the information is available for the provider. For Lead Agencies that do not currently have a means for differentiating quality of care, there may be new money costs associated with creating the system of quality indicators necessary to obtain quality information on providers. Therefore, we are incorporating the cost of implementing a system of quality indicators into the cost estimate for the consumer education Web site.

In order to estimate the costs of implementing the transparent system of quality indicators for the consumer education Web site, we modeled a sample system of quality indicators using the QRIS Cost Estimation Model (developed by the National Center on Child Care Quality Improvement funded by ACF). Costs were associated with the following components included in the cost estimation model: Quality assessment, monitoring and administration, and data and other systems administration. For each State, we identified the components of the sample system of quality indicators that each individual State or territory was missing. Costs were applied only in the areas that were lacking for States and territories with partial compliance. States and Territories not meeting any of the components of the model had all new costs associated with each component. Using information from the CCDF FY 2014–2015 State Plans and the National Center on Child Care Quality Improvement, ACF determined which States had a system for differentiating the quality of care available in the State, which States could then use to provide information on the consumer education Web site. In order for States to be considered as already meeting this requirement, the State needed to have reported having a means for measuring and differentiating quality between child care providers. ACF recommends this system be a QRIS that meets high-quality benchmarks, but as this rule does not require a QRIS, we counted other systems of quality indicators, such as tiered reimbursement based on quality, as meeting the components of the consumer Web site. More than 45 States have sufficient means for differentiating quality and therefore we assumed no cost for those States. ACF estimates that during the five-year phase-in period the total national cost associated with implementing transparent systems of quality indicators has an average annual cost of $2.2 million. This estimate has been included in the cost of designing and implementing the consumer education Web site, which was discussed above. The total estimated present value cost (using a 3% discount rate) of the Web site requirement over the 10 year period examined in this rule is $108.6 million, with an annualized cost of $12.4 million.

Consumer statement. The final rule at § 98.33(d) requires Lead Agencies to provide parents receiving CCDF subsidies with a consumer statement that includes information specific to the child care provider they select. The consumer statement must include health and safety, licensing or regulatory requirements met by the provider, the date the provider was last inspected, any history of violations, and any voluntary quality standards met by the provider. It also must disclose the number for the hotline for parents to submit complaints about child care providers, as well as contact information for local resource and referral agencies or other community-based supports that can assist parents in finding and enrolling in quality child care.

The information included in the consumer statement overlaps with much of the information required on the consumer education Web site. In their FY 2014–2015 CCDF Plans, 42 States and Territories report using their Web sites to convey consumer education information to parents about how their child care certificate permits them to choose from a variety of child care categories. Since many States and Territories are already using their Web sites to make available provider-specific information, this final rule does not require Lead Agencies to create a whole new document or information item. Rather, the Lead Agency can point parents to the provider’s profile on the Web site or print it out for a parent that may be doing intake in person. We assumed the consumer education Web site already includes the majority of information required in the consumer statement, including, if available, information about provider quality. However, commenters noted that there may be additional staff time needed to provide additional information to parents receiving subsidies. Therefore, this cost estimate takes into account labor costs associates with the consumer statement. This estimate also takes into account the number of children in each State or Territory. During the five-year phase-in period, we estimated an
average annual cost of the consumer statement provisions to be approximately $1 million and an

average ongoing cost of $775,000 annually.

3. Increased Average Subsidy per Child

The reauthorized statute and this final rule include several policies aimed at increasing access to quality care for low-income children, as well as creating a fairer system for child care providers. As Lead Agencies implement these new policies, we expect that there will be an increase in the amount paid to child care providers, representing a budget impact on Lead Agencies. While we expect these changes to cause an increase in payments, we lack specific data on the amounts associated with each of these policies. We requested comments about whether Lead Agencies expect these policies to cause an increase in the subsidy payment rates, but did not receive any comments with specific information to further inform the cost estimate.

We expect the following policies and practices to impose budget impacts (which are characterized in this analysis as transfers) on Lead Agencies:

- Setting payment rates based on the most recent market rate survey (or alternative methodology) and at least at a level to cover health, safety, quality, and staffing requirements in the rule (though some of the impact related to health and safety may already be accounted for in the health and safety sections of the RIA). Lead Agencies must also take into consideration the cost of providing higher-quality child care services (§ 98.45(f));
- Delinking provider payments from a child’s occasional absences by either paying based on a child’s enrollment, providing full payment if a child attends at least 85 percent of authorized time, or providing full payment if a child is absent for five or fewer days in a month (§ 98.45(l)(2)); and,
- Adopting the generally-accepted payment practices of child care providers who do not receive CCDF subsidies, including paying on a part-time or full-time basis (rather than paying for hours of service or smaller increments of time) and paying for reasonable mandatory registration fees that the provider charges to private-paying parents (§ 98.45(l)(3)).

Lead Agencies are required to implement each of these policies; however, several of them have a few options from which Lead Agencies may choose. We do not know which options Lead Agencies will choose, and therefore are not certain of which policies will impose budget impacts on which Lead Agencies. These impacts will also vary by Lead Agency depending on how many of the policies the Lead Agency adopted prior to this final rule. We requested comment on how Lead Agencies may choose to implement these different payment policies and practices and included this in the preamble discussion of § 98.45 above.

Because of the multiple policy options available to Lead Agencies and limited data on the effects of individual policies, it is difficult to estimate new impacts associated with each policy listed. However, we recognize that implementing these new policies will impact Lead Agency budgets and contribute to an increase in the amount of cost per child of child care assistance per child. Therefore, despite our uncertainty regarding specific effects, we would be overlooking a potentially significant new impact if we did not include an analysis of payment policies and practices in this RIA.

These payment policies and practices will each have varying effects, but once they are put together, one likely outcome is an increase in the average annual subsidy amount per child. Therefore, in order to estimate the possible payment effects associated with these policies, we are bundling them together and estimating their total impact on the average annual subsidy per child. The actual impact will depend on how many of the policies the Lead Agency currently has in place and how the Lead Agency chooses to implement these new policies.

The average annual subsidy rate per child in FY 2014 was $4,824. This amount is the starting point for our estimate. The average annual subsidy rate per child has historically increased each year and would continue to do so regardless of the new law or regulation. Therefore, we have built in a 2.59% increase for each of the ten years included in this cost estimate. This increase represents the historical increases in the average annual subsidy per child that we estimate would occur without this rule.

This subsidy amount, including the increase that would be expected to happen regardless of reauthorization and this final rule, provides the baseline for our ten year estimate. This average represents all settings, all types of care, all ages, and all localities, which masks great variation across the States/Territories based on different costs of living or the higher costs associated with providing care to infants and toddlers. For example, the highest average annual subsidy per child paid by a State/Territory was $9,408 in the average annual subsidy per child paid by a State/Territory was $1,944. States/Territories with subsidy payments substantially lower than the average subsidy payment are likely to see higher increases in the subsidy rate than States/Territories with subsidy payments closer to the average.

To calculate the impacts, we estimated a phased-in increase in the average annual subsidy per child above the baseline, which includes the expected increase in the average annual subsidy per child regardless of this final rule. We expect that there will be a phase-in of the subsidy increase as Lead Agencies phase-in the new policies in reauthorization and this final rule. The

</tbody>
</table>
phase-in is expected from FY 2016 to FY 2018, with the increase in the subsidy being $165 in FY 2016, $265 in FY 2017, and $515 in FY 2018, respectively, each comparable to the current baseline. This represents the increase on top of the regular annual average subsidy per child, and not the estimated subsidy itself. Following the new market rate survey or alternative methodology that may lead to setting higher payment rates, we estimate the subsidy would increase by $765 in FY 2019, and stay steady in FY 2020 and FY 2024. With the new market rate survey or alternative methodology in FY 2022, we expect an additional increase in the subsidy of $250 (or a total increase of $1,015 above the baseline), and estimate the subsidy will stay steady in FY 2023 and FY 2024.

The per child calculations used here are not recommendations for a per child subsidy, but rather represent an estimated cost of increasing the current national average annual subsidy per child as a result of these new policies. This is likely an underestimate of the payment amounts necessary to raise provider payment rates to a level that supports access to high-quality child care for low-income children. We requested comments on what provider payment rates may be necessary to support high-quality child care. While one State did comment to note that they anticipate that “it may be necessary for providers to increase their rates in order to comply with additional health and safety training requirements,” we did not receive comments with specific information on projected costs related to this analysis.

To calculate the estimated total increase in the average annual subsidy per child and the impacts associated with the new payment policies in this final rule, we multiplied the estimated increase in the average annual subsidy per child (described above) by the FY 2014 CCDF caseload of 1.4 million children. Based on this formula, we estimate the average annual impact to be $478.8 million during the initial five year period, with the estimated present value over the subsequent 5 year period of $839.1 million (estimated using a 3% discount rate). This would be a total present value of approximately $7.4 billion over 10 years (using a 3% discount rate).

As discussed above, there is a high level of uncertainty associated with this estimate. However, not including an estimate of the Lead Agency budget impacts associated with these policies would overlook significant policies in the legislation and this final rule and fail to give an accurate picture of the costs associated with them.

OMB Circular A-4 notes the importance of distinguishing between costs to society as a whole and transfers of value between entities in society. The increases in subsidy payments just described impose budget impacts on Lead Agencies, but from a society-wide perspective, they only generate costs to the extent that they lead to new resources being devoted to quantity or quality of child care. Although we acknowledge this potential increase in resource use, for the technical purposes of this regulatory impact analysis, we will refer to the estimated subsidy payment impacts as transfers from Lead Agencies to entities bearing the existing cost burden (mostly child care providers who typically have low earnings), rather than societal costs.

B. Analysis of Benefits

The changes made by the CCDBG Act of 2014 and the final rule have three primary beneficiaries: Children in care funded by CCDF (currently approximately 1.4 million), their families who need the assistance to work, pursue education or to go to school/training, and the roughly 415,000 child care providers that care for and educate these children. But the effect of these changes will go far beyond those children who directly participate in CCDF and will accrue benefits to children, families, and society at large. Many providers who serve children receiving CCDF subsidies also serve private-paying families, and all children in the care of these providers will be safer because of the new CCDF health and safety requirements. Further, the requirements for background checks extend beyond just CCDF providers. The public at large also benefits in cost savings due to greater family work stability when there is stable, high quality child care; lower rates of child morbidity and injury; fewer special education placements and less need for remedial education;
reduced juvenile delinquency; and higher school completion rates.

In 2012, approximately 60 percent of children age 5 and younger not enrolled in kindergarten were in at least one weekly non-parental care arrangement. (U.S. Department of Education, Early Childhood Program Participation, from the National Household Education Surveys Program of 2012, August 2013) We know that many child care arrangements are low quality and lack basic safeguards. A 2006 study conducted by the National Institute of Child Health and Development (NICHD) found that, “most child care settings in the United States provide care that is “fair” (between “poor” and “good”) and fewer than 10 percent of arrangements were rated as providing very high quality child care.” (U.S. Department of Health and Human Services, National Institutes of Health, Study of Early Child Care and Youth Development, 2006) More recently, both the Department of Health and Human Services’ (HHS) Office of Inspector General (OIG) and the Government Accountability Office (GAO) have identified serious deficiencies with health and safety protections for children in child care settings. (HHS Office of the Inspector General, Child Care and Development Fund: Monitoring of Licensed Child Care Providers, OEI–07–10–00230, November 2013) (Early Alert Memorandum Report: License-Exempt Child Care Providers in the Child Care and Development Fund Program, HHS OIG, 2013.) (Government Accountability Office, Over Relevant Employment Laws and Cases of Sex Offenders at Child Care Facilities, GAO–11–757, 2011) We also know from a growing body of research that in addition to the importance of quality to health and safety on a child’s immediate and long term future health, quality is important for children’s long term success in school and in life (as described elsewhere in this section).

While there are many benefits to children, families, child care providers, and society from affordable, high-quality child care, there are challenges to quantifying their impact. CCDF provides flexibility to States, Territories, and Tribes in setting health and safety standards, eligibility, payment rates, and quality improvements. As a result, there is much variation in CCDF programs across States. Therefore, we do not have a strong basis for estimating the magnitude of the benefits of the CCDBG Act of 2014 and the final rule in dollar amounts. While we are not quantifying benefits, in this analysis, we requested comment on ways to measure the benefit that the Act and the proposed (now final) rule will have on children, families, child care providers, and the public. However, we did not receive comment in this area that would support quantification of these benefits.

As shown in the discussion below, there is evidence that the CCDBG Act of 2014 and final rule’s improvements to health and safety, quality of children’s experiences, and stability of assistance for parents and providers will have a significant positive return on the public’s investment in child care. We discuss these benefits as “packages” of improvements: (1) Health and safety; (2) consumer information and education; (3) family work stability; (4) child outcomes; and (5) provider stability.

1. Health and Safety

One of the most substantial changes made by this final rule is a package of health and safety improvements, including health and safety requirements in specific thematic areas, health and safety training, background checks, and monitoring and pre-inspections.

Health and Safety Requirements. The Act requires Lead Agencies to set requirements in baseline areas of health and safety, such as CPR and first aid, and safe sleeping practices for infants. At their core, health and safety standards in this final rule are intended to make child care safer and thus lower the risk of harm to children. The CCDBG Act of 2014 and the final rule are expected to lead to a reduction in the risk of child morbidity and injuries in child care. The most recent study on fatalities occurring in child care found 1,326 child deaths from 1985 through 2003. The study also showed variation in fatality rates based on strength of licensing requirements and suggested that licensing not only raises standards of quality, but serves as an important mechanism for identifying high-risk facilities that pose the greatest risk to child safety. (Dreby, J., Wrigley, J., Fatalities and the Organization of Child Care in the United States, 1985–2003, American Sociological Review, 2005) ACF collects data about the number of child care injuries and fatalities through the Quality Performance Report (QPR) in the CCDF Plan (ACF–118). In 2014, there were 93 child deaths in child care based on data reported by 50 States and Territories. The number of serious injuries to children in child care in 2014 was 11,047, with 35 States and Territories reporting.

Various media outlets have also conducted investigations of unsafe child care and deaths of children. In Minneapolis, the Star Tribune in Minneapolis reported in a series of articles in 2012 that the number of children dying in child care facilities “had risen sharply in the past five years, from incidents that include asphyxia, sudden infant death syndrome (SIDS) and unexplained causes.” The report found 51 children died in Minnesota over the five-year period. (Star Tribune, The Day Care Threat, 2012) In Indiana, an investigation by the Indianapolis Star found, “21 deaths at Indiana day cares from 2009 to June 2013, and 10 more child deaths have since been reported.” (Indianapolis Star, How Safe are Indiana Day Cares, 2013) Indiana recently passed legislation that raises standards for child care programs. In Kansas, the high incidence of fatalities prompted the Kansas legislature to implement new procedures to guide investigations of serious injury or sudden, possibly unexplained deaths in child care, particularly infants. (Kansas Blue Ribbon Panel on Infant Mortality, Road Map for Preventing Infant Mortality in Kansas, 2011) The case of Lexie Engelman was a rally cry of advocates for better health and safety requirements. The 13-month old child suffered fatal injuries in a registered family child care home in 2004 due to lack of supervision. As a result, Kansas enacted new protections such as requiring all providers to be licensed and regularly inspected, training for providers, and new rules of supervision. Since implementing “Lexie’s Law,” Kansas jumped from 46th to 3rd in the Child Care Aware of America annual ranking of State policies, and State officials have been able to use data to target regulatory action and provide information to the public in a much more timely way. State officials report that more stringent regulations have greatly enhanced State capacity to protect children.

With respect to morbidity, 20 percent of SIDS deaths occur while children are in child care. (Moon, R.Y., Sprague, B.M., and Patel, K.M., Stable Prevalence but Changing Risk Factors for Sudden Infant Death Syndrome in Child Care Settings in 2001, 2005) Many of these deaths are preventable by safe sleep practices. Local review teams in one State found that 83 percent of SIDS deaths could have been prevented. (Arizona Child Fatality Review Program, Twentieth Annual Report, November 2013) As part of health and safety training requirements, the Act and final rule require that caregivers, teachers, and directors serving CCDF children receive training in safe sleep practices.

According to the FY 2014–2015 CCDF Plans, approximately 27 States and
Territories already have safe sleep and SIDS prevention pre-service training requirements for child care centers, and 26 States and Territories have SIDS prevention pre-service training requirements for family child care homes. Requiring the remaining States and Territories to have safe sleep training for child care providers will likely help change provider practice and lower the risk of SIDS-related deaths for infants.

**Health and Safety Training.** The final rule codifies the requirement of the Act that CCDF caregivers, teachers, and directors undergo a pre-service or orientation training, as well as receive ongoing training, in the health and safety standards. The final rule also adds child development as a required topic for required training, consistent with the professional development and training provisions of the Act.

Knowledge of child development is important to understanding and implementing safety and health practices and conditions. Training in health and safety standards, particularly prevention of SIDS, should reduce child fatalities and injuries in child care. For example, the rate of SIDS in the U.S. has been reduced by more than 50 percent since the campaign in the early 1990s by the American Academy of Pediatrics on safe sleep practices with infants. (National Institutes of Health, Eunice Kennedy Shriver National Institute of Child Health and Human Development. Back to Sleep Public Education Campaign) Only 24 States currently require pre-service or orientation training to include SIDS prevention.

**Background Checks.** The new background check requirements are expected to prevent individuals with criminal records from working for child care providers. Data from two States show that 5 to 10 percent and 3 to 4 percent, respectively, of background checks result in criminal record “hits” that disqualify the provider. To the extent that these individuals would have otherwise worked in child care settings, thereby increasing the risk of maltreatment or injury to a child, we assume that background checks yield a positive benefit for child health and safety. That is, background checks serve a real purpose in preventing a small proportion of potentially dangerous individuals from providing care to children.

**Monitoring.** The Act and this final rule require States to conduct monitoring visits for all CCDF providers, including license-exempt providers (except at the Lead Agency option, those that serve relatives). Licensed CCDF providers must receive a pre-licensure inspection and annual, unannounced inspections. License-exempt CCDF providers (except at the Lead Agency option those that serve relatives) must have annual inspections for health, safety and fire standards. Currently, 15 States do not conduct a licensing pre-inspection visit of family child care; 12 States do not conduct pre-inspections on group homes; and one State does not pre-inspect child care centers. Nineteen States do not inspect family child care providers each year, 22 States do not conduct annual visits for group homes, and 10 States do not visit child care centers on an annual basis. It is reasonable to expect that more stringent health and safety standards and their enforcement through pre-inspections and annual licensing inspections will result in fewer serious injuries and child fatalities in child care.

**Child Abuse Reporting and Training.** Nationally, there are approximately 12.5 million children in child care settings. With a rate of over 10 children per thousand being victims of substantiated abuse or neglect, there are over 100,000 children estimated to be victims of abuse who are also receiving services in child care settings. This final rule contains a number of provisions designed to prevent child abuse and neglect. Under the Act and this final rule, Lead Agencies must certify that child care caregivers, teachers, and directors comply with child abuse reporting requirements of the Child Abuse Prevention and Treatment Act. The final rule also requires training in “recognition and reporting of suspected child abuse and neglect”, which would equip caregivers, teachers, and directors with training necessary to report potential abuse and neglect. The rule also requires training in child development for CCDF caregivers, teachers, and directors. From a protection standpoint, research has shown that improving parental understanding of child development reduces the incidence of child abuse and neglect cases. (Daro, D. and McCurdy, K., Preventing Child Abuse and Neglect: Programmatic Interventions, Child Welfare, 1994) (Reppucci, N., Britner, P., and Woodard, J., Preventing Child Abuse and Neglect Through Parent Education, Child Welfare, 1997) To the extent that this training would have a similar effect on caregivers, teachers, and directors of CCDF providers, we expect there to be some decrease in child abuse within child care settings.

In addition to the tragedy of injuries and fatalities in child care, there are tangible costs such as medical care, a parent’s absence from work to tend to an injured child, the loss for the family, and loss of lifetime potential earnings for society. According to the 2014 Quality Performance Report, there were 11,407 injuries (defined as needing professional medical attention) and 93 fatalities reported in child care. We think these numbers are lower than the actual incidences because some Lead Agencies have difficulty accessing this information collected by other agencies.

2. Consumer Information and Education

As one research study said, “Child care markets would work more effectively if parents had access to more information about program quality and help finding a suitable situation. This would cut the cost of searching for care and increase the likelihood of more comparison shopping by parents.” (Helburn, S. and Bergmann, B., America’s Child Care Problem: The Way Out, 2002) The Act and final rule require the Lead Agency to provide consumer education to parents of eligible children, the general public, and child care providers. This includes a consumer-friendly and easily accessible Web site about relevant Lead Agency processes and provider-specific information. The Act and the final rule also require a range of information for parents, including the availability of child care services and other assistance for which they might be eligible, best practices relating to child development, how to access developmental screening, and policies on social-emotional behavioral health and expulsion. The final rule also requires a consumer statement for families receiving subsidies. Taken together, these provisions should improve parents’ ability to make fully informed choices about child care arrangements.

The consumer education package also provides benefits to parents in regards to the value of their time. Most parents want to know about health and safety records, licensing compliance, and quality ratings when deciding on a child care provider. However, this research can be very time consuming because of barriers to accessing the information needed to make a fully informed decision. For example, while all Lead Agencies must make substantiated complaints available to the public, some States previously required that people go to a government office during regular business hours to access these records. It is not reasonable to expect a parent who is working to take that time to navigate these bureaucratic requirements.

The final rule’s package of consumer education provisions, including the
consumer-friendly Web site, addresses the aforementioned information barrier by helping to provide parents with important resources in a manner that fits their needs.

The Act and the final rule promote continuity of care in the CCDF program through family-friendly policies—it requires Lead Agencies to implement minimum 12-month eligibility redetermination periods, ensures that parents who lose their jobs do not immediately lose their subsidy, minimizes requirements for families to report changes in circumstances, and provides more flexibility to serve vulnerable populations, such as children experiencing homelessness, without regard to income or work requirements.

Benefits to employers. There is a strong relationship between the stability of child care and the stability of the workforce for employers. The cost to businesses of employee absenteeism due to disruptions in child care is estimated to be $3 billion annually. (Shellenback, K., Child Care & Parent Productivity: Making the Business Case, Cornell University: Ithaca, NY, 2004) The eligibility provisions of the Act and this final rule will allow parents to work for longer stretches without interruptions to their child care subsidy, and will benefit parents by limiting disruptions to their child care arrangements. These policies in turn also provide benefits to employers seeking to maintain a stable workforce.

Studies show a relationship between child care instability and employers’ dependability of a stable workforce. In one study, 54 percent of employers reported that child care services had a positive impact on employee absenteeism, reducing missed workdays by as much as 20 to 30 percent. (Friedman, D.E., Child Care for Employees’ Kids, Harvard Business Review, 1986) In addition, 63 percent of employees surveyed at American Business Collaboration (ABC) companies in 10 communities across the country reported improved productivity when a parent was using high-quality dependent care, and 40 percent of employees reporting spending less time worrying about their families, 35 percent were better able to concentrate on work, and 30 percent had to leave work less often to deal with family situations. (Abt Associates, National Report on Work and Family, 2000) A 2010 study examined the impact of child care subsidy receipt by New York City employees and employees of subcontracted agencies in the health care sector. The study looked at the variables of attendance, work performance, productivity, and retention of employees. Results showed that subsidy receipt had a positive impact on work performance; whereas, the loss of the subsidy had a negative effect. After the subsidy period ended and parents were faced with less stable child care arrangements, participants self-reported a decrease in their work performance and in their work productivity coupled with an increase in tardiness and work/family conflict. (Wagner, K.C., Working Parents for a Working New York Study, Cornell and New York Child Care Coalition, 2010)

Benefits to parents. The lack of reliable and dependable child care arrangements negatively affects parents’ income, hours worked, work performance, and advancement opportunities. To the extent that these new requirements will reduce barriers to retaining child care assistance for CCDF families, the new rule will mitigate some of the disruption currently experienced by low-income families. Studies have shown that many parents face child care issues that can disrupt work, impacting both the parent and their employers. One researcher, using data from the Survey of Income and Program Participation (SIPP), found that 9–12 percent of families reported losing work hours as a result of child care disruptions. (Boushey, H., Who Cares? The Child Care Choices of Working Mothers, Center for Economic and Policy Research, Data, 2003) Another study showed that 29 percent of parents experienced a breakdown in their child care arrangement in the last 3 months. (Bond, J., Galinsky, E., and Swanson, J., The 1997 National Study of the Changing Workforce, 1998) These child care disruptions can negatively impact parental employment. For example, a survey of over 200 mothers working in the restaurant industry in five cities: Chicago, Washington, DC, Detroit, Los Angeles, and New York found that instability in child care arrangements negatively affected their ability to work desirable shifts or to move into better paying positions at the restaurant. (Restaurant Opportunities Centers United, et al., The Third Shift: Child Care Needs and Access For Working Mothers In Restaurants, Restaurant Opportunities Centers United, 2013)

4. Child Outcomes and Human Capital Development

Beyond implementing health and safety standards, the Act states that two of the purposes of the program are improving child development of participating children and increasing the number and percentage of low-income children in high-quality child care settings. This final rule places significant emphasis on policies that support those goals.

Child care continuity. The eligibility and redetermination provisions benefit children as well as parents and employers. Continuity in child care arrangements can have a positive impact on a child’s cognitive and socio-emotional development. (Raikes, H. Secure Base for Babies: Applying Attachment Theory Concepts to the Infant Care Setting, Young Children 51, no. 5, 1996) Young children need to have secure relationships with their caregivers in order to thrive. (Schumacher, R. and Hoffmann, E., Continuity of Care: Charting Progress for Babies in Child Care Research-Based Rationale, 2008) Children with fewer changes in child care arrangements are less likely to exhibit behavior problems. (de Schipper, J.C., Van Ijzendoorn, M. & Tavecchio, I, Stability in Center Day Care: Relations with Children’s Well-being and Problem Behavior in Day Care, Social Development, 2004) Conversely, larger numbers of changes have been linked to less outgoing and more aggressive behaviors among four- and five-year-old children. (Howes, C. & Hamilton, C.E., Children’s Relationships with Caregivers: Mothers and Child Care Teachers, Child Development, 1992)

Continuity of care policies support children’s ability to develop nurturing, responsive, and continuous relationships with their caregivers. For school-age children, continuity of care is important because it provides additional exposure to programming that can lead to improved school attendance and academic outcomes. (Welsh, M. Russell, C., Willimans, L., Promoting Learning and School Attendance through After-School Programs, Policy Studies Associates, 2002.)

Child care quality beyond health and safety. Health and safety form the foundation of quality but are not sufficient for high-quality development and learning experiences. When children have high quality early care and education, there are benefits to the child and to society. (Yoshikawa, H., et al., Investing in Our Future: The Evidence Base on Preschool Education, 2013) The North Carolina Abecedarian Project demonstrated both categories of benefits. The Project enrolled very low-income children from infancy to age four and continued full day child care with high-quality staff, environments, and curricula. A
longitudinal study following them through age 21 found significant returns on the investment, such as greater school readiness that led to fewer special education and remedial education placements, higher rates of high school completion and jobs, fewer teen pregnancies, and lower rates of juvenile delinquency. (Masse, Leonard N. and Barnett, Steven W., A Benefit Cost Analysis of the Abecedarian Early Childhood Intervention, National Institute for Early Education Research; New Brunswick, NJ) Recent follow-up studies to the well-known Abecedarian Project, which began in 1972 and has followed participants from early childhood through young adulthood, found that adults who participated in a high quality early childhood education program are still benefiting from their early experiences. Abecedarian Project participants had significantly more years of education than their control group peers, were four times more likely to earn college degrees, and had lower risk of cardiovascular and metabolic diseases in their mid-30s. (Campbell, Pungello, Burchinal, et al., Adult Outcomes as a Function of an Early Childhood Educational Program: An Abecedarian Project Follow-Up, Frank Porter Graham Child Development Institute, Developmental Psychology, 2012 and Campbell, Conti, Heckman et al, Early Childhood Investments Substantially Boost Adult Health, Science 28 March 2014, Vol. 343.)

Other cost-benefit analyses of other publicly funded preschool programs with high quality standards, such as the Chicago Child Parent Centers, demonstrated a high return to society on the public investment. (“Age 21 Cost-Benefit Analysis of the Title I Chicago Child-Parent Centers.” Educational Evaluation and Policy Analysis, 24(4): 267–303.)

5. Provider Stability

The Act and final rule include provisions to strengthen the stability of providers serving CCDF-assisted children. Studies that have interviewed child care providers participating in the subsidy system have shown the importance of policies that improve and stabilize payments to the providers. (Sandstrom, H, Grazi, J., and Henly, J.R., Clients’ Recommendations for Improving the Child Care Subsidy Program, Urban Institute: Washington, DC, 2015; Adams, G., Snyder, Katherine, and Tout, Kathryn, Essential But Often Ignored: Child care providers in the subsidy system, Urban Institute: Washington, DC 2003; Oliveira, Pog, The Child Care Subsidy Program Policy and Practice: Connecticut Child Care Providers Identify the Problems, Connecticut Voices for Children, 2006)

In addition to rates that reflect the cost of providing quality services, the manner in which providers are paid is important to the stability of the child care industry. Provider instability has a domino effect that can lead to parent employment instability, an outcome that undercuts the Act’s core principle of ensuring that CCDF children have equal access to child care that is comparable to non-CCDF families. The Act and the final rule require Lead Agencies to pay providers in a timely manner based on generally accepted payment practices for non-CCDF providers. Lead Agencies also

must de-link provider payments from children’s absences to the extent practicable. Child care providers have many fixed costs, such as salaries, utilities, rent or mortgage.

Surveys and focus groups with child care providers have found that some providers experience problems with late payments, including issues with receiving the full payment on time and difficulties resolving payment disputes. (Adams, G., Rohacek, M., and Snyder, K., Child Care Voucher Programs: Provider Experiences in Five Counties, 2008) This research has also found that delayed payments creates significant financial hardships for the impacted providers, and forces some providers to stop serving or limit the number of children receiving child care subsidies. Thus, lack of timely payments and rules on payments that lead to disincentives to taking children with chronic illnesses or other reasons for absences undercut the equal access provision. By addressing these issues, these provisions of the Act and final rule will provide increased stability and benefits for CCDF providers and the families they serve.

Market Rate or Alternative Methodology. The child care market often does not reflect the actual costs of providing child care, let alone the higher costs of quality child care. Financial constraints of low-income parents prevent child care providers from setting their prices to fully cover the cost of care (National Women’s Law Center, Building Blocks: State Child Care Assistance Policies, 2015; Child Care Aware, Parents and the High Cost of Child Care, 2014. Currently, relative to the cost of providing quality care, CCDF subsidy payment rates are low in many States.

A report from the National Women’s Law Center on State subsidy policies states that, “only one State had reimbursement rates at the federally recommended level in 2014, a slight decrease from the three States with rates at the recommended level in 2013, and a significant decrease from the twenty-two States with rates at the recommended level in 2001. Thirty-seven States had higher reimbursement rates for higher-quality providers in 2014—an increase from thirty-three States in 2013. However, in more than three-quarters of these States, even the higher rates were below the federally recommended level in 2014.” (Turning the Corner: State Child Care Policies 2014. Schuman, K. and Blank, H. National Women’s Law Center: Washington, DC 2014)” The Act and the final rule require Lead Agencies to set provider payment rates based on the
current, valid market rate survey or alternative methodology.
To allow for equal access, the rule requires that Lead Agencies set base payment rates sufficient to support implementation of the health, safety, quality, and staffing requirements. Establishing base rates at these levels is important to ensure that providers have the resources they need to meet minimum requirements and that providers are not discouraged from serving CCDF children. With subsidy payments higher than the aforementioned base rate, providers can exceed the minimum requirements of health and safety and quality. In doing so, more providers will be able to serve CCDF-assisted children and more quality providers may decide to participate in the subsidy system—giving parents more choices for their children’s care. Currently there has been a downward trend in the number of CCDF providers, and providing for a stronger base rate will help mitigate this effect.

C. Distributional Effects
As part of our regulatory analysis, we considered whether changes would disproportionately benefit or harm a particular subpopulation. As discussed above, benefits accrue both directly and indirectly to society. In order to implement the requirements of the CCDBG Act of 2014 and the final rule, States may have to make key decisions about the allocation of resources, and some may shift priorities during the start-up phase and possibly continuing in later years once the State is fully implementing these requirements. The true impact partially depends on the overall funding level. The President’s FY2017 Budget request includes additional funding to help States implement the policies required by the reauthorized Act and this final rule, as well as significant new resources across a ten year period to expand access to child care assistance for all eligible families with children under age four years of age. If funding increases sufficiently, both quality and access could be improved.

While, depending on State behavior, there may be some distributional effect related to any cost, below is a discussion of two policy areas that represent specific distributional effects. The first—changes to subsidy policy required by the reauthorized Act—may result (depending on how the State chooses to implement the policy) in families receiving subsidies for a longer period. Other families may not be able to access subsidies (absent an increase in funding for the CCDF program). This would be in effect a transfer of subsidy funding that would potentially limit new enrollment for the purposes of keeping existing families enrolled longer. The second area—increased statutory quality spending requirements—may result in a change in which families receive benefits, or how they receive them, by shifting resources away from direct services to quality spending.

Minimum 12-month eligibility and related provisions. In order to reduce administrative burden and to improve the stability and continuity of care in the CCDF program, the CCDBG Act of 2014 and this final rule at §§ 98.20 and 98.21 require Lead Agencies to adopt a minimum period of eligibility regardless of temporary changes in income. This package of eligibility policies will allow families to maintain their eligibility for up to 12 months to support the hypothesis that longer recertification periods increase the number of months that recipient families participate in the program. Assuming that States will maintain their average monthly caseloads once they implement the 12-month recertification periods, but will serve fewer unique children over that time period because of longer subsidy participation durations, we estimated the number of families that could be impacted at current funding levels. Decreased churn would not decrease the amount of assistance given, nor would it affect the average monthly caseload, but may result in a decrease in the total number of families served over the course of a given year. We used an analysis of disaggregated CCDF administrative data from FY 2010 to determine the ratio between unique annual counts and average monthly caseloads, which we used for a baseline ratio to apply to the average monthly caseload totals from FY 2012 (which showed 609,800 children being served in an average month in the 25 States with eligibility periods less than 12 months). With this data, we estimated the unique caseload size of each State in FY 2012, which is the last year for which we have caseload estimates and documentation of policies (which showed 1,053,773 unique children received services at some point during the year in the 25 States). Based on these assumptions and using the results from the Illinois study to estimate the impact on length of subsidy receipt, we estimate that the reduction in unique children served in a given year after the policy change could be approximately 162,000 children.
Increase in Quality Set-aside. As discussed above in the analysis of benefits, the increased quality set-aside and the new infant and toddler set-aside required in reauthorization will benefit children and, when coupled with training and higher rates, child care providers. Lead Agencies are not required to use quality funds to support the quality of care for only CCDF children. Thus, quality investments often support the entire child care system in the State, especially because of the high investments in licensing, training, and quality rating and improvement systems. Therefore, these increased investments will have an impact broader than families receiving CCDF assistance, and will continue to improve the quality of care available to all children, regardless of subsidy receipt.

We do not expect the increase in the quality set-aside to have a significant impact on caseload, particularly since the majority of States are already spending more than the new 9% quality set-aside requirement (see Table 9 below). Other States that do not currently spend above this level will have time to phase-in the increases and will likely use these additional increases to cover several of the new health and safety and professional development requirements. Therefore, any caseload impact would have already been included in the costs associated with those provisions. However, we recognize some Lead Agencies will have to reallocate funds currently being used for other activities, including direct services, so we are discussing possible distributional effects here. Currently, about 13 percent of CCDF expenditures are spent on quality improvement activities, including targeted funds included in appropriations. This amount is more than the full percentage to be set aside for the quality and infant and toddler set-asides in FY 2020, once fully phased-in. However, this is a national figure and may not provide a complete picture of how many States and Territories might have to adjust their quality expenditures to meet new requirements.

Using FY 2012 CCDF expenditure data, we did an analysis of the number of States and Territories that will have to increase their quality expenditures in order to meet the requirements in the CCDBG Act of 2014 and incorporated into this final rule at § 98.50(b)(2) a new requirement of the Act that, beginning in FY 2017 and each succeeding fiscal year, Lead Agencies must expend at least three percent of their full awards (including Discretionary, Mandatory, and Federal and State Matching funds) on activities that relates to the care of infants and toddlers. Since FY 2001, federal appropriations law has included a requirement for Lead Agencies to spend a certain amount of discretionary funds on activities to improve the quality of care for infants and toddlers. In FY 2015, this set-aside was $102 million. The new three percent reservation represents an increase of about $129 million (for a new amount of $231 million), based on FY 2012 State and Territory expenditures. Lead Agencies do not currently report how much of their quality funds are spent on activities targeted to improving care for infants and toddlers.

Therefore, we only have the amount of targeted funds they spent on infant and toddler activities, which for all but five States and Territories is below the new three percent requirement. The increase necessary ranges from State to State, from $38,000 for Idaho to $21 million for New York. The average increase will be $2.5 million per State. However, as these estimates do not include any regular quality funds overestimating the required increases for the majority of States and Territories.

While a small number of States (five) will have to increase their quality expenditures, since the national average quality expenditure is already above the 12% target for the quality and infant and toddler set-asides, we are not attributing a reduction in the number of children served as a result of this policy change.

D. Analysis of Regulatory Alternatives

In developing this final rule, we considered alternative ways to meet the purposes of the reauthorized Act. There are areas of the Act that we are interpreting and clarifying through this rule. Our interpretation of the Act remains within the legal parameters of the statute and is consistent with the goals and purposes of the Act. Below we include a discussion of areas that we clarified through the final rule: (1) Monitoring for licensed non-CCDF providers, (2) background checks for regulated and registered providers and (3) background checks for non-caregivers.

For the purposes of this analysis, we are discussing the costs, benefits, and potential caseload impacts related to meeting these new requirements. However, it is particularly difficult to predict caseload impact due to a variety of unknown factors, including future federal funding levels. Even if we were to assume level federal funding, States could allocate new funds, redirect current quality spending (e.g., by changing quality activities to focus on health & safety), shift costs to parents or providers, or use a combination of these approaches to pay for new requirements. The caseload estimates in the following discussion are based on the assumption that the entire cost of meeting this requirement are covered by redistributing funds that would otherwise be used for direct services. Therefore, these caseload impact figures should be considered upper bound estimates and are mostly likely significant overestimates.

Background Checks for Regulated and Registered Providers. At § 98.43(a)(1)(i), we are applying the background check requirements to all child care staff.
members (including prospective child care staff members) of all licensed, regulated, or registered child care providers and all child care providers eligible to deliver CCDF services. This language includes all licensed, regulated, or registered providers, regardless of whether they receive CCDF funds and all license-exempt CCDF providers (with the exception of those related to all children in their care).

The alternative to this policy would be to limit background checks to only providers receiving CCDF assistance. While we acknowledge that others may have interpreted the statute differently, there is justification for applying this requirement in the broadest terms for two important reasons. First, it is our strong belief that all parents using child care deserve this basic protection of knowing that those who are trusted with the care of their children do not have criminal backgrounds that may endanger the well-being of their children. Second, limiting those child care providers who are subject to background checks, has the potential to severely restrict parental choice and equal access for CCDF children. If all child care providers are not subject to comprehensive background checks, providers could opt to not serve CCDF children thereby restricting access. Creating a bifurcated system in which CCDF children have access to only a portion of child care providers who meet applicable standards would be incongruous with the purposes of the Act and would not serve to advance the important goal of serving more low-income children in high-quality care.

Choosing this would present additional costs to the alternative of limiting background checks to only CCDF providers. The cost of the background check requirement for only CCDF providers would be approximately $11.9 million per year (estimated using a 3% discount rate). Using the methodology discussed in detail in the background check section of the preamble, we estimate the additional cost of requiring background checks of all licensed and regulated providers, rather than just those who are eligible to deliver CCDF services, to be approximately $1.7 million annually (estimated using a 3% discount rate), which would amount to an upper bound caseload impact of about 300 fewer children served per year.

Background Checks for Non-Caregivers: The Act defines a child care staff member as someone (unless they are related to the child in care) who is employed by the child care provider for compensation or whose activities involve unsupervised access to children who are cared for by the child care provider. This final rule requires individuals, age 18 or older, residing in a family child care home to be subject to background checks. The alternative to this would be to not require background checks of other individuals living in the family child care home. However, we chose this policy because it is reasonable to assume that these individuals may have unsupervised access to children. Because we are including these individuals in the definition of child care staff members, they will be subject to the same requirements and will be allowed the same appeals process as employees.

More than forty States require some type of background check of family members 18 years of age or older that reside in the family child care home (Leaving Child Care to Chance: NACCRRA’s Ranking of State Standards and Oversight for Small Family Child Care Homes, National Association of Child Care Resource and Referral Agencies, 2011). While the total cost of the background check requirement is approximately $13.6 million, we can isolate the costs of applying the background checks to non-caregiver individuals, we estimate the cost to be approximately $3 million annually (estimated using a 3% discount rate), which would amount to an upper bound caseload impact of approximately 550 fewer children served per year.

E. Break Even Analysis for Reductions in Injuries and Deaths

This section estimates the potential benefits associated with the elimination of injuries and deaths in child care settings in the United States, and the proportion of fatalities and injuries, which, if eliminated by the provisions discussed here, would justify their costs on their own. Standard methods are used to monetize the value of these potential benefits. Although children receiving subsidies through the Child Care and Development Fund (CCDF) are the individuals that will likely benefit most from the rule’s overall health and safety provisions, we conduct this break even analysis using data on children in all child care settings since children in non-CCDF arrangements will directly benefit from the extension of background check requirements and may see additional benefits as a result of other health and safety and quality provisions in the final rule. As described above, the primary regulatory alternative in implementing health and safety provisions would be to restrict background checks provisions and monitoring requirements. Therefore, this analysis discusses the costs and benefits of the final rule relative to that alternative.

The benefits estimated for this analysis are derived from voluntary data reporting on fatalities and injuries in the child care setting to ACF in a Quality Performance Report (QPR). These figures are supplemented by data from several other sources. Although many States contribute data to the QPR report, data on fatalities and injuries is not available for all States. To estimate fatalities and injuries in the child care setting at the national level in 2014 using the QPR data, we impute estimated fatalities and injuries for States with incomplete reports. For States with no reported data for 2014, we assume that the injury or fatality rate per provider is equal to the average injury or fatality rate per provider across States with available 2014 data.

To monetize benefits from reductions in injury rates, we rely on data on the cost of injury from the Centers for Disease Control (CDC). In particular, we use CDC data to calculate the cost of non-fatal injuries resulting in emergency room treatment and/or hospitalization for children age 12 and under, which includes medical costs as well as lost productivity costs for caretakers, based on 2012 data. After adjusting for inflation using the Gross Domestic Product (GDP) deflator from the Bureau of Economic Analysis (BEA), the cost per injury for children age 12 and under is $8,095 in 2014 dollars. The benefit of a reduction in the injury rate, then, is the reduction in the medical costs and productivity losses associated with the reduction in injuries. Note that this does not include the dollar value of any changes in health status for the injured individuals, which implies that these estimates underestimate the value of reductions in injuries in the child care setting. Based on QPR data, we estimate that there were 18,209 injuries in child care settings in 2014. To calculate the monetary value of a reduction in the injury rate in child care settings due to this rule, we multiplied the expected number of avoided injuries in each year by the value of eliminating each injury. For simplicity, we assume that the number of prevented injuries is the same in each year after implementation of the requirements, and that the cost of injury, in 2014 dollars, is constant over time. This method implies that the present value of eliminating all injuries

1 CDC provided updated estimates of the cost of injury based on Cost of Injury Reports 2005 and 2012 data on non-fatal injuries. For more information, see http://www.cdc.gov/injury/wisqars/cost/cost-learn-more.html.
The number of non-SIDS deaths in 2014 is estimated based on QPR data. Information on cause of death were reported for 18 deaths in the 2014 QPR data, of which 5 were due to SIDS and 13 were due to other causes. Based on this information, we estimate that 72 percent of deaths in child care settings reported in QPR data were due to causes other than SIDS. After adding the 82 fatalities from non-SIDS as reported in the QPR data to the 231 fatalities from SIDS, we arrive at a sum of 313 fatalities in child care settings.

A 2010 study estimates that the value of a statistical life for children to be $12–15 million. After taking the mean of this range and adjusting it for inflation using the GDP deflator, we arrive at $14.5 million in 2014 dollars per fatality. For simplicity, we assume that the potential number of lives saved is the same in each year after implementation of the requirements. We follow Department of Transportation (DOT) guidance to adjust the value of a statistical life for real income growth, increasing it by 1.07 percent each year. To calculate the dollar value of reductions in mortality, we calculate the number of statistical lives saved, and multiply that number by the relevant value of a statistical life. This method implies that the present value of eliminating all deaths in the child care setting over the period examined in this rule, using a 3 percent discount rate, is approximately $44.4 billion.

Next, we estimate the proportion of fatalities and injuries which, if eliminated by the provision that extends background checks (approximately $4 million per year), would justify their costs on their own. Based on the assumptions and methodologies described above, the present value of the injury and mortality rate reduction benefits of the rule, using a 3 percent discount rate, would equal the costs of this provision if fatalities and injuries were reduced by approximately 0.08 percent over the period examined in this rule. Note that this does not include other benefits associated with this rule.

F. Accounting Statement—Table of Quantified Money Costs and Opportunity Costs

As required by OMB Circular A–4, we have prepared an accounting statement table showing the classification of the impacts associated with implementation of this final rule.

### TABLE 10—QUANTIFIED MONEY COSTS, OPPORTUNITY COSTS, AND TRANSFERS

2 For more information, see http://wonder.cdc.gov.
3 Our review of the QPR data conclude that the number of deaths and injuries reported are likely to be undercounts because some States do not collect data from some types of child care providers.

*Administrative and IT/Infrastructure costs are only applied to Health and Safety requirements. Other costs have administrative costs already built into their cost estimates.

**d. Unfunded Mandates Reform Act of 1995**

The Unfunded Mandates Reform Act (UMRA) was enacted to avoid imposing unfunded federal mandates on State, local, and Tribal governments, or on the private sector. Most of UMRA’s provisions apply to proposed and final rules for which a general notice of proposed rulemaking was published, and that include a federal mandate that may result in expenditures by State, local, or Tribal governments, in the aggregate, or by the private sector of $100 million or more in any one year. The regulatory impact analysis includes information about the costs of this regulation. As explained throughout the preamble to this final rule, ACF has ensured that the rule is based on provisions of the CCDBG Act of 2014. We have provided for Lead Agency flexibility in many areas to limit burden and allow for cost-effective implementation of the statutory requirements. In addition, States, Territories and Tribes receive well over $5 billion annually in federal funding to implement the program.

**e. Executive Order 13045 on Protection of Children**

Executive Order 13045 applies to economically significant rules under Executive Order 12866 and directs agencies to identify and assess environmental health risks and safety risks that may disproportionately affect children. Agencies shall provide an evaluation of the environmental health or safety effects of the proposed rulemaking and an explanation of why the proposed regulation is preferable to other potentially effective and reasonably feasible alternatives considered by the agency. This regulatory action has been identified as being economically significant and will positively impact children by lowering health and safety risks in child care settings funded by CCDF. The regulatory impact analysis includes a full explanation of the final rule’s expected impact on children and regulatory alternatives considered by the agency.

**f. Executive Order 13175 on Consultation With Indian Tribes**

Executive Order 13175 requires agencies to consult with Tribal leaders and Tribal officials early in the process of developing regulations and prior to the formal promulgation of the regulations. Agencies also must include a Tribal impact statement, which includes a description of the agency’s prior consultation with Tribal officials, a summary of the nature of their concerns and the agency’s position supporting the need to issue the regulation, and a statement of the extent to which the concerns of Tribal officials have been met. ACF is committed to continued consultation and collaboration with Tribes, and this final rule meets the requirements of Executive Order 13175. The discussion of subpart I in section IV of the preamble serves as the Tribal impact statement and contains a detailed description of the consultation and outreach on this final rule.

**g. Paperwork Reduction Act**

A number of sections in this final rule refer to collections of information, all of which are subject to review by the Office of Management and Budget (OMB) under the Paperwork Reduction Act of 1995 (the PRA) (44 U.S.C. 3501 et seq.). In some instances (listed in the table below), the collections of information for the relevant sections of this final rule have been previously approved under a series of OMB control numbers.
consumer education, and eligibility policies. State and Territorial compliance with the final rule will be determined in part through the review of CCDF Plans and Plan amendments. We have finalized a revised Plan that reflects requirements under the Act.

- **ACF–800 (Annual Aggregate Data Reporting—States and Territories).** The Act and this final rule add new annual aggregate data reporting requirements. Through the OMB clearance process, we finalized revised forms and instructions reflecting these changes.

- **ACF–801 (Monthly Case-Level Data Reporting—States and Territories).** The Act and this final rule add new case-level data reporting requirements. Through the OMB clearance process, we finalized revised forms and instructions reflecting the majority of these changes.

- **ACF–403, ACF–404, ACF–405 (Error Rate Reporting).** The final rule does not make changes to this information collection, which has been previously approved by OMB.

- **ACF–700 (Administrative Data Report—Tribes).** The final rule provides reduced regulatory specificity regarding the information collection, but does not change the content.

- **ACF–696–T (Financial Reporting—Tribes).** The final rule does not make any changes to this information collection.

In other instances, which are listed below, the final rule modifies several previously-approved information collections, but ACF has not yet initiated the OMB approval process to implement these changes, or the approval process is currently underway but not yet completed. ACF will publish Federal Register notices soliciting public comment on specific revisions to these information collections and the associated burden estimates, and will make available the proposed forms and instructions for review.

</table>

Finally, this final rule contains two new information collection requirements, and the table below provides an annual burden hour estimate for these collections. First, § 98.33 requires Lead Agencies to collect and disseminate consumer education information to parents of eligible children, the general public, and providers through a consumer-friendly and easily accessible Web site. This Web site will include information about States or Territory policies (related to licensing, monitoring, and background checks) as well as provider-specific information, including results of monitoring and inspection reports and, if available, information about quality. This requirement applies to the 50 States, the District of Columbia, and 5 Territories that receive CCDF grants. In estimating the burden estimate, we considered the fact that many States already have existing Web sites. Even in States without an existing Web site, much of the information will be available from licensing agencies, quality rating and improvement systems, and other sources. The burden hour estimate below reflects an average estimate, recognizing that there will be significant State variation. The estimate is annualized to encompass initial data entry as well as updates to the Web site over time.
Second, § 98.42 requires Lead Agencies to establish procedures that require child care providers that care for children receiving CCDF subsidies to report to a designated State, Territorial, or Tribal entity any serious injuries or deaths of children occurring in child care. This is necessary to be able to examine the circumstances leading to serious injury or death of children in child care, and, if necessary, make adjustments to health and safety requirements and enforcement of those requirements in order to prevent any future tragedies. The requirement would potentially apply to the nearly 390,000 child care providers who serve children receiving CCDF subsidies, but only a portion of these providers would need to report, since our burden estimate assumes that no report is required in the absence of serious injury or death.

Using currently available aggregate data on child deaths and injuries, we estimated the average number of provider respondents would be approximately 10,000 annually. In estimating the burden, we considered that more than half the States already have reporting requirements in place as part of their licensing procedures for child care providers. States, Territorial, and Tribes have flexibility in specifying the particular reporting requirements, such as timeframes and which serious injuries must be reported. While the reporting procedures will vary by jurisdiction, we anticipate that most providers will need to complete a form or otherwise provide written information.

We did not receive any public comments on these burden estimates, which were included in the NPRM. The information collection provisions in this final rule were submitted to OMB for review as required by section 3507(d) of the Paperwork Reduction Act and were assigned OMB control number 0970–0473. Before the effective date of this final rule, ACF will publish a notice in the Federal Register announcing OMB’s decision to approve, modify, or disapprove the information collection provisions in this final rule. An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a currently valid OMB control number.

**h. Congressional Review**

The Congressional Review Act (CRA) allows Congress to review “major” rules issued by federal agencies before the rules take effect. The CRA defines a major rule as one that has resulted or is likely to result in (1) an annual effect on the economy of $100 million or more; (2) a major increase in costs or prices for consumers, individual industries, federal, State or local government agencies, or geographic regions; or (3) significant adverse effects on competition, employment, investment, productivity, or innovation, or on the ability of United States-based enterprises to compete with foreign-based enterprises in domestic and export markets. This regulation is a major rule because it will likely result in an annual effect of more than $100 million on the economy. Therefore, this final rule is being transmitted to Congress and the Comptroller General for review.

i. Executive Order 13132; Federalism Impact Statement

Executive Order 13132 requires Federal agencies to consider the impact of their regulatory actions on State and local governments. Where such actions have federalism implications, agencies are directed to provide a statement for inclusion in the preamble to the regulations describing the agency’s considerations.

Consultations with State and local officials. After passage of the CCDBG Act of 2014, the Office of Child Care (OCC) in the Office of the Deputy Assistant Secretary for Early Childhood Development in ACF conducted outreach to engage with a variety of stakeholders to better understand the implications of its provisions. OCC created a reauthorization page on its Web site to provide public information and a specific email address to submit general questions. OCC received approximately 650 questions and comments through this email address, webinars, inquiries to regional offices, and meetings with grantees. OCC leadership and staff participated in more than 21 listening sessions with approximately 675 people representing diverse national, State, and local stakeholders regarding the reauthorized Act, held webinars and gave presentations at national conferences. Participants included State human services agencies, child care providers, parents with children in child care, child care resource and referral agencies, national and State advocacy groups, national stakeholders including faith-based communities, after-school and school age child care providers, child care researchers, State and local early childhood organizations, provider associations, labor unions, and National Head Start Association members.

Furthermore, OCC held five meetings with State and Territory CCDF administrators and a series of consultations with Tribal leaders to describe the updated Act and to gather input from federal grantees with responsibility for operating the CCDF program.

In addition, ACF reviewed the records of comments received after issuing a now withdrawn NPRM for CCDF in May 2013 prior to passage of the CCDBG Act of 2014 by Congress. Many, but not all, of the key components of the Act are in alignment with provisions included in that NPRM.

Finally, we carefully reviewed the nearly 150 comments received on the December 2015 NPRM after widely disseminating the NPRM to solicit comments. We also held a Tribal consultation on the NPRM during the comment period.

Nature of concerns and the need to issue this final rule. State, Territorial and Tribal CCDF Lead Agencies want to provide family friendly child care assistance and support increased quality of child care services, but are concerned about the cost of the reauthorized Act and need for grantee flexibility. We seriously considered these views in developing the final rule. We also completed a regulatory impact analysis to fully assess costs and benefits of the new requirements. We recognize that a number of the new regulatory provisions will require some States,
Territories, and Tribal Lead Agencies to re-direct CCDF funds to implement specific provisions.

**Extent to which we meet those concerns.** Each fiscal year ACF provides to States, Territories, and Tribes $5.7 billion in annual funding to implement the CCDF program. Additionally, the regulatory changes made to the Act and this final rule are based on policy practices already implemented by many States. Finally, in several areas, the final rule increases the flexibility available to States, Territories, and Tribes in administering the program (e.g., waiving family co-payments, defining protective services).

**j. Treasury and General Government Appropriations Act of 1999**

Section 654 of the Treasury and General Government Appropriations Act of 1999 (Pub. L. 105–277) requires federal agencies to determine whether a regulation may negatively impact family well-being. If the agency determines a policy or regulation negatively affects family well-being, then the agency must prepare an impact assessment addressing seven criteria specified in the law. This final rule will not have a negative impact on the autonomy or integrity of the family as an institution.

Accordingly, we concluded that it is not necessary to prepare a family policymaking assessment. In fact, the final rule will have positive benefits by improving health and safety protections and the quality of care that children receive, as well as improving transparency for parents about the child care options available to them. The provisions in this final rule will enable parents make more informed child care decisions and increases continuity of care through family-friendly practices.

**List of Subjects in 45 CFR Part 98**

Child care, Grant programs—social programs.
(Catalog of Federal Domestic Assistance Program Number 93.575, Child Care and Development Block Grant; 93.596, Child Care Mandatory and Matching Funds)

Dated: July 14, 2016.

**Mark H. Greenberg,**

*Acting Assistant Secretary for Children and Families.*

Approved: July 18, 2016.

**Sylvia M. Burwell,**

*Secretary.*

Accordingly, the Department of Health and Human Services amends 45 CFR part 98 as follows:

**PART 98—CHILD CARE AND DEVELOPMENT FUND**

1. The authority citation for part 98 continues to read as follows:

   **Authority:** 42 U.S.C. 618, 9858.

2. Revise § 98.1 to read as follows:

   **§98.1 Purposes.**

   (a) The purposes of the CCDF are:

   (1) To allow each State maximum flexibility in developing child care programs and policies that best suit the needs of children and parents within that State;

   (2) To promote parental choice to empower working parents to make their own decisions regarding the child care services that best suit their family’s needs;

   (3) To encourage States to provide consumer education information to help parents make informed choices about child care services and to promote involvement by parents and family members in the development of their children in child care settings;

   (4) To assist States in delivering high-quality, coordinated early childhood care and education services to maximize parents’ options and support parents trying to achieve independence from public assistance;

   (5) To assist States in improving the overall quality of child care services and programs by implementing the health, safety, licensing, training, and oversight standards established in this subchapter and in State law (including State regulations);

   (6) To improve child care and development of participating children; and

   (7) To increase the number and percentage of low-income children in high-quality child care settings.

   (b) The purpose of this part is to provide the basis for administration of the Fund. These regulations provide that State, Territorial, and Tribal Lead Agencies:

   (1) Maximize parental choice of safe, healthy and nurturing child care settings through the use of certificates and through grants and contracts, and by providing parents with information about child care programs;

   (2) Include in their programs a broad range of child care providers, including center-based care, family child care, in home care, care provided by relatives and sectarian child care providers;

   (3) Improve the quality and supply of child care and before- and after-school care services that meet applicable requirements and promote healthy child development and learning and family economic stability;

   (4) Coordinate planning and delivery of services at all levels, including Federal, State, Tribal, and local;

   (5) Design flexible programs that provide for the changing needs of recipient families and engage families in their children’s development and learning;

   (6) Administer the CCDF responsibly to ensure that statutory requirements are met and that adequate information regarding the use of public funds is provided;

   (7) Design programs that provide uninterrupted service to families and providers, to the extent allowed under the statute, to support parental education, training, and employment and continuity of care that minimizes disruptions to children’s learning and development;

   (8) Provide a progression of training and professional development opportunities for caregivers, teachers, and directors to increase their effectiveness in supporting children’s development and learning and strengthen and retain (including through financial incentives and compensation improvements) the child care workforce.

3. Amend § 98.2 as follows:

   a. Revise the definition of **Categories of care** as follows:

   b. Add in alphabetical order definitions for **Child experiencing homelessness, Child with a disability,** and **Director** as follows:

   c. Revise the definition of **Eligible child care provider** as follows:

   d. Add in alphabetical order a definition for **English learner** as follows:

   e. Revise the definition of **Family child care provider** as follows:

   f. Remove the definition of **Group home child care provider;**

   g. Revise the definitions of **Lead Agency, Programs,** and **Sliding fee scale** as follows:

   h. Add in alphabetical order a definition for **Teacher** as follows:

   The revisions and additions read as follows:

   **§98.2 Definitions.**

   * * * * * *

   **Categories of care** means center-based child care, family child care, and in home care;

   * * * * * *

   **Child experiencing homelessness** means a child who is homeless as defined in section 725 ofSubtitle VII–B of the McKinney-Vento Act (42 U.S.C. 11434a);

   * * * * * *

   **Child with a disability** means:

   (1) A child with a disability, as defined in section 602 of the Individuals
with Disabilities Education Act (20 U.S.C. 1401);
(2) A child who is eligible for early intervention services under part C of the Individuals with Disabilities Education Act (20 U.S.C. 1431 et seq.);
(3) A child who is less than 13 years of age and who is eligible for services under section 504 of the Rehabilitation Act of 1973 (29 U.S.C. 794); and
(4) A child with a disability, as defined by the State, Territory or Tribe involved;

* * * * *

Director means a person who has primary responsibility for the daily operations and management for a child care provider, which may include a family child care provider, and which may serve children from birth to kindergarten entry and children in school-age child care;

* * * * *

Eligible child care provider means:

(1) A center-based child care provider, a family child care provider, an in-home child care provider, or other provider of child care services for compensation that—

(i) Is licensed, regulated, or registered under applicable State or local law as described in §98.40; and

(ii) Satisfies State and local requirements, including those referred to in §98.41 applicable to the child care services it provides; or

(2) A child care provider who is 18 years of age or older who provides child care services only to eligible children who are, by marriage, blood relationship, or court decree, the grandchild, great grandchild, siblings (if such provider lives in separate residence), niece, or nephew of such provider, and complies with any applicable requirements that govern child care provided by the relative involved;

English learner means an individual who is an English learner, as defined in section 8101 of the Elementary and Secondary Education Act of 1965 or who is limited English proficient, as defined in section 637 of the Head Start Act (42 U.S.C. 9832);

* * * * *

Family child care provider means one or more individual(s) who provide child care services for fewer than 24 hours per day per child, in a private residence other than the child’s residence, unless care in excess of 24 hours is due to the nature of the parent(s)’ work;

* * * * *

Lead Agency means the State, territorial or tribal entity, or joint interagency office, designated or established under §§98.10 and 98.16(a) to which a grant is awarded and that is accountable for the use of the funds provided. The Lead Agency is the entire legal entity even if only a particular component of the entity is designated in the grant award document;

* * * * *

Programs refers generically to all activities under the CCDF, including child care services and other activities pursuant to §98.50 as well as quality activities pursuant to §98.53;

* * * * *

Sliding fee scale means a system of cost-sharing by a family based on income and size of the family, in accordance with §98.45(k);

* * * * *

Teacher means a lead teacher, teacher, teacher assistant, or teacher aide who is employed by a child care provider for compensation on a regular basis, or a family child care provider, and whose responsibilities and activities are to organize, guide, and implement activities in a group or individual basis, or to assist a teacher or lead teacher in such activities, to further the cognitive, social, emotional, and physical development of children from birth to kindergarten entry and children in school-age child care;

* * * * *

4. In §98.10, revise the introductory text and paragraphs (d) and (e) and add paragraph (f) to read as follows:

§98.10 Lead Agency responsibilities.

The Lead Agency (which may be an appropriate collaborative agency), or a joint interagency office, as designated or established by the Governor of the State (or by the appropriate Tribal leader or applicant), shall:

* * * * *

(d) Hold at least one public hearing in accordance with §98.14(c);

(e) Coordinate CCDF services pursuant to §98.12; and

(f) Consult, collaborate, and coordinate in the development of the State Plan in a timely manner with Indian Tribes or tribal organizations in the State (at the option of the Tribe or tribal organization);

* * * * *

5. In §98.11, add a sentence to the end of paragraph (a)(3) and revise paragraph (b)(5) to read as follows:

§98.11 Administration under contracts and agreements.

(a) * * *

(3) * * * The contents of the written agreement may vary based on the role the agency is asked to assume or the type of project undertaken, but must include, at a minimum, tasks to be performed, a schedule for completing tasks, a budget which itemizes categorical expenditures consistent with CCDF requirements at §98.65(h), and indicators or measures to assess performance.

(b) * * *

(5) Oversee the expenditure of funds by subrecipients and contractors, in accordance with 75 CFR parts 351 to 353;

* * * * *

6. In §98.12, revise paragraph (c) to read as follows:

§98.12 Coordination and consultation.

* * * * *

(c) Coordinate, to the maximum extent feasible, per §98.10(f) with any Indian Tribes in the State receiving CCDF funds in accordance with subpart I of this part.

* * * * *

7. Amend §98.14 as follows:

(a) Revise paragraph (a)(1) introductory text;

(b) Redesignate paragraphs (a)(1)(A) through (D) as paragraphs (a)(1)(i) through (iv);

(c) Revise newly redesignated paragraphs (a)(1)(iii) and (iv);

(d) Add paragraphs (a)(1)(v) through (vii) and (a)(3) and (4);

(e) Revise paragraph (c)(3); and

(f) Add paragraph (d).

The revisions and additions read as follows:

§98.14 Plan process.

* * * * *

(a)(1) Coordinate the provision of child care services funded under this part with other Federal, State, and local child care and early childhood development programs (including such programs for the benefit of Indian children, infants and toddlers, children with disabilities, children experiencing homelessness, and children in foster care) to expand accessibility and continuity of care as well as full-day services. The Lead Agency shall also coordinate the provision of services with the State, and if applicable, tribal agencies responsible for:

* * * * *

(iii) Public education (including agencies responsible for prekindergarten services, if applicable, and early intervention and preschool services provided under Part B and C of the Individuals with Disabilities Education Act (20 U.S.C. 1400));

(iv) Providing Temporary Assistance for Needy Families;

(v) Child care licensing;

(vi) Head Start collaboration, as authorized by the Head Start Act (42 U.S.C. 9831 et seq.);

(vii) State Advisory Council on Early Childhood Education and Care
(designated or established pursuant to the Head Start Act (42 U.S.C. 9831 et seq.) or similar coordinating body;

(vii) Statewide after-school network or other coordinating entity for out-of-school time care (if applicable);

(ix) Emergency management and response;

(x) Child and Adult Care Food Program (CACFP) authorized by the National School Lunch Act (42 U.S.C. 1766) and other relevant nutrition programs;

(xi) Services for children experiencing homelessness, including State Coordinators of Education for Homeless Children and Youth (EHCY State Coordinators) and, to the extent practicable, local liaisons designated by Local Educational Agencies (LEAs) in the State as required by the McKinney-Vento Act (42 U.S.C. 11432) and Continuum of Care grantees;

(xii) Medicaid and the State children’s health insurance programs (42 U.S.C. 1396 et seq., 1397aa et seq.);

(xiii) Mental health services; and

(xiv) Child care resources and referral agencies, child care consumer education organizations, and providers of early childhood education training and professional development.

   (3) If the Lead Agency elects to combine funding for CCDF services with any other early childhood program, provide a description in the CCDF Plan of how the Lead Agency will combine and use the funding.

   (4) Demonstrate in the CCDF Plan how the State, Territory, or Tribe encourages partnerships among its agencies, other public agencies, Indian Tribes and Tribal organizations, and private entities, including faith-based and community-based organizations, to leverage existing service delivery systems for child care and development services and to increase the supply and quality of child care and development services and to increase the supply and quality of child care services for children who are less than 13 years of age, such as by implementing voluntary shared service alliance models.

   (c) * * *

   (3) In advance of the hearing required by this section, the Lead Agency shall make available to the public the content of the Plan as described in § 98.16 that it proposes to submit to the Secretary, which shall include posting the Plan content on a Web site.

   (d) Make the submitted and final Plan, any Plan amendments, and any approved requests for temporary relief (in accordance with § 98.19) publicly available on a Web site.

§ 98.15 Assurances and certifications.

(a) * * *

(6) That if expenditures for pre-Kindergarten services are used to meet the maintenance-of-effort requirement, the State has not reduced its level of effort in full-day/full-year child care services, pursuant to § 98.55(h)(1).

(7) Training and professional development requirements comply with § 98.44 and are applicable to caregivers, teaching staff, and directors working for child care providers of services for which assistance is provided under the CCDF.

(8) To the extent practicable, enrollment and eligibility policies support the fixed costs of providing child care services by delinking provider payment rates from an eligible child’s occasional absences in accordance with § 98.45(l).

(9) The State will maintain or implement early learning and developmental guidelines that are developmentally appropriate for all children from birth to kindergarten entry, describing what such children should know and be able to do, and covering the essential domains of early childhood development (cognition, including language arts and mathematics; social, emotional and physical development; and approaches toward learning) for use statewide by child care providers and caregivers. Such guidelines shall—

(i) Be research-based and developmentally, culturally, and linguistically appropriate, building in a forward progression, and aligned with entry to kindergarten;

(ii) Be implemented in consultation with the State educational agency and the State Early Childhood Education and Care (designated or established pursuant to section 642B(b)(1)(A)(i) of the Head Start Act (42 U.S.C. 9837b(b)(1)(A)(i)) or similar coordinating body, pursuant to § 98.14(a)(1)(vi));

(ii) Be updated as determined by the State.

(10) Funds received by the State to carry out this subchapter will not be used to develop or implement an assessment for children that—

(i) Will be the primary or sole basis for a child care provider being determined to be ineligible to participate in the program carried out under this subchapter;

(ii) Will be used as the primary or sole basis to provide a reward or sanction for an individual provider;

(iii) Will be used as the primary or sole method for assessing program effectiveness; or

(iv) Will be used to deny children eligibility to participate in the program carried out under this subchapter.

(11) To the extent practicable and appropriate, any code or software for child care information systems or information technology that a Lead Agency or other agency expends CCDF funds to develop must be made available upon request to other public agencies, including public agencies in other States, for their use in administering child care or related programs.

(b) The Lead Agency shall include the following certifications in its CCDF Plan:

(1) The State has developed the CCDF Plan in consultation with the State Advisory Council on Early Childhood Education and Care (designated or established pursuant to section 642B(b)(1)(A)(i) of the Head Start Act (42 U.S.C. 9837b(b)(1)(A)(i)) or similar coordinating body, pursuant to § 98.14(a)(1)(vi));

(2) In accordance with § 98.31, the Lead Agency has procedures in place to ensure that providers of child care services for which assistance is provided under the CCDF, afford parents unlimited access to their children and to the providers caring for their children, during the normal hours of operations and whenever such children are in the care of such providers;

(3) As required by § 98.32, the State maintains a record of substantiated parental complaints and makes information regarding such complaints available to the public upon request;

(4) It will collect and disseminate to parents of eligible children, the general public and, where applicable, child care providers, consumer education information that will promote informed child care choices, information on access to other programs for which families may be eligible, and information on developmental screenings, as required by § 98.33;

(5) In accordance with § 98.33(a), that the State makes public, through a consumer-friendly and easily accessible Web site, the results of monitoring and inspection reports, as well as the number of deaths, serious injuries, and instances of substantiated child abuse that occurred in child care settings;
(6) There are in effect licensing requirements applicable to child care services provided within the State, pursuant to § 98.40;

(7) There are in effect within the State (or other area served by the Lead Agency), under State or local (or tribal) law, requirements designed to provide the health and safety of children that are applicable to child care providers who provide services for which assistance is made available under the CCDF, pursuant to § 98.41;

(8) In accordance with § 98.42(a), procedures are in effect to ensure that child care providers of services for which assistance is provided under the CCDF comply with all applicable State or local (or tribal) health and safety requirements;

(9) Caregivers, teachers, and directors of child care providers comply with the State’s, Territory’s, or Tribe’s procedures for reporting child abuse and neglect as required by section 106(b)(2)(B)(i) of the Child Abuse Prevention and Treatment Act (42 U.S.C. 5106a(b)(2)(B)(i)), if applicable, or other child abuse reporting procedures and laws in the service area, as required by § 98.41(e);

(10) There are in effect monitoring policies and practices pursuant to § 98.42;

(11) Payment rates for the provision of child care services, in accordance with § 98.45, are sufficient to ensure equal access for eligible children to comparable child care services in the State or sub-State area that are provided to children whose parents are not eligible to receive assistance under this program or under any other Federal or State child care assistance programs;

(12) Payment practices of child care providers of services for which assistance is provided under the CCDF reflect generally-accepted payment practices of child care providers that serve children who do not receive CCDF assistance, pursuant to § 98.45(f); and

(13) There are in effect policies to govern the use and disclosure of confidential and personally identifiable information about children and families receiving CCDF assistance and child care providers receiving CCDF funds.

9. Revise § 98.16 to read as follows:

§ 98.16 Plan provisions.

A CCDF Plan shall contain the following:

(a) Specification of the Lead Agency whose duties and responsibilities are delineated in § 98.10;

(b) A description of processes the Lead Agency will use to monitor administrative and implementation responsibilities undertaken by agencies other than the Lead Agency including descriptions of written agreements, monitoring and auditing procedures, and indicators or measures to assess performance pursuant to § 98.11(a)(3);

(c) The assurances and certifications listed under § 98.15;

(d)(1) A description of how the CCDF program will be administered and implemented, if the Lead Agency does not directly administer and implement the program;

(2) Identification of the public or private entities designated to receive private donated funds and the purposes for which such funds will be expended, pursuant to § 98.55(f);

(e) A description of the coordination and consultation processes involved in the development of the Plan and the provision of services, including a description of public-private partnership activities that promote business involvement in meeting child care needs pursuant to § 98.14;

(f) A description of the public hearing process, pursuant to § 98.14(c);

(g) Definitions of the following terms includes group size limits, child-staff ratios, and required qualifications for caregivers, teachers, and directors;
(n) A description of monitoring and other enforcement procedures in effect to ensure that child care providers comply with applicable health and safety requirements pursuant to § 98.42;
(o) A description of criminal background check requirements, policies, and procedures in accordance with § 98.43, including a description of the requirements, policies, and procedures in place to respond to other States’, Territories’, and Tribes’ requests for background check results in order to accommodate the 45 day timeframe;
(p) A description of training and professional development requirements for caregivers, teaching staff, and directors of providers of services for which assistance is provided in accordance with § 98.44;
(q) A description of the child care certificate payment system(s), including the form or forms of the child care certificate, pursuant to § 98.30(c);
(r) Payment rates and a summary of the factors, local market rate survey or alternative methodology relied upon to determine that the rates provided are sufficient to ensure equal access pursuant to § 98.45;
(s) A detailed description of the State’s hotline for complaints, its process for substantiating and responding to complaints, whether or not the State uses monitoring as part of its process for responding to complaints for both CCDF and non-CCDF providers, how the State maintains a record of substantiated parental complaints, and how it makes information regarding those complaints available to the public on request, pursuant to § 98.32;
(t) A detailed description of the procedures in effect for affording parents unlimited access to their children whenever their children are in the care of the provider, pursuant to § 98.31;
(u) A detailed description of the licensing requirements applicable to child care services provided, any exemption to licensing requirements that is applicable to child care providers of services for which assistance is provided under the CCDF and a demonstration of why such exemption does not endanger the health, safety, or development of children, and a description of how such licensing requirements are effectively enforced, pursuant to § 98.40;
(v) Pursuant to § 98.33(f), the definitions or criteria used to implement the exception, provided in section 407(e)(2) of the Social Security Act (42 U.S.C. 607(e)(2)), to individual penalties in the Anti-Money Laundering Act applicable to a single custodial parent caring for a child under age six;
English proficiency and persons with disabilities and facilitate participation of child care providers with limited English proficiency and disabilities in the subsidy system; 

(ee) A description of policies to prevent suspension, expulsion, and denial of services due to behavior of children birth to age five in child care and other early childhood programs receiving assistance under this part, which must be disseminated as part of consumer and provider education efforts in accordance with § 98.33(b)(1)(v); 

(ff) Designation of a State, territorial, or tribal entity to which child care providers must submit reports of any serious injuries or deaths of children occurring in child care, in accordance with § 98.42(b)(4); 

(gg) A description of how the Lead Agency will support child care providers in the successful engagement of families in children’s learning and development; 

(hh) A description of how the Lead Agency will respond to complaints submitted through the national hotline and Web site, required in section 658I(b) of the CCBDB Act of 2014 (42 U.S.C. 9858I(b)), including the designee responsible for receiving and responding to such complaints regarding both licensed and license-exempt child care providers; 

(ii) Such other information as specified by the Secretary.

10. In § 98.17, revise paragraph (a) to read as follows:

§ 98.17 Period covered by Plan.

(a) For States, Territories, and Indian Tribes the Plan shall cover a period of three years.

11. In § 98.18, revise paragraph (b) to read as follows:

§ 98.18 Approval and disapproval of Plans and Plan amendments.

(b) Plan amendments. (1) Approved Plans shall be amended whenever a substantial change in the program occurs. A Plan amendment shall be submitted within 60 days of the effective date of the change. Plan amendments will be approved or denied not later than the 90th day following the date on which the amendment is received, unless a written agreement to extend that period has been secured.

(2) Lead Agencies must ensure advanced written notice is provided to affected parties (i.e., parents and child care providers) of substantial changes in the program that adversely affect eligibility, payment rates, and/or sliding fee scales.

12. Add § 98.19 to subpart B to read as follows:

§ 98.19 Requests for temporary relief from requirements.

(a) Requests for relief. The Secretary may temporarily waive one or more of the requirements contained in the Act or this part, with the exception of State Match and Maintenance of Effort requirements for a State, consistent with the conditions described in section 658I(c)(1) of the Act (42 U.S.C. 9858I(c)(1)), provided that the waiver request:

(1) Describes circumstances that prevent the State, Territory, or Tribe from complying with any statutory or regulatory requirements of this part;

(2) By itself, contributes to or enhances the State’s, Territory’s, or Tribe’s ability to carry out the purposes of the Act and this part;

(3) Will not contribute to inconsistency with the purposes of the Act or this part;

(4) Meets the requirements set forth in paragraphs (b) through (g) of this section.

(b) Types. Types of waivers include:

(1) Transitional and legislative waivers. Lead Agencies may apply for temporary waivers meeting the requirements described in paragraph (a) of this section that would provide transitional relief from conflicting or duplicative requirements preventing implementation, or an extended period of time in order for a State, territorial, or tribal legislature to enact legislation to implement the provisions of this subchapter. Such waivers are:

(i) Limited to a one-year initial period;

(ii) May be extended, in accordance with paragraph (f) of this section, for at most one additional year from the date of approval of the extension;

(iii) Are designed to provide States, Territories and Tribes at most one full legislative session to enact legislation to implement the provisions of the Act or this part, and;

(iv) Are conditional, dependent on progress towards implementation, and may be terminated by the Secretary at any time in accordance with paragraph (e) of this section.

(2) Waivers for extraordinary circumstances. States, Territories and Tribes may apply for waivers meeting the requirements described in paragraph (a) of this section, in cases of extraordinary circumstances, which are defined as extraordinary circumstances or situations, such as a natural disaster or financial crisis. Such waivers are:

(i) Limited to an initial period of no more than 2 years from the date of approval;

(ii) May be extended, in accordance with paragraph (f) of this section, for at most one additional year from the date of approval of the extension, and;

(iii) May be terminated by the Secretary at any time in accordance with paragraph (e) of this section.

(c) Contents. Waiver requests must be submitted to the Secretary in writing and:

(1) Indicate which type of waiver, as detailed in paragraph (b) of this section, the State, Territory or Tribe is requesting:

(2) Detail each sanction or provision of the Act or regulations that the State, Territory or Tribe seeks relief from;

(3) Describe how a waiver from that sanction or provision will, by itself, improve delivery of child care services for children; and

(4) Certify and describe how the health, safety, and well-being of children served through assistance received under this part will not be compromised as a result of the waiver.

(d) Notification. Within 90 days after receipt of the waiver request or, if additional follow up information has been requested, the receipt of such information, the Secretary will notify the Lead Agency of the approval or disapproval of the request.

(e) Termination. The Secretary shall terminate approval of a request for a waiver authorized under the Act or this section if the Secretary determines, after notice and opportunity for a hearing based on the rules of procedure in part 99 of this chapter, that the performance of a State, Territory or Tribe granted relief under this section has been inadequate, or if such relief is no longer necessary to achieve its original purposes.

(f) Renewal. The Secretary may approve or disapprove a request for a new waiver under the Act or this section if the Secretary determines, after notice and opportunity for a hearing based on the rules of procedure in part 99 of this chapter, that the performance of a State, Territory or Tribe granted relief under this section has been inadequate, or if such relief is no longer necessary to achieve its original purposes.

(g) Restrictions. The Secretary may not:

(1) Permit Lead Agencies to alter the federal eligibility requirements for eligible children, including work requirements, job training, or
educational program participation, that apply to the parents of eligible children under this part:

(2) Waive anything related to the Secretary’s authority under this part; or
(3) Require or impose any new or additional requirements in exchange for receipt of a waiver if such requirements are not specified in the Act.

■ 13. Amend §98.20 as follows:
   a. Revise paragraphs (a) introductory text, (a)(2) and (3), and (b) introductory text;
   b. In paragraph (b)(2), remove “Subpart D; or” and add in its place “subpart D of this part;”;
   c. In paragraph (b)(3): i. Remove “§98.44” and add “§98.46” in its place; and
      ii. Remove the period at the end of the paragraph and add “; or” in its place; and
   d. Add paragraphs (b)(4) and (c).

The revisions and additions read as follows:

§98.20 A child’s eligibility for child care services.

(a) To be eligible for services under §98.50, a child shall, at the time of eligibility determination or redetermination:

* * * * *

(2)(i) Reside with a family whose income does not exceed 85 percent of the State’s median income (SMI), which must be based on the most recent SMI data that is published by the Bureau of the Census, for a family of the same size; and

(ii) Whose family assets do not exceed $1,000,000 (as certified by such family member); and

(iii) Reside with a parent or parents who are working or attending a job training or educational program; or

(ii) Receive, or need to receive, protective services, which may include specific populations of vulnerable children as identified by the Lead Agency, and reside with a parent or parents other than the parent(s) described in paragraph (a)(3)(i) of this section.

(A) At grantee option, the requirements in paragraph (a)(2) of this section may be waived for families eligible for child care pursuant to this paragraph, if determined to be necessary on a case-by-case basis.

(B) At grantee option, the waiver provisions in paragraph (a)(3)(ii)(A) of this section apply to children in foster care when defined in the Plan, pursuant to §98.16(g)(7).

(b) A grantee or other administering agency may establish eligibility conditions or priority rules in addition to those specified in this section and §98.46, which shall be described in the Plan pursuant to §98.16(b)(5), so long as they do not:

* * * * *

(4) Impact eligibility otherwise than at the time of eligibility determination or redetermination.

(c) For purposes of implementing the citizenship eligibility verification requirements mandated by title IV of the Personal Responsibility and Work Opportunity Reconciliation Act, 8 U.S.C. 1601 et seq., only the citizenship and immigration status of the child, who is the primary beneficiary of the CCDF benefit, is relevant. Therefore, a Lead Agency or other administering agency may not condition a child’s eligibility for services under §98.50 based upon the citizenship or immigration status of their parent or the provision of any information about the citizenship or immigration status of their parent.

■ 14. Add §98.21 to subpart C to read as follows:

§98.21 Eligibility determination processes.

(a) A Lead Agency shall re-determine a child’s eligibility for child care services no sooner than 12 months following the initial determination or most recent redetermination, subject to the following:

(1) During the period of time between determinations or redeterminations, if the child met all of the requirements in §98.20(a) on the date of the most recent eligibility determination or redetermination, the child shall be considered eligible and will receive services at least at the same level, regardless of:

   (i) A change in family income, if that family income does not exceed 85 percent of SMI for a family of the same size; or

   (ii) A temporary change in the ongoing status of the child’s parent as working or attending a job training or educational program. A temporary change shall include, at a minimum:

      (A) Any time-limited absence from work for an employed parent due to reasons such as need to care for a family member or an illness;;

      (B) Any interruption in work for a seasonal worker who is not working between regular industry work seasons;

      (C) Any student holiday or break for a parent participating in training or education;

      (D) Any reduction in work, training or education hours, as long as the parent is still working or attending training or education;

      (E) Any other cessation of work or attendance at a training or education program that does not exceed three months or a longer period of time established by the Lead Agency;

      (F) Any change in age, including turning 13 years old during the eligibility period; and

      (G) Any change in residency within the State, Territory, or Tribal service area.

   (2)(i) Lead Agencies have the option, but are not required, to discontinue assistance due to a parent’s loss of work or cessation of attendance at a job training or educational program that does not constitute a temporary change in accordance with paragraph (a)(1)(ii) of this section. However, if the Lead Agency exercises this option, it must continue assistance at least at the same level for a period of not less than three months after each such loss or cessation in order for the parent to engage in job search and resume work, or resume attendance at a job training or educational activity.

   (ii) At the end of the minimum three-month period of continued assistance, if the parent is engaged in a qualifying work, education, or training activity with income below 85% of SMI, assistance cannot be terminated and the child must continue receiving assistance until the next scheduled redetermination, or at Lead Agency option, for an additional minimum 12—month eligibility period.

   (iii) If a Lead Agency chooses to initially qualify a family for CCDF assistance based a parent’s status of seeking employment or engaging in job search, the Lead Agency has the option to end assistance after a minimum of three months if the parent has still not found employment, although assistance must continue if the parent becomes employed during the job search period.

(3) Lead Agencies cannot increase family co-payment amounts, established in accordance with §98.45(k), within the minimum 12-month eligibility period except as described in paragraph (b)(3) of this section.

(4) Because a child meeting eligibility requirements at the most recent eligibility determination or redetermination is considered eligible between redeterminations as described in paragraph (a)(1) of this section, any payment for such a child shall not be considered an error or improper payment under subpart K of this part due to a change in the family’s circumstances.

(5) Notwithstanding paragraph (a)(1), the Lead Agency may discontinue assistance prior to the next re-determination in limited circumstances where there have been:
(i) Excessive unexplained absences despite multiple attempts by the Lead Agency or designated entity to contact the family and provider, including prior notification of possible discontinuation of assistance;

(A) If the Lead Agency chooses this option, it shall define the number of unexplained absences that shall be considered excessive;

(ii) A change in residency outside of the State, Territory, or Tribal service area; or

(iii) Substantiated fraud or intentional program violations that invalidate prior determinations of eligibility.

(b)(1) Lead Agencies that establish family income eligibility at a level less than 85 percent of SMI for a family of the same size (in order for a child to initially qualify for assistance) must provide a graduated phase-out by implementing two-tiered eligibility thresholds, with the second tier of eligibility (used at the time of eligibility re-determination) set at:

(i) 85 percent of SMI for a family of the same size; or

(ii) An amount lower than 85 percent of SMI for a family of the same size, but above the Lead Agency’s initial eligibility threshold, that:

(A) Takes into account the typical household budget of a low income family; and

(B) Provides justification that the second eligibility threshold is:

(1) Sufficient to accommodate increases in family income over time that are typical for low-income workers and that promote and support family economic stability; and

(2) Reasonably allows a family to continue accessing child care services without unnecessary disruption.

(2) At re-determination, a child shall be considered eligible (pursuant to paragraph (a) of this section) if their parents, at the time of redetermination, are working or attending a job training or educational program even if their income exceeds the Lead Agency’s income limit to initially qualify for assistance, as long as their income does not exceed the second tier of the eligibility described in (b)(1);

(3) A family meeting the conditions described in (b)(2) shall be eligible for services pursuant to the conditions described in §98.20 and all other paragraphs of §98.21, with the exception of the co-payment restrictions at §98.21(i)(3). To help families transition off of child care assistance, Lead Agencies may gradually adjust co-pay amounts for families whose children are determined eligible under the graduate phase-out conditions described in paragraph (b)(2) and may require additional reporting on changes in family income as described in paragraph (e)(3) of this section. provided such requirements do not constitute an undue burden, pursuant to conditions described in (e)(2)(ii) and (iii) of this section.

(c) The Lead Agency shall establish procedures for initial determination and redetermination of eligibility that take into account irregular fluctuation in earnings, including policies that ensure temporary increases in income, including temporary increases that result in monthly income exceeding 85 percent of SMI (calculated on a monthly basis), do not affect eligibility or family co-payments.

(d) The Lead Agency shall establish procedures and policies to ensure parents, especially parents receiving assistance through the Temporary Assistance for Needy Families (TANF) program, are not required to unduly disrupt their education, training, or employment in order to complete the eligibility redetermination process.

(e) The Lead Agency shall specify in the Plan any requirements for parents to notify the Lead Agency of changes in circumstances during the minimum 12-month eligibility period, and describe efforts to ensure such requirements do not place an undue burden on eligible families that could impact continued eligibility between redeterminations.

(1) The Lead Agency must require families to report a change at any point during the minimum 12-month period, limited to:

(i) If the family’s income exceeds 85% of SMI, taking into account irregular income fluctuations; or

(ii) At the option of the Lead Agency, the family has experienced a non-temporary cessation of work, training, or education.

(2) Any additional requirements the Lead Agency chooses, at its option, to impose on parents to provide notification of changes in circumstances to the Lead Agency or entities designated to perform eligibility functions shall not constitute an undue burden on families. Any such requirements shall:

(i) Limit notification requirements to items that impact a family’s eligibility (e.g., only if income exceeds 85 percent of SMI, or there is a non-temporary change in the status of the child’s parent as working or attending a job training or educational program) or those that enable the Lead Agency to contact the family or pay providers;

(ii) Not require an office visit in order to fulfill notification requirements; and

(iii) Offer a range of notification options (e.g., phone, email, online forms, extended submission hours) to accommodate the needs of parents;

(3) During a period of graduated phase-out, the Lead Agency may require additional reporting on changes in family income in order to gradually adjust family co-payments, if desired, as described in paragraph (b)(3) of this section.

(4) Lead Agencies must allow families the option to voluntarily report changes on an ongoing basis.

(i) Lead Agencies are required to act on this information provided by the family if it would reduce the family’s co-payment or increase the family’s subsidy.

(ii) Lead Agencies are prohibited from acting on information that would reduce the family’s subsidy unless the information provided indicates the family’s income exceeds 85 percent of SMI for a family of the same size, taking into account irregular income fluctuations, or, at the option of the Lead Agency, the family has experienced a non-temporary change in the work, training, or educational status.

(f) Lead Agencies must take into consideration children’s development and learning and promote continuity of care when authorizing child care services.

(g) Lead Agencies are not required to limit authorized child care services strictly based on the work, training, or educational schedule of the parent(s) or the number of hours the parent(s) spend in work, training, or educational activities.

15. In §98.30, revise paragraphs (e)(1), (f) introductory text, and (f)(2) and add paragraphs (g) and (h) to read as follows:

§98.30 Parental choice.

* * * * *

(e)(1) For child care services, certificates under paragraph (a)(2) of this section shall permit parents to choose from a variety of child care categories, including:

(i) Center-based child care;

(ii) Family child care; and

(iii) In-home child care, with limitations, if any, imposed by the Lead Agency and described in its Plan at §98.16(i)(2). Under each of the above categories, care by a sectarian provider may not be limited or excluded.

* * * * *

(f) With respect to State and local regulatory requirements under §98.40, health and safety requirements under §98.41, and payment rates under §98.43, CCDF funds will not be available to a Lead Agency if State or local rules, procedures or other requirements promulgated for purposes
of the CCDF significantly restrict parental choice by:

* * * * *

(2) Having the effect of limiting parental access to or choice from among such categories of care or types of providers, as defined in § 98.2, with the exception of in-home care; or

* * * * *

(g) As long as provisions at paragraph (f) of this section are met, parental choice provisions shall not be construed as prohibiting a Lead Agency from establishing policies that require providers of child care services for which assistance is provided under this part to meet higher standards of quality, such as those identified in a quality rating and improvement system or other transparent system of quality indicators.

(b) Parental choice provisions shall not be construed as prohibiting a Lead Agency from providing parents with information and incentives that encourage the selection of high-quality child care.

■ 16. Revise § 98.31 to read as follows:

§ 98.31 Parental access.

The Lead Agency shall have in effect procedures to ensure that providers of child care services for which assistance is provided to child parents unlimited access to their children, and to the providers caring for their children, during normal hours of provider operation and whenever the children are in the care of the provider. The Lead Agency shall provide a detailed description in the Plan of such procedures.

■ 17. Revise § 98.32 to read as follows:

§ 98.32 Parental complaints.

The State shall:

(a) Establish or designate a hotline or similar reporting process for parents to submit complaints about child care providers;

(b) Maintain a record of substantiated parent complaints;

(c) Make information regarding such parental complaints available to the public on request; and

(d) The Lead Agency shall provide a detailed description in the Plan of how:

(1) Complaints are substantiated and responded to, including whether or not the State uses monitoring as part of its process for responding to complaints for both CCDF and non-CCDF providers; and

(2) A record of substantiated complaints is maintained and is made available.

■ 18. Revise § 98.33 to read as follows:

§ 98.33 Consumer and provider education.

The Lead Agency shall:

(a) Certify that it will collect and disseminate consumer education information to parents of eligible children, the general public, and providers through a consumer-friendly and easily accessible Web site that ensures the widest possible access to services for families who speak languages other than English and persons with disabilities, including:

(1) Lead Agency processes, including:

(i) The process for licensing child care providers pursuant to § 98.40;

(ii) The process for conducting monitoring and inspections of child care providers pursuant to § 98.42;

(iii) Policies and procedures related to criminal background checks for child care providers pursuant to § 98.43; and

(iv) The offenses that prevent individuals from serving as child care providers.

(2) A localized list of all licensed child care providers, and, at the discretion of the Lead Agency, all eligible child care providers (other than an individual who is related to all children for whom child care services are provided), differentiating between licensed and license-exempt providers, searchable by zip code;

(3) The quality of a provider as determined by the Lead Agency through a quality rating and improvement system or other transparent system of quality indicators, if such information is available for the provider;

(4) Results of monitoring and inspection reports for all eligible and licensed child care providers (other than an individual who is related to all children for whom child care services are provided), including those required at § 98.42 and those due to major substantiated complaints about failure to comply with provisions at § 98.41 and Lead Agency child care policies. Lead Agencies shall post in a timely manner full monitoring and inspection reports, either in plain language or with a plain language summary, for parents and child care providers to understand, and shall establish a process for correcting inaccuracies in the reports. Such results shall include:

(i) Information on the date of such inspection;

(ii) Information on corrective action taken by the State and child care provider, where applicable;

(iii) Any health and safety violations, including any fatalities and serious injuries occurring at the provider, prominently displayed on the report or summary; and

(iv) A minimum of 3 years of results where available;

(5) Aggregate number of deaths and serious injuries (for each provider category and licensing status) and instances of substantiated child abuse that occurred in child care settings each year, for eligible providers.

(6) Referrals to local child care resource and referral organizations.

(7) Directions on how parents can contact the Lead Agency or its designee and other programs to help them understand information included on the Web site.

(b) Certify that it will collect and disseminate, through resource and referral organizations or other means as determined by the State, including, but not limited to, through the Web site described in paragraph (a) of this section, to parents of eligible children and the general public, and where applicable providers, information about:

(1) The availability of the full diversity of child care services to promote informed parental choice, including information about:

(i) The availability of child care services under this part and other programs for which families may be eligible, as well as the availability of financial assistance to obtain child care services;

(ii) Other programs for which families that receive assistance under this part may be eligible, including:

(A) Temporary Assistance for Needy Families (TANF) (42 U.S.C. 601 et seq.);

(B) Head Start and Early Head Start (42 U.S.C. 9831 et seq.);

(C) Low-Income Home Energy Assistance Program (LIHEAP) (42 U.S.C. 8021 et seq.);

(D) Supplemental Nutrition Assistance Program (SNAP) (7 U.S.C. 2011 et seq.);

(E) Special supplemental nutrition program for women, infants, and children (42 U.S.C. 1786);

(F) Child and Adult Care Food Program (CACFP) (42 U.S.C. 1766); and

(G) Medicaid and the State children’s health insurance programs (42 U.S.C. 1396 et seq., 1397aa et seq.);

(iii) Programs carried out under section 619 and part C of the Individuals with Disabilities Education Act (IDEA) (20 U.S.C. 1419, 1431 et seq.);

(iv) Research and best practices concerning children’s development, meaningful parent and family engagement, and physical health and development, particularly healthy eating and physical activity; and

(v) State policies regarding social emotional behavioral health of children which may include positive behavioral health intervention and support models for birth to school-age appropriate, and policies to prevent suspension and expulsion of children.
birth to age five in child care and other early childhood programs, as described in the Plan pursuant to § 98.16(ee), receiving assistance under this part.
(c) Provide information on developmental screenings to parents as part of the intake process for families receiving assistance under this part, and to providers through training and education, including:
(1) Information on existing resources and services the State can make available in conducting developmental screenings and providing referrals to services when appropriate for children who receive assistance under this part, including the coordinated use of the Early and Periodic Screening, Diagnosis, and Treatment program (42 U.S.C. 1396 et seq.) and developmental screening services available under section 619 and part C of the Individuals with Disabilities Education Act (20 U.S.C. 1419, 1431 et seq.); and
(2) A description of how a family or eligible child care provider may utilize the resources and services described in paragraph (c)(1) of this section to obtain developmental screenings for children who receive assistance under this part who may be at risk for cognitive or other developmental delays, which may include social, emotional, physical, or linguistic delays.
(d) For families that receive assistance under this part, provide specific information about the child care provider selected by the parent, including health and safety requirements met by the provider pursuant to § 98.41, any licensing or regulatory requirements met by the provider, date the provider was last inspected, any history of violations of these requirements, and any voluntary quality standards met by the provider. Information must also describe how CCDF subsidies are designed to promote equal access in accordance with § 98.41, any licensing requirements met by the provider, date the provider was last inspected, any history of violations of these requirements, and any voluntary quality standards met by the provider.
(e) Provide linkages to databases related to paragraph (a) to HHS for implementing a national Web site and other uses as determined by the Secretary.
(f) Inform parents who receive TANF benefits about the requirement at section 407(e)(2) of the Social Security Act (42 U.S.C. 607(e)(2)) that the TANF agency make an exception to the individual penalties associated with the work requirement for any single custodial parent who has a demonstrated inability to obtain needed child care for a child under six years of age. The information may be provided directly by the Lead Agency, or, pursuant to § 98.11, other entities, and shall include:
(1) The procedures the TANF agency uses to determine if the parent has a demonstrated inability to obtain needed child care;
(2) The criteria or definitions applied by the TANF agency to determine whether the parent has a demonstrated inability to obtain needed child care, including:
(i) “Appropriate child care’’;
(ii) “Reasonable distance’’;
(iii) “Unsuitability of informal child care’’;
(iv) “Affordable child care arrangements’’;
(3) The clarification that assistance received during the time an eligible parent receives the exception referred to in paragraph (f) of this section will count toward the time limit on Federal benefits required at section 408(a)(7) of the Social Security Act (42 U.S.C. 608(a)(7)).
(g) Include in the triennial Plan the definitions or criteria the TANF agency uses in implementing the exception to the work requirement specified in paragraph (f) of this section.
19. In § 98.40, redesignate paragraph (a)(2) as (a)(3), revise newly redesignated paragraph (a)(3), and add new paragraph (a)(2).
The addition and revision read as follows:
§ 98.40 Compliance with applicable State and local regulatory requirements.
(a) * * *
(2) Describe in the Plan exemption(s) to licensing requirements, if any, for child care services for which assistance is provided, and a demonstration for how such exemption(s) do not endanger the health, safety, or development of children who receive services from such providers. Lead Agencies must provide the required description and demonstration for any exemptions based on:
(i) Provider category, type, or setting;
(ii) Length of day;
(iii) Providers not subject to licensing because the number of children served falls below a State-defined threshold; and
(iv) Any other exemption to licensing requirements; and
(3) Provide a detailed description in the Plan of the requirements under paragraph (a)(1) of this section and of how they are effectively enforced.
* * * * * *
20. Revise § 98.41 to read as follows:
§ 98.41 Health and safety requirements.
(a) Each Lead Agency shall certify that there are in effect, within the State (or other area served by the Lead Agency), under State, local or tribal law, requirements (appropriate to provider setting and age of children served) that are designed, implemented, and enforced to protect the health and safety of children. Such requirements must be applicable to child care providers of services for which assistance is provided under this part. Such requirements, which are subject to monitoring pursuant to § 98.42, shall:
(1) Include health and safety topics consisting of, at a minimum:
(i) The prevention and control of infectious diseases (including immunizations); with respect to immunizations, the following provisions apply:
(A) As part of their health and safety provisions in this area, Lead Agencies shall assure that children receiving services under the CCDF are appropriately immunized. Those health and safety provisions shall incorporate (by reference or otherwise) the latest recommendation for childhood immunizations of the respective State, territorial, or tribal public health agency.
(B) Notwithstanding this paragraph (a)(1)(i), Lead Agencies may exempt:
(1) Children who are cared for by relatives (defined as grandparents, great grandparents, siblings (if living in a separate residence), aunts, and uncles), provided there are no other unrelated children who are cared for in the same setting.
(2) Children who receive care in their own homes, provided there are no other unrelated children who are cared for in the home.
(3) Children whose parents object to immunization on religious grounds.
(4) Children whose medical condition contraindicates immunization.
(C) Lead Agencies shall establish a grace period that allows children experiencing homelessness and children in foster care to receive services under this part while providing their families (including foster families) a reasonable time to take any necessary action to comply with immunization and other health and safety requirements.
(1) The length of such grace period shall be established in consultation with the State, Territorial or Tribal health agency.
(2) Any payment for such child during the grace period shall not be considered an error or improper payment under subpart K of this part.
(3) The Lead Agency may also, at its option, establish grace periods for other
children who are not experiencing homelessness or in foster care.

(4) Lead Agencies must coordinate with licensing agencies and other relevant State, Territorial, Tribal, and local agencies to provide referrals and support to help families of children receiving services during a grace period comply with immunization and other health and safety requirements;

(ii) Prevention of sudden infant death syndrome and use of safe sleeping practices;

(iii) Administration of medication, consistent with standards for parental consent;

(iv) Prevention and response to emergencies due to food and allergic reactions;

(v) Building and physical premises safety, including identification of and protection from hazards, bodies of water, and vehicular traffic;

(vi) Prevention of shaken baby syndrome, abusive head trauma, and child maltreatment;

(vii) Emergency preparedness and response planning for emergencies resulting from a natural disaster, or a man-caused event (such as violence at a child care facility), within the meaning of those terms under section 602(a)(1) of the Robert T. Stafford Disaster Relief and Emergency Assistance Act (42 U.S.C. 5195a(a)(1)) that shall include procedures for evacuation, relocation, shelter-in-place and lock down, staff and volunteer emergency preparedness training and practice drills, communication and reunification with families, continuity of operations, and accommodation of infants and toddlers, children with disabilities, and children with chronic medical conditions;

(viii) Handling and storage of hazardous materials and the appropriate disposal of bioccontaminants;

(ix) Appropriate precautions in transporting children, if applicable;

(x) Pediatric first aid and cardiopulmonary resuscitation;

(xi) Recognition and reporting of child abuse and neglect, in accordance with the requirement in paragraph (e) of this section; and

(xii) May include requirements relating to:

(A) Nutrition (including age-appropriate feeding);

(B) Access to physical activity;

(C) Caring for children with special needs; or

(D) Any other subject area determined by the Lead Agency to be necessary to promote child development or to protect children’s health and safety.

2. Include minimum health and safety training on the topics above, as described in § 98.44.

(b) Lead Agencies may not set health and safety standards and requirements other than those required in paragraph (a) of this section that are inconsistent with the parental choice safeguards in § 98.30(l).

(c) The requirements in paragraph (a) of this section shall apply to all providers of child care services for which assistance is provided under this part, within the area served by the Lead Agency, except the relatives specified at § 98.42(c).

(d) Lead Agencies shall describe in the Plan standards for child care services for which assistance is provided under this part, appropriate to strengthening the adult and child relationship in the type of child care setting involved, to provide for the safety and developmental needs of the children served, that address:

1. Group size limits for specific age populations;

2. The appropriate ratio between the number of children and the number of caregivers, in terms of age of children in child care; and

3. Required qualifications for caregivers in child care settings as described at § 98.44(a)(4).

(e) Lead Agencies shall certify that caregivers, teachers, and directors of child care providers within the State or area service will comply with the State’s, Territory’s, or Tribe’s child abuse reporting requirements as required by section 106(b)(2)(B)(i) of the Child Abuse and Prevention and Treatment Act (42 U.S.C. 5106a(b)(2)(B)(i)) or other child abuse reporting procedures and laws in the service area.

21. Revise § 98.42 to read as follows:

§ 98.42 Enforcement of licensing and health and safety requirements.

(a) Each Lead Agency shall certify in the Plan that procedures are in effect to ensure that child care providers of services for which assistance is made available in accordance with this part, within the area served by the Lead Agency, comply with all applicable Federal, State, local, or tribal health and safety requirements, including those described in § 98.41.

(b) Each Lead Agency shall certify in the Plan it has monitoring policies and practices applicable to all child care providers and facilities eligible to deliver services for which assistance is provided under this part. The Lead Agency shall:

1. Ensure individuals who are hired as licensing inspectors are qualified to inspect those child care providers and facilities and have received training in related health and safety requirements appropriate to provider setting and age of children served. Training shall include, but is not limited to, those requirements described in § 98.41, and all aspects of the State, Territory, or Tribe’s licensure requirements;

2. Require inspections of child care providers and facilities, performed by licensing inspectors (or qualified inspectors designated by the Lead Agency), as specified below:

(i) For licensed child care providers and facilities,

(A) Not less than one pre-licensure inspection for compliance with health, safety, and fire standards, and

(B) Not less than annually, an unannounced inspection for compliance with all child care licensing standards, which shall include an inspection for compliance with health and safety, (including, but not limited to, those requirements described in § 98.41) and fire standards (inspectors may inspect for compliance with all three standards at the same time); and

(ii) For license-exempt child care providers and facilities that are eligible to provide services for which assistance is made available in accordance with this part, an annual inspection for compliance with health and safety (including, but not limited to, those requirements described in § 98.41), and fire standards;

(iii) Coordinate, to the extent practicable, monitoring efforts with other Federal, State, and local agencies that conduct similar inspections.

(iv) The Lead Agency may, at its option:

(A) Use differential monitoring or a risk-based approach to design annual inspections, provided that the contents covered during each monitoring visit is representative of the full complement of health and safety requirements;

(B) Develop alternate monitoring requirements for care provided in the child’s home that are appropriate to the setting; and

3. Ensure the ratio of licensing inspectors to such child care providers and facilities is maintained at a level sufficient to enable the State, Territory, or Tribe to conduct effective inspections on a timely basis in accordance with the applicable Federal, State, Territory, Tribal, and local law;

4. Require child care providers to report to a designated State, Territorial, or Tribal entity any serious injuries or deaths of children occurring in child care.

(c) For the purposes of this section and § 98.41, Lead Agencies may exclude grandparents, great grandparents, siblings (if such providers live in a separate residence), aunts, or uncles,
from the term “child care providers.” If the Lead Agency chooses to exclude these providers, the Lead Agency shall provide a description and justification in the CCD plan, pursuant to §98.16(l), of requirements, if any, that apply to these providers.

§§ 98.43 through 98.47 [Redesignated as §§ 98.45 through 98.49]

22. Redesignate §§ 98.43 through 98.47 of subpart E as §§ 98.45 through 98.49.

23. Add new §98.43 to subpart E to read as follows:

§ 98.43 Criminal background checks.

(a)(1) States, Territories, and Tribes, through coordination of the Lead agency with other State, territorial, and tribal agencies, shall have in effect: (i) Requirements, policies, and procedures to require and conduct criminal background checks for child care staff members (including prospective child care staff members) of all licensed, regulated, or registered child care providers and all child care providers eligible to deliver services for which assistance is provided under this part as described in paragraph (a)(2) of this section;

(ii) Licensing, regulation, and registration requirements, as applicable, that prohibit the employment of child care staff members as described in paragraph (c) of this section; and

(iii) Requirements, policies, and procedures in place to respond as expeditiously as possible to other States’, Territories’, and Tribes’ requests for background check results in order to accommodate the 45 day timeframe required in paragraph (e)(1) of this section.

(2) In this section:

(i) Child care provider means a center based child care provider, a family child care provider, or another provider of child care services for compensation and on a regular basis that:

(A) Is not an individual who is related to all children for whom child care services are provided; and

(B) Is licensed, regulated, or registered under State law or eligible to receive assistance provided under this subchapter; and

(ii) Child care staff member means an individual (other than an individual who is related to all children for whom child care services are provided):

(A) Who is employed by a child care provider for compensation, including contract employees or self-employed individuals;

(B) Whose activities involve the care or supervision of children for a child care provider or unsupervised access to children who are cared for or supervised by a child care provider; or

(C) Any individual residing in a family child care home who is age 18 and older.

(b) A criminal background check for a child care staff member under paragraph (a) of this section shall include:

(1) A Federal Bureau of Investigation fingerprint check using Next Generation Identification;

(2) A search of the National Crime Information Center’s National Sex Offender Registry; and

(3) A search of the following registries, repositories, or databases in the State where the child care staff member resides and each State where such staff member resided during the preceding five years:

(i) State criminal registry or repository, with the use of fingerprints being:

(A) Required in the State where the staff member resides;

(B) Optional in other States;

(ii) State sex offender registry or repository; and

(iii) State-based child abuse and neglect registry and database.

(c)(1) A child care staff member shall be ineligible for employment by child care providers of services for which assistance is made available in accordance with this part, if such individual:

(i) Refuses to consent to the criminal background check described in paragraph (b) of this section;

(ii) Knowingly makes a materially false statement in connection with such criminal background check;

(iii) Is registered, or is required to be registered, on a State sex offender registry or repository or the National Sex Offender Registry; or

(iv) Has been convicted of a felony consisting of:

(A) Murder, as described in section 1111 of title 18, United States Code;

(B) Child abuse or neglect;

(C) A crime against children, including child pornography;

(D) Spousal abuse;

(E) A crime involving rape or sexual assault;

(F) Kidnapping;

(G) Arson;

(H) Physical assault or battery; or

(I) Subject to paragraph (e)(4) of this section, a drug-related offense committed during the preceding 5 years; or

(v) Has been convicted of a violent misdemeanor committed as an adult against a child, including the following crimes: Child abuse, child endangerment, sexual assault, or of a misdemeanor involving child pornography.

(2) A child care provider described in paragraph (a)(2)(i) of this section shall be ineligible for assistance provided in accordance with this subchapter if the provider employs a staff member who is ineligible for employment under paragraph (c)(1) of this section.

(d)(1) A child care provider covered by paragraph (a)(2)(i) of this section shall submit a request, to the appropriate State, Territorial, or Tribal agency, defined clearly on the State or Territory Web site described in paragraph (g) of this section, for a criminal background check described in paragraph (b) of this section, for each child care staff member (including prospective child care staff members) of the provider.

(2) Subject to paragraph (d)(3) of this section, the provider shall submit such a request:

(i) Prior to the date an individual becomes a child care staff member of the provider; and

(ii) Not less than once during each 5-year period for any existing staff member.

(3) A child care provider shall not be required to submit a request under paragraph (d)(2) of this section for a child care staff member if:

(i) The staff member received a background check described in paragraph (b) of this section:

(A) Within 5 years before the latest date on which such a submission may be made; and

(B) While employed by or seeking employment by another child care provider within the State;

(ii) The State provided to the first provider a qualifying background check result, consistent with this subchapter, for the staff member; and

(iii) The staff member is employed by a child care provider within the State, or has been separated from employment from a child care provider within the State for a period of not more than 180 consecutive days.

(4) A prospective staff member may begin work for a child care provider described in paragraph (a)(2)(i) of this section after completing either the check described at paragraph (b)(1) or (b)(3)(i) of this section in the State where the prospective staff member resides. Pending completion of all background check components in paragraph (b) of this section, the staff member must be supervised at all times by an individual who received a qualifying result on a background check described in paragraph (b) of this section within the past five years.
(e) **Background check results.** (1) The State, Territory, or Tribe shall carry out the request of a child care provider for a criminal background check as expeditiously as possible, but not to exceed 45 days after the date on which the provider submitted the request, and shall provide the results of the criminal background check to such provider and to the current or prospective staff member.

(2) States, Territories, and Tribes shall ensure the privacy of background check results by:

(i) Providing the results of the criminal background check to the provider in a statement that indicates whether a child care staff member (including a prospective child care staff member) is eligible or ineligible for employment described in paragraph (c)(1) of this section, without revealing any disqualifying crime or other related information regarding the individual.

(ii) If the child care staff member is ineligible for such employment due to the background check, the State, Territory, or Tribe will, when providing the results of the background check, include information related to each disqualifying crime, in a report to the staff member or prospective staff member, along with information on the opportunity to appeal, described in paragraph (e)(3) of this section.

(iii) No State, Territory, or Tribe shall publicly release or share the results of individual background checks, except States and Tribes may release aggregated data by crime as listed under paragraph (c)(1)(iv)(i) of this section from background check results, as long as such data is not personally identifiable information.

(3) States, Territories, and Tribes shall provide for a process by which a child care staff member (including a prospective child care staff member) may appeal the results of a criminal background check conducted under this section to challenge the accuracy or completeness of the information contained in such member's criminal background report. The State, Territory, and Tribe shall ensure that:

(i) Each child care staff member is given notice of the opportunity to appeal;

(ii) A child care staff member will receive clear instructions about how to complete the appeals process if the child care staff member wishes to challenge the accuracy or completeness of the information contained in such member's criminal background report;

(iii) If the staff member files an appeal of the decision, the State, Territory, or Tribe will attempt to verify the accuracy of the information challenged by the child care staff member, including making an effort to locate any missing disposition information related to the disqualifying crime;

(iv) The appeals process is completed in a timely manner for each child care staff member; and

(v) Each child care staff member shall receive written notice of the decision. In the case of a negative determination, the decision should indicate the State's efforts to verify the accuracy of information challenged by the child care staff member, as well as any additional appeals rights available to the child care staff member.

(4) States, Territories, and Tribes may allow for a review process through which the State, Territory, or Tribe may determine that a child care staff member (including a prospective child care staff member) disqualified for a crime specified in paragraph (c)(1)(iv)(i) of this section is eligible for employment described in paragraph (c)(1) of this section, notwithstanding paragraph (g)(2) of this section. The review process shall be consistent with title VII of the Civil Rights Act of 1964 (42 U.S.C. 2000e et seq.);

(5) Nothing in this section shall be construed to create a private right of action if a provider has acted in accordance with this section.

(f) **Fees for background checks.** Fees that a State, Territory, or Tribe may charge for the costs of processing applications and administering a criminal background check as required by this section shall not exceed the actual costs for the processing and administration.

(g) **Transparency.** The State or Territory must ensure that its policies and procedures under this section, including the process by which a child care provider or other State or Territory may submit a background check request, are published in the Web site of the State or Territory as described in § 98.33(a) and the Web site of local lead agencies.

(h) **Disqualification for other crimes.**

(1) Nothing in this section shall be construed to prevent a State, Territory, or Tribe from disqualifying individuals as child care staff members based on their conviction for crimes not specifically listed in paragraph (c)(1) of this section that bear upon the fitness of an individual to provide care for and have responsibility for the safety and well-being of children.

(2) Nothing in this section shall be construed to alter or otherwise affect the rights and remedies provided for child care staff members or prospective staff members residing in a State that disqualifies individuals as child care staff members for crimes not specifically provided for under this section.

24. Add new § 98.44 to subpart E to read as follows:

**§ 98.44 Training and professional development.**

(a) The Lead Agency must describe in the Plan the State or Territory framework for training, professional development, and postsecondary education for caregivers, teachers, and directors, including those working in school-age care, that:

1. Is developed in consultation with the State Advisory Council on Early Childhood Education and Care (designated or established pursuant to section 6428(b)(1)(A)(ii) of the Head Start Act (42 U.S.C. 9837b(b)(1)(A)(ii)) or similar coordinating body;

2. May engage training and professional development providers, including higher education in aligning training and education opportunities with the State’s framework;

3. Addresses professional standards and competencies, career pathways, advisory structure, articulation, and workforce information and financing;

4. Establishes qualifications in accordance with § 98.41(d)(3) designed to enable child care and school-age care providers that provide services for which assistance is provided in accordance with this part to promote the social, emotional, physical, and cognitive development of children and improve the knowledge and skills of caregivers, teachers and directors in working with children and their families;

5. Includes professional development conducted on an ongoing basis, providing a progression of professional development (which may include encouraging the pursuit of postsecondary education);

6. Reflects current research and best practices relating to the skills necessary for caregivers, teachers, and directors to meet the developmental needs of participating children and engage families, including culturally and linguistically appropriate practices; and

7. Improves the quality, diversity, stability, and retention (including financial incentives and compensation improvements) of caregivers, teachers, and directors.

(b) The Lead Agency must describe in the Plan its established requirements for pre-service or orientation (to be completed within three months) and ongoing professional development for caregivers, teachers, and directors of child care providers of services for which assistance is provided under the
CCDF that, to the extent practicable, align with the State framework:

1. Accessible pre-service or orientation training in health and safety standards appropriate to the setting and age of children served that addresses:
   (i) Each of the requirements relating to matters described in §98.41(a)(1)(i) through (xi) and specifying critical health and safety training that must be completed before caregivers, teachers, and directors are allowed to care for children unsupervised;
   (ii) At the Lead Agency option, matters described in §98.41(a)(1)(xii); and
   (iii) Child development, including the major domains (cognitive, social, emotional, physical development and approaches to learning);

2. Ongoing, accessible professional development, aligned to a progression of professional development, including the minimum annual requirement for hours of training and professional development for eligible caregivers, teachers and directors, appropriate to the setting and age of children served, that:
   (i) Maintains and updates health and safety training standards described in §98.41(a)(1)(i) through (xi), and at the Lead Agency option, in §98.41(a)(1)(xii);
   (ii) Incorporates knowledge and application of the State’s early learning and developmental guidelines for children birth to kindergarten (where applicable);
   (iii) Incorporates social-emotional behavior intervention models for children birth through school-age, which may include positive behavior intervention and support models including preventing and reducing expulsions and suspensions of preschool-age and school-aged children;
   (iv) To the extent practicable, are appropriate for a population of children that includes:
      (A) Different age groups;
      (B) English learners;
      (C) Children with developmental delays and disabilities; and
      (D) Native Americans, including Indians, as the term is defined in section 4 of the Indian Self-Determination and Education Assistance Act (25 U.S.C. 450b) (including Alaska Natives within the meaning of that term), and Native Hawaiians (as defined in section 6207 of the Elementary and Secondary Education Act of 1965);
   (v) To the extent practicable, awards continuing education units or is credit-bearing and
   (vi) Shall be accessible to caregivers, teachers, and directors supported through Indian tribes or tribal organizations that receive assistance under this subchapter.

25. Revise newly redesignated §98.45 to read as follows:

§98.45 Equal access.

(a) The Lead Agency shall certify that the payment rates for the provision of child care services under this part are sufficient to ensure equal access, for eligible families in the area served by the Lead Agency, to child care services comparable to those provided to families not eligible to receive CCDF assistance or child care assistance under any other Federal, State, or tribal programs.

(b) The Lead Agency shall provide in the Plan a summary of the data and facts relied on to determine that its payment rates ensure equal access. At a minimum, the summary shall include facts showing:
   (1) How a choice of the full range of providers is made available, and the extent to which child care providers participate in the CCDF subsidy system and any barriers to participation including barriers related to payment rates and practices, based on information obtained in accordance with paragraph (d)(2) of this section;
   (2) How payment rates are adequate and have been established based on the most recent market rate survey or alternative methodology conducted in accordance with paragraph (c) of this section;
   (3) How base payment rates enable providers to meet health, safety, quality, and staffing requirements in accordance with paragraphs (f)(1)(iii)(A) and (f)(2)(ii) of this section;
   (4) How the Lead Agency took the cost of higher quality into account in accordance with paragraph (f)(2)(iii) of this section, including how payment rates for higher-quality care, as defined by the Lead Agency using a quality rating and improvement system or other system of quality indicators, relate to the estimated cost of care at each level of quality;
   (5) How co-payments based on a sliding fee scale are affordable, as stipulated at paragraph (k) of this section; if applicable, a rationale for the Lead Agency’s policy on whether child care providers may charge additional amounts to families above the required family co-payment, including a demonstration that the policy promotes affordability and access; analysis of the interaction between any such additional amounts with the required family co-payments, and of the ability of subsidy payment rates to provide access to care without additional fees; and data on the extent to which CCDF providers charge such additional amounts to families (based on information obtained in accordance with paragraph (d)(2) of this section);
   (6) How the Lead Agency’s payment practices support equal access to a range of providers by providing stability of funding and encouraging more child care providers to serve children receiving CCDF subsidies, in accordance with paragraph (l) of this section;
   (7) How and on what factors the Lead Agency differentiates payment rates; and
   (8) Any additional facts the Lead Agency considered in determining that its payment rates ensure equal access.

(c) The Lead Agency shall demonstrate in the Plan that it has developed and conducted, not earlier than two years before the date of the submission of the Plan, either:
   (1) A statistically valid and reliable survey of the market rates for child care services; or
   (2) An alternative methodology, such as a cost estimation model, that has been:
      (i) Proposed by the Lead Agency; and
      (ii) Approved in advance by ACF.

(d) The Lead Agency must:
   (1) Ensure that the market rate survey or alternative methodology reflects variations by geographic location, category of provider, and age of child;
   (2) Track through the market rate survey or alternative methodology, or through a separate source, information on the extent to which:
      (i) Child care providers are participating in the CCDF subsidy program and any barriers to participation, including barriers related to payment rates and practices; and
      (ii) CCDF child care providers charge additional amounts to families more than the required family co-payment (under paragraph (k) of this section) in instances where the provider’s price exceeds the subsidy payment, including data on the size and frequency of any such amounts.

(e) Prior to conducting the market rate survey or alternative methodology, the Lead Agency must consult with:
   (1) The State Advisory Council on Early Childhood Education and Care (designated or established pursuant to section 642B(b)(1)(A)(i) of the Head Start Act (42 U.S.C. 9837b(b)(1)(A)(i)) or similar coordinating body, local child care program administrators, local child care resource and referral agencies, and other appropriate entities; and
   (2) Organizations representing child care caregivers, teachers, and directors.

(f) After conducting the market rate survey or alternative methodology, the Lead Agency must:
(1) Prepare a detailed report containing the results, and make the report widely available, including by posting it on the Internet, not later than 30 days after the completion of the report.

The report must include:

(i) The results of the market rate survey or alternative methodology;

(ii) The estimated cost of care necessary (including any relevant variation by geographic location, category of provider, or age of child) to support:

(A) Child care providers’ implementation of the health, safety, quality, and staffing requirements at §§ 98.41 through 98.44; and

(B) Higher-quality care, as defined by the Lead Agency using a quality rating and improvement system or other system of quality indicators, at each level of quality; and

(iii) The Lead Agency’s response to stakeholder views and comments.

(2) Set payment rates for CCDF assistance:

(i) In accordance with the results of the most recent market rate survey or alternative methodology conducted pursuant to paragraph (c) of this section;

(ii) With base payment rates established at least at a level sufficient for child care providers to meet health, safety quality, and staffing requirements in accordance with paragraph (f)(1)(ii)(A) of this section;

(iii) Taking into consideration the cost of providing higher-quality child care services, including consideration of the information at each level of higher quality required by paragraph (f)(1)(ii)(B) of this section;

(iv) Taking into consideration the views and comments of the public obtained in accordance with paragraph (e) and through other processes determined by the Lead Agency; and

(v) Without, to the extent practicable, reducing the number of families receiving CCDF assistance.

(g) A Lead Agency may not establish different payment rates based on a family’s eligibility status, such as TANF status.

(h) Payment rates under paragraph (a) of this section shall be consistent with the parental requirements in § 98.30.

(i) Nothing in this section shall be construed to create a private right of action if the Lead Agency acts in accordance with the Act and this part.

(j) Nothing in this part shall be construed to prevent a Lead Agency from differentiating payment rates on the basis of such factors as:

1. Geographic location of child care providers (such as location in an urban or rural area);

2. Age or particular needs of children (such as the needs of children with disabilities, children served by child protective services, and children experiencing homelessness);

3. Whether child care providers provide services during the weekend or other non-traditional hours; or

4. The Lead Agency’s determination that such differential payment rates may enable a parent to choose high-quality child care that best fits the parents’ needs.

(k) Lead Agencies shall establish, and periodically revise, by rule, a sliding fee scale(s) for families that receive CCDF child care services that:

1. Helps families afford child care and enables choice of a range of child care options;

2. Is based on income and the size of the family and may be based on other factors as appropriate, but may not be based on the cost of care or amount of subsidy payment;

3. Provides for affordable family co-payments that are not a barrier to families receiving assistance under this part; and

4. At Lead Agency discretion, allows for co-payments to be waived for families whose incomes are at or below the poverty level for a family of the same size, that have children who receive or need to receive protective services, or that meet other criteria established by the Lead Agency.

(l) The Lead Agency shall demonstrate in the Plan that it has established payment practices applicable to all CCDF child care providers that:

1. Ensure timely payment by either:

(i) Paying prospectively prior to the delivery of services; or

(ii) Paying within no more than 21 calendar days of the receipt of a complete invoice for services.

2. To the extent practicable, support the fixed costs of providing child care services by delinking provider payments from a child’s occasional absences by:

(i) Paying based on a child’s enrollment rather than attendance;

(ii) Providing full payment if a child attends at least 85 percent of the authorized time;

(iii) Providing full payment if a child is absent for five or fewer days in a month; or

(iv) An alternative approach for which the Lead Agency provides a justification in its Plan.

3. Reflect generally-accepted payment practices of child care providers that serve children who do not receive CCDF subsidies, which must include (unless the Lead Agency provides evidence in the Plan that such practices are not generally-accepted in the State or service area):

(i) Paying on a part-time or full-time basis (rather than paying for hours of service or smaller increments of time); and

(ii) Paying for reasonable mandatory registration fees that the provider charges to private-paying parents.

4. Ensure child care providers receive payment for any services in accordance with a written payment agreement or authorization for services that includes, at a minimum, information regarding provider payment policies, including rates, schedules, any fees charged to providers, and the dispute resolution process required by paragraph (l)(6);

5. Ensure child care providers receive prompt notice of changes to a family’s eligibility status that may impact payment, and that such notice is sent to providers no later than the day the Lead Agency becomes aware that such a change will occur;

6. Include timely appeal and resolution processes for any payment inaccuracies and disputes.

26. Revise newly redesignated § 98.46 to read as follows:

§ 98.46 Priority for child care services.

(a) Lead Agencies shall give priority for services provided under § 98.50(a) to:

1. Children of families with very low family income (considering family size);

2. Children with special needs, which may include any vulnerable populations as defined by the Lead Agency; and

3. Children experiencing homelessness.

(b) Lead Agencies shall prioritize increasing access to high-quality child care and development services for children of families in areas that have significant concentrations of poverty and unemployment and that do not have a sufficient number of such programs.

27. Revise § 98.50 to read as follows:

§ 98.50 Child care services.

(a) Direct child care services shall be provided:

1. To eligible children, as described in § 98.20;

2. Using a sliding fee scale, as described in § 98.45(k);

3. Using funding methods provided for in § 98.30; and

4. Based on the priorities in § 98.46.

(b) Of the aggregate amount of funds expended by a State or Territory (i.e., Discretionary, Mandatory, and Federal and State share of Matching funds):
(1) No less than seven percent in fiscal years 2016 and 2017, eight percent in fiscal years 2018 and 2019, and nine percent in fiscal year 2020 and each succeeding fiscal year shall be used for activities designed to improve the quality of child care services and increase parental options for, and access to, high-quality child care as described at § 98.53; and

(2) No less than three percent in fiscal year 2017 and each succeeding fiscal year shall be used to carry out activities at § 98.53(a)(4) as such activities relate to the quality of care for infants and toddlers.

(3) Nothing in this section shall preclude the State or Territory from reserving a larger percentage of funds to carry out activities described in paragraphs (b)(1) and (2) of this section.

(c) Funds expended from each fiscal year’s allotment on quality activities pursuant to paragraph (b) of this section:

(1) Must be in alignment with an assessment of the Lead Agency’s need to carry out such services and care as required at § 98.53(a); and

(2) Must include measurable indicators of progress in accordance with § 98.53(f); and

(3) May be provided directly by the Lead Agency or through grants or contracts with local child care resource and referral organizations or other appropriate entities.

(d) Of the aggregate amount of funds expended (i.e., Discretionary, Mandatory, and Federal and State share of Matching Funds), no more than five percent may be used for administrative activities as described at § 98.54.

(e) Not less than 70 percent of the Mandatory and Federal and State share of Matching Funds shall be used to meet the child care needs of families who:

(1) Are receiving assistance under a State program under Part A of title IV of the Social Security Act;

(2) Are attempting through work activities to transition off such assistance program; and

(3) Are at risk of becoming dependent on such assistance program.

(f) From Discretionary amounts provided for a fiscal year, the Lead Agency shall:

(1) Reserve the minimum amount required under paragraph (b) of this section for quality activities, and the funds for administrative costs described at paragraph (d) of this section; and

(2) From the remainder, use not less than 70 percent to fund direct services (provided by the Lead Agency).

(g) Of the funds remaining after applying the provisions of paragraphs (a) through (f) of this section, the Lead Agency shall spend a substantial portion of funds to provide direct child care services to low-income families who are working or attending training or education.

(h) Pursuant to § 98.16(j)(4), the Plan shall specify how the State will meet the child care needs of families described in paragraph (e) of this section.

§§ 98.51 through 98.55 [Redesignated as §§ 98.53 through 98.57]

28. Redesignate §§ 98.51 through 98.55 of subpart F as §§ 98.53 through 98.57.

29. Add new § 98.51 to subpart F to read as follows:

§ 98.51 Services for children experiencing homelessness.

Lead Agencies shall expend funds on activities that improve access to quality child care services for children experiencing homelessness, including:

(a) The use of procedures to permit enrollment (after an initial eligibility determination) of children experiencing homelessness while required documentation is obtained;

(1) If, after full documentation is provided, a family experiencing homelessness is found ineligible,

(i) The Lead Agency shall pay any amount owed to a child care provider for services provided as a result of the initial eligibility determination; and

(ii) Any CCDF payment made prior to the final eligibility determination shall not be considered an error or improper payment under subpart K of this part;

(2) [Reserved]

(b) Training and technical assistance for providers and appropriate Lead Agency (or designated entity) staff on identifying and serving children experiencing homelessness and their families; and

(c) Specific outreach to families experiencing homelessness.

30. Add new § 98.52 to subpart F to read as follows:

§ 98.52 Child care resource and referral system.

(a) A Lead Agency may expend funds to establish or support a system of local or regional child care resource and referral organizations that is coordinated, to the extent determined appropriate by the Lead Agency, by a statewide public or private nonprofit, community-based or regionally based, lead child care resource and referral organization.

(b) If a Lead Agency uses funds as described in paragraph (a) of this section, the local or regional child care resource and referral organizations supported shall, at the direction of the Lead Agency:

(1) Provide parents in the State with consumer education information referred to in § 98.33 (except as otherwise provided in that paragraph), concerning the full range of child care options (including faith-based and community-based child care providers), analyzed by provider, including child care provided during nontraditional hours and through emergency child care centers, in their political subdivisions or regions;

(2) To the extent practicable, work directly with families who receive assistance under this subchapter to offer the families support and assistance, using information described in paragraph (b)(1) of this section, to make an informed decision about which child care providers they will use, in an effort to ensure that the families are enrolling their children in the most appropriate child care setting to suit their needs and one that is of high quality (as determined by the Lead Agency);

(3) Collect data and provide information on the coordination of services and supports, including services under section 619 and part C of the Individuals with Disabilities Education Act (20 U.S.C. 1431, et seq.), for children with disabilities (as defined in section 602 of such Act (20 U.S.C. 1401));

(4) Collect data and provide information on the supply of and demand for child care services in political subdivisions or regions within the State and submit such information to the State;

(5) Work to establish partnerships with public agencies and private entities, including faith-based and community-based child care providers, to increase the supply and quality of child care services in the State; and

(6) As appropriate, coordinate their activities with the activities of the State Lead Agency and local agencies that administer funds made available in accordance with this part.

31. Revise newly redesignated § 98.53 to read as follows:

§ 98.53 Activities to improve the quality of child care.

(a) The Lead Agency must expend funds from each fiscal year’s allotment on quality activities pursuant to §§ 98.50(b) and 98.83(g) in accordance with an assessment of need by the Lead Agency. Such funds must be used to carry out at least one of the following quality activities to improve the quality of child care services for all children, regardless of CCDF receipt, in accordance with paragraph (d) of this section:
(1) Supporting the training, professional development, and postsecondary education of the child care workforce as part of a progression of professional development through activities such as those included at § 98.44, in addition to:

(i) Offering training, professional development, and postsecondary education opportunities for child care caregivers, teachers and directors that:

(A) Relate to the use of scientifically based, developmentally-appropriate, culturally-appropriate, and age-appropriate strategies to promote the social, emotional, physical, and cognitive development of children, including those related to nutrition and physical activity; and

(B) Offer specialized training, professional development, and postsecondary education for caregivers, teachers and directors caring for those populations prioritized at § 98.44(b)(2)(iv), and children with disabilities;

(ii) Incorporating the effective use of data to guide program improvement and improve opportunities for caregivers, teachers and directors to advance on their progression of training, professional development, and postsecondary education;

(iii) Including effective, age-appropriate behavior management strategies and training, including positive behavior interventions and support models for birth to school-age, that promote positive social and emotional development and reduce challenging behaviors, including reducing suspensions and expulsions of children under age five for such behaviors;

(iv) Providing training and outreach on engaging parents and families in culturally and linguistically appropriate ways to expand their knowledge, skills, and capacity to become meaningful partners in supporting their children’s positive development;

(v) Providing training corresponding to the nutritional and physical activity needs of children to promote healthy development;

(vi) Providing training or professional development for caregivers, teachers and directors regarding the early neurological development of children; and

(vii) Connecting child care caregivers, teachers, and directors with available Federal and State financial aid that would assist these individuals in pursuing relevant postsecondary education or delivering financial resources directly through programs that provide scholarships and compensation improvements for education attainment and retention.

(2) Improving upon the development or implementation of the early learning and development guidelines at § 98.15(a)(9) by providing technical assistance to eligible child care providers in order to enhance the cognitive, physical, social, and emotional development and overall well-being of participating children.

(3) Developing, implementing, or enhancing a tiered quality rating and improvement system for child care providers and services to meet consumer education requirements at § 98.33, which may:

(i) Support and assess the quality of child care providers in the State, Territory, or Tribe;

(ii) Build on licensing standards and other regulatory standards for such providers;

(iii) Be designed to improve the quality of different types of child care providers and services;

(iv) Describe the safety of child care facilities;

(v) Build the capacity of early childhood programs and communities to promote parents’ and families’ understanding of the early childhood system and the rating of the program in which the child is enrolled;

(vi) Provide, to the maximum extent practicable, financial incentives and other supports designed to expand the full diversity of child care options and help child care providers improve the quality of services; and

(vii) Accommodate a variety of distinctive approaches to early childhood education and care, including but not limited to, those practiced in faith-based settings, community-based settings, child centered settings, or similar settings that offer a distinctive approach to early childhood development.

(4) Improving the supply and quality of child care programs and services for infants and toddlers through activities, which may include:

(i) Establishing or expanding high-quality community or neighborhood based family and child development centers, which may serve as resources to child care providers in order to improve the quality of early childhood services provided to infants and toddlers from low-income families and to help eligible child care providers improve their capacity to offer high-quality, age-appropriate care to infants and toddlers from low-income families;

(ii) Establishing or expanding the operations of community or neighborhood-based family child care networks;

(iii) Promoting and expanding child care providers’ ability to provide developmentally appropriate services for infants and toddlers through, but not limited to:

(A) Training and professional development for caregivers, teachers and directors, including coaching and technical assistance on this age group’s unique needs from statewide networks of qualified infant-toddler specialists; and

(B) Improved coordination with early intervention specialists who provide services for infants and toddlers with disabilities under part C of the Individuals with Disabilities Education Act (20 U.S.C. 1431. et seq.);

(iv) If applicable, developing infant and toddler components within the Lead Agency’s quality rating and improvement system described in paragraph (a)(3) of this section for child care providers for infants and toddlers, or the development of infant and toddler components in the child care licensing regulations or early learning and development guidelines;

(v) Improving the ability of parents to access transparent and easy to understand consumer information about high-quality infant and toddler care as described at § 98.33; and

(vi) Carrying out other activities determined by the Lead Agency to improve the quality of infant and toddler care provided, and for which there is evidence that the activities will lead to improved infant and toddler health and safety, infant and toddler cognitive and physical development, or infant and toddler well-being, including providing health and safety training (including training in safe sleep practices, first aid, and cardiopulmonary resuscitation for providers and caregivers).

(5) Establishing or expanding a statewide system of child care resource and referral services.

(6) Facilitating compliance with Lead Agency requirements for inspection, monitoring, training, and health and safety, and with licensing standards.

(7) Evaluating and assessing the quality and effectiveness of child care programs and services offered, including evaluating how such programs positively impact children.

(8) Supporting child care providers in the voluntary pursuit of accreditation by a national accrediting body with demonstrated, valid, and reliable program standards of high-quality.

(9) Supporting Lead Agency or local efforts to develop or adopt high-quality program standards relating to health, mental health, nutrition, physical activity, and physical development.
(10) Carrying out other activities, including implementing consumer education provisions at § 98.33, determined by the Lead Agency to improve the quality of child care services provided, and for which measurement of outcomes relating to improvement of provider preparedness, child safety, child well-being, or entry to kindergarten is possible.

(b) Pursuant to § 98.16(j), the Lead Agency shall describe in its Plan the activities it will fund under this section.

(c) Non-Federal expenditures required by § 98.55(c) (i.e., the maintenance-of-effort amount) are not subject to the requirement at paragraph (a) of this section.

(d) Activities to improve the quality of child care services are not restricted to activities affecting children meeting eligibility requirements under § 98.20 or to child care providers of services for which assistance is provided under this part.

(e) Unless expressly authorized by law, targeted funds for quality improvement and other set asides that may be included in appropriations law may not be used towards meeting the quality expenditure minimum requirement at § 98.50(b).

(f) States shall annually prepare and submit reports, including a quality improvement report and expenditure report, to the Secretary, which must be made publicly available and shall include:

(1) An assurance that the State was in compliance with requirements at § 98.50(b) in the preceding fiscal year and information about the amount of funds reserved for that purpose;

(2) A description of the activities carried out under this section to comply with § 98.50(b);

(3) The measures the State will use to evaluate its progress in improving the quality of child care programs and services in the State, and data on the extent to which the State had met these measures;

(4) A report describing any changes to State regulations, enforcement mechanisms, or other State policies addressing health and safety based on an annual review and assessment of serious child injuries and any deaths occurring in child care programs serving children receiving assistance under this part, and in other regulated and unregulated child care centers and family child care homes, to the extent possible; and

(5) A description of how the Lead Agency responded to complaints submitted through the national hotline and website, required in section 658L(b) of the CCBG Act (42 U.S.C. 9858L(b)).

32. Amend newly redesignated § 98.54 as follows:

a. Revise paragraphs (a) introductory text and (a)(6);

b. Redesignate paragraphs (b) and (c) as (c) and (d), respectively;

c. Add new paragraph (b);

d. Revise newly redesignated paragraph (d); and

e. Add paragraph (e).

The revisions and additions read as follows:

§ 98.54 Administrative costs.

(a) At no time shall the lead agency expend more than five percent of the aggregate funds expended by the lead agency from each fiscal year’s allotment, including the amounts expended in the State pursuant to § 98.55(b), shall be expended for administrative activities. These activities may include but are not limited to:

(6) Indirect costs as determined by an indirect cost agreement or cost allocation plan pursuant to § 98.57.

(b) The following activities do not count towards the five percent limitation on administrative expenditures in paragraph (a) of this section:

(1) Establishment and maintenance of computerized child care information systems;

(2) Establishing and operating a certificate program;

(3) Eligibility determination and redetermination;

(4) Preparation/participation in judicial hearings;

(5) Child care placement;

(6) Recruitment, licensing, inspection of child care providers;

(7) Training for Lead Agency or sub recipient staff on billing and claims processes associated with the subsidy program;

(8) Reviews and supervision of child care placements;

(9) Activities associated with payment rate setting;

(10) Resource and referral services; and

(11) Training for child care staff.

33. In newly redesignated § 98.55, revise paragraphs (e)(2)(iv), (f)(g)(2), and (h)(2) to read as follows:

§ 98.55 Matching Fund requirements.

(f) Donated funds need not be transferred to or under the administrative control of the Lead Agency in order to qualify as an expenditure eligible to receive Federal match under this section. They may be given to the public or private entities designated by the State to implement the child care program in accordance with § 98.11 provided that such entities are identified and designated in the State Plan to receive donated funds in accordance with § 98.16(d)(2).

(h) * * *

34. In newly redesignated § 98.56, add a sentence to the end of paragraph (b)(1) and revise paragraphs (d) and (e) to read as follows:

§ 98.56 Restrictions on the use of funds.

(d) Non-Federal expenditures required by § 98.55(c) (i.e., the maintenance-of-effort amount) are not subject to the five percent limitation at paragraph (a) of this section.

(e) If a Lead Agency enters into agreements with sub-recipients for operation of the CCDF program, the amount of the contract or grant attributable to administrative activities as described in this section shall be counted towards the five percent limit.

(d) Sectarian purposes and activities. Funds provided under grants or contracts to providers may not be expended for any sectarian purpose or activity, including sectarian worship or instruction. Assistance provided to parents through certificates is not a grant or contract. Funds provided through child care certificates may be expended for sectarian purposes or
activities, including sectarian worship or instruction when provided as part of the child care services.

(e) Non-Federal share for other Federal programs. The CCDF may not be used as the non-Federal share for other Federal grant programs, unless explicitly authorized by statute.

35. Amend §98.60 as follows:
(a) Revise paragraphs (b) introductory text, (b)(1), (d)(2)(i), (d)(4)(ii), and (d)(6) introductory text;
(b) Redesignate paragraph (d)(7) as (d)(8);
(c) Add new paragraph (d)(7); and
(d) Revise paragraph (h).

The revisions and addition read as follows:

§98.60 Availability of funds.

(b) Subject to the availability of appropriations, in accordance with relevant statutory provisions and the apportionment of funds from the Office of Management and Budget, the Secretary:
(1) May withhold a portion of the CCDF funds made available for a fiscal year for the provision of technical assistance, for research, evaluation, and demonstration, and for a national toll-free hotline and Web site;
(2)(i) Mandatory Funds for States requesting Matching Funds per §98.55 shall be obligated in the fiscal year in which the funds are granted and are available until expended.
(4) * * * *

(ii) If there is no applicable State or local law, the regulation at 45 CFR 75.2, Expenditures and Obligations.

(6) In instances where the Lead Agency issues child care certificates, funds for child care services provided through a child care certificate will be considered obligated when a child care certificate is issued to a family in writing that indicates:

(7) In instances where third party agencies issue child care certificates, the obligation of funds occurs upon entering into agreement through a subgrant or contract with such agency, rather than when the third party issues certificates to a family.

(h) Repayment of loans made to child care providers as part of a quality improvement activity pursuant to §98.53, may be made in cash or in services provided in-kind shall be based on fair market value. All loans shall be fully repaid.

36. In §98.61, revise paragraph (a) and paragraph (c) introductory text and add paragraph (f) to read as follows:

§98.61 Allocations from the Discretionary Fund.

(a) To the 50 States, the District of Columbia, and the Commonwealth of Puerto Rico an amount equal to the funds appropriated for the Child Care and Development Block Grant, less amounts reserved for technical assistance, research, and the national hotline and Web site, pursuant to §98.60(b)(6) and amounts reserved for the Territories and Tribes, pursuant to §98.60(b) and paragraphs (b) and (c) of this section, shall be allotted based upon the formula specified in section 6580(b) of the Act (42 U.S.C. 9858m(b)).

(c) For Indian Tribes and tribal organizations, including any Alaskan Native Village or regional or village corporation as defined in or established pursuant to the Alaska Native Claims Settlement Act (43 U.S.C. 1601 et seq.) not less than two percent of the amount appropriated for the Child Care and Development Block Grant shall be reserved.

(f) Lead Agencies shall expend any funds that may be set-aside for targeted activities pursuant to annual appropriations law as directed by the Secretary.

37. In §98.63, revise paragraphs (b) and (c) to read as follows:

§98.63 Allocations from the Matching Fund.

(b) For purposes of this section, the amounts available under section 418(a)(3) of the Social Security Act (42 U.S.C. 618(a)(3)) excludes the amounts reserved and allocated under §98.60(b)(1) for technical assistance, research and evaluation, and the national toll-free hotline and Web site and under §98.62(a) and (b) for the Mandatory Fund.

(c) Amounts under this section are available pursuant to the requirements at §98.55(c).

38. In §98.64, revise paragraph (c)(1) to read as follows:

§98.64 Reallocation and redistribution of funds.

(c)(1) Any portion of the Matching Fund granted to a State that is not obligated in the period for which the grant is made shall be redistributed.

Funds, if any, will be redistributed on the request of, and only to, those other States that have met the requirements of §98.55(c) in the period for which the grant was first made. For purposes of this paragraph (c)(1), the term “State” means the 50 States and the District of Columbia. Territorial and tribal grantees may not receive redistributed Matching Funds.

39. In §98.65, revise paragraphs (a) and (g) and to add paragraphs (h) and (i) to read as follows:

§98.65 Audits and financial reporting.

(a) Each Lead Agency shall have an audit conducted after the close of each program period in accordance with 45 CFR part 75, subpart F, and the Single Audit Act Amendments of 1996.

(h) At a minimum, a State or territorial Lead Agency’s quarterly report shall include the following information on expenditures under CCDF grant funds, including Discretionary (which includes reallocated funding and any funds transferred from the TANF block grant), Mandatory, and Matching Funds (which includes redistributed funding); and State Matching and Maintenance-of-Effort (MOE) Funds:
(1) Child care administration;
(2) Quality activities, including any sub-categories of quality activities as required by ACF;
(3) Direct services;
(4) Non-direct services, including:
(i) Establishment and maintenance of computerized child care information systems;
(ii) Certificate program cost/eligibility determination;
(iii) All other non-direct services; and
(5) Such other information as specified by the Secretary.

(i) Tribal Lead Agencies shall submit financial reports annually in a manner specified by ACF.

40. Add §98.68 to subpart G to read as follows:

§98.68 Program integrity.

(a) Lead Agencies are required to describe in their Plan effective internal controls that are in place to ensure integrity and accountability, while maintaining continuity of services, in the CCDF program. These shall include:
(1) Processes to ensure sound fiscal management;
(2) Processes to identify areas of risk; 
(3) Processes to train child care providers and staff of the Lead Agency and other agencies engaged in the administration of CCDF about program requirements and integrity; and 
(4) Regular evaluation of internal control activities.

(b) Lead Agencies are required to describe in their Plan the processes that are in place to:
(1) Identify fraud or other program violations, which may include, but are not limited to the following:
   (i) Record matching and database linkages;
   (ii) Review of attendance and billing records;
   (iii) Quality control or quality assurance reviews; and 
   (iv) Staff training on monitoring and audit processes.

(2) Investigate and recover fraudulent payments and to impose sanctions on clients or providers in response to fraud.

(c) Lead Agencies must describe in their Plan the procedures that are in place for documenting and verifying that children receiving assistance under this part meet eligibility determination and redetermination. Because a child meeting eligibility requirements at the most recent eligibility determination or redetermination is considered eligible during the period between redeterminations as described in § 98.21(a)(1):

(1) The Lead Agency shall pay any amount owed to a child care provider for services provided for such a child during this period under a payment agreement or authorization for services; and

(2) Any CCDF payment made for such a child during this period shall not be considered an error or improper payment under subpart K of this part due to a change in the family’s circumstances, as set forth at § 98.21(a).

41. In § 98.70, add paragraph (d) to read as follows:

§ 98.70 Reporting requirements.

(d) State and territorial Lead Agencies shall make the following reports publicly available on a Web site in a timely manner:

(1) Annual administrative data reports under paragraph (b) of this section;

(2) Quarterly financial reports under § 98.65(g); and

(3) Annual quality progress reports under § 98.53(f).

42. Revise § 98.71 to read as follows:

§ 98.71 Content of report.

(a) At a minimum, a State or territorial Lead Agency’s quarterly case-level report to the Secretary, as required in § 98.70, shall include the following information on services provided under CCDF grant funds, including Federal Discretionary (which includes any funds transferred from the TANF Block Grant), Mandatory, and Matching Funds; and State Matching and Maintenance-of-Effort (MOE) Funds:

(1) The total monthly family income and family size used for determining eligibility;

(2) Zip code of residence of the family and zip code of the location of the child care provider;

(3) Gender and month/year of birth of children;

(4) Ethnicity and race of children;

(5) Whether the head of the family is a single parent

(6) The sources of family income and assistance from employment (including self-employment), cash or other assistance under a State program for which State spending is counted toward the maintenance of effort requirement under section 409(a)(7) of the Social Security Act, housing assistance, assistance under the Food Stamp Act of 1977, and other assistance programs;

(7) The month/year child care assistance to the family started;

(8) The type(s) of child care in which the child was enrolled (such as family child care, in-home care, or center-based child care);

(9) Whether the child care provider was a relative;

(10) The total monthly child care copayment by the family;

(11) If applicable, any amount charged by the provider to the family more than the required copayment in instances where the provider’s price exceeds the subsidy payment;

(12) The total expected dollar amount per month to be received by the provider for each child;

(13) The total hours per month of such care;

(14) Unique identifier of the head of the family unit receiving child care assistance, and of the child care provider;

(15) Reasons for receiving care;

(16) Whether the family is experiencing homelessness;

(17) Whether the parent(s) are in the military service;

(18) Whether the child has a disability;

(19) Primary language spoken at home;

(20) Date of the child care provider’s most recent health, safety and fire inspection meeting the requirements of § 98.42(b)(2);

(21) Indicator of the quality of the child care provider; and

(22) Any additional information that the Secretary shall require.

(b) At a minimum, a State or territorial Lead Agency’s annual aggregate report to the Secretary, as required in § 98.70(b), shall include the following information on services provided through all CCDF grant funds, including Federal Discretionary (which includes any funds transferred from the TANF Block Grant), Mandatory, and Matching Funds; and State Matching and MOE Funds:

(1) The number of child care providers that received funding under CCDF as separately identified based on the type of programs listed in section 658P(5) of the amended Child Care and Development Block Grant Act;

(2) The number of children served by payments through certificates or vouchers, contracts or grants, and cash under public benefit programs, listed by the primary type of child care services provided during the last month of the report period (or the last month of service for those children leaving the program before the end of the report period);

(3) The manner in which consumer education information was provided to parents and the number of parents to whom such information was provided;

(4) The total number (without duplication) of children and families served under CCDF;

(5) The number of child fatalities by type of care; and

(6) Any additional information that the Secretary shall require.

(c) A Tribal Lead Agency’s annual report as required in § 98.70(c), shall include such information as the Secretary shall require.

43. In § 98.80, revise paragraphs (a) and (c)(1) and (2) and remove paragraph (f).

The revisions read as follows:

§ 98.80 General procedures and requirements.

(a) An Indian Tribe applying for or receiving CCDF funds shall be subject to the requirements under this part as specified in this section based on the size of the awarded funds. The Secretary shall establish thresholds for Tribes’ total CCDF allotments pursuant to §§ 98.61(c) and 98.62(b) to be divided into three categories:

(1) Large allocations;

(2) Medium allocations; and

(3) Small allocations.
(c) * * *
(1) The consortium adequately demonstrates that each participating Tribe authorizes the consortium to receive CCDF funds on behalf of each Tribe or tribal organization in the consortium;
(2) The consortium consists of Tribes that each meet the eligibility requirements for the CCDF program as defined in this part, or that would otherwise meet the eligibility requirements if the Tribe or tribal organization had at least 50 children under 13 years of age;
* * * * *

44. In §98.81, revise paragraphs (b) introductory text, (b)(1), (5), and (6), add paragraph (b)(9), and revise paragraph (c) to read as follows:

§98.81 Application and Plan procedures.

(b) Tribal Lead Agencies with large and medium allocations shall submit a CCDF Plan, as described at §98.16, with the following additions and exceptions:
(1) The Plan shall include the basis for determining family eligibility.
(i) If the Tribe’s median income is below a certain level established by the Secretary, then, at the Tribe’s option, any Indian child in the Tribe’s service area shall be considered eligible to receive CCDF funds, regardless of the family’s income, work, or training status, provided that provision for services still goes to those with the highest need.
(ii) If the Tribe’s median income is above the level established by the Secretary, then a tribal program must determine eligibility for services pursuant to §98.20(a)(2). A tribal program, as specified in its Plan, may use either:
(A) 85 percent of the State median income for a family of the same size; or
(B) 85 percent of the median income for a family of the same size residing in the area served by the Tribal Lead Agency.
* * * * *
(5) The Plan shall include a description of the Tribe’s payment rates, how they are established, and how they support quality including, where applicable, cultural and linguistic appropriateness.
(6) The Plan is not subject to the following requirements:
(i) The early learning and developmental guidelines requirement at §98.15(b)(9);
(ii) The certification to develop the CCDF Plan in consultation with the State Advisory Council at §98.15(b)(1);
(iii) The licensing requirements applicable to child care services at §98.15(b)(6) and §98.16(u);
(iv) The identification of the public or private entities designated to receive private funds at §98.16(d)(2);
(v) A definition of very low income at §98.16(g)(8);
(vi) A description at §98.16(i)(4) of how the Lead Agency will meet the needs of certain families specified at §98.50(e);
(vii) The description of the market rate survey or alternative methodology at §98.16(r);
(viii) The description of how the Lead Agency prioritizes increasing access to high-quality child care in areas with high concentration of poverty at §98.16(y).
* * * * *
(9) Plans for Tribal Lead Agencies with medium allocations are not subject to the following requirements unless the Tribe chooses to include such services, and, therefore, the associated requirements, in its program:
(i) The assurance at §98.15(a)(2) regarding options for services;
(ii) A description of any limits established for the provision of in-home care at §98.16(i)(2), or
(iii) A description of the child care certificate payment system(s) at §98.16(q).
(c) Tribal Lead Agencies with small allocations shall submit an abbreviated CCDF Plan, as described by the Secretary.

45. Revise §98.82 to read as follows:

§98.82 Coordination.

Tribal applicants shall coordinate the development of the Plan and the provision of services, to the extent practicable, as required by §§98.12 and 98.14 and:
(a) To the maximum extent feasible, with the Lead Agency in the State or States in which the applicant will carry out the CCDF program; and
(b) With other Federal, State, local, and tribal child care and childhood development programs.

46. Revise §98.83 to read as follows:

§98.83 Requirements for tribal programs.

(a) The grantee shall designate an agency, department, or unit to act as the Tribal Lead Agency to administer the CCDF program.
(b) With the exception of Alaska, California, and Oklahoma, programs and activities for the benefit of Indian children shall be carried out on or near an Indian reservation.
(c) In the case of a tribal grantee that is a consortium:
(1) A brief description of the direct child care services funded by CCDF for each of their participating Tribes shall be provided by the consortium in their three-year CCDF Plan; and
(2) Variations in CCDF programs or requirements and in child care licensing, regulatory and health and safety requirements shall be specified in written agreements between the consortium and the Tribe.
(3) If a Tribe elects to participate in a consortium arrangement to receive one part of the CCDF (e.g., Discretionary Funds), it may not join another consortium or apply as a direct grantee to receive the other part of the CCDF (e.g., Tribal Mandatory Funds).
(4) If a Tribe relinquishes its membership in a consortium at any time during the fiscal year, CCDF funds awarded on behalf of the member Tribe will remain with the tribal consortium to provide direct child care services to other consortium members for that fiscal year.
(d) (1) Tribal Lead Agencies shall not be subject to:
(i) The requirement to produce a consumer education Web site at §98.33(a). Tribal Lead Agencies still must collect and disseminate the provider-specific consumer education information described at §98.33(a) through (d), but may do so using methods other than a Web site;
(ii) The requirement to have licensing applicable to child care services at §98.49;
(iii) The requirement for a training and professional development framework at §98.44(a);
(iv) The market rate survey or alternative methodology described at §98.45(b)(2) and the related requirements at §98.45(c), (d), (e), and (f);
(v) The requirement that Lead Agencies shall give priority for services to children of families with very low family income at §98.46(a)(1);
(vi) The requirement that Lead Agencies shall prioritize increasing access to high-quality child care in areas with significant concentrations of poverty and unemployment at §98.46(b);
(vii) The requirements about Mandatory and Matching Funds at §98.50(e);
(viii) The requirement to complete the quality progress report at §98.53(f);
(xi) The requirement that Lead Agencies shall expend no more than five percent from each year’s allotment on administrative costs at §98.54(a); and
(x) The Matching Fund requirements at §§ 98.55 and 98.63.

(2) Tribal Lead Agencies with large, medium, and small allocations shall be subject to the provision at § 98.42(b)(2) to require inspections of child care providers and facilities, unless a Tribal Lead Agency describes an alternative monitoring approach in its Plan and provides adequate justification for the approach.

(3) Tribal Lead Agencies with large, medium, and small allocations shall be subject to the requirement at § 98.43 to conduct comprehensive criminal background checks, unless the Tribal Lead Agency describes an alternative background check approach in its Plan and provides adequate justification for the approach.

(e) Tribal Lead Agencies with medium and small allocations shall not be subject to the requirement for certificates at § 98.30(a) and (d).

(f) Tribal Lead Agencies with small allocations must spend their CCDF funds in alignment with the goals and purposes described in § 98.1. These Tribes shall have flexibility in how they spend their CCDF funds and shall be subject to the following requirements:

(1) The health and safety requirements described in § 98.41;

(2) The monitoring requirements at §§ 98.42 and 98.83(d)(2); and

(3) The background checks requirements described in §§ 98.43 and 98.83(d)(3);

(4) The requirements to spend funds on activities to improve the quality of child care described in §§ 98.83(g) and 98.53; and

(5) The use of funds requirements at § 98.56 and cost allocation requirement at § 98.57;

(6) The financial management requirements at subpart G of this part that are applicable to Tribes;

(7) The reporting requirements at subpart H of this part that are applicable to Tribes;

(8) The eligibility definitions at § 98.81(b)(2);

(9) The 15 percent limit on administrative activities at § 98.83(i);

(10) The monitoring, non-compliance, and complaint provisions at subpart J of this part; and

(11) Any other requirement established by the Secretary.

(g) Of the aggregated amount of funds expanded (i.e., Discretionary and Mandatory Funds),

(1) For Tribal Lead Agencies with large, medium and small allocations, no less than three percent in fiscal years 2017, seven percent in fiscal years 2018 and 2019, eight percent in fiscal years 2020 and 2021, and nine percent in fiscal years 2022 and each succeeding fiscal year shall be used for activities designed to improve the quality of child care services and increase parental options for, and access to high-quality child care services described at § 98.53; and

(2) For Tribal Lead Agencies with large and medium allocations no less than three percent in fiscal year 2019 and each succeeding fiscal year shall be used to carry out activities at § 98.53(a)(4) as such activities relate to the quality of care for infants and toddlers.

(3) Nothing in this section shall preclude the Tribal Lead Agencies from reserving a larger percentage of funds to carry out activities described in paragraph (g)(1) and (2) of this section.

(b) The base amount of any tribal grant is not subject to the administrative cost limitation at paragraph (i) of this section, the direct services requirement at § 98.50(f)(2), or the quality expenditure requirement at § 98.53(a). The base amount may be expended for any costs consistent with the purposes and requirements of the CCDF.

(i) Not more than 15 percent of the aggregate CCDF funds expended by the Tribal Lead Agency from each fiscal year's (including amounts used for construction and renovation in accordance with § 98.84, but not including the base amount provided under paragraph (h) of this section) shall be expended for administrative activities. Amounts used for construction and major renovation in accordance with § 98.84 are not considered administrative costs.

(j)(1) CCDF funds are available for costs incurred by the Tribal Lead Agency only after the funds are made available by Congress for Federal obligation unless costs are incurred for planning activities related to the submission of an initial CCDF Plan.

(2) Federal obligation of funds for planning costs, pursuant to paragraph(i)(1) of this section is subject to the actual availability of the appropriation.

47. In § 98.84, add a sentence at the end of paragraph (b)(3), add paragraphs (b)(3)(i) and (ii), and revise paragraphs (d)(1) through (6) to read as follows:

§ 98.84 Construction and renovation of child care facilities.

(ii) The Indian tribe or tribal organization submits to the Secretary a plan that demonstrates that after the date on which the construction or renovation is completed:

(A) The level of direct child care services will increase; or

(B) The quality of child care services will improve.

(d) * * * * (1) Federal share requirements and use of property requirements at 45 CFR 75.318;

(2) Transfer and disposition of property requirements at 45 CFR 75.318(c);

(3) Title requirements at 45 CFR 75.318(a);

(4) Cost principles and allowable cost requirements at subpart E of this part;

(5) Program income requirements at 45 CFR 75.307;

(6) Procurement procedures at 45 CFR 92.36; 75.326 through 75.335; and

* * * *

48. In § 98.92, revise paragraph (a)(1) and add paragraphs (b)(3) and (4) to read as follows:

§ 98.92 Penalties and sanctions.

(a) * * * * (1) The Secretary will disallow any improperly expended funds;

(b) * * * (3)(i) A penalty of five percent of the funds allotted under § 98.61 (i.e., the Discretionary Funds) for a Fiscal Year shall be withheld for any Fiscal Year the Secretary determines that the Lead Agency has failed to give priority for service in accordance with § 98.46(a);

(ii) This penalty will be withheld no earlier than the first full Fiscal Year following the determination to apply the penalty;

(iii) This penalty will not be applied if the Lead Agency corrects its failure to comply and amends its CCDF Plan within six months of being notified of the failure; and

(iv) The Secretary may waive a penalty for one year in the event of extraordinary circumstances, such as a natural disaster.

(4)(i) A penalty of five percent of the funds allotted under § 98.61 (i.e., the Discretionary Funds) for a Fiscal Year shall be withheld for any Fiscal Year that the Secretary determines that the State, Territory, or Tribe has failed to comply substantially with the criminal background check requirements at § 98.46;

(ii) This penalty will be withheld no earlier than the first full Fiscal Year
following the determination to apply the penalty; and
(iii) This penalty will not be applied if the State, Territory, or Tribe corrects
the failure before the penalty is to be applied or if it submits a plan for
corrective action that is acceptable to the Secretary.

§ 98.93 [Amended]
■ 49. In § 98.93(b), remove “, 370 L’Enfant Promenade SW., Washington,
DC 20447”.
■ 50. In § 98.100, add a sentence at the end of paragraph (d)(2) and revise
paragraph (e) to read as follows:

§ 98.100 Error Rate Report.
* * * * *
(d) * * * * Because a child meeting
eligibility requirements at the most
recent eligibility determination or
redetermination is considered eligible
between redeterminations as described
in § 98.21(a)(1), any payment for such a
child shall not be considered an error or
improper payment due to a change in
the family’s circumstances, as set forth
at § 98.21(a) and (b).
(e) Costs of Preparing the Error Rate
Report—Provided the error rate
calculations and reports focus on client
eligibility, expenses incurred by the
States, the District of Columbia and
Puerto Rico in complying with this rule,
including preparation of required
reports, shall be considered a cost of
direct service related to eligibility
determination and therefore is not
subject to the five percent limitation on
CCDF administrative costs pursuant to
§ 98.54(a).
■ 51. In § 98.102, revise paragraph (a)(5)
and to add paragraph (c) to read as
follows:

§ 98.102 Content of Error Rate Reports.
(a) * * *
(5) Estimated annual amount of
improper payments (which is a
projection of the results from the sample
to the universe of cases statewide during
the 12-month review period) calculated
by multiplying the percentage of
improper payments by the total dollar
amount of child care payments that the
State, the District of Columbia or Puerto
Rico paid during the 12-month review
period;
* * * * *
(c) Any Lead Agency with an
improper payment rate that exceeds a
threshold established by the Secretary
must submit to the Assistant Secretary
for approval a comprehensive corrective
action plan, as well as subsequent
reports describing progress in
implementing the plan.
(1) The corrective action plan must be
submitted within 60 days of the
deadline for submitting the Lead
Agency’s standard error rate report
required by paragraph (b) of this section.
(2) The corrective action plan must
include the following:
(i) Identification of a senior
accountable official;
(ii) Milestones that clearly identify
actions to be taken to reduce improper
payments and the individual
responsible for completing each action;
(iii) A timeline for completing each
action within 1 year of the Assistant
Secretary’s approval of the plan, and for
reducing the improper payment rate
below the threshold established by the
Secretary; and
(iv) Targets for future improper
payment rates.
(3) Subsequent progress reports must
be submitted as requested by the
Assistant Secretary.
(4) Failure to carry out actions
described in the approved corrective
action plan will be grounds for a penalty
or sanction under § 98.92.
Establishing Paid Sick Leave for Federal Contractors; Final Rule
DEPARTMENT OF LABOR
Office of the Secretary
29 CFR Part 13
RIN 1235–AA13
Establishing Paid Sick Leave for Federal Contractors

AGENCY: Wage and Hour Division, Department of Labor.

ACTION: Final rule.

SUMMARY: This Final Rule issues regulations to implement Executive Order 13706, Establishing Paid Sick Leave for Federal Contractors, signed by President Barack Obama on September 7, 2015. Executive Order 13706 requires certain parties that contract with the Federal Government to provide their employees with up to 7 days (56 hours) of paid sick leave annually, including paid leave allowing for family care; it explains that providing access to paid sick leave will improve the health and performance of employees of Federal contractors and bring their benefits packages in line with model employers, ensuring that Federal contractors remain competitive employers and generating savings and quality improvements that will lead to improved economy and efficiency in Government procurement. The Order directs the Secretary of Labor to issue regulations to implement its requirements by September 30, 2016. This Final Rule defines terms used in the regulatory text, describes the categories of contracts and employees the Order covers and excludes from coverage, sets forth requirements and restrictions governing the accrual and use of paid sick leave, and prohibits interference with or discrimination for the exercise of rights under the Executive Order. It also describes the obligations of contracting agencies, the Department of Labor, and contractors under the Executive Order, and it establishes the standards and procedures for complaints, investigations, remedies, and administrative enforcement proceedings related to alleged violations of the Order. As required by the Order and to the extent practicable, the Final Rule incorporates existing definitions, procedures, remedies, and enforcement processes under the Fair Labor Standards Act, the Service Contract Act, the Davis-Bacon Act, the Family and Medical Leave Act, the Violence Against Women Act, and Executive Order 13658, Establishing a Minimum Wage for Contractors.

DATES: Effective date: This Final Rule is effective on November 29, 2016.

Applicability date: For procurement contracts subject to the Federal Acquisition Regulation and Executive Order 13706, this Final Rule is applicable only after the effective date of regulations to be issued by the Federal Acquisition Regulatory Council. The Department of Labor will publish a document in the Federal Register to announce the applicability date for such contracts.

FOR FURTHER INFORMATION CONTACT: Robert Waterman, Compliance Specialist, Wage and Hour Division, U.S. Department of Labor, Room S–3510, 200 Constitution Avenue NW., Washington, DC 20210; telephone: (202) 693–0406 (this is not a toll-free number). Copies of this Final Rule may be obtained in alternative formats (large print, Braille, audio tape or disc), upon request, by calling (202) 693–0675 (this is not a toll-free number). TTY/TDD callers may dial toll-free 1–877–889–5627 to obtain information or request materials in alternative formats.

Questions of interpretation and/or enforcement of the agency’s regulations may be directed to the nearest Wage and Hour Division (WHD) district office. Locate the nearest office by calling the WHD’s toll free help line at (866) 4US–WAGE (866) 487–9243 between 8 a.m. and 5 p.m. in your local time zone, or log onto the WHD’s Web site for a nationwide listing of WHD district and area offices at http://www.dol.gov/whd/america2.htm.

SUPPLEMENTARY INFORMATION:

I. Executive Order 13706 Requirements and Background

On September 7, 2015, President Barack Obama signed Executive Order 13706, Establishing Paid Sick Leave for Federal Contractors (the Executive Order or the Order). 80 FR 54697. Section 1 of Executive Order 13706 explains that the Order seeks to increase efficiency and cost savings in the work performed by parties that contract with the Federal Government by ensuring that employees on those contracts can earn up to 7 days or more of paid sick leave annually, including paid leave allowing for family care. 80 FR 54697. The Order states that providing access to paid sick leave will improve the health and performance of employees of Federal contractors and bring benefits packages at Federal contractors in line with model employers, ensuring that they remain competitive employers in the search for dedicated and talented employees. Id. The Order further states that these improvements will lead to improved economy and efficiency in Government procurement. Id. Section 2 of the Executive Order establishes paid sick leave for Federal contractors and subcontractors, 80 FR 54697. Section 2(a) provides that executive departments and agencies (agencies) shall, to the extent permitted by law, ensure that new contracts, contract-like instruments, and solicitations (collectively referred to as “contracts”), as described in section 6 of the Order, include a clause, which the contractor and any subcontractors shall incorporate into lower-tier subcontracts, specifying, as a condition of payment, that all employees, in the performance of the contract or any subcontract thereunder, shall earn not less than 1 hour of paid sick leave for every 30 hours worked. Id. Section 2(b) prohibits a contractor from limiting the total accrual of paid sick leave per calendar year, or at any point, at less than 56 hours. Id.

Section 2(c) explains that paid sick leave earned under the Order may be used by an employee for an absence resulting from: (i) Physical or mental illness, injury, or medical condition; (ii) obtaining diagnosis, care, or preventive care from a health care provider; (iii) caring for a child, a parent, a spouse, a domestic partner, or any other individual related by blood or affinity whose close association with the employee is the equivalent of a family relationship who has any of the conditions or needs for diagnosis, care, or preventive care described in (i) or (ii) or is otherwise in need of care; or (iv) domestic violence, sexual assault, or stalking, if the time absent from work is for the purposes described in (i) or (ii), to obtain additional counseling, to seek relocation, to seek assistance from a victim services organization, or take related legal action, including preparation for or participation in any related civil or criminal legal proceeding, or to assist an individual related to the employee as described in (iii) in engaging in any of these activities. 80 FR 54697.

Section 2(d) provides that paid sick leave shall carry over from one year to the next and shall be reinstated for employees rehired by a covered contractor within 12 months after a job separation. Id. Under section 2(e), the use of paid sick leave cannot be made contingent on the requesting employee finding a replacement to cover any work time to be missed. 80 FR 54698. Section 2(f) provides that the paid sick leave required by the Order is in addition to a contractor’s obligations under the Service Contract Act and Davis-Bacon Act, and contractors may not receive credit toward their prevailing wage or
fringe benefit obligations under those Acts for any paid sick leave provided in satisfaction of the Order’s requirements.

Section 2(g) provides that an employer’s existing paid sick leave policy provided in addition to the fulfillment of Service Contract Act or Davis-Bacon Act obligations, if applicable, and made available to all covered employees will satisfy the requirements of the Executive Order if the amount of paid leave is sufficient to meet the requirements of section 2 and if it may be used for the same purposes and under the same conditions described in the Executive Order.

Section 2(h) of the Order establishes that paid sick leave shall be provided upon the oral or written request of an employee that includes the expected duration of the leave, and is made at least 7 calendar days in advance where the need for the leave is foreseeable, and in other cases as soon as is practicable.

Section 2(i) addresses when a contractor may require employees to provide certification or documentation regarding the use of leave. 80 FR 54698. It provides that a contractor may only require certification issued by a health care provider for paid sick leave used for the purposes listed in sections 2(c)(i), (c)(ii), or (c)(iii) for employee absences of 3 or more consecutive workdays, to be provided no later than 30 days from the first day of the leave. It further provides that if 3 or more consecutive days of paid sick leave is used for the purposes listed in section 2(c)(iv), documentation may be required to be provided from an appropriate individual or organization with the minimum necessary information establishing a need for the employee to be absent from work. The Executive Order notes that the contractor shall not disclose any verification information and shall maintain confidentiality about domestic abuse, sexual assault, or stalking, unless the employee consents or when disclosure is required by law.

Section 2(j) states that nothing in the Order shall require a covered contractor to make a financial payment to an employee upon a separation from employment for unused accrued sick leave. 80 FR 54698. Section 2(j) further notes, however, that unused leave is subject to reinstatement as prescribed in section 2(d).

Section 2(k) prohibits a covered contractor from interfering with or in any other manner discriminating against an employee for taking, or attempting to take, paid sick leave as provided for under the Order, or in any manner asserting, or assisting any other employee in asserting, any right or claim related to the Order.

Section 2(l) states that nothing in the Order shall excuse noncompliance with or supersede any applicable Federal or State law, any applicable law or municipal ordinance, or a collective bargaining agreement requiring greater paid sick leave or leave rights than those established under the Order.

Section 3(a) of the Executive Order provides that the Secretary of Labor (Secretary) shall issue such regulations by September 30, 2016, as are deemed necessary and appropriate to carry out the Order, to the extent permitted by law and consistent with the requirements of 40 U.S.C. 121, including providing exclusions from the requirements set forth in the Order where appropriate; defining terms used in the Order; and requiring contractors to make, keep, and preserve such employee records as the Secretary deems necessary and appropriate for the enforcement provisions of the Order or the regulations thereunder. 80 FR 54698. It also requires that, to the extent permitted by law, within 60 days of the Secretary issuing such regulations, the Federal Acquisition Regulatory Council (FARC) shall issue regulations in the Federal Acquisition Regulation (FAR) to provide for inclusion in Federal procurement solicitations and contracts subject to the Executive Order the contract clause described in section 2(a) of the Order.

Additionally, section 3(b) states that within 60 days of the Secretary issuing regulations pursuant to the Order, agencies shall take steps, to the extent permitted by law, to exercise any applicable authority to ensure that contracts or contract-like instruments for concessions and contracts entered into with the Federal Government in connection with Federal property or lands and related to offering services for Federal employees, their dependents, or the general public, entered into after January 1, 2017, consistent with the effective date of such agency action, comply with the requirements set forth in section 2 of the Order. 80 FR 54699.

Section 3(c) specifies that any regulations issued pursuant to section 3 of the Order should, to the extent practicable and consistent with section 7 of the Order, incorporate existing definitions, procedures, remedies, and enforcement processes under the Fair Labor Standards Act, 29 U.S.C. 201 et seq. (FLSA); the McNamara-O’Hara Veterans’ Contract Act, 41 U.S.C. 6701 et seq. (SCA); the Davis-Bacon Act, 40 U.S.C. 3141 et seq. (DBA); the Family and Medical Leave Act, 29 U.S.C. 2601 et seq. (FMLA); the Violence Against Women Act of 1994, 42 U.S.C. 13925 et seq. (VAWA); and Executive Order 13658, Establishing a Minimum Wage for Contractors, 79 FR 9851 (Feb. 20, 2014) (Executive Order 13658 or Minimum Wage Executive Order).

Section 4(a) of the Executive Order grants authority to the Secretary to investigate potential violations of and obtain compliance with the Order, including the prohibitions on interference and discrimination in section 2(k) of the Order. 80 FR 54699. Section 4(b) further explains that the Executive Order creates no rights under the Contract Disputes Act, and disputes regarding whether a contractor has provided employees with paid sick leave prescribed by the Order, to the extent permitted by law, shall be disposed of only as provided by the Secretary in regulations issued pursuant to the Order.

Section 5 of the Executive Order establishes that if any provision of the Order, or applying such provision to any person or circumstance, is held to be invalid, the remainder of the Order and the application of the provisions of such to any person or circumstances shall not be affected thereby.

Section 6(a) of the Executive Order provides that nothing in the Order shall be construed to impair or otherwise affect (i) the authority granted by law to an executive department, agency, or the head thereof; or (ii) the functions of the Director of the Office of Management and Budget (OMB) relating to budgetary, administrative, or legislative proposals. 80 FR 54699. Section 6(b) states that the Order is to be implemented consistent with applicable law and subject to the availability of appropriations.

Section 6(c) explains that the Order is not intended to, and does not, create any right or benefit, substantive or procedural, enforceable at law or in equity by any party against the United States, its departments, agencies, or entities, its officers, employees, or agents, or any other person.

Section 6(d) of the Executive Order establishes that the Order shall apply only to a new contract or contract-like instrument, as defined by the Secretary in the regulations issued pursuant to section 3(a) of the Order, if: (i) It is a procurement contract for services or construction; (B) It is a contract or contract-like instrument for services covered by the Service Contract Act; (C) it is a contract or contract-like instrument for concessions, including any concessions contracts included by Department of Labor (the Department) regulations at 29 CFR 4.133(b); or (D) it
is a contract or contract-like instrument entered into with the Federal Government in connection with Federal property or lands and related to offering services for Federal employees, their dependents, or the general public; and (ii) the wages of employees under such contract or contract-like instrument are governed by the DBA, SCA, or FLSA, including employees who qualify for an exemption from the FLSA’s minimum wage and overtime provisions. 80 FR 54699.

Section 6(e) states that, for contracts or contract-like instruments covered by the SCA or DBA, the Order shall apply only to contracts or contract-like instruments at the thresholds specified in those statutes. 80 FR 54699–700. Additionally, Section 6(e) provides that for procurement contracts in which employees’ wages are governed by the FLSA, the Order shall apply only to contracts or contract-like instruments that exceed the micro-purchase threshold, as defined in 41 U.S.C. 1902(a), unless expressly made subject to the Order pursuant to regulations or actions taken under section 3 of the Order. 80 FR 54700.

Section 6(f) specifies that the Order shall not apply to grants; contracts and agreements with and grants to Indian Tribes under the Indian Self-Determination and Education Assistance Act (Pub. L. 93–638), as amended; or any contracts or contract-like instruments expressly excluded by the regulations issued pursuant to section 3(a) of the Order. Id. Section 6(g) strongly encourages independent agencies to comply with the Order’s requirements. Id.

Section 7(a) of the Executive Order provides that the Order is effective immediately and shall apply to covered contracts where the solicitation for such contract has been issued, or the contract has been awarded outside the solicitation process, on or after: (i) January 1, 2017, consistent with the effective date for the action taken by the FARC pursuant to section 3(a) of the Order; or (ii) January 1, 2017, for contracts where an agency action is taken pursuant to section 3(b) of the Order, consistent with the effective date for such action. 80 FR 54700. Section 7(b) specifies that the Order shall not apply to contracts or contract-like instruments that are awarded, or entered into pursuant to solicitations issued, on or before the effective date for the relevant action taken pursuant to section 3 of the Order. Id.

II. Discussion of Final Rule

A. Legal Authority

The President issued Executive Order 13706 pursuant to his authority under “the Constitution and the laws of the United States of America,” expressly including 40 U.S.C. 121, a provision of the Federal Property and Administrative Services Act (Procurement Act). 80 FR 54697. The Procurement Act authorizes the President to “prescribe policies and directives that [the President] considers necessary and appropriate to carry out” the statutory purposes of ensuring “economical and efficient” government procurement and administration of government property. 40 U.S.C. 101, 121(a). Executive Order 13706 delegates to the Secretary the authority to issue regulations “deemed necessary and appropriate to carry out this order.” 80 FR 54698. The Secretary has delegated his authority to promulgate these regulations to the WHD. Secretary’s Order 01–2014 (Dec. 19, 2014), 79 FR 77527 (published Dec. 24, 2014).

B. Comments Received

On February 25, 2016, the Department published a Notice of Proposed Rulemaking (NPRM) in the Federal Register, inviting public comments on a proposal to implement the provisions of Executive Order 13706, which were to be submitted by March 28, 2016. See 81 FR 9592. On March 14, 2016, the Department extended the period for submitting written comments until April 12, 2016. See 81 FR 13306. More than 35,000 individuals and entities commented on the Department’s NPRM. Comments were received from a variety of interested stakeholders, such as labor organizations; contractors and contractor associations; worker advocates; advocacy groups focused on issues affecting women, children, seniors, and the LGBT community; Members of Congress; local government agencies; small businesses; and workers. The vast majority of comments received came from individuals who submitted materially identical comments through interested organizations. For example, 9,025 individuals submitted essentially identical comments in support of, or joined, a comment submitted by the National Partnership for Women & Families (National Partnership) in favor of the rule, and Organizing for Action submitted a comment in support of the rule signed by 20,853 individuals.

The Department received many comments expressing opposition to the Order, many describing its requirements as burdensome for contractors. Some of these commenters also questioned the President’s authority to issue the Order, which is a subject outside the purview of this rulemaking.

Many commenters expressed reactions to, offered suggestions regarding, or posed questions about specific provisions in the proposed regulations. The Department will address such comments in the section-by-section analysis of the Final Rule below.

C. Effective Date

The Department received comments requesting that the effective date of this Final Rule be delayed. AGC requested that the Final Rule apply only to contracts resulting from solicitations issued no earlier than one year after the date of the rule’s publication in the Federal Register; the American Benefits Council asked for a “grace period” of 1 year before contractors were responsible for compliance with the Order; and TrueBlue, Inc. asked that the rule’s effective date be 1 year after its publication. The General Contractors Association of Hawaii, Master Sheet Metal, Inc., and Alan Shintani, Inc. also requested a delay in the effective date of the rule.
beyond January 1, 2017. Because the Order itself specifically designates a date as of which its requirements apply to covered contracts, the Department does not believe it is appropriate to generally delay its effective date. (A specific, temporary exception from the Order’s requirements for employees performing work subject to the terms of a collective bargaining agreement is discussed in the section of this preamble addressing § 13.4.) As such, this Final Rule is effective as indicated in the Dates section above, and shall apply to covered contracts where the solicitation for such contract has been issued, or the contract has been awarded outside the solicitation process, on or after January 1, 2017.

D. Discussion of the Final Rule

After considering all timely and relevant comments received in response to the February 25, 2016 NPRM, the Department is issuing this Final Rule to implement the provisions of Executive Order 13706. The Final Rule, which amends Title 29 of the Code of Federal Regulations (CFR) by adding part 13, establishes standards and procedures for implementing and enforcing Executive Order 13706. Subpart A of part 13 includes a prohibition against the waiver of rights and a new provision regarding multiemployer plans and other plans, funds, or programs to provide paid sick leave. Subpart A also prohibits interference with the accrual or use of the paid sick leave required by, and discrimination for the exercise of rights under, the Executive Order or part 13, as well as violations of recordkeeping requirements of part 13. Additionally, subpart A includes a prohibition against waiver of rights and a new provision regarding multiemployer plans and other plans, funds, or programs to provide paid sick leave.

Section 13.1 Purpose and Scope

Proposed § 13.1(a) explained that the purpose of the rule is to implement Executive Order 13706 and reiterated statements from the Order that the Federal Government’s procurement interests in economy and efficiency are promoted when the Federal Government contracts with sources that provide paid sick leave to their employees. It explained that the Order states that providing access to paid sick leave will improve the productivity of employees by improving their health and performance and will bring benefits packages offered by Federal contractors in line with model employers, ensuring they remain competitive in the search for dedicated and talented employees. Proposed § 13.1(a) also stated that it is for these reasons that the Executive Order concludes that the provision of paid sick leave under the Order will generate savings and quality improvements in the work performed by parties who contract with the Federal Government, thereby leading to improved economy and efficiency in Government procurement. The Department believes that, by increasing the quality and efficiency of services provided to the Federal Government, the Executive Order will improve the value that taxpayers receive from the Federal Government’s investment. The Department did not receive comments regarding § 13.1(a) in particular, and, as noted above, comments questioning the President’s authority to issue Executive Order 13706 are outside of the scope of this rulemaking. This provision is therefore adopted as proposed.

Proposed § 13.1(b) set forth the general position of the Federal Government that providing access to paid sick leave on Federal contracts will increase efficiency and cost savings for the Federal Government, and it explained the general requirement established in Executive Order 13706 that new contracts with the Federal Government include a clause, which the contractor and any subcontractors shall incorporate into lower-tier subcontracts, requiring, as a condition of payment, that the contractor and any subcontractors provide paid sick leave to employees in the amount of not less than 1 hour of paid sick leave for every 30 hours worked on or in connection with covered contracts. The final sentence of proposed § 13.1(b) also specified that nothing in Executive Order 13706 or part 13 would excuse noncompliance with or supersede any applicable Federal or State law, any applicable law or municipal ordinance, or a collective bargaining agreement (CBA) requiring greater paid sick leave or leave rights than those established under the Order or part 13. The Department did not receive comments regarding § 13.1(b) and adopts the provision largely as proposed, except for one change that has no substantive effect: Deletion of the final sentence, because identical language appears in § 13.5(f)(1). Proposed § 13.1(c) outlined the scope of the proposed rule and provided that neither Executive Order 13706 nor part 13 created any rights under the Contract Disputes Act or created any private right of action. As noted in the NPRM, the Department does not interpret the Executive Order as limiting existing rights under the Contract Disputes Act. Proposed § 13.1(c) also implemented the directive in section 4(b) of the Order that disputes regarding whether a contractor has provided paid sick leave as prescribed by the Order, to the extent permitted by law, shall be disposed of only as provided by the Secretary in regulations issued under the Order. The proposed provision specified, however, that nothing in the Order or part 13 was intended to limit or preclude a civil action under the False Claims Act, 31 U.S.C. 3730, or criminal prosecution under 18 U.S.C. 1001. Finally, this proposed paragraph specified that neither the Order nor part 13 would preclude judicial review of final decisions by the Secretary in accordance...
with the Administrative Procedure Act, 5 U.S.C. 701 et seq. No commenters addressed this provision, and the Department adopts it as proposed.

Section 13.2 Definitions

Proposed § 13.2 defined terms for purposes of part 13. Section 3(c) of the Executive Order instructs that any regulations issued pursuant to the Order be "incorporate[ate] existing definitions" under the FLSA, SCA, DBA, FMLA, VAWA, and Executive Order 13658 "to the extent practicable and consistent with section 7 of this order." 80 FR 54699. Because of the similarities in language, structure, and intent of the Minimum Wage Executive Order and Executive Order 13706, many of the definitions provided in the proposed rule were identical to or based on definitions promulgated in the Minimum Wage Executive Order Final Rule, which in turn were largely based on the definitions of relevant terms set forth in the statutory text or implementing regulations of the FLSA, SCA, or DBA. In addition, some definitions were based on definitions published by the FARC in section 2.101 of the FAR, 48 CFR 2.101, and others were based on definitions set forth in the Department’s regulations implementing Executive Order 13495, Nondisplacement of Qualified Workers Under Service Contracts (Executive Order 13495 or Nondisplacement Executive Order), at 29 CFR 9.2. 79 FR 60637. Definitions in the proposed rule that were relevant because of provisions of Executive Order 13706 that do not appear in Executive Order 13658 were largely based on definitions set forth in the statutory text or implementing regulations of the FMLA or the VAWA, as well as regulations issued by the U.S. Office of Personnel Management (OPM) at 5 CFR part 630, subparts B and D, which govern the accrual and use of sick leave by employees of the Federal Government.

As explained in the NPRM, the definitions discussed below will govern the implementation and enforcement of Executive Order 13706. Nothing in this Final Rule is intended to alter the meaning of or to be interpreted inconsistently with the definitions set forth in section 2.101 of the FAR for purposes of that regulation.

The Department proposed to define "accrual year" to mean the 12-month period during which a contractor may limit an employee’s accrual of paid sick leave to no less than 56 hours. No commenters suggested revising this definition, and it is adopted as proposed.

The Department proposed to define the term "Administrative Review Board" as the Administrative Review Board within the U.S. Department of Labor. The Department received no comments addressing this definition, and it is adopted as proposed.

The Department proposed to define the term "Administrator" to mean the Administrator of the Wage and Hour Division and to include any official of the Wage and Hour Division authorized to perform any of the functions of the Administrator under part 13. The Department received no comments regarding this definition and adopts it as proposed.

The Department proposed to define as soon as practicable to mean as soon as both possible and practical, taking into account all of the facts and circumstances of the individual case. This definition was derived from the definition of "as soon as practicable" in the FMLA regulations. 29 CFR 825.302(b). Although the Department received comments regarding the application of this term, as described in the discussion of § 13.5(d) below, the Department did not receive comments requesting changes to this definition and therefore implements it without modification.

The Department proposed to define certification issued by a health care provider as any type of written document created or signed by a health care provider (or by a representative of the health care provider) that contains information verifying the existence of the physical or mental illness, injury, medical condition, or need for diagnosis, care, or preventive care or other need for care referred to in proposed § 13.5(c)(1)(i), (ii), or (iii). The proposed definition allowed employees to provide as certification a greater range of documents than would suffice to demonstrate the existence of a serious health condition for purposes of the FMLA. See 29 CFR 825.305, 825.306. For example, under the proposal, a note from a hospital nurse stating that an employee needed surgery and would require at least 3 days to recover before returning to work would meet the definition, as would a note from an employee’s parent’s doctor stating that the parent needs daily assistance with tasks such as dressing and eating. EEAC commented that employees should be required to provide as much information to certify the use of paid sick leave as is necessary to certify the use of FMLA leave; on the other hand, the Center for WorkLife Law at the University of California, Hastings College of Law (Center for WorkLife Law) commented that the Department should require no specificity in the certification beyond the fact that a medical or health condition exists, because such a statement is sufficient to prevent employee abuse of leave and would avoid inviting the contractor to inappropriately evaluate whether a particular condition justifies the use of paid sick leave. The Department declines to adopt either suggestion. With respect to EEAC’s comment, the Department notes that the reasons for which an employee may use FMLA leave are significantly more limited than the permissible uses of paid sick leave under the Order and part 13, and it is therefore logical that the information required to justify the use of FMLA leave correspondingly reflects a higher threshold than is called for in using paid sick leave. But neither does the Department agree that a simple statement that an employee (or an employee’s family member) has a medical or health issue would constitute the type of certification contemplated in the Executive Order. As the examples above indicate, the Department believes that great specificity regarding the medical or health issue is not required; a health care provider’s note referring to surgery need not explain what condition the surgery treated or the specifics of the procedure, and a note from a doctor regarding a physical or mental condition (such as a broken leg or dementia) that causes a need for caregiving need not provide specific details about the parent’s condition or the specific tasks with which assistance is required. In the discussion of this definition in the NPRM, the Department noted that a contractor could not require that an employee or the individual for whom the employee is caring have seen the health care provider in person in order to accept the certification. The Department did not receive comments regarding this interpretation. For purposes of clarity, it has included language in the final regulatory text making the point that the health care provider (or representative) need not have seen the employee or individual in person in order to create a valid certification.

In the NPRM, the Department proposed to define "child" to mean (1) a biological, adopted, step, or foster son or daughter of the employee; (2) a person who is a legal ward or was a legal ward of the employee when that individual was a minor or required a legal guardian; (3) a person for whom the employee stands in loco parentis or stood in loco parentis when that individual was a minor or required someone to stand in loco parentis; or (4)
right to use Federal property, including land or facilities, for furnishing services, and included as examples of such contracts those the principal purpose of which is to furnish food, lodging, automobile fuel, souvenirs, newspaper stands, and/or recreational equipment. The Department noted that the proposed definition was not limited based on the beneficiary of the services but rather that it encompassed contracts regardless of whether they are of direct benefit to the Federal Government, its property, its civilian or military personnel, or the general public. See 29 CFR 14.133; see also 79 FR 60638. The NPRM noted that the proposed definition included, but was not limited to, all concessions contracts excluded by Departmental regulations under the SCA at 29 CFR 14.133(b). See 79 FR 60638. No commenters addressed the definition of concessions contract or contract for concessions, and the Department adopts the definition as proposed.

The Department proposed to define contract and contract-like instrument collectively for purposes of the Executive Order in the same manner as it did in the Minimum Wage Executive Order implementing regulations. See 79 FR 60722 (codified at 29 CFR 10.2). Specifically, the NPRM defined a contract or contract-like instrument as an agreement between two or more parties creating obligations that are enforceable or otherwise recognizable at law. The proposed definition included, but was not limited to, a mutually binding legal relationship obligating one party to furnish services (including construction) and another party to pay for them. The proposed definition of the term contract broadly included all contracts and any subcontracts of any tier thereunder, whether negotiated or advertised, including any procurement actions, lease agreements, cooperative agreements, provider agreements, interfederal service agreements, service agreements, permits, or any other type of agreement, regardless of nomenclature, type, or particular form, and whether entered into verbally or in writing. The proposed definition of the term contract was interpreted broadly to include, but not be limited to, any contract that may be consistent with the definition provided in the FAR or applicable Federal statutes. The proposed definition further included, but was not limited to, any contract that may be covered under any Federal procurement statute. The Department specifically noted in the proposed definition that contracts may be the result of competitive bidding or awarded to a single source under applicable authority to do so. The proposed definition also explained that, in addition to bilateral instruments, contracts included, but were not limited to, awards and notices of awards; job orders or task letters issued under basic ordering agreements; letter contracts; orders, such as purchase orders, under which the contract becomes effective by written acceptance or performance; and bilateral contract modifications. The proposed definition also specified that the term contract included contracts covered by the SCA, contracts covered by the DBA, concessions contracts not subject to the SCA, and contracts in connection with Federal property or lands and related to offering services for Federal employees, their dependents, or the general public. As explained in the Minimum Wage Executive Order rulemaking, the proposed definition of contract was derived from the definition of the term contract set forth in Black’s Law Dictionary (9th ed. 2009) and section 2.101 of the FAR (48 CFR 2.101), as well as the descriptions of the term contract that appear in the SCA’s regulations at 29 CFR 4.110–4.111 and 4.130. See 79 FR 60638–41.

The Department’s proposal deliberately adopted a broad definition of this term, but noted that the mere fact that a legal instrument constitutes a contract would not mean that such contract is subject to the Executive Order. In order for a contract to be covered by the Executive Order and part 13, the contract must (1) qualify as a contract or contract-like instrument; (2) fall within one of the specifically enumerated types of contracts set forth in section 6(d)(i) of the Order and § 13.3; and (3) be a new contract. Therefore, the NPRM explained that, for example, although a cooperative agreement was a contract under the Department’s proposed definition, a cooperative agreement would not be covered by the Executive Order and part 13 unless it was a new contract and was subject to the SCA or DBA, was a concessions contract, or was entered into in connection with Federal property or lands and related to offering services for Federal employees, their dependents, or the general public.

The Department did not receive any comments requesting a change to this proposed definition, and it therefore adopts it as proposed. One commenter, Bodman PLC, asked for clarification of whether, based on the broad definition of contract, a financial institution that holds deposits insured by the Federal Deposit Insurance Corporation or the National Credit Union Administration would be covered by the Order and part 13. A contract with the Federal
Government is not covered by the Order and this rulemaking unless it is one of the types of covered contracts named in the Order and further described in §13.3 and the accompanying explanation in this preamble. Unless the types of agreements to which the commenter referred are procurement contracts for construction covered by the DBA, contracts for services covered by the SCA, contracts for concessions, or contracts in connection with Federal property or lands and related to offering services for Federal employees, their dependents, or the general public, the Order does not cover them.

Furthermore, as explained below, with respect to the fourth category of covered contracts, the Department does not interpret “Federal property” to encompass money, and therefore purely financial transactions with the Federal Government are not covered by the Order or part 13.

The Department proposed to define contracting officer based on the definition used in 29 CFR 10.2, issued pursuant to the Minimum Wage Executive Order, which in turn was adopted from the definition in section 2.101 of the FAR. See 79 FR 60641 (citing 48 CFR 2.101). As proposed, the term meant a representative of an executive department or agency with the authority to enter into, administer, and/or terminate contracts and make related determinations and findings.

The term also included certain authorized representatives of the contracting officer acting within the limits of authority as delegated by the contracting officer. The Department received no comments regarding this definition and adopts it as proposed.

The Department proposed to define contractor to mean any individual or other legal entity that is awarded a Federal Government contract or a subcontract under a Federal Government contract. The proposed definition referred to both a prime contractor and all of its first- or lower-tier subcontractors on a contract with the Federal Government. It also included lessors and lessees. The Department noted that the term employer was used interchangeably with the terms contractor and subcontractor in part 13. The proposed definition also explained that the U.S. Government, its agencies, and its instrumentalities are not considered contractors, subcontractors, employers, or joint employers for purposes of compliance with the provisions of Executive Order 13706. The proposed definition, which was derived from the definition adopted in the Minimum Wage Executive Order rulemaking, see 79 FR 60722 (codified at 29 CFR 10.2), incorporated relevant aspects of the definitions of the term contractor in section 9.403 of the FAR, see 48 CFR 9.403; the SCA regulations at 29 CFR 4.1a(f); and the Department’s regulations implementing the Nondisplacement Executive Order at 29 CFR 9.2.

The proposed definition differed from the Minimum Wage Executive Order only in that it did not refer to employers of employees performing work on covered Federal contracts whose wages are computed pursuant to special certificates issued under 29 U.S.C. 214(c). The Department noted in the NPRM that although such employers would be contractors for purposes of Executive Order 13706, such a reference was not called for in the proposed definition because, unlike the Minimum Wage Executive Order, this Order does not contain any explicit reference to employees whose wages are computed pursuant to section 14(c) certificates. No commenters addressed this definition, and it is adopted as proposed.

The Department proposed to define the term Davis-Bacon Act to mean the Davis-Bacon Act of 1931, as amended, 40 U.S.C. 3141 et seq., and its implementing regulations. This definition is adopted as proposed.

The Department proposed to define the term domestic partner to mean an adult in a committed relationship with another adult. The proposed definition included both same-sex and opposite-sex relationships. The Department proposed to further explain that a committed relationship was one in which the employee and the domestic partner of the employee are each other’s sole domestic partner (and are not married to or domestic partners with anyone else) and share responsibility for a significant measure of each other’s common welfare and financial obligations. The proposed definition included, but was not limited to, any relationship between two individuals of the same or opposite sex that is granted legal recognition by a State or by the District of Columbia as a marriage or analogous relationship (including, but not limited to, a civil union). The proposed definition was adopted from the definitions of “domestic partner” and “committed relationship” in the OPM regulations regarding the use of sick leave by Federal employees. 5 CFR 630.201(b).

The Department received a number of comments, including from Pride at Work, the Los Angeles LGBT Center, CAP, and Lambda Legal, largely supporting this proposed definition but also asking that it be clarified. Specifically, these organizations wrote that they have “a concern regarding the requirement that domestic partners share responsibility for a significant measure of each other’s financial obligations” because for many couples, only one individual earns an income that supports both partners, and “the regulations should be clear that such couples are not excluded from the definition of domestic partners or committed relationship solely because only one partner earns income that they both depend upon.” The Department did not intend its proposed definition to imply that only if both members of a couple earn an income would that couple be considered domestic partners. Rather, the language regarding sharing responsibility for financial obligations could refer to a variety of circumstances, such as but not limited to one member of the couple paying for the housing and other necessities of the other, the couple having joint bank accounts, the couple sharing significant expenses, and/or the couple being jointly responsible for financial obligations such as mortgage or other loan payments. In other words, rather than calling for any particular financial arrangement, the financial interdependence clause of the definition is meant to indicate that the couple’s financial situation reflects that the relationship is a committed one, rather than, for example, a casual roommate situation. See Final Rule, Absence and Leave; Definitions of Family Member, Immediate Relative, and Related Terms, 75 FR 33491, 33493–94 (June 14, 2010) (OPM’s discussion of the term “committed relationship,” noting that its definition “would preclude casual roommates from qualifying as each other’s domestic partner”). Because the Department’s language is consistent with OPM’s and does not have the meaning about which the commenters were concerned, the Department adopts the definition of domestic partner as proposed.

The Department proposed to define domestic violence as (1) felony or misdemeanor crimes of violence (including threats or attempts) committed: (i) by a current or former spouse, domestic partner, or intimate partner of the victim; (ii) by a person with whom the victim shares a child in common; (iii) by a person who is cohabitating with or has cohabitated with the victim as a spouse, domestic partner, or intimate partner; (iv) by a person similarly situated to a spouse of the victim under domestic or family violence laws of the jurisdiction in which the victim resides or the events occurred; or (v) by any other adult person against a victim who is protected...
from that person’s acts under the
domestic or family violence laws of the
jurisdiction in which the victim resides or
the events occurred. Under the
proposed definition, domestic violence
also included (2) any crime of violence
considered to be an act of domestic
violence according to State law. This
definition was derived from the VAWA,
42 U.S.C. 13925(a)(8), and its
implementing regulations, 28 CFR
90.2(a). In its comment, the Women’s
Law Project expressed concern that this
definition only refers to acts that are
considered to be domestic violence for
purposes of criminal laws rather than
also including acts that constitute
domestic violence for purposes of civil
laws, in particular those allowing for
civil protection orders. Because the
Department did not intend for this
definition to be narrow or exclude any
subset of victims of acts that a State
considers to constitute domestic
violence, it is adopting the definition
with the revisions suggested by the
Women’s Law Project. Specifically,
in the fourth and fifth lines of the first part
of the definition, the Department is
inserting “civil or criminal” before
“domestic and family violence laws,”
and in the second part of the definition,
the Department is replacing “according
to State law” with “under the civil or
criminal domestic or family violence
laws of the jurisdiction in which the
victim resides or the events occurred,’’
the same phrase used in the first part
of the definition.

The Department proposed to define
employee similarly to the way the term
worker was used in the Minimum Wage
Executive Order rulemaking, see 79 FR
60723, but with some differences
reflecting the differences in the text of
that Executive Order and Executive
Order 13706. As proposed, the term
meant any person engaged in
performing work on or in connection
with a contract covered by the Executive
Order, and whose wages under such
contract are governed by the SCA, DBA,
or FLSA, including employees who
qualify for an exemption from the
FLSA’s minimum wage and overtime
provisions, regardless of the contractual
relationship alleged to exist between
the individual and the employer.
Furthermore, the term employee
included any person performing work
on or in connection with a covered
contract and individually registered in a
bona fide apprenticeship or training
program registered with the U.S.
Department of Labor’s Employment and
Training Administration, Office of
Apprenticeship, or with a State
Apprenticeship Agency recognized by
the Office of Apprenticeship.

Much of this proposed definition
came directly from section 6(d)(ii) of the
Executive Order, and much of it was
identical to the definition of worker in
the Minimum Wage Executive Order
regulations. The most significant
difference between the proposed
definition of employee and the
Minimum Wage Executive Order
rulemaking’s definition of worker was
the inclusion of employees who qualify
for an exemption from the FLSA’s
minimum wage and overtime
provisions, such as employees
employed in a bona fide executive,
administrative, or professional capacity,
as those terms are defined in 29 CFR
part 541. Comments regarding the
application of the Order and part 13 to
such employees are addressed below, in
the discussion of coverage of employees
under § 13.3; for the reasons explained
there, the Department adopts the
relevant portion of this definition as
proposed.

The proposed definition also
emphasized, as had been explained in
the Minimum Wage Executive Order
rulemaking, the well-established
principle under the DBA, SCA, and
FLSA that employee coverage does not
depend upon the existence or form of
any contractual relationship that may be
alleged to exist between the contractor
or subcontractor and such persons. See
79 FR 60644 (citing 29 U.S.C. 203(d),
(e)(1), (g) [FLSA]; 41 U.S.C. 6701(3)(B),
29 CFR 4.155 (SCA); 29 CFR 5.5(a)(1)(i)
(DBA)). As reflected in the proposed
definition, the Executive Order is
intended to apply to a wide range of
employment relationships. Neither an
individual’s subjective belief about his
or her employment status nor the
existence of a contractual relationship is
determinative of whether an employee
is covered by the Executive Order.
EEAC and AGC remarked on the
breadth of the proposed rule’s
statements about coverage of
independent contractors, and AGC,
Master Sheet Metal, Inc., General
Contractors Association of Hawaii, and
TrueBlue, Inc. specifically requested
clarification that the rule does not apply to
independent contractor owner-
operators or sole proprietors to the
extent they are not subject to SCA or
DBA prevailing wage requirements.
Although the Department reiterates its
statement that allegations of a
contractual relationship or the existence
of a contract are not determinative of
whether a worker is an employee or an
independent contractor, it clarifies its
statements about the effect of a worker
being properly categorized as an
independent contractor here. Whether a
worker is an “employee” or an
“independent contractor” as those terms
are often used in other contexts is not
material to whether that worker is a
service employee for purposes of the
SCA or a laborer or mechanic for
purposes of the DBA. See, e.g., 29 CFR
4.155 (SCA); 29 CFR 5.5(a)(1)(i) (DBA);
In re Igwe, ARB Case No. 07–120, 2009
WL 4324725, at *3–4 (Nov. 25, 2009)
(rejecting an argument that “the
individuals working on the four
contracts were not entitled to SCA
prevailing wages and fringe benefits
because they were independent
contractors, not employees” because
“the relevant inquiry is whether the
persons working on the contract come
within the SCA definition of ‘service
employee’” and explaining “the
irrelevance of ‘contractual relationship’
to that definition’’). Because even
workers who are independent
contractors may be covered by the SCA
and DBA, those workers, if so covered,
are employees for purposes of the Order
and part 13. A worker who is not a
service employee for purposes of the
SCA or a laborer or mechanic for
purposes of the DBA and who is not an
employee under the FLSA, however, is
not covered by the Order or part 13.
(The Department notes that an employee
who qualifies for an exemption from the
FLSA’s minimum wage and overtime
requirements is still an employee rather
than an independent contractor; as
explained elsewhere, employees who
qualify for such exemptions are covered
by the Order and part 13.) More
specifically, owner-operators (such as
owner-operator truck drivers) and sole
proprietors are not covered by the
Executive Order and part 13 to the
extent they are not entitled to prevailing
wages under the DBA or SCA and are
properly classified as independent
contractors whose wages are not
governed by the FLSA. The
Department’s guidance regarding the
classification of workers as independent
contractors under the FLSA is available
on the WHD Web site, http://
www.dol.gov/whd.

The proposed definition’s inclusion of
any person performing work on or in
connection with a covered contract and
individually registered in a bona fide
apprenticeship or training program
registered with the Department’s
Employment and Training
Administration, Office of
Apprenticeship, or with a State
Apprenticeship Agency recognized by
the Office of Apprenticeship, was
similarly in keeping with the Minimum
Wage Executive Order’s adoption of
those provisions from the SCA and DBA regulations. See 79 FR 60644 (citing 29 CFR 4.6(p) (SCA); 29 CFR 5.2(n) (DBA)). The Department received no comments regarding this portion of the proposed definition and has adopted it as proposed.

The Department noted in the NPRM that, because unlike the Minimum Wage Executive Order, Executive Order 13706 makes no reference to individuals performing work on or in connection with a covered contract whose wages are calculated pursuant to special certificates issued under 29 U.S.C. 214(c), that category of employees was not explicitly mentioned in the proposed definition. It further explained that such individuals would nevertheless plainly fall within the definition of employee for purposes of this rulemaking because their wages are governed by the FLSA. The AFL–CIO and SEIU supported the Department’s inclusion of such workers, and the Department makes no change to this implication of the definition.

Finally, the Department has added language to this definition explaining the meaning of working “on or in connection with” a covered contract. Specifically, the definition now provides that an employee performs “on” a contract if the employee directly performs the specific services called for by the contract and that an employee performs “in connection with” a contract if the employee’s work activities are necessary to the performance of a contract but are not the specific services called for by the contract. As noted in the more detailed discussion below of employee coverage as provided for in § 13.3, these concepts were explained in the NPRM but were not included in the regulatory text itself.

The Department proposed to define executive departments and agencies for purposes of this rulemaking by adopting the definition of that term used in the Minimum Wage Executive Order rulemaking, which was derived from the definition of executive agency provided in section 2.101 of the FAR, 48 CFR 2.101, 79 FR 60642, 60722 (codified at 29 CFR 10.2). The Department therefore proposed to interpret the Executive Order to apply to executive departments within the meaning of 5 U.S.C. 101, military departments within the meaning of 5 U.S.C. 102, independent establishments within the meaning of 5 U.S.C. 104(1), and wholly owned Government corporations within the meaning of 31 U.S.C. 9101. The Department did not interpret this definition to extend to the District of Columbia or any Territory or possession of the United States.

Bredhoff & Kaiser, PLLC submitted a comment on behalf of the National Postal Mail Handlers Union urging the Department to ensure that the Executive Order and part 13 apply to covered contracts with the U.S. Postal Service. Although the proposed rule did not identify any particular entities that would or would not have qualified as executive departments and agencies, its definition of that term referred to, among other types of entities, independent establishments within the meaning of 5 U.S.C. 104(1). That statutory provision expressly excludes the U.S. Postal Service.

The Department agrees with the commenter that the Executive Order, which contains no indication that the U.S. Postal Service is in any way among the governmental entities the contracts of which may be covered, is best interpreted to apply to covered contracts with the U.S. Postal Service. The Minimum Wage Executive Order rulemaking did not address the implications of its adoption of the FAR’s definition of executive departments and agencies, including its reference to independent establishments within the meaning of 5 U.S.C. 104(1) generally or coverage of the U.S. Postal Service specifically; there is no indication in the rulemaking that any commenter asked that the Department expand coverage to the U.S. Postal Service or that doing so would have had practical effect. The terms of Executive Order 13706 (as well as Executive Order 13658) indicate that contracts with the Federal Government covered by the SCA are covered by the Order, and it is clear that under the SCA, service contracts with the Federal Government covered by that Act include contracts with the U.S. Postal Service unless they are expressly excluded. See, e.g., 41 U.S.C. 6702(b)(7) (“This chapter does not apply to . . . a contract with the United States Postal Service, the principal purpose of which is the operation of postal contract stations.”).

It is therefore appropriate to infer that the Executive Order was intended to apply to covered contracts with the U.S. Postal Service. Furthermore, the purpose of the Executive Order—ensuring that employees working on or in connection with covered contracts have access to paid sick leave—is best served by modifying the proposed definition to make clear that coverage extends to covered contracts with the U.S. Postal Service. Accordingly, the Department has expanded the definition of executive departments and agencies to include the establishments not only within the meaning of 5 U.S.C. 104(1), but also within the meaning of 39 U.S.C. 201, which establishes the U.S. Postal Service “as an independent establishment of the executive branch of the Government of the United States.”

The Department proposed to define Executive Order 13495 or Nondisplacement of Qualified Workers Under Service Contracts, 74 FR 6103 (Feb. 4, 2009), and its implementing regulations at 29 CFR part 9. This definition is adopted as proposed.

The Department proposed to define Executive Order 13658 or Minimum Wage Executive Order to mean Executive Order 13658 of February 12, 2014, Establishing a Minimum Wage for Contractors, 79 FR 9851 (Feb. 20, 2014), and its implementing regulations at 29 CFR part 10. This definition is adopted as proposed.

The Department proposed to define Fair Labor Standards Act as the Fair Labor Standards Act of 1938, as amended, 29 U.S.C. 201 et seq., and its implementing regulations. This definition is adopted as proposed.

The Department proposed to define Family and Medical Leave Act as the Family and Medical Leave Act of 1993, as amended, 29 U.S.C. 2601 et seq., and its implementing regulations. This definition is adopted as proposed.

The Department proposed to define domestic violence, a term used in the definition of domestic violence, to mean any act or threatened act of violence, including any forceful detention of an individual that results or threatens to result in physical injury and is committed by a person against another individual (including an elderly individual) to or with whom such person is related by blood, is or was related by marriage or is or was otherwise legally related, or is or was lawfully residing. Because the VAWA does not provide a definition of the term, this definition was adopted from the definition of “family violence” in the Family Violence Prevention and Services Act, 42 U.S.C. 10401. See 42 U.S.C. 10402(b). The Department did not receive any comments regarding this definition and therefore adopts it as proposed.

Proposed § 13.2 defined Federal Government as an agency or instrumentality of the United States that enters into a contract pursuant to authority derived from the Constitution or the laws of the United States. The proposed definition was identical to that used in the regulations implementing the Act of 1938 Wage Executive Order. 79 FR 60722 (codified at 29 CFR 10.2). That definition was
based on the definition of Federal Government set forth in 29 CFR 9.2, but eliminated the term “procurement” from that definition because Executive Order 13658 applies—as does Executive Order 13706—to both procurement and non-procurement contracts. 79 FR 60642. Consistent with the SCA, the term Federal Government under the proposal included nonappropriated fund instrumentalities under the jurisdiction of the Armed Forces or of other Federal agencies. See 29 CFR 4.107(a). The proposed definition provided that for purposes of Executive Order 13706 and part 13, Federal Government did not include the District of Columbia or any Territory or possession of the United States. As used in the Order and part 13, the term also did not include any independent regulatory agency within the meaning of 44 U.S.C. 3502(5) because such agencies are not required to comply with the Order or part 13.

Brehoff & Kaiser’s comment, discussed above with respect to the definition of executive departments and agencies, suggested that the Department adjust the definition of Federal Government to ensure that this rulemaking applies to covered contracts with the U.S. Postal Service. The Department believes that the definition of Federal Government is sufficiently broad that the expansion of the definition of executive departments and agencies to include the U.S. Postal Service fulfills the purpose of making clear that the Department interprets the provision in the Minimum Wage Executive Order, to mean that independent agencies are not required to comply with this Executive Order. See 79 FR 9853; 79 FR 60643. The proposed definition was therefore based on other Executive Orders that similarly exempt independent regulatory agencies within the meaning of 44 U.S.C. 3502(5) from the definition of agency or include language requesting that they comply. See, e.g., Executive Order 13636, 78 FR 11739 (Feb. 12, 2013) (defining agency as any executive department, military department, Government corporation, Government-controlled operation or other establishment in the executive branch of the Government but excluding independent regulatory agencies as defined in 44 U.S.C. 3502(5)); Executive Order 13610, 77 FR 28469 (May 10, 2012) (same); Executive Order 12861, 58 FR 48255 (September 11, 1993) (“Sec. 4 Independent Agencies. All independent regulatory commissions and agencies are requested to comply with the provisions of this order.”). The Department received no comments regarding this definition and adopts it as proposed.

The Department proposed to include in §13.2 a definition of individual related by blood or affinity whose close association with the employee is the equivalent of a family relationship. The Department proposed to define the term to mean any person with whom the employee has a significant personal bond that is or is like a family relationship, regardless of biological or legal relationship. The NPRM noted that although this term is used in the OPM regulations, see 5 CFR 630.201 (defining “family member,” “for purposes of Federal employees’ use of leave, to include the term), OPM has not created a regulatory definition of it; the Department’s proposed definition was, however, derived from OPM’s discussion of the term in OPM’s 2010 Final Rule, 75 FR 33491. In particular, OPM explained that creating an exhaustive list of the relationships that meet the definition is not possible, but that OPM has “broadly intended the phrase to include such relationships as grandparent and grandchild, brother- and sister-in-law, fiancé and fiancée, cousin, aunt and uncle, other relatives not specified in [the list naming a spouse, child, parent, brother, or sister], and close friend, to the extent that the connection between the employee and the individual was significant enough to be regarded as having the closeness of a family relationship even though the individuals might not be related by blood or formally in law.” 75 FR 33492.

The Department explained in the NPRM that it understood the term to be inclusive of non-nuclear family structures, noting that it could include, for example, an individual who was a foster child in the same home in which the employee was a foster child for several years and with whom the employee has maintained a sibling-like relationship, a friend of the family in whose home the employee lived while she was in high school and whom the employee therefore considers to be like a mother or aunt to her, or an elderly neighbor with whom the employee has regularly shared meals and to whom the employee has provided unpaid caregiving assistance for the past 5 years and whom the employee therefore considers to be like a grandfather to her. In the NPRM, the Department sought comments regarding its proposed definition of this term, in particular regarding whether additional specificity was necessary. Numerous organizations—including but not limited to Lambda Legal, the National LGBTQ Task Force, Pride at Work, CAP,
the Children's Alliance, the Family Equality Council, Equality Maine, Basic Rights Oregon, CLASP, Demos, A Better Balance, the Working Families Organization, Caring Across Generations, the Labor Project for Working Families in partnership with Family Values @ Work, and the Movement Advancement Project—strongly supported the proposed definition of this phrase. Many of these commenters noted that many Americans live in multigenerational households and LGBTQ Americans in particular often rely on “families of choice,” meaning that any specific limitations inserted into the definition could defeat the purpose of using the broad term. They also wrote that a broad definition has been successfully in place with respect to Federal employees’ sick leave for years, indicating that the proposed definition would not be difficult to implement or likely to be abused. The New York City (NYC) Department of Consumer Affairs wrote about its experience enforcing a local paid sick time law and the importance of capturing, for example, an employee’s fiancé or aunt in the set of people for whom the employee can take leave to care. The Main Street Alliance, a coalition of employers, wrote that using a broad definition alleviated the burden on contractors of determining whether an employee’s relationship fit into some more limited set of relationships. Other commenters noted that the example included in the NPRM of the elderly neighbor was useful.

Other commenters, however, did not support the proposed definition. The American Benefits Council, Seyfarth Shaw LLP, the Chamber/IFA, and Society for Human Resource Management and the College and University Professional Association for Human Resources (SHRM/CUPA–HR), for example, asked that the Department narrow the definition. Some of these commenters wrote that the definition applies more broadly than is necessary to achieve the goals of the Executive Order. Others noted that State and local paid sick time laws do not apply as broadly or that they believed it would be difficult for contractors to verify whether a relationship of the type described exists. A few commenters proposed specific replacement definitions: The Independent Electrical Contractors, Inc. (IEC) asked that the Department interpret the Order to allow an employee to use paid sick leave to care only for individuals with whom the employer has a biological or legal relationship; Koga Engineering and Construction, Royal Contracting Company LTD, Master Sheet Metal, Inc., and the General Contractors Association of Hawaii asked that this category extend only to family members for whom an employee can take FMLA leave; EEAC asked that it extend only to a “person with whom the employee has a significant personal bond that is or is like that of a child, parent or spouse”; and Vigilant asked that the Department interpret the word “affinity” to mean only a relationship by marriage. The Department carefully considered the comments received and is adopting this definition as proposed. The term has been used with respect to sick leave for Federal employees since 1994, see Final Rule, Absence and Leave; Sick Leave, 59 FR 62266, 62266–67, 62270–71 (codified at 5 CFR 630.201(b)(v)), and OPM has indicated that it has had and continues to have an expansive meaning, see 75 FR 33491–92. The Department agrees with commenters that these facts suggest that the term in the Executive Order is best interpreted to have the same meaning as the term in the OPM regulations and that OPM does not consider its use of the term to have proved unworkable. Furthermore, the Department will not depart from the plain meaning of the text, which clearly extends beyond marital relationships or those referenced in the FMLA and reflects a general intent to be broad and inclusive by adopting the specific, significantly narrower definitions some commenters suggested. The Department notes that the issue of contractor verification of employees’ relationships is addressed below in the discussions of requests to use paid sick leave and certification or documentation of the need to use paid sick leave; because contractor inquiries into employees’ private lives are deliberately limited, the Department does not expect such verification to be intensive or complicated.

The Department proposed to define intimate partner, a term used in the definition of domestic violence, to mean a person who is or has been in a social relationship of a romantic or intimate nature with the victim, where the existence of such a relationship shall be determined based on a consideration of the length of the relationship; the type of relationship; and the frequency of interaction between the persons involved in the relationship. This definition was derived from the definition of “dating partner” in the VAWA. See 42 U.S.C. 13925(a)(9). No commenter suggested any revisions to this definition, and the Department adopts it as proposed.

In the Final Rule, the Department has added a definition of multiemployer plan, because that term is used in the final regulations for reasons explained in the discussion of § 13.8. The term is defined to mean a plan to which more than one employer is required to contribute and which is maintained pursuant to one or more CBAs between one or more employee organizations and more than one employer. This definition is derived from, but not identical to, the definition of the term under the Employee Retirement Income Security Act of 1974 (ERISA), 29 U.S.C. 1001 et seq. See 29 U.S.C. 1002(37). Because of the differences between the ERISA definition and that used here, a plan could qualify as a multiemployer plan for purposes of part 13 even though it does not so qualify for purposes of ERISA.

The Department proposed that the term new contract have the same meaning as in the Minimum Wage Executive Order Final Rule, but with dates altered to reflect the timing contemplated in section 7 of Executive Order 13706. See 79 FR 60722 (codified at 29 CFR 10.2); 80 FR 54700. Under the proposed definition, a new contract was a contract that results from a solicitation issued on or after January 1, 2017, or a contract that is awarded outside the solicitation process on or after January 1, 2017. This term included both new contracts and replacements for expiring contracts. It did not apply to the unilateral exercise of a pre-negotiated option to renew an existing contract by the Federal Government. The proposal explained that for purposes of the Executive Order, a contract that is entered into prior to January 1, 2017 would constitute a new contract if, through bilateral negotiation, on or after January 1, 2017: (1) The contract is renewed; (2) the contract is extended, unless the extension is made pursuant to a term in the contract as of December 31, 2016 providing for a short-term limited extension; or (3) the contract is amended pursuant to a modification that is outside the scope of the contract. The Minimum Wage Executive Order rulemaking explained that this definition was derived from section 8 of that Executive Order, 79 FR 9853, is consistent with the convention set forth in section 1.108(d) of the FAR, 48 CFR 1.108(d), and was developed in part in response to comments on the proposed definition of new contract that appeared in the Minimum Wage Executive Order NPRM. 79 FR 60643, 60646–49. No commenter suggested altering this definition, and the Department adopts it as proposed. Additional discussion of what constitutes a new contract appears in the text addressing § 13.3 below.
For purposes of the Executive Order and part 13, which use the terms in reference to domestic violence, sexual assault, or stalking, the Department proposed to define obtain additional counseling, seek relocation, seek assistance from a victim services organization, or take related legal action to mean to spend time arranging, preparing for, or executing acts related to addressing physical injuries or mental or emotional impacts resulting from being a victim of domestic violence, sexual assault, or stalking. Under the NPRM, such acts included finding and using services of a counselor or victim services organization (a term also defined in § 13.2) intended to assist a victim to respond to or prevent future incidents of domestic violence, sexual assault, or stalking; identifying and moving to a different residence to avoid being a victim of domestic violence, sexual assault, or stalking; or a victim’s pursuing any related legal action (another term defined in § 13.2). The Department stated in the proposal that counseling could, but need not be, provided by a health care provider. The Department did not receive comments addressing this definition and adopts it as proposed.

The Department proposed to define obtaining diagnosis, care, or preventive care from a health care provider to mean receiving services from a health care provider, whether to identify, treat, or otherwise address an existing condition or to prevent potential conditions from arising. The Department interpreted this term broadly and provided the following non-exhaustive list of examples: Obtaining a prescription for antibiotics at a health clinic, attending an appointment with a psychologist, having an annual physical or gynecological exam, or receiving a teeth cleaning from a dentist’s assistant. The proposed definition further noted that it included time spent traveling to and from the location at which such services are provided or recovering from receiving such services. The Center for the Study of Social Policy commented that the Department should state explicitly that this definition includes seeking treatment for drug or substance abuse. Under the definition as proposed and adopted, any treatment for drug, alcohol, or another addiction received from a practitioner who is a health care provider as defined in § 13.2 would be included in this definition. The Department adopts the definition as proposed.

The Department proposed to define the term Office of Administrative Law Judges to mean the Office of Administrative Law Judges, U.S. Department of Labor. The Department adopts this definition as proposed.

Proposed § 13.2 defined the term option by adopting the definition of that term used in the Minimum Wage Executive Order rulemaking, which in turn adopted the definition set forth in section 2.101 of the FAR, 48 CFR 2.101. 79 FR 60643, 60722 (codified at 29 CFR 10.2). Under the proposal, the term option meant a unilateral right in a contract by which, for a specified time, the Federal Government may elect to purchase additional supplies or services called for by the contract, or may elect to extend the term of the contract. No commenters suggested changes to this definition, and it is adopted as proposed.

The Department proposed to define paid sick leave to mean compensated absence from employment that is required by Executive Order 13706 and part 13. In the NPRM and again in this Final Rule, the Department used and uses “paid sick leave” to refer to the leave required by the Order and part 13 and “paid sick time” to refer more generally to any compensated absence from work for time used for purposes similar (although not necessarily identical) to the purposes described in the Order, including as required by State and local laws or as provided pursuant to contractors’ existing policies or under CBAs. The Department received no comments regarding this definition and adopts it as proposed.

Proposed § 13.2 defined the term parent to mean (1) a biological, adoptive, step, or foster parent of the employee, or a person who was a foster parent of the employee when the employee was a minor; (2) a person who is the legal guardian of the employee or was the legal guardian of the employee when the employee was a minor or required a legal guardian; (3) a person who stands in loco parentis to the employee or stood in loco parentis to the employee when the employee was a minor or required someone to stand in loco parentis; or (4) a parent, as described in paragraphs (1) through (3) of the definition, of an employee’s spouse or domestic partner. This definition was adopted from the OPM regulations regarding leave for Federal employees. 5 CFR 630.102(b). EEAC urged the Department to use the definition of parent provided in the FMLA in order not to include the parent of an employee’s spouse or domestic partner. Because, as noted above, the Department previously adopted the Order’s deliberate inclusion of family members beyond those for whom an employee could take FMLA leave to indicate a general intent to allow the use of leave to care for a broad set of family members, it is adopting the definition as proposed.

The Department proposed to define physical or mental illness, injury, or medical condition as any disease, sickness, disorder, or impairment of, or any trauma to, the body or mind. The Department explained in the NPRM that the Executive Order intended for this term to be understood broadly, to include any illness, injury, or medical condition, regardless of whether it requires attention from a health care provider or whether it would be a “serious health condition” that qualifies for use of leave under the FMLA. See 29 U.S.C. 2611(11); 29 CFR 285.113. In the NPRM, the Department provided the following non-exclusive list of conditions included within the proposed definition: A common cold, ear infection, upset stomach, ulcer, flu, headache, migraine, sprained ankle, broken arm, or depressive episode. The Department did not receive comments addressing this definition and adopts it as proposed.

The Department proposed to define predecessor contract to mean a contract that precedes a successor contract. Because this definition was only included in the proposed rule in connection with the provision in § 13.5(b)(4) requiring reinstatement of paid sick leave by successor contractors, which for the reasons explained below does not appear in the Final Rule, the Department has removed this definition from § 13.2.

The proposed rule defined procurement contract for construction as that term was defined for purposes of the Minimum Wage Executive Order Final Rule, that is, to mean a contract for the construction, alteration, or repair (including painting and decorating) of public buildings or public works and which requires or involves the employment of mechanics or laborers, and any subcontract of any tier thereunder. 79 FR 60723 (codified at 29 CFR 10.2). That proposed definition, which was derived from language found at 40 U.S.C. 3142(a) and 29 CFR 5.2(h), included any contract subject to the DBA. See 79 FR 60643. No commenter addressed this definition, and it is adopted as proposed.

The Department proposed to define the term procurement contract for services to mean a contract the principal purpose of which is to furnish services in the United States through the use of employees, and any subcontract of any tier thereunder. The proposal also stated that the term includes any...
contract subject to the SCA. This proposed definition was derived, as explained in the Minimum Wage Executive Order, from language set forth in 41 U.S.C. 6702(a), 29 CFR 4.1a(e), and 29 CFR 9.2. The Department did not receive comments specifically addressing this definition. For the reasons explained in the discussion of service contract coverage below, the Department is adopting the definition as proposed.

For purposes of the Executive Order and part 13, which use the terms in reference to domestic violence, sexual assault, or stalking, the Department proposed to define **related legal action** or related civil or criminal legal proceedings to mean any type of legal action, in any forum, that relates to domestic violence, sexual assault, or stalking, including, but not limited to, family, tribal, territorial, immigration, employment, administrative agency, housing matters, campus administrative or protection or stay-away order proceedings, and other similar matters; and criminal justice investigations, prosecutions, and post-trial matters (including sentencing, parole, and probation) that impact the victim’s safety and privacy. This definition, which the Department intended to be broad and inclusive, was derived from the definition of “legal assistance” that appears in the VAWA. See 42 U.S.C. 13925(a)(19). The Department explained in the NPRM that this definition encompassed actions in any civil or criminal court, including a juvenile court. The definition also included administrative proceedings run by institutions of higher education (college, community college, university, or trade school), such as those related to alleged violations of Title IX of the Education Amendments of 1972, 20 U.S.C. 1681 et seq. The Department received no comments regarding this definition and adopts it as proposed.

Under proposed § 13.2, **Secretary** meant the Secretary of Labor and included any official of the U.S. Department of Labor authorized to perform any of the functions of the Secretary of Labor under part 13. The Department adopts this definition as proposed.

The Department proposed to define the term **Service Contract Act** to mean the McNamara-O’Hara Service Contract Act of 1965, as amended, 41 U.S.C. 6701 et seq., and its implementing regulations. See 29 CFR 4.1a(a). This provision is adopted as proposed.

The proposed definition of sexual assault in § 13.2 was any nonconsensual sexual act proscribed by Federal, tribal, or State law, including when the victim lacks capacity to consent. This definition was adopted from the VAWA. See 42 U.S.C. 13925(a)(29). No commenter suggested revising this definition, and the Department adopts it as proposed.

In the NPRM, the term solicitation was defined to have the meaning given to it in the Minimum Wage Executive Order Final Rule, i.e., any request to submit offers, bids, or quotations to the Federal Government, 79 FR 60673 (codified at 29 CFR 10.2). As explained in the Minimum Wage Executive Order rulemaking, the definition was based on language from 29 CFR 9.2, and requests for information issued by Federal agencies and informal conversations with federal workers do not fall within the definition. See 79 FR 60643–44. No comments addressed this definition, and it is adopted as proposed.

The Department proposed to define the term **spouse** as the other person with whom an individual entered into marriage as defined or recognized under State law for purposes of marriage in the State in which the marriage was entered into or, in the case of a marriage entered into outside of any State, if the marriage is valid in the place where entered into and could have been entered into in at least one State. This definition included an individual in a common law marriage that was entered into in a State that recognizes such marriages or, if entered into outside of any State, is valid in the place where entered into and could have been entered into in at least one State. This definition was derived from the FMLA regulations. See 29 CFR 825.122 (as updated by Definition of Spouse Under the Family and Medical Leave Act, 80 FR 9989 (Feb. 25, 2015)). As the Department noted in the NPRM, marriage and common law marriage include both same-sex and opposite-sex marriages or common law marriages. The Department did not receive comments regarding this definition and adopts it as proposed.

Under proposed § 13.2, **stalking** meant engaging in a course of conduct directed at a specific person that would cause a reasonable person to fear for his or her safety or the safety of others or suffer substantial emotional distress. This definition was adopted from the VAWA. See 42 U.S.C. 13925(a)(30). The Department did not receive comments regarding this definition and adopts it as proposed.

The Department proposed to define successor contract to mean a contract for the same or similar services as were provided by a different predecessor contractor at that location. This definition does not appear in the Final Rule because, for the reasons explained in the discussion of § 13.5(b)(4), the term is no longer relevant.

In proposed § 13.2, the Department defined the term **United States** as it did in the Minimum Wage Executive Order rulemaking, which used the definitions of that term set forth in 29 CFR 9.2 and 48 CFR 2.101, though it did not adopt any of the exceptions to the definition of the term set forth in the FAR. See 79 FR 60645. Based on those regulations, United States meant the United States and all executive departments, independent establishments, administrative agencies, and instrumentalities of the United States, including corporations of which all or substantially all of the stock is owned by the United States, by the foregoing departments, establishments, agencies, and instrumentalities, including nonappropriated fund instrumentalities. The proposed definition further noted that when used in a geographic sense, the United States meant the 50 States and the District of Columbia. The Department did not receive comments regarding this definition and adopts it as proposed.

The Department proposed to define victim services organization to mean a nonprofit, nongovernmental, or tribal organization or rape crisis center, including a State or tribal coalition, that assists or advocates for victims of domestic violence, sexual assault, or stalking, including domestic violence shelters, faith-based organizations, and other organizations, with a documented history of effective work concerning domestic violence, sexual assault, or stalking. This definition was based on the definition of “victim service provider” in the VAWA. See 42 U.S.C. 13925(a)(43). The Department intended this definition to include organizations that provide services to adult, teen, and/or child victims of domestic violence, sexual assault, or stalking. The Department did not receive comments regarding this definition and adopts it as proposed.

The Department proposed to define **Violence Against Women Act** as the Violence Against Women Act of 1994, 42 U.S.C. 13925 et seq., and its implementing regulations. This definition is adopted as proposed.

Finally, the Department proposed to define **Wage and Hour Division** to mean the Wage and Hour Division within the U.S. Department of Labor. This definition is adopted as proposed.

Section 13.3 **Coverage**

Proposed § 13.3 addressed and implemented the coverage provisions of section 6 of Executive Order 13706. 80 FR 54697–700.
Proposed § 13.3(a) stated that part 13 applies to any new contract with the Federal Government, unless excluded by § 13.4, provided that: (1)(i) It is a procurement contract for construction covered by the DBA; (ii) it is a contract for services covered by the SCA; (iii) it is a contract for concessions, including any concessions contract excluded from coverage under the SCA by Department of Labor regulations at 29 CFR 4.133(b); or (iv) it is a contract in connection with Federal property or lands and related to offering services for Federal employees, their dependents, or the general public; and (2) the wages of employees performing on or in connection with such contract are governed by the DBA, SCA, or FLSA, including employees who qualify for an exemption from the FLSA’s minimum wage and overtime provisions. As explained in more detail below in the discussion of covered employees, the Department is promulgating this provision as proposed.

Proposed § 13.3(b) incorporated the monetary value thresholds referred to in section 6(e) of the Executive Order. Specifically, it provided that for contracts covered by the SCA or the DBA, part 13 applies to prime contracts only at the thresholds specified in those statutes, and for procurement contracts where employees’ wages are governed by the FLSA (i.e., procurement contracts not covered by the SCA or DBA), part 13 applies when the prime contract exceeds the micro-purchase threshold, as defined in 41 U.S.C. 1902(a).

Proposed § 13.3(b) further explained that for all other covered prime contracts and for all subcontracts awarded under covered prime contracts, part 13 applies regardless of the value of the contract. In this context, “all other prime contracts” covered by the Order and part 13 referred to non-procurement concessions contracts not covered by the SCA and non-procurement contracts with the Federal Government in connection with Federal property or lands and related to offering services for Federal employees, their dependents, or the general public not covered by the SCA. The Department received one comment relevant to this provision, addressed in the discussion of “procurement contracts for construction” below, and adopts § 13.3(b) as proposed.

Proposed § 13.3(c), which was identical to the analogous provision in the Minimum Wage Executive Order Final Rule, 29 CFR 10.3(c), stated that part 13 only applies to contracts with the Federal Government requiring performance in whole or in part within the United States. It further explained that if a contract with the Federal Government is to be performed in part within and in part outside the United States and is otherwise covered by the Executive Order and part 13, the requirements of the Order and part 13 would apply with respect to that part of the contract that is performed within the United States. As explained below, the Department adopts this provision as proposed.

Proposed § 13.3(d), adopted from the Minimum Wage Executive Order regulations, 29 CFR 10.3(d), explained that part 13 does not apply to contracts subject to the Walsh-Healey Public Contracts Act, 41 U.S.C. 5601 et seq. The Department is adopting this provision largely as proposed, but with one modification described below in the section discussing such contracts.

The preamble to the proposed rule addressed several issues related to the coverage provisions in some detail, and the Department repeats those points here, in addition to responding to comments relative to them, in order to ensure that this Final Rule contains a full discussion of the scope of coverage under the Order. As noted in the NPRM, the Minimum Wage Executive Order Final Rule addressed many of the same issues, and much of the discussion here reflects interpretations described in that rulemaking.

Coverage of Executive Agencies and Departments

Executive Order 13706 applies to all “[e]xecutive departments and agencies.” 80 FR 54697. Like the Minimum Wage Executive Order, it strongly encourages but does not compel “[i]ndependent agencies” to comply with its requirements. 80 FR 54700; see also 79 FR 9853. The Department explained in the NPRM that this exemption from coverage is narrow, in light of the Executive Order’s broad goal of providing paid sick leave to employees on contracts with the Federal Government. The terms executive departments and agencies (modified to include the U.S. Postal Service, as explained above) and independent agencies are defined in § 13.2. The Department received no comments regarding this interpretation.

Coverage of New Contracts With the Federal Government

Proposed § 13.3(a) provided that the requirements of the Executive Order apply to a “new contract with the Federal Government.” By applying only to “new contracts,” the Executive Order ensures that contracting agencies and contractors will have sufficient notice of any obligations under Executive Order 13706 and can take into account any potential impact of the Order prior to entering into “new contracts” on or after January 1, 2017. As discussed above, the proposed definition of the term contract was broadly inclusive, and the proposed definition of new contract was modeled on the definition of that term in the Minimum Wage Executive Order Final Rule, 29 CFR 10.2, and incorporated the provisions of section 7 of Executive Order 13706. Therefore, as proposed, part 13 applied to covered contracts with the Federal Government that result from solicitations issued on or after January 1, 2017, or to contracts that are awarded outside the solicitation process on or after January 1, 2017. For example, any covered contracts that are added to the GSA Schedule in response to GSA Schedule solicitations issued on or after January 1, 2017 will qualify as “new contracts” subject to the Order; any covered task orders issued pursuant to those contracts also would be deemed to be “new contracts.” This included contracts to add new covered services as well as contracts to replace expiring contracts.

As explained in the discussion of § 13.2, the definition of new contract (adopted as proposed) also provides that the term includes both new contracts and replacements for expiring contracts. Consistent with the Minimum Wage Executive Order Final Rule, however, the definition does not include the unilateral exercise of a pre-negotiated option to renew an existing contract by the Federal Government. As discussed above, option means unilateral right in a contract by which, for a specified time, the Federal Government may elect to purchase additional supplies or services called for by the contract, or may elect to extend the term of the contract. See 48 CFR 2.101. The proposed definition of new contract also provided that for purposes of the Executive Order, a contract that is entered into prior to January 1, 2017 constituted a new contract if, through bilateral negotiation, on or after January 1, 2017: (1) The contract is renewed; (2) the contract is extended, unless the extension is made pursuant to a term in the contract as of December 31, 2016 providing for a short-term limited extension; or (3) the contract is amended pursuant to a modification that is outside the scope of the contract. These statements have the same meaning in part 13 as they did in the Minimum Wage Executive Order rulemaking. See 79 FR 60646–49. The NPRM also noted the Department’s understanding that contract extensions may be accomplished through options created by an agency pursuant to FAR...
clause 52.217–9 (which allows for an extension of time of up to 6 months for a contractor to perform services that were acquired but not provided during the contract period) or FAR clause 52.217–9 (which provides for an extension of the contract term to provide additional services for a limited term specified in the contract at previously agreed upon prices). As explained, the contracting agency’s exercise of extensions under these clauses would not trigger application of the Order’s paid sick leave requirements because the clauses give the contracting agency a discretionary right to unilaterally exercise the option to extend, and unilateral options are excluded from the definition of “new contract.”

Specifically, and particularly in light of these clauses, a bilaterally negotiated extension of an existing contract on or after January 1, 2017 would be viewed as a “new contract” unless the extension is made pursuant to a term in the contract as of December 31, 2016 providing for a short-term limited extension, in which case the extension would not constitute a “new contract” and would not be covered. Therefore, a short-term, bilaterally negotiated extension of contract terms (e.g., an extension of 6 months or less) that was provided for by the pre-negotiated terms of the contract prior to January 1, 2017, such as a bridge to prevent a gap in service, would not constitute a new contract. See Interim Final Rule, Federal Acquisition Regulation; Establishing a Minimum Wage for Contractors, 79 FR 74544, 74545 (Dec. 15, 2014) (providing that contracting officers “shall include” the FAR contract clause to implement the Minimum Wage Executive Order when “bilateral modifications extending the contract . . . are individually or cumulatively longer than six months”). In addition, when a contracting agency exercises its unilateral right to extend the term of an existing service contract and simply makes pricing adjustments based on increased labor costs that result from its obligation to include a current SCA wage determination pursuant to 29 CFR 4.4 but no bilateral negotiations occur (other than any necessary to determine and effectuate those pricing adjustments), the Department would not view the exercise of that option as a “new contract” covered by the Executive Order.

An extension that was bilaterally negotiated and not previously authorized by the terms of the existing contract, however, would be a “new contract subject to the Order’s paid sick leave requirements. A long-term extension of an existing contract will qualify as a “new contract” subject to the Executive Order even if such an extension was provided for by a pre-negotiated term of the contract.

With respect to the coverage of other contract modifications, the Department’s approach is identical to that in the Minimum Wage Executive Order Final Rule. 79 FR 60646–49. It reflects that modifications within the scope of the contract do not in fact constitute new contracts. Long-standing contracting principles recognize that an existing contract, especially a larger one, will often require modifications, which may include very modest changes (e.g., a small change to a delivery schedule). Therefore, regulations such as the FAR do not require agencies to create new contracts to support these actions. Accordingly, contract modifications that are within the scope of the contract within the meaning of the FAR, see 48 CFR 6.001(c) and related case law, are not “new contracts” under the proposed definition, even when undertaken after January 1, 2017. The Department’s proposal nonetheless strongly encouraged agencies to bilaterally negotiate, as part of any in-scope modification, application of the Executive Order’s paid sick leave requirements so that such modified contracts could take advantage of the benefits of such leave.

As also explained in the NPRM, if the parties bilaterally negotiate a modification that is outside the scope of the contract, the agency will be required to create a new contract, triggering solicitation and/or justification requirements, and thus such a modification after January 1, 2017 will constitute a “new contract” subject to the Executive Order’s paid sick leave requirements. For example, if an existing SCA-covered contract for janitorial services at a Federal office building is modified by bilateral negotiation after January 1, 2017 to also provide for security services at that building, such a modification would likely be regarded as outside the scope of the contract and thus qualify as a “new contract” subject to the Executive Order. Similarly, if an existing DBA-covered contract for construction work at Site A was modified by bilateral negotiation after January 1, 2017 to also cover construction work at Site B, such a modification would generally be viewed as outside the scope of the contract and thus trigger coverage of the Executive Order. The Department cautioned, however, that whether a modification qualifies as “within the scope” or “outside the scope” of the contract is necessarily a fact-specific determination. See, e.g., AT&T Communications, Inc. v. Wiltel, Inc., 1 F.3d 1201, 1205 (Fed. Cir. 1993).

The Department did not receive comments suggesting changes to these interpretations regarding what constitutes a “new contract.” AGC asked whether new task orders under existing indefinite-delivery, indefinite-quantity (IDIQ) contracts qualify as new contracts for purposes of the Executive Order. A task order under an IDIQ contract covered by the Executive Order and part 13 would itself be covered by the Order and part 13 to the extent the task order falls within one of the four categories of contracts covered by the Order. A task order under (and within the scope of) an IDIQ contract that is not covered by the Executive Order and part 13, either because the solicitation for the IDIQ contract was issued before January 1, 2017, or the IDIQ contract was awarded outside the solicitation process before January 1, 2017, would not qualify under the Order and part 13 as a new contract even if the task order was issued after January 1, 2017.

However, the Department recommended in the NPRM, and reiterates here, that the FARC should encourage, if not require, contracting officers to modify existing IDIQ contracts in accordance with FAR section 1.108(d)(3) to include the paid sick leave requirements of Executive Order 13706 and part 13, particularly if the remaining ordering period extends at least 6 months and the amount of remaining work or number of orders expected is substantial. See 79 FR 74545 (providing that contracting officers “are strongly encouraged to include” the FAR contract clause to implement the Minimum Wage Executive Order in “existing indefinite-delivery indefinite-quantity contracts, if the remaining ordering period extends at least six months and the amount of remaining work or number of orders expected is substantial”).

Coverage of Types of Contractual Arrangements

Proposed § 13.3(a)(1) set forth the specific types of contractual arrangements with the Federal Government that are covered by the Executive Order. Consistent with the intent of Executive Order 13706 to apply to a wide range of contracts with the Federal Government for services or construction, proposed § 13.3(a)(1) implemented the Executive Order by generally extending coverage to procurement contracts for construction covered by the DBA; service contracts covered by the SCA; concessions contracts, including any concessions contract excluded by the Department’s regulations at 29 CFR 4.133(b); and
contracts in connection with Federal property or lands and related to offering services for Federal employees, their dependents, or the general public. Each of these categories of contractual agreements is discussed in greater detail below. The Department notes that, as was also the case under the Minimum Wage Executive Order rulemaking, these categories are not mutually exclusive—a concessions contract might also be covered by the SCA, as might a contract in connection with Federal property or lands, for example—but a contract that falls within any one of the four categories is covered.

Procurement Contracts for Construction: Section 6(d)(i)(A) of the Executive Order extends coverage to any “procurement contract for . . . construction.” 80 FR 54699. As explained in the NPRM and the Minimum Wage Executive Order rulemaking, 79 FR 60650, this language indicates that the Executive Order and part 13 apply to contracts subject to the DBA and that they do not apply to contracts subject only to the Davis-Bacon Related Acts, including those set forth at 29 CFR 5.1(a)(2)–(60). The Final Rule makes no change to this interpretation.

The DBA applies, in relevant part, to contracts to which the Federal Government is a party, for the construction, alteration, or repair, including painting and decorating, of public buildings and public works of the Federal Government and which require or involve the employment of mechanics or laborers. 40 U.S.C. 3142(a). The DBA’s regulatory definition of construction is expansive and includes all types of work done on a particular building or work by laborers and mechanics employed by a construction contractor or construction subcontractor. See 29 CFR 5.2(j). The DBA’s implementing regulations define the term “public building or public work” as any building or work, the construction, prosecution, completion, or repair of which is carried on directly by authority of or with funds of a Federal agency to serve the interest of the general public. See 29 CFR 5.2(k).

Proposed § 13.3(b) implemented section 6(e) of Executive Order 13706, 80 FR 52699–700, which provides that the Order applies only to DBA-covered prime contracts that exceed the $2,000 value threshold specified in the DBA. See 40 U.S.C. 3142(a). Under this provision, which is adopted as proposed, there is no value threshold requirement for application of Executive Order 13706 and part 13 to subcontracts awarded under such prime contracts.

The Mechanical Contractors Association of America (MCAA) asked in its comment why the proposal covered subcontracts that fall below the DBA threshold amount. The Department believes coverage of subcontracts without regard to their monetary value is appropriate because it is consistent with the DBA itself, which applies the threshold only to prime contracts, 40 U.S.C. 3142(a), is consistent with the coverage provisions of the Minimum Wage Executive Order, which also do not apply threshold amounts to subcontracts, 29 CFR 10.3(b), and ensures that employees who work for lower-tier contractors on projects in which the prime contract is DBA-covered are not denied access to paid sick leave.

Procurement Contracts for Services: Proposed § 13.3(a)(1)(ii) provided, in language identical to that of 29 CFR 10.3(a)(1)(ii) as promulgated by the Minimum Wage Executive Order Final Rule, 79 FR 60723, that coverage of the Executive Order and part 13 encompasses any “contract for services covered by the Service Contract Act.” That proposed provision implemented section 6(d)(i)(B) of the Executive Order, which states that the Order applies to “a contract or contract-like instrument for services covered by the Service Contract Act.” 80 FR 54699. The SCA applies (subject to the exceptions discussed below) to any contract entered into by the United States that “has as its principal purpose the furnishing of services in the United States through the use of service employees.” 41 U.S.C. 6702(a)(3); see also 29 CFR 4.110. The SCA is intended to cover a wide variety of service contracts with the Federal Government, so long as the principal purpose of the contract is to provide services using service employees. See, e.g., 29 CFR 4.130(a). SCA coverage exists regardless of the direct beneficiary of the services or the source of the funds from which the contractor is paid for the service and irrespective of whether the contractor performs the work in its own establishment, on a Government installation, or elsewhere. 29 CFR 4.133(a).

The NPRM noted, however, that in addition to the provision in section 6(d)(i)(B) of the Executive Order extending coverage to contracts covered by the SCA, section 6(d)(i)(A) provides that the Order applies to “a procurement contract for services.” 80 FR 54699. In the Minimum Wage Executive Order rulemaking, the Department interpreted these two phrases together to mean that Executive Order 13658 applied to all procurement and non-procurement contracts covered by the SCA. As the NPRM to implement Executive Order 13706 explained, the phrase “a procurement contract for services” could instead be construed to encompass a category or categories of procurement contracts for services beyond those covered by the SCA. The SCA does not apply to all procurement contracts with the Federal Government for services. For example, the SCA itself contains a list of exemptions from its coverage: It does not apply to a “contract for the carriage of freight or personnel by vessel, airplane, bus, truck, express, railway line or oil or gas pipeline where published tariff rates are in effect”; “a contract for the furnishing of services by radio, telephone, telegraph, or cable companies, subject to the Communications Act of 1934”; “a contract for public utility services, including electric light and power, water, steam, and gas”; “an employment contract providing for direct services to a Federal agency by an individual”; and “a contract with the United States Postal Service, the principal purpose of which is the operation of postal contract stations.” 41 U.S.C. 6702(b); see also 29 CFR 4.115–4.122. Additionally, the SCA regulations at 29 CFR 4.123(d) and (e) identify certain categories of contracts the Department has exempted from SCA coverage pursuant to authority granted by the SCA, see 41 U.S.C. 6707(b), to the extent regulatory criteria for exclusion from coverage are satisfied. For example, 29 CFR 4.123(e)(1)(i)(A) exempts from SCA coverage certain contracts primarily for repair, maintenance, calibration, or repair of automated data processing equipment and office information/word processing systems. Furthermore, the SCA does not apply to contracts for services to be performed exclusively by persons who are not service employees, i.e., persons who qualify as bona fide executive, administrative, or professional employees as defined in the FLSA’s regulations at 29 CFR part 541. 29 CFR 4.113(a)(2); see also 41 U.S.C. 6701(a)(3)(C), 6702(a)(3); WHD Field Operations Handbook (FOH) ¶ 14c07. Similarly, a contract for services “performed essentially by bona fide executive, administrative, or professional employees, with the use of service employees being only a minor factor in contract performance,” is not covered by the SCA. 29 CFR 4.113(a)(3); FOH ¶ 14c07.

In the proposed rule, the Department sought comment as to whether it should include within the coverage of Executive Order 13706 a wider set of procurement contracts for services than those contracts for services covered by
the SCA. The Department’s proposal noted that, for example, an interpretation treating as covered procurement contracts for services performed exclusively or essentially by employees who qualify as bona fide executive, administrative, or professional employees as defined in the FLSA’s regulations at 29 CFR part 541—a type of employee covered by section 6(d)(ii) of the Order because such employees qualify for an exemption from the FLSA’s minimum wage and overtime provisions, 80 FR 54700—would extend the Order’s paid sick leave requirements to some such employees who would otherwise not be covered by the Order. The proposal further noted that an interpretation treating as covered other types of service contracts explicitly exempted from SCA coverage under 41 U.S.C. 6702(b) and 29 CFR 4.123(d) and (e) would also extend the Order’s paid sick leave requirements to at least some employees on any such contracts; although those employees’ wages would by definition not be covered by the SCA, under such an interpretation, employees performing work on or in connection with such contracts whose wages were governed by the FLSA, including employees who qualify for an exemption from its minimum wage and overtime provisions, would be entitled to paid sick leave under the Order and part 13. The Department sought comments on the potential scope and implications of such coverage, including whether employees who work on or in connection with certain categories of non-SCA-covered service contracts currently typically do not have paid sick time or do not have any type of paid time off such that the protections of Executive Order 13706 would be particularly significant to them.

Numerous commenters, including CLASP, Equal Rights Advocates, the CAP Women’s Initiative, Caring Across Generations, the Working Families Organization, Women Employed, the Center for Popular Democracy (CPD), and the National Association of County and City Health Officials, urged the Department to ensure that the Executive Order covers all procurement contracts for services in order to extend paid sick leave benefits to as many employees as possible. The AFL-CIO also encouraged the Department to expand contract coverage under the Order and part 13. Other commenters, such as PSC, the Chamber/IFA, and the American Benefits Council, however, urged the Department not to expand coverage to service contracts not covered by the SCA. In particular, PSC asserted that covering contracts for services performed exclusively or essentially by employees who qualify as bona fide executive, administrative, or professional employees would discourage technology and consulting companies from doing business with the Federal Government. It also asserted that contracts such as those involving utilities and airlines are exempted from the SCA by regulation for reasons that would also make application of paid sick leave requirements particularly difficult and therefore inappropriate.

After careful consideration of these comments, the Department is adopting § 13.3(a)(1)(i) as proposed, that is, it is interpreting the Executive Order to cover contracts for services covered by the SCA and not (other than contracts covered by § 13.3(a)(1)(iii) and (iv)) contracts for services that, although entered into with an executive department or agency, are not covered by the SCA. Although the Department continues to believe in the importance of ensuring that employees performing work on or in connection with Federal contracts have access to paid sick leave, in this case, for reasons of consistency with the Minimum Wage Executive Order Final Rule and familiarity with the types of obligations and requirements imposed by the SCA and Minimum Wage Executive Order, the Department believes the best course is the one proposed in the NPRM.

The Department reiterates, however, that under § 13.3(a)(1)(iii) and (iv) (as well as § 13.3(d), described below), irrespective of whether a contract is covered by part 13 because it is an SCA-covered contract, the Order’s paid sick leave requirements apply to service contracts that are concessions contracts, including all concessions contracts excluded by the SCA regulations at 29 CFR 4.133(b); apply to service contracts that are in connection with Federal property or lands and related to offering services for Federal employees, their dependents, or the general public; and do not apply to contracts for the manufacturing or furnishing of materials, supplies, articles, or equipment to the Federal Government that are subject to the Walsh-Healey Public Contracts Act, 41 U.S.C. 6501 et seq.

Proposed § 13.3(b) implemented section 6(e) of the Executive Order, which provides that for SCA-covered contracts, the Executive Order applies only to those prime contracts that exceed the threshold for prevailing wage requirements specified in the SCA. 80 FR 54700. Since the SCA covers all non-exempted contracts with the Federal Government that have the “principal purpose” of furnishing services in the United States through the use of service employees regardless of the value of the contract, the prevailing wage requirements of the SCA only apply to covered contracts in excess of $2,500. 41 U.S.C. 6702(a)(2). Consistent with the SCA, under proposed § 13.3(b), there would be no value threshold requirement for application of Executive Order 13706 and part 13 to subcontracts awarded under such prime contracts. The Department received no comments on this portion of the proposed provision.

Contracts for Concessions: Proposed § 13.3(a)(1)(iii) implemented the Executive Order’s coverage of a “contract or contract-like instrument for concessions, including any concessions contract excluded by the Department of Labor’s regulations at 29 CFR 4.133(b)” (80 FR 54699, just as the Minimum Wage Executive Order Final Rule implemented identical language in that Order, see 79 FR 60638, 60652.

The SCA generally covers contracts for concessionaire services. See 29 CFR 4.130(a)(11). Pursuant to the Secretary’s authority under section 4(b) of the SCA, however, the SCA’s regulations specifically exempt from coverage concession contracts “principally for the furnishing of food, lodging, automobile fuel, souvenirs, newspaper stands, and recreational equipment to the general public.” 29 CFR 4.133(b); 48 FR 49736, 49753 (Oct. 27, 1983). Proposed § 13.3(a)(1)(iii) extended coverage of the Executive Order and part 13 to all concession contracts with the Federal Government, including those exempted from SCA coverage. The Department explained that the Executive Order generally covers, for example, souvenir shops at national monuments as well as boat rental facilities and fast food restaurants at National Parks. In addition, consistent with the SCA’s implementing regulations at 29 CFR 4.107(a), the Department proposed that the Executive Order generally apply to concessions contracts with nonappropriated fund instrumentalities under the jurisdiction
of the Armed Forces or other Federal agencies.

Under proposed § 13.3(h), the Executive Order applies to an SCA-covered concessions contract only if it exceeds $2,500. Id.; 41 U.S.C. 6702(a)(2). Section 6(e) of the Executive Order further provides that, for procurement contracts where employees' wages are governed by the FLSA, such as any procurement contracts for concessionaire services that are excluded from SCA coverage under 29 CFR 4.133(b), part 13 applies only to contracts that exceed the micro-purchase threshold, as defined in 41 U.S.C. 1902(a). That threshold is currently defined in the FAR as $3,500. 48 CFR 2.101. The Department proposed that there be no value threshold for application of Executive Order 13706 and part 13 to subcontracts awarded under covered prime contracts or for non-procurement concessions contracts that are not covered by the SCA.

The Chamber/IFA and the American Benefits Council commented that the Order should not apply to concessions contracts, explaining that such contractors will be disadvantaged by the requirements of the Order and part 13 because they compete against businesses that do not contract with the Federal Government and therefore do not bear the costs of providing paid sick leave. The Department declines to amend part 13's coverage provisions to exclude concessions contracts because section 6(d)(i)(C) of the Executive Order explicitly names such contracts as one of the types to which the Order applies. 80 FR 54699.

**Contracts in Connection with Federal Property or Lands and Related to Offering Services:** Proposed § 13.3(a)(1)(iv) implemented section 6(d)(i)(D) of the Executive Order, which extends coverage to contracts entered into with the Federal Government in connection with Federal property or lands and related to offering services for Federal employees, their dependents, or the general public. For example, if a Federal agency contracts with an outside catering company to provide and deliver food for a conference, such a contract will not be considered a concessions contract under section 6(d)(i)(D) because it is not a contract related to offering services for Federal employees, their dependents, or the general public.

Although this definition is broad, the Department noted some limits to it in the NPRM that it reiterates here. First, coverage under this proposed section only extends to contracts that are in connection with Federal property or lands. For example, if a Federal agency contracts with an outside catering company to provide and deliver food to serve Federal employees and the general public in a Federal building and serves food to the general public, the Department would not consider the contract to be covered by section 6(d)(i)(D) because it is not a contract related to offering services for Federal employees, their dependents, or the general public. Therefore, if a Federal agency contracted with a company to provide food in a Federal building and serve food to the general public, the Department would not consider such a contract covered by section 6(d)(i)(D).

Proposed § 13.3(h) interpreted section 6(e) of Executive Order 13706, 80 FR 54700, to mean that the Order applies only to SCA-covered prime contracts in connection with Federal property or lands and related to offering services if such contracts exceed $2,500. 41 U.S.C. 6702(a)(2); 29 CFR 4.141(a). For procurement contracts in connection with Federal property or lands and related to offering services where employees' wages are governed by the FLSA rather than the SCA, part 13 applies only to such contracts that exceed the $3,500 micro-purchase threshold, as defined in 41 U.S.C. 1902(a) and 48 CFR 2.101. As to subcontracts awarded under prime contracts in this category and non-procurement contracts in connection with Federal property or lands and related to offering services for Federal employees, their dependents, or the general public that are not SCA-covered, the Department proposed and is adopting no value threshold for coverage under Executive Order 13706 and part 13.

The Chamber/IFA and the American Benefits Council commented that the Order should not apply to contracts in connection with Federal property or lands and related to offering services for Federal employees, their dependents, or the general public for the same reasons on which they based their objections to coverage of concessions contracts. Because section 6(d)(i)(D) of the Executive Order extends contracts in connection with Federal property or lands and related to offering services for Federal employees, their dependents, or the general public as one of the types of contracts to which the Order applies, 80 FR 54699, the Department does not believe it would be appropriate to exclude such contracts from coverage under part 13.

**Contracts Subject to the Walsh-Healey Public Contracts Act:** Finally, the Department proposed to include as § 13.3(d) a statement that contracts for the manufacturing or furnishing of materials, supplies, articles, or
equipment to the Federal Government that are subject to the Walsh-Healey Public Contracts Act (PCA), 41 U.S.C. 6501 et seq., are not covered by Executive Order 13706 or part 13. As noted in the NPRM, however, where a PCA-covered contract involves a substantial and segregable amount of construction work that is subject to the DBA, employees whose wages are governed by the DBA or FLSA, including those who qualify for an exemption from the FLSA’s minimum wage and overtime provisions, are covered by the Executive Order for the hours that they spend performing work on or in connection with such DBA-covered construction work.

No commenters asked that the Department not exempt contracts subject to the PCA. EEAC asked for clarification about the Order’s application to a contract for the manufacturing or furnishing of materials, supplies, articles, or equipment to the Federal Government for an amount less than $15,000, the threshold amount for PCA coverage. See 48 CFR 22.602. Because such contracts are not one of the four types of covered contracts, the Department did not intend for the NPRM to imply that they could be covered, nor does it intend to cover them in the Final Rule. To make this point more evident, the text of § 13.3(d) has been slightly modified to indicate that PCA-covered contracts are an example of contracts for the manufacturing or furnishing of materials, supplies, articles, or equipment to the Federal Government rather than to suggest that all such contracts are PCA-covered.

Coverage of Subcontracts

As explained in the Minimum Wage Executive Order rulemaking, 79 FR 60657–58, the Department proposed that the same test for determining application of the Executive Order to prime contracts apply to the determination of whether a subcontract is covered by the Order, with the distinction that the value threshold requirements set forth in section 6(e) of the Order do not apply to subcontracts. In other words, the Department proposed that the requirements of the Order apply to a subcontract if the subcontract qualifies as a contract or contract-like instrument under the definition set forth in part 13 and it falls within one of the four specifically enumerated types of contracts set forth in section 6(d)(ii) of the Order and proposed § 13.3(a)(1). Under this approach, only covered subcontracts of covered prime contracts are subject to the requirements of the Executive Order. Therefore, just as the Executive Order does not apply to prime contracts for the manufacturing or furnishing of materials, supplies, articles, or equipment, the Order likewise does not apply to subcontracts for the manufacturing or furnishing of materials, supplies, articles, or equipment. In other words, the Executive Order does not apply to subcontracts for the manufacturing or furnishing of materials, supplies, articles, or equipment between a manufacturer or other supplier and a contractor for use on a covered contract. For example, a subcontract to supply napkins and utensils to a covered prime contractor operating a fast food restaurant on a military base is not a covered subcontract for purposes of this Order. The Executive Order likewise does not apply to contracts under which a contractor orders materials from a construction materials supplier.

The Chamber/IFA asked in their comment that the Department include in the Final Rule “significantly more guidance” regarding the definition of “subcontract.” Although the Department recognizes that the NPRM did not include a definition of “subcontract,” it notes that the SCA, DBA, and Minimum Wage Executive Order regulations all also refer to subcontracts without defining the term. The Department does not believe it is necessary or appropriate to develop a definition for the first time here. In this context as under those statutes, it is generally clear when a contract is a subcontract, such as when a contractor who enters into a covered contract to build a Federal office building also enters into a contract with a separate company to install the windows in that building. It is also generally clear when a contract is not a subcontract, such as when a contractor who enters into a covered contract with the Federal Government to build a Federal office building also enters into a contract with a separate company to repair the contractor’s electronic time system or provide cleaning services at the contractor’s corporate headquarters.

Coverage of Employees

Proposed § 13.3(a)(2) implemented section 6(d)(ii) of Executive Order 13706, which provides that the paid sick leave requirements of the Order only apply if the wages of employees under a covered contract are governed by the DBA, SCA, or FLSA, including employees who qualify for an exemption from the FLSA’s minimum wage and overtime provisions. 80 FR 54699. This coverage provision is distinct from that of Executive Order 13658 in that the Minimum Wage Executive Order did not cover employees who qualify for an exemption from the FLSA’s minimum wage and overtime provisions. See 79 FR 9853.

The NPRM explained the Department’s interpretation that an employee’s wages are governed by the FLSA for purposes of section 6(d)(ii) of the Executive Order and part 13 if the employee is entitled to minimum wage and/or overtime compensation under sections 6 and/or 7 of the FLSA or the employee’s wages are calculated pursuant to special certificates issued under section 14 of the FLSA. See 29 U.S.C. 206, 207, 214. No commenter addressed this interpretation, and the Department reiterates it here.

The Department further interpreted the Order’s explicit coverage of employees who qualify for an exemption from the FLSA’s minimum wage and overtime provisions to mean that the Order and part 13 apply to an employee who would be entitled to minimum wage and/or overtime compensation under the FLSA but for the application of an exemption from the FLSA’s minimum wage and overtime requirements pursuant to section 13 of the Act. See 29 U.S.C. 213. Such employees include those employed in a bona fide executive, administrative, or professional capacity as defined in section 13(a)(1) of the FLSA, 29 U.S.C. 213(a)(1), and 29 CFR part 541.

PSC objected to the application of the Order and regulations to employees who qualify for an exemption from the FLSA’s minimum wage and overtime requirements, asserting that the Department had incorrectly interpreted the Order to include such workers. The Department disagrees with the commenter’s reading of the Executive Order’s text. Section 6(d)(ii) of the Order explains that the paid sick leave requirements apply to covered contracts on which employees’ wages are governed by the DBA, SCA, and FLSA, “including employees who qualify for an exemption from its minimum wage and overtime provisions.” 80 FR 54699.

Consistent with the Department’s interpretation of the analogous provision in the Minimum Wage Executive Order, this language is best understood to mean that employees exempt from FLSA requirements are among the categories of employees who, if they perform work on or in connection with any covered contract, are entitled to accrue and use paid sick leave.

EEAC expressed concern that application of the requirements of the
Executive Order and part 13 to employees who qualify for an exemption from the FLSA’s minimum wage and overtime requirements would create a risk that the employee could no longer properly be treated as exempt under the FLSA. Specifically, the commenter worried that if a contractor tracks such an employee’s hours worked for purposes of paid sick leave accrual or use or if a contractor deducts pay, even if for less than a full day, under a bona fide plan, policy, or practice of providing compensation for loss of salary that results from an absence for which the employee uses paid sick leave, those acts would call into question whether the employee still qualifies for the FLSA exemptions described in 29 CFR part 541. The Department has explained in its guidance regarding 29 CFR part 541, however, that “[c]ertain common payroll and recordkeeping practices do not bring into question whether someone is paid on a salary basis including, e.g., taking deductions from an exempt employee’s accrued leave accounts (regardless of whether to cover partial-day or full-day absences); requiring exempt employees to keep track of and/or record their hours worked; requiring exempt employees to work a specified schedule of hours; and implementing bona fide, across-the-board changes in schedules.” FOH ¶ 22g02(e).

The Department also explained in the NPRM that it interpreted the Order’s reference to employees whose wages are governed by the DBA, including any individual who is employed on a DBA-covered contract and individually registered in a bona fide apprenticeship program registered with the Department’s Employment and Training Administration, Office of Apprenticeship, or with a State Apprenticeship Agency recognized by the Office of Apprenticeship, or with a State Apprenticeship, or with a State Apprenticeship Agency recognized by the Office of Apprenticeship. AGC asked that the Department exclude laborers and mechanics—i.e., those workers who must receive prevailing wages pursuant to the DBA—from the paid sick leave requirements of the Order and part 13. Because section 6(d)(ii) of the Executive Order explicitly refers to employees whose wages are governed by the DBA, the Department does not believe it would be appropriate to accept the commenter’s suggestion. The Department also interpreted the language in section 6(d)(ii) of Executive Order 13706 and proposed § 13.3(a)(2) to extend coverage to employees performing work on or in connection with DBA-covered contracts for construction who are not laborers or mechanics but whose wages are governed by the FLSA as provided above, including those who qualify for an exemption from the FLSA’s minimum wage and overtime provisions. Although such employees are not covered by the DBA itself because they are not “laborers and mechanics,” 40 U.S.C. 3142(b), the NPRM noted that such individuals are employees performing work on or in connection with a contract subject to the Executive Order whose wages are governed by the FLSA, including those who qualify for an exemption from the FLSA’s minimum wage and overtime provisions, and thus they are covered by section 6(d) of the Order. 80 FR 54699.

The NPRM further explained that this coverage extends to employees whose wages are governed by the FLSA, including those who qualify for an exemption from the FLSA’s minimum wage and overtime provisions, who are working on or in connection with DBA-covered contracts regardless of whether such employees are physically present where the work called for in the contract will remain, 29 CFR 5.2(k)(1)(1). The Executive Order applies, however, to DBA-covered contracts and to employees performing work on or in connection with such contracts, including employees whose wages are governed by the FLSA, such as employees who perform work away from the “site of the work.” The Minimum Wage Executive Order rulemaking included the same coverage of employees away from the site of the work and similarly explained that the Order’s text compelled that result. 79 FR 60658–59.

The Executive Order also refers to employees whose wages are governed by the SCA. The SCA provides that “service employees” directly engaged in providing specific services called for by the SCA-covered contract are entitled to SCA prevailing wage rates. 41 U.S.C. 6701(3), 6703; 29 CFR 4.152. The Department explained in the NPRM that these employees are covered by the plain language of section 6(d) of Executive Order 13706, and that it interpreted this category to include individuals who are employed on an SCA contract and individually registered in a bona fide apprenticeship program registered with the Department’s Employment and Training Administration, Office of Apprenticeship, or with a State Apprenticeship Agency recognized by the Office of Apprenticeship. The Department received no comments regarding this interpretation.

The NPRM also noted that under the SCA, “service employees” who do not perform the services required by an SCA-covered contract but whose duties are “necessary to performance of the contract” must be paid at least the FLSA minimum wage. 29 CFR 4.153; see also 41 U.S.C. 6704(a). The Department proposed to interpret the language in section 6(d)(ii) of Executive Order 13706 and proposed § 13.3(a)(2) to extend coverage to this category of employee. It offered as an example an accounting clerk who processes invoices and work orders on an SCA-covered contract for janitorial services; such an employee would likely not qualify as performing services required by the contract (and therefore would not be entitled to SCA prevailing wages), but the clerk would be entitled to at least the FLSA minimum wage. Therefore, the clerk would be covered by the Executive Order. The Department did not receive comments regarding this interpretation.

The Department further noted in the NPRM that some employees perform work on or in connection with SCA-covered contracts but are not “service employees” for purposes of the Act because that term does not include an individual employed in a bona fide executive, administrative, or professional capacity, as those terms are defined in the FLSA regulations at 29 CFR part 541. 41 U.S.C. 6701(3)(C). The Department proposed to cover these employees under section 6(d)(ii) of the Executive Order. For example, a contractor could employ a manager who meets the test for the executive employee exemption under 29 U.S.C. 213(a)(1) and 29 CFR 541.100, who supervises janitors on an SCA-covered contract for cleaning services at a Federal building. Because that manager performs work on or in connection with a covered contract and qualifies for an exemption from the FLSA’s minimum wage and overtime provisions, she would be entitled to paid sick leave as required by Executive Order 13706 and part 13. The Department did not receive comments specifically regarding this explanation, and because it is declining to adopt the suggestion of commenters who asked that part 13 not apply to employees who qualify for an
exemption from the FLSA’s minimum wage and overtime requirements, it also need not make any amendment to this discussion.

The NPRM included the interpretation that where State or local government employees are performing work on or in connection with covered contracts and their wages are governed by the SCA or the FLSA, including employees who qualify for an exemption from the FLSA’s minimum wage and overtime provisions, such employees are entitled to the protections of the Executive Order and part 13. The Department received no comments on this issue and reiterates its position here. As noted in the NPRM, the DBA does not apply to construction performed by State or local government employees.

The Department received additional comments addressing the scope of coverage of employees. The U.S. Small Business Administration’s Office of Advocacy (SBA Advocacy) asked whether those who are part-time, seasonal, immigration visa holders, or students are covered by the Order and part 13. If those employees perform work on or in connection with covered contracts and their wages are governed by the DBA, SCA, or FLSA, including if they qualify for an exemption from the FLSA’s minimum wage and overtime requirements, then they would be covered and entitled to paid sick leave as required by the Order and part 13. The ability of part-time and seasonal workers to accrue and use paid sick leave would be limited, but not eliminated, by their shorter work schedules. No special rules apply to non-citizens or students for purposes of this rulemaking. The U.S. Women’s Chamber of Commerce asked that the paid sick leave requirements be extended to all private-sector employees. Although the Department appreciates that many workers do not have and would benefit from paid sick time, its authority to require employers to provide this benefit extends only to employees working on or in connection with contracts covered by the Executive Order.

On or In Connection With

As proposed, the paid sick leave requirements of Executive Order 13706 and part 13 apply to employees performing work “on or in connection with” covered contracts. As it had in the Minimum Wage Executive Order rulemaking, see 79 FR 60671–72, the Department proposed to interpret these terms in a manner consistent with SCA regulations, see, e.g., 29 CFR 4.150–4.155. In the Final Rule, the Department reiterates these interpretations, which it is including in the definition of employee in § 13.2 for purposes of clarity.

Specifically, the Department explained in the NPRM that employees performing “on” a covered contract are those employees directly performing the specific services called for by the contract, and whether an employee is performing “on” a covered contract would be determined, as explained in the Minimum Wage Executive Order Final Rule, 79 FR 60660, in part by the scope of work or a similar statement set forth in the covered contract that identifies the work (e.g., the services or construction) to be performed under the contract. Under this approach, all laborers and mechanics engaged in the construction of a public building or public work on the site of the work will be regarded as performing “on” a DBA-covered contract, and all service employees performing the specific services called for by an SCA-covered contract will also be regarded as performing “on” a contract governed by the Executive Order. In other words, any employee who is entitled to be paid DBA or SCA prevailing wages would necessarily be performing “on” a covered contract. For purposes of concessions contracts and contracts in connection with Federal property or lands and related to offering services for Federal employees, their dependents, or the general public that are not covered by the SCA, the Department would regard any employee performing the specific services called for by the contract as performing “on” the covered contract.

The Department further noted in the NPRM that it would consider an employee performing “in connection with” a covered contract to be any employee who is performing work activities that are necessary to the performance of a covered contract but who is not directly engaged in performing the specific services called for by the contract itself. For example, any employee who is not a DBA-covered laborers or mechanics but whose services are necessary to the performance of the DBA contract, such as employees who do not directly perform the construction identified in the DBA contract either due to the nature of their non-physical duties and/or because they are not present on the site of the work, would necessarily be performing “in connection with” a covered contract. This standard, also articulated in the Minimum Wage Executive Order rulemaking, was derived from SCA regulations. See 79 FR 60659 (citing 29 CFR 4.150–4.155).

Several commenters addressed this topic. The Small Business Legislative Council (SBLC) and Vigilant suggested that the Department not cover employees working “in connection with” a covered contract, instead limiting coverage to those employees working “on” covered contracts. The Department has considered these comments but is not accepting the commenters’ suggestion for several reasons. First, the Executive Order’s purpose is best fulfilled by extending its coverage to a broader set of employees whose work contributes to fulfillment of Federal contracts than only those who are directly engaged in performing the specific services called for by a covered contract. Furthermore, section 6(d) provides that an employee whose wages are governed by the FLSA, including an employee who qualifies for an exemption from the FLSA’s minimum wage and overtime provisions, is covered regardless of which type of covered contract the employee’s work is performed under—and the employees whose wages are governed by the FLSA under an SCA-covered contract are those who work “in connection with” such contracts. Finally, the coverage of employees working “in connection with” covered contracts is consistent with the Department’s interpretation in the Minimum Wage Executive Order rulemaking. 79 FR 60659–60. SBLC, the American Benefits Council, Chamber/IFA, and the National Association of Manufacturers (NAM) all asked that the Department explain in greater detail which employees would be considered to work “in connection with” covered contracts. Specifically, some of these commenters wanted to know whether a human resources professional involved in the process of recruiting, interviewing, and/or hiring employees who perform on covered contracts would be included. Because finding employees to perform the work of a contract is necessary to the performance of the contract, such an employee would be working “in connection with” the contract for which he was performing such services and, if employed by the contractor, would be entitled to paid sick leave unless the exception described below applies. Similarly, an administrative assistant to an employee who manages the work of a contract could be working “in connection with” a contract depending on his duties. For example, if the assistant orders supplies the manager determines her subordinates need to complete the tasks would work “in connection with” the contract because they are necessary to the performance of.
the contract; on the other hand, if the assistant schedules the manager’s meetings regarding private contracts or orders supplies to be used in the completion of private contracts, that work would not be “in connection with” the contract.

MCAA requested clarification of whether a construction contractor’s off-site fabrication shop employees would be regarded as performing work “in connection with” a covered contract. Such employees would be performing work “in connection with” a covered contract to the extent their services are necessary to the performance of the contract. Methods of calculating or estimating the portion of such employees’ hours worked in connection with covered contracts is discussed below, particularly in the discussion of §13.5(a)(1)(i). As MCAA notes, however, employees performing under contracts for the manufacturing or furnishing of materials, supplies, articles, or equipment to the Federal Government that are subject to the Walsh-Healey Public Contracts Act, 41 U.S.C. 6501 et seq., would not be covered by the Executive Order or part 13 because such contracts are not one of the four types of covered contracts under the Executive Order.

The Department notes that it has included in this Final Rule, as it did in the Minimum Wage Executive Order rulemaking, an exception from coverage for employees who spend a minimal amount of time—less than 20 percent in a workweek—working in connection with covered contracts. (Comments regarding that exclusion, which appears in §13.4(e), are addressed in the discussion of it below.) In other words, the exclusion would apply to an employee who spends only minimal amounts of time performing tasks necessary to the performance of covered contracts—such as if the human resources professional described above interviews two people to work on a covered contract during a workweek in which he interviews 20 people for jobs on a private contract, or if the assistant places a single order for supplies in a workweek in which he spends the remainder of his worktime performing duties related to private contracts. In addition, this analysis occurs on a workweek-by-workweek basis, so if the human resources professional spends most of his time for 2 weeks hiring workers for a covered contract and then the contractor for which he works takes on no new covered contract for 6 months, the contractor would only have to proving that any pre-paid sick leave for those 2 weeks. If at some point during the 6 months, one employee on the covered contract quit and the human resources professional spent 2 hours of his 40-hour workweek sorting through resumes to find a potential replacement, although he performed work in connection with a covered contract, the 20 percent exclusion would apply and he would not need to be permitted to accrue paid sick leave during that workweek.

The Department noted in the NPRM and repeats here that the Order does not extend to employees who are not engaged in working on or in connection with a covered contract. For example, a technician who is hired to repair a DBA contractor’s electronic time system or a janitor who is hired to clean the bathrooms at the DBA contractor’s company headquarters are not covered by the Order because they are not performing the specific duties called for by the contract or other services or work necessary to the performance of the contract. Similarly, the Executive Order would not apply to a landscaper at the home office of an SCA contractor because that employee is not performing the specific duties called for by the SCA contract or other services or work necessary to the performance of the contract. And the Executive Order would not apply to an employee hired by a covered concessionaire to redesign the storefront sign for a snack shop in a National Park unless the redesign of the sign was called for by the concessions contract itself or otherwise necessary to the performance of the contract.

The Department noted in the NPRM and repeats here that because the Order and part 13 do not apply to employees of Federal contractors who do no work on or in connection with a covered contract, a contractor could be required to provide paid sick leave to some of its employees but not others; in other words, it is not the case that because a contractor has one or more Federal contracts, all of its employees or projects are covered.

Geographic Scope

Proposed §13.3(c), which was identical to 29 CFR 10.3(c) as promulgated in the Minimum Wage Executive Order Final Rule, see 79 FR 60723, provided that Executive Order 13706 and part 13 would only apply to contracts with the Federal Government requiring performance in whole or in part within the United States. This interpretation was reflected in the Department’s proposed definition of the term United States, which provided that when used in a geographic sense the United States means the 50 States and the District of Columbia. The Department received no comments on this issue.

Accordingly, the requirements of the Order and part 13 do not apply to contracts with the Federal Government to be performed in their entirety outside the geographical limits of the United States as thus defined. If a contract with the Federal Government is to be performed in part within and in part outside these geographical limits and is otherwise covered by the Executive Order and part 13, however, the requirements of the Order and part 13 would apply with respect to that part of the contract that is performed within the United States, i.e., employees would accrue paid sick leave based on their hours worked on or in connection with covered contracts within the United States, and would likewise be entitled to use accrued paid sick leave while performing work on or in connection with a covered contract within the United States.

As noted in the NPRM, as with other instances described below in which employees perform some work covered by the Executive Order and part 13 and other work that is not, or if some employees working on or in connection with a covered contract do so in the United States and others do so outside the United States, a contractor wishing to comply with the Order’s paid sick leave requirements as to only some employees on a contract or only some of an employee’s hours worked must keep records adequately segregating non-covered work from covered work. If a contractor does not make and maintain such records, in the absence of other proof regarding the nature or location of the work, all of the employees’ hours worked and/or all of the employees working on or in connection with the covered contract will be presumed to be covered by the Order and part 13.

Section 13.4 Exclusions

Proposed §13.4 set forth exclusions from the Executive Order’s requirements, including by implementing the exclusions set forth in section 6(f) of the Order and creating other limited exclusions from coverage as authorized by section 3(a) of the Executive Order. See 80 FR 54698, 54700. Specifically, proposed §13.4(a) through (d) described the limited categories of contractual arrangements with the Federal Government for services or construction excluded from the paid sick leave requirements of the Executive Order and part 13, and proposed §13.4(e) established a narrow category of employees that are excluded from coverage of the Order and part 13. For the reasons explained below, the
Department adopts these provisions as proposed and adds a new, temporary exclusion for a particular category of employees.

Proposed § 13.4(a) implemented the statement in section 6(f) of Executive Order 13706 that the Order does not apply to “grants.” 80 FR 54700. As it did in the Minimum Wage Executive Order rulemaking, see 79 FR 60665–66, the Department interpreted this provision to mean that the paid sick leave requirements of the Executive Order and part 13 do not apply to grants as that term is used in the Federal Grant and Cooperative Agreement Act, 31 U.S.C. 6301 et seq. That statute defines a “grant agreement” as “the legal instrument reflecting a relationship between the United States Government and a State, a local government, or other recipient when—(1) the principal purpose of the relationship is to transfer a thing of value to the State or local government or other recipient to carry out a public purpose of support or stimulation authorized by a law of the United States, by authorizing (by purchase, lease, or barter) property or services for the direct benefit or use of the United States Government; and (2) substantial involvement is not expected between the executive agency and the State, local government, or other recipient when carrying out the activity contemplated in the ‘agreement.’” 31 U.S.C. 6304. Section 2.101 of the FAR similarly excludes “grants,” as defined in the Federal Grant and Cooperative Agreement Act, from its coverage of contracts. 48 CFR 2.101.

Several appellate courts have also adopted this construction of “grants” in defining the term for purposes of other Federal statutory schemes. See, e.g., Chem. Service, Inc. v. Environmental Monitoring Systems Laboratory, 12 F.3d 1256, 1258 (3rd Cir. 1993) (applying same definition of “grants” in interpreting 41 U.S.C. 6702(b) or its implementing regulations, including those at 29 CFR 4.115 through 4.122 and 29 CFR 4.126(a)). Under the proposed provision, if a contract qualified as a grant within the meaning of the Federal Grant and Cooperative Agreement Act, it would be excluded from coverage of Executive Order 13706 and part 13. No commenter requested a change to this provision, and it is adopted as proposed.

Proposed § 13.4(b) implemented the other exclusion set forth in section 6(f) of Executive Order 13706, which states that the Order does not apply to “contracts and agreements with and grants to Indian Tribes under the Indian Self-Determination and Education Assistance Act (Pub. L. 93–638), as amended.” 80 FR 54700. The proposed provision was identical to 29 CFR 10.4(b) as promulgated by the Minimum Wage Executive Order. See 79 FR 60723. Elk Valley Rancheria asked that the Department expand this provision to exclude from the Order and part 13’s coverage all contracts, agreements, and grants with Indian tribes. Because this provision was based on language included in the Executive Order that excludes only a subset of contracts and agreements with Indian Tribes and because expanding the exemption would not advance the Order’s goal of ensuring that employees working on or in connection with other types of covered contracts have access to paid sick leave, the Department adopts § 13.4(b) as proposed.

Proposed § 13.4(c) provided that any procurement contracts for construction that are not subject to the DBA are excluded from coverage of the Executive Order and part 13. The proposed provision was identical to 29 CFR 10.4(c) as promulgated by the Minimum Wage Executive Order Final Rule. See 79 FR 60723. The Department proposed to make coverage of construction contracts under the Executive Order and part 13 consistent with coverage under the DBA in order to assist all interested parties in understanding their rights and obligations under Executive Order 13706. The Department received no comments addressing this provision and adopts it as proposed.

Similarly, proposed § 13.4(d) incorporated the SCA’s exemption of certain service contracts into the exclusionary provisions of the Executive Order. The proposed provision excluded from coverage of the Executive Order and part 13 any contracts for services, except for those expressly covered by § 13.3(a)(1)(ii) or (iv), that are exempted from coverage under the SCA, pursuant to its statutory language at 41 U.S.C. 6702(b) or its implementing regulations, including those at 29 CFR 4.115 through 4.122 and 29 CFR 4.126(b). The Department’s proposal noted that this exemption would not apply if the relevant service contract is expressly included within the Executive Order’s coverage by § 13.3(a)(1)(iii) or (iv). For example, certain types of concessions contracts are excluded from SCA coverage pursuant to 29 CFR 4.133(b) but are explicitly covered by section 6(d)(ii)(C) of the Executive Order and part 13 under § 13.3(a)(1)(iii). Based on the Department’s decision with regard to the coverage of service contracts described above, the Department is adopting this provision as proposed.

Several commenters asked the Department to add additional exclusions for certain types of contracts or contractors. The America Outdoors Association and River Riders asked that the Department exclude businesses that receive two-thirds of their revenues over 6 months of the year (and one-third over the remaining 6 months) and/or businesses whose employees work less than 4 or 6 months per year. These commenters asserted that it would be difficult to document the hours of employees who work in wilderness settings and that the costs of compliance with the Executive Order would be particularly high for seasonal businesses. River & Trail Outfitters also asked that the Department create exemptions for seasonal recreational businesses. After considering these comments, the Department has decided not to grant these requests. No such exemption was included in the Minimum Wage Executive Order rulemaking, and the intent of Executive Order 13706 is best fulfilled by extending its coverage broadly. The Department also notes that the burdens of the Executive Order and part 13 on these contractors will be limited because to the extent employees of these businesses must be paid according to the FLSA or SCA, these contractors are already required to keep records of the employees’ hours worked, and to the extent they are exempt from the FLSA’s minimum wage and overtime requirements pursuant to 29 U.S.C. 213(a)[3], 29 U.S.C. 213(b)[29], or any other FLSA provision, these contractors may avoid the burden of tracking hours worked by using the approximation permitted by § 13.5(a)(1)(iii).

Koga Engineering and Construction, Royal Contracting Company, and the General Contractors Association of Hawaii requested that the Department exempt employers with 50 or fewer employees from the requirements of the Ordinance and part 13, asserting that smaller contractors will not be able to afford the new systems necessary to segregate time employees work on DBA-covered contracts from other contracts. Although the Department is sensitive to the concerns of small businesses, it believes it is most appropriate not to grant this request. Under this rulemaking, prime contracts that do not meet the SCA, DBA, or 41 U.S.C. 1902(a) thresholds are excluded from coverage pursuant to a provision in the Executive Order itself, and the size of the contractor is not relevant to coverage. Furthermore, although the Department understands that small employers may not be able to afford expensive systems, the
Department believes employers can use less expensive means for tracking time, just as smaller contractors may use such means to comply with the SCA, DBA, and FLSA.

Delta Air Lines (Delta) urged the Department to include an express exception for contracts with air carriers, asserting that application of the Order would be complicated in the airline industry and noting that its employees already receive paid sick leave. As Airlines for America (A4A) noted in its comment, many contracts with air carriers are already outside of the scope of the Order’s coverage because they are exempted from the SCA by regulation. And to the extent some such contracts are covered, airlines’ existing paid sick time policies may satisfy the requirements of the Order or airline employees may perform a sufficiently small amount of work in connection with such contracts that the exemption created by § 13.4(e) applies. For these reasons, the Department is not exempting air carriers from the Order and part 13.

The Association of American Railroads (AAR) similarly asked the Department to exempt contracts with entities that are employers for purposes of the Railroad Unemployment Insurance Act, 45 U.S.C. 351 et seq., from the Executive Order’s requirements, noting that most contracts for rail services are SCA-exempt and asserting that it would be extremely difficult to segregate time railroad employees spend working on covered and non-covered contracts. For reasons analogous to those described with respect to the airline industry—many contracts are already excluded from the Order’s coverage and some employees already receive paid sick time or would not be entitled to paid sick leave, and the Department is not persuaded that application of the Order is inappropriate in other circumstances—the Department has decided not to adopt this suggestion.

An individual commenter, Anthony Pannone, contended that the Department should interpret the Executive Order to apply only to contracts under which the contractor receives payment from the Federal Government, and that the Department therefore should exempt contractors that pay rent to, rather than receive appropriated funds from, the Federal Government. The Department declines to adopt this proposed exemption because it is inconsistent with section 6(d) of the Executive Order, which makes clear that the Executive Order applies to contracts that do not involve the payment of appropriated funds, including nonprocurement contracts covered by the SCA and contracts for concessions. Moreover, no such exemption was included in the Minimum Wage Executive Order rulemaking, and the intent of Executive Order 13706 is best fulfilled by extending its coverage broadly.

Vigilant sought clarification regarding whether the Department intended to cover a contract for the sale of timber by the Federal Government, the principal purpose of which is the harvesting and purchase of timber by the contractor but which also includes such incidental activities as building roads to access the timber, gathering debris for later burning or removal, and replanting the harvested areas. Application of the paid sick leave requirements to such a contract will depend, as it does for all other contracts, upon whether they are covered contracts under the Order and part 13—that is, whether they are one of the four types of contracts described in § 13.3(a)(1). To the extent such a contract is subject to the SCA or the DBA, it would be covered under Executive Order 13706. The Department also notes, however, that “[s]o-called timber sales contracts generally are not subject to the [SCA] because normally the services provided under such contracts are incidental to the principal purpose of the contracts.” 29 CFR 4.131(f) (citations omitted); see also Am. Fed’n of Labor & Cong. of Indus. Organizations v. Donovan, 757 F.2d 330, 345–56 (D.C. Cir. 1985) (citing 48 FR 49736, 49751–52 (1983)).

The NPRM also addressed exemptions for categories of employees rather than contracts. Specifically, proposed § 13.4(e) provided that the accrual requirements of part 13 do not apply to employees performing work in connection with covered contracts, i.e., those employees who perform work duties necessary to the performance of the contract but who are not directly engaged in performing the specific work called for by the contract, who spend less than 20 percent of their hours worked in a particular workweek performing work in connection with such contracts. It further provided that this exclusion is inapplicable to employees performing work on covered contracts, i.e., those employees directly engaged in performing the specific work called for by the contract, at any point during the workweek. Finally, it explained that this exclusion is also inapplicable to employees performing work in connection with covered contracts at any point during the workweek in which the employees spend 20 percent or more of their hours worked performing work in connection with a covered contract.

This proposed provision adopted language included in the Minimum Wage Executive Order Final Rule in response to comments expressing concern about new burdens on contractors associated with employees who spend an insubstantial amount of time performing work in connection with covered contracts (in particular, DBA-covered contractors that did not previously segregate hours worked by FLSA-covered employees, including those who were not present on the site of the construction work). 79 FR 60659, 60724 (codified at 29 CFR 10.4(f)). The Department explained in that rulemaking that it expected the exclusion to significantly mitigate the recordkeeping concerns identified by commenters without substantially affecting the Executive Order’s economy and efficiency interests, and noted that it has used a 20 percent threshold for other purposes in the SCA and DBA contexts. 79 FR 60660 (citing 29 CFR 4.125(e)(2); FOH §§ 15e06, 15e10(b), 15e16(c), and 15e19).

SBLC asked that the Department modify the § 13.4(e) exclusion to apply to employees performing work in connection with covered contracts who spend less than 50, rather than 20, percent of their hours worked in a particular workweek performing work in connection with such contracts. The Department has decided not to adopt this suggestion. This exclusion was intended to relieve contractors from potential burden without depriving employees who would otherwise be entitled to accrue and use meaningful amounts of paid sick leave—as would be the case for employees who spend a significant portion of their work time performing covered work—of that benefit. Finally, as noted, this provision is based on an exclusion included in the Minimum Wage Executive Order Final Rule, and the Department believes it would cause confusion to have different tolerances in these otherwise identical provisions that will be applied to many of the same employees. Accordingly, the Department adopts the provision as proposed and reiterates the discussion in the NPRM regarding how the provision will operate.

As explained in the NPRM, like the exclusion created for purposes of the Minimum Wage Executive Order rulemaking, 79 FR 60659–62, this exclusion will not apply to any employee performing “on,” rather than “in connection with,” a covered contract at any point during the workweek. If an employee spends any time performing work on a covered
Similarly, any employees performing work in connection with an SCA contract who are not entitled to SCA prevailing wages but are, because they perform work “in connection with” an SCA-covered contract, entitled to at least the FLSA minimum wage could fall within the scope of the exclusion provided their work falls below the 20 percent threshold. For example, the exclusion could apply to an accounting clerk who processes a few invoices for SCA contracts out of hundreds of other invoices for non-covered contracts during the workweek or a human resources employee who assists for short periods of time in the hiring of the employees performing work on the SCA-covered contract in addition to the hiring of employees on other non-covered projects.

With respect to concessions contracts and contracts in connection with Federal property or lands and related to offering services, the § 13.4(e) exclusion could apply to any employees performing work in connection with such contracts at any time directly engaged in performing the specific services identified in the contract but whose services or work duties are necessary to the performance of the covered contract. One example of an employee who could qualify for this exclusion is a clerk who handles the payroll for a child care center that leases space in a Federal building as well as the center’s other locations that are not covered by the Executive Order and thus does not spend 20 percent or more of his time handling payroll for the child care center in the Federal building.

Importantly, as noted in the NPRM and the Minimum Wage Executive Order rulemaking, 79 FR 60661–62, a contractor seeking to rely on this exclusion must correctly determine the hours worked, make and maintain records (or have other affirmative proof) that the employee did not work “on” a covered contract, and appropriately segregate the hours worked by the employee in connection with the covered contract from other work not subject to the Executive Order. A contractor may apply this exception on the basis of an estimate of the employee’s work time in connection with covered contracts, as discussed in more detail with respect to the final text of § 13.5(a)(1)(i), but in that case, the estimate must be reasonable and based on verifiable information. In the absence of records or other proof demonstrating that an employee did not work “on” a covered contract and adequately segregating non-covered work from the work performed in connection with a covered contract (or proof that the estimate of the employee’s work time in connection with covered contracts is reasonable and based on verifiable information), the exclusion will not apply, and employees who work in connection with a covered contract will be presumed to have spent all work time performing such work throughout the workweek.

The quantum of affirmative proof necessary to support reliance on the exclusion will vary with the circumstances. For example, it may require considerably less affirmative proof to satisfy the § 13.4(e) exclusion with respect to an accounting clerk who only occasionally processes an SCA-contract-related invoice than would be necessary to establish the exclusion with respect to a security guard who works on a DBA-covered site for at least several hours each week.

Finally, as noted in the discussion of this exclusion in the NPRM, in calculating hours worked by a particular employee in connection with covered contracts for purposes of determining whether this exclusion may apply, contractors must determine the aggregate amount of hours worked on or in connection with covered contracts in a given workweek by that employee. For example, if an administrative assistant works for a single employer 40 hours per week and spends 2 hours each week handling payroll for each of four separate SCA contracts, the 8 hours that the employee spends performing work in connection with the four covered contracts must be aggregated for each workweek in order to determine whether the exclusion applies. In this case, the exclusion would not apply because the employee’s hours worked in connection with the SCA contracts constitute 20 percent of her total hours worked for that workweek. As a result, the 8 hours that the employee spends performing work in connection with the four covered contracts each workweek would count toward the accrual of paid sick leave.

The Department also received several requests regarding the application of Executive Order 13706 and part 13 to employees performing work on or in connection with covered contracts whose conditions of employment are governed by a CBA. Seyfarth Shaw suggested exempting a contract from the Executive Order’s requirements if a CBA applies to the work performed under the contract; the American Benefits Council and the Chamber/IFA suggested exempting a contract from the Executive Order’s requirements if a CBA that provides for at least 7 days of paid sick time applies to the work performed...
under the contract; the AFL–CIO as well as the Chamber/IFA suggested exempting a contract from the Executive Order’s requirements if a CBA applies to the work performed under the contract until after the current CBA expires, so that negotiations taking the Executive Order into account can occur; and Seyfarth Shaw offered as an alternative exempting a contract from the Executive Order’s requirements if a CBA that explicitly waives the rights in the Executive Order applies to the work performed under the contract. Other commenters, such as the Sheet Metal and Air Conditioning Contractors’ National Association (SMACNA) and MCAA, also suggested exempting contracts to which CBAs apply, but only with respect to narrower sets of construction contracts.

After careful consideration of these comments, the Department has included a new, temporary exclusion from the requirements of the Order and part 13 for employees whose work is governed by certain CBAs. Specifically, the new provision, §13.4(f), provides that if a CBA ratified before September 30, 2016 applies to an employee’s work performed on or in connection with a covered contract and provides the employee with at least 56 hours (or 7 days) of paid sick time (or paid time off that may be used, among other purposes, for reasons related to sickness or health care) each year, the requirements of the Executive Order and part 13 do not apply to the employee until the earlier of the date the agreement terminates or January 1, 2020. This provision balances the importance of ensuring that the Executive Order applies to all employees entitled to its benefits promptly against the complications that could arise where an existing CBA provides for paid sick time in a manner that is similar to, but not sufficient to meet the requirements of, the paid sick leave provision of part 13. These complications are significant in circumstances involving CBAs because the agreement will limit a contractor’s ability to unilaterally change the terms of the leave it requires to be provided. Similarly, the new §13.4(f) provides that if a CBA ratified before September 30, 2016 applies to an employee’s work performed on or in connection with a covered contract and provides the employee with paid sick time (or paid time off that may be used, among other purposes, for reasons related to sickness or health care) each year, but the amount provided under the CBA is less than 56 hours (or 7 days, if the CBA refers to days rather than hours), the contractor must provide covered employees with the difference between 56 hours (or 7 days) and the amount provided under the existing CBA. For example, if a CBA ratified before September 30, 2016 applies to an employee’s work performed on or in connection with a covered contract and provides the employee with 20 hours of paid sick time each year, the contractor, in order to avail itself of the §13.4(f) exemption, would be required under this Final Rule to allow the employee to accrue and use an additional 36 hours of paid sick time in that year, for a total of 56 hours. A contractor must provide such “top up” leave in a manner consistent with either the provisions of the Executive Order and part 13 or the terms and conditions of its CBA.

This temporary exclusion applies to employees rather than contracts because on any covered contract, some employees’ work might be governed by a CBA while others’ work is not. For example, laborers and mechanics working on a DBA contract might be members of a union that has negotiated a CBA with the contractor, but the administrative staff performing work in connection with the contract might not be covered by the CBA. Or a CBA could apply to janitors working on an SCA contract but not their supervisor. As to employees to whom a CBA does not apply, a contractor must provide access to paid sick leave without reliance on this exception.

In addition, the temporary exclusion applies to any paid sick time policy or other paid time off policy under a CBA that allows employees to take leave for reasons related to sickness or health care. Such policies need not permit employees to be absent for all of the reasons required under §13.5(c)(1); for example, if a paid sick time policy under a CBA allowed an employee to use leave if she is sick but not to care for family members, or if a paid sick time policy does not permit leave for reasons related to domestic violence, sexual assault, or stalking other than seeking health care, the exclusion can still apply. Adjustments to the reasons for which an employee may use paid leave are among those changes that a contractor that is party to a CBA might be unable to make unilaterally.

Finally, the Department notes it has included a date—January 1, 2020—by which all contractors taking advantage of this limited exception must come into compliance with the paid sick leave requirements regardless of whether an applicable CBA has yet terminated. The Department believes delaying the application of the Executive Order by more than 3 years after the effective date of this rulemaking, which could occur if a CBA with an extended term is in place, is inappropriate, and parties to the CBA will have 3 full years to take any actions necessary to prepare for compliance.

SHRM/CUPA–HR also asked in their comment for a different exception for certain employees. They requested that the Department exclude graduate research assistants, i.e., students who perform research under grants or contracts as part of the pursuit of an advanced degree, from the requirements of the Order and part 13, asserting that it would be problematic to cover these workers because it would be difficult to segregate their covered and non-covered hours worked. The Department does not believe a provision specific to graduate research assistants is necessary or appropriate in this context. Application of the paid sick leave requirements to such assistants will depend, as it does for all other workers, upon whether they meet the definition of employee under part 13—that is, whether their wages are governed by the SCA, DBA, or FLSA, including if they qualify for an exemption from the FLSA’s minimum wage and overtime requirements—and are performing work on or in connection with a covered contract. Graduate research assistants, whether or not they qualify as employees as defined for purposes of the Order, may often perform work on or in connection with Federal grants that are excluded from the Order’s coverage. To the extent such assistants’ work is covered by the Order and part 13 and therefore the commenters’ concern about segregating time is relevant, the Department notes that it has created additional flexibility for contractors who perform research under grants or contracts as part of the pursuit of an advanced degree. The Department noted in the NPRM that the Minimum Wage Executive Order rulemaking contained additional exclusions for certain categories of employees that were not replicated in the proposed rule. Specifically, under the Minimum Wage Executive Order regulations, employees whose wages are not governed by section 206(a)(1) of the
be added together to determine how much paid sick leave the employee has accrued. If in one pay period the employee spent 20 hours at Site A and 10 hours at Site B, she would have accrued 1 hour of paid sick leave at the end of that pay period; if in the next pay period the employee spent 30 hours at Site C, she would then have a total accrual of 2 hours of paid sick leave. As for an employee who falls within the §13.4(e) exclusion in some workweeks but not others, only the employee’s hours worked on or in connection with covered contracts during workweeks in which the exclusion does not apply would count toward accrual of paid sick leave. The Department received no comments regarding these portions of §13.5(a)(1) and adopts them as proposed.

Proposed §13.5(a)(1)(i) explained that for purposes of Executive Order 13706 and part 13, “hours worked” would include all time for which an employee is or should be paid, meaning time an employee spends working or in paid time off status, including time when the employee is using paid sick leave or any other paid time off provided by the contractor. The proposed definition was different from the use of the term “hours worked” in other contexts and was to apply only for purposes of the Executive Order. It included (but was broader than) all time considered “hours worked” for purposes of the SCA and the FLSA, i.e., all time an employee is suffered or permitted to work. 29 CFR 4.178; 29 CFR 785.11.

The Department explained that its proposed interpretation of “hours worked” under Executive Order 13706 to additionally include paid time off, although distinct from the FLSA and SCA definitions of the term, was analogous to the accrual of vacation leave under the SCA, where absences from work (with or without pay) generally count toward satisfaction of length of service requirements for vacation benefits. 29 CFR 4.173(b)(1). It was also consistent with the OPM regulations regarding leave accrual by federal employees, which provides that an employee accrues leave each pay period based on time she is in “a pay status.” 5 CFR 630.202(a). The Department’s proposed interpretation reflected its view that basing paid sick leave accrual on all time an employee is in pay status, rather than merely on when the employee is suffered or permitted to work, would be administratively easier (or no more difficult) for contractors to implement. The Department further noted in the NPRM that this interpretation generally would have minimal impact on the rate of an employee’s accrual of paid sick leave and, with respect to many employees who work at least full time (or potentially even less) each week on or in connection with covered contracts, would have no impact on the total amount of paid sick leave accrued per year because such employees will reach the maximum 56 hours within each accrual year regardless of whether paid time off is included.

Many commenters, including the National Partnership, CAF Women’s Initiative, NELP, NETWORK Lobby for Catholic Social Justice (NETWORK), Women Employed, and the AFL-CIO expressed support for the NPRM’s definition of hours worked. But other commenters opposed it: Koga Engineering and Construction, Royal Contracting Company, Master Sheet Metal, Inc., the General Contractors Association of Hawaii, and Vigilant wrote that it is a basic premise of accruing leave that workers earn time off by working, EEAC believed it would be appropriate for “hours worked” to have the same meaning for purposes of this rulemaking as it does in the FMLA context; the SBLC believed the proposed definition would discourage employers from having generous time off policies; and the American Benefits Council, Seyfarth Shaw, and the Chamber/IFA commented that the proposed definition would be confusing to administer because it differs from State and local paid sick time laws.

After considering the input received from commenters, the Department has decided to change the definition of hours worked such that it does not include paid time off. Instead, the term “hours worked” will have the same meaning for purposes of Executive Order 13706 and part 13 as it does under the Fair Labor Standards Act, as described in 29 CFR part 785. The Department anticipates that this change will make administration of paid sick leave easier for those contractors who are familiar with this definition under other statutes and/or already apply it for purposes of complying with a State or local paid sick time law. Any contractor that prefers to calculate its employees’ paid sick leave accrual based on hours worked and hours spent in paid time off status is permitted, though not required, to do so.

As it did in the NPRM, the Department reiterates that a contractor would only be required to count hours worked on or in connection with a covered contract, rather than hours worked on or in connection with a non-covered contract, toward paid sick leave accrual. For example, if an employee works on an SCA-covered contract for
contracts, consistent with the treatment of hours in connection with covered contracts. This proposed policy was
or in connection with a covered contract. The Department proposed to require contractors who wish to distinguish covered and non-covered hours worked for purposes of paid sick leave accrual to keep records that clearly reflect that distinction.

Specifically, proposed § 13.5(a)(1)(i) explained that to properly exclude time spent on non-covered work from an employee’s hours worked that count toward the accrual of paid sick leave, a contractor must accurately identify in its records the employee’s covered and non-covered hours worked. The Department’s proposal explained that, in the absence of records or other proof adequately segregating the time—whether because of a contractor’s inadequate recordkeeping, because the contractor preferred permitting the employee to more rapidly accrue paid sick leave rather than keeping such records, or for another reason—the employee would be presumed to have spent all paid time performing work on or in connection with a covered contract. This proposed policy was consistent with the treatment of hours worked on SCA- and non-SCA-covered contracts, see 29 CFR 4.178, 4.179, as well as the treatment of covered versus non-covered time under the Minimum Wage Executive Order rulemaking, see 79 FR 60660–61, 60672.

Several commenters expressed concern about segregating employees’ covered and non-covered work time. SBA Advocacy wrote that such segregation would be difficult, in particular in the construction industry in which employees move between work on different contracts, for seasonal recreational businesses in which employees work in remote locations, and for contractors in general as to employees who do not work directly on contracts, such as accounting, delivery, and management staff. DLA Piper and the HR Policy Association asked for more information about the type of proof that would be sufficient; DLA Piper asked whether, for example, a list or copies of all invoices processed by an accounting clerk, including some that relate to covered contracts, would be required. EEAC, PSC, and DLA Piper asked if, with respect to employees working in connection with covered contracts (such as receptionists and mail room clerks), contractors would be permitted to make estimates based on a contractor’s revenue or some other basis.

The Department believes that in most circumstances it will be simple, or at least practicable, to distinguish an employee’s work on a covered contract from time spent on non-covered contracts, such as when a mechanic spends some time at a site of construction on a DBA-covered contract and some time at a site of construction on a private contract. But it appreciates that segregation of time will be more complicated in circumstances in which an employee works only in connection with covered contracts, such as, as the commenters noted, when a receptionist answers phone calls, or a mail room clerk sorts mail, regarding numerous projects, or when, as MCAA and SMACNA recognized, a contractor has employees in its off-site fabrication shop prefabricate pipe assemblies or ducts for delivery and installation at projects undertaken pursuant to both covered and non-covered contracts. Therefore, the Department has added to § 13.5(a)(1)(i) a statement allowing a contractor to estimate the portion of an employee’s hours worked spent in connection with (but not on) covered contracts provided the estimate is reasonable and based on verifiable information.

As suggested by the commenters, such information could include the portion of a contractor’s total revenue that derives from covered contracts if it is reasonable to assume that an employee’s work time is roughly evenly divided across all of the contractor’s work. If, for example, a contractor derives half of its revenue from covered contracts, the contractor would likely have a reasonable basis for estimating that employees in the mail room of the contractor’s corporate headquarters spend half of their hours worked in connection with covered contracts. But if that contractor has offices in two locations, and all of its work at one of those locations pertains to covered contracts, the contractor could not reasonably assume that the staff in the mail room at that location worked in connection with covered contracts only 50 percent of the time.

An estimate of this type based on information other than a contractor’s revenue could also be appropriate. For example, a contractor could estimate that a receptionist who handles incoming calls for a group of other employees who work on covered contracts during, on average, one third of their work time also spends one third of her hours worked in connection with covered contracts. Like the basis for an estimate, the period of time for which an estimate could appropriately be used would also vary depending upon the circumstances; for example, a contractor that claims the § 13.4(e) exclusion for its receptionist because at the time, only 5 percent of its revenue derived from covered contracts would not be able to continue to do so if the contractor is awarded a new covered contract that will account for 40 percent of its revenue for the next year.

Proposed § 13.5(a)(1)(ii) required a contractor to calculate an employee’s accrual of paid sick leave no less frequently than at the conclusion of each workweek. The Department explained in the NPRM that it considered “workweek” to have the meaning explained in the FLSA regulations, i.e., a fixed and regularly recurring period of 168 hours—seven consecutive 24-hour periods—that need not coincide with the calendar week but must generally remain fixed for each employee. See 29 CFR 778.105. NECA, SBLIC, Vigilant, and the National Defense Industrial Association (NDIA) urged the Department not to adopt this provision as proposed, asserting that contractors’ systems are configured to account for time each pay period rather than as frequently as once a week.

Several of these commenters requested that instead, the Department require accrual at the end of each pay period or, if contractors’ pay periods occur less frequently than twice a month, then at least that often. The Department is adjusting the regulatory text based on these comments. Rather than requiring that paid sick leave accrue no less frequently than at the end of each workweek, § 13.5(a)(1)(ii) will require that accrual occur no less frequently than at the conclusion of each pay period or each month, whichever interval is shorter. This provision has no effect on a contractor’s obligation under the SCA to have semimonthly (or more frequent) pay periods, see 29 CFR 4.6(h), or under the DBA to have weekly pay periods, see 40 U.S.C. 3142(c)(1), 29 CFR 5.5(a)(3). The Department anticipates that this added flexibility will benefit those contractors who currently track hours worked less frequently than each week, although it notes that contractors may still choose to calculate paid sick leave accrual each week, and will be required to do so if they have weekly pay periods. This
change is also consistent with modifications to proposed § 13.5(a)(2), described below.

Proposed § 13.5(a)(1)(ii) also provided that a contractor was not required to allow employees to accrue paid sick leave in increments smaller than 1 hour for completion of any fraction of 30 hours worked. In other words, under the proposal, an employee could accrue 1 hour of paid sick leave after working a full 30 hours, rather than accruing any fraction of an hour for any fraction of 30 hours worked. Proposed § 13.5(a)(1)(ii) further required any remaining fraction of 30 hours to be added to hours worked for the same contractor in subsequent workweeks to reach the next 30 hours worked provided that the next workweek in which the employee performs on or in connection with a covered contract occurs within the same accrual year. (The term accrual year is defined in proposed § 13.2 and addressed in the discussion of § 13.5(b)(1) below.) Vigilant expressed approval of these provisions, and the Department adopts them essentially as proposed, although the references to “workweeks” have been changed to “pay periods” for consistency with the change to the first sentence of the provision.

The NPRM included an example of how § 13.5(a)(1)(iii) would operate in practice. The Department provides a similar example here, although it has modified the specifics to reflect how accrual would occur at the end of a pay period rather than after each workweek. Assume a contractor had 2-week pay periods, and an employee works on a covered concessions contract for 80 hours in pay period 1 and 35 hours in pay period 2. At the conclusion of pay period 1, the employee will have accrued 2 hours of paid sick leave based on his first 60 hours worked and, unless the employer chooses to allow accrual in increments smaller than 1 hour, will not have accrued any more paid sick leave based on the additional 20 hours he worked in that pay period. At the conclusion of pay period 2, the employee will have accrued 1 additional hour of paid sick leave based on the remaining 20 hours from pay period 1 plus his first 10 hours worked in pay period 2. The employee need not have accrued any paid sick leave based on the remaining 25 hours worked during pay period 2 (because 25 is less than 30). If the employee spends several subsequent weeks working for the contractor on a private contract and then returns to working on the covered concessions contract, under this provision, those remaining 25 hours would be added to his subsequent hours worked on the concessions contract for purposes of reaching his next accrued hour of paid sick leave (provided his return to the covered concessions contract occurred within the same accrual year as pay period 2). As noted in the proposal, an employer might wish to permit employees to accrue paid sick leave in fractions of an hour, perhaps because it finds the related recordkeeping less burdensome than keeping track of hours worked from previous workweeks, it allows for use of paid sick leave in increments smaller than 1 hour, or for some other reason. An employer may elect to do so provided all hours worked for the contractor on or in connection with covered contracts within the accrual year are counted toward an employee’s paid sick leave accrual.

Proposed § 13.5(a)(1)(iii) addressed the accrual of paid sick leave for employees as to whom contractors are not obligated by another statute to keep records of hours worked. As the Department explained in the NPRM, for most employees on covered contracts, such as service employees on SCA-covered contracts, laborers and mechanics on DBA-covered contracts, and all employees performing work on or in connection with any covered contract whose wages are governed by the FLSA, contractors are already obligated by the SCA, DBA, or FLSA to keep records of employees’ hours worked. 29 CFR 4.6(g)(1)(iii), 4.185 (SCA); 29 CFR 5.5(a)(3)(i) (DBA); 29 CFR 516.2(a)(7), 516.30(a) (FLSA). Therefore, as to those employees, contractors are already collecting the information necessary to calculate the accrual of paid sick leave. But for those employees who are employed in a bona fide executive, administrative, or professional capacity, as those terms are defined in 29 CFR part 541, contractors are not currently required by the SCA, DBA, or FLSA to keep such records. See 29 CFR 4.6(g)(1)(iii), 4.156, 4.185 (requiring that records be kept for “service employees” to whom the SCA applies and excluding from that category “persons employed in an executive, administrative, or professional capacity as those terms are defined in 29 CFR part 541”); 29 CFR 5.5(a)(3)(i), 5.2(m) (requiring that records be kept for “laborers and mechanics” to whom the DBA applies and excluding from those terms “[p]ersons employed in a bona fide executive, administrative, or professional capacity as defined in part 541 of this title”); 29 CFR 516.3 (excluding employers of “each employee in a bona fide executive, administrative, or professional capacity . . . as defined in part 541 of this chapter” from the FLSA requirement to maintain and preserve records of hours worked).

In order not to impose a new recordkeeping burden on employers of such employees, proposed § 13.5(a)(1)(iii) allowed contractors to choose to continue not to keep records of such employees’ hours worked, but instead to allow the employees to accrue paid sick leave as though the employees were working on or in connection with a covered contract for 40 hours per week. Contractors could, under the proposed provision, choose to calculate paid sick leave accrual by tracking the employee’s actual hours worked provided they permitted the relevant employees to accrue paid sick leave based on their actual hours worked consistently across workweeks rather than, for example, using the 40 hours assumption in workweeks during which an employee works more than 40 hours but not those in which the employee works fewer. Under the proposed approach, the Department would apply these principles to any employees exempt from the FLSA’s minimum wage and overtime provisions and not covered by the SCA or DBA. The Department explained in the NPRM that this approach is consistent with FMLA recordkeeping regulations, under which there is a general requirement that FMLA-covered employers keep records of hours worked by employees eligible for FMLA leave but an exception with respect to employees who are not covered by or are exempt from the FLSA; employers of those employees need not keep such records so long as the employer presumes that the employees have met the hours requirement for FMLA eligibility. See 29 CFR 825.500(c)(1), (f). The Department received a supportive comment from Vigilant regarding the proposal to allow contractors to use this 40 hours assumption, and it adopts it as proposed.

Proposed § 13.5(a)(1)(iii) also provided that if an employee as to whom an employer is not otherwise required to keep a record of hours worked regularly works fewer than 40 hours per week on or in connection with covered contracts, whether because the employee’s time is split between covered and non-covered contracts or because the employee is part-time, the contractor could allow the employee to accrue paid sick leave based on the employee’s typical number of hours worked on covered contracts per workweek. The Department further explained in the NPRM that, although the contractor need not keep records of
the employee’s hours worked each week, to use a number less than 40 for this purpose, the contractor was required to have probative evidence of the employee’s typical number of covered hours worked, such as payroll records showing that an employee who performs on a covered contract was paid for only 20 hours per week by the contractor.

PSC expressed concern about “intrusive second-guessing by [the Department’s] auditors” regarding the determination of an employee’s usual time spent on or in connection with covered contracts and suggested that the Department revise this provision to state that it would presume a contractor’s estimate of the portion of time an employee exempt from the FLSA’s minimum wage and overtime requirements spends working in connection with covered contracts is reasonable unless countered by a preponderance of the evidence. The Department is not adopting this suggestion because of the incentives it would create; more specifically, it would likely reward any contractor that chose not to keep records that could be the basis for a sound determination of how much time employees spend working in connection with covered contracts.

The Department has, however, modified the proposed regulatory text to alleviate the concerns of PSC and other commenters regarding the tracking of time of employees who work exclusively in connection with, rather than on, covered contracts. Specifically, § 13.5(a)(1)(iii) now provides that a contractor must have probative evidence to support using an assumed typical number of hours worked on or in connection with covered contracts that is less than 40 or, if the employee performs work in connection with rather than on covered contracts, a contractor may estimate the employee’s typical number of hours worked in connection with covered contracts per workweek provided the estimate is reasonable and based on verifiable information. This language is the same as that used in § 13.5(a)(1)(i) with respect to employees as to whom contractors are obligated to track hours worked and is intended to provide the same flexibility for contractors as to employees who qualify for an exemption from the FLSA’s minimum wage and overtime requirements.

Proposed § 13.5(a)(2) required a contractor to inform an employee, in writing, of the amount of paid sick leave that the employee has accrued but not used (i) no less than monthly, (ii) at any time when the employee makes a request to use paid sick leave, (iii) upon the employee’s request for such information, but no more often than once a week, (iv) upon a separation from employment, and (v) upon reinstatement of paid sick leave pursuant to § 13.5(b)(3). Some of these requirements were based on FMLA regulations regarding notification to an employee of how much leave will be or has been counted against her FMLA entitlement, see 29 CFR 825.300(d)(4), but they were modified to account for the differences between FMLA leave and paid sick leave, including in the method of accrual. The fourth and fifth requirements were meant to ensure that employees who may be and ultimately are rehired by a contractor know how much paid sick leave they should and do have available upon such rehiring. In the NPRM, the Department explained that it was important that employees be able to determine whether absences will be paid (so they can, for example, schedule their own or their family members’ doctors’ appointments to occur after they have accrued sufficient paid sick leave), and that these notification requirements would not create a significant burden for contractors.

CFD, NWLC, the National Council of Jewish Women, Greater New Orleans Section, the National Association of Social Workers, the State Innovation Exchange, and the Coalition on Human Needs wrote that these various requirements would ensure that employees have the information they need to effectively use paid sick leave, and the Seattle Office of Labor Standards noted in particular that if workers cannot access information about their leave balances, they are less likely to use the benefit even when they are ill. The Chamber/IFA, the American Council of Engineering Companies (ACEC), NDIA, NECA, SBLC, Seyfarth Shaw, and the ERISA Industry Committee added that under the proposed modification, weekly notifications were too frequent and that responding to employee requests for accrual amounts would generate burdensome work and paperwork. Commenters offered varied alternative suggestions: IEC asked that the Department give contractors full discretion over when to inform employees how much paid sick leave they have accrued; EEAC and Vigilant requested that notifications be required quarterly; PSC believed notification in the ordinary course of payroll administration should be sufficient; and NDIA and Delta indicated that notification each pay period or at least twice a month would be preferable.

The Department has modified proposed § 13.5(a)(2) in light of these comments. Specifically, under the regulatory text as adopted, contractors will be required to inform each employee, in writing, of the amount of paid sick leave the employee has accrued but not used no less than once per pay period or per month, whichever interval is shorter, as well as upon a separation from employment and upon reinstatement of paid sick leave pursuant to paragraph (b)(4) of this section. The Department believes this revised provision appropriately balances the need to ensure that employees are informed about the paid sick leave they have available for use with the interests of contractors in administering paid sick leave in a manner that is not unnecessarily burdensome. As was true of a corresponding change to § 13.5(a)(iii), this provision has no effect on a contractor’s obligation under the SCA to have at least semimonthly pay periods, see 29 CFR 46.5(h), or under the DBA to have weekly pay periods, see 40 U.S.C. 3142(c)(1), 29 CFR 5.5(a)(3). The Department also notes that contractors are free to provide notifications to employees more frequently than is required, including in response to employee requests.

PSC, EEAC and Roffman Horvitz, PLC asked in their comments that the Department allow contractors to satisfy the requirements of § 13.5(a)(2) with a self-service portal employees can access to check their paid sick leave accrual, as long as the contractor keeps the information updated. The Department intended its proposal to be understood to accommodate such a system. Indeed, in the discussion of proposed § 13.5(a)(2) in the NPRM, the Department noted that a contractor’s existing procedure for informing employees of their available paid time off, such as notification accompanying each paycheck or an online system an employee can check at any time, could be used to satisfy or partially satisfy these accrual notification requirements provided it is written and clearly indicates the amount of paid sick leave an employee has accrued separately from indicating amounts of other types of paid time off available (except where the employer’s paid time off policy satisfies the requirements of § 13.5(f)(5), described below). If the contractor customarily corresponds with or makes information available to its employees by electronic means, “written” for this purpose includes electronic transmissions. The Department has inserted language to this effect into the
regulatory text to eliminate any confusion.

Finally, Vigilant commented with respect to proposed §13.5(a)(2) that verbal notifications of an employee’s amount of accrued paid sick leave should be sufficient. The Department believes written notifications are more useful for employees and not particularly burdensome for contractors, particularly because the requirement is modified to coincide with pay periods, when contractors will already be providing information to employees, and because the requirement may be satisfied by electronic communication, such as by email or an appropriate self-service portal. Accordingly, it has not modified this provision as requested.

Proposed §13.5(a)(3) permitted a contractor to choose to provide an employee with at least 56 hours of paid sick leave at the beginning of each accrual year rather than allowing the employee to accrue such leave based on hours worked over time. As proposed, it further provided that in such circumstances, the contractor need not comply with the accrual requirements described in §13.5(a)(1). The proposed section required the contractor to allow carryover of paid sick leave as required by §13.5(b)(2), and although the contractor could limit the amount of paid sick leave an employee may carry over to no less than 56 hours, the contractor could not limit the amount of paid sick leave an employee has available for use at any point as is otherwise permitted by §13.5(b)(3). The NPRM provided an example to illustrate the operation of these principles: if a contractor exercises this option and an employee carries over 16 hours of paid sick leave from one accrual year to the next (as described in the discussion of §13.5(b)(2) below), the contractor must permit the employee to have 72 hours (16 hours plus 56 hours) of paid sick leave available for use as of the beginning of the second accrual year (because the contractor is not permitted to limit an employee’s paid sick leave at any point in time as described in the discussion of §13.5(b)(3) below).

Under §13.5(c)(4), described below, the contractor may not limit the employee’s use of that paid sick leave in the second (or any) accrual year, but the employee’s use can effectively be limited if the contractor sets, as permitted by this proposed provision, a limit on the amount of paid sick leave an employee can carry over from year to year; in the example, if the employee who had 72 hours of paid sick leave at the beginning of accrual year 2 did not use any leave in that year, she could be permitted to carry over only 56 hours into accrual year 3. The Department explained in the NPRM that it believed this option would be beneficial to contractors that find the tracking of hours worked and/or calculations of paid sick leave accrual to be burdensome and would provide employees with the full amount of paid sick leave contemplated by the Executive Order at the beginning of each accrual year.

EEAC, the SBLC, Seyfarth Shaw, the HR Policy Association, the American Benefits Council, the ERISA Industry Committee, SHRM/CUPA-HR, and the Chamber/IFA all generally supported proposed §13.5(a)(3) because they agree it is an advantage for contractors to be excused from tracking paid sick leave accrual, but these commenters strongly objected to the requirement under the proposed provision to carry over paid sick leave that was not used in one accrual year into the next. The commenters asserted that employees would unfairly benefit from having more than 56 hours of paid sick leave available at once and that under State and local paid sick time laws, the option to “frontload” leave benefits employees because they do not have to wait to accrue paid sick time before being able to use it and, in turn, benefits employers because they do not have to permit carryover. The NYC Department of Consumer Affairs and AFL-CIO also supported the proposed provision, noting that it was helpful, especially for small employers, to have the flexibility it creates, and did not suggest that it be modified.

After carefully considering these comments, the Department is not modifying the proposed provision as requested (although some of the proposed text has become §13.5(a)(3)(i) because of other additions to the provision that constitute new subparagraphs (ii) and (iii), described below). First and most significantly, the Executive Order itself requires that paid sick leave carry over from one year to the next. 80 FR 54697. Second, the Department believes that this option, as designed, benefits contractors by permitting them to avoid the obligation to track paid sick leave accrual, which requires accounting for an employee’s hours worked and performing calculations each pay period, and it would not be appropriate to also allow contractors who elect to use this option to reduce the total amount of paid sick leave an employee could accrue and use. Specifically, if a contractor does not exercise this option and as in the example described above, an employee carries over 16 hours of paid sick leave from one accrual year to the next, if the employee uses those 16 hours, he must be permitted to accrue 56 more, meaning he could (if he has reason to use the paid sick leave and enough hours worked to accrue the maximum number of paid sick leave hours the contractor permits) have 72 total hours of paid sick leave available for use over the course of accrual year 2—just as the employee in the example above has 72 hours (that she also might or might not have reason to use during the year). Comments also asked for specific additions to the proposed provision. EEAC noted that the NPRM did not address circumstances in which an employee starts work for a contractor who has chosen this option in the middle of an accrual year and suggested the Department provide that the employee should begin with as much paid sick leave as she would have been able to accrue based on her typical, predicted hours worked in the remainder of the year. The Department appreciates that these circumstances could arise and that it will not always be appropriate to provide a new employee with 56 hours of paid sick leave. Accordingly, it is adding as §13.5(a)(3)(ii) regulatory text providing that if a contractor chooses to use the option described in §13.5(a)(3) and the contractor hires an employee or newly assigns the employee to work or in connection with a covered contract after the beginning of the accrual year, the contractor may provide the employee with a prorated amount of paid sick leave based on the number of pay periods remaining in the accrual year. Under this new provision, if, for instance, an employee was hired by a contractor to work full-time on a covered contract after one-third of the pay periods in the current accrual year had passed, that employee would be entitled to begin her employment with at least 37 hours (two-thirds of 56 hours, rounded to the nearest hour) of paid sick leave. The Department notes that if a contractor chooses an accrual year that begins on the date an employee begins work on or in connection with a covered contract, this issue arises and this new provision will not be relevant. Vigilant asked that contractors be permitted to select this option as to only some employees, such as if they wish to track accrual for newly hired workers and switch to providing 56 hours of paid sick leave at the beginning of an employee’s second year of employment. The Department agrees that contractors should have flexibility in deciding when and as to whom they choose this option. It may be, for example, that as to some employees, tracking accrual is simple, whereas for others it is more
complicated, and a contractor wishes to treat those employees differently for that reason. Or a contractor might change timekeeping systems during the course of a covered contract and determine that one option has become preferable to another in later accrual years. Therefore, the Department has added § 13.5(a)(3)(iii), which provides that a contractor may use the option described in § 13.5(a)(3) as to any or all of its employees in any or all accrual years. This language is not intended to permit a contractor to change its accrual system during an accrual year, but rather, at the beginning of a new accrual year. As with all actions a contractor takes with respect to paid sick leave, a contractor may not use the discretion of whether to elect this option to avoid its obligations under the Executive Order.

Finally, the SBLC made two suggestions: first, that contractors be permitted to prorate the amount of leave employees who work less than full-time on or in connection with covered contracts receive at the beginning of an accrual year under this option, and second, that contractors be permitted to provide employees with paid sick leave each quarter, rather than each year, without tracking accrual, noting that under such a system, “rollover” of paid sick leave between quarters would be appropriate. The Department has considered these suggestions but has decided not to adopt either of them. Prorating the amount of leave provided under this option could be administratively complicated (it would require, for example, knowing in advance how much time an employee will work on or in connection with a covered contract over the course of a full year) and is unnecessary because, as explained above, employers now explicitly have the option of tracking accrual based on hours worked on or in connection with covered contracts for part-time employees even if they use the § 13.5(a)(3) option for full-time employees. Regarding a quarterly accrual system, the Department notes that most commenters responded positively to the proposed option to provide an alternative to tracking accrual, and adding another method of calculating accrual would introduce unnecessary confusion for both contractors and for purposes of enforcement by the Wage and Hour Division.

Proposed § 13.5(b)(1) implemented the Executive Order’s provisions, in sections 2(b), (d), and (j), regarding maximum accrual, carryover, and reinstatement of paid sick leave as well as non-payment for unused paid sick leave.

Proposed § 13.5(b)(1) allowed a contractor to limit the amount of paid sick leave an employee is permitted to accrue at not less than 56 hours in each accrual year. The Department received no comments on this portion of the provision, which implements section 2(b) of the Executive Order, and adopts it as proposed.

Proposed § 13.5(b)(1) also provided detail regarding an accrual year, a term defined in § 13.2. The Department proposed to explain that an accrual year is a 12-month period beginning on the date an employee’s work on or in connection with a covered contract began or any other fixed date chosen by the contractor, such as the date a covered contract began, the date the contractor’s fiscal year begins, a date relevant under State law, or the date a contractor uses for determining employees’ leave entitlements under the FMLA pursuant to 29 CFR 825.200. Under the proposal, a contractor could choose its accrual year but was required to use a consistent option for all employees. The Department could not select or change its accrual year in order to avoid the paid sick leave requirements of Executive Order 13706 and part 13. The NPRM explained that as under the FMLA, if a contractor does not select an accrual year, the option that provides the most beneficial outcome to the employee would be used. See 29 CFR 825.200(e).

EEAC commented that contractors should be permitted to choose different accrual years for groups of similarly situated employees, offering as examples employees who are covered by a CBA, those who are employed by the contractor as the result of a merger with or acquisition of a different company, or those as to whom different paid time off policies apply. Because the Department agrees that there could be circumstances in which it would be difficult for a contractor to select the same accrual year for all employees, such as if a large contractor employs some workers subject to a CBA that calls for the accrual year to begin on one date and others subject to a relevant State law that calls for a different date, it has modified the regulatory text to incorporate EEAC’s suggestion. The Department notes, however, that the contractor must choose the same accrual year (or, if the contractor chooses an accrual year that begins on the date an employee begins work on or in connection with a covered contract, the same accrual year methodology) for similarly situated employees and, as noted at the proposal stage, may not select or change any employee’s accrual year in order to avoid the paid sick leave requirements of the Order and part 13.

Proposed § 13.5(b)(2) provided that paid sick leave shall carry over from one accrual year to the next. The proposed language would mean that upon the date a contractor has selected as the beginning of the accrual year, an employee would continue to have available for use as much paid sick leave as the employee had accrued but not used as of the end of the previous accrual year. This portion of § 13.5(b)(2) implements section 2(d) of the Executive Order, and no commenter opposed it, so the Department adopts it as proposed.

Proposed § 13.5(b)(2) further provided that paid sick leave carried over from the previous accrual year would not count toward any limit the contractor sets on the annual accrual of paid sick leave. The NPRM explained that under this proposal, if an employee carries over 30 unused hours of paid sick leave from accrual year 1 to accrual year 2, for example, she must still be permitted to accrue up to 56 additional hours of paid sick leave in accrual year 2 rather than only 26 (because 30 plus 26 is 56), subject to the limitations described below. NAM opposed this portion of the proposed provision, asserting that it allows employees to accrue more than 56 hours in a year. The Department believes that the Executive Order’s requirement that a contractor allow an employee to accrue up to 56 hours annually only has meaningful effect if an employee can accrue up to 56 hours of new paid sick leave in each accrual year rather than merely carry over unused paid sick leave from the previous accrual year. The Department notes that an employee’s ability to accrue additional paid sick leave if she has carried over unused leave from the previous year is limited by § 13.5(b)(3) (which, as described below, allows a contractor to limit the amount of paid sick leave an employee has at any point in time) and that an employee’s ability to use paid sick leave, regardless of the amount she has accrued, is limited by the set of reasons that justify such use listed in § 13.5(c)(1) (which, as described below, sets forth the purposes for which an employee may use paid sick leave). As an example, as noted by EEAC, if an employee accrues 56 hours of paid sick leave in accrual year 1 and uses no paid sick leave in year 1 or year 2, she could begin accrual year 3 with only 56 hours of leave, having accrued none in accrual year 2 (pursuant to § 13.5(b)(3) in the effect of this provision on an employee’s ability to accrue paid sick leave is limited.

Accordingly, this provision is adopted as proposed.

Proposed § 13.5(b)(3) allowed a contractor to limit the amount of paid sick leave an employee is permitted to have available for use at any point to not less than 56 hours and further explained that even if an employee has accrued fewer than 56 hours of paid sick leave since the beginning of the accrual year, the employee need only be permitted to accrue additional paid sick leave if the employee has fewer than 56 hours available for use. The NPRM provided as an example a circumstance in which an employee carries over 56 hours of paid sick leave into a new accrual year; in that case, a contractor need not permit that employee to accrue any additional paid sick leave until she has used some portion of that leave. If and when she does use paid sick leave, she must be permitted to accrue additional paid sick leave, up to a limit of no less than 56 hours for the accrual year, beginning with hours worked in the pay period after she has used paid sick leave such that her amount of available leave is less than 56 hours. Similarly, as explained in the NPRM, if an employee carries over 16 hours of paid sick leave into a new accrual year, she must be permitted to accrue 40 additional hours of paid sick leave even if she does not use any paid sick leave while that accrual occurs. Once she has 56 hours of paid sick leave accrued, the contractor may prohibit her from accruing any additional leave unless, and until the pay period after, she uses some portion of the 56 hours. If she uses, for example, 24 hours of paid sick leave in the same accrual year (such that she has 32 hours remaining available for use), she must be permitted to accrue up to at least 16 more hours (in addition to the 40 hours she has already accrued during the accrual year) for a total of 56 hours accrued in that accrual year. If she did so, she would then have 48 hours of paid sick leave (32 previously available hours plus 16 newly accrued hours) available for use and could be limited to that amount until the next accrual year.

Numerous commenters, including Caring Across Generations, the American Association of University Women, the National Association of County and City Health Officials, and the National Hispanic Council on Aging, asked the Department to simplify the accrual system by limiting the amount of paid sick leave an employee can carry over from one accrual year to the next rather than the amount of paid sick leave an employee has available at any point in time. And Seyfarth Shaw noted that the Department’s proposed system will be confusing for contractors because limiting the amount of paid sick leave an employee may have available for use deviates from the way many State and local paid sick time laws operate. Although the Department appreciates the commenters’ interest in having paid sick leave accrual operate in the simplest manner possible, the Department declines to adopt this suggestion because it believes its proposed system to be faithful to the Executive Order, which provides in section 2(b) that “[a] contractor may not set a limit on the total accrual of paid sick leave per year, or at any point in time, at less than 56 hours,” 80 FR 54697 (emphasis added). Accordingly, the Department adopts § 13.5(b)(3) as proposed. The Department notes, however, that consistent with the permissive language of § 13.5(b)(3), contractors would be in compliance with the Order and part 13 if they permitted employees to have available for use an amount of paid sick leave greater than 56 hours and if they allowed employees with more than 56 hours of paid sick leave available for use to carry over only 56 of those hours into the next year; in other words, a contractor may choose to use the simplified system the commenters prefer, based on ease of administration, compliance with a State or local paid sick time law, or for any other reason.

Proposed § 13.5(b)(4) implemented the second clause of section 2(d) of the Executive Order by requiring that paid sick leave be reinstated for employees rehired by the same contractor or a successor contractor within 12 months after a job separation. The proposed text specified that this reinstatement requirement applied whether the employee leaves and returns to a job on or in connection with a single covered contract or works for a single contractor or in connection with more than one covered contract, regardless of whether the employee was employed by the contractor to work on non-covered contracts in between periods of working on covered contracts. The NPRM offered as an example a situation in which a service employee on an SCA-covered contract accrued but did not use 12 hours of paid sick leave, moved to a different work site to perform work unrelated to a contract with the Federal Government (either with or not with the same employer), and after 6 months, returned to the original SCA-covered contract. In this example, the employee would begin back on the original job with 12 hours of paid sick leave available for use. Pursuant to §§13.5(a)(2) and 13.5(b)(1), if her first week back on the job is within the same accrual year during which she accrued those 12 hours, the contractor would be required to count any fraction of 30 hours worked in her previous time on the contract toward the accrual of her next hour of paid sick leave, but the contractor may limit her additional accrual in that accrual year to 44 hours such that she can only accrue 56 hours total in the accrual year.

Proposed § 13.5(b)(4) further explained that the reinstatement requirement also applied if an employee takes a job on or in connection with a covered successor contract after working for a different contractor on or in connection with the predecessor contract, including when an employee is entitled to a right of first refusal of employment from a successor contractor under Executive Order 13495. The terms “successor contract” and “predecessor contract” were defined in proposed § 13.2, and the requirements that a predecessor contractor submit to a contracting agency, and a contracting agency provide to a successor contractor, a certified list of relevant employees’ accrued, unused paid sick leave appeared in proposed §§13.26 and 13.11(f), respectively. The NPRM offered the example of an employee performing work on a contract to sell food to the public in a National Park who has accrued 16 hours of paid sick leave. If that contract ends, a different contractor takes over the food stand, and the employee is rehired by the successor contractor, he would begin his new job with 16 hours of paid sick leave. In the NPRM, the Department invited comments on its interpretation of section 2(d) of the Executive Order to mean that the reinstatement requirement applied if an employee is rehired by a different contractor on or in connection with a covered successor contract after working on or in connection with a covered successor contract after working on or in connection with the predecessor contract. The Department described its belief that the Executive Order’s requirement to carry over previously accrued paid sick leave for employees “rehired by a covered contractor” should be interpreted to include different successor contractors who rehire employees from the predecessor contract. It further noted that SCA-covered successor contractors are generally required by the Nondisplacement Executive Order to provide a right of first refusal of employment to employees on the predecessor contract in positions for which they are qualified as a result, many covered successor contractors effectively “rehire” these employees,
making it reasonable to interpret Executive Order 13706 to provide that such employees’ accrued paid sick leave balances would carry over as well. The NPRM also explained that this interpretation would ensure that the carryover of accrued, unused leave would not depend on whether the successor contract is awarded to the same contractor that performed on the predecessor contract (in which case the Executive Order clearly mandates that employees either keep their accrued, unused paid sick leave or have it reinstated).

The Department’s proposal recognized that the Government must ensure that it spends money wisely and it is imperative that contract actions result in the best value for the taxpayer. It further noted that the Government understands contractors may include the costs of benefits in overhead and it therefore may not (except in cost-type contracts) pay contractors based on their actual costs. For these reasons, the Department invited comments regarding the extent to which its interpretation of the reinstatement requirement could affect pricing and cost accounting, if at all, for covered contractors and contracting agencies, including any potential for paying twice for the same benefit—once to a predecessor contractor charging the Government for predicted use of paid sick leave during its contract term, and a second time to a successor contractor who would be obligated to pay for unused sick leave later used by its employees during the successor contract, with the Government potentially bearing the added costs through higher contract prices.

The Department’s proposal noted a potential scenario in which a contractor on a covered contract may have included in its bid the full cost of providing 56 hours of paid sick leave to every employee performing work on or in connection with the contract, and the contracting agency may treat the full amount of such leave as an allowable cost. At the end of the contract term, some employees will likely have balances of accrued but unused paid sick leave which could be carried over to a successor contractor. The Department specifically sought comment on how the current contractor and any different contractors bidding for the successor contract would account for this situation in their bid pricing. Finally, the Department invited comment as to the extent to which any potential impacts on pricing or cost accounting might be mitigated, including ways to mitigate any potential impact on subcontractors, small businesses, and prime contractors with covered supply chains. In providing comments on the feasibility of mitigation steps, the Department asked commenters to consider that the requirement for paid sick leave flows down to all subcontract tiers and that in other than cost-type contracts, the Government may not have insight into and does not pay contractors based on their actual costs.

CLASP, Demos, the Working Families Organization, NETWORK, the Diverse Elders Coalition, CAP Women’s Initiative, Caring Across Generations, CPD, NELP, and Equal Rights Advocates supported the proposed provision, writing that reinstatement of leave by successor contractors could encourage employees to continue working on successor contracts, which would improve efficiency and reduce training costs for the contractor. Other commenters supported the proposal for additional reasons: The AFL-CIO noted that an employee’s access to paid sick leave should not depend on which contractor wins the contract on which she works; the SEIU wrote that the retention of benefits is valuable to employees and therefore will promote continuity on covered contracts; the American Federation of State, County & Municipal Employees (AFSCME) wrote that any costs of reinstating leave could be included in contractors’ bids, and the Building Trades asserted that the proposal advances the goals of the Executive Order. Other commenters, however, opposed the proposed provision: The PSC and the NAM argued that potential successor contractors would not know the costs of the paid sick leave they would have to reinstate at the time of bidding (further suggesting that if such reinstatement is required, a successor contractor should be entitled to a price adjustment after receiving the certified list of employees’ paid sick leave accrual created by the predecessor contractor); the NAM also asserted that implementing this requirement would be confusing and contracting agencies would be charged twice for the same paid sick leave; and DLA Piper and the HR Policy Association believed it would be challenging to create a certified list of employees’ paid sick leave accruals where tracking employees’ time is difficult, that it was unclear what a successor contractor should do if it did not receive a certified list, and that there would be unfairness to successor contractors where an employee does so little covered work for the successor contractor that she would not have been able to accrue paid sick leave on the successor contract.

After careful consideration of these comments, the Department is promulgating the Final Rule without requiring that successor contractors reinstate paid sick leave to employees who worked on the predecessor contract. Although the Department appreciates the points made by the commenters who supported the provision and had proposed including it for those reasons, the Department finds the concerns of commenters opposed to the provision compelling. Because at this time, the Department has not identified a logistically viable mechanism to address the concerns expressed about costs, including to the government, the Department has removed the proposed provision. As noted elsewhere, other definitions and requirements included in the proposed rule to implement reinstatement by successor contractors—in particular, the requirements to create and provide a certified list of employees and their paid sick leave balances, as well as a recordkeeping requirement related to that list—also do not appear in this Final Rule.

Proposed § 13.5(b)(5) implemented section 2(j) of the Executive Order by providing that nothing in the Order or part 13 required a contractor to make a financial payment to an employee for accrued paid sick leave that has not been used upon a separation from employment. Although the Executive Order does not prohibit a contractor from making such payments should the contractor so choose, under the proposed regulatory text, doing so (whether voluntarily or pursuant to a CBA) would not affect that contractor’s obligation to reinstate any accrued paid sick leave upon rehiring the employee within 12 months of the separation pursuant to § 13.5(b)(4). In other words, under proposed § 13.5(b)(5), a contractor could not avoid the requirement to reinstate paid sick leave when it rehires an employee by cashing out the leave at the time of the original separation from employment. The proposed interpretation was consistent with the Department’s understanding that the Executive Order is meant to ensure that employees of Federal contractors have access to paid sick leave rather than its cash equivalent. The Department requested comments, however, regarding the impact of the proposed provision on contractors and employees, as well as the incidence of cash-out for paid time off or paid sick time under contractors’ current policies or relevant CBAs.
Executive Order, and addressed the purposes for which an employee may use paid sick leave, that contractor should no longer have the obligation to reinstate such leave if the employee returns to employment on a covered contract. EEAC, PSC, and Delta wrote more specifically that contractors subject to State or local laws requiring payment to employees for unused paid sick time should not have to reinstate such leave; and DLA Piper suggested that contractors party to a CBA that requires payment to employees for unused leave should not have to reinstate such leave. The Building Trades, AFL–CIO, and A Better Balance similarly asked that employees be able to receive the cash value of unused paid sick leave upon separation from employment rather than have leave reinstated, although they suggested that the employee, rather than contractor, decide whether to exercise that option. In light of these comments, the Department is modifying the regulatory text to provide that if a contractor makes a financial payment to an employee for accrued paid sick leave that has not been used upon a separation from employment, that contractor is no longer obligated to comply with the reinstatement of paid sick leave requirement in §13.5(b)(4). This relief from the reinstatement obligation also applies regardless of the contractor's reason for making the payment—that is, whether it is required by State or local law, mandated by a CBA, or a voluntary decision. It applies only if the payment is in an amount equal to or greater than the value of the pay and benefits the employee would have received pursuant to §13.5(c)(3) had the employee used the paid sick leave. Pursuant to the Executive Order itself, the Department is not changing the portion of the provision that notes a contractor is not required by the Order or part 13 to make such a payment. The Department is neither requiring contractors to allow employees to accept payment for unused paid sick leave nor prohibiting contractors from giving employees such a choice.

Proposed §13.5(c) described the purposes for which an employee may use paid sick leave, thereby implementing section 2(c) of the Executive Order, and addressed the calculation of the use of paid sick leave. Proposed §13.5(c)(1) required, subject to the conditions described in §13.5(d) and (e) and the amount of paid sick leave the employee has available for use, a contractor to permit an employee to use paid sick leave to be absent from work for that contractor on or in connection with a covered contract for four reasons. The Department received only positive comments regarding the four proposed provisions describing the reasons for leave—in particular, CLASP, Caring Across Generations, Demos, the Working Families Organization, NELP, the CAP Women's Initiative, Jobs With Justice, Young Invincibles, Lift Louisiana, the National Hispanic Council on Aging, the National Council of Jewish Women, and the Coalition on Human Needs, among others, supported the enumerated uses of paid sick leave—and it adopts that list as proposed.

First, §13.5(c)(1)(i) permits an employee to use paid sick leave if she is absent because of her own physical or mental illness, injury, or medical condition. As noted in the NPRM and discussed above, these terms, defined in §13.2, are meant to be understood broadly.

Second, §13.5(c)(1)(ii) permits an employee to use paid sick leave if she is absent because she is obtaining diagnosis, care, or preventive care from a health care provider. The Department also interprets the terms obtaining diagnosis, care, or preventive care from a health care provider and health care provider, defined in §13.2 and discussed above, broadly.

Third, §13.5(c)(1)(iii) permits an employee to use paid sick leave if she is absent because she is caring for an individual related by blood or affinity whose close association with the employee is the equivalent of a family relationship who has any of the conditions or needs for diagnosis, care, or preventive care referred to in §13.5(c)(1)(i) or (ii) or is otherwise in need of care. The terms child, parent, spouse, domestic partner, and individual related by blood or affinity whose close association with the employee is the equivalent of a family relationship are defined in §13.2. As the Department explained in the NPRM, it understands the use of these terms in the Executive Order to be an indication that the category of individuals for whom an employee can use paid sick leave to care is expansive. As also noted in the NPRM, the individual for whom the employee is caring could have any of the broadly understood conditions or needs referred to in §13.5(c)(1)(i) or (ii). For example, an employee may use paid sick leave to be with a child home from school with a cold or to accompany her spouse to an appointment at a fertility clinic. This provision also refers to an individual who is “otherwise in need of care,” language that appears in section 2(c) of the Executive Order. In the NPRM, the Department interpreted this phrase to refer to non-medical caregiving for an individual who has a general need for assistance related to the individual’s underlying health condition, noting as an example that an employee may use paid sick leave to provide his grandfather, who has dementia, unpaid assistance with bathing, dressing, and eating if the grandfather’s usual paid personal care attendant is unable to keep her regular schedule. AARP supported the Department’s inclusion of care for older adults, and the Department reiterates its interpretation here.

Fourth, §13.5(c)(1)(iv) permits an employee to use paid sick leave if the absence is because of domestic violence, sexual assault, or stalking, if the time absent from work is for the purposes otherwise described in §13.5(c)(1)(i) or (ii) or to obtain additional counseling, seek relocation, seek assistance from a victim services organization, take related legal action, including preparation for or participation in any related civil or criminal legal proceeding, or assist an individual related to the employee as described in §13.5(c)(1)(iii) in engaging in any of these activities. The terms used in §13.5(c)(1)(iv) (domestic violence, which includes the terms spouse, domestic partner, intimate partner, and family violence; sexual assault; stalking; obtain additional counseling, seek relocation, seek assistance from a victim services organization; or take related legal action; victim services organization; and related legal action or related civil or criminal legal proceeding) are defined in §13.2 and interpreted broadly in keeping with the purpose of ensuring that victims of domestic violence, sexual assault, or stalking are able to obtain the care, safety, and legal protections they need without losing wages or their jobs and that employees can assist such victims who are family members or like family in doing so.

For example, as noted in the NPRM, an employee who is a victim of domestic violence could use a day of paid sick leave to prepare for a meeting with an attorney, travel to the attorney’s office, have the meeting to discuss her legal options, and travel home; a victim could use a day of paid sick leave to go to a courthouse to determine the process for filing a petition for a civil protection order, complete any necessary paperwork, and file that paperwork with the court and use another full day to
attend proceedings at the court in support of that application, including mandatory mediation. For this purpose, assisting another individual who is a victim of domestic violence, sexual assault, or stalking includes, but is not limited to, accompanying the victim to see a health care provider, attorney, social worker, victim advocate, or other individual who provides services the victim needs as a result of the domestic violence, sexual assault, or stalking. If the individual the employee is assisting is a minor victim of domestic violence or child sexual abuse, the employee could use paid sick leave to, for example, seek legal protections for the victim (including filing a police report and/or seeking a civil protection order), medical treatment for the victim, or emergency relocation services.

As the Department explained in the discussion of proposed § 13.5(c)(1) in the NPRM, use of paid sick leave is contractor, rather than contract, specific, meaning that an employee who has accrued paid sick leave working on or in connection with one covered contract could use the leave for time she would otherwise have been working on or in connection with another covered contract for the same contractor. For example, if an employee had accrued 4 hours of paid sick leave over the course of several pay periods during which he worked for a single contractor in connection with one covered contract for 60 hours and another two covered contracts for 30 hours each, he could use his accrued paid sick leave during time he was scheduled to perform work in connection with any of the three contracts, or any other covered contract, on behalf of the same contractor. This explanation applies to the provision as adopted.

The Department also noted in the NPRM that under proposed § 13.5(c)(1), an employee need only be permitted to use paid sick leave during time the employee would otherwise have spent working on or in connection with a covered contract rather than time spent performing other work (such as on a private contract), even if that work is for the same contractor. Numerous commenters, including the National Partnership, A Better Balance, CPD, and the National Council of Jewish Women, Greater New Orleans Section, asked that the Department amend this portion of the provision to require contractors to allow employees to use paid sick leave at any time, regardless of whether they would otherwise have been performing work on or in connection with a covered contract, asserting the Department’s proposed system would be difficult to administer. Although the Department is sympathetic to the commenters’ concerns, it does not believe it is appropriate given the limits of the Executive Order’s scope to require that contractors permit employees to use paid sick leave at times they would not be performing work on or in connection with a covered contract. The Department notes, however, that as explained in the discussion of the anti-interference provision in § 13.6(a) below, a contractor is prohibited from scheduling an employee’s covered and non-covered work for the purpose of preventing an employee from using paid sick leave.

Relatedly, the Hawaii Employers Council posed a question regarding the implications of an employee’s using paid sick leave on a day when he would have worked for half the day on a covered contract and half the day on a non-covered contract. The Department clarifies that the contractor would be obligated, provided all other relevant requirements are met, to allow the employee to use paid sick leave for the portion of the day during which she would have been working on the covered contract. In the absence of another requirement (such as one imposed by a CBA, a State or local paid sick time law, or the FMLA) and if the employer has records or other proof adequately segregating the time the employee is performing the non-covered work, it is at the employer’s discretion how to address the employee’s need for leave during the remainder of the day.

The Department has modified the text of § 13.5(c)(1) to provide that a contractor must permit an employee to use paid sick leave to be absent from work for that contractor during time the employee would have been performing work on or in connection with a covered contract or, if the contractor estimates the employee’s hours worked in connection with such contracts for purposes of accrual, during any work time. Two aspects of this language are notable. First, as in the proposed text, this language does not prohibit an employer from permitting employees to use paid sick leave during time they would have been performing non-covered work, an approach that AGC and Roffman Horvitz suggest may be particularly suitable for covered construction contractors whose workforces may move regularly between covered and non-covered work. A contractor may choose to do so, and the Department clarifies, in response to ABC’s comment, that a contractor would not be penalized for doing so; specifically, if a contractor has a more generous policy regarding when employees may use paid sick leave than is necessary under the Order and part 13 such that, for example, an employee could use all 56 hours of his accrued paid sick leave during a period when he was working exclusively on a private contract, the contractor is not obligated to provide any additional paid sick leave for use during time the employee spends performing work on or in connection with covered contracts.

Second, the revised language provides that if a contractor chooses to estimate rather than track the amount of time an employee spends performing work in connection with covered contracts as permitted by § 13.5(a)(1)(i) or (iii), that contractor must permit the employee to use her paid sick leave at any time she would have been working for the contractor. As explained in the NPRM, if a contractor wishes to distinguish an employee’s covered and non-covered time for purposes of (accrual and) use of paid sick leave, it is the contractor’s responsibility to keep adequate records distinguishing between an employee’s covered and non-covered work, and any denial of a request to use paid sick leave because the leave would occur while an employee is performing work that is not covered by Executive Order 13706 or part 13 must be supported by records or other proof demonstrating that fact. The implication of choosing to calculate an employee’s paid sick leave based on an estimate rather than track actual covered and non-covered hours worked is that the contractor does not have proof of the actual time the employee spends performing covered work, and therefore it would not be possible for the contractor to properly restrict the employee’s use of paid sick leave to that time.

Finally, the Department notes that as explained in the NPRM, if an employee falls within the 20 percent of hours worked exclusion created by § 13.4(e) for some workweeks but not others, the employee must be permitted to use paid sick leave at any time the employee would have been working on or in connection with covered contracts (or, if the contractor estimates the employee’s hours worked in connection with such contracts for purposes of accrual, during any work time), regardless of whether that time falls during a workweek in which the exclusion applies with respect to accrual. As explained in the proposed rule, this approach was designed to avoid complications that would otherwise arise in responding to requests to use paid sick leave accrued by such employees. Specifically, an employee could request to use paid sick leave during a workweek in which it was not clear at the time of the request (because it would not be known until the end of
the week) whether the employee met the 20 percent threshold; under this approach, in such circumstances, the contractor must permit the use of paid sick leave (assuming all relevant requirements for use are met) rather than deny the request or provide an uncertain response to the employee.

Proposed § 13.5(c)(2) required a contractor to account for an employee’s use of paid sick leave in increments of no greater than 1 hour. In other words, under the proposal, although a contractor was permitted to choose to allow employees to use paid sick leave in increments smaller than 1 hour (such as half an hour or 15 minutes), it was not permitted to require employees to use paid sick leave in increments of any more than 1 hour. The NPRM explained that, for example, if an employee needs to be an hour late for work because he accompanied his sister to a chemotherapy appointment that morning, his employer must permit him to use 1 hour of paid sick leave (rather than, for instance, requiring him to take a full day off or use a full day’s leave).

Several commenters asked that the Department amend this provision: EEAC asked the Department to make the minimum increment of leave 4 hours, because scheduling a replacement worker can be difficult if an employee misses only a short period of work; the SBLC suggested that contractors be permitted to require employees to use a full day of paid sick leave if they request to use more than 75 percent of their normally scheduled work hours; A4A asked that the minimum increment for airline flight crew employees be 1 day; and the American Benefits Council noted that it would be expensive for contractors that currently track attendance in greater increments to implement this requirement. The United Food and Commercial Workers International Union (UFCW), on the other hand, asked that the Department require contractors to allow employees to use paid sick leave in increments smaller than 1 hour if they already keep other time records in fractions of an hour. The Department has considered each of these suggestions but declines to adopt any of them. A contractor may limit an employee’s accrual of paid sick leave to 56 hours, or seven 8-hour days, per year. If an employee were required to use 4 or 8 hours of that leave at a time even when she only needs to be absent from work for a shorter duration, she would more rapidly deplete the amount of paid sick leave she has available for use than if she were permitted to use only the smallest increments she needed. Furthermore, employees will typically accrue paid sick leave over time, meaning they will often have far less than 56 hours available for use. If, for example, an employee who has 10 hours of paid sick leave available for use needs to leave work on a covered contract just 1 hour early to take his daughter to a doctor’s appointment, but he could be required to use 4 hours of paid sick leave, he would then have only 6 hours of paid sick leave—less than a day—available if the following week his daughter is sick and needs to stay home from school. Such outcomes would not advance the purposes of the Executive Order because they would make the paid sick leave benefit less meaningful for employees and could discourage employers from obtaining preventive health care for themselves and their families. The Department recognizes, however, that the smaller the minimum increment of paid sick leave required, the greater potential exists for administrative burden on contractors; it therefore declines to require, although it continues to allow, contractors to account for paid sick leave in increments smaller than 1 hour.

Proposed § 13.5(c)(2)(iii) explained that a contractor could not reduce an employee’s accrued paid sick leave by more than the amount of leave the employee actually takes, and a contractor could not require an employee to take more leave than is necessary to address the circumstances that precipitated the need for the leave, provided that the leave is counted using an increment of no greater than 1 hour. This language was based on FMLA regulations regarding the use of FMLA leave. See 29 CFR 825.205(a). The Department explained in the NPRM that this provision means that if a contractor chooses to waive its increment of leave policy in order to return an employee to work—for example, if an employee arrives a half hour late to work because he was at an appointment with a psychologist and the contractor waives its normal 1-hour increment of leave and puts the employee to work immediately—the contractor would be required to treat the employee as having used no more than the amount of leave the employee actually used, half an hour. See 78 FR 8867 (discussing relevant language codified in 29 CFR 825.205(a)). Under no circumstances could a contractor treat an employee as having used paid sick leave for any time that employee was working. The Department received no comments regarding § 13.5(c)(2)(ii) and adopts it as proposed, but with minor, non-substantive edits for consistency with language used in other provisions. Proposed § 13.5(c)(2)(iii) explained that the amount of paid sick leave used could not exceed the hours an employee would have worked if the need for leave had not arisen. For example, as explained in the NPRM, if an employee is scheduled to work from 9am to 3pm, and she is absent from work from 10:30am to 12:30pm to take her father to a doctor’s appointment, a contractor could deduct no more than 2 hours of paid sick leave from her accrued paid sick leave. Similarly, if the employee is scheduled to work from 9 a.m. to 3 p.m. and she is absent from work for the entire day to care for her sick child, a contractor may deduct no more than 6 hours of paid sick leave from her accrued paid sick leave. Further, the NPRM noted, if an employee is using paid sick leave at a time when she could have worked beyond her scheduled hours but would not have been required to do so, the contractor could not treat the employee as having used paid sick leave for those optional hours. For example, if an employee scheduled to work from 9 a.m. to 3 p.m. could have chosen to stay until 7 p.m. that night to earn overtime, but was absent for the entire day, a contractor could not deduct more than 6 hours of paid sick leave from her accrued paid sick leave. The proposed provision was consistent with the FMLA regulation at 29 CFR 825.205(c) (“Voluntary overtime hours that an employee does not work due to an FMLA-qualifying reason may not be counted against the employee’s FMLA leave entitlement.”). In response to comments from AAR and Delta, the Department clarifies that these examples were meant to distinguish voluntary overtime from mandatory overtime; if an employee was scheduled to work from 9am to 7pm and was absent for the entire day, he would have used (and, pursuant to § 13.5(c)(3), must receive regular pay and benefits for) 10 hours of paid sick leave regardless of whether a portion of that time would have constituted overtime. The Department did not receive requests to amend § 13.5(c)(2)(ii) and adopts it as proposed.

In the NPRM, the Department requested comments regarding whether it should add a physical impossibility exception, as exists under the FMLA regulations at 29 CFR 825.205(a)(2), to the 1-hour minimum increment requirement. Under such a provision, in situations in which an employee is physically unable to access the worksite after the start of the shift or to depart from the workplace prior to the end of the shift, a contractor would be permitted to require the employee to continue to use paid sick leave for as long as the physical impossibility...
remains. Examples that arise in the FMLA context are flight attendants whose scheduled flight departs, train conductors whose scheduled train departs, and laboratory technicians who work in “clean rooms” that must remain sealed. The Department sought comment regarding the categories of covered contracts and employees entitled to paid sick leave under Executive Order 13706 and part 13 with respect to which similar circumstances could arise and the implications of a physical impossibility provision for employers and employees who perform or in connection with those contracts.

AAR, A4A, Delta, EEAC, and the SBLC asked that the Department include a physical impossibility exception to the minimum increment set forth in § 13.5(c)(2). Based on these requests, the Department has included such a provision, modeled on the language of the analogous FMLA provision, as § 13.5(c)(2)(iii). The new language provides that if it is physically impossible for an employee using paid sick leave to commence or end work mid-way through a shift, such as if a flight attendant or a railroad conductor is scheduled to work aboard an airplane or train, or a laboratory employee is unable to enter or leave a sealed “clean room” during a certain period of time, and no equivalent position is available, the entire period that the employee is forced to be absent constitutes paid sick leave. The period of the physical impossibility is limited to the period during which the contractor is unable to permit the employee to work prior to the use of paid sick leave or return the employee to the same or an equivalent position due to the physical impossibility after the use of paid sick leave.

The Department notes that as under the FMLA, this provision is “intended to make a limited allowance for the practical realities of the airline, railroad, and other industries with unique workplaces in which it is physically impossible for employees to leave work early or start work late.” Final Rule, The Family and Medical Leave Act, 78 FR 8833, 8869 (Feb. 6, 2013); see also FOH §39601(d)(3) (“The ‘physical impossibility’ provision is intended to be narrowly construed and applied only in instances of true physical impossibility.”). Furthermore, as under the FMLA, “the physical impossibility rule is protective of employees who may be subject to disciplinary action because they need to take leave beyond that required” by the reason for which they are using paid sick leave. Id. Under this new provision, all leave taken due to physical impossibility will count as paid sick leave. Finally, the Department notes that “an equivalent position” as used in § 13.5(c)(2)(i) has the same meaning described in the FMLA regulations at 29 CFR 825.215. Therefore, “[a]n equivalent position is one that is virtually identical to the employee’s former position in terms of pay, benefits and working conditions, including privileges, perquisites and status. It must involve the same or substantially similar duties and responsibilities, which must entail substantially equivalent skill, effort, responsibility, and authority.” 29 CFR 825.215(a).

Proposed § 13.5(c)(3) required a contractor to provide to an employee using paid sick leave the same pay and benefits the employee would have received had the employee not used paid sick leave. In other words, while using paid sick leave, employees paid on a salary basis may not face any deduction in pay, and employees paid hourly must receive the same hourly rate of pay they would have earned had they been present at work. In addition, employees must receive the same benefits while using paid sick leave that they would have were they present at work; for example, contractors must continue to make contributions to any fringe benefit plan (such as a health insurance plan or retirement account) for time employees are using paid sick leave and count time toward the earning of other benefits (for example, the accrual of vacation time), although, as explained above, the time an employee is using paid sick leave does not constitute hours worked for purposes of paid sick leave accrual. As noted in the NPRM, under this provision, employees whose wages are governed by the SCA or DBA would receive the same wages required under those statutes, including health and welfare and other fringe benefits or the cash equivalent thereof, as they would have earned had they been present at work instead of using paid sick leave.

TrueBlue, Inc. posed a question in its comment regarding the proper rate of pay when an employee uses paid sick leave at a time when she is earning a different hourly amount that she was when she accrued the paid sick leave. As explained in the NPRM, an employee who receives different pay and benefits for different portions of her work (for example, an employee who works as a carpenter on one DBA-covered contract and a skilled laborer on another DBA-covered contract on which she works for the same contractor) the pay and benefits due while the employee uses paid sick leave is to be determined based on which work she would have been performing at the time she uses the leave. The employee’s pay rate at the time she accrued the paid sick leave is not relevant.

Delta asked that the Department amend this provision to state that employees need not receive premium pay they would otherwise have received if using paid sick leave, and Vigilant similarly asked the Department to state that employees receive only straight time, rather than overtime, pay while using paid sick leave. To provide clarity in response to these comments, the Department has added the word “regular” before “pay” in the regulatory text. As indicated in the regulatory text, this addition is meant to indicate that only payments that would be included in the calculation of the employee’s regular rate for hours worked under the FLSA (or basic rate for purposes of the Contract Work Hours and Safety Standards Act, 40 U.S.C. 3701 et seq. (CWHSSA)) must be provided to an employee using paid sick leave to fulfill the obligation to provide the same pay to that employee. The relevant FLSA principles (adopted under CWHSSA, see 29 CFR 5.15(c)) are set forth at 29 CFR part 778.

AGC indicated that it believed this provision required that contractors provide employees with their pay and benefits in cash rather than, for example, as contributions to fringe benefit trust funds. The Department wishes to clarify it did not intend this result; employees using paid sick leave must receive the same pay and benefits they would have had they not been absent from work, and any benefits should generally be provided in the same manner as an employee receives them at other times. For example, if a contractor provides its employees with health insurance coverage by making monthly payments to a third-party insurer on behalf of each employee, the contractor must not make any reduction in such payments to account for time an employee used paid sick leave. Or if a contractor satisfies its DBA health and welfare requirements by making contributions to a benefit fund of a certain amount per hour that an employee works on DBA-covered contracts, it must continue to make the same payments when an employee is using paid sick leave. To the extent a contractor is unable to provide the same benefits during time an employee is using paid sick leave that it does when an employee is working, such as because the benefit plan to which the contractor contributes will not accept them for non-work time and an amendment to the plan is not feasible,
the contractor may instead provide cash or another benefit of the same or greater value as the benefit it cannot provide. The Department notes that this exception to the general requirement to provide the same benefits is limited to circumstances in which doing so is infeasible.

The Department adopts § 13.5(c)(3) essentially as proposed, but with a minor modification (the words "had the employee not used paid sick leave" are replaced with "had the employee not been absent from work") for technical accuracy.

Proposed § 13.5(c)(4) prohibited a contractor from limiting the amount of paid sick leave an employee may use per year or at once. In other words, although a contractor could limit an employee's accrual of paid sick leave to 56 hours per year, a contractor could not prohibit the employee from, for example, using 16 hours carried over from the year 1, accruing 56 additional hours, and then using all 56 hours accrued in year 2 even though her total use in year 2 would exceed 56 hours. Under the proposed text, an employer also could not limit the amount of paid sick leave an employee may use at one time. For example, an employer could not establish a policy prohibiting employees from using any particular number of hours of paid sick leave in a single workweek. Similarly, an employer could not deny an employee's request to use paid sick leave for 2 full days in a row based on the length of time requested (as long as the employee had accrued sufficient paid sick leave to cover the time). Seyfarth Shaw, the Chamber/IFA, and the American Benefits Council strongly encouraged the Department not to prohibit contractors from setting a limit on use per year, and specifically asked that the Department allow contractors to limit use of paid sick leave to 56 hours per year. Seyfarth Shaw suggested in the alternative than an 80-hour usage cap would be appropriate. The Department has considered these suggestions but has decided not to adopt them because the Executive Order does not call for a cap on the amount of paid sick leave an employee can use in a year but does effectively create limits on use by allowing for limits on accrual, which are implemented in § 13.5(b). In light of this reasoning, the Department is amending the regulatory text to clarify that an employee's use of paid sick leave may be limited by the amount of paid sick leave an employee has available for use.

Proposed § 13.5(c)(5) prohibited a contractor from limiting an employee's use of paid sick leave contingent on the employee's finding a replacement worker to cover any work time to be missed or the fulfillment of the contractor's operational needs. This language implemented section 2(e) of the Executive Order and made explicit the important point that the intent of the Executive Order could only be fulfilled if employees are entitled to use paid sick leave even if the need for such leave arises at a time that is inconvenient for a contractor. PSC, AAR, and EEAC urged the Department to indicate in the regulations that employees should consult with contractors about scheduling foreseeable paid sick leave, noting that language to that effect appears in the FMLA regulations. PSC pointed to the difficulties that would arise if, for example, the four security guards a contractor sends to a Federal courthouse all request to use paid sick leave for doctor's appointments on the same morning. Although the Department is not altering the fundamental premise of this provision, it has amended the regulatory language in recognition of these commenters' concerns. Specifically, it has inserted language modeled on 29 CFR 825.302(e), the FMLA provision to which the commenters referred; the new text provides that an employee is encouraged to make a reasonable effort to schedule preventive care or another foreseeable need to use paid sick leave to suit the needs of both the contractor and employee, and a contractor may ask an employee to make a reasonable effort to schedule foreseeable absences for paid sick leave so as to not disrupt unduly the contractor's operations, but a contractor may not make an employee's use of paid sick leave contingent on the employee's finding a replacement worker to cover any work time to be missed or on the fulfillment of the contractor's operational needs. The Department notes that because employees will have far less paid sick leave than they do FMLA leave and because paid sick leave will often involve far less serious health conditions than are involved when an employee takes FMLA leave, the risk of disruption is not as high in this context, so no greater protections for employers are necessary.

Proposed § 13.5(d) implemented section 2(h) of Executive Order 13706 by addressing an employee's request to use paid sick leave. Proposed § 13.5(d)(1) required a contractor to permit an employee to use any or all of the employee's available paid sick leave upon the oral or written request of an employee that includes information sufficient to inform the contractor that the employee is seeking to be absent from work for a purpose described in § 13.5(c)(1) and, to the extent reasonably feasible, the anticipated duration of the leave. Proposed § 13.5(d)(1) further required the request to be directed to the appropriate personnel pursuant to a contractor's policy or, in the absence of a formal policy, any personnel who typically receive requests for other types of leave or otherwise address scheduling issues on behalf of the contractor.

The NPRM explained that employees could request paid sick leave by any oral or written method, including in person, by phone, via email, or with a note reasonably calculated to provide timely notice of the employee's intent to take leave, although as explained below, in response to comments, the Department now notes that a contractor's policy may provide specific methods of communicating a request. Additionally, although the request needed to contain sufficient information for a contractor to determine whether it is a proper use of paid sick leave, and the contractor could ask questions tailored to making that determination, the request was not required to contain extensive or detailed information about the reason for the leave and a contractor is not permitted to require such information. Specifically, under the proposed approach, the employee needed only to provide information sufficient to inform the contractor that she wished to miss work for a reason that is a permissible use of paid sick leave and was not required to specify all symptoms or details of the need for leave. The Department has inserted language to this effect into the regulatory text, included as part of § 13.5(d)(1)(i), to ensure clarity.

As also noted in the NPRM and now provided in § 13.5(d)(1)(i), an employee's request to use paid sick leave need not include a specific reference to the Executive Order or part 13 or even use the words "sick leave" or "paid sick leave"; this language is modeled on a portion of the FMLA regulations regarding the content of an employee's notice to an employer of the need to use FMLA leave. See 29 CFR 825.301(b) ("An employee giving notice of the need for FMLA leave does not need to expressly assert rights under the Act or even mention the FMLA to meet his or her obligation to provide notice, though the employee would need to state a qualifying reason for the needed leave."); see also 29 CFR 825.302(c). Under § 13.5(d)(1)(i), an employee could simply state, for example, that the employee has a cold, a dentist appointment, or an appointment with an attorney regarding a domestic medical dispute.
In such cases, a contractor could not ask (for purposes of approving or rejecting the request to use paid sick leave) when the cold began or how severe it is, which dentist the employee is seeing or for what purpose, or for any detail regarding the circumstances of the domestic violence. The NPRM further explained that under the proposed provision, an employee was not required to include in her request extensive details regarding the employee’s relationship with an individual for whom the employee wished to care in the time absent from work; she only needed to inform the contractor that she has a family or family-like relationship with the individual. The Department has added this point to § 13.5(d)(1)(i) for clarity. As explained in the NPRM, simply stating, for example, that the employee’s son has a stomach bug, the employee’s wife was injured in a car accident, or the employee’s father needs assistance going to a doctor’s appointment was sufficient under this proposed approach. For a request for paid sick leave involving providing care for an individual related by blood or affinity whose close association with the employee is the equivalent of a family relationship, the employee need only assert that a family or family-like relationship exists, such as by stating that the employee needs to care for her ill grandmother or needs to accompany a man who is like a brother to him to a doctor’s appointment. As also noted in the NPRM, although a contractor may ask questions to determine if the use of paid sick leave is justified, such as inquiring of an employee who asks to take leave to care for a close friend who was in a car accident whether that friend is someone whom the employee considers to be like family, the contractor could not demand intimate details upon receiving a positive response to such an inquiry. Although the Department recognizes that paid sick leave is available for only particular uses, it interprets Executive Order 13706 as intending to provide paid sick leave that is not burdensome for employees and does not allow significant intrusion into their personal lives by their employers. The NPRM also explained that under proposed § 13.5(d)(1), the request to use paid sick leave should provide an estimate of the timing and amount of such leave needed to the extent reasonably feasible. This requirement is satisfied by stating that the sick employee hopes only to be out for 1 day, that the child’s dentist appointment is on a particular date at 10 a.m. and is not anticipated to take more than an hour, or that the appointment with the attorney related to a domestic violence matter is on a particular date at 2 p.m. and will likely continue for the remainder of the work day. The contractor may not hold an employee to the estimate provided in the request; for example, the sick employee could return to work in the afternoon if he recovers more quickly than he expected, and an employee can use more than an hour of paid sick leave (provided he has more than 1 hour available for use) if the dentist appointment runs longer than anticipated. To ensure that this point is clear to the regulated community, the Department has included it as § 13.5(d)(1)(ii).

Finally, the Department explained in the NPRM that under proposed § 13.5(d)(1), an employee’s request to use paid sick leave would be acceptable if the employee directs it to the appropriate personnel pursuant to a contractor’s policy or, in the absence of a formal policy, any personnel who typically receive requests for other types of leave on behalf of the contractor, such as a supervisor or human resources department staff. A few commenters addressed the use of an employer’s usual procedures for requesting time off of work. AAR asked that the Department allow contractors to use their normal procedures; EEAC asked that the Department explicitly require employees to use a contractor’s policy; Vigilant asked that the Department state it is usually reasonable to comply with the contractor’s call-in policy; and the UFCW asked the Department to clarify whether a contractor may deny an employee’s request for paid sick leave because the employee failed to use the contractor’s typical procedures. Because not all contractor policies will comply with the requirements of the Executive Order (for example, a policy might not permit an employee to make oral or written requests for leave as described in section 2(h) of the Order), the Department has not modified the relevant proposed text, which now appears as § 13.5(d)(1)(iii), in response to these comments; because a contractor’s policy may govern how an employee must make requests to use paid sick leave, however, the Department provides more detail here about the provision’s meaning. Under the regulatory text as proposed and adopted, if a contractor has a policy regarding to whom an employee should submit leave requests, it may require the employee to direct her request to use paid sick leave to particular personnel pursuant to that policy. The policy may include particular procedures to use to contact the specified personnel, such as a designated phone number or email address, as long as—pursuant to the Executive Order’s requirement that contractors accept “oral or written” requests, 80 FR 54698—the employee may communicate the request by at least one oral and at least one written method. If the employee directs a request to someone who is not the individual or individuals identified in the contractor’s policy, the recipient may formally reject the request or explain that she is without authority to respond to it, in either case informing the employee of the correct personnel to whom to direct a new request, or the recipient may forward the request to the correct personnel herself.

Finally, the Department noted in the NPRM that pursuant to §§ 13.5(e)(1)(i) and 13.25(d), when an employee requests leave for the purposes described in proposed § 13.5(c)(1)(iv), i.e., for absences related to being a victim of domestic violence, sexual assault, or stalking, the contractor shall maintain confidentiality about the domestic abuse, sexual assault, or stalking, unless the employee consents or when disclosure is required by law. For completeness and clarity, the Department has added to the regulatory text, as § 13.5(d)(1)(iv), a general reference to the confidentiality requirements described in § 13.25(d), which apply to information a contractor obtains in the course of receiving requests to use paid sick leave for any purpose as well as to information an employee may provide pursuant to the confidentiality and documentation provisions described below.

Proposed § 13.5(d)(2) provided that if the need to use paid sick leave is foreseeable, the employee’s request shall be made at least 7 calendar days in advance, whereas if the employee is unable to request leave at least 7 calendar days in advance, the request shall be made as soon as is practicable. The term as soon as is practicable is defined in § 13.2. Proposed § 13.5(d)(2) further provided that when an employee becomes aware of a need to use paid sick leave less than 7 calendar days in advance, it should typically be practicable for the employee to make a request for leave either the day the employee becomes aware of the need to use paid sick leave or the next business day, but notes that in all cases, the determination of when an employee could practically make a request must take into account the individual facts and circumstances.

The Department explained in the NPRM that it would consider any request made on the day the employee becomes aware of the need to take paid
sick leave or the following business day to have been made as soon as was practicable; although it would not presume that requests made beyond that time frame were made as soon as practicable, the facts and circumstances of the specific situation could be such that despite the longer delay, the employee did in fact notify the employer as soon as was possible and practical. As explained in the NPRM, for example, if an employee makes an appointment for his daughter to have an annual exam with her doctor 2 weeks in advance, the employee should ask to use paid sick leave to take her daughter to the appointment at least 7 calendar days before the date on which it is scheduled. If instead the nurse at the employee’s daughter’s school called one afternoon to say the daughter had a high fever and he needed to take her out of school right away, he could plainly not have requested leave 7 days in advance, and he should instead request leave as soon as is practicable. Depending on the circumstances, such as how much attention the daughter needed, whether the employee had access to a phone or computer, and/or whether the person to whom the request would be directed was available, in this situation, as soon as practicable could be as the employee was preparing to leave work to get his daughter, when he got home with his daughter, later that evening (perhaps after she was asleep), or the next morning (assuming the following day was a business day). If, on the other hand, the employee himself was in a serious car accident, was taken to the hospital, and had surgery the next day, he could not practicably have requested leave the day of the accident or of the surgery (i.e., the day he became aware of the need for leave or the following day).

AAR commented that under the FMLA, foreseeable requests for leave are to be made 30 days in advance, and there is no reason to have a shorter period of 7 days in the paid sick leave context. The Department adopts § 13.5(d)(2) as proposed but with minor, non-substantive modifications for clarity.

The NPRM further explained, and the Department reiterates, that if an employee did not comply with the requirements of § 13.5(d)(2), a contractor could properly deny the employee’s request to use paid sick leave. For example, if an employee arranges a doctor’s appointment for his son 3 weeks in advance but does not submit a request to use paid sick leave until 2 days before the appointment, the contractor may properly deny that request. Denial of the request would not be proper, however, if the need for leave was not foreseeable and the employee made the request as soon as was practicable, such as if upon making the request 2 days in advance, the employee explained that his husband had planned to take their son to the appointment, but the husband learned on the morning the appointment was scheduled that the husband would be unavailable at the time of the appointment, and the couple decided that the employee would have to take the son instead.

Proposed § 13.5(d)(3) addressed a contractor’s response to an employee’s request to use paid sick leave. Proposed § 13.5(d)(3)(i) permitted a contractor to communicate its grant of a request to use paid sick leave either orally or in writing provided that the contractor also complied with the requirement in § 13.5(a)(2) to inform the employee in writing of the amount of paid sick leave the employee has available for use. The Department did not receive comments regarding this provision specifically but has modified it to reflect that § 13.5(a)(2) no longer requires a contractor to inform an employee of the amount of paid sick leave she has available for use upon each request to use paid sick leave and to note that a written communication may be provided electronically, if the contractor customarily corresponds with or makes information available to its employees by such means.

Proposed § 13.5(d)(3)(ii) required a contractor to communicate any denial of a request to use paid sick leave in writing, with an explanation for the denial. PSC commented that a contractor’s denial of a request to use paid sick leave should not have to be in writing. The Department is not adopting this suggestion because it believes written denials are advantageous for both employees and contractors. By providing the employee with a written statement of the reason for the denial, the contractor most effectively communicates what types of requests will be denied in the future and ensures that the WHD has a written record of the contractor’s rationale in the event the employee were to file an interference complaint. EEAC asked that the Department be explicit that it considers electronic communication to satisfy this requirement. The Department believes it is appropriate for a contractor to communicate denials via electronic means, such as an email or text message, provided that the contractor customarily corresponds with or makes information available to its employees by such means; it has added language to this effect to the regulatory text.

Proposed § 13.5(d)(3)(ii) further provided that denial is appropriate if, for example, the employee did not provide sufficient information about the need for paid sick leave; the reason given is not consistent with the uses of paid sick leave described in § 13.5(c)(1); the employee did not indicate when the need would arise; the employee has not accrued, and will not have accrued by the date of leave anticipated in the request, a sufficient amount of paid sick leave to cover the request (in which case, if the employee will have any paid sick leave available for use, only a partial denial would be appropriate); or the request is to use paid sick leave during time the employee is scheduled to be performing non-covered work. The proposed text also explained that if the denial is based on insufficient information provided in the request, such as if the employee did not state the time of an appointment with a health care provider, the contractor must permit the employee to submit a new, corrected request. The Department further proposed that if the denial is based on an employee’s request to use paid sick leave during time she is scheduled to be performing non-covered work, the denial must be supported by records adequately segregating the employee’s time spent on covered and non-covered contracts. Seyfarth Shaw commented that this list of reasons a contractor may properly deny a request to use paid sick leave for contractors seeking to avoid accusations of interfering with employees’ rights. The Department appreciates that contractors must be able to administer paid sick leave in a reasonable manner, and adopts this text as proposed.

IEC, the American Staffing Association, and TrueBlue, Inc. requested that the Department permit a contractor to prohibit an employee from using paid sick leave until the employee has worked for the contractor for 90 days. Although the Department recognizes that such a delay may be
consistent with some contractors’ existing practices, the Department declines to adopt this suggestion for purposes of the Executive Order because the Order itself provides for no such delay and the Department believes the purposes of providing access to paid sick leave are best fulfilled by ensuring that employees have such access throughout their employment, including early in their tenure with a new employer.

Proposed § 13.5(d)(3)(iii) required a contractor to respond to any request to use paid sick leave as soon as is practicable after the request is made. As proposed, it further explained that, although the determination of when it is practicable for a contractor to provide a response would take into account the individual facts and circumstances, it should in many circumstances be practicable for the contractor to respond to a request immediately or within a few hours. The proposed provision further explained that in some instances, such as if it is unclear at the time of the request whether the employee will be working on or in connection with a covered or non-covered contract at the time for which paid sick leave is requested, as soon as practicable could mean within a day or no longer than within a few days. PSC, the American Benefits Council, and Vigilant objected to the Department’s suggestion that a contractor could respond to a request immediately or within a few hours; in particular, Vigilant noted that in many cases, the individual who receives the request would have to check with the human resources department to determine whether the employee had paid sick leave available for use before responding to the employee. The Department does not disagree with the comments but also does not believe modification of the proposed regulatory text is necessary. In some circumstances, such as if a contractor with only a small number of employees who knows they have all accrued some paid sick leave faces a request from an employee to leave work 1 hour early because his son is sick, or if a large contractor has an information technology system in place that allows a supervisor or human resources professional who handles leave requests to immediately check how much paid sick leave an employee has available for use, an immediate or very prompt response will be possible. As the regulatory text acknowledges, under other circumstances—such as if the human resources office with paid sick leave accrual information is unreachable at the time the request is made or the employee’s schedule at the time he needs to be absent is not yet determined—there will be reasons that the response to a request will necessarily be delayed. The Department does not mean to, and did not, indicate that a very short time frame for response will always be required; its language is meant instead to indicate that employers should respond to requests to use paid sick leave as promptly as is reasonable under the circumstances.

Proposed § 13.5(e) implemented section 2(i) of the Executive Order, which addresses certification and documentation for leave of 3 or more consecutive workdays. Under proposed § 13.5(e)(1)(i), a contractor could require certification issued by a healthcare provider to verify the need for paid sick leave used for the purposes listed in proposed § 13.5(c)(1)(i), (ii), or (iii) only if the employee is absent for 3 or more consecutive full workdays. Under the proposed provision, a contractor could not require certification to justify the use of paid sick leave for any amount of time shorter than 3 consecutive full workdays. For instance, if an employee is scheduled to work from 9 am to 5 pm on Monday, Tuesday, and Wednesday, and he is unable to come to work at all during those times because he is hospitalized due to a severe infection, his employer could require that he provide certification issued by a healthcare provider. On the other hand, if the employee uses 4 hours of paid sick leave on Monday because his daughter’s school nurse calls in the early afternoon to say his daughter has a fever and must be taken home, all 8 hours on Tuesday because he stays home with his ill daughter, and another 2 hours on Wednesday because his daughter is not well enough to go to school on time, his employer could not require certification because he has not used paid sick leave for all of his scheduled time on 3 consecutive full workdays. (The definition of certification issued by a healthcare provider appears in § 13.2.)

Proposed § 13.5(e)(1)(ii) further required the contractor to protect the confidentiality of any certification as required by § 13.25(d). The Department received no comments specifically regarding this provision and adopts it as proposed but with a minor correction to accurately reflect that the use of paid sick leave would be for one of the purposes described in § 13.5(c)(1)(i), (ii), or (iii), rather than all of them.

Proposed § 13.5(e)(1)(iii) addressed documentation to verify the use of paid sick leave for the purposes listed in § 13.5(c)(1)(iv), i.e., for absences related to domestic violence, sexual assault, or stalking. Specifically, it permitted a contractor to require documentation from an appropriate individual or organization to verify the need for such leave only if an employee uses paid sick leave on 3 or more consecutive full workdays for such purposes. The NPRM explained that such documentation could come from any person involved in providing or assisting with the care, counseling, relocation, assistance of a victim services organization, or related legal action, such as, but not limited to, a health care provider, counselor, employee of the victim services organization, or attorney. The Women’s Law Project, NWLC, and a group of organizations “dedicated to preventing, addressing, and ending domestic violence and sexual assault” suggested that the Department move this explanatory text to the regulation itself to prevent any confusion among contractors about the broad set of possible sources of acceptable documentation. These commenters also asked that the Department add clergy members, as well as family and close friends, to the illustrative list of individuals who can provide the documentation, and that the Department permit self-certification because there are instances in which an employee has not told anyone about the domestic violence, sexual assault, or stalking situation she faces. Because the Department agrees with these commenters that the broad scope of possible documentation for the varied and difficult circumstances related to domestic violence, sexual assault, and stalking was not fully articulated in the proposed regulatory text, and in the interest of minimizing any burden on victims who wish to limit the number of people to whom they reveal information about the situations they are facing, the Department has modified the text of § 13.5(e)(1)(ii) to incorporate each of these suggestions. The Department notes that the paid sick time laws in Massachusetts and Seattle also permit self-certification when leave is used for purposes like those described in § 13.5(c)(1)(iv). See 90 Mass. Code Regs. 33.06(2)(b)(vi); Seattle, Wash. Mun. Code § 14.16.030(F)(2)(d).

Proposed § 13.5(e)(1)(ii) also provided that a contractor may only require that such documentation contain the minimum necessary information establishing the need for the employee to be absent from work. This portion of the provision was not the subject of any comments and is adopted as proposed. As explained in the NPRM, the documentation could, for example, consist of a note from a social worker at
a victim services organization stating that the employee received services from the organization related to being a victim of domestic violence and moved to a new home for reasons related to the domestic violence, as well as a receipt from a moving company or a note from a landlord that indicates the date(s) of the move; it need not name the perpetrator of the domestic violence, the nature of the acts that constitute domestic violence, the addresses of the old or new homes, or any other details beyond those sufficient to make clear that the time was used for a purpose that justifies the use of paid sick leave. As another example, documentation could consist of a letter from a legal services attorney or sexual assault victim advocate who is assisting an employee who is a victim of sexual assault in completing the paperwork related to and filing for a civil protection order or restraining order, explaining that the employee spent time (consisting of most business hours over 3 consecutive days) with the attorney or advocate preparing for the hearing, including completing the petition for the court’s order and obtaining a time for the hearing as well as attending the hearing, including waiting at the courthouse and attending the proceedings; the letter would not need to explain the circumstances of the sexual assault, name the person(s) accused of the sexual assault, or otherwise provide any details beyond those sufficient to justify the need to use paid sick leave. Similarly, if the employee used 3 or more consecutive full workdays of paid sick leave to fly across the country to be with her daughter who is a victim of sexual assault to provide support related to an administrative hearing at the university the daughter attends, documentation could consist of the boarding passes from the employee’s plane flights and emails from a university official to the daughter setting the date of the hearing, without providing details about the specific subject matter of the hearing. Proposed § 13.5(e)(1)(ii) prohibited a contractor from requesting any of the above verification information and reiterated that the contractor must maintain confidentiality about the domestic abuse, sexual assault, or stalking as required by § 13.25(d). This sentence is adopted as proposed.

PSC and AGC urged the Department to permit contractors to request certification for leave of less than 3 days if an employee’s use of paid sick leave occurs in a pattern that the employer believes suggests abuse (such as if an employee repeatedly uses paid sick leave on Fridays or Mondays). Because the Executive Order provides that a contractor may only require certification or documentation if an employee is absent for 3 or more consecutive days, 80 FR 54698, the Department declines to adopt the suggestion that in some circumstances, contractors be permitted to require certification or documentation for shorter periods of leave. The Department further addresses suspected abuse of paid sick leave by employees, including by noting that contractors may investigate such situations, in the discussion of § 13.6 below.

Proposed § 13.5(e)(2), which was derived from the FMLA regulations at 29 CFR 825.122(k), provided that if certification or documentation is to verify the illness, injury, or condition, need for diagnosis, care, or preventive care, or activity related to domestic violence, sexual assault, or stalking of an individual related to the employee as described in § 13.5(c)(1)(iii), a contractor could also require the employee to provide reasonable documentation or a statement of the family or family-like relationship. Proposed § 13.5(e)(2) further explained that this documentation could take the form of a simple written statement from the employee or could be a legal or other document proving the relationship, such as a birth certificate or court order. EEAC noted its approval of this proposed requirement, and the Department adopts it as proposed. As noted in the NPRM, like under the FMLA, such a written statement from the employee need not be notarized. Additionally, a contractor is entitled to examine any legal or other documentation provided, but the employee is entitled to the return of any official document submitted for this purpose, such as a birth certificate. The Department also notes that if an employee has already submitted proof of a family or family-like relationship to the contractor for some other purpose, such as providing a marriage certificate in order to obtain health care benefits for the employee’s spouse, such proof is sufficient to establish a family relationship for purposes of paid sick leave, and the contractor may not require additional documentation. Proposed § 13.5(e)(3) addressed timing with respect to certification and documentation. Proposed § 13.5(e)(3)(i) allowed a contractor to require certification or documentation only if the contractor informs an employee before the employee returns to work that certification or documentation would be required to verify the use of paid sick leave if the employee is absent for 3 or more consecutive full workdays. The Department viewed this time limit as necessary because without notice at the time the employee or individual cared for by the employee has the condition or need justifying the use of paid sick leave, it could become difficult or even impossible for the employee to obtain certification. For example, if an employee has the flu for 4 days, without knowing that the contractor wishes her to provide certification from a health care provider verifying that she was sick, she might well recover fully without contacting a doctor. The Department further explained in the NPRM but not the regulatory text that a contractor’s general policy, if made clear to employees (such as in an employee handbook), requiring certification of the use of paid sick leave for absences of 3 or more consecutive full workdays would suffice to meet this requirement. The AFL–CIO was generally supportive of this provision. Other commenters had conflicting views regarding whether notification in an employee handbook should be sufficient to meet this obligation. EEAC asked that a statement that such notice would fulfill this requirement appear in the regulatory text, whereas the Center for WorkLife Law suggested that the Department disallow such general notice but instead require actual notice to an employee at the time the employee is using leave (a requirement that would be consistent with the analogous FMLA provision, 29 CFR 825.305(a), which provides that “[a]n employer must give notice of a requirement for certification each time a certification is required”).

Because the Department recognizes both the importance of employees being notified of the need to acquire certification or documentation and the potential burden on contractors that would be associated with informing each employee of its policy each time she requested to use leave, the Department is addressing these comments by adding to § 13.5(e)(3) a statement that the contractor may inform an employee of his requirement each time the employee requests to use or does use paid sick leave, or that the contractor may inform employees of a general policy to require certification or documentation for absences of 3 or more consecutive full workdays if it does so in a manner reasonably calculated to provide actual notice of the requirement to employees. Whether employees have received actual notice will depend on the particular circumstances, but in general, the Department will not consider simply including an explanation of the requirement in a lengthy handbook to be sufficient to show the employer has ensured that its
employees had actual notice. Explaining the policy orally when an employee is hired, reiterating the policy periodically in email reminders or at human resources trainings, and including it in an employee handbook to which the employee can refer at later dates, however, would satisfy the actual notice requirement, as would prominently posting the policy on a Web page from which employees can submit electronic requests to use paid sick leave.

Under proposed § 13.5(e)(3)(ii), a contractor could require the employee to provide certification or documentation within 30 days of the first day of the 3 or more consecutive full workdays of paid sick leave but could not set a shorter deadline for its submission. This requirement is set forth in section 2(i) of the Executive Order. 80 FR 54698. No commenter addressed it, and it is adopted as proposed.

Proposed § 13.5(e)(3)(iii) addressed the period between an employee’s use of paid sick leave, which a contractor properly requires certification or documentation and the employee’s submission of such certification and documentation, as well as how a contractor can respond to insufficient certification or documentation. It is adopted largely as proposed, but with modifications as described. First, proposed § 13.5(e)(3)(iii) required that while a contractor is waiting for or reviewing certification or documentation, it must treat the employee’s otherwise proper request for 3 or more consecutive full workdays of paid sick leave as valid. Vigilant asked that the Department change this provision such that the contractor would not treat an employee’s absence as paid sick leave until after receiving sufficient certification or documentation. The Department recognizes that because it is not possible to immediately resolve the issue of whether an employee’s absence of 3 or more days from work is properly treated as time using paid sick leave, either the contractor or the employee must bear the risk of an incorrect assumption while the determination is pending. Permitting an employer to wait to pay an employee for the time would create a significant deterrent to the use of paid sick leave at times when an employee’s need is likely greatest (because relatively longer leave will often be for an acute or severe issue). For these reasons, and because recoupment of payments made for paid sick leave after a proper retroactive denial of that leave is permitted under the Order and part 13 in the circumstances explained below, the Department believes it is more appropriate to ensure that the employee receives the pay and benefits she would have earned had she been working than to delay such payment to the employee.

Proposed § 13.5(e)(3)(iii) also explained that if the contractor ultimately does not receive certification or documentation, or if the certification or documentation the employee provides is insufficient to verify the employee’s need for paid sick leave, the contractor could, within 10 calendar days of the deadline for receiving the certification or documentation or within 10 calendar days of the receipt of the insufficient certification or documentation, whichever occurs first, retroactively deny the employee’s request to use paid sick leave.

The Department explained in the NPRM that certification or documentation could be insufficient, for example, because it did not describe a need for leave consistent with the permitted reasons for using paid sick leave or because leave was for a purpose other than that described in § 13.5(c)(1)(iv), it was not created or signed by a health care provider or a health care provider’s representative. The Center for WorkLife Law commented that the Department should require the contractor to give an employee notice that her certification or documentation is insufficient and allow her at least 5 days to cure the deficiency. Because the Department agrees that it is appropriate to give employees, who will often be unfamiliar with the rules regarding certification and documentation, a second chance to justify their use of a substantial portion of their accrued paid sick leave, the Department has modified the regulatory text to implement this suggestion. Specifically, § 13.5(e)(3)(iii) now provides that if an employee provides certification or documentation that is insufficient to verify the employee’s need for paid sick leave, the contractor shall notify the employee of the deficiency and allow the employee at least 5 days to provide new or supplemental certification or documentation. If after 30 days the employee has not provided any certification or documentation, or if after the 5 or more days allowed for resubmission the employee has either provided no new or supplemental certification or documentation or the new certification or documentation is still insufficient to verify the employee’s need for paid sick leave, the contractor may, within 10 calendar days of the employee’s request for providing sufficient certification or documentation, retroactively deny the employee’s request to use paid sick leave.

Proposed § 13.5(e)(3)(iii) further provided that if the contractor retroactively rejected the employee’s request, the contractor could recover the value of the pay and benefits the employee received but to which the employee was not entitled, including through deduction from any sums due to the employee (e.g., unpaid wages, vacation pay, profit sharing, etc.), provided such deductions do not otherwise violate applicable Federal or State wage payment or other laws. This language was derived from the FMLA regulations regarding the consequences of an employee’s failure to return to work after an employer paid for health or non-health benefit premiums while an employee was on FMLA leave. See 29 CFR 825.213(f). If a contractor retroactively denied an employee’s request to use paid sick leave, the NPRM explained, the contractor was required to reimburse the amount of paid sick leave the employee was treated as having used to the employee.

Delta commented that the NPRM did not address a contractor’s options if a State law does not permit recoupment of wages paid and suggested that the contractor be permitted to treat the absence as paid sick leave but nevertheless count the absence against the employee in the contractor’s time and attendance policy. The Department does not agree with this suggestion. If a contractor could properly retroactively deny an employee’s request to use paid sick leave but may not recoup relevant payments made, the contractor has two options. It may treat the time as paid sick leave, in which case the contractor must comply with all of the requirements of the Order and part 13 with respect to that time, including the prohibitions on interference and discrimination (that is, it may not count the absence against the employee under its attendance policy) but the employee will have less paid sick leave available for use going forward. Or it may elect not to treat the time as paid sick leave, in which case it may count the absence against the employee under its attendance policy but it must restore the hours of paid sick leave the employee attempted to use to the amount of paid sick leave the employee has available for use. This section of the provision is therefore adopted as proposed, except that the reference to Federal or State wage payment laws has been corrected to refer to Federal, State, or local wage payment laws.

Proposed § 13.5(e)(4) permitted a contractor to contact the health care provider or other individual who...
created or signed the certification or documentation only for purposes of authenticating the document or clarifying its contents and further explained that the contractor could not request additional details about the medical or other condition referenced, seek a second opinion, or otherwise question the substance of the certification. Under the proposal, authentication meant verifying that the health care provider or other individual did in fact create or sign the certification. Clarifying meant asking what illegible handwriting or other unreadable text says or asking for an explanation of the meaning of words used or information contained in the certification. Under the proposal, which was consistent with requirements regarding certification under the FMLA, see 29 CFR 825.307, a contractor could not ask the health care provider or other individual who created or signed the certification or other documentation for more information than necessary to verify that the employee was justified in using paid sick leave. The specific information required would vary depending upon the reason for the leave. For example, as explained in the NPRM, if an employee was home sick or injured for 3 days, any certification would need to contain some information about the medical condition (such as that it was the flu or a badly sprained ankle) to verify that the condition existed and lasted 3 or more days, but if an employee was a patient in a hospital for 3 days, the certification would not need to specify the condition for which the employee was being treated, because he was clearly receiving care from a health care provider while using paid sick leave. No commenter suggested modification of this portion of the provision, and the Department adopts it as proposed.

Proposed § 13.5(e)(4) further required the contractor to use a human resources professional, a leave administrator, or a management official if making contact with the health care provider or other individual who created or signed the certification or documentation. This requirement was derived from a regulatory provision under the FMLA. See 29 CFR 825.307(a). The proposed text went on to prohibit the employee’s direct supervisor from contacting the employee’s health care provider unless there is no other appropriate individual who can do so. The proposed requirement was also based on a similar provision in the FMLA regulations, 29 CFR 825.307 (a), by analogy that provision, it did not contain a complete prohibition on an employee’s direct supervisor contacting the health care provider. In explaining this distinction, the Department noted that although the Department sought to protect the privacy of employees (who might not wish to share personal medical or other information with a supervisor) to the extent possible, it recognized that the Executive Order applies to contractors that are not covered by the FMLA because their businesses are not of the requisite size, and so it believed the limited proposed exception was necessary. EEAC commented that it was helpful for the Department to be clear about who is permitted to seek authentication or clarification. Roffman Horvitz, on the other hand, believed the proposed provision placed too many requirements on contractors and should instead describe the necessary training for seeking authentication or clarification and allow the contractor to select the person who would complete those tasks. The Department adopts this portion of the provision as proposed, noting in response to Roffman Horvitz that the regulatory language allows contractors significant leeway in determining who may contact the health care provider or other professional and the limits that it does create are necessary to protect employees’ privacy. Proposed § 13.5(e)(4) also addressed the Health Insurance Portability and Accountability Act (HIPAA) Privacy Rule, Pub. L. 104–191, 110 Stat. 1936 (1996), which governs the privacy of individually identifiable health information created or held by HIPAA-covered entities and the requirements of which are set forth at 45 CFR parts 160 and 164. Specifically, it provided that the HIPAA Privacy Rule requirements must be satisfied when individually identifiable health information of an employee is shared with a contractor by a HIPAA-covered health care provider. As is true for purposes of the FMLA, if an employee’s certification is unclear and the employee chooses not to provide the contractor with authorization allowing the contractor to clarify the certification with the health care provider (otherwise clarify the certification), the proposed rule permitted the contractor to deny an employee’s request to use paid sick leave. See 29 CFR 825.307(a). The Department received no requests to change this language and adopts it as proposed.

Proposed § 13.5(f) addressed the interaction between the paid sick leave required by Executive Order 13706 and part 13 with other laws as well as contract sick time policies. Proposed § 13.5(f)(1) implemented section 2(f) of the Executive Order by providing that nothing in the Order or part 13 excused noncompliance with or superseded any applicable Federal or State law, any applicable law or municipal ordinance, or a CBA requiring greater paid sick leave or leave rights than those established under the Executive Order and part 13. The Department received no comments regarding this provision and adopts it as proposed.

Proposed § 13.5(f)(2) addressed the interaction between paid sick leave and the requirements of the SCA and DBA, thereby implementing section 2(f) of the Executive Order. Proposed § 13.5(f)(2)(i) explained that paid sick leave required by Executive Order 13706 and part 13 was in addition to a contractor’s obligations under the SCA and DBA, and a contractor would not receive credit toward its prevailing wage or fringe benefit obligations under those Acts for any paid sick leave provided in satisfaction of the requirements of Executive Order 13706 and part 13. The SCA and DBA both provide that fringe benefits furnished to employees in compliance with their requirements do not include any benefits “required by Federal, State, or local law.” 41 U.S.C. 6703(2) (SCA); 40 U.S.C. 3141(2)(B) (DBA); see also 29 CFR 4.171(c) (“No benefit required by any other Federal law or by any State or local law, such as unemployment compensation, workers’ compensation, or social security, is a fringe benefit for purposes of the [SCA].”); 29 CFR 5.29 (“The [DBA] excludes fringe benefits which a contractor or subcontractor is obligated to provide under other Federal, State, or local law. No credit may be taken under the [DBA] for the payments made for such benefits. For example, payment[s] for workmen’s compensation insurance under either a compulsory or elective State statute are not considered payments for fringe benefits under the [DBA].”). Because paid sick leave provided in accordance with the Executive Order and part 13 is required by law, the Department reasoned, consistent with the Executive Order’s express language, that paid sick leave cannot count toward the fulfillment of SCA or DBA obligations. Proposed § 13.5(f)(2)(ii) allowed a contractor to count the value of any paid sick time provided in excess of the requirements of Executive Order 13706 and part 13 (and any other law) toward its obligations under the SCA or DBA in keeping with the requirements of those Acts. In particular, the NPRM explained that a contractor could take credit for such paid sick time only if the contractor’s paid time off policies were in compliance with the SCA requirements regarding fringe benefits as described in
may be counted toward its SCA or DBA obligations (to the extent permitted by those statutes and their implementing regulations). Or if a contractor’s paid time off policy provides more than 56 hours of leave and a contractor tracks and records the amount of paid time off employees use for the purposes described in § 13.5(c)(1), the contractor may count paid time off an employee uses for other purposes toward its SCA or DBA obligations (to the extent permitted by those statutes and their implementing regulations). For SCA-covered contracts, such obligations could include the required health and welfare benefit or required vacation time.

The Chamber/IFA asked how paid sick time that is provided for in a CBA would be treated under section 4(c) of the SCA, 29 U.S.C. 6707(c), which generally requires that a successor contractor under the SCA may not pay service employees less than the wages and fringe benefits they would have received under a predecessor contractor’s CBA. The response to this question will depend on the terms and circumstances of the paid leave provided for in the CBA, but will be determined based on two primary principles. First, “[a]n SCA contractor may satisfy its fringe benefit obligations under any wage determination by furnishing any equivalent combinations of fringe benefits or by making equivalent or differential payments in cash’’ in accordance with [SCA requirements].” 29 CFR 4.163(j). In other words, if the CBA provides for any particular benefit, such as paid time off, does not mean the successor contractor subject to a wage determination issued under section 4(c) must provide that same benefit. Second, benefits that are required by law, including paid sick leave required by the Executive Order and part 13, cannot count toward the fulfillment of SCA (or DBA) obligations.

Proposed § 13.5(f)(3) addressed the interaction of paid sick leave required by Executive Order 13706 and part 13 with the FMLA. It provided that a contractor’s obligations under the Executive Order and part 13 would have no effect on its obligations to comply with, or ability to act pursuant to, the FMLA. It further provided that paid sick leave could be substituted for (that is, may run concurrently with) unpaid FMLA leave under the same conditions as other paid time off pursuant to 29 CFR 825.207. It also explained that as to time off that is designated as FMLA leave, it need not be provided if the employee uses paid sick leave, all notices and certifications that satisfy the FMLA requirements set forth at 29 CFR 825.300 through 825.308 would satisfy the request for leave and certification requirements of § 13.5(d) and (e).

For example, although under the Executive Order and part 13 an employee’s request to use paid sick leave need only be made at least 7 days in advance if the need for leave is foreseeable, under the FMLA, such notice must be made at least 30 days in advance pursuant to 29 CFR 825.302(a). If an employee seeks to use paid sick leave for an FMLA-qualifying reason (and thus both types of leave will run concurrently), such as if she needs major surgery, the contractor may require that she comply with the FMLA’s notice requirements, which will satisfy the requirements of the Executive Order and part 13; specifically, when she notifies the contractor of the date of her surgery (that is 30 days in the future or as soon as practicable) and likely recovery period, she will have complied with the requirements of § 13.5(d) to provide oral or written notice of a need for leave that justifies the use of paid sick leave, and the expected duration of the leave, at least 7 days in advance or as soon as practicable.

Similarly, although under the Executive Order and part 13 a contractor may not require certification of the need to use paid sick leave unless the employee uses more than 3 consecutive full workdays of paid sick leave, a contractor is permitted to require certification from an employee for a shorter period of FMLA-designated leave as provided in 29 CFR 825.305. If an employee is concurrently using paid sick leave and FMLA leave, a contractor may require certification as permitted under the FMLA even if certification for paid sick leave would not be permitted under Executive Order 13706 and part 13 (such as, for example, if the employee only needed to use 1 day of leave). If that certification supported the use of FMLA leave for an employee’s serious health condition, it would be more than sufficient to serve as the certification issued by a health care provider for use of 3 consecutive full workdays of paid sick leave should such certification become necessary. Even if the certification was insufficient to demonstrate that an employee was entitled to use FMLA leave (such as because although the employee is ill, the illness did not meet the definition of a serious health condition), it could nevertheless be sufficient to meet the requirements of the Executive Order and part 13. The Department received no comments specific to the interaction of paid sick leave and FMLA leave and
therefore adopts this provision as proposed.

EEAC asked the Department, presumably in response to the portion of this provision stating that paid sick leave can run concurrently with FMLA leave, to state that paid sick leave also runs concurrently with other types of paid leave. The Department has made clear in § 13.5(f)(4), discussed below, that for purposes of this rulemaking, a contractor can fulfill its obligation to provide paid sick leave under the Order and part 13 as well as satisfy the requirements of a State or local paid sick time law with one type of paid leave that complies with both the Order and such a law. Nothing in the regulations prohibits a contractor from fulfilling other legal obligations by providing leave that also satisfies its obligations under the Executive Order and part 13. (The Department notes, however, that the converse is not necessarily true: Leave that satisfies a contractor’s obligations under the Executive Order and part 13 may not necessarily satisfy or be used to satisfy other legal obligations, such as those arising under the SCA and DBA.)

Proposed § 13.5(f)(4) addressed the interaction of paid sick leave required by Executive Order 13706 and part 13 with paid sick time required by State or local law. As proposed, it explained that a contractor’s compliance with a State or local law requiring that employees be provided with paid sick time does not excuse the contractor from compliance with its obligations under the Executive Order and part 13. It noted, however, that a contractor is permitted to satisfy its obligations under the Order and part 13 by providing paid sick time that fulfills the requirements of a State or local law provided that the paid sick time is accrued and could be used in a manner that meets or exceeds the requirements of the Order and part 13. The American Benefits Council, Seyfarth Shaw, the Chamber/IFA, and TrueBlue, Inc. asked that the Department provide that a contractor can fulfill its requirements under the Executive Order and part 13 by complying with any applicable State or local paid sick time law, emphasizing the burdens on contractors who would be required to comply with this Federal requirement in addition to State or local (or sometimes both) requirements. The Department declines to adopt this suggestion because it would often result in employees covered by a State or local paid sick time law having access to less paid sick time, or paid sick time that is available for fewer uses, than is required under the Executive Order. Furthermore, contractors have experience complying with a variety of Federal, State, and local laws, so although the Department recognizes that contractors operating in States and localities with paid sick time laws may have greater obligations than those operating elsewhere, this is not a situation unique to paid sick time or that is unduly burdensome.

NWLC, the National Hispanic Council on Aging, the Maine Women’s Lobby, UltraViolet Education Fund, and Innovation Ohio suggested that the Department provide more detail about the ways in which a contractor must satisfy the requirements of the Executive Order while also complying with a State or local paid sick time law, in particular by specifying that a contractor subject to both the Order and a State or local paid sick time law must provide leave that meets or exceeds the Order’s accrual, use, and other requirements. The Department intended to make these points in the NPRM, and reiterates them here; it has also inserted language to this effect into the regulatory text—which is otherwise adopted as proposed—to be as clear as possible about contractors’ obligations in jurisdictions in which a State or local paid sick time law applies. Specifically, as explained in the NPRM, a contractor whose employees perform work on or in connection with covered contracts in States, counties, or municipalities that have statutes or ordinances requiring that employees be provided with paid sick time must comply with both those laws and the Executive Order. But that contractor would be permitted, at least for purposes of the Executive Order and part 13, to fulfill both obligations simultaneously. If, for example, a State law requires that employees receive up to 40 hours of paid sick time, a contractor is not necessarily required to provide employees performing work on or in connection with covered contracts in that State an additional 56 hours of paid sick leave; if the contractor provides paid sick time in compliance with both the State law and the Executive Order, the contractor need only provide up to 56 hours total of paid sick leave. (The NYC Department of Consumer Affairs indicated in its comment that this example would apply to New York City’s paid sick time ordinance.)

The Department further explained in the NPRM that because the requirements of State and local laws and the Order and part 13 will rarely be identical, to satisfy both, a contractor will likely need to comply with the requirements that are more generous to employees. For example, a contractor could satisfy both a county law that requires employees to earn at least 1 hour of paid sick time for every 40 hours worked and the Executive Order by allowing employees to earn 1 hour of paid sick leave for every 30 hours worked. Or a contractor could satisfy both a State statute that allows employers to limit employees’ use of paid sick time to 40 hours per year and the Executive Order by not limiting use per year on a basis other than the amount of leave an employee has available for use. Similarly, a contractor could satisfy both a municipal ordinance that does not permit an employer to require certification of the reason for using paid sick time under any circumstances and the Executive Order and part 13 by choosing not to require certification for the use of paid sick time even if an employee uses such leave for more than 3 consecutive days.

Proposed § 13.5(f)(5) addressed the interaction between the paid sick leave requirements of Executive Order 13706 and part 13 and an employer’s paid time off policies, explaining first that the Order and part 13 need not have any effect on a contractor’s voluntary paid time off policy, whether provided pursuant to a CBA or otherwise. The Department’s proposal noted that whether as a practical matter the requirement to provide paid sick leave under the Order and part 13 affects the amount or types of other leave a contractor provides or a union negotiates is not an issue within the Department’s rulemaking authority. The Department received no comments specifically addressing any portion of the provision and adopts it as proposed, though it now appears as § 13.5(f)(5)(i) because of adjustments to the provision described below. The timing of the Order’s application to employees whose covered work is governed by a CBA is addressed in § 13.4(f).

Proposed § 13.5(f)(5) also implemented section 2(g) of the Order by providing that a contractor’s existing paid time off policy (if provided in addition to the fulfillment of SCA or DBA obligations, if applicable) would satisfy the requirements of the Executive Order and part 13 if various conditions were met. First, the proposed provision explained that the paid time off was to be made available to all employees described in § 13.3(a)(2) (other than those excluded by § 13.4(e)). Second, under the proposal, employees were to be permitted to use the paid time off for at least all of the purposes described in § 13.5(c)(1). Those purposes, described in detail in the discussion of that provision, are those for which an employee must be permitted to use paid sick leave: (1) A physical or mental
illness, injury, or medical condition; (2) obtaining diagnosis, care, or preventive care from a health care provider; (3) caring for the employee’s child, parent, spouse, domestic partner, or any other individual related by blood or affinity whose close association with the employee is the equivalent of a family relationship for the reasons detailed in the provision; or (4) domestic violence, sexual assault, or stalking, if the time absent from work is for the purposes detailed in the provision. Third, the paid time off was to be provided in a manner and an amount sufficient to comply with the rules and restrictions regarding the accrual of paid sick leave set forth in § 13.5(a) and regarding maximum accrual, carryover, reinstatement, and payment for unused leave set forth in § 13.5(b). Fourth, the paid time off was to be provided pursuant to policies sufficient to comply with the rules and restrictions regarding use of paid sick leave set forth in § 13.5(c), requests for leave set forth in § 13.5(d), and certification and documentation set forth in § 13.5(e), at least with respect to any paid time off used for the purposes described in § 13.5(c)(1). Finally, the paid time off was to be protected by the prohibitions against interference, discrimination, and recordkeeping violations described in § 13.6 and the prohibition against waiver of rights described in § 13.7, at least with respect to any paid time off used for the purposes described in § 13.5(c)(1).

EEAC, the Chamber/IFA, the American Benefits Council, and PSC wrote that requiring contractors with paid time off policies to comply with the Executive Order’s requirements is too burdensome, and that any paid time off policy that allows for 56 hours or more of leave should satisfy a contractor’s obligations under the Order regardless of whether it meets the other requirements for accrual and use of paid sick leave specified in part 13. Some commenters identified specific requirements they found problematic: Seyfarth Shaw wrote that being unable to limit an employee’s use of leave during an accrual year would be challenging for contractors, and would lead many of them to abandon their existing paid time off policies; PSC asked that the recordkeeping requirements of part 13 not apply to paid time off policies; Delta wrote that the carryover requirement conflicted with its existing paid time off policy; and EEAC interpreted the Order to mean that any paid time off policy that complies with the terms of the Order, which it distinguished from what it asserted were additional requirements set forth in part 13, would satisfy a contractor’s obligations. The Chamber/IFA and SHRM/CUPA–HR suggested that the Department identify the most crucial requirements of the Order and part 13 and permit contractors with paid time off policies to comply only with those. SHRM/CUPA–HR also asked for clarification of whether if an employee uses all of her paid time off for purposes other than those the Order specifies (such as vacation), the contractor is obligated to provide additional paid sick leave to that employee.

After careful consideration of these comments, the Department declines to adopt the commenters’ suggestions that contractors with paid time off policies that provide employees with less than is required by this rulemaking be excused from complying with the requirements described in the Order and part 13. The Department believes the best interpretation of section 2(g) of the Order is that it allows contractors that already provide paid time off under policies that are equivalent to or more generous than those described in the Order and part 13 to avoid an obligation to provide an additional 56 hours of paid sick leave. Thus, employers who make available to employees entitled to paid sick leave pursuant to the Executive Order 56 hours of paid time off under policies that are equivalent to or more generous than those described in the Order and part 13 have fulfilled their obligations, regardless of whether their employees use that paid leave for the purposes designated by the Order or for other purposes deemed permissible by their employers, such as vacation. The key to compliance with the Order and part 13 is that employers with paid time off policies provide access to no less than 56 hours of paid leave under the required conditions, and that any such leave used for the purposes described in § 13.5(c)(1) is covered by the relevant protections form part 13, not whether employees choose to use their paid time off for the purposes covered by the Order and part 13. In this way, contractors may maintain the flexibility and discretion that many employers and employees value in paid time off policies.

This flexibility and discretion, however, should not be understood to excuse contractors that provide paid time off that is not equally protective of employees’ access to paid absences for the reasons described in § 13.5(c)(1) from fulfilling the requirements of the Order and part 13. For example, if a contractor offered a paid time off policy under which each employee had 7 days of paid leave he could use for any purpose but an employee was required to use a full day of leave at a time even if he only needed to be absent for an hour to go to a doctor’s appointment, or if the contractor could deny a request to use leave for any reason, including if the office is busy at the time an employee’s child is sick, that contractor’s employees would not have the meaningful access to paid sick leave the Order and part 13 are meant to confer and therefore the Department is not adopting commenters’ suggestion that such a policy would fulfill the contractor’s obligations under the Order.

With respect to EEAC’s interpretation that the Order requires paid time off policies to comply with the Order itself but not what it considers to be additional regulatory requirements (such as recordkeeping requirements, the requirement to notify employees of the amount of paid sick leave they have accrued, the requirement to establish an accrual year, or the requirement not to make impermissible deductions from the pay and benefits an employee receives when using paid sick leave), the Department disagrees with the commenter’s premise. The Order contemplates that regulations will be integral to carrying out its purposes, and accordingly directs the Secretary to issue regulations that are necessary and appropriate to implement the Order. 80 FR 54698. Part 13 constitutes the Department’s interpretation of what the Order requires and how contractors will comply with it; each regulatory provision, rather than being an unnecessary or additional requirement beyond what the Order demands, is a necessary and appropriate part of a complete scheme to give the Order its full intended effect. For example, the Order specifically authorizes the Secretary to include in its implementing regulations requirements regarding recordkeeping, and the records part 13 requires contractors to make and maintain will be essential to any WHD investigation of a possible violation of the Order. In addition, the Order refers to paid sick leave accrual in the course of a year without defining it; the definition of and requirements regarding establishing an “accrual year” give contractors the information and instructions they need to comply with their obligations. The Department is therefore adopting § 13.5(f)(5) with the language proposed, which now appears as § 13.5(f)(5)(ii), but it is also clarifying, as § 13.5(f)(5)(iii) and as discussed here, how its provisions apply if a contractor’s paid time off policy provides more than 56 hours of leave each year. The Department recognizes that (1)
employers often provide paid time off rather than separate vacation and sick leave because they and their employees value the flexibility inherent in not distinguishing types of leave and (2) the intent of the Order was to ensure that employees have access to up to 56 hours of paid leave for the purposes described in § 13.5(c)(1). Therefore, the regulatory text now explicitly provides that a contractor satisfying the requirements of the Executive Order and part 13 with a paid time off policy that provides more than 56 hours of leave per accrual year may choose to (1) provide all paid time off as described in § 13.5(f)(5)(ii) or (2) track, and make and maintain records reflecting, the amount of paid time off an employee uses for the purposes described in § 13.5(c)(1), in which case the contractor need only provide, for each accrual year, up to 56 hours of paid time off the employee requests to use for such purposes in compliance with the Order and part 13.

In other words, to ensure that 56 hours of paid time off is protected under the Order, if a contractor chooses to track, and make and maintain records reflecting, the amount of paid time off an employee uses for the purposes described in § 13.5(c)(1), the contractor need only provide, for each accrual year, up to 56 hours that an employee requests to use for such purposes in compliance with the rules and requirements of the Executive Order and part 13. If a contractor does not choose to track, and make and maintain records reflecting, the amount of paid time off an employee uses for the purposes described in § 13.5(c)(1), all of an employee’s requests to use paid time off for such purposes must be provided in compliance with the Order and part 13. Regardless of whether a contractor distinguishes between paid time off used for the purposes described in § 13.5(c)(1) and paid time off used for other purposes, the contractor is not required to provide any additional paid sick leave or paid time off beyond the amount provided by the contractor’s paid time off policy that satisfies the condition described in § 13.5(f)(5).

For example, assume a contractor provides 120 hours of paid time off per accrual year. That contractor could decide to track and record the amount of paid time off each employee uses for the purposes described in § 13.5(c)(1), meaning that it formally distinguishes between leave used for such purposes and for other purposes and maintains documentation designed to ensure that it and each of its employees know how much paid time off an employee has used for the purposes described in § 13.5(c)(1) (and therefore how many out of at least 56 hours per accrual year the employee has remaining for use subject to the protections of the Order and part 13). If the contractor made such a choice, an employee who uses 56 hours for the purposes described in § 13.5(c)(1) early in the accrual year would not be entitled to Order’s protections for her remaining 64 hours of paid time off regardless of the purposes for which she requests to use them. On the other hand, an employee who uses 64 hours of paid time off for other purposes (such as vacation) early in the year would still be entitled to use any or all of her remaining 56 hours of leave for such purposes subject to all of the protections required by the Order and part 13. Under this approach, a contractor must make up to 56 hours of paid time off per accrual year available for an employee’s use for the purposes described in § 13.5(c)(1), but an employee might not choose to use any or all of her leave in that manner. For example, an employee who uses 80 hours of paid time off for vacation early in the year would only be entitled to use up to 40 remaining hours of leave for the purposes described in § 13.5(c)(1) subject to the protections required by the Order and part 13, and if she used those 40 hours for another vacation, she would have no paid leave remaining that her contractor would be obligated to provide for the purposes described in § 13.5(c)(1).

If a contractor that provides 120 hours of paid time off chooses not to track and record the amount of paid time off employees use for the purposes described in § 13.5(c)(1), its obligations would differ because it would not have information to demonstrate that an employee had in fact used her full entitlement to up to 56 hours of paid leave for the purposes described in § 13.5(c)(1). For example, if one of the contractor’s employees uses 56 hours of leave early in the accrual year for reasons that the contractor did not document (even if the contractor was informally aware of those reasons), the employee would still be entitled to use any or all of her 64 remaining hours of paid time off for the purposes described in § 13.5(c)(1) subject to the protections of the Order and part 13. As these examples demonstrate, whether a contractor chooses to keep track of the purposes for which paid time off is used determines whether it may limit the amount of paid time off as to which it must, if the leave is used for a purpose described in § 13.5(c)(1), provide all of the protections of the Order and part 13. But whichever option the contractor selects, it need not provide more paid time off than it offers in its policy (in this example, 120 hours) per accrual year irrespective of the purposes for which an employee actually uses her leave.

Accordingly, § 13.5(f)(5) as adopted still provides that a contractor’s paid time off policy must in significant measure comply with the requirements of the Order and part 13, but the Department clarifies that contractors who fulfill their obligations under the Order and part 13 with a paid time off policy have both the option to formally distinguish between uses of leave and other flexibilities as described below. The following discussion offers details regarding how a paid time off policy used to fulfill a contractor’s obligations under the Order and part 13 could operate.

As noted in the regulatory text and above, to satisfy the obligations of the Order and part 13, a contractor’s paid time off policy must comply with all of the requirements of §§ 13.5(a) and 13.5(b) or, if the contractor chooses to track and record the amount of paid time off employees use for the purposes described in § 13.5(c)(1), the contractor must comply with those provisions with respect to up to 56 hours per accrual year of paid time off an employee requests to use for such purposes. The accrual-related requirements of the Executive Order and part 13 with which a contractor’s paid time off policy must comply include allowing employees to accrue at least 1 hour of leave for every 30 hours worked (as hours worked are defined for purposes of the FLSA) without limiting annual accrual at any less than 56 hours and providing leave that accrues at least each pay period or each month as under § 13.5(a)(1)(ii). A contractor may assume for purposes of accrual of leave under its paid time off policy that employees whose hours it is not otherwise required by statute to track work 40 hours per week as described in § 13.5(a)(1)(iii). A contractor also has the option of providing employees with at least 56 hours of paid time off at the beginning of each accrual year as described in § 13.5(a)(3).

A contractor may choose to fulfill its obligations pursuant to § 13.5(f)(5) with a paid time off policy that provides more leave than is required, either by allowing for more rapid accrual (for example, by providing employees who work 80 hours in a pay period with 4 hours of paid time off for each pay period) or by providing more than 56 hours of paid time off at the beginning of each accrual year. It is in these circumstances that the contractor’s choice to track and record the reasons for which employees
use leave becomes relevant, as noted throughout this discussion.

The requirement in §13.5(a)(2) that a contractor notify employees of the amount of paid sick leave they have accrued also applies to paid time off policies that fulfill a contractor’s obligations under the Order and part 13. In a circumstance in which a contractor does not track and record which paid time off an employee uses for the purposes described in §13.5(c)(1), the contractor would comply with this requirement by informing an employee of an amount of paid time off generally, rather than paid sick leave specifically, available for use. In other words, because paid sick leave is typically not designated separately when an employer offers a paid time off policy, in this context, a contractor need only provide notice of the amount of paid time off an employee has available for use no less than once each pay period or each month (whichever interval is shorter) as well as upon a separation from employment and upon any reinstatement of leave if an employee is rehired within 12 months. If, however, a contractor chooses to track and record paid time off used for the purposes described in §13.5(c)(1), the contractor would comply with this requirement by informing an employee of the amount of paid time off available for use for those purposes with the full protections required by the Order and part 13. A contractor would be free to follow its usual policy for informing employees of how much paid time off they have available over what that amount differs (or to adopt any other practice it wished with respect to that time).

Additionally, a paid time off policy used to fulfill a contractor’s obligations under the Order and part 13 must allow carryover of leave from the previous accrual year as provided in §13.5(b)(2). But a contractor need only allow carryover of up to 56 hours of paid time off even if its policy provides more than 56 hours of leave, although this requirement applies differently depending on whether a contractor chooses to track and record the amount of paid sick leave an employee uses for the purposes described in §13.5(c)(1). For example, assume that under a particular contractor’s paid time off policy, employees who regularly work 8-hours days, 5 days per week accrue a half day of paid time off each semi-monthly pay period, so they receive 12 days total per year, and the contractor does not track and record the reason the employee uses paid time off. If one employee used all 12 days in year 1 (for vacation, the purposes described in §13.5(c)(1), or some combination of both), she would not carry over any paid time off into year 2. If another employee used 7 days in year 1 (for any purpose), a contractor would be required to permit her to carry over her remaining 5 days into year 2. If a third employee used no paid time off in year 1, however, the contractor would only be required to allow her to carry over 7 of her 12 days into year 2. (Consistent with §13.5(b)(3), a contractor may choose to limit an employee’s additional accrual in year 2 until she has less than 7 days of paid time off available.)

If instead a contractor had a paid time off policy with the same accrual practices but the contractor did choose to track and record which leave employees used for the purposes described in §13.5(c)(1), application of the carryover requirement would in some circumstances depend on how much leave each employee had so used. If an employee used all 12 days in year 1 (in this case, regardless of whether she used it all for vacation or some for sick leave and some for the purposes described in §13.5(c)(1)), she would not carry over any paid time off into year 2. If another employee used 7 days in year 1 for vacation, the contractor would be required to permit her to carry over her remaining 5 days into year 2 (and to use as much of those 40 hours, in addition to as much of 56 additional hours accrued in year 2, as she requested during year 2 for the purposes described in §13.5(c)(1)). But if the employee used 7 days of paid time off because she was sick, the contractor would not be required to permit her to carry over any remaining paid time off into year 2. If instead the employee had used 5 days because she was sick and 2 days for vacation, the contractor would only be required to permit her to carry over 2 of her remaining 5 days of paid time off into year 2 (and to use as much of those 16 hours, in addition to as much of 56 additional hours accrued in year 2, as she requested during year 2 for the purposes described in §13.5(c)(1)). If a third employee used no paid time off in year 1, the contractor would be required to allow her to carry over 7 of her 12 days into year 2. (Consistent with §13.5(b)(3), the contractor would be permitted to limit an employee’s additional accrual in year 2 until she had less than 7 days of paid time off available to use for the purposes described in §13.5(c)(1).)

If a contractor’s paid time off policy provides leave at the beginning of each year rather than allowing employees to accrue it over time (as is permitted under §13.5(a)(3)), employees still need only begin the subsequent year with as much leave as would have been required under the Order and part 13. Under §13.5(a)(3), if a contractor provides 56 hours of paid sick leave at the beginning of the accrual year, an employee must receive 56 additional hours of paid sick leave even if he has carried over some paid sick leave from the previous accrual year. In practice, these requirements mean that an employee of a contractor who has chosen the §13.5(a)(3) option could begin accrual years after the first year with as much as 112 hours of paid sick leave. Accordingly, if a contractor provides employees with 10 days of paid time off at the beginning of each year, employees who use all of their leave (regardless of the purposes for which the leave is used or whether the contractor tracks and records such purposes) may begin subsequent years with only 10 days, but those who have not used all of their leave must be permitted either to carry over up to 4 days of unused paid time off (even if they have more) such that they begin the year with up to 14 days (that is, 112 hours) of leave or, if a contractor tracks and records leave used for the purposes described in §13.5(c)(1), as much paid time off as is unused and required to be available for such purposes (because the employee has used less than any amount carried over plus up to 56 newly accrued hours for such purposes). Alternatively, if an employee begins new accrual years with 112 hours or more of paid time off, whether he has carried over some of that time from the previous year or has received new leave at or above that amount, the Department would consider a contractor to have met its carryover obligation. In such circumstances, a contractor that tracks and records the amount of paid time off employees use for the purposes described in §13.5(c)(1) must permit employees to use up to 112 hours of paid time off for such purposes in compliance with the requirements of the Order and part 13 in accrual years after the first, consistent with §13.5(a)(3).

Paid time off policies used to satisfy the requirements of the Order and part 13 pursuant to §13.5(f)(5) must also comply with the requirement to reinstate leave for an employee rehired by the same contractor within 12 months of a job separation. As with carryover, however, only up to 56 hours of paid time off must be reinstated even if employees have greater amounts of leave upon separation. The precise amount will depend upon how much paid time off an employee has used for the purposes described in §13.5(c)(1), or some combination of both. But a contractor need only begin the subsequent year with up to 112 hours of paid sick leave (or any purpose), a contractor would be required to permit her to carry over her remaining 5 days into year 2. If a third employee used no paid time off in year 1, however, the contractor would only be required to allow her to carry over 7 of her 12 days into year 2. (Consistent with §13.5(b)(3), a contractor may choose to limit an employee’s additional accrual in year 2 until she has less than 7 days of paid time off available.)

If instead a contractor had a paid time off policy with the same accrual practices but the contractor did choose to track and record which leave employees used for the purposes described in §13.5(c)(1), application of the carryover requirement would in some circumstances depend on how much leave each employee had so used. If an employee used all 12 days in year 1 (in this case, regardless of whether she used it all for vacation or some for sick leave and some for the purposes described in §13.5(c)(1)), she would not carry over any paid time off into year 2. If another employee used 7 days in year 1 for vacation, the contractor would be required to permit her to carry over her remaining 5 days into year 2 (and to use as much of those 40 hours, in addition to as much of 56 additional hours accrued in year 2, as she requested during year 2 for the purposes described in §13.5(c)(1)). But if the employee used 7 days of paid time off because she was sick, the contractor would not be required to permit her to carry over any remaining paid time off into year 2. If instead the employee had used 5 days because she was sick and 2 days for vacation, the contractor would only be required to permit her to carry over 2 of her remaining 5 days of paid time off into year 2 (and to use as much of those 16 hours, in addition to as much of 56 additional hours accrued in year 2, as she requested during year 2 for the purposes described in §13.5(c)(1)). If a third employee used no paid time off in year 1, the contractor would be required to allow her to carry over 7 of her 12 days into year 2. (Consistent with §13.5(b)(3), the contractor would be permitted to limit an employee’s additional accrual in year 2 until she had less than 7 days of paid time off available to use for the purposes described in §13.5(c)(1).)
§ 13.5(c)(1), how much of that time the contractor must permit an employee to use for such purposes based on the employee’s prior use in that accrual year. Because the Department has modified § 13.5(b)(5) to provide that if a contractor pays separating employees for unused paid sick leave, no reimbursement of the leave is required, the same relief from the obligation could apply to paid time off policies.

Under § 13.5(f)(5), a contractor may only use its paid time off policy to satisfy its obligations under the Order and part 13 if, when an employee seeks to use or does use leave for the purposes described in § 13.5(c)(1) (all of which must be permissible uses of the paid time off), the request and use of the leave comply with all of the requirements of §§ 13.5(c), (d), (e), § 13.6, and § 13.7. These requirements apply to all paid time off used for the purposes described in § 13.5(c)(1) regardless of whether the contractor tracks and records such time.

The following examples illustrate how a contractor may treat paid time off used for different purposes differently and the implications of a contractor’s choice to track and record the use of paid time off for the purposes described in § 13.5(c)(1).

When paid time off is used for a purpose described in § 13.5(c)(1), employees must be permitted to use leave in increments of no greater than 1 hour. A contractor may, however, require employees using paid time off for other reasons (such as vacation) to use paid time off in larger increments of at least half a day. Therefore, if an employee asked to come to work 2 hours late one day so he could attend an event at his daughter’s school, a contractor could require the employee to take the entire day off; if the employee asked to come to work 2 hours late because he needed to take his daughter to see her pediatrician, however, the contractor would have to permit the employee to use only 2 hours of paid time off.

If that contractor’s paid time off policy provides 10 days of leave each year, and the employee had already used 7 (8-hour) days of paid time off that year to be absent from work because his daughter was sick, the contractor’s obligation to comply with the requirements of §§ 13.5(c), (d), (e), § 13.6, and § 13.7 with respect to the employee’s additional request to take his daughter to the pediatrician would depend upon how the contractor managed its paid time off policy.

Specifically, the contractor chose not to track and record the reasons for which an employee had used paid time off, it would be required to approve the employee’s request to use only 2 hours of paid time off. But if the contractor had kept a record noting that the employee’s previous requests to use paid time off were for a purpose described in § 13.5(c)(1) (in this case, caring for his daughter when she was ill), it would have already fulfilled its obligations under the Order and this part and would be free to require that the employee use a full day of leave. Furthermore, if the employee had already used all 10 days of paid time off, regardless of the reason for his absence or whether the contractor tracked those reasons, the contractor would be free to deny the employee’s request for 2 additional hours of paid leave. As another example of how a contractor can treat paid time off used for different purposes differently, a contractor would be obligated not to make the use of paid time off requested for a purpose described in § 13.5(c)(1) contingent on finding a replacement worker or fulfilling operational needs, although it would be free to deny requests for vacation for those reasons.

The Department noted in the discussion of § 13.5(f)(5) in the NPRM that a paid time off policy used to satisfy a contractor’s obligations under the Order and part 13 may not set limits on the amount of leave that may be used per year or at once; in the Final Rule, this requirement in § 13.5(c)(4) is clarified to make explicit that use may be limited by the amount of paid sick leave an employee has available. The Department similarly clarifies here that compliance with this requirement in the context of a paid time off policy involves either not limiting use per year, at least for the purposes described in § 13.5(c)(1), to an amount of leave less than the total amount an employee has accrued under the contractor’s policy, or not limiting use per year to less than 56 hours of leave (or any amount of leave carried over plus up to 56 hours of paid time off newly accrued in the accrual year) for the purposes described in § 13.5(c)(1), subject to the amount of paid time off that an employee has remaining, if the contractor tracks and records such use and chooses to limit leave for such purposes.

For instance, if a contractor’s policy provided employees with 120 hours of leave per year to use for any purpose and the contractor did not track the purposes for which employees used leave, a contractor could limit use per year to 120 hours. For example, the contractor could permissibly deny an employee’s request to use paid time off to care for his frail grandmother after the employee had used all 120 hours in that year for vacation or any other purpose. By contrast, a contractor that does track and record the reasons an employee uses paid time off could, for example, deny an employee’s request to use paid time off to meet with a counselor regarding domestic violence after an employee (who did not carry over any leave from the previous accrual year) had already used 56 hours of paid time off for that reason even though the employee had additional, unused hours of paid time off that year. That contractor could also deny that request if the employee had already used all of her paid time off for the year, even if she had only used 10 hours for purposes described in § 13.5(c)(1) and the rest for vacation.

As noted above, a contractor using its paid time off policy to satisfy its obligations under the Order and part 13 must comply with all of the requirements of § 13.5(d) (which addresses employee requests to use paid sick leave and contractors’ responses to such requests) with respect to leave used for any purpose described in § 13.5(c)(1) or to the amount of such leave as to which the contractor must comply with the Order and part 13, if the contractor tracks and records leave for the purposes described in § 13.5(c)(1). For example, consistent with that provision, a contractor may not require employees to make requests for leave (at least when used for a purpose described in § 13.5(c)(1) and if the contractor is required to comply with the Order and part 13 with respect to the leave) more than 7 days in advance of the need or as soon as is practicable if the need for leave is foreseeable. In addition, under a paid time off policy used to fulfill a contractor’s obligations under the Order and part 13 pursuant to § 13.5(f)(5), a contractor’s denial of a request to take leave, at least when requested for the purposes required under § 13.5(c)(1) and if the contractor is required to comply with the Order and part 13 with respect to the leave, must be explained in writing that is in accordance with the permissible reasons for denial under part 13.

Contractors have the option of complying with these and other provisions of § 13.5(c) and (d) (and (e), and §§ 13.6 and 13.7) as to all paid time off or distinguishing between leave used for the purposes described in § 13.5(c)(1) and other purposes (such as vacation time) even if they do not choose to track and record the amount of time used for the purposes described in § 13.5(c)(1). For example, a contractor could approve any requests to use paid time off made at least 7 days in advance...
if foreseeable, or as soon as practicable if not foreseeable, regardless of the reason for the absence, or a contractor could require requests to use paid time off for vacation to be made 30 days in advance but allow requests to use paid time off for illness (as well as the other uses of paid sick leave described in § 13.5(c)(1)) to be made no more than 7 days in advance if foreseeable or as soon as practicable if not foreseeable.

The rules regarding certification or documentation of the reason for an absence of 3 or more full consecutive days in § 13.5(e) are also applicable to a paid time off policy used to satisfy the requirements of the Order and part 13, at least with respect to paid time off used for the purposes required by § 13.5(c)(1). If the contractor tracks and records the amount of leave used for the purposes described in § 13.5(c)(1), however, it would be required to comply with § 13.5(e) with respect to paid time off an employee uses for the purposes described in § 13.5(c)(1) only to the extent such leave is within the amount of leave as to which the contractor must comply with the Order and part 13 (that is, up to 56 hours in the first accrual year and up to any amount carried over plus 56 hours in subsequent accrual years). If a contractor’s paid time off policy allows the use of leave for a broad range of purposes, that contractor might never require such certification or documentation, in which case there would be no conflict with § 13.5(e). Similarly, although the recordkeeping requirements of part 13 apply to contractors who fulfill their obligations under the Order with paid time off policies, to the extent the contractor does not deny requests for leave or require certification or documentation to justify the use of leave, no such records will exist or, therefore, need to be maintained.

As noted in the NPRM, a contractor may only use its paid time off policy to satisfy its obligations under the Order and part 13 if, at least when an employee seeks to use or does use leave for the purposes described in § 13.5(c)(1) and if the contractor (that tracks and records the amount of leave used for the purposes described in § 13.5(c)(1)) is required to comply with the Order and part 13 with respect to the leave, that leave is treated as protected by the prohibitions on interference and discrimination as required by § 13.6, meaning that, for example, the request for or use of leave could not be a negative factor in any hiring or promotion decision and could not be the basis for discipline, including by being counted in a no fault attendance policy.

The Department notes that the option to track and record time as described in this discussion is not reflected in the recordkeeping requirements set forth in § 13.25 because making and maintaining documentation of the purposes for which employees use paid time off is a choice rather than an obligation. If, however, a contractor wishes to limit the amount of paid time off employees may use for the purposes described in § 13.5(c)(1)—and, more significantly, as to which it must comply with the Order and part 13—the burden is on the contractor to create and keep adequate documentation showing that it has in fact allowed an employee to receive the required benefits such that it is subsequently permitted to deny an employee of them. No particular form of documentation is required; a contractor may develop any system for tracking when paid time off is used for a purpose described in § 13.5(c)(1) it chooses as long as the contractor has accurate records (that could be reviewed during a WHD investigation) and employees are properly notified of the amount of paid time off they have available for such purposes.

The Department reiterates that a contractor has a choice between amending an existing paid time off policy to operate as described here or instead providing paid sick leave that is separate from its more general leave policy. For example, if a contractor does not permit an employee to use paid time off for the purposes described in § 13.5(c)(1)(iv) related to domestic violence, sexual assault, or stalking, its paid time off policy would not satisfy its obligations under the Executive Order and part 13 as provided in § 13.5(f)(5). Accordingly, the contractor could choose to amend its paid time off policy to permit leave for these additional purposes or could provide paid sick leave pursuant to the Order and part 13 in addition to paid time off. Similarly, if a contractor’s policy allowed the contractor to deny an employee’s request for leave to be used for one of the purposes described in § 13.5(c)(1) based on operational needs, that policy would not satisfy the contractor’s obligations under the Executive Order and part 13, and the contractor could either adjust its policy or distinguish between paid sick leave (which it would provide in keeping with the requirements of the Order and part 13) and other types of paid time off it provides (which it could provide in any manner it wishes, so long as it complies with any other applicable laws). And if a contractor with a paid time off policy that provides more than 56 hours of paid time off does not wish to comply with the requirements of the Order and part 13 as described with respect to all of the leave its policy allows or to track and record the amount of leave used for the purposes described in § 13.5(c)(1), it can instead provide paid sick leave separately from paid time off.

Finally, as noted in the NPRM, although a contractor need not treat vacation or other uses of leave under its paid time off policy identically to the way it treats paid sick leave, the Department will consider any aspects of a paid time off policy that create significant barriers to an employee’s using the time for the purposes described in § 13.5(c)(1) as interference with the employee’s annual or non-continuous leave under the Order or part 13 in violation of § 13.6(a) or, if appropriate, as discrimination in violation of § 13.6(b), meaning that the paid time off policy would not satisfy the contractor’s obligations under the Order and part 13.

For example, although a contractor need not allow vacation time to be taken in 1-hour increments, a contractor would not be in compliance with § 13.6(a) if it were to require employees to use all of the time provided in its paid time off policy at once should the employee ask to take vacation, such that any employee who took any vacation in an accrual year would automatically have no paid time off remaining for the purposes described in § 13.5(c)(1). (This example does not imply that an employee cannot choose to use all of her paid time off for vacation such that she has no paid leave remaining in the event a need to be absent from work for one of the reasons described in § 13.5(c)(1) arises; it signifies only that a contractor cannot deliberately make it difficult to make a different choice.) Similarly, a contractor’s paid time off policy would not comply with § 13.6(a) if the contractor required employees to request leave for vacation 1 month in advance and would not allow an employee who had scheduled such leave and who became, or had a family member who became, unexpectedly ill to instead use paid time off for that purpose (and cancel the other upcoming leave, or take it as unpaid leave).

Section 13.6 Prohibited Acts

Proposed § 13.6 described and prohibited acts that constitute violations of the requirements of Executive Order 13706 and part 13.

Proposed § 13.6(a)(1) prohibited a contractor from interfering with an employee’s accrual or use of paid sick leave as required by Executive Order 13706 or part 13. Proposed § 13.6(a)(2)
including a non-exclusive list of examples of interference. The first example was miscalculating the amount of paid sick leave an employee has accrued, such as if a contractor does not include all of an employee’s hours worked in calculating accrual. A second was denying or unreasonably delaying a response to a proper request to use paid sick leave, such as if a contractor denies a request to use paid sick leave for an appointment with a clinical social worker because the contractor mistakenly believes a clinical social worker is not a health care provider. or if a contractor denies a request to use paid sick leave to accompany the employee’s sister to a court proceeding regarding stalking because the contractor does not believe an employee can use paid sick leave for a family member’s legal proceeding related to stalking, or if a contractor does not respond to an employee’s timely request for paid sick leave until after the need for leave has passed (provided the request was made sufficiently in advance of the need). In addition, the Department explained that as proposed, interference included discouraging an employee from using paid sick leave or reducing an employee’s accrued paid sick leave by more than the amount of such leave used. Transferring the employee to work on non-covered contracts to prevent the accrual or use of paid sick leave, including scheduling an employee’s non-covered work to fall at the time for which the employee has requested to use paid sick leave for the purpose of avoiding approving the request (rather than for a lawful reason, such as for a legitimate business purpose), would also constitute interference. Finally, under the NPRM, interference also included disclosing confidential information received in certification or other documentation provided to verify the need to use paid sick leave or making the use of paid sick leave contingent on the employee’s finding a replacement worker or the fulfillment of the contractor’s operational needs.

Proposed § 13.6(b)(2) was an anti-discrimination provision implementing section 2(k) of Executive Order 13706. Proposed § 13.6(b)(1) prohibited a contractor from discharging or in any other manner discriminating against an employee for: (i) Using, or attempting to use, paid sick leave as provided for under Executive Order 13706 and part 13; (ii) filing any complaint, initiating any proceeding, or otherwise asserting any right or claim under Executive Order 13706 and part 13; (iii) cooperating in any investigation or testifying in any proceeding under Executive Order 13706 and part 13; or (iv) informing any other person about his or her rights under Executive Order 13706 and part 13. Proposed § 13.6(b)(2) addressed what constitutes discrimination, a term the Department intended to be understood broadly, by noting that discrimination included, but was not limited to, a contractor’s considering any of the activities described in § 13.6(b)(1) as a negative factor in employment actions, such as hiring, promotions, or disciplinary actions, or a contractor’s counting paid sick leave under a no fault attendance policy. See 29 CFR 825.220(c) (analogous provision under FMLA regulations). Under this proposed provision, a contractor could not, for example, reassign an employee to fewer or less preferable shifts, to a less well paid position, or to a non-covered contract because he used paid sick leave. The proposed provision also prohibited a contractor, in deciding whether to hire an employee to work on or in connection with a covered contract, to a factor that the contractor would be required to restate the employee’s unused paid sick leave from prior covered work pursuant to § 13.5(b)(4).

In the NPRM, the Department noted that this proposed provision would serve the important purpose of ensuring effective enforcement of the Executive Order, which will depend on complaints from employees, and reiterated several interpretations of the provision it had discussed in the Minimum Wage Executive Order rulemaking in connection with a comparable anti-discrimination provision. 79 FR 60666–67. First, consistent with the Supreme Court’s interpretation of the FLSA’s anti-retaliation provision, § 13.6(b) would protect employees who file oral as well as written complaints. See Kasten v. Saint-Gobain Performance Plastics Corp., 131 S. Ct. 1325, 1336 (2011). Furthermore, as under the FLSA, the anti-discrimination provision under part 13 would protect employees who complain to the Department as well as those who complain internally to their employers about alleged violations of the Order or part 13. See, e.g., Minor v. Bostwick Laboratories, 669 F.3d 428, 438 (4th Cir. 2012); Hagan v. EchoStar Satellite, LLC, 529 F.3d 617, 626 (5th Cir. 2008); Lambert v. Ackerley, 180 F.3d 997, 1008 (9th Cir. 1999) (en banc); Valero v. Putnam Associates, 173 F.3d 35, 43 (1st Cir. 1999); EEOC v. Romeo Community Sch., 976 F.2d 985, 989 (6th Cir. 1992). The Department further noted in the NPRM that the anti-discrimination provision would apply in situations where there is no current employment relationship between the parties; for example, it would protect from retaliation by a prospective or former employer that is a covered contractor. This position was consistent with the Department’s interpretation of the FLSA’s anti-retaliation provision, which it considers to extend to job applicants. As explained in the Minimum Wage Executive Order rulemaking, however, the Department recognizes that the U.S. Court of Appeals for the Fourth Circuit has disagreed with its interpretation with respect to the coverage of job applicants, see Dellinger v. Science Applications Int’l Corp., 649 F.3d 226 (4th Cir. 2011), and the Department therefore would not enforce its interpretation on this issue in that circuit. See 79 FR 60667. To the extent the application of the FLSA’s anti-retaliation provision to job applicants or internal complaints is definitively resolved through the judicial process by the Supreme Court or otherwise, the Department would interpret the anti-retaliation provision under the Executive Order in accordance with such precedent. Id.

Commenters generally addressed the interference and discrimination provisions together. Several commenters, including Demos, NELP, the National Council of Jewish Women, NETWORK, Women Employed, and the Diverse Elders Coalition, commented that these provisions were crucial protections for workers, who would otherwise face punitive measures from employers for using paid sick leave or be deterred from asking to use paid sick leave in the first place. The NYC Department of Consumer Affairs similarly commented that these provisions are fundamental because without them, the paid sick leave benefit is merely illusory. The Department adopts the provisions as proposed.

AGC commented that contractors needed to be able to address employee abuse of paid sick leave without being in jeopardy of violating these provisions. The Department recognizes that there will be circumstances in which an employer becomes aware that an employee has fraudulently used paid sick leave, such as by lying about being sick or having a doctor’s appointment. As in the FMLA context, an employee who engages in fraud is not entitled to the benefits or protections afforded by the Executive Order or part 13. See 29 CFR 825.216(d) (“An employee who fraudulently obtains FMLA leave from an employer is not protected by FMLA’s job restoration or maintenance of health...
benefits provisions."). Accordingly, although a contractor may not impose requirements on an employee's use of paid sick leave specifically prohibited by the Order or part 13 (such as by requiring certification of uses of paid sick leave that are shorter than 3 full consecutive days) or otherwise discourage an employee's legitimate use of paid sick leave (such as by disciplining an employee on the basis of abuse of paid sick leave privileges that is suspected but not verified), a contractor may investigate situations in which it believes an employee has committed fraud. If a contractor determines, based on a reasonable investigation of the circumstances, that an employee has abused paid sick leave, it may respond appropriately, such as by recouping (to the extent permitted by law) pay and benefits provided when the employee used paid sick leave based on a request premised on false information or by imposing discipline on the employee. In the absence of verification of abuse, however, a contractor must permit an employee to accrue and use paid sick leave according to the requirements of part 13.

For example, assume an employee requests to use paid sick leave to be absent every other Monday for several weeks, explaining that her wife has cancer and receives radiation treatments every other Monday, or by voluntarily providing certification (such as a note from the wife's oncologist). In that case, the contractor would not have violated the provisions of § 13.6, and the contractor would be assured that the employee's requests to use paid sick leave would never have been designated as paid sick leave, though it notes that part 13 does not absolve contractors from complying with any other relevant law regarding such actions and that whether a particular action constitutes interference or discrimination under § 13.6 (such as a contractor's taking action against an employee who was absent for a full day after the human resources department erroneously told him he had 8 hours of paid sick leave although he actually had only 4) will depend on the circumstances.

Proposed § 13.6(c) provided that a contractor's failure to make and maintain or to make available to the WHD records for inspection, copying, and transcription as required by § 13.25, or any other failure to comply with the requirements of that provision, constituted a violation of Executive Order 13706, part 13, and the contractor could be sanctioned. This proposed provision was derived from paragraph (g)(3) of the contract clause included in the Minimum Wage Executive Order Final Rule as well as analogous provisions in the SCA and DBA. 29 CFR 4.6(g)(3) (SCA); 29 CFR 5.5(a)(3)(iii) (DBA). The Department received no comments specifically regarding this provision (though it notes that other comments regarding recordkeeping and remedies for violations of part 13 are discussed below), and adopts it as proposed.

Section 13.7 Waiver of Rights

Proposed § 13.7 provided that employees cannot waive, nor may contractors induce employees to waive, their rights under Executive Order 13706 or part 13. The Department explained in the NPRM that it had included a provision prohibiting the waiver of rights in the regulations implementing the Minimum Wage Executive Order. 79 FR 60667. The NPRM noted that, as the Department had explained in the Minimum Wage Executive Order rulemaking, an employee's rights and remedies under the FLSA, including payment of minimum wage and back wages, cannot be waived or abridged by contract. 79 FR 60667 (citing Tony & Susan Alamo Found. v. Sec'y of Labor, 471 U.S. 290, 302 (1985); Barrentine v. Arkansas-Best Freight Sys., Inc., 450 U.S. 728, 740 (1981); D.A. Schulte, Inc. v. Gangi, 328 U.S. 108, 112–16 (1946); Brooklyn Sav. Bank v. O'Neil, 324 U.S. 697, 706–07 (1945)). The Supreme Court has explained that "FLSA rights cannot be abridged by contract or otherwise waived because this would 'nullify the purposes' of the statute and thwart the legislative policies it was designed to effectuate." Barrentine, 450 U.S. at 740 (quoting Brooklyn Sav. Bank, 324 U.S. at 707), and that FLSA rights are not subject to waiver because they serve an important public interest by protecting employers against unfair methods of competition in the national economy, see Tony & Susan Alamo Found., 471 U.S. at 302. Similarly, under the SCA regulations, releases and waivers executed by employees for unpaid SCA wages (and fringe benefits) are without legal effect. 29 CFR 4.187(d). The Department believed it was appropriate to adopt this policy in the NPRM because the interests underlying the issuance of Executive Order 13706 would be similarly thwarted by permitting workers to waive their rights under the Order or part 13.

EEAC urged the Department to limit the waiver of rights provision to prospective waivers, that is, to allow an employee to waive claims based on the current employment-related matters.

The Department disagrees with the commenter's rationale. It is correct that, although the FLSA and FMLA prohibit any prospective waiver of rights, employees have some ability to settle or release claims based on past employment conduct, and that prohibiting such waiver under this Order would interfere with an employee's ability to release or settle, rather than litigate, employment-related matters.

The Department disagrees with the commenter's rationale. It is correct that, although the FLSA and FMLA prohibit any prospective waiver of rights, employees have some ability to settle or release claims based on past employment conduct. See, e.g., 29 U.S.C. 218(c)(b)(2) (“The rights and remedies [under the FLSA] may not be waived by any agreement, policy, form, or condition of employment.”); 29 U.S.C. 216(c)(6) (providing that an employee may agree, under the supervision of the Secretary, to accept payment of compensation owed and, upon full payment, waive rights to unpaid compensation); Cheeks v. Freeport Pancake House, Inc., 796 F.3d 199 (2d Cir. 2015) (describing the
disputed.

Executive Order 13706 does not enable employees to pursue claims of violations of the Order on their own behalf, but rather vests enforcement authority in the Secretary to initiate an investigation of alleged violations, obtain compliance where violations are discovered, and participate in enforcement proceedings against a contractor where such violations are disputed. See 80 FR 54699. Therefore, as a preliminary matter, waivers of contractor liability, if they were permitted, would be limited: At most, an employee could agree not to file a complaint with the WHD or not to cooperate with an investigation or enforcement action the WHD was pursuing.

Furthermore, such an agreement would deprive the Secretary of important notice, testimony, and evidence needed to determine whether a violation has occurred and would therefore limit the Secretary’s ability to obtain specific relief for employees whose rights have been curtailed and to vindicate the general public interest in ensuring that employees who work on or in connection with covered contracts have access to paid sick leave. The SCA also does not create a private right of action, instead vesting sole enforcement authority in the Secretary, 29 CFR 4.189, 4.191, and it prohibits all releases or waivers for unpaid wages and fringe benefits due without distinguishing between prospective waiver and waiver of claims based on past employer conduct, 29 CFR 4.187(d). For these reasons as well as those explained in the Minimum Wage Executive Order rule incorporated in the NPRM, permitting any waiver of rights under the Order would be inconsistent with public policy and the Order’s purposes.

Section 13.8 Multiemployer Plans or Other Funds, Plans, or Programs

Some commenters, including MCAA, AGC, and North American Dismantling Corp., noted what they perceived to be the difficulty of monitoring paid sick leave accrual and reinstatement in the construction industry, in which employees may work for a contractor on a short-term basis, sometimes more than once over the course of a year. As explained in the discussion of employee coverage, a worker’s seasonal or part-time status does not affect a contractor’s obligations under the Order and part 13—including to track hours worked on with a covered contract, which contractors with DBA-covered contracts will already do, and to reinstate paid sick leave upon rehiring an employee within 12 months of a separation from employment—although in practice, the employee’s accrual and use of paid sick leave will be limited by his work schedule. The Department recognizes that in situations like those described by these commenters, some employers resolve the issues such transient employment can raise by providing benefits to employees by contributing to multiemployer plans negotiated pursuant to CBAs. The Building Trades specifically explained that in the construction industry, multiemployer plans that provide benefits such as health insurance, pension benefits, or vacation time are common. They therefore asked that the Department allow contractors to create multiemployer plans to jointly provide paid sick leave to comply with the Order and part 13 as employees move between different contractors’ projects. AGC similarly requested that, if the Order and part 13 must apply to laborers and mechanics, the Department permit contractors to fulfill their paid sick leave obligations by making payments into a multiemployer plan on behalf of covered workers, noting that some existing multiemployer plans already provide for paid time off.

In response to these comments, the Department has added a new provision, § 13.8(a), to the Final Rule providing that a contractor may fulfill its obligations under Executive Order 13706 and this part jointly with other contractors—that is, as though all of the contractors are a single contractor for purposes of Executive Order 13706 and part 13—through a multiemployer plan that provides paid sick leave in compliance with the rules and requirements of Executive Order 13706 and this part. (The term multiemployer plan is defined in § 13.2.) This new provision also provides that regardless of what functions the plan performs, each contractor remains responsible for any violation of the Order or part 13 that occurs during its employment of the employee.

Under § 13.8(a), if employees who work on or in connection with covered contracts receive access to paid sick leave through a multiemployer plan, the contractors that make contributions to that plan on behalf of the employees satisfy their obligations under the Order and part 13 as though they are a single employer for purposes of Executive Order 13706 and part 13. For example, assume an employee is a member of a union that has a CBA with Contractors A and B that provides that the employers will contribute to a multiemployer plan to provide paid sick leave that complies with the requirements of the Executive Order and part 13. If that employee works for Contractor A on a DBA contract for a single pay period and accrues 2 hours of paid sick leave, and she subsequently works for Contractor B on a different DBA contract for several pay periods, the employee would begin the job for Contractor B with 2 hours of paid sick leave available for use and would accrue additional paid sick leave that would be added to those 2 hours for purposes of the accrual cap (of no less than 56 hours) for which the CBA provides. In such a scenario, Contractor A and Contractor B are separately responsible for complying with the Order and part 13 as to the employee’s accrual and use of paid sick leave while working for each respective employer; for example, if Contractor B denied an employee’s valid request to use paid sick leave the employee accrued while working for Contractor A, Contractor B would have violated § 13.6, and Contractor A would not be responsible for that violation. To the extent the plan or any third party that administers the plan plays a role in administering paid sick leave—for example, by tracking accrual, notifying employees of the amounts of paid sick leave they have accrued but not used, responding to employee requests to use paid sick leave, or providing employees with the pay and benefits to which they are entitled while using paid sick leave—the contractor for which the employee is working at the time such actions are taken is responsible for ensuring that the plan performs those functions in compliance with the requirements of the Order and part 13.

AGC asked that the Department revise the proposed regulations to allow contractors to fulfill their paid sick leave obligations by contributing to a funded plan outside the multiemployer plan context, whether a contractor creates such a plan pursuant to a CBA or not. The Department did not intend any proposed regulatory provision or other interpretation in the NPRM to prohibit a contractor from providing paid sick leave by contributing to a plan, as long as the contractor’s employees receive access to paid sick leave that meets all of the requirements of the Order and part 13. For purposes
of clarity and completeness, the Department has added to the regulations, as § 13.8(b), a provision stating that nothing in part 13 prohibits a contractor from providing paid sick leave through a fund, plan, or program. The new provision also notes that regardless of the manner in which a contractor provides paid sick leave or what functions any fund, plan, or program performs, the contractor remains responsible for any violation of the Order or part 13 with respect to any of its employees. In other words, a contractor would be free to delegate to any fund, plan, or program—terms the Department intends to have the meaning they do for purposes of the DBA, see 29 CFR 5.27 (“The phrase ‘fund, plan, or program’ is merely intended to recognize the various types of arrangements commonly used to provide fringe benefits through employer contributions.”)—any or all of its responsibilities under the Order and part 13. For example, the plan might simply provide pay and benefits to an employee using paid sick leave upon receiving instructions from a contractor to do so, or it could also notify employees of their amounts of accrued paid sick leave and even approve or deny requests to use the leave. The contractor would remain ultimately responsible, however, for ensuring that its obligations under the Order and part 13 are satisfied, and the contractor would be liable for any violations of the Order and part 13 regardless of whether it has made proper contributions to the plan.

Finally, the Department notes that nothing in § 13.8 (or any other provision of part 13) has any effect on any claims procedure or enforcement standards under ERISA that apply to plans that provide fringe benefits through employer contributions. for the Department to implement and comply with Executive Order 13706. Section 13.11 addresses contracting agency requirements, and § 13.12 explains the requirements placed upon the Department of Labor.

Section 13.11 Contracting Agency Requirements

Proposed § 13.11(a) implemented section 2(a) of Executive Order 13706 by directing that the contracting agency include the Executive Order paid sick leave contract clause set forth in appendix A of part 13 in all covered contracts and solicitations for such contracts, as described in § 13.3, except for procurement contracts subject to the FAR. Proposed § 13.11(a) further provided that the required contract clause directs, as a condition of payment, that all employees performing work on or in connection with covered contracts be permitted to accrue and use paid sick leave as required by Executive Order 13706 and part 13. It also provided that for procurement contracts subject to the FAR, contracting agencies must use the contract clause set forth in the FAR to implement part 13, and that the FAR clause will accomplish the same purposes as the clause set forth in appendix A and be consistent with the requirements set forth in part 13. The Department explained in the NPRM that proposed § 13.11(a) was effectively identical to 29 CFR 10.11(a), the analogous provision in the Minimum Wage Executive Order Final Rule.

PSC commented that contractors’ compliance with the Order and part 13 should not be a condition of payment, arguing in part that this requirement could expose contractors to liability under the False Claims Act. As described in greater detail below in the discussion of subpart C, the Department declines to alter this provision because section 2(a) of the Order specifically requires a contract clause that renders compliance with the Order a condition of payment. See 80 FR 54697. The Department therefore adopts § 13.11(a) in the Final Rule as proposed.

The Department notes that, as noted in the NPRM, inserting the full contract clause in a covered contract is an effective and practical means of ensuring that contractors receive notice of their obligations under the Executive Order and part 13, and the Department therefore prefers that covered contracts include the contract clause in full. As discussed in the NPRM and below in the discussion of subpart C, however, particular facts and circumstances may establish that the contracting agency or contractor sufficiently apprised the prime or lower-tier contractor that the Executive Order applied to the contract despite the failure to include the contract clause in full in the contract. See Nat’l Electro-Coatings, Inc. v. Brock, No. C86–2188, 1988 WL 125784 (N.D. Ohio July 13, 1988); In the Matter of Progressive Design & Build, Inc., WAB Case No. 87–31, 1990 WL 484308 (WAB Feb. 21, 1990). In such circumstances, the contract clause may be deemed to have been incorporated by reference in the covered contract. For example, the full contract clause will be deemed to have been incorporated by reference in a covered contract if the contract provides that “Executive Order 13706—Establishing Paid Sick Leave for Federal Contractors, and its implementing regulations, including the applicable contract clause, are incorporated by reference into this contract as if fully set forth in this contract” and includes a citation to a Web page that contains the contract clause in full, to the provision of the Code of Federal Regulations containing the contract clause set forth at appendix A to part 13, or to the provision of the FAR containing the contract clause promulgated by the FARC to implement part 13.

Proposed § 13.11(b) explained a contracting agency’s obligations in the event that it fails to include the contract clause in a covered contract. Proposed § 13.11(b) first provided that where the Department of Labor or the contracting agency discovers or determines, whether before or subsequent to a contract award, that the contracting agency made an erroneous determination that Executive Order 13706 and part 13 did not apply to a particular contract and/or failed to include the applicable contract clause in a contract to which the Executive Order and part 13 apply, the contracting agency, on its own initiative or within 15 calendar days of notification by an authorized representative of the Department of Labor, would incorporate the clause in the contract retroactive to commencement of performance under the contract through the exercise of any and all authority that may be needed (including, where necessary, its authority to negotiate or amend, its authority to pay any necessary additional costs, and its authority under any contract provision authorizing changes, cancellation, and termination). The proposed language mirrored the analogous provision in the Minimum Wage Executive Order’s Final Rule, see 29 CFR 4.5(c), and DBA, see 29 CFR 1.6(f), implementing regulations.

Roffman Horvitz suggested that it would be unfair to impose a retroactive obligation when a contracting officer or the Department discovers after the contract has begun that the contract clause was omitted. AGC requested that the Department require contracting agencies to use the adjustments, or change-order, process to govern any cost increases related to retroactively incorporating the contract clause. PSC similarly requested that the Department expressly require a price or cost adjustment when a contracting agency...
fails to include the contract clause in a covered contract.

After carefully considering these comments, the Department adopts § 13.11(b) without change. The Order directs the Department to the extent practicable to incorporate procedures and enforcement processes that exist under the SCA, DBA, and Minimum Wage Executive Order. The Department’s approach incorporates the procedure used under the Minimum Wage Executive Order (which the Department derived from similar SCA and DBA procedures) when a contracting agency has failed to include the contract clause and does not limit a contracting agency’s authority to pay any necessary additional costs.

Furthermore, the Department believes, as it did with respect to the Minimum Wage Executive Order rulemaking, that this procedure will promote compliance with the Order consistent with section 4(a) of the Order.

Proposed § 13.11(c) provided that a contracting officer would, upon his or her own action or upon written request of the Administrator, withhold or cause to be withheld from the prime contractor under the contract or any other Federal contract with the same prime contractor, so much of the accrued payments or advances as may be necessary to pay employees the full amount owed to compensate for any violation of Executive Order 13706 or part 13. It further provided that in the event of any such violation, the agency may, after authorization or by direction of the Administrator and written notification to the contractor, take action to cause suspension of any further payment or advance of funds until such violations have ceased. Such amounts would be based on the estimated monetary relief, including any pay and/or benefits denied or lost by reason of the violation, or other monetary losses sustained as a direct result of the violation as described in § 13.44.

The SCA, DBA, and Minimum Wage Executive Order’s implementing regulations provide for withholding to ensure the availability of monies for payment to covered workers when a contractor or subcontractor has failed to comply with its obligations to pay required wages (including fringe benefits where applicable). 29 CFR 4.6(i) (SCA); 29 CFR 5.5(a)(2) (DBA); 29 CFR 10.11(c) (Executive Order 13658). The Department reasoned that withholding likewise is an appropriate remedy under this Executive Order because the Order directs the Department to adopt enforcement processes from the SCA, DBA, and Minimum Wage Executive Order to the extent practicable and to exercise authority to obtain compliance with the Order. 80 FR 54699. Consistent with withholding procedures under the SCA and DBA, which were also adopted in the Minimum Wage Executive Order rulemaking, proposed § 13.11(c) would allow the contracting agency and the Department to withhold or cause to be withheld funds from the prime contractor not only under the contract on which violations of the paid sick leave requirements of Executive Order 13706 and part 13 occurred, but also under any other contract that the prime contractor has entered into with the Federal Government. 29 CFR 4.6(i) (SCA); 29 CFR 5.5(a)(2) (DBA); 29 CFR 10.11(c) (Executive Order 13658).

Proposed § 13.11(c) also provided that any failure to comply with the requirements of Executive Order 13706 or part 13 could be grounds for termination of the right to proceed with the contract work. Under the proposed rule, in such event, the contracting agency could enter into other contracts or agreements for completion of the work, charging the contractor in default with any additional cost. This language was essentially identical to language included in the analogous provision in the Minimum Wage Executive Order rulemaking. See 79 FR 60724 (codified at 29 CFR 10.11(c)).

AGC requested that contracting officers not have authority to withhold payments to a prime contractor, asserting that contracting officers lack a standard upon which to determine that an alleged violation rises to the level of an actual or actionable violation and that it would accordingly be suitable to compel contracting officers to forward all allegations of noncompliance to the Department for investigation. As the Department noted above, the proposed provision, consistent with the Order’s directive to incorporate procedures and enforcement processes under the SCA, DBA and Minimum Wage Executive Order, mirrors regulations under the SCA, DBA, and Minimum Wage Executive Order that authorize contracting officers to withhold monies from accrued payments or advances as may be considered necessary to pay employees the full amount owed to compensate for any violation of the DBA, SCA, or Minimum Wage Executive Order. In addition, the Department believes that authorizing contracting officers to withhold in the circumstances contemplated by § 13.11(c) will help the Department to obtain compliance with the Order’s requirements. See section 4(a) of the Order. Although the Department anticipates that contracting officers typically will effectuate withholding in response to written requests from the Administrator, the Department also believes that contracting officers should have the authority (as they do under the SCA, DBA and Minimum Wage Executive Order) to withhold on their own action when such withholding may be necessary to pay employees the full amount owed to compensate for any violation of Executive Order 13706 or part 13.

AGC also suggested that the Department prohibit contracting agencies from canceling or terminating a contract that fails to include the paid sick leave contract clause. The Department wishes to reaffirm that the authority of a contracting agency to cancel or terminate a contract is conditioned on a contractor’s failure to comply with the Order or part 13. The Department modeled this authority on a contracting agency’s authority to cancel a contract under the Minimum Wage Executive Order, see 29 CFR 10.11(c), which itself reflected a contracting agency’s power under the SCA, see 29 CFR 4.6(i), and DBA, see 29 CFR 5.5(a)(7). Because the Order instructs the Department to incorporate enforcement processes under the Minimum Wage Executive Order, SCA, and DBA to the extent practicable, and because the Department believes the possibility of contract termination by a contracting agency due to a contractor’s failure to comply with the Order will advance the Department’s efforts to obtain compliance with the Order, the Department declines to adopt the commenter’s suggestion. For all of the reasons described, the Department adopts § 13.11(c) as proposed, except that it has corrected an inadvertent omission: The second sentence now provides that an agency may act to suspend not just a payment or advance, but also a guarantee of funds consistent with the DBA regulations at 29 CFR 5.5(a)(2) (as well as paragraph (d) of the contract clause in appendix A as proposed and adopted).

Proposed § 13.11(d) described a contracting agency’s responsibility to suspend further payment or advance of funds to a contractor that fails to make available for inspection, copying, and transcription any of the records identified in § 13.25. The proposal required contracting agencies to take action to suspend payment or advance of funds under these circumstances upon their own action, or upon the direction of the Administrator and notification of the contractor. Proposed § 13.11(d) was derived from paragraph (g)(3) of the Minimum Wage Executive
Order contract clause, 79 FR 60731, and was consistent with the analogous provisions of the SCA and DBA regulations, 29 CFR 4.6(g)(3) (SCA); 29 CFR 5.5(a)(3)(iii) (DBA). The Department did not receive any comments on proposed § 13.11(d) and therefore adopts the provision as proposed except that it corrects the same omission of a reference to suspending a guarantee of funds provisions of the SCA and DBA that Executive Order 13706 and part 13, as well as any information related to the complaint. Although the Department proposed in §13.41 that complaints be filed with the WHD rather than with contracting agencies, the Department recognized that some employees or other interested parties nonetheless could file formal or informal complaints concerning alleged violations of the Executive Order or part 13 with contracting agencies. Proposed § 13.11(e)(1) therefore specifically required the contracting agency to transmit the complaint-related information identified in proposed § 13.11(e)(2) to the WHD’s Office of Government Contracts Enforcement within 14 calendar days of receipt of a complaint alleging a violation of the Executive Order or part 13 or within 14 calendar days of being contacted by the WHD regarding any such complaint. Proposed § 13.11(e)(2) described the contents of any transmission under proposed § 13.11(e)(1). Specifically, it provided that the contracting agency would forward to the Office of Government Contracts Enforcement any: (i) Complaint of contractor noncompliance with Executive Order 13706 or part 13; (ii) available statements by the worker, contractor, or any other person regarding the alleged violation; (iii) evidence that the Executive Order paid sick leave contract clause was included in the contract; (iv) information concerning known settlement negotiations between the parties, if applicable; and (v) any other relevant facts known to the contracting agency or other information requested by the WHD.

Proposed § 13.11(e) was nearly identical to 29 CFR 10.11(d) as promulgated by the Minimum Wage Executive Order Final Rule, which was derived from analogous provisions in the Department’s regulations implementing the Nondisplacement Executive Order, 79 FR 60669 (citing 29 CFR 9.11(d)). In the NPRM, the Department stated that proposed § 13.11(e), which included an obligation to send such complaint-related information to the WHD even absent a specific request (e.g., when a complaint was filed with a contracting agency rather than with the WHD), was appropriate because prompt receipt of such information from the relevant contracting agency would allow the Department to fulfill its charge under the Order to obtain compliance with the Order. 80 FR 54699. The proposed requirement was consistent with the requirements in the Minimum Wage Executive Order rulemaking. The Department did not receive any comments on proposed § 13.11(e) and therefore implements the provision as proposed.

Proposed § 13.11(f) stated that a contracting officer would provide to a successor contractor any predecessor contractor’s certified list, provided to the contracting officer pursuant to proposed § 13.26, of the amounts of unused paid sick leave that employees have accrued. The Department intended this requirement to facilitate compliance by successor contractors with § 13.5(b)(4), which required that paid sick leave be reinstated for employees rehired by a successor contractor within 12 months of the job separation from the predecessor contractor. Because that provision does not appear in the Final Rule, as explained above, the Department has also removed this provision from the Final Rule.

Section 13.12 Department of Labor Requirements

Proposed § 13.12 set forth the Department’s obligations under the Executive Order. Proposed § 13.12(a) addressed notice-related requirements. Specifically, proposed § 13.12(a)(1) stated that the Administrator would publish and maintain on Wage Determinations OnLine (WDOL), http://www.wdol.gov, or any successor Web site, a notice that Executive Order 13706 creates a requirement to allow employees performing work on or in connection with contracts covered by Executive Order 13706 and part 13 to accrue and use paid sick leave, as well as an indication of where to find more complete information about that requirement. Many commenters, including the NYC Department of Consumer Affairs and the Center for the Study of Social Policy, supported the Department’s proposal to create a notice poster. The Department adopts § 13.12(a) as proposed and will publish the notice poster on the WHD Web site.

Proposed § 13.12(b), which was modeled on 29 CFR 10.12(d) as promulgated by the Minimum Wage Executive Order rulemaking, addressed the Department’s obligation to notify a contractor of a request to the contracting agency for the withholding of funds or a request for the suspension of payment or advance of funds. As explained above, § 13.11(c) authorizes the Administrator to direct that payments due on the covered contract or any other contract between the contractor and the Federal Government be withheld as may be considered necessary to provide for monetary relief for violations of Executive Order 13706 and part 13, and § 13.11(d) authorizes the Administrator to direct that the contracting agency suspend payment, advance, or guarantee of funds. If the Administrator made the requests contemplated by § 13.11(c) or (d), proposed § 13.12(b) would require the Administrator and/or the contracting agency to notify the affected prime contractor of the Administrator’s withholding request to the contracting agency. Although it is only necessary that one party—either the Administrator or the contracting agency—provide the notice, the other can choose in its discretion to provide notice as well. The Department did not receive any comments addressing proposed § 13.12(b) and implements the provision as proposed, although it has inserted a reference to a guarantee of funds for the reasons explained in the discussion of § 13.11(c).

Subpart C—Contractor Requirements

Subpart C of part 13 describes the requirements with which contractors must comply under Executive Order 13706 and part 13. It sets forth the obligations to include the applicable paid sick leave contract clause in subcontracts and lower-tier contracts as well as to comply with the contract clause. It also sets forth contractor requirements pertaining to deductions, kickbacks, recordkeeping, notice, and timing of pay.

Section 13.21 Contract Clause

Proposed § 13.21(a), which implemented section 2(a) of the Order and was adopted from 29 CFR 10.21 as promulgated by the Minimum Wage
Executive Order Final Rule, required the contractor, as a condition of payment, to abide by the terms of the applicable paid sick leave contract clause referred to in § 13.11(a). The applicable contract clause would contain the requirements with which the contractor must comply on the covered contract. PSC requested that the Department remove the language in proposed § 13.21(a) rendering compliance with the Order and part 13 a “condition of payment.” PSC asserted this language exposes contractors to potential False Claims Act liability and is unnecessary because the Department proposed sufficient remedial options in § 13.44. However, section 2(a) of the Executive Order specifically requires a contract clause that renders compliance with the Order a condition of payment. 80 FR 54697. Thus, the Department declines to accept PSC’s suggestion and adopts § 13.21 in the Final Rule as proposed.

Proposed § 13.21(b) required that contractors include the applicable contract clause in any covered subcontract and, as a condition of payment, that subcontractors include the clause in all lower-tier subcontracts. Under the proposal, the prime contractor and upper-tier contractors would be responsible for compliance by any subcontractor or lower-tier subcontractor with Executive Order 13706 and part 13, regardless of whether the contract clause was included in the subcontract. This responsibility on the part of prime and upper-tier contractors for subcontractor compliance, which is commonly referred to as “flow-down” liability, parallelled that of the SCA, DBA, and Minimum Wage Executive Order. See 29 CFR 4.114(b) (SCA); 29 CFR 5.5(a)(6) (DBA); 29 CFR 10.21(b) (Executive Order 13658). EEAC and Vigilant requested that covered contractors be permitted to incorporate the contract clause by reference into covered subcontracts. As the Department noted with respect to insertion of the contract clause in the discussion of § 13.11(a), the Department prefers that contractors include the contract clause in full in covered contracts, including covered subcontracts. However, there may be facts and circumstances establishing that the contractor sufficiently apprised the lower-tier subcontractor that the Order applies to the subcontract despite the contractor’s failure to include the contract clause in full in the covered subcontract. The Department notes, for example, that the full contract clause will be deemed to have been incorporated by reference in a covered subcontract if the subcontract provides that “Executive Order 13706—Establishing Paid Sick Leave for Federal Contractors, and its implementing regulations, including the applicable contract clause, are incorporated by reference into this contract and as fully set forth in this contract” and includes a citation to a Web page that contains the contract clause in full, to the provision of the Code of Federal Regulations containing the contract clause set forth at appendix A to part 13, or to the provision of the FAR containing the contract clause promulgated by the FARC to implement part 13. AGC requested that the Department delete the final sentence of proposed § 13.21(b), which imposes flow-down liability on upper-tier contractors. ABC specifically asserts that it is more difficult for upper-tier contractors to monitor lower-tier contractors’ compliance with the Order’s requirements than it is to monitor such contractors’ compliance with DBA requirements. ABC similarly contended it will be difficult for upper-tier contractors to monitor lower-tier contractors’ compliance with the Order, noting, as did AGC, that employees working for lower-tier contractors with which upper-tier contractors subcontract may have accrued paid sick leave on other covered contracts. The Chamber/IFA requested that the Department detail the types of activities that upper-tier contractors would be expected to conduct in order to ensure compliance by subcontractors. NECA contended the cost of lower-tier compliance oversight will increase project costs and the Department should accordingly consider alternative enforcement mechanisms. Finally, Vigilant questioned the Department’s authority to impose flow-down liability, suggesting that an upper-tier contractor’s sole responsibility should be to incorporate the contract clause in its subcontract.

After careful consideration of the comments received, the Department has decided to adopt § 13.21(b) as proposed. In response to the comments submitted by the Chamber/IFA and NECA, as well as comments from AGC and ABC asserting that upper-tier contractors’ oversight of lower-tier contractors here may present challenges not present under the DBA and SCA, the Department notes that covered contractors are required to insert the applicable contract clause in subcontracts in order to inform covered subcontractors of the requirements with which they must comply, and that covered contractors have the latitude to implement additional measures to promote compliance by subcontractors, including emphasizing to subcontractors that the Executive Order and part 13 apply to employees performing work on or in connection with covered subcontracts and directing covered subcontractors to the portions of this Final Rule and related guidance materials that explain the rule’s application to such employees. The Department further notes that upper-tier contractors can, and the Department understands often do, indemnify themselves against violations committed by lower-tier contractors. With respect to Vigilant’s comment, both the SCA and DBA, to which the Order directs the Department to look in adopting remedies and enforcement processes, have long permitted the Department to hold a prime contractor responsible for compliance by any lower-tier contractor, see 29 CFR 4.114(b) (SCA); 29 CFR 5.5(a)(6) (DBA), and the Minimum Wage Executive Order’s implementing regulations make the prime and upper-tier contractors responsible for compliance by any lower-tier contractor, see 29 CFR 10.21(b). Removal of this obligation, as AGC has requested, could diminish the level of care contractors exercise in selecting subcontractors on covered contracts and reduce contractors’ monitoring of the performance of subcontractors—two “vital functions” served by the flow-down responsibility. In the Matter of Bongiovanni, WAB Case No. 91–08, 1991 WL 494751 (WAB April 19, 1991). Removal of this obligation could additionally hamper the Department’s enforcement efforts under section 4(a) of the Order because a contractor’s responsibility for the compliance of its lower-tier subcontractors enhances the Department’s ability to obtain compliance with the Executive Order. For all these reasons, the Department declines to grant the request to remove the flow-down liability obligation.

Section 13.22 Paid Sick Leave

Proposed § 13.22 required contractors to allow all employees performing work on or in connection with a covered contract to accrue and use paid sick leave as required by the Executive Order and part 13. The Department received many comments related to contractors’ paid sick leave obligations, which are addressed in subpart A of the preamble, but no comments specifically addressing § 13.22. This provision is therefore adopted as proposed.

Section 13.23 Deductions

Proposed § 13.23 stated that contractors may only make deductions from the pay and benefits of an employee who is using paid sick leave under the limited circumstances set
for in the proposed provision. The reference to "pay and benefits" in proposed §13.23 had the same meaning as the reference to pay and benefits in §13.5(c)(3), discussed above.

Proposed §13.23 permitted deductions required by Federal, State, or local law, including Federal or State withholding of income taxes. See 29 CFR 531.38 (FLSA); 29 CFR 4.168(a) (SCA); 29 CFR 5.5(a)(1) (DBA); 29 CFR 10.23(a) (Executive Order 13658). This proposed provision also permitted deductions for payments made to third parties pursuant to court orders. See 29 CFR 531.39 (FLSA); 29 CFR 4.168(a) (SCA); 29 CFR 5.5(a)(1) (DBA); 29 CFR 10.23(b) (Executive Order 13658).

Permissible deductions made pursuant to a court order could include such deductions as those made for child support. The proposed section also permitted deductions directed by a voluntary assignment of the employee or his or her authorized representative. See 29 CFR 531.40 (FLSA); 29 CFR 4.168(a) (SCA); 29 CFR 5.5(a)(1) (DBA). Finally, the Department proposed to permit deductions made for the reasonable cost or fair value of board, lodging, and other facilities. See 29 CFR part 531 (FLSA); 29 CFR 4.168(a) (SCA); 29 CFR 5.5(a)(1) (DBA). The Department explained that a contractor could take credit for the reasonable cost or fair value of board, lodging, or other facilities against an employee's wages, rather than taking a deduction for the reasonable cost or fair value of these items. See 29 CFR part 531.

In the proposed provision, the Department noted that a contractor could take credit for the reasonable cost or fair value of board, lodging, or other facilities against an employee's wages, rather than taking a deduction for the reasonable cost or fair value of these items. See 29 CFR part 531. The Department did not receive comments asking for modifications to proposed §13.23. The Department is therefore adopting the language proposed, but it is also adding as §13.23(e) that deductions are also permitted to be made by law, for the purpose of recouping pay and benefits provided for paid sick leave as to which the contractor retroactively denied the employee's request pursuant to §13.5(e)(3)(ii) or because the contractor approved the use of the paid sick leave based on a fraudulent request. This addition is consistent with the discussion of §13.5(e)(3)(i) and of comments regarding employee abuse of paid sick leave benefits.

Section 13.24 Anti-Kickback

Proposed §13.24 required that all paid sick leave used by employees performing work on or in connection with covered contracts be paid free and clear and without subsequent deduction (unless as set forth in §13.23), rebate, or kickback on any account. It further prohibited kickbacks directly or indirectly to the contractor or to another person for the benefit of the contractor for the whole or part of the paid sick leave. The proposal was derived from the Executive Order 13658 Final Rule at 29 CFR 10.27; it reflected the Department's intent to ensure that employees actually receive the full pay and benefits to which they are entitled under the Executive Order and part 13. The Department received no comments on this provision and adopts it as proposed.

Section 13.25 Records To Be Kept by Contractors

Proposed §13.25 explained the recordkeeping and related requirements for contractors. The obligations set forth in proposed §13.25 were derived from the FLSA, SCA, DBA, FMLA and Executive Order 13658. See 29 CFR part 516 (FLSA); 29 CFR 4.6(g) (SCA); 29 CFR 5.5(a)(3) (DBA); 29 CFR 10.27; 29 CFR 825.500(c) (FMLA); 29 CFR 10.26 (Executive Order 13658). Proposed §13.25(a) required contractors and subcontractors to make and maintain during the course of the covered contract, and preserve for no less than 3 years thereafter, records containing the information enumerated in proposed §13.25(a)(1)–(15). It also required contractors to make such records available to the WHD for inspection, copying, and transcription. Proposed §13.25(a)(1)–(6) required contractors to make and maintain for each employee: Name, address, and Social Security number; the employee's occupation(s) or classification(s); the rate or rates of wages paid; the number of daily and weekly hours worked; any deductions made; and the total wages paid each pay period. Contractor obligations to maintain the categories of records set forth in proposed §13.25(a) were derived from and are consistent across the FLSA, SCA, and DBA (with the exception of the requirement to preserve records for no less than 3 years after the contract expires, which applies under the DBA and SCA but not the FLSA). An exception to the requirement in proposed §13.25(a)(4) to keep records of an employee's hours worked was provided in proposed §13.25(c), as described below. Therefore, in conjunction with §13.25(c), these recordkeeping requirements imposed almost no new burdens on contractors.

Proposed §13.25(a)(7) required contractors to maintain copies of notifications to employees of the amount of paid sick leave the employees accrued as required under §13.5(a)(2). Proposed §13.25(a)(8) required contractors to maintain copies of employees' requests to use paid sick leave, if in writing, or, if not in writing, any other records of employers' requests.

Proposed §13.25(a)(9) required contractors to make and maintain records of the dates and amounts of paid sick leave used by employees and further specified that unless a contractor's paid time off policy satisfies the requirements of Executive Order 13706 and part 13 as described in §13.5(f)(5), contractors must designate the leave in their records as paid sick leave pursuant to Executive Order 13706. Proposed §13.25(a)(10) required contractors to make and maintain copies of any written denial of employees' requests to use paid sick leave, including explanations for such denials, as required under §13.5(d)(3). Proposed §13.25(a)(11) required contractors to make and maintain records relating to the certification and documentation a contractor could require an employee to provide under §13.5(e), including copies of any certification or documentation provided by an employee. Proposed §13.25(a)(12) required contractors to make and maintain any other records showing any tracking of or calculations related to an employee's accrual and/or use of paid sick leave.

Proposed §13.25(a)(13) required contractors to make and maintain copies of any certified list of employees' accrued, unused paid sick leave provided to a contracting officer in compliance with proposed §13.26. Proposed §13.25(a)(14) required contractors to maintain any certified list of employees' accrued, unused paid sick leave received from the contracting agency in compliance with proposed §13.11(f). Finally, proposed §13.25(a)(15) required contractors to maintain a copy of the relevant covered contract. The Department explained that each of the recordkeeping obligations
set forth in proposed § 13.25(a)(1)–(15) were necessary and appropriate for the enforcement of Executive Order 13706 and part 13 because they require the maintenance and preservation of records necessary to investigate potential violations of and obtain compliance with the Order, consistent with sections 3(a) and 4(a) of the Order. 

The Chamber/IFA, the American Benefits Council, and Seyfarth Shaw asserted that the requirement to preserve records for 3 years after contract completion was unduly burdensome. The Department has carefully reviewed the commenters’ concerns; however, the Department declines to reduce the time period required for preserving records in this Final Rule. Section 3(a) of the Executive Order specifically authorizes the Secretary to issue regulations requiring contractors to make, keep, and preserve such employee records as the Secretary deems necessary and appropriate for the enforcement of either the Order’s provisions or the regulations issued by the Department. Section 4(a) of the Executive Order further authorizes the Secretary to investigate possible violations of and obtain compliance with the Order, and instructs the Department, to the extent practicable, to adopt procedures and enforcement processes consistent with the FLSA, SCA, DBA, FMLA, VAWA, and Minimum Wage Executive Order. The obligation to preserve records for 3 years after contract completion mirrors the recordkeeping requirements under the SCA and DBA, see 29 CFR 4.6(g) (SCA); 29 CFR 5.5(a)(3) (DBA), that the Department has previously determined would assist in investigating possible violations of and obtaining compliance with those statutes’ provisions. Thus, the requirements in proposed § 13.25(a) are not undue; rather, consistent with sections 3(a) and 4(a) of the Order, the Secretary has determined that maintenance and preservation of the records set forth in proposed § 13.25(a) for 3 years after contract completion is necessary and appropriate to ensure the Department effectively investigate potential violations of and obtain compliance with the Order. 

PSC requested that the Department “streamline” the recordkeeping requirements contained in § 13.25(a)(7)–(12) because, although those provisions reflect FMLA requirements, they are more burdensome here because the instances of paid sick leave will outnumber those under the FMLA. The ERISA Industry Committee similarly requested that the Department remove or otherwise decrease a contractor’s recordkeeping requirements related to required notifications of the amount of paid sick leave employees have accrued. Consistent with these requests and as explained in the discussion of § 13.5(a)(2), the Department has reduced the frequency with which a contractor must notify employees of the leave they have accrued under the Order, which will reduce the required recordkeeping under § 13.25(a)(7). In addition, the Department has clarified elsewhere in this Final Rule that contractors may create and preserve documents electronically. With respect to the other recordkeeping requirements contained in § 13.25(a)(7)–(12), the Department understands that these requirements might result in a greater volume of recordkeeping than under the FMLA because there are likely to be more instances of leave under the Order than contractors experience under the FMLA. However, as mentioned above, the records the Department is requiring covered contractors to maintain under § 13.25(a)(7)–(12) are necessary to ensure the Department can fulfill its enforcement mandate under the Order. 

The HR Policy Association requested that covered contractors be permitted to preserve the required records electronically. Similarly, the Chamber/IFA suggested that contractors be permitted to send required notifications to employees electronically to avoid the accumulation of paper. The ERISA Industry Committee contended that the voluminous records covered contractors would need to create to comply with the recordkeeping requirements would cause an administrative burden. In response to these comments, the Department clarifies that, as proposed, § 13.25(a) allowed a covered contractor to make and maintain the required records electronically provided that the reproductions of the electronic records were clear, identifiable, otherwise satisfy the specific requirements of § 13.25(a)(1)–(15), and were made available upon request. The Department additionally notes, however, that regardless of how a contractor maintains the required records, a contractor may only send information required by the Order and part 13 to employees electronically if the contractor customarily corresponds with or makes information available to its employees by electronic means. The Department expects that the right of contractors to make and maintain records electronically in the manner described above, which is generally consistent with FLSA and FMLA recordkeeping requirements under 29 CFR 516.1(a) and 825.500(b), respectively, should significantly reduce contractors’ asserted recordkeeping burdens under the Order and implementing regulations. 

The Chamber/IFA, the ERISA Industry Committee, and the HR Policy Association also asserted that the requirement in proposed § 13.25(a)(9) to designate leave used in records as paid sick leave pursuant to the Order will cause confusion because the leave might also satisfy overlapping Federal, State, or local leave requirements. The Department agrees that there may be circumstances when leave taken by an employee under the Order also satisfies a contractor’s obligations under another Federal, State, or local law. However, the Department does not agree that requiring such leave to be designated consistent with proposed § 13.25(a)(9) will cause undue confusion. First, the language in the proposed rule does not preclude covered contractors from also designating the leave in its records as compliant with another legal or regulatory obligation; therefore, contractors may additionally designate the leave as compliant with the overlapping legal requirements. Second, although the Department is not requiring contractors to disclose records made under proposed § 13.25(a)(9) to employees, it is possible that employees will receive documents, such as pay stubs, that identify the leave used by employees as paid sick leave pursuant to the Order. Rather than causing confusion, however, the Department believes that such disclosures, to the extent they occur, will help employees stay apprised of how much paid sick leave they have used. 

ABC contended that the proposed rule does not address the new recordkeeping requirements it is imposing with respect to exempt employees, apparently referring to the Order’s coverage of employees who qualify for an exemption from the FLSA’s minimum wage and overtime provisions. Under § 13.25(c) (adopted as proposed, as explained below), however, a contractor is excused from maintaining records of employees’ number of daily and weekly hours worked as otherwise required under § 13.25(a)(4) if the SCA, DBA, or FLSA do not require the contractor to keep records of the employees’ hours worked and the contractor elected to use the assumption, permitted by § 13.5(a)(1)(iii), that the employee works 40 hours on or in connection with covered contracts in each workweek. Thus, the Department has not only addressed the new recordkeeping requirement with respect to exempt employees, it has also provided contractors an opportunity to significantly reduce any new
recordkeeping requirement with respect to such employees.

For all of these reasons, the Department is adopting § 13.25(a) essentially as proposed, although it has made certain modifications to ensure that certain provisions expressly refer to all relevant records and removed two entries from the list that are no longer necessary. Specifically, the Department has clarified that the reference to “wages paid” under § 13.25(a)(3) and § 13.25(a)(6) includes all “pay and benefits” as those terms are used in § 13.5(c)(3), which requires covered contractors to provide to an employee using paid sick leave the same pay and benefits (that is, both wages and any other benefits, such as but not limited to contributions toward a fringe benefit plan) the employee would have received had the employee not been absent from work. The addition of new language to § 13.25(a)(3) and § 13.25(a)(6) clarifies that contractors must make and maintain records of benefits, such as any contributions they make to a fringe benefit plan on an employee’s behalf. Because the clarification compels covered contractors to maintain documentation to demonstrate that they have complied with § 13.5(c)(3), it will facilitate the Department’s efforts to enforce the Order and its implementing regulations. The additional language is also generally consistent with the DBA and SCA recordkeeping requirements under 29 CFR 5.5(a)(3)(i) and 4.6(g)(1)(ii), respectively. Additionally, the Department has modified § 13.25(a)(10) to reflect that contractors must maintain records of not just written denials of requests to use paid sick leave, but all written responses, including approvals of such requests if in writing as well as denials, including explanations for such denials as required under § 13.5(d)(3). Although under § 13.5(d)(3)(ii), contractors are not required to grant employees’ requests to use paid sick leave in writing; if they do, maintaining such records will facilitate any investigation by the WHD that might occur. The Department removed § 13.5(a)(13) and § 13.5(a)(14) because the certified list requirement, which was necessary only to implement the requirement that successor contractors reinstate paid sick leave of employees who worked for the predecessor contractor, no longer appears. The entries that follow have been renumbered accordingly. The Department has also inserted as § 13.25(a)(14) the requirement that contractors maintain records of the regular pay and benefits provided to an employee for each use of paid sick leave. This provision makes explicit that records of such payments are required regardless of whether they are technically included in wages as referred to in § 13.25(a)(6). Finally, the Department inserted as § 13.25(a)(15) a requirement that a contractor make and maintain records of any financial payment made for unused paid sick leave upon a separation from employment that, pursuant to § 13.5(b)(5), relieves a contractor from the obligation to reinstate such paid sick leave as otherwise required by § 13.5(b)(4). This provision follows from the change to § 13.5(b)(5) described above; because financial payments can under the Final Rule affect a contractor’s reinstatement obligation, it would be important in any investigation that a contractor have records showing that such payments were made.

Proposed § 13.25(b) related to the segregation of employees’ covered and non-covered work for a single contractor. It provided that in order for a contractor to distinguish between an employee’s covered and non-covered work (such as time spent performing work on or in connection with a covered contract versus time spent performing work on or in connection with non-covered contracts or time spent performing work or in connection with a covered contract) it would be necessary to keep records reflecting such distinctions. The language in proposed § 13.25(b) is consistent with the Department’s experience in segregating hours worked by an employee who performs work in connection with covered contracts or time spent working outside the United States, or to establish that time spent performing work under the Minimum Wage Executive Order making, see 79 FR 60659, 60660–61, 60672. Thus, many, if not most, covered contractors will have experience in segregating hours worked in the manner required by proposed § 13.25(b). In addition, requiring contractors that wish to distinguish between covered and non-covered time to keep adequate records reflecting that distinction would implement section 4(a) of the Order because it would facilitate the Department’s investigation of potential violations of, and assist in obtaining compliance with, the Order. For these reasons, the Department declines to provide the grace period requested by HR Policy Association and the ERISA Industry Committee and adopts § 13.25(b) in the Final Rule as proposed. However, the Department has re-designated proposed § 13.25(b) as subparagraph (1) in the Final Rule because of the insertion of subparagraph (2), described below.

As explained above in the discussion of § 13.5(a)(i) and (iii), the Department has amended those provisions in response to comments to allow contractors to estimate an employee’s covered hours worked in connection with covered contracts provided that the estimate is reasonable and based on verifiable information. New § 13.25(b)(2) reflects this change by providing that if a contractor estimates covered hours worked by an employee who performs work in connection with covered contracts pursuant to § 13.5(a)(i) or (iii), the contractor must keep records or other proof of the verifiable information on which such estimates are reasonably based. It further provides that only if the contractor relies on an estimate that is reasonable and based on verifiable information will an employee’s time spent in connection with non-covered contracts be excluded from hours worked counted toward the accrual of paid sick leave, and that similarly, only if that contractor adequately segregated the employee’s time would time spent on non-covered work be excluded from hours worked counted toward the accrued paid sick leave.

The HR Policy Association and the ERISA Industry Committee commented that it would be difficult for covered contractors to implement § 13.25(b) with respect to those employees that might be spending less than 20 percent of hours worked in a workweek in connection with covered contracts and sought a 1-year grace period for contractors to make necessary modifications to their human resource systems to enable compliance with the requirements of § 13.25(b). EEAC and Seyfarth Shaw similarly expressed that tracking the hours of individuals working in connection with a covered contract would be challenging. The language in proposed § 13.25(b) is consistent with the treatment of hours worked on SCA- and non-SCA-covered contracts, see 29 CFR 4.178, 4.179, as well as the treatment of covered versus non-covered time under the Minimum Wage Executive Order ruling, see 79 FR 60659, 60660–61, 60672. Thus, many, if not most, covered contractors will have experience in segregating hours worked in the manner required by proposed § 13.25(b). In addition, requiring contractors that wish to distinguish between covered and non-covered time to keep adequate records reflecting that distinction would implement section 4(a) of the Order because it would facilitate the Department’s investigation of potential violations of, and assist in obtaining compliance with, the Order. For these reasons, the Department declines to provide the grace period requested by HR Policy Association and the ERISA Industry Committee and adopts § 13.25(b) in the Final Rule as proposed. However, the Department has re-designated proposed § 13.25(b) as subparagraph (1) in the Final Rule because of the insertion of subparagraph (2), described below.
the employee to use her paid sick leave during any work time for the contractor.

Proposed § 13.25(c) excused a contractor from maintaining records of the employee’s number of daily and weekly hours worked as otherwise required under § 13.25(a)(4) if the SCA, DBA, or FLSA do not require the contractor to keep records of the employee’s hours worked, such as because the employee is employed in a bona fide executive, administrative, or professional capacity as those terms are defined in 29 CFR part 541, and the contractor elected to use the assumption permitted by § 13.5(a)(1)(iii). The Department received no specific comments on proposed § 13.25(c) and implements the provision without modification.

Proposed § 13.25(d) addressed requirements related to the confidentiality of records. Proposed § 13.25(d)(1) required a contractor to maintain as confidential in separate files/records from the usual personnel files any records relating to medical histories or domestic violence, sexual assault, or stalking created by or provided to a contractor for purposes of Executive Order 13706, whether of an employee or an employee’s child, parent, spouse, domestic partner, or other individual related by blood or affinity whose close association with the employee is the equivalent of a family relationship. Proposed § 13.25(d)(2) required records or documents created to comply with the recordkeeping requirements in proposed part 13 that are subject to the confidentiality requirements of the Genetic Information Nondiscrimination Act of 2008 (GINA), Public Law 110–233, 122 Stat. 881 (2008), and/or the Americans with Disabilities Act (ADA), 42 U.S.C. 12101 et seq., to be maintained in compliance with the confidentiality requirements of those statutes as described in 29 CFR 1635.9 and 1630.14(c)(1), respectively. Proposed § 13.25(d)(3) prohibited the disclosure of any documentation used to verify the need to use 3 or more consecutive days of paid sick leave for the purposes listed in § 13.5(c)(1)(iv), and required the contractor to maintain confidentiality about any domestic violence, sexual assault, or stalking, unless the employee consents or the disclosure is required by law.

The Department has modified proposed § 13.25(d)(2) to clarify that the confidentiality requirements of the GINA and the ADA apply to medical information contained in records or documents that a contractor creates or receives with compliance with part 13. This modification aims to more clearly fulfill the intent of proposed § 13.25(d)(2), which was to ensure that to the extent compliance with the Order and its implementing regulations resulted in a contractor possessing documents to which the GINA and/or the ADA confidentiality requirements apply, the contractor must maintain those documents consistent with the GINA’s and/or the ADA’s confidentiality requirements. The Department received no specific comments related to proposed § 13.25(d), and with the exception of this modification, the Department adopts § 13.25(d) as proposed.

Proposed § 13.25(c)(e) required contractors to permit authorized representatives of the WHD to conduct interviews with employees at the worksite during normal working hours. This provision was derived from similar provisions under the SCA and DBA, 29 CFR 4.6(g)(4) (SCA); 29 CFR 5.5(a)(3)(iii) (DBA), and would facilitate the WHD’s ability to enforce the Order and part 13. The Department received no comments related to proposed § 13.25(e) and retains the provision as proposed.

Proposed § 13.25(f) stated that nothing in part 13 limits or otherwise modifies the contractor’s recordkeeping obligations, if any, under the SCA, DBA, FLSA, FMLA, Executive Order 13658, their implementing regulations, or other applicable law. The Department received no comments regarding this provision and adopts it without change.

Certified List of Employees’ Accrued Paid Sick Leave

Proposed § 13.26 required a predecessor prime contractor to provide to the contracting officer, upon completion of a covered contract, a certified list of the names of all employees entitled to paid sick leave under Executive Order 13706 and part 13 who worked on or in connection with the covered contract or any covered subcontract(s) at any point during the 12 months preceding the date of completion of the contract; and the amount of paid sick leave each such employee had available for use as of the date of completion of the contract or the date each such employee separated from the contractor or subcontract. This requirement was intended to facilitate compliance by successor contractors with the requirement set forth in § 13.5(b)(4) that paid sick leave be reinstated for employees required by a successor contractor within 12 months of the job separation from the predecessor contractor. Because (for reasons explained above) that provision does not appear in the Final Rule, proposed § 13.26 is no longer necessary and also does not appear in the Final Rule.

Section 13.26 Notice

Proposed § 13.27 addressed the obligations of contractors with respect to notice to employees of their rights under Executive Order 13706 and part 13. Proposed § 13.27(a) required that contractors notify all employees performing work on or in connection with a covered contract of the paid sick leave requirements of Executive Order 13706 and part 13 by posting a notice provided by the Department of Labor in a prominent and accessible place at the worksite so it would be readily seen by employees. The Department derived this proposal from the Executive Order 13658 Final Rule at 29 CFR 10.29(b). 79 FR 60670. This proposal differed from the Minimum Wage Executive Order regulations, however, in that it required all covered contractors, including those whose contracts are DBA- or SCA-covered, to display the poster rather than allowing DBA and SCA contractors to provide notice solely on wage determinations. This difference was based on the Department’s belief that, because the Order’s paid sick leave requirements require lengthier explanation than the minimum wage requirements of Executive Order 13658, and because those requirements are sufficiently detailed such that the Department did not propose to describe them in full on wage determinations, employees working on or in connection with DBA- and SCA-covered contracts would be more adequately informed about the paid sick leave requirements by a poster. The Department stated in the NPRM that it would make a poster, modeled on the Minimum Wage Executive Order poster, available on the WHD Web site.

Numerous commenters, including Voices for Vermont’s Children, Consumer Affairs, and NETWORK, USA, the NYC Department of Consumer Affairs, and NETWORK, supported the requirement that contractors prominently post notices regarding paid sick leave for employees to see. The National Partnership suggested that the Department additionally require contractors to provide employees with individual written notice of the paid sick leave requirements, either when they begin employment with the contractor or as soon as practicable if they are already employed. The Department declines to adopt this suggestion because it believes the notice poster and of paid sick leave accrual requirements in § 13.5(a)(2) will suffice to inform
employees that they are entitled to paid sick leave. The Department therefore adopts § 13.27(a) as proposed, except that it appears in the Final Rule as § 13.26(a) because of the removal of proposed § 13.26 as explained above.

Proposed § 13.27(b), derived from the Executive Order 13658 Final Rule at 29 CFR 10.29(c), permitted contractors that customarily post notices to employees electronically to post the notice electronically, provided such electronic posting is displayed prominently on any Web site maintained by the contractor, whether external or internal, and is customarily used for notices to employees about terms and conditions of employment. The Department received no specific comments on proposed § 13.27(b) and retains the section in its proposed form, except that it appears in the Final Rule as § 13.26(b).

Section 13.27 Timing of Pay

Proposed § 13.28 described the time by which a contractor must compensate employees for hours during which they used paid sick leave. Under the proposed provision, a contractor was required to provide such compensation no later than one pay period following the end of the regular pay period in which the paid sick leave was used. The proposed timing of the payment obligation imposed was consistent with both the SCA’s and Executive Order 13658’s implementing regulations. See 29 CFR 4.165(a) (SCA); 29 CFR 10.25 (Executive Order 13658). The Department received no specific comments on proposed § 13.28 and accordingly adopts the provision without change, except that it appears in the Final Rule as § 13.27 because of the removal of proposed § 13.26.

Subpart D—Enforcement

Subpart D implements section 4 of Executive Order 13706, which grants the Secretary “authority for investigating potential violations of and obtaining compliance with the order.” 80 FR 54699, by setting forth remedies, procedures, and enforcement processes. Subpart D is largely based on subpart D of the Minimum Wage Executive Order regulations in 29 CFR part 10, which incorporated relevant regulatory provisions under the FLSA, SCA, and DBA, as well as certain enforcement procedures set forth in the Department’s regulations implementing the Nondisplacement Executive Order. Subpart D differs in some respects from the analogous provisions in the Minimum Wage Executive Order regulations because of the differences between minimum wage and paid sick leave requirements and because Executive Order 13706 contemplates that the Department would also incorporate FMLA provisions to the extent practicable.

Subpart D establishes a procedure for filing complaints with the WHD, creates an informal complaint resolution process between the WHD and parties alleged to be in violation of the Order, details the WHD’s investigation procedures under the Order, and provides remedies and sanctions for violations of the Order, including monetary relief, liquidated damages, and debarment, as well as processes for collection of underpayments. As noted in the NPRM, the Department believes subpart D will facilitate investigations of potential violations of the Order, allow for violations of the Order to be addressed and remedied, and promote compliance with the Order. The Department received numerous comments generally supporting the proposed enforcement provisions as reasonable, strong, and critical to protecting workers and discouraging violation of the law; as explained in more detail below, the Department is adopting subpart D as proposed.

Section 13.41 Complaints

The Department proposed a procedure for filing complaints in § 13.41 identical to that which appears in 29 CFR 10.41, the analogous section of the Minimum Wage Executive Order Final Rule. Proposed § 13.41(a) provided that any employee, contractor, labor organization, trade organization, contracting agency, or other person or entity that believes a violation of the Executive Order or part 13 has occurred could file a complaint with any office of the WHD. It also provided that no particular form of complaint is required; a complaint could be filed orally or in writing, and WHD would accept a complaint in any language if the complaintant was unable to file it in English. Proposed § 13.41(b) stated the well-established policy of the Department with respect to confidential sources. See 29 CFR 4.191(a); 29 CFR 5.6(a)(5). Specifically, it provided that it is the Department’s policy to protect the identity of its confidential sources and to prevent an unwarranted invasion of personal privacy. Accordingly, the provision stated that the identity of any individual who makes a written or oral statement as a complaint or in the course of an investigation, as well as portions of the statement which would reveal the individual’s identity, would not be disclosed in any manner to anyone other than Federal officials without the prior consent of the individual. The proposed provision further provided that disclosure of such statements would be governed by the provisions of the Freedom of Information Act, 5 U.S.C. 552, 29 CFR part 70, and the Privacy Act of 1974, 5 U.S.C. 552. Many commenters, including Jobs With Justice, Demos, Women Employed, the National Hispanic Council on Aging, and the National Employment Lawyers Association (NELA), generally supported allowing employees to file complaints with the WHD. No commenter suggested any change to this provision, and the Department adopts it as proposed.

Section 13.42 Wage and Hour Division Conciliation

Proposed § 13.42, which was identical to 29 CFR 10.42, established an informal complaint resolution process for complaints filed with the WHD. The provision allowed the WHD, after obtaining the necessary information from the complainant regarding the alleged violations, to contact the party against whom the complaint was lodged and attempt to reach an acceptable resolution through conciliation. The Department received no comments regarding this provision and adopts § 13.42 without modification.

Section 13.43 Wage and Hour Division Investigation

Proposed § 13.43, which outlined the WHD’s investigative authority, was identical to 29 CFR 10.43. That section of the Minimum Wage Executive Order Final Rule was derived primarily from regulations implementing the SCA and DBA. See 79 FR 60679 (citing 29 CFR 4.6(g)(4), 29 CFR 5.6(b)). Proposed § 13.43 permitted the Administrator to initiate an investigation either as the result of a complaint or at any time on his or her own initiative. Under the proposal, as part of the investigation, the Administrator was entitled to conduct interviews with the contractor, as well as the contractor’s employees at the worksite during normal work hours; inspect the relevant contractor’s records (including contract documents and payrolls, if applicable); make copies and transcriptions of such records; and require the production of any documentary or other evidence the Administrator deems necessary to determine whether a violation, including conduct warranting imposition of debarment, has occurred. The proposed section also required Federal agencies and contractors to cooperate with authorized representatives of the Department in the
inspection of records, in interviews with employees, and in all aspects of investigations. The Department received no comments requesting any change to this provision and therefore implements it as proposed.

Section 13.44 Remedies and Sanctions

In proposed § 13.44, the Department set forth remedies and sanctions for violations of the Order and part 13. Proposed § 13.44(a) provided for remedies for violations of the prohibition on interference with the accrual or use of paid sick leave described in § 13.6(a). Proposed § 13.44(a) provided that when the Administrator determines that a contractor has interfered with an employee’s accrual or use of paid sick leave in violation of § 13.6(a), the Administrator would notify the contractor and the relevant contracting agency of the interference and request the contractor to remedy the violation. It additionally proposed that if the contractor does not remedy the violation, the Administrator would direct the contractor to provide any appropriate relief to the affected employee(s) in the Contractor’s investigation findings letter issued pursuant to § 13.51. The Department further proposed that such relief may include any pay and/or benefits denied or lost by reason of the violation; other actual monetary losses sustained as a direct result of the violation; or appropriate equitable or other relief.

Proposed relief also included an amount equaling any monetary relief as liquidated damages unless such amount was reduced by the Administrator because the violation was in good faith and the contractor had reasonable grounds for believing it had not violated the Order or part 13. The types of relief available under proposed § 13.44(a) were derived from the FMLA, 29 U.S.C. 2617(a)(1), 2617(b)(2), and its implementing regulations, 29 CFR 825.400(c). Important aspects of these FMLA remedies, such as the inclusion of liquidated damages, are also part of the FLSA scheme. See 29 U.S.C. 216(b), 260. As noted in the NPRM, under the FLSA and FMLA—and by extension, under Executive Order 13706 and part 13—liquidated damages serve the direct result of the violation, and remedies not solely from the FLSA scheme.

Proposed § 13.44(a) also provided that an amount equaling any monetary relief as liquidated damages as an available remedy for violations of the Order, and part 13 would often be limited because the monetary value of paid sick leave is limited. Liquidated damages in the amount of any monetary relief is therefore an important mechanism for ensuring that employees who suffer violations are adequately compensated. Proposed § 13.44(a) also provided that the Administrator could direct that payments due on the contract or any other contract between the contractor and the Federal Government be withheld as may be necessary to provide any appropriate monetary relief, and that, upon the final order of the Secretary that monetary relief is due, the Administrator could direct the relevant contracting agency to transfer the withheld funds to the Department for disbursement. These portions of the proposed provision were identical to language in the Minimum Wage Executive Order Final Rule. See 29 CFR 10.44(a). The Department received no comments regarding this portion of the proposed provision. For the reasons explained, the Department adopts § 13.44(a) as proposed.

Proposed § 13.44(b) set out remedies for violations of the prohibition on discrimination in § 13.6(b). It provided that when the Administrator determines that a contractor has discriminated against an employee in violation of § 13.6(b), the Administrator would notify the contractor and the relevant contracting agency of the discrimination and request that the contractor remedy the violation. It further provided that if the contractor does not remedy the violation, the Administrator would direct the contractor to provide any appropriate relief, including but not limited to employment, reinstatement, promotion, restoration of leave, or lost pay and/or benefits, in the Administrator’s investigation findings letter issued pursuant to § 13.51. As proposed, § 13.44(b) also provided that an amount equaling any monetary relief could be awarded as liquidated damages unless such amount is reduced by the Administrator because the violation was in good faith and the contractor had reasonable grounds for believing the contractor had not violated the Order or part 13. This language was derived from the FMLA remedies set forth in 29 U.S.C. 2617(a)(1) and 29 CFR 825.400(c); see also 29 U.S.C. 216(b)(2). It was similar to the analogous provision in the Minimum Wage Executive Order rulemaking, 79 FR 60728 (codified at 29 CFR 10.44(b)), which was derived from the remedies provided for under the FLSA’s anti-retaliation provision, 29 U.S.C. 216(b), except that the proposed provision allowed for liquidated
a contractor is found by the Secretary to have disregarded its obligations under Executive Order 13706 or part 13, such contractor and its responsible officers, and any firm, corporation, partnership, or association in which the contractor or responsible officers have an interest, would be ineligible to be awarded any contract or subcontract subject to the Executive Order for a period of up to 3 years from the date of publication of the name of the contractor or responsible officer on the excluded parties list currently maintained on the System for Award Management Web site, http://www.SAM.gov. The “disregarded its obligations” standard, which is also used in the Minimum Wage Executive Order rulemaking, was derived from the DBA implementing regulations at 29 CFR 5.12(a)(2). See 79 FR 60680. Proposed § 10.44(d) further provided that neither an order of debarment of any contractor or its responsible officers from further Government contracts nor the inclusion of a contractor or its responsible officers on a published list of noncomplying contractors under this section would be carried out without affording the contractor or responsible officers an opportunity for a hearing before an Administrative Law Judge (ALJ).

Debarment is a long-established remedy for a contractor’s failure to fulfill its labor standards obligations under the SCA and the DBA, see 41 U.S.C. 6706(b); 40 U.S.C. 3144(b); 29 CFR 4.188(a); 29 CFR 5.5(a)(7); 29 CFR 5.12(a)(2), and one that, as noted, was adopted in the Minimum Wage Executive Order rulemaking, see 79 FR 60728 (codified at 29 CFR 10.44(c)). In the NPRM, the Department explained that the possibility that a contractor will be unable to obtain Government contracts for a fixed period of time due to debarment promotes contractor compliance with the SCA, DBA, and Minimum Wage Executive Order, and the Department intended inclusion of the remedy in the NPRM to incentivize compliance with Executive Order 13706 as well.

A Better Balance, Innovation Ohio, the National Partnership, Equal Rights Advocates, CPD, and numerous other commenters endorsed the debarment of contractors found to have violated the Order and part 13 as an appropriate remedy. The Department therefore implements § 13.44(d) as proposed. Proposed § 13.44(e) allowed for initiation of an action, following a final order of the Secretary, against a contractor in any court of competent jurisdiction to collect underpayments when the amounts withheld under § 13.11(c) are insufficient to reimburse all monetary relief due. Proposed § 13.44(e) also authorized initiation of an action, following the final order of the Secretary, in any court of competent jurisdiction when there are no payments available to withhold. Such circumstances could arise, for example, if at the time the Administrator discovers a contractor owes monetary relief to employees, no payments remain owing under the contract or another contract between the same contractor and the Federal Government, or if the covered contract is a concessions contract under which the contractor does not receive payments from the Federal Government. Proposed § 13.44(e) additionally provided that any sums the Department recovers would be paid to affected employees to the extent possible, but that sums not paid to employees because of an inability to do so within 3 years would be transferred into the Treasury of the United States. Proposed § 13.44(e) was derived from the analogous provision of the Minimum Wage Executive Order rulemaking, 29 CFR 10.44(d), which in turn was derived from the SCA, 41 U.S.C. 6705(b)(2). No comments addressed this provision specifically and the Department adopts it as proposed.

In proposed § 13.44(f), the Department addressed what remedy would be available when a contracting agency fails to include the contract clause in a contract subject to the Executive Order. It provided that the contracting agency, on its own initiative or within 15 calendar days of notification by the Department, would incorporate the clause in the contract retroactive to commencement of performance under the contract through the exercise of any and all authority that may be needed (including, where necessary, its authority to negotiate or amend, its authority to pay any necessary additional costs, and its authority under any contract provision authorizing changes, cancellation, and termination). This provision was identical to 29 CFR 10.44(e); in promulgating that provision during the Minimum Wage Executive Order rulemaking, the Department explained that this clause would provide the Administrator authority to collect underpayments on behalf of affected employees on the applicable contract retroactive to commencement of performance under the contract. 79 FR 60681. The Department also noted in that rulemaking that the Administrator possesses comparable authority under the DBA. Id. (citing 29 CFR 1.6(6)). The Department explained in the NPRM that a mechanism for addressing a failure to
include the contract clause in a contract subject to Executive Order 13706 would further the interest in both remedying violations and obtaining compliance with the Order, as it did with respect to the Minimum Wage Executive Order. Furthermore, as also noted in the Minimum Wage Executive Order rulemaking, the proposed provision included language reflecting the Department’s belief that a contractor is entitled to an adjustment where necessary to pay any necessary additional costs when a contracting agency initially omits and then subsequently includes the contract clause in a covered contract. *Id.* (citing 29 CFR 4.5(c), the SCA regulation with which this position is consistent). As noted above, PSC requested that the Department expressly require a price or cost adjustment when a contracting agency fails to include the contract clause in a covered contract. For the reasons explained in the discussion of § 13.11(b), § 13.44(f) is implemented without change.

Subpart E—Administrative Proceedings

Pursuant to section 4 of Executive Order 13706, subpart E establishes and describes the administrative proceedings to be conducted under the Order. In compliance with section 3(c) of the Order, proposed subpart E incorporates, to the extent practicable, the DBA, SCA, and Executive Order 13656 administrative procedures the Department believes are necessary to remedy potential violations and ensure compliance with the Executive Order. Indeed, the Department substantially modeled subpart E on subpart E of the Minimum Wage Executive Order Final Rule, which was primarily derived from the rules governing administrative proceedings conducted under the DBA and SCA. 79 FR 60682. The administrative procedures included in subpart E also closely adhere to existing procedures of the Department’s Office of Administrative Law Judges and Administrative Review Board (ARB).

Section 13.51 Disputes Concerning Contractor Compliance

Proposed § 13.51, which the Department derived primarily from the DBA’s implementing regulations at 29 CFR 5.11, addressed how the Administrator would process disputes regarding a contractor’s compliance with part 13. Specifically, proposed § 13.51(a) provided that the Administrator or a contractor could initiate a proceeding. The Department received no comments regarding this provision, and it is adopted as proposed.

Proposed § 13.51(b)(1) provided that when it appears that relevant facts are at issue in a dispute covered by § 13.51(a), the Administrator would notify the affected contractor(s) and the prime contractor, if different, of the investigative findings by certified mail to the last known address. The preamble to the proposal further stated that if the Administrator determines that there are reasonable grounds to believe the contractor(s) should be subject to debarment, the investigative findings letter would so indicate. Proposed § 13.51(b)(2) required a contractor desiring a hearing concerning the investigative findings letter to request a hearing by letter postmarked within 30 calendar days of the date of the Administrator’s letter. It further required the request to set forth those findings in dispute with respect to the violation(s) and/or debarment, as appropriate, and to explain how such findings are in dispute, including by reference to any applicable affirmative defenses.

Proposed § 13.51(b)(3) required the Administrator, upon receipt of a timely request for hearing, to refer the matter to the Chief Administrative Law Judge by Order of Reference for designation of an ALJ to conduct such hearings as may be necessary to resolve the disputed matter in accordance with the procedures set forth in 29 CFR part 6. It also required the Administrator to attach a copy of the Administrator’s letter, and the response thereto, to the Order of Reference that the Administrator sent to the Chief Administrative Law Judge.

The Department did not receive any requests to alter § 13.51(b) and implements it as proposed.

Proposed § 13.51(c)(1) applied in circumstances when it appears there are no relevant facts at issue and there is not at that time reasonable cause to institute debarment proceedings. It required the Administrator to notify the contractor, by certified mail to the contractor’s last known address, of the investigative findings and to issue a ruling on any issues of law known to be in dispute.

Proposed § 13.51(c)(2)(i) applied when a contractor disagrees with the Administrator’s factual findings or believes there are relevant facts in dispute. It required the contractor to advise the Administrator of such disagreement by letter postmarked within 30 calendar days of the date of the Administrator’s letter. Under the NPRM, the contractor was also required to explain why the fact alleged to be in dispute and attach any supporting documentation with its response.

Proposed § 13.51(c)(2)(ii) applied where the information submitted in the response alleging the existence of a factual dispute must be timely in order for the Administrator to examine such information. Under the NPRM, where the Administrator determined there was a relevant issue of fact, the Administrator would refer the case to the Chief Administrative Law Judge. If the Administrator determined there was no relevant issue of fact, the Administrator would so rule and advise the contractor accordingly.

Proposed § 13.51(c)(3) applied where a contractor desires review of a ruling issued by the Administrator under proposed § 13.51(c)(1) or the final sentence of proposed § 13.51(c)(2)(ii). It required a contractor to file any petition for review with the ARB postmarked within 30 calendar days of the Administrator’s ruling, with a copy thereof to the Administrator. It further required the petitioner to file its petition in accordance with the procedures set forth in 29 CFR part 7.

The Department received no comments addressing § 13.51(c) and adopts it without modification.

Proposed § 13.51(d) provided that the Administrator’s investigative findings letter would become the final order of the Secretary if a timely response to the letter is not made or a timely petition for review is not filed. It additionally provided that if a timely response or a timely petition for review is filed, the investigative findings letter would be inoperable unless and until the decision is upheld by an ALJ or the ARB, or the letter otherwise becomes a final order of the Secretary. No comments addressed § 13.51(d), and the Department implements it as proposed.

Section 13.52 Debarment Proceedings

Proposed § 13.52 addressed debarment proceedings and was identical to the analogous provision in the Minimum Wage Executive Order regulations. 29 CFR 10.52, which the Department primarily derived from the DBA implementing regulations at 29 CFR 5.12. 79 FR 60683. Proposed § 13.52(a) provided that whenever any contractor is found by the Secretary of Labor to have disregarded its obligations to employees or subcontractors under Executive Order or part 13, such contractor and its responsible officers, and any firm, corporation, partnership, or association in which such contractor or responsible officers have an interest, would be ineligible for a period of up to 3 years to receive any contracts or subcontracts subject to the Executive Order from the date of publication of the name or names of the contractor or
persons on the excluded parties list currently maintained on the System for Award Management Web site, http://www.SAM.gov. The Department received no comments addressing this provision and adopts it as proposed.

Proposed § 13.52(b)(1) provided that where the Administrator finds reasonable cause to believe a contractor has committed a violation of the Executive Order or part 13 that constitutes a disregard of its obligations to its employees or subcontractors, the Administrator would notify, by certified mail to the last known address, the contractor and its responsible officers (and any firms, corporations, partnerships, or associations in which the contractor or responsible officers are known to have an interest) of the finding. Under proposed § 13.52(b)(1), the Administrator would additionally furnish those notified a summary of the investigatory findings and afford them an opportunity for a hearing regarding the debarment issue. Those notified would have to request a hearing on the debarment issue, if desired, by letter to the Administrator postmarked within 30 calendar days of the date of the letter from the Administrator. The letter requesting a hearing would need to set forth any findings that were in dispute and the reasons therefore, including any affirmative defenses to be raised.

Proposed § 13.52(b)(1) also required the Administrator, upon receipt of a timely request for hearing, to refer the matter to the Chief Administrative Law Judge by Order of Reference, to which would be attached a copy of the Administrator’s investigative findings letter and the response thereto, for designation to an ALJ to conduct such hearings as may be necessary to decide the disputed matters. It further provided that a copy of the Order of Reference and attachments thereto would be served upon the respondent and that the investigative findings letter and the response thereto would be given the effect of a complaint and answer, respectively, for purposes of the administrative proceeding.

Proposed § 13.53(b) stated that at any time prior to the closing of the hearing record, the complaint or answer could be amended with permission of the ALJ upon such terms as the ALJ approves, and that for proceedings initiated pursuant to proposed § 13.51, such an amendment could include a statement that debarment action is warranted under proposed § 13.52. It further provided that such amendments would be allowed when justice and the presentation of the merits are served thereby, provided no prejudice to the objecting party’s presentation on the merits would result. It additionally stated that when issues not raised by the pleadings were reasonably within the scope of the original complaint and were tried by express or implied consent of the parties, they would be treated as if they had been raised in the pleadings, and such amendments could be made as necessary to make them conform to the evidence. Proposed § 13.53(b) further provided that the presiding ALJ could, upon reasonable notice and upon such terms as are just, permit supplemental pleadings setting forth transactions, occurrences, or events that have happened since the date of the pleadings and that are relevant to issues involved. It also authorized the ALJ to grant a continuance in the hearing, or leave the record open, to enable the new allegations to be addressed. The Department received no comments addressing this provision and implements it as proposed.

Section 13.54 Consent Findings and Order

Proposed § 13.54(a) provided that parties could at any time prior to the ALJ’s receipt of evidence or, at the ALJ’s discretion, at any time prior to issuance of a decision, agree to dispose of the matter, or any part thereof, by entering into consent findings and an order disposing of the proceeding. Proposed § 13.54(b) provided that any agreement containing consent findings and an order disposing of a proceeding in whole or in part would also provide: (1) That the order would have the same force and effect as an order made after full hearing; (2) that the entire record on which any order may be based must consist solely of the Administrator’s findings letter and the agreement; (3) a waiver of any further procedural steps before the ALJ and the ARB regarding those matters which are the subject of the agreement; and (4) a waiver of any right to challenge or contest the validity of the findings and order entered into in accordance with the agreement.

Proposed § 13.54(c) provided that within 30 calendar days of receipt of any proposed consent findings and order, the ALJ would accept the agreement by issuing a decision based on the agreed findings and order, provided the ALJ is satisfied with the proposed agreement’s form and substance. It further provided that if the agreement disposes of only a part of the disputed matter, a hearing would be conducted on the matters remaining in dispute. The Department received no comments addressing this provision, and it adopts § 13.54 as proposed.

Section 13.55 Proceedings of the Administrative Law Judge

Proposed § 13.55 addressed the ALJ’s proceedings and decision. Proposed § 13.55(a) provided that the Office of Administrative Law Judges has jurisdiction to hear and decide appeals concerning questions of law and fact from the Administrator’s investigative findings letters issued under § 13.51 and/or § 13.52. The Department received no comments related to proposed § 13.55(a) and accordingly adopts the section in its proposed form.

Proposed § 13.55(b) provided that each party could file with the ALJ proposed findings of fact, conclusions of law, and a proposed order, together with a supporting brief expressing the reasons for such proposals, within 20 calendar days of filing of the transcript (or a longer period if the ALJ permits). It also provided that each party would serve such documents on all other parties. No comments addressed § 13.55(b), and the Department adopts it as proposed.

Proposed § 13.55(c)(1) required an ALJ to issue a decision within a reasonable period after receipt of the proposed findings of fact, conclusions of law, and order, or within
30 calendar days after receipt of an agreement containing consent findings and an order disposing of the matter in whole. It further provided that the decision would contain appropriate findings, conclusions of law, and an order and be served upon all parties to the proceeding. Proposed § 13.55(c)(2) provided that if the Administrator requests debarment, and the ALJ concludes the contractor has violated the Executive Order or part 13, the ALJ would issue an order regarding whether the contractor is subject to the excluded parties list that would include any findings related to the contractor’s disregard of its obligations to employees or subcontractors under the Executive Order or part 13. The Department received no comments related to proposed § 13.55(c) and adopts it without modification.

Proposed § 13.55(d) provided that the Equal Access to Justice Act (EAJA), as amended, 5 U.S.C. 504, does not apply to proceedings under part 13 because such proceedings were not required by an underlying statute to be determined on the record after an opportunity for an agency hearing. Therefore, the Department reasoned that an ALJ had no authority to award attorney’s fees and/or other litigation expenses pursuant to the provisions of the EAJA for any proceeding under part 13.

NELA commented that the rule would be strengthened by adding language to allow prevailing employees represented by private counsel to recover attorney’s fees and costs in administrative proceedings brought to enforce and remedy violations of the Order. NELA expressed the view that the financial loss to a full-time employee who has not been permitted to accrue or use up to 56 hours per year of paid sick leave as required under the Order is likely to be minimal, and that without the ability to recover attorney’s fees and costs, it would not be financially feasible for an employee to retain private counsel, or economically viable for a private attorney to represent an employee in this type of complaint.

After careful consideration of this comment, the Department has decided to retain § 13.55(d) as proposed. Although the Department agrees that promoting legal representation for employees is a worthy objective, the Department declines to adopt the recommendation to add language to permit the recovery of attorney’s fees and costs by prevailing employees in administrative proceedings brought pursuant to these regulations. The Amendment Rule requiring the recovery of attorney’s fees ordinarily requires litigants in court to bear their own fees and costs, regardless whether they win or lose. See Buckhannon Bd. & Care Home, Inc. v. West Va. Dep’t of Health & Human Res., 532 U.S. 598, 602 (2001). A prevailing party may be entitled to collect fees from the losing party only pursuant to explicit statutory authority. See Key Tronic Corp. v. United States, 511 U.S. 809, 819 (1994); In the Matter of Ann P. Harris v. Tennessee Valley Authority, ARB Case No. 99–004, 2000 WL 2804643, at *3–7 (DOL Adm. Rev. Bd. Nov. 29, 2000) (same, in administrative proceedings before Department of Labor ALJs or the ARB). Not only does the Order not contain any such explicit authority, it also specifies that it does not create, and is not intended to create, any right or benefit, substantive or procedural, enforceable at law or in equity by any party against the government or any other person. 80 FR 54699. Rather, pursuant to subpart E, where the Administrator finds that a violation of the Order or part 13 has occurred, the WHD shall initiate an enforcement proceeding, and an employee may participate in, but cannot be a party to, such a proceeding under the Order, and therefore would not be a “prevailing party” for purposes of fee-shifting even if monetary or other relief were awarded.

Lastly, § 13.44 sets forth remedies and sanctions for violations of the Order. Relief may include any pay and/or benefits denied or lost by reason of the violation, other monetary losses sustained as a direct result of the violation, or appropriate equitable or other relief in certain circumstances, payment of liquidated damages in an amount equaling any monetary relief. The Department believes these remedies provide adequate restitution to employees for violations of the Order, and that the inability of affected employees to recover attorney’s fees and costs does not represent an impediment to enforcement of Executive Order 13706. Proposed § 13.55(e) provided that if an ALJ concludes that a violation of the Executive Order or part 13 occurred, the final order would mandate action to remedy the violation, including any monetary or equitable relief described in § 13.44. It also required an ALJ to determine whether an order imposing debarment is appropriate, if the Administrator has sought debarment. The Department received no comments related to proposed § 13.55(e) and accordingly retains the section as proposed.

Proposed § 13.55(f) provided that the ALJ’s decision would become the final order of the Secretary, provided a party does not timely appeal the matter to the ARB. The Department received no comments regarding this provision and adopts it as proposed.

Section 13.56 Petition for Review

The Department proposed § 13.56 as the process to apply to petitions for review to the ARB from ALJ decisions. Proposed § 13.56(a) provided that within 30 calendar days after the date of the decision of the ALJ, or such additional time as the ARB grants, any aggrieved party has the right to appeal the decision to the ARB. The aggrieved party must file a petition for review with supporting reasons in writing to the ARB within 30 calendar days of receipt of the ALJ decision. The Department received no comments related to this provision and retains it as proposed.

Proposed § 13.56(b) provided that if a party files a timely petition for review, the ARB’s decision would be inoperative unless and until the ARB issues an order affirming the decision, or the decision otherwise becomes a final order of the Secretary. It further provided that if a petition for review concerns only the imposition of debarment, the remainder of the ALJ’s decision would be effective immediately. It additionally stated that judicial review would not be available unless a timely petition for review to the ARB is first filed. Failure of the aggrieved party to file a petition for review with the ARB within 30 calendar days of the ALJ decision would render the decision final, without further opportunity for appeal. No commenter addressed proposed § 13.56(b), and the Department retains it without change.

Section 13.57 Administrative Review Board Proceedings

Proposed § 13.57 outlined the ARB proceedings under the Executive Order. Proposed § 13.57(a) stated the ARB has jurisdiction to hear and decide in its discretion appeals from the
Administrator’s investigative findings letters issued under § 13.51(c)(1) or the final sentence of § 13.51(c)(2)(ii). Administrator’s rulings issued under § 13.58, and from ALJ decisions issued under § 13.55. It further provided that in considering the matters within its jurisdiction, the ARB would be the Secretary’s authorized representative and would act fully and finally on behalf of the Secretary. Proposed § 13.57(a)(2)(ii) identified the limitations on the ARB’s scope of review, including a restriction on passing on the validity of any provision of part 13 and a general prohibition on receiving new evidence in the record, because the ARB is an appellate body and must decide cases before it based on substantial evidence in the existing record. Proposed § 13.57(a)(2)(ii) prohibited the ARB from granting attorney’s fees or other litigation expenses under the EAJA.

With respect to attorney’s fees and costs under the EAJA, the Department explained in the discussion of § 13.55(d) above why it is declining to adopt NELA’s recommendation to add language to permit the recovery of attorney’s fees and costs by prevailing employees in administrative proceedings brought pursuant to these regulations. The Department received no other comments related to proposed § 13.57(a) and is adopting it as proposed.

Proposed § 13.57(b) required the ARB to issue a final decision within a reasonable period of time following receipt of the petition for review and to serve the decision by mail on all parties at their last known address, and on the Chief ALJ, if the case involved an appeal from an ALJ’s decision. Proposed § 13.57(c) directed the ARB’s order to mandate action to remedy a violation, including any monetary or equitable relief described in § 13.44, if the ARB concludes a violation occurred. Under the proposed rule, if the Administrator sought debarment, the ARB would determine whether a debarment remedy is appropriate.

Finally, proposed § 13.57(d) provided that the ARB’s decision would become the Secretary’s final order in the matter. The Department received no comments related to proposed § 13.57 (b), (c), and (d) and accordingly adopts them as proposed.

Section 13.58 Administrator Ruling

Proposed § 13.58 set forth a procedure for addressing questions regarding the application and interpretation of the rules contained in part 13. Proposed § 13.58(b), which the Department derived primarily from the DBA’s implementing regulations at 29 CFR 5.13, provided that such questions could be referred to the Administrator. It further provided that the Administrator would issue an appropriate ruling or interpretation related to the question. Additionally, under proposed § 13.58(a), requests for rulings under this section must be addressed to the Administrator, Wage and Hour Division, U.S. Department of Labor, Washington, DC 20210.

Any interested party could, pursuant to proposed § 13.58(b), appeal a final ruling of the Administrator issued pursuant to proposed § 13.58(a) to the ARB within 30 calendar days of the date of the ruling.

The Department received no comments related to proposed § 13.58 and accordingly retains the section as proposed.

Appendix A (Contract Clause)

Because Executive Order 13706 requires inclusion of a contract clause in covered contracts, the Department proposed the text of a contract clause in appendix A to part 13. The Department is finalizing the contract clause as appendix A to part 13 essentially as proposed. Certain provisions of the proposed contract clause have been modified, however, to reflect changes to relevant portions of part 13 as promulgated by the Final Rule; these modifications are explained below. As required by the Order, the contract clause specifies employees must earn not less than 1 hour of paid sick leave for every 30 hours worked. Consistent with the Secretary’s authority to obtain compliance with the Order, as well as the Secretary’s responsibility to issue regulations implementing the requirements of the Order that incorporate, to the extent practicable, existing procedures, remedies, and enforcement processes under the FLSA, SCA, DBA, FMLA, VAWA and Executive Order 13658, the additional provisions of the contract clause are based on the statutory text or implementing regulations of these five statutes and Executive Order 13658 and are intended to obtain compliance with the Order.

The introduction to the contract clause provides that the clause must be included by the contracting agency in all contracts, contract-like instruments, and solicitations to which Executive Order 13706 applies, except for procurement contracts subject to the Federal Acquisition Regulation (FAR). For procurement contracts subject to the FAR, contracting agencies shall use the clause parallel to the one developed to implement part 13. Such clause shall accomplish the same purposes as the clause set forth in appendix A and shall be consistent with the requirements set forth in the Secretary’s regulations.

Paragraph (a) of the contract clause set forth in appendix A provides that the contract in which the clause is included is subject to Executive Order 13706, the regulations issued in part 13 to implement the Order’s requirements, and all the provisions of the contract clause.

Paragraph (b) identifies the contractor’s general paid sick leave obligations. Paragraph (b)(1) stipulates that contractors must permit each employee engaged in the performance of the contract by the prime contractor or any subcontractor, regardless of any contractual relationship that may be alleged to exist between the contractor and the employee, to earn not less than 1 hour of paid sick leave for every 30 hours worked. It further provides that the contractor must allow accrual and use of paid sick leave as required by the Executive Order and part 13, particularly the accrued paid leave and other requirements set forth in §§ 13.5 and 13.6, which are incorporated by reference in the contract.

The first sentence of paragraph (b)(2), which reflects requirements in proposed §§ 13.23 and 13.24 and was derived from the contract clauses applicable to contracts subject to the SCA, DBA and Executive Order 13658, see 29 CFR 4.6(h) (SCA); 29 CFR 5.5(a)(1) (DBA); 79 FR 60731 (Executive Order 13658), aims to ensure that employees actually receive the full pay and benefits to which they are entitled under the Executive Order and part 13 when they use paid sick leave. It requires a contractor to provide paid sick leave to all employees when due free and clear and without subsequent deduction (except as otherwise provided by § 13.24), rebate, or kickback on any account. Paragraph (b)(2)’s second sentence clarifies that employees who have used paid sick leave must receive the full pay and benefits to which they are entitled for the period of leave used no later than one pay period following the end of the regular pay period in which the employee used the sick leave. This requirement appears in § 13.27.

Paragraph (b)(3) provides that the prime contractor and any upper-tier subcontractor shall be responsible for the compliance by any subcontractor or lower-tier subcontractor with the requirements of Executive Order 13706, part 13, and the contract clause. This responsibility on the part of prime and upper-tier contractors for subcontractor compliance parallel to the SCA, DBA and Executive Order 13658, See 29 CFR 4.114(b) (SCA); 29 CFR 5.5(a)(6)
§ 13.11(c). Paragraph (d) also provides that the breach of the contract clauses may be grounds to debar the contractor as provided in §13.52.

Paragraph (e), which implements section 2(f) of the Executive Order, provides that the paid sick leave required by the Executive Order, part 13, and the contract clause is in addition to a contractor’s obligations under the SCA and DBA, and that a contractor may not receive credit toward its prevailing wage or fringe benefit obligations under those Acts for any paid sick leave provided in satisfaction of the requirements of the Executive Order and part 13.

Paragraph (f), which implements section 2(l) of the Executive Order, provides that nothing in Executive Order 13706 or part 13 shall excuse noncompliance with or supersede any applicable Federal or State law, any applicable law or municipal ordinance, or a CBA requiring greater paid sick leave or leave rights than those established under Executive Order 13706 and part 13. Sections 13.5(f)(2)(i) and §13.5(f)(1) also implement sections 2(f) and 2(l) of the Executive Order, respectively, and the preamble discussions related to §§13.5(f)(2)(i) and 13.5(f)(1) accordingly describe the operation of paragraphs (e) and (f) in greater detail.

Paragraph (g) sets forth recordkeeping and related obligations that are consistent with the Secretary’s authority under section 4 of the Order to obtain compliance with the Order, and that the Department views as essential to determining whether the contractor has satisfied its obligations under the Executive Order. The Department derived the obligations set forth in paragraph (g) from the FLSA, SCA, DBA, FMLA and Executive Order 13658. The recordkeeping obligations in paragraph (g) duplicate those in §13.25, and paragraph (g) has accordingly been modified to reflect any changes to §13.25. Specifically, paragraphs (xvi) and (xvii) have been added to section (1) to reflect the addition of §13.25(16) and (17); paragraph (ii) has been added to section (2) to reflect the addition of §13.25(b)(2); and paragraphs (iii), (vi), (vii), and (x) have been edited to reflect minor revisions made to the corresponding paragraphs of §13.25. A full description of those obligations and changes appears in the preamble related to §13.25.

Paragraph (h) requires the contractor to both insert the contract clause in all its covered subcontracts and to require its subcontractors to include the clause in any covered lower-tier subcontracts.

Paragraph (i), which implements Executive Order 13706, part 13, and the contract clause by posting a notice provided by the Department of Labor in a prominent and accessible place at the worksite so it may be readily seen by employees. It additionally permits contractors that customarily post notices to employees electronically to post the notice electronically, provided such electronic posting is displayed prominently on any Website that is maintained by the contractor, whether external or internal, and is customarily used for notices to...
employees about terms and conditions of employment. The notice obligations contained in paragraph (l) mirror those contained in § 13.26(a)–(b), which the Department derived from the Minimum Wage Executive Order Final Rule at 29 CFR 10.29(b)–(c). The preamble related to those sections contains a discussion of the Department’s rationale for including the particular notice obligation it has adopted.

Paragraph (m) is based on section 5(b) of the Executive Order and provides that disputes related to the application of the Executive Order to the contract shall not be subject to the contract’s general disputes clause. Instead, such disputes shall be resolved in accordance with the dispute resolution process set forth in part 13. Paragraph (m) also provides that disputes within the meaning of the contract clause include disputes between the contractor (or any of its subcontractors) and the contracting agency, the U.S. Department of Labor, or the employees or their representatives.

III. Paperwork Reduction Act

The Paperwork Reduction Act of 1995 (PRA), 44 U.S.C. 3501 et seq., and its attendant regulations, 5 CFR part 1320, requires that the Department consider the impact of paperwork and other information collections burdens imposed on the public. Under the PRA, an agency may not collect or sponsor the collection of information, nor may it impose an information collection requirement unless it displays a currently valid Office of Management and Budget (OMB) control number. See 5 CFR 1320.8(b)(3)(vi). The OMB has assigned control number 1235–0018 to the general recordkeeping provisions of various labor standards that the WHD administers and enforces and control number 1235–0021 to the information collection which gathers information from complainants alleging violations of such labor standards. The OMB has assigned control number 1235–0029 to the new information collection request (ICR) that the Department has created to address any recordkeeping requirements related to paid sick leave that may be new.

In accordance with the PRA, the Department solicited public comments on the proposed changes to the existing information collections and the new information collection in the NPRM, as discussed below. See 81 FR 9592. The Department also submitted a contemporaneous request for OMB review of the proposed revisions to the information collections in accordance with 44 U.S.C. 3507(d). The Department extended the period for filing comments on the PRA and information collections only to provide interested parties additional time to submit comments. See 81 FR 19997. On April 28, 2016, the OMB issued a notice that continued the previous approval of the information collections under the existing terms of clearance and asked the Department to resubmit the information collection requests upon promulgation of the Final Rule and after consideration of public comments received.

Circumstances Necessitating Collection: The Final Rule contains provisions that are considered collections of information under the PRA. Pursuant to § 13.21, the contractor and any subcontractors shall include in any covered subcontracts the applicable Executive Order paid sick leave contract clause referred to in § 13.31(a) and shall require, as a condition of payment, that the subcontractor include the contract clause in any lower-tier subcontracts. Pursuant to § 13.25, contractors and each subcontractor performing work subject to Executive Order 13706 and these regulations shall make and maintain during the course of the covered contract, and preserve for no less than three years thereafter, records containing the information specified in paragraphs (a)(1) through (17) of § 13.25 for each employee and shall make them available for inspection, copying, and transcription by authorized representatives of the Wage and Hour Division. These include: (1) Name, address, and Social Security number of each employee; (2) The employee’s occupation(s) or classification(s); (3) The rate or rates of wages paid (including all pay and benefits provided); (4) The number of daily and weekly hours worked; (5) Any deductions made; (6) The total wages paid (including all pay and benefits provided) each pay period; (7) A copy of notifications to employees of the amount of paid sick leave the employees have accrued as required under § 13.5(a)(2); (8) A copy of employees’ requests to use paid sick leave, if in writing, or, if not in writing, any other records reflecting such employee requests; (9) Dates and amounts of paid sick leave used by employees; (10) A copy of any written denials of employees’ requests to use paid sick leave, including explanations for such denials, as required under § 13.5(d)(3); (11) Any records reflecting the certification and documentation a contractor may require an employee to provide under § 13.5(e), including copies of any certification or document required from an employee; (12) Any other records showing any tracking of or calculations related to an employee’s accrual and/or use of paid sick leave; (13) The relevant covered contract; (14) The regular pay and benefits provided to an employee for each use of paid sick leave; and (15) Any financial payment made for unused paid sick leave upon a separation from employment intended, pursuant to § 13.5(b)(5), to relieve a contractor from the obligation to reinstate such paid sick leave as otherwise required by § 13.5(b)(4).

Additionally, under § 13.25, if a contractor wishes to distinguish between an employee’s covered and non-covered work, the contractor must keep records reflecting such distinctions.

The Department notes that some of the recordkeeping requirements related to paid sick leave may be new requirements for some contractors. As a result, the Department created a new information collection, 1235–0NEW, titled “Government Contractor Paid Sick Leave” and submitted it to OMB for approval. On April 28, 2016, the OMB filed a notice of action, assigning OMB control number 1235–0029 to the new package, and asked that prior to publication of the Final Rule, the Department provide OMB a summary of all comments received and identify any changes made in the Final Rule in response to those comments. A new information collection request (ICR) was submitted to the OMB that would provide PRA authorization for control number 1235–0029 to incorporate the recordkeeping provisions in this Final Rule and to incorporate burdens associated with the new recordkeeping requirements.

Additionally, on, April 28, 2016, the OMB filed a notice of action instructing the Department to continue the information collections under the existing terms of clearance for ICR 1235–0018 and ICR 1235–0021, and asked the Department to resubmit the information collection requests upon promulgation of the Final Rule and after consideration of public comments received. The Department will submit to OMB for approval a revision to ICR 1235–0018 incorporating certain recordkeeping provisions in this rule even though the Final Rule does not increase a paperwork burden on the regulated community of the information collection provisions contained in ICR 1235–0018. The ICR under OMB control number 1235–0018 contains the general FLSA recordkeeping requirements and burdens. The Final Rule does restate recordkeeping requirements that are already required for FLSA purposes. The restated recordkeeping requirements are located in § 13.25(a)(1)–(6) (including an
exemption located in § 13.25(c)). Such burden is already captured in the ICR for all employers; however, the Department believes restating the requirements in one place will help employers, particularly small entities, comply with this Final Rule by removing the need to cross check other regulations.

The WHD obtains PRA clearance under control number 1235–0021 for an information collection covering complaints alleging violations of various labor standards that the agency administers and enforces. An ICR has been submitted to revise the approval to incorporate the provisions in the Final Rule applicable to complaints and adjust burden estimates to reflect any increase in the number of complaints filed against contractors who fail to comply with the paid sick leave requirements of Executive Order 13706 and 29 CFR part 13.

Subpart E establishes administrative proceedings to resolve investigation findings and the information collection requirements, particularly with respect to hearings. However, the PRA’s requirements do not apply to a civil action in which a U.S. agency is a party, or to an administrative action or investigation involving a U.S. agency. See 44 U.S.C. 3518(c)(1)(B); 5 CFR 1320.4(a)(2). Therefore, the Department determined the collections of information required by subpart E of this Final Rule are exempt from the PRA’s requirements.

Information and technology: There is no particular order or form of records prescribed by the Final Rule. A contractor may meet the requirements of this Final Rule using paper or electronic means. The WHD, in order to reduce burden caused by the filing of complaints that are not actionable by the agency, uses a complaint filing process that has complainants discuss their concerns with WHD professional staff. This process allows agency staff to refer complainants raising concerns that are not actionable under wage and hour laws and regulations to an agency that may be able to offer assistance.

Public comments: The Department sought public comments on its analysis that the NPRM created a slight paperwork burden on the regulated community for the information collection provisions otherwise previously approved in ICR 1235–0018. Additionally, the Department sought comments on its analysis that the proposed a new paperwork burden on the regulated community as described in the new information collection provisions contained in ICR 1235–0029. The Department received some comments with respect to the paperwork. The SEIU submitted a comment, with approximately 4,000 employee signatures, voicing general support for the new reporting requirements established by the NPRM and stating that Section 13.21 (which requires federal contractors to include the Executive Order contract clause in all of their federal contracts) “guarantees that federal contractors and subcontractors are familiar with the paid sick leave requirements and that they will comply with these requirements ‘as a condition of payment’,” and that Section 13.25’s recordkeeping requirements “assist the agency with both preventing and detecting possible instances of contractor fraud and inaccuracies.”

The Chamber commented that the Department’s Paperwork Reduction Act burden estimates provided in the NPRM were too low. They contended that the Department’s assertion that 322,067 workers will gain paid sick leave rights during the first three years of implementation of the proposed rule was an underestimate for the number of affected employees. They suggested that a more reasonable estimate of the number of affected workers would include the number of workers working for concessionaires and lessees of space on Federal property, independent contractors who are covered under the EO, subcontractor employees, and employees who spend time working on non-Federal projects. As described in more detail in the relevant sections, to address commenters’ concerns with respect to the number of affected employees, the Department reviewed its methodology and revised its estimates by adding concessionaires and other contractors on Federal lands, lessees of space on Federal property, and firms with operations on Federal bases to the analysis of this Final Rule, which contributed to an increase in the estimated number of affected employees. Also, using more recent data to estimate the number of subcontractors led to the inclusion of 3,763 more subcontractors than in the NPRM. The Department notes that the OES includes incorporated independent contractors, and thus those workers are included in the analysis. Unincorporated independent contractors continue to be excluded in this Final Rule as they are unlikely to be covered by this Rule because, assuming they are bona fide independent contractors, they are not covered by the FLSA and are unlikely to be performing work on or in connection with SCA-covered, or DBA-covered contracts. As further described below, the methodology represents workers who are working exclusively and year-round on covered Federal contracts, thus the number of workers who will gain benefits will likely exceed this number. However, data are not available to estimate the number of workers gaining benefits. Implications of this for costs and transfers are discussed in the relevant sections.

The Chamber also expressed the view that the new recordkeeping burden should be higher because the Department underestimated its estimates of patterns of leave use; time values associated with recordkeeping, creating a certified list, and providing leave balances; and failed to account for the burden created for employers as a part of regulatory familiarization. The Department agrees that the Executive Order and the regulations will usually require employers subject to the Order to track accrued leave and leave usage and to provide notice to employees of the amount of accrued paid leave, and will allow employers subject to the Order to obtain a certification under certain circumstances. The Department has accordingly created a new information collection requirement for employers subject to these new requirements. The Department’s estimates of time values related to these requirements are based on its enforcement experience. The Department has added a new section on regulatory familiarization to this ICR to address the Chamber’s concern.

An agency may not conduct an information collection unless it has a currently valid OMB approval, and the Department submitted the identified information collections contained in the proposed rule to OMB for review in accordance with the PRA under Control numbers 1235–0018, and 1235–0021. The Department submitted a new information collection request in the proposed rule as 1235–0NEW, to which OMB subsequently assigned control number 1235–0029. See 44 U.S.C. 3507(d); 5 CFR 1320.11. The Department has resubmitted the revised information collections to OMB for approval, and the Department intends to publish a notice announcing OMB’s decision regarding this information collection request. A copy of the information collection request can be obtained at http://www.Reginfo.gov or by contacting the Wage and Hour Division as shown in the FOR FURTHER INFORMATION CONTACT section of this preamble.
Total burden for the recordkeeping and complaint process information collections, including the burdens that will be unaffected by this Final Rule and any changes are summarized as follows:

**Type of Review:** Revision to currently approved information collections.

**Agency:** Wage and Hour Division, Department of Labor.

**Title:** Records to be Kept by Employers—Fair Labor Standards Act.

**OMB Control Number:** 1235–0018.

**Affected Public:** Private sector businesses or other for-profits, farms, not-for-profit institutions, state, local and tribal governments, and individuals or households.

**Estimated Number of Respondents:** 5,511,960 (unaffected by this rulemaking).

**Estimated Number of Responses:** 46,057,855 (unaffected by this rulemaking).

**Estimated Burden Hours:** 3,489,585 (unaffected by this rulemaking).

**Estimated Time per Response:** Various (unaffected by this rulemaking).

**Frequency:** Various (unaffected by this rulemaking).

**Other Burden Cost:** 0.

**Title:** Employment Information Form.

**OMB Control Number:** 1235–0021.

**Affected Public:** Businesses or other for-profit, not-for-profit institutions, state and local governments, and individuals or households.

**Estimated Number of Respondents:** 37,594 (227 from this rulemaking).

**Estimated Number of Responses:** 46,057,855 (unaffected by this rulemaking).

**Estimated Burden Hours:** 3,489,585 (unaffected by this rulemaking).

**Estimated Time per Response:** Various (unaffected by this rulemaking).

**Frequency:** Various (unaffected by this rulemaking).

**Other Burden Cost:** 0.

**Title:** Government Contractor Paid Sick Leave.

**OMB Control Number:** 1235–0029.

**Affected Public:** Businesses or other for-profit, farms, not-for-profit institutions, state, local and tribal governments, and individuals or households.

**Estimated Number of Respondents:** 617,200.

**Estimated Number of Responses:** 13,577,407.

**Estimated Burden Hours:** 590,478.

**Estimated Time per Response:** Various.

**Frequency:** on occasion.

**Other Burden Cost:** $347,784 (maintenance and operations).

---

**IV. Executive Orders 12866 and 13563**

Executive Orders 12866 and 13563 direct agencies to assess the costs and benefits of an intended regulation and to propose or adopt a regulation only upon a reasoned determination that the intended regulation’s net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity) justify its costs. Executive Order 13563 emphasizes the importance of quantifying both costs and benefits where possible, reducing costs, harmonizing rules, and promoting flexibility.

Under Executive Order 12866, it must be identified whether a regulatory action is significant and therefore subject to the requirements of the Executive Order and to review by OMB. 58 FR 51735. Section 3(f) of Executive Order 12866 defines a “significant regulatory action” as an action that is likely to result in a rule that: (1) Has an annual effect on the economy of $100 million or more, or adversely affects in a material way a sector of the economy, productivity, competition, jobs, the environment, public health or safety, or State, local or tribal governments or communities (also referred to as economically significant); (2) creates serious inconsistency or otherwise interferes with an action taken or planned by another agency; (3) materially alters the budgetary impacts of entitlement grants, user fees, or loan programs, or the rights and obligations of recipients thereof; or (4) raises novel legal or policy issues arising out of legal or legal or policy actions. Executive Orders 12866 and 13563 require that the President, consistent with the authorization in section 3 of the Order, provide an assessment of the intended regulation’s net benefits.

---

2 The phrase “economy and efficiency” is used here only in the sense implied by the Federal Property and Administrative Services Act.

3 This includes projected net job growth and so is somewhat larger than five times the number of affected employees in Year 1. Net job growth takes into account both workers entering and leaving Federal government contracting.

4 The estimates of affected employees represent the number of full-year employees working exclusively on covered contracts.

---

The Department estimated the number of employees who would, as a result of the Executive Order and this Final Rule, receive some additional amount of paid sick leave, i.e., “affected employees.” There are two categories of affected employees: Those covered employees who currently receive no paid sick leave, and those covered employees who currently receive paid sick leave in an amount less than they would be entitled to receive under the Executive Order (up to 7 days annually). As discussed in detail below, because the Final Rule only applies to “new contracts,” and the Department has assumed it will take five years for the universe of possibly covered contracts to become “new,” the full impact of the rulemaking will not likely occur before Year 5. In Year 5, the Department estimates there will be 1.2 million affected employees (Table 1). This includes approximately 593,800 employees who currently receive no paid sick leave and 556,800 employees who receive some paid sick leave but would be entitled to receive additional paid sick leave under the Final Rule (Table 8).

The Department also estimated costs and transfer payments associated with this rulemaking. During the first 10 years the rule is in effect, average annualized direct employer costs are estimated to be $27.3 million (Table 1). (This estimate assumes a 7 percent real discount rate; hereafter, unless otherwise specified, average annualized values will be presented using a 7 percent real discount rate.) This estimated annualized cost includes $10.7 million for regulatory familiarization, $4.9 million for initial implementation costs, $3.7 million for recurring implementation costs, and $8.0 million for administrative costs. For a discussion of how the Department
estimated these numbers, please see section V.C.ii.

Transfer payments are transfers of income from employers to employees. Estimated average annualized transfer payments are $349.6 million per year over 10 years. Some of these payments may be in terms of increased time away from work rather than increased income if workers take more days of sick leave after the Rulemaking. We refer to all such gains as transfers.

Lastly, the Department estimated deadweight loss (DWL). DWL occurs when a market operates at less than optimal equilibrium output, which happens anytime the conditions for a perfectly competitive market are not met, including but not limited to a labor market intervention. The Department estimated that average annualized DWL will be $734,000 per year during the first ten years of the rule. This will be primarily due to a possible small decrease in employment that may be a consequence of the Final Rule. This DWL analysis assumes the market is currently in equilibrium.

There will be many benefits associated with this rule. However, due to data limitations, these benefits are not monetized. The following benefits are a subset of those discussed qualitatively: Improved employee health, improved health of dependents, increased productivity, reduced hiring costs, decreased healthcare expenditures, and job growth.

### iii. Terminology and Abbreviations

The following terminology and abbreviations will be used throughout this Regulatory Impact Analysis (RIA).

- **ATUS**: American Time Use Survey.
- **BLM**: Bureau of Land Management.
- **BLS**: Bureau of Labor Statistics.
- **CFI–U**: Consumer Price Index for all urban consumers.
- **CUA**: Commercial Use Authorization.
- **DBA**: Davis-Bacon Act.
- **DWL**: Deadweight loss. This is the loss of economic efficiency that can occur when the market equilibrium for a good or service is not achieved.
- **ECEC**: Employer Costs for Employee Compensation.
- **FPDS–NG**: Federal Procurement Data System–Next Generation.
- **FS**: U.S. Forest Service.
- **FY**: Fiscal year. The Federal fiscal year, used in this analysis, is from October 1 through September 30.
- **GSAs**: General Services Administration.
- **GSA**: General Services Administration.
- **NGS**: National Compensation Survey.
- **NHS**: National Health Interview Survey.
- **NPS**: National Park Service.
- **OES**: Occupational Employment Statistics.
- **PTO**: Paid time-off.
- **Price elasticity of labor demand (with respect to wage)**: The percentage change in labor hours demanded in response to a one percent increase in wages.
- **Price elasticity of labor supply (with respect to wage)**: The percentage change in labor hours supplied in response to a one percent increase in wages.
- **Real dollars (2015$)**: Dollars adjusted using the CPI–U to reflect their purchasing power in 2015.

Department estimated the share who will receive additional days of paid sick leave due to the rulemaking. The 2015 National Compensation Survey (NCS) provides data on the percentage of employees with paid sick leave and categorical ranges of the annual number of days of leave that employees receive. This distribution allowed the Department to estimate the number of employees who receive less than the amount of paid sick leave required under the Final Rule. The 2015 NCS does not provide data for the agriculture industry. Therefore, the Department supplemented the 2015 NCS data on paid sick leave with data from the 2011 ATUS Leave Module.

### ii. Number of Affected Firms

Commenters asserted that the Department underestimated the number of firms affected by the rulemaking for several reasons. In response to these comments, the Department reviewed its methodology for estimating the number of affected firms and revised its estimates by excluding firms that are only applying for grants, and adding entities likely operating under covered nonprocurement contracts, specifically nonprocurement contracts on Federal lands, firms with leases in Federally owned properties, and firms with operations on Federal bases to the analysis. These revisions are described below with a discussion of commenters' concerns.
The main data source used to estimate the number of affected firms is SAM. SAM reports all entities registered in the database, which is a requirement to bid for Federal procurement contracts or grants. Firms report a 6-digit primary NAICS code as part of their SAM registration. NAICS codes were not reported by 20 companies; for these firms NAICS codes are assigned based on the proportion of firms in each industry.

In the NPRM we used SAM data to estimate that 543,851 firms might be affected by the rulemaking. See 81 FR 9641. However, this estimate included firms whose sole contractual arrangement with the Federal Government was that they were applying for grants. These firms will not be affected by the rulemaking, and therefore, we have eliminated them from the analysis. The Department updated its estimate by downloading August 2015 SAM data and removing from the analysis firms only receiving grants. After this adjustment we found 415,310 registered firms. This is a reduction of 128,541 firms relative to the NPRM.

SAM includes all prime contractors and some subcontractors (those who are also prime contractors or who have otherwise registered in SAM). However, we are unable to determine the number of subcontractors who are not in the SAM database. Therefore, for the NPRM the Department examined five years of USA Spending data and found 20,589 subcontractors who did not hold contracts as primes (and thus may not be included in SAM), and added these firms to the total from SAM. The Department used the number of unique subcontractors over five years to adjust for USA Spending data not including lower-tiers of subcontractors. No commenters provided data or suggestions for methodological improvements, so we continue to use this methodology in this Final Rule. Applying this method to the most recent five years of data, FY2011 through FY2015, the Department found 24,352 subcontractors who do not hold contracts as primes and added these firms to the 415,310 firms not registered in SAM solely for the purpose of receiving grants in this Final Rule (Table 2).

Commenters such as the Chamber/IFA and the SBA Advocacy noted the Department did not account for nonprocurement concessions contracts and nonprocurement contracts entered into with the Federal Government in connection with Federal property or lands related to offering services for Federal employees, their dependents, or the general public. In response to these comments, the Department has included 49,757 additional firms in the Final Rule. Estimating the number of entities operating under covered nonprocurement contracts on Federal property or lands involved many data sources and assumptions as described below.

First, the Department estimated the number of contractors with National Park Service (NPS) concessions contracts. The NPS Web site contains a list of entities operating under concessions contracts on NPS lands. The Department downloaded all 473 records contained on the Web site, identified unique firms by name, and assigned them to industries based on the first service provided listed. This results in 418 entities operating under concessions contracts on NPS lands.

Second, the Department estimated the number of NPS Commercial Use Authorizations (CUAs). The Department used data obtained from the NPS and learned that the NPS has approximately

5,900 FY2015 CUAs. The Department understands that a NPS CUA is a written authorization to provide services to park area visitors. See 36 CFR 18.2(c). Because this definition may render NPS CUAs contracts with the Federal Government in connection with Federal property or lands and related to offering services to the general public and/or SCA-covered contracts, the Department has assumed, solely for purposes of the economic analysis, that all NPS CUAs are contracts covered by the Executive Order. Because the number of CUAs does not take into account that one firm may hold multiple authorizations, we multiplied the total number of CUAs by the ratio of unique firms holding NPS concessions contracts to total NPS concessions contracts to estimate the number of contractors with CUAs (418 divided by 473 = 88 percent) for an estimated 5,190 unique firms with CUAs from NPS. We also used the industry distribution from NPS concessions contracts to assign CUA permit holders to industries because industry information was not directly available.

Next, we estimated the number of U.S. Forest Service special use authorizations. The Department informally consulted the FS, which informed the Department that 77,353 special use authorizations (SUAs) were in effect in fiscal year 2015. Based on further informal consultations with the FS, the Department estimates that approximately 36 percent of these SUAs may be covered contracts. No data are available to determine whether a contractor holds more than one permit; therefore, we used the NPS ratio of unique concessions contract holders to total concessions contract holders to estimate the number of unique contractors with FS permits (88 percent). This leaves 24,370 unique firms that may be affected. The Department combined its own assumptions with information from the U.S. Census Bureau on the NAICS classification when determining the relevant industry for each type of permit because data were not available.

We also estimated the number of affected NPS special use permits. During informal discussions with DOL, NPS officials estimated it issued 33,700 special use permits in FY 2015. It is likely that many, if not most, of these permits will not be covered by the

---

[7] Entities registering in SAM are asked if they wish to bid on contracts. If a non-Federal entity answers “Yes” to this question, SAM marks the registration as being “All Awards.” This is the “Purpose of Registration” column in the SAM data. The Department included only firms with a value of “Z2,” which denotes “All Awards.” See Section 3.2: Determining your Purpose of Registration in the System for Award Management User Guide available at: https://f3st.sam.gov/sam/SAM_Guide/ SAM User Guide.htm# Toc3037060975.
[8] The Department identified subawardees from the USA Spending.gov data who did not perform work as a prime during those years. The Department examined contractors from five years of data to compensate for lower-tier subcontractors that may not be included in USA Spending.gov. The Department believes this is a reasonable approximation of the number of subcontractors, and received no comments providing a better method. The USA Spending data are discussed in more detail in the section on “Number of Potentially Affected Employees.”
[9] Those estimates primarily capture those covered contracts for concessions and contracts in connection with Federal property or lands and related to services for Federal employees, their dependents, or the general public that are nonprocurement in nature, such that the contracting entities are not necessarily listed in SAM. However, the estimates will additionally capture some SCA-covered contracts, contracts for concessions and contracts in connection with Federal property or lands are to some degree overlapping categories of contracts (e.g., at least some concessions contracts and contracts in connection with Federal property or lands are covered by e.g., v. g: Clade of Forestry in America Interpretive Association, ARB Case No. 99–035, 2001 WL 328132 (ARB March 30, 2001)).
[10] Available at: http://www.concessions.nps.gov/ authorizing/concessions.htm. The Department has assumed all NPS concessions contracts are covered by the EO, solely for purposes of this economic analysis, primarily because the EO itself specifically covers concessions contracts.
rulemaking, but the Department has no method for directly determining the number of such permits that might be covered. Therefore the Department assumed, solely for purposes of the economic analysis, that the EO would cover 36 percent of NPS special use permits using the FS data for SUAs, and that 88 percent of the permits are held by unique contract holders based on NPS data for CUAs. Therefore, the Department estimates that 10,600 entities holding special use permits will be covered by the rule. We assigned these permit holders to the “arts, entertainment, and recreation” industry.

Next, we estimated the number of U.S. Bureau of Land Management (BLM) special recreation permits. BLM reports 4,004 of these permits in FY2014.12 The Department again relied on the FS data to assume that 36 percent of these permits will be covered, and that 88 percent will be held by unique contractors.13 This results in 1,261 entities holding BLM special recreation permits. We assumed that these are in the “arts, entertainment, and recreation” industry. These estimates for the NPS, FS, and BLM do not account for the possibility that the same firms may hold concessions contracts with more than one group.

SBA Advocacy provided estimates of retail and concession leases in federally-owned buildings. SBA Advocacy cites the GSA as the source for 732 retail leases and “hundreds of other businesses that have concessions contracts” in Federally-owned buildings. We were unable to confirm these numbers. We interpreted “hundreds” to be 500 and thus included a total of 1,232 entities. SBA also suggested that the NPRM’s estimate of affected firms did not include visually-impaired contractors that lease space at federal buildings to operate vending facilities under the Randolph-Sheppard Act. The Department understands that approximately 2,108 such leases may have existed in fiscal year 2014.14 The Department has accordingly added 2,108 firms to its estimate, but notes that some of these firms may already be counted in the GSA estimate. We assume these entities are in the “retail trade” and “accommodation and food services” industries.

SBA Advocacy also provided estimates of operations and concessions on military bases. SBA Advocacy cites a phone call between Advocacy and the Army and Air Force Exchange Service to report 1,200 direct operations and 462 concessions operating on federal bases. The Department was unable to independently confirm these numbers.15 The Navy, the Marine Corps, and the Coast Guard also have bases with retail and concessions contracts.

The Department determined there are 523 Navy Exchanges,16 2,250 Marine Corps Exchanges,17 and 11418 Coast Guard Exchanges. Based on general information about services on bases, we assume these entities are in the “retail trade” and “accommodation and food services” industries. We further assume that these entities, which appear to be providing nonprocurement services, are not listed in SAM.

In conclusion, the Department added some firms to the pool of affected business entities, but eliminated others. The Department added 49,757 firms operating under contracts on federal lands or with leases in federal buildings or bases, based on our assumption that these were nonprocurement contractors not registered in SAM that might be covered by the Executive Order. Using more recent data to estimate the number of subcontractors led to the inclusion of 3,763 more subcontractors than in the NPRM. We also eliminated 128,541 firms that only receive federal grants mentioned above. In total, these revisions and updates reduced the number of firms by 75,021 (49,757 + 3,763 – 128,541). This Final Rule accordingly estimates 489,419 potentially affected firms. Table 2 summarizes the estimated number of affected contractors by contract nexus and industry used in this rulemaking.

13 The Department believes it is reasonable to apply the 36% coverage estimates to NPS special use permits and BLM special recreation permits because it understands that these permits are likely for sufficiently similar purposes and entered into with sufficiently similar individuals and entities as the FS SUAs. For more information about military bases, see [http://www2.ed.gov/programs/rsaarp/index.html](http://www2.ed.gov/programs/rsaarp/index.html). The Department did identify one source of data. a GSA’s System for Award Management (SAM) for August 2015.
c Total CUAs from NPS, adjusted for firms holding more than one permit using the ratio from NPS concessions.
d Total SUAs from NPS. Assumed same proportion as the FS SUAs are covered and the same proportion as NPS concessions are unique.
e Forest Service provided a count of permits at the end of FY2015. Use ratio of unique firms to all firms from NPS concessions.
f Retail and concession leases in public buildings. Provided by SBA Advocacy and U.S. Department of Education.

The Chamber/IFA also argued that the Department’s analysis in the NPRM is internally inconsistent because we estimated 1.2 million potentially affected employees and 543,900 potentially affected contractors, which results in an average of 2.1 potentially affected employees per contracting firm. The Department believes this perceived inconsistency is the result of inappropriately dividing the number of potentially affected employees by 543,900. There are three primary reasons why the 543,900 figure is not the appropriate denominator when calculating the average number of employees per contracting firm.

First, as explained in the NPRM, 81 FR 9641, the estimated number of potentially affected contractors includes those that only work on Walsh-Healey Public Contracts Act (PCA) contracts, which will not be affected by the rulemaking, and whose employees thus have been excluded from the estimate of affected employees. These contractors remain in the estimate of affected contractors in the Final Rule because the Department believes they may accrue some limited regulatory familiarization costs to determine that they are not impacted by the Final Rule. However, these contractors will not have affected employees.

Second, as also explained in the NPRM, 81 FR 9641, some firms listed in the SAM database may not currently hold government contracts but are enrolled in SAM because they have held government contracts in the past or are interested in applying for contracts. These firms were kept in the analysis because some may bid on and be awarded future contracts. However, since others will not, affected workers should not be distributed to those firms (i.e., some of these firms will not have affected employees). Third, the NPRM analysis included firms listed in the SAM database that only hold, or wish to hold, government grants. Firms applying only for grants were eliminated from the estimated number of affected firms in this Final Rule because they will not accrue any costs.

When preparing the analysis of the proposed rule, the Department had not identified an appropriate method to eliminate contracting firms with contracts only on Walsh-Healey PCA contracts or without Federal contracts to estimate the number of contracting firms with affected employees. For this Final Rule, the Department has identified a methodology to estimate the number of contractors with potentially affected employees. This methodology counts only contractors with service (including construction) contracts in USASpending in FY2015 because these are the procurement contractors with potentially affected employees, and adds entities operating under covered nonprocurement contracts on Federal property or lands. We estimate there are 165,987 such contractors (91,878 prime contractors in USASpending, 24,352 subcontractors, and 49,757 entities with contracts on Federal property or lands). If this is used as the denominator, which we think would be reasonable, then we estimate an average of 10.4 full-year employees working exclusively on covered contracts per contracting firm. It is important to note, however, that this is not an estimate of the average number of total employees at these potentially affected contracting firms since only a segment of a contracting firm’s workforce may work on covered Federal contracts.

iii. Number of Potentially Affected Employees

There are no data on the number of employees working on Federal contracts; therefore, to estimate the number of Federal contract employees, the Department employed the approach used in the Minimum Wage Executive Order Final Rule.20 The Department estimated the number of employees who work on federal contracts that will be covered by the Executive Order, representing the number of “potentially affected employees.” Additionally, the Department estimated the share of potentially affected employees who will receive new or additional paid sick leave as a result of the Executive Order. These employees are referred to as “affected.”21

The Department estimated the number of potentially affected employees in two parts. First, we estimated employees working on SCA and DBA procurement contracts. Second, we estimated the number of potentially affected employees on nonprocurement concessions contracts and contracts on Federal property or lands (some of which would also be SCA-covered). SCA and DBA contract employees on covered procurement contracts were estimated by taking the ratio of Federal contracting expenditures (“Exp”) to total output (Y), by industry. Total output is the market value of the goods and services produced by an industry. This ratio is then applied to total private employment in that industry (“Emp”)

20 See 79 FR 60634, 60692–60720.
21 Some workers with seven days of paid sick leave may still be affected if the Executive Order entitles them to use paid sick leave for additional purposes. However, data are not available to estimate these workers.
The Department used total Federal contracting expenditures from USASpending.gov data, which tabulates data on Federal contracting through the Federal Procurement Data System—Next Generation (FPDS-NG). The Congressional Budget Office (CBO) has stated that this is the “only comprehensive source of information about federal spending on contracts.” According to data from USASpending.gov, the government spent $555 billion on procurement contracts in FY2015. The Department excluded expenditures to state and local governments because government employees generally receive at least seven days of paid sick leave and because the DBA does not apply to construction performed by state or local government employees. The Department also excluded contracts performed outside the U.S. because the Final Rule only covers contracts to the extent they are performed in the U.S. These two adjustments reduce the relevant Federal government’s expenditures to $508 billion. Next, the Department excluded expenditures on goods purchased by the Federal government because the Final Rule does not apply to contracts subject to the Walsh-Healey PCA and hence would not apply to contracts for the manufacturing and furnishing of materials and supplies. Contracts for goods were identified in the USASpending.gov data if the product or service code begins with a number (services begin with a letter).

Subtracting Federal expenditures on goods purchased, the Department found that the Federal government spent $286.4 billion on services (including construction) provided by government contractors in FY2015. To determine the share of all output associated with government contracts the Department divided industry-level contracting expenditures by that industry’s gross output. For example, in the information industry, $8.1 billion in contracting expenditures was divided by $1.6 trillion in total output, resulting in an estimate that covered government contracts comprise 0.52 percent of every dollar of total output in the information industry. The Department then multiplied the ratio of covered-to-gross output by private sector employment to estimate the share of employees working on covered contracts for each 2-digit NAICS industry. Private sector employment is from the 2015 Occupational Employment Statistics (OES). To demonstrate, in the information industry, there were approximately 2.7 million private sector employees in May 2015 and covered government contracts comprise 0.52 percent of every dollar of total output. The Department multiplied 2.7 million by 0.52 percent to estimate that 14,000 employees on covered procurement contracts in the information industry will be potentially affected by the Executive Order.

Commenters claimed that independent contractors are not represented in these data. For example, the Chamber/IFA wrote “the Department’s analysis fails to account for independent contractors who will be treated as equivalent employees under the proposal.” The Department notes that the OES includes incorporated independent contractors, and thus such independent contractors are included in the analysis. Unincorporated independent contractors are unlikely to be covered by this rule because, assuming they are bona fide independent contractors, they are not covered by the FLSA, and are unlikely to be performing work on or in connection with SCA- or DBA-covered contracts. Thus, they continue to be excluded in the Final Rule.

This Final Rule makes clear that contract workers with the U.S. Postal Service are covered by this rulemaking. These workers are included in the OES employment data for the transportation and warehousing industry and these contracts are included in USASpending.gov data. Therefore, workers covered by these contracts are captured in the methodology above.

This methodology represents the number of year-round potentially affected employees who work exclusively on covered Federal contracts. Thus, when we refer to potentially affected employees in this analysis we are referring to this illustrative number of year-round potentially affected employees who work exclusively on covered government contracts. The number of employees who will gain benefits is unlikely to exceed this number since all workers may not work exclusively on Federal contracts. However, data are not available to estimate the number of employees who will gain benefits. Implications of this for costs and

\[

\]

Where \( i = 2\)-digit NAICS

\(^{22}\) The North American Industry Classification System is a method by which Federal statistical agencies classify business establishments in order to collect, analyze, and publish data about certain industries. Each industry is categorized by a sequence of codes ranging from 2 digits (most aggregated level) to 6 digits (most granular level). United States Census Bureau. “North American Industry Classification System: Introduction to NAICS.” U.S. Department of Commerce. Available at: http://www.census.gov/eos/www/naics/.

\(^{24}\) For example, the government purchases pencils; however, a contract solely to purchase pencils (whether covered by the Walsh-Healey PCA or not) would not be covered by the Executive Order.

\(^{25}\) Bureau of Economic Analysis, National Income and Product Accounts (NIPA) Tables, Gross Output. 2015. “Gross output of an industry is the market value of the goods and services produced by an industry, including commodity taxes. The components of gross output include sales or receipts and other operating income, commodity taxes, plus inventory change. Gross output differs from value added, which measures the contribution of the industry’s labor and capital to its gross output.”

\(^{27}\) Note that number of employees aggregated across industry analysis does not match the total number of employees derived using totals due to the order of multiplying and summing.

\(^{28}\) The Department excludes from the OES data the 615,100 workers in NAICS 491110 who are Federal postal service employees but includes workers in NAICS 492000: Couriers and Messengers.
transfers are discussed in the relevant sections.

a OES May 2015.

b Bureau of Economic Analysis, NIPA Tables, Gross output. 2015.

c USA Spending.gov. Contracting expenditures for covered contracts in FY2015.

d Assume share of expenditures on contracting is same as share of employment. Assumes all employees work exclusively on Federal contracts. Thus this may be an underestimate if some employees are not working entirely on Federal contracts.

The above analysis, which largely follows the NPRM, found 1.4 million potentially affected employees associated with contracting expenditures by the Federal government. However, as pointed out by SBA Advocacy and the Chamber/IFA, the rulemaking also covers entities operating under covered nonprocurement contracts on Federal property or lands and these workers may not be represented above. To account for these employees the Department used a variety of sources. First, the Department estimated the number of entities operating under covered nonprocurement contracts on Federal property or lands (section V.B.i.i). Then the Department multiplied the number of contracting firms by the number of potentially affected employees per contracting firm by industry. Conceptually, this ratio was calculated by dividing the potentially affected employees on direct contracts identified above (1.4 million across all industries) by the 116,200 estimated number of prime contractors and subcontractors with potentially affected employees from USA Spending (91,900 prime contractors in and 24,400 subcontractors) (V.B.ii). However, this calculation was conducted at the industry level and summed over industries. For example, in retail trade, we estimate 12,000 potentially affected workers in 597 entities (545 prime plus 528 subcontractors), for an average of 20.7 potentially affected workers per firm. This estimate of potentially affected workers per firm is multiplied by the estimated 5,184 entities operating under covered nonprocurement contracts on Federal property or lands in the retail trade industry, resulting in 107,000 potentially affected employees in these firms. Summing these calculations over all industries results in an additional 306,000 covered employees for a total of 1.7 million potentially affected employees.

Because the Executive Order only applies to “new contracts,” coverage of the estimated total number of potentially affected employees (1.7 million) will occur on a staggered year-by-year basis. The Department accordingly needed to devise a method to estimate at what rate the staggered coverage would occur. The Executive Order defines a new contract to be either one for which a solicitation has been issued, or for which the contract has been awarded outside the solicitation process, on or after January 1, 2017. Consistent with the Department’s approach in the rulemaking implementing Executive Order 13658, see 79 FR 34568, 34596, 60693, the Department estimated that twenty percent of contracts will qualify as “new” in Year 1. If approximately twenty percent of contracts are new each year, then almost all contracts should qualify as new for purposes of the Executive Order by Year 5. The Department assumed employee coverage would also occur on a uniform twenty percent year-by-year basis. The Department accordingly multiplied the 1.7 million total potentially affected employees by 0.2 to estimate that 345,000 employees may be impacted in Year 1. In Years 2 through 5 a slightly larger number of workers will be impacted due to projected employment growth.

The Chamber/IFA questioned the Department’s estimate of affected employees in the NPRM on multiple grounds. As discussed below, the Department disagrees with the commenters. First, the Chamber/IFA believes the Department may have underestimated the number of affected employees because the “estimate is based only on consideration of numbers of employees who may currently lack access to 7 days of paid leave, and it ignores the impact on thousands more employees and their employers because current programs offering 7 or more...
days of leave fail to match other prescriptive details of the proposed rule. Employers that offer seven days of paid sick leave but with more restrictive usage will be required to broaden the use of their paid sick leave policies in response to the rulemaking. For instance, to the extent the employer’s policy does not allow employees to use paid sick leave for absences related to domestic violence, the policy would need to be revised to comply with the Order and part 13. Therefore, the Department agrees these workers may be beneficiaries of this Final Rule. Although, as discussed below, the Department was able to calculate imprecise estimates of the number of additional affected employees, it has not included the costs or transfers associated with these employees for two main reasons. First, the Department found no applicable evidence to estimate the number of employees with paid sick leave that have a more restrictive scope of use than required in this Final Rule. Second, no strong evidence is available to estimate the impact on the number of days of paid sick leave taken for these employees who currently have a more restrictive scope of use in their current paid sick leave access. Therefore, they are not included in the analysis.

However, the Department identified some data appropriate for illustrative estimates. According to the 2010 National Paid Sick Days Study (NPSDS), 64 percent of workers have paid sick days but only 47 percent have paid sick days they are allowed to use to care for sick family members. If we assume workers with paid sick leave that can only be used for their own health are uniformly distributed across days of paid leave then we can estimate the number of affected employees due to expanded usage eligibility. We estimate 123,300 workers (115,700 full-time + 7,600 part-time) receive 7 days or more of paid sick leave. If 9.4 percent (l53 percent – 48 percent)/53 percent of these employees have usage extended then an additional 11,600 employees may be considered “affected” in Year 1, (a 5.2 percent increase in the workforce of affected employees). Therefore, depending on the source, the estimate of the incremental number of affected employees due to expanded usage varies between 11,600 and 32,800 employees.

The second Chamber/IFA concern is that the Department is underestimating affected employees because “if government contract work is more labor intensive per dollar expended than non-governmental activity, then the number of affected employees will be commensurately greater than the numbers estimated by the Department in its analysis.” The Department calculated the number of employees based on the share of government expenditures to all expenditures by industry. Overall, the Department believes that services provided for the government will not be any more or less labor intensive than services provided for the private sector. However, within industries, government contract work could be more or less labor intensive than private contract work. For example, because federal contracts for construction services are more likely to be heavy or highway construction, government contract work could involve different levels of labor intensity than private contract work in the construction industry. The Department believes that the differences in labor intensity between contracted and non-contracted sectors across 2-digit NAICS tend to balance each other out.

Third, the Chamber/IFA believes affected employees may be underestimated because the Department assumed that employees were working exclusively on Federal contracts. To the extent that employees spend only a portion of their time working on federal contracts, the number of affected employees will be higher than the number of year-round exclusively federal contract employees estimated above. As discussed above, data are not available on the share of an employee’s time that is spent on Federal contracting. The impact of this on transfers was discussed in the NPRM and in this Final Rule in the section on transfers (V.C.iii.). For this Final Rule we have added a discussion regarding the impact on costs (V.C.I.).

Fourth, the Chamber/IFA repeatedly stated that the Department should have conducted a baseline survey of government contractors to obtain information about the prevalence of the “15 plus specific elements” required by the Rule. The commenters claim that the Department could have conducted a survey “following the issuance of Executive Order 13706 in September 2015” and “still be on schedule to complete the contemplated rulemaking by September 30, 2016.” The Department believes that conducting such a survey is unnecessary because existing data provides the information necessary to calculate reasonable estimates of the total costs and transfers of this Final Rule.

iv. Number of Affected Employees

The Department used the 2015 National Compensation Survey (NCS) to determine the proportion of potentially affected employees who already receive paid sick leave. The NCS estimates that nationally 61 percent of all private sector employees currently receive some paid sick leave. However, this average can vary substantially by industry and hours worked. To account for these differences the Department performed its analysis by industry and full-time/part-time status. The BLS reports the share of employees who receive paid leave disaggregated by industry and separately by full-time status (Table 4). However, the NCS does not publish data cross-tabulated by industry and hours worked.

By the Council of Economic Advisors, 53 percent of workers have paid sick days that can be used for their own illness and 48 percent have paid sick days that can be used to care for family members. As noted above, the Department estimated that 123,300 potentially affected employees receive 7 days or more of paid sick leave. If 9.4 percent ((l53 percent – 48 percent)/53 percent) of these employees have usage extended then an additional 11,600 employees may be considered “affected” in Year 1, (a 5.2 percent increase in the workforce of affected employees). Therefore, depending on the source, the estimate of the incremental number of affected employees due to expanded usage varies between 11,600 and 32,800 employees.

38 The Department’s analysis categorizes as full-time those individuals who work 32 hours or more per workweek (rounded to the nearest integer). 32 hours represents the line of demarcation between workers who would and would not accrue 56 hours of paid sick leave a year if they work a full year. The Department’s designation herein of certain individuals as “full-time” and other individuals as “part-time” based on their usual hours worked is solely for purposes of facilitating the economic analysis in this rulemaking.
The Department estimated that of the 345,000 employees potentially impacted in Year 1, approximately 294,000 are full-time employees and 51,400 are part-time employees.\(^\text{41}\) For full-time employees, across all industries, 73 percent receive some paid sick leave and 27 percent currently receive no paid sick leave. For part-time employees, 25 percent receive some paid sick leave and 75 percent receive no paid leave. All employees with no paid sick leave will be affected regardless of how many hours per week they work (assuming they work a sufficient number of hours to accrue paid sick leave).

Additionally, some employees who currently receive paid sick leave will also be affected by the Final Rule if they receive fewer than the mandated number of days based on the required accrual rate. To determine how many of these employees are affected, the Department used NCS data on the distribution of days of leave. The 2015 NCS provides the share of employees with a range of days of paid sick leave (e.g., 5 to 9 days per year).\(^\text{42}\) The NCS publishes these data aggregated across all industries. However, since this analysis is conducted by industry, the Department distributed the share of employees by industry based on the NCS data and full-time status. Full-time is defined as 32 or more hours per week.

The Department distributed the share of employees within each NCS category (e.g., 5 to 9 days per year) of paid sick leave days across the individual number of days in that category (e.g., 5, 6, 7, 8, 9). Therefore, the Department estimated the share of employees with access to paid sick leave in those industries based on the 2011 ATUS Leave Module.\(^\text{40}\)

</table>

\(\text{\textsuperscript{a}}\)National Compensation Survey, March 2015, Table 32. Leave benefits: Access, private industry workers (unless otherwise noted). Assumes distribution of paid leave is similar for Federal contractors and other private employees.

\(\text{\textsuperscript{b}}\)The NCS does not publish data by industry and full-time status; however, for this Final Rule the BLS provided this breakdown using the NCS microdata for industries with sufficient observations to meet their publication criteria. Full-time is defined as 32 or more hours per week.

\(\text{\textsuperscript{c}}\)NCS does not include information for this industry and part-time status. The Department estimated these rates.

\(\text{\textsuperscript{d}}\)NCS does not include information for this industry and part-time status. The Department estimated these rates.

\(\text{\textsuperscript{e}}\)The Department used the share of employees with sick leave, for all employees and full-time employees, and the ratio of full-time to part-time employees in each industry to estimate the shares for part-time employees in those industries without part-time employees’ shares. The Department used data from the CPS to calculate the ratio of full- to part-time employees. For example, the NCS does not provide an estimate of the percentage of part-time workers in the manufacturing industry with paid sick leave. NCS provides estimates of 65 percent and 67 percent of all and full-time workers, respectively, have some paid sick leave in the manufacturing industry. Based on the 2015 CPS data, the Department estimated that about 96% of workers in the manufacturing industry work full-time. Since the 65 percent total is a weighted average of full-time and part-time workers with paid sick leave, we estimated the percentage of part-time workers in the manufacturing industry with paid sick leave by solving for "PT%" in:

\[
0.65 = (0.67\times0.959) + (PT\times0.041).\]

\(\text{\textsuperscript{f}}\)The 2011 ATUS Leave Module is a special supplement to the annual ATUS survey sponsored by the BLS and conducted by the U.S. Census Bureau. It surveys employees nationally on use of leave. The Department estimated the share of workers in the agriculture, forestry, fishing and hunting industries that receive paid sick leave. The ratio of leave benefits for full-time and part-time workers from the NCS was applied to this total to estimate separate rates for these two subgroups.

\(\text{\textsuperscript{g}}\)Based on the share of workers who are full-time in the 2015 CPS data. This assumes the share of government contractors that are full-time is similar to private industry overall. As noted, employment is defined for purposes of this analysis as 32 or more hours per week.

\(\text{\textsuperscript{h}}\)The distribution is available for all workers and full-time workers but not part-time workers. Combining these data with the share of workers who are full-time allowed the Department to approximate the distribution for part-time workers.
9) using a Poisson distribution that approximates the distribution of days of paid sick leave provided to workers with this benefit.\textsuperscript{44} For example, using the NCS data the Department estimates that 53 percent of full-time employees with paid sick leave receive 5 to 9 days of leave. Applying the Poisson distribution, the Department estimated 10 percent of employees with paid sick leave currently receive 5 sick days, 13 percent currently receive 6 sick days, etc.\textsuperscript{45} The percent distributions of days of paid sick leave are presented in Appendix A.

The Executive Order generally measures paid sick leave in hours, restricting a contractor from limiting total accrual of paid sick leave per year, or any portion thereof, at less than 56 hours. Because the NCS tabulates paid sick leave in days, the Department converted sick leave hours to days to use the NCS. The Department assumed a standard 8 hours worked per day, so the Executive Order provides a maximum accrual of 7 days of paid sick leave annually. Therefore, this analysis assumes employees receiving at least 7 days of paid sick leave are not affected.\textsuperscript{46}

To estimate the number of affected employees in Year 1 the Department summed the number of potentially affected employees with less than 7 days of paid sick leave. The Department estimates 114,600 contract employees have no paid sick leave and will be affected. The Department also estimates 107,500 contract employees have access to paid sick leave but receive fewer than 7 days of paid sick leave (47 percent of workers with some paid sick leave) and are thus classified as affected employees. The Department accordingly estimates that there will be approximately 222,100 affected employees in Year 1 (Table 5).

v. Number of Additional Days of Paid Sick Leave Accrued by Affected Employees

The Department estimated the number of additional paid sick leave days the approximately 222,100 affected employees would need to receive for contractors to comply with the Executive Order. This was done somewhat differently for full-time and part-time employees. For full-time employees with no paid sick leave the Department estimated they will receive 7 additional days of paid sick leave. For full-time employees with between 1 and 6 days of leave the Department estimated the number of additional days they would need to receive to reach 7 days of paid sick leave (e.g., if they currently receive 1 day then they will receive an additional 6 days).

To estimate the additional number of paid sick days per year that would accrue to part-time employees as a result of the rule, the Department first had to estimate hours of paid sick leave per year currently available to these workers. To estimate paid sick leave hours currently available to part-time employees required additional calculations because the NCS reports days of paid sick leave per year, not hours. Therefore, the Department adjusted part-time employees’ days of paid sick leave by assuming that the hours of paid sick leave associated with “one day” of leave is equivalent to average hours worked in a day. For example, if a part-time worker averages 6 hours of work per work day, then one day of paid sick leave will also be equal to 6 hours. To do this, the Department divided part-time workers’ average hours worked per week by 5 to calculate their average hours worked per day by industry. The Department then multiplied average work hours per day by NCS reported paid days of sick leave per year to estimate part-time employees’ hours of paid sick leave currently available per year.

Next, the Department calculated the total hours of paid sick leave per year that might accrue to a part-time worker as a result of this E.O. Because paid sick leave is accrued at a rate of 1 hour per every 30 hours worked, the Department divided mean annual hours worked for part-time workers in an industry by 30 to estimate the number of hours of paid sick leave required under the Executive Order. The difference between hours of paid sick leave currently available per year and hours of paid sick leave per year required under the Executive Order is the additional hours that accrue to part-time workers. This was then divided by 8 to express the additional paid sick hours in terms of standardized 8-hour days. Table 7 presents the adjusted numbers for part-time employees.

As stated above, the Department is estimating a total of 222,100 affected employees in Year 1 (Table 5). The total number of additional days of paid sick leave is then calculated by multiplying the number of employees affected by the average number of additional days of paid sick leave provided by the Final Rule (Table 6 and Table 7). The Department estimated that the Final Rule will result in a total of 968,000 additional days of paid sick leave provided (792,000 days for full-time workers and 176,000 days for part-time workers).\textsuperscript{47}

\textsuperscript{44} The Poisson distribution is frequently used for discrete count data. The data were consistent with a Poisson distribution. The distribution of days of sick leave is continuous but was approximated using integers to allow use of the Poisson distribution and to simplify the analysis. Aggregate findings would be highly comparable if a continuous distribution had been used instead.

\textsuperscript{45} Some additional manipulations were made to the data in cases where the Poisson distribution resulted in numbers contradictory to the reported medians (see Appendix A).

\textsuperscript{46} The number of days of leave for workers with paid time off policies is unknown. The NCS estimates the distribution of days of paid sick leave for workers with a set number of days of paid sick leave. We assume this distribution of days of leave is the same for workers with paid time off policies (and those with “as needed” paid sick leave provisions). This may result in an underestimate of the number of days currently received by workers with a paid-time off program because the SHRM (2008) estimates that workers with paid time off policies receive an average of 15 days the first year of service.

\textsuperscript{47} This estimate is based on the marginal number of paid sick days employers would have to provide due to this regulation. To the extent employers that currently provide paid sick leave do not modify their existing paid sick leave policies in accordance with section 2(g) of the Executive Order and section 13.5(f), and to the extent there are SCA- or DBA-covered employers who provide paid sick leave as an SCA or DBA fringe benefit, this estimate may not entirely reflect the total marginal number of days employers would have to provide. However, the Department assumes firms will be able to and will choose to apply the currently provided days of paid sick leave toward the requirements of the Executive Order and this rule, and the Department similarly understands that contractors generally do not provide paid sick leave as an SCA or DBA fringe benefit.

To estimate the number of affected employees in later years, the Department calculated the average annual geometric growth rate in employment based on the ten-year employment projection for 2014 to 2024 from BLS’ Employment Projections program. Table 8 shows the number of affected employees in Years 1 through 10, along with the number of employees with no paid sick leave currently, with some paid sick leave, and by full-time/part-time status. The share of employees working full-time in 2015 and the share of employees with no paid sick leave were applied to projected years.

The Department estimates that once all covered contracts have been renewed (in Year 5), the equivalent of 1.2 million year-round exclusively federal contract employees will be affected by this Final Rule. The Economic Policy Institute developed a range of estimates that are comparable; they found that “between 694,000 and 1,053,000 employees of Federal contractors may directly benefit with additional paid sick leave.” Their estimates use data from the General Services Administration’s (GSA’s) Federal Procurement Data System, the BLS’ Employment Requirements Matrix, and the BLS’ NCS. EPI’s estimated number is consistent with the Department’s estimate in the NPRM because both estimates included only employees working on contracts in USASpending.gov. As noted previously, the Department added employees working on contracts on Federal property or lands in the analysis of this Final Rule, which increased the estimated number of affected employees.

C. Impacts of Final Rule

i. Overview

This section presents direct employer costs, transfer payments and DWL associated with the Final Rule. These impacts were projected for 10 years. The Department estimated average annualized direct employer costs of $27.3 million, transfer payments of $349.6 million and DWL of $734,000. As these numbers demonstrate, the largest quantified impact of the Final Rule will be the transfer of income from employers to employees. The Department also discusses the many benefits of this rule qualitatively.

ii. Costs

The Department quantified three direct employer costs: (1) Regulatory familiarization costs; (2) implementation costs; and (3) recurring administrative costs. Other employer costs are considered qualitatively. This section explains the methodology and responds to commenters. Some commenters believe our costs estimates are too low; where appropriate, estimates were adjusted. Other commenters provided evidence from state and municipal laws demonstrating that costs will be low. For instance, the Seattle Office of Labor Standards cited a study that found the costs of the Seattle paid leave law have been modest, stating: “[T]here is no evidence that the Ordinance caused employers to go out of business, and 70% of employers were either “somewhat” or “very” supportive of the Ordinance.”

They also cite a study by the Main Street Alliance of Washington that found “no evidence of widespread negative economic impacts.” Similarly, many commenters submitted a form letter that cites the Vice
President of the San Francisco Chamber of Commerce saying that the San Francisco law’s impact on employers was “minimal” (due to responses by employers that allow them to lower costs, such as having current employees cover for others using paid sick leave instead of hiring replacement labor).50 These commentators also cited research finding that the Connecticut paid sick leave “law had a minimal impact on costs” 51 for employers. The Leadership Conference on Civil and Human Rights cited research showing that “CEOs support paid sick time 73 percent to 16 percent, and support ‘more time off to take care of sick children or other relatives’ 83 percent to 5 percent.” 52

1. Regulatory Familiarization Costs

The Final Rule will impose direct costs on covered contractors by requiring them to review the regulation. The Department believes that all Federal contracting firms that have or expect to have covered contracts will incur regulatory familiarization costs because all establishments will need to determine whether they are in compliance. As explained above, in response to comments the Department revised the number of potentially affected contracting firms to include entities operating on Federal lands and property. See section V.B.ii. for a description of the number of these potentially affected contracting firms. The Department estimated in the NPRM, based on the GSA’s SAM data in August 2015, that there were 543,900 Federal contracting firms.

In the NPRM the Department included contracting firms strictly providing materials and supplies to the government and other firms with no Federal contracts covered by the Executive Order because they may incur some regulatory familiarization costs.53 However, the Department also noted that these firms may not incur regulatory familiarization costs, resulting in an overestimate of the number of potentially affected contractors. The Chamber/IFA wrote that the Department’s estimate of regulatory familiarization costs is based on the assumption that “only successful contract bidders will incur familiarization cost.” To clarify, our estimate includes firms that are registered in SAM but that do not have covered contracts. Thus, it includes most firms serious about bidding. The Chamber/IFA also wrote: “Even contractors exempt from the proposed rule for some reason will, first, have to review the regulation and their own book of contracts (and prospective bids) to make such a determination.” The Department acknowledges these firms may still incur some minimal regulatory familiarization costs and has therefore included them in the estimate of potentially affected contractors. In the NPRM the Department assumed one hour of a human resources manager’s time will be spent reviewing the rulemaking. Some commenters believe this is an underestimate. The Chamber/IFA wrote “experience based on other recent regulations . . . shows that the initial familiarization process entails many hours of involvement by a variety of company executives, attorneys and consultants.” TrueBlue, Inc. wrote: “We have already spent well more than [one hour] trying to decipher this rule.” In response to these comments, the Department has increased this estimate to two hours per firm. The Department also notes that the time estimate is an average over all firms the Department has identified as potentially affected. As stated in the previous paragraph, the estimate includes firms expected to have very minimal or no regulatory familiarization costs such as contractors only holding or bidding on contracts for products. Thus, while some firms presumably will spend more than two hours on regulatory familiarization, the Department believes that the average amount of time potentially affected contractors will spend on regulatory familiarization is two hours.

The Chamber/IFA also wrote that “[t]here may be circumstances under which a familiarization effort may require repetition. For example, a large firm with decentralized contract teams, may find that multiple familiarization activities occur as different teams within the company make independent bid decisions on different contract opportunities.” However, the commenters provided neither evidence of the prevalence of these circumstances nor an average number of teams per firm with these circumstances. The Department accordingly cannot confirm how commonly, if at all, this scenario will occur. Even assuming it does, the Department lacks the data to make an estimate related to additional familiarization costs.

The cost of this time is the mean wage for a human resource manager of $82.17 per hour.54 In the NPRM, based on 2014 data, this wage rate was $79.96. The Chamber/IFA believes this is too low because it does not include the “full economic opportunity cost.” It suggests that a “practical approximation may be provided by the indirect overhead and profit mark-ups relative to direct labor cost that government contracts permit.” Thus, the Chamber/IFA believes direct wages should be multiplied by 3.25 instead of the 1.46 used in the proposed rule.

The Department disagrees with the mark-up rate suggested by the Chamber/IFA because it is not appropriate to apply a load factor used on direct labor costs to indirect labor. That is, the mark-up rate suggested by the commenters includes indirect overhead labor (i.e., time for human resource workers), and it is inappropriate to mark-up that indirect cost (i.e., HR workers’ wages) for indirect costs (e.g., additional HR time). The Department also disagrees with the mark-up rate suggested by the commenters because the relatively small costs of this rulemaking (relative to payroll or revenue, see section V.C.vii.) are likely to have little to no effect on the cost of overhead and support services in addition to the overhead costs estimated in this cost section. Most overhead costs are largely fixed and will be unaffected. For example, building rent, heat and electricity are unlikely to change. For these reasons, the Department has continued to use the NPRM mark-up rate in the Final Rule.55

53 In addition, at the time the NPRM was prepared, the Department had not developed a method to estimate and exclude firms strictly providing materials and supplies to the government and firms without Federal contracts. The Department has since devised a method to identify and exclude such firms which is done when estimating the number of contractors with affected employees.
54 This includes the mean base wage of $56.29 from the Occupational Employment Statistics (OES) plus benefits paid at a rate of 46 percent of the base wage, as estimated from the BLS’s Employer Costs for Employee Compensation (ECEC) data, OES data available at: http://www.bls.gov/oes/current/oes113121.htm.
55 The Department acknowledges that there might be overhead costs and thus conducted a sensitivity analysis using an additional overhead rate of 17 percent. This rate is based on a Chemical Manufacturers Association Study and has been used in the Environmental Protection Agency’s Final Rules (see for example, EPA Electronic Reporting under the Toxic Substances Control Act Final Rule, Supporting & Related Material).
Therefore, for this Final Rule, the Department has estimated regulatory familiarization costs to be $80.4 million ($82.17 per hour × 2 hours × 489,400 contractors) (Table 9). The Department has included all regulatory familiarization costs in Year 1. We believe firms will need to familiarize themselves with the rule in Year 1 in order to identify whether any contracts will be covered in Year 1. It is possible a contractor will postpone the familiarization effort until it is poised to have a covered contract (i.e., a new contract within one of the 4 covered categories). However, since many contractors will have at least one new contract in Year 1, and the Department has no data on when contractors will first be affected, the Department has included all regulatory familiarization costs in Year 1.

*a Total number of prime contractors from the GSA’s SAM from August 2015 and subcontractors from USASpending.gov. Number of entities operating under covered contracts on Federal property from various sources. Total is split between firms with and without a sick leave policy based on results from a SHRM survey.

**Ratio of loaded wage to unloaded wage from the 2015 ECEC.

2. Implementation Costs

Firms will incur implementation costs. The Department believes some of these costs will be incurred in Year 1 and will occur regardless of the number of employees affected but other implementation costs will be incurred as employees become covered and be a function of the number of affected employees. Therefore, the Department modeled this in two parts. First, firms will incur upfront implementation costs (e.g., fixed time costs associated with making baseline adjustments to accounting and payroll software that are not dependent on the size of the firm). Second, because we believe overall implementation costs will generally vary with the size of the firm, we have included a cost per affected employee. Because this Final Rule will only apply to employees on new contracts, the Department estimates it will take approximately five years to phase in the coverage over nearly all affected employees. Therefore, recurring implementation costs will generally be spread over the first five years that the regulation is in effect, with some fixed costs upfront. As each contract becomes affected, the covered contractors will need to spend some time updating the accounting systems used to track paid sick leave and training managers responsible for implementing the requirements of the Executive Order and this rule.

Fixed costs that do not vary by number of employees are assumed to be a small share of total implementation costs but they provide an opportunity to vary costs across firms with and without sick leave programs in place. The Department assumed firms that need to create a sick leave policy will each spend 10 hours of time developing this policy, regardless of the number of employees, and firms with a program in place will spend one hour, regardless of the number of employees. According to a survey conducted by the Society for Human Resource Management (SHRM), 81 percent of companies provided some form of paid sick leave. As noted above, the Department estimated there are 489,400 Federal contracting firms. Therefore, the Department estimated 93,000 firms will need to create a sick leave policy (19 percent of 489,400 firms). The remaining 396,400 firms would have lower implementation costs. The share of firms with a system in place is consistent with findings from one study of the San Francisco paid sick leave ordinance that found “only one-sixth needed to introduce an entirely new paid sick days policy because of the law.” This is 16.7 percent, which is comparable to the SHRM estimate (19 percent) the Department used above.

In addition to these fixed costs, all firms with affected employees will have additional implementation costs that vary based on the number of affected employees. The Department also assumed, as it did in the NPRM, that firms will spend one hour on implementation costs per newly affected employee. Total implementation costs are therefore a function of whether the firm has a system in place and the number of affected employees.

However, an overhead rate based on the chemical manufacturing industry may not be appropriate for all industries, and thus we present this estimate as an illustrative example. Adding an additional overhead rate of 17 percent would increase total costs (regulatory familiarization costs, implementation costs, and administrative costs) by $14.6 million in Year 1, an increase of 11.6 percent. As previously noted, the Department believes this overstates the overhead costs attributable to this rulemaking, but recognizes that there is not a definitive approach to estimating the marginal cost of labor.

*58 When developing the NPRM the Department identified little applicable data from which to estimate the amount of time required to make these adjustments. One source, based on a small sample, finds the average one-time implementation costs ranged from zero to $125,000 with an average of 0.125 percent of revenue. See Romich, J., et al. (2014), Implementation and Early Outcomes of the City of Seattle Paid Sick and Safe Time Ordinance. However, the authors note: “These respondents are self-selected and too few to provide statistically representative data. However, their responses offer a qualitative sense of the range of possible costs.”

*57 Society for Human Resource Management. (2008). Examining Paid Leave in the Workplace: Helping Your Organization Attract and Retain Talented Employees. SHRM reports are available based on more recent surveys, which indicate a greater proportion of firms have a paid sick leave program than the 81 percent figure used here. However, the newer estimates seem inconsistent with data from other sources concerning the prevalence of paid sick leave programs; because of this uncertainty, and to avoid a possible underestimate of implementation costs, the Department has relied here on the earlier SHRM report.

For this Final Rule, the Department has included a table demonstrating average implementation hours by contractor size. For a contractor with a current paid sick leave policy and 50 affected employees, we estimated they will spend 51 hours over five years implementing the program. We estimated that a contractor without a current paid sick leave policy and 50 affected employees will spend a total of 60 hours over five years implementing the program. Contractors with no affected employees are estimated to incur no fixed implementation costs because they have no employees working on covered contracts and will not have to make any changes to their current systems. Thus, while some firms may spend more than one hour (or 10 hours depending on whether they currently have a system in place), other firms will spend less time; one hour (or 10 hours) for a firm with no system is used to approximate the average time spent for all of the potentially affected contracting firms.

The Department values this time using human resources worker’s mean wage of $27.50 per hour.\(^{59}\) Initial implementation costs in Year 1 were estimated to be $36.5 million ($27.50 per hour × 10 hours × 93,000 contractors plus $27.50 per hour × 1 hour × 396,400 contractors) (Table 9). The Department assumes recurring implementation costs will use one hour of a human resource worker’s time per newly affected employee. As stated above, the Department found that the average wage with benefits for a human resources worker is $27.50 per hour. The estimated number of newly affected employees in Year 1 is 222,100 (Table 9). Therefore, total Year 1 recurring implementation costs were estimated to equal $6.1 million ($27.50 × 1 hour × 222,100 employees). The Chamber/IFA asserted that implementation will require the time of multiple employees at various levels within a company and thus a blended wage rate should be used. However, the Department believes a human resources worker is capable of performing the tasks necessary for a contractor to implement the Order and this part, and the Chamber provided no specific basis for computing a blended wage rate.

The Chamber/IFA contended that affected employees were underestimated in the NPRM (as mentioned previously) and that this may cause costs to be underestimated. It expressed concern that the Department’s “estimate is based only on consideration of numbers of employees who may currently lack access to 7 days of paid leave, and it ignores the impact on thousands more employees and their employers because current programs offering 7 or more days of leave fail to match other prescriptive details of the proposed rule.” The Department’s estimate of implementation costs in this Final Rule includes an hour of implementation time for contractors that currently offer 7 or more days of sick leave, i.e., the initial implementation cost. The Department believes the costs associated with changing a paid sick leave policy solely to meet the prescriptive details of the Order and implementing regulations will be minimal, particularly because some contractors likely provide an opportunity to take 7 or more days of paid sick leave in programs for which leave is already permitted for any reason, and that its one-hour estimate is accordingly appropriate.

As noted earlier, the Chamber/IFA also believes affected employees may be underestimated because the analysis assumes workers are working only on Federal contracts. This modeling method was retained in the Final Rule because the number of truly affected employees is unknown. The number of employees sharing work on Federal contracts will impact recurring costs; therefore the Department tried to take into account that this work may be spread over several employees when it estimated the amount of time per affected employee—i.e. per affected full-year-on-federal-contract equivalents—necessary for implementation and administrative activities. If this has not been adequately reflected in the time cost estimates, and the costs used instead better represent costs per one worker working exclusively on Federal contracts, then the total costs may be underestimated. Unfortunately, data are not available to determine whether this is true and if so, how much higher costs may be.

Various commenters, including AGC, the Chamber/IFA, TrueBlue, Inc., the American Benefits Council, PSC and Integrated Facility Services, also expressed a general concern that the Department’s time estimates were low. For example, TrueBlue, Inc. asserted the time estimates are inaccurate because “[m]aking the necessary procedural, IT infrastructure, and administrative changes needed to accommodate and comply with the proposed rules is complicated, daunting, time-consuming, and leaves any employer open to making potentially costly mistakes.” Additionally, the Chamber/IFA expressed a concern that the Department’s estimate of the time allotted for implementation is insufficient for the amount of training required in a company to implement...

\(^{59}\)This includes the mean base wage of $18.84 from the OES plus benefits paid at a rate of 46 percent of the base wage, as estimated from the BLS’s ECIC data. OES data available at: [http://www.bls.gov/oes/current/oes113121.htm](http://www.bls.gov/oes/current/oes113121.htm).
this regulation. However, the Department believes that the total hours estimated for implementation by companies, as demonstrated in Table 10 above, adequately covers any training, IT, and administrative time that might be necessary to implement any changes. Indeed, other commenters provided evidence from state and municipality laws that supports the Department’s assessment concerning the size of implementation costs. For example, many commenters submitted a form letter that cites research finding that 70 percent of employers in the city of Seattle had experienced no administrative difficulties with implementation. Another report found that in Connecticut almost half of employers reported that the new state law had caused no change in their overall costs. Evidence from state and local laws is discussed in additional detail in the section on “Other Potential Costs.”

The Department has carefully reviewed the comments suggesting its implementation costs estimate in the NPRM was too low as well as the comments suggesting that the Department’s estimate in the NPRM was appropriate. For the reasons described above, the Department has not adjusted the implementation time estimates for this Final Rule.

3. Recurring Administrative Costs

Contractors may incur recurring administrative costs associated with maintaining records of paid sick leave, approving leave, and adjusting scheduling. In the NPRM the Department assumed an HR worker will spend on average an additional fifteen minutes per affected employee annually on administrative costs. We believe these costs will be relatively small because employers already have systems in place and already incur many of these costs for employees who take sick leave. For example, managers may need to adjust scheduling when workers take time off due to illness regardless of whether that sick leave is paid or unpaid. These costs should therefore reflect only the costs associated with the marginal number of days of leave taken due to the implementation of this Final Rule. The additional number of days of leave taken is unknown but estimates tend to be in the 1-to-2 day range. For example, Ahn and Yelowitz (2016) found that paid sick leave results in workers staying home 1.2 more days a year.

Many commenters, including the Chamber/IFA, PSC, American Outdoors Association and the National Roofing Contractors Association asserted the rule would be administratively burdensome and/or that the proposed cost is too low. For example, the Chamber/IFA believes the 15-minute estimate is too low because it does not include time for workers to enter their hours, and the National Roofing Contractors Association asserts that its members are concerned the paid sick leave mandate will disrupt their daily operations.

Other commenters discussed the high cost of tracking hours worked on Federal contracts. For example, SBA Advocacy contended construction industry representatives have represented that segregating covered federal work from non-federal work for the accrual of paid sick leave will be challenging because their employees often work at multiple locations for multiple clients. However, the Department believes that for billing and/or other purposes most businesses already track hours spent on work for different clients on different contracts. For example, hours worked by laborers and mechanics on DBA contracts must already be monitored and reported. SBA Advocacy believes this may be a concern for seasonal recreation businesses which it asserts “often have large numbers of part time workers and operate in remote locations, shifting from covered and non-covered work for multiple days.”

Conversely, some commenters provided evidence from state and municipality laws demonstrating that administrative costs will be low. For example, many commenters cited a study of Connecticut’s paid sick leave law that found employers “typically found that the administrative burden was minimal.” The study authors wrote: “In our fieldwork, some managers noted that it took time and effort to establish mechanisms to track employee hours for those receiving paid sick day coverage for the first time. However, once those mechanisms were in place, the staff required to administer the law was modest.” Evidence from state and local laws is discussed in additional detail in the section on “Other Potential Costs.” Additionally, some commenters drew upon their own experience as evidence that providing paid sick leave is not overly burdensome to implement. Hawthorne Auto Clinic has 33 years of experience providing sick leave to employees and wrote “[b]ased on our experience, I am confident that other businesses will find it simple to implement paid sick days policies.”

The Department believes most employers already track employees’ time and thus these costs would be negligible. The Department has also reduced both the frequency with which contractors must calculate covered employees’ accrued paid sick leave, and the frequency with which contractors must inform covered employees of the paid sick leave they have accrued, as explained in the discussion of subpart A above. Therefore, the recurring administrative costs of this Final Rule will be lower than the proposed rule. However, despite that, the Department agrees with commenters that these administrative costs may be underestimated and has increased the time estimate from 15 minutes per affected employee to 20 minutes in order to be responsive to comments. The Department would like to emphasize this is the average amount of time per affected employee. Some employees may require more time; for example, employees whose requests are denied might require more administrative effort. However, many employees do not take any sick leave and their costs would be negligible. Based on tabulations of the 2014 National Health Interview Survey (NHIS) data, the Department estimated that 46.9 percent

62 However, it should be noted that the Connecticut law may be easier to implement since it applies to all workers at a firm. Therefore, it does not necessitate tracking hours on different contracts.
64 Using the ATUS 2011 Leave Module, the Department estimated workers with paid sick leave take on average an additional 2.3 hours of sick leave compared to workers with no paid sick leave annually. Using the National Health Interview Survey (NHIS) the Department found workers with paid sick leave took on average 0.77 more days of sick leave than did workers without paid sick leave.
of workers with paid sick leave do not take any sick leave in a year.67

The cost of this time is estimated as the mean wage for a human resource worker of $27.50 per hour.68 The Department estimates in Year 1 there will be 222,100 affected employees. Under these assumptions, administrative costs in Year 1 will total $2.0 million ($27.50 × (20 minutes/60 minutes) × 222,100 employees). Although these costs are relatively small in Year 1, they will occur annually and thus be a significant share of costs in the long run.

Some commenters, including the Chamber/IFA, argued this wage is inappropriate. However, the Chamber did not provide any evidence for what a more appropriate wage rate would be. Additionally, as noted earlier, the Chamber/IFA believes affected employees may be underestimated because we assume employees are working exclusively on Federal contracts. As noted in the section on implementation costs, because the number of truly affected employees is unknown, the Department considered costs related to the equivalent of one employee working exclusively on Federal contracts.

4. Projected Costs

Table 11 shows estimated costs for each of the first 10 years as well as average annualized costs over the same period. Regulatory familiarization and initial implementation costs will only accrue in Year 1. Recurring implementation costs are incurred over the first 5 years since the Department has estimated it will take five years for the universe of covered contracts to become “new.” Recurring administrative costs accrue in all years. The annual administrative cost increases until Year 5 because the number of affected employees increases during this period. After Year 5, recurring administrative costs level off, with only a small increase over time to reflect employment growth.

When estimating projected costs the Department employed the same method used for Year 1 but used projected numbers of affected employees. The employment growth rate was calculated as the geometric annual growth rate based on the ten-year employment projection for 2014 to 2024 from BLS’ Employment Projections program. Real wages for human resource managers and human resources assistants (except payroll and timekeeping) were assumed to remain constant over this ten-year period.

5. Other Potential Costs

In addition to the costs discussed above, there may be additional costs that have not been quantified. These include the following potential costs included in the NPRM: Costs to consumers, reduced production, and replacement costs. Based on similar rules in states and municipalities, the Department expects these costs to be small.69 After discussing these costs we then discuss additional costs mentioned by commenters, including: Costs to seasonal businesses, reduced profits, reduced benefits, bonuses, or wages, reduced employment, absenteeism, and competitive disadvantage.

Consumer Costs

The relevant consumer is the Federal government. If the rulemaking increases employers’ costs, and contractors pass along part or all of the increased cost to the government, in the form of higher contract prices, then government expenditures may rise (though, as discussed later, benefits of the Executive Order are expected to accompany any such increase in expenditures). Because direct costs to employers and transfers are relatively small compared to Federal covered contract expenditures, the Department believes that any potential increase in contract prices will be negligible. In FY2015, Federal expenditures for covered contracting service firms were $286.4 billion (Table 3). Employer costs and transfers (estimated below) in Year 5 (the year when all employees are affected) are estimated to be $473.6 million.

Therefore, employer costs are 0.17

---

67 However, due to the additional uses allowed under this rulemaking and the provisions to prevent retaliation, use may be expanded due to this Final Rule.

68 This includes the mean base wage of $18.84 from the 2015 OES plus benefits paid at a rate of 46 percent of the base wage, as estimated from the BLS’s ECEC data. OES data available at: http://www.bls.gov/oes/current/oes113121.htm.

percent of contracting revenue (assuming no growth in contracting expenditures and without accounting for the benefits of the Final Rule).

Concerning prices, the National Roofing Contractors Association wrote that paid sick leave costs “must be factored into the bids submitted for any federal contract and will add further to the already high degree of uncertainty to the bidding process.” MCAA believes firms will “have to add high price contingencies to their bids or proposals to cover these new contingent risks.” However, a study of Connecticut’s paid sick leave law cited by many commenters, found only 15.5 percent of employers reported increased prices.70 Similarly, in San Francisco 10.9 percent of firms raised prices in response to paid sick leave.71 Therefore, there is some evidence that increased costs will be passed on to the government in higher contract prices. However, the Department expects this price increase to be low because evidence shows a majority of firms raised prices and the cost of the rulemaking is a very small share of these firms’ revenues.

Some commenters believe this rulemaking will reduce the efficiency of government contracting by increasing government contract prices or stifling competition. Roffman Horvitz PLC wrote “[t]he proposed regulation creates additional overhead contract costs that new government contractors simply cannot bear to absorb, creating further barriers to entry in the market.” The National Roofing Contractors Association spoke with members who reported “they would consider not bidding at all on federal contracts” due to this rulemaking. Conversely, the Washington Center for Equitable Growth cited research evaluating Washington, DC’s Accrued Sick and Safe Leave Act of 2008 that found that “[i]n 2013, the Office of the District of Columbia Auditor looked at the effects of the requirement and found no evidence that businesses opted to leave Washington or that it prevented new business formation in the District.”72 73 In order for competition to be stifled, costs would have to increase (and outweigh benefits) and not be passed along to the government. As noted above, we believe costs will be small on average and will be accompanied by benefits, and some costs will be passed along to the government, leaving little reason to restrain the vast majority of bidders.

### Production Costs

If the number of days of sick leave taken remains unchanged by the Final Rule, then production should not be affected by the rule. However, employees may take more sick days if the number of compensated sick days available increases or the scope of eligible reasons to take sick leave broadens; it is via this path that the Final Rule might result in production costs to employers. There is evidence that workers may take additional days of leave under this rulemaking.74 If these additional hours are not covered by a replacement worker, then the employer incurs costs associated with this lost production and the employee receives benefits associated with the paid sick leave (expressed as a transfer from employer to employee in this rule). Payroll remains the same but the worker’s production is lost. If a worker’s productivity is equal to his or her wage, then the cost is equivalent to income paid to the worker in wages while on sick leave.

If employers bring in workers to cover these lost hours of production, then the additional cost (i.e., the replacement worker’s wages) is offset because the employer does not lose the production attributed to the sick worker. In both cases, the employer incurs net costs equivalent to one worker’s wage or productivity; either the employer pays the sick worker, but loses the sick worker’s productivity, or the employer pays both the sick worker and the replacement worker, but does not lose the sick worker’s productivity. In both cases, costs and benefits should offset each other, to the extent that workers are paid according to their marginal productivity, and the productivity of the replacement worker matches that of the original worker. Although these assumptions are not likely to be exactly met, conceptually small deviations from the assumptions should result in only small deviations of net costs or benefits. In addition, there are no data available on which to estimate these net costs or benefits.

### Replacement Costs

As demonstrated above, if the worker who takes sick leave is temporarily replaced by another worker, the marginal payroll cost of the additional worker is offset by the productivity of the replacement worker. Therefore, the Department estimates there will be very few additional costs associated with bringing in workers to cover work normally performed by workers on sick leave (in addition to the cost of paying the sick worker). However, there are four channels through which additional costs may be incurred if firms bring in replacement workers. These all stem from the assumption that workers take more leave when paid sick leave is provided. These costs will depend on whether firms hire new workers or reschedule current workers.

First, there are managerial costs associated with rescheduling; these are included in administrative costs. Second, if replacement workers are hired, then there may be associated hiring costs. The Department expects this cost to be small. A 2010 survey of employers providing paid sick days in San Francisco found 8.4 percent reported “always” or “frequently” hiring a replacement for a sick worker and 23.6 percent saying they “rarely” hire replacement workers.75 Third, if other workers are scheduled at their overtime wage rate, then there may be some additional cost associated with the overtime premium. Once again, the Department expects this cost to be small. Many commenters cited a study of Connecticut’s paid sick leave law that found 13.7 percent of employers had other workers work overtime to cover absences as the primary method of covering absences.76 Fourth, if the replacement worker is paid the same amount as the absent worker but is less productive, then there may be some production costs.

Some commenters disagreed with the Department’s analysis in the previous years, arguing that the extra cost of hiring replacement workers was small. However, a recent study of Connecticut’s paid sick leave law found 13.7 percent of employers had other workers work overtime to cover absences, and many commenters cited a study of Connecticut’s paid sick leave law that found 3.7 percent of employers had other workers work overtime to cover absences as the primary method of covering absences.76

Data suggest that workers may take more sick leave when it is paid. Using the ATUS 2011 Leave Module, the Department estimated workers with paid sick leave take on average an additional 2.3 hours of sick leave annually. Using the NHISS the Department found workers with paid sick leave took on average 0.72 more days of sick leave. Workers who already have paid sick leave may also expand their usage because of the additional days allowed under this rulemaking and the provisions to prevent retaliation.

73 Impacts of this rule may differ from DC because this law may result in employers having to distinguish between covered and non-covered workers. Additionally, the DC law required less paid sick leave, 7 to 87 hours, depending on the size of the firm.
74 Data suggest that workers may take more sick leave when it is paid. Using the ATUS 2011 Leave Module, the Department estimated workers with paid sick leave take on average an additional 2.3 hours of sick leave annually. Using the NHISS the Department found workers with paid sick leave took on average 0.72 more days of sick leave. Workers who already have paid sick leave may also expand their usage because of the additional days allowed under this rulemaking and the provisions to prevent retaliation.
paragraph as it was depicted in the NPRM. For example, the National Roofing Contractors Association asserted that the Department’s assumption means that a replacement worker would have to do the job of two people for this rationale to make sense. This was not an assumption made by the Department. The point of the discussion in the NPRM and above is that if an employer pays another worker to replace the sick worker, that employer does not incur any costs in addition to the transfers accounted for elsewhere in the Regulatory Impact Analysis section.

Reduced Profits

Some commenters argued profits will be hurt. However, after the Seattle law took effect a majority of employers reported profitability was unchanged. The Institute for Women’s Policy Research cited the 2011 IWPR report on San Francisco’s Paid Sick Leave Ordinance, which found that “Six of seven employers reported no negative effect on profitability after the law’s implementation.” In part, this may be because costs were passed through to consumers or wages or other benefits to workers were reduced. However, the same survey found that only 10.9 percent of firms raised prices (as discussed above) and “[s]ix out of seven workers reported that their employer did not reduce raises, bonuses, or other benefits to implement” (benefits, bonuses, and wages are discussed below). Therefore, it seems employers make adjustments through multiple channels to account for any increased costs.

Reduction in Benefits, Bonuses, and Wages

Some commenters believe this benefit would be offset by reductions in other benefits, bonuses, or pay. A commenter from New Jersey wrote that requiring paid sick leave will “force them to look at alternatives to reduce other costs—reduce vacation eligibility or other types of benefits OR reducing staff or hours worked.” We believe these impacts will be negligible. A study of Connecticut’s paid sick leave law found only one percent of establishments reduced wages within the time period of the analysis. And as noted in the survey discussed above, according to workers, employers generally did not reduce benefits, raises, or bonuses as a result of the San Francisco Ordinance.

Reduction in Employment

Some commenters believe this benefit will hurt employment or hours. One small business owner believes this rule will cause layoffs. A manager of a seasonal recreational business believes the increased costs will result in employment cuts, in particular for youth. The Department believes any impact on employment will be small due to case studies of paid sick leave and the small size of costs relative to these contractors’ payroll and revenue. For example, a study of Connecticut’s paid sick leave law found that approximately 90 percent of employers did not reduce employee hours. Furthermore, San Francisco job growth was stronger in 2013 after the Ordinance went into effect than it was in the first part of 2012. The Department does, however, account for some decreased hours in the model in the DWL calculation (section V.C.iv.).

Work Absences

Some commenters expressed concern that the rulemaking will increase workers’ absences. This is especially a concern to employers when the absences are considered abuse of the policy. AGC asserted its member contractors working in Massachusetts have noticed questionable uses of paid sick leave since the state adopted a paid leave mandate. They also cited research by Ahn and Yelowitz (2016) showing that paid sick leave increases absenteeism by 1.2 days a year. They also noted that absenteeism in the construction industry causes unique challenges because cost and schedule concerns are highly dependent on labor productivity. This issue is discussed in more detail in section V.C.vii.

The Department agrees the rulemaking will likely increase days away from the office because workers may stay home more often when sick or to care for sick family members. This is an intended result of the rulemaking, and the Department expects the benefits from increased access to paid sick leave to partially offset increased costs. Moreover, there is little evidence of employees abusing paid sick leave. According to a study of Connecticut’s paid sick leave law, managers commented that “the level of abuse was not only low, but [had] not changed at all after the state law’s implementation.” The Department also believes abuses are unlikely because workers with paid sick leave do not take all of their paid sick days and a significant portion of workers do not take any paid sick leave.

Competitive Disadvantage

According to the American Benefits Council:

Providing mandatory paid leave will increase costs of doing business, but the requirements—and increased costs—apply only to those businesses providing services to the federal government. A business operating in a federal building must provide the paid leave; its competitor down the street need not. This puts the business in the federal building at a financial disadvantage. It cannot simply request that the government pay for the increased costs. In these types of contracts, the contractor remits a portion of its proceeds to the government. The federal building business can increase its prices (although some contracts with the government limit the business’s ability to do so) and hope that the price increase does not drive customers away. The federal building business can cut costs in other ways—decreasing staffing levels or reducing service options. Or, the federal building business can decide to cease operating in a federal building.

84 The authors measure “absenteeism” as the amount of sick leave taken from one’s job, regardless of the reason. The Department chose to not use this result to calculate quantitative estimates of impacts for various reasons, including that the estimate is based on administrative workers and thus may not be applicable to all workers.
86 Based on tabulations of the 2014 NHIS, the Department estimated that 46.9 percent of workers with paid sick leave do not take any sick leave in a year.
The Department reiterates that the costs of this Final Rule are expected to be small relative to payroll and revenue. Therefore, even if the contractor incurs additional costs they should be incorporated by small adjustments to prices, profits, wages, or hours (as discussed above). Additionally, because the Final Rule only applies to new contracts, the bidder can potentially restructure its contractual relationship in order to be able to incur the potentially higher costs without making these adjustments. The Department believes contractors will find the most efficient combination of adjustments.

The Chamber/IFA considered competitive disadvantage from a different angle: “The proposed rule may raise costs for contractors who need to create new or modify existing paid sick leave programs and put them at a contract bidding disadvantage compared to firms that already have such plans in place.” However, it is the contractor who may presently avoid the costs of providing sick leave to employees that has a competitive advantage; requiring contractors to provide paid sick leave removes that advantage. Indeed, as the U.S. Women’s Chamber of Commerce commented: “Requiring more businesses to provide paid sick leave will help level the playing field for those business owners who are doing the right thing for their workers.”

DLA Piper asked whether the Department considered the impact of the proposed rule on commercial item contractors and barriers to participation. As an initial matter, the Department recognizes that some commercial items contracts may be covered by the Executive Order and part 13 because they cover contracts covered by the SCA, which may apply in certain circumstances to contracts for commercial services. See, e.g., 48 CFR 52.212-5(c). However, a significant portion of commercial items contracts will not be covered by the Order and part 13. First, the paid sick leave requirements do not apply to commercial supply contracts subject to the Walsh-Healey Public Contracts Act. Second, unless covered under one of the other contract categories in the Order (such as concession contracts), the Final Rule will not apply to contracts for services that are specifically exempted from coverage under the SCA, including those commercial services listed in 29 CFR 4.123(e). For the reasons discussed above, the Department’s conclusions regarding the benefits and costs associated with other contractors implementing the Order are similarly applicable to any commercial items contracts subject to the Order and this Final Rule.

iii. Transfer Payments

1. Calculating Transfer Payments

To calculate transfer payments, the Department has assumed solely for purposes of discussion and ease of presentation that no offsetting cost- and productivity-related benefits will be realized as a result of the Executive Order and this Final Rule. As discussed in section V.C.v., however, numerous benefits of providing paid sick leave under the Executive Order can be expected to accompany the transfer payments and other costs discussed above.

The most important factor in determining transfer payments is the number of additional days of paid sick leave for which employees will be compensated. In order to estimate transfer payments the Department needed to:

- Assign a monetary value to these days of paid sick leave taken; and
- Determine what share of the additional 968,000 days of paid sick leave accrued (calculated above in section V.B.iv.) will be taken.

The Final Rule requires contractors to provide an employee the same pay and benefits for hours of paid sick leave used that the employee would have received had he been working. Thus, the Department needed to estimate both a base hourly wage for affected employees and a base hourly benefit rate. The Department assumed an 8-hour work day to place a monetary value on the transfer payment associated with a day of paid sick leave used. The Department used data from the 2015 CPS to estimate base hourly wage rates by industry and full-time status. The SCA nationwide fringe benefit rate, which applies to most contracts covered by the SCA, currently is $4.27 per hour. Because many of the contracts covered by the Executive Order will be subject to the SCA, and many employees performing on or in connection with contracts covered by the Executive Order but not covered by the SCA will nonetheless be performing service-related work similar in character to work performed by SCA-covered service employees, the Department estimated that most affected employees will average a base hourly benefit rate of $4.27. The exception is the construction industry, for which the Department used the benefit to wage ratio from the ECEC for the construction industry (1.45) because employees in the construction industry will be performing on or in connection with DBA contracts rather than SCA contracts.

Although the Executive Order will allow employees to accrue up to 56 hours of paid sick leave annually, many employees will not use all paid sick leave that they accrue (and many others will not work a sufficient number of hours on covered contracts to accrue 56 hours of paid sick leave in an accrual year). If employees take less than the full amount of paid sick leave accrued, then transfer payments should include only some of the additional days accrued. The Department expects employees on average to use fewer days than allocated. To estimate the share of accrued days employees will use, the Department used data from the 2015 NCS and ECEC by industry (provided by the BLS and reported in Table 12). While the numbers vary by industry, over all industries employees with paid sick leave take an average of 4 days of sick leave annually. Employees with access to a fixed number of paid sick leave days per year will use an average of 4 days annually. Dividing the average days of paid sick leave taken by the average days of paid sick leave accrued annually, the Department estimated that employees use on average 50 percent of days allotted. This may be an underestimate in Year 1 when employees may have fewer days available since they will not start to accrue paid sick leave until they commence work on a covered contract, nor will they carry over any days from the previous year. This could also be an underestimate because the additional uses allowed under this rulemaking and the provisions to prevent retaliation, may result in expanded use for employees who already have paid sick leave.

Case studies demonstrate that not all paid sick days will be taken. In a comment by the Institute for Women’s Policy Research, the organization cited the 2011 IWPR report on San Francisco’s Paid Sick Leave Ordinance that found that the average worker used only three paid sick days per year and 25 percent used no paid sick days at all.

---

87 For full-time construction workers benefits are estimated to be $10.06 per hour (45 percent of $22.47). For part-time construction workers benefits are estimated to be $7.94 per hour (45 percent of $17.74).

88 BLS calculated this using the ECEC data based on workers in paid sick leave plans where a cost was incurred by the employer in the reference period.

89 This assumes employees with sick leave in the NCS are allowed to carry over sick days. The larger the share of these employees without carryover privileges, the more appropriate the number is for Year 1 and the less appropriate it is for future years.

Therefore, of the 968,000 days of additional paid sick leave accrued, 370,200 days are estimated to be taken and result in transfer payments (see Table 12). Using wage data by industry results in Year 1 transfer payments of $85.5 million (Table 13). This is 0.03 percent of revenue from Federal contracts for these contractors (since many covered contractors garner revenue from private work, the transfer payment estimate is almost certainly a lower percentage of their total revenues). If all days of paid sick leave were used, transfers would be $214.4 million in Year 1 or 0.07 percent of Federal contracting revenues.

To estimate transfers beyond year 1, the Department projected employment and wage growth. The employment growth rate was calculated as the geometric annual growth rate based on the ten-year employment projection for 2014 to 2024 from BLS (as discussed in section V.B.iv.). The Department calculated the average annual geometric growth rate in median nominal wages from CPS data between 2005 and 2015. The geometric growth rate is the constant annual growth rate that when compounded yields the last historical year’s wage. The CPI–U was then used to convert this nominal growth rate to a real growth rate.

The real growth rate for benefit payments was calculated using the geometric growth rate in nominal SCA benefit rates between 2006 and 2015 and converted to a real rate using the CPI–U. For projected transfers the Department employed the same method used for Year 1 but used the projected number of employees and wages. Table 14 shows projected transfers through Year 10. It also contains average annualized transfers using both 3 percent and 7 percent discount rates. If some contracts last longer than 5 years, then not all contracts will be covered by Year 5 and transfers will accrue more slowly. In general, the Department believes most contracts will renew within five years but notes that some contracts, such as contracts for concessions and operations on federal lands may last longer than five years.

2. Additional Considerations

The Department based its method of calculating transfers on the number of employees working exclusively on Federal contracts. To the extent that Federal contract work is split between employees, these transfer estimates may be over- or underestimates. The current method attributes all hours worked on a Federal contract to one employee. For example, if that employee currently receives five paid sick leave days per year, he or she would receive a transfer of two additional days of paid sick leave. If instead half this work was completed by one employee and half by another employee, the Executive Order would require that each receive 3.5 sick days per year; however, since each employee already receives 5 days of paid sick leave, there would be no incremental transfer. The Department estimated that the maximum size of the overestimate due to the assumption of employees working exclusively on Federal contracts is $27.0 million in Year 1 (31.6 percent of the $85.5 million in total transfers). Conversely, if this work is spread across multiple employees, and these employees currently do not receive any paid sick leave, and the propensity to take the paid sick leave diminishes with the number of days, then this methodology could result in an underestimate of transfers.

Another consideration is that some of the transfers may be reduced by employer responses to the rule. Employers may reduce vacation time, reduce wages, or increase health insurance premiums in order to diminish some of their increased costs. (These outcomes may be unlikely in the short run due to stickiness of compensation.) Employers may also reallocate days of leave to keep total benefits the same. For example, an employer that used to provide 5 sick days and 5 vacation days could now provide 5 sick days, 3 vacation days, and 2 days that can be used for any purpose. This would leave exactly zero employer-employee transfer because an employee could take 7 days paid sick leave if necessary but could still only take a maximum of 5 days of vacation. (Provided the policy met the requirements of section 2 of the Order and this Final Rule and employees could use accrued paid sick leave and the 2 “any-purpose” days for the same purposes and under the same conditions as described in the Order and this Final Rule, the employer would be in compliance and transfers would be zero).

Some commenters expressed concern that because monitoring hours worked on Federal contracts will be very burdensome employers may provide paid sick leave to all workers for all hours worked in order to reduce the monitoring costs. For example, the ERISA Industry Committee asserted that many large employers are likely to apply the Executive Order’s requirements to a larger group than what is mandated by the Executive Order to reduce the risk of excluding covered employees. However, benefits potentially provided to workers on non-covered contracts are not quantified.

Transfer payments were calculated assuming paid sick leave is accrued for all 52 weeks of the year. If workers take paid sick leave or other leave, and do not accrue hours while on leave, then transfers may be slightly lower. The impact for full-time employees will be negligible. An employee who works 40

---

91 The Department calculated how estimates would change if we used the GDP deflator instead of the CPI–U to adjust wages and benefits. The differences are small. Average annualized transfers would increase by 0.89% from $134.6 million to $135.2 (costs would not change).

92 The maximum possible overestimate was calculated by eliminating transfers associated with employees who currently receive any paid sick leave.
hours per week will reach the 56 hour cap after 42 weeks of work. Therefore, they will reach the cap regardless of whether paid sick leave is accrued while on leave. For part-time employees, hours of accrual are slightly overestimated. For example, an employee who works 25 hours per week will accrue 43.3 hours of paid sick leave annually (assuming no leave). If this worker takes a week of sick leave, and paid sick leave is not accrued during this week, then they will accrue 0.8 fewer hours of paid sick leave (25/30). If this worker also took two weeks of vacation, they would accrue 1.7 fewer hours of paid sick leave ((25 x 2)/30).

iv. Deadweight Loss

Deadweight loss (DWL) occurs when a market operates at less than optimal equilibrium output. This typically results from an intervention that sets, in the case of a labor market, compensation above the equilibrium level. The higher cost of labor leads to a decrease in the total number of labor hours that are purchased on the market. DWL is a function of the difference between the compensation the employers were willing to pay for the hours lost and the compensation employees were willing to take for those hours. In other words, DWL represents the total loss in economic surplus resulting from a “wedge” between the employer’s willingness to pay and the employee’s willingness to accept work arising from the Final Rule. DWL may vary in magnitude depending on market parameters, but it is typically small when wage changes are small or when labor supply and labor demand are relatively inelastic with respect to compensation.

The DWL resulting from this Final Rule was estimated based on the average decrease in hours worked and increase in average hourly compensation (again, without accounting for offsetting benefits of the Executive Order and the Final Rule). As the cost of labor rises due to the requirement to pay sick leave, the quantity of labor demanded decreases, which results in fewer hours worked. To calculate the DWL, the estimated value of $734,500.

Using these values the Department calculated DWL per affected employee (Table 15). This was multiplied by the number of affected employees to estimate total DWL; $182,900 in Year 1. Projected DWL is shown in Table 16. Average annualized DWL during the first ten years the rule is in effect is estimated to be $734,500.

v. Benefits

There are a variety of benefits associated with this rule; however, due to data limitations these are not monetized. The following benefits were discussed qualitatively in the NPRM:
- Improved employee health, improved health of dependents, increased productivity, reduced hiring costs, decreased healthcare expenditures, improved firm profits and decreased government expenditures relative to what would be expected if the rule's costs and transfer impacts were considered in isolation, and job growth.

The first part of this section considers these benefits and related comments. The second part of this section considers benefits discussed by commenters that were not included in the benefits section of the NPRM RIA.

1. Benefits Discussed Qualitatively in the NPRM

Improved Employee Health

Multiple studies have shown that paid sick leave greatly reduces the chance of employee injury and/or exposure to illness. When sick employees attend their jobs, they engage in a practice known as "presenteeism." Presenteeism is detrimental to productivity, and increases the probability of workplace injury and illness, resulting in greater employer and employee costs. In one study from the American Journal of Public Health, which many commenters cited, researchers used data from multiple industries (construction, retail, manufacturing, health care, etc.) to show that employees with access to paid sick leave were 28 percent less likely to incur a non-fatal work injury than their counterparts without paid sick leave.97

In a similar study, data from the outbreak of the 2009 H1N1 pandemic showed that individuals who were not paid for absences had a 4.4 percentage point greater chance of contracting an influenza-type illness than those with sick leave pay (9.2 percent versus 13.6 percent; only the rate for workers without paid leave is statistically significant at the 10 percent level).98 A study of Connecticut's paid sick leave law, cited by many commenters, found 18.8 percent of employers reported reduced presenteeism and 14.8 percent reported a reduction in spread of illness.99

Diminishing presenteeism by providing paid sick leave can be expected to have positive impacts on employee health, as it would reduce the possibility that sick employees could potentially expose their colleagues to infection or disease. Studies have linked the incidence of presenteeism to a lack of paid sick leave. For instance, a 2010 survey found that 37 percent of the working respondents who had paid sick leave, had attended work with a contagious illness.100 Meanwhile, 55 percent of employees with no paid sick leave had attended work with a contagious illness.101

Many commenters discussed the health benefits of paid leave. In particular, commenters stressed the reduction in the spreading of contagious illnesses. The Iowa Main Street Alliance wrote: "Our businesses know that when employees stay home rather than reporting to work sick, their co-workers and customers stay healthy. Preventing the spread of illness in the workplace saves money." Many form letter submissions cited studies demonstrating how paid sick leave reduces the prevalence of presenteeism and prevents spreading illnesses.

105 The commenter did not elaborate but for context, this refers to sick employees attending work which led to two norovirus outbreaks. For more information see: http://www.cnbc.com/2016/02/08/chipotle-blames-norovirus-outbreaks-on-sick-employees.html.
106 However, the Department notes that poultry industry contracts with the Federal government may not be covered by this rulemaking because it does not cover contracts for commercial items subject to the Walsh-Healey Public Contracts Act.

Improved Health of Dependents

Another potential positive impact of the Final Rule is its indirect effect on the health of an employee’s dependents (particularly children). Paid leave has a substantial impact on parents’ ability to care for sick children. One study, using the Baltimore Parenthood Study and multivariate analysis, found parents with paid sick leave or vacation leave were 5.2 times more likely to remain home to care for their sick child.108 According to a study in San Francisco by the Institute for Women’s Policy Research, parents that did not have paid sick leave were more than 20 percentage points more likely to send their children to school while sick (75.9 compared with 53.8).109 This “child presenteeism” is problematic because these pupils have the potential to expose other students and teachers to the illness, decreasing others’ health.

Commenters agreed. Legal Aid Society wrote: “Parents’ access to paid sick leave under the Executive Order will be accompanied by its benefits. The Department particularly anticipates that contractor costs to provide paid leave will be accompanied by increased employee productivity. This increased productivity will occur through numerous channels, such as improved health, employee retention, and level of effort. When workers attend work while sick they tend to have diminished productivity. Goetzel et al. (2004) found that on-the-job productivity loss due to sickness represented 18 percent to 60 percent of employer costs associated with 10 health conditions.”110 Legal Aid Society also pointed out that: “Sick children can have a significant effect on spreading contagious illness. A study analyzing the spread of pandemic influenza found that children and teenagers make up nearly 65% of those responsible for infectious flu contacts.”111 They also cited research demonstrating that children recover better from illnesses and injuries when their parents care for them.112

The ability to take sick leave to care for individuals equivalent to a family relationship may be especially helpful in the LGBT community. The Williams Institute at the UCLA School of Law noted the rule “would also allow employees to use paid sick leave to care for a partner’s children, even when the employee has no legally recognized relationship to the children. This policy is particularly important for LGBT people, who continue to experience unique barriers to establishing parental status or legal custody of a partner’s children.”

Increased Productivity

As noted earlier, the Department expects the costs of providing paid sick leave under the Executive Order will be accompanied by its benefits. The Department particularly anticipates that contractor costs to provide paid leave will be accompanied by increased employee productivity. This increased productivity will occur through numerous channels, such as improved health, employee retention, and level of effort. When workers attend work while sick they tend to have diminished productivity. Goetzel et al. (2004) found that on-the-job productivity loss due to sickness represented 18 percent to 60 percent of employer costs associated with 10 health conditions.113

A strand of economic research, commonly referred to as “efficiency wage” theory, considers how an increase in compensation to workers may reduce employer costs by reducing turnover, allowing workers to gain more firm-specific human capital that enhances their productivity and reducing the cost of replacing workers. Efficiency wages may also elicit greater effort on the part of workers, making them more effective on the job.114 A higher wage implies a larger cost of losing one’s job; employees will put in more effort in order to reduce the risk of losing the job. This is commonly referred to as the shirking model.115 Third, efficiency wages may attract higher-quality applicants.

Providing paid sick leave to employees has been associated with decreased job separations. In one 2013 study, the author showed that paid sick leave is associated with a decrease in the probability of job separation of 25 percent.116 Such a reduction in job separation would increase marginal productivity because new employees have less firm-specific capital (i.e., skills and knowledge that have productive value in their particular company) and thus would require additional supervision and training to match the productivity of former workers.117 Other research supports the hypothesis that paid leave encourages employees to remain at their respective companies. In a survey of two hundred human resource managers, two-thirds cited family-supportive policies as the single most important factor in attracting and retaining employees.118 By providing paid sick leave, companies may be able to reduce the firm’s turnover rate and increase productivity (and therefore reduce hiring costs, see the section on reduced hiring costs below).

Commenters agreed that the rule will increase productivity. Many form letter submissions cited studies demonstrating how paid sick leave improves productivity. The first uses results from the American Productivity Audit to estimate that presenteeism cost the economy $206.6 billion in 2005 (after adjusting for inflation).121 The second is

a survey of human resources executives that found “38 percent reported presenteeism being a problem in their organizations, and 69 percent reported having paid sick time or other paid time off policies in place as measures to prevent this problem.” The third is a survey showing that “26 percent of workers without paid time off to see a doctor reported having six or more days in which they were unable to concentrate at work, compared to 17 percent of workers who had such paid time off.” The fourth demonstrates that paid sick days “help workers recover and return to work more quickly: Nationally, workers without paid sick days spent more days bedridden due to illness than workers with paid sick days.” The last showed that in Jersey City, “businesses that changed their policies to comply with the law reported significant increases in productivity.” Finally, productivity may increase due to the ability to attract more productive employees. Many commenters cited the same Jersey City study, which found that benefits to businesses that changed their policy to adhere to the city’s paid sick leave law experienced “an improvement in the quality of job applicants.”

Reduced Hiring Costs
By providing paid sick leave, employers may experience lower job turnover, resulting in higher productivity and lower hiring costs, both of which would positively impact profits (the benefit of increased productivity was discussed above and profits are discussed below). Multiple studies demonstrate an inverse relationship between sick leave pay and employee turnover. One 2003 study from the University of Michigan found that when employers in upstate New York implemented a paid sick leave policy, they experienced modest reductions in employee turnover. Lowering employee turnover reduces hiring costs, boosting profitability. Various research shows that firms incur a substantial cost for hiring new employees. A review of 27 case studies found that the median cost of replacing an employee was 21 percent of the employee’s annual salary. These costs might be estimated by incorporating paid sick leave into family friendly policies. Even though marginal labor costs may rise when employers provide paid sick leave, the Department expects the new, higher wages will be partially offset by increased productivity, and reduced hiring and training costs.

The potential reduction in turnover is a function of several variables: The current wage, hours worked, turnover rate, industry, and occupation. Additionally, the cost of replacing a separated employee, and providing paid sick leave to an employee, varies significantly based on factors such as industry and geographic region. Therefore, quantifying the potential benefits associated with a decrease in turnover attributed to this Final Rule would require many sources of data and assumptions. Many commenters agreed that the rule will increase retention and diminish hiring costs. One commenter wrote: “An employer is much more likely to lose their employee when a mother is forced to choose between a job and [her] child, or to have an employee who is struggling to balance the needs of work and childcare.” The Main Street Alliance wrote: “The costs of turnover can be high, and many business owners do not fully realize how providing paid sick time can reduce this cost. Employers who begin providing paid sick time often report that employee turnover is reduced, saving them the cost of hiring and training replacements, as well as that of lost productivity while the positions are unfilled.” Many commenters submitting a form letter noted that in Jersey City, “businesses that changed their policies to comply with the law reported significant benefits, including . . . a reduction in employee turnover.” Many of these same commenters also cited research, noted above, that “shows that an employee is at least 25 percent less likely to voluntarily leave a job when the employee has access to paid sick days.” A study of Connecticut’s paid sick leave law, cited by many commenters, found 3.3 percent of employers reported reduced employee turnover. However, 10.6 percent reported increased loyalty which may result in additional long-term reductions in turnover.

Some commenters noted the high cost of turnover. The Main Street Alliance wrote: “In middle- and low-wage jobs, turnover costs are estimated to be 16 to 20 percent of workers’ annual wages.” Commenters submitting a form letter noted, as we did above, that “across all occupations, median turnover costs are estimated to be 21 percent of workers’ annual wages.” Additionally, one of the authors of this study wrote in support of this rulemaking and confirmed the high cost of turnover.

Firm Profits/Earnings
To the extent that productivity increases and turnover and hiring costs are reduced, offering paid sick leave will increase profits relative to what would be expected if the rule’s costs and transfers were considered in isolation. Some studies have suggested there may be a positive relationship between paid sick leave and profits. In one study such from 2001, researchers discovered that having a paid sick leave policy had a positive effect on firms’

Firm Profits/Earnings
To the extent that productivity increases and turnover and hiring costs are reduced, offering paid sick leave will increase profits relative to what would be expected if the rule’s costs and transfers were considered in isolation. Some studies have suggested there may be a positive relationship between paid sick leave and profits. In one study such from 2001, researchers discovered that having a paid sick leave policy had a positive effect on firms’
profits. The authors note, however, that efficiency wage theory underpins their empirical result and thus requires compensation to increase, which is not guaranteed to result from this rule because employers may respond to the paid sick leave requirement, where permitted by law, by reducing other fringe benefits, such as paid vacation, or by decreasing base wages. Additionally, even if compensation increases, efficiency wage theory may not apply if the main reason for the improved productivity is a response to the goodwill created by a voluntary increase in compensation offered by an employer. Therefore, it may not be valid to assume that Meyer et al.’s results would be comparable.

Few commenters discussed increased profits or earnings. The Legal Aid Society reported: “A study published three years after [San Francisco’s] ordinance’s implementation found that over 70 percent of employers did not report any impact on profitability.” Conversely, the HR Policy Association noted that “the studies [cited in the NPRM] on productivity and firm profits are based on general efficiency wage theory and presented without a quantitative cost-benefit analysis of the specific leave mandate for current and future beneficiaries of Executive Order 13706.” The Department did not quantify the value of these benefits since none of the studies provided estimates that were directly applicable to employees covered by this Final Rule.

Government Expenditures

As noted in the section on costs, contractors may pass along part or all of the potentially increased costs to the government in the form of higher contract prices. However, to the extent that benefits from increased productivity and reduced turnover offset these higher costs which the Department expects, this will reduce government contract spending relative to what would be expected if the rule’s costs and transfers were considered in isolation.

Some commenters believe the rule may reduce government contracting costs. Others noted that we did not adequately justify the assertion that the rulemaking will provide cost savings. The National Association of Manufacturers wrote the following: “Simply stated, there is no concrete evidence that requiring federal contractors to increase the benefits they provide to their workers will result in cost savings or efficiency.” As previously noted, the Department discussed benefits qualitatively because quantitative research findings related to benefits were not directly applicable to the population of employees and contracting firms impacted by this Final Rule.

Regardless of the direct impact on contract costs, there are other important channels through which the Final Rule might affect government expenditures. The transfer of income resulting from this Final Rule may result in reduced social assistance payments, and thus decrease government expenditures. For example, providing access to paid sick leave may help workers retain their jobs, reducing eligibility for government social assistance programs and lowering government expenditures. Studies have shown that the more paid family leave an employee receives, the less likely he/she is to utilize various social assistance programs. For instance, a 2012 study by Rutgers University’s Center for Women and Work showed that women who received paid maternity leave reported receiving $413 less in public assistance in the year after their child was born than women who took no leave after childbirth. The National Partnership for Women & Families also cited research showing that “allowing all workers to earn paid sick time would result in ... more than $500 million in savings to publicly funded health insurance programs such as Medicare, Medicaid and the State Children’s Health Insurance Program.”

Decreased Healthcare Expenditures

One positive impact of mandating paid sick leave benefits would be that employees could mitigate future health costs by more frequently investing in preventive care. For example, employees would likely use paid sick leave to visit a physician, who could diagnose illnesses and other ailments before they become more serious and costlier to patients. A study analyzing data from the 2008 NHIS shows that employees with paid sick leave were 12 percent more likely to have visited a doctor in the past year. Additionally, employees with paid sick leave were more likely to have received preventive procedures such as an endoscopy (9.6 percent) or mammogram (7.8 percent). Researchers at the Institute for Women’s Policy Research used data from the NHIS on emergency room visits by workers with and without paid sick leave to project that requiring employers to provide paid sick leave would prevent roughly 1.3 million hospital emergency department visits nationally each year, resulting in $1.1 billion in medical savings annually (this includes the $500 million in savings to publicly funded health insurance programs mentioned previously). Commenters agreed that the rule could reduce health care costs through preventative care and reduced use of emergency rooms. Several commenters wrote: “A day or more to recover can prevent routine illnesses from turning into something much more serious. Those who earn paid time for a doctor’s visit are more likely to get annual check-ups and critical screenings like mammograms, to identify any health problems and seek timely treatment. They’re less likely to be injured on the job, and less likely to use an emergency room because the doctor’s office is closed after hours or an untreated condition worsened.”

According to the National Partnership for Women & Families, individuals without paid sick time are “almost three times as likely to report taking their child or a family member to a hospital emergency room because they were unable to take time off work during their regular work hours.” The National Women’s Law Center cited research finding “one-third of workers with annual family incomes below $35,000 who lacked paid sick days delayed seeking medical care, or...
did not seek care, for an ill family member.”

Job Growth and Labor Force Retention

One critique of the proposal to mandate paid sick leave has been that the transfer of income from employers to employees might reduce employment. However, various studies have argued the opposite, claiming that paid sick leave is associated with greater job growth. Recently, it has been shown that counties in which a city has implemented paid sick leave have experienced greater job growth than neighboring counties with no cities with paid leave laws. San Francisco County, for example, saw a 3.5 percent increase in employment between the years of 2006 (when a paid sick leave law was implemented) and 2010, while the five counties surrounding it experienced an employment decrease of 3.4 percent on average (the analysis did not control for other characteristics that may affect employment rates).146

Additionally, King County, the county in which Seattle (which instituted a similar paid sick leave policy to San Francisco in 2011) is located, found that the rate of annual job growth in the food and retail industries increased much faster than within the state of Washington as a whole between 2011 and 2013.147 We note, however, that these results might also be associated with other economic factors, such as labor migration as a result of the Great Recession, and historically greater employment trends in the urban areas of San Francisco and Seattle in comparison to neighboring regions.

Job growth was not mentioned by many commenters. However, Legal Aid Society cited a study that found “the sectors most affected by the ordinance, including the food service and accommodation [industries], experienced higher rates of job and business growth than neighboring counties following the [San Francisco] ordinance’s passage.”

A related topic discussed by some commenters is that paid sick leave can prevent workers from leaving the labor force. The New Hampshire Campaign for a Family Friendly Economy noted, “[w]hen families are able to provide for their basic needs and know that their loved ones are well cared for they are more likely to stay in the workforce.” Sarah Damasko, a researcher from Pennsylvania State University, wrote: “Access to paid sick leave is an important feature of the types of jobs that college educated women find and that helps workers maintain their employment.” She explained how research she and Adrienne Freen conducted suggests that maintaining full-time employment has long-term physical and mental health benefits.

2. Benefits Mentioned by Commenters Not Previously Addressed in This Section

Expanded Covered Reasons for Use

Commenters discussed the benefits associated with expanding applicable uses of leave. In this rulemaking, the Department estimates transfers by comparing current days of paid sick leave and newly mandated days of sick leave. Benefits are then associated with additional sick days provided and expected to be taken. The Department notes that workers who currently have access to paid sick leave may take more sick days to the extent the permitted uses under the Executive Order and this Final Rule are broader than under their existing paid sick leave or paid time off program. This impact is not quantified in benefits or transfers due to a lack of applicable quantitative evidence. The Williams Institute at the UCLA School of Law wrote “[t]he Proposed[d] Rule could protect many more LGBT employees who may not currently be able to use their paid sick leave to care for their families.” They also wrote that the rule “would also allow employees to care for the children of a same-sex spouse or partner, even when the employee has not been able to form a legal relationship with the child, for example, because of obstacles to adoption, parental status, or custody.” Legal Aid Society wrote that the rule “will increase job security for workers and families who have fewer workplace protections, as such LGBT workers, and for workers who need paid sick time to ensure their safety, such as survivors of domestic violence.”

Allowing paid sick leave to be used by victims of domestic violence, sexual assault, and stalking also provides benefits. According to surveys from the Bureau of Justice Statistics, reported by the National Partnership for Women & Families, “36 percent of rape and sexual assault victims lost more than 10 days of work following victimization, and more than half of stalking victims lost five or more days of work.”

Disadvantaged Groups

As discussed above, the rulemaking may be especially helpful to the LGBT community by allowing paid sick leave to be used to care for certain individuals not related by blood or marriage. Additionally, some minority groups, women, and low-wage earners, who have lower prevalence of paid sick leave, will be helped by this rule. The Center for the Study of Social Policy wrote: “[P]aid sick time can be an effective tool for advancing equity by providing crucial economic stability to families and reducing familial stress during illnesses and times of hardship,” and observed that ensuring the ability to accrue and use paid sick leave is particularly important for part-time, low-income and single head of household workers who are disproportionately women and people of color. The National Hispanic Council on Aging wrote: “According to a report released by the Congressional Joint Economic Committee in March, 2010, about 49% of Hispanics working for firms hiring over 15 employees did not have paid sick leave, while about 60% of White workers overall reported receiving paid sick leave.” According to the AFL–CIO: “Those with lower incomes are especially vulnerable to the lack of paid sick days. Sixty-two percent of low-wage private sector workers do not have employer-paid sick leave.”

The National Organization for Women noted that “[t]he burden of inadequate paid sick leave and paid sick family leave falls heaviest on mothers. Given current norms of caregiving, women are more likely to need to stay home with a sick family member than fathers, yet mothers are less likely than fathers to...

---

have any paid time off, and those who do have some paid leave have fewer weeks of paid time off than dads.” 151 They also noted that “[s]ingle parent families, mostly headed by women, are disproportionately affected by the inability to access paid sick leave.”

Fair Competition

One business owner wrote: “This rule will help level the playing field so that businesses, like mine, that provide earned paid leave, are more cost competitive. Right now we compete against other companies that do not provide these benefits to their employees, therefore these competitors have lower overhead and lower hourly rates.” The public policy organization Demos cited their report that quantified “how the federal contracting system fuels inequality by funding low-wage jobs that lack critical benefits such as leave.” 152 The U.S. Women’s Chamber of Commerce wrote: “Requiring more businesses to provide paid sick leave will help level the playing field for those business owners who are doing the right thing for their workers.” Bredhoff & Kaiser cited a 2015 study by the Department that found lack of paid sick leave results in competitive disadvantages against those employers who do provide such paid leave.153

Morale, Stress, Financial Stability, and Job Retention

Commenters noted that the rule could help morale. Many commenters cited a study of Connecticut’s paid sick leave law that found “employers identified several positive effects of paid sick days, including improved employee productivity and morale.” 154 This study found 29.6 percent of employers reported an increase in morale and 12.5 reported an increase in motivation. According to the Americans United for Change: ‘In jurisdictions where paid sick leave has been implemented, research has shown that businesses reported positive benefits such as improved morale.’ 155 Commenters believe the rule will reduce stress and improve financial and job stability. NLWC noted that “a lack of paid time off can be a major Stressor in parents’ lives, which can impair their interactions with their children and affect their development.” 156 Bredhoff & Kaiser wrote: “As one 2011 report observed, missing just three and a half days of work due to illness can cause a worker to forfeit wages equivalent to the average monthly paycheck for an American family.” 157 NWLC cited research finding “almost one in five low-wage working mothers reported losing a job due to her own illness or caring for a family member.” 158 Job stability benefits may accrue to both workers with and without current paid sick leave. According to the AFL-CIO, “49 percent of private sector workers who have paid sick leave report that their employers have dismissal policies for missed time that, in practice, penalize their paid sick time, and 34 percent fear penalties for using paid sick leave.” 159 This Final Rule may reduce employers’ fear of retribution because the rule proscribes interference and discrimination.

vi. Regulatory Alternatives

The Department notes that Executive Order 13706 delegates to the Secretary the authority only to issue regulations to “implement the requirements of this order.” Because the Executive Order itself establishes the basic paid sick leave requirements that the Department is responsible for implementing, many potential regulatory alternatives are beyond the scope of the Department’s authority in issuing this Final Rule. However, the Chamber/IFA expressed concern that the Department did not present alternatives and wrote “it is a well-established principle of regulatory impact analysis under Executive Order 12866 to present comparative costs and benefits for various alternatives, including those the underlying law or Executive Order may seem to exclude.” In response, the Department has discussed some alternatives posed by commenters in this section.

1. Alternative With Unlimited Accrual

As was done in the NPRM, for illustrative purposes only, this section presents an alternative to the provisions set forth in this Final Rule. The Department notes, however, that it considers this alternative to be beyond the scope of the Department’s authority under the Executive Order. This alternative considers how transfer payments would be affected if employees could accrue an unlimited number of hours of paid sick leave, as long as they kept a maximum balance of 56 hours. For example, if paid sick leave is used periodically throughout the year, an employee who works 80 hours per week could accrue and use 138.7 hours of paid sick leave (80 hours × 52 weeks × accrual rate of one hour per 30 hours worked (1/30)). To calculate transfers associated with this alternative, the modeling allows employees to accrue more than 7 days of paid sick leave annually. The number of days of leave accrued is based on the mean number of hours worked among full-time employees in an industry. For example, in administrative and waste services full-time employees work on average 41.7 hours per week. With no cap on paid leave accrual, this would result in 9.0 days of leave accrued annually for employees in this industry. Using this alternative across all industries, the Department estimated 1.2 million additional days of paid sick leave would be accrued by full-time employees in Year 1. If only a fraction of these additional sick days are actually taken (as assumed earlier in the analysis and shown in Table 12) then 488,200 days will be taken by full-time employees and total transfer payments would be $132.0 million. This is 54 percent higher than the current transfer estimate of $85.5 million. However, this might be an overestimate because employees are not required to accrue paid sick leave while on vacation or leave.

2. Alternatives Suggested by Commenters

Some commenters made suggestions that could help reduce costs while maintaining the intent of the rulemaking and continuing to provide the intended benefits. Some of these have been incorporated in the Final Rule.

---

155 Ibid.
158 Id.
impact of these alternatives on costs was generally not quantifiable.

The American Benefits Council believes the requirement that employers allow paid leave in increments of only 1 hour could cost tens of thousands of dollars in adjustment costs which is “an excessive burden on such employers, and serves only to preserve an extra 3 hours of paid leave for the employee.” The Department believes that changing a firm’s tracking system to allow paid sick leave to be taken in increments of one hour is not excessively burdensome, and the American Benefits Council provided no basis for its estimate. The Department also did not have the necessary data to estimate the impact on regulatory costs of allowing a larger minimum hour requirement.

Commenters believe the requirement to allow accrual of paid sick leave while on leave (e.g., sick leave, vacation) will be costly to firms. The Equal Employment Advisory Council (EEAC) believes because this definition of “hours worked” differs from the FLSA and FMLA this requirement will “be extremely confusing for federal contractors” and “changing the regulations requires a significant additional set of records that must be kept.” They also noted that “counting hours not actually ‘worked’ as ‘hours worked’ artificially inflates the employee’s entitlement under the Executive Order, which likely used that term of art in accord with its traditional meaning.” The Department adjusted this requirement such that paid sick leave is only required to be earned on time suffered or permitted to work and not paid time off. The transfer estimates presented in this analysis continue to include accrual while on leave because of the difficulty in adjusting them due to lack of reliable data; furthermore, these adjustments are likely to be small since hours on vacation and paid sick leave are a fraction of work hours and the paid sick leave time that might be accrued in those periods will only be one-thirtieth of the hours spent on vacation and sick leave (see V.C.iii.2.).

The Department notes that this change may reduce employer costs by creating consistency across regulations. However, the Department believes this change will have a small impact on the amount of leave full-time employees accrue because annual accrual is limited to 56 hours. A worker who works 40 hours per week will reach this cap after 42 weeks of work. Therefore, even if they are on vacation/leave for the other 10 weeks and technically accruing leave, this change will not increase their accrued hours. For part-time workers accruing while on vacation or leave, this change will impact total hours accrued. The Department made some calculations to demonstrate how transfers may change for the 19 percent of affected workers who work part-time now that accrual is not required while on leave. We quantified the additional hours accrued due to accruing while on paid sick leave and found it to be small. For example, a worker who works 25 hours per week will accrue 43.3 hours of paid sick leave annually (assuming no leave). If this worker takes a week of leave, paid sick leave is not accrued during this week, then he will accrue 0.8 hours less of paid sick leave (25/30). If this worker also took two weeks of vacation, he would accrue 1.7 fewer hours of paid sick leave ((25 × 2)/30).

vii. Average Annualized Impacts by Industry

Commenters expressed concern that the Department did not adequately consider costs for specific industries. For example, the MCAA wrote that OMB Circular A-4 requires a more specific examination of the impact of the rule on Federal construction projects. A recreation permit holder on public lands wrote that the Department “should demonstrate how the costs associated with the rule make sense given the . . . volume and gross revenues of small permit holders.” In response, the Department has added this section analyzing average annualized costs and transfers by industry relative to payroll and revenue.

Table 17 shows 10-year average annualized costs and transfers by industry using both a 3 percent and a 7 percent interest rate. These annualized costs are then compared to estimated Federal contractors’ payroll and revenue. Across all industries, these average annualized costs are less than 0.07 percent of payroll and less than 0.01 percent of revenue. The industry where costs and transfers are the largest share of both payroll and revenue is the professional, scientific, and technical services industry. This industry is followed by the construction industry (when looking at payroll) and the administrative and waste services industry (when considering revenue).

aSource: Total payroll and revenue from 2012 SUSB; inflated to 2015$ using the CPI–U. Payroll and revenue for contractors estimated by taking ratio of potentially affected contractors relative to all firms, within an industry, and multiplying by total payroll or revenue. If contractors tend to be larger or smaller than other firms in the industry then revenue and payroll may be under or over estimated. These calculations assume no growth in real value of revenue or payroll over these ten years.

Many commenters expressed concern that the rule would be especially costly in the construction industry. However, as modeled, costs in the construction industry are small compared with payroll and revenues (less than 0.2 percent of payroll and less than 0.04 percent of revenue). Moreover, the Department does not believe that one of the primary concerns for the construction industry—the segregating of time between Federal contracts and non-covered contracts (e.g., SBA Advocacy, Sheet Metal and Air Conditioning National Association)—will result in substantial costs because hours worked by laborers and mechanics on DBA contracts must already be monitored. 29 CFR 5.5(a)(3). Thus, in nearly all instances, if a construction contractor complies with its existing DBA recordkeeping obligation, it will have effectively segregated these employees’ time. Therefore, there should be minimal, or no, additional costs associated with tracking hours for these employees. In addition, for employees working “in connection with” covered contracts the Department has reduced the costs associated with monitoring hours by permitting contractors to make estimates consistent with § 13.5(a)(1)(ii). For these reasons, we believe the estimated costs to the construction industry are appropriate.

Another concern expressed by members of the construction industry is the higher costs associated with absenteeism in this industry. The AGC noted that “absenteeism is particularly problematic in the construction industry, where cost and schedule concerns are critical and highly dependent on labor productivity.” They also cite research demonstrating these costs: “Nicholson et al. (2006) 160 have used economic models to estimate that when a carpenter in construction is absent, the cost of the absence is 50% greater than his/her daily wage, and when a laborer in construction is absent, the cost is 9% greater than his/her daily wage.” The Department notes that even if costs and transfers are 50 percent larger than estimated, they would still be less than 0.3 percent of payroll and less than 0.06 percent of revenues in the construction industry.

V. Final Regulatory Flexibility Analysis (FRFA)

The Regulatory Flexibility Act of 1980 (RFA), as amended by the Small Business Regulatory Enforcement Fairness Act of 1996 (SBREFA), hereafter jointly referred to as the RFA, requires agencies to prepare regulatory flexibility analyses when they propose regulations that will have a significant economic impact on a substantial number of small entities. See 5 U.S.C. 603. This rule is expected to have a significant economic impact, and thus the Department has prepared a FRFA.

The RFA defines a “small entity” as a (1) small not-for-profit organization, (2) small governmental jurisdiction, or (3) small business. SBP establishes separate standards for each 6-digit NAICS industry code, and standard cutoffs are typically based on either the average annual number of employees or average annual receipts. For example, small businesses are generally defined as having fewer than 500, 1,000, or 1,250 employees in manufacturing industries and less than $7.5 million in average annual receipts for many nonmanufacturing industries. SBA revised its size standards February 26, 2016. In this analysis, the Department used the indicator in the SAM data to identify small contractors based on the six-digit NAICS code listed as their primary NAICS. However, because most firms would have registered on SAM prior to SBA’s update of its size standards, the Department expected more firms would have been listed as small had they registered after the update. To account for this, the Department used SBA’s estimates of the increase in the number of small businesses in each industry, converted it to a percentage increase in the number of small businesses in that industry, and applied it to the number of entities listed as small in the SAM database. For example, SBA estimated the revised standards would result in an additional 1,250 manufacturers classified as small, about 0.5 percent of small manufacturing firms. We therefore increased the number of small affected manufacturers by 0.5 percent. The subcontracting firms identified were all assumed to be small. The Department applied the national ratio of small businesses to total business by industry (determined by applying the updated SBA standards to the 2012 Statistics of U.S. Businesses (SUSB) data) to estimate the number of small entities operating under covered contracts on Federal property.

A. Commenters’ Response

The Department specifically asked for comments on the impacts of the proposed rule on small businesses, particularly whether alternatives exist that will reduce burdens on small entities and still meet the rule’s objectives. Most small businesses that commented expressed concern the rulemaking will increase their costs in general. Some noted the costs will be more burdensome for small businesses. The National Federation of Independent Business wrote:

At the majority of these [small] businesses, the task of compliance will fall on the small business owner. This individual is unlikely to be an expert in the complex details of paid sick leave program management. Accordingly, it will take additional time to comprehend the requirement and may also require the covered small business to hire a consultant or other expert to assist with implementation.

Women Impacting Public Policy wrote that “[l]arger contractors with higher revenues and large administrative staffs are more capable of handling this compliance burden and are more likely to already have the necessary systems in place. Women-owned businesses, which are by-and-large small businesses, will encounter costs and burdens that are not experienced by other firms.” Other small businesses supported the rulemaking. For example, the U.S. Women’s Chamber of Commerce wrote: “These women business owners nationwide already provide paid sick leave to their employees because many of them have been previously in workforces that did not offer these critical benefits... Requiring more businesses to provide paid sick leave will help level the playing field for those business owners who are doing the right thing for their workers.”

Some commenters believe the Executive Order and implementing regulations will hurt small businesses’ ability to compete in bidding. SBA Advocacy noted that “[s]mall recreation companies have stated that they will be reluctant to sign a new contract to provide services such as food or equipment rentals on federal lands, as they may not be able to increase the price of their products to offset these costs.” The National Federation of Independent Business wrote that “[m]ost small companies will have to increase the price of their bids to maintain the same return on the contract. Higher prices will make their bids less competitive than a larger federal contractor that may already have a compliant paid sick leave program in place.”

163 The “NAICS CODE STRING” variable (column 33) and the “PRIMARY NAICS” variable (column 31) were the specific variables used. If the primary NAICS value contained a “Y” at the end when listed in the “NAICS CODE STRING” column, the firm was identified as small.
Some commenters suggested alternatives that would reduce the burden on small entities, including an exemption for small businesses. Several commenters, such as the General Contractors Association of Hawaii and the Hawaiian Dredging Construction Company, stated that small businesses should be exempt from the requirement of providing paid sick leave, although they varied on the size of contracting firms that should be excluded. Independent Electrical Contractors commented that “the Department should take into account processes and procedures already in place in most small businesses,” and further recommended that the Department should allow companies to “apply a 90-day probationary period to new employees before they are able to take paid sick leave.” SBA Advocacy stated that DOL should consider alternatives suggested by commenters “such as exemptions for certain part-time and seasonal work.” The Department has addressed requests for exclusions, like those described above, in the subpart A preamble.

The Chief Counsel for Advocacy of the Small Business Administration (SBA) was notified of this rule upon its submission to OMB under EO 12866. Advocacy noted several concerns; in addition to those described in the preceding paragraphs, it stated that the Department underestimated the number of small businesses affected by this Final Rule by only including contracting companies registered in SAM. SBA Advocacy wrote: “Advocacy believes that there may be hundreds or thousands of small businesses such as restaurants, retail, and outdoor recreation companies operating on federal lands, in federal buildings and on military bases that DOL has not adequately counted in determining the numbers of small businesses affected or in estimating the costs of this rule.”

SBA Advocacy provided additional information about the number of concessions contracts, commercial use authorizations, and permits issued by the National Park Service, the U.S. Forest Service, GSA, and the Army and Air Force Exchange Service. As described in section V.B.i., the Department included estimates of these potentially affected contractors in this Final Rule.

The Department describes responses to some of these comments in the appropriate part of the FRFA. Responses to comments to apply to the overall analysis were generally included in the appropriate section of the RIA.

B. Number of Small Entities and Employees to Which the Final Rule Will Apply

The number of prime contracting entities was based on the GSA’s System for Award Management (SAM) for August 2015 (415,300). This number is lower than in the proposed rulemaking because firms enrolled on SAM strictly for grants have now been excluded (see V.B.ii.). The Department understands that many entities that are prime contractors listed in SAM are also subcontractors, and therefore SAM includes both. However, we were unable to determine the number of subcontractors who are not in the SAM database. Therefore, the Department examined five years of USASpending data and found 24,400 subcontractors who do not hold contracts as primes (and thus may not be included in SAM), and added these subcontractors to the total from SAM to obtain a total estimate of 439,700 firms that may be holding procurement contracts. In response to comments from SBA Advocacy and others, the Department has also included an estimated 49,800 entities operating under covered contracts on Federal property or lands. Estimating the number of entities operating under covered contracts on Federal property or lands involved many data sources and assumptions as described in section V.B.ii. These calculations result in 489,400 potentially affected contractors. Of these, an estimated 320,000 are considered small contracting firms.

This estimated number of potentially affected small contractors includes those that strictly provide materials and supplies to the government and other firms with no Federal contracts covered by the Executive Order. These firms may accrue regulatory familiarization costs despite not having employees affected, although their cost will be minimal. However, these firms should be eliminated when we consider costs per establishment with affected employees. Information was not available to eliminate these firms from the SAM database.

Thus, the Department used data from USASpending to estimate a more appropriate number of small contractors with affected employees. Using the FY2015 USASpending database, the Department found 70,600 unique private small prime contracting firms. Adding in the small subcontractors and the small entities operating under covered contracts on Federal property yields an estimated 143,400 small contractors with active contracts in Year 1. Because this Final Rule only applies to new contracts, the Department divided the number of contractors by 5 to represent the number of contractors with new contracts in Year 1 (28,700 firms). Lastly, the Department adjusted this estimate to exclude a share of potentially affected contractors who have potentially affected employees but no affected employees because they already provide the required number of days of paid sick leave.

The ratio of affected employees to potentially affected employees in small businesses...

169 In the proposed rule the Department said these firms may not incur familiarization costs. Commenters contended that these firms will still accrue regulatory familiarization costs.

170 As discussed in the RIA, some potentially affected employees considered not affected in the Department’s analysis may actually be affected due to a broader scope of uses allowed for taking paid sick leave. However, data are not sufficient to estimate the number of additional employees that will be affected due to this. How many additional days of paid sick leave will be taken by these employees, or the transfers associated with any additional affected employees. Thus, for purposes of calculating average costs per contractor with affected employees, any possible additional employees affected are excluded from both the numerator and denominator for consistency.
was calculated and multiplied by the number of small contractors with potentially affected employees by industry to make this adjustment. These calculations result in an estimated 21,400 small contractors with affected employees in Year 1. The calculations of direct costs and transfers per small contractor with affected employees shown in Table 23 include only these 21,400 small contractors.

The number of employees in small contracting firms is unknown. The Department estimated the share of total Federal contracting expenditures in the USASpending data associated with contractors labeled as small, by industry. The Department then applied these shares to all affected employees to estimate the share of affected employees in small entities. However, based on 2015 NCS data, smaller firms are less likely to offer sick leave pay, and therefore employees in small contracting firms are more likely to be affected. The Department adjusted for this using data from the 2015 NCS on the distribution of employees with paid sick leave by employer size. For these purposes, small businesses were approximated as those having less than 500 employees. The Department found that employees in firms with less than 500 employees were 1.1 times more likely to not have paid sick leave than employees in all firms. Therefore, the Department multiplied the previously estimated share of affected employees working for small contractors (e.g., 22.3 percent in the information industry) by 1.1 to better estimate the percent of affected employees in small businesses in each industry (e.g., 24.9 percent in the information industry). The Department then multiplied the percent affected that are in small businesses by the total number of affected employees by industry, then summed over all industries, to find that 66,800 employees employed by small contractors in Year 1 would be affected by the rule.

*Source: GSA’s System for Award Management (SAM) for August 2015. Companies without a primary NAICS code are distributed proportionately amongst all industries. All firms are assumed to be potentially affected. Includes 24,352 additional subcontractors identified in USASpending.gov from FY2011–FY2015 and includes 49,757 firms with operations on Federal land or property.

**SAM for August 2015. Companies without a primary NAICS code are distributed proportionately amongst all industries. All small firms are assumed to be potentially affected. Assume all 24,352 additional subcontractors identified in USASpending.gov are small.

**Employees in firms with less than 500 employees were 1.1 times more likely to have no paid sick leave than employees in all firms. The Department adjusted upward the number of affected employees by 1.1.

### C. Small Entity Costs of the Final Rule

Employers will need to keep additional records for affected employees. This will result in an increase in employer burden, which was estimated in the PRA portion (section V.I.). Note that the burdens reported for the PRA section of this Final Rule include the entire information collection and not merely the additional burden estimated as a result of this Final Rule.

Small entities will also have regulatory familiarization, implementation, administrative, and payroll costs (i.e., transfers). These are discussed in section V.C. Total direct costs (i.e., excluding transfers) to small contractors in Year 1 were estimated to be $78.9 million (Table 22). This is 63 percent of total direct costs in Year 1 (compared with 30 percent of affected employees in small contracting firms). Calculation of these costs is discussed in the following paragraphs.

Estimated regulatory familiarization costs and initial implementation costs in Year 1 apply to all small firms that potentially hold covered contracts (320,000). Regulatory familiarization costs were assumed to take two hours of time in Year 1, on average across these potentially affected contractors of all sizes. In the NPRM, the Department estimated one hour of time was necessary for this purpose, but due to comments the Department has increased this time estimate to two hours in the Final Rule. An hour of a human resource manager’s time is valued at $82.17 per hour.\(^{173}\)\(^{174}\) Initial implementation costs, the upfront cost that is thought to be comparable across contractors of all sizes, and thus is a fraction of the total implementation costs, were estimated as taking either 1 hour.

\(^{173}\)This includes the mean base wage of $56.29 from the OES plus benefits paid at a rate of 46 percent of the base wage, as estimated from the BLS’s ECEC data. OES data available at: http://www.bls.gov/oes/current/oes113121.htm.

\(^{174}\)Time and wage estimates for small establishments are the same as used in the analysis for all contractors. We have not tailored these to small businesses due to lack of data.
or 10 hours of a human resource worker’s time, (depending on whether the contractor has a paid leave system in place), valued at $27.50 per hour.\(^{175}\)

In addition to upfront implementation costs, contractors with affected employees will experience recurring implementation costs as employees gradually become covered. As each employee is affected, the contractor will need to spend some time updating the accounting systems used to track paid sick leave. Therefore, implementation costs are modeled as a function of newly affected employees for the first five years.\(^{176}\) Because of this component, costs vary with contractor size. The Department estimated one hour of time per newly affected employee will be spent by a human resources worker on implementation costs. Contractors may also incur recurring administrative costs associated with maintaining records of paid sick leave and adjusting scheduling. In the NPRM, the Department assumed a human resource worker will spend an additional fifteen minutes per affected employee annually on ongoing administrative costs. Due to comments the Department has increased this time estimate to twenty minutes in the Final Rule.

To calculate payroll costs, the Department began with total transfers estimated in section V.C.\(\text{iii.}\), and multiplied this by the ratio of affected employees in small contracting firms to all affected employees. This yields the share of transfers occurring in small Federal contracting firms, $26.1 million in Year 1 (Table 22), which is 31 percent of total transfers for all contracting firms in Year 1. As noted in V.C.\(\text{iii.}\), total transfers may be an overestimate if contractors tend to perform work for multiple clients, rather than working exclusively on Federal contracts. This may be especially pertinent for small business since according to a report by American Express Open, Federal contracting comprises 19 percent of revenues for small contracting firms.\(^{177}\) Table 23 contains the average costs and transfers per small contractor with affected employees by industry (see V.I.B. for explanation). Average Year 1 costs and transfers per small contractor with affected employees range from $174 to $3,391.

To estimate whether these costs and transfers will have a substantial impact on small entities they are compared to total revenues for these firms. Based on Statistics of U.S. Businesses (SUSB) data, small Federal contractors had total annual revenues of $566.6 billion in 2015 from all sources (Table 24).\(^{178}\) Transfers from small contractors and costs to small contractors in Year 1 ($105.0 million) are less than 0.02 percent of revenues on average and are no more than 0.17 percent in any industry. Therefore, the Department believes this Final Rule will not have a significant impact on small businesses.

To estimate average annualized costs to small contracting firms the Department projected small business costs and transfers forward 9 years. To do this the Department calculated the ratio of affected employees in small contracting firms to all affected employees in Year 1, then multiplied this ratio by the 10-year projections of national costs and transfers (see section V.C.). This yields the share of projected costs and transfers attributable to small businesses (Table 25).

*a Source: USASpending.gov FY2015. Firms with contracting revenue, excluding contracts only for goods. Also includes 24,352 additional subcontractors identified in USASpending.gov from FY2011–FY2015 and 48,400 firms with operations on Federal land or property.

*b Estimated as 20 percent of contractors with revenue from service contracts in FY2015. If affected employees in Year 1 are spread over more than 20 percent of these contractors, average costs and transfers per small contractor in Year 1 would be lower.

*c Calculated by multiplying the number of small contractors with potentially affected employees in Year 1 by percentage of potentially affected workers who are affected, by industry. This may be an underestimate of the number of small contractors with affected employees if contractors have some potentially affected employees who are affected and others who are not affected.

D. Differing Compliance and Reporting Requirements for Small Entities

This Final Rule provides no differing compliance and reporting requirements for small entities.

E. Least Burdensome Option or Explanation Required

The Department believes it has chosen the most effective option that implements the Executive Order, and limits burdens to the extent reasonably possible given the requirements of the Executive Order. Taking no regulatory action does not address the Department’s concerns discussed above (see Need for Regulation section) and would contravene the Executive Order. The Department also found the option to allow unlimited accrual (section V.C.vi.) to be overly burdensome on business as well as beyond the scope of the Executive Order.

Pursuant to section 603(c) of the RFA, the following alternatives are to be addressed:

i. Differing compliance or reporting requirements for small entities. To establish differing compliance or reporting requirements for small businesses would undermine the impact of the rule. The Department makes available a variety of resources to employers for understanding their obligations and achieving compliance. Therefore, the Department is not implementing differing compliance or reporting requirements for small businesses.

ii. The clarification, consolidation, or simplification of compliance and reporting requirements for small entities. The Department makes available a variety of resources to employers for understanding their obligations and achieving compliance. As such, the Department has not clarified, consolidated, or simplified the rule.

iii. The use of performance rather than design standards. The Department makes available a variety of resources to employers for understanding their obligations and achieving compliance. Therefore, the Department is not relying upon performance to determine compliance.

iv. An exemption from coverage of the rule, or any part thereof, for such small entities. To exempt small businesses from the Final Rule would undermine the impact of the rule. The Department makes available a variety of resources to employers for understanding their obligations and achieving compliance. Therefore, the Department is not implementing a “small business” exemption.

F. Identification, to the Extent Practicable, of All Relevant Federal Rules That May Duplicate, Overlap, or Conflict With the Final Rule

The Department is not aware of any Federal rules that duplicate, overlap, or conflict with this Final Rule.

VI. Unfunded Mandates Reform Act

The Unfunded Mandates Reform Act of 1995 (UMRA), 2 U.S.C. 1532, requires that agencies prepare a written statement, which includes an assessment of anticipated costs and benefits, before proposing any Federal mandate that may result in excess of $100 million (adjusted annually for inflation) in expenditures in any one year by state, local, and tribal governments in the aggregate, or by the private sector. However, this rulemaking applies almost entirely to private employees on Federal contracts and is not expected to affect state, local, or tribal governments. Please see section V.C. for an assessment of anticipated costs and benefits to the private sector.

A few commenters discussed the cost of the proposed rule to tribes. Elk Valley Rancheria wrote that they have “limited staff available to perform both direct and indirect services for federal contracts... . The recordkeeping requirements, ambiguity in covered contracts, limited budgets of federal agencies, and potential penalties that could be imposed upon the Tribe as a federal contractor could result in the Tribe having to forego important federal contracting opportunities to the detriment of both the Tribe and federal agencies such as the Federal Highway Administration and the National Park Service.” The Chamber/IFA believes some costs may be passed on to state, local, and tribal governments and believes “the Department neglected to identify the various parties or types of contracts that would be implicated. The Department has therefore not addressed these important issues in its Unfunded Mandates Reform Act analysis.” The Department believes that because costs are a small share of revenues, impacts to governments and tribes should be small.

VII. Executive Order 13132, Federalism

The Department has (1) reviewed this rule in accordance with Executive Order 13132 regarding federalism and (2) determined that it does not have federalism implications. The Final Rule will not have substantial direct effects on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government.
VIII. Executive Order 13175, Indian Tribal Governments

This Final Rule will not have tribal implications under Executive Order 13175 that would require a tribal summary impact statement. The rule will not have substantial direct effects on one or more Indian tribes, on the relationship between the Federal government and Indian tribes, or on the distribution of power and responsibilities between the Federal government and Indian tribes.

IX. Effects on Families

The undersigned hereby certifies that the Final Rule will not adversely affect the well-being of families, as discussed under section 654 of the Treasury and General Government Appropriations Act, 1999.

X. Executive Order 13045, Protection of Children

This Final Rule will have no environmental health risk or safety risk that may disproportionately affect children.

XI. Environmental Impact Assessment

A review of this Final Rule in accordance with the requirements of the National Environmental Policy Act of 1969 (NEPA), 42 U.S.C. 4321 et seq.; the regulations of the Council on Environmental Quality, 40 CFR 1500 et seq.; and the Departmental NEPA procedures, 29 CFR part 11, indicates that the rule will not have a significant impact on the quality of the human environment. There is, thus, no corresponding environmental assessment or an environmental impact statement.

XII. Executive Order 13211, Energy Supply

This rule is not subject to Executive Order 13211. It will not have a significant adverse effect on the supply, distribution, or use of energy.

XIII. Executive Order 12630, Constitutionally Protected Property Rights

This Final Rule is not subject to Executive Order 12630 because it does not involve implementation of a policy that has takings implications or that could impose limitations on private property use.

XIV. Executive Order 12988, Civil Justice Reform Analysis

This Final Rule was drafted and reviewed in accordance with Executive Order 12988 and will not unduly burden the Federal court system. The rule was: (1) Reviewed to eliminate drafting errors and ambiguities; (2) written to minimize litigation; and (3) written to provide a clear legal standard for affected conduct and to promote burden reduction.

List of Subjects in 29 CFR Part 13

Administrative practice and procedure, Construction, Government contracts, Law enforcement, Paid sick leave, Reporting and recordkeeping requirements.

David Weil, Administrator, Wage and Hour Division.

For the reasons set out in the preamble, the Department of Labor amends Title 29 of the Code of Federal Regulations by adding part 13 to read as follows:

PART 13—ESTABLISHING PAID SICK LEAVE FOR FEDERAL CONTRACTORS

Subpart A—General

Sec.
13.1 Purpose and scope.
13.2 Definitions.
13.3 Coverage.
13.4 Exclusions.
13.5 Paid sick leave for Federal contractors and subcontractors.
13.6 Prohibited acts.
13.7 Waiver of rights.
13.8 Multiemployer plans or other funds, plans, or programs.

Subpart B—Federal Government Requirements

13.11 Contracting agency requirements.
13.12 Department of Labor requirements.

Subpart C—Contractor Requirements

13.21 Contract clause.
13.22 Paid sick leave.
13.23 Deductions.
13.24 Anti-kickback.
13.25 Records to be kept by contractors.
13.26 Notice.
13.27 Timing of pay.

Subpart D—Enforcement

13.41 Complaints.
13.42 Wage and Hour Division conciliation.
13.43 Wage and Hour Division investigation.
13.44 Remedies and sanctions.

Subpart E—Administrative Proceedings

13.51 Disputes concerning contractor compliance.
13.52 Debarment proceedings.
13.53 Referral to Chief Administrative Law Judge; amendment of pleadings.
13.54 Consent findings and order.
13.55 Administrative Law Judge proceedings.
13.56 Petition for review.
13.57 Administrative Review Board proceedings.
13.58 Administrator ruling.

Subpart A—General

§ 13.1 Purpose and scope.

(a) Purpose. This part contains the Department of Labor’s rules relating to the administration and enforcement of Executive Order 13706 (Executive Order or the Order), “Establishing Paid Sick Leave for Federal Contractors.” The Order states that providing paid sick leave to employees will improve the health and performance of employees of Federal contractors and will bring benefits packages offered by Federal contractors in line with model employers, ensuring they remain competitive in the search for dedicated and talented employees. The Executive Order concludes that providing paid sick leave will result in savings and quality improvements in the work performed by parties who contract with the Federal Government that will in turn lead to improved economy and efficiency in Government procurement.

(b) Policy. Executive Order 13706 sets forth the general position of the Federal Government that providing access to paid sick leave on Federal contracts will increase efficiency and cost savings for the Federal Government. The Order therefore provides that executive departments and agencies shall, to the extent permitted by law, ensure that new covered contracts, contract-like instruments, and solicitations (collectively referred to as “contracts”) include a clause, which the contractor and any subcontractors shall incorporate into lower-tier subcontracts, specifying, as a condition of payment, that employees will earn not less than 1 hour of paid sick leave for every 30 hours worked on or in connection with covered contracts.

(c) Scope. Neither Executive Order 13706 nor this part creates or changes any rights under the Contract Disputes Act or creates any private right of action. The Executive Order provides that disputes regarding whether a contractor has provided paid sick leave as prescribed by the Order, to the extent permitted by law, shall be disposed of only as provided in this part. However, nothing in the Order or this part is intended to limit or preclude a civil action under the False Claims Act, 31 U.S.C. 3730, or criminal prosecution under 18 U.S.C. 1001. The Order and this part similarly do not preclude judicial review of final decisions by the Secretary of Labor in accordance with the Administrative Procedure Act, 5 U.S.C. 701 et seq.
Section 13.2 Definitions.

For purposes of this part:

Accrual year means the 12-month period during which a contractor may limit an employee's accrual of paid sick leave to no less than 56 hours.

Administrative Review Board (ARB or Board) means the Administrative Review Board, U.S. Department of Labor.

Administrator means the Administrator of the Wage and Hour Division and includes any official of the Wage and Hour Division authorized to perform any of the functions of the Administrator under this part.

As soon as is practicable means as soon as both possible and practical, taking into account all of the facts and circumstances of the individual case.

Certification issued by a health care provider means any type of written document created or signed by a health care provider (or by a representative of the health care provider) that contains information verifying that the physical or mental illness, injury, medical condition, or need for diagnosis, care, or preventive care or other need for care referred to in §13.5(c)(1)(i), (ii), or (iii) exists. The health care provider (or representative) need not have seen the employee or the individual for whom the employee is caring in person to create a valid certification.

Child means:

1. A biological, adopted, step, or foster son or daughter of the employee;
2. A person who is a legal ward or stood in loco parentis when that individual was a minor or required a legal guardian;
3. A person for whom the employee stands in loco parentis when that individual was a minor or required someone to stand in loco parentis; or
4. A child, as described in paragraphs (1) through (3) of this definition, of an employee’s spouse or domestic partner.

Concessions contract or contract for concessions means a contract under which the Federal Government grants a right to use Federal property, including land or facilities, for furnishing services.

The term concessions contract includes, but is not limited to, a contract the principal purpose of which is to furnish food, lodging, automobile fuel, souvenirs, newspaper stands, and/or recreational equipment, regardless of whether the services are of direct benefit to the Government, its personnel, or the general public.

Contract or contract-like instrument means an agreement between two or more parties creating obligations that are enforceable or otherwise recognizable at law. This definition includes, but is not limited to, a mutually binding legal relationship obligating one party to furnish services (including construction) and another party to pay for them. The term contract includes all contracts and any subcontracts of any tier thereunder, whether negotiated or advertised, including any procurement actions, lease agreements, cooperative agreements, provider agreements, intergovernmental service agreements, service agreements, licenses, permits, or any other type of agreement, regardless of nomenclature, type, or particular form, and whether entered into verbally or in writing. The term contract shall be interpreted broadly to include, but not be limited to, any contract that may be consistent with the definition provided in the Federal Acquisition Regulation (FAR) or applicable Federal statutes. This definition includes, but is not limited to, any contract that may be covered under any Federal procurement statute. Contracts may be the result of competitive bidding or awarded to a single source under applicable authority to do so. In addition to bilateral instruments, contracts include, but are not limited to, awards and notices of awards; job orders or task letters issued under basic ordering agreements; letter contracts; orders, such as purchase orders, under which the contract becomes effective by written acceptance or performance; and bilateral contract modifications. The term contract includes contracts covered by the Service Contract Act, contracts covered by the Davis-Bacon Act, concessional contracts not subject to the Service Contract Act, and contracts in connection with Federal property or land and related to offering services for Federal employees, their dependents, or the general public.

Contracting officer means a representative of an executive department or agency with the authority to enter into, administer, and/or terminate contracts and make related determinations and findings. This term includes certain authorized representatives of the contracting officer acting within the limits of their authority as delegated by the contracting officer.

Contractor means any individual or other legal entity that is awarded a Federal Government contract or subcontract under a Federal Government contract. The term contractor refers to both a prime contractor and all of its subcontractors of any tier on a contract with the Federal Government. The term contractor includes lessees and lessors.

The term employer is used interchangeably with the terms contractor and subcontractor in various sections of this part. The U.S. Government, its agencies, and instrumentalities are not contractors, subcontractors, employers, or joint employers for purposes of compliance with the provisions of the Executive Order.

Domestic partner means an adult in a committed relationship with another adult. A committed relationship is one in which the employee and the domestic partner of the employee are each other’s sole domestic partner (and are not married to or domestic partners with anyone else) and share responsibility for a significant measure of each other’s common welfare and financial obligations. This includes, but is not limited to, any relationship between two individuals of the same or opposite sex that is granted legal recognition by a State or by the District of Columbia as a marriage or analogous relationship (including, but not limited to, a civil union).

Domestic violence means:

1. Felony or misdemeanor crimes of violence (including threats or attempts) committed:
2. (i) By a current or former spouse, domestic partner, or intimate partner of the victim;
3. (ii) By a person with whom the victim shares a child in common;
4. (iii) By a person who is cohabitating with or has cohabited with the victim as a spouse, domestic partner, or intimate partner;
5. (iv) By a person similarly situated to the spouse of the victim under civil or criminal domestic or family violence laws of the jurisdiction in which the victim resides or the events occurred; or
6. (v) By any other adult person against a victim who is protected from that person’s acts under the civil or criminal domestic or family violence laws of the jurisdiction in which the victim resides or the events occurred.

(2) Domestic violence also includes any crime of violence considered to be an act of domestic violence under the civil or criminal domestic or family violence laws of the jurisdiction in which the victim resides or the events occurred.

Employee means any person engaged in performing work on or in connection with a contract covered by the Executive Order, and whose wages under such contract are governed by the Service Contract Act, the Davis-Bacon Act, or
the Fair Labor Standards Act, including employees who qualify for an exemption from the Fair Labor Standards Act’s minimum wage and overtime provisions, regardless of the contractual relationship alleged to exist between the individual and the employer. The term employee includes any person performing work on or in connection with a covered contract and individually registered in a bona fide apprenticeship or training program registered with the U.S. Department of Labor’s Employment and Training Administration, Office of Apprenticeship, or with a State Apprenticeship Agency recognized by the Office of Apprenticeship. An employee performs “on” a contract if the employee directly performs the specific services called for by the contract. An employee performs “in connection with” a contract if the employee’s work activities are necessary to the performance of a contract but are not the specific services called for by the contract.

Executive Order 13495 or Nondisplacement Executive Order means Executive Order 13495 of January 30, 2009, Nondisplacement of Qualified Workers Under Service Contracts, 74 FR 6103 (Feb. 4, 2009), and its implementing regulations at 29 CFR part 6103 (Feb. 4, 2009), and its implementing regulations.

Family violence means any act or threatened act of violence, including any forceful detention of an individual that results or threatens to result in physical injury and is committed by a person against another individual (including a child in the individual’s care), or with whom such person is related by blood, is or was related by marriage or is or was otherwise legally related, or is or was lawfully residing.

Federal Government means any agency or instrumentality of the United States that enters into a contract pursuant to authority derived from the Constitution or the laws of the United States. For purposes of the Executive Order and this part, this definition does not include the District of Columbia, any Territory or possession of the United States, or any independent regulatory agency within the meaning of 44 U.S.C. 3502(c).

Health care provider means any practitioner who is licensed or certified under Federal or State law to provide the health-related services in question or any practitioner recognized by an employer or the employer’s group health plan. The term includes, but is not limited to, doctors of medicine or osteopathy, podiatrists, dentists, psychologists, optometrists, chiropractors, nurse practitioners, nurse-midwives, clinical social workers, physician assistants, physical therapists, and Christian Science Practitioners listed with the First Church of Christ, Scientist in Boston, Massachusetts.

Independent agencies means independent regulatory agencies within the meaning of 44 U.S.C. 3502(c).

Individual related by blood or affinity whose close association with the employee is the equivalent of a family relationship means any person with whom the employee has a significant personal bond that is or is like a family relationship, regardless of biological or legal relationship.

Intimate partner means a person who is or has been in a social relationship of a romantic or intimate nature with the victim, where the existence of such a relationship shall be determined based on a consideration of the length of the relationship; the type of relationship; and the frequency of interaction between the persons involved in the relationship.

Multiemployer plan means a plan to which more than one employer is required to contribute and which is maintained pursuant to one or more collective bargaining agreements between one or more employee organizations and more than one employer.

New contract means a contract that results from a solicitation issued on or after January 1, 2017, or a contract that is awarded outside the solicitation process on or after January 1, 2017. This term includes both new contracts and replacements for expiring contracts. It does not apply to the unilateral exercise of a pre-negotiated option to renew an existing contract by the Federal Government. For purposes of the Executive Order, a contract that is entered into prior to January 1, 2017 will constitute a new contract if, through bilateral negotiation, on or after January 1, 2017:

(1) The contract is renewed;
(2) The contract is extended, unless the extension is made pursuant to a term in the contract as of December 31, 2016 providing for a short-term limited extension; or
(3) The contract is amended pursuant to a modification that is outside the scope of the contract.

Obtain additional counseling, seek relocation, seek assistance from a victim services organization, or take related legal action, used in reference to domestic violence, sexual assault, or stalking, means to spend time arranging, preparing for, or executing acts related to addressing physical injuries or mental or emotional impacts resulting from being a victim of domestic violence, sexual assault, or stalking. Such acts include finding and using services of a counselor or victim services organization intended to assist a victim to respond to or prevent future incidents of domestic violence, sexual assault, or stalking; identifying and moving to a different residence to avoid being a victim of domestic violence, sexual assault, or stalking; or a victim’s pursuing any related legal action.

Obtaining diagnosis, care, or preventive care from a health care provider means receiving services from a health care provider, whether to identify, treat, or otherwise address an existing condition or to prevent potential conditions from arising. The term includes time spent traveling to and from the location at which such services are provided or recovering from receiving such services.

Option means a unilateral right in a contract by which, for a specified time, the Government may elect to purchase additional supplies or services called for by the contract, or may elect to extend the term of the contract.

Paid sick leave means compensated absence from employment that is required by Executive Order 13706 and this part.

Parent means:
(1) A biological, adoptive, step, or foster parent of the employee, or a person who was a foster parent of the employee when the employee was a minor;
(2) A person who is the legal guardian of the employee or was the legal guardian of the employee when the
employee was a minor or required a legal guardian;

(3) A person who stands in loco parentis to the employee or stood in loco parentis to the employee when the employee was a minor or required someone to stand in loco parentis; or

(4) A parent, as described in paragraphs (1) through (3) of this definition, of an employee’s spouse or domestic partner.

Physical or mental illness, injury, or medical condition means any disease, sickness, disorder, or impairment of, or any trauma to, the body or mind.

Procurement contract for construction means a procurement contract for the construction, alteration, or repair (including painting and decorating) of public buildings or public works and which requires or involves the employment of mechanics or laborers, and any subcontract of any tier thereunder. The term procurement contract for construction includes any contract subject to the Walsh-Healey Public Law and Contracts Act.

Procurement contract for services means a contract the principal purpose of which is to furnish services in the United States through the use of service employees, and any subcontract of any tier thereunder. The term procurement contract for services includes any contract subject to the Service Contract Act.

Related legal action or related civil or criminal legal proceeding, used in reference to domestic violence, sexual assault, or stalking, means any type of legal action, in any forum, that relates to the domestic violence, sexual assault, or stalking, including, but not limited to, family, tribal, territorial, immigration, employment, administrative agency, housing matters, campus administrative or protection or stay-away order proceedings, and other similar matters; and criminal justice investigations, prosecutions, and posttrial matters (including sentencing, parole, and probation) that impact the victim’s safety and privacy.

Secretary means the Secretary of Labor and includes any official of the U.S. Department of Labor authorized to perform any of the functions of the Secretary of Labor under this part.

Sexual assault means any nonconsensual sexual act proscribed by Federal, tribal, or State law, including when the victim lacks capacity to consent.

Sororitation means any request to submit offers, bids, or quotations to the Federal Government.

Spouse means the other person with whom an individual entered into marriage as defined or recognized under State law for purposes of marriage in the State in which the marriage was entered into or, in the case of a marriage entered into outside of any State, if the marriage is valid in the place where entered into and could have been entered into in at least one State. This definition includes an individual in a common law marriage that was entered into in a State that recognizes such marriages or, if entered into outside of any State, is valid in the place where entered into and could have been entered into in at least one State.

Stalking means engaging in a course of conduct directed at a specific person that would cause a reasonable person to fear for his or her safety or the safety of others or suffer substantial emotional distress.

United States means the United States and all executive departments, independent establishments, administrative agencies, and instrumentalities of the United States, including corporations of which all or substantially all of the stock is owned by the United States, by the foregoing departments, establishments, agencies, and instrumentalities, including nonappropriated fund instrumentalities. When used in a geographic sense, the United States means the 50 States and the District of Columbia.

Victim services organization means a nonprofit, nongovernmental, or tribal organization or rape crisis center, including a State or tribal coalition, that assists or advocates for victims of domestic violence, sexual assault, or stalking, including domestic violence shelters, faith-based organizations, and other organizations, with a documented history of effective work concerning domestic violence, sexual assault, or stalking.

Wage and Hour Division means the Wage and Hour Division, U.S. Department of Labor.

§ 13.3 Coverage.

(a) This part applies to any new contract with the Federal Government, unless excluded by § 13.4, provided that:

(1)(i) It is a procurement contract for construction covered by the Davis-Bacon Act;

(ii) It is a contract for services covered by the Service Contract Act;

(iii) It is a contract for concessions, including any concessions contract excluded from coverage under the Service Contract Act by Department of Labor regulations at § 4.133(b); or

(iv) It is a contract in connection with Federal property or lands and related to offering services for Federal employees, their dependents, or the general public; and

(2) The wages of employees performing on or in connection with such contract are governed by the Davis-Bacon Act, the Service Contract Act, or the Fair Labor Standards Act, including employees who qualify for an exemption from the Fair Labor Standards Act’s minimum wage and overtime provisions.

(b) For contracts covered by the Service Contract Act or the Davis-Bacon Act, this part applies to prime contracts only at the thresholds specified in those statutes. For procurement contracts where employees’ wages are governed by the Fair Labor Standards Act, this part applies when the prime contract exceeds the micro-purchase threshold, as defined in 41 U.S.C. 1902(a). For all other prime contracts covered by Executive Order 13706 and this part and for all subcontracts awarded under prime contracts covered by Executive Order 13706 and this part, this part applies regardless of the value of the contract.

(c) This part only applies to contracts with the Federal Government requiring performance in whole or in part within the United States. If a contract with the Federal Government is to be performed in part within and in part outside the United States and is otherwise covered by the Executive Order and this part, the requirements of the Order and this part would apply with respect to that part of the contract that is performed within the United States.

(d) This part does not apply to contracts for the manufacturing or furnishing of materials, supplies, articles, or equipment to the Federal Government, including those that are subject to the Walsh-Healey Public Contracts Act, 41 U.S.C. 6501 et seq.

§ 13.4 Exclusions.

(a) Grants. The requirements of this part do not apply to grants within the meaning of the Federal Grant and Cooperative Agreement Act, as amended, 31 U.S.C. 6301 et seq.

(b) Contracts and agreements with and grants to Indian Tribes. This part does not apply to contracts and agreements with and grants to Indian Tribes under the Indian Self-Determination and Education Assistance Act, as amended, 25 U.S.C. 450 et seq.
(c) Procurement contracts for construction that are excluded from coverage of the Davis-Bacon Act. Procurement contracts for construction that are not covered by the Davis-Bacon Act are not subject to this part.

(d) Contracts for services that are exempted from coverage under the Service Contract Act. Service contracts, except for those expressly covered by §13.3(a)(1)(i)(ii) or (iv), that are exempt from coverage of the Service Contract Act pursuant to its statutory language at 41 U.S.C. 6702(b) or its implementing regulations, including those at §4.115 through 4.122 and §4.123(d) and (e), are not subject to this part.

(e) Employees performing in connection with covered contracts for less than 20 percent of their work hours in a given workweek. The accrual requirements of this part do not apply to employees performing in connection with covered contracts, i.e., those employees who perform work duties necessary to the performance of the contract but who are not directly engaged in performing the specific work called for by the contract, who spend less than 20 percent of their hours worked in a particular workweek performing in connection with such contracts. This exclusion is inapplicable to employees performing on covered contracts, i.e., those employees directly engaged in performing the specific work called for by the contract, at any point during the workweek. This exclusion is also inapplicable to employees performing in connection with covered contracts provided the estimate is reasonable and based on verifiable information.

(f) Employees whose covered work is governed by a collective bargaining agreement that already provides 56 hours of paid sick time. If a collective bargaining agreement ratified before September 30, 2016 applies to an employee’s work performed on or in connection with a covered contract and provides the employee with at least 56 hours (or 7 days, if the agreement refers to days rather than hours) of paid sick time (or paid time off that may be used for reasons related to sickness or health care) each year, the requirements of the Executive Order and this part do not apply to the employee until the earlier of the date the agreement terminates or January 1, 2020. If a collective bargaining agreement ratified before September 30, 2016 applies to an employee’s work performed on or in connection with a covered contract and provides the employee with paid sick time (or paid time off that may be used for reasons related to sickness or health care) each year, but the amount of such leave provided under the agreement is less than 56 hours (or 7 days, if the agreement refers to days rather than hours), the requirements of the Executive Order and this part do not apply to the employee until the earlier of the date the agreement terminates or January 1, 2020, provided that each year the contractor provides covered employees with the difference between 56 hours (or 7 days) and the amount provided under the existing agreement in a manner consistent with either the Executive Order and this part or the terms and conditions of the collective bargaining agreement.

§13.5 Paid sick leave for Federal contractors and subcontractors.

(a) Accrual. (1) A contractor shall permit an employee to accrue not less than 1 hour of paid sick leave for every 30 hours worked on or in connection with a covered contract. A contractor shall aggregate an employee’s hours worked on or in connection with all covered contracts for that contractor for purposes of paid sick leave accrual.

(ii) Hours worked has the same meaning for purposes of Executive Order 13706 and this part as it does under the Fair Labor Standards Act, as set forth in 29 CFR part 785. To properly exclude time spent on non-covered work from an employee’s hours worked that count toward the accrual of paid sick leave, a contractor must accurately identify in its records the employee’s covered and non-covered hours worked, or, if the employee performs work in connection with covered contracts per workweek provided the contractor has probative evidence to support the number it uses or, if the employee performs work in connection with covered contracts, a contractor may estimate the employee’s typical number of hours worked in connection with covered contracts per workweek provided the estimate is reasonable and based on verifiable information.

(2) A contractor shall inform an employee, in writing, of the amount of paid sick leave that the employee has accrued but not used no less than once each pay period or each month, whichever interval is shorter, as well as upon a separation from employment and upon reinstatement of paid sick leave pursuant to paragraph (b)(4) of this section. A contractor’s existing procedure for informing employees of their available leave, such as notification accompanying each paycheck or an online system an employee can check at any time, may be used to satisfy or partially satisfy these requirements provided it is written (including electronically, if the contractor customarily corresponds with or makes information available to its employees by electronic means).

(3) A contractor may choose to provide an employee with at least 56 hours of paid sick leave at the beginning of each accrual year rather than allowing the employee to accrue such leave based on hours worked over time.

(i) If a contractor chooses to use the option described in this paragraph, the contractor need not comply with the accrual requirements described in paragraph (a)(1) of this section. The contractor must, however, allow carryover of paid sick leave as required by paragraph (b)(2) of this section, and
although the contractor may limit the amount of paid sick leave an employee may carry over to no less than 56 hours, the contractor may not limit the amount of paid sick leave an employee has available for use at any point as is otherwise permitted by paragraph (b)(3) of this section.

(ii) If a contractor chooses to use the option described in this paragraph and the contractor hires an employee or newly assigns the employee to work on or in connection with a covered contract after the beginning of the accrual year, the contractor may provide the employee with a prorated amount of paid sick leave based on the number of pay periods remaining in the accrual year.

(iii) A contractor may use the option described in this paragraph as to any or all of its employees in any or all accrual years.

(b) Maximum accrual, carryover, reinstatement, and payment for unused leave. (1) A contractor may limit the amount of paid sick leave an employee is permitted to accrue to not less than 56 hours in each accrual year. An accrual year is a 12-month period beginning on the date an employee’s work on or in connection with a covered contract began or any other fixed date chosen by the contractor, such as the date a covered contract began, the date the contractor’s fiscal year begins, a date relevant under State law, or the date a contractor uses for determining employees’ leave entitlements under the FMLA pursuant to §825.200 of this title.

A contractor may choose its accrual year but must use a consistent option for all, or across similarly situated groups of, employees and may not select or change any employee’s accrual year in order to avoid the paid sick leave requirements of Executive Order 13706 and this part.

(2) Paid sick leave shall carry over from one accrual year to the next. Paid sick leave carried over from the previous accrual year shall not count toward any limit the contractor sets on annual accrual.

(3) A contractor may limit the amount of paid sick leave an employee is permitted to have available for use at any point to not less than 56 hours. Accordingly, even if an employee has accrued fewer than 56 hours of paid sick leave since the beginning of the accrual year, the employee need only be permitted to accrue additional paid sick leave if the employee has fewer than 56 hours available for use.

(4) Paid sick leave shall be reinstated for employees rehired by the same contractor within 12 months after a job separation. This reinstatement requirement applies whether the employee leaves and returns to a job on or in connection with a single covered contract or works for a single contractor on or in connection with more than one covered contract, regardless of whether the employee remains employed by the contractor in between periods of working on covered contracts.

(5) Nothing in Executive Order 13706 or this part shall require a contractor to make a financial payment to an employee for accrued paid sick leave that has not been used upon a separation from employment. If a contractor nevertheless makes such a payment in an amount equal to or greater than the value of the pay and benefits the employee would have received pursuant to paragraph (c)(3) of this section had the employee used the paid sick leave, the contractor is relieved of the obligation to reinstate an employee’s accrued paid sick leave upon rehiring the employee within 12 months of the separation pursuant to paragraph (b)(4) of this section.

(c) Use. (1) The conditions described in paragraphs (d) and (e) of this section and the amount of paid sick leave the employee has available for use, a contractor must permit an employee to use paid sick leave to be absent from work for that contractor during the time the employee would have been performing work on or in connection with a covered contract or, if the contractor estimates the employee’s hours worked in connection with such contracts for purposes of accrual, during any work time because of:

(i) A physical or mental illness, injury, or medical condition of the employee;
