

Description and Estimate of the Number of Small Entities To Which the Proposed Rule Would Apply

On December 29, 2015, NMFS issued a final rule establishing a small business size standard of \$11 million in annual gross receipts for all businesses primarily engaged in the commercial fishing industry and \$7 million in annual gross receipts for all businesses primarily engaged in for-hire fishing activity (NAICS 11411) for Regulatory Flexibility Act (RFA) compliance purposes only (80 FR 81194, December 29, 2015). The North American Industry Classification System (NAICS) is the standard used by Federal statistical agencies in classifying business establishments for the purpose of collecting, analyzing, and publishing statistical data related to the U.S. business economy.

This proposed rule affects commercial and recreational fish harvesting entities engaged in the summer flounder fishery. Individually-permitted vessels may hold permits for several fisheries, harvesting species of fish that are regulated by several different FMPs, even beyond those impacted by the proposed action. Furthermore, multiple-permitted vessels and/or permits may be owned by entities affiliated by stock ownership, common management, identity of interest, contractual relationships, or economic dependency. For the purposes of the RFA analysis, the ownership entities, not the individual vessels, are considered to be the regulated entities.

Ownership entities are defined as those entities with common ownership personnel as listed on the permit application. Only permits with identical ownership personnel are categorized as an ownership entity. For example, if five permits have the same seven persons listed as co-owners on their permit applications, those seven persons would form one ownership entity that holds those five permits. If two of those seven owners also co-own additional vessels, that ownership arrangement would be considered a separate ownership entity for the purpose of this analysis.

The current ownership data set used for this analysis is based on calendar year 2015 (the most recent complete year available) and contains average gross sales associated with those permits for calendar years 2013 through 2015.

A description of the specific permits that are likely to be impacted by this action is provided below, along with a discussion of the impacted businesses, which can include multiple vessels and/or permit types.

According to the commercial ownership database, 553 affiliate firms landed summer flounder during the 2013–2015 period, with 547 of those businesses affiliates categorized as small businesses and 6 categorized as large businesses. The ownership data for the for-hire fleet indicate that there were 411 for-hire affiliate firms generating revenues from fishing recreationally for various species during the 2013–2015 period, all of which are categorized as small businesses. Although it is not possible to derive what proportion of the overall revenues came from specific fishing activities, given the popularity of summer flounder as a recreational species, it is likely that revenues generated from summer flounder recreational fishing is important for some, if not all, of these firms.

Description of the Projected Reporting, Record-Keeping, and Other Compliance Requirements of This Proposed Rule

There are no new reporting or recordkeeping requirements contained in any of the alternatives considered for this action.

Federal Rules Which May Duplicate, Overlap, or Conflict With This Proposed Rule

NMFS is not aware of any relevant Federal rules that may duplicate, overlap, or conflict with this proposed rule.

Description of Significant Alternatives to the Proposed Action Which Accomplish the Stated Objectives of Applicable Statutes and Which Minimize Any Significant Economic Impact on Small Entities

This action proposes to set commercial quotas and recreational harvest limits for the summer flounder fishery for the 2017 and 2018 fishing years that are consistent with the best scientific information available and the most recent catch limit recommendations of the Council's SSC. The proposed landings limits for 2017 include a commercial quota of 5.66 million lb (2,567 mt) and a recreational harvest limit of 3.77 million lb (1,711 mt). For 2018, the proposed measures include a commercial quota of 6.63 million lb (3,006 mt) and a recreational harvest limit of 4.42 million lb (2,004 mt).

The only other alternatives considered in this document are status quo alternatives that are identical to the summer flounder landings limits implemented in December 2015. If these specifications remained in place, they would have greater positive socioeconomic impacts than the

preferred alternatives. However, these alternatives were not selected as preferred given that they do not address the new scientific information regarding summer flounder stock status, and, therefore, would likely result in overfishing, which would be inconsistent with the FMP, National Standard 1 guidance under the Magnuson-Stevens Act, and the most recent advice of the Council's SSC. Because these alternatives are inconsistent with the purpose and need of this action, they are not considered further under this analysis.
