SUPPLEMENTARY INFORMATION:

I. Introduction

The NRC is considering renewal of Facility Operating License No. R-103, held by the Curators of the University of Missouri, which would authorize continued operation of its reactor for 20 years from date of issuance, located in the University Research Park, Columbia, Boone County, Missouri. As required by section 51.21 of title 10 of the *Code of Federal Regulations* (10 CFR), "Criteria for and identification of licensing and regulatory actions requiring environmental assessments," the NRC staff prepared an EA documenting its environmental review. Based on the results of the EA that follows, the NRC has determined not to prepare an environmental impact statement for the proposed renewed license is not required and is issuing a FONSI in accordance with 10 CFR 51.32.

II. Environmental Assessment

Facility Site and Environs

The MURR facility is located on 7.5 acres of land in the central portion of

the 84-acre University Research Park in Boone County. Boone County is located in the central part of the state and consists of an area of approximately 683 square miles (1,769 square km) and is approximately 41 miles (66 km) in its greatest north-to-south length and 22 miles (35.4 km) in its greatest east-to-west width. The University Research Park is an extension of the University of Missouri-Columbia, main campus and is located approximately 1.6 kilometers (1 mile) southwest of the main campus. The MURR facility includes a five-story reactor containment building which is centrally located and integrated into a one-story laboratory building. Immediately surrounding the MURR facility are other research buildings and parking lots associated with the University Research Park. Facilities beyond the University Research Park include a golf course to the west; campus sports arenas and fields to the northeast, east, and south; and the University's main campus. The City of Columbia is to the north. There are few permanent residences nearby with only 225 persons living within 1 kilometer (0.6 miles) of the MURR facility. The nearest permanent residence is located approximately 760 meters (0.5 miles) north of the site. The nearest dormitories are located approximately 1 kilometer (0.6 miles) from the MURR facility. The MURR is a tank-type (pressure vessel) reactor where the tank is located in an open pool. The reactor is light water moderated and cooled. It is licensed to operate at a maximum thermal steady state power level of 10 megawatts (MWt). The reactor core is located in a pressure vessel within the lined reactor pool. The reactor pool is 3 meters (10 feet) in diameter and 9 meters (30 feet) deep. The reactor is fueled with highly-enriched uranium plate-type fuel contained in eight fuel elements. A detailed description of the reactor can be found in the MURR safety analysis report (SAR). There have been no major modifications to the MURR since issuance of Operating License Amendment No. 2 on July 9, 1974, which authorized the MURR to operate at its current power level. However, the facility has added several laboratories and hot cells over the intervening time period in order to conduct research activities. A complete description of these changes will be provided in the NRC staff's safety evaluation report (SER) accompanying the issuance of the renewed license.

Description of the Proposed Action

The proposed action would renew Facility Operating License No. R-103 for an additional 20 years from the date
