Opportunity process. As a result of implementing those policies and procedures, we propose establishing the Anti-Harassment system to manage information regarding allegations of workplace harassment filed by SSA employees and SSA contractors alleging harassment by another SSA employee, as well as allegations of workplace harassment filed by SSA employees alleging harassment by an SSA contractor.

We propose establishing the Anti-Harassment system as part of our compliance efforts under Title VII of the Civil Rights Act of 1964; the Age Discrimination in Employment Act of 1967; the Americans with Disabilities Act of 1990 (ADA); the ADA Amendments Act of 2008; the Notification and Federal Employee Antidiscrimination and Retaliation Act of 2002 (No FEAR Act); and the Genetic Information Nondiscrimination Act of 2008 (GINA); and Executive Orders 11478, 11246, 13152, and 13087. These legal authorities prohibit discrimination, including harassment, based on sex, race, color, religion, national origin, age, disability, genetic information, or other protected basis.

The Anti-Harassment System will capture and house information regarding allegations of workplace harassment filed by SSA employees and SSA contractors alleging harassment by another SSA employee, and any investigation, or response, we take because of the allegation. Due to the investigatory nature of information that will be maintained in this system of records, the proposed rule would add the Anti-Harassment System to the list of SSA systems that are exempt from specific provisions of the Privacy Act pursuant to 5 U.S.C. 552a(k)(2).

Rulemaking Analyses and Notices

All comments received on or before the close of business on the comment closing date indicated above will be considered and will be available for examination in the docket at the above address. Comments received after the comment closing date will be filed in the docket and will be considered to the extent practicable. A final rule may be published at any time after close of the comment period.

Clarity of This Rule

Executive Order 12866, as supplemented by Executive Order 13563, requires each agency to write all rules in plain language. In addition to your substantive comments on this proposed rule, we invite your comments on how to make the rule easier to understand.

For example:

• Would more, but shorter, sections be better?
• Are the requirements in the rule clearly stated?
• Have we organized the material to suit your needs?
• Could we improve clarity by adding tables, lists, or diagrams?
• What else could we do to make the rule easier to understand?
• Does the rule contain technical language or jargon that is not clear?
• Would a different format make the rule easier to understand, e.g., grouping and order of sections, use of headings, paragraphing?

Regulatory Procedures

SSA will publish a final rule responding to any comments received and, if appropriate, will amend provisions of the rule.

Executive Order 12866, as Supplemented by Executive Order 13563

We consulted with the Office of Management and Budget (OMB) and determined that this proposed rule does not meet the criteria for a significant regulatory action under Executive Order 12866, as supplemented by Executive Order 13563. Therefore, OMB did not review it.

We also determined that this proposed rule meets the plain language requirement of Executive Order 12866.

Executive Order 13132 (Federalism)

This proposed rule was analyzed in accordance with the principles and criteria established by Executive Order 13132, and SSA determined that the proposed rule will not have sufficient Federalism implications to warrant the preparation of a Federalism assessment. SSA also determined that this proposed rule will not preempt any State law or State regulation or affect the States’ abilities to discharge traditional State governmental functions.

Executive Order 12372 (Intergovernmental Review)

The regulations effectuating Executive Order 12372 regarding intergovernmental consultation on Federal programs and activities apply to this proposed rule.

Regulatory Flexibility Act

We certify that this proposed rule will not have a significant economic impact on a substantial number of small entities because it affects individuals only. Therefore, the Regulatory Flexibility Act, as amended, does not require us to prepare a regulatory flexibility analysis.

Paperwork Reduction Act

This proposed rule does not create any new or affect any existing collections and, therefore, do not require Office of Management and Budget approval under the Paperwork Reduction Act.

List of Subjects in 20 CFR Part 401

Privacy and disclosure of official records and information.

Carolyn W. Colvin,
Acting Commissioner of Social Security.

For the reasons stated in the preamble, we are proposing to amend subpart B of part 401 of title 20 of the Code of Federal Regulations as set forth below:

PART 401—PRIVACY AND DISCLOSURE OF OFFICIAL RECORDS AND INFORMATION

Subpart B—[Amended]

1. The authority citation for subpart B of part 401 continues to read as follows:

2. Amend § 401.85, by adding paragraph (b)(2)(iii)(F) to read as follows:

§ 401.85 Exempt Systems.

* * * * *

(b) * * *

(ii) * * *

(F) Anti-Harassment & Hostile Work Environment Case Tracking and Records System, SSA.

* * * * *

[FR Doc. 2016–28919 Filed 12–1–16; 8:45 am]
BILLING CODE 4191–02–P
establish the 133-square mile “Dahlonega Plateau” viticultural area in portions of Lumpkin and White Counties, Georgia. The proposed viticultural area does not lie within any established viticultural area. TTB designates viticultural areas to allow vintners to better describe the origin of their wines and to allow consumers to better identify wines they may purchase. TTB invites comments on this proposed addition to its regulations.

DATES: Comments must be received by January 31, 2017.

ADDRESSES: Please send your comments on this notice to one of the following addresses:

- Internet: http://www.regulations.gov (via the online comment form for this notice as posted within Docket No. TTB–2016–0012 at “Regulations.gov,” the Federal e-rulemaking portal);
- U.S. Mail: Director, Regulations and Rulings Division, Alcohol and Tobacco Tax and Trade Bureau, 1310 G Street NW., Box 12, Washington, DC 20005; or
- Hand delivery/courier in lieu of mail: Alcohol and Tobacco Tax and Trade Bureau, 1310 G Street NW., Suite 400, Washington, DC 20005.

See the Public Participation section of this notice for specific instructions and requirements for submitting comments, and for information on how to request a public hearing or view or obtain copies of the petition and supporting materials.

FOR FURTHER INFORMATION CONTACT: Karen A. Thornton, Regulations and Rulings Division, Alcohol and Tobacco Tax and Trade Bureau, 1310 G Street NW., Box 12, Washington, DC 20005; phone 202–453–1039, ext. 175.

SUPPLEMENTARY INFORMATION:

Background on Viticultural Areas

TTB Authority

Section 105(e) of the Federal Alcohol Administration Act (FAA Act), 27 U.S.C. 205(e), authorizes the Secretary of the Treasury to prescribe regulations for the labeling of wine, distilled spirits, and malt beverages. The FAA Act provides that these regulations should, among other things, prohibit consumer deception and the use of misleading statements on labels and ensure that labels provide the consumer with adequate information as to the identity and quality of the product. The Alcohol and Tobacco Tax and Trade Bureau (TTB) administers the FAA Act pursuant to section 1111(d) of the Homeland Security Act of 2002, codified at 6 U.S.C. 531(d). The Secretary has delegated various authorities through Treasury Department Order 120–01, dated December 10, 2013, (superseding Treasury Order 120–01, dated January 24, 2003), to the TTB Administrator to perform the functions and duties in the administration and enforcement of these provisions.

Part 4 of the TTB regulations (27 CFR part 4) authorizes TTB to establish definitive viticultural areas and regulate the use of their names as appellations of origin on wine labels and in wine advertisements. Part 9 of the TTB regulations (27 CFR part 9) sets forth standards for the preparation and submission of petitions for the establishment or modification of American viticultural areas (AVAs) and lists the approved AVAs.

Definition

Section 4.25(e)(1)(i) of the TTB regulations (27 CFR 4.25(e)(1)(i)) defines a viticultural area for American wine as a delimited grape-growing region having distinguishing features, as described in part 9 of the regulations, and a name and a delineated boundary, as established in part 9 of the regulations. These designations allow vintners and consumers to attribute a given quality, reputation, or other characteristic of a wine made from grapes grown in an area to the wine’s geographic origin. The establishment of AVAs allows vintners to describe more accurately the origin of their wines to consumers and helps consumers to identify wines they may purchase. Establishment of an AVA is neither an approval nor an endorsement by TTB of the wine produced in that area.

Requirements

Section 4.25(e)(2) of the TTB regulations (27 CFR 4.25(e)(2)) outlines the procedure for proposing an AVA and provides that any interested party may petition TTB to establish a grape-growing region as an AVA. Section 9.12 of the TTB regulations (27 CFR 9.12) prescribes the standards for petitions for the establishment or modification of AVAs. Petitions to establish an AVA must include the following:

- Evidence that the area within the proposed AVA boundary is nationally or locally known by the viticultural area name specified in the petition;
- An explanation of the basis for defining the boundary of the proposed AVA;
- A narrative description of the features of the proposed AVA affecting viticulture, such as climate, geology, soils, physical features, and elevation, that make the proposed AVA distinctive and distinguish it from adjacent areas outside the proposed boundary;
- The appropriate United States Geological Survey (USGS) map(s) showing the location of the proposed AVA, with the boundary of the proposed AVA clearly drawn thereon; and
- A detailed narrative description of the proposed AVA boundary based on USGS map markings.

Dahlonega Plateau Petition

TTB received a petition from Amy Booker, President of the Dahlonega–Lumpkin Chamber & Visitors Bureau, on behalf of local vineyard and winery owners, proposing to establish the “Dahlonega Plateau” AVA. The proposed AVA is located in portions of Lumpkin and White Counties, in Georgia. The proposed AVA encompasses approximately 133 square miles. Seven wineries and 8 commercial vineyards covering a total of approximately 110 acres are distributed throughout the proposed AVA. The petition notes that there are an additional 12 acres of vineyards planned for planting within the proposed AVA in the next few years. According to the petition, the distinguishing features of the proposed Dahlonega Plateau AVA are its topography and climate. Unless otherwise noted, all information and data pertaining to the proposed AVA contained in this document are from the petition for the proposed Dahlonega Plateau AVA and its supporting exhibits.

Name Evidence

The proposed Dahlonega Plateau AVA derives its name from a long, narrow, northeast-southwest trending plateau in the northern foothills of the Georgia Piedmont known as the Dahlonega Plateau. The plateau covers most of Lumpkin, Dawson, White, Pickens, and Cherokee Counties. However, the proposed AVA is limited to the northeastern portion of the plateau, in Lumpkin and White Counties, due to a lack of viticulture in the southwestern region of the plateau, as well topographical and climatic differences.

The town of Dahlonega, which is located within the proposed AVA, derived its name from the Cherokee word “dalonige,” which means “yellow” or “golden,” due to the presence of gold in the region. The town was named in 1837, and the geological feature derives its name, in part, from the name of the town. The petition states that the first written reference to the plateau was in a 1911 scientific paper by geologist L.C. Glenn, who...
noted, “In the Chestatee basin about [the
town of] Dahlonega the upland is an
old, well-dissected plateau * * *.”1
The petition lists several other
professional papers and books, both
historical and contemporary, which
describe a geological feature known as
the “Dahlonega Plateau.” These sources
are listed in the “References” section
of the petition. Additionally, an excerpt
from a contemporary travel guide
describes the region of the proposed
AVA as follows: “In the northeastern
section of the Piedmont lies the
Dahlonega Plateau, a deeply eroded
region of steep, forested hills and
narrow valleys * * *.”2 An online
travel site states, “A broad, high plain
shadowed by some of Georgia’s highest
mountains, the Dahlonega Plateau offers
near perfect growing conditions [for
wine grapes].”3 Finally, the petition
includes a 1976 map of the
physiographic regions of Georgia, from
the Georgia Department of Natural
Resources, which includes a region
titled “Dahlonega Uplands/Dahlonega
Plateau.”

**Boundary Evidence**

The northern and northeastern
boundaries of the proposed Dahlonega
Plateau AVA follow the 1,800-foot
elevation contour and separate the
proposed AVA from the higher, steeper
slopes of the Blue Ridge Mountains. The
proposed eastern and southeastern
boundaries follow a series of straight
d lines drawn between roads and
elevation points on the USGS
maps in order to separate the proposed
AVA from the southwestern portion of
the plateau, which has a different
topography and climate.

**Distinguishing Features**

The distinguishing features of the
proposed Dahlonega Plateau AVA are its
topography and climate.

**Topography**

The topography of the proposed AVA
is characterized by broad, rounded
hills, separated by wide valleys.

According to the petition, the
distinctive topography is due to the
underlying geology of the proposed
AVA, which is comprised of layers of
rocks that weather uniformly and are
moderately resistant to erosion. Over
time, wind and water have gradually
worn down the underlying rocks and
formed a gently rolling landscape with
moderate elevations that are lower than
the elevations to the north and east and
higher than the elevations to the south
and west.

By contrast, the geology of Blue Ridge
Mountains to the north and northeast
of the proposed AVA is comprised of
rocks that are structurally higher and more
erosion-resistant than those of the
proposed AVA. Because the rocks do
not erode as easily, the Blue Ridge
Mountains generally have higher
elevations than are found within the
proposed Dahlonega Plateau AVA.

Additionally, the peaks within the Blue
Ridge Mountains are more rugged and
the slopes are steeper because the
surfaces have not been as softened or
rounded by erosion as the hilltops of the
proposed AVA.

To the immediate east and southeast
of the proposed AVA are the Hightower
Ridges. The geology of these ridges is
characterized by strongly-layered,
alternating zones of weak rocks and
more resistant rocks. These alternating
zones have a strong northeast-southwest
orientation. Because these layers erode
at different rates, the resulting
topography has a “washboard”
appearance, with steep, parallel ridges
(forming from the more resistant layers)
separated by narrow valleys (formed
from the less resistant layers). Compared
to the proposed AVA, the valleys
generally have lower minimum
elevations and the ridges generally have
higher maximum elevations. Further
south and running parallel to the
Hightower Ridges is the Central
Uplands region. The topography of this
region is similar to that of the proposed
AVA, with broad valleys and rolling
hills, but with a wider range of
elevations.

To the west and southwest of the
proposed AVA, in the southwestern
portion of the geological feature known
as the Dahlonega Plateau, the
underlying geology is comprised of
rocks that are less erosion-resistant and
structurally lower than the rocks in the
northeastern portion of the plateau,
which are within the proposed AVA.
Because the rocks are more susceptible
to erosion, the topography of the
southwestern portion of the plateau is
generally flatter and lower than within
the proposed AVA.

The following table shows the
minimum, maximum, and mean
elevations for the proposed Dahlonega
Plateau AVA and the surrounding areas,
which were described in the petition.4

</tbody>
</table>

The topography of the proposed
Dahlonega Plateau AVA and the
surrounding regions has an effect on
viticulture. Because the hills within the
proposed AVA are gently sloped and
have moderate elevations, the floors of

---

4 Figure 7 of the petition shows the location of the comparison regions in relation to the proposed AVA.

5 This information is also presented as a map in Figure 8 of the petition.
the intervening valleys are not highly shadowed and receive adequate sunlight for vineyards. The hillsides within the proposed AVA are also suitable for vineyards because they are not so steep as to make mechanical cultivation difficult or dangerous. The petition also states that the proposed AVA’s location between higher and lower elevations allows cool nighttime air draining from the higher elevations of the Blue Ridge Mountains to flow through the proposed AVA and into the lower elevations to the south and west. As a result, vineyards within the proposed AVA benefit from cool nighttime temperatures but do not have a high risk of frost because the cool air does not settle.

By contrast, the petition states that the topography of the regions surrounding the proposed AVA is less suitable for vineyards. Within the Blue Ridge Mountains and Hightower Ridges to the north, east, and southeast of the proposed AVA, the narrow valleys are often shadowed by the surrounding steep, high slopes, meaning less light would reach any vineyard planted on the valley floors. The steepness of the slopes would also make mechanical cultivation of any vineyard planted on the sides of the mountains impractical. In the lower elevations of the regions to the south and west of the proposed AVA, cool air draining from higher elevations eventually settles and pools and would increase the risk of frost damage in any vineyard planted there.

Climate

Topography, and more specifically elevation, also affects the climate of the proposed Dahlonega Plateau AVA and the surrounding regions. The petition included information on the length of the growing season, growing degree day accumulations, and precipitation amounts within the proposed AVA and the surrounding regions. According to the petition, the proposed AVA’s location between higher elevations to the north, east, and southeast and lower elevations to the southwest and west create climatic conditions that are ideal for growing grape varietals such as Cabernet Franc, Cabernet Sauvignon, Chardonnay, and Merlot.

Length of Growing Season: The petition states that the length of the growing season within the proposed Dahlonega Plateau AVA provides ample time for most Vitis vinifera (V. vinifera) varietals of grapes to ripen. The petition included the average minimum, maximum, and mean length of the growing season within the proposed AVA and the surrounding areas. Because the growing season length within a given region may fluctuate based on the range of elevations within that region, the petition also listed the percentage of terrain within each region that is within a given range of growing season length. The growing season data is shown in the following tables.

</table>

The data in Table 2 shows that the mean growing season length is shorter in regions with high elevations and longer in regions with lower elevations.

The proposed Dahlonega Plateau AVA, with its moderate elevations, has a mean growing season length that is longer than the regions to the north and northeast, which have higher elevations, and is shorter than the regions to the south and west, which have lower elevations.

Table 3 shows that over 60 percent of the terrain within the proposed AVA has a growing season length of 190 to 200 days, which is a higher percentage of terrain with that length of a growing season than any of the surrounding regions except the Hightower Ridges region to the east. The petition states that guidelines for selecting vineyard sites based on growing season lengths, published by the College of Agriculture and Life Sciences at Cornell University in conjunction with the Institute for the Application of Geospatial Technology, do not recommend planting vineyards in regions with growing seasons shorter...
than 160 days because most grape varietals will not have time to ripen fully. Sites with growing seasons of between 180 and 190 days are described as “good,” while sites with growing seasons between 190 and 200 days are “not limited by growing season.” Sites with growing seasons of over 200 days are considered suitable for growing varietals that need a long time to mature. Based on this guidance, vineyard owners can plant many different grape varietals in the majority of the proposed AVA without the fear of having too short of a growing season for the grapes to ripen.

Growing Degree Days: The petition notes that although growing season length is important because it reflects the number of frost-free days, the temperatures that are reached during that frost-free period are just as important to viticulture. The petition states that grape vines do not grow and fruit does not mature when temperatures are below 50 degrees Fahrenheit (F). Therefore, a region that has a 180-day frost-free growing season would still be unsuitable for viticulture if temperatures seldom or never rise above 50 degrees F.

Growing degree day (GDD) accumulations are a way of describing the frequency that temperatures within a region exceed 50 degrees F during the growing season.\(^9\) The Winkler zone scale ranges from the very cool Zone I, for regions accumulating 2,500 or fewer GDDs in a growing season, to the very warm Zone V, for regions accumulating over 4,000 GDDs. The petition included the information in the following table which shows the percentage of the proposed AVA and the surrounding areas that can be categorized into each of the five Winkler zones.\(^10\)

</tbody>
</table>

The data in the table shows that all of the terrain within the proposed Dahlonega Plateau AVA is classified in the intermediate ranges of the Winkler scale (Zones III and IV). The proposed AVA has a higher percentage of terrain within Zone IV than any of the surrounding regions and lacks any terrain in the very cool Zone I, the cool Zone II, or the very warm Zone V. According to the petition, regions classified as Zones III or IV, such as the proposed AVA, are suitable for growing a diverse range of late-ripening varietals of *V. vinifera*, including Cabernet Sauvignon and Merlot. Regions that are categorized as Zones I and II have temperatures that are too low to ripen the varietals grown within the proposed AVA and are more suitable for growing cold-hardy French–American hybrid varietals and early ripening *V. vinifera* varietals such as Riesling and Pinot Noir. Finally, the petition states that regions categorized as the very warm Zone V are best suited for growing long-season varietals of wine grapes that tolerate the high heat, such as Muscadine, and for growing table grapes.

Precipitation: According to the petition, the rising elevations of the proposed AVA and the regions to the north and east cause the moisture-laden winds travelling inland from the Gulf of Mexico and Atlantic Ocean to drop their rain. Areas with higher elevations typically receive more annual rainfall than regions with lower elevations. The petition included information on the mean annual, growing season, and winter precipitation amounts for the proposed Dahlonega Plateau AVA and the surrounding regions. The following table is derived from information included in the petition. All data was gathered from 1981–2010 climate normals.

<table>

</table>

\(^9\)In the Winkler climate classification system, annual heat accumulation during the growing season, measured in annual GDDs, defines climatic regions. One GDD accumulates for each degree Fahrenheit that a day’s mean temperature is above 50 degrees F, the minimum temperature required for grapevine growth. See Albert J. Winkler, *General Viticulture* (Berkeley: University of California Press, 1974), pages 61–64.

\(^10\)The growing degree day data for the proposed AVA and the surrounding regions was calculated using the PRISM Climate Group’s 1981–2010 climate normals. The Parameter Elevation Regression on Independent Slopes Model (PRISM) climate data mapping system combined climate normals gathered from weather stations, along with other factors such as elevation, longitude, slope angles, and solar aspect to estimate the general climate patterns for the proposed AVA and the surrounding regions. Climate normals are only calculated every 10 years, using 30 years of data, and at the time the petition was submitted, the most recent climate normals available were from the period of 1981–2010. [PRISM Climate Group, Oregon State University, http://prism.oregonstate.edu, created 4 February 2004].

\(^11\)This information is also presented as a map in Figure 19 of the petition.

\(^12\)This information is also presented as a map in Figure 20 of the petition.
The data in the table shows that annual rainfall amounts within the proposed AVA are in the intermediate range. The regions to the north and east generally receive more rainfall annually than the proposed AVA, and the regions to the south and west generally receive less. The petition states that vineyard irrigation within the proposed AVA is seldom necessary because the average annual amount of rainfall within the proposed AVA is sufficient for the adequate hydration of grapevines.

Finally, the petition states that the amount of rainfall a region receives during the winter months has an effect on viticulture. Excessive precipitation during the winter months can delay bud break and/or pruning in vineyards, which can lead to a late harvest and a higher probability of fruit remaining on the vine when damaging fall frosts occur. Delayed bud break is less likely within the proposed AVA than in the higher elevations to the north and east because the proposed AVA has lower winter rainfall amounts. However, the possibility of delayed bud break within the proposed AVA is higher than within the lower elevations of the regions to the south and west, because those regions typically receive less winter precipitation.

Summary of Distinguishing Features

In summary, the evidence provided in the petition indicates that the viticulturally significant geographic features of the proposed Dahlonega Plateau AVA distinguish it from the surrounding regions in each direction. With respect to topography, the proposed AVA is characterized by broad, rounded hilltops, wide valleys, gentle slopes, and moderate elevations. By contrast, the regions to the north and northeast of the proposed AVA, within the Blue Ridge Mountains, feature high elevations and steep, rugged slopes. To the east and southeast of the proposed AVA, within the Hightower Ridges, the topography has a “washboard” appearance, with high, steep ridges separated by narrow valleys. To the west and southwest of the proposed AVA, the topography is generally flatter and elevations are lower.

Temperatures within the proposed Dahlonega Plateau are suitable for growing most V. vinifera varietals of grapes. The mean growing season length within the proposed AVA is longer than within the regions to the north and northeast and shorter than within the regions to the south and west. With respect to GDDs, the proposed AVA is classified in the intermediate Winkler Zones III and IV, with the majority of the proposed AVA classified as Zone IV. The regions to the north and northeast of the proposed AVA are primarily classified as Zone III and also contain areas classified as Zones I and II. The regions to the southeast and west have areas that are classified as the very warm Zone V.

Finally, precipitation amounts within the proposed AVA provide sufficient hydration for grapevines, making irrigation seldom necessary. The regions to the north and east of the proposed AVA generally receive more rainfall, and regions to the south and west generally receive less.

TTB Determination

TTB concludes that the petition to establish the Dahlonega Plateau viticultural area warrants consideration and public comment, as invited in this notice of proposed rulemaking.

Boundary Description

See the narrative description of the boundary of the petitioned-for viticultural area in the proposed regulatory text published at the end of this proposed rule.

Maps

The petitioner provided the required maps, and they are listed below in the proposed regulatory text.

Impact on Current Wine Labels

Part 4 of the TTB regulations prohibits any label reference on a wine that indicates or implies an origin other than the wine’s true place of origin. For a wine to be labeled with an AVA name, at least 85 percent of the wine must be derived from grapes grown within the area represented by that name, and the wine must meet the other conditions listed in § 4.25(e)(3) of the TTB regulations. If the wine is not eligible for labeling with an AVA name and that name appears in the brand name, then the label is not in compliance and the bottler must change the brand name and obtain approval of a new label. Similarly, if the AVA name appears in another reference on the label in a misleading manner, the bottler would have to obtain approval of a new label. Different rules apply if a wine has a brand name containing an AVA name that was used as a brand name on a label approved before July 7, 1986. See § 4.39(i)(2) of the TTB regulations for details.

If TTB establishes this proposed viticultural area, its name, “Dahlonega Plateau,” will be recognized as a name of viticultural significance. If the AVA name appears in another reference on the label in a misleading manner, the bottler would have to obtain approval of a new label. Different rules apply if a wine has a brand name containing an AVA name that was used as a brand name on a label approved before July 7, 1986. See § 4.39(i)(2) of the TTB regulations for details.

TTB invites comments from interested members of the public on whether it should establish the proposed viticultural area. TTB is also interested in receiving comments on the
sufficiency and accuracy of the name, boundary, soils, climate, and other required information submitted in support of the petition. Please provide any available specific information in support of your comments.

Because of the potential impact of the establishment of the proposed Dahlonega Plateau AVA on wine labels that include the term “Dahlonega Plateau” as discussed above under Impact on Current Wine Labels, TTB is particularly interested in comments regarding whether there will be a conflict between the proposed area name and currently used brand names. If a commenter believes that a conflict will arise, the comment should describe the nature of that conflict, including any anticipated negative economic impact that approval of the proposed viticultural area will have on an existing viticultural enterprise. TTB is also interested in receiving suggestions for ways to avoid conflicts, for example, by adopting a modified or different name for the viticultural area.

Submitting Comments

You may submit comments on this notice by using one of the following three methods:

- **Federal e-Rulemaking Portal:** You may send comments via the online comment form posted with this notice on “Regulations.gov,” the Federal e-rulemaking portal, at http://www.regulations.gov. A direct link to that docket is available under Notice No. 166 on the TTB Web site at https://www.ttb.gov/wine/wine-rulemaking.shtml. Supplemental files may be attached to comments submitted via Regulations.gov. For complete instructions on how to use Regulations.gov, visit the site and click on the “Help” tab.

- **U.S. Mail:** You may send comments via postal mail to the Director, Regulations and Rulings Division, Alcohol and Tobacco Tax and Trade Bureau, 1310 G Street NW., Box 12, Washington, DC 20005.

- **Hand Delivery/Courier:** You may hand-carry your comments or have them hand-carried to the Alcohol and Tobacco Tax and Trade Bureau, 1310 G Street NW., Suite 400, Washington, DC 20005.

Please submit your comments by the closing date shown above in this notice. Your comments must reference Notice No. 166 and include your name and mailing address. Your comments also must be made in English, be legible, and be written in language acceptable for public disclosure. TTB does not acknowledge receipt of comments, and TTB considers all comments as originals.

In your comment, please clearly indicate if you are commenting on your own behalf or on behalf of an association, business, or other entity. If you are commenting on behalf of an entity, your comment must include the entity’s name, as well as your name and position title. If you comment via Regulations.gov, please enter the entity’s name in the “Organization” blank of the online comment form. If you comment via postal mail or hand delivery/courier, please submit your entity’s comment on letterhead.

You may also write to the Administrator before the comment closing date to ask for a public hearing. The Administrator reserves the right to determine whether to hold a public hearing.

Confidentiality

All submitted comments and attachments are part of the public record and are subject to public disclosure. Do not enclose any material in your comments that you consider to be confidential or inappropriate for public disclosure.

Public Disclosure

TTB will post, and you may view, copies of this notice, selected supporting materials, and any online or mailed comments received about this proposal within Docket No. TTB–2016–0012 on the Federal e-rulemaking portal, Regulations.gov, at http://www.regulations.gov. A direct link to that docket is available under Notice No. 166 on the TTB Web site at https://www.ttb.gov/wine/wine-rulemaking.shtml. Supplemental files may be attached to comments submitted via Regulations.gov. For complete instructions on how to use Regulations.gov, visit the site and click on the “Help” tab.

All posted comments will display the commenter’s name, organization (if any), city, and State, and, in the case of mailed comments, all address information, including email addresses. TTB may omit voluminous attachments or material that the Bureau considers unsuitable for posting.

You may also view copies of this notice, all related petitions, maps, and other supporting materials, and any electronic or mailed comments that TTB receives about this proposal by appointment at the TTB Information Resource Center, 1310 G Street NW., Washington, DC 20005. You may also reach the relevant docket through the Regulations.gov search page at http://www.regulations.gov. For information on how to use Regulations.gov, click on the site’s “Help” tab.

The proposed regulation imposes no new reporting, recordkeeping, or other administrative requirement. Any benefit derived from the use of a viticultural area name would be the result of a proprietor’s efforts and consumer acceptance of wines from that area. Therefore, no regulatory flexibility analysis is required.

Executive Order 12866

It has been determined that this proposed rule is not a significant regulatory action as defined by Executive Order 12866 of September 30, 1993. Therefore, no regulatory assessment is required.

Drafting Information

Karen A. Thornton of the Regulations and Rulings Division drafted this proposed rule.

List of Subjects in 27 CFR Part 9

Wine.

Proposed Regulatory Amendment

For the reasons discussed in the preamble, TTB proposes to amend title 27, chapter I, part 9, Code of Federal Regulations, as follows:

PART 9—AMERICAN VITICULTURAL AREAS

1. The authority citation for part 9 continues to read as follows:

2. Subpart C is amended by adding §9.11 to read as follows:

   §9.11 Dahlonega Plateau.

   (a) Name. The name of the viticultural area described in this section is “Dahlonega Plateau”. For purposes of part 4 of this chapter, “Dahlonega Plateau” is a term of viticultural significance.

   (b) Approved maps. The 9 United States Geological Survey (USGS) 1:24,000 scale topographic maps used to determine the boundary of the Dahlonega Plateau viticultural area are titled:
SUMMARY: On October 4, 2016, OSHA published a Notice of Proposed Rulemaking (NPRM) titled “Standards Improvement Project-Phase IV.” The period for submitting comments is being extended 30 days to allow parties affected by the rule more time to review the proposed rule and collect information and data necessary for comments.

DATES: Comments must be submitted by January 4, 2017. All submissions must bear a postmark or provide other evidence of the submission date.

ADDRESSES: Submit comments and additional material using any of the following methods:
- Facsimile. Commenters may fax submissions, including any attachments that are no longer than 10 pages in length, to the OSHA Docket Office at (202) 693–1648; OSHA does not require hard copies of these documents. Commenters must submit lengthy attachments that supplement these documents (e.g., studies, journal articles) to the OSHA Docket Office, Technical Data Center, Room N3653, U.S. Department of Labor, 200 Constitution Ave. NW., Washington, DC 20210. These attachments must clearly identify the commenter’s name, date, subject, and docket number (OSHA–2012–0007) so the Agency can attach them to the appropriate comments.
- Regular mail, express mail, hand (courier) delivery, or messenger service. Submit a copy of comments and any additional material (e.g., studies, journal articles) to the OSHA Docket Office, Docket No. OSHA–2012–0007, Technical Data Center, Room N3653, U.S. Department of Labor, 200 Constitution Avenue NW., Washington, DC 20210; telephone: (202) 693–2350 (TDY number: (877) 889–5627). Note that security procedures may result in significant delays in receiving comments and other written materials by regular mail. Contact the OSHA Docket Office for information about security procedures concerning delivery of materials by express mail, hand delivery, or messenger service. The hours of operation for the OSHA Docket Office are 10:00 a.m.–3:30 p.m., e.t.

Instructions. All submissions received must include the Agency name and the docket number for this rulemaking (OSHA–2012–0007) plus all submissions, including any personal information provided, in the public
