- k. *Description of Request:* The licensee requests a temporary variance of the minimum flow requirements in the Rapid River below the Middle Dam

development due to drought conditions. License Article 402, in part, requires the licensee to release from September 16 through the start of the spring refill of Richardson Lake, a minimum flow of 472 cubic feet per second (cfs). The licensee explains that due to drought conditions, Richardson Lake is below its long term average. Considering a dry long term precipitation forecast and the impending winter freeze up, the licensee is concerned that the reservoir may not refill by spring as intended, which could cause additional water level and minimum flow issues in the spring of 2017. Therefore in order to conserve as much fall runoff as possible, the licensee is requesting to reduce the minimum flow to 200 cfs until April 23, 2017, at which time a minimum flow of 382 cfs would be released in accordance with the requirements of Article 402.
