(2) If your non-linear grant allows for multi-year payments, such as a short term grant issued for energy site-specific testing, you may request that your initial rent bill be for the full term of the grant instead of the initial rent bill periods provided under paragraph (a)(1)(i) or (ii) of this section.

(b) You must make all rental payments for linear rights-of-way according to the payment plan described in § 2806.24.

* * * * *

(d) You must make all rental payments as instructed by us or as provided for by Secretarial order or legislative authority.

■ 31. Amend § 2806.13 by:

■ a. Revising the section heading and paragraph (a);

■ b. Redesignating paragraph (e) as paragraph (f); and

■ c. Adding new paragraphs (e) and (g).
The revisions and additions read as follows:

§ 2806.13 What happens if I do not pay rents and fees or if I pay the rents or fees late?

(a) If the BLM does not receive the rent or fee payment required in subpart 2806 within 15 calendar days after the payment was due under § 2806.12, we will charge you a late payment fee of \$25 or 10 percent of the amount you owe, whichever is greater, per authorization.

* * * * *

(e) Subject to applicable laws and regulations, we will retroactively bill for uncollected or under-collected rent, fees, and late payments, if:

(1) A clerical error is identified;

(2) An adjustment to rental schedules is not applied; or

(3) An omission or error in complying with the terms and conditions of the authorized right-of-way is identified.

* * * * *

(g) We will not approve any further activities associated with your right-of-way until we receive any outstanding payments that are due.

■ 32. In § 2806.20, revise paragraph (c) to read as follows:

§ 2806.20 What is the rent for a linear right-of-way grant?

* * * * *

(c) You may obtain a copy of the current Per Acre Rent Schedule from any BLM State, district, or field office or by writing: U.S. Department of the Interior, Bureau of Land Management, 20 M Street SE., Room 2134LM, Washington, DC 20003. We also post the current rent schedule at <http://www.blm.gov>.

■ 33. In § 2806.22, revise the second sentence of paragraph (a) to read as follows:

§ 2806.22 When and how does the Per Acre Rent Schedule change?

(a) * * * For example, the average annual change in the IPD-GDP from 1994 to 2003 (the 10-year period immediately preceding the year (2004) that the 2002 National Agricultural Statistics Service Census data became available) was 1.9 percent. * * *

* * * * *

§ 2806.23 [Amended]

■ 34. Amend § 2806.23 by removing paragraph (b) and redesignating paragraph (c) as paragraph (b).

■ 35. In § 2806.24, revise paragraph (c) to read as follows:

§ 2806.24 How must I make rental payments for a linear grant?

* * * * *

(c) *Proration of payments.* The BLM prorates the first year rental amount based on the number of months left in the calendar year after the effective date of the grant. If your grant requires, or you chose a 10-year payment term, or multiples thereof, the initial rent bill consists of the remaining partial year plus the next 10 years, or multiple thereof.

■ 36. Amend § 2806.30 by:

■ a. Revising paragraphs (a)(1) and (2);

■ b. Removing paragraph (b); and

■ c. Redesignating paragraph (c) as paragraph (b).

The revisions read as follows:

§ 2806.30 What are the rents for communication site rights-of-way?

(a) *Rent schedule.* (1) The BLM uses a rent schedule to calculate the rent for communication site rights-of-way. The schedule is based on nine population strata (the population served), as depicted in the most recent version of the Ranally Metro Area (RMA) Population Ranking, and the type of communication use or uses for which we normally grant communication site rights-of-way. These uses are listed as part of the definition of “communication use rent schedule,” set out at § 2801.5(b). You may obtain a copy of the current schedule from any BLM State, district, or field office or by writing: U.S. Department of the Interior, Bureau of Land Management, 20 M Street SE., Room 2134LM, Washington, DC 20003. We also post the current communication use rent schedule at <http://www.blm.gov>.

(2) We update the schedule annually based on two sources: The U.S. Department of Labor Consumer Price Index for All Urban Consumers, U.S. City Average (CPI-U), as of July of each year (difference in CPI-U from July of one year to July of the following year), and the RMA population rankings.

* * * * *

■ 37. In § 2806.34, revise the second sentence of paragraph (b)(4) to read as follows:

§ 2806.34 How will BLM calculate the rent for a grant or lease authorizing a multiple-use communication facility?

* * * * *

(b) * * *

(4) * * * This paragraph (b)(4) does not apply to facilities exempt from rent under § 2806.14(a)(4) except when the facility also includes ineligible facilities.

■ 38. In § 2806.43, revise the third sentence of paragraph (a) to read as follows:

§ 2806.43 How does BLM calculate rent for passive reflectors and local exchange networks?

(a) * * * For passive reflectors and local exchange networks not covered by a Forest Service regional schedule, we use the provisions in § 2806.70 to determine rent. * * *

* * * * *

■ 39. Amend § 2806.44 by revising the section heading, adding introductory text, and revising paragraph (a) to read as follows:

§ 2806.44 How will BLM calculate rent for a facility owner's or facility manager's grant or lease which authorizes communication uses?

This section applies to a grant or lease that authorizes a mixture of communication uses, some of which are subject to the communication use rent schedule and some of which are not. We will determine rent for these leases under the provisions of this section.

(a) The BLM establishes the rent for each of the uses in the facility that are not covered by the communication use rent schedule using § 2806.70.

* * * * *

■ 40. Remove the undesignated centered heading preceding § 2806.50.

§ 2806.50 [Redesignated as § 2806.70]

■ 41. Redesignate § 2806.50 as § 2806.70.

■ 42. Add an undesignated centered heading and §§ 2806.50, 2806.51, 2806.52, 2806.54, 2806.56, and 2806.58 to read as follows:

Solar Energy Rights-of-Way

Sec.

2806.50 Rents and fees for solar energy rights-of-way.

2806.51 Scheduled Rate Adjustment.

2806.52 Rents and fees for solar energy development grants.

2806.54 Rents and fees for solar energy development leases.

2806.56 Rent for support facilities authorized under separate grant(s).

2806.58 Rent for energy development testing grants.

§ 2806.50 Rents and fees for solar energy rights-of-way.

If you hold a right-of-way authorizing solar energy site-specific or project-area testing, or solar energy development, you must pay an annual rent and fee in accordance with this section and subpart. Your solar energy right-of-way authorization will either be a grant (if issued under subpart 2804) or a lease (if issued under subpart 2809). Rents and fees for either type of authorization consist of an acreage rent that must be paid prior to issuance of the authorization and a phased-in MW capacity fee. Both the acreage rent and the phased-in MW capacity fee are charged and calculated consistent with § 2806.11 and prorated consistent with § 2806.12(a). The MW capacity fee will vary depending on the size and technology of the solar energy development project.

§ 2806.51 Scheduled Rate Adjustment.

(a) The BLM will adjust your acreage rent and MW capacity fee over the course of your authorization as described in these regulations. For new grants or leases, you may choose either

the standard rate adjustment method (see § 2806.52(a)(5) and (b)(3) for grants; see § 2806.54(a)(4) or (c) for leases) or the scheduled rate adjustment method (see § 2806.52(d) for grants; see § 2806.54(d) for leases). Once you select a rate adjustment method, that method will be fixed until you renew your grant or lease (see § 2807.22).

(b) For new grants or leases, if you select the scheduled rate adjustment method you must notify the BLM of your decision in writing. Your decision must be received by the BLM before your grant or lease is issued. If you do not select the scheduled rate adjustment method, the standard rate adjustment method will apply.

(c) If you hold a grant that is in effect prior to January 18, 2017, you may either accept the standard rate adjustment method or request in writing that the BLM apply the scheduled rate adjustment method, as set forth in § 2806.52(d), to your grant. To take advantage of the scheduled rate adjustment option, your request must be received by the BLM before December 19, 2018. The BLM will continue to apply the standard rate adjustment method to adjust your rates unless and until it receives your request to use the scheduled rate adjustment method.

§ 2806.52 Rents and fees for solar energy development grants.

You must pay an annual acreage rent and MW capacity fee for your solar energy development grant as follows:

(a) *Acreage rent.* The BLM will calculate the acreage rent by multiplying the number of acres (rounded up to the nearest tenth of an acre) within the authorized area times the annual per acre zone rate from the solar energy acreage rent schedule in effect at the time the authorization is issued.

(1) *Per acre zone rate.* The annual per acre zone rate from the solar energy acreage rent schedule is calculated using the per acre zone value (as assigned under paragraph (a)(2) of this section), encumbrance factor, rate of return, and the annual adjustment factor. The calculation for determining the annual per acre zone rate is $A \times B \times C \times D = E$ where:

(i) A is the per acre zone value = the same per acre zone values described in the linear rent schedule in § 2806.20(c);

(ii) B is the encumbrance factor = 100 percent;

(iii) C is the rate of return = 5.27 percent;

(iv) D is the annual adjustment factor = the average annual change in the IPD-GDP for the 10-year period immediately preceding the year that the NASS

Census data becomes available (see § 2806.22(a)). The BLM will adjust the per acre zone rates each year based on the average annual change in the IPD–GDP as determined under § 2806.22(a). Adjusted rates are effective each year on January 1; and

(v) *E* is the annual per acre zone rate.

(2) *Assignment of counties.* The BLM will calculate the per acre zone rate in paragraph (a)(1) of this section by using a State-specific factor to assign a county to a zone in the solar energy acreage rent schedule. The BLM will calculate a State-specific factor and apply it to the NASS data (county average per acre land and building value) to determine the per acre value and assign a county (or other geographical area) to a zone. The State-specific factor represents the percent difference between improved agricultural land and unimproved rangeland values, using NASS data. The calculation for determining the State-specific factor is $(A/B) - (C/D) = E$ where:

(i) *A* = the NASS Census statewide average per acre value of non-irrigated acres;

(ii) *B* = the NASS Census statewide average per acre land and building value;

(iii) *C* = the NASS Census total statewide acres in farmsteads, homes, buildings, livestock facilities, ponds, roads, wasteland, etc.;

(iv) *D* = the total statewide acres in farms; and

(v) *E* = the State-specific percent factor or 20 percent, whichever is greater.

(3) The initial assignment of counties to the zones on the solar energy acreage rent schedule will be based upon the most recent NASS Census data (2012) for years 2016 through 2020. The BLM may on its own or in response to requests consider making regional adjustments to those initial assignments, based on evidence that the NASS Census values do not accurately reflect the value of the BLM-managed lands in a given area. The BLM will update this rent schedule once every 5 years by re-assigning counties to reflect the updated NASS Census values as described in § 2806.21 and recalculate the State-specific percent factor once every 10 years as described in § 2806.22(b).

(4) *Acreage rent payment.* You must pay the acreage rent regardless of the stage of development or operations on the entire public land acreage described in the right-of-way authorization. The BLM State Director may approve a rental payment plan consistent with § 2806.15(c).

(5) *Acreage rent adjustments.* This paragraph (a)(5) applies unless you

selected the scheduled rate adjustment method (see § 2806.51). The BLM will adjust the acreage rent annually to reflect the change in the per acre zone rates as specified in paragraph (a)(1) of this section. The BLM will use the most current per acre zone rates to calculate the acreage rent for each year of the grant term.

(6) You may obtain a copy of the current per acre zone rates for solar energy development (solar energy acreage rent schedule) from any BLM State, district, or field office or by writing: U.S. Department of the Interior, Bureau of Land Management, 20 M Street SE., Room 2134LM, Attention: Renewable Energy Coordination Office, Washington, DC 20003. The BLM also posts the current solar energy acreage rent schedule for solar energy development at <http://www.blm.gov>.

(b) *MW capacity fee.* The MW capacity fee is calculated by multiplying the approved MW capacity by the MW rate (for the applicable type of technology employed by the project) from the MW rate schedule (see paragraph (b)(2) of this section). You must pay the MW capacity fee annually when electricity generation begins or is scheduled to begin in the approved POD, whichever comes first:

(1) *MW rate.* The MW rate is calculated by multiplying the total hours per year, by the net capacity factor, by the MWh price, by the rate of return. For an explanation of each of these terms, see the definition of MW rate in § 2801.5(b).

(2) *MW rate schedule.* You may obtain a copy of the current MW rate schedule for solar energy development from any BLM State, district, or field office or by writing: U.S. Department of the Interior, Bureau of Land Management, 20 M Street SE., Room 2134LM, Attention: Renewable Energy Coordination Office, Washington, DC 20003. The BLM also posts the current MW rate schedule for solar energy development at <http://www.blm.gov>.

(3) *Periodic adjustments in the MW rate.* This paragraph (b)(3) applies unless you selected the scheduled rate adjustment method (see § 2806.51). The BLM will adjust the MW rate applicable to your grant every 5 years, beginning in 2021, by recalculating the following two components of the MW rate formula:

(i) The adjusted MWh price is the average of the annual weighted average wholesale price per MWh for the major trading hubs serving the 11 Western States of the continental United States for the full 5 calendar-year period preceding the adjustment, rounded to the nearest dollar increment; and

(ii) The adjusted rate of return is the 10-year average of the 20-year U.S. Treasury bond yield for the full 10 calendar-year period preceding the adjustment, rounded to the nearest one-tenth percent, with a minimum rate of return of 4 percent.

(4) *MW rate phase-in.* This paragraph (b)(4) applies unless you selected the scheduled rate adjustment method (see § 2806.51). If you hold a solar energy development grant, the MW rate will be phased in as follows:

(i) There is a 3-year phase-in of the MW rate when electricity generation begins or is scheduled to begin in the approved POD, whichever comes first, at the rates of:

(A) 25 percent for the first year. This rate applies for the first partial calendar year of operations, from the date electricity generation begins until Dec. 31 of that year;

(B) 50 percent for the second year; and

(C) 100 percent for the third and subsequent years of operations.

(ii) After generation of electricity starts and an approved POD provides for staged development:

(A) The 3-year phase-in of the MW rate applies to each stage of development; and

(B) The MW capacity fee is calculated using the authorized MW capacity approved for that stage plus any previously approved stages, multiplied by the MW rate.

(5) The general payment provisions for rents described in this subpart, except for § 2806.14(a)(4), also apply to the MW capacity fee.

(c) *Initial implementation of the acreage rent and MW capacity fee.* This paragraph (c) applies unless you selected the scheduled rate adjustment method (see § 2806.51). If you hold a solar energy grant and made payments for billing year 2016, the BLM will reduce by 50 percent the net increase in annual costs between billing year 2017 and billing year 2016. The net increase will be calculated based on a full calendar year.

(d) *Scheduled rate adjustment.* Under the scheduled rate adjustment method (see § 2806.51), the BLM will update your per acre zone rate and MW rate as follows:

(1) The BLM will calculate your payments using the per acre zone rate (see § 2806.52(a)(1)) and MW rate (see § 2806.52(b)(1)) in place when your grant is issued, or for existing grants, the per acre zone rate and MW rate in place prior to December 19, 2016, as adjusted under paragraph (d)(6) of this section;

(2) The per acre zone rate will increase:

(i) Annually, beginning after the first full calendar year plus any initial partial year following issuance of your grant, by the average annual change in the IPD–GDP as described in § 2806.22(b); and

(ii) Every 5 years, beginning after the first 5 calendar years, plus any initial partial year, following issuance of your grant, by 20 percent;

(3) The MW rate will increase by 20 percent every 5 years, beginning after the first 5 years, plus the initial partial year, if any, your grant is in effect;

(4) The BLM will not apply the phase-in to your MW rate under § 2806.52(b)(4) or the reduction under § 2806.52(c);

(5) If the approved POD for your project provides for staged development, the BLM will calculate the MW capacity fee using the MW capacity approved for the current stage plus any previously approved stages, multiplied by the MW rate, as described under this section.

(6) For grants in place prior to January 18, 2017 that select the scheduled rate adjustment method offered under § 2806.51(c), the per acre zone rate and the MW rate in place prior to December 19, 2016 will be adjusted for the first year's payment using the scheduled rate adjustment method as follows:

(i) The per acre zone rate will increase by the average annual change in the IPD–GDP as described in § 2806.22(b) plus 20 percent;

(ii) The MW rate will increase by 20 percent; and

(iii) Subsequent increases will be performed as set forth in paragraphs (d)(2) and (3) of this section from the date of the initial adjustment under this paragraph (d).

§ 2806.54 Rents and fees for solar energy development leases.

If you hold a solar energy development lease obtained through competitive bidding under subpart 2809 of this part, you must make annual payments in accordance with this section and subpart, in addition to the one-time, upfront bonus bid you paid to obtain the lease. The annual payment includes an acreage rent for the number of acres included within the solar energy lease and an additional MW capacity fee based on the total authorized MW capacity for the approved solar energy project on the public lands.

(a) *Acreage rent.* The BLM will calculate and bill you an acreage rent that must be paid prior to issuance of your lease as described in § 2806.52(a). This acreage rent will be based on the following:

(1) *Per acre zone rate.* See § 2806.52(a)(1).

(2) *Assignment of counties.* See § 2806.52(a)(2) and (3).

(3) *Acreage rent payment.* See § 2806.52(a)(4).

(4) *Acreage rent adjustments.* This paragraph (a)(4) applies unless you selected the scheduled rate adjustment method (see § 2806.51). Once the acreage rent is determined under § 2806.52(a), no further adjustments in the annual acreage rent will be made until year 11 of the lease term and each subsequent 10-year period thereafter. The BLM will use the per acre zone rates in effect when it adjusts the annual acreage rent at those 10-year intervals.

(b) *MW capacity fee.* See § 2806.52(b) introductory text and (b)(1), (2), and (3).

(c) *MW rate phase-in.* This paragraph (c) applies unless you selected the scheduled rate adjustment method (see § 2806.51). If you hold a solar energy development lease, the MW capacity fee will be phased in, starting when electricity begins to be generated. The MW capacity fee for years 1–20 will be calculated using the MW rate in effect when the lease is issued. The MW capacity fee for years 21–30 will be calculated using the MW rate in effect in year 21 of the lease. These rates will be phased-in as follows:

(1) For years 1 through 10 of the lease, plus any initial partial year, the MW capacity fee is calculated by multiplying the project's authorized MW capacity by 50 percent of the applicable solar technology MW rate, as described in § 2806.52(b)(2).

(2) For years 11 through 20 of the lease, the MW capacity fee is calculated by multiplying the project's authorized MW capacity by 100 percent of the applicable solar technology MW rate, as described in § 2806.52(b)(2).

(3) For years 21 through 30 of the lease, the MW capacity fee is calculated by multiplying the project's authorized MW capacity by 100 percent of the applicable solar technology MW rate, as described in § 2806.52(b)(2).

(4) If the lease is renewed, the MW capacity fee is calculated using the MW rates at the beginning of the renewed lease period and will remain at that rate through the initial 10-year period of the renewal term. The MW capacity fee will be adjusted using the MW rate at the beginning of each subsequent 10-year period of the renewed lease term.

(5) If an approved POD provides for staged development, the MW capacity fee is calculated using the MW capacity approved for that stage plus any previously approved stages, multiplied by the MW rate as described under this section.

(d) *Scheduled rate adjustment.* Under the scheduled rate adjustment (see § 2806.51), the BLM will update your per acre zone rate and MW rate as follows:

(1) The BLM will calculate your payments using the per acre zone rate (see § 2806.52(a)(1)) and MW rate (see § 2806.52(b)(1)) in place when your lease is issued;

(2) The per acre zone rate will increase every 10 years, beginning after the first 10 years, plus the initial partial year, if any, your lease is in effect, by the average annual change in the IPD–GDP for the preceding 10-year period as described in § 2806.22(b) plus 40 percent;

(3) The MW rate will increase by 40 percent every 10 years, beginning after the first 10 years, plus the initial partial year, if any, your lease is in effect;

(4) The BLM will not apply the phase-in to your MW rate under § 2806.52(c). Instead, for years 1 through 5, plus any initial partial year, the BLM will calculate the MW capacity fee by multiplying the project's authorized MW capacity by 50 percent of the applicable solar technology MW rate. This phase-in will not be applied to renewed leases; and

(5) If the approved POD for your project provides for staged development, the BLM will calculate the MW capacity fee using the MW capacity approved for the current stage plus any previously approved stages, multiplied by the MW rate, as described under this section.

§ 2806.56 Rent for support facilities authorized under separate grant(s).

If a solar energy development project includes separate right-of-way authorizations issued for support facilities only (administration building, groundwater wells, construction lay down and staging areas, surface water management and control structures, etc.) or linear right-of-way facilities (pipelines, roads, power lines, etc.), rent is determined using the Per Acre Rent Schedule for linear facilities (see § 2806.20(c)).

§ 2806.58 Rent for energy development testing grants.

(a) *Grants for energy site-specific testing.* You must pay \$100 per year for each meteorological tower or instrumentation facility location. BLM offices with approved small site rental schedules may use those fee structures if the fees in those schedules charge more than \$100 per meteorological tower per year. In lieu of annual payments, you may instead pay for the entire term of the grant (3 years or less).

(b) *Grants for energy project-area testing.* You must pay \$2,000 per year or \$2 per acre per year for the lands authorized by the grant, whichever is greater. There is no additional rent for the installation of each meteorological tower or instrumentation facility located within the site testing and monitoring project-area.

■ 43. Add an undesignated centered heading and §§ 2806.60, 2806.61, 2806.62, 2806.64, 2806.66, and 2806.68 to read as follows:

Wind Energy Rights-of-Way

Sec.

2806.60 Rents and fees for wind energy rights-of-way.

2806.61 Scheduled Rate Adjustment.

2806.62 Rents and fees for wind energy development grants.

2806.64 Rents and fees for wind energy development leases.

2806.66 Rent for support facilities authorized under separate grant(s).

2806.68 Rent for energy development testing grants.

§ 2806.60 Rents and fees for wind energy rights-of-way.

If you hold a right-of-way authorizing wind energy site-specific testing or project-area testing or wind energy development, you must pay an annual rent and fee in accordance with this section and subpart. Your wind energy development right-of-way authorization will either be a grant (if issued under subpart 2804) or a lease (if issued under subpart 2809). Rents and fees for either type of authorization consist of an acreage rent that must be paid prior to issuance of the authorization and a phased-in MW capacity fee. Both the acreage rent and the phased-in MW capacity fee are charged and calculated consistent with § 2806.11 and prorated consistent with § 2806.12(a). The MW capacity fee will vary depending on the size of the wind energy development project.

§ 2806.61 Scheduled Rate Adjustment.

(a) The BLM will adjust your acreage rent and MW capacity fee over the course of your authorization as described in these regulations. For new grants or leases, you may choose either the standard rate adjustment method (see § 2806.52(a)(5) and (b)(3) for grants; see § 2806.54(a)(4) or (c) for leases) or the scheduled rate adjustment method (see § 2806.52(d) for grants; see § 2806.54(d) for leases). Once you select a rate adjustment method, that method will be fixed until you renew your grant or lease (see § 2807.22).

(b) For new grants or leases, if you select the scheduled rate adjustment method you must notify the BLM of

your decision in writing. Your decision must be received by the BLM before your grant or lease is issued. If you do not select the scheduled rate adjustment method, the standard rate adjustment method will apply.

(c) If you hold a grant that is in effect prior to January 18, 2017, you may either accept the standard rate adjustment method or request in writing that the BLM apply the scheduled rate adjustment method, as set forth in § 2806.52(d), to your grant. To take advantage of the scheduled rate adjustment option, your request must be received by the BLM before December 19, 2018. The BLM will continue to apply the standard rate adjustment method to adjust your rates unless and until it receives your request to use the scheduled rate adjustment method.

§ 2806.62 Rents and fees for wind energy development grants.

You must pay an annual acreage rent and MW capacity fee for your wind energy development grant as follows:

(a) *Acreage rent.* The BLM will calculate the acreage rent by multiplying the number of acres (rounded up to the nearest tenth of an acre) within the authorized area times the per acre zone rate from the wind energy acreage rent schedule in effect at the time the authorization is issued.

(1) *Per acre zone rate.* The annual per acre zone rate from the wind energy acreage rent schedule is calculated using the per acre zone value (as assigned in accordance with paragraph (a)(2) of this section), encumbrance factor, rate of return, and the annual adjustment factor. The calculation for determining the annual per acre zone rate is $A \times B \times C \times D = E$ where:

- (i) A is the per acre zone value = the same per-acre zone values described in the linear rent schedule in § 2806.20(c);
- (ii) B is the encumbrance factor = 10 percent;
- (iii) C is the rate of return = 5.27 percent;
- (iv) D is the annual adjustment factor = the average annual change in the IPD-GDP for the 10-year period immediately preceding the year that the NASS Census data becomes available (see § 2806.22(a)). The BLM will adjust the per acre rates each year based on the average annual change in the IPD-GDP as determined under § 2806.22(a). Adjusted rates are effective each year on January 1; and
- (v) E is the annual per acre zone rate.

(2) *Assignment of counties.* The BLM will calculate the per acre zone rate in paragraph (a)(1) of this section by using a State-specific factor to assign a county to a zone in the wind energy acreage rent schedule. The BLM will calculate a State-specific factor and apply it to the NASS data (county average per acre land and building value) to determine

the per acre value and assign a county (or other geographical area) to a zone. The State-specific factor represents the percent difference between improved agricultural land and unimproved rangeland values, using NASS data. The calculation per acre for determining the State-specific factor is $(A/B) - (C/D) = E$ where:

- (i) A = the NASS Census statewide average per acre value of non-irrigated acres;
- (ii) B = the NASS Census statewide average per acre land and building value;
- (iii) C = the NASS Census total statewide acres in farmsteads, homes, buildings, livestock facilities, ponds, roads, wasteland, etc.;
- (iv) D = the total statewide acres in farms; and
- (v) E = the State-specific percent factor or 20 percent, whichever is greater.

(3) The initial assignment of counties to the zones on the wind energy acreage rent schedule will be based upon the most recent NASS Census data (2012) for years 2016 through 2020. The BLM may on its own or in response to requests consider making regional adjustments to those initial assignments, based on evidence that the NASS Census values do not accurately reflect those of the BLM-managed lands. The BLM will update this rent schedule once every 5 years by re-assigning counties to reflect the updated NASS Census values as described in § 2806.21 and recalculate the State-specific percent factor once every 10 years as described in § 2806.22(b).

(4) *Acreage rent payment.* You must pay the acreage rent regardless of the stage of development or operations on the entire public land acreage described in the right-of-way authorization. The BLM State Director may approve a rental payment plan consistent with § 2806.15(c).

(5) *Acreage rent adjustments.* This paragraph (a)(5) applies unless you selected the scheduled rate adjustment method (see § 2806.61). The BLM will adjust the acreage rent annually to reflect the change in the per acre zone rates as specified in paragraph (a)(1) of this section. The BLM will use the most current per acre zone rates to calculate the acreage rent for each year of the grant term.

(6) The acreage rent must be paid as described in § 2806.62(a) except for the initial implementation of the wind energy acreage rent schedule of section § 2806.62(c).

(7) You may obtain a copy of the current per acre zone rates for wind energy development (wind energy acreage rent schedule) from any BLM State, district, or field office or by writing: U.S. Department of the Interior,

Bureau of Land Management, 20 M Street SE., Room 2134LM, Attention: Renewable Energy Coordination Office, Washington, DC 20003. The BLM also posts the current wind energy acreage rent schedule for wind energy development at <http://www.blm.gov>.

(b) *MW capacity fee.* The MW capacity fee is calculated by multiplying the approved MW capacity by the MW rate. You must pay the MW capacity fee annually when electricity generation begins or is scheduled to begin in the approved POD, whichever comes first.

(1) *MW rate.* The MW rate is calculated by multiplying the total hours per year by the net capacity factor, by the MWh price, by the rate of return. For an explanation of each of these terms, see the definition of MW rate in § 2801.5(b).

(2) *MW rate schedule.* You may obtain a copy of the current MW rate schedule for wind energy development from any BLM State, district, or field office or by writing: U.S. Department of the Interior, Bureau of Land Management, 20 M Street SE., Room 2134LM, Attention: Renewable Energy Coordination Office, Washington, DC 20003. The BLM also posts the current MW rate schedule for wind energy development at <http://www.blm.gov>.

(3) *Periodic adjustments in the MW rate.* This paragraph (b)(3) applies unless you selected the scheduled rate adjustment method (see § 2806.61). We will adjust the MW rate every 5 years, beginning in 2021, by recalculating the following two components of the MW rate formula:

(i) The adjusted MWh price is the average of the annual weighted average wholesale price per MWh for the major trading hubs serving the 11 Western States of the continental United States for the full 5 calendar-year period preceding the adjustment, rounded to the nearest dollar increment; and

(ii) The adjusted rate of return is the 10-year average of the 20-year U.S. Treasury bond yield for the full 10 calendar-year period preceding the adjustment, rounded to the nearest one-tenth percent, with a minimum rate of return of 4 percent.

(4) *MW rate phase-in.* This paragraph (b)(4) applies unless you selected the scheduled rate adjustment method (see § 2806.61). If you hold a wind energy development grant, the MW rate will be phased in as follows:

(i) There is a 3-year phase-in of the MW rate when electricity generation begins or is scheduled to begin in the approved POD, whichever comes first, at the rates of:

(A) 25 percent for the first year. This rate applies for the first partial calendar year of operations;

(B) 50 percent for the second year; and

(C) 100 percent for the third and subsequent years of operations.

(ii) After generation of electricity starts and an approved POD provides for staged development:

(A) The 3-year phase-in of the MW rate applies to each stage of development; and

(B) The MW capacity fee is calculated using the authorized MW capacity approved for that stage, plus any previously approved stages, multiplied by the MW rate.

(iii) The MW rate may be phased in further, as described in paragraph (c) of this section.

(5) The general payment provisions for rents described in this subpart, except for § 2806.14(a)(4), also apply to the MW capacity fee.

(c) *Initial implementation of the acreage rent and MW capacity fee.* This paragraph (c) applies unless you selected the scheduled rate adjustment method (see § 2806.61).

(1) If you hold a wind energy grant and made payments for billing year 2016, the BLM will reduce by 50 percent the net increase in annual costs between billing year 2017 and billing year 2016. The net increase will be calculated based on a full calendar year.

(2) If the BLM accepted your application for a wind energy development grant, including a plan of development and cost recovery agreement, prior to September 30, 2014, the BLM will phase in your payment of the acreage rent and MW capacity fee by reducing the:

(i) Acreage rent of the grant by 50 percent for the initial partial year of the grant; and

(ii) MW capacity fee by 75 percent for the first (initial partial) and second years and by 50 percent for the third and fourth years for which the BLM requires payment of the MW capacity fee. This reduction to the MW capacity fee applies to each stage of development.

(d) *Scheduled rate adjustment.* Under the scheduled rate adjustment (see § 2806.61), the BLM will update your per acre zone rate and MW rate as follows:

(1) The BLM will calculate your payments using the per acre zone rate (see § 2806.62(a)(1)) and MW rate (see § 2806.62(b)(1)) in place when your grant is issued, or for existing grants, the per acre zone rate and MW rate in place prior to December 19, 2016, as adjusted under paragraph (d)(6) of this section;

(2) The per acre zone rate will increase:

(i) Annually, beginning after the first full year plus the initial partial year, if any, your grant is in effect by the average annual change in the IPD–GDP as described in § 2806.22(b); and

(ii) Every 5 years, beginning after the first 5 years, plus the initial partial year, if any, your grant is in effect, by 20 percent;

(3) The MW rate will increase by 20 percent every 5 years, beginning after the first 5 years, plus the initial partial year, if any, your grant is in effect;

(4) The BLM will not apply the phase-in to your MW rate under § 2806.62(b)(4) or the reduction under § 2806.62(c); and

(5) If the approved POD for your project provides for staged development, the BLM will calculate the MW capacity fee using the MW capacity approved for that stage in question plus any previously approved stages, multiplied by the MW rate as described under this section.

(6) For grants in place prior to January 18, 2017 that select the scheduled rate adjustment method offered under § 2806.61(c), the per acre zone rate and the MW rate in place prior to December 19, 2016 will be adjusted for the first year's payment using the scheduled rate adjustment method as follows:

(i) The per acre zone rate will increase by the average annual change in the IPD–GDP as described in § 2806.22(b) plus 20 percent;

(ii) The MW rate will increase by 20 percent; and

(iii) Subsequent increases will be performed as set forth in paragraphs (d)(2) and (3) of this section from the date of the initial adjustment under paragraph (d)(6) of this section.

§ 2806.64 Rents and fees for wind energy development leases.

If you hold a wind energy development lease obtained through competitive bidding under subpart 2809 of this part, you must make annual payments in accordance with this section and subpart, in addition to the one-time, up front bonus bid you paid to obtain the lease. The annual payment includes an acreage rent for the number of acres included within the wind energy lease and an additional MW capacity fee based on the total authorized MW capacity for the approved wind energy project on the public lands.

(a) *Acreage rent.* The BLM will calculate and bill you an acreage rent that must be paid prior to issuance of your lease as described in § 2806.62(a).

This acreage rent will be based on the following:

(1) *Per acre zone rate*. See

§ 2806.62(a)(1).

(2) *Assignment of counties*. See

§ 2806.62(a)(2) and (3).

(3) *Acreage rent payment*. See

§ 2806.62(a)(4).

(4) *Acreage rent adjustments*. This paragraph (a)(4) applies unless you selected the scheduled rate adjustment method (see § 2806.61). Once the acreage rent is determined under § 2806.62(a), no further adjustments in the annual acreage rent will be made until year 11 of the lease term and each subsequent 10-year period thereafter. We will use the per acre zone rates in effect at the time the acreage rent is due (at the beginning of each 10-year period) to calculate the annual acreage rent for each of the subsequent 10-year periods.

(b) *MW capacity fee*. See § 2806.62(b) introductory text and (b)(1), (2), and (3).

(c) *MW rate phase-in*. This paragraph (c) applies unless you selected the scheduled rate adjustment method (see § 2806.61). If you hold a wind energy development lease, the MW capacity fee will be phased in, starting when electricity begins to be generated. The MW capacity fee for years 1–20 will be calculated using the MW rate in effect when the lease is issued. The MW capacity fee for years 21–30 will be calculated using the MW rate in effect in year 21 of the lease. These rates will be phased-in as follows:

(1) For years 1 through 10 of the lease, plus any initial partial year, the MW capacity fee is calculated by multiplying the project's authorized MW capacity by 50 percent of the wind energy technology MW rate, as described in § 2806.62(b)(2);

(2) For years 11 through 20 of the lease, the MW capacity fee is calculated by multiplying the project's authorized MW capacity by 100 percent of the wind energy technology MW rate described in § 2806.62(b)(2);

(3) For years 21 through 30 of the lease, the MW capacity fee is calculated by multiplying the project's authorized MW capacity by 100 percent of the wind energy technology MW rate as described in § 2806.62(b)(2);

(4) If the lease is renewed, the MW capacity fee is calculated using the MW rates at the beginning of the renewed lease period and will remain at that rate through the initial 10 year period of the renewal term. The MW capacity fee will continue to adjust at the beginning of each subsequent 10 year period of the renewed lease term to reflect the then currently applicable MW rates; and

(5) If an approved POD provides for staged development, the MW capacity

fee is calculated using the MW capacity approved for that stage plus any previously approved stage, multiplied by the MW rate, as described in this section.

(d) *Scheduled rate adjustment*. Under the scheduled rate adjustment (see § 2806.61), the BLM will update your per acre zone rate and MW rate as follows:

(1) The BLM will calculate your payments using the per acre zone rate (see § 2806.62(a)(1)) and MW rate (see § 2806.62(b)(1)) in place when your lease is issued;

(2) The per acre zone rate will increase every 10 years, beginning after the first 10 years, plus the initial partial year, if any, your lease is in effect, by the average annual change in the IPD–GDP for the preceding 10-year period as described in § 2806.22(b) plus 40 percent;

(3) The MW rate will increase by 40 percent every 10 years, beginning after the first 10 years, plus the initial partial year, if any, your lease is in effect;

(4) The BLM will not apply the phase-in to your MW rate under § 2806.62(c). Instead, for years 1 through 5, plus any initial partial year, the BLM will calculate the MW capacity fee by multiplying the project's authorized MW capacity by 50 percent of the applicable solar technology MW rate. This phase-in will not be applied to renewed leases; and

(5) If the approved POD for your project provides for staged development, the BLM will calculate the MW capacity fee using the MW capacity approved for that stage in question plus any previously approved stages, multiplied by the MW rate as described under this section.

§ 2806.66 Rent for support facilities authorized under separate grant(s).

If a wind energy development project includes separate right-of-way authorizations issued for support facilities only (administration building, groundwater wells, construction lay down and staging areas, surface water management, and control structures, etc.) or linear right-of-way facilities (pipelines, roads, power lines, etc.), rent is determined using the Per Acre Rent Schedule for linear facilities (see § 2806.20(c)).

§ 2806.68 Rent for energy development testing grants.

(a) *Grant for energy site-specific testing*. You must pay \$100 per year for each meteorological tower or instrumentation facility location. BLM offices with approved small site rental schedules may use those fee structures

if the fees in those schedules charge more than \$100 per meteorological tower per year. In lieu of annual payments, you may instead pay for the entire term of the grant (3 years or less).

(b) *Grant for energy project-area testing*. You must pay \$2,000 per year or \$2 per acre per year for the lands authorized by the grant, whichever is greater. There is no additional rent for the installation of each meteorological tower or instrumentation facility located within the site testing and monitoring project area.

■ 44. Add an undesignated centered heading immediately preceding newly redesignated § 2806.70 to read as follows:

Other Rights-of-Way

■ 45. Revise newly redesignated § 2806.70 to read as follows:

§ 2806.70 How will the BLM determine the payment for a grant or lease when the linear, communication use, solar energy, or wind energy payment schedules do not apply?

When we determine that the linear, communication use, solar, or wind energy payment schedules do not apply, we may determine your payment through a process based on comparable commercial practices, appraisals, competitive bids, or other reasonable methods. We will notify you in writing of the payment determination. If you disagree with the payment determination, you may appeal our final determination under § 2801.10.

Subpart 2807—Grant Administration and Operation

■ 46. Amend § 2807.11 by:

■ a. Revising paragraph (b);

■ b. Redesignating paragraphs (d) and (e) as paragraphs (f) and (g); and

■ c. Adding new paragraphs (d) and (e).

The revisions and additions read as follows:

§ 2807.11 When must I contact BLM during operations?

* * * * *

(b) When your use requires a substantial deviation from the grant. You must seek an amendment to your grant under § 2807.20 and obtain the BLM's approval before you begin any activity that is a substantial deviation;

* * * * *

(d) Whenever site-specific circumstances or conditions result in the need for changes to an approved right-of-way grant or lease, POD, site plan, mitigation measures, or construction, operation, or termination procedures that are not substantial deviations in location or use authorized

by a right-of-way grant or lease. Changes for authorized actions, project materials, or adopted mitigation measures within the existing, approved right-of-way area must be submitted to us for review and approval;

(e) To identify and correct discrepancies or inconsistencies;

* * * * *

■ 47. Amend § 2807.17 by redesignating paragraph (d) as paragraph (e) and adding new paragraph (d) to read as follows:

§ 2807.17 Under what conditions may the BLM suspend or terminate my grant?

* * * * *

(d) The BLM may suspend or terminate another Federal agency's grant only if:

(1) The terms and conditions of the Federal agency's grant allow it; or

(2) The agency head holding the grant consents to it.

* * * * *

■ 48. Revise § 2807.21 to read as follows:

§ 2807.21 May I assign or make other changes to my grant or lease?

(a) With the BLM's approval, you may assign, in whole or in part, any right or interest in a grant or lease. Assignment actions that may require BLM approval include, but are not limited to, the following:

(1) The transfer by the holder (assignor) of any right or interest in the grant or lease to a third party (assignee); and

(2) Changes in ownership or other related change in control transactions involving the BLM right-of-way holder and another business entity (assignee), including corporate mergers or acquisitions, but not transactions within the same corporate family.

(b) The BLM may require a grant or lease holder to file new or revised information in some circumstances that do not constitute an assignment (see subpart 2803 and §§ 2804.12(e) and 2807.11). Circumstances that would not constitute an assignment but may necessitate this filing include, but are not limited to:

(1) Transactions within the same corporate family;

(2) Changes in the holder's name only (see paragraph (h) of this section); and

(3) Changes in the holder's articles of incorporation.

(c) In order to assign a grant or lease, the proposed assignee must file an assignment application and follow the same procedures and standards as for a new grant or lease, including paying application and processing fees, and the grant must be in compliance with the

terms and conditions of § 2805.12. The preliminary application review meetings and public meeting under §§ 2804.12 and 2804.25 are not required for an assignment. We will not approve any assignment until the assignor makes any outstanding payments that are due (see § 2806.13(g)).

(d) The assignment application must also include:

(1) Documentation that the assignor agrees to the assignment; and

(2) A signed statement that the proposed assignee agrees to comply with and be bound by the terms and conditions of the grant that is being assigned and all applicable laws and regulations.

(e) Your assignment is not recognized until the BLM approves it in writing.

We will approve the assignment if doing so is in the public interest. Except for leases issued under subpart 2809 of this part, we may modify the grant or lease or add bonding and other requirements, including additional terms and conditions, to the grant or lease when approving the assignment, unless a modification to a lease issued under subpart 2809 of this part is required under § 2805.15(e). We may decrease rents if the new holder qualifies for an exemption (see § 2806.14) or waiver or reduction (see § 2806.15) and the previous holder did not. Similarly, we may increase rents if the previous holder qualified for an exemption or waiver or reduction and the new holder does not. If we approve the assignment, the benefits and liabilities of the grant or lease apply to the new grant or lease holder.

(f) The processing time and conditions described at § 2804.25(d) of this part apply to assignment applications.

(g) Only interests in issued right-of-way grants and leases are assignable. Except for applications submitted by a preferred applicant under § 2804.30(g), pending right-of-way applications do not create any property rights or other interest and may not be assigned from one entity to another, except that an entity with a pending application may continue to pursue that application even if that entity becomes a wholly owned subsidiary of a new third party.

(h) To complete a change in name only, (i.e., when the name change in question is not the result of an underlying change in control of the right-of-way grant), the following requirements must be met:

(1) The holder must file an application requesting a name change and follow the same procedures as for a new grant, including paying processing fees. However, the

application fees (see subpart 2804 of this part) and the preliminary application review and public meetings (see §§ 2804.12 and 2804.25) are not required. The name change request must include:

(i) If the name change is for an individual, a copy of the court order or other legal document effectuating the name change; or

(ii) If the name change is for a corporation, a copy of the corporate resolution(s) proposing and approving the name change, a copy of the acceptance of the change in name by the State or Territory in which it is incorporated, and a copy of the appropriate resolution, order or other documentation showing the name change.

(2) When reviewing a proposed name change only, we may determine it is necessary to:

(i) Modify a grant issued under subpart 2804 to add bonding and other requirements, including additional terms and conditions to the grant; or

(ii) Modify a lease issued under subpart 2809 in accordance with § 2805.15(e).

(3) Your name change is not recognized until the BLM approves it in writing.

■ 49. Amend § 2807.22 by:

■ a. Revising the section heading and paragraphs (a), (b), and (d);

■ b. Redesignating paragraph (f) as paragraph (g); and

■ c. Adding new paragraph (f).

The revisions and addition read as follows:

§ 2807.22 How do I renew my grant or lease?

(a) If your grant or lease specifies the terms and conditions for its renewal, and you choose to renew it, you must request a renewal from the BLM at least 120 calendar days before your grant or lease expires consistent with the renewal terms and conditions specified in your grant or lease. We will renew the grant or lease if you are in compliance with the renewal terms and conditions; the other terms, conditions, and stipulations of the grant or lease; and other applicable laws and regulations.

(b) If your grant or lease does not specify the terms and conditions for its renewal, you may apply to us to renew the grant or lease. You must send us your application at least 120 calendar days before your grant or lease expires. In your application you must show that you are in compliance with the terms, conditions, and stipulations of the grant or lease and other applicable laws and regulations, and explain why a renewal

of your grant or lease is necessary. We may approve or deny your application to renew your grant or lease.

* * * * *

(d) We will review your application and determine the applicable terms and conditions of any renewed grant or lease.

* * * * *

(f) If you make a timely and sufficient application for a renewal of your existing grant or lease, or for a new grant or lease, in accordance with this section, the existing grant does not expire until we have issued a decision to approve or deny the application.

* * * * *

■ 50. Revise subpart 2809 to read as follows:

Subpart 2809—Competitive Process for Leasing Public Lands for Solar and Wind Energy Development Inside Designated Leasing Areas

Sec.

2809.10 General.

2809.11 How will the BLM solicit nominations?

2809.12 How will the BLM select and prepare parcels?

2809.13 How will the BLM conduct competitive offers?

2809.14 What types of bids are acceptable?

2809.15 How will the BLM select the successful bidder?

2809.16 When do variable offsets apply?

2809.17 Will the BLM ever reject bids or re-conduct a competitive offer?

2809.18 What terms and conditions apply to leases?

2809.19 Applications in designated leasing areas or on lands that later become designated leasing areas.

Subpart 2809—Competitive Process for Leasing Public Lands for Solar and Wind Energy Development Inside Designated Leasing Areas

§ 2809.10 General.

(a) Lands inside designated leasing areas may be made available for solar and wind energy development through a competitive leasing offer process established by the BLM under this subpart.

(b) The BLM may include lands in a competitive offer on its own initiative.

(c) The BLM may solicit nominations by publishing a call for nominations under § 2809.11(a).

(d) The BLM will generally prioritize the processing of “leases” awarded under this subpart over the processing of non-competitive “grant” applications under subpart 2804, including those that are “high priority” under § 2804.35.

§ 2809.11 How will the BLM solicit nominations?

(a) *Call for nominations.* The BLM will publish a notice in the **Federal**

Register and may use other notification methods, such as a newspaper of general circulation in the area affected by the potential offer of public land for solar and wind energy development or the Internet; to solicit nominations and expressions of interest for parcels of land inside designated leasing areas for solar or wind energy development.

(b) *Nomination submission.* A nomination must be in writing and must include the following:

(1) *Nomination fee.* If you nominate a specific parcel of land under paragraph (a) of this section, you must also include a non-refundable nomination fee of \$5 per acre. We will adjust the nomination fee once every 10 years using the change in the IPD–GDP for the preceding 10-year period and round it to the nearest half dollar. This 10 year average will be adjusted at the same time as the per acre rent schedule for linear rights-of-way under § 2806.22;

(2) *Nominator's name and personal or business address.* The name of only one citizen, association, partnership, corporation, or municipality may appear as the nominator. All communications relating to leasing will be sent to that name and address, which constitutes the nominator's name and address of record; and

(3) The legal land description and a map of the nominated lands.

(c) We may consider informal expressions of interest suggesting lands to be included in a competitive offer. If you submit a written expression of interest, you must provide a description of the suggested lands and rationale for their inclusion in a competitive offer.

(d) In order to submit a nomination, you must be qualified to hold a grant or lease under

§ 2803.10.

(e) *Nomination withdrawals.* A nomination cannot be withdrawn, except by the BLM for cause, in which case all nomination monies will be refunded to the nominator.

§ 2809.12 How will the BLM select and prepare parcels?

(a) The BLM will identify parcels for competitive offer based on nominations and expressions of interest or on its own initiative.

(b) The BLM and other Federal agencies, as applicable, will conduct necessary studies and site evaluation work, including applicable environmental reviews and public meetings, before offering lands competitively.

§ 2809.13 How will the BLM conduct competitive offers?

(a) *Variety of competitive procedures available.* The BLM may use any type of competitive process or procedure to conduct its competitive offer, and any method, including the use of the Internet, to conduct the actual auction or competitive bid procedure. Possible bid procedures could include, but are not limited to: Sealed bidding, oral auctions, modified competitive bidding, electronic bidding, and any combination thereof.

(b) *Notice of competitive offer.* We will publish a notice in the **Federal Register** at least 30 days prior to the competitive offer and may use other notification methods, such as a newspaper of general circulation in the area affected by the potential right-of-way or the Internet. The **Federal Register** and other notices will include:

(1) The date, time, and location, if any, of the competitive offer;

(2) The legal land description of the parcel to be offered;

(3) The bidding methodology and procedures to be used in conducting the competitive offer, which may include any of the competitive procedures identified in paragraph (a) of this section;

(4) The minimum bid required (see § 2809.14(a)), including an explanation of how we determined this amount;

(5) The qualification requirements for potential bidders (see § 2803.10);

(6) If a variable offset (see § 2809.16) is offered:

(i) The percent of each offset factor;

(ii) How bidders may pre-qualify for each offset factor; and

(iii) The documentation required to pre-qualify for each offset factor; and

(7) The terms and conditions of the lease, including the requirements for the successful bidder to submit a POD for the lands involved in the competitive offer (see § 2809.18) and any lease mitigation requirements, including compensatory mitigation for residual impacts associated with the right-of-way.

(c) We will notify you in writing of our decision to conduct a competitive offer at least 30 days prior to the competitive offer if you nominated lands and paid the nomination fees required by § 2809.11(b)(1).

§ 2809.14 What types of bids are acceptable?

(a) *Bid submissions.* The BLM will accept your bid only if:

(1) It includes the minimum bid and at least 20 percent of the bonus bid; and

(2) The BLM determines that you are qualified to hold a grant or lease under

§ 2803.10. You must include documentation of your qualifications with your bid, unless we have previously approved your qualifications under § 2809.10(d) or § 2809.11(d).

(b) *Minimum bid.* The minimum bid is not prorated among all bidders, but must be paid entirely by the successful bidder. The minimum bid consists of:

(1) The administrative costs incurred by the BLM and other Federal agencies in preparing for and conducting the competitive offer, including required environmental reviews; and

(2) An amount determined by the authorized officer and disclosed in the notice of competitive offer. This amount will be based on known or potential values of the parcel. In setting this amount, the BLM will consider factors that include, but are not limited to, the acreage rent and megawatt capacity fee.

(c) *Bonus bid.* The bonus bid consists of any dollar amount that a bidder wishes to bid in addition to the minimum bid.

(d) If you are not the successful bidder, as defined in § 2809.15(a), the BLM will refund your bid.

§ 2809.15 How will the BLM select the successful bidder?

(a) The bidder with the highest total bid, prior to any variable offset, is the successful bidder and may be offered a lease in accordance with § 2805.10.

(b) The BLM will determine the variable offsets for the successful bidder in accordance with § 2809.16 before issuing final payment terms.

(c) *Payment terms.* If you are the successful bidder, you must:

(1) Make payments by personal check, cashier's check, certified check, bank draft, or money order, or by other means deemed acceptable by the BLM, payable to the Department of the Interior—Bureau of Land Management;

(2) By the close of official business hours on the day of the offer or such other time as the BLM may have specified in the offer notices, submit for each parcel:

(i) Twenty percent of the bonus bid (before the offsets are applied under paragraph (b) of this section); and

(ii) The total amount of the minimum bid specified in § 2809.14(b);

(3) Within 15 calendar days after the day of the offer, submit the balance of the bonus bid (after the variable offsets are applied under paragraph (b) of this section) to the BLM office conducting the offer; and

(4) Within 15 calendar days after the day of the offer, submit the acreage rent for the first full year of the solar or wind energy development lease as provided in § 2806.54(a) or § 2806.64(a),

respectively. This amount will be applied toward the first 12 months acreage rent, if the successful bidder becomes the lessee.

(d) The BLM will offer you a right-of-way lease if you are the successful bidder and:

(1) Satisfy the qualifications in § 2803.10;

(2) Make the payments required under paragraph (c) of this section; and

(3) Do not have any trespass action pending against you for any activity on BLM-administered lands (see § 2808.12) or have any unpaid debts owed to the Federal Government.

(e) The BLM will not offer a lease to the successful bidder and will keep all money that has been submitted, if the successful bidder does not satisfy the requirements of paragraph (d) of this section. In this case, the BLM may offer the lease to the next highest bidder under § 2809.17(b) or re-offer the lands under § 2809.17(d).

§ 2809.16 When do variable offsets apply?

(a) The successful bidder may be eligible for an offset of up to 20 percent of the bonus bid based on the factors identified in the notice of competitive offer.

(b) The BLM may apply a variable offset to the bonus bid of the successful bidder. The notice of competitive offer will identify each factor of the variable offset, the specific percentage for each factor that would be applied to the bonus bid, and the documentation required to be provided to the BLM prior to the day of the offer to qualify for the offset. The total variable offset cannot be greater than 20 percent of the bonus bid.

(c) The variable offset may be based on any of the following factors:

(1) Power purchase agreement;

(2) Large generator interconnect agreement;

(3) Preferred solar or wind energy technologies;

(4) Prior site testing and monitoring inside the designated leasing area;

(5) Pending applications inside the designated leasing area;

(6) Submission of nomination fees;

(7) Submission of biological opinions, strategies, or plans;

(8) Environmental benefits;

(9) Holding a solar or wind energy grant or lease on adjacent or mixed land ownership;

(10) Public benefits; and

(11) Other similar factors.

(d) The BLM will determine your variable offset prior to the competitive offer.

§ 2809.17 Will the BLM ever reject bids or re-conduct a competitive offer?

(a) The BLM may reject bids regardless of the amount offered. If the BLM rejects your bid under this provision, you will be notified in writing and such notice will include the reason(s) for the rejection and what refunds to which you are entitled. If the BLM rejects a bid, the bidder may appeal that decision under § 2801.10.

(b) We may offer the lease to the next highest qualified bidder if the successful bidder does not execute the lease or is for any reason disqualified from holding the lease.

(c) If we are unable to determine the successful bidder, such as in the case of a tie, we may re-offer the lands competitively (under § 2809.13) to the tied bidders or to all prospective bidders.

(d) If lands offered under § 2809.13 receive no bids, we may:

(1) Re-offer the lands through the competitive process under § 2809.13; or

(2) Make the lands available through the non-competitive application process found in subparts 2803, 2804, and 2805 of this part, if we determine that doing so is in the public interest.

§ 2809.18 What terms and conditions apply to leases?

The lease will be issued subject to the following terms and conditions:

(a) *Lease term.* The term of your lease includes the initial partial year in which it is issued, plus 30 additional full years. The lease will terminate on December 31 of the final year of the lease term. You may submit an application for renewal under § 2805.14(g).

(b) *Rent.* You must pay rent as specified in:

(1) Section 2806.54, if your lease is for solar energy development; or

(2) Section 2806.64, if your lease is for wind energy development.

(c) *POD.* You must submit, within 2 years of the lease issuance date, a POD that:

(1) Is consistent with the development schedule and other requirements in the POD template posted at <http://www.blm.gov>; and

(2) Addresses all pre-development and development activities.

(d) *Cost recovery.* You must pay the reasonable costs for the BLM or other Federal agencies to review and approve your POD and to monitor your lease. To expedite review of your POD and monitoring of your lease, you may notify BLM in writing that you are waiving paying reasonable costs and are electing to pay the full actual costs incurred by the BLM.

(e) *Performance and reclamation bond.* (1) For Solar Energy Development, you must provide a bond in the amount of \$10,000 per acre prior to written approval to proceed with ground disturbing activities.

(2) For Wind Energy Development, you must provide a bond in the amount of \$10,000 per authorized turbine less than 1 MW in nameplate capacity or \$20,000 per authorized turbine equal or greater than 1 MW in nameplate capacity prior to written approval to proceed with ground disturbing activities.

(3) For testing and monitoring sites authorized under a development lease, you must provide a bond in the amount of \$2,000 per site prior to receiving written approval to proceed with ground disturbing activities.

(4) The BLM will adjust the solar and wind energy development bond amounts every 10 years using the change in the IPD–GDP for the preceding 10-year period rounded to the nearest \$100. This 10-year average will be adjusted at the same time as the Per Acre Rent Schedule for linear rights-of-way under § 2806.22.

(f) *Assignments.* You may assign your lease under § 2807.21, and if an assignment is approved, the BLM will not make any changes to the lease terms or conditions, as provided for by § 2807.21(e) except for modifications required under § 2805.15(e).

(g) *Due diligence of operations.* You must start construction within 5 years and begin generation of electricity no later than 7 years from the date of lease issuance, as specified in your approved POD. A request for an extension may be granted for up to 3 years with a show of good cause and approval by the BLM.

§ 2809.19 Applications in designated leasing areas or on lands that later become designated leasing areas.

(a) Applications for solar or wind energy development filed on lands outside of designated leasing areas, which subsequently become designated leasing areas will:

(1) Continue to be processed by the BLM and are not subject to the competitive leasing offer process of this subpart, if such applications are filed prior to the publication of the notice of intent or other public announcement from the BLM of the proposed land use plan amendment to designate the solar or wind leasing area; or

(2) Remain in pending status unless withdrawn by the applicant, denied, or issued a grant by the BLM, or the subject lands become available for application or leasing under this part, if such applications are filed on or after the date

of publication of the notice of intent or other public announcement from the BLM of the proposed land use plan amendment to designate the solar or wind leasing area.

(3) Resume being processed by the BLM if your application is pending under paragraph (a)(2) of this section and the lands become available for application under § 2809.17(d)(2).

(b) An applicant that submits a bid on a parcel of land for which an application is pending under paragraph (a)(2) of this section may:

(1) Qualify for a variable offset under § 2809.16; and

(2) Receive a refund for any unused application fees or processing costs if the lands identified in the application are subsequently leased to another entity under § 2809.13.

(c) After the effective date of this regulation, the BLM will not accept a new application for solar or wind energy development inside designated leasing areas (see §§ 2804.12(b)(1) and 2804.23(e)), except as provided by § 2809.17(d)(2).

(d) You may file a new application under part 2804 for testing and monitoring purposes inside designated leasing areas. If the BLM approves your application, you will receive a short term grant in accordance with § 2805.11(b)(2)(i) or (ii), which may qualify you for an offset under § 2809.16.

PART 2880—RIGHTS-OF-WAY UNDER THE MINERAL LEASING ACT

■ 51. Revise the authority citation for part 2880 to read as follows:

Authority: 30 U.S.C. 185 and 189, and 43 U.S.C. 1732(b), 1733, and 1740.

Subpart 2884—Applying for MLA Grants or TUPs

■ 52. In § 2884.11, revise paragraph (c)(5) to read as follows:

§ 2884.11 What information must I submit in my application?

* * * * *

(c) * * *

(5) The estimated schedule for constructing, operating, maintaining, and terminating the project (a POD). Your POD must be consistent with the development schedule and other requirements as noted on the POD template for oil and gas pipelines at <http://www.blm.gov>;

* * * * *

53. In § 2884.12, revise paragraphs (a), (b), and (c) to read as follows:

§ 2884.12 What is the processing fee for a grant or TUP application?

(a) You must pay a processing fee with the application to cover the costs to the Federal Government of processing your application before the Federal Government incurs them. Subject to applicable laws and regulations, if processing your application will involve Federal agencies other than the BLM, your fee may also include the reasonable costs estimated to be incurred by those Federal agencies. Instead of paying the BLM a fee for the estimated work of other Federal agencies in processing your application, you may pay other Federal agencies directly for the costs estimated to be incurred by them in processing your application. The fees for Processing Categories 1 through 4 are one-time fees and are not refundable. The fees are categorized based on an estimate of the amount of time that the Federal Government will expend to process your application and issue a decision granting or denying the application.

(b) There is no processing fee if work is estimated to take 1 hour or less. Processing fees are based on categories. We update the processing fees for Categories 1 through 4 in the schedule each calendar year, based on the previous year's change in the IPD–GDP, as measured second quarter to second quarter. We will round these changes to the nearest dollar. We will update Category 5 processing fees as specified in the Master Agreement. These processing categories and the estimated range of Federal work hours for each category are:

PROCESSING CATEGORIES

Processing category	Federal work hours involved
(1) Applications for new grants or TUPs, assignments, renewals, and amendments to existing grants or TUPs.	Estimated Federal work hours are >1 ≤8.
(2) Applications for new grants or TUPs, assignments, renewals, and amendments to existing grants or TUPs.	Estimated Federal work hours are >8 ≤24.
(3) Applications for new grants or TUPs, assignments, renewals, and amendments to existing grants or TUPs.	Estimated Federal work hours are >24 ≤36.
(4) Applications for new grants or TUPs, assignments, renewals, and amendments to existing grants or TUPs.	Estimated Federal work hours are >36 ≤50.
(5) Master Agreements	Varies.

PROCESSING CATEGORIES—Continued

Processing category	Federal work hours involved
(6) Applications for new grants or TUPs, assignments, renewals, and amendments to existing grants or TUPs.	Estimated Federal work hours are >50.

(c) You may obtain a copy of the current schedule from any BLM State, district, or field office or by writing: U.S. Department of the Interior, Bureau of Land Management, 20 M Street SE., Room 2134LM, Washington, DC 20003. The BLM also posts the current schedule at <http://www.blm.gov>.

* * * * *

■ 54. Amend § 2884.16 by redesignating paragraphs (a)(6), (7), and (8) as paragraphs (a)(7), (8), and (9), and adding new paragraph (a)(6) to read as follows:

§ 2884.16 What provisions do Master Agreements contain and what are their limitations?

(a) * * *

(6) Describes existing agreements between the BLM and other Federal agencies for cost reimbursement;

* * * * *

■ 55. Amend § 2884.17 by revising paragraph (a) and adding paragraph (e) to read as follows:

§ 2884.17 How will BLM process my Processing Category 6 application?

(a) For Processing Category 6 applications, you and the BLM must enter into a written agreement that describes how we will process your application. The final agreement consists of a work plan, a financial plan, and a description of any existing agreements you have with other Federal agencies for cost reimbursement associated with such application.

* * * * *

(e) We may collect funds to reimburse the Federal Government for reasonable costs for processing applications and other documents under this part relating to the Federal lands.

■ 56. In § 2884.18, revise paragraphs (a)(1) and (c) to read as follows:

§ 2884.18 What if there are two or more competing applications for the same pipeline?

(a) * * *

(1) *Processing Categories 1 through 4.* You must reimburse the Federal Government for processing costs as if the other application or applications had not been filed.

* * * * *

(c) If we determine that competition exists, we will describe the procedures for a competitive bid through a bid announcement in the **Federal Register** and may use other notification methods, such as a newspaper of general circulation or the Internet. We may offer lands through a competitive process on our own initiative.

■ 57. Amend § 2884.20 by revising paragraphs (a) introductory text and (d) to read as follows:

§ 2884.20 What are the public notification requirements for my application?

(a) When the BLM receives your application, it will publish a notice in the **Federal Register** and may use other notification methods, such as a newspaper of general circulation in the vicinity of the lands involved or the Internet. If we determine the pipeline(s) will have only minor environmental impacts, we are not required to publish this notice. The notice will, at a minimum, contain:

* * * * *

(d) We may hold public hearings or meetings on your application if we determine that there is sufficient interest to warrant the time and expense of such hearings or meetings. We will publish a notice in the **Federal Register** and may use other notification methods, such as a newspaper of general circulation in the vicinity of the lands involved or the Internet, to announce in advance any public hearings or meetings.

■ 58. Amend § 2884.21 by:

■ a. Redesignating paragraphs (b) and (c) as paragraphs (c) and (d);

■ b. Adding new paragraph (b); and

■ c. Revising newly redesignated paragraph (d)(4).

The revisions and addition read as follows:

§ 2884.21 How will BLM process my application?

* * * * *

(b) The BLM will not process your application if you have any trespass action pending against you for any activity on BLM-administered lands (see § 2888.11) or have any unpaid debts owed to the Federal Government. The only applications the BLM would process are those to resolve the trespass with a right-of-way as authorized in this part, or a lease or permit under the regulations found at 43 CFR part 2920, but only after outstanding debts are paid. Outstanding debts are those currently unpaid debts owed to the Federal Government after all administrative collection actions have occurred, including any appeal proceedings under applicable Federal

regulations and the Administrative Procedure Act.

* * * * *

(d) * * *

(4) Hold public meetings, if sufficient public interest exists to warrant their time and expense. The BLM will publish a notice in the **Federal Register** and may use other methods, such as a newspaper of general circulation in the vicinity of the lands involved or the Internet, to announce in advance any public hearings or meetings; and

* * * * *

■ 59. Amend § 2884.22 by revising paragraph (a) to read as follows:

§ 2884.22 Can BLM ask me for additional information?

(a) If we ask for additional information, we will follow the procedures in § 2804.25(c) of this chapter.

* * * * *

■ 60. Amend § 2884.23 by revising paragraph (a)(6), redesignating paragraph (b) as paragraph (c), and adding new paragraph (b) to read as follows:

§ 2884.23 Under what circumstances may BLM deny my application?

(a) * * *

(6) You do not adequately comply with a deficiency notice (see § 2804.25(c) of this chapter) or with any requests from the BLM for additional information needed to process the application.

(b) If you are unable to meet any of the requirements in this section you may request an alternative from the BLM (see § 2884.30).

* * * * *

■ 61. Add § 2884.30 to read as follows:

§ 2884.30 Showing of good cause.

If you are unable to meet any of the processing requirements in this subpart, you may request approval for an alternative requirement from the BLM. Any such request is not approved until you receive BLM approval in writing. Your request to the BLM must:

(a) Show good cause for your inability to meet a requirement;

(b) Suggest an alternative requirement and explain why that requirement is appropriate; and

(c) Be received in writing by the BLM in a timely manner, before the deadline to meet a particular requirement has passed.

Subpart 2885—Terms and Conditions of MLA Grants and TUPs

■ 62. Amend § 2885.11 by revising paragraphs (a) introductory text and (b)(7) to read as follows:

§ 2885.11 What terms and conditions must I comply with?

(a) *Duration.* All grants, except those issued for a term of 3 years or less, will expire on December 31 of the final year of the grant. The term of a grant may not exceed 30 years, with the initial partial year of the grant considered to be the first year of the term. The term of a TUP may not exceed 3 years. The BLM will consider the following factors in establishing a reasonable term:

* * * * *

(b) * * *

(7) The BLM may require that you obtain, or certify that you have obtained, a performance and reclamation bond or other acceptable security to cover any losses, damages, or injury to human health, the environment, and property incurred in connection with your use and occupancy of the right-of-way or TUP area, including terminating the grant or TUP, and to secure all obligations imposed by the grant or TUP and applicable laws and regulations. Your bond must cover liability for damages or injuries resulting from releases or discharges of hazardous materials. We may require a bond, an increase or decrease in the value of an existing bond, or other acceptable security at any time during the term of the grant or TUP. This bond is in addition to any individual lease, statewide, or nationwide oil and gas bonds you may have. All other provisions in § 2805.12(b) of this chapter regarding bond requirements for grants and leases issued under FLPMA also apply to grants or TUPs for oil and gas pipelines issued under this part;

* * * * *

■ 63. Amend § 2885.15 by revising paragraph (b) to read as follows:

§ 2885.15 How will BLM charge me rent?

* * * * *

(b) There are no reductions or waivers of rent for grants or TUPs, except as provided under § 2885.20(b).

* * * * *

■ 64. Amend § 2885.16 by revising paragraph (a) to read as follows:

§ 2885.16 When do I pay rent?

(a) You must pay rent for the initial rental period before we issue you a grant or TUP. We prorate the initial rental amount based on the number of full months left in the calendar year after the effective date of the grant or TUP. If your grant qualifies for annual payments, the initial rent consists of the remaining partial year plus the next full year. If your grant or TUP allows for multi-year payments, your initial rent payment may be for the full term of the grant or TUP. See § 2885.21 for additional information on payment of rent.

* * * * *

■ 65. Amend § 2885.17 by revising the section heading, redesignating paragraph (e) as paragraph (f), and adding new paragraph (e) to read as follows:

§ 2885.17 What happens if I do not pay rents and fees or if I pay the rents or fees late?

* * * * *

(e) We will retroactively bill for uncollected or under-collected rent, including late payment and administrative fees, upon discovery if:

(1) A clerical error is identified;

(2) An adjustment to rental schedules is not applied; or

(3) An omission or error in complying with the terms and conditions of the authorized right-of-way is identified.

* * * * *

■ 66. In § 2885.19, revise paragraph (b) to read as follows:

§ 2885.19 What is the rent for a linear right-of-way grant?

* * * * *

(b) You may obtain a copy of the current Per Acre Rent Schedule from any BLM State, district, or field office or by writing: U.S. Department of the Interior, Bureau of Land Management, 20 M Street SE., Room 2134LM, Washington, DC 20003. The BLM also posts the current rent schedule at <http://www.blm.gov>.

■ 67. In § 2885.20, revise paragraph (b) to read as follows:

§ 2885.20 How will the BLM calculate my rent for linear rights-of-way the Per Acre Rent Schedule covers?

* * * * *

(b) *Phase-in provisions.* If, as the result of any revisions made to the Per Acre Rent Schedule under § 2885.19(a)(2), the payment of your new annual rental amount would cause you undue hardship, you may qualify for a 2-year phase-in period if you are a small business entity as that term is defined in Small Business Administration regulations and if it is in the public interest. We will require you to submit information to support your claim. If approved by the BLM State Director, payment of the amount in excess of the previous year's rent may be phased-in by equal increments over a 2-year period. In addition, the BLM will adjust the total calculated rent for year 2 of the phase-in period by the annual index provided by § 2885.19(a)(1).

* * * * *

■ 68. Revise § 2885.24 to read as follows:

§ 2885.24 If I hold a grant or TUP, what monitoring fees must I pay?

(a) *Monitoring fees.* Subject to § 2886.11, you must pay a fee to the BLM for any costs the Federal Government incurs in inspecting and monitoring the construction, operation, maintenance, and termination of the pipeline and protection and rehabilitation of the affected public lands your grant or TUP covers. We update the monitoring fees for Categories 1 through 4 in the schedule each calendar year, based on the previous year's change in the IPD-GDP, as measured second quarter to second quarter. We will round these changes to the nearest dollar. We will update Category 5 monitoring fees as specified in the Master Agreement. We categorize the monitoring fees based on the estimated number of work hours necessary to monitor your grant or TUP. Monitoring fees for Categories 1 through 4 are one-time fees and are not refundable. These monitoring categories and the estimated range of Federal work hours for each category are:

MONITORING CATEGORIES

Monitoring category	Federal work hours involved
(1) Inspecting and monitoring of new grants and TUPs, assignments, renewals, and amendments to existing grants and TUPs.	Estimated Federal work hours are >1 ≤8.
(2) Inspecting and monitoring of new grants and TUPs, assignments, renewals, and amendments to existing grants and TUPs.	Estimated Federal work hours are >8 ≤24.
(3) Inspecting and monitoring of new grants and TUPs, assignments, renewals, and amendments to existing grants and TUPs.	Estimated Federal work hours are >24 ≤36.

MONITORING CATEGORIES—Continued

Monitoring category	Federal work hours involved
(4) Inspecting and monitoring of new grants and TUPs, assignments, renewals, and amendments to existing grants and TUPs.	Estimated Federal work hours are >36 ≤50.
(5) Master Agreements	Varies.
(6) Inspecting and monitoring of new grants and TUPs, assignments, renewals, and amendments to existing grants and TUPs.	Estimated Federal work hours >50.

(b) The current monitoring cost schedule is available from any BLM State, district, or field office or by writing: U.S. Department of the Interior, Bureau of Land Management, 20 M Street SE., Room 2134LM, Washington, DC 20003. The BLM also posts the current schedule at <http://www.blm.gov>.

■ 69. Amend § 2886.12 by:

■ a. Revising paragraph (b);

■ b. Redesignating paragraph (d) as paragraph (g); and

■ c. Adding new paragraphs (d), (e), and (f).

The revisions and additions read as follows:

§ 2886.12 When must I contact BLM during operations?

* * * * *

(b) When your use requires a substantial deviation from the grant or TUP. You must seek an amendment to your grant or TUP under § 2887.10 and obtain our approval before you begin any activity that is a substantial deviation;

* * * * *

(d) Whenever site-specific circumstances or conditions arise that result in the need for changes to an approved right-of-way grant or TUP, POD, site plan, mitigation measures, or construction, operation, or termination procedures that are not substantial deviations in location or use authorized by a right-of-way grant or TUP. Changes for authorized actions, project materials, or adopted mitigation measures within the existing, approved right-of-way or TUP area must be submitted to the BLM for review and approval;

(e) To identify and correct discrepancies or inconsistencies;

(f) When you submit a certification of construction, if the terms of your grant require it. A certification of construction is a document you submit to the BLM after you have finished constructing a facility, but before you begin operating it, verifying that you have constructed and tested the facility to ensure that it complies with the terms of the grant and with applicable Federal and State laws and regulations; and

* * * * *

Subpart 2887—Amending, Assigning, or Renewing MLA Grants and TUPs

■ 70. Revise § 2887.11 to read as follows:

§ 2887.11 May I assign or make other changes to my grant or TUP?

(a) With the BLM's approval, you may assign, in whole or in part, any right or interest in a grant or TUP. Assignment actions that may require BLM approval include, but are not limited to, the following:

(1) The transfer by the holder (assignor) of any right or interest in the grant or TUP to a third party (assignee); and

(2) Changes in ownership or other related change in control transactions involving the BLM right-of-way grant holder or TUP holder and another business entity (assignee), including corporate mergers or acquisitions, but not transactions within the same corporate family.

(b) The BLM may require a grant or lease holder to file new or revised information in some circumstances that do not constitute an assignment (see subpart 2883 and §§ 2884.11(c) and 2886.12). Circumstances that would not constitute an assignment but may necessitate this filing include, but are not limited to:

(1) Transactions within the same corporate family;

(2) Changes in the holder's name only (see paragraph (h) of this section); and

(3) Changes in the holder's articles of incorporation.

(c) In order to assign a grant or TUP, the proposed assignee, subject to § 2886.11, must file an application and follow the same procedures and standards as for a new grant or TUP, including paying processing fees (see § 2884.12).

(d) The assignment application must also include:

(1) Documentation that the assignor agrees to the assignment; and

(2) A signed statement that the proposed assignee agrees to comply with and to be bound by the terms and conditions of the grant or TUP that is being assigned and all applicable laws and regulations.

(e) Your assignment is not recognized until the BLM approves it in writing. We will approve the assignment if doing so is in the public interest. The BLM may modify the grant or TUP or add bonding and other requirements, including terms and conditions, to the grant or TUP when approving the assignment. If we approve the assignment, the benefits and liabilities of the grant or TUP apply to the new grant or TUP holder.

(f) The processing time and conditions described at § 2884.21 apply to assignment applications.

(g) Only interests in issued right-of-way grants and TUPs are assignable. Pending right-of-way and TUP applications do not create any property rights or other interest and may not be assigned from one entity to another, except that an entity with a pending application may continue to pursue that application even if that entity becomes a wholly owned subsidiary of a new third party.

(h) *Change in name only of holder.* Name-only changes are made by individuals, partnerships, corporations, and other right-of-way and TUP holders for a variety of business or legal reasons. To complete a change in name only, (*i.e.*, when the name change in question is not the result of an underlying change in control of the right-of-way grant or TUP), the following requirements must be met:

(1) The holder must file an application requesting a name change and follow the same procedures as for a new grant or TUP, including paying processing fees (see subpart 2884 of this part). The name change request must include:

(i) If the name change is for an individual, a copy of the court order or other legal document effectuating the name change; or

(ii) If the name change is for a corporation, a copy of the corporate resolution(s) proposing and approving the name change, a copy of the filing/acceptance of the change in name by the State or territory in which it is incorporated, and a copy of the appropriate resolution(s), order(s), or

other documentation showing the name change.

(2) In connection with processing of a name change only, the BLM retains the authority under § 2885.13(e) to modify the grant or TUP, or add bonding and other requirements, including additional terms and conditions, to the grant or TUP.

(3) Your name change is not recognized until the BLM approves it in writing.

■ 71. In § 2887.12, add paragraphs (d) and (e) to read as follows:

§ 2887.12 How do I renew my grant?

* * * * *

(d) If you make a timely and sufficient application for a renewal of your existing grant or for a new grant in accordance with this section, the existing grant does not expire until we have issued a decision to approve or deny the application.

(e) If we deny your application, you may appeal the decision under § 2881.10.

Dated: November 10, 2016.

Amanda C. Leiter,

Acting Assistant Secretary for Land and Minerals Management, Department of the Interior.

Department of Education

34 CFR Parts 600 and 668

Program Integrity and Improvement; Final Rule

DEPARTMENT OF EDUCATION**34 CFR Parts 600 and 668****[Docket ID ED–2016–OPE–0050]****RIN 1840–AD20****Program Integrity and Improvement****AGENCY:** Office of Postsecondary Education, Department of Education.**ACTION:** Final regulations.

SUMMARY: The Secretary amends the State authorization sections of the Institutional Eligibility regulations issued under the Higher Education Act of 1965, as amended (HEA). In addition, the Secretary amends the Student Assistance General Provisions regulations issued under the HEA, including the addition of a new section on required institutional disclosures for distance education and correspondence courses.

DATES: These regulations are effective July 1, 2018.

SUPPLEMENTARY INFORMATION:**Executive Summary**

Purpose of This Regulatory Action: This regulatory action establishes requirements for institutional eligibility to participate in title IV, HEA programs. These financial aid programs are the Federal Pell Grant program, the Federal Supplemental Educational Opportunity Grant, the Federal Work-Study program, the Teacher Education Assistance for College and Higher Education (TEACH) Grant program, Federal Family Educational Loan Program, and the William D. Ford Direct Loan program.

The HEA established what is commonly known as the program integrity “triad” under which States, accrediting agencies, and the Department act jointly as gatekeepers for the Federal student aid programs mentioned above. This triad has been in existence since the inception of the HEA; and as an important component of this triad, the HEA requires institutions of higher education to obtain approval

from the States in which they provide postsecondary educational programs.

This requirement recognizes the important oversight role States play in protecting students, their families, taxpayers, and the general public as a whole. The Department established regulations on October 29, 2010 (75 FR 66832) to clarify the minimum standards of State authorization that an institution must demonstrate in order to establish eligibility to participate in HEA title IV programs. While the regulations established in 2010 made clear that all eligible institutions must have State authorization in the States in which they are physically located, the U.S. Court of Appeals for the District of Columbia set aside the Department’s regulations requiring authorization of distance education programs or correspondence courses by other States where students were located outside of the State with the physical location. Furthermore, the 2010 regulations did not address additional locations or branch campuses located in foreign locations. As such, these regulations clarify the State authorization requirements an institution must comply with in order to be eligible to participate in HEA title IV programs, ending uncertainty with respect to State authorization and closing any gaps in State oversight to ensure students, families, and taxpayers are protected.

The Office of the Inspector General (OIG), the Government Accountability Office (GAO), and others have voiced concerns over fraudulent practices, issues of noncompliance with requirements of the title IV programs, and other challenges within the distance education environment. Such practices and challenges include misuse of title IV funds, verification of student identity, and gaps in consumer protections for students. The clarified requirements related to State authorization will support the integrity of the title IV, HEA programs by permitting the Department to withhold those title IV funds from institutions that are not authorized to operate in a given State. Because institutions that offer distance education programs usually offer the programs in multiple States, there are unique challenges with respect to oversight of these programs by States and other agencies.

Many States and stakeholders have expressed concerns with these unique challenges, especially those related to ensuring adequate consumer protections for students as well as compliance by institutions participating in this sector. For example, some States have expressed concerns over their ability to identify which out of State providers are

operating in their States; whether those programs prepare their students for employment, including meeting licensure or certification requirements in those States; the academic quality of programs offered by those providers; as well as the ability to receive, investigate and address student complaints about out-of-State institutions. One stakeholder provided an example of a student in California who enrolled in an online program offered by an institution in Virginia, but then informed the institution of her decision to cancel her enrollment agreement. Four years later, that student was told that her wages would be garnished if she did not begin making monthly payments on her debt to the institution. Although the State of California had a cancellation law that may have been beneficial to the student, that law did not apply due to the institution’s lack of physical presence in the State. According to the stakeholder, the Virginia-based institution was also exempt from oversight by the appropriate State oversight agency, making it problematic for the student to voice a complaint or have any action taken on it. Documented wrong-doing has been reflected in the actions of multiple State Attorney Generals who have filed lawsuits against online education providers due to misleading business tactics. For example, the Attorney General of Iowa settled a case against a distance education provider for misleading Iowa students because the provider incorrectly represented that its educational programs would qualify a student to earn teacher licensure. As such, this regulatory action also establishes requirements for institutional disclosures to prospective and enrolled students in programs offered through distance education or correspondence courses, which we believe will protect students by providing them with important information that will aid their decisions regarding whether to enroll in distance education programs or correspondence courses as well as improve the efficacy of State-based consumer protections for students.

Since distance education may involve multiple States, authorization requirements among States may differ, and students may be unfamiliar with or fail to receive information about complaint processes, licensure requirements, or other requirements of authorities in States in which they do not reside. These disclosures will provide consistent information necessary to safeguard students and taxpayer investments in the title IV, HEA programs. By requiring disclosures

that reflect actions taken against a distance education program, how to lodge complaints against a program they believe has misled them, and whether the program will lead to certification or licensure will provide enrolled and prospective students with important information that will protect them.

Summary of the Major Provisions of This Regulatory Action: The regulations would—

- Require an institution offering distance education or correspondence courses to be authorized by each State in which the institution enrolls students, if such authorization is required by the State, in order to link State authorization of institutions offering distance education to institutional eligibility to participate in the title IV, HEA programs, including through a State authorization reciprocity agreement.

- Define the term “State authorization reciprocity agreement” to be an agreement between two or more States that authorizes an institution located and legally authorized in a State covered by the agreement to provide postsecondary education through distance education or correspondence courses to students residing in other States covered by the agreement and does not prohibit any State in the agreement from enforcing its own statutes and regulations, whether general or specifically directed at all or a subgroup of educational institutions.

- Require an institution to document the State process for resolving complaints from students enrolled in programs offered through distance education or correspondence courses.

- Require that an additional location or branch campus located in a foreign location be authorized by an appropriate government agency of the country where the additional location or branch campus is located and, if at least half of an educational program can be completed at the location or branch campus, be approved by the institution’s accrediting agency and be reported to the State where the institution’s main campus is located.

- Require that an institution provide public and individualized disclosures to enrolled and prospective students regarding its programs offered solely through distance education or correspondence courses.

Costs and Benefits: The regulations support States in their efforts to develop standards and increase State accountability for a significant sector of higher education—the distance education sector. In 2014, over 2,800,000 students were enrolled in

distance education programs.¹ The potential primary benefits of the regulations are: (1) Increased transparency and access to institutional/program information for prospective students through additional disclosures, (2) updated and clarified requirements for State authorization of distance education and foreign additional locations, and (3) a process for students to access complaint resolution from the State in which the institution is authorized and the State in which the students reside. The clarified requirements related to State authorization also support the integrity of the title IV, HEA programs by permitting the Department to withhold title IV funds from institutions that are not authorized to operate in a given State. Institutions that choose to offer distance education will incur costs in complying with State authorization requirements as well as costs associated with the disclosures that would be required by the regulations.

Public Comments: In response to our invitation in the notice of proposed rulemaking (NPRM) published July 25, 2016 (81 FR 48598), 139 parties submitted comments on the proposed regulations. We also had a consultative meeting with staff from the Department of Defense. We group major issues according to subject, with appropriate sections of the regulations to which they pertain. Generally, we do not address technical or other minor changes.

Analysis of Comments and Changes: An analysis of the comments and of any changes to the regulations since publication of the NPRM follows:

General Comments

Comments: Commenters were concerned that the Department has overstepped its statutory authority under the HEA, stating that, much like the previous State Authorization regulations, the requirement under the proposed regulations that schools offering online and distance learning programs meet licensing requirements in every State where their students happen to be found is contrary to the HEA. Rather, the commenters asserted that HEA requires only that an institution be authorized in the State where it is located, not where the student is located. The commenters noted a discussion from H.R. Rep. No. 105–481, at 148 (1998) (explaining that “States have a number of options in

overseeing institutions within their boundaries”) and conclude that the Department’s distance education requirements exceed the statutory scope.

Discussion: We disagree with the commenters and believe that we have the authority to require an institution to obtain any required State approval for distance education programs by each and every State in which its enrolled students reside. The HEA requires institutions to be authorized by States, and the Department recognizes that this encompasses a State’s authority to set standards for in-State students for educational programs that originate outside of that State. Additionally, the language in the legislative history that the commenters quoted was a statement made to explain the elimination from the HEA of the State Postsecondary Review Program that had required States to create certain postsecondary oversight functions to conduct reviews at physical school locations, and that language did not address whether States could establish requirements over distance education programs.

Changes: None.

Section 600.2 Definitions

State Authorization Reciprocity Agreement

Comments: Several commenters supported the Department’s definition of the term “State authorization reciprocity agreement.” Many commenters requested clarification on the term “consumer protection laws” under the definition of a State authorization reciprocity agreement. Some commenters suggested that the Department’s clarification specify that “consumer protection laws” encompasses a State’s consumer protection statutes and the regulations interpreting those statutes, both general and specific, including those directed at all or a subset of educational institutions. Some commenters further asked that “consumer protection laws” include laws specifically applicable to higher education institutions that cover the following: Disclosures to current and prospective students, the contents of any documents provided to students or prospective students, prohibited practices, refunds, cancellation rights, student protection funds or bonds, private causes of action, and student complaint standards and procedures. Other commenters asked for clarification that any State authorization reciprocity agreement that the Department authorizes for the purpose of institutional title IV eligibility must be governed and controlled by member

¹ 2015 Digest of Education Statistics: Table 311.15: Number and percentage of students enrolled in degree-granting postsecondary institutions, by distance education participation, location of student, level of enrollment, and control and level of institution: Fall 2013 and Fall 2014.

States under clearly defined policies and procedures that allow the member States to exercise ultimate authority for establishing, maintaining, and enforcing conditions of State and institutional participation in the agreement. Commenters also recommended that reciprocity agreements be required to include standard due process requirements, similar to those provided in proceedings by State agencies, the Department, and by accrediting agencies. Several commenters argued that States should not be forced to accept conditions that would limit specific State requirements such as refund policies in order to join a State authorization reciprocity agreement.

Other commenters were concerned that the proposed provision on “consumer protection laws” would make the institutions need to comply with additional State requirements besides the conditions required under the State reciprocity agreement. This was described as something that could result in the end of reciprocity agreements because States would still be able to enforce their own rules, regardless of the reciprocity agreement. Other commenters suggested that “consumer protection laws” be clarified to refer to a State’s general consumer protection laws (commonly dealing with issues such as fraud, misrepresentation or abuse, and applicable to all entities doing business in the State) rather than any consumer protection aspects of laws dealing specifically with postsecondary education. Some commenters specifically cited the existing State Authorization Reciprocity Agreement (SARA) administered by the National Council for State Authorization Reciprocity Agreement (NC-SARA) as allowing SARA member States to have authority to enforce all their general purpose laws against non-domestic institutions (including SARA participating institutions) providing distance education in the State, including, but not limited to, those laws related to consumer protection and fraudulent activities, where the term “general-purpose law” is defined as “one that applies to all entities doing business in the State, not just institutions of higher education.” Commenters stated that this type of definition would ensure that distance education providers operating in a given State under SARA must still comply with the consumer protection standards any other business must meet, and noted that those provisions are commonly enforced by the offices of Attorneys General. The commenters further said that this approach also

ensures that a given State may limit the applicability of its own laws by recasting State authorization requirements focused solely on institutions of higher education as “consumer protection laws.”

In a related vein, commenters recommended that the Department clarify that a State authorization reciprocity agreement cannot bar any State from membership on grounds related to its consumer protection laws because a State’s consumer protection statutes and regulations should never be a barrier to its entry into a reciprocity agreement. Commenters recommended that the word “participating” should be replaced with the word “any” so that a prospective State authorization reciprocity agreement would not be able to cite the word “participating” to refuse to admit an otherwise eligible State for membership in, or force a State to withdraw from, an agreement on the grounds that the State’s consumer protection laws are too rigorous.

Discussion: We appreciate commenters’ support regarding the definition of the term State authorization reciprocity agreement.

We define a State authorization reciprocity agreement as “an agreement between two or more States,” not an agreement between States and a non-State entity. Therefore, while States may permit a non-State entity to oversee the requirements of a State authorization reciprocity agreement, we agree with the comment that the ultimate responsibility for establishing, maintaining, and enforcing such requirements must rest with the member States that are parties to the agreement. An agreement that placed such responsibilities with a non-State entity would not fulfill the definition of a State authorization reciprocity agreement. While we agree that the ultimate responsibility for resolving disagreements between two participating States who are party to an agreement rests with those States, not with a non-State entity, we decline to define due process procedures for resolving conflicts or disagreements between States. The member States to an agreement have the discretion to establish due process requirements in the manner that they so choose.

We disagree with the recommendation by some commenters that the term “consumer protection laws” be clarified to only refer to the laws that apply to all entities doing business in the State, not just institutions of higher education, so that the resulting outcome would be that laws that applied only to institutions of higher education would be displaced by

a State reciprocity agreement. Rather, we believe that if a State has laws that are specific to postsecondary institutions, the State’s laws should not be preempted by a reciprocity agreement that does not recognize those State laws. Thus, we believe that the definition of a State authorization reciprocity agreement should encompass a State’s statutes and the regulations interpreting those statutes, both general and specific, including those directed at all or a subset of educational institutions. We decline to further specify the content of State statutes and regulations, and we also decline to require specific State policies and procedures.

Moreover, we agree that States should be active in protecting their own students, and thus, agree that the word “participating” should be replaced with “any” when referring to reciprocity agreements, so that a State authorization reciprocity agreement does not prohibit any State from enforcing its own statutes and regulations, whether general or specifically directed at all or a subgroup of educational institutions. We would expect States to work together to implement a reciprocity arrangement to resolve conflicts between their respective State statutes and regulations and the provisions of the State authorization reciprocity agreement.

Changes: We have revised the definition of State authorization reciprocity agreement by deleting the words “consumer protection laws” and adding in their place “statutes and regulations, whether general or specifically directed at all or a subgroup of educational institutions.” In addition, we have replaced the word “participating” with reference to a participating State with the word “any” so that a State authorization reciprocity agreement does not prohibit any State from enforcing its own statutes and regulations, whether general or specifically directed at all or a subgroup of educational institutions. We add the word “residing” after the word “students” to clarify that the agreement authorizing and institution to provide postsecondary education through distance education or correspondence courses is to students residing in other States covered by the agreement. We also add the words “in the agreement” after “any State” to clarify that the agreement does not prohibit any State in the agreement from enforcing its own statutes and regulations.

Comments: Some commenters stated concerns that certain institutions will not be able to participate in the currently existing SARA because they

are not degree-granting institutions and that there is no way for those institutions to develop a SARA-type structure due to differences between States in length, curriculum, examination requirements, and licensure prerequisites. Commenters stated that although utilization of technology at their institutions is in its infancy, the proposed regulations create a roadblock that will prohibit advances that are beneficial to students and recommended that the Department provide some form of accommodation so as not to impede the potential benefits students attending these institutions would be able to access under State authorization reciprocity agreements.

Discussion: We do not agree with the commenter's recommendation that the Department provide accommodations for institutions that cannot join an existing reciprocity agreement. The proposed definition of the term "State authorization reciprocity agreement" is intended to apply to any State authorization reciprocity agreement, not just the existing SARA. States are able to develop reciprocity agreements as they deem necessary or desirable, and there is nothing in the final regulations that would prohibit a State from developing or participating in a State authorization reciprocity agreement that authorizes non-degree-granting institutions.

Changes: None.

Comments: A commenter requested that the Department clearly define or create a process that provides reciprocity based on accreditation status and mandate that all States participate in this as many State requirements for approving institutions of higher education were created for brick-and-mortar institutions and do not fit well with new technologies and pedagogy that crosses State lines.

Discussion: We disagree that the Department should define or create a process that provides reciprocity based on accreditation status and mandate that all States participate in this. As we discussed in the preamble to the NPRM, the HEA established what is commonly called the triad under which States, accrediting agencies, and the Department act jointly as gatekeepers for the Federal student aid programs. State authorization is an important part of the triad, recognizing the important oversight role States play in protecting students, their families, taxpayers, and the general public as a whole. Accepting the commenter's recommendation would undermine the concept of the triad and would jeopardize the State's important oversight role. Lastly, it is the

State, not accrediting agencies, that has jurisdiction over who operates in that State.

Changes: None.

Comments: Some commenters stated that State and Federal laws treat for-profit entities very differently from nonprofit and public entities, and that while the governing boards of for-profit entities may spend their revenue virtually without restriction, including taking the money for themselves, the corporate structure of public and other nonprofit entities is designed to provide built-in protections against self-interest. The structural difference results in contrasting behavior by colleges, the commenters stated, with for-profit colleges far more likely to engage in predatory practices. The commenters indicate that some States may not wish to adopt reciprocity that recognizes the approval of for-profit colleges by other States and that States should not be forced by a reciprocity agreement to accept all of a State's approvals without regard to sector. The commenters recommend that the Department add a provision that would require reciprocity agreements to allow States to adopt reciprocity for public and nonprofit colleges without automatic inclusion of for-profit companies.

Discussion: We do not agree that the Department should require reciprocity agreements to allow States to adopt reciprocity for public and nonprofit colleges without automatic inclusion of for-profit companies. If States want to develop and participate in such reciprocity agreements, they are able to do so.

Changes: None.

Section 600.9(c)(1) State Authorization of Distance Education and Correspondence Courses

Comments: A few commenters cited a letter urging the Department to explicitly exempt clinical education rotations from any future rulemaking on distance education to avoid compounding the harmful impacts of the existing State authorization regulations on educational and health professions institutions.

Discussion: While we understand the commenters' concern regarding the effects of this rulemaking on health professions institutions, Dear Colleague Letter GEN-12-13 states that, for State authorization purposes, in the case of an additional location of an institution where a student cannot complete more than 50 percent of a program, the student is considered to be enrolled at the main campus of the institution, and thus, no additional State authorization would be required. We believe that most

clinical education rotations would fall under this policy, and students enrolled in such rotations would not be considered enrolled in distance education or correspondence courses. However, it should be noted that States may independently have requirements that an institution obtain approval of such locations.

Changes: None.

Comments: Some commenters were concerned that the proposed regulation would render institutions entirely ineligible to participate in title IV programs because they have not met applicable State authorization requirements for distance education programs that are not title-IV eligible. An institution could be ineligible for Federal financial aid for all of its on-campus programs even if none of its distance education programs were eligible for title IV aid—or, for that matter, if any one non-title IV program or course, including a course offered free of charge to students worldwide, failed to exclude a student from a State that had not authorized the instruction. The commenters asked that if the Department does intend to apply the State authorization requirement to overall institutional eligibility, even in cases in which no HEA title IV funds are used for students enrolled in an institution's distance education programs, clarification be provided as to the Department's authority and interest to regulate non-title IV distance education programs. Other commenters asked the Department to clarify in the case where an institution does not obtain or maintain State authorization for distance education programs or correspondence courses in any particular State, what financial aid eligibility would be at risk in that State—eligibility of the institution or eligibility of certain programs?

Discussion: These regulations do not apply to education programs that are not title IV-eligible. However, for title IV-eligible programs that include distance education or correspondence courses, if an institution does not obtain or maintain State authorization for distance education or correspondence courses in any particular State that has such requirements, such programs would only lose eligibility for HEA title IV funding for students residing in that State. An institution's inadvertent or unintentional failure to obtain State authorization for distance education or correspondence courses in a State where its enrolled students reside would not jeopardize the entire institution's eligibility if the institution otherwise met eligibility requirements.

Changes: None.

Comments: Some commenters were concerned that the State authorization requirement in proposed section 600.9(c) applies at such time as an institution “offers” postsecondary education through distance education or correspondence courses to students in a State in which the institution is not physically located, whether or not the institution actually enrolls students in the State. Thus, under the proposed rule, an institution may face a loss of Federal financial aid for failure to comply with requirements of a State in which it has not enrolled any distance education students. The commenters recommended that the final rule should permit institutions to identify the States in which applicants to particular programs reside, and then make determinations regarding the need for authorization based on expected enrollment, regardless of whether or not courses have been offered more broadly.

Discussion: We disagree with the commenters’ recommendation. Institutions should not market to, nor enroll students in, a program in a State unless the institution has met applicable State authorization requirements. A State may also have specific State requirements for how postsecondary institutions market distance education programs within that State, and we would expect institutions to comply with those requirements. We note that, if an institution does not obtain or maintain State authorization for distance education or correspondence courses in any particular State that has such requirements, such programs would only lose eligibility for HEA title IV funding for students residing in that State.

Changes: None.

Comments: A few commenters expressed concerns regarding the case of a student from a State in which the institution was approved at the time the student initially enrolled relocating during the period of enrollment to a State which requires authorization and in which the institution is not authorized. The commenters ask whether, in order to maintain compliance with the requirement to be authorized in every State in which students are served, would the institution be required to administratively dismiss the student from the program. They note that if so, this seems unfair to the student who invested time and resources in the program and for whom transfer to a different institution that is authorized in her new State of residence may be costly and burdensome. In addition, commenters argue that such a case also creates an untenable situation for the

institution that may not, due to financial constraints or strategy regarding market area, be in a position to seek or obtain approval in the student’s new State of residence so the student can stay enrolled through completion of the program. Even if willing and able to do so, and in the interest of supporting the student’s educational goals, obtaining such approval will take time for the institution and may result in a period of noncompliance while in process. The commenters also posit that a rigid approach in this circumstance could have a disproportionate impact on certain classes of students, including those who are in the military and employees who may be required to relocate as a condition of a military or work assignment. The commenters recommend some consideration for an amnesty, exemption, or “safe harbor” that would allow these students to remain enrolled in the institution through the completion of the program, as long as the institution was in compliance in the student’s original State of residence at the time the student initially enrolled or through a modification to the attestation language in the program participation agreement to reflect that the institution was in compliance with the Federal program integrity rules related to distance education at the time of student enrollment in the online program.

Discussion: An institution is not required to dismiss a student from a program if the student moves to a State in which the institution is not authorized under the requirements in § 600.9(c); however, the institution may not disburse additional Federal student aid to the student if the institution has information that the student has moved to another State in which the institution is not authorized. For purposes of this rulemaking, a student is considered to reside in a State if the student meets the requirements for residency under that State’s law. In general, when determining the State in which a student resides, an institution may rely on a student’s self-determination unless the institution has information that conflicts with that determination. An institution should be providing the student with information about its State authorization status and should be informing the student that, if the student relocates to a State where the institution is not authorized, the institution cannot disburse Federal student aid to the student as long as the student continues to reside in that State.

With respect to military personnel, just as with non-military personnel, we treat the student’s State of residence to be the State for which the student meets

the requirements for residency under State law. Further, similar to non-military personnel, when determining the State in which the military student resides, the institution may rely on the student’s self-determination unless the institution has information that conflicts with that determination. The Department expects institutions who already offer distance education programs to be in compliance with State laws and we decline to create any safe harbors that would permit an institution to provide title IV funds to a student in a State where the program does not meet State requirements. Institutions must use the disclosure process and conversations with prospective students to ensure the students understand and consider that relocating to other States could affect the title IV funding for their program.

Changes: None.

Comments: Some commenters stated that some educational programs, including hybrid programs with on-campus components, are subject to the laws of the State in which the institution’s physical campus is located, and thus, no additional purpose is served by requiring hybrid programs to meet both home State requirements and authorization requirements from each State in which students reside, simply because a portion of the program is offered through distance education. If students attend any portion of a program at the physical campus where the institution is located, the program is subject to the oversight of authorities in the State where the campus is located. The commenters recommend that the Department amend § 600.9(c) to apply only to educational programs that can be completed “solely” through distance education or correspondence courses.

Discussion: The regulations do not require that hybrid programs meet both home State requirements and authorization requirements from each State in which students reside, simply because a portion of the program is offered through distance education. Rather, an institution is required to meet any State requirements for it to be legally offering postsecondary distance education or correspondence courses in the State. If a State has applicable requirements for students taking a portion of a hybrid program through distance education, the institution must meet those state requirements.

Changes: None.

Comments: A commenter recommended that the Department clarify that any institution offering distance education has the option to decide whether it chooses to be authorized individually in each

required State or whether it participates in a reciprocity agreement between States. The commenter suggested that the regulations clearly state the option, perhaps by adding “or” between paragraphs (i) and (ii) of § 600.9(c)(1).

Discussion: We agree with the commenter that the regulations provide any institution offering distance education with the option to decide whether it chooses to be authorized individually in each required State or whether it participates in a reciprocity agreement between States and that adding “or” between paragraphs (i) and (ii) of § 600.9(c)(1) clarifies this point. In addition, we note that an institution could simultaneously participate in multiple State authorization reciprocity agreements and simultaneously be authorized individually in multiple States.

Changes: We have added “or” between paragraphs (i) and (ii) of § 600.9(c)(1).

Comments: Some commenters opined that proposed § 600.9(c)(1)(i) did not appear to address those States that regulate—in some way—institutions offering distance education courses to residents, but that do not require full State approval or authorization in order to do so. They recommended that § 600.9 be revised to address these types of situations as there are many States that have an exemption process or otherwise have a registration process that results in something less than full approval yet still allows the institution to enroll residents.

Discussion: We decline to revise the regulations. It is a State’s discretion as to how it may choose to regulate by establishing requirements that exceed the minimum requirements for title IV program eligibility. An institution is responsible for meeting any State requirements and should maintain the applicable documentation.

Changes: None.

Comments: Some commenters requested clarification regarding what entity the Department would rely upon to determine whether an institution covered by a State authorization reciprocity agreement is operating in a State outside of the limitations of that agreement. These commenters also asked the Department to affirm that each State in which an institution is offering distance education remains the ultimate authority for determining whether an institution is operating lawfully in that State, regardless of whether a non-State entity administers the agreement.

Discussion: We agree with the commenters that each State in which an institution is offering distance education remains the ultimate authority for

determining whether an institution is operating lawfully in that State, regardless of whether a non-State entity administers the agreement, including whether an institution covered by a State authorization reciprocity agreement is operating in a State outside of the limitations of that agreement.

Changes: None.

Comments: Some commenters stated that though the regulation is given the title of “State authorization” it seems that an institution will need to prove compliance with more State agencies than just the State higher education agency, such as a State Secretary of State or a State’s licensing board. These commenters stated that this issue is important for institutions so that they can make plans for compliance, and if necessary, restrict enrollments in certain States until all State requirements are met.

Discussion: Institutions are required to know what State requirements exist for an educational program to be offered to a student in a particular State, and the required approvals that constitute what is needed for the program to be authorized by that State. While we agree that institutions should not enroll students from a State until all State requirements are met, we believe institutions should routinely identify this information and ensure State requirements are being met where their students live.

Changes: None.

Comments: A commenter asked the Department to declare that, for the purpose of this regulation, an institution authorized to provide higher education in its own State is also authorized to serve students from any other State in the country.

Discussion: We disagree with the commenter’s suggestion as it would allow one State to preempt another State’s requirements.

Changes: None.

Section 600.9(c)(2) State Authorization of Distance Education and Correspondence Courses—Complaint Process

Comments: Some commenters supported the proposal that students enrolled in an out-of-State online school are eligible for title IV aid only if they are able to seek and receive action on their complaints from the authorizing agency in their State of residence. However, the commenters were concerned that complaint-handling is inadequate if the State does not have the ability to enforce its decisions. They recommended language clarifying that the State’s process must be able to ultimately lead to denying the

institution’s authority to enroll residents of that State.

Discussion: We appreciate the commenters’ support. We further agree that a State should be able to deny an institution’s authorization to enroll students who reside in that State and believe that the regulations as drafted do not interfere with the State’s ability to exercise this authority. We decline to specify that the State complaint process must allow a State to deny an institution from enrolling students because that is an issue best left to each State.

Changes: None.

Comments: Some commenters were concerned that, for institutions that do not have access to reciprocity agreements, the proposed regulations would impose a number of new compliance requirements that will require significant resources on an ongoing basis. For instance, States would be required to document the existence of a State process for action on complaints in each State from which a distance education program enrolls students. The commenters asked that the Department or another agency make the determination if a State process exists and publish this information, or alternatively, to write into the final regulations the previous guidance from the Department (Dear Colleague Letter (DCL) GEN–12–13, July 27, 2013, Question 9) which permitted institutions offering distance education in multiple States to satisfy the requirement to provide State contact information for filing complaints by providing a link to non-institutional Web sites that identified contact information for filing student complaints for multiple States.

Discussion: We believe that access to a complaint process is an important student protection that an institution should be able to document and provide to a student regardless of whether the institution participates in a reciprocity agreement. This policy is not new, since every institution already has to provide this information under 34 CFR 668.43(b). In addition, DCL GEN–12–13 states that an institution must make sure that all of its students are provided with the applicable consumer information that corresponds to their enrollment and that the information must be for every State in which the institution is operating, including every State where students are enrolled for distance education. The consumer information to be provided includes the complaint process.

We make a distinction, however, between an institution that provides documentation to the Department in order to satisfy the requirements under

the State authorization regulations and an institution that is providing information to a student regarding the State's complaint process to satisfy the consumer information requirements. DCL GEN-12-13 Question 9 was related to consumer information requirements, thus we would not include this guidance for compliance with the State authorization regulations. We discuss consumer information requirements further under the consumer disclosures section.

Changes: None.

Comments: A few commenters asked that the regulations include compliance for their students from States such as California that reportedly lack oversight for their out-of-State student complaints. Other commenters opined that the proposed rule would require all States to have a process for reviewing complaints from any student located in that State enrolled in a distance education program or at an out-of-State institution even if the State law does not require the institution to be authorized in that State. Other commenters noted that the California Bureau for Private Postsecondary Education (CA-BPPE) does not currently require purely online institutions to be authorized and will not accept complaints against non-authorized institutions. These commenters recommended that the Department determine that these students in distance education programs are not adequately covered by a complaint process and, therefore, not eligible for title IV funding. Some commenters recommended allowing institutions to use their home State's complaint processes for students in States lacking adequate complaint procedures.

Discussion: Section 600.9(c)(2) provides that if an institution offers postsecondary education or correspondence courses to students residing in a State in which the institution is not physically located, the institution must document that there is a State complaint process in each State in which the institution's enrolled students reside or through a State authorization reciprocity agreement which designates for this purpose either the State in which the institution's enrolled students reside or the State in which the institution's main campus is located. In addition, any student who is enrolled in distance or correspondence education provided by an institution must have access to the consumer complaint system in the State where the institution's main campus is located (the home State), as that complaint process is described under 34 CFR 600.9(a). Thus, we agree with

commenters that, if a State does not provide a complaint process as described in a State where an institution's enrolled students reside, the institution would not be able to disburse Federal student aid to students in that State. Additionally, if the State in which the institution's main campus is located does not provide an appropriate complaint process to students enrolled through distance or correspondence education at that institution, none of those students would be eligible to receive Federal student aid.

Changes: None.

Comments: Commenters stated that policymakers may see not establishing a complaint process and not entering into a reciprocity agreement as a way to protect their in-State institutions from out-of-State competition, which would limit opportunities and create considerable confusion for students. The commenters recommended that the regulations be revised to say that, in cases where a student resides in a State that does not participate in a reciprocity agreement or have its own student complaint process, a distance or correspondence education program located in a State with a student complaint process should be able to use such home State complaint procedures, or other procedures designated in a reciprocity agreement, to satisfy the Department's requirement if clearly and conspicuously disclosed to the student under § 668.50(b)(1) and (2).

Discussion: We disagree with the commenter's suggestion. A State is not required to have a complaint process, although, if it does not, institutions would not be able to disburse Federal student aid to resident students in that State. A State is also not required to participate in a reciprocity agreement, thus, it cannot be required to be subject to a complaint process under a reciprocity agreement. However, as provided in 34 CFR 600.9(a), the complaint process in the State where the institution's main campus is located may be utilized.

Changes: None.

Comments: Several commenters felt that it is unclear what the term "document" in the proposed regulations requires, stating that some commenters are interpreting that term to require that institutions verify the efficacy of the process, as opposed to its mere existence. They also stated that it is not appropriate for institutions to be put in the position of determining whether a student complaint process in a particular State contains "appropriate action" on complaints, as required by the proposed regulations because such a

subjective determination puts an institution in a position of potential sanctions or liabilities for substantial misrepresentation should the institution make an incorrect, though good faith, determination. The commenters asked that the Department provide clarification or delete the requirement. Other commenters asked whether institutions would be required to provide yearly proof of compliance.

Discussion: Institutions will be asked to provide documentation of the State's complaint process when an institution is seeking certification or recertification or if a question arises due to a complaint, program review or audit, not on an annual basis. The Department will subsequently determine if the State's complaint process is compliant with the State authorization regulations. This same process is currently used for institutions under § 600.9(a) and (b). If the Department determines that the complaint process is not compliant with the State authorization regulations, it will notify the institution and subsequently work with the institution to address this issue.

Changes: None.

Comments: Commenters said that the Disclosures section of the proposed regulations are only applicable to students completing programs "solely" through distance education, yet, the term "solely" is not employed elsewhere to define distance education and asked for clarification that distance education in § 600.9(c) pertains only to programs offered 100 percent off campus. Commenters further stated that the NPRM did not address the issue of hybrid style courses or programs and the regulations seem to omit any Federal oversight of hybrid programs and requested a formal definition of distance education be provided. Some commenters recommended that the term "distance education" include both purely online programs and online programs which include a requirement for a credit-bearing internship or practicum that the student could complete in his or her State of residence. Other commenters were concerned that the NPRM did not adequately distinguish between distance education "programs" and "courses" and suggested that the Department focus the intent of the NPRM on the programmatic level and amend the regulations to clearly refer to "distance education programs," as opposed to distance education courses.

Discussion: We disagree that a formal definition of distance education should be provided. A State has discretion as to whether it has any State authorization requirements with respect to an

institution offering postsecondary education through distance education in that State and that discretion includes how the State defines distance education. States may therefore choose whether or not to exercise authority over hybrid distance education or correspondence programs, but any requirements established by the State must be complied with in order for an institution to be considered authorized for title IV eligibility purposes.

Changes: None.

Comments: Commenters stated that the NPRM uses disclosure in its attempt to address situations in which a college's program does not satisfy the occupational licensing or prerequisites in the State where the student lives and that, in these situations, disclosure is not an adequate or appropriate solution. Instead, the commenters argued that the regulations should generally prohibit using title IV funds for programs that do not meet State requirements for the occupation, allowing for exceptions only when the student has provided the specific, personal reason he or she is seeking to enroll in a program that does not qualify them for the occupation in the State where they live (for example, an intention to relocate). Commenters asked that the Department add § 600.9(c)(3) to say that "If an institution described under paragraph (a)(1) of this section offers postsecondary education through distance education or correspondence courses, its programs must meet the applicable educational prerequisites for professional licensure or certification for the occupation for which the program prepares students to enter, in the student's State of residence, unless prior to enrollment the student affirmatively states in writing, in his or her own words, that he or she knows that the program does not meet the State requirements, and explains the reason he or she is seeking to enroll in the program."

Discussion: While we agree with the focus and spirit of this comment, we do not agree with the recommendation that we withhold Federal student aid where programs provided through distance education do not meet State requirements where a student resides unless an institution documents the reasons each student decided to enroll in that program anyway. We are requiring an institution to determine whether a program it offers meets State requirements in each State where the students enrolled in that program reside, and to publicly disclose that information to students. We also believe that the complaint process and program review process will readily identify any instances where institutions fail to

provide this information through disclosures. Furthermore, we note that, upon implementation of this final rule, institutions offering GE programs will need to ensure that those programs fulfill licensure or certification requirements in each State in which the institution is required to be authorized, or in which the institution is authorized through a State authorization reciprocity agreement. This will ensure that institutions certify that distance education or correspondence GE programs fulfill requirements for licensure or certification in the majority of States where enrolled students reside.

More specifically, the GE final regulations include several provisions under 34 CFR 668.414(d) that are connected to the State authorization rules under 34 CFR 600.9. In particular, § 668.414(d)(2) requires an institution to certify that each eligible GE program it offers is programmatically accredited, if such accreditation is required by a Federal governmental entity or by a governmental entity, in each State in which the institution is required to obtain State approval under 34 CFR 600.9. Similarly, § 668.414(d)(3) requires an institution to certify that, for each State in which the institution is required to obtain State approval under 34 CFR 600.9, each eligible GE program that it offers satisfies the applicable educational prerequisites for professional licensure or certification requirements in that State so that a student who completes the program and seeks employment in that State qualifies to take any licensure or certification exam that is needed for the student to practice or find employment in an occupation that the program prepares students to enter. Under these final regulations an institution must fulfill any requirements for it to be legally offering postsecondary distance education or correspondence courses in that State, or be authorized under a State authorization reciprocity agreement if the State chooses that mechanism to authorize postsecondary institutions. Therefore, for the purposes of institutional compliance with the GE regulations in 34 CFR 668.414(d)(2) and (3), a GE program will be required to have the appropriate programmatic accreditation and/or lead to licensure or certification in each State in which at least one enrolled student resides and where there is either a State requirement for authorization or where the State is part of a State authorization reciprocity agreement that confers authorization to the institution.

We believe that the combination of the disclosure requirements regarding licensure and certification in new 34

CFR 668.50(b)(7) and the requirements for GE programs to meet licensure and certification requirements in each State where students reside (if such States require authorization or are part of a reciprocity agreement) are sufficient to mitigate the commenter's concerns about distance education programs not leading to licensure or certification.

Changes: None.

Comments: One commenter expressed concern that a student residing in one State could not take an online course from a school located in another State, unless the latter conformed to the educational standards set for schools in the first State. The commenter further stated that what recent experience has shown is that the proposed regulations are unlikely to be value-neutral across the board and that some of the regulations would establish norms and goals for diversity that would be impossible for private, confessional schools to meet in good conscience and that the proposed regulations should be withdrawn.

Discussion: We disagree with the commenter. The regulations do not prohibit a student residing in one State from taking an online course from a school located in another State, unless the latter conformed to the educational standards set for schools in the first State. Rather, the regulations establish that an institution that offers postsecondary education through distance or correspondence courses to students in a State in which the institution is not physically located, or in which the institution is otherwise subject to that State's jurisdiction as determined by the State, must meet any State requirements for it to be legally offering postsecondary distance or correspondence courses in the State and offer a complaint process. Institutions may also meet the requirements by participating in a State authorization reciprocity agreement. In addition, institutions are required to document the State's complaint process.

Changes: None.

Section 600.9(d) State Authorization of Foreign Additional Locations and Branch Campuses of Domestic Institutions

General Opposition

Comments: Some commenters did not support a rulemaking to address State authorization of foreign additional locations and branch campuses of domestic institutions. A few commenters asserted that the Department does not have the authority to regulate foreign locations of domestic institutions. Commenters argued that

the HEA does not grant the Department the authority to regulate institutions outside of the United States as it defines an “institution of higher education” as an educational institution *in any State* that is legally authorized *within such State* to provide a program of education beyond secondary education.

Commenters also stated that the proposed regulations exceeded the Department’s authority by mandating compliance with the requirements of foreign governments, with one commenter stating that enforcement of foreign requirements is the responsibility of the foreign country, not the Department. Some commenters asserted that the provisions of § 600.9(d) also raise significant federalism issues, as they impose substantive requirements for foreign authorization that go beyond what individual States may decide to require with respect to authorization of institutions with locations outside U.S. borders. The commenter noted that State agencies may decline to regulate the foreign locations of in-State institutions. One commenter stated that education in foreign locations is a complex topic and any rulemaking addressing foreign locations should not be conflated with the State authorization rulemaking. Some commenters opposed regulations for foreign locations on the grounds that they would be too complex to implement and too difficult to enforce.

Discussion: Sections 101(a)(2), 102(a)(1), 102(b)(1)(B), and 102(c)(1)(B) of the HEA require an educational institution to be legally authorized in a State in order to be eligible to apply to participate in programs approved under the HEA, unless an institution meets the definition of a foreign institution. As stated in the NPRM, these regulations allow an institution with a foreign additional location or branch campus to meet the statutory State authorization requirement for the foreign location or branch campus in a manner that recognizes both the domestic control of the institution as a whole, while ensuring that the foreign location or branch campus is legally operating in the foreign country in which it is located. The Department believes it is consistent with the HEA and in the best interest of students to allow the provision of title IV, HEA program funds to students attending a foreign additional location or branch campus of a domestic institution. Thus, we are establishing authorization regulations that provide the protections to United States students intended by the HEA to those attending foreign locations or branch campuses of domestic

institutions. To permit an institution to operate in violation of a foreign country’s requirements would be irresponsible and, in many cases, ineffectual as it is the Department’s responsibility to ensure the proper administration of the title IV, HEA programs. We address commenters’ specific concerns regarding the difficulty in working with foreign countries to comply with the regulations in the discussion of the difficulty in obtaining foreign authorization below.

The Department will not be enforcing the requirements of any foreign country on behalf of the foreign country. Rather, we will be determining whether or not an institution is in compliance with any requirements of a foreign country in order to ensure whether title IV, HEA program funds are appropriately available to students at any foreign additional location or branch.

Changes: None.

Applicability

Comments: Commenters asked for clarification of the applicability of the regulations. Commenters asked whether the regulations would cover programs through agreements that domestic schools have with foreign institutions. For example, commenters stated that they have agreements to offer programs at foreign “host” universities, and it is not clear whether the regulations extend to such situations. Commenters also asked for clarification of what constitutes a branch campus or an additional location of an institution. Specifically, one commenter asked whether a faculty-led overseas trip constitutes a university establishing a branch campus or additional location since the presence in the foreign country is temporary. Commenters also questioned whether these regulations would apply to educational programs that are not title IV eligible.

Commenters, referencing the proposed differentiation of requirements for additional locations or branch campuses where 50 percent or more of an educational program is offered and those where less than 50 percent of the educational program is offered, asked what the definition of an “educational program” is. One commenter asked whether educational program means a degree-seeking program only, or whether a study abroad experience would stand alone as an educational program. One commenter, an institution contracted to offer educational services on military bases abroad, requested that the Department include language declaring that (1) as an education services contractor, it is fully exempt without proving any foreign

government’s proof of exemption, since the Department of Defense requires it to provide educational services on the specified foreign bases/additional locations; or (2) that compliance could be verified by providing proof of the Education Services contract with the Department of Defense. Another commenter, a university active in serving an international school by way of distance education, stated that, should they choose to offer more than 50 percent of their programs on-site, the international school should be treated in a manner similar to military bases. Commenters asked whether the regulations would apply when an institution does not have a physical presence in a foreign country, but offers programs to students in foreign countries through distance education. One commenter was also concerned that if the logic of domestic requirements for State authorization is eventually extended to students in online programs who live abroad (that is, they would need to seek authorization in every country in which an international student is taking an online class) they would have to discontinue enrolling those students.

Discussion: The requirements of § 600.9(d) apply to foreign additional locations and branch campuses of a domestic institution at which all or more than half of a title IV, HEA eligible educational program is offered by a domestic institution. They do not apply to study abroad arrangements or other agreements that domestic institutions have with foreign institutions whereby a student attends less than half of a program at separate foreign institutions, which are regulated under § 668.5. They do not apply to foreign institutions (*i.e.*, institutions that have their main campus located outside of a State). They do not apply to programs for which the institution does not seek title IV, HEA program eligibility. They also do not apply when a domestic institution is offering an educational program to title IV eligible students in a foreign country through distance education.

These regulations note that the term “educational program,” as used in § 600.9(d)(1) and (2), is defined in § 600.2. That is, an educational program is a legally authorized postsecondary program of organized instruction or study that: (1) Leads to an academic, professional, or vocational degree, or certificate, or other recognized educational credential, or is a comprehensive transition and postsecondary program, as described in 34 CFR part 668, subpart O; and (2) May, in lieu of credit hours or clock hours as a measure of student learning,

utilize direct assessment of student learning, or recognize the direct assessment of student learning by others, if such assessment is consistent with the accreditation of the institution or program utilizing the results of the assessment and with the provisions of § 668.10.

A branch campus is defined in § 600.2 as a location of an institution that is geographically apart and independent of the main campus of the institution. The Department considers an institution to be independent of the main campus if the location (1) is permanent in nature; (2) offers courses in educational programs leading to a degree, certificate, or other recognized educational credential; (3) has its own faculty and administrative or supervisory organization; and (4) has its own budgetary and hiring authority. Institutions are required to obtain approval from the Department for a location to be designated as a branch campus. All other locations of an institution are referred to as additional locations. An additional location is any location of an institution that is geographically apart from the main campus and does not meet the definition of a branch campus.

An institution that is contracted by the U.S. military may be exempt from obtaining legal authorization from an appropriate government authority to operate in the country for an additional location at which 50 percent or more of an educational program is offered. That additional location or branch campus would be exempt if it is physically located on a U.S. military base, facility, or area that the foreign country has granted the U.S. military to use and the institution can demonstrate that it is exempt from obtaining such authorization from the foreign country. The Department believes the regulations provide clear language that reflects when a contractor may be exempt from obtaining foreign authorization to offer programs and we decline to provide additional regulatory language to further this exemption. However, an institution that does not contract with the U.S. military as stated that offers more than 50 percent or more of an educational program, as defined in § 600.2, would not be eligible for that exemption. Institutions that contract with the U.S. military are in a unique position in that they have a contract with a U.S. military base which has a Status of Forces Agreement with a foreign government that may address the inclusion of educational programs offered through a contract with the U.S. military.

The Department wishes to clarify that military bases, for purposes of the

foreign authorization exemption, are any areas that are under use by the U.S. military, including facilities and areas that foreign countries have allowed the U.S. military to use.

A temporary class site may qualify as an additional location. If an institution offers or will offer 50 percent or more of an educational program at that temporary location, then that temporary location would meet the definition of an additional location. Similarly, if an institution only rents space that it does not own, then it may still be considered an additional location if the institution is offering or will offer 50 percent of more of an educational program in that temporary space. The Department expects that institutions will comply with the appropriate requirements to operate in the foreign country for any temporary or permanent locations they establish.

Changes: The exemption to obtaining foreign authorization in § 600.9(d)(1)(i) has been altered to include facilities and areas in which the foreign country has granted the U.S. military usage.

Difficulty in Obtaining Authorization

Comments: Some commenters expressed concern about the difficulty of obtaining legal authorization from a foreign country for a foreign additional location or branch campus under proposed § 600.9(d)(1)(i). Commenters argued that requiring institutions to obtain legal authorization by a foreign government would leave institutions in a likely impossible position of attempting to determine the appropriate authority amidst multiple levels of government, often in countries in which there is no formal governmental process for oversight of foreign or private institutions. One commenter asserted that there will be certain situations where the foreign government itself will not know which of its agencies is responsible for issuing an approval. Commenters were also concerned about the difficulty of obtaining legal authorization in a foreign country if the foreign country is unaware of the requirement that an institution must seek their authorization. Commenters asserted that it is also possible that foreign governments may see United States-required authorization as a revenue source and charge institutions significant sums of money for their required approval. Commenters stated that the difficulty in obtaining the required legal authorization may limit enriching international opportunities for students.

Commenters asserted that foreign governments are sometimes unresponsive. One commenter noted

that they have contacted foreign governments on occasion and have experienced difficulties getting an official response, or any response at all, from certain governments. One commenter noted that some foreign governments are highly adverse to provide specific wording in an authorization letter. Some commenters were concerned with the amount of time it can take to obtain legal authorization from a foreign country.

Discussion: The Department believes that locations should meet the legal requirements where they are located in order to provide educational programs to students receiving title IV funds. This includes institutions operating additional locations or branch campuses in foreign countries. This authorization will serve as a protection to students against potential interruptions in their education should that operation be suspended or shut down due to noncompliance. Institutions must perform the due diligence of learning what additional requirements a foreign government may put on an institution to offer educational programs in their jurisdiction and comply with those requirements as a basic price of doing business in that foreign country. An institution of higher education is not required to create additional locations in foreign countries and should follow the laws of the foreign Nation in order to legally operate in that location. An institution that would be unable to meet the requirements of a foreign country or that cannot show that it has received authorization to operate in that country would not have the ability to offer title IV financial aid programs to students enrolled at those additional locations.

Section 600.9(d)(1) specifies the requirements for legal authorization for any additional location at which 50 percent or more of an educational program is offered, or will be offered, and any foreign branch campus. These additional locations and branch campuses are required to be legally authorized to operate by an appropriate government authority in the country where the foreign additional location or branch campus is physically located. An institution is required to provide documentation of that authorization by the foreign country to the Department upon request, unless the additional location or branch campus is located on a U.S. military base and is therefore exempt from obtaining such authorization from the foreign country. The documentation is required to demonstrate that the government authority for the foreign country is aware that the additional location or branch provides postsecondary

education and does not object to those activities. Beyond that, the Department declines to provide specific requirements of what that documentation must look like, to allow flexibility to institutions since foreign countries may vary in what documentation they provide. The regulations do not require that any statement of authorization from a foreign government include the phrase "does not object to those activities." The Department expects that any authorization given by a foreign government will show that the foreign government is aware of what it is authorizing and that it has given approval to an institution that is offering educational programs in its jurisdiction. The Department expects that an institution will determine if and what authorization requirements a foreign country has for institutions that wish to offer educational programs within its jurisdiction. If there are legitimate barriers to obtaining authorization, such as a lack of authorization requirements in the foreign jurisdiction, then the institution should document its efforts to obtain authorization, but the Department does not expect that an institution would not offer programs in these instances. However, an institution should ensure that the lack of receiving written correspondence authorizing the institution to offer educational programs at a branch campus or additional location is not a denial of authorization by that foreign entity. If an institution can readily determine that its locations or programs do not meet the authorization requirements, the institution cannot operate its program under the guise of an inability to navigate a foreign country's authorization process. As mentioned previously, an institution that does not meet the clear authorization requirements of a foreign country would not be considered authorized under these regulations.

An institution must receive authorization from a foreign government prior to enrolling title IV eligible students who would take more than 50 percent of a program at an additional location or branch campus. An institution should plan ahead for a country's authorization process before enrolling title IV eligible students so that it is compliant with the authorization requirements. For institutions that have enrolled students prior to these regulations' effective date, we encourage the institution to provide information to students about the potential loss of title IV aid for programs that do not receive foreign authorization

when these regulations go into effect. If an institution is advertising a program and recruiting students for a program that meets this 50 percent threshold, the Department believes that the institution must have obtained authorization from a foreign government for that additional location before enrolling any title IV eligible students in that program. The Department believes that an institution must meet these requirements as the cost of doing business in a foreign location, regardless of what those requirements are or if there is a monetary cost to meeting the authorization requirements in a foreign country.

We disagree with the commenter that believes that requiring an institution to meet any authorization requirements established by the foreign country would unfairly limit the opportunities of institutions to limit the international experiences of students. The Department believes that an institution should follow the requirements of a foreign country if an institution is planning on having a branch campus or additional location in that country.

Changes: None.

Sufficient Documentation

Comments: The commenters also asked, for purposes of § 600.9(d)(1)(ii), what would constitute sufficient documentation of the foreign government's lack of objection. Commenters asserted that it was unclear exactly what types of legal authorization and documentation of legal authorization would satisfy the requirement. Some commenters stated that the Department should provide a list of appropriate foreign government authorities that may provide acceptable legal authorization and should delineate the types of legal authorizations that would be acceptable to demonstrate compliance with the legal authorization requirement. Commenters stated that regulations should provide specific guidance as to what would be considered sufficient evidence of appropriate legal authorization that a foreign government is aware of a program and does not object to operation of a program. One commenter suggested that the regulations consider a response from a foreign government stating it does not prohibit any higher education institution of other countries to grant college credit to its citizens to be sufficient authorization. With respect to a Status of Forces agreement between the U.S. and another country, commenters wanted the Department to clarify that this counts as sufficient documentation of foreign authorization if the agreement specifically mentions

the offering of educational programs at additional locations or branch campuses located in the country. Commenters asked whether an institution would be required to obtain legal authorization if a foreign government chooses to exempt the institution from needing authorization.

Discussion: Each country may provide a wide variety of documentation to reflect that an institution has authorization to have a branch campus or additional location in their country. As such, the Department declines to provide an exhaustive list of what documentation would be appropriate to prove authorization in a foreign country to allow for maximum flexibility to an institution in obtaining documentation. However, an institution should ensure that the documentation they obtain to prove foreign authorization has made it clear that the institution has indeed received authorization. If an institution receives documentation stating that a foreign entity does not provide authorization approvals to institutions but does not object to the establishment of a branch campus or additional location of U.S. institutions, then the Department would consider that to be sufficient documentation for obtaining foreign authorization. This would also apply if an appropriate foreign entity provides documentation that the institution is exempt from authorization requirements in that country. A Status of Forces Agreement may be used to demonstrate authorization if that Status of Forces Agreement addresses and provides for authorization of branch campuses or additional locations of domestic institutions or provides for exemption to foreign authorization for these facilities.

The Department does not require a specific foreign government agency to provide authorization to an institution for the operation of branch campuses or additional locations because the relevant approving authority will vary from country to country. An institution should receive authorization from an appropriate agency that would have the authority to legally authorize an educational entity in a foreign location. An institution could identify this agency, for example, if the agency provided similar authorization for other entities for schools within the country, or for other foreign entities or businesses. It is also up to the institution to be aware of, and comply with, any additional requirements of a foreign country to ensure legal operations within the country.

Changes: None.

No Objection From Foreign Country

Comments: Commenters argued that it was unfair to require an institution to obtain such legal authorization if a country has no such authorization process in place. Commenters stated that, if it is not the Department's intent to require legal authorization if the foreign government has no mechanism or requirement for such authorization, the Department should change § 600.9(d)(1)(i) to a conforming "no objection" standard. Commenters asserted that there was an inconsistency between the language in § 600.9(d)(1)(i), which requires that any additional location at which 50 percent or more of an education program is offered, or will be offered, or at a branch campus "must be legally authorized" to operate by an appropriate government authority, and the wording of § 600.9(d)(1)(ii), which requires the institution to provide, upon request, documentation to the Secretary that the government authority is aware that the additional location or branch campus provides postsecondary education and does not object. One commenter asserted that the additional requirement that an institution's documentation of their authorization to operate must also include a statement by the foreign government that the government "does not object to those activities" should be removed from the regulations. The commenter asserted that it is easy to imagine circumstances in which a domestic institution may be operating abroad in full compliance with all relevant laws and regulations, but the government may object to how specific topics are taught. For example, foreign governments may condition approval based on changes in curriculum, such as revising history to be more favorable to that country. With the other provisions that require notification to, and approval of, foreign additional locations and branch campuses by relevant accreditation agencies and State governments, the commenter stated that this requirement is unnecessary to protect student interests and is likely to cause significant problems for institutions operating abroad.

Discussion: The Department disagrees with the commenters that believe it is unfair to require an institution to obtain legal authorization even when their authorization process is unclear. Institutions should make an effort to understand the requirements of foreign authorization in any country it wishes to do business. As mentioned earlier in this preamble, if there are no requirements for authorization or a country exempts an institution from its

authorization requirements, then the Department would consider that being legally recognized by a foreign government. However, the institution should retain documentation reflecting their efforts in determining the authorization process, results of any inquiries with appropriate foreign entities, and any exemptions provided by the foreign government. The Department does not believe there is contradictory wording in § 600.9(d)(1)(i) and (ii).

If a foreign country has a process in which a U.S. institution can be legally recognized in their jurisdiction, it is expected that the institution will follow that process and obtain proper authorization from an appropriate foreign governmental agency. However, if that process does not exist, an institution must obtain some documentation that the foreign country does not object to the operation of a branch campus or additional location in their jurisdiction, which is established in § 600.9(d)(1)(i). An institution must have documentation on file and be able to provide that documentation to the Secretary, if requested, which is established in § 600.9(d)(1)(ii). As stated earlier in the preamble, the regulations do not require that any statement of authorization from a foreign government include the phrase "does not object to those activities." It is expected that institutions doing business in foreign countries follow the requirements in those countries. An institution would not be considered to be authorized if a foreign country objects to the institution providing educational programs within their country, regardless of the nature of the foreign country's objection.

Changes: None.

Miscellaneous

Comments: One commenter argued that, because the proposed requirements would be too difficult to implement, for all foreign additional locations and branch campuses, the regulations should require only that the educational program does not violate the laws of the country in which it is present. One commenter encouraged the Department to allow an optional reciprocity agreement for countries similar to what is available between States in order to provide a cost-effective and efficient process for any additional location at which 50 percent or more of an educational program is offered, or will be offered, and any foreign branch campus. Some commenters asserted that the proposed legal authorization requirements for foreign additional locations and branch campuses are unnecessary because accrediting agency

criteria for adding international locations are sufficient.

Some commenters asked the Department to clarify what programs that "will be offered" means for purposes of foreign authorization in proposed § 600.9(d). The commenter wanted to know at what point the Department considered a program to be one that "will be offered." For example if an institution commences development of a program with an intent to offer it at a new foreign additional location at some undetermined point in the future, but has not yet advised students of the potential program, much less enrolled them, is the institution required to have met the provisions of the regulations for the location?

One commenter asserted that, as the proposed regulations would exempt from legal authorization a foreign additional location or branch campus at which 50 percent or more of an educational program is offered, or will be offered, that is located on a U.S. military base and is exempt from obtaining legal authorization from the foreign country, the Department should provide a current and updated list of which military bases are exempt in which countries.

Discussion: The Department disagrees with the commenter who suggested that it would be too difficult to obtain authorization for all branch campuses in all foreign countries and that it should be sufficient to just ensure that the programs do not break the laws of the foreign country. If a country has requirements for institutions offering programs in their country for authorization, the Department expects an institution to follow those requirements and if those requirements do not exist, as addressed earlier, an institution should make a good faith effort to determine any requirements and document the lack of authorization in a country that does not have requirements. Should multiple countries establish some sort of reciprocity in which a particular foreign government accepts the authorization of another country or organization in lieu of making their own determinations on any requirements for an institution to be considered legally authorized in the country, the Department would not interfere with that country's process in authorizing institutions. While accrediting agencies may have criteria, the Department believes that these regulations provide needed protections to students by reinforcing the State's—or in this case the foreign government's—role in the program

integrity “triad” of accrediting agencies, states, and the Department.

An institution should have legal authorization from an appropriate foreign governmental agency by the time that it enrolls students at a branch campus or additional location in that foreign country. An institution should plan for this process when deciding to open a branch campus or additional location in a foreign country.

While these regulations provide an exemption for branch campuses that is physically located on a military base, facility, or area that a foreign country has granted the U.S. military to use, the Department declines to publish a complete listing of these areas. These areas would be decided by a Status of Forces agreement between the U.S. and a foreign country. Based on the unique nature of having a branch campus on a U.S. military base, the Department believes that an institution with a branch campus on a military base would know if they fall within that exemption.

Changes: None.

State Provisions

Some commenters stated that proposed § 600.9(d)(1)(v), which would require an institution to report at least annually to the State in which its main campus is located regarding the establishment or operation of each foreign additional location or branch campus, will force States to create a costly reporting mechanism for receiving and processing such information, without evident benefit. The commenters questioned why the Department does not defer to the States with respect to what reporting obligations institutions should or should not have with respect to foreign additional locations and branch campuses. One commenter, who asserted that the proposed regulation is over-reach by the Department, asked to which State an institution would be required to report the establishment of a foreign additional location or branch campus under proposed § 600.9(d)(1)(v). The commenter also asked how the requirement would apply to SARA-participating institutions. A few commenters suggested that the Department change the proposed regulations to allow those States that do not currently oversee foreign additional locations and branch campuses to become compliant without adjusting State laws.

Some commenters were unclear as to the legal authority for States to place limitations on institutions’ establishment or operation of foreign additional locations or branch campuses. These commenters asked the

Department to clarify the premise underlying proposed § 600.9(d)(1)(vi), which would require an institution to comply with any limitations the State places on the establishment or operation of the foreign additional location or branch campus.

One commenter requested that the Department reconsider the proposed regulation that would require State agencies to monitor institutions’ compliance with international authorizing bodies. The commenter, who noted that their experience shows that many State authorizing agencies already struggle with limited staff and resources, questioned how a State would be able to monitor international authorizations in addition to their current responsibilities.

One commenter asked the Department to clarify the institution’s home State’s role in an institution’s compliance with the requirement in proposed § 600.9(d)(4), in instances where the home State prohibits the foreign additional location or branch campus.

Discussion: The regulations delineate requirements with which a foreign additional location or branch campus of a domestic institution must comply to meet the State authorization requirements. They do not impose any requirements on State agencies, but instead ensure that those State agencies are informed about any foreign locations an institution is operating. The State where the institution’s main location is located will know all locations in which the institution is operating within the State, in other States, and in foreign locations so that the State is aware of what locations it is authorizing. The Department believes that this is basic information that should be provided to State agencies when an institution applies for new and renewal approvals. Authorization from a State for an institution’s main campus after the State has been notified of an institution’s foreign location is required in order for the institution to provide title IV financial aid to students attending courses at those foreign locations.

These regulations do not require States to create sophisticated and costly mechanisms for receiving and processing this information on additional locations or branch campuses in foreign locations, and each State may establish its own application and notification process for institutions to provide this information. Additionally, these regulations do not require State agencies to monitor an institution’s compliance with foreign requirements, but instead make sure that States are aware the foreign locations are in operation so that further inquiry may be

made if a State chooses to do so. These regulations do not require States to change their laws, as they do not create any requirements for States. The regulations in § 600.9(d) create requirements for institutions with branch campuses or additional locations in foreign locations to be compliant with authorization standards, but do not require States to do anything. States can determine the level of oversight they deem necessary. These regulations do not impose requirements on State agencies and would not necessarily require States to increase staff or resources to comply with these regulations. Institutions should already be following any requirements that a State providing their authorization has established, whether that applies to their main campus located in that State or to branch campuses in foreign locations.

The regulations at § 600.9(d) do not delineate any difference in authorization for those institutions that may participate in a State authorization reciprocity agreement. A State authorization reciprocity agreement handles authorization for distance education programs or correspondence courses, not the authorization requirements for branch campuses or additional locations in foreign countries.

Changes: None.

Complaint Process

Comments: One commenter asserted that it would be very complicated for an institution to obtain information on the student complaint process that is required by proposed § 600.9(d)(3). This commenter suggested that the regulations instead require students at foreign locations and branches to follow the complaint process of the State in which the main campus of the institution is physically located, or as prescribed by a reciprocity agreement.

Discussion: As stated in the preamble to the NPRM on page 48604, proposed § 600.9(d)(3) required institutions to disclose information regarding that student complaint process to enrolled and prospective students to ensure that students at foreign additional locations and branches are aware of the complaint process of the State in which the main campus of the institution is located and we have clarified this point in the final regulations. Section 600.9(d)(3) does not impose any new requirements regarding what consumer information must be disclosed to students. Note also that an institution is only required to make disclosures under § 600.9(d)(3) to title IV-eligible students enrolled at the foreign location.

Changes: Section 600.9(d)(3) has been changed to clarify that institutions must disclose to enrolled and prospective students information regarding that student complaint process of the State in which the main campus of the institution is located.

Comments: None.

Discussion: The intent of proposed § 600.9(d)(3), as indicated in the preamble to the NPRM on page 48603, was to require institutions to disclose to enrolled and prospective students at foreign additional locations and foreign branch campuses, the information regarding the institution's student complaint process as described in § 668.43(b). However, we inadvertently left out the reference to foreign branch campuses in the proposed regulatory language.

Changes: Section 600.9(d)(3) has been changed to make clear that an institution must disclose to enrolled and prospective students at both foreign additional locations and foreign branch campuses the information regarding the institution's student complaint process.

More Time Needed for Implementation

Comment: Some commenters requested a longer implementation period for the requirements applicable to foreign additional locations and branch campuses because they asserted that some States and institutions would not be equipped to implement the new requirements by July 1, 2017. One commenter stated that complying with the proposed requirements that any foreign additional location at which 50 percent or more of an education program is offered, or will be offered, and any branch campus, be legally authorized by the foreign country in which it is located (proposed § 600.9(d)(1)(i)) and receive accrediting agency approval (proposed § 600.9(d)(1)(iii)), would impede an institution's ability to comply in a short period of time. One commenter argued that the Department should not enforce the regulations for at least three years after enactment because institutions will need time to do initial research and coordinate with the State agency, which cannot be done quickly. The commenter added that States that have no current process in place will need the extra time to put one in place. Commenters from public institutions in Alabama stated that, currently, the Alabama Commission on Higher Education and the Alabama State Portal Agency consider foreign locations to be outside their jurisdiction for regulatory authorization. The commenters asserted that the State would need time to make appropriate legislative changes to

address this. These commenters also asked the Department to prepare a timeline to phase in full compliance with this regulation.

Discussion: These regulations do not require a State to establish any authorization requirements or procedures for foreign additional locations or branch campuses of a domestic institution, and instead ensure that institutions with foreign locations are advising States about those locations.

An institution must report to the State in which the main campus of the institution is located at least annually, or more frequently if required by the State, the establishment or operation of each additional foreign location or branch campus for any additional location at which 50 percent or more of an educational program is offered, or will be offered, and any foreign branch campus. If an institution cannot comply with this requirement through a procedure that is already known to the institution, the State can provide the institution the proper format to submit this information to the State.

We note that the Department will review an institution's documentation of legal authorization by a foreign jurisdiction, established under § 600.9(d)(2), and therefore the State is under no obligation to review that documentation if they choose to take no action with that information.

We believe that institutions operating foreign locations should already be aware of, and in compliance with, any applicable foreign requirements. These regulations will go into effect on July 1, 2018, and that should provide institutions with adequate time to ensure they are in compliance.

In the example of Alabama, these regulations do not require the State to change their regulatory jurisdiction. These regulations require institutions to submit to their State a report of their branch campuses or additional locations in foreign locations, but do not require States to change their oversight of institutions in their State. States may claim regulatory oversight of these locations, but may choose to take no action.

Changes: None.

Section 668.50 Institutional Disclosures for Distance or Correspondence Programs

Comments: Multiple commenters identified conflicting language in proposed § 668.50(a) and (c), which referred to an institution that offers a program solely through distance education or correspondence course, and proposed § 668.50(b), which

referred to an institution that offers an educational program that is provided, or can be completed solely through distance education or correspondence courses, excluding internships and practicums. The commenters believed that these regulatory provisions should be worded the same.

Discussion: We agree with the commenters regarding the inconsistency between proposed § 668.50(a) and (c) and proposed § 668.50(b) and with the recommendation to change the regulatory language for consistency and clarity.

Changes: We have revised § 668.50(a) and (c) to say an institution that offers an educational program that is provided, or can be completed solely through distance education or correspondence courses, excluding internships and practicums.

Public Disclosures

Comments: A commenter requested clarification on the meaning of "enrolled student" and "prospective student" in the context of these disclosures. A second commenter stated that these disclosures create additional protections that were not given to students who enrolled in traditional brick and mortar campuses. Another commenter believed that the disclosures in § 668.50 were excessive in number. The same commenter asked whether an institution would be required to provide these disclosures separately or if an institution could combine them all into a larger disclosure for students. Another commenter recommended that the Department revise the regulatory language of this disclosure to ensure that the institution provides this information prominently, clearly and concisely, and that it is readable at a 6th grade level.

Discussion: The term "enrolled student" is defined in § 668.2(b) and is the status of a student who has completed the registration requirements (except for the payment of tuition and fees) at the institution that he or she is attending; or has been admitted into an educational program offered predominantly by correspondence and has submitted one lesson after being accepted for enrollment that the student completed without the help of a representative of the institution. We define the term prospective student as an individual who has been in contact with an eligible institution requesting information concerning admission to that institution. These definitions apply to 34 CFR 668.50.

The Department is requiring these disclosures because they create additional protections that do not exist

for students enrolling in traditional programs. The distance education sector has been fraught with problems where students were not provided adequate information that may have informed them of deficiencies in a particular program and these disclosures for distance education programs are intended to address this problem. We disagree with the commenter who believes the disclosures in § 668.50(b) and (c) are excessive. The Department believes that this is important information that a prospective or enrolled student in a distance education program should receive about his or her educational program. An institution may combine these disclosures or provide them separately as it sees fit in order to ensure that important information will be presented to students in a clear and concise manner. The Department believes that institutions will make a good faith effort to provide these disclosures to students in a way that will clearly convey the information, so the Department declines to regulate the exact parameters of these disclosures at this time. However, the Secretary may provide additional guidance on this matter in the future.

Changes: None.

Authorization Status Disclosure

Comments: One commenter supported the regulation by agreeing that institutions should notify students whether an institution is authorized directly by a State or through participation in a reciprocity agreement.

Other commenters asked for clarification on the level of detail that must be disclosed under § 668.50(b)(1).

Discussion: We appreciate the support for the requirement to disclose whether an institution is authorized to enroll students in a distance education program.

This disclosure only requires an institution to inform students whether it is authorized to enroll students in a distance education program to students residing in a particular State. It does not require institutions to provide details related to the authorization process it completed to obtain authorization.

Changes: None.

Comments: Some commenters asked for additional guidance on how the proposed State authorization regulations would coexist with the June 16, 2016 proposed Defense to Repayment regulations. Commenters discuss a hypothetical situation where an online or correspondence student resides in a non-SARA participating State or, during their course of study, relocates to a non-SARA State, and thus, an institution would be faced with either completing

the burdensome process of State authorization in the non-SARA State in order to ensure that student could continue his/her course of study, or disenroll that student. If the student is disenrolled, at potentially no fault of the institution, the commenter suggests that the student could then potentially begin a Defense to Repayment claim against the institution. Under the proposed Defense to Repayment regulation, there could be circumstances where the institution would be required to post a 10 percent letter of credit. Commenters stated this hypothetical case places institutions in a regulatory Catch-22 and asked the Department to consider this likely scenario and address it either through changes to the regulatory text or through a "Dear Colleague" letter. The commenters specifically recommended that the Department allow students currently enrolled through online or correspondence courses to continue to be exempt from the proposed regulation through a grandfather clause or delaying implementation of the regulation to afford students ample time to complete their course of study.

Discussion: We appreciate the commenter's concern, and we also believe that the potential consequences to students of relocating to a State where an institution is not authorized or where the student's program does not lead to licensure or certification are sufficiently severe that disclosure of these consequences by institutions should be required. If a school misrepresents or omits information that a student reasonably relies on to his or her detriment, it may give rise to a borrower defense claim; however, at this stage, without sufficient evidence surrounding the potential misrepresentation, it is unclear whether the commenter's hypothetical would apply.

Changes: We revised the disclosures in § 668.50(b)(1) to include a disclosure that explains the potential consequences for students who change their State of residence to a State where the institution does not meet State requirements, or in the case of a GE program, where the program does not lead to licensure or certification in the State.

Complaint Process Disclosure

Comments: Multiple commenters asked for clarification about an institution's obligation to disclose complaint processes to distance education students when the institution participates in a State authorization reciprocity agreement, and also when the institution does not participate in such an agreement. They specifically asked whether an institution would be

prohibited from enrolling students in a distance education program if those students reside in a State that lacks an appropriate complaint process. One commenter stated that providing information about complaint processes will confuse students. This commenter also recommended that for institutions that participate in the currently operating SARA, an institution does not have to provide both the disclosure under § 668.50(b)(2) and the disclosure under § 668.50(b)(3).

One commenter believed that this requirement was superfluous and should be tied to § 668.43(b), which requires institutions to provide prospective and current students with contact information for filing complaints with its accreditor and with its State approval or licensing entity.

One commenter believed that this requirement would inappropriately cause institutions to interfere and lobby in the legislative process for other States. One commenter requested that the Department of Education collect the information required for the disclosure in § 668.50(b)(3) and provide a centralized Web site in which this information could be accessed by students. Other commenters also recommended that the Department indicate which States it believes to have an inadequate student complaint process.

Other commenters asked whether this disclosure would still be required for States that do not require authorization to offer distance education programs or for States that choose to not assert jurisdiction over a complaint process. Additionally, another commenter recommended adding in language to limit this disclosure to those States that have an appropriate State complaint process in place by adding the phrase "to the extent the State has a complaint process applicable to the institution."

Discussion: Under § 668.50(b)(2), an institution that is authorized directly by a State would need to disclose the process for submitting a complaint to an appropriate State agency for the State in which the institution's main campus is located. If an institution is authorized by a State authorization reciprocity agreement, it would be required to provide a description for submitting complaints that was established in the reciprocity agreement. For both types of authorization, an institution also must provide a description of a complaint process for the student's State of residence under § 668.50(b)(3), if such a process applies. In a State that has not joined a State authorization reciprocity agreement and does not have an appropriate complaint process for its

resident, an institution would not meet the authorization requirements established in § 600.9(c)(2)(i) and would be precluded from providing title IV aid to enrolled students who reside in that particular State.

The Department does not believe § 668.50(b) creates a situation where institutions are forced to become involved in the legislative process of States without an appropriate complaint process, though such institutions could choose to contact States to request that they create or revise this process in order to ensure that the State's residents become title IV-eligible. We disagree with the commenter that believes providing information on State complaint processes will confuse students. We believe that students are best served when provided with important information regarding their institution that will support their decision to enroll or remain enrolled.

While we agree with the commenter that there may be some overlap between the requirements in §§ 668.50(b)(2) and 668.43(b), we believe that the focus of the information is substantively different. The information disclosed under § 668.43(b) focuses on complaint processes in States where the institution maintains physical locations, and those complaint processes may differ from the complaint process disclosed under § 668.50(b)(2). For example, the disclosures in § 668.50(b)(2)(ii) refer to complaint processes that are designated by a State reciprocity agreement, which could feasibly require an institution to disclose complaint processes in any of the fifty States and additional jurisdictions within the country. We believe that students who reside in States other than the ones in which the institution is physically located benefit when they are able to easily identify the complaint process that is applicable to them, and the place where such students find information about how to file a complaint may differ because they are not enrolled to know specifically at a physical location of the institution where hard copies of information about filing complaints could be readily obtained. Therefore, we believe that it is important to require a disclosure about the complaint process in the State where the institution's main campus is located and any complaint process that is provided through an approved State authorization reciprocity agreement that the institution is a part of.

Discussion: The Department does not agree that it should provide a centralized Federal Web site listing the complaint processes of each State. The Department is concerned that providing this information on its Web site may be

misperceived as indicating a formal approval of such processes by the Department. Additionally, information may become outdated regarding State-based complaint processes because these processes that change, and the Department does not have the authority to compel States to provide and update this information in a timely way. We believe that each individual institution is in a better position to identify and obtain the necessary approvals from the States where it provides educational programs to students, since the institution would need to establish and maintain a working relationship with those State agencies. The Department does not believe that an institution necessarily has to do all the work to provide this disclosure to students. The administrators of a State authorization reciprocity agreement could provide this information to its members as a potential service, which could reduce the burden on individual institutions while still providing necessary information for the protection of students. The Department expects that all distance education programs will provide this disclosure regardless of the level of active review a State provides in providing authorization to distance education programs. For a distance education program to be considered to be authorized in a State, that State must have a complaint process in place. Therefore, there should not be programs operating in States that are not exerting jurisdiction over a complaint process.

The Department does not believe that adding exemptions to this disclosure is in the best interest of protecting students. As previously discussed, an institution would be prohibited from using title IV funds for students enrolling in distance education programs or correspondence courses in States that do not offer an appropriate complaint process to students who reside in the State.

Changes: None.

State Initiated Adverse Actions Disclosure

Comments: Many commenters requested additional information on the definition of "adverse action" in § 668.50(b)(4), which requires an Institution to disclose any adverse actions related to a postsecondary education program that a State entity has initiated. They noted that adverse action has a clear definition in the world of accreditation, but does not have a clear definition in State law or regulation. One commenter recommended that the Department use language established in NC-SARA's Agreement's Policies and Standards as a

definition for adverse actions. One commenter also asked for a definition for the word "initiated," stating that there may be investigations occurring that take years to resolve, but never result in any actions actually taken against the institution. A third commenter asked for a definition for the term "State entity." This commenter also recommended that those actions initiated by State entities be reported to any reciprocity agreement the institution is a member of, but only actions taken against the institution be reported to students. Another commenter requested that the rule be revised to only require that those adverse actions that remain pending or unresolved be required to be disclosed to students. One commenter requested that the Department eliminate this disclosure because these terms vary State by State and may cause confusion among students. One commenter requested clarification on whether this disclosure would need to be provided only to students in the State where the adverse action occurred, or whether it would need to be provided to all students enrolled in an institution's distance education programs. One commenter recommended the Department use these regulations to limit the title IV eligibility of institutions that receive legitimate complaints of malfeasance.

Discussion: The Department declines to define State adverse action in these regulations because it is difficult to capture all the different States' processes in one comprehensive definition. However, we agree that some further clarification is merited regarding what constitutes a State initiated adverse action that an institution must disclose to students. Adverse actions include any official finding for which an institution can appeal an administrative or judicial review, any penalty against an institution including a restriction on an institution's State approval, or the initiation of a civil or criminal legal proceeding. These actions include anything related to distance programs offered by an institution, as well as actions that apply to the institution as a whole. The Department also considers an adverse action to include any settlement of a legal proceeding initiated by a State entity, regardless of whether the institution had to admit to any wrongdoing. This disclosure is intended to provide students with information about adverse actions that either are being taken or were taken against an institution or program. An institution must disclose any adverse action at the point that it is publicly

announced or, for instances in which there will be no public announcements, within 14 days of being notified of the action, which is when the Department considers an adverse action to have been initiated. The Department believes that an institution that is a member of a State authorization reciprocity agreement should report adverse actions to other States members if it is required as part of their agreement, but that does not absolve the institution from disclosing that information to students, who should be informed of any adverse actions taken against an institution or program. Additionally, we believe that institutions should disclose information about adverse actions after the action concludes to ensure that a student is informed that an action was taken, including any settlement, so that the student may seek further information about it from the State or from the institution.

The Department believes that these disclosures should be made to all prospective or enrolled students in distance education at an institution, not just to students who reside in the State that has initiated the particular adverse action. This is because such disclosures may demonstrate risk indicators that any student should be aware of to determine their comfort level with enrollment in a particular program.

A State entity is any State department or agency that has the authority of the State to initiate an investigation or lawsuit against an institution of higher education. The Department believes that institutions which receive legitimate complaints of malfeasance will be handled through other mechanisms within the Department, such as audit findings and program reviews. As such, the Department does not believe these disclosures should be tied to specific penalties for issues beyond State authorization.

Changes: None.

Accreditation Adverse Action Disclosure

Comments: One commenter expressed concern at the term “adverse actions” with regards to accrediting agencies in § 668.50(B)(5), stating that what may be considered an adverse action for one accrediting agency may be a minor issue to another accrediting agency. The commenter requested that the Department standardize adverse actions initiated by an accrediting agency. Another commenter stated that information-gathering activities or those that might place an institution or program on probation or show cause should not constitute adverse actions under currently used definitions by

accrediting agencies. That commenter continued by stating that actions that should be considered adverse actions are: Denial, withdrawal, suspension, revocation, or termination of accreditation. The same commenter also noted that those actions of lesser severity that do not incorporate any right of appeal should not constitute adverse actions under this disclosure. One commenter noted that they felt it was unjustified to only require the disclosure of adverse actions of programs offered solely through distance education, but that all institutions of higher education should be required to disclose this information to students. Another commenter stated that accrediting agencies generally take actions against an institution and not a program and recommended the Department revisit their terminology throughout the regulation.

Discussion: “Adverse accrediting action,” as defined in 34 CFR 602.3, is the denial, withdrawal, suspension, revocation, or termination of accreditation or preaccreditation, or any comparable accrediting action an agency may take against an institution or program. While the Department believes that these examples provide a starting point for adverse actions initiated by an accrediting agency, the Department believes that, for purposes of this regulation, any downgrade in accreditation status, such as being placed on show cause or probation, is an adverse action and must be disclosed to students.

Information being requested for any type of accreditation review would not be considered an adverse action, but if the accrediting agency ends their review with a downgrade of accreditation status, then the institution would be required to disclose that downgrade as an adverse action. While we appreciate the support of the commenter who believes a disclosure for accreditation agency initiated adverse actions should be provided to students who are enrolled in traditional programs, we believe that is beyond the scope of this rulemaking. Institutions are required to provide information pertaining to their accreditation status per the requirements in 34 CFR 668.43(a)(6) by providing the names and addresses of the organizations that accredit the institution and their programs to students and prospective students upon request, even if it does not require calling specific attention to any downgraded status in their accreditation status. The Department believes that an institution must disclose adverse actions that pertain either to an institution’s accreditation status from a

regional accrediting agency or a programmatic accreditation that the institution’s programs may have. If a particular adverse action by an accrediting agency could affect the ability of an institution to continue to offer title IV funds to students enrolled in one of its programs, such as a downgrade in accreditation status, we would expect that institution to disclose this information. The Department believes that the language used in the regulation clearly indicates that any adverse actions by an accrediting agency that could have a negative impact on a distance education program or correspondence course would need to be disclosed to students.

Changes: None.

Refund Policies Disclosure

Comments: A number of commenters questioned the efficiency of the refund policy disclosure in § 668.50(b)(6) and they believed there would be significant errors in accuracy. They recommended that this disclosure would be more effective if the information could be collected once and then a centralized portal could be created to disclose the information to students. One commenter noted that the Department should also specifically require institutions to disclose, in writing, any refund promises that an institution of higher education makes to students beyond what is required by State law. One commenter stated that colleges and universities should not be required to comply with individual State tuition refund policies due to the high administrative burden since all title IV participating institutions are required to comply with Return of Title IV funds (R2T4) regulations, as established in 34 CFR 668.22. Another commenter asked for clarification on whether an institution that is exempt from State regulations, such as through a State authorization reciprocity agreement, can use its own refund policies.

Discussion: The Department believes that an institution of higher education is required to follow the laws in the State in which it operates or enrolls students, including any refund policies that the State enacts. While there may be a lack of efficiency in each institution providing a disclosure related to the refund policies in each State it enrolls students, an institution of higher education would still need to know those refund policies in order to follow them. Again, this disclosure is one that the Department believes that the administrators of a State authorization reciprocity agreement could provide as a service to its members, which would increase the efficiency and accuracy of

the information as the reciprocity agreement would have established relationships with State agencies to ensure accurate information. Even in cases where an institution participates in a State authorization reciprocity agreement, the institution must follow the individualized State refund policies. The Department considers refund policies as an integral part of a State's consumer protection laws and believes that institutions of higher education enrolling students within a State's jurisdiction are required to follow the laws of that State, even if it participates in a State authorization reciprocity agreement. As such, based on the definition of State authorization reciprocity agreement in § 600.2, a State authorization reciprocity agreement does not have the ability to overrule State law with regards to consumer protection, including refund policies. Institutions must follow the R2T4 regulations to determine the proper return of Federal, title IV funds when a student does not complete an academic term, however the Department does not have any specific requirements for tuitions to make tuition refunds to students. While not mandated in this disclosure, institutions of higher education must provide information about any institutional refund policies that a college or university follows under 34 CFR 668.43(a)(2), which requires an institution to disclose any refund policy with which the institution is required to comply for the return of unearned tuition and fees and other refundable portions of costs paid to the institution.

Changes: None.

Licensure or Certification Disclosure General Support

Comments: Multiple commenters supported the disclosure of educational prerequisites for professional licensure or certification in each State under § 668.50(b)(7)(i)(A) and (B). One commenter specifically encouraged the Department to keep this disclosure despite any opposition to its inclusion in these regulations.

Discussion: We appreciate the commenters' support for this disclosure under § 668.50(b)(7)(i)(A) and (B).

Changes: None.

Determining State Prerequisites for Licensure

Comments: Multiple commenters recommended that these regulations should generally prohibit using title IV funds for programs that do not meet State requirements for the occupation that it prepares students for, allowing exemptions only when a particular

student has provided a specific, personal reason on why they are enrolling in a program that does not qualify them for the licensure or certification requirements in their state of residence. One commenter specifically asked under what circumstances it would be permissible for an institution to not make a determination on whether their program meets the licensure or certification requirements in a particular State. The same commenter asked if it would be permissible for an institution to provide the licensure and certification prerequisites for a particular State and then distribute a "do not know" statement on whether their program meets those prerequisites. Another commenter asked that this disclosure be limited to States where the program is offered by the institution. Another commenter requested that this disclosure be limited to those programs that lead to professions that have licensure or certification prerequisites in a particular State.

Discussion: This disclosure is limited to programs that lead to a profession where the State has established licensure or certification prerequisites. If a State has not established prerequisites to work in the jobs associated with the program training, then the institution would have nothing to disclose. Obviously, certain professions are more regulated than others. For example, programs that lead to teaching or nursing as a career would be more likely to have established prerequisites, while a general studies program, which could lead to a multitude of other careers, may not have established prerequisites. However, if an academic program offered in a State may foreseeably lead to careers that require licensure or certification in that State, based on how an institution markets or advertises a particular distance education program or correspondence course, an institution must provide information to students on the requirements to meet that licensure or certification. We expect that if an institution has determined what the licensure or certification prerequisites are for a given State, the institution would also determine whether its programs fulfill those prerequisite requirements.

Many distance education programs are also held to the standards established by the GE regulations. GE programs are forbidden from using title IV aid for students enrolled in programs that do not meet the licensure or certification prerequisites of a State. However, these regulations do not extend that prohibition to distance

education programs that are not also GE programs.

Changes: None.

Determining the Applicable State for Licensure Disclosure

Comments: One commenter expressed concern that this disclosure was unfair to distance education programs which may be offered in States where the institution does not have a physical presence. They continued that this may be a problem for students who do not plan to remain in a particular State after they receive their degree. Another commenter recommended a change that a program be given an entire year in which to make a determination on whether their program meets licensure or certification requirements when a student moves to a State that the institution has not made a determination about their program.

Other commenters expressed concern that these regulations may require that they be held responsible for personal characteristics of the student that may disqualify the individual from licensure, such as moral character issues. Two commenters specifically recommended that this disclosure provide information on obtaining a job in-field and if the student needs to do anything beyond simply graduating in order to meet the State standard.

One commenter requested that this requirement be revised to include providing this disclosure to prospective students in any State where the institution is marketing its programs. Multiple commenters asked for clarification on the meaning of "where a student resides."

Discussion: We disagree with the commenter that believes it is unfair to require this disclosure of distance education programs because they do not have a physical presence in the State. In fact, we believe that is a strong justification that makes this an important justification for this disclosure. It is important that students being enrolled by an institution in a distance education program are provided information on how their educational program relates to career opportunities in the State in which they reside. Institutions should make the effort to provide students not in the same State as the institution with accurate information about licensure or certification prerequisites. As stated above, many distance education programs are also GE programs and are required to comply with the GE regulations, which prohibit enrollment of title IV eligible students in programs that do not meet licensure or certification requirements in a State.

However, these regulations do not extend that prohibition to distance education programs that are not GE programs. However, we expect that institutions will provide accurate information to students about the licensure or certification prerequisites in their State of residence. The Department believes that institutions should make these determinations as a part of doing business in a State. Where an institution does the research to determine the licensure or certification prerequisites for a State, then that institution should go the next step and determine whether their programs meet such prerequisites.

While the Department agrees with the commenter that this disclosure provides important information that could be shared with students, we believe it would be too difficult for institutions to be able to accurately identify every possible State in which a potential student could reside. Oftentimes, students find information on a program and contact an institution about a program from conducting Internet searches, rather than the recruitment techniques of an institution. In such cases, it would be unrealistic for an institution to be able to provide certification or licensure prerequisites to prospective students across the country. However, by the time a student enrolls, the institution should know what the prerequisites for that student's State of residence is and whether the program fulfills those requirements. The Department expects institutions to have provided this disclosure by the time the student enrolls.

The Department believes that if graduates of a program are able to sit for any type of licensure or certification examination, then the distance education program they were enrolled in meets State requirements for licensure or certification. If a program does not meet State requirements for licensure or certification, the Department believes that graduates of that program will be denied the ability to sit for licensure or certification. We agree that an institution of higher education is only responsible for how their programs meet or do not meet the requirements for licensure or certification in a State and are not responsible for student-level qualifications to sit for licensure or certification. The Department does not feel that providing information on obtaining a job in-field is necessary because information on State licensure or certification prerequisites is sufficient to allow a student to make an informed choice about whether to enroll or continue in an educational program.

The student's State of legal residence is the residency or domicile of a student's true, fixed, and permanent home of a student, usually where their domicile is located. As noted above, a student is considered to reside in a State if the student meets the requirements for residency under State law, and an institution may rely on a student's self-determination of the State in which he or she resides unless the institution has information to the contrary.

Changes: None.

Miscellaneous Issues Related to Licensure Disclosure

Comments: Multiple commenters noted that they believed that the Department should provide a centralized Web site or searchable government data base to ease the burden on institutions of higher education. Outside of a Federal Web site, other commenters requested clarification on whether an institution could link to a non-institutional Web site, such as a third-party Web site or a State professional licensure board Web site to provide appropriate disclosures to students. A number of commenters noted that this disclosure is difficult to fulfill because State agencies are not equipped to provide responses to institution requests for information on licensure and certification requirements. Other commenters requested guidance on how to provide this disclosure to students, recommending size, format and wording. One commenter specifically requested permission to encourage students to confirm whether the program meets the licensure or certification requirements of a State. Other commenters asked for sufficient time to become compliant with this regulation. One commenter asked for clarification on how it will be determined if a program leads to a career that would in fact need licensure or certification. One commenter requested that the Department exempt graduate programs from this disclosure requirement. Another commenter recommended that this disclosure only be required for those programs and States where schools have awarded more than ten degrees in the previous five years. One other commenter recommended that this disclosure be waived for institutions that are accredited by a regional accreditation agency and for programs that are accredited by a nationally recognized accrediting agency. One commenter requested clarification on which State's licensure and certification prerequisites should be disclosed to students. One commenter asked for clarification on how often an institution would need to

confirm accurate licensing or certification prerequisites to determine that their program continues to meet those prerequisites.

Discussion: The Department does not plan on developing a centralized Federal Web site to house information on the licensure or certification requirements of each State for those professions that States have implemented licensure or certification requirements. However, the Department does not believe that this information must necessarily be collected by each and every institution independently. Rather, an institution can be in compliance with this requirement by referring to a non-institutional Web site, including relevant State professional licensure board Web sites, which contains such information. Institutions that link to a non-institutional Web site should follow the guidance issued in Dear Colleague Letter GEN-12-13, and make the link accessible from the institution's Web site and have the link prominently displayed and accurately described. The institution is also responsible for ensuring that the link is functioning and accurate. Additionally, an institution should not need to request information on the licensure and certification requirements through official communications with a State agency. As pointed out by other commenters, many State agencies have licensure and certification prerequisites listed on a Web site and the Department believes that institutions could find this information on the Internet easily and they do not need to rely on State agency staff for official information. An institution would still be responsible for ensuring accurate information is being provided to their students though. Administrators of a State authorization reciprocity agreement could also offer the collection of this information to institutions as a service for membership in the agreement, which would reduce the burden on institutions.

The Department, at this time, declines to mandate any particular requirements about how these disclosures must be provided to students, but reserves the right to provide further guidance on that issue. However, we expect that institutions of higher education will collect and disclose this information for students and not put the onus of discovering the information on the student. Institutions should not try to hide this information deep on their Web sites, but should instead make these disclosures easily accessible for students. The institution is ultimately responsible for ensuring that this information is disclosed to students and should not put the burden on the

student making the determination about whether the program meets the prerequisites for licensure or certification. The Department believes that an institution makes the determination about the careers that potential academic programs can lead to when developing programs as a matter of conducting business. Institutions of higher education advertise these linkages between their academic programs and potential careers as part of the advertising and student recruitment process. Institutions report these linkages, especially in GE reporting, by connecting the programs' Classification of Instructional Program (CIP) codes to their related Standard Occupational Classification (SOC) codes. These regulations become active on July 1, 2018, and the Department believes that is sufficient time for institutions of higher education to prepare for compliance. The Department disagrees with the recommendation that graduate programs should be exempted from this disclosure. We believe that graduate students would also benefit from this information and should be provided this disclosure, as graduate programs may also be preparing students for careers in subject areas that States have established licensure or certification prerequisites.

The Department also disagrees with the recommendation that the disclosure only be required of programs for States where the institution has awarded more than ten degrees in five years. We believe that this information should be provided to all students so they will know whether the program they enroll in will meet the licensure or certification prerequisites regardless of how many degrees are given in a particular program. The Department disagrees with the recommendation to provide an exemption to institutions with regional accreditation or programs with national accreditation. While accreditation status is another disclosure required under these regulations, we believe that students should be informed of whether a program meets licensure and certification prerequisites and obtaining accreditation does not mean that an institution's program necessarily meets those prerequisites. The Department believes that an institution must disclose the licensure and certification requirements to students for the State in which the student resides because that is the State where a student would most likely be searching for employment upon completing their academic program. The Department does not intend to define the minimum

timeframe required for an institution to confirm licensing or certification prerequisites with State agency information, but believes that an institution should do so regularly to ensure that each prospective student receives accurate information. The Department would like to remind institutions that in addition to providing accurate public disclosures that it would also need to ensure accurate information when providing individualized disclosures to prospective students that a program they are enrolling in does not meet licensure or certification prerequisites in their State of residence, as required by § 668.50(c)(1)(i).

Changes: None.

Programs That Do Not Satisfy Licensure or Certification Prerequisites

Comments: Multiple commenters expressed concern with § 668.50(b)(7)(ii), which requires disclosing whether a program does or does not satisfy the applicable educational prerequisites for licensure or certification where the institution determines a State's requirements. These commenters were concerned that § 668.50(b)(7)(ii) does not require a program to meet certification or licensure prerequisites to be eligible to award title IV aid to students. One commenter requested that the Department require institutions with distance education programs to make a determination with respect to certification or licensure prerequisites for all States, regardless of whether the institution is recruiting students for enrollment. One commenter also requested clarification on what it means to make a "determination with respect to certification or licensure prerequisites." Specifically, the commenter asked whether an institution that has made an incorrect determination of whether a program meets licensure or certification requirements would still be considered in compliance with this requirement. The commenter provided as an example an institution that advertises that a certain program will lead to a career such as teaching, but fails to conduct the research on whether the program meets those prerequisites established by the State.

Discussion: The Department believes that students are best served by having accurate information to be able to make decisions regarding their academic pursuits, including with regard to the certification or licensure prerequisites of potential careers. As stated above, most distance education programs are also GE programs, which means that an

institution cannot provide Title IV aid to students enrolled in those programs unless the program meets the licensure or certification status of a State. The GE regulations do not forbid non-GE distance education programs from enrolling title IV eligible students.

However, the Department expects that institutions will make a good faith effort in determining whether their programs meet State licensure or certification prerequisites. We do not believe that requiring institutions to research and provide information on States that it does not plan on recruiting or enrolling students will be useful to students, as the individuals that the information would pertain to are not being solicited for enrollment.

Therefore, we believe that requiring institutions to research State certification or licensure prerequisites for States in which it is not actively recruiting or enrolling students would significantly increase the burden associated with this disclosure without substantial benefit to those individuals that enroll in their programs. If an institution advertises that a distance education program could lead to a career that would require certification or licensure in a State, such as teaching, but does not follow through to research the licensure requirements to determine how the program matches up against the prerequisites, then the institution has not provided accurate licensure requirements to students nor stated that its program meets the academic requirements of those prerequisites, as required by this regulation.

Changes: None.

Timeline for Individualized Disclosures

Comments: One commenter requested that the timeframe in which an institution must disclose any determination that its program ceases to meet licensure or certification prerequisites be increased from 7 days to 45 days under § 668.50(c)(1)(ii)(B). The commenter continued by stating that it would take significantly more than 7 days to understand the impact of a change in licensure requirements, inform internal stakeholders, determine impacted learners, craft and route communications for approval, educate employees who may receive questions from learners, and execute a mass communication. The same commenter also asked for clarification on when the clock would start to provide this disclosure. Another commenter asked whether an institution would be allowed to make a determination that it has not made a determination with respect to how their program meets the licensure or certification prerequisites

in a State, rather than disclosing that the institution no longer meets those prerequisites.

Discussion: The Department believes that a 45-day window from determining that an institution's distance education program ceases to meet licensure or certification programs to informing enrolled and prospective students of that determination is too long. However, the Department recognizes that seven days may be too small a window to inform prospective and enrolled students of a determination. This disclosure's time-frame would not start until an institution has made a determination that a distance education program no longer meets the certification or licensure prerequisites for a State. Once that determination has been made, we believe an institution can move quickly to prepare notifications and inform students, especially with the use of technology in mass communications.

We believe that a 14-calendar day period from the point that an institution has determined a program no longer meets the licensure or certification requirements of a State is sufficient to notify prospective and enrolled students. If an institution determines that a program ceases to meet the licensure or certification requirements in a State, the institution must inform students of that determination within 14 calendar days. That institution cannot avoid providing students with accurate information by claiming the institution is not making a determination with respect to those prerequisites.

Changes: We revised § 668.50(c)(1)(ii)(B) to provide institutions 14-calendar days to disclose any determination by the institution that the program ceases to meet licensure or certification prerequisites of a State.

Individualized Disclosure Acknowledgement

Comments: One commenter stated that § 668.50(c)(2) should not require institutions, under the penalty of losing title IV eligibility, to obtain acknowledgment from students that they received notification of any determination by the institution that the program does not meet licensure or certification prerequisites in the State of the student's residence, prior to the student's enrollment. Another commenter stated that institutions with a very mobile student population, such as military students, would have particular difficulty in obtaining this acknowledgment.

Discussion: The Department disagrees with the commenters that receiving

acknowledgment of this disclosure would be extremely difficult to achieve. As mentioned in the NPRM, the Department believes that an institution could simply add in a paragraph to their enrollment agreement, a process that takes place electronically for many distance education programs already, that addresses receiving this disclosure. This disclosure does not require a separate, stand-alone affirmation and can be combined with other acknowledgments that the student may have to provide to an institution during the enrollment process. As such, the Department does not believe that an institution would have to create a separate process for record keeping of these disclosures outside of the record keeping an institution would already do on enrollment agreements. Based on the flexibility of how an institution can obtain acknowledgement from a student that they received the disclosure that the program they are enrolling in does not meet the licensure or certification prerequisites in their State of residence, we believe that institutions with a highly mobile population should not have any difficulty obtaining this acknowledgement from individuals enrolling in their distance education programs. We believe that the best way to demonstrate to students that they are receiving important information that may influence their decision to enroll in a program would be for the student to attest to receiving such information before enrollment.

Changes: None.

Executive Orders 12866 and 13563

Regulatory Impact Analysis

Introduction

Under Executive Order 12866, it must be determined whether this regulatory action is "significant" and, therefore, subject to the requirements of the Executive order and subject to review by the Office of Management and Budget (OMB). Section 3(f) of Executive Order 12866 defines a "significant regulatory action" as an action likely to result in a rule that may—

(1) Have an annual effect on the economy of \$100 million or more, or adversely affect a sector of the economy, productivity, competition, jobs, the environment, public health or safety, or State, local, or tribal governments or communities in a material way (also referred to as an "economically significant" rule);

(2) Create serious inconsistency or otherwise interfere with an action taken or planned by another agency;

(3) Materially alter the budgetary impacts of entitlement grants, user fees,

or loan programs or the rights and obligations of recipients thereof; or

(4) Raise novel legal or policy issues arising out of legal mandates, the President's priorities, or the principles stated in the Executive order.

This regulatory action is a significant regulatory action subject to review by OMB under section 3(f) of Executive Order 12866.

We have also reviewed these regulations under Executive Order 13563, which supplements and explicitly reaffirms the principles, structures, and definitions governing regulatory review established in Executive Order 12866. To the extent permitted by law, Executive Order 13563 requires that an agency—

(1) Propose or adopt regulations only upon a reasoned determination that their benefits justify their costs (recognizing that some benefits and costs are difficult to quantify);

(2) Tailor its regulations to impose the least burden on society, consistent with obtaining regulatory objectives and taking into account—among other things and to the extent practicable—the costs of cumulative regulations;

(3) In choosing among alternative regulatory approaches, select those approaches that maximize net benefits (including potential economic, environmental, public health and safety, and other advantages; distributive impacts; and equity);

(4) To the extent feasible, specify performance objectives, rather than the behavior or manner of compliance a regulated entity must adopt; and

(5) Identify and assess available alternatives to direct regulation, including economic incentives—such as user fees or marketable permits—to encourage the desired behavior, or provide information that enables the public to make choices.

Executive Order 13563 also requires an agency "to use the best available techniques to quantify anticipated present and future benefits and costs as accurately as possible." The Office of Information and Regulatory Affairs of OMB has emphasized that these techniques may include "identifying changing future compliance costs that might result from technological innovation or anticipated behavioral changes."

We are issuing these regulations only on a reasoned determination that their benefits would justify their costs. In choosing among alternative regulatory approaches, we selected those approaches that maximize net benefits. Based on the analysis that follows, the Department believes that these

regulations are consistent with the principles in Executive Order 13563.

We also have determined that this regulatory action would not unduly interfere with State, local, and tribal governments in the exercise of their governmental functions.

In this Regulatory Impact Analysis we discuss the need for regulatory action, the potential costs and benefits, net budget impacts, assumptions, limitations, and data sources, as well as regulatory alternatives we considered. Although the majority of the costs related to information collection are discussed within this RIA, elsewhere in this Notice of Final Rules, under Paperwork Reduction Act of 1995, we also identify and further explain burdens specifically associated with information collection requirements.

Need for Regulatory Action

States have a vital and unique role in the oversight of higher education and the Department believes that states are a key partner in setting minimum standards for institutions to operate. Recognizing the important role that States play in the oversight of distance education and the interest that States

have in protecting their residents, the Department's regulation requires that institutions fulfill any requirements imposed by States whose residents are enrolled in the institution's postsecondary programs. The landscape of higher education has changed over the last 20 years. During that time, the role of distance education in the higher education sector has grown significantly. For the 1999–2000 Academic Year, eight percent of undergraduate students participated in at least one distance education course.² Recent National Center for Education Statistics' Integrated Postsecondary Education Data System (IPEDS) data indicate that in the fall of 2014, 28.5 percent of students at degree-granting, title IV participating institutions were enrolled in at least one distance education class.³ The emergence of online learning options has allowed students to enroll in colleges authorized in other States and jurisdictions with relative ease. According to IPEDS, in the fall of 2014, the number of students enrolled exclusively in distance education programs totaled 2,824,334.⁴ Distance education industry sales have increased alongside student enrollment.

As students continue to embrace distance education, revenue for distance education providers has increased steadily. In 2014, market research firm Global Industry Analysts projected that 2015 revenue for the distance education industry would reach \$107 billion.⁵ For the same year, gross output for the overall non-hospital private Education Services sector totaled \$332.2 billion. Distance education has grown to account for roughly one-third of the U.S. non-hospital private Education Services sector.

In this aggressive market environment, distance education providers have looked to expand their footprint to gain market share. An analysis of recent data from IPEDS indicates that 2,301 HEA title-IV-participating institutions offered 23,434 programs through distance education in 2014. Approximately 2.8 million students were exclusively enrolled in distance education courses, with 1.2 million of those students enrolled in programs offered by institutions from a different State. Table 1 summarizes the number of institutions, programs, and students involved in distance education by sector.

TABLE 1—2014 PARTICIPATION IN DISTANCE EDUCATION BY SECTOR

Sector	Institutions offering distance education programs	No. of distance education programs	Students exclusively in distance education programs	Students exclusively in out-of-state distance education programs
Public 4-year	540	5,967	692,074	144,039
Private Not-for-Profit 4-year	745	6,555	607,224	333,495
Proprietary 4-year	255	5,153	820,630	628,699
Public 2-year	625	5,311	690,771	45,684
Private Not-for-Profit 2-year	15	42	814	388
Proprietary 2-year	87	339	21,421	5,291
Public less-than-2-year	7	10	55	
Private Not-for-Profit less-than- 2-year	1	1		
Proprietary less-than-2-year	26	56	1,056	382
Total	2,301	23,434	2,834,045	1,157,978

States have differing requirements that institutions of higher education must meet, such as varying application requirements and fees. The different requirements can potentially cause increased costs and burden for those institutions, and some States have entered into reciprocity agreements with other States in an effort to coordinate oversight of distance education. For example, as of June 2016, 40 States and

the District of Columbia have entered into a State Authorization Reciprocity Agreement administered by the National Council for State Authorization Reciprocity Agreements, which establishes standards for the interstate offering of postsecondary distance-education courses and programs. Through a State authorization reciprocity agreement, an approved institution may provide distance

education to residents of any other member State without seeking authorization from each member State. However, even where States accept the terms of a reciprocity agreement, that agreement may not apply to all institutions and programs in any given State. The regulation defines the type of reciprocity agreements that are an acceptable means for States to confer

² NCES, "A Profile of Participation in Distance Education: 1999–2000", p.6 available at <http://nces.ed.gov/pubs2003/2003154.pdf>.

⁵ Online Learning Industry Poised for \$107 Billion In 2015 (<http://www.forbes.com/sites/tjmccue/2014/08/27/online-learning-industry-poised-for-107-billion-in-2015/#46857a0966bc>).

authorization to distance education programs.

There also has been a significant growth in the number of American institutions and programs enrolling students abroad. As of May 2016, American universities were operating 80 foreign locations worldwide according to information available from the Department's Postsecondary Education Participation System (PEPS).

American institutions operating foreign locations are still relatively new. As such, data about the costs involved in these operations is limited. Some American institutions establishing locations in other countries have negotiated joint ventures and reimbursement agreements with foreign governments to share the startup costs or other costs of doing business.

With the expansion of these higher education models, the Department believes it is important to maintain a minimum standard of State authorization of postsecondary education institutions. These regulations support States in their efforts to develop standards for this growing sector of higher education. The clarified requirements related to State authorization also support the integrity of the Federal student aid programs by not supplying funds to programs and institutions that are not authorized to operate in a given State.

Summary of Comments and Changes

Following the publication of the NPRM on July 25, 2016 (81 FR 48598), the Department received 139 comments on the proposed regulations. Many of these comments have been addressed in the *Analysis of Comments and Changes* in this preamble. A number of commenters expressed concern about the costs of complying with these State authorization regulations. These commenters state that the Department underestimated the costs of researching State authorization requirements, coordination between the institution and foreign locations, and interactions with State agencies. Commenters representing HBCUs and other Minority Serving Institutions ("MSIs") raised concerns about the costs and effect on those institutions, with some commenters requesting additional resources be made available to help them comply if the regulations passed. Additionally, commenters representing small institutions stated that the regulations and associated compliance costs would serve as a barrier to entry that would prevent small, highly reputable institutions from competing in the distance education market and potentially deny students a high-quality

and cost-effective educational opportunity. The commenters noted that, in recent years, distance education has become an important source of revenue and a way to level the playing field with larger and better funded public and private institutions. The comments asserted that the Department underestimated the complexity and burden of complying with the regulations, and that the costs, including unintended negative consequences of the regulations such as cost transfers to students, outweigh the benefits.

The Department appreciates the comments and the specificity with which some commenters discussed the calculation of burden for the regulations. Where applicable, comments about the relevant burden calculation will be addressed in the *Paperwork Reduction Act* section of this preamble. Other comments about the overall costs of the regulation relative to the benefits are addressed in the *Discussion of Costs, Benefits, and Transfers* section.

Based on the comments received and the Department's internal review, a number of changes have been made from the proposed regulations. In particular, with respect to distance education, the final regulations: (1) State that for a reciprocity agreement to be valid under these regulations, it may not prohibit a State from enforcing its own statutes and regulations; (2) clarify that institutions may choose to be authorized individually in each State required or to participate in a reciprocity agreement between States; (3) revise the language in § 668.50(a) and (c) to be consistent with § 668.50(b) in requiring the specified disclosure from institutions that offer programs solely through distance education or correspondence courses, excluding internships and practicums; (4) Add a new requirement under § 668.50(b)(1)(iii) that an institution must explain to students the consequences of relocating to a State where the institution does not meet State requirements or where one of the institution's GE programs does not meet licensure or certification requirements in the State; and (5) revise the timeframe in § 668.50(c)(1)(ii)(B) for disclosing that the program ceases to meet licensure or certification prerequisites of a State within 14 days of that determination, not 7 days as proposed in the NPRM. With respect to foreign locations, the final regulations make the following changes: (1) Revise § 600.9(d)(1)(i) to clarify that military bases, for purposes of foreign authorization exemption, are any area that is under use by the U.S. military, including facilities and areas

that foreign countries have allowed the U.S. military to use; (2) revise § 600.9(d)(3) to clarify that institutions must disclose to enrolled and prospective students information regarding the student complaint process of the State in which the main campus of the institution is located; and (3) revise § 600.9(d)(3) to make clear that an institution must disclose to enrolled and prospective students at both foreign additional locations and foreign branch campuses the information regarding the institution's student complaint process.

Discussion of Costs, Benefits, and Transfers

The primary benefits of these regulations are: (1) Increased transparency and access to institutional and program information, (2) updated and clarified requirements for State authorization of distance education and foreign additional locations, and (3) a process for students to access complaint resolution in either the State in which the institution is authorized or the State in which they reside.

We have identified the following groups and entities we expect to be affected by these regulations:

- Students
- Institutions
- Federal, State, and local government

Students

During the negotiated rulemaking students stated that the availability of online courses allowed them to earn credentials in an environment that suited their personal needs. We believe, therefore, that students would benefit from increased transparency about distance education programs. The disclosures of adverse actions against the programs, refund policies, consequences of moving to a State in which the program does not meet requirements, and the prerequisites for licensure and whether the program meets those prerequisites in States for which the institution has made those determinations will provide valuable information that can help students make more informed decisions about which institution to attend.

Increased access to information could help students identify programs that offer credentials that potential employers recognize and value. Additionally, institutions have to provide an individualized disclosure to enrolled and prospective students of adverse actions against the institution and when programs offered solely through distance education or correspondence courses do not meet licensure or certification prerequisites

in the student's State of residence. The disclosure regarding adverse actions will ensure that students have information about potential wrongdoing by institutions. Similarly, disclosures regarding whether a program meets applicable licensure or certification requirements will provide students with valuable information about whether attending the program will allow them to pursue the chosen career upon program completion, helping students make a better choice of program before they incur significant loan debt or use up their Pell Grant and subsidized loan eligibility.

In response to comments received about the NPRM, the Department has added a requirement that institutions disclose the potential loss of title IV eligibility or disenrollment of students who relocate to a State in which the program does not meet the requirements. This information does not require an individualized disclosure, but should provide students with generalized information on where the program meets requirements and the consequences if the student relocates to a State not on that list and will give the student information about how their choice of residence and program interact with respect to eligibility for title IV funding. The licensure disclosure requires acknowledgment by the student before enrollment, which emphasizes the importance of ensuring students receive that information. It also recognizes that students may have specific plans for using their degree, potentially in a new State of residence where the program would meet the relevant prerequisites.

Students in distance education or at foreign locations of domestic institutions will also benefit from the disclosure and availability of complaint resolution processes that will let them know how to submit complaints to the State in which the main campus of the institution is located or, for distance education students, the students' State of residence. This will help students to access available consumer protections.

Some commenters did note that students could bear the costs of compliance with the regulations through increased tuition and fees or through reduced options for pursuing their education. The Department recognizes that some colleges may choose to pass some costs through to students, but we believe that the increased value of a program that is legally authorized to operate in a State, has a clear complaints process, and lets students know if it leads to valid licensure opportunities, if applicable, is worth the potential cost increase.

Commenters representing small colleges expressed concern that the costs of compliance with the regulations would favor larger and better resourced institutions, potentially reducing competition and options for students. The Department appreciates these comments and acknowledges that the burden will vary for different types of institutions, but we believe that requiring institutions to comply with State standards is a minimum expectation to operate a program.

Institutions

Institutions will benefit from the increased clarity concerning the requirements and process for State authorization of distance education and of foreign additional locations. Institutions will bear the costs of complying with State authorization requirements, whether through entering into a State authorization reciprocity agreement or researching and meeting the relevant requirements of the States in which they operate distance education programs. The Department does not ascribe specific costs to the State authorization regulations and associated definitions because it is presumed that institutions are already complying with applicable State authorization requirements. Additionally, nothing in these regulations would require institutions to participate in distance education. In the NPRM, the Department estimated potential costs of complying with State authorization requirements as an illustrative example in the event that the clarification of the State authorization requirements in the regulations, among other factors, would provide an incentive for more institutions to offer distance education courses. As noted in the NPRM, the actual costs to institutions would vary based on a number of factors including the institutions' size, the extent to which an institution provides distance education, and whether it participates in a State authorization reciprocity agreement or chooses to obtain authorization in specific States. The Department applied the costs associated with a SARA arrangement to all 2,301 title IV participating institutions reported as offering distance education programs in IPEDS for a total of \$19.3 million annually in direct fees and charges associated with distance education authorization. Additional State fees to institutions applied were \$3,000 for institutions under 2,500 FTE, \$6,000 for 2,500 to 9,999 FTE, and \$10,000 for institutions with 10,000 or more FTE.

As discussed previously, several commenters stated that the Department

underestimated the costs of compliance with the regulations, noting that extensive research would be required for each program in each State. One institution noted that it costs \$23,520 to obtain authorization for a program with an internship in all 50 States and \$3,650 to obtain authorization for a new 100 percent online program in all 50 States. To renew the authorization for its existing programs, this institution estimates a cost of \$75,000 including fees, costs for surety bonds, and accounting services, and notes these costs have been increasing in recent years. The commenter noted the institution currently has one full-time employee to oversee the State authorization process and contracts with State authorization and licensing experts and expects those personnel and contracting costs would increase significantly under the proposed regulations from the NPRM. We appreciate the cost information provided by the commenters. These comments demonstrate that the costs of establishing distance education programs could vary significantly, but, as stated earlier, we assume that institutions are already operating programs with appropriate authorizations. Domestic institutions that choose to operate foreign locations may incur costs from complying with the requirements of the foreign country or the State of their main campus, and these will vary based on the location, the State, the percentage of the program offered at the foreign location, and other factors. As with distance education, nothing in the regulation requires institutions to operate foreign locations and we assume that institutions have complied with applicable requirements in operating their foreign locations.

In addition to the costs institutions incur from identifying State requirements or entering a State authorization reciprocity agreement to comply with the regulations, institutions will incur costs associated with the disclosure requirements. This additional workload is discussed in more detail under the *Paperwork Reduction Act of 1995* section of this preamble. In total, these regulations are estimated to increase burden on institutions participating in the title IV, HEA programs by 152,565 hours. The monetized cost of this burden on institutions, using wage data developed using Bureau of Labor Statistics BLS data available at: www.bls.gov/ncs/ect/sp/ecsuphst.pdf, is \$5,576,251. This burden estimate is based on an hourly rate of \$36.55.

Federal, State, and Local Governments

These regulations maintain the important role of States in authorizing institutions and in providing consumer protection for residents. The increased clarity about State authorization should also assist the Federal government in administering the title IV, HEA programs. The regulations do not require States to take specific actions related to authorization of distance education programs. States may choose the systems they establish, their participation in a State authorization reciprocity agreement, and the fees they charge institutions and States have the option to do nothing in response to the regulations. Therefore, the Department has not quantified specific annual costs to States based on these regulations.

Net Budget Impacts

As indicated in the NPRM, these regulations are not estimated to have a significant net budget impact in costs over the 2017–2026 loan cohorts. A cohort reflects all loans originated in a given fiscal year. Consistent with the requirements of the Credit Reform Act of 1990, budget cost estimates for the student loan programs reflect the estimated net present value of all future non-administrative Federal costs associated with a cohort of loans.

In the absence of evidence that these regulations will significantly change the size and nature of the student loan borrower population, the Department estimates no significant net budget impact from these regulations. While the clarity about the requirements for State authorization and the option to use State authorization reciprocity agreements may expand the availability of distance education, that does not necessarily mean the volume of student loans will expand greatly. Additional distance education could serve as a convenient option for students to pursue their education and loan funding may shift from physical to online campuses. Distance education has expanded significantly already and these regulations are only one factor in institutions' plans within this field. The distribution of title IV, HEA program funding could continue to evolve, but the overall volume is also driven by demographic and economic conditions that are not affected by these regulations and State authorization requirements are not expected to change loan volumes in a way that would result in a significant net budget impact.

Likewise, the availability of options to study abroad at foreign locations of domestic institutions offers students flexibility and potentially rewarding

experiences, but is not expected to significantly change the amount or type of loans students use to finance their education. Therefore, the Department does not estimate that the foreign location requirements in § 600.9(d) will have a significant budget impact on title IV, HEA programs. The changes made from the proposed regulations discussed in the *Summary of Comments and Changes* section of this RIA are not expected to significantly change the budget impact of these regulations.

Assumptions, Limitations, and Data Sources

In developing these estimates, a wide range of data sources were used, including data from the National Student Loan Data System, and data from a range of surveys conducted by the National Center for Education Statistics such as the 2012 National Postsecondary Student Aid Survey. Data from other sources, such as the U.S. Census Bureau, were also used.

Alternatives Considered

In the interest of promoting good governance and ensuring that these regulations produce the best possible outcome, the Department reviewed and considered various proposals from both internal sources as well as from non-Federal negotiators. We summarize below the major proposals that we considered but ultimately declined to adopt these regulations.

The Department has addressed State authorization during two negotiated rulemaking sessions, one in 2010 and the other in 2014. In 2010, State authorization of distance education was not a topic addressed in the negotiations, but the Department addressed the issue in the final rule in response to public comment. The distance education provision in the 2010 regulation was struck down in court on procedural grounds, leading to the inclusion of the issue in the 2014 negotiations. The 2014 negotiated rulemaking considered, in part, requiring an institution of higher education to obtain State authorization wherever its students were located. That option would also have allowed for reciprocity agreements between States as a form of State authorization, including State authorization reciprocity agreements administered by a non-State entity. The Department and participants of the 2014 rulemaking session were unable to reach consensus.

As it developed the regulations, the Department considered adopting the approaches considered in 2010 or 2014. However, the 2010 rule did not allow for reciprocity agreements and did not

require a student complaint process for distance education students if a State did not already require it. The option considered in 2014 raised concerns about complexity and the level of burden involved. The Department therefore used elements of both the 2010 and 2014 rulemakings in formulating these regulations. Using the 2010 rule as a starting point, these regulations allow for State authorization reciprocity agreements and provide a student complaint process requirement to achieve a balance between appropriate oversight and burden level. In 2014, the Department and non-Federal negotiators reached agreement on the provisions related to foreign locations without considering specific alternative proposals.

Regulatory Flexibility Analysis

The final regulations would affect institutions that participate in the title IV, HEA. The U.S. Small Business Administration (SBA) Size Standards define “for-profit institutions” as “small businesses” if they are independently owned and operated and not dominant in their field of operation with total annual revenue below \$7,000,000. The SBA Size Standards define “not-for-profit institutions” as “small organizations” if they are independently owned and operated and not dominant in their field of operation, or as “small entities” if they are institutions controlled by governmental entities with populations below 50,000. Under these definitions, approximately 4,267 of the IHEs that would be subject to the paperwork compliance provisions of the final regulations are small entities. Accordingly, we have prepared this regulatory flexibility analysis to present an estimate of the effect on small entities of the final regulations.

Description of the Reasons That Action by the Agency Is Being Considered

The Secretary is amending the regulations governing the title IV, HEA programs to provide clarity to the requirements for, and options to: Obtain State authorization of distance education, correspondence courses, and foreign locations; document the process to resolve complaints from distance education students in the State in which they reside; and make disclosures about distance education and correspondence courses.

Succinct Statement of the Objectives of, and Legal Basis for, the Proposed Regulations

Section 101(a)(2) of the HEA defines the term “institution of higher education” to mean, in part, an

educational institution in any State that is legally authorized within the State to provide a program of education beyond secondary education. Section 102(a) of the HEA provides, by reference to section 101(a)(2) of the HEA, that a proprietary institution of higher education and a postsecondary vocational institution must be similarly authorized within a State. Section 485(a)(1) of the HEA provides that an institution must disclose information about the institution's accreditation and State authorization.

Description of and, Where Feasible, an Estimate of the Number of Small Entities To Which the Regulations Will Apply

These final regulations would affect IHEs that participate in the Federal Direct Loan Program and borrowers. Approximately 60 percent of IHEs qualify as small entities, even if the range of revenues at the not-for-profit institutions varies greatly. Using data from IPEDS, the Department estimates that approximately 4,267 IHEs participating in the title IV, HEA programs qualify as small entities—1,878 are not-for-profit institutions, 2,099 are for-profit institutions with programs of two years or less, and 290 are for-profit institutions with four-year programs. The Department believes that most proprietary institutions that are heavily involved in distance education should not be considered small entities because the scale required to operate substantial distance education programs would put them above the relevant revenue threshold. However, the private non-profit sector's involvement in the field may mean that a significant

number of small entities could be affected. The Department also expects this to be the case for foreign locations of domestic institutions, with proprietary institutions operating foreign locations unlikely to be small entities and a number of private not-for-profits classified as small entities involved.

Distance education offers small entities, particularly not-for-profit entities of substantial size that are classified as small entities, an opportunity to serve students who could not be accommodated at their physical locations. Institutions that choose to provide distance education could potentially capture a larger share of the higher education market. Overall, as of Fall 2014, approximately 14.5 percent of students receive their education exclusively through distance education while 71.5 percent took no distance education courses. However, at proprietary institutions almost 53.9 percent of students were exclusively distance education students and 38.6 percent had not enrolled in distance education courses.⁶ As discussed above, we assume that most of the proprietary institutions offering a substantial amount of distance education are not small entities, but if not-for-profit institutions expand their role in the distance education sector, small entities could increase their share of revenue. On the other hand, small entities that operate physical campuses could face more competition from distance education providers. The potential reshuffling of resources within higher education would occur regardless of the final regulations, but the clarity provided by the distance education

requirements and the acceptance of State authorization reciprocity agreements could accelerate those changes.

In order to accommodate students through distance learning, institutions face a number of costs, including the costs of complying with authorization requirements. As with the broader set of institutions, the costs for small entities would vary based on the scope of the distance education they choose to provide, the States in which they operate, and the size of the institution. In the Initial Regulatory Flexibility Analysis in the NPRM, we estimated that small entities will face annual costs of \$7.0 million for SARA fees and additional state fees, using the same analysis and costs as in Table 2 of the NPRM.⁷ As noted in the Regulatory Impact Analysis, several commenters stated that the Department's illustrative costs were understated, and, in particular, that the cost of complying with State authorization requirements would be a greater burden for small institutions. The Department acknowledges that the costs of obtaining State authorization will vary by type and existing resources of institutions and that these considerations may influence the extent to which small entities operate distance education programs. It is possible that some costs can be mitigated through shared research on compliance requirements through national organizations or other approaches, but the Department maintains that State authorization is an important oversight mechanism and a minimum expectation for institutions to operate a program, whatever their size.

TABLE 3—ESTIMATED COSTS FOR STATE AUTHORIZATION OF DISTANCE EDUCATION FOR SMALL ENTITIES

Institutions	Count	SARA fees	Additional State fees
Private Not-for-Profit 2-year or less			
Under 2,500	16	\$32,000	\$48,000
2,500 to 9,999			
10,000 or more			
Proprietary 2-year or less			
Under 2,500	109	218,000	327,000
2,500 to 9,999			
10,000 or more			
Private Not-for-Profit 4-year			
Under 2,500	474	948,000	1,422,000
2,500 to 9,999	227	908,000	1,362,000
10,000 or more	44	264,000	440,000
Proprietary 4-year			
Under 2,500	198	396,000	594,000
2,500 to 9,999			

⁶ 2015 Digest of Education Statistics: Table 311.15: Number and percentage of students enrolled in degree-granting postsecondary institutions, by distance education participation, location of

student, level of enrollment, and control and level of institution: Fall 2013 and Fall 2014.

⁷ Notice of Proposed Rulemaking published July 25, 2016, Table 2, p.48609 available at <https://www.gpo.gov/fdsys/pkg/FR-2016-07-25/pdf/2016-17068.pdf>.

TABLE 3—ESTIMATED COSTS FOR STATE AUTHORIZATION OF DISTANCE EDUCATION FOR SMALL ENTITIES—Continued

Institutions	Count	SARA fees	Additional State fees
10,000 or more			
Total	1,068	2,766,000	4,193,000

Description of the Projected Reporting, Recordkeeping and Other Compliance Requirements of the Regulations, Including an Estimate of the Classes of Small Entities That Will Be Subject to the Requirement and the Type of Professional Skills Necessary for Preparation of the Report or Record

Table 3 relates the estimated burden of each information collection

requirement to the hours and costs estimated in the *Paperwork Reduction Act of 1995* section of the preamble. This additional workload is discussed in more detail under the *Paperwork Reduction Act of 1995* section of the preamble. Additional workload would normally be expected to result in estimated costs associated with either the hiring of additional employees or opportunity costs related to the

reassignment of existing staff from other activities. In total, these changes are estimated to increase burden on small entities participating in the title IV, HEA programs by 13,981 hours. The monetized cost of this additional burden on institutions, using wage data developed using BLS data available at www.bls.gov/ncs/ect/sp/ecsuhphst.pdf, is \$510,991. This cost was based on an hourly rate of \$36.55.

TABLE 4—PAPERWORK REDUCTION ACT BURDEN FOR SMALL ENTITIES

Provision	Reg. section	OMB control number	Hours	Costs
Reporting related to foreign additional locations or branch campuses.	600.9	1845–0144	86	\$3,158
Public disclosure made to enrolled and prospective students in the institution's distance education programs or correspondence courses. Requires 7 disclosures related to State authorization, complaints process, adverse actions, refund policies, and whether the program meets pre-requisites for licensure or certification.	668.50(b)	1845–0145	57,743	2,110,547
Individualized disclosure to and attestation by enrolled and prospective students of distance education programs about adverse actions or the program not meeting licensure requirements in the student's State.	668.50(c)	1845–0145	271	9,912
Total			58,101	2,123,577

Identification, to the Extent Practicable, of All Relevant Federal Regulations That May Duplicate, Overlap, or Conflict With the Regulations

As acknowledged in the Analysis of Comments and Changes, the disclosure requirement about the State complaint process in § 668.50(b)(2) overlaps the more generalized institutional information disclosure requirement in § 668.43(b). The Department believes this overlap is warranted because of the importance of these disclosures to distance education students and the means of providing the disclosure may be different for this population.

Alternatives Considered

As described above, the Department participated in negotiated rulemaking when developing the proposed regulations, and considered a number of options for some of the provisions. No alternatives were aimed specifically at small entities.

Paperwork Reduction Act of 1995

As part of its continuing effort to reduce paperwork and respondent burden, the Department provides the general public and Federal agencies with an opportunity to comment on proposed and continuing collections of information in accordance with the Paperwork Reduction Act of 1995 (PRA) (44 U.S.C. 3506(c)(2)(A)). This helps ensure that: The public understands the Department's collection instructions; respondents can provide the requested data in the desired format; reporting burden (time and financial resources) is minimized; collection instruments are clearly understood; and the Department can properly assess the impact of collection requirements on respondents.

Sections 600.9 and 668.50 contain information collection requirements. Under the PRA, the Department has submitted a copy of these sections, and an Information Collection Request (ICR) to OMB for its review.

A Federal agency may not conduct or sponsor a collection of information

unless OMB approves the collection under the PRA and the corresponding information collection instrument displays a currently valid OMB control number.

Notwithstanding any other provision of law, no person is required to comply with, or is subject to penalty for failure to comply with, a collection of information if the collection instrument does not display a currently valid OMB control number.

In these final regulations, we display the control numbers assigned by OMB to any information collection requirements proposed in the NPRM and adopted in the final regulations.

Background

The following data will be used throughout this section: For the year 2014, there were 2,301 institutions that reported to IPEDS that they had enrollment of 2,834,045 students attending 23,434 programs offered through distance education as follows:

1,172 public institutions reported 1,382,900 students attending 11,288 programs through distance education; 761 private, not-for-profit institutions reported 608,038 students attending 6,598 programs through distance education;

368 private, for-profit institutions reported 843,107 students attending 5,548 programs through distance education.

According to information available from the Department's Postsecondary Education Participation System (PEPS), there are currently 80 domestic institutions with identified additional locations in 60 foreign countries; 35 public institutions, 42 private, not-for-profit institutions, and 3 private, for-profit institutions.

Section 600.9 State Authorization

State Authorization of Foreign Additional Locations and Branch Campuses of Domestic Institutions

Requirements: Section 600.9(d)(1)(v) specifies that, for any foreign additional location at which 50 percent or more of an educational program is offered, or will be offered, and any foreign branch campus, an institution is required to report the establishment or operation of the foreign additional location or branch campus to the State in which the main campus of the institution is located at least annually, or more frequently if required by the State.

Burden Calculation: There will be burden on each domestic institution reporting the establishment or continued operation of a foreign additional location or branch campus to the State in which the main campus of the domestic institution is located. We estimate that each institution will require 2 hours annually to draft and submit the required notice. We estimate that 35 public institutions will require a total of 70 hours to draft and submit the required State notice (35 institutions $\times$ 2 hours). We estimate that 42 private, not-for-profit institutions will require a total of 84 hours to draft and submit the required State notice (42 institutions $\times$ 2 hours). We estimate that 3 private, for-profit institutions will require a total of 6 hours to draft and submit the required State notice (3 institutions $\times$ 2 hours).

The total estimated burden for 34 CFR 600.9 will be 160 hours under OMB Control Number 1845-0144.

Section 668.50 Institutional Disclosures for Distance or Correspondence Programs

Requirements: The Department added new § 668.50(b) and (c), which requires disclosures to enrolled and prospective

students in the institution's distance education programs or correspondence courses. Seven disclosures will be made publicly available, and up to three disclosures will require direct communication with enrolled and prospective students when certain conditions have been met. These disclosures will not change any other required disclosures of the Student Assistance General Provisions regulations.

Public Disclosures

Under § 668.50(b)(1), an institution will be required to disclose whether or not the program offered through distance education or correspondence courses is authorized by each State in which enrolled students reside. If an institution is authorized through a State authorization reciprocity agreement, the institution will be required to disclose its authorization status under such an agreement. An institution will also be required to explain to students the consequences of relocating to a State where the institution does not meet State authorization requirements, or, in the case of a GE program, where the program does not meet licensure or certification requirements in the State.

Under § 668.50(b)(2)(i), an institution authorized by a State agency will be required to disclose the process for submitting complaints to the appropriate State agency in the State in which the main campus of the institution is located, including contact information for the appropriate State agencies that handle consumer complaints.

Under § 668.50(b)(2)(ii), an institution authorized by a State authorization reciprocity agreement will be required to disclose the complaint process established by the reciprocity agreement, if the agreement established such a process. An institution will be required to provide contact information for receipt of such complaints, as set out in the State authorization reciprocity agreement.

Under § 668.50(b)(3), an institution will be required to disclose the process for submitting complaints to the appropriate State agency in the State in which enrolled students reside, including contact information for those State agencies that handle consumer complaints.

Under § 668.50(b)(4), an institution will be required to disclose any adverse actions a State entity has initiated related to the institution's distance education programs or correspondence courses for a five calendar year period prior to the year in which the institution makes the disclosure.

Under § 668.50(b)(5) an institution will be required to disclose any adverse actions an accrediting agency has initiated related to the institution's distance education programs or correspondence courses for a five calendar year period prior to the year in which the institution makes the disclosure.

Under § 668.50(b)(6), an institution will be required to disclose any refund policies for the return of unearned tuition and fees with which the institution is required to comply by any State in which the institution enrolls students in a distance education program or correspondence courses. This disclosure requires publication of the State-specific requirements on the refund policies as well as any institutional refund policies that would be applicable to students enrolled in programs offered through distance education or correspondence courses with which the institution must comply.

Under § 668.50(b)(7), an institution will be required to disclose the applicable educational prerequisites for professional licensure or certification which the program offered through distance education or correspondence course prepares the student to enter for each State in which students reside. The institution must also make this disclosure for any other State which the institution has made a determination regarding such prerequisites as well as if the institution's program meets those requirements. For any State for which an institution has not made a determination with respect to the licensure or certification requirement, an institution will be required to disclose a statement to that effect.

Burden Calculation: We anticipate that most institutions will provide this information electronically to enrolled and prospective students regarding their distance education or correspondence courses. We estimate that the six of the seven public disclosure requirements would take institutions an average of 15 hours to research, develop, and post on a Web site. We estimate that 1,172 public institutions will require 17,580 hours to research, develop, and post on a Web site the required public disclosures (1,172 institutions $\times$ 15 hours). We estimate that 761 private, not-for-profit institutions will require 11,415 hours to research, develop, and post on a Web site the required public disclosures (761 institutions $\times$ 15 hours). We estimate that 368 private, for-profit institutions will require 5,520 hours to research, develop, and post on a Web site the required public disclosures (368 institutions $\times$ 15 hours).

The estimated burden for § 668.50(b)(1) through (6) is 34,515 hours under OMB Control Number 1845–0145.

After reviewing the comments that were received we are adding 100 hours of burden per program specifically pertaining to the disclosure requirements for the prerequisites for professional licensure or certification. We estimate that 1,172 programs or five percent of the 23,434 distance education or correspondence programs at the affected institutions will require the professional licensure or certification disclosure information. We estimate that there will be 564 programs at public institutions which will require 56,400 hours ($564 \times 100 \text{ hours} = 56,400$) for the research and development of this required public disclosure. We estimate that there will be 330 programs at private, not-for-profit institutions which will require 33,000 hours ($330 \times 100 \text{ hours} = 33,000$) for the research and development of this required public disclosure. We estimate that there will be 278 programs at private, for-profit institutions which will require 27,800 hours ($278 \times 100 \text{ hours} = 27,800$) for the research and development of this required public disclosure.

The estimated burden for § 668.50(b)(7) is 117,200 hours under OMB Control Number 1845–0145.

Individualized Disclosures

Under § 668.50(c)(1)(i), an institution will be required to provide an individualized disclosure to prospective students when it determines a program offered solely through distance education or correspondence courses

does not meet licensure or certification prerequisites in the State of the student's residence.

Under § 668.50(c)(1)(ii), an institution will be required to provide an individualized disclosure to both enrolled and prospective students within 30 days of when it becomes aware of any adverse action initiated by a State or an accrediting agency related to the institution's programs offered through distance education or correspondence courses; or within seven days of the institution's determination that a program ceases to meet licensure or certification prerequisites of a State.

For prospective students who receive any individualized disclosure and subsequently enroll, § 668.50(c)(2) will require an institution to obtain an acknowledgment from the student that the communication was received prior to the student's enrollment in the program.

Burden Calculation: We anticipate that institutions will provide this information electronically to enrolled and prospective students regarding their distance education or correspondence courses. We estimate that institutions will take an average of 2 hours to develop the language for the individualized disclosures. We estimate that it will take an additional average of 4 hours for the institution to individually disclose this information to enrolled and prospective students for a total of 6 hours of burden to the institutions. We estimate that five percent of institutions will meet the criteria to require these individual

disclosures. We estimate that 59 public institutions will require 354 hours to develop the language for the disclosures and to individually disclose this information to enrolled and prospective students ($59 \text{ institutions} \times 6 \text{ hours}$). We estimate that 38 private, not-for-profit institutions will require 228 hours to develop the language for the disclosures and to individually disclose this information to enrolled and prospective students ($38 \text{ institutions} \times 6 \text{ hours}$). We estimate that 18 private, for-profit institutions will require 108 hours to develop the language for the disclosures and to individually disclose this information to enrolled and prospective students ($18 \text{ institutions} \times 6 \text{ hours}$).

The total estimated burden for § 668.50(c) is 690 hours under OMB Control Number 1845–0145.

The combined total estimated burden for § 668.50 is 152,405 ($34,515 + 117,200 + 690$) hours under OMB Control Number 1845–0145.

Consistent with the discussion above, the following chart describes the sections of the final regulations involving information collections, the information being collected, and the collections that the Department will submit to OMB for approval and public comment under the PRA, and the estimated costs associated with the information collections. The monetized net costs of the increased burden on institutions, lenders, guaranty agencies, and borrowers, using BLS wage data, available at www.bls.gov/ncs/ect/sp/ecsuhst.pdf, is \$5,576,251 as shown in the chart below. This cost was based on an hourly rate of \$36.55 for institutions.

COLLECTION OF INFORMATION

Regulatory section	Information collection	OMB control number and estimated burden [change in burden]	Estimated costs
§ 600.9	The regulations specify that, for any foreign additional location at which 50 percent or more of an educational program is offered, or will be offered, and any foreign branch campus, an institution would be required to report the establishment or operation of the foreign additional location or branch campus to the State in which the main campus of the institution is located at least annually, or more frequently if required by the State.	1845–0144—This is a new collection. We estimate that the burden would increase by 160 hours.	\$5,848
§ 668.50(b)	The regulations require institutions to produce disclosures to enrolled and prospective students in the institution's distance education programs or correspondence courses. Seven disclosures must be made publicly available. These disclosures include: (1) Whether the distance education programs are authorized by the State where the student resides, if the institution participate in a state authorization reciprocity agreement and explain consequences of moving to a State where the institution does not meet State authorization requirements; (2) The process for submitting a complaint to the appropriate State agency in the State where the main campus of the institution is located; (3) The process for submitting a complaint if the institution is covered by a State authorization reciprocity agreement and it has such a process;	1845–0145—This is a new collection. We estimate that the burden would increase by 151,715 hours.	5,545,183

COLLECTION OF INFORMATION—Continued

Regulatory section	Information collection	OMB control number and estimated burden [change in burden]	Estimated costs
§ 668.50(c)	(4) The disclosure of any adverse action initiated by the institution's State entity related to the distance education program; (5) The disclosure of any adverse action initiated by the institution's accrediting agency related to the distance education program; (6) The disclosure of any refund policy required by any State in which the institution enrolls students; (7) The disclosure of any determination made regarding whether or not the distance education program meets applicable prerequisites for professional licensure or certification in the State where the student resides, if such a determination has been made. If such a determination has not been made, a statement to that effect would be required. The regulations require institutions to produce disclosures to enrolled and prospective students in the institution's distance education programs or correspondence courses. Three disclosures must be made available to individuals. These disclosures include: (1) Notice of an adverse action by the State or accrediting agency related to the distance education program. This disclosure must be provided within 30 days of when the institution becomes aware of the action; (2) Notice of the institution's determination that the distance education program no longer meets the prerequisites for licensure or certification of a State. This disclosure must be provided within 7 days of when the institution makes such a determination.	1845–0145—This is a new collection. We estimate that the burden would increase by 690 hours..	25,220

The total burden hours and change in burden hours associated with each OMB Control number affected by the regulations follows:

Control No.	Total burden hours	Change in burden hours
1845–0144	160	+160
1845–0145	152,405	+152,405
Total ...	152,565	+152,565

Assessment of Educational Impact

In the NPRM we requested comments on whether the regulations would require transmission of information that any other agency or authority of the United States gathers or makes available.

Based on the response to the NPRM and on our review, we have determined that these final regulations do not require transmission of information that any other agency or authority of the United States gathers or makes available.

Federalism

Executive Order 13132 requires us to ensure meaningful and timely input by State and local elected officials in the development of regulatory policies that have federalism implications. "Federalism implications" means substantial direct effects on the States, on the relationship between the National Government and the States, or on the distribution of power and

responsibilities among the various levels of government.

In the NPRM we identified specific sections that may have federalism implications and encouraged State and local elected officials to review and provide comments on the regulations. In the *Public Comment* section of this preamble, we discuss any comments we received on this subject.

Dated: December 5, 2016.

John B. King, Jr.,

Secretary of Education.

For the reasons discussed in the preamble, the Secretary amends 34 CFR parts 600 and 668 as follows:

PART 600—INSTITUTIONAL ELIGIBILITY UNDER THE HIGHER EDUCATION ACT OF 1965, AS AMENDED

■ 1. The authority citation for part 600 continues to read as follows:

Authority: 20 U.S.C. 1001, 1002, 1003, 1088, 1091, 1094, 1099b, and 1099c, unless otherwise noted.

■ 2. Section 600.2 is amended by adding, in alphabetical order, a definition of “State authorization reciprocity agreement” to read as follows:

§ 600.2 Definitions.

* * * * *

State authorization reciprocity agreement: An agreement between two or more States that authorizes an institution located and legally authorized in a State covered by the agreement to provide postsecondary education through distance education or correspondence courses to students residing in other States covered by the agreement and does not prohibit any State in the agreement from enforcing its own statutes and regulations, whether general or specifically directed at all or a subgroup of educational institutions.

* * * * *

■ 3. Section 600.9 is amended by revising paragraph (c) and adding paragraph (d) to read as follows:

§ 600.9 State authorization.

* * * * *

(c)(1)(i) If an institution that meets the requirements under paragraph (a)(1) of this section offers postsecondary education through distance education or correspondence courses to students residing in a State in which the institution is not physically located or in which the institution is otherwise subject to that State’s jurisdiction as determined by that State, except as provided in paragraph (c)(1)(ii) of this section, the institution must meet any of that State’s requirements for it to be legally offering postsecondary distance education or correspondence courses in that State. The institution must, upon request, document the State’s approval to the Secretary; or

(ii) If an institution that meets the requirements under paragraph (a)(1) of this section offers postsecondary education through distance education or correspondence courses in a State that participates in a State authorization reciprocity agreement, and the institution is covered by such agreement, the institution is considered to meet State requirements for it to be legally offering postsecondary distance

education or correspondence courses in that State, subject to any limitations in that agreement and to any additional requirements of that State. The institution must, upon request, document its coverage under such an agreement to the Secretary.

(2) If an institution that meets the requirements under paragraph (a)(1) of this section offers postsecondary education through distance education or correspondence courses to students residing in a State in which the institution is not physically located, for the institution to be considered legally authorized in that State, the institution must document that there is a State process for review and appropriate action on complaints from any of those enrolled students concerning the institution—

(i) In each State in which the institution’s enrolled students reside; or

(ii) Through a State authorization reciprocity agreement which designates for this purpose either the State in which the institution’s enrolled students reside or the State in which the institution’s main campus is located.

(d) An additional location or branch campus of an institution that meets the requirements under paragraph (a)(1) of this section and that is located in a foreign country, *i.e.*, not in a State, must comply with §§ 600.8, 600.10, 600.20, and 600.32, and the following requirements:

(1) For any additional location at which 50 percent or more of an educational program (as defined in § 600.2) is offered, or will be offered, or at a branch campus—

(i) The additional location or branch campus must be legally authorized by an appropriate government authority to operate in the country where the additional location or branch campus is physically located, unless the additional location or branch campus is physically located on a U.S. military base, facility, or area that the foreign country has granted the U.S. military to use and the institution can demonstrate that it is exempt from obtaining such authorization from the foreign country;

(ii) The institution must provide to the Secretary, upon request, documentation of such legal authorization to operate in the foreign country, demonstrating that the foreign governmental authority is aware that the additional location or branch campus provides postsecondary education and that the government authority does not object to those activities;

(iii) The additional location or branch campus must be approved by the institution’s recognized accrediting

agency in accordance with §§ 602.24(a) and 602.22(a)(2)(viii), as applicable;

(iv) The additional location or branch campus must meet any additional requirements for legal authorization in that foreign country as the foreign country may establish;

(v) The institution must report to the State in which the main campus of the institution is located at least annually, or more frequently if required by the State, the establishment or operation of each foreign additional location or branch campus; and

(vi) The institution must comply with any limitations the State places on the establishment or operation of the foreign additional location or branch campus.

(2) An additional location at which less than 50 percent of an educational program (as defined in § 600.2) is offered or will be offered must meet the requirements for legal authorization in that foreign country as the foreign country may establish.

(3) In accordance with the requirements of 34 CFR 668.41, the institution must disclose to enrolled and prospective students at foreign additional locations and foreign branch campuses the information regarding the student complaint process described in 34 CFR 668.43(b), of the State in which the main campus of the institution is located.

(4) If the State in which the main campus of the institution is located limits the authorization of the institution to exclude the foreign additional location or branch campus, the foreign additional location or branch campus is not considered to be legally authorized by the State.

PART 668—STUDENT ASSISTANCE GENERAL PROVISIONS

■ 4. The authority citation for part 668 continues to read as follows:

Authority: 20 U.S.C. 1001–1003, 1070a, 1070g, 1085, 1087b, 1087d, 1087e, 1088, 1091, 1092, 1094, 1099c, 1099c–1, 1221e–3, and 3474, unless otherwise noted.

§ 668.2 [Amended]

■ 5. Section 668.2 is amended in paragraph (a) by adding to the list of definitions, in alphabetical order, “Distance education”.

■ 6. Section 668.50 is added to subpart D to read as follows:

§ 668.50 Institutional disclosures for distance or correspondence programs.

(a) *General.* In addition to the other institutional disclosure requirements established in this and other subparts, an institution described under 34 CFR 600.9(a)(1) or (b) that offers an

educational program that is provided, or can be completed solely through distance education or correspondence courses, excluding internships and practicums, must provide the information described in paragraphs (b) and (c) of this section to enrolled and prospective students in that program.

(b) *Public disclosures.* An institution described under 34 CFR 600.9(a)(1) that offers an educational program that is provided, or can be completed solely through distance education or correspondence courses, excluding internships and practicums, must make available the following information to enrolled and prospective students of such program, the form and content of which the Secretary may determine:

(1)(i) Whether the institution is authorized by each State in which enrolled students reside to provide the program;

(ii) Whether the institution is authorized through a State authorization reciprocity agreement, as defined in 34 CFR 600.2, to provide the program; and

(iii) An explanation of the consequences, including ineligibility for title IV, HEA funds, for a student who changes his or her State of residence to a State where the institution does not meet State requirements or, in the case of a GE program, as defined under § 668.402, where the program does not meet licensure or certification requirements in the State;

(2)(i) If the institution is required to provide a disclosure under paragraph (b)(1)(i) of this section, a description of the process for submitting complaints, including contact information for the receipt of consumer complaints at the appropriate State authorities in the State in which the institution's main campus is located, as required under § 668.43(b); and

(ii) If the institution is required to provide a disclosure under paragraph (b)(1)(ii) of this section, and that agreement establishes a complaint process as described in 34 CFR

600.9(c)(2)(ii), a description of the process for submitting complaints that was established in the reciprocity agreement, including contact information for receipt of consumer complaints at the appropriate State authorities;

(3) A description of the process for submitting consumer complaints in each State in which the program's enrolled students reside, including contact information for receipt of consumer complaints at the appropriate State authorities;

(4) Any adverse actions a State entity has initiated, and the years in which such actions were initiated, related to postsecondary education programs offered solely through distance education or correspondence courses at the institution for the five calendar years prior to the year in which the disclosure is made;

(5) Any adverse actions an accrediting agency has initiated, and the years in which such actions were initiated, related to postsecondary education programs offered solely through distance education or correspondence courses at the institution for the five calendar years prior to the year in which the disclosure is made;

(6) Refund policies with which the institution is required to comply by any State in which enrolled students reside for the return of unearned tuition and fees; and

(7)(i) The applicable educational prerequisites for professional licensure or certification for the occupation for which the program prepares students to enter in—

(A) Each State in which the program's enrolled students reside; and

(B) Any other State for which the institution has made a determination regarding such prerequisites;

(ii) If the institution makes a determination with respect to certification or licensure prerequisites in a State, whether the program does or does not satisfy the applicable

educational prerequisites for professional licensure or certification in that State; and

(iii) For any State as to which the institution has not made a determination with respect to the licensure or certification prerequisites, a statement to that effect.

(c) *Individualized disclosures.* (1) An institution described under 34 CFR 600.9(a)(1) or (b) that offers an educational program that is provided, or can be completed solely through distance education or correspondence courses, excluding internships or practicums, must disclose directly and individually—

(i) Prior to each prospective student's enrollment, any determination by the institution that the program does not meet licensure or certification prerequisites in the State of the student's residence; and

(ii) To each enrolled and prospective student—

(A) Any adverse action initiated by a State or an accrediting agency related to postsecondary education programs offered by the institution solely through distance education or correspondence study within 30 days of the institution's becoming aware of such action; or

(B) Any determination by the institution that the program ceases to meet licensure or certification prerequisites of a State within 14 calendar days of that determination.

(2) For a prospective student who received a disclosure under paragraph (c)(1)(i) of this section and who subsequently enrolls in the program, the institution must receive acknowledgment from that student that the student received the disclosure and be able to demonstrate that it received the student's acknowledgment.

Department of Homeland Security

8 CFR Parts 212, 214, 245, et al.

Classification for Victims of Severe Forms of Trafficking in Persons;
Eligibility for "T" Nonimmigrant Status; Final Rule

DEPARTMENT OF HOMELAND SECURITY**8 CFR Parts 212, 214, 245, and 274a**

[CIS No. 2507–11; DHS Docket No. USCIS–2011–0010]

RIN 1615–AA59

Classification for Victims of Severe Forms of Trafficking in Persons; Eligibility for “T” Nonimmigrant Status**AGENCY:** U.S. Citizenship and Immigration Services, Department of Homeland Security.**ACTION:** Interim rule with request for comments.

SUMMARY: The Department of Homeland Security (DHS) is amending its regulations governing the requirements and procedures for victims of human trafficking seeking T nonimmigrant status. The Secretary of Homeland Security (Secretary) may grant T nonimmigrant status (commonly known as a “T visa”) to aliens who are or were victims of severe forms of trafficking in persons, who are physically present in the United States on account of such trafficking, who have complied (unless under 18 years of age or unable to cooperate due to trauma) with any reasonable request by a Federal, State, or local law enforcement agency (LEA) for assistance in an investigation or prosecution of acts of trafficking in persons or the investigation of other crimes involving trafficking, and who would suffer extreme hardship involving unusual and severe harm if removed from the United States. In this interim rule, DHS is amending its regulations to conform with legislation enacted after the initial rule was published in 2002: the Trafficking Victims Protection Reauthorization Act of 2003 (TVPA 2003), the Violence Against Women and Department of Justice Reauthorization Act of 2005 (VAWA 2005), the William Wilberforce Trafficking Victims Protection Reauthorization Act of 2008 (TVPA 2008), and Titles VIII and XII of the Violence Against Women Reauthorization Act of 2013 (VAWA 2013).

DHS is also streamlining procedures, responding to public comments on the 2002 interim final rule, and providing guidance for the statutory requirements for T nonimmigrants. The intent is to make sure the T nonimmigrant status regulations are up to date and reflect USCIS adjudicative experience, as well as the input provided by stakeholders.

DATES: *Effective date.* This rule is effective January 18, 2017.

Comment date. Written comments must be submitted on or before February 17, 2017. Comments on the form, form instructions, and information collection revisions in this interim rule must be submitted on or before January 18, 2017.

ADDRESSES: You may submit comments, identified by DHS Docket No. USCIS–2011–0010, by *one* of the following methods:

- *Federal eRulemaking Portal:* <http://www.regulations.gov>. Follow the instructions for submitting comments.

- *Email:* You may submit comments directly to U.S. Citizenship and Immigration Services (USCIS) by email at USCISFRComment@uscis.dhs.gov. Include DHS Docket No. USCIS–2011–0010 in the subject line of the message.

- *Mail:* Samantha Deshommes, Chief, Regulatory Coordination Division, Office of Policy and Strategy, U.S. Citizenship and Immigration Services, Department of Homeland Security, 20 Massachusetts Avenue NW., Washington, DC 20529–2140. To ensure proper handling, please reference DHS Docket No. USCIS–2011–0010 on your correspondence. This mailing address may be used for paper, disk, or CD–ROM submissions.

- *Hand Delivery/Courier:* Samantha Deshommes, Chief, Regulatory Coordination Division, Office of Policy and Strategy, U.S. Citizenship and Immigration Services, Department of Homeland Security, 20 Massachusetts Avenue NW., Washington, DC 20529–2140. Contact Telephone Number (202) 272–8377.

FOR FURTHER INFORMATION CONTACT:

Elizabeth Dallam, Office of Policy and Strategy, U.S. Citizenship and Immigration Services, Department of Homeland Security, 20 Massachusetts Avenue NW., Washington, DC 20529–2099, telephone (202) 272–8377 (this is not a toll-free number).

I. Public Participation

DHS invites interested persons to participate in this rulemaking by submitting written data, views, or arguments on all aspects of this interim rule. DHS also invites comments that relate to the economic, environmental, or federalism effects that might result from this interim rule. DHS particularly encourages comments from individuals, organizations, and agencies with direct experience handling T nonimmigrant cases or issues. Comments that will provide the most assistance to DHS in developing these procedures will reference a specific portion of the interim rule, explain the reason for any recommended change, and include data, information, or authority that support such recommended change.

Instructions: All submissions received must include the agency name (U.S. Citizenship and Immigration Services) and DHS Docket No. USCIS–2011–0010 for this rulemaking. All comments received will be posted without change to <http://www.regulations.gov>, including any personal information provided. See the **ADDRESSES** section above for

information on how to submit comments. Those wishing to submit anonymous comments should do so electronically at <http://www.regulations.gov>.

Docket: For access to the docket to read background documents or comments received go to <http://www.regulations.gov>.

II. Executive Summary

A. Purpose of the Regulatory Action

The T nonimmigrant status regulations—which include eligibility criteria, application process, evidentiary standards, and benefits associated with the T nonimmigrant classification (commonly known as the “T visa”¹)—have been in effect since a 2002 interim rule. *New Classification for Victims of Severe Forms of Trafficking in Persons; Eligibility for “T” Nonimmigrant Status*, 67 FR 4784 (Jan. 31, 2002) (2002 interim rule). Since the publication of that interim rule, the public has submitted comments on the regulations and Congress has enacted numerous pieces of related legislation. DHS is responding to the public comments on the 2002 interim rule, clarifying requirements based on experience operating the program for more than 14 years, and amending provisions as required by legislation.

1. Need for the Regulatory Action and How the Action Will Meet That Need

Statutory amendments to the Trafficking Victims Protection Act of 2000 (TVPA) require that DHS amend and clarify the eligibility and application requirements to conform to current law. In addition, DHS needs to respond to public comments on the 2002 interim rule. DHS accomplishes both actions in this interim rule.

2. Statement of Legal Authority for the Regulatory Action

The TVPA authorizes various means to combat trafficking in persons,

¹ T nonimmigrant status is known as the “T visa” colloquially, however “T visa” is not an entirely accurate term in light of the statutory scheme. Principal victims granted T–1 nonimmigrant status may seek derivative T nonimmigrant status for certain family members. 8 CFR 214.11(o)(1). Some of these family members may reside outside the United States and, if eligible, can join the victim in the United States. Before family members with approved derivative T nonimmigrant status can enter the United States, the family members must first undergo processing with the Department of State at a U.S. Embassy or Consulate to obtain a T visa abroad. This is known as consular processing. USCIS will decide on the basis of the application filed by the principal T–1 nonimmigrant whether an overseas family member qualifies for derivative T nonimmigrant status. The Department of State will then separately determine that family member’s eligibility to receive a visa in order to enter the United States.

including tools to effectively prosecute and punish perpetrators of trafficking in persons, and protection to victims of trafficking through immigration relief and access to Federal public benefits. See Victims of Trafficking and Violence Protection Act of 2000 (VTVPA), div. A, TVPA, Public Law 106–386, 114 Stat. 1464 (Oct. 28, 2000), as amended by TVPRA 2003, Public Law 108–193, 117 Stat. 2875 (Dec. 19, 2003); VAWA 2005, Public Law 109–162, 119 Stat. 2960 (Jan. 5, 2006); Technical Corrections to VAWA 2005, Public Law 109–271, 120 Stat. 750 (Aug. 12, 2006); TVPRA 2008, Public Law 110–457, 122 Stat. 5044 (Dec. 23, 2008), and VAWA 2013, Public Law 113–4, titles viii, xii, 127 Stat. 54 (Mar. 7, 2013); Justice for Victims of Trafficking Act of 2015 (JVTA), Public Law 114–22, 129 Stat. 227 (May 29, 2015). The Immigration and Nationality Act of 1952 (INA), as amended, permits the Secretary to grant T nonimmigrant status to aliens who are or were victims of a severe form of trafficking in persons, who have complied with any reasonable request by an LEA for assistance in an investigation or prosecution of acts of trafficking in persons or the investigation of crime where acts of trafficking are at least one central reason for the commission of that crime, or who are exempt from this compliance requirement, and who would suffer extreme hardship involving unusual and severe harm if removed from the United States. See INA section 101(a)(15)(T), 8 U.S.C. 1101(a)(15)(T).

B. Summary of the Major Provisions of the Rule

1. Statutory Changes

The legislative changes to the T nonimmigrant statute addressed in this interim rule are as follows:

- Expanding the definition and discussion of LEA to include State and local law enforcement agencies (added by VAWA 2005). See INA section 101(a)(15)(T)(i)(III)(aa), 8 U.S.C. 1101(a)(15)(T)(i)(III)(aa); new 8 CFR 214.11(a).
- Raising the age at which the applicant must comply with any reasonable request by an LEA for assistance in an investigation or prosecution of acts of trafficking in persons, from 15 years to 18 years of age (added by TVPRA 2003). See INA section 101(a)(15)(T)(i)(III)(cc), 8 U.S.C. 1101(a)(15)(T)(i)(III)(cc); new 8 CFR 214.11(b)(3)(i) and (h)(4)(ii).
- In cases where the applicant is unable, due to physical or psychological trauma, to comply with any reasonable request by an LEA, exempting the

applicant from the requirement to comply (added by TVPRA 2008). *See* INA section 101(a)(15)(T)(i)(III)(bb), 8 U.S.C. 1101(a)(15)(T)(i)(III)(bb); new 8 CFR 214.11(b)(3)(ii) and (h)(4)(i).

- Expanding the regulatory definition of physical presence on account of trafficking to include those whose entry into the United States was for participation in investigative or judicial processes associated with an act or a perpetrator of trafficking (added by TVPRA 2008). *See* INA section 101(a)(15)(T)(i)(II), 8 U.S.C. 1101(a)(15)(T)(i)(II); new 8 CFR 214.11(b)(2) and (g)(1).

- Allowing principal applicants under 21 years of age to apply for derivative T nonimmigrant status for unmarried siblings under 18 years and parents as eligible derivative family members (added by TVPRA 2003). *See* INA section 101(a)(15)(T)(ii)(I), 8 U.S.C. 1101(a)(15)(T)(ii)(I); new 8 CFR 214.11(k)(1)(ii).

- Providing age-out protection for a principal applicant's eligible family members under 21 years of age (added by TVPRA 2003). *See* INA section 214(o)(4), 8 U.S.C. 1184(o)(4); new 8 CFR 214.11(k)(5)(ii).

- Providing age-out protection for principal applicants under 21 years of age (added by TVPRA 2003). *See* INA section 214(o)(5), 8 U.S.C. 1184(o)(5); new 8 CFR 214.11(k)(5)(iii).

- Allowing principal applicants of any age to apply for derivative T nonimmigrant status for unmarried siblings under 18 years of age and parents as eligible family members if the family member faces a present danger of retaliation as a result of the principal applicant's escape from a severe form of trafficking or cooperation with law enforcement (added by TVPRA 2008). *See* INA section 101(a)(15)(T)(ii)(III), 8 U.S.C. 1101(a)(15)(T)(ii)(III); new 8 CFR 214.11(k)(1)(iii) and (k)(5)(iv).

- Allowing principal applicants of any age to apply for derivative T nonimmigrant status for children (adult or minor) of the principal's derivative family members if the derivative's child faces a present danger of retaliation as a result of the principal's escape from a severe form of trafficking or cooperation with law enforcement (added by VAWA 2013). *See* INA section 101(a)(15)(T)(ii)(III), 8 U.S.C. 1101(a)(15)(T)(ii)(III); new 8 CFR 214.11(k)(1)(iii).

- Permitting all derivative T nonimmigrants, if otherwise eligible, to apply for adjustment of status under INA section 245(l), 8 U.S.C. 1255(l). *See* new 8 CFR 245.23(b)(2).

- Removing the requirement that eligible family members must face

extreme hardship if the family member is not admitted to the United States or was removed from the United States (removed by VAWA 2005). *See* previous INA section 101(a)(15)(T)(ii), 8 U.S.C. 1101(a)(15)(T)(ii); 8 CFR 214.11(o)(1)(ii).

- Exempting T nonimmigrant applicants from the public charge ground of inadmissibility (added by TVPRA 2003). *See* INA section 212(d)(13)(A), 8 U.S.C. 1182(d)(13)(A); new 8 CFR 212.16(b).

- Limiting duration of T nonimmigrant status to 4 years but providing extensions for LEA need, for exceptional circumstances, and for the pendency of an application for adjustment of status (VAWA 2005 and TVPRA 2008). *See* INA section 214(o)(7)(B), 8 U.S.C. 1184(o)(7)(B); new 8 CFR 214.11(c)(1) and (l).

- Implementing a technical fix to clarify that presence in the Commonwealth of the Northern Mariana Islands after being granted T nonimmigrant status qualifies toward the requisite physical presence requirement for adjustment of status (added by VAWA 2013). *See* VAWA 2013, tit. viii, section 809; section 705(c) of the Consolidated Natural Resources Act of 2008 (CNRA), Title VII, Public Law 110–229, 122 Stat. 754 (2008); new 8 CFR 245.23(a)(3)(ii).

- Confirming the regulatory definition of sex trafficking to the revised statutory definition in section 103(10) of the TVPA (22 U.S.C. 7102(10)), as amended by section 108(b) of the JVT A, 129 Stat. 239. *See* new 8 CFR 214.11(a).

2. Discretionary Changes

In addition to the necessary statutory changes, DHS makes the following changes and clarifications related to the T nonimmigrant classification in this interim rule:

- Specifies how USCIS will exercise its waiver authority with respect to criminal inadmissibility grounds; new 8 CFR 212.16(b)(3).

- Discontinues the practice of weighing evidence as primary and secondary in favor of an “any credible evidence” standard; 8 CFR 214.11(f); new 8 CFR 214.11(d)(2)(ii) and (3).

- Provides guidance on the definition of “severe form of trafficking in persons” where an individual has not performed labor or services, or a commercial sex act; new 8 CFR 214.11(f)(1).

- Removes the current regulatory “opportunity to depart” requirement for those who escaped traffickers before law enforcement became involved; 8 CFR 214.11(g)(2).

- Addresses situations where trafficking has occurred abroad, but the applicant can potentially meet the physical presence requirement; new 8 CFR 214.11(g)(3).

- Eliminates the requirement that an applicant provide three passport-style photographs; 8 CFR 214.11(d)(2)(ii); new 8 CFR 214.11(d)(4).

- Removes the filing deadline for applicants victimized prior to October 28, 2000; 8 CFR 214.11(d)(4).

- Announces forthcoming updates to the forms used to apply for T nonimmigrant status.

- Updates the regulation to reflect the creation of DHS, and to implement current standards of regulatory organization, plain language, and USCIS efforts to transform its customer service practices.

C. Costs and Benefits

With this interim rule, DHS incorporates in its regulations several statutory provisions associated with the T nonimmigrant status that have been enacted since 2002 and that DHS already has been implementing. While codifying these changes in the DHS regulations will not result in additional quantitative costs or benefits, ensuring that DHS regulations are consistent with applicable legislation will provide qualitative benefits. In addition, DHS will implement changes made necessary by VAWA 2013, and other discretionary changes. DHS estimates the changes made in this interim rule will result in the following costs:

- A per application opportunity cost for the T–1 principal alien of \$33.92 to complete and submit the Application for Family Member of T–1 Recipient, Form I–914 Supplement A, in order to apply for children (adult or minor) of the principal's derivative family members if the derivative's child faces a present danger of retaliation as a result of the principal's escape from a severe form of trafficking and/or cooperation with law enforcement. The children of the principal's derivative relatives will be admitted under the T–6 classification. DHS has no basis to project the population of children of derivative family members that may be eligible for the new T–6 nonimmigrant classification.

- An individual total cost of \$89.70 for applicants who become eligible to apply for principal T–1 nonimmigrant status when the filing deadline for those trafficked before October 28, 2000 is removed. The total cost includes the opportunity cost associated with filing the Application for T Nonimmigrant Status, Form I–914, and the time and travel costs associated with submitting

biometrics. If the applicant includes the Declaration of Law Enforcement Officer for Victim of Trafficking in Persons, Form I-914 Supplement B in the application, there is an opportunity cost of \$149.70 for the law enforcement worker that completes that form. DHS has no way of predicting how many individuals physically present in the United States may now be eligible for T-1 nonimmigrant status as a result of removing the filing deadline.

- An individual total cost of \$89.70 for those applicants trafficked abroad that will now become eligible to apply for T nonimmigrant status due to DHS's expanded interpretation of the physical presence requirement. As previously described, the total cost includes both the opportunity of time cost and estimated travel cost incurred with filing Form I-914 and submitting biometrics. If the applicant includes the Declaration of Law Enforcement Officer for Victim of Trafficking in Persons, Form I-914 Supplement B in the application, there is an opportunity cost of \$149.70 for the law enforcement worker that completes that form. DHS is unable to project the size of this new eligible population.

Based on recent filing volumes, DHS estimates total cost savings of \$56,130 for T nonimmigrant applicants and their eligible family members as a result of no longer being required to submit three passport-style photographs with their T nonimmigrant applications. In addition, the interim rule will provide various qualitative benefits for victims of trafficking, their eligible family members, and law enforcement agencies investigating trafficking incidents. These qualitative benefits result from making the T nonimmigrant classification more accessible, reducing some burden involved in applying for this status in certain cases, and clarifying the process by which DHS adjudicates and administers the T nonimmigrant benefit.

D. Public Comments

DHS welcomes public comment on all aspects of this interim final rule.

III. Background and Legislative Authority

Congress created the T nonimmigrant status in the TVPA. *See* Victims of Trafficking and Violence Protection Act of 2000 (VTVPA), div. A, TVPA, Public Law 106-386, 114 Stat. 1464 (Oct. 28, 2000). Congress has since amended the TVPA, including the T nonimmigrant status provisions, several times: TVPRA 2003, Public Law 108-193, 117 Stat. 2875 (Dec. 19, 2003); VAWA 2005, Public Law 109-162, 119 Stat. 2960

(Jan. 5, 2006); Technical Corrections to VAWA 2005, Public Law 109-271, 120 Stat. 750 (Aug. 12, 2006); TVPRA 2008, Public Law 110-457, 122 Stat. 5044 (Dec. 23, 2008); VAWA 2013, Public Law 113-4, titles viii, xii, 127 Stat. 54 (Mar. 7, 2013); JVTA, Public Law 114-22, 129 Stat. 227 (May 29, 2015).

The TVPA and subsequent reauthorizing legislation provide various means to combat trafficking in persons, including tools to effectively prosecute and punish perpetrators of trafficking in persons, and protect victims of trafficking through immigration relief and access to federal public benefits. The T nonimmigrant status is one type of immigration relief available to victims of severe forms of trafficking in persons who assisted LEAs in the investigation or prosecution of the perpetrators of these crimes.

The INA permits the Secretary to grant T nonimmigrant status to individuals who are or were victims of a severe form of trafficking in persons, who have complied with any reasonable request by an LEA for assistance in an investigation or prosecution of crime involving acts of trafficking in persons (or who are under 18 years of age or are unable to cooperate due to physical or psychological trauma).² *See* INA Section 101(a)(15)(T)(i)(I), (III), 8 U.S.C. 1101(a)(15)(T)(i)(I), (III). Applicants for T nonimmigrant status must be physically present in the United States, American Samoa, or the Commonwealth of the Northern Mariana Islands, or at a port-of-entry thereto, on account of trafficking in persons, including physical presence on account of the alien having been allowed entry into the United States for participation in investigative or judicial processes associated with an act or a perpetrator of trafficking. *See* INA section 101(a)(15)(T)(i)(II), 8 U.S.C. 1101(a)(15)(T)(i)(II). In addition, an applicant must demonstrate that he or she would suffer extreme hardship involving unusual and severe harm if removed from the United States. *See* INA section 101(a)(15)(T)(i)(IV), 8 U.S.C. 1101(a)(15)(T)(i)(IV). T nonimmigrant status allows eligible individuals to remain in the United States for a period of not more than 4 years (with the possibility for extensions), receive work

² The primary victim of trafficking is also referred to as the "principal T nonimmigrant" or "principal alien" and receives T-1 nonimmigrant status, if eligible. The principal alien may be permitted to apply for certain family members who are referred to as "eligible family members" or "derivative T nonimmigrants" and when approved those family members receive T-2, T-3, T-4, T-5, or T-6 nonimmigrant status. The term derivative is used in this context because the family member's eligibility derives from that of the primary nonimmigrant.

authorization, receive federal public benefits, and apply for derivative status for certain eligible family members. *See* INA section 101(a)(15)(T)(ii), 8 U.S.C. 1101(a)(15)(T)(ii); INA section 214(o), 8 U.S.C. 1184(o); 8 U.S.C. 1641(c)(4).

On January 31, 2002, the former Immigration and Naturalization Service (INS)³ published an interim final rule in the **Federal Register** titled *New Classification for Victims of Severe Forms of Trafficking in Persons; Eligibility for "T" Nonimmigrant Status* implementing the T nonimmigrant status provisions of the TVPA. 67 FR 4784. INS outlined the eligibility criteria, application process, evidentiary standards, and benefits associated with the T nonimmigrant status. *Id.* Most of the provisions in this rule have been in effect since the 2002 interim rule and have been the subject of extensive public comment.⁴ In this rule, DHS is responding to the 14 public submissions with comments on multiple provisions of the 2002 interim rule. No comments were received regarding the procedural aspects of the 2002 interim rule or the good cause arguments put forth in the rule for bypassing notice and comment.

As noted above, DHS also welcomes additional input by stakeholders in response to this action. As explained further in the Administrative Procedure Act section of this rule, DHS is publishing this rule as an interim final rule and requesting additional comment on all aspects of this rulemaking.

IV. Eligibility and Application Requirements, Procedures, and Changes in This Rule

DHS provides a summary of the changes made in this rule in Section II.B. of this preamble above. In this section, DHS describes the changes in greater detail. The discussion is organized generally in the same order as the relevant regulatory provisions in this interim rule, and proceeds as follows:

³ Various functions formerly performed by the INS, or otherwise vested in the Attorney General, were transferred to DHS in March 2003. *See* 6 U.S.C. 251, 271(b), 557; 6 U.S.C. 542 note; 8 U.S.C. 1103(a)(1), (g), 8 U.S.C. 1551 note. Even though INS published the 2002 interim rule, this rule refers to DHS because DHS is now the regulatory actor.

⁴ Since the publication of the 2002 interim rule, DHS has amended the core regulatory provision relating to T nonimmigrant status, 8 CFR 214.11, multiple times. Most of these changes have been minor conforming changes as parts of other actions. *See, e.g., Removal of the Standardized Request for Evidence Processing Timeframe*, 72 FR 19100, 19107 (Apr. 17, 2007); *Adjustment of Status to Lawful Permanent Resident for Aliens in T or U Nonimmigrant Status*, 73 FR 75558 (Dec. 12, 2008); *Application of Immigration Regulations to the Commonwealth of the Northern Mariana Islands*, 74 FR 55738 (Oct. 28, 2009).

A. Eligibility Requirements for T Nonimmigrant Classification (including core eligibility factors such as victimization, physical presence on account of trafficking in persons, and extreme hardship involving unusual and severe harm upon removal),

B. Application Requirements (include filing deadlines, bona fide determinations, and processes and eligibility for derivative family members),

C. Adjudication and Post-Adjudication (including waivers of inadmissibility, confidentiality requirements, and duration of status), and

D. Filing and Biometric Services Fees. Throughout the discussion, DHS addresses and responds to the public comments received in connection with the 2002 interim rule.

A. Eligibility Requirements for T Nonimmigrant Classification

There are four statutory eligibility requirements for T nonimmigrant status. See INA section 101(a)(15)(T), 8 U.S.C. 1101(a)(15)(T). To be eligible, the applicant must meet the following criteria:

- The applicant must be or have been a victim of a severe form of trafficking in persons, as defined in 22 U.S.C. 7102 (section 103 of the TVPA);

- The applicant must be physically present in the United States, American Samoa, the Commonwealth of the Northern Mariana Islands (CNMI),⁵ or at a port-of-entry thereto, on account of such trafficking, including physical presence based on the applicant having been allowed to enter the United States to participate in investigative or judicial processes associated with an act or a perpetrator of trafficking; and

- The applicant must meet one of the following criteria:

- Has complied with any reasonable request for assistance in the Federal, State, or local investigation or prosecution of acts of trafficking or the investigation of a crime where acts of trafficking are at least one central reason for the commission of that crime; or

- Is under 18 years of age; or
 - Is unable to cooperate with a request due to physical or psychological trauma; and

- The applicant would suffer extreme hardship involving unusual and severe harm upon removal from the United States.

Below DHS addresses each of these requirements in turn.

1. Victim of a Severe Form of Trafficking in Persons

First, an individual applying for classification as a T nonimmigrant must demonstrate that he or she is or was a victim of a severe form of trafficking in persons. See INA section 101(a)(15)(T)(i)(I), 8 U.S.C.

1101(a)(15)(T)(i)(I). In the 2002 interim rule, DHS defined “victim of a severe form of trafficking in persons” consistent with the statutory definitions in TVPA section 103(9) and (14), 22 U.S.C. 7102(9), (14). Under the interim rule, an applicant must show that he or she is a victim of one or more of the following:

- Sex trafficking in which a commercial sex act is induced by force, fraud, or coercion;
- Sex trafficking in which the person induced to perform such an act is under the age of 18; or
- The recruitment, harboring, transportation, provision, or obtaining of a person for labor or services, through the use of force, fraud, or coercion for the purpose of subjection to involuntary servitude, peonage, debt bondage, or slavery.

See 8 CFR 214.11(a); see also TVPA section 103(9), 22 U.S.C. 7102(9).

DHS received public comments on the definition of “victim of a severe form of trafficking in persons,” and responds as follows:

- DHS clarifies that the term “involuntary servitude,” as used in 22 U.S.C. 7102(9), encompasses the use of psychological coercion. See 8 CFR 214.11(a).

- DHS clarifies that an individual need not perform labor, services, or a commercial sex act to meet the definition of a “victim of a severe form of trafficking in persons.” New 8 CFR 214.11(f)(1).

- DHS explains how a victim can meet the evidentiary burden to show victimization, even when the victim did not perform labor, services or a commercial sex act.

In order to simplify the regulatory text, DHS used and defined the term “victim” in this rule as shorthand to refer to “an alien who is or has been subject to a severe form of trafficking in persons,” as defined by TVPA section 103 (22 U.S.C. 7102). See 8 CFR 214.11(a).

a. Definition of “Involuntary Servitude”

DHS received four comments about the definition of “involuntary servitude” in 8 CFR 214.11(a). Commenters maintained that the

definition appeared to be too narrow because it cited *United States v. Kozminski*, 487 U.S. 931, 952 (1988). In *Kozminski*, the Supreme Court had occasion to construe “involuntary servitude” as used in the criminal provisions at 18 U.S.C. 241 (conspiracy to interfere with free exercise of constitutional rights, including Thirteenth Amendment guarantee against involuntary servitude) and 1584 (knowingly and willfully holding to involuntary servitude . . . any other person for any term). The Court, considering the historical context of the term as used in those criminal provisions, held that involuntary servitude excluded compulsion by psychological coercion.

The commenters stated that Congress intended the definition of involuntary servitude as used in 22 U.S.C. 7102(9) and defined in part in 22 U.S.C. 7102(6), to go beyond the *Kozminski* construction, and recommended striking the citation from the definition. We agree. In the 2002 interim rule, DHS did not intend to exclude psychological coercion from the definition of involuntary servitude. The citation to *Kozminski* in the definition was qualified by the word “includes,” and therefore did not limit the definition of involuntary servitude by excluding psychological coercion. Additionally, in the 2002 interim rule’s preamble, DHS specifically said that the TVPA definition of “forced labor” was meant to “expand[] the definition of involuntary servitude contained in *Kozminski*.” 67 FR 4784, at 4786. To avoid the potential for confusion, DHS is removing the citation to *Kozminski* from the definition of “involuntary servitude.”

b. Performing Labor, Services, or Commercial Sex Is Not Necessary

In this interim rule, DHS is clarifying that an individual need not actually perform labor, services, or a commercial sex act to meet the definition of a “victim of a severe form of trafficking in persons.” See new 8 CFR 214.11(f)(1).

In the 2002 interim rule, DHS explained that it interpreted the term “severe form of trafficking in persons” to require a particular means (force, fraud, or coercion) and a particular end (sex trafficking, involuntary servitude, peonage, debt bondage, or slavery). See 67 FR at 4786 (construing the statutory definition at 22 U.S.C. 7102(9) and (14)). However, DHS did not discuss how it would address cases involving the means of force, fraud, or coercion and the intended ends of sex trafficking, involuntary servitude, peonage, debt bondage, or slavery, where those illicit

⁵ The federalization of the CNMI immigration law took place on November 28, 2009. See Consolidated Natural Resources Act of 2008 (CNRA), Public Law 110–229, title VII, 122 Stat. 754 (2008). This effectively replaced the CNMI’s immigration laws with the INA and other applicable United States immigration laws, with few exceptions.

ends are never realized. This would include, for example, a situation where the victim was recruited and came to the United States through force, fraud or coercion for the purpose of a commercial sex act, but the victim was rescued or escaped before performing a commercial sex act.

The definition of “severe form of trafficking in persons” at 22 U.S.C. 7102(9) includes the phrase “for the purpose of” subjection to a form of human trafficking; *i.e.*, the applicant may establish that he or she was recruited, transported, harbored, provided, or obtained through force, fraud, or coercion *for the purpose of* subjecting him or her to a commercial sex act, involuntary servitude, peonage, debt bondage, or slavery.⁶ The statutory

⁶ Note that the labor trafficking prong of the statutory definition of “severe forms of trafficking in persons” at 22 U.S.C. 7102(9)(B) directly uses the phrase “for the purpose of,” whereas the sex trafficking prong of the statutory definition does not. The sex trafficking prong, however, incorporates the definition of “sex trafficking” at 22 U.S.C. 7102(10) (“The term ‘sex trafficking’ means the recruitment, harboring, transportation, provision, obtaining, patronizing, or soliciting of a person for the purpose of a commercial sex act”), which employs the phrase “for the purpose of.” Although the statute requires the commercial sex act to be “induced,” the statute does not expressly provide that the inducement must be successful in order for a victim to satisfy the definition, nor does the term “induce” necessarily require that the desired end be achieved. *See, e.g., United States v. Murrell*, 368 F.3d 1283, 1287 (11th Cir. 2004) (“We have previously held that the term ‘induce’ in [18 U.S.C.] § 2422 is not ambiguous and has a plain and ordinary meaning. . . . By negotiating with the purported father of a minor, Murrell attempted to stimulate or cause the minor to engage in sexual activity with him. Consequently, Murrell’s conduct fits squarely within the definition of ‘induce.’”) (citations omitted); *cf. NLRB v. Associated Musicians of N.Y.*, 226 F.2d 900, 904 (2d Cir. 1955) (holding that “common understanding of the meaning” of “induce,” as used in the National Labor Relations Act, does not require the inducement to be successful). Moreover, the two prongs of the statutory definition should be read to fit harmoniously as part of “a symmetrical and coherent statutory scheme.” *FDA v. Brown & Williamson Tobacco Corp.*, 529 U.S. 120, 133 (2000). We can discern neither a logical reason nor any congressional design to designate inchoate labor trafficking offenses as “severe forms of trafficking in persons,” but not so designate inchoate sex trafficking offenses. To the extent there is ambiguity in the statutes, it is reasonable for the Department to adopt the more expansive conception of “victim” for purposes of the T visa regime given the protection and humanitarian aims of the statutory scheme. *Cf., e.g., INS v. Cardoza-Fonseca*, 480 U.S. 421, 449 (1987) (construing “any lingering ambiguities” in Refugee Act of 1980 so as to “increase[] . . . flexibility” in protecting refugees in light of statute’s humanitarian aims); *Flores v. USCIS*, 718 F.3d 548, 554 (6th Cir. 2013) (observing that court’s more expansive reading of temporary protected status (TPS) provision is supported by clear congressional intent “to protect a class of people . . . due to an extraordinary circumstance”); *Akhtar v. Burzynski*, 384 F.3d 1193, 1200 (9th Cir. 2004) (observing that “[i]n determining congressional intent” when seeking to resolve ambiguities in LIFE Act (“V visa” program),

definition does not require a victim to have actually performed labor, services, or a commercial sex act to be considered a victim of a severe form of trafficking, for T nonimmigrant status eligibility purposes.

The TVPA did not elaborate on the term “for the purpose of subjection to” a form of human trafficking. We therefore consider common definitions of the key terms:

- **Purpose:** “something set up as an object or an end to be attained.” *See Merriam-Webster Online Dictionary*, 2011, <http://merriam-webster.com>. Also defined as “an objective, goal, or end; specifically the business activity that a corporation is chartered to engage in.” *See Black’s Law Dictionary* (7th ed. 2000).

- **Subjection:** “the act of subjecting someone to something.” *See Black’s Law Dictionary* (7th ed. 2000). “Subjecting” is also defined as “bringing under control or dominion” or “causing or forcing to undergo or endure.” *See Merriam-Webster Online Dictionary*, 2011, <http://merriam-webster.com>.

The concept of “for the purpose of” speaks to the process of attaining an object or end or the intention to attain something, but not the end result. The inclusion of the “for the purpose of” language may reasonably be construed as encompassing situations where labor or commercial sex act has not occurred.

Furthermore, Congress amended the federal criminal code to punish attempts to violate any trafficking-related criminal provision in the same manner as a completed act of trafficking would be punished. *See TVPA* section 112; 18 U.S.C. 1594. The criminal code thus specifically allows for attempts and conspiracy to commit trafficking to be prosecuted. *Id.* The T nonimmigrant status was intended to assist LEAs and provide a tool to, in part, allow for prosecution and stop the traffickers from continuing to enslave human beings. *See TVPA* section 102. Congress intended to provide an incentive for victims to report these crimes by providing for an immigration benefit connected to assistance to LEAs. *Id.*

If victims who have been recruited, harbored, transported, provided, or obtained for the purposes of trafficking (or patronized or solicited in the case of sex trafficking) and have not yet performed any labor, services, or commercial sex acts are not eligible for T nonimmigrant status, Congress’s

“we should adhere to the general rule of construction that when the legislature enacts an ameliorative rule designed to forestall harsh results, the rule will be interpreted and applied in an ameliorative fashion”) (quotations marks omitted).

intent in the TVPA to prosecute traffickers would be thwarted. Such an interpretation would hinder victims from coming forward to report trafficking to LEAs and assist with investigations or prosecutions. This could amount to a chilling effect on LEAs’ ability to investigate and prosecute trafficking-related crimes. Since the 2002 interim rule, USCIS has seen far fewer filings than expected. However, based on the Federal Government estimates, the small number of filings is not due to a correspondingly small number of victims in the United States. *See U.S. Department of State, Trafficking in Persons Report* (June 2010). Victims already often find it difficult to report trafficking and work with law enforcement; excluding an entire class of potential victims from T nonimmigrant eligibility could thwart the purpose of the visa and hinder prosecutions. A narrow interpretation would also seem to punish a victim who was rescued by an LEA or escaped on their own before any labor, services or commercial sex acts were performed. That result is illogical and inconsistent with Congressional intent. Therefore, those who have been recruited, harbored, transported, provided, or obtained for the purposes of trafficking (or patronized or solicited in the case of sex trafficking) are eligible for T nonimmigrant status in this rule, irrespective of the actual performance of any labor, services or commercial sex acts.

Below, DHS includes a discussion of how victims can meet the evidentiary burden to show victimization when they did not perform labor, services or a commercial sex act.

c. Evidence of Victimization

An applicant can meet the victimization requirement in a number of ways. In the 2002 interim rule, DHS required the submission of primary or secondary evidence to establish victimization. *See* 8 CFR 214.11(f). Primary evidence of victimization included an LEA endorsement on the Declaration of a Law Enforcement Officer for Victim of Trafficking in Persons, Form I-914 Supplement B to the Application for T Nonimmigrant Status,⁷ Form I-914, and a grant of Continued Presence from U.S. Immigration and Customs Enforcement (ICE) under 28 CFR 1100.35. Secondary evidence included any credible evidence that demonstrated that the applicant is or has been a victim of a

⁷ Currently USCIS Form I-914. Available online at <http://www.uscis.gov/files/form/i-914.pdf>.

severe form of trafficking in persons, including evidence that explained the nonexistence or unavailability of the primary evidence.

As discussed later in this preamble, DHS received comments suggesting that the interim rule made the LEA endorsement mandatory because it was “primary” evidence. Commenters also thought the LEA endorsement created an imbalance between the needs of law enforcement and the rights of victims.

DHS amends the regulations in this rule to discontinue giving the two types of evidence different and unequal weight. *See* new 8 CFR 214.11(d)(3). Under new 8 CFR 214.11(d)(2)(ii), USCIS will accept any credible evidence of victimization, including but not limited to an LEA endorsement or a grant of Continued Presence. Following this change, USCIS will review applications where there is no LEA endorsement or grant of Continued Presence and give equal weight to other credible evidence based on the TVPA goals of protecting victims and enhancing law enforcement’s ability to investigate and prosecute human trafficking. *See* TVPA section 102. By making the LEA endorsement just one type of evidence of victimization, DHS clarifies a misconception of the LEA role in the T nonimmigrant process. An LEA does not determine if the victim meets the “severe form of trafficking definition” under Federal law. That is a determination that is made by USCIS.

Except in instances of sex trafficking involving victims under 18 years of age, severe forms of trafficking in persons must involve both a particular means (force, fraud, or coercion) and a particular end (sex trafficking, involuntary servitude, peonage, debt bondage, or slavery) or intended particular end. *See* new 8 CFR 214.11(f)(1). The applicant must demonstrate both elements, regardless of the evidence submitted.

As noted above, if the victim has not yet actually performed labor, services or a commercial sex act, he or she must establish that the trafficker acted “for the purpose of” subjecting the victim to sex trafficking, involuntary servitude, peonage, debt bondage, or slavery. *See* new 8 CFR 214.11(f)(1). The clearest evidence of this purpose would be that the victim did in fact perform labor, services, or commercial sex acts. In the absence of that evidence, a victim can submit any credible evidence from any reliable source that shows the purpose for which the victim was recruited, transported, harbored, provided or obtained. Examples of evidence that may be submitted to demonstrate the trafficker’s purpose include, but are not

limited to: Correspondence with the trafficker, evidence from an LEA, trial transcripts, court documents, police reports, news articles, and affidavits. *See* new 8 CFR 214.11(f)(1).

2. Physical Presence on Account of Trafficking in Persons

Second, an alien applying for T nonimmigrant status must demonstrate physical presence in the United States, American Samoa, the Commonwealth of the Northern Mariana Islands, or at a port of entry thereto, on account of trafficking. *See* INA section 101(a)(15)(T)(i)(II), 8 U.S.C. 1101(a)(15)(T)(i)(II).

In this interim rule, DHS makes the following changes and clarifications:

- If a victim departed from the United States but the victim is allowed reentry into the United States to participate in an investigative or judicial process⁸ associated with an act or a perpetrator of trafficking, USCIS will consider the victim to have met the physical presence requirement. New 8 CFR 214.11(g)(1)(v) and (2).

- If the trafficking occurred abroad, but the victim is allowed entry into the United States for the purpose of participating in an investigative or judicial process associated with an act or a perpetrator of trafficking, USCIS will consider the victim to have met the physical presence requirement. New 8 CFR 214.11(g)(1)(v) and (3).

- If the victim escaped a trafficker before an LEA became involved in the matter, DHS will no longer require the victim to show that he or she did not have a clear chance to leave the United States, or an “opportunity to depart.” New 8 CFR 214.11(g)(1).

- Where a victim is allowed entry into the United States to participate in

⁸ Congress used different language in INA section 101(a)(15)(T)(i)(II), 8 U.S.C. 1101(a)(15)(T)(i)(II), than in INA section 214(o)(7)(B)(i), 8 U.S.C. 1184(o)(7)(B)(i), which specifically requires the LEA to “certify that the presence of the alien in the United States is necessary to assist in the investigation or prosecution of such activity.” Congress could have inserted “prosecution” in INA section 101(a)(15)(T)(i)(II), 8 U.S.C. 1101(a)(15)(T)(i)(II), as it did in INA section 101(a)(15)(T)(i)(III)(aa), 8 U.S.C. 1101(a)(15)(T)(i)(III)(aa), and INA section 214(o)(7)(B)(i), 8 U.S.C. 1184(o)(7)(B)(i), but did not. Instead it used the broader concept of “judicial processes.” DHS does not interpret the phrase “judicial processes” as referring only to criminal investigations or prosecutions, nor will DHS require LEA “sponsorship.” For example, if DHS were to parole a victim to pursue civil remedies associated with an act or perpetrator of trafficking, *see, e.g.*, 18 U.S.C. 1595, the applicant may potentially meet this physical presence requirement. DHS does not interpret this provision to require the victim enter the United States through an LEA sponsored entry, such as Significant Public Benefit Parole, although practical use of this parole may be the most common way these applicants enter the United States.

an investigative or judicial process associated with an act or a perpetrator of trafficking, the victim must show documentation of entry through a legal means such as parole and must submit evidence that the entry is for the purpose of participation in investigative or judicial processes associated with an act or perpetrator of trafficking. New 8 CFR 214.11(g)(3). DHS discusses each change in turn below.

a. LEA Returns a Victim to the United States

DHS received six comments suggesting that if a victim leaves the United States and then returns to the United States for an investigation or prosecution, USCIS should consider the victim to have met the physical presence requirement. DHS agrees that victims who left but who are allowed valid reentry into the United States for the purposes of an investigation or prosecution meet the physical presence requirement. Moreover, TVPRA 2008 amended section 101(a)(15)(T)(i)(II) of the INA, 8 U.S.C. 1101(a)(15)(T)(i)(II), to include physical presence on account of the victim having been allowed to enter the United States to participate in investigative or judicial processes associated with an act or perpetrator of trafficking. *See* TVPRA 2008 section 201(a)(1)(C). DHS codifies this change in this rule at new 8 CFR 214.11(b)(2) and 214.11(g)(1)(v).

In the 2002 interim rule, DHS presumed that individuals who have traveled outside of the United States and then returned are not here on account of trafficking in persons. To overcome this presumption, an applicant must show that his or her presence in the United States is the result of continued victimization or a new incident of a severe form of trafficking in persons. *See* 8 CFR 214.11(g)(3). DHS clarifies in this rule that the presumption does not apply when the victim who previously left the United States is allowed reentry in order for the victim to participate in investigative or judicial processes associated with an act or a perpetrator of trafficking. *See* new 8 CFR 214.11(g)(2)(iii).

b. Victim Who Has Been Trafficked Abroad Is Allowed Entry Into the United States

The physical presence language introduced in TVPRA 2008 broadens the physical presence requirement. It applies not only to valid reentry to the United States as discussed above, but also to initial entry to the United States to participate in investigative or judicial processes associated with trafficking.

For these types of cases, DHS has identified two primary examples where a victim may qualify for T nonimmigrant status:

- When trafficking occurred in the United States or the victim was physically present in the United States on account of trafficking, but the victim has left the United States and is allowed valid reentry into the United States for participation in investigative or judicial processes associated with trafficking; or
- When trafficking occurred outside the United States, but the victim is allowed valid entry into the United States in order to participate in investigative or judicial processes associated with trafficking.

DHS anticipates limited types of cases when trafficking occurred outside the United States that could lead to eligibility for T nonimmigrant status. One type could be when criminal activities occur outside the United States, but the relevant statutes provide for extraterritorial jurisdiction, and the activity involved would meet the Federal definition of “severe forms of trafficking in persons.” Statutes establishing extraterritorial jurisdiction generally require some nexus between the criminal activity and the United States’ interests. For example, under 18 U.S.C. 2423(c), the United States has jurisdiction to investigate and prosecute cases involving citizens or nationals who engage in illicit sexual conduct outside the United States, such as sexually abusing a minor. This offense is referred to as “sex tourism.”

Sex tourism often interplays with crimes of human trafficking. According to the Federal definition of “severe forms of trafficking in persons,” where a minor (*i.e.*, a person under the age of 18) engages in a commercial sex act, that minor meets the definition without having to show force, fraud, or coercion. See TVPA section 103(9), 22 U.S.C. 7102(9). The TVPA definition of “commercial sex act” is any sex act on account of which anything of value is given to or received by any person. TVPA section 103(4), 22 U.S.C. 7102(4). Violations of the sex tourism statute could involve commercial sex acts involving a minor. Such a minor would also meet the Federal definition of a victim of “severe forms of trafficking in persons,” and if the victim is allowed valid entry into the United States in order to participate in investigative or judicial processes associated with trafficking, the victim may qualify for T nonimmigrant status.

Even absent extraterritorial jurisdiction, there are other cases which could lead to eligibility for T nonimmigrant status when the

trafficking occurred outside the United States. DHS understands that the nature of human trafficking crimes often means that traffickers operate internationally and may commit crimes in a number of countries. If the victim is allowed valid entry into the United States in order to participate in investigative or judicial processes, the victim could potentially qualify for T nonimmigrant status. DHS notes that the victim would need to meet every eligibility requirement in order to qualify for T nonimmigrant status and DHS adjudicates every application on a case-by-case basis.

Even before the statutory expansion of the physical presence requirement, it was possible that trafficking that occurred abroad could qualify a victim for T nonimmigrant status. INA section 101(a)(15)(T)(i)(II); 8 U.S.C. 1101(a)(15)(T)(i)(II), allows victims at a port of entry to qualify, so long as they can show that their presence at the port is on account of trafficking. This means that the recruitment, harboring, transportation, provision, or obtaining of a person for a severe form of trafficking that occurs abroad and results in the person’s presence at a port of entry of the United States qualifies a victim for T nonimmigrant status. INA section 101(a)(15)(T)(i)(II); 8 U.S.C. 1101(a)(15)(T)(i)(II). DHS notes that not every instance of trafficking occurring abroad would qualify a victim for T nonimmigrant status. The victim must establish that he or she is now in the United States or at a port of entry on account of trafficking or the victim was allowed valid entry into the United States to participate in a trafficking-related investigation or a prosecution or other judicial process. If a victim of trafficking abroad makes his or her way to the United States and the reason is not related to or on account of the trafficking and the victim was not allowed valid entry to participate in an investigative or judicial process related to trafficking or a trafficker, this victim cannot meet the physical presence requirement and would not be eligible for T nonimmigrant status on account of that trafficking incident.

c. Removal of the “Opportunity To Depart” Requirement

DHS is also amending the former “opportunity to depart” aspect of the physical presence requirement. DHS provided in the 2002 interim rule that the general physical presence requirement can cover applicants who are currently being trafficked, were recently liberated from trafficking, or were subject to trafficking in the past. For those who escaped a trafficker before an LEA became involved, DHS

required in the 2002 interim rule that the applicant show that, evaluated in light of the applicant’s circumstances, he or she did not have a clear chance to leave the United States, or an “opportunity to depart.” 8 CFR 214.11(g)(2). This requirement was intended to ensure that the applicant’s continuing presence in the United States is directly related to the trafficking.

Most commenters on the subject of physical presence objected to USCIS requiring a victim liberated from traffickers to demonstrate that his or her continuing presence in the United States is directly related to the trafficking. Commenters also opposed the requirement that a victim who escaped the traffickers and remains in the United States must show he or she had no clear chance to leave, asserting it is burdensome, vague, and may frustrate congressional intent to protect victims.

Although DHS has tempered this requirement by looking at the opportunity to depart in light of the individual’s circumstances such as trauma, injury, and lack of resources, DHS agrees that this requirement is unnecessary and may be counterproductive. DHS therefore is removing the requirement that an applicant must show that he or she did not have a clear chance to leave (*i.e.*, “opportunity to depart”) the United States.

Notwithstanding this change, every applicant must still establish that they are physically present in the United States on account of trafficking. Section 101(a)(15)(T)(i)(II) of the INA, 8 U.S.C. 1101(a)(15)(T)(i)(II), requires that a victim be physically present “on account of such trafficking.” Unlike the requirement of victimization, which is phrased in both the present and past tense, the physical presence requirement is only phrased in the present tense. DHS interprets this language to require a consideration of the victim’s current situation, and a consideration of whether the victim can establish that his or her current presence in the United States is on account of trafficking. A victim who is liberated from trafficking is not exempt from the statutory requirement to show that his or her presence is on account of trafficking. Applicants who have not performed labor or services, or a commercial sex act also need to demonstrate physical presence in the United States on account of trafficking.

d. Evidence of Physical Presence on Account of Trafficking in Persons

For those victims demonstrating physical presence on account of “the alien having been allowed entry into the United States,” DHS interprets this language to require the victim’s entry through a lawful means. *See* INA section 101(a)(15)(T)(i)(II), 8 U.S.C. 1101(a)(15)(T)(i)(II); new 8 CFR 214.11(g)(3). The victim must provide evidence of the lawful entry. New 8 CFR 214.11(g)(3).

DHS does not interpret the phrase “judicial processes” as referring only to criminal investigations or prosecutions, nor will DHS require LEA “sponsorship.” For example, if DHS were to parole a victim to pursue civil remedies associated with an act or perpetrator of trafficking, *see, e.g.,* 18 U.S.C. 1595, the applicant may potentially meet this physical presence requirement. DHS does not interpret this provision to require the victim to enter the United States through an LEA sponsored entry, such as Significant Public Benefit Parole (SPBP).

Practically, SPBP may be the most common way these applicants enter the United States, because United States law enforcement may investigate or prosecute the trafficking crime, and law enforcement could sponsor an individual for SPBP for access to United States courts that would likely have jurisdiction over the related trafficking incidents. In these cases, the victim is in the United States on account of trafficking because DHS facilitated the victim’s entry into the United States for participation in an investigation or prosecution.

The lawful entry must be connected to the victim’s participation in an investigative or judicial process associated with an act or perpetrator of trafficking. The victim must include evidence of the lawful entry and of how he or she entered to participate in an investigative or judicial process associated with an act or perpetrator of trafficking. Evidence could include a Form I-914 Supplement B, or other evidence from an LEA to describe the victim’s participation. The victim can also provide other credible evidence, such as a personal statement, or attach supporting documentation.

When the physical presence requirement is met by the victim’s entry into the United States for participation in investigative or judicial processes associated with an act or perpetrator of trafficking, the victim must still establish his or her eligibility for all the other requirements for T nonimmigrant status. The compliance with the any

reasonable request for assistance requirement would not be met simply by the entry into the United States with the intent to assist the LEA, but by the victim actually complying with any reasonable request by an LEA or meeting an exception to the compliance requirement. The requirement to comply with any reasonable request is an ongoing requirement, meaning that applicants must continue to cooperate with the LEA from the time of their initial application through the time they apply for adjustment of status to lawful permanent resident. *See* new 8 CFR 214.11(h)(1) and (m)(2)(ii)–(iii); 8 CFR 245.23(a)(6)(i). Failure to comply with any reasonable request from the LEA can result in revocation of the T nonimmigrant status. *See* new 8 CFR 214.11(m)(2)(ii)–(iii). However, if the LEA chooses not to pursue an investigation or prosecution, that decision will not affect the applicant’s eligibility so long as the applicant complied with any reasonable LEA request.

DHS notes that victims must also meet the other eligibility requirements, including the requirement that the victim establish that she or he would suffer extreme hardship involving unusual and severe harm upon removal from the United States. 8 CFR 214.11(i). The victim must include evidence of extreme hardship following the guidelines laid out in 8 CFR 214.11(i). One example of where this requirement may be met when the victimization occurred abroad is if the traffickers abroad are now threatening the victim or the victim’s family because the victim is no longer under the trafficker’s control or because the victim is cooperating with an LEA or judicial process in the United States. DHS will make “extreme hardship” determinations in accordance with the law and DHS policy, as discussed below in this preamble.

3. Compliance With Any Reasonable Request

Third, a victim is required to comply with any reasonable request for assistance in a Federal, State, or local investigation or prosecution of acts of trafficking in persons, or the investigation of a crime where an act of trafficking in persons is at least one central reason for the commission of that crime. *See* INA section 101(a)(15)(T)(i)(III)(aa), 8 U.S.C. 1101(a)(15)(T)(i)(III)(aa); new 8 CFR 214.11(b)(3). A “reasonable request for assistance” is defined as “a reasonable request made by an LEA or prosecutor to a victim of a severe form of trafficking in persons to assist an LEA in the

investigation or prosecution of acts of trafficking in persons or the investigation of a crime where an act of trafficking in persons is at least one central reason for the commission of that crime.” 8 CFR 214.11(a).

In this rule, DHS makes the following changes and clarifications:

- Expanding the factors that DHS may consider in the totality of the circumstances test to determine the “reasonableness” of LEA requests. New 8 CFR 214.11(h)(2).

- Clarifying that DHS will continue to use a “comparably situated crime victims” standard to determine reasonableness, rather than a “subjective trafficked persons” standard.

- Clarifying that the proper standard to determine “reasonableness” is whether the LEA request was reasonable, not whether the victim’s refusal was unreasonable. New 8 CFR 214.11(m)(2)(ii).

- Raising the age at which the applicant must comply with any reasonable request by an LEA for assistance in an investigation or prosecution of acts of trafficking in persons from 15 years to 18 years of age. New 8 CFR 214.11(h)(4)(ii).

- According no special weight to an LEA endorsement and moving to an “any credible evidence” standard. New 8 CFR 214.11(h)(3).

- In cases where the applicant is unable, due to physical or psychological trauma, to cooperate with any reasonable request by an LEA, exempting the applicant from the requirement to comply. New 8 CFR 214.11(h)(4)(i).

DHS discusses each change in turn below.

a. Totality of the Circumstances Test To Determine the “Reasonableness” of LEA Requests

In the 2002 interim rule, DHS accounted for situations in which a request made to a victim was not reasonable. *See* 8 CFR 214.11(a). Under that rule, the reasonableness of a request depended on the totality of the circumstances, taking into account general law enforcement and prosecutorial practices, the nature of victimization, and the specific circumstances of the victim, including fear, severe traumatization (both mental and physical), and the age and maturity of young victims. *Id.*

In the 2002 interim rule, DHS sought specific comments on this requirement. Of the total 191 public comments received, 37 comments related to some aspect of this issue. Fifteen commenters commended DHS for adopting a totality

of the circumstances test to determine the reasonableness of an LEA request and for balancing law enforcement needs and the protection of victims. Some commenters appreciated the comprehensiveness of the totality of the circumstances test. Some commenters also provided a broad, non-exhaustive list of factors to be considered when implementing the totality of the circumstances test, including fear of retribution against family members outside the United States for whom foreign law enforcement cannot or will not provide protection. Six commenters also thought the regulations were too vague regarding how long a victim must comply with any reasonable requests for assistance. The commenters urged DHS to take into account circumstances that may delay or limit an applicant's compliance with LEA requests when determining whether an applicant meets the compliance requirement. These circumstances could include responses to trauma and psychological issues, delays necessary to ensure the safety of the applicant or the applicant's family members, delays or difficulties accessing social services, and the time it takes an applicant to build trust with law enforcement.

DHS appreciates the public's input with respect to the "reasonable requests for assistance" requirement. DHS strives to implement the aims of the TVPA while striking the proper balance between the law enforcement need to investigate and prosecute and the need to ensure that victims are not overburdened. DHS includes in this rule almost all of the commenters' suggested factors to consider when evaluating the reasonableness of an LEA request, including factors related to time. *See* new 8 CFR 214.11(h)(2). DHS will evaluate the totality of the circumstances using a broad range of factors, and is not limited by those listed in this rule. *Id.*

b. "Comparably-Situated Crime Victims" Standard

In the 2002 interim rule, DHS noted that it is generally reasonable for an LEA to ask a victim of a severe form of trafficking in persons similar things an LEA would ask other comparably-situated crime victims, thus articulating a "comparably-situated crime victims" standard. 67 FR 4784, at 4788. Some commenters suggested, however, that in the application of the test, DHS could go further by replacing the "comparably-situated crime victims" standard with a "subjective trafficked person" standard that would take into account the unique situation of the particular trafficking victim. DHS has determined, however,

that a "subjective trafficked persons" standard could actually be narrower than the existing "comparably-situated crime victims." 67 FR 4784, at 4788. DHS also notes that many factors of the totality of the circumstances test are unique to trafficking victims.

The definition of "severe forms of trafficking in persons" can be limiting in that elements of force, fraud, and coercion are required. By adopting a "subjective trafficked persons" standard, USCIS would be bound by the federal trafficking definition. The existing comparably-situated crime victim standard can go beyond the scope of the federal trafficking definition to victims of other crimes, such as domestic violence. Law enforcement practice regarding sensitivity to domestic violence victims is long standing and has evolved over the course of several decades. DHS did not limit who it envisioned as a comparably-situated crime victim, intending to keep the evaluation of reasonableness as broad as possible. After considering the comments, DHS has determined that it will retain the reasonableness test and use the comparably-situated crime victim standard in its application, as it properly focuses on the protection of victims and provides more flexibility than the alternative suggested by commenters.

In addition, DHS notes that when comments on the 2002 interim rule were submitted, Congress had not yet added the trauma exemption from compliance with any reasonable requests. In part because of the trauma exemption that Congress enacted following the 2002 interim rule and that is discussed later in this Preamble, DHS sees no need to amend current practice.

c. Proper Standard Is the Reasonableness of the LEA Request

DHS received six comments asserting that USCIS inconsistently implements the statutory requirement that a victim must comply with "any reasonable request for assistance" by sometimes trying to determine whether the victim's refusal to assist was reasonable, instead of whether the request itself was reasonable. The commenters pointed out that the 2002 interim rule discusses the victim's refusal to assist an LEA at page 4788 under, "What is the Law Enforcement Agency Endorsement?" and at 8 CFR 214.11(s)(1)(iv), *Grounds for notice of intent to revoke*. Commenters also suggested the word "reasonable" should be added to Part D (Cooperation of Victim) checklist item of the Declaration of Law Enforcement Officer for Victim of Trafficking in

Persons, Form I-914 Supplement B. The item would then read that the applicant "has complied with reasonable requests for assistance"

DHS agrees that the statute focuses on whether an LEA request was reasonable and not whether a victim unreasonably refused to assist. (DHS notes, however, that whether a request is reasonable can depend on victim-specific factors, such as whether the victim and the victim's family are sufficiently safe or emotionally able to assist law enforcement at any given time.) DHS is amending the revocation standards to reflect the statutory language. New 8 CFR 214.11(m)(2)(iii). DHS has also revised Declaration of Law Enforcement Officer for Victim of Trafficking in Persons, Form I-914 Supplement B to the Application for T Nonimmigrant Status, Form I-914, to add the term "reasonable" to refer to requests made to a victim.

d. Minors Exempt From Compliance With Any Reasonable Request

DHS received eight comments specific to minors and the requirement for compliance with any reasonable request. These commenters proposed that DHS consider the applicant's age and any developmental delays for minors above the age of 15. Persons under the age of 15 were not required to comply with any reasonable requests for assistance under the 2002 interim rule. The commenters requested special consideration for those between the ages of 15 and 18.

Since the 2002 interim rule, the statute has been amended to exempt from this requirement children under 18 years of age and those who cannot comply with a request for assistance due to physical or psychological trauma. *See* INA section 101(a)(15)(T)(i)(III)(bb) and (cc), 8 U.S.C. 1101(1)(15)(T)(i)(III)(bb) and (cc); new 8 CFR 214.11(b)(3)(i) and (ii). Therefore, there is no longer a population of 15 to 18 year olds to which this comment would apply. *See* new 8 CFR 214.11(b)(3)(i) and 214.11(h)(4)(ii).

e. Evidence of Compliance With Any Reasonable Request

Under the 2002 interim rule, evidence of compliance was weighed as primary evidence or secondary evidence, similar to the evidentiary requirement for victimization. *See* 8 CFR 214.11(h). An LEA endorsement was primary evidence of compliance with reasonable requests. *Id.* Secondary evidence was any credible evidence submitted to explain the nonexistence or unavailability of the primary evidence and to demonstrate

compliance with any reasonable request. *Id.*

DHS received 10 comments relating to the creation of an LEA endorsement, an optional part of an application for T nonimmigrant status. Commenters believed that in practice the endorsement is mandatory since it is primary evidence, and that it creates an imbalance between the needs of law enforcement and the rights of victims. Commenters asserted that the use of an LEA endorsement is not specifically required by statute. Furthermore, commenters believed that Congress did not intend for the LEA endorsement to be required because an endorsement was required in the U nonimmigrant statute concerning victims of certain qualifying criminal activity under INA section 214(p)(1), which includes human trafficking, but not specifically required in the T nonimmigrant statute. Commenters also suggested allowing State or local LEAs to issue an endorsement in addition to Federal LEAs.

DHS is amending the regulations with this rule to discontinue the “primary” and “secondary” evidentiary distinctions in favor of an “any credible evidence” standard. *See* new 8 CFR 214.11(d)(2)(ii) and (3). Under new 8 CFR 214.11(h)(3), USCIS will accept any credible evidence of compliance with reasonable requests, including, but not limited to, an LEA endorsement. *See* new 8 CFR 214.11(d)(3). DHS notes that under the “any credible evidence” standard, the absence of an LEA endorsement will not adversely affect an applicant who can meet the evidentiary burden with the submission of other evidence of sufficient reliability and relevance.

Even though the statute creating T nonimmigrant status did not explicitly require an LEA endorsement, DHS considers such an endorsement a useful and convenient form of evidence, among other types of credible evidence. In TVPRA 2003, Congress added section 214(o)(6) of the INA, 8 U.S.C. 1184(o)(6), which instructs USCIS to consider statements from State and local LEAs that a victim has complied with any reasonable requests for assistance in investigations or prosecutions where trafficking appears to have been involved. *See* TVPRA 2003 section 4(b)(2)(B). TVPRA 2003 also added State and local LEAs to the compliance requirement at section 101(a)(15)(T)(i)(III)(aa) of the INA, 8 U.S.C. 1101(a)(15)(T)(i)(III)(aa). *Id.* TVPRA 2003 endorsed and codified the LEA endorsement process by directing USCIS to consider statements from State and local LEAs. *See* TVPRA 2003

section 4(b)(2)(B), INA section 214(o)(6), 8 U.S.C. 1184(o)(6).

In creating the T nonimmigrant status, Congress intended to provide law enforcement with a tool to combat and prosecute human trafficking and to protect victims of human trafficking. DHS intends to equally balance the goals of law enforcement and victim protection by moving to an “any credible evidence” standard. DHS has amended the evidentiary standard as described above.

This change to an “any credible evidence” standard also clarifies some misconceptions of the LEA role in the T nonimmigrant process. Signing an endorsement does not grant T nonimmigrant status, nor does it lead to automatic approval. Only USCIS can grant T nonimmigrant status after reviewing evidence and completing security and background checks. An “any credible evidence” standard may assist LEAs in better understanding their role in the T nonimmigrant process. This new standard may also result in LEAs being more likely to sign endorsements, increasing the likelihood that T nonimmigrant status will be utilized as the law enforcement tool that it is intended to be. Even in the absence of an LEA endorsement, in order to determine whether a victim meets the “compliance with any reasonable request” requirement, DHS may contact the LEA that is involved in the case at its discretion to document the victim’s compliance (or inability to comply) with reasonable requests for assistance.

Consistent with DHS’ adoption of an any credible evidence standard, this rule also expands the definition of “Law Enforcement Agency (LEA)” to allow for any Federal, State or local law enforcement agency, prosecutor, judge, labor agency, or other authority that has responsibility for the detection, investigation, and/or prosecution of severe forms of trafficking in persons to complete an LEA endorsement. New 8 CFR 214.11(d)(2); 8 CFR 214.11(h)(3). Federal LEAs include but are not limited to: U.S. Attorneys’ Offices, Civil Rights Division, Criminal Division, U.S. Marshals Service, Federal Bureau of Investigation (Department of Justice); U.S. Immigration and Customs Enforcement (ICE), U.S. Customs and Border Protection (CBP); Diplomatic Security Service (Department of State); and U.S. Department of Labor. State and local LEAs include but are not limited to: Police departments, sheriff’s offices, district attorney’s offices, human rights commissions, departments of labor, and child protective services. An agency that has the responsibility to detect severe forms of trafficking in persons may be

an LEA even if the agency does not investigate or prosecute acts of trafficking.

Further, commenters suggested that the act of filing an application for T nonimmigrant status amounts to contacting law enforcement and DHS should require no additional action. At a minimum, commenters asked USCIS to ensure that Federal LEAs issue LEA endorsements without undue delay if a prosecution does not proceed as originally charged, a prosecution moves forward for a lesser offense, or a State or local prosecution proceeds in lieu of a Federal prosecution.

Since the regulations were promulgated, INS was dissolved and its responsibilities transferred to several components of DHS. Unlike the Department of Justice (DOJ) or law enforcement components within DHS, such as ICE, USCIS has no authority to investigate or prosecute trafficking. Therefore, applying for T nonimmigrant status with USCIS is not the same as contacting an LEA to report a trafficking crime. DHS cannot assure applicants that LEAs will issue endorsements, but has clarified with this rule that a formal investigation or prosecution is not required in order for an LEA to complete an endorsement. *See* new 8 CFR 214.11(d)(3)(i). DHS has created awareness materials and training for LEAs that describe the LEA role in the process and emphasize that a formal investigation or prosecution is not required to complete an endorsement.

DHS is removing language that described how to obtain an LEA endorsement if the victim has not had contact with an LEA. *See* former 8 CFR 214.11(f)(4). That provision directed applicants to contact the DOJ hotline to file a complaint and be referred to an LEA. This level of specificity is overly-detailed for regulations and it does not provide sufficient flexibility to adapt to changes in the future. Since the publication of the 2002 regulations, DHS and many other Federal agencies and nongovernmental partners have engaged in various public education campaigns and posted information on Web sites, which are better vehicles than regulations for conveying this type of guidance.

Finally, the 2002 interim rule created a requirement that the LEA endorsement be signed by a supervising official responsible for the detection, investigation or prosecution of severe forms of trafficking in persons. *See* 8 CFR 214.11(f)(1). This interim final rule maintains that requirement at new 8 CFR 214.11(d)(3)(i). USCIS did not receive any comments on this requirement in connection with the

2002 interim rule. More recently, however, USCIS has received public feedback on a similar requirement in the U nonimmigrant status process. USCIS will consider any changes related to the U nonimmigrant status process in a separate rulemaking.

f. Trauma Exception

Legislation enacted since the publication of the 2002 interim rule exempts victims who cannot cooperate with an LEA request due to physical or psychological trauma from compliance with the any reasonable request requirement. *See* INA section 101(a)(15)(T)(i)(III)(bb), 8 U.S.C. 1101(a)(15)(T)(i)(III)(bb); new 8 CFR 214.11(b)(3)(ii). DHS adds this statutory change in this rule and provides guidance on how an applicant can demonstrate the requisite trauma. New 8 CFR 214.11(h)(4)(i). DHS welcomes comments on how it should evaluate whether an applicant cannot comply with a request for cooperation from an LEA due to trauma. DHS will require that an applicant submit an affirmative statement describing the trauma, and any other credible evidence. Other supporting evidence may include a signed attestation as to the victim's physical or psychological indicators of trauma from a person qualified to make such determinations in the course of his or her job, such as a medical professional, social worker, or victim advocate, or any medical, psychological, or other records that are relevant to the trauma. *See* INA section 101(a)(15)(T)(i)(III)(bb), 8 U.S.C. 1101(a)(15)(T)(i)(III)(bb); new 8 CFR 214.11(h)(4)(i). In order to show that the person providing the signed attestation is qualified to make such a determination in the course of his or her job, the applicant could provide a description of the person's qualifications or education or a description of the person's contact and experience with the applicant.

Although a victim's affidavit alone may suffice to satisfy the victim's evidentiary burden, USCIS encourages applicants to submit additional evidence that will assist them in establishing the trauma exception from the general requirement that they comply with any reasonable LEA request for assistance. In order to determine whether a victim meets the trauma exception, DHS may contact the LEA that is involved in the case at its discretion to document the victim's inability to assist in the law enforcement process. *See* new 8 CFR 214.11(h)(4)(i). In these trauma exception cases, the applicant is not required to have had contact with an

LEA, including reporting the trafficking. In those cases with no LEA contact, DHS will not contact an LEA because there will not be an LEA involved with the applicant's case.

Congress instructed DHS to consult with DOJ as appropriate when adjudicating the trauma exception from compliance with reasonable LEA requests. *See* INA section 101(a)(15)(T)(i)(III)(bb), 8 U.S.C. 1101(a)(15)(T)(i)(III)(bb). USCIS already collaborates with DOJ on certain T nonimmigrant matters and it will follow a similar process for the trauma exception. USCIS may consult with DOJ regarding the trauma exception when the underlying criminal case is being handled by DOJ.

4. Extreme Hardship Involving Unusual and Severe Harm Upon Removal

The fourth and final eligibility requirement for T nonimmigrant status is that the applicant would suffer extreme hardship involving unusual and severe harm upon removal from the United States. *See* INA section 101(a)(15)(T)(i)(IV), 8 U.S.C. 1101(a)(15)(T)(i)(IV); new 8 CFR 214.11(b)(4). When evaluating whether removal would result in such extreme hardship, USCIS considers a number of factors and uses an "any credible evidence" standard. *See* 8 CFR 214.11(i)(3); new 8 CFR 214.11(d)(5).

In this rule, DHS clarifies two points regarding the extreme hardship requirement based on public comment:

- Minors are not exempt from the extreme hardship requirement.
- The applicant bears the burden of proof for the extreme hardship requirement.

DHS discusses these in turn below.

Nine commenters suggested a rule that minors would always suffer extreme hardship involving unusual and severe harm on removal.

Congress did not exempt minors from the extreme hardship requirement. *See* INA section 101(a)(15)(T)(i)(IV), 8 U.S.C. 1101(a)(15)(T)(i)(IV). In contrast, Congress did exempt minors from compliance with reasonable LEA requests. *See* INA section 101(a)(15)(T)(i)(III)(cc), 8 U.S.C. 1101(a)(15)(T)(i)(III)(cc). As noted above, Federal law also defines "severe forms of trafficking in persons" differently with respect to victims under 18 years old than with respect to victims 18 years and older. *See* 22 U.S.C. 7102(9)(A). Consistent with the different treatment of minors with regard to certain eligibility criteria in the statute, DHS will not adopt a per se rule that minors would suffer extreme hardship. USCIS, however, considers an

applicant's age, maturity, and personal circumstances (among other factors) when evaluating the extreme hardship requirement. *See* new 8 CFR 214.11(i)(2).

One commenter stated that it is unrealistic to place the burden of proof on the applicant to show extreme hardship. This comment appears to be based on a lack of general understanding of USCIS immigration benefit processing. The applicant bears the burden of proving he or she is eligible to receive any immigration benefits requested; the government is not required to prove an applicant's ineligibility. *See* INA section 291, 8 U.S.C. 1361; *Matter of Chawathe*, 25 I&N Dec. 369, 375 (AAO 2010); *Matter of Brantigan*, 11 I&N Dec. 493 (BIA 1966); 8 CFR 103.2(b)(1). The applicant may document his or her extreme hardship through a personal statement or other evidence. New 8 CFR 214.11(i)(3). USCIS can consider relevant country condition reports and any other public or private sources of information, when appropriate. *Id.* By allowing such a broad "any credible evidence" standard, including the applicant's own statement, USCIS is recognizing and taking into account difficulties applicants may encounter in obtaining certain documents.

B. Application Requirements

1. Filing the Application

An applicant must submit a complete Application for T Nonimmigrant Status, Form I-914, in accordance with the form instructions. *See* new 8 CFR 214.11(d)(1). DHS is making the following changes and clarifications in this rule:

- Removing the filing deadline.
 - Amending the related forms to reflect public comments.
 - Continuing to require proof of identity and relationship for family members of minor applicants. New 8 CFR 214.11(k)(3).
 - Amending the law enforcement referral language to account for the creation of DHS. New 8 CFR 214.11(o).
- DHS discusses each of these in turn.

a. Filing Deadline

DHS required anyone victimized prior to October 28, 2000, to apply for T nonimmigrant status before January 31, 2003. 8 CFR 214.11(d)(4). DHS received seven comments against the adoption of this filing deadline. Commenters noted that Congress did not impose a deadline and further noted T nonimmigrant status is meant for a person who is or has been a victim of severe form of trafficking in persons. Commenters also

thought the deadline would hinder victims from coming forward and receiving protection, as well as LEA efforts to combat trafficking.

DHS acknowledges that Congress did not impose a filing deadline. At the time of the 2002 interim rule, DHS anticipated a large volume of applications for T nonimmigrant status. The deadline was intended to prevent application backlogs. T nonimmigrant application volume has not reached expected levels. To protect as many victims as possible, DHS is removing the deadline in this interim rule. As of January 18, 2017, USCIS will accept applications regardless of when the applicant was victimized.

b. Form-Related Changes

DHS received 11 specific comments about particular fields on the Application for T Nonimmigrant Status, Form I-914 and the Application for Family Member of T-1 Recipient, Form I-914 Supplement A. Commenters asked USCIS to change a question on victimization to allow for the past tense, remove a question on public benefits, and add a safe address for the eligible family members of an approved T-1 nonimmigrant.

USCIS has updated the Application for T Nonimmigrant Status, Form I-914, and Application for Family Member of T-1 Recipient, Form I-914 Supplement A, several times since the publication of the 2002 interim rule. The current version of the form allows victimization in the past tense. Forms I-914 and Supplement A for T nonimmigrant derivatives contain a safe address. In addition, the application no longer contains a question about public benefits. In the Paperwork Reduction Act (PRA) section of this rule, DHS requests public comments on the revised Application for T Nonimmigrant Status, Form I-914; Application for Family Member of T-1 Recipient, Form I-914 Supplement A; and Declaration of Law Enforcement Office for Victim of Trafficking in Persons, Form I-914 Supplement B. 44 U.S.C. 3507. DHS is renaming the Application for Family Member of T-1 Recipient, Form I-914 Supplement A. DHS is removing the phrase "immediate family member" because, as explained in this preamble, the derivative categories have been statutorily expanded to include family members who are not traditionally thought of as "immediate family members"

Four comments suggested that USCIS should return incomplete forms to the applicant with a rejection notice and allow an applicant to re-file using the process USCIS established for VAWA

self-petitioners. USCIS is not aware of the process for VAWA self-petitioners to which the commenter is referring. Nonetheless, 8 CFR 103.2(a) requires benefit requests to be executed and filed in accordance with the form instructions and provides that a benefit request that is not executed may be rejected. Accordingly, USCIS properly returns substantially incomplete forms (including U nonimmigrant petitions and VAWA self-petitions) to the petitioner, who is instructed in the rejection notice that they may correct the deficiencies that are noted and refile their request.

c. Proof Required for Family Members of a Minor Applicant

One commenter also asserted that the standards for proving identity and eligibility for eligible family members of a minor principal are too burdensome and recommended approving the eligibility of family members of a minor principal regardless of the incomplete application. DHS declines to accept the commenter's proposal because all applicants for immigration benefits generally must submit all required initial evidence, and supporting documentation, with an application completed according to form instructions. 8 CFR 103.2(a). There are already allowances in regulations if original documentation to prove age and identity are not available. 8 CFR 103.2(b)(2) (permitting the submission of secondary evidence to overcome the unavailability of primary evidence, and affidavits to overcome the unavailability of both primary and secondary evidence).

In addition, many eligible family members are outside the United States and need to be processed by the Department of State (DOS) at a United States embassy or consulate in order to receive a T visa to apply for admission to the United States. These eligible family members must prove identity, age, and relationship during consular processing according to DOS standards. DHS does not believe it would be beneficial to applicants for DHS to relax the standard USCIS requires to prove identity because that may result in a situation where USCIS approves a Form I-914, but DOS will not grant a T visa for entry to the United States.

d. Referral to Law Enforcement and Department of Health and Human Services

One commenter also recommended that a filing from a victim under 18 years of age should trigger a proactive investigation by law enforcement and experts in child protective services.

USCIS cannot initiate this type of investigation because USCIS is not a law enforcement agency, but the 2002 interim rule contained provisions for referring cases to investigators. *See* 8 CFR 214.11(v). DHS is amending this language to account for the creation of DHS and will instruct USCIS officers who come into contact with a possible victim who is not already working with an LEA to refer the case to ICE officials responsible for victim protection, trafficking investigations and prevention, and deterrence, as appropriate. *See* new 8 CFR 214.11(o).

Furthermore, child protective services are generally under the jurisdiction of States, and USCIS cannot require States to investigate claims of crimes or abuse against children. TVPRA 2008 vested responsibility for the care and custody of unaccompanied alien children with the U.S. Department of Health and Human Services (HHS).⁹ *See* TVPRA 2008 section 235(b)(1), 8 U.S.C. 1232(b)(1). Federal agencies must notify HHS upon apprehension or discovery of an unaccompanied alien child or any claim or suspicion that an individual in custody is under 18 years of age. *See* TVPRA 2008 section 235(b)(2), 8 U.S.C. 1232(b)(2). TVPRA 2008 also provided that federal agencies would notify HHS to facilitate the provision of public benefits to trafficking victims. Minors are eligible to receive federally funded benefits and services to the same extent as a refugee as soon as they are identified by HHS as a possible victim of trafficking, unlike adults who are eligible for public benefits only upon a grant of continued presence by DHS under 28 CFR 1100.35, a bona fide determination, or approval of T nonimmigrant status. Federal officials also must notify HHS upon discovering that a person under the age of 18 may be a victim of a severe form of trafficking in persons to facilitate provision of interim assistance to the minor victim. *See* TVPRA 2008 section 212(a)(2), 22 U.S.C. 7105(b)(1)(H). Upon receiving a T nonimmigrant status application from a minor, USCIS will notify HHS in order for the minor to be advised of public benefits that may be available as a minor victim of trafficking. *See* new 8 CFR 214.11(d)(1)(iii).

⁹ An unaccompanied alien child is defined as one who has no lawful immigration status in the United States, has not attained 18 years of age, and has no parent or legal guardian in the United States or no parent or legal guardian in the United States available to provide care and physical custody. 6 U.S.C. 279(g)(2).

2. Initial Evidence

All applicants for immigration benefits generally must submit all required initial evidence, and supporting documentation, with an application completed according to form instructions. 8 CFR 103.2(a). DHS is amending what constitutes acceptable initial evidence that must accompany the application for T nonimmigrant status. *See* new 8 CFR 214.11(d)(2). DHS will allow the following initial evidence:

- A signed statement in the applicant's own words describing the victimization and cooperation with any LEA reasonable request for assistance or applicable exemptions from cooperation with such an LEA request, and any other eligibility requirements;
- Evidence that the applicant is or has been a victim of a severe form of trafficking in persons;
- Evidence that the applicant meets the physical presence requirement;
- Evidence of any one of the following:
 - The applicant has complied with any reasonable request for assistance in a Federal, State, or local investigation or prosecution of crime where acts of trafficking are at least one central reason for the commission of that crime;
 - The applicant is under 18 years of age; or
 - The applicant is unable to cooperate with a reasonable request due to physical or psychological trauma;
 - Evidence that the applicant would suffer extreme hardship involving unusual and severe harm if removed from the United States; and
 - If the applicant is inadmissible, an Application for Advance Permission to Enter as Nonimmigrant, Form I-192, and supporting evidence to explain the inadmissibility.

As discussed above, DHS is removing the provisions requiring USCIS to weigh evidence as primary or secondary, and will accept any credible evidence to demonstrate each eligibility requirement for T nonimmigrant status. *See* new 8 CFR 214.11(d)(2)(ii). USCIS will determine the credibility and weight of evidence at its sole discretion. *See* new 8 CFR 214.11(d)(5). As is the case in all other immigration benefits, the applicant bears the burden of establishing eligibility. *Id.*

3. Bona Fide Determinations

Current regulations provide for USCIS to conduct an initial review of each T nonimmigrant status application package to determine if the application is a bona fide application. An application will be determined to be

bona fide if the application is complete and ready for adjudication. Among other requirements, the application must include biometrics, background checks, and prima facie evidence for each eligibility requirement. *See* 8 CFR 214.11(k). In conjunction with this pre-adjudication bona fide determination review, USCIS may grant the applicant deferred action when the application for T nonimmigrant status is bona fide, which allows the applicant to request employment authorization. *See* Memorandum from Stuart Anderson, Executive Associate Commissioner, Office of Policy and Planning, INS, Deferred Action for Aliens with Bona Fide Applications for T Nonimmigrant Status (May 8, 2002).¹⁰

One commenter recommended that USCIS make a bona fide determination and grant deferred action within 90 days of the receipt of the application.

Since 2002, USCIS has received fewer applications for T nonimmigrant status than were expected. USCIS generally adjudicates the merits of T nonimmigrant applications as quickly as it can make a bona fide determination. Nevertheless, in the event of processing backlogs, DHS recognizes that a bona fide determination may offer a victim of trafficking some protection for immigration status purposes, employment authorization, and the availability of public benefits through HHS.

In reference to a 90-day deadline, USCIS cannot guarantee a bona fide determination within 90 days in every case because the bona fide determination is dependent on the unique circumstances of each case, and the completion of biometric and background checks. Typically, these checks will be completed within 90 days, but occasionally the checks will take longer than 90 days. The completion of biometric and background checks depends on several factors, such as the schedule of the applicant, the workload of the Federal Bureau of Investigation (FBI) and other factors over which USCIS does not have control. DHS will retain the current regulatory process for bona fide determinations and make no additional changes at this time. *See* new 8 CFR 214.11(e).

This commenter also asked USCIS to notify HHS of a bona fide determination so that HHS can facilitate federal public benefits available to trafficking victims, as well as amend the bona fide determination notice to include

information about the federal benefits. USCIS currently notifies HHS upon approval of an application or a bona fide determination. As discussed elsewhere in this preamble, DHS will also notify HHS in accordance with TVPRA 2008 section 212(a)(2), 22 U.S.C. 7105(b)(1)(G). *See* new 8 CFR 214.11(d)(1)(iii).

4. Derivative Family Members

An applicant may be permitted to apply for certain family members to receive derivative T nonimmigrant status. In this rule, DHS is making the following changes and clarifications:

- Defining terms used to refer to victims and their family members to provide clarity. New 8 CFR 214.11(a).
- Adding new derivative categories since publication of the 2002 interim rule. New 8 CFR 214.11(k)(1).

DHS will discuss each in turn.

a. Definitions

DHS is defining “principal T nonimmigrant,” “eligible family member” and “derivative T nonimmigrant” to clarify these terms used throughout the regulations. New 8 CFR 214.11(a). Principal T nonimmigrant means the victim of trafficking who has been granted T-1 nonimmigrant status. *Id.* DHS uses the term “victim” to refer to aliens who were subject to a severe form of trafficking in persons, and who may be eligible to apply for T-1 nonimmigrant status. *Id.* Eligible family member means someone who has the relationship to a principal applicant required for derivative T nonimmigrant status. *Id.* Derivative T nonimmigrant refers to an eligible family member in the United States who has been granted T-2, T-3, T-4, T-5, or T-6 nonimmigrant derivative status or an eligible family member who has been admitted to the United States as a T-2, T-3, T-4, T-5, or T-6 nonimmigrant. *Id.*

b. Eligibility of Certain Family Members

The law governing T nonimmigrant status was changed in 2003 to allow a principal alien under 21 years of age to apply for admission of his or her parents and unmarried siblings under 18 years of age. *See* TVPRA 2003 section 4(b)(1)(B) and (b)(2), INA section 101(a)(15)(T)(ii)(I), 8 U.S.C. 1101(a)(15)(T)(ii)(I). In 2008, the law was amended to allow any principal, regardless of age, to apply for derivative T nonimmigrant status for parents or unmarried siblings under 18 years of age if the family member faces a present danger of retaliation as a result of the principal's escape from the severe form of trafficking in persons or cooperation

¹⁰ Available for review in the rulemaking docket for this rule (DHS Docket No. USCIS-2011-0010) at <http://www.regulations.gov>.

with law enforcement. *See* TVPRA 2008 section 201(a)(2)(D), INA section 101(a)(15)(T)(ii)(III), 8 U.S.C. 1101(a)(15)(T)(ii)(III). In 2013, the derivative categories were further expanded to allow any principal, regardless of age, to apply for children (adult or minor) of the principal's derivative family members if the derivative's child (adult or minor) faces a present danger of retaliation as a result of the principal's escape from the severe form of trafficking or cooperation with law enforcement. *See* VAWA 2013 section 1221, INA section 101(a)(15)(T)(ii)(III), 8 U.S.C. 1101(a)(15)(T)(ii)(III). DHS is amending the T nonimmigrant status regulations accordingly in this rule. New 8 CFR 214.11(k)(1)(ii)–(iii).

There are two general categories of family members eligible for T nonimmigrant status: those whose eligibility is based on the age of the principal and those whose eligibility is based on a showing of a present danger of retaliation. *See* INA section 101(a)(15)(T)(ii), 8 U.S.C. 1101(a)(15)(T)(ii).

Under INA section 101(a)(15)(T)(ii)(I), 8 U.S.C. 1101(a)(15)(T)(ii)(I), eligible family members of a principal alien under 21 years of age are the principal's:

- Spouse,
- Child(ren),¹¹
- Unmarried sibling(s) under 18 years of age; and/or
- Parent(s).

Under INA section

101(a)(15)(T)(ii)(II), 8 U.S.C.

1101(a)(15)(T)(ii)(II), eligible family members of a principal alien over 21 years of age are the principal's:

- Spouse, and/or
- Child(ren).

Under INA section

101(a)(15)(T)(ii)(III), 8 U.S.C.

1101(a)(15)(T)(ii)(III), eligible family members whose eligibility is based on a showing of a present danger of retaliation as a result of the principal's escape from the severe form of trafficking or cooperation with law enforcement (regardless of the age of the principal or, except where noted below, the age of the derivative) are the principal's:

- Parent(s) (added by TVPRA 2008),
- Unmarried sibling(s) under 18 years of age (added by TVPRA 2008),¹²

- Child(ren) or stepchild(ren),¹³ namely the adult or minor child of the principal alien's spouse (added by VAWA 2013),

- Grandchild(ren), namely the adult or minor child of the principal alien's child (added by VAWA 2013),

- Niece or nephew, namely the adult or minor child of the principal alien's sibling (added by VAWA 2013), and/or

- Sibling(s) (regardless of age or marital status), namely the adult or minor child of the principal alien's parent (added by VAWA 2013).¹⁴

The VAWA 2013 derivative expansion for children (adult or minor) of the principal's derivative family members if the derivative's child (adult or minor) faces a present danger of retaliation does not extend to the family members of the adult or minor child. For example, the spouse of an adult niece would not be eligible for derivative T nonimmigrant status.

The principal applicant may file an Application for Family Member of T–1 Recipient, Form I–914 Supplement A on behalf of these eligible family members, in accordance with form instructions. When relevant, and as described below, evidence that demonstrates a present danger of retaliation to the eligible family member must be included.

New 8 CFR 214.1(a)(1)(viii) classifies the principal alien and eligible derivative family members as:

trafficking or cooperation with law enforcement, the parent(s) and unmarried sibling(s) under 18 years of age of a principal who is under 21 years of age qualify for derivative T nonimmigrant status under INA section 101(a)(15)(T)(ii)(II).

¹³ Stepchildren are eligible under the definition of child at INA section 101(b)(1). Delineating stepchildren in this list is not intended to mean stepchildren are not already eligible. DHS includes this because the new T–6 category is complex and this list is intended to aid the reader.

¹⁴ Section 1221 of VAWA 2013 provided, “Section 101(a)(15)(T)(ii)(III) of the Immigration and Nationality Act (8 U.S.C.

1101(a)(15)(T)(ii)(III)) is amended by inserting ‘, or any adult or minor children of a derivative beneficiary of the alien, as ‘after ‘age.’” 127 Stat. 144. The resulting statutory text in INA section 101(a)(15)(T)(ii)(III) is awkwardly worded: “any parent or unmarried sibling under 18 years of age, or any adult or minor children of a derivative beneficiary of the alien, as of an alien described in subclause (I) or (II) who the Secretary . . . determines faces a present danger of retaliation as a result of the alien's escape from the severe form of trafficking or with law enforcement” (emphasis added). DHS believes that this provision is most reasonably construed as encompassing parents of principal T–1 nonimmigrants (regardless of the T–1's age), unmarried siblings of T–1 nonimmigrants (regardless of the T–1's age), and adult and minor children of derivative T nonimmigrants described in INA section 101(a)(15)(T)(ii)(I) or (II). A contrary reading would result in the inclusion of at-risk parents and unmarried siblings under 18 of derivative T nonimmigrants but the exclusion of at-risk parents and unmarried siblings under 18 of adult principal T–1 nonimmigrants. DHS does not believe that Congress intended such a counterintuitive outcome.

- T–1 (principal alien);
- T–2 (spouse);
- T–3 (child);
- T–4 (parent);
- T–5 (unmarried sibling under 18 years of age); and/or

- T–6 (adult or minor child of a principal's derivative).

VAWA 2013 did not amend INA section 245(l), 8 U.S.C. 1255(l) to explicitly provide for adjustment of status for individuals who were granted derivative T nonimmigrant status as the children (adult or minor) of the principal's derivative family members who face a present danger of retaliation as a result of the principal's escape from the severe form of trafficking or cooperation with law enforcement.¹⁵ However, USCIS may adjust the status of the principal and any person admitted under INA section 101(a)(15)(T)(ii), 8 U.S.C. 1101(a)(15)(T)(ii), as the spouse, parent, sibling or child. *See* INA section 245(l)(1), 8 U.S.C. 1255(l)(1). Even though section 245(l)(1) of the INA specifically names only the “spouse, parent, sibling or child” of the T–1 nonimmigrant, the statute is reasonably construed as allowing for the adjustment of status of any eligible derivative given its general reference to “any person admitted under section 101(a)(15)(T)(ii),” which as amended by VAWA 2013 includes the new derivative classes. The plain text, therefore, could reasonably be construed to encompass the new derivative class of children of derivative T nonimmigrants.

To conclude otherwise would be to impute to Congress, by virtue of this apparently inadvertent omission, an improbable intent to preclude the new class of derivatives from adjusting status, thwarting the very protection, family unity, and victim stabilization aims animating the expansion of derivative eligibility in the 2008 TVPRA and 2013 VAWA reauthorizations. *See, e.g., United States v. Casasola*, 670 F.3d 1023, 1029 (9th Cir. 2012) (“[W]e do not impute to Congress an intent to create a law that produces an unreasonable result.”). The practical effect of precluding adjustment of status would be to require these children of derivative T nonimmigrants to return, upon the expiration of their T nonimmigrant status, to the danger of retaliation that DHS and the LEA believed warranted their admission to the United States.

¹⁵ In section 809 of VAWA 2013, however, Congress did amend section 705(c) of the CNRA to clarify that physical presence in the CNMI on, before or after November 28, 2009 will be considered physical presence in the United States for purposes of INA section 245(l).

¹¹ See definition of child at INA section 101(b)(1), 8 U.S.C. 1101(b)(1), which includes stepchildren.

¹² Practically, the “parent(s)” and “unmarried sibling(s) under 18 years of age” derivative categories added by TVPRA 2008 benefit principal aliens who are over 21 years of age. This is because regardless of whether the family member faces a present danger of retaliation as a result of the principal alien's escape from the severe form of

Nothing in the greater statutory scheme or the legislative history of either law suggests that such a result was congressionally designed or that the failure to provide a conforming amendment to section 245(l)(1) was intentional or due to anything other than oversight or inadvertence.¹⁶

Thus, individuals who were granted derivative T nonimmigrant status as the children (adult or minor) of the principal's derivative family members who face a present danger of retaliation as a result of the principal's escape from the severe form of trafficking or cooperation with law enforcement, may apply for adjustment of status under INA section 245(l) provided they are otherwise eligible. *See* new 8 CFR 245.23(b)(2).

5. Age-Out Protection of Eligible Family Members

In some USCIS benefits, a principal alien is said to "age-out" if the alien was a certain age, generally under 21 years of age, at the time of filing, but then turns a certain age before USCIS adjudicates the application or petition. This type of age-out does not occur for principal aliens applying for T nonimmigrant status because they are protected by statute. *See* INA section 101(a)(15)(T)(ii)(I), 8 U.S.C. 1101(a)(15)(T)(ii)(I). However, as described in the following, DHS is addressing other types of age-out situations related to the ability of eligible family members to seek T nonimmigrant status.

In this rule, DHS makes the following changes and clarifications:

¹⁶ This conclusion is bolstered by the fact that Congress similarly did not update the identical reference to "spouses, sons, daughters, siblings, or parents of such aliens [(T-1 nonimmigrants)]" in the provision establishing that the annual numerical limitation on grants of T nonimmigrant visas or status does not apply to derivative beneficiaries. INA section 214(o)(3), 8 U.S.C. 1184(o)(3); *cf.*, e.g., *King v. Burwell*, 135 S. Ct. 2480, 2489, 2495 (2015) (observing that court's "duty is to construe statutes, not isolated provisions," that the meaning of a phrase "may seem plain when viewed in isolation, [but] turns out to be untenable in light of the statute as a whole" and that "the context and structure of the [act may] compel us to depart from what would otherwise be the most natural reading of the pertinent statutory phrase") (quotation marks and citation omitted); *Validus Reinsurance, Ltd. v. United States*, 786 F.3d 1039, 1045–46 (D.C. Cir. 2015) (noting that courts "must . . . avoid statutory interpretations that bring about an anomalous result when other interpretations are available") (quotation marks omitted); *Kolon Indus. Inc. v. E.I. DuPont de Nemours & Co.*, 748 F.3d 160, 169 (4th Cir. 2014) ("Even the plain meaning of a statute is not conclusive 'in the rare cases [in which] the literal application of a statute will produce a result demonstrably at odds with the intentions of its drafters.'" (quoting *United States v. Ron Pair Enters., Inc.*, 489 U.S. 235, 242 (1989) (alteration in original))).

- A child principal can apply for all eligible family members, including parents and unmarried siblings under 18 years of age, so long as the child was under 21 years of age when he or she filed for T-1 nonimmigrant status. New 8 CFR 214.11(k)(5)(ii).

- An unmarried sibling of a child principal need only be under 18 years of age at the time the principal files for T-1 nonimmigrant status. New 8 CFR 214.11(k)(5)(ii).

- A child derivative need only be under 21 years of age at the time the principal parent filed for T-1 nonimmigrant status. New 8 CFR 214.11(k)(5)(iii).

- Clarifying the distinction between age-out protections and marital status of a child or a sibling. New 8 CFR 214.11(k)(5)(v).

a. Age-Out Protection for Child Principal To Apply for Eligible Family Members

Seven commenters noted that a principal applicant under 21 years of age could turn 21 years of age before adjudication of the T nonimmigrant application, or age-out, and not be able to apply for a parent as a T-4 derivative. These commenters urged DHS to adopt the standard that if a principal applicant is under 21 years of age at the time of filing an application for T-1 nonimmigrant status, the ability to include a parent as a T-4 derivative is preserved. One commenter wrote that DHS should lock in the child's age for purposes of eligibility as of the date the child comes to the attention of law enforcement.

TVPR 2003 fixed this potential age-out problem. *See* TVPR 2003 section 4(b)(2)(B). A principal who files an application for T nonimmigrant status while under 21 years of age will continue to be treated as an alien described in INA section 101(a)(15)(T)(ii)(I), 8 U.S.C. 1101(a)(15)(T)(ii)(I) (a principal alien under 21 years of age), even if the alien attains 21 years of age while the T-1 application is pending. *See* INA section 214(o)(5), 8 U.S.C. 1184(o)(5). This means that as long as a principal applicant was under 21 years of age at the time of filing for T-1 status, he or she can still file an Application for Family Member of T-1 Recipient, Form I-914 Supplement A, to include T-4 parents or T-5 unmarried siblings under 18 years of age, even if the principal applicant turns 21 years of age before the principal alien's T-1 application is adjudicated. *See* new 8 CFR 214.11(k)(5)(ii).

b. Age-Out Protection for Unmarried Sibling Derivative of Child Principal

Similarly, TVPR 2003 provides that an unmarried sibling of a principal T-1 applicant under 21 years of age need only be under the age of 18 at the time the principal T-1 applicant files the Application for T Nonimmigrant Status, Form I-914 for T-1 nonimmigrant status. *See* TVPR 2003 section 4(b)(1)(B), INA section 101(a)(15)(T)(ii)(I), 8 U.S.C. 1101(a)(15)(T)(ii)(I); new 8 CFR 214.11(k)(5)(ii). It does not matter if the unmarried sibling turns 18 years of age before the principal applicant files an Application for Family Member of T-1 Recipient, Form I-914 Supplement A.

c. Age-Out Protection for Child Derivative

In addition, INA section 214(o)(4), 8 U.S.C. 1184(o)(4) was revised to provide that as long as a child T-3 derivative was under 21 years of age on the date the principal T-1 parent applied for T-1 nonimmigrant status, he or she will continue to be classified as a child and allowed entry as a derivative child. *See* TVPR 2003 section 4(b)(2)(B). This means that age at the time of classification, entry into the United States, or the date the child came to the attention of law enforcement, does not matter. Therefore, DHS has provided in this rule that for a child to be T-3 derivative, he or she must be under the age of 21 when the parent T-1 filed the Application for T Nonimmigrant Status, Form I-914 for T-1 nonimmigrant status. *See* new 8 CFR 214.11(k)(5)(iii).

d. Marriage of Eligible Family Members

In order to be eligible for T-3 or T-5 status, this interim rule requires a child or a sibling under the age of 18 to be unmarried:

- At the time the Application for T Nonimmigrant Status, Form I-914 for the principal is filed and adjudicated;
- At the time the Application for Family Member of T-1 Recipient, Form I-914 Supplement A for the eligible family member is filed and adjudicated; and
- At the time of admission to the United States (if an eligible family member is outside the United States). *See* new 8 CFR 214.11(k)(5)(v).

The law uses the term "children" in the derivative categories for family members. *See* INA section 101(a)(15)(T)(ii), 8 U.S.C. 1101(a)(15)(T)(ii). The term "child" is defined as a person who is under 21 years of age and unmarried. *See* INA section 101(b)(1), 8 U.S.C. 1101(b)(1). The derivative category for siblings

clarifies that the sibling must be unmarried and under the age of 18 years. *See* INA section 101(a)(15)(T)(ii), 8 U.S.C. 1101(a)(15)(T)(ii).

The age-out protections described above are linked specifically to age, but are not linked to marital status. For example, INA section 214(o)(4), 8 U.S.C. 1184(o)(4), specifies that an “unmarried alien,” who is the eligible family member of a parent and was under 21 years of age when the parent applied for T–1 status, can continue to be classified as a child if he or she turns 21 before adjudication. DHS believes that in giving a specific time frame related to age only and by using the term “unmarried alien,” Congress did not intend a similar time-of-filing standard with respect to marital status.

Similarly, Congress used the phrase “children, unmarried siblings under 18 years of age on the date on which such alien applied for status” in listing eligible family members for a principal who is under 21 years of age. *See* INA section 101(a)(15)(T)(ii)(I), 8 U.S.C. 1101(a)(15)(T)(ii)(I). Congress provided a specific time frame related to when siblings need to be under the age of 18, but does not give a time frame for marriage of either children or siblings. DHS believes that Congress intended that derivative status for T–3 children and T–5 unmarried siblings under the age of 18 should be limited to unmarried children and unmarried siblings through time of adjudication of both the principal’s and derivative’s T nonimmigrant application, as well as the admission into the United States of the family member. *See* new 8 CFR 214.11(k)(5)(v); *cf.*, *e.g.*, *Akhtar v. Gonzales*, 406 F.3d 399, 407–08 (6th Cir. 2005) (concluding that Congress’ provision of special age-out protections for derivative asylees but not similar protections based on marital status is reasonable and “easily withstand[s] constitutional scrutiny”).

e. Evidence for Eligible Family Members

The principal applicant must submit an Application for Family Member of T–1 Recipient, Form I–914 Supplement A, for each eligible family member with all required initial evidence and supporting documentation according to form instructions. *See* new 8 CFR 214.11(k)(2) and (3). DHS will require the following initial and supporting evidence:

- Evidence demonstrating the relationship of the eligible family member to the principal applicant;
- If seeking T–4, T–5, or T–6 status based on present danger of retaliation to the eligible family member, evidence of this danger; and

- If the eligible family member is inadmissible, a copy of the eligible family member’s Application for Advance Permission to Enter as Nonimmigrant, Form I–192 and attachments.

As discussed above, DHS has removed the provisions weighing evidence as primary or secondary and will accept any credible evidence to demonstrate each eligibility requirement for derivative T nonimmigrant status. As is the case in all other immigration benefits, the applicant bears the burden of establishing eligibility. *See* 8 CFR 103.2(b). USCIS will consider any credible evidence relevant to the application for derivative T nonimmigrant status. *See* new 8 CFR 214.11(k)(7) and (d)(2)(ii). USCIS will exercise its sole discretion to determine what evidence is credible and the weight of such evidence. *Id.*

DHS is removing regulatory language that required demonstration of extreme hardship to an eligible family member if the eligible family member was not allowed to accompany or follow to join the T–1 principal applicant. *See* 8 CFR 214.11(o)(1)(ii) and (5). This was a statutory requirement that was removed by VAWA 2005. *See* VAWA 2005 section 801(a)(2).

The provisions under new 8 CFR 214.11(k)(6) describe how an applicant can demonstrate a present danger of retaliation to an eligible parent or unmarried sibling under the age of 18, or to a child (adult or minor) of a derivative applying for derivative T nonimmigrant status. USCIS will consider any credible evidence of a present danger of retaliation to the eligible family member. Present danger will be evaluated on a case-by-case basis. An applicant may submit a statement describing the danger the family member faces and how the danger is linked to the victim’s escape from trafficking or cooperation with law enforcement. An applicant’s statement alone, however, may not be sufficient. Other examples of evidence include, but are not limited to: a previous grant of advance parole to a family member; a signed statement from an LEA describing the danger of retaliation; trial transcripts, court documents, police reports, news articles, copies of reimbursement forms for travel to and from court; documentation from their country of origin or place of residence (*e.g.* foreign government agencies, local law enforcement, social services), and affidavits from other witnesses. Regardless of whether the applicant submits a statement from an LEA, USCIS reserves the right to contact the LEA most likely to be involved in the

criminal case, if appropriate. Applicants who believe such contact could further endanger them or their family member should indicate that in a cover letter in the application for the family member’s T derivative status or otherwise contact USCIS.

C. Adjudication and Post-Adjudication

1. Prohibitions on Use of Information

In this rule, DHS makes the following changes and clarifications relating to the disclosure and use of an applicant’s information provided to USCIS:

- Updating the regulations to account for statutory confidentiality provisions applicable to T nonimmigrants. *See* new 8 CFR 214.11(p)
- Confirming the legal requirement to turn over information to prosecutors. *Id.*
- Confirming the warning on the T nonimmigrant application that information an applicant provides could be used to remove the applicant.

DHS discusses each in turn.

a. Applicability of Confidentiality Provisions

The confidentiality provisions of section 384 of the Illegal Immigration Reform and Immigrant Responsibility Act of 1996 (IIRIRA), codified at 8 U.S.C. 1367, apply to applicants for T nonimmigrant status. *See* IIRIRA section 384, 8 U.S.C. 1367. DHS issued the 2002 interim rule before the confidentiality provisions were applicable to those seeking T nonimmigrant status. Congress extended the confidentiality provisions to T nonimmigrant applicants in VAWA 2005. *See* VAWA 2005 section 817. In the 2002 interim rule, DHS did include some information about disclosure of an applicant’s information. For example, DHS allowed for disclosure of information to LEAs with the authority to detect, investigate, or prosecute severe forms of trafficking in persons. *See* 8 CFR 214.11(e). In this rule, DHS is incorporating the confidentiality provisions provided at 8 U.S.C. 1367, as amended, and including implementing provisions similar to those provided in the DHS U nonimmigrant status regulations. *See* new 8 CFR 214.11(p).

DHS, however, does not see a need to include the full list of protections and exceptions, as it would essentially reiterate the language of 8 U.S.C. 1367(a)(2) and (b). By citing to the statutory confidentiality provisions, DHS is protecting applicants while also ensuring that the regulations remain up to date. DHS has issued department-wide guidance on how these confidentiality provisions are interpreted and how they will be

implemented. *See, e.g.*, Department of Homeland Security Directive 002–02 and Instruction 002–02–001, Implementation of Section 1367 Information Provisions. DHS components plan to issue further guidance specific to component operations.

T nonimmigrant applicants are protected under 8 U.S.C. 1367 in two ways. First, adverse determinations of admissibility or deportability against an applicant for T nonimmigrant status, with a limited exception for individuals convicted of certain crimes, cannot be made based on information furnished solely by the perpetrator of the acts of trafficking in persons. *See* IIRIRA section 384(a)(1)(F), 8 U.S.C. 1367(a)(1)(F). Second, the statute prohibits the use or disclosure to anyone of any information relating to the beneficiary of a pending or approved application for T nonimmigrant status except in certain limited circumstances. *See* IIRIRA section 384(a)(2), (b), 8 U.S.C. 1367(a)(2), (b). Section 1367(a)(2) allows the release of information to a sworn officer or employee of DHS, DOJ, DOS, or a bureau or agency of either of those Departments for legitimate Department, bureau, or agency purposes. *Id.* Section 1367(b) also enumerates specific exceptions to confidentiality. The statute permits, for example, disclosure of protected information, in certain limited circumstances, to law enforcement and national security officials and nongovernmental victim services providers.

This rule, at new 8 CFR 214.11(p), also essentially reflects the same restrictions on use and disclosure of information relating to applicants for and beneficiaries of T nonimmigrant status that are described in DHS' interim U nonimmigrant status regulations at 8 CFR 214.14(e). *See* New Classification for Victims of Criminal Activity; Eligibility for 'U' Nonimmigrant Status, 72 FR 53014, 53039 (Sept. 17, 2007). These restrictions are based on the statutory directive that DHS not "permit use by or disclosure to anyone" (other than a sworn officer or employee of DHS, DOJ, or DOS) of "any information which relates to" an applicant for or beneficiary of T or U nonimmigrant status or VAWA immigration relief, with limited exceptions (*e.g.*, law enforcement or national security purposes). *See* 8 U.S.C. 1367(a)(2), (b). The intent of the restrictions in 8 U.S.C. 1367(a) on the use and disclosure of protected information was to "ensure that abusers and perpetrators of crime cannot use the immigration system against their victims," either to silence

them or to commit further abuse. 151 Cong. Rec. E2605, E2607 (statement of Rep. John Conyers in support of VAWA 2005 amendments to 8 U.S.C. 1367).

b. Disclosure Required in Relation to Criminal Prosecution

In the 2002 interim rule, DHS allowed for disclosure of information to DOJ officials responsible for prosecution in all cases involving an ongoing or impending prosecution of any defendants who are or may be charged with severe forms of trafficking in persons in connection with the victimization of the applicant. *Id.* This provision complies with constitutional requirements that pertain to the government's duty to disclose information, including exculpatory evidence or impeachment material, to defendants. *See, e.g.*, U.S. Const. amends. V, VI; *Brady v. Maryland*, 373 U.S. 83, 87 (1963); *Giglio v. United States*, 405 U.S. 150, 154 (1972).

DHS received seven comments relating to the provision that allows federal authorities and defendants in criminal proceedings to review any information from an application for T nonimmigrant status. Commenters suggested that the standard for disseminating information should be that:

1. Federal authorities should have to make a request in writing for release of information;
2. Prosecutors should be prohibited from releasing information to a defendant unless the information is needed for impeachment; and
3. In the event a prosecutor determines evidence to be exculpatory, a judge should review the information and give time for victim safety planning before information will be released.

In the 2002 interim rule, DHS explained its position on timely disclosure of information, including DOJ's obligation to provide statements by witnesses and certain other documents to defendants in pending criminal proceedings. *See* 67 FR at 4789. These obligations stem from constitutional, statutory and other legal requirements pertaining to the duty to disclose exculpatory evidence or impeachment material to a criminal defendant in order to prepare a defense. *Id.* DHS appreciates the need for confidentiality and especially the desire to protect the safety of victims. However, we must balance the need to take measures to protect victims from perpetrators with the need to comply with constitutional requirements, and DHS believes that the regulations as currently drafted reflects the best way to balance these considerations. In

addition, the determination of whether constitutional or other legal obligations require disclosure in a criminal matter is a determination reserved to prosecuting attorneys. DHS therefore declines to amend its regulation regarding the dissemination of information, other than some minor edits to account for the creation of DHS and streamline the language.

c. Use of Information on the T Nonimmigrant Status Application

Commenters also raised concerns that the Application for T Nonimmigrant Status, Form I-914 warns that any information provided could be used to remove an unsuccessful applicant. The commenters asserted that this policy would hinder applications because victims may be reluctant to work with law enforcement if a victim thought he or she would be removed. USCIS does not have a policy to refer applicants for T nonimmigrant status for removal proceedings absent serious aggravating circumstances, such as the existence of an egregious criminal history, a threat to national security, or where the applicant is implicit in the trafficking. USCIS includes a standard warning on many applications that information within the application could lead to removal. USCIS believes it is a sound practice to warn applicants of this fact, and not including it would be unfair to applicants for whom such a warning could prove important.

2. Waivers of Grounds of Inadmissibility

An applicant for T nonimmigrant status must be admissible to the United States, or otherwise obtain a waiver of any grounds of inadmissibility. In this rule, DHS is making the following changes and clarifications:

- Clarifying the waiver authority for T nonimmigrants and the public charge exemption. New 8 CFR 212.16(b).
- Changing the standard for exercising waiver authority only in "extraordinary circumstances" over criminal grounds of inadmissibility when the crime does not relate to the trafficking victimization. New 8 CFR 212.16(b)(2).
- Removing language that waiver authority should not be exercised for inadmissibility grounds that may limit the ability of the applicant to adjust status. 8 CFR 212.16(b)(3).
- Clarifying that DHS takes into account trafficking victimization when exercising waiver authority. New 8 CFR 212.16(b)(2).
- Retaining the current separate waiver application process. New 8 CFR 212.16(a).

- Clarifying the waiver process at adjustment of status.

a. Waiver Authority for T Nonimmigrants

Under INA section 212(d)(13), 8 U.S.C. 1182(d)(13), DHS has broad discretionary authority to waive grounds of inadmissibility.¹⁷ DHS may waive INA section 212(a)(1) (health-related grounds), 8 U.S.C. 1182(a)(1), if DHS considers it to be in the national interest to grant a waiver. *See* INA section 212(d)(13)(B)(i), 8 U.S.C. 1182(d)(13)(B)(i). DHS may waive almost any other ground of INA section 212(a), 8 U.S.C. 1182(a), if DHS considers it to be in the national interest to grant a waiver and determines that the activities rendering the applicant inadmissible were caused by, or were incident to, the trafficking victimization. *See* INA section 212(d)(13)(B)(ii), 8 U.S.C. 1182(d)(13)(B)(ii). DHS, however, may not waive INA sections 212(a)(3) (security and related grounds), (10)(C) (international child abduction), or (10)(E) (former U.S. citizens who renounced citizenship to avoid taxation), 8 U.S.C. 1182(a)(3), (10)(C), (10)(E).

In addition, because INA section 212(a)(4) (public charge), 8 U.S.C. 1182(a)(4), does not apply to an applicant for T nonimmigrant status (but would apply at the time of adjustment of status to lawful permanent resident), *see* INA section 212(d)(13)(A), 8 U.S.C. 1182(d)(13)(A), no waiver of that ground is necessary. TVPRA 2003 added INA section 212(d)(13)(A), 8 U.S.C. 1182(d)(13)(A), to eliminate the public charge ground at the time the applicant seeks T nonimmigrant status. TVPRA 2003 section 4(b)(4), codified at INA section 212(d)(13)(A), 8 U.S.C. 1182(d)(13)(A). DHS is amending the regulations as necessary in this interim rule. *See* new 8 CFR 212.16(b).

b. Criminal Grounds of Inadmissibility

DHS received 21 comments relating to different aspects of waivers of inadmissibility. Eight commenters objected to the language of 8 CFR 212.16(b)(2), stating that USCIS will exercise its discretion to waive criminal grounds of inadmissibility under INA

section 212(a)(2), 8 U.S.C. 1182(a)(2) (criminal and related grounds), only in “exceptional cases” where the criminal activity was not caused by or was not incident to the trafficking in persons. Commenters thought the language about “exceptional cases” was not statutorily required, replaced a simple exercise of discretion, and was unnecessary. In addition, commenters encouraged DHS to consider the type of crimes and the seriousness of the offenses when exercising discretion based on criminal grounds. DHS has the discretionary authority to waive the criminal grounds of inadmissibility for T nonimmigrant status applicants if the criminal activities were caused by or incident to the trafficking victimization. *See* INA section 212(d)(13)(B)(ii), 8 U.S.C. 1182(d)(13)(B)(ii). DHS implemented this provision in the 2002 interim rule and explained that it was choosing to exercise its discretion in cases where the criminal grounds of inadmissibility were not caused by or incident to trafficking, only in “exceptional cases.” *See* 67 FR 4789; 8 CFR 212.16(b)(2). In this interim rule, DHS is revising its regulations to describe how USCIS will consider the nature and seriousness of the offenses and the number of convictions in exercising its discretion. *See* new 8 CFR 212.16(b)(3). In this rule, DHS is replacing the general “exceptional cases” limitation. Instead, in cases where the applicant has a conviction for a violent or otherwise dangerous crime, DHS will allow waivers, in its discretion, in “extraordinary circumstances” only. *See* new 8 CFR 212.16(b)(3). A similar standard applies in the related U nonimmigrant status regulations at 8 CFR 212.17.¹⁸

c. Waivers Relating to Adjustment of Status

Five commenters expressed concern with the language of 8 CFR 212.16(b)(3), stating that USCIS will exercise its discretion to waive grounds of inadmissibility that would prevent or limit the applicant from adjusting to permanent resident status only in exceptional cases. Commenters objected to the connection between inadmissibility at the application phase of T nonimmigrant status with inadmissibility at the adjustment of status phase. Commenters urged DHS to take note of INA section 245(l)(2), 8 U.S.C. 1255(l)(2), which provides a waiver authority for the adjustment of

status phase that is similar to the authority contained at INA section 212(d)(13), 8 U.S.C. 1182(d)(13). Since the publication of the 2002 interim rule, DHS published a rule on adjustment of status to permanent resident for T nonimmigrants. *See* 8 CFR 245.23 and *Adjustment of Status to Lawful Permanent Resident for Aliens in T or U Nonimmigrant Status*, 73 FR 75540 (Dec. 12, 2008). The regulations at 8 CFR 245.23 clarify that any grounds of inadmissibility waived at the time USCIS grants T nonimmigrant status will be considered waived for purposes of adjustment of status under INA section 245(l) and that any grounds of inadmissibility that an applicant acquires while in T nonimmigrant status require a new waiver. In this interim rule, DHS is removing 8 CFR 212.16(b)(3), as it is no longer necessary in light of the adjustment of status regulations.

d. Waivers of Inadmissibility Grounds Related to the Trafficking Victimization

A number of commenters expressed general concerns over particular grounds of inadmissibility that relate to victimization based on trafficking in persons. DHS received two comments about waivers of inadmissibility for those with the human immunodeficiency virus (HIV), one comment about waivers of inadmissibility for those engaged in prostitution, and one comment about waivers of inadmissibility for drug users. Commenters stated that victims may become HIV positive as a result of trafficking. Commenters noted that often trafficking victims are forced to engage in prostitution by traffickers, or continue in prostitution for basic survival. Commenters also expressed concern about victims who self-medicate with illegal drugs to ease the effects of trauma and/or other psychological conditions due to the victimization they suffered. These commenters did not provide specific recommendations, beyond asking DHS to take special note of those concerns.

DHS acknowledges that victims of trafficking in persons are an especially vulnerable population, and therefore considers the special circumstances of victims when exercising its waiver authority. As of January 4, 2010, HIV infection is no longer defined as a “communicable disease of public health significance” according to HHS regulations. *See* 74 FR 56547 (Nov. 2, 2009) (effective Jan. 4, 2010). Therefore, HIV infection does not make an applicant inadmissible on health-related grounds for any immigration benefit. In addition, USCIS personnel who

¹⁷ Section 212(d)(13)(B) of the INA states, in part, “[I]f the Secretary of Homeland Security considers it to be in the national interest to do so, the Secretary of Homeland Security, in the Attorney General’s discretion, may waive the application of” various grounds of inadmissibility. 8 U.S.C. 1182(d)(13)(B) (emphasis added). The vestigial reference to the Attorney General in that sentence is clearly a drafting oversight. DHS therefore reads the provision as referring, instead, to the Secretary’s discretion.

¹⁸ This approach also is consistent with DHS and DOJ practice in other immigration contexts. *See, e.g.,* 8 CFR 212.7(d) (INA section 212(h)(2) waivers); *Matter of Jean*, 23 I&N Dec. 373, 383 (A.G. 2002) (INA section 209(c) waivers).

adjudicate applications for T nonimmigrant status and waivers of inadmissibility are trained on various aspects of the dynamics of victimization. DHS has not made any changes to the regulation as a result of these comments.

e. Requesting a Waiver

In the 2002 interim rule, DHS directed applicants to file the form designated by USCIS to request a waiver of inadmissibility. *See* 8 CFR 212.16(a). This form is the Application for Advance Permission to Enter as Nonimmigrant, Form I-192.¹⁹ Five commenters asserted that this waiver application procedure was overly complicated and suggested a simpler procedure of providing space on the Application for T Nonimmigrant Status, Form I-914, itself for victims to explain any grounds of inadmissibility and attach evidence.

DHS is not adopting the suggestion. DHS is concerned that additional inadmissibility concerns can arise after an application for T nonimmigrant status is approved. Without a waiver of inadmissibility on a separate form, USCIS would be unable to address inadmissibility concerns other than to revisit the underlying approval itself, which could cause problems for the applicant. In addition, USCIS has developed a process with DOS for eligible family members abroad so that DOS officers are made aware of the inadmissibility grounds waived by USCIS. This process might be compromised if a separate waiver form were not used, resulting in potential delays or problems for eligible family members consular processing to apply for admission to the United States. DHS believes the Application for Advance Permission to Enter as Nonimmigrant, Form I-192 process is working well and does not need to be modified at this time; however, DHS welcomes further comments on this process.

In addition, one commenter asserted that the waiver application process at the time of adjustment was burdensome. The commenter recommended sparing victims from applying for a waiver of inadmissibility both at the time of application and the time of adjustment of status.

Since publication of the 2002 interim rule, DHS published an interim rule with request for comments on adjustment of status to lawful

permanent resident for T nonimmigrants. *See* 8 CFR 245.23 and 73 FR 75540. The regulations only require a new request for a waiver of inadmissibility at the adjustment of status phase for any new ground of inadmissibility that has arisen since the grant of T nonimmigrant status. Typically, T nonimmigrants applying for adjustment of status do not need to file a request for a new waiver of inadmissibility for inadmissibility grounds that were waived at the T nonimmigrant stage. In this interim rule, DHS is mainly addressing the T nonimmigrant application phase; DHS will consider comments and recommendations that relate to adjustment of status in a separate rulemaking.

3. Decisions

At new 8 CFR 214.11(d)(8)–(10), DHS describes approval and denial procedures for applications for T nonimmigrant status. USCIS will issue written decisions to grant or deny T nonimmigrant status. If USCIS denies an application, it will provide written reasons for the denial. In any case where USCIS denies an application for T nonimmigrant status, an applicant may appeal to the USCIS Administrative Appeals Office (AAO) under established procedures in 8 CFR 103.3.

4. Benefits

DHS provides for employment authorization incident to a grant of principal T nonimmigrant status. *See* 8 CFR 214.11(l)(4). One commenter pointed out that even after a bona fide determination is made, the applicant would not receive an employment authorization document (EAD) until T nonimmigrant status is granted. This commenter highlighted this fact because, even though a victim could be certified by HHS on the basis of a bona fide application, he or she would not be eligible for certain types of cash assistance and would not be accepted into the federal Matching Grant Program. This commenter recommended granting an EAD when USCIS determined that an application is bona fide. DHS is authorized to grant an EAD in connection with a bona fide determination. *See* Memorandum from Stuart Anderson, Executive Associate Commissioner, Office of Policy and Planning, INS, *Deferred Action for Aliens with Bona Fide Applications for T Nonimmigrant Status* (May 8, 2002). In its discretion, USCIS may grant deferred action to an applicant when a T nonimmigrant application is deemed bona fide, while awaiting final adjudication. *Id.* Once an application is

deemed bona fide and USCIS grants deferred action, the applicant can request employment authorization based on the grant of deferred action. *See* 8 CFR 274a.12(c)(14).

5. Duration of Status

Originally, T nonimmigrant status was granted for a period of 3 years from the date of approval. *See* 8 CFR 214.11(p) (2002). Upon approval, USCIS would notify the recipient of the future expiration of his or her nonimmigrant status and of a requirement to apply for adjustment of status to permanent resident within the 90 days immediately preceding the third anniversary of the approval. *Id.* At the time of the 2002 interim rule, there was no ability to extend T nonimmigrant status. *Id.* DHS provided that an applicant who properly applied for adjustment of status would remain in T nonimmigrant status until a final decision was rendered on the application. *Id.* DHS received seven comments related to the 90 day adjustment of status application period requirement.

In 2008, DHS published an interim rule implementing adjustment of status procedures for T and U nonimmigrants. *See* 73 FR 75540. DHS amended 8 CFR 214.11(p) to incorporate VAWA 2005 legislative changes that lengthened the duration of status from 3 years to 4 years, but also limited the status to 4 years unless an applicant could qualify for an extension. *See* VAWA 2005 section 821(a), INA section 214(o)(7)(A), 8 U.S.C. 1184(o)(7)(A). DHS also removed the 90-day adjustment of status application period requirement; instead, a T nonimmigrant may apply for adjustment of status after accruing three years in valid T nonimmigrant status. *See* 8 CFR 245.23(a)(3).

6. Extension of Status

Commenters on the 2002 interim rule also objected to the lack of extensions available for T nonimmigrant status. Since the publication of the 2002 interim rule, legislation allowed for extensions of T nonimmigrant status in the following circumstances:

- An LEA, prosecutor, judge, or other authority investigating or prosecuting activity relating to human trafficking certifies that the presence of the victim in the United States is necessary to assist in the investigation or prosecution of such activity;²⁰

²⁰ *See* VAWA 2005 section 821(a); INA section 214(o)(7)(B)(i), 8 U.S.C. 1184(o)(7)(B)(i).

¹⁹ On August 29, 2011, as part of USCIS's business transformation initiative, USCIS replaced specific references to Form I-192 to read, "the form designated by USCIS." Immigration Benefits Business Transformation, Increment I, Final Rule, 76 FR 53764 (Aug. 29, 2013), at 53788.

- DHS determines that an extension is warranted due to exceptional circumstances;²¹ or

- During the pendency of an application for adjustment of status under INA section 245(l), 8 U.S.C. 1255(l).²²

INA section 214(o)(7)(B) and (C), 8 U.S.C. 1184(o)(7)(B) and (C). DHS is implementing the extension of status provisions at new 8 CFR 214.11(l).²³ Below, DHS discusses each extension category in turn.

a. Extension of Status for Law Enforcement Need

In this interim rule, DHS is implementing the discretionary extensions for law enforcement need at new 8 CFR 214.11(l)(1)(i). The T nonimmigrant bears the burden of establishing eligibility for an extension of status. *Id.* As outlined in new 8 CFR 214.11(l)(2), to request an extension, the T nonimmigrant will file an Application to Extend/Change Nonimmigrant Status, Form I-539, along with supporting evidence. The Application to Extend/Change Nonimmigrant Status should be filed before the individual's T nonimmigrant status expires.

To establish law enforcement need, supporting evidence may include a newly executed Declaration of Law Enforcement Officer for Victim of Trafficking in Persons, Form 914 Supplement B, or other evidence from a law enforcement official, prosecutor, judge, or other authority who can investigate or prosecute human trafficking activity and was involved in the applicable case (e.g., a letter on the agency's letterhead, emails, or faxes). *See* new 8 CFR 214.11(l)(5). The applicant must include evidence that comes directly from an LEA (as listed above). *Id.* The applicant may also submit any other credible evidence. *Id.* DHS believes this is necessary under INA section 214(o)(7)(B)(i), 8 U.S.C. 1184(o)(7)(B)(i), because that section allows for an extension only if a law

enforcement official (which includes prosecutors, judges, and others with the authority to investigate or prosecute human trafficking) at the Federal, State, or local level "certifies" that the presence of the victim is necessary. The use of the word "certifies" does not allow for the substitution of evidence that does not come directly from an LEA. Applicants are not required to use Declaration of Law Enforcement Officer for Victim of Trafficking in Persons, Form I-914 Supplement B, to seek an extension of T nonimmigrant status.

b. Extension of Status for Exceptional Circumstances

In this interim rule, DHS is implementing the discretionary extensions for exceptional circumstances at new 8 CFR 214.11(l)(1)(ii). As described above, to request an extension, the T nonimmigrant will file an Application to Extend/Change Nonimmigrant Status, Form I-539, along with supporting evidence. New 8 CFR 214.11(l)(2).

An applicant may submit his or her own statement and any other credible evidence to establish exceptional circumstances for an extension of status. Such evidence could include, but is not limited to, medical records, police or court records, news articles, correspondence with an embassy or consulate, and affidavits of witnesses. *See* new 8 CFR 214.11(l)(6). An exceptional circumstance could exist when a principal T nonimmigrant's status will expire and an approved family member had not yet received a T visa from a consulate to apply for admission to the United States. In this example, without an extension, if the principal T nonimmigrant's status expires, the family member could not apply for a T visa to apply for admission to the United States. In the evidence submitted to establish exceptional circumstances in this example, the principal should explain what exceptional circumstances prevented the family member(s) from applying for admission to the United States.

Applicants should apply for an extension before the T nonimmigrant status has expired. USCIS, however, has discretion to grant an extension after T nonimmigrant status expires. *See* new 8 CFR 214.11(l)(3). The T nonimmigrant should explain in writing, in accordance with 8 CFR 214.1(c)(4), why he or she is filing the Application to Extend/Change Nonimmigrant Status, Form I-539, after the T nonimmigrant status has expired. If USCIS grants an extension of T nonimmigrant status, USCIS will issue a new Notice of Action valid from the date the previous status expired

until 1 year after approval of the extension. Once an applicant receives this new Notice of Action, he or she may then file an Application to Register Permanent Residence or Adjust Status, Form I-485, to adjust status to lawful permanent resident before the extension expires.

c. Extension of Status While an Application for Adjustment of Status Is Pending

In this interim rule, DHS implements a mandatory extension for those who apply for adjustment of status at new 8 CFR 214.11(l)(7), and does not require a separate application or additional supporting evidence to request an extension of status when an application for adjustment of status has been properly filed. INA section 214(o)(7)(C), 8 U.S.C. 1184(o)(7)(C), requires USCIS to grant this extension; therefore no evidentiary burden rests on the applicant.

7. Waiting List

Congress has established a 5,000-person limit on the number of grants of T-1 nonimmigrant status per fiscal year (from October 1 through September 30). *See* INA section 214(o)(2)–(3), 8 U.S.C. 1184(o)(2)–(3). In the 2002 interim rule, DHS implemented a waiting list procedure in the event that the numerical limit is reached in a particular fiscal year. *See* former 8 CFR 214.11(m)(2). USCIS has not had to utilize the waiting list procedure created in the 2002 interim rule because approvals have not approached 5,000 in any given fiscal year. The 2002 interim rule provided that an applicant on the waiting list would "maintain his or her current means to prevent removal." *Id.*

DHS received three comments pointing out that DHS did not address protection from removal for those without current means. The commenters urged DHS to provide protection from removal or a legal means to stay in the United States for this population of applicants.

DHS agrees with this comment, and has determined that this provision is superfluous and confusing. DHS has therefore removed the provision, to clarify that applicants who may be placed on the waiting list for T nonimmigrant status can either maintain their "current means" to prevent removal (deferred action, parole, or stay of removal) and any employment authorization, or attain "new means." *See* new 8 CFR 214.11(j)(2).

Although DHS retains the authority to protect applicants on the waiting list from being removed, the 2002 interim

²¹ *See* TVPRA 2008 section 201(b)(1); INA section 214(o)(7)(B)(iii), 8 U.S.C. 1184(o)(7)(B)(iii).

²² *See* TVPRA 2008 section 201(b)(2); INA section 214(o)(7)(C), 8 U.S.C. 1184(o)(7)(C).

²³ In addition, TVPRA 2008 provided an extension of status for T nonimmigrants who were eligible for adjustment of status relief under INA section 245(l), 8 U.S.C. 1255(l), but could not obtain adjustment of status relief because DHS had not issued implementing regulations. *See* TVPRA 2008 section 201(b)(1); INA section 214(o)(7)(B)(ii), 8 U.S.C. 1184(o)(7)(B)(ii). TVPRA 2008 was enacted on December 23, 2008. DHS issued regulations on adjustment of status on December 12, 2008. *See* 73 FR 75540. Therefore, when TVPRA 2008 was enacted, regulations on adjustment of status existed. Because INA section 214(o)(7)(B)(ii), 8 U.S.C. 1184(o)(7)(B)(ii), is obsolete, DHS will not reference this language in this interim rule.

rule's implication that the applicant may not seek other means to prevent removal was problematic. DHS has existing policies, procedures, and regulations for exercising its discretion in providing parole, deferred action, or a stay of removal to individuals on a case-by-case basis. *See, e.g.*, 8 CFR 241.6 (administrative stay of removal); 8 CFR 274a.12(c)(14) (employment authorization for deferred action grantees demonstrating economic necessity); 8 CFR 212.5 (parole of aliens into the United States). DHS will consider providing temporary relief on a case by case basis to applicants on the waiting-list who are participating in law-enforcement investigations in the United States pursuant to those policies, regulations and procedures.

This change maintains the protections in the previous regulation while providing DHS and the applicant with more flexibility, particularly as to those applicants who may have no "current means" to prevent removal, and allows applicants the flexibility to seek alternate avenues of relief if their "current means" may not be sustainable or the most beneficial.

8. Revocation

In the 2002 interim rule, DHS created several grounds for revocation on notice at 8 CFR 214.11(s). T nonimmigrant status could be revoked on notice if:

- The T nonimmigrant violated the requirements of T nonimmigrant status;
- The approval of the T nonimmigrant application violated 8 CFR 214.11 or involved an error in preparation, procedure, or adjudication;
- In the case of a T-2 spouse, the T-2 spouse's divorce from the T-1 principal became final;
- The LEA notifies USCIS that the principal T nonimmigrant has unreasonably refused to cooperate with the investigation or prosecution and provides USCIS with a detailed explanation in writing; or
- The LEA withdraws its endorsement or disavows the contents of the endorsement in a detailed written explanation.

a. Streamlining Revocation Based on Violation of the Requirements of T Nonimmigrant Status

Six commenters asserted that the ground of revocation at 8 CFR 214.11(s)(1)(i), based on a violation of the requirements of the status by the T nonimmigrant, needs clarification. Commenters suggested that the meaning is unclear because if the applicant satisfied the eligibility requirements, the status should not be revoked, unless there was an error in granting the status

(which is provided for in another ground of revocation).

DHS agrees that the ground of revocation on notice at 8 CFR 214.11(s)(1)(i) could benefit from greater clarification. The requirements of INA section 101(a)(15)(T), 8 U.S.C. 1101(a)(15)(T) generally are victimization, physical presence, compliance with any reasonable LEA request for assistance, and extreme hardship involving unusual and severe harm if the applicant is removed. If USCIS has evidence that one of these requirements was not met, it could revoke under 8 CFR 214.11(s)(1)(ii). If the violation is based on a victim not complying with reasonable requests, USCIS could revoke under 8 CFR 214.11(s)(1)(iv) or (v), based on information from an LEA or a withdrawal or disavowal of an LEA endorsement (bullets 4 and 5 above, respectively). In this interim rule, DHS is therefore removing 8 CFR 214.11(s)(1)(i). *See* new 8 CFR 214.11(m)(2). Relatedly, for clarity, DHS is incorporating a statutory citation into the "errant approval" ground of revocation (bullet 2 above). *Id.*

b. Revocation Based on Information Provided by Law Enforcement

Commenters were also concerned that an LEA could provide information to USCIS that a victim is no longer cooperating and this information could serve as the basis for revocation. The commenters noted that revocation could be problematic in these cases, because USCIS would have already determined the individual would face extreme hardship involving unusual and severe harm if removed.

DHS is not persuaded that there is a problem with receiving information from an LEA about a victim with T nonimmigrant status. Consistent with the goals of the TVPA, DHS must balance law enforcement needs with the protection of victims of trafficking. Law enforcement may provide USCIS with valuable probative information, and it would be illogical for USCIS to reject this information solely because it came from an LEA or because USCIS made a prior adjudication of eligibility. USCIS does not revoke automatically upon receiving this LEA information; rather, it can revoke after providing notice to the T nonimmigrant of the intent to revoke and an opportunity for the victim to respond. As new 8 CFR 214.11(m)(2) and 8 CFR 103.3 explain, USCIS will issue a notice of intent to revoke in writing, providing the applicant with an opportunity to respond, and potentially provide additional evidence to rebut the

information provided by the LEA. USCIS will accept any relevant evidence under new 8 CFR 214.11(d)(2)(ii) and (3). Evidence could include, but is not limited to, information about the mental or physical health of the applicant, including any ongoing trauma, information about the safety concerns involved for the applicant or his or her family, information about how the victim has been cooperative, information about the disposition of the case, or information about how the LEA requests were not reasonable. *Id.*

USCIS will then review all the evidence considering the totality of the circumstances, and will not revoke based solely on any one factor or piece of evidence, including the information provided by the LEA. When USCIS initially approves the T nonimmigrant status, including making the determination that the victim would face extreme hardship upon removal, USCIS also accounts for victimization and compliance with reasonable requests. If USCIS learns after approval that there are grounds sufficient for revocation under new 8 CFR 214.11(m), USCIS may exercise its discretion to revoke the T nonimmigrant status.

c. Revocation of Derivative Nonimmigrant Status

In this interim rule, DHS is adding a ground for automatic revocation applicable only to family members outside of the United States. DHS will revoke an approved derivative application if the family member notifies USCIS that he or she will not apply for admission into the United States. *See* new 8 CFR 214.11(m)(1). This provision closely mirrors a provision in the U nonimmigrant status regulations at 8 CFR 214.14(h)(1).

9. Technical Fix for T Nonimmigrants Residing in the CNMI

Physical presence in the CNMI will be considered in determining whether an applicant for T nonimmigrant status meets the physical presence requirement. *See* INA section 101(a)(15)(T)(i)(II); 8 CFR 214.11(b)(2); *see also* INA section 101(a)(38) (defining "United States" for immigration purposes as including the CNMI).

Prior to the federalization of CNMI immigration law on November 28, 2009, victims in the CNMI had to travel to Guam or elsewhere in the United States to actually be admitted as a T nonimmigrant. *See* Title VII of the Consolidated Natural Resources Act of 2008 (CNRA), Public Law 110-229, 122 Stat. 754 (2008) (effectively replacing the CNMI's immigration laws with the INA and other applicable U.S.

immigration laws, with few exceptions). The adjustment of status provisions for T nonimmigrants require 3 years of continuous physical presence in the United States since admission as a T nonimmigrant. See INA section 245(l)(1)(A), 8 U.S.C. 1255(l)(1)(A). An approved T nonimmigrant in the CNMI would not accrue this time in the United States for purposes of adjustment of status until on or after November 28, 2009, when the CNRA took effect, and only if he or she was actually admitted to the United States. The CNRA included a rule of construction that time in the CNMI before November 28, 2009 does not count as time in the United States (except for limited purposes). See CNRA section 705(c).

VAWA 2013 added a new exception to this rule, so that time in the CNMI, whether before or after November 28, 2009, counts as time admitted as a T nonimmigrant for establishing physical presence for purposes of adjustment of status to lawful permanent residence, so long as the applicant was granted T nonimmigrant status. See VAWA 2013, tit. viii, section 809. DHS interprets this to mean that when T nonimmigrant status was granted to an individual in the CNMI, the 3-year continuous physical presence required for adjustment of status began to run at that time, even if he or she was not actually admitted in T nonimmigrant status. See new 8 CFR 245.23(a)(3)(ii).

D. Filing and Biometric Services Fees

DHS received 17 comments on the interim rule regarding fees. Commenters thought application fees for T nonimmigrant status, derivative T nonimmigrant status, and waivers of inadmissibility were excessive and burdensome. Some commenters recommended eliminating or greatly reducing fees associated with applying for T nonimmigrant status, especially for minor victims.

Since the publication of the 2002 interim rule, intervening events resolved commenters' concerns. In 2007, DHS eliminated the fee to file the Application for T Nonimmigrant Status, Form I-914, and the Application for Family Member of a T-1 Recipient, Form I-914 Supplement A. See *Adjustment of the Immigration and Naturalization Benefit Application and Petition Fee Schedule*, 72 FR 29851, at 29865 (Feb. 1, 2007). Further, USCIS may waive the fee for any request from the time of application for T nonimmigrant status until USCIS adjudicates an application for adjustment of status. See TVPRA 2008 section 201(d)(3); INA section 245(l)(7),

8 U.S.C. 1255(l)(7). DHS added this waiver authority at 8 CFR 103.7(c)(3)(xviii). See *U.S. Citizenship and Immigration Services Fee Schedule*, 75 FR 58961 (Sept. 24, 2010). Thus, an applicant may request a fee waiver for any other form associated with the application for T nonimmigrant status.

DHS will require biometric services for all applicants for T nonimmigrant status between the ages of 14 and 79. See new 8 CFR 214.11(d)(4) and 8 CFR 103.16 (providing that any individual may be required to submit biometric information if the regulations or form instructions require such information).²⁴ In addition, regarding the biometric services fee, at the time of the 2002 interim rule, DHS charged applicants for biometric services. DHS regulations now provide that no fee will be charged for biometric services for T nonimmigrant applicants. See 8 CFR 103.7(b)(1)(i)(C)(3); *U.S. Citizenship and Immigration Services Fee Schedule; Final Rule*, 75 FR 58962, 58991, 58967, 58986 (Sept. 24, 2010).

One commenter suggested that taking fingerprints as part of the application process was duplicative since many victims have already had fingerprints taken. Biometric capture is a necessary measure in any USCIS application process to ensure identity and prevent fraud. USCIS must determine the identity of the individual through biometric capture. In addition, not all victims of trafficking or all applicants for T nonimmigrant status will have had contact with law enforcement or have had fingerprints taken by law enforcement and USCIS will not have access to the applicant's fingerprints from those who do.

DHS will not amend its general biometric capture requirements as requested by the commenter. DHS, however, is removing the requirement at 8 CFR 214.11(d)(2)(ii) that applicants submit three photographs with an application for T nonimmigrant status. At the time of the 2002 interim rule, the DHS biometric process did not include taking photographs of applicants. USCIS now takes photographs when capturing biometrics, so this requirement is no longer necessary.

²⁴ Any individual may be required to submit biometric information if the regulations or form instructions require such information or if requested in accordance with 8 CFR 103.2(b)(9). DHS may collect and store for present or future use, by electronic or other means, the biometric information submitted by an individual. DHS may use this biometric information to conduct background and security checks, adjudicate immigration and naturalization benefits, and perform other functions related to administering and enforcing the immigration and naturalization laws. 8 CFR 103.16(a).

V. Regulatory Requirements

A. Administrative Procedure Act

As explained below, the changes made in this interim rule do not require advance notice and opportunity for public comment, because they are (1) required by various legislative revisions, (2) exempt as procedural under 5 U.S.C. 553(b)(A), (3) logical outgrowths of the 2002 interim rule, or (4) exempt from public comment under the "good cause" exception to notice-and-comment under 5 U.S.C. 553(b)(B). DHS nevertheless invites written comments on this interim rule, and will consider any timely submitted comments in preparing a final rule.

1. Statutorily Required Changes

As noted elsewhere in the preamble, DHS is conforming its T nonimmigrant regulations to statutory changes that provide little agency discretion in their interpretation and promulgation. When regulations merely restate the statute they implement (*i.e.*, when the rule does not change the established legal order), the APA does not require the agency to use notice-and-comment procedures. See 5 U.S.C. 553(b)(B); *Gray Panthers Advocacy Comm. v. Sullivan*, 936 F.2d 1284, 1291 (D.C. Cir. 1991). So long as the agency does not expand the substantive reach of the statute to impose new obligations, penalties, or substantive eligibility requirements—*i.e.*, so long as the agency "merely restate[s]" the statute—notice and comment are unnecessary. See *World Duty Free Americas, Inc. v. Summers*, 94 F. Supp. 2d 61, 65 (D.D.C. 2000). The following changes meet these criteria:

(a) Victims who leave the United States and are allowed reentry for participation in investigative or judicial processes are eligible. New 8 CFR 214.11(b)(2), (g)(1)(v), (g)(2)(iii). INA 101(a)(15)(T)(i)(II), *as amended by* TVPRA 2008 section 201(a)(1)(C). As discussed above in the preamble, section 201(a)(1)(C) of TVPRA 2008 amended section 101(a)(15)(T)(i)(II) of the INA, 8 U.S.C. 1101(a)(15)(T)(i)(II), to include physical presence on account of the victim having been allowed to enter the United States to participate in investigative or judicial processes associated with an act or perpetrator of trafficking. DHS codifies this change in this rule at new 8 CFR 214.11(b)(2) and 214.11(g)(1)(v), which provide, respectively, that, "the alien is physically present in the United States," and the presence requirement reaches an alien who is present, "on account of the alien having been allowed entry into the United States for participation in investigative or judicial processes

associated with an act or perpetrator of trafficking.” This change in regulation merely codifies intervening statutory changes. Advance notice and opportunity for public comment are therefore unnecessary.

Incident to expanding the definition of presence as described above, this rule also establishes that applicants claiming entry into the United States for participation in investigative or judicial processes must document that their entry was valid and that it was for participation in investigative or judicial processes associated with trafficking. New 8 CFR 214.11(g)(3). This provision makes no changes to the established legal order, other than to reiterate the public’s statutory rights and establish procedures for adjudication. Similar to a number of other evidentiary requirements in this rule, the documentation requirement affords the public maximum flexibility in presenting their case to the agency. The change does not impose any limitation on the types of evidence that would be acceptable to show valid entry. Advance notice and opportunity for public comment are therefore unnecessary.

(b) Victims of trafficking which occurred abroad, who have been allowed entry for investigative or judicial processes, are eligible. New 8 CFR 214.11(b)(2), (g)(1)(v), (g)(3). INA section 101(a)(15)(T)(i)(II), 8 U.S.C. 1101(a)(15)(T)(i).

As noted above, DHS is revising its regulations at new 8 CFR 214.11(g)(3) to provide that the victim may be physically present in the United States on account of having been allowed initial entry into the United States for participation in investigative or judicial processes associated with an act or perpetrator of trafficking that did not occur in the United States. This change expands the scope of the regulation as required by section 201(a)(1)(C) of TVPRA 2008 to account for eligibility when the trafficking occurred abroad but the victim was allowed entry into the United States for participation in investigative or judicial processes associated with an act or perpetrator of trafficking. Similar to the change described directly above, this change in regulation merely codifies intervening statutory changes. Advance notice and opportunity for public comment are therefore unnecessary.

(c) Exemption for victims under 18 years old from compliance with any reasonable request for assistance. INA section 101(a)(15)(T)(i)(III)(bb) and (cc), 8 U.S.C. 1101(a)(15)(T)(i)(III)(bb) and (cc); new 8 CFR 214.11(b)(3)(i), (ii).

Under the 2002 interim rule, persons under the age of 15 were not required

to comply with any reasonable request for assistance in a prosecution or investigation from an LEA. Former 8 CFR 214.11(b)(3)(ii). The statute was amended by TVPRA 2008 to exempt from this requirement children under 18 years of age. *See* INA section 101(a)(15)(T)(i)(III)(bb) and (cc), 8 U.S.C. 1101(a)(15)(T)(i)(III)(bb) and (cc). In this rule, DHS is codifying the intervening statutory changes without modification.²⁵ New 8 CFR 214.11(b)(3)(i) and (ii).

(d) Exemption for victims who suffer trauma from compliance with reasonable requests for assistance. INA section 101(a)(15)(T)(i)(III)(bb), 8 U.S.C. 1101(a)(15)(T)(i)(III)(bb); New 8 CFR 214.11(h)(4)(i).

INA section 101(a)(15)(T)(i)(III)(aa), 8 U.S.C. 1101(a)(15)(T)(i)(III)(aa) requires that victims comply with any reasonable request for assistance from an LEA, but the INA exempts victims who are, “unable to cooperate with a request described in item (aa) due to physical or psychological trauma.” INA section 101(a)(15)(T)(i)(III)(bb), 8 U.S.C. 1101(a)(15)(T)(i)(III)(bb). DHS provides in this rule that, if the applicant is unable to cooperate with a reasonable request due to physical or psychological trauma or age, an applicant who has not had contact with an LEA or who has not complied with any reasonable request may be exempt from the requirement to comply with any reasonable request for assistance in an investigation or prosecution. New 8 CFR 214.11(h)(4)(i). In this rule, DHS is codifying the intervening statutory changes without modification.²⁶

This rule also establishes general procedures for an applicant to demonstrate the trauma necessary for this exception. The victim will be required to submit evidence of the trauma by submitting an affirmative statement describing the trauma and any other credible evidence. This includes, for instance, a signed statement from a qualified professional, such as a medical professional, social worker, or victim advocate, who attests to the victim’s mental state, and medical, psychological, or other records which are relevant to the trauma. *Id.* USCIS reserves the authority and discretion to contact the law enforcement agency

²⁵ USCIS has implemented this change in practice. *See* Mem. from Paul Novak, Director, Vermont Service Center, USCIS, *Trafficking Victims Protection Reauthorization Act of 2003* (Apr. 15, 2004).

²⁶ USCIS has implemented the trauma exception in practice. *See* Mem. from Paul Novak, Director, Vermont Service Center, USCIS, *Trafficking Victims Protection Reauthorization Act of 2003* (Apr. 15, 2004).

involved in the case, if appropriate. *Id.* These provisions are procedural and make no changes to the established legal order, other than to reiterate the public’s statutory rights. Although notice-and-comment requirements do not apply to this provision, DHS welcomes comments from the public on this matter.

(e) Requirement to notify HHS upon discovering that a person under the age of 18 may be a victim of trafficking. TVPRA 2008 section 212(a)(2); New 8 CFR 214.11(d)(1)(iii).

Federal agencies must notify HHS within 48 hours upon (1) apprehension or discovery of an unaccompanied alien child or (2) any claim or suspicion that an alien in custody is under 18 years of age. *See* TVPRA 2008 section 235(b)(2), codified at 8 U.S.C. 1232(b)(2). In addition, to facilitate the provision of public benefits to trafficking victims, federal agencies must notify HHS not later than 24 hours after discovering that a person under the age of 18 may be a victim of a severe form of trafficking in persons. *See* TVPRA 2008 section 212(a)(2), codified at 22 U.S.C. 7105(b)(1)(G). In this rule, DHS is codifying the statutory changes without modification; receipt of a T nonimmigrant status application from a minor will result in DHS notifying HHS. *See* new 8 CFR 214.11(d)(1)(iii).

(f) Expansion of family members an alien victim is permitted to apply for derivative T nonimmigrant status. INA section 101(a)(15)(T)(ii)(I), 8 U.S.C. 1101(a)(15)(T)(ii)(I). New 8 CFR 214.11(k)(1)(ii), (iii).

The INA allows a principal applicant under 21 years of age to apply for admission in T nonimmigrant status of his or her parents and unmarried siblings under 18 years of age. *See* INA section 101(a)(15)(T)(ii)(I), 8 U.S.C. 1101(a)(15)(T)(ii)(I). In addition, the INA allows any principal, regardless of age, to apply for parents or unmarried siblings under 18 years of age if the family member faces a present danger of retaliation as a result of the principal’s escape from the severe form of trafficking in persons or his or her cooperation with law enforcement. *See* INA section 101(a)(15)(T)(ii)(III), 8 U.S.C. 1101(a)(15)(T)(ii)(III). Finally, any principal, regardless of age, may apply for the adult or minor children of the principal’s derivative family members if the derivative’s child faces a present danger of retaliation as a result of the principal’s escape from the severe form of trafficking or cooperation with law enforcement. *See* INA section 101(a)(15)(T)(ii)(III), 8 U.S.C. 1101(a)(15)(T)(ii)(III).

In this rule, DHS is codifying the change made by TVPRA 2003 to expand eligibility by allowing a victim granted T–1 nonimmigrant status (principal) to apply for the admission of his or her spouse, child, and, if the principal is under 21 years of age, his or her parent, or unmarried sibling under the age of 18. New 8 CFR 214.11(k)(1)(ii). In addition, DHS is codifying the change made by TVPRA 2003 that provides that, regardless of the age of the principal, if the eligible family member faces a present danger of retaliation as a result of the principal's escape from trafficking or cooperation with law enforcement, the principal alien can apply for the admission of his or her parents. New 8 CFR 214.11(k)(1)(iii). Finally, DHS is codifying the change made in VAWA 2013 that permits the adult or minor children of a principal's derivative family member to be an eligible family member if he or she faces a present danger of retaliation. *Id.* DHS is codifying these statutory changes without modification; notice and comment thereon are therefore unnecessary.²⁷

Finally, this rule includes a procedural provision at new 8 CFR 214.11(k)(3) requiring the principal applicant to demonstrate that the derivative applicant is a family member who meets one of the categories in new 8 CFR 214.11(k)(1)(ii)–(iii), *i.e.*, that the family member meets statutory eligibility requirements as a family member accompanying or following to join the principal applicant. Similar to a number of other evidentiary requirements in this rule, the documentation requirement concerning eligible family members affords the public maximum flexibility in presenting their case to the agency. DHS nonetheless invites public comment on this matter.

²⁷ USCIS implemented the statutory directive to allow a T–1 to apply for their spouse, child, and, if the principal is under 21 years of age, their parent, or unmarried sibling under the age of 18 in a policy memorandum dated April 15, 2004. *See* Mem. from Paul Novak, Director, Vermont Service Center, USCIS, *Trafficking Victims Protection Reauthorization Act of 2003* (Apr. 15, 2004). USCIS has also implemented the change allowing the principal, regardless of his or her age, to apply for the admission of parents, unmarried siblings under the age of 18, or the adult or minor children of their derivative family members if the family member faces a present danger of retaliation as a result of the principal's escape from trafficking or cooperation with law enforcement was implemented by USCIS in a memorandum dated July 21, 2010. *See* Mem., USCIS, *William Wilberforce Trafficking Victims Protection Reauthorization Act of 2008: Changes to T and U Nonimmigrant Status and Adjustment of Status Provisions*; Revisions to Adjudicators Field Manual (AFM) Chapters 23.5 and 39 (AFM Update AD10–38) (July 21, 2010).

(g) Age-out protection for child principal applicant to petition for eligible family members. INA section 214(o)(5), 8 U.S.C. 1184(o)(5). New 8 CFR 214.11(k)(5)(ii).

TVPRA 2003 section 4(b)(2)(B) revised the INA to provide that a principal who files an application for T nonimmigrant status while under 21 years of age will continue to be eligible even if the principal turns 21 while the application is pending. INA section 214(o)(5), 8 U.S.C. 1184(o)(5). DHS has revised the regulations in this rule to provide that a principal who was under 21 years of age at the time of filing for T–1 status can file an Application for Family Member of T–1 Recipient, Form I–914 Supplement A, to include T–4 parents even if the principal turns 21 years of age before the principal's T–1 application is adjudicated. *See* new 8 CFR 214.11(k)(5)(ii). DHS is codifying this statutory change without modification; notice and comment thereon are therefore unnecessary.²⁸

(h) The unmarried sibling of a child principal need only be under 18 years of age when the child principal files for T–1 status. INA section 101(a)(15)(T)(ii)(I), 8 U.S.C. 1101(a)(15)(T)(ii)(I). New 8 CFR 214.11(k)(5)(ii).

TVPRA 2003 sections 4(b)(1)(B) and (b)(2) provide that a principal under 21 years of age may apply for admission of his or her parents and unmarried siblings under 18 years of age. Thus, the INA now provides that an unmarried sibling who is seeking status as a T–5 derivative of a principal T–1 applicant under 21 years of age need only be under the age of 18 at the time the principal T–1 applicant files for T–1 nonimmigrant status. INA section 101(a)(15)(T)(ii)(I), 8 U.S.C. 1101(a)(15)(T)(ii)(I). It does not matter if the unmarried sibling turns 18 years of age between the time the principal files his or her own application and before the principal files the application for his or her sibling. *Id.* The age of an unmarried sibling when USCIS adjudicates the T–1 application, when the unmarried sibling files the derivative application, when USCIS adjudicates the derivative application, or when the unmarried sibling is admitted to the United States does not affect eligibility. 8 CFR 214.11(k)(5)(ii). DHS is codifying this statutory change without modification; notice and

²⁸ USCIS has already implemented this change in a policy memorandum dated April 15, 2004. *See* Mem. from Paul Novak, Director, Vermont Service Center, USCIS, *Trafficking Victims Protection Reauthorization Act of 2003* (Apr. 15, 2004).

comment thereon are therefore unnecessary.²⁹

(i) A child derivative only needs to be under 21 at the time the principal parent filed for T–1 status. INA section 214(o)(4), 8 U.S.C. 1184(o)(4); New 8 CFR 214.11(k)(5)(iii).

TVPRA 2003 section 4(b)(2)(B) revised INA section 214(o)(4), 8 U.S.C. 1184(o)(4), to provide that as long as a child derivative (T–3) was under 21 years of age on the date the principal T–1 parent applied for T–1 nonimmigrant status, he or she will continue to be classified as a child and allowed entry as a derivative child. DHS implements this statutory requirement in this rule by providing that the derivative's age at the time of classification or entry does not matter as long as the child T–3 derivative was under the age of 21 when the parent T–1 filed for T nonimmigrant status. *See* new 8 CFR 214.11(k)(5)(iii). DHS is codifying this statutory change without modification; notice and comment thereon are therefore unnecessary.³⁰

(j) Exemption for the public charge ground of inadmissibility. INA section 212(d)(13)(A), 8 U.S.C. 1182(d)(13)(A); New 8 CFR 212.16(b).

The INA generally prohibits DHS and immigration judges from admitting as an immigrant or granting adjustment of status to lawful permanent residence to any alien who is likely to become a public charge at any time. *See* INA section 212(a)(4), 8 U.S.C. 1182(a)(4). TVPRA 2003 section 4(b)(4), however, provided that inadmissibility as a public charge does not apply to an applicant for T nonimmigrant status. *See* INA section 212(d)(13)(A), 8 U.S.C. 1182(d)(13)(A). DHS is amending the regulations in this interim rule and on the form to comply with the statutory requirements. *See* new 8 CFR 212.16(b). DHS is codifying these statutory provisions without modification; notice and comment thereon are therefore unnecessary.³¹

(k) Allowing extensions of status and the process to request them for LEA need, exceptional circumstances, and applying for adjustment of status. INA

²⁹ USCIS has already implemented this change in a policy memorandum dated April 15, 2004. *See* Mem. from Paul Novak, Director, Vermont Service Center, USCIS, *Trafficking Victims Protection Reauthorization Act of 2003* (Apr. 15, 2004).

³⁰ USCIS has already implemented this change in a policy memorandum dated April 15, 2004. *See* Mem. from Paul Novak, Director, Vermont Service Center, USCIS, *Trafficking Victims Protection Reauthorization Act of 2003* (Apr. 15, 2004).

³¹ USCIS has already implemented this change in a policy memorandum dated April 15, 2004. *See* Mem. from Paul Novak, Director, Vermont Service Center, USCIS, *Trafficking Victims Protection Reauthorization Act of 2003* (Apr. 15, 2004).

section 214(o)(7), 8 U.S.C. 1184(o)(7); New 8 CFR 214.11(l).

VAWA 2005 section 821(a) requires DHS to allow extensions of T nonimmigrant status for law enforcement need. TVPRA 2008, section 201(b)(1), requires DHS to allow extensions of T nonimmigrant status in cases of exceptional circumstances, and TVPRA 2008 section 201(b)(2) requires extensions for T nonimmigrants who apply for adjustment of status. INA section 214(o)(7), 8 U.S.C. 1184(o)(7). DHS provides in this rule that USCIS may grant extensions of T-1 nonimmigrant status beyond 4 years from the date of approval in 1-year periods from the date the T-1 nonimmigrant status ends, if the presence of the victim in the United States is necessary to assist in the investigation or prosecution of such activity, an extension is warranted due to exceptional circumstances, or the T-1 nonimmigrant has a pending application for adjustment of status to lawful permanent resident. New 8 CFR 214.11(l)(1). DHS is codifying this statutory change without substantive modification; notice and comment thereon are therefore unnecessary.

This rule also establishes general procedures for an applicant to demonstrate that he or she has met the requirements for an extension of stay including prescribing an application and supporting evidence to establish eligibility. New 8 CFR 214.11(l)(2)–(7). The victim will be required to document his or her eligibility by submitting the form designated by USCIS with the prescribed fee in accordance with form instructions before the expiration of T-1 nonimmigrant status, including: Evidence to support why USCIS should grant the extension; evidence of law enforcement need that comes directly from a law enforcement agency, including a new LEA endorsement; evidence from a law enforcement official, prosecutor, judge, or appropriate authority; or any other credible evidence. New 8 CFR 214.11(l)(2)–(5). An applicant may demonstrate exceptional circumstances by submitting an affirmative statement or any other credible evidence, including medical records, police or court records, news articles, correspondence with an embassy or consulate, and affidavits of witnesses. New 8 CFR 214.11(l)(6). USCIS will automatically extend T nonimmigrant status when a T nonimmigrant properly files an application for adjustment of status, and a separate application for extension of T nonimmigrant status is not required. New 8 CFR 214.11(l)(7). These broad procedural provisions

make no changes to the established legal order, other than to reiterate the public's statutory rights, and to allow the applicants to exercise such rights. DHS has therefore determined it is not required to publish these procedures for public notice and comment. DHS nevertheless welcomes comments from the public on these changes.³²

(l) Time of physical presence in the CNMI counts as time admitted as a T nonimmigrant for establishing physical presence required at adjustment of status. INA section 101(a)(15)(T)(i)(II), 8 U.S.C. 1101(a)(15)(T)(i)(II); New 8 CFR 214.11(b)(2), 245.23(a)(3)(ii).

Title VIII, section 809 of VAWA 2013 provides that aliens in the CNMI are eligible for T nonimmigrant status because status in the CNMI meets the requirement for an alien to be physically present in the United States. INA section 101(a)(15)(T)(i)(II), 8 U.S.C. 1101(a)(15)(T)(i)(II) (aliens eligible for T nonimmigrant status include those who are “physically present in the . . . [CNMI] . . . on account of such trafficking”). This means that under the statute, when T nonimmigrant status was granted for someone in the CNMI, the 3-year continuous physical presence required for adjustment of status began to toll at that time, even if he or she was not actually admitted in T nonimmigrant status. DHS provides in this rule that if the individual was granted T nonimmigrant status under 8 CFR 214.11, such individual's physical presence in the CNMI before, on, or after November 28, 2009, including physical presence subsequent to the grant of T nonimmigrant status, is considered as equivalent to presence in the United States pursuant to an admission in T nonimmigrant status. New 8 CFR 245.23(a)(3)(ii). DHS is codifying this statutory directive without substantive modification; notice and comment thereon are therefore unnecessary.

(m) The definition of sex trafficking includes patronizing or soliciting of a person for the purpose of a commercial sex act. See INA 101(a)(15)(T)(i)(I), 22 U.S.C. 7102.

The Justice for Victims of Trafficking Act of 2015 (JVTA), Public Law 114–22, 129 Stat 227 (May 29, 2015), expanded the definition of sex trafficking at 22 U.S.C. 7102(10) to add “patronizing or soliciting of a person for the purpose of a commercial sex act” to the list of activities constituting sex trafficking. DHS believes the terms “patronizing or

soliciting of a person for the purpose of a commercial sex act” are clear both in terms of USCIS adjudications and LEA certification and do not require clarification of their intent or meaning in regulatory text. Because DHS is codifying this statutory change without modification, notice and comment on those provisions are unnecessary. New 8 CFR 214.11(a), (f)(1).

2. Procedural Changes Only

Binding agency rules that do not themselves alter the substantive rights or interests of parties are exempt from the APA notice and comment requirements. 5 U.S.C. 553(b)(A); *Public Citizen v. Dep't of State*, 276 F.3d 634, 640 (D.C. Cir. 2002). Although the exception for procedural rules is to be construed narrowly, its purpose is clear: to provide agencies with flexibility to implement and modify administrative procedures efficiently, so long as such procedures do not intrude on the public's substantive rights or interests. Above, DHS notes that in revising its regulation to codify intervening statutory changes, DHS has included a number of procedural provisions that provide the public with maximum flexibility to exercise statutory rights. In addition to such provisions, DHS is also making a number of procedural changes, as described below and in the succeeding sections.

This rule includes at least one change to reflect changes to agency organization. The 2002 interim rule provided that any Service officer who receives a request for T nonimmigrant status shall be referred to the local Service office with responsibility for investigations relating to victims of severe forms of trafficking in persons for a consultation. Former 8 CFR 214.11(v). DHS provides in this rule that a USCIS employee who comes into contact with an alien believed to be a victim of a severe form of trafficking in persons should consult with the ICE officials responsible for victim protection, trafficking investigations and prevention, and deterrence, as appropriate. New 8 CFR 214.11(o). This change is necessary because the former INS was split into separate components responsible for the adjudication of immigration benefits and investigations and enforcement.

3. Logical Outgrowth

A number of the changes made in this interim rule are logical outgrowths of the 2002 rule, and made in response to the public comments on that rule. When issuing a final or interim final rule following an interim rule, an agency must maintain “a flexible and open-

³² In addition, USCIS has already implemented these statutory requirements through policy guidance. See Mem., USCIS, *Extension of Status for T and U Nonimmigrants*; Revisions to AFM Chapter 39.1(g)(3) and Chapter 39.2(g)(3) (AFM Update AD11–28) (Apr. 19, 2011).

minded attitude” toward comments that support changing the original interim rule. *Fed. Express Corp. v. Mineta*, 373 F.3d 112, 120 (D.C. Cir. 2004) (quoting *Nat’l Tour Brokers Ass’n v. United States*, 591 F.2d 896, 902 (D.C. Cir. 1978), and citing *Advocates for Highway & Auto Safety v. Fed. Highway Admin.*, 28 F.3d 1288, 1292 (D.C. Cir. 1994)). The agency should change its original rule if the data before the agency justify the change. Substantial changes may be made so long as the interim final rule provided a clear signal to the affected public as to what changes may be made, they are in character with the original scheme, and they are a logical outgrowth of the notice provided. See *id.*; *Methodist Hosp. of Sacramento v. Shalala*, 38 F.3d 1225 (D.C. Cir. 1994); *BASF Wyandotte Corp. v. Costle*, 598 F.2d 637 (1st Cir. 1979).

The following changes made in this rule are logical outgrowths of the 2002 interim rule because they were suggested by commenters or they are clearly within the scope and in character with the original scheme of the interim rule. Notwithstanding the passage of time since the 2002 interim rule was published and intervening legislation that affects the T nonimmigrant visa program, comments provided, the factual circumstances surrounding the rule, and the administration of the T nonimmigrant visa program have not changed to an extent that would render the comments on the 2002 rule not germane or otherwise inapplicable. As described more fully in the section-by-section analysis above, in each case, the justification for the change is either as strong as or stronger than it was in 2002. Among these changes are the following:

(a) No need to actually perform labor or services to qualify as victim. New 8 CFR 214.11(f)(1); TVPA sections 103(9), (10), (14); 22 U.S.C. 7102(9), (10), (14).

(b) Removal of filing deadline. Former 8 CFR 214.11(d)(4).

(c) Eliminating citation to *United States v. Kozminski*, 487 U.S. 931 (1998), and otherwise clarifying the definition of “involuntary servitude” for purposes of TVPA section 103(9), 22 U.S.C. 7102(9). New 8 CFR 214.11(a).

(d) For evidence of victimization, accept LEA endorsements as any credible evidence. New 8 CFR 214.11(f)(1).

(e) Remove the requirement to show no clear chance to depart the United States. Former 8 CFR 214.11(g)(2).

(f) Provide a non-exhaustive list of factors used in the “totality of the circumstances” test to determine reasonableness of failure to cooperate

with law enforcement. New 8 CFR 214.11(h)(2).

(g) Consolidate the grounds for revocation of status for violation of requirements of T status from two into one ground. New 8 CFR 214.11(m)(2)(i).

(h) Provide for revocation of derivative nonimmigrant status if the family member will not apply for admission to the United States. New 8 CFR 214.11(m)(1).

(i) Clarify that the standard for judging a victim’s refusal to satisfy an LEA request is not whether the victim’s refusal was reasonable, but whether the LEA request was reasonable. New 8 CFR 214.11(m)(2)(iii).

(j) For evidence of compliance with an LEA request, accept any credible evidence and ascribe no special weight to the LEA endorsement. New 8 CFR 214.11(h)(3).

(k) Changing the standard for when DHS will exercise its discretionary criminal waiver authority with respect to crimes that do not involve a link to the victimization; whereas the former standard allowed for discretionary waiver in “exceptional cases” only, the new standard allows for discretionary waiver in a broader category of cases (and in cases involving violent or dangerous crimes, only in “extraordinary circumstances”). New 8 CFR 212.16(b)(2).

(l) Revise 8 CFR 212.16(b)(3), which previously provides that USCIS would waive a ground of inadmissibility only in exceptional cases when the ground of inadmissibility would prevent or limit the ability of the applicant to adjust to permanent resident status after the conclusion of 3 years. Former 8 CFR 212.16(b)(3). DHS is replacing “exceptional cases” with the term “extraordinary circumstances.” New 8 CFR 212.16(b)(3).

(m) Remove language that applicants on the wait list would maintain current means to prevent removal, to clarify that people can maintain current means or attain new means to prevent removal, in accordance with existing practice. Former 8 CFR 214.11(m)(2); new 8 CFR 214.11(j)(2).

(n) Updating nondisclosure protections for information relating to an applicant or beneficiary of an application for T nonimmigrant status. 8 U.S.C. 1367; New 8 CFR 214.11(p)(1).

4. Contrary to the Public Interest

Finally, public notice and comment is also not required when an agency for good cause finds that notice and public comment procedure are contrary to the public interest. The good cause exception is an important safety valve to be used where delay would do real

harm. *N. Am. Coal Corp. v. Dir., Office of Workers’ Comp. Programs, U.S. Dep’t of Labor*, 854 F.2d 386, 389 (10th Cir. 1988). To the extent DHS is filling any gaps in promulgating provisions to implement the new statutory provisions, DHS has determined that delaying the effect of this rule during the period of public comment is contrary to the public interest. Congress created the T nonimmigrant classification to protect victims of human trafficking in the United States and encourage victims to fully participate in the investigation or the prosecution of the traffickers. See TVPA, sec. 102(b). Since the 2002 interim rule, Congress enacted legislation to encourage victims of human trafficking to assist law enforcement. Public Law 108–193, 117 Stat. 2875 (Dec. 19, 2003); Public Law 109–162, 119 Stat. 2960 (Jan. 5, 2006); Public Law 109–271, 120 Stat. 750 (Aug. 12, 2006); Public Law 110–457, 122 Stat. 5044 (Dec. 23, 2008), Public Law 113–4, 127 Stat. 54 (Mar. 7, 2013), and Public Law 114–22, 129 Stat. 227 (May 29, 2015). Even if DHS has some remaining discretion in their execution, each of the specific changes made in the underlying law were intended to reduce the number of people who will be exposed to the dangers associated with human trafficking.

It is contrary to the public interest to delay the changes made by this rule to provide for pre-promulgation public comment. For example, adult or minor children of the principal’s derivative family members who face a present danger of retaliation as a result of the victim’s escape from a severe form of trafficking or cooperation with law enforcement may now qualify for adjustment of status after expiration of their T nonimmigrant derivative status. Without this change taking effect immediately, family members of victims who can get nonimmigrant status would not be able to adjust status to that of a lawful permanent resident and could be required to depart the United States after their nonimmigrant status runs out. This would expose them to danger from traffickers in their home country as a result of the principal’s cooperation with law enforcement. In order to be eligible to adjust status, the family member must continue to hold status at the time of the application. 8 CFR 245.23(b)(2). If this provision is delayed, there is a risk the T–6 derivative status period will expire and the family member will not be able to adjust status, as his or her time in T–6 status will have ended.

USCIS does not have another source of authority to preserve the eligibility of the T–6 status of the family member to

adjust status in lieu of implementing this provision immediately. In addition to potential harm to family members and reduced incentive for principals to participate in the T nonimmigrant visa program, delaying this change would also harm law enforcement's ability to leverage the knowledge and experience of family members themselves. Family members coming to the United States from abroad may have knowledge of the actions of the trafficker that even the victim cooperating with the LEA may not know. DHS has seen situations where the assistance of the family members has greatly furthered the investigation. DHS has decided to avoid these harms by not delaying this change for a period of public notice and comment.

B. Unfunded Mandates Reform Act of 1995

This rule will not result in the expenditure by State, local and tribal governments, in the aggregate, or by the private sector, of \$100 million or more in any one year, and it will not significantly or uniquely affect small governments. As a result, no actions were deemed necessary under the provisions of the Unfunded Mandates Reform Act of 1995.

C. Small Business Regulatory Enforcement Fairness Act of 1996

This rule is not a major rule as defined by section 804 of the Small Business Regulatory Enforcement Act of 1996. This rule will not result in an annual effect on the economy of \$100 million or more, a major increase in costs or prices, or significant adverse effects on competition, employment, investment, productivity, innovation, or on the ability of United States companies to compete with foreign-based companies in domestic and export markets.

D. Executive Orders 12866 and 13563

Executive Orders 12866 (Regulatory Planning and Review) and 13563 (Improving Regulation and Regulatory Review) direct agencies to assess the costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity). Executive Order 13563 emphasizes the importance of quantifying both costs and benefits, of reducing costs, of harmonizing rules, and of promoting flexibility. DHS considers this to be a "significant regulatory action," although not an

economically significant regulatory action, under section 3(f) of Executive Order 12866. Accordingly, the Office of Management and Budget (OMB) has reviewed this regulation.

1. Summary

With this interim rule, DHS incorporates in its regulations several statutory provisions associated with the T nonimmigrant status that have been passed since 2002. All statutory changes made before VAWA 2013 have already been implemented by DHS, and codifying these changes in the DHS regulations will result in no additional quantitative costs or benefits to impacted stakeholders nor the Federal government in administering the T nonimmigrant status program. Ensuring that DHS regulations are consistent with applicable legislation will provide qualitative benefits. Additionally, with the enactment of VAWA 2013, the following legislative changes were made to the statute and later implemented into DHS policy: (a) Expanding the derivative categories of family members that are eligible for derivative T nonimmigrant status; and (b) providing a technical fix to clarify that physical presence in the CNMI while in T nonimmigrant status will count as continuous presence in the United States for purposes of adjustment of status. DHS will assess the impact of the statutory provisions that will be codified into regulation in this interim rule. In addition, DHS is making several discretionary changes that will: (1) Clarify DHS policy in adjudicating T nonimmigrant applications; (2) eliminate a redundant requirement to include three passport-style photographs with applications; and, (3) make the T nonimmigrant status more accessible to victims of severe forms of trafficking in persons and their eligible family members. DHS estimates the statutory and discretionary changes made in this interim rule will result in the following impacts:

- A per application opportunity cost of time of \$33.92 for the T-1 nonimmigrant principal alien to complete and submit the Application for Family Member of T-1 Recipient, Form I-914 Supplement A, in order to apply for children (adult or minor) of the principal's derivative family members if the derivative's child faces a present danger of retaliation as a result of the victim's escape from a severe form of trafficking and/or cooperation with law enforcement.³³ The cost is due

to the VAWA 2013 statutory change that permits eligible children of the principal's derivative relatives to be admitted under the T-6 classification. DHS has no basis to project the population of children of derivative family members that may be eligible for the new T-6 nonimmigrant classification. Like current T nonimmigrant derivative classifications, the new T-6 visa classification is not subject to a statutory cap.

- An individual total cost of \$89.70 for aliens who become eligible to apply for principal T-1 nonimmigrant status due to the discretionary change that removes the filing deadline for aliens trafficked before October 28, 2000. The total cost includes the opportunity cost associated with pulling together supporting evidence and filing the Application for T Nonimmigrant Status, Form I-914, and the time and travel costs associated with submitting biometrics. If the applicant includes the Declaration of Law Enforcement Office for Victim of Trafficking in Persons, Form I-914 Supplement B in the application, there is an opportunity cost of \$149.70 for the law enforcement worker that completes that form. DHS has no way of predicting how many victims physically present in the United States may now be eligible for T-1 nonimmigrant status as a result of removing the filing deadline. Those that are newly eligible for T-1 nonimmigrant status as a result of removing the date restriction will still be subject to the statutory cap of 5,000 T-1 nonimmigrant visas allotted per fiscal year.

- An individual total cost of \$89.70 for victims trafficked abroad that will now become eligible to apply for T nonimmigrant status due to the discretionary change that expands DHS's interpretation of the physical presence requirement. As previously described, the total cost includes both the opportunity of time cost and estimated travel cost incurred with filing Form I-914 and submitting biometrics. If the applicant includes the Declaration of Law Enforcement Office for Victim of Trafficking in Persons, Form I-914 Supplement B in the application, there is an opportunity cost of \$149.70 for the law enforcement worker that completes that form. DHS is unable to project the size of this new eligible population, but note that all victims newly eligible for T-1 nonimmigrant status due to this change are still subject to the statutory cap of

³³ There is no filing fee for the Form I-914 and its supplements. The opportunity cost of time refers to the estimated cost associated with the time it

takes for an individual to complete and file the Form I-914 and its supplements.

5,000 T–1 nonimmigrant visas allotted per fiscal year.

Based on recent filing volumes, DHS estimates total cost savings of \$56,130 for T nonimmigrant applicants and their eligible family members as a result of the discretionary change that eliminates the requirement to submit three passport-style photographs with their T nonimmigrant applications. In addition, the interim rule will provide various qualitative benefits for victims of trafficking, their eligible family members, and law enforcement agencies investigating trafficking incidents. These qualitative benefits result from making the T nonimmigrant classification more accessible, reducing some burden involved in applying for this status in certain cases, and clarifying the process by which DHS adjudicates and administers the T nonimmigrant benefit.

2. Background

Congress created the T nonimmigrant status in the TVPA of 2000. The TVPA provides various means to combat trafficking in persons, including tools for LEAs to effectively investigate and prosecute perpetrators of trafficking in persons. The TVPA also provides protection to victims of trafficking through immigration relief and access to federal public benefits. DHS published an interim final rule on January 31, 2002 implementing the T nonimmigrant status and the provisions put forth by the TVPA 2000.³⁴ The 2002 interim final rule established the eligibility criteria, application process, evidentiary standards, and benefits associated with obtaining T nonimmigrant status.

T nonimmigrant status is available to victims of severe forms of trafficking in persons who comply with any reasonable request for assistance from LEAs in investigating and prosecuting

the perpetrators of these crimes. T nonimmigrant status provides temporary immigration benefits (nonimmigrant status and employment authorization) and a pathway to permanent resident status, provided that established criteria are met. Additionally, if a victim obtains T nonimmigrant status then certain eligible family members may also apply to obtain T nonimmigrant status.³⁵

Table 1 provides the number of T nonimmigrant application receipts, approvals, and denials for principal victims and derivative family members for fiscal year 2005 through fiscal year 2015. Although the maximum annual number of T nonimmigrant visas that may be granted is 5,000 for T–1 principal aliens per fiscal year, this maximum number has never been reached and is not projected to be reached in the foreseeable future under current practice.³⁶

TABLE 1—USCIS PROCESSING STATISTICS FOR FORM I–914³⁷

FY	Victims (T–1)			Family of victims (T–2,3,4,5)			I–914 Totals		
	Receipts	Approved	Denied	Receipts	Approved	Denied	Receipts	Approved	Denied
2005	379	113	321	34	73	21	413	186	342
2006	384	212	127	19	95	45	403	307	172
2007	269	287	106	24	257	64	293	544	170
2008	408	243	78	118	228	40	526	471	118
2009	475	313	77	235	273	54	710	586	131
2010	574	447	138	463	349	105	1,037	796	243
2011	967	557	223	795	722	137	1,762	1,279	360
2012	885	674	194	795	758	117	1,680	1,432	311
2013	799	848	104	1,021	975	91	1,820	1,823	195
2014	944	613	153	925	788	105	1,869	1,401	258
2015	1,062	610	294	1,162	694	192	2,224	1,304	486

From the publication of the interim final rule in 2002 through 2016, Congress passed various statutes amending the original TVPA 2000. These include: The Trafficking Victims Protection Reauthorization Act of 2003 (TVPA 2003), the Violence Against Women and Department of Justice Reauthorization Act of 2005 (VAWA 2005), the William Wilberforce Trafficking Victims Protection Reauthorization Act of 2008 (TVPA 2008), and the Violence Against Women

Reauthorization Act of 2013 (VAWA 2013). After the passage of each of the statutes, as noted in section I.A.1 of this preamble, USCIS issued policy and guidance memorandum to both implement the provisions of the Acts and to ensure compliance with the legal requirements of the Acts.³⁸

This interim final rule codifies DHS policy and guidance from these statutes into the Code of Federal Regulations (CFR). The statutory changes from TVPA 2003, TVPA 2008, and VAWA

2005 are reflected in Table 2, below. Codifying existing USCIS policy and guidance ensures that the regulations are consistent with the applicable legislation, and that the general public has access to these policies through the CFR without locating and reviewing multiple policy memoranda. DHS provides the impact of these provisions in Table 2 assuming a pre-statutory baseline per OMB Circular A–4 requirements.

³⁴ See 67 FR 4784.

³⁵ The current T nonimmigrant categories are: T–1 (principal alien), T–2 (spouse), T–3 (child), T–4 (parent), and T–5 (unmarried sibling under 18 years of age). This interim rule creates a new T nonimmigrant category, T–6 (adult or minor child of a principal's derivative).

³⁶ There is no statutory cap for grants of T nonimmigrant derivative status or visas.

³⁷ Approved and denied volumes may not sum to the receipts in a given fiscal year because the processing and final decision for T nonimmigrant

status applications may overlap fiscal years. USCIS records indicate that processing an application for T nonimmigrant status requires an estimated 6 to 9 months. Data source for the table: Performance Analysis System (PAS), USCIS Office of Performance and Quality (OPQ), Data Analysis and Reporting Branch (DARB).

³⁸ See Mem. from Paul Novak, Director, Vermont Service Center, USCIS, *Trafficking Victims Protection Reauthorization Act of 2003* (Apr. 15, 2004); see also Mem., USCIS, *William Wilberforce Trafficking Victims Protection Reauthorization Act of 2008: Changes to T and U Nonimmigrant Status*

and Adjustment of Status Provisions; Revisions to AFM Chapters 23.5 and 39 (AFM Update AD10–38) (July 21, 2010); Mem., USCIS, *Extension of Status for T and U Nonimmigrants; Revisions to AFM Chapter 39.1(g)(3) and Chapter 39.2(g)(3) (AFM Update AD11–28)* (Apr. 19, 2011); Mem., USCIS, *New T Nonimmigrant Derivative Category and T and U Nonimmigrant Adjustment of Status for Applicants from the Commonwealth of the Northern Mariana Islands; Revisions to Chapters 23.5 and Chapter 39.2 (AFM Update AD14–05)* (Apr. 15, 2015).

TABLE 2—SUMMARY OF IMPACTS TO THE REGULATED POPULATION OF TVPRA 2003, TVPRA 2008 AND VAWA 2005
STATUTORY CHANGES CODIFIED BY THIS INTERIM RULE

Provision	Current policy	Expected cost of the interim rule	Expected benefit of the interim rule
Expanding the definition and discussion of LEA (added by VAWA 2005).	LEA includes State and local law enforcement agencies.	None	Provides clarity and consistency in DHS practice with DHS regulations will lead to a qualitative benefit providing transparency to both the victims of trafficking and USCIS adjudicators.
Removing the requirement that eligible family members must face extreme hardship if the family member is not admitted to the United States or was removed from the United States (removed by VAWA 2005).	Family members may be eligible for T nonimmigrant status without having to show extreme hardship.	No additional costs, other than the opportunity cost of time to file Form I-914 Supplement A. However, DHS reiterates that this is a voluntary provision.	Provides a broader definition of an eligible family member and may increase the number of eligible family members.
Raising the age at which the applicant must comply with any reasonable request by an LEA for assistance in an investigation or prosecution of acts of trafficking in persons (added by TVPRA 2003).	The provision increased the minimum age requirement from 15 years to 18 years of age.	None	Provides a benefit by acknowledging the significance of an applicant's maturity in understanding the importance of participating with an LEA.
Exempting T nonimmigrant applicants from the public charge ground of inadmissibility (added by TVPRA 2003).	DHS may grant T nonimmigrant status to applicants even if they are likely to become a public charge.	No additional costs, other than the opportunity cost of time to file Form I-914 and if necessary Supplement B.	Victims who are likely to become a public charge are able to apply for T nonimmigrant status and receive the benefits associated with that status.
Exemptions to an applicant's requirement, to comply with any reasonable request by an LEA (added by TVPRA 2008).	Applicants are exempt from the requirement to comply with any reasonable request by an LEA in cases where the applicant is unable to comply, due to physical or psychological trauma.	None	Provides a benefit by acknowledging the significance of an applicant's mental capacity in understanding the importance of participating with an LEA.
Limiting duration of T nonimmigrant status but providing extensions for LEA need, for exceptional circumstances, and for the pendency of an application for adjustment of status (VAWA 2005 and TVPRA 2008).	Extends the duration of T nonimmigrant status from 3 years to 4 years, but limits the status to 4 years unless an applicant can qualify for an extension.	None	Provides T nonimmigrants status for an additional year with the possibility of extension.
Expanding the regulatory definition of physical presence on account of trafficking (added by TVPRA 2008).	DHS will consider victims as having met the physical presence requirement if they were allowed entry into the United States for participation in investigative or judicial processes associated with an act or perpetrator trafficking for purposes of eligibility for T nonimmigrant classification.	None	Provides a broader definition of physical presence on account of trafficking and may increase the number of eligible applicants.
Allowing principal applicants under 21 years of age to apply for derivative T nonimmigrant status for unmarried siblings under 18 years and parents as eligible derivative family members (added by TVPRA 2003).	Unmarried siblings under 18 years of age and parents of the principal applicant may now be eligible for T nonimmigrant status under the T-4 and T-5 derivative category, if the principal applicant is under age 21.	No additional costs, other than the opportunity cost of time to file Form I-914 Supplement A on behalf of the principal's unmarried siblings under 18 years of age and parents.	Provides a broader definition of eligible family member and may increase the number of eligible family members.
Providing age-out protection for child principal applicants to apply for eligible family members (added by TVPRA 2003).	A principal applicant who was under 21 years of age at the time of filing the Form I-914 can file Form I-914 Supplement A on behalf of eligible family members, including parents and unmarried siblings under age 18, even if the principal alien turns 21 years of age before the principal T-1 application is adjudicated.	None	Provides a qualitative benefit by removing an age-out restriction, allowing principal applicants to apply for parents and unmarried siblings under age 18, even if the principal applicant turns 21 years of age before the T-1 application is adjudicated.

TABLE 2—SUMMARY OF IMPACTS TO THE REGULATED POPULATION OF TVPRA 2003, TVPRA 2008 AND VAWA 2005 STATUTORY CHANGES CODIFIED BY THIS INTERIM RULE—Continued

Provision	Current policy	Expected cost of the interim rule	Expected benefit of the interim rule
Providing age-out protection for child derivatives (added by TVPRA 2003).	An unmarried child of the principal who was under age 21 on the date the principal applied for T-1 nonimmigrant status may continue to qualify as an eligible family member, even if he or she reaches age 21 while the T-1 application is pending.	None	Provides a qualitative benefit by removing an age-out restriction, allowing a principal applicant parent to apply for a child as a derivative beneficiary, even if the child reaches age 21 while the principal's T-1 application is pending.
Allowing principal applicants of any age to apply for derivative T nonimmigrant status for unmarried siblings under 18 years of age and parents as eligible family members if the family member faces a present danger of retaliation as a result of the principal applicant's escape from a severe form of trafficking or cooperation with law enforcement (added by TVPRA 2008).	Allows any principal applicant, regardless of age, to apply for derivative T nonimmigrant status for parents or unmarried siblings under 18 years of age if they face a present danger of retaliation.	No additional costs, other than the opportunity cost of time to file Form I-914 Supplement A, on behalf of the derivative's unmarried siblings under 18 years of age and parents.	If eligible, unmarried siblings under 18 years of age and parents of principal applicants may qualify for T-4 and T-5 nonimmigrant status, and obtain the immigration benefits that accompany that status. In addition, LEAs may benefit if more victims come forward to report trafficking crimes.
Care and custody of unaccompanied children with the HHS (added by TVPRA 2008).	Federal agencies must notify HHS upon apprehension or discovery of an unaccompanied child or any claim or suspicion that an individual in custody is under 18 years of age. Minors are eligible to receive federally funded benefits and services as soon as they are identified by HHS as a possible victim of trafficking.	DHS may have some additional administrative costs associated with informing HHS of unaccompanied children. As a result, HHS may have some additional costs in providing benefits and services to the affected minors.	Provides a qualitative benefit by enabling the health and well-being of a minor victimized by trafficking. These victims also obtain federally funded benefits and services.

3. Changes Implemented in This Interim Rule

This regulatory evaluation will provide a more in-depth analysis of the costs and benefits of the two statutory provisions added by VAWA 2013 and implemented in this interim rule. In addition, this analysis will address the impacts of several new discretionary provisions DHS is making in this interim rule.

a. Statutory Provisions

The legislative changes to the T nonimmigrant statutes added by VAWA 2013 and addressed in this analysis include:

- Allowing principal applicants of any age to apply for derivative T nonimmigrant status for children (adult or minor) of the principal's derivative family members if the derivative's child faces a present danger of retaliation as a result of the applicant's escape from a severe form of trafficking or cooperation with law enforcement. *See* INA section 101(a)(15)(T)(ii)(III), 8 U.S.C. 1101(a)(15)(T)(ii)(III); new 8 CFR 214.11(k)(1)(iii). Harmonizing with current allowances for T derivatives, this interim rule will also permit those classified as children of derivative

aliens to apply for adjustment of status under INA section 245(l), 8 U.S.C 1255(1); new 8 CFR 245.23(b)(2).

- Implementing a technical fix to clarify that presence in the Commonwealth of the Northern Mariana Islands (CNMI) after being granted T nonimmigrant status qualifies toward the requisite physical presence requirement for adjustment of status to lawful permanent resident. *See* section 705(c) of the Consolidated Natural Resources Act of 2008 (CNRA), Title VII, Public Law 110-229, 122 Stat. 754 (May 8, 2008); new 8 CFR 245.23(a)(3)(ii).

VAWA 2013 expanded the eligibility of family members who may qualify for T nonimmigrant derivative status. The new statutory provision allows for the eligibility of the children (adult or minor) of the principal's derivative family members if the derivative's child faces a present danger of retaliation as a result of the victim's escape from a severe form of trafficking or cooperation with law enforcement. Family members that may be eligible as a result of this new provision could, for example, include: Stepchild(ren) (the adult or minor child(ren) of the principal's spouse); grandchild(ren) (the adult or minor child(ren) of the principal's

child); niece(s) or nephew(s) (the adult or minor child(ren) of the principal's sibling); and/or sibling(s) (the adult or minor child of the principal's parent). The principal must file an Application for Family Member of T-1 Recipient, Form I-914 Supplement A, on behalf of these eligible family members, in accordance with form instructions. Evidence that demonstrates a present danger of retaliation to the family member must be included with the application.

New 8 CFR 214.1(a)(7) classifies the principal and eligible family members (including the new category as set forth by VAWA 2013) as:

- T-1 (principal alien);
- T-2 (spouse);
- T-3 (child);
- T-4 (parent);
- T-5 (unmarried sibling under 18 years of age); or
- T-6 (adult or minor child of a principal's derivative).

The final relevant provision in VAWA 2013 is a clarification that presence in the CNMI after being granted T nonimmigrant status qualifies toward the physical presence requirement for adjustment of status. T nonimmigrants may adjust to lawful permanent resident status after three years of continuous

physical presence in the United States. *See* INA section 245(l)(1)(A), 8 U.S.C. 1255(l)(1)(A). Prior to the enactment of VAWA 2013, an approved T nonimmigrant in the CNMI would not accrue time that counts toward the three year continuous physical presence requirement for adjustment of status until on or after November 28, 2009. Title VII of the CNRA extended, with limited exceptions, the U.S. immigration laws to the CNMI, effective November 28, 2009. Before the U.S. immigration laws were in effect in the CNMI, aliens in the CNMI had to travel to Guam or the United States to be admitted as a T nonimmigrant. In addition, the CNRA noted that time in the CNMI prior to the date the U.S. immigration laws became effective would not count as time in the United States. DHS data does not track aliens who were admitted as T nonimmigrants in the United States or Guam who relocated to the CNMI, and who may have been unable to adjust to lawful permanent resident because their time in the CNMI prior to November 28, 2009 did not qualify towards the three year physical presence requirement. VAWA 2013 added an exception to this provision so that time in the CNMI prior to November 28, 2009 would count as time admitted as a T nonimmigrant for establishing physical presence for purposes of adjustment of status to lawful permanent resident. *See* new 8 CFR 245.23(a)(3)(ii).

b. Discretionary Changes

In addition to the statutory provisions, DHS will make the following discretionary changes to DHS regulations governing the T nonimmigrant classification:

- Specify how USCIS will exercise its waiver authority over criminal inadmissibility grounds; new 8 CFR 212.16(b)(3).
- Discontinue the practice of weighing evidence as primary and secondary in favor of an “any credible evidence” standard; 8 CFR 214.11(f); new 8 CFR 214.11(d)(2)(ii) and (3).
- Eliminate the requirement that an applicant provide three passport-style photographs; 8 CFR 214.11(d)(2)(ii); new 8 CFR 214.11(d)(4).
- Remove the filing deadline for those victimized prior to October 28, 2000; 8 CFR 214.11(d)(4).
- Removes the restriction in the 2002 interim rule that an eligible applicant who is placed on the waiting list shall maintain his or her current means to prevent removal (deferred action, parole, or stay of removal) and any employment authorization, subject to any limits imposed on that. *See* former

8 CFR 214.11(m)(2). DHS will clarify that applicants on the waiting-list can either maintain their “current means” to prevent removal or find a “new means” to attain relief from removal. This will provide USCIS with avenues to exercise its discretion to provide temporary assistance to applicants on a case-by-case basis, even if applicants have no current means of protection if the statutory cap is met in a given fiscal year; new 8 CFR 214.11(j)(1).

- Remove the current regulatory “opportunity to depart” requirement for those who escaped traffickers before law enforcement became involved; former 8 CFR 214.11(g)(2).
- Provide guidance on meeting the definition of “severe forms of trafficking in persons” in those cases where an individual has not actually performed labor or services, or a commercial sex act; new 8 CFR 214.11(f)(1).
- Addresses situations where trafficking has occurred abroad, but the victim can potentially meet the physical presence eligibility requirement; new 8 CFR 214.11(g)(3).
- Update DHS regulations to reflect the creation of DHS, and to implement current standards of regulatory organization, plain language, and USCIS efforts to transform its customer service practices.

4. Benefits

a. Benefits of Statutory Provisions

A qualitative benefit is realized by incorporating all the statutory provisions that are current USCIS practice in DHS regulations. The addition of these provisions to DHS regulations is necessary to ensure: That DHS regulations are consistent with applicable legislation; that no ambiguity exists between current DHS practices and the CFR; and that the general public is able to access DHS practices via the CFR without having to consult multiple policy memoranda.

The VAWA 2013 provision expanding the derivative eligibility to the children (adult or minor) of the principal’s derivative family members provides an additional qualitative benefit for trafficking victims and their eligible family members. Specifically, incorporating this statutory change in DHS regulations upholds the United States Federal Government’s commitment to promoting family unity in its immigration laws. Additionally, this provision may provide a qualitative benefit to law enforcement agencies that are investigating trafficking crimes, as it provides them with another method to incentivize victims to report these crimes who otherwise may not have

because they feared retaliation against their family members.

In the event the adult or minor children of the principal’s derivative family members face a present danger of retaliation as a result of the victim’s escape from a severe form of trafficking or cooperation with law enforcement, they may now qualify for T nonimmigrant derivative status. Prior to this expansion of derivative eligibility these family members may have been exposed to danger as a result of the victims coming forward to report the trafficking incidents. This may have acted as a disincentive for victims to report these crimes and to seek assistance. Expanding derivative eligibility to these family members may induce trafficking victims to seek LEA assistance and to cooperate with investigations of trafficking crimes. As a result, trafficking victims, their eligible family members, and law enforcement agencies investigating trafficking abuses all benefit from this statutory expansion.

The final VAWA 2013 provision provides a benefit by addressing a gap in immigration law as it pertains to the CNMI to clarify that presence as a T nonimmigrant in the CNMI before or after November 28, 2009 qualifies toward the three-year physical presence requirement for adjustment of status to lawful permanent residence. Prior to this technical fix, the CNRA provision stated that time in the CNMI before November 28, 2009 did not count as time in the United States. This may have been a barrier to T nonimmigrants residing in the CNMI who wished to adjust status but whose time in the CNMI prior to this date did not qualify toward the three year physical presence requirement. With the enactment of VAWA 2013, time spent as a T nonimmigrant in the CNMI before November 28, 2009 counts toward the physical presence requirement for adjustment of status to lawful permanent residence.

DHS is unable to determine how many T nonimmigrants may have been unable to adjust to permanent residence status as a result of the prior CNRA provision. Those in the CNMI had to travel to Guam or other parts of the United States to be admitted as a T nonimmigrant prior to the replacement of the immigration laws of the CNMI with those of the United States under the CNRA. DHS data does not track individuals who were admitted as T nonimmigrants in the United States (including Guam) who relocated to the CNMI, and who may have been unable to adjust to lawful permanent resident because their time in the CNMI prior to November 28, 2009 did not qualify

towards the three-year physical presence requirement. DHS believes this to have been a rare occurrence, however, and therefore anticipates that any additional population adjusting status solely as a result of this change will be small, if any.

b. Benefits of Discretionary Changes

DHS will eliminate the current requirement that three passport-style photographs be submitted with T nonimmigrant applications. This is a requirement for both principal alien victims and their eligible family members. Enhancements in USCIS operations as it pertains to collecting biometrics make the requirement to submit these photographs redundant. T nonimmigrant applicants have their photographs taken when they visit an application support center (ASC) to submit biometrics. The photographs taken at the ASC replaces the current requirement to submit three passport-style photographs with T nonimmigrant applications. DHS, in our ongoing efforts to review our regulations and reduce unnecessary and/or redundant burdens, is eliminating the requirement to submit these photographs, resulting in quantitative savings for applicants. According to the findings of Department of State (DOS), a passport-style photograph has an average cost of \$10.00.³⁹ Therefore, each T nonimmigrant status applicant would save an estimated \$30.00, the cost of three photographs.

This \$30.00 savings would benefit all future T nonimmigrant principal and derivative applicants. As noted throughout this analysis, DHS is unable to reasonably project how future filing volumes may be affected by the statutory and discretionary changes implemented by this interim rule. In an effort, however, to calculate total cost savings to applicants by no longer having to submit three photographs DHS averaged total annual receipts for Fiscal Years 2011 through 2015. (Refer to Table 1 in this analysis to view all T nonimmigrant receipts since Fiscal Year 2005.) DHS assumes that average filing volumes for Fiscal Years 11 through 15 offer a reasonable expectation of what future receipts would be under current DHS process. DHS does not have the information to forecast populations that may result from the changes made in this interim rule. Using the average of

Fiscal Years 11 through 15 receipts, DHS estimates expects that annual receipts for T nonimmigrant status applications (both principal and derivative applicants) would be approximately 1,871.⁴⁰ Again, the assumed volume of 1,871 is calculated without considering any unforeseeable increases in receipts that may result from new population groups that will be eligible for T nonimmigrant status in this interim rule. Therefore, at a minimum, DHS expects the cost savings from eliminating the photograph requirement to be \$56,130.⁴¹

In addition to this quantitative benefit, the remaining discretionary changes result in qualitative benefits for victims of trafficking and their eligible family members, and also for law enforcement agencies in their efforts to combat and investigate trafficking crimes. The provision relating to the discretion of USCIS to administer its waiver authority over criminal inadmissibility grounds provides benefits by clarifying USCIS policy as it relates to USCIS waiver authority and the granting of deferred action. Additionally, removing the regulatory restrictions on methods available to protect applicants on the waiting list from removal will allow DHS the discretion to grant deferred action to applicants on the waiting list who currently have no current means to prevent removal.

Additionally, amending DHS regulations to clarify that a trafficked individual may be eligible for T nonimmigrant status even though he or she did not perform labor or services, or a commercial sex act will also provide benefits for the impacted population. This amendatory language is meant to clarify when an individual can satisfy the definition of being a victim of "severe forms of trafficking in persons," even if the victim escaped his or her traffickers prior to performing the labor, services, or commercial sex acts intended. This clarification will be a qualitative benefit to applicants who, prior to the clarification, may have experienced confusion as to whether they are eligible for T nonimmigrant status if they have not performed the services mentioned. Likewise, the clarification will provide clear guidance to DHS adjudicators in their evaluations of applications in which this might occur.

DHS is also eliminating the filing deadline for those who were victimized prior to October 28, 2000. See 8 CFR 214.11(d)(4). According to current DHS

regulations, victims of a severe form of trafficking in persons whose victimization occurred prior to this deadline must have filed a completed application for T nonimmigrant status within one year of March 4, 2002, the effective date of the 2002 interim final rule. The deadline was originally put in place because of uncertainty of how many victims may come forward to apply for T nonimmigrant benefits. The reasoning at the time was that there could be a large influx of applicants for T nonimmigrant benefits, which could have adversely impacted timely administration and adjudication of the program if no deadline were in place. This concern never materialized, however, and annual T nonimmigrant application receipts have remained well under the cap of 5,000 T-1 principal aliens. Therefore, DHS will remove the filing deadline for those victims that were trafficked before October 28, 2000. This will make the T nonimmigrant status accessible to those victimized prior to the enactment of TVPA that were unable to apply for T nonimmigrant status prior to the filing deadline. DHS is unable to estimate how many individuals may apply once the deadline is removed, although it is believed the receipts would be small given the amount of time that has passed.

The discretionary provision eliminating the requirement that victims of trafficking must show they had no clear opportunity to depart from the United States will provide another benefit to potential applicants. Currently, victims of trafficking who escaped their traffickers prior to LEA involvement in the matter must submit evidence showing they had no clear chance to leave the United States once they became free of their traffickers. Such evidence may include, but is not limited to, demonstrating the victim had limited ability to depart due to circumstances attributable to the trafficking, such as trauma, injury, lack of funds, or seizure of travel documents by the traffickers. See 8 CFR 214.11(g)(2). DHS has determined that this requirement places an unnecessary additional burden on victims of trafficking who wish to apply for T nonimmigrant status. Removing this evidentiary requirement will provide time and cost savings to the applicant by not having to procure and provide such evidence to USCIS; additionally, USCIS may realize some time savings by not having to review these documents during case adjudication. DHS did not have the necessary data to estimate the monetary value of such savings.

³⁹ DOS estimates an average cost of \$10 per passport photo in the PRA Supporting Statement found under OMB control number 1450-0004. A copy of the Supporting Statement is found on [Reginfo.gov](http://www.reginfo.gov) at: http://www.reginfo.gov/public/do/PRAViewDocument?ref_nbr=201102-1405-001 (see question #13 of the Supporting Statement).

⁴⁰ Average of FY 11 through 15 total receipts.

⁴¹ Calculation: 1,871 × \$30.00 = \$56,130.

DHS also will discontinue the practice of labeling evidence as primary and secondary, in favor of requiring “any credible evidence” the applicant may possess to show that they were a victim of a severe form of trafficking and have complied with any reasonable request to assist an LEA. Currently, DHS considers only the submission of the Declaration of Law Enforcement Officer, Form I-914 Supplement B, to be primary evidence. All other evidence the applicant may submit is labeled as secondary evidence. This distinction has proven to be confusing for both applicants and law enforcement officials, because the Supplement B is not a required form to be submitted by applicants. Furthermore, LEAs have expressed concern that because the Supplement B is the only evidence considered by DHS to be “primary evidence,” the mere fact that an LEA completes the form may be the primary ground relied on by DHS in granting status to an applicant seeking T nonimmigrant benefits. As a result of this misinterpretation, some LEAs have been reluctant to complete a Supplement B on behalf of applicants. DHS believes removing the “primary evidence” and “secondary evidence” labels currently in place will reduce confusion for applicants and alleviate the concerns of LEAs. LEAs may then be more likely to complete the Supplement B for an applicant, which, although it would no longer have the label of “primary evidence,” would still contribute to the alien’s overall application for T nonimmigrant benefits. In turn, the victim may be more willing to cooperate if he or she feels more confident the LEA will recognize this assistance.

Lastly, DHS will amend the regulations to provide guidance on how victims may still qualify for T nonimmigrant status in instances when the trafficking occurred abroad. Though DHS anticipates there will be limited circumstances when trafficking occurred abroad that could still lead to T nonimmigrant eligibility, it has identified some instances when this might occur and discusses them in this interim rule. This expanded interpretation of the physical presence

requirement will be a benefit to any additional aliens and their eligible family members who may now become eligible for T nonimmigrant status. In addition, LEAs will benefit from having access to additional eligible populations that can provide key information and assistance to those investigating trafficking crimes. DHS is unable to project how many victims may become eligible for T nonimmigrant status as a result of this change.

5. Costs

a. Costs of Statutory Provisions

The majority of the changes to DHS regulations made to incorporate statutory provisions result in no additional costs to victims of severe forms of trafficking or their eligible family members. Since the application volume for the T nonimmigrant program has never reached capacity, we expect that any additional costs to DHS in its administration of the T nonimmigrant program will be minimal. The provisions created as a result of congressional action in the years following the 2002 interim final rule and prior to the VAWA 2013 are current DHS policy and therefore no changes or amendments to current practice are necessary as a result of codifying them in DHS regulations. Likewise, the provision in VAWA 2013 clarifying that presence in the CNMI qualifies toward the requisite physical presence requirement for adjustment of status will result in no additional costs.

The VAWA 2013 provision expanding T nonimmigrant derivative status eligibility to the children (adult or minor) of the principal’s derivative family members is currently reflected in DHS policy and includes certain associated costs. In order for family members to be eligible for the new T-6 derivative categories, the T-1 principal must file an Application for Family Member of T-1 Recipient, Form I-914 Supplement A, on behalf of each of these family members, in accordance with form instructions. There is no fee to file the Form I-914 Supplement A; therefore, the associated cost to the T-1 principal is the opportunity cost of time to file the form. DHS uses the time

burden of one hour for Form I-914 Supplement A to calculate the opportunity cost associated with this provision.⁴²

Consistent with other DHS rulemakings, we use wage rates as the mechanism to calculate opportunity or time valuation costs associated with submitting required information to USCIS in order to apply for immigration benefits. Since T-1 principals must file one Application for Immediate Family Member of T-1 Recipient, Form 914 Supplement A, on behalf of each of their eligible family members and are authorized to work when they are granted T nonimmigrant status, DHS employs the mean hourly wage rate of all occupations in the United States, \$23.23.⁴³ The mean hourly wage rate is multiplied by 1.46 to account for the full cost of employee benefits such as paid leave, insurance, and retirement, bringing the total burdened wage rate to \$33.92.⁴⁴ Therefore, the T-1 principal is subject to a per application opportunity cost of \$33.92 to complete and file an Application for Immediate Family Member of T-1 Recipient, Form I-914 Supplement A with USCIS.⁴⁵

The opportunity cost of time for T-1 principals to file the Application for Family Member of a T-1 Recipient, Form I-914 Supplement A, as presented here are individual per application costs only; applying these costs to an entire population is not possible at this time. DHS has no way to estimate the additional population of eligible family members who may qualify for status under the new T-6 nonimmigrant derivative classification. Current statutory authority offers no comparable immigration benefits to family members of nonimmigrant aliens outside of those considered immediate relatives, such as spouses, children, parents, and in some cases siblings. Making benefits eligible to the children (adult or minor) of derivatives will be a new practice for DHS; therefore, an informed estimation of this population is not possible.

Table 3 provides a summary of the costs and benefits to the regulated population that are associated with the statutory changes as put forth by VAWA 2013.

⁴² Currently, the PRA time burden for Application for T-1 Nonimmigrant Status, Form I-914 and Application for Immediate Family Member of T-1 Recipient, Form I-914 Supplement A are not reported separately. The current time burden is reported in aggregate as 3 hours 15 min. The information collection instrument is being revised slightly, and as part of those revisions, the time burden for each form, Form I-914 (2.25 hours) and Form I-914A (1 hour), will be reported separately.

The information collection request will be reviewed by OMB concurrent with the interim final rule.

⁴³ U.S. Department of Labor, Bureau of Labor Statistics. *May 2015 National Occupational Employment and Wage Estimates*, Mean Hourly Wage (all occupations), available at: http://www.bls.gov/oes/current/oes_nat.htm#00-0000.

⁴⁴ Calculation: $\$23.23 \times 1.46 = \$33.92$. Bureau of Labor Statistics, *Economic News Release*, Table 1.

Employer costs per hour worked for employee compensation and costs as a percent of total compensation: Civilian workers, by major occupational and industry group, March 2016, available at: <http://www.bls.gov/news.release/ecec.t01.htm>.

⁴⁵ $(\$33.92 \text{ hourly burdened wage rate}) \times (1 \text{ hour estimated time burden}) = \$33.92$.

TABLE 3—SUMMARY OF IMPACTS TO THE REGULATED POPULATION OF VAWA 2013 STATUTORY CHANGES CODIFIED BY THIS INTERIM RULE

Provision	Current policy	Expected cost of the interim rule	Expected benefit of the interim rule
Allowing principals to apply for derivative T nonimmigrant status for children of the principal's derivative family members if the derivative's child faces a present danger of retaliation as a result of the victim's escape from a severe form of trafficking or cooperation with law enforcement.	Adult or minor children of the principal's derivative family members may now be eligible for T nonimmigrant status under the new T-6 derivative category.	T-1 principals will face an opportunity cost of \$33.92 to file Form I-914 Supplement A on behalf of the derivative's adult or minor child.	If eligible, the children of the principal's derivative relatives may qualify for T-6 nonimmigrant status, and obtain the immigration benefits that accompany that status. In addition, LEAs may benefit if more victims come forward to report trafficking crimes.
Implementing a clarification that presence in the Commonwealth of the Northern Mariana Islands (CNMI) after being granted T nonimmigrant status prior to November 28, 2009 qualifies toward the requisite physical presence requirement for adjustment of status.	Time in the CNMI as a T nonimmigrant, whether before, on or after November 28, 2009, now counts as physical presence for purposes of establishing eligibility for adjustment of status as a T nonimmigrant to lawful permanent residence.	None	Provides a benefit in that it addresses a gap in immigration law as it pertains to the CNMI and removes a provision that may have been a bar to adjustment of status to lawful permanent resident.

b. Costs of Discretionary Changes

Most of the discretionary changes included in the interim rule will require no additional costs to either victims of severe forms of trafficking or to DHS in its administration of T nonimmigrant status benefits. The two provisions related to USCIS's waiver authority over criminal inadmissibility grounds and its discretion to grant deferred action to those victims placed on the waiting list simply clarify current USCIS practice and do not result in changes to the process of handling and adjudicating T nonimmigrant applications. Likewise, the guidance provided in the interim rule for meeting the definition of "severe forms of trafficking in persons" where an individual has not performed labor or service, or a commercial sex act is simply a clarification of current DHS interpretation of the definition and will not result in additional costs or changes to the process of handling and the adjudication of T nonimmigrant applications. The remaining discretionary changes that result in no additional costs include:

- No longer weighing evidence as either primary or secondary in favor of an "any credible evidence" standard;
- Eliminating the requirement that applicants provide three passport-style photographs as part of his or her application;
- Discontinuing the current practice of requiring victims who escaped from traffickers prior to LEA involvement to submit evidence to show that he or she had no clear opportunity to depart from the United States; and
- Providing guidance on physical presence as it relates to eligibility for T

nonimmigrant status when the trafficking has occurred abroad.

Though these provisions do amend current DHS practice, they place no further burden or cost on victims of trafficking who wish to apply for T nonimmigrant status. Furthermore, DHS does not expect these changes to have an impact on staffing plans or adjudication timeframes in processing T nonimmigrant applications. The change to remove the filing deadline for individuals victimized prior to October 28, 2000 will result in costs for any additional victims that may now be eligible to apply for principal T-1 nonimmigrant status. In addition, if the victim wishes to provide evidence in their application that they are cooperating with law enforcement, there will be an opportunity cost for the law enforcement officer completing the Declaration of Law Enforcement Office for Victim of Trafficking in Persons, Form I-914 Supplement B.

Since there are no fees associated with either the T nonimmigrant application or providing required biometrics, the newly eligible population would be responsible only for the opportunity cost of time to file the Form I-914 and to submit the required biometrics.

DHS estimates the time burden to file the Form I-914 to be 2.25 hours. Generally, trafficked individuals applying for T-1 nonimmigrant status are not eligible to work in the United States until after USCIS has made a decision on their application (either a grant of bona fide determination or an approval). There could, however, be instances where a victim may have received other forms of immigration

relief which allowed them to legally work, although DHS does not collect the data necessary to estimate the number of victims that may fall into this category.⁴⁶ Consistent with other DHS rulemakings, we use wage rates as a mechanism to estimate the opportunity or time valuation costs for these aliens to file the Application for T Nonimmigrant Status, Form I-914 and to submit the required biometrics.

Assuming that most individuals applying for T-1 nonimmigrant status on the basis of removing the October 28, 2000 filing deadline are not yet authorized to work in the United States, DHS will use the Federal minimum wage as a proxy to estimate the opportunity cost understanding these individuals are not currently eligible to participate in the workforce. The Federal minimum wage is currently \$7.25 per hour.⁴⁷ To anticipate the full opportunity costs faced by the applicants, the minimum hourly wage rate is multiplied by 1.46 to account for the full cost of employee benefits such as paid leave, insurance, and retirement, which equals \$10.59 per hour.⁴⁸ DHS

⁴⁶ For example, some in this population could have received a grant of continued presence from DHS, U.S. Immigration and Customs Enforcement, which would permit them work authorization. See 22 U.S.C. 7105(c)(3)(A)(i).

⁴⁷ U.S. Department of Labor, Wage and Hour Division. *Minimum Wage* effective July 24, 2009, available at: <http://www.dol.gov/dol/topic/wages/minimumwage.htm>.

⁴⁸ U.S. Department of Labor, Bureau of Labor Statistics, *Economic News Release*, Table 1. Employer costs per hour worked for employee compensation and costs as a percent of total compensation: Civilian workers, by major occupational and industry group, May 2016, available at <http://www.bls.gov/news.release/ecec.t01>.

multiplied the fully burdened wage rate of \$10.59 per hour by the 2.25 hours estimated to file the Form I-914 to get an opportunity cost of \$23.83 to file the Application for T Nonimmigrant Status.⁴⁹

Applicants seeking T-1 nonimmigrant status will be required to travel to an ASC to submit biometrics. In past rulemaking, DHS estimated that the average round-trip distance to an ASC is 50 miles, and that the average travel time for the trip is 2.5 hours.⁵⁰ DHS also estimates that applicants will wait an average of 1.17 hours for service, bringing the total time to submit biometrics to 3.67 hours.⁵¹ In addition, the cost of travel includes a mileage charge based on the estimated 50 mile round trip at the 2016 General Services Administration rate of \$0.54 per mile, which equals \$27.00 for each applicant.⁵² Using an opportunity cost of time of \$10.59 per hour and the 3.67 hours estimated time for travel and service and the mileage charge of \$27.00, DHS estimates the cost per T-1 principal applicant to be \$65.87 for travel to and service at the ASC.⁵⁴ Therefore, the full cost for a T nonimmigrant applicant victimized

prior to October 28, 2000, including the total costs of filing the Form I-914 and submitting biometrics, is \$89.70.⁵⁵

Lastly, there is an opportunity cost for law enforcement to complete Declaration of Law Enforcement Officer for Victim of Trafficking in Persons, Form I-914 Supplement B if the applicant decides to include that evidence in their application. DHS estimates the time burden to complete Declaration of Law Enforcement Officer for Victim of Trafficking in Persons, Form I-914 Supplement B is 3.75 hours. In 2015, the mean hourly wage rate for law enforcement workers was \$27.34, which when accounting for non-salaried benefits equals \$39.92.⁵⁶ Using this total hourly wage rate, DHS estimates the opportunity costs for law enforcement to complete the Declaration of Law Enforcement Officer for Victim of Trafficking in Persons, Form I-914 Supplement B is \$149.70.⁵⁷ DHS is unable to estimate how many individuals victimized prior to October 28, 2000 may apply once the filing deadline is removed. Due to the passage of time, we anticipate filing volumes for those that were victimized prior to October 28, 2000 to be minimal.

Additionally, individuals who may now become eligible for T nonimmigrant status as a result of the expanded interpretation of the physical presence requirement will face the same opportunity cost of \$89.70 to file the Form I-914 and submit the required biometrics. Likewise, if the applicant decides to include evidence of law enforcement cooperation, the law enforcement official completing Declaration of Law Enforcement Officer for Victim of Trafficking in Persons, Form I-914 Supplement B will face an opportunity cost of \$149.70. DHS is unable to estimate how many individuals may become eligible as a result of this provision but anticipates there will be a limited number of cases where the trafficking occurred outside of the United States and the alien will now meet the physical presence requirement.

Table 4 provides a summary of the costs and benefits associated with each discretionary change made in this interim rule. The discretionary change that updates terminology and organizational structure in DHS regulations is not included in the table as it results in no additional impacts.

TABLE 4—SUMMARY OF IMPACTS TO THE REGULATED POPULATION OF THE DISCRETIONARY CHANGES IMPLEMENTED IN THIS INTERIM RULE

Provision	Changes to current policy resulting from the interim rule	Expected cost of the interim rule	Expected benefit of the interim rule
Specifies how USCIS exercises its waiver authority over criminal inadmissibility grounds.	None. This will simply be a clarification of current DHS practice and align T nonimmigrant regulations with those currently governing the U nonimmigrant status.	None	Providing clarity and consistency in DHS practice with DHS regulations will lead to a qualitative benefit to both the victims of trafficking and USCIS staff adjudicating these cases.
Discontinues weighing evidence as primary and secondary in favor of a standard that reviews any credible evidence in making the determination to approve or disapprove an application for T nonimmigrant status.	Evidence will no longer be labeled primary or secondary. DHS will accept any credible evidence of compliance with any reasonable request to assist LEAs.	None	Removes confusion associated with labeling evidence as primary and secondary, and will result in qualitative benefits for both the victims of trafficking and LEAs.
Eliminates the requirement that an applicant provide three passport-style photographs.	The applicant will no longer be responsible for submitting three passport-style photographs with his/her application. DHS will continue to take photographs at Application Support Centers at the time of fingerprint collection.	None	Results in total quantitative savings of \$56,130 for principal applicants and their derivatives.

⁴⁹ (\$10.59 per hour) × (2.25 hours) = \$23.83.

⁵⁰ See, e.g., *Provisional Unlawful Presence Waivers of Inadmissibility for Certain Immediate Relatives*, 78 FR 535 (Jan. 3, 2013) (DHS final rule).

⁵¹ See "Paperwork Reduction Act (PRA) Supporting Statement for Application for Employment Authorization, Form I-765 (OMB control number 1615-0040), Question 13. The Supporting Statement can be found on [Reginfo.gov](http://www.reginfo.gov)

at http://www.reginfo.gov/public/do/PRAViewICR?ref_nbr=201502-1615-004."

⁵² Calculation: 2.5 hours + 1.17 average of service wait time = 3.67 total time to submit biometrics.

⁵³ The General Services Administration mileage rate of \$0.54, effective January 1, 2016, available at: <http://www.gsa.gov/portal/content/100715>.

⁵⁴ (\$10.46 per hour × 3.67 hours) + (\$0.54 per mile × 50 miles) = \$65.87.

⁵⁵ \$23.83 + \$65.87 = \$89.70.

⁵⁶ U.S. Department of Labor, Bureau of Labor Statistics. *May 2015 National Occupational Employment and Wage Estimates*, Law Enforcement Workers (occupational group code 33-3000), http://www.bls.gov/oes/current/oes_nat.htm#33-0000. The calculation to load the wage is: \$27.34 × 1.46 = \$39.92 (rounded).

⁵⁷ (\$39.92 hourly burdened wage rate) × (3.75 hours in estimated time burden) = \$149.70.

TABLE 4—SUMMARY OF IMPACTS TO THE REGULATED POPULATION OF THE DISCRETIONARY CHANGES IMPLEMENTED IN THIS INTERIM RULE—Continued

Provision	Changes to current policy resulting from the interim rule	Expected cost of the interim rule	Expected benefit of the interim rule
Removes the filing deadline for applicants victimized prior to October 28, 2000.	Those victimized prior to October 28, 2000 will be able to apply for T nonimmigrant status.	Any new eligible applicants will be responsible for the full cost of \$89.70 for applying and submitting fingerprints. If included in the application, the cost for law enforcement to complete Form I-914 Supplement B is \$149.70.	Those victimized prior to October 28, 2000, and their eligible derivative family members, will be able to apply for T nonimmigrant status and receive the immigration benefits associated with that status.
Permits USCIS to take a discretionary action to protect applicants from removal who are placed on the waiting list if the statutory cap is met in a given fiscal year.	None. This will simply be a clarification of current DHS practice and align T nonimmigrant regulations with those currently governing the U nonimmigrant status.	None	Providing clarity and consistency in DHS practice will lead to a qualitative benefit to both the victims of trafficking and DHS staff adjudicating these cases.
Removes the current regulatory “opportunity to depart” requirement for those victims who escaped traffickers before law enforcement became involved.	DHS will no longer require additional evidence to show the victim had no opportunity to depart the United States after he/she escaped traffickers prior to LEA involvement.	None	Provides a qualitative benefit by removing an additional evidentiary burden for those victims of trafficking who escaped prior to LEA involvement.
Provides guidance on meeting the definition of “severe forms of trafficking in persons” where an individual has not performed labor or services, or a commercial sex act.	None. This will clarify current DHS practice as regards the definition of “severe forms of trafficking in persons”.	None	Providing clarity and consistency in DHS practice will lead to a qualitative benefit to both the victims of trafficking and DHS staff adjudicating these cases.
Addresses situations where trafficking has occurred abroad and whether the applicant can potentially meet the physical presence requirement.	DHS may consider victims as having met the physical presence requirement for certain instances when the trafficking occurred outside the United States.	Any new eligible applicants will be responsible for the full cost of \$89.70 for applying and submitting fingerprints. If included in the application, the cost for law enforcement to complete Form I-914 Supplement B is \$149.70.	Individuals victimized abroad, and their eligible derivative family members, can apply for T nonimmigrant status. These victims will also help in investigations of trafficking crimes, which will benefit LEAs.

c. Costs to the Federal Government

If the changes implemented in this interim rule increase the volume of applications for T nonimmigrant status, USCIS could face increased costs to administer the T nonimmigrant status program. The INA provides for the collection of fees at a level that will ensure recovery of the full costs of providing adjudication and naturalization services, including services provided without charge to asylum applicants and certain other immigrant applicants. INA section 286(m), 8 U.S.C. 1356(m). Recognizing the economic needs and hardships of this vulnerable population, as a matter of policy USCIS exempted the fee for applying for T nonimmigrant status and for submitting biometrics. Likewise, the fees for any additional applications needed for T nonimmigrants, from the time the alien victim applies for initial T nonimmigrant status (e.g. for submitting waivers of inadmissibility requests) through applications to adjust status, are eligible for fee waiver requests. Accordingly, the costs incurred by USCIS to process T nonimmigrant applications and biometrics are an insignificant portion

of the total USCIS adjudication costs compared to other fee paying immigrant benefit requests. These costs are insignificant due to the small number of receipts of Form I-914. In FY 2015, USCIS received 2,224 Form I-914 applications (see Table 1) out of a total of 7,650,475 applications received agency wide, making Form I-914 receipts less than 0.03% of total agency-wide receipts.⁵⁸ Therefore, to the extent that the changes implemented in this interim rule may result in additional applications, or even reach the statutory cap of 5,000 applications, in the short term we expect those costs to be insignificant and absorbed by the current fee structure for immigration benefits. In the long term, USCIS will continue to monitor the costs of administering the T nonimmigrant program as a normal part of its biennial fee review. The biennial fee review determines if fees for immigration

⁵⁸ Source: USCIS, Number of Service-wide Forms by Fiscal Year To-Date, Quarter, and Form Status 2015 available at https://www.uscis.gov/sites/default/files/USCIS/Resources/Reports%20and%20Studies/Immigration%20Forms%20Data/All%20Form%20Types/all_forms_performancedata_fy2015_qtr4.pdf.

benefits are sufficient in light resource needs and filing trends. As previously mentioned, beneficiaries of T nonimmigrant status are also eligible for federal public benefits from the Department of Health and Human Services, so the changes implemented in this interim rule could result in increased transfer payments if there are increases in the number of persons granted T nonimmigrant status.

E. Regulatory Flexibility Act

The Regulatory Flexibility Act (RFA), 5 U.S.C. 605(b), as amended by the Small Business Regulatory Enforcement Fairness Act of 1996 (SBREFA), requires an agency to prepare and make available to the public a regulatory flexibility analysis that describes the effect of the rule on small entities (*i.e.*, small businesses, small organizations, and small governmental jurisdictions). A regulatory flexibility analysis is not required when a rule is exempt from notice and comment rulemaking. DHS has determined that this rule is exempt from notice and comment rulemaking. Therefore, a regulatory flexibility analysis is not required for this rule. Nonetheless, USCIS examined the

impact of this rule on small entities under the Regulatory Flexibility Act (RFA), 5 U.S.C. 601(6). The individual victims of trafficking and their derivative family members to whom this rule applies are not small entities as that term is defined in 5 U.S.C. 601(6).

F. Executive Order 13132

This rule will not have substantial direct effects on the States, on the relationship between the National Government and the States, or on the distribution of power and responsibilities among the various levels of government. Therefore, in accordance with section 6 of Executive Order 13132 (Federalism), it is determined that this rule does not have sufficient federalism implications to warrant the preparation of a federalism summary impact statement.

G. Executive Order 12988

This rule meets the applicable standards set forth in sections 3(a) and 3(b)(2) of Executive Order 12988 (Civil Justice Reform).

H. Family Assessment

This regulation may affect family well-being as that term is defined in section 654 of the Treasury General Appropriations Act, 1999, Public Law 105–277, Div. A. This action has been assessed in accordance with the criteria specified by section 654(c)(1). This regulation will enhance family well-being by encouraging vulnerable individuals who have been victims of severe forms of trafficking in persons to report the criminal activity and by providing critical assistance and benefits. Additionally, this regulation allows certain family members to obtain T nonimmigrant status once the principal applicant has received status.

I. Paperwork Reduction Act

Under the PRA of 1995, 44 U.S.C. 3501 *et seq.*, all Departments are required to submit to OMB, for review and approval, any reporting requirements inherent in a rule. DHS is amending application requirements and procedures for aliens to receive T nonimmigrant status, defined in section 101(a)(15)(T) of the INA, 8 U.S.C. 1101(a)(15)(T). DHS has revised the Application for T Nonimmigrant Status, Form I–914; the Application for Family Member of T–1 Recipient, Form I–914 Supplement A; and the Declaration of Law Enforcement Officer for Victim of Trafficking in Persons, Form I–914 Supplement B, and the associated form instructions to conform with the new regulations (OMB Control Number 1615–0099). These forms are considered

information collections and are covered under the PRA. USCIS previously requested public comments on the revised forms and form instructions for 60 days. 60-day notice, *Agency Information Collection Activities: Application for T Nonimmigrant Status, Form I–914, Application for Immediate Family Member of T–1 Recipient, Supplement A, Declaration of Law Enforcement Officer for Victim of Trafficking in Persons, Supplement B; Revision of a Currently Approved Collection*, 79 FR 6209–10 (Feb. 3, 2014). One comment was received that expressed general opposition to the T nonimmigrant program but provided no input on the information collection instruments. No changes were made in response to the comment.

The revised information collection has been submitted for approval to the Office of Management and Budget (OMB) for review and approval under procedures covered under the PRA. USCIS is requesting comments on this information collection for 30 days until January 18, 2017. When submitting comments on the information collection, your comments should address one or more of the following four points.

(1) Evaluate whether the collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;

(2) Evaluate the accuracy of the agency's estimate of the burden of the collection of information, including the validity of the methodology and assumptions used;

(3) Enhance the quality, utility, and clarity of the information to be collected; and

(4) Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, e.g., permitting electronic submission of responses.

Overview of information collection:

(a) *Type of information collection:* Revised information collection.

(b) *Abstract:* This information collection will be used by individuals (aliens who are victims of severe forms of trafficking in persons and certain family members, as appropriate) to file a request for USCIS approval for T nonimmigrant status.

(c) *Title of Form/Collection:* Application for T Nonimmigrant Status, Application for Family Member of T–1 Recipient, and Declaration of Law

Enforcement Officer for Victim of Trafficking in Persons.

(d) *Agency form number, if any, and the applicable component of the Department of Homeland Security sponsoring the collection:* Form I–914, Form I–914 Supplement A, and Form I–914 Supplement B; USCIS.

(e) *Affected public who will be asked or required to respond:* Individuals and households.

(f) *An estimate of the total number of annual respondents:* 1,871 respondents.

(g) *Hours per response:* Application for T Nonimmigrant Status, Form I–914 at 2.25 hours per response; Application for Family Member of T–1 Recipient, Form I–914 Supplement A at 1 hour per response; Declaration of Law Enforcement Officer for Victim of Trafficking in Persons, Form I–914 Supplement B at 3.75 hours per response; and biometric services processing at 1.17 hours per response.

(h) *Total annual reporting burden:* 9,921 annual burden hours.

Comments should refer to the proposal by name and/or the OMB Control Number and should be sent to DHS using *one* of the methods provided under the **ADDRESSES** and I. Public Participation sections of this interim rule. Comments should also be submitted to USCIS Desk Officer, Office of Management and Budget, New Executive Office Building, Washington, DC 20503; fax: 202–395–5806. Email: OIRA_Submission@omb.eop.gov.

List of Subjects

8 CFR Part 212

Administrative practice and procedure, Aliens, Immigration, Passports and visas, Reporting and recordkeeping requirements.

8 CFR Part 214

Administrative practice and procedure, Aliens, Cultural exchange programs, Employment, Foreign officials, Health professions, Reporting and recordkeeping requirements, Students.

8 CFR Part 245

Aliens, Immigration, Reporting and recordkeeping requirements.

8 CFR Part 274a

Administrative practice and procedure, Aliens, Employment, Penalties, Reporting and recordkeeping requirements.

Accordingly, chapter I of title 8 of the Code of Federal Regulations is amended as follows:

PART 212—DOCUMENTARY REQUIREMENTS: NONIMMIGRANTS; WAIVERS; ADMISSION OF CERTAIN INADMISSIBLE ALIENS; PAROLE

■ 1. The authority citation for part 212 is revised to read as follows:

Authority: 8 U.S.C. 1101 and note, 1102, 1103, 1182 and note, 1184, 1187, 1223, 1225, 1226, 1227, 1255, 1359; 8 U.S.C. 1185 note (section 7209 of Pub. L. 108–458); 8 CFR part 2. Section 212.1(q) also issued under section 702, Pub. L. 110–229, 122 Stat. 754, 854.

■ 2. Section 212.1 is amended by revising paragraph (o) to read as follows:

§ 212.1 Documentary requirements for nonimmigrants.

* * * * *

(o) *Alien in T–2 through T–6 classification.* USCIS may apply paragraph (g) of this section to individuals seeking T–2, T–3, T–4, T–5, or T–6 nonimmigrant status upon request by the applicant.

* * * * *

■ 3. Section 212.16 is revised to read as follows:

§ 212.16 Applications for exercise of discretion relating to T nonimmigrant status.

(a) *Requesting the waiver.* An alien requesting a waiver of inadmissibility under section 212(d)(3)(B) or (d)(13) of the Act must submit a waiver form as designated by USCIS in accordance with 8 CFR 103.2.

(b) *Treatment of waiver request.* USCIS, in its discretion, may grant a waiver request based on section 212(d)(13) of the Act of the applicable ground(s) of inadmissibility, except USCIS may not waive a ground of inadmissibility based on sections 212(a)(3), (a)(10)(C), or (a)(10)(E) of the Act. An applicant for T nonimmigrant status is not subject to the ground of inadmissibility based on section 212(a)(4) of the Act (public charge) and is not required to file a waiver form for the public charge ground. Waiver requests are subject to a determination of national interest and connection to victimization as follows.

(1) *National interest.* USCIS, in its discretion, may grant a waiver of inadmissibility request if it determines that it is in the national interest to exercise discretion to waive the applicable ground(s) of inadmissibility.

(2) *Connection to victimization.* An applicant requesting a waiver under section 212(d)(13) of the Act on grounds other than the health-related grounds described in section 212(a)(1) of the Act must establish that the activities rendering him or her inadmissible were caused by, or were incident to, the

victimization described in section 101(a)(15)(T)(i)(I) of the Act.

(3) *Criminal grounds.* In exercising its discretion, USCIS will consider the number and seriousness of the criminal offenses and convictions that render an applicant inadmissible under the criminal and related grounds in section 212(a)(2) of the Act. In cases involving violent or dangerous crimes, USCIS will only exercise favorable discretion in extraordinary circumstances, unless the criminal activities were caused by, or were incident to, the victimization described under section 101(a)(15)(T)(i)(I) of the Act.

(c) *No appeal.* There is no appeal of a decision to deny a waiver request. Nothing in this section is intended to prevent an applicant from re-filing a request for a waiver of a ground of inadmissibility in appropriate cases.

(d) *Revocation.* USCIS, at any time, may revoke a waiver previously authorized under section 212(d) of the Act. There is no appeal of a decision to revoke a waiver.

PART 214—NONIMMIGRANT CLASSES

■ 4. The authority citation for part 214 continues to read as follows:

Authority: 6 U.S.C. 111 and 202; 8 U.S.C. 1101, 1102, 1103, 1182, 1184, 1186a, 1187, 1221, 1281, 1282, 1301–1305 and 1372 and 1762; Sec. 643, Pub. L. 104–208, 110 Stat. 3009–708; Pub. L. 106–386, 114 Stat. 1477–1480; Pub. L. 107–173, 116 Stat. 543; section 141 of the Compacts of Free Association with the Federated States of Micronesia and the Republic of the Marshall Islands, and with the Government of Palau, 48 U.S.C. 1901 note, and 1931 note, respectively; 48 U.S.C. 1806; 8 CFR part 2.

■ 5. Section 214.1 is amended by:

■ a. Revising paragraph (a)(1)(viii); and

■ b. Adding entries for “101(a)(15)(T)(v)” and “101(a)(15)(T)(vi)” in alpha/numeric sequence in the table in paragraph (a)(2).

The revision and additions read as follows:

§ 214.1 Nonimmigrant classifications.

(a) * * *

(1) * * *

(viii) Section 101(a)(15)(T)(ii) is divided into (T)(ii), (T)(iii), (T)(iv), and (T)(v) for the spouse, child, parent, and unmarried sibling under 18 years of age, respectively, of a principal nonimmigrant classified under section 101(a)(15)(T)(i); and T(vi) for the adult or minor child of a derivative nonimmigrant classified under section 101(a)(15)(T)(ii); and

* * * * *

(2) * * *

Section					Designation

■ 6. Section 214.11 is revised to read as follows:

§ 214.11 Alien victims of severe forms of trafficking in persons.

(a) *Definitions.* Where applicable, USCIS will apply the definitions provided in section 103 and 107(e) of the Trafficking Victims Protection Act (TVPA) with due regard for the definitions and application of these terms in 28 CFR part 1100 and the provisions of 18 U.S.C. 77. As used in this section the term:

Application for derivative T nonimmigrant status means a request by a principal alien on behalf of an eligible family member for derivative T–2, T–3, T–4, T–5, or T–6 nonimmigrant status on the form designated by USCIS for that purpose.

Application for T nonimmigrant status means a request by a principal alien for T–1 nonimmigrant status on the form designated by USCIS for that purpose.

Bona fide determination means a USCIS determination that an application for T–1 nonimmigrant status has been initially reviewed and determined that the application does not appear to be fraudulent, is complete and properly filed, includes completed fingerprint and background checks, and presents prima facie evidence of eligibility for T–1 nonimmigrant status including admissibility.

Child means a person described in section 101(b)(1) of the Act.

Coercion means threats of serious harm to or physical restraint against any person; any scheme, plan, or pattern intended to cause a person to believe that failure to perform an act would result in serious harm to or physical restraint against any person; or the abuse or threatened abuse of the legal process.

Commercial sex act means any sex act on account of which anything of value is given to or received by any person.

Debt bondage means the status or condition of a debtor arising from a pledge by the debtor of his or her personal services or of those of a person under his or her control as a security for debt, if the value of those services as reasonably assessed is not applied

toward the liquidation of the debt or the length and nature of those services are not respectively limited and defined.

Derivative T nonimmigrant means an eligible family member who has been granted T-2, T-3, T-4, T-5, or T-6 derivative status. A family member outside of the United States is not a derivative T nonimmigrant until he or she is granted a T-2, T-3, T-4, T-5, or T-6 visa by the Department of State and is admitted to the United States in derivative T nonimmigrant status.

Eligible family member means a family member who may be eligible for derivative T nonimmigrant status based on his or her relationship to an alien victim and, if required, upon a showing of a present danger or retaliation; and:

(1) In the case of an alien victim who is 21 years of age or older, means the spouse and children of such alien;

(2) In the case of an alien victim under 21 years of age, means the spouse, children, unmarried siblings under 18 years of age, and parents of such alien; and

(3) Regardless of the age of an alien victim, means any parent or unmarried sibling under 18 years of age, or adult or minor child of a derivative of such alien where the family member faces a present danger of retaliation as a result of the alien victim's escape from a severe form of trafficking or cooperation with law enforcement.

Involuntary servitude means a condition of servitude induced by means of any scheme, plan, or pattern intended to cause a person to believe that, if the person did not enter into or continue in such condition, that person or another person would suffer serious harm or physical restraint; or a condition of servitude induced by the abuse or threatened abuse of legal process. Involuntary servitude includes a condition of servitude in which the victim is forced to work for the defendant by the use or threat of physical restraint or physical injury, or by the use or threat of coercion through the law or the legal process. This definition encompasses those cases in which the defendant holds the victim in servitude by placing the victim in fear of such physical restraint or injury or legal coercion.

Law Enforcement Agency (LEA) means a Federal, State, or local law enforcement agency, prosecutor, judge, labor agency, children's protective services agency, or other authority that has the responsibility and authority for the detection, investigation, and/or prosecution of severe forms of trafficking in persons. Federal LEAs include but are not limited to the following: U.S. Attorneys' Offices, Civil

Rights Division, Criminal Division, U.S. Marshals Service, Federal Bureau of Investigation (Department of Justice); U.S. Immigration and Customs Enforcement (ICE), U.S. Customs and Border Protection (CBP); Diplomatic Security Service (Department of State); and Department of Labor.

Law Enforcement Agency (LEA) endorsement means an official LEA endorsement on the form designated by USCIS for such purpose.

Peonage means a status or condition of involuntary servitude based upon real or alleged indebtedness.

Principal T nonimmigrant means the victim of a severe form of trafficking in persons who has been granted T-1 nonimmigrant status.

Reasonable request for assistance means a request made by an LEA to a victim to assist in the investigation or prosecution of the acts of trafficking in persons or the investigation of crime where acts of trafficking are at least one central reason for the commission of that crime. The "reasonableness" of the request depends on the totality of the circumstances. Factors to consider include, but are not limited to: General law enforcement and prosecutorial practices; the nature of the victimization; the specific circumstances of the victim; severe trauma (both mental and physical); access to support services; whether the request would cause further trauma: The safety of the victim or the victim's family; compliance with other requests and the extent of such compliance; whether the request would yield essential information; whether the information could be obtained without the victim's compliance; whether an interpreter or attorney was present to help the victim understand the request; cultural, religious, or moral objections to the request; the time the victim had to comply with the request; and the age and maturity of the victim.

Severe form of trafficking in persons means sex trafficking in which a commercial sex act is induced by force, fraud, or coercion, or in which the person induced to perform such act is under the age of 18 years; or the recruitment, harboring, transportation, provision, or obtaining of a person for labor or services through the use of force, fraud, or coercion for the purpose of subjection to involuntary servitude, peonage, debt bondage, or slavery.

Sex trafficking means the recruitment, harboring, transportation, provision, obtaining, patronizing, or soliciting of a person for the purpose of a commercial sex act.

United States means the fifty States of the United States, the District of

Columbia, the Commonwealth of Puerto Rico, the U.S. Virgin Islands, Guam, and the Commonwealth of the Northern Mariana Islands.

Victim of a severe form of trafficking in persons (victim) means an alien who is or has been subject to a severe form of trafficking in persons.

(b) *Eligibility for T-1 status.* An alien is eligible for T-1 nonimmigrant status under section 101(a)(15)(T)(i) of the Act if he or she demonstrates all of the following, subject to section 214(o) of the Act:

(1) *Victim.* The alien is or has been a victim of a severe form of trafficking in persons.

(2) *Physical presence.* The alien is physically present in the United States or at a port-of-entry thereto, according to paragraph (g) of this section.

(3) *Compliance with any reasonable request for assistance.* The alien has complied with any reasonable request for assistance in a Federal, State, or local investigation or prosecution of acts of trafficking in persons, or the investigation of a crime where acts of trafficking in persons are at least one central reason for the commission of that crime, or meets one of the conditions described below.

(i) *Exemption for minor victims.* An alien under 18 years of age is not required to comply with any reasonable request.

(ii) *Exception for trauma.* An alien who, due to physical or psychological trauma, is unable to cooperate with a reasonable request for assistance in the Federal, State, or local investigation or prosecution of acts of trafficking in persons, or the investigation of a crime where acts of trafficking in persons are at least one central reason for the commission of that crime, is not required to comply with such reasonable request.

(4) *Hardship.* The alien would suffer extreme hardship involving unusual and severe harm upon removal.

(5) *Prohibition against traffickers in persons.* No alien will be eligible to receive T nonimmigrant status under section 101(a)(15)(T) of the Act if there is substantial reason to believe that the alien has committed an act of a severe form of trafficking in persons.

(c) *Period of admission.* (1) *T-1 Principal.* T-1 nonimmigrant status may be approved for a period not to exceed 4 years, except as provided in section 214(o)(7) of the Act.

(2) *Derivative family members.* A derivative family member who is otherwise eligible for admission may be granted T-2, T-3, T-4, T-5, or T-6 nonimmigrant status for an initial period that does not exceed the

expiration date of the initial period approved for the T-1 principal alien, except as provided in section 214(o)(7) of the Act.

(3) *Notice.* At the time an alien is approved for T nonimmigrant status or receives an extension of T nonimmigrant status, USCIS will notify the alien when his or her T nonimmigrant status will expire. USCIS also will notify the alien that the failure to apply for adjustment of status to lawful permanent resident, as set forth in 8 CFR 245.23, will result in termination of the alien's T nonimmigrant status in the United States at the end of the 4-year period or any extension.

(d) *Application.* USCIS has sole jurisdiction over all applications for T nonimmigrant status.

(1) *Filing an application.* An alien seeking T-1 nonimmigrant status must submit an application for T nonimmigrant status on the form designated by USCIS in accordance with 8 CFR 103.2 and with the evidence described in paragraph (d) of this section.

(i) *Applicants in pending immigration proceedings.* An alien in removal proceedings under section 240 of the Act, or in exclusion or deportation proceedings under former sections 236 or 242 of the Act (as in effect prior to April 1, 1997), and who wishes to apply for T-1 nonimmigrant status must file an application for T nonimmigrant status directly with USCIS. In its discretion, DHS may agree to the alien's request to file with the immigration judge or the Board a joint motion to administratively close or terminate proceedings without prejudice, whichever is appropriate, while an application for T nonimmigrant status is adjudicated by USCIS.

(ii) *Applicants with final orders of removal, deportation, or exclusion.* An alien subject to a final order of removal, deportation, or exclusion may file an application for T-1 nonimmigrant status directly with USCIS. The filing of an application for T nonimmigrant status has no effect on DHS authority or discretion to execute a final order of removal, although the alien may request an administrative stay of removal pursuant to 8 CFR 241.6(a). If the alien is in detention pending execution of the final order, the period of detention (under the standards of 8 CFR 241.4) reasonably necessary to bring about the applicant's removal will be extended during the period the stay is in effect. If USCIS subsequently determines under the procedures in paragraph (e) of this section that the application is bona fide, DHS will automatically grant an

administrative stay of the final order of removal, deportation, or exclusion, and the stay will remain in effect until a final decision is made on the application for T nonimmigrant status.

(iii) *Minor applicants.* When USCIS receives an application from a minor principal alien under the age of 18, USCIS will notify the Department of Health and Human Services to facilitate the provision of interim assistance.

(2) *Initial evidence.* An application for T nonimmigrant status must include:

(i) The applicant's signed statement describing the facts of the victimization and compliance with any reasonable law enforcement request (or a basis for why he or she has not complied) and any other eligibility requirements in his or her own words;

(ii) Any credible evidence that the applicant would like USCIS to consider supporting any of the eligibility requirements set out in paragraphs (f), (g), (h) and (i) of this section; and

(iii) *Inadmissible applicants.* If an applicant is inadmissible based on a ground that may be waived, he or she must also submit a request for a waiver of inadmissibility on the form designated by USCIS with the fee prescribed by 8 CFR 103.7(b)(1), in accordance with form instructions and 8 CFR 212.16, and accompanied by supporting evidence.

(3) *Evidence from law enforcement.*

An applicant may wish to submit evidence from an LEA to help establish certain eligibility requirements for T nonimmigrant status. Evidence from an LEA is optional and is not given any special evidentiary weight.

(i) *Law Enforcement Agency (LEA) endorsement.* An LEA endorsement is optional evidence that can be submitted to help demonstrate victimization and/or compliance with reasonable requests. An LEA endorsement is not mandatory and is not given any special evidentiary weight. An LEA endorsement itself does not grant a benefit and is one form of possible evidence but it does not lead to automatic approval of the application for T nonimmigrant status by USCIS. If provided, the LEA endorsement must be submitted on the form designated by USCIS in accordance with the form instructions and must be signed by a supervising official responsible for the detection, investigation or prosecution of severe forms of trafficking in persons. The LEA endorsement must attach the results of any name or database inquiries performed and describe the victimization (including dates where known) and the cooperation of the victim. USCIS, not the LEA, will determine if the applicant was or is a victim of a severe form of trafficking in

persons, and otherwise meets the eligibility requirements for T nonimmigrant status. The decision whether to complete an LEA endorsement is at the discretion of the LEA. A formal investigation or prosecution is not required to complete an LEA endorsement.

(ii) *Disavowed or revoked LEA endorsement.* An LEA may revoke or disavow the contents of a previously submitted endorsement in writing. After revocation or disavowal, the LEA endorsement will no longer be considered as evidence.

(iii) *Continued Presence.* An applicant granted Continued Presence under 28 CFR 110.35 should submit documentation of the grant of Continued Presence. If Continued Presence has been revoked, it will no longer be considered as evidence.

(iv) *Other evidence.* An applicant may also submit any evidence regarding entry or admission into the United States or permission to remain in the United States or note that such evidence is contained in an applicant's immigration file.

(4) *Biometric services.* All applicants for T-1 nonimmigrant status must submit biometrics in accordance with 8 CFR 103.16.

(5) *Evidentiary standards and burden of proof.* The burden is on the applicant to demonstrate eligibility for T-1 nonimmigrant status. The applicant may submit any credible evidence relating to a T nonimmigrant application for consideration by USCIS. USCIS will conduct a de novo review of all evidence and may investigate any aspect of the application. Evidence previously submitted by the applicant for any immigration benefit or relief may be used by USCIS in evaluating the eligibility of an applicant for T-1 nonimmigrant status. USCIS will not be bound by previous factual determinations made in connection with a prior application or petition for any immigration benefit or relief. USCIS will determine, in its sole discretion, the evidentiary value of previously or concurrently submitted evidence.

(6) *Interview.* USCIS may require an applicant for T nonimmigrant status to participate in a personal interview. The necessity and location of the interview is determined solely by USCIS in accordance with 8 CFR part 103. Every effort will be made to schedule the interview in a location convenient to the applicant.

(7) *Bona fide determination.* Once an alien submits an application for T-1 nonimmigrant status, USCIS will conduct an initial review to determine if the application is a bona fide

application for T-1 nonimmigrant status under the provisions of paragraph (e) of this section.

(8) *Decision.* After completing its de novo review of the application and evidence, USCIS will issue a decision approving or denying the application in accordance with 8 CFR 103.3.

(9) *Approval.* If USCIS determines that the applicant is eligible for T-1 nonimmigrant status, USCIS will approve the application and grant T-1 nonimmigrant status, subject to the annual limitation as provided in paragraph (j) of this section. USCIS will provide the applicant with evidence of T-1 nonimmigrant status. USCIS may also notify other parties and entities of the approval as it determines appropriate, including any LEA providing an LEA endorsement and the Department of Health and Human Service's Office of Refugee Resettlement, consistent with 8 U.S.C. 1367.

(i) *Applicants with an outstanding order of removal, deportation or exclusion issued by DHS.* For an applicant who is the subject of an order of removal, deportation or exclusion issued by DHS, the order will be deemed cancelled by operation of law as of the date of the USCIS approval of the application.

(ii) *Applicants with an outstanding order of removal, deportation or exclusion issued by the Department of Justice.* An applicant who is the subject of an order of removal, deportation or exclusion issued by an immigration judge or the Board may seek cancellation of such order by filing a motion to reopen and terminate removal proceedings with the immigration judge or the Board. ICE may agree, as a matter of discretion, to join such motion to overcome any applicable time and numerical limitations of 8 CFR 1003.2 and 1003.23.

(10) *Denial.* Upon denial of an application, USCIS will notify the applicant in accordance with 8 CFR 103.3. USCIS may also notify any LEA providing an LEA endorsement and the Department of Health and Human Service's Office of Refugee Resettlement. If an applicant appeals a denial in accordance with 8 CFR 103.3, the denial will not become final until the administrative appeal is decided.

(i) *Effect on bona fide determination.* Upon denial of an application, any benefits derived from a bona fide determination will automatically be revoked when the denial becomes final.

(ii) *Applicants previously in removal proceedings.* In the case of an applicant who was previously in removal proceedings that were terminated on the

basis of a pending application for T nonimmigrant status, once a denial becomes final, DHS may file a new Notice to Appear to place the individual in removal proceedings again.

(iii) *Applicants subject to an order of removal, deportation or exclusion.* In the case of an applicant who is subject to an order of removal, deportation or exclusion that had been stayed due to the pending application for T nonimmigrant status, the stay will be automatically lifted as of the date the denial becomes final.

(11) *Employment authorization.* An alien granted T-1 nonimmigrant status is authorized to work incident to status. There is no need for an alien to file a separate form to be granted employment authorization. USCIS will issue an initial Employment Authorization Document (EAD) to such aliens, which will be valid for the duration of the alien's T-1 nonimmigrant status. An alien granted T-1 nonimmigrant status seeking to replace an EAD that was lost, stolen, or destroyed must file an application on the form designated by USCIS in accordance with form instructions.

(e) *Bona fide determination.* Once an alien submits an application for T-1 nonimmigrant status, USCIS will conduct an initial review to determine if the application is a bona fide application for T-1 nonimmigrant status.

(1) *Criteria.* After initial review, an application will be determined to be bona fide if:

(i) The application is properly filed and is complete;

(ii) The application does not appear to be fraudulent;

(iii) The application presents prima facie evidence of each eligibility requirement for T-1 nonimmigrant status;

(iv) Biometrics and background checks are complete; and

(v) The applicant is:

(A) Admissible to the United States; or

(B) Inadmissible to the United States based on a ground that may be waived (other than section 212(a)(4) of the Act); and either the applicant has filed a waiver of a ground of inadmissibility described in section 212(d)(13) of the Act concurrently with the application for T nonimmigrant status, or USCIS has already granted a waiver with respect to any ground of inadmissibility that applies to the applicant. USCIS may request further evidence from the applicant. All waivers are discretionary and require a request for waiver, on the form designated by USCIS.

(2) *USCIS determination.* An application will not be treated as bona fide until USCIS provides notice to the applicant.

(i) *Incomplete or insufficient application.* If an application is incomplete or if an application is complete but does not present sufficient evidence to establish prima facie eligibility for each eligibility requirement for T-1 nonimmigrant status, USCIS may request additional information, issue a notice of intent to deny as provided in 8 CFR 103.2(b)(8), or may adjudicate the application on the basis of the evidence presented under the procedures of this section.

(ii) *Notice.* Once USCIS determines an application is bona fide, USCIS will notify the applicant. An application will be treated as a bona fide application as of the date of the notice.

(3) *Stay of final order of removal, deportation, or exclusion.* If USCIS determines that an application is bona fide it automatically stays the execution of any final order of removal, deportation, or exclusion. This administrative stay will remain in effect until any adverse decision becomes final. The filing of an application for T nonimmigrant status does not automatically stay the execution of a final order unless USCIS has determined that the application is bona fide. Neither an immigration judge nor the Board has jurisdiction to adjudicate an application for a stay of removal, deportation, or exclusion on the basis of the filing of an application for T nonimmigrant status.

(f) *Victim of a severe form of trafficking in persons.* To be eligible for T-1 nonimmigrant status an applicant must meet the definition of a victim of a severe form of trafficking in persons described in paragraph (a) of this section.

(1) *Evidence.* The applicant must submit evidence that demonstrates that he or she is or has been a victim of a severe form of trafficking in persons. Except in instances of sex trafficking involving victims under 18 years of age, severe forms of trafficking in persons must involve both a particular means (force, fraud, or coercion) and a particular end or a particular intended end (sex trafficking, involuntary servitude, peonage, debt bondage, or slavery). If a victim has not performed labor or services, or a commercial sex act, the victim must establish that he or she was recruited, transported, harbored, provided, or obtained for the purposes of subjection to sex trafficking, involuntary servitude, peonage, debt bondage, or slavery, or patronized or solicited for the purposes of subjection

to sex trafficking. The applicant may satisfy this requirement by submitting:

(i) An LEA endorsement as described in paragraph (d)(3) of this section;

(ii) Documentation of a grant of Continued Presence under 28 CFR 1100.35; or

(iii) Any other evidence, including but not limited to, trial transcripts, court documents, police reports, news articles, copies of reimbursement forms for travel to and from court, and/or affidavits. In the victim's statement prescribed by paragraph (d)(2) of this section, the applicant should describe what the alien has done to report the crime to an LEA and indicate whether criminal records relating to the trafficking crime are available.

(2) If the Continued Presence has been revoked or the contents of the LEA endorsement have been disavowed based on a determination that the applicant is not or was not a victim of a severe form of trafficking in persons, it will no longer be considered as evidence.

(g) *Physical presence.* To be eligible for T-1 nonimmigrant status an applicant must be physically present in the United States, American Samoa, or at a port-of-entry thereto on account of such trafficking.

(1) *Applicability.* The physical presence requirement requires USCIS to consider the alien's presence in the United States at the time of application. The requirement reaches an alien who:

(i) Is present because he or she is currently being subjected to a severe form of trafficking in persons;

(ii) Was liberated from a severe form of trafficking in persons by an LEA;

(iii) Escaped a severe form of trafficking in persons before an LEA was involved, subject to paragraph (g)(2) of this section;

(iv) Was subject to a severe form of trafficking in persons at some point in the past and whose continuing presence in the United States is directly related to the original trafficking in persons; or

(v) Is present on account of the alien having been allowed entry into the United States for participation in investigative or judicial processes associated with an act or perpetrator of trafficking.

(2) *Departure from the United States.* An alien who has voluntarily departed from (or has been removed from) the United States at any time after the act of a severe form of trafficking in persons is deemed not to be present in the United States as a result of such trafficking in persons unless:

(i) The alien's reentry into the United States was the result of the continued victimization of the alien;

(ii) The alien is a victim of a new incident of a severe form of trafficking in persons; or

(iii) The alien has been allowed reentry into the United States for participation in investigative or judicial processes associated with an act or perpetrator of trafficking, described in paragraph (g)(4) of this section.

(3) *Presence for participation in investigative or judicial processes.* An alien who was allowed initial entry or reentry into the United States for participation in investigative or judicial processes associated with an act or perpetrator of trafficking will be deemed to be physically present in the United States on account of trafficking in persons, regardless of where such trafficking occurred. To satisfy this section, an alien must submit documentation to show valid entry into the United States and evidence that this valid entry is for participation in investigative or judicial processes associated with an act or perpetrator of trafficking.

(4) *Evidence.* The applicant must submit evidence that demonstrates that his or her physical presence in the United States or at a port-of-entry thereto, is on account of trafficking in persons, including physical presence on account of the alien having been allowed entry into the United States for participation in investigative or judicial processes associated with an act or a perpetrator of trafficking. USCIS will consider all evidence presented to determine the physical presence requirement, including the alien's responses to questions on the application for T nonimmigrant status about when he or she escaped from the trafficker, what activities he or she has undertaken since that time including the steps he or she may have taken to deal with the consequences of having been trafficked, and the applicant's ability to leave the United States. The applicant may satisfy this requirement by submitting:

(i) An LEA endorsement, described in paragraph (d)(3) of this section;

(ii) Documentation of a grant of Continued Presence under 28 CFR 1100.35;

(iii) Any other documentation of entry into the United States or permission to remain in the United States, such as parole under section 212(d)(5) of the Act, or a notation that such evidence is contained in the applicant's immigration file; or

(iv) Any other credible evidence, including a personal statement from the applicant, stating the date and place (if known) and the manner and purpose (if known) for which the applicant entered

the United States and demonstrating that the applicant is now present on account of the trafficking.

(h) *Compliance with any reasonable request for assistance in an investigation or prosecution.* To be eligible for T-1 nonimmigrant status, an applicant must have complied with any reasonable request for assistance from an LEA in an investigation or prosecution of acts of trafficking or the investigation of a crime where acts of trafficking are at least one central reason for the commission of that crime, unless the applicant meets an exemption described in paragraph (h)(4) of this section.

(1) *Applicability.* An applicant must have had, at a minimum, contact with an LEA regarding the acts of a severe form of trafficking in persons. An applicant who has never had contact with an LEA regarding the acts of a severe form of trafficking in persons will not be eligible for T-1 nonimmigrant status, unless he or she meets an exemption described in paragraph (h)(4) of this section.

(2) *Unreasonable requests.* An applicant need only show compliance with reasonable requests made by an LEA for assistance in the investigation or prosecution of the acts of trafficking in persons. The reasonableness of the request depends on the totality of the circumstances. Factors to consider include, but are not limited to:

(i) General law enforcement and prosecutorial practices;

(ii) The nature of the victimization;

(iii) The specific circumstances of the victim;

(iv) Severity of trauma suffered (both mental and physical) or whether the request would cause further trauma;

(v) Access to support services;

(vi) The safety of the victim or the victim's family;

(vii) Compliance with previous requests and the extent of such compliance;

(viii) Whether the request would yield essential information;

(ix) Whether the information could be obtained without the victim's compliance;

(x) Whether an interpreter or attorney was present to help the victim understand the request;

(xi) Cultural, religious, or moral objections to the request;

(xii) The time the victim had to comply with the request; and

(xiii) The age and maturity of the victim.

(3) *Evidence.* An applicant must submit evidence that demonstrates that he or she has complied with any reasonable request for assistance in a

Federal, State, or local investigation or prosecution of trafficking in persons, or a crime where trafficking in persons is at least one central reason for the commission of that crime. In the alternative, an applicant can submit evidence to demonstrate that he or she should be exempt under paragraph (h)(4) of this section. If USCIS has any question about whether the applicant has complied with a reasonable request for assistance, USCIS may contact the LEA. The applicant may satisfy this requirement by submitting any of the following:

(i) An LEA endorsement as described in paragraph (d)(3) of this section;

(ii) Documentation of a grant of Continued Presence under 28 CFR 1100.35; or

(iii) Any other evidence, including affidavits of witnesses. In the victim's statement prescribed by paragraph (d)(2) of this section, the applicant should show that an LEA that has responsibility and authority for the detection, investigation, or prosecution of severe forms of trafficking in persons has information about such trafficking in persons, that the victim has complied with any reasonable request for assistance in the investigation or prosecution of such acts of trafficking, and, if the victim did not report the crime, why the crime was not previously reported.

(4) An applicant who has not had contact with an LEA or who has not complied with any reasonable request may be exempt from the requirement to comply with any reasonable request for assistance in an investigation or prosecution if either of the following two circumstances applies:

(i) *Trauma*. The applicant is unable to cooperate with a reasonable request for assistance in the Federal, State, or local investigation or prosecution of acts of trafficking in persons due to physical or psychological trauma. An applicant must submit evidence of the trauma. An applicant may satisfy this by submitting an affirmative statement describing the trauma and any other credible evidence. "Any other credible evidence" includes, for instance, a signed statement from a qualified professional, such as a medical professional, social worker, or victim advocate, who attests to the victim's mental state, and medical, psychological, or other records which are relevant to the trauma. USCIS reserves the authority and discretion to contact the LEA involved in the case, if appropriate; or

(ii) *Age*. The applicant is under 18 years of age. An applicant under 18 years of age is exempt from the requirement to comply with any

reasonable request for assistance in an investigation or prosecution, but he or she must submit evidence of age. Applicants should include, where available, an official copy of the alien's birth certificate, a passport, or a certified medical opinion. Other evidence regarding the age of the applicant may be submitted in accordance with 8 CFR 103.2(b)(2)(i).

(i) *Extreme hardship involving unusual and severe harm*. To be eligible for T-1 nonimmigrant status, an applicant must demonstrate that removal from the United States would subject the applicant to extreme hardship involving unusual and severe harm.

(1) *Standard*. Extreme hardship involving unusual and severe harm is a higher standard than extreme hardship as described in 8 CFR 240.58. A finding of extreme hardship involving unusual and severe harm may not be based solely upon current or future economic detriment, or the lack of, or disruption to, social or economic opportunities. The determination of extreme hardship is made solely by USCIS.

(2) *Factors*. Factors that may be considered in evaluating whether removal would result in extreme hardship involving unusual and severe harm should include both traditional extreme hardship factors and factors associated with having been a victim of a severe form of trafficking in persons. These factors include, but are not limited to:

(i) The age, maturity, and personal circumstances of the applicant;

(ii) Any physical or psychological issues the applicant has which necessitates medical or psychological care not reasonably available in the foreign country;

(iii) The nature and extent of the physical and psychological consequences of having been a victim of a severe form of trafficking in persons;

(iv) The impact of the loss of access to the United States courts and the criminal justice system for purposes relating to the incident of a severe form of trafficking in persons or other crimes perpetrated against the applicant, including criminal and civil redress for acts of trafficking in persons, criminal prosecution, restitution, and protection;

(v) The reasonable expectation that the existence of laws, social practices, or customs in the foreign country to which the applicant would be returned would penalize the applicant severely for having been the victim of a severe form of trafficking in persons;

(vi) The likelihood of re-victimization and the need, ability, and willingness of

foreign authorities to protect the applicant;

(vii) The likelihood of harm that the trafficker in persons or others acting on behalf of the trafficker in the foreign country would cause the applicant; or

(viii) The likelihood that the applicant's individual safety would be threatened by the existence of civil unrest or armed conflict.

(3) *Evidence*. An applicant must submit evidence that demonstrates he or she would suffer extreme hardship involving unusual and severe harm if removed from the United States. An applicant is encouraged to describe and document all factors that may be relevant to the case, as there is no guarantee that a particular reason(s) will satisfy the requirement. Hardship to persons other than the alien victim cannot be considered in determining whether an applicant would suffer the requisite hardship. The applicant may satisfy this requirement by submitting any credible evidence regarding the nature and scope of the hardship if the applicant was removed from the United States, including evidence of hardship arising from circumstances surrounding the victimization and any other circumstances. An applicant may submit a personal statement or other evidence, including evidence from relevant country condition reports and any other public or private sources of information.

(j) *Annual cap*. In accordance with section 214(o)(2) of the Act, DHS may not grant T-1 nonimmigrant status to more than 5,000 aliens in any fiscal year.

(1) *Waiting list*. All eligible applicants who, due solely to the cap, are not granted T-1 nonimmigrant status will be placed on a waiting list and will receive written notice of such placement. Priority on the waiting list will be determined by the date the application was properly filed, with the oldest applications receiving the highest priority. In the next fiscal year, USCIS will issue a number to each application on the waiting list, in the order of the highest priority, providing the applicant remains admissible and eligible for T nonimmigrant status. After T-1 nonimmigrant status has been issued to qualifying applicants on the waiting list, any remaining T-1 nonimmigrant numbers for that fiscal year will be issued to new qualifying applicants in the order that the applications were properly filed.

(2) *Unlawful presence*. While an applicant for T nonimmigrant status who was granted deferred action or parole is on the waiting list, the applicant will not accrue unlawful

presence under section 212(a)(9)(B) of the Act while maintaining parole or deferred action.

(3) *Removal from the waiting list.* An applicant may be removed from the waiting list and the deferred action or parole may be terminated consistent with law and policy. Applicants on the waiting list must remain admissible to the United States and otherwise eligible for T nonimmigrant status. If at any time prior to final adjudication USCIS receives information that an applicant is no longer eligible for nonimmigrant status, the applicant may be removed from the waiting list and the deferred action or parole may be terminated. USCIS will provide notice to the applicant of that decision.

(k) *Application for eligible family members.* (1) *Eligibility.* Subject to section 214(o) of the Act, an alien who has applied for or has been granted T-1 nonimmigrant status (principal alien) may apply for the admission of an eligible family member, who is otherwise admissible to the United States, in derivative T nonimmigrant status if accompanying or following to join the principal alien.

(i) *Principal alien 21 years of age or older.* For a principal alien who is 21 years of age or over, eligible family member means a T-2 (spouse) or T-3 (child).

(ii) *Principal alien under 21 years of age.* For a principal alien who is under 21 years of age, eligible family member means a T-2 (spouse), T-3 (child), T-4 (parent), or T-5 (unmarried sibling under the age of 18).

(iii) *Family member facing danger of retaliation.* Regardless of the age of the principal alien, if the eligible family member faces a present danger of retaliation as a result of the principal alien's escape from the severe form of trafficking or cooperation with law enforcement, in consultation with the law enforcement officer investigating a severe form of trafficking, eligible family member means a T-4 (parent), T-5 (unmarried sibling under the age of 18), or T-6 (adult or minor child of a derivative of the principal alien).

(iv) *Admission requirements.* The principal applicant must demonstrate that the alien for whom derivative T nonimmigrant status is being sought is an eligible family member of the T-1 principal alien, as defined in paragraph (a) of this section, and is otherwise eligible for that status.

(2) *Application.* A T-1 principal alien may submit an application for derivative T nonimmigrant status on the form designated by USCIS in accordance with the form instructions. The application for derivative T

nonimmigrant status for an eligible family member may be filed with the T-1 application, or separately. Derivative T nonimmigrant status is dependent on the principal alien having been granted T-1 nonimmigrant status and the principal alien maintaining T-1 nonimmigrant status. If a principal alien granted T-1 nonimmigrant status cannot maintain status due to his or her death, the provisions of section 204(l) of the Act may apply.

(i) *Eligible family members in pending immigration proceedings.* If an eligible family member is in removal proceedings under section 240 of the Act, or in exclusion or deportation proceedings under former sections 236 or 242 of the Act (as in effect prior to April 1, 1997), the principal alien must file an application for derivative T nonimmigrant status directly with USCIS. In its discretion and at the request of the eligible family member, ICE may agree to file a joint motion to administratively close or terminate proceedings without prejudice with the immigration judge or the Board, whichever is appropriate, while USCIS adjudicates an application for derivative T nonimmigrant status.

(ii) *Eligible family members with final orders of removal, deportation, or exclusion.* If an eligible family member is the subject of a final order of removal, deportation, or exclusion, the principal alien may file an application for derivative T nonimmigrant status directly with USCIS. The filing of an application for derivative T nonimmigrant status has no effect on ICE's authority or discretion to execute a final order, although the alien may file a request for an administrative stay of removal pursuant to 8 CFR 241.6(a). If the eligible family member is in detention pending execution of the final order, the period of detention (under the standards of 8 CFR 241.4) will be extended while a stay is in effect for the period reasonably necessary to bring about the applicant's removal.

(3) *Required supporting evidence.* In addition to the form, an application for derivative T nonimmigrant status must include the following:

(i) Biometrics submitted in accordance with 8 CFR 103.16;

(ii) Evidence demonstrating the relationship of an eligible family member, as provided in paragraph (k)(4) of this section;

(iii) In the case of an alien seeking derivative T nonimmigrant status on the basis of danger of retaliation, evidence demonstrating this danger as provided in paragraph (k)(6) of this section.

(iv) *Inadmissible applicants.* If an eligible family member is inadmissible

based on a ground that may be waived, a request for a waiver of inadmissibility under section 212(d)(13) or section 212(d)(3) of the Act must be filed in accordance with 8 CFR 212.16 and submitted with the completed application package.

(4) *Relationship.* Except as described in paragraphs (k)(5) of this section, the family relationship must exist at the time:

(i) The application for the T-1 nonimmigrant status is filed;

(ii) The application for the T-1 nonimmigrant status is adjudicated;

(iii) The application for derivative T nonimmigrant status is filed;

(iv) The application for derivative T nonimmigrant status is adjudicated; and

(v) The eligible family member is admitted to the United States if residing abroad.

(5) *Relationship and age-out protections.* (i) *Protection for new child of a principal alien.* If the T-1 principal alien proves that he or she had a child after filing the application for T-1 nonimmigrant status, the child will be deemed to be an eligible family member eligible to accompany or follow to join the T-1 principal alien.

(ii) *Age-out protection for eligible family members of a principal alien under 21 years of age.* If the T-1 principal alien was under 21 years of age when he or she filed for T-1 nonimmigrant status, USCIS will continue to consider a parent or unmarried sibling as an eligible family member. A parent or unmarried sibling will remain eligible even if the principal alien turns 21 years of age before adjudication of the T-1 application. An unmarried sibling will remain eligible even if the unmarried sibling is over 18 years of age at the time of adjudication of the T-1 application, so long as the unmarried sibling was under 18 years of age at the time of the T-1 application. The age of an unmarried sibling when USCIS adjudicates the T-1 application, when the unmarried sibling files the derivative application, when USCIS adjudicates the derivative application, or when the unmarried sibling is admitted to the United States does not affect eligibility.

(iii) *Age-out protection for child of a principal alien 21 years of age or older.* If a T-1 principal alien was 21 years of age or older when he or she filed for T-1 nonimmigrant status, USCIS will continue to consider a child as an eligible family member if the child was under 21 years of age at the time the principal filed for T-1 nonimmigrant status. The child will remain eligible even if the child is over 21 years of age at the time of adjudication of the T-1

application. The age of the child when USCIS adjudicates the T-1 application, when the child files the derivative application, when USCIS adjudicates the derivative application, or when the child is admitted to the United States does not affect eligibility.

(iv) *Marriage of an eligible family member.* An eligible family member seeking T-3 or T-5 status must be unmarried when the principal files an application for T-1 status, when USCIS adjudicates the T-1 application, when the eligible family member files for T-3 or T-5 status, when USCIS adjudicates the T-3 or T-5 application, and when the family member is admitted to the United States. If a T-1 marries subsequent to filing the application for T-1 status, USCIS will not consider the spouse eligible as a T-2 eligible family member.

(6) *Evidence demonstrating a present danger of retaliation.* An alien seeking derivative T nonimmigrant status on the basis of facing a present danger of retaliation as a result of the T-1 victim's escape from a severe form of trafficking or cooperation with law enforcement, must demonstrate the basis of this danger. USCIS may contact the LEA involved, if appropriate. An applicant may satisfy this requirement by submitting:

(i) Documentation of a previous grant of advance parole to an eligible family member;

(ii) A signed statement from a law enforcement official describing the danger of retaliation;

(iii) An affirmative statement from the applicant describing the danger the family member faces and how the danger is linked to the victim's escape or cooperation with law enforcement (ordinarily an applicant's statement alone is not sufficient to prove present danger); and/or

(iv) Any other credible evidence, including trial transcripts, court documents, police reports, news articles, copies of reimbursement forms for travel to and from court, and affidavits from other witnesses.

(7) *Biometric collection; evidentiary standards.* The provisions for biometric capture and evidentiary standards described in paragraph (d)(2) and (d)(4) of this section apply to an eligible family member's application for derivative T nonimmigrant status.

(8) *Review and decision.* USCIS will review the application and issue a decision in accordance with paragraph (d) of this section.

(9) *Derivative approvals.* Aliens whose applications for derivative T nonimmigrant status are approved are not subject to the annual cap described

in paragraph (j) of this section. USCIS will not approve applications for derivative T nonimmigrant status until USCIS has approved T-1 nonimmigrant status to the related principal alien.

(i) *Approvals for eligible family members in the United States.* When USCIS approves an application for derivative T nonimmigrant status for an eligible family member in the United States, USCIS will concurrently approve derivative T nonimmigrant status. USCIS will notify the T-1 principal alien of such approval and provide evidence of derivative T nonimmigrant status to the derivative.

(ii) *Approvals for eligible family members outside the United States.* When USCIS approves an application for an eligible family member outside the United States, USCIS will notify the T-1 principal alien of such approval and provide the necessary documentation to the Department of State for consideration of visa issuance.

(10) *Employment authorization.* An alien granted derivative T nonimmigrant status may apply for employment authorization by filing an application on the form designated by USCIS with the fee prescribed in 8 CFR 103.7(b)(1) in accordance with form instructions. For derivatives in the United States, the application may be filed concurrently with the application for derivative T nonimmigrant status or at any later time. For derivatives outside the United States, an application for employment authorization may only be filed after admission to the United States in T nonimmigrant status. If the application for employment authorization is approved, the derivative alien will be granted employment authorization pursuant to 8 CFR 274a.12(c)(25) for the period remaining in derivative T nonimmigrant status.

(l) *Extension of T nonimmigrant status.* (1) *Eligibility.* USCIS may grant extensions of T-1 nonimmigrant status beyond 4 years from the date of approval in 1-year periods from the date the T-1 nonimmigrant status ends if:

(i) An LEA investigating or prosecuting activity related to human trafficking certifies that the presence of the alien in the United States is necessary to assist in the investigation or prosecution of such activity;

(ii) The Secretary of Homeland Security determines that an extension is warranted due to exceptional circumstances; or

(iii) The alien has a pending application for adjustment of status to that of a lawful permanent resident.

(2) *Application for a discretionary extension of status.* Upon application, USCIS may extend T-1 nonimmigrant

status based on law enforcement need or exceptional circumstances. A T-1 nonimmigrant may apply for an extension by submitting the form designated by USCIS with the prescribed fee and in accordance with form instructions. A T-1 nonimmigrant should indicate on the application whether USCIS should apply the extension to any family member holding derivative T nonimmigrant status.

(3) *Timely filing.* An alien should file the application to extend nonimmigrant status before the expiration of T-1 nonimmigrant status. If T-1 nonimmigrant status has expired, the applicant must explain in writing the reason for the untimely filing. USCIS may exercise its discretion to approve an untimely filed application for extension of T nonimmigrant status.

(4) *Evidence.* In addition to the application, a T-1 nonimmigrant must include evidence to support why USCIS should grant an extension of T nonimmigrant status. The nonimmigrant bears the burden of establishing eligibility for an extension of status.

(5) *Evidence of law enforcement need.* An applicant may demonstrate law enforcement need by submitting evidence that comes directly from an LEA, including:

(i) A new LEA endorsement;

(ii) Evidence from a law enforcement official, prosecutor, judge, or other authority who can investigate or prosecute human trafficking activity, such as a letter on the agency's letterhead, email, or fax; or

(iii) Any other credible evidence.

(6) *Evidence of exceptional circumstances.* An applicant may demonstrate exceptional circumstances by submitting:

(i) The applicant's affirmative statement; or

(ii) Any other credible evidence, including medical records, police or court records, news articles, correspondence with an embassy or consulate, and affidavits of witnesses.

(7) *Mandatory extensions of status for adjustment of status applicants.* USCIS will automatically extend T-1 nonimmigrant status when a T nonimmigrant properly files an application for adjustment of status in accordance with 8 CFR 245.23. No separate application for extension of T nonimmigrant status, or supporting evidence, is required.

(m) *Revocation of approved T nonimmigrant status.* (1) *Automatic revocation of derivative status.* An approved application for derivative T nonimmigrant status will be revoked automatically if the beneficiary of the approved derivative application notifies

USCIS that he or she will not apply for admission to the United States.

(2) *Revocation on notice/grounds for revocation.* USCIS may revoke an approved application for T nonimmigrant status following issuance of a notice of intent to revoke. USCIS may revoke an approved application for T nonimmigrant status based on one or more of the following reasons:

(i) The approval of the application violated the requirements of section 101(a)(15)(T) of the Act or 8 CFR 214.11 or involved error in preparation, procedure, or adjudication that affects the outcome;

(ii) In the case of a T-2 spouse, the alien's divorce from the T-1 principal alien has become final;

(iii) In the case of a T-1 principal alien, an LEA with jurisdiction to detect or investigate the acts of severe forms of trafficking in persons notifies USCIS that the alien has refused to comply with reasonable requests to assist with the investigation or prosecution of the trafficking in persons and provides USCIS with a detailed explanation in writing; or

(iv) The LEA that signed the LEA endorsement withdraws it or disavows its contents and notifies USCIS and provides a detailed explanation of its reasoning in writing.

(3) *Procedures.* Procedures for revocation and appeal follow 8 CFR 103.3. If USCIS revokes approval of the previously granted T nonimmigrant status application, USCIS may notify the LEA who signed the LEA endorsement, any consular officer having jurisdiction over the applicant, or the Office of Refugee Resettlement of the Department of Health and Human Services.

(4) *Effect of revocation.* Revocation of a principal alien's application for T-1 nonimmigrant status will result in termination of T-1 status for the principal alien and, consequently, the automatic termination of the derivative T nonimmigrant status for all derivatives. If a derivative application is pending at the time of revocation, it will be denied. Revocation of an approved application for T-1 nonimmigrant status or an application for derivative T nonimmigrant status also revokes any waiver of inadmissibility granted in conjunction with such application. The revocation of an alien's T-1 status will have no effect on the annual cap described in paragraph (j) of this section.

(n) *Removal proceedings.* Nothing in this section prohibits DHS from instituting removal proceedings for conduct committed after admission, or for conduct or a condition that was not disclosed prior to the granting of T

nonimmigrant status, including misrepresentations of material facts in the application for T-1 nonimmigrant status or in an application for derivative T nonimmigrant status, or after revocation of T nonimmigrant status.

(o) *USCIS employee referral.* Any USCIS employee who, while carrying out his or her official duties, comes into contact with an alien believed to be a victim of a severe form of trafficking in persons and is not already working with an LEA should consult, as necessary, with the ICE officials responsible for victim protection, trafficking investigations and prevention, and deterrence. The ICE office may, in turn, refer the victim to another LEA with responsibility for investigating or prosecuting severe forms of trafficking in persons. If the alien has a credible claim to victimization, USCIS may advise the alien that he or she can submit an application for T nonimmigrant status and seek any other benefit or protection for which he or she may be eligible, provided doing so would not compromise the alien's safety.

(p) *Restrictions on use and disclosure of information relating to applicants for T nonimmigrant classification.* (1) The use or disclosure (other than to a sworn officer or employee of DHS, the Department of Justice, the Department of State, or a bureau or agency of any of those departments, for legitimate department, bureau, or agency purposes) of any information relating to the beneficiary of a pending or approved application for T nonimmigrant status is prohibited unless the disclosure is made in accordance with an exception described in 8 U.S.C. 1367(b).

(2) Information protected under 8 U.S.C. 1367(a)(2) may be disclosed to federal prosecutors to comply with constitutional obligations to provide statements by witnesses and certain other documents to defendants in pending federal criminal proceedings.

(3) Agencies receiving information under this section, whether governmental or non-governmental, are bound by the confidentiality provisions and other restrictions set out in 8 U.S.C. 1367.

(4) DHS officials are prohibited from making adverse determinations of admissibility or deportability based on information obtained solely from the trafficker, unless the alien has been convicted of a crime or crimes listed in section 237(a)(2) of the Act.

PART 245—ADJUSTMENT OF STATUS TO THAT OF PERSON ADMITTED FOR PERMANENT RESIDENCE

■ 7. The authority citation for part 245 continues to read as follows:

Authority: 8 U.S.C. 1101, 1103, 1182, 1255; Pub. L. 105–100, section 202, 111 Stat. 2160, 2193; Pub. L. 105–277, section 902, 112 Stat. 2681; Pub. L. 110–229, tit. VII, 122 Stat. 754; 8 CFR part 2.

■ 8. Section 245.23(a)(3) and (b)(2) are revised to read as follows:

§ 245.23 Adjustment of aliens in T nonimmigrant classification.

(a) * * *

(3) Has been physically present in the United States for a continuous period of at least 3 years since the first date of lawful admission as a T-1 nonimmigrant, or has been physically present in the United States for a continuous period during the investigation or prosecution of acts of trafficking and the Attorney General has determined that the investigation or prosecution is complete, whichever period is less; except

(i) If the applicant has departed from the United States for any single period in excess of 90 days or for any periods in the aggregate exceeding 180 days, the applicant shall be considered to have failed to maintain continuous physical presence in the United States for purposes of section 245(l)(1)(A) of the Act; and

(ii) If the alien was granted T nonimmigrant status under 8 CFR 214.11, such alien's physical presence in the CNMI before, on, or after November 28, 2009, and subsequent to the grant of T nonimmigrant status, is considered as equivalent to presence in the United States pursuant to an admission in T nonimmigrant status.

* * * * *

(b) * * *

(2) The derivative family member was lawfully admitted to the United States in derivative T nonimmigrant status under section 101(a)(15)(T)(ii) of the Act, and continues to hold such status at the time of application;

* * * * *

PART 274a—CONTROL OF EMPLOYMENT OF ALIENS

■ 9. The authority citation for part 274a continues to read as follows:

Authority: 8 U.S.C. 1101, 1103, 1324a; 48 U.S.C. 1806; 8 CFR part 2; Pub. L. 101–410, 104 Stat. 890, as amended by Pub. L. 114–74, 129 Stat. 599.

■ 10. Section 274a.12 is amended by revising paragraphs (a)(16) and (c)(25) to read as follows:

§ 274a.12 Classes of aliens authorized to accept employment.

(a) * * *

(16) Any alien in T-1 nonimmigrant status, pursuant to 8 CFR 214.11, for the period in that status, as evidenced by an

employment authorization document issued by USCIS to the alien.

* * * * *

(c) * * *

(25) Any alien in T-2, T-3, T-4, T-5, or T-6 nonimmigrant status, pursuant to 8 CFR 214.11, for the period in that status, as evidenced by an employment

authorization document issued by USCIS to the alien.

Department of Labor

Employee Benefits Security Administration

29 CFR Part 2560

Claims Procedure for Plans Providing Disability Benefits; Final Rule

DEPARTMENT OF LABOR**Employee Benefits Security Administration****29 CFR Part 2560**

RIN 1210-AB39

Claims Procedure for Plans Providing Disability Benefits**AGENCY:** Employee Benefits Security Administration, Department of Labor.**ACTION:** Final rule.

SUMMARY: This document contains a final regulation revising the claims procedure regulations under the Employee Retirement Income Security Act of 1974 (ERISA) for employee benefit plans providing disability benefits. The final rule revises and strengthens the current rules primarily by adopting certain procedural protections and safeguards for disability benefit claims that are currently applicable to claims for group health benefits pursuant to the Affordable Care Act. This rule affects plan administrators and participants and beneficiaries of plans providing disability benefits, and others who assist in the provision of these benefits, such as third-party benefits administrators and other service providers.

DATES: *Effective Date:* This rule is effective January 18, 2017.

Applicability Date: This regulation applies to all claims for disability benefits filed on or after January 1, 2018.

FOR FURTHER INFORMATION CONTACT: Frances P. Steen, Office of Regulations and Interpretations, Employee Benefits Security Administration, (202) 693-8500. This is not a toll free number.

SUPPLEMENTARY INFORMATION:**I. Background**

Section 503 of ERISA requires every employee benefit plan, in accordance with regulations of the Department, to “provide adequate notice in writing to any participant or beneficiary whose claim for benefits under the plan has been denied, setting forth the specific reasons for such denial, written in a manner calculated to be understood by the participant” and “afford a reasonable opportunity to any participant whose claim for benefits has been denied for a full and fair review by the appropriate named fiduciary of the decision denying the claim.”

In 1977, the Department published a regulation pursuant to section 503, at 29 CFR 2560.503-1, establishing minimum requirements for benefit claims procedures for employee benefit plans

covered by title I of ERISA (hereinafter “Section 503 Regulation”).¹ The Department revised and updated the Section 503 Regulation in 2000 by improving and strengthening the minimum requirements for employee benefit plan claims procedures.² As revised in 2000, the Section 503 Regulation provided new time frames and enhanced requirements for notices and disclosure with respect to decisions at both the initial claims decision stage and on review for group health and disability benefits. The regulations were designed to help reduce lawsuits over benefit disputes, promote consistency in handling benefit claims, and provide participants and beneficiaries a non-adversarial method of having a plan fiduciary review and settle claims disputes. Although the Section 503 Regulation applies to all covered employee benefit plans, including pension plans, group health plans, and plans that provide disability benefits, the more stringent procedural protections under the Section 503 Regulation apply to claims for group health benefits and disability benefits.³

The Department’s experience since 2000 with the Section 503 Regulation and related changes in the governing law for group health benefits led the Department to conclude that it was appropriate to re-examine the rules governing disability benefit claims. Even though fewer private-sector employees participate in disability plans than in group health and other types of plans,⁴ disability cases dominate the ERISA litigation landscape today. An empirical study of ERISA employee benefits litigation from 2006 to 2010 concluded that cases involving

long-term disability claims accounted for 64.5% of benefits litigation whereas lawsuits involving health care plans and pension plans accounted for only 14.4% and 9.3%, respectively.⁵ Insurers and plans looking to contain disability benefit costs may be motivated to aggressively dispute disability claims.⁶ Concerns exist regarding conflicts of interest impairing the objectivity and fairness of the process for deciding claims for group health benefits. Those concerns resulted in the Affordable Care Act recognizing the need to enhance the Section 503 Regulation with added procedural protections and consumer safeguards for claims for group health benefits.⁷ The Departments of Health and Human Services, Labor, and the Department of the Treasury issued regulations improving the internal claims and appeals process and establishing rules for the external review processes required under the Affordable Care Act (“ACA”).⁸ These additional protections for a fair process include the right of claimants to respond to new and additional evidence and rationales and the requirement for independence and impartiality of the persons involved in making benefit determinations.

The Department’s independent ERISA advisory group also urged the

⁵ See Sean M. Anderson, *ERISA Benefits Litigation: An Empirical Picture*, 28 ABA J. Lab. & Emp. L. 1 (2012).

⁶ See, e.g., *Salomaa v. Honda Long Term Disability Plan*, 642 F.3d 666, 678 (9th Cir. 2011) (“The plan’s reasons for denial were shifting and inconsistent as well as illogical. . . . Failing to pay out money owed based on a false statement of reasons for denying is cheating, every bit as much as making a false claim.”); *Lauder v. First Unum Life Ins. Co.*, 76 F. App’x 348, 350 (2d Cir. 2003) (reversing district court’s denial of attorneys’ fees to plaintiff-insured and describing “ample demonstration of bad faith on First Unum’s part, including . . . the frivolous nature of virtually every position it has advocated in the litigation.”); *Schully v. Continental Cas. Co.*, 634 F. Supp. 2d 663, 687 (E.D. La. 2009) (“In concluding that plaintiff was not disabled, the Hartford not only disregarded considerable objective medical evidence, but it also relied heavily on inconclusive and irrelevant evidence . . . Hartford’s denial of coverage results from its preferential and predetermined conclusions.”); *Rabuck v. Hartford Life and Accident Ins. Co.*, 522 F. Supp. 2d 844, 882 (W.D. Mich. 2007) (insurer “obviously motivated by its own self-interest, engaged in an unprincipled and overly aggressive campaign to cut off benefits for a gravely ill insured who could not possibly have endured the rigors of his former occupation on a full-time basis.”); *Curtin v. Unum Life Ins. Co. of America*, 298 F. Supp. 2d 149, 159 (D. ³ A benefit is a disability benefit, subject to the special rules for disability claims under the Section 503 Regulation, if the plan conditions its availability to the claimant upon a showing of disability. If the claims adjudicator must make a determination of disability in order to decide a claim, the claim must be treated as a disability claim for purposes of the Section 503 Regulation, and it does not matter how the benefit is characterized by the plan or whether the plan as a whole is a pension plan or a welfare plan. On the other hand, when a plan, including a pension plan, provides a benefit the availability of which is conditioned on a finding of disability made by a party other than the plan, (e.g., the Social Security Administration or the employer’s long-term disability plan), then a claim for such benefits is not treated as a disability claim for purposes of the Section 503 Regulation. See FAQs About The Benefit Claims Procedure Regulation, A-9 (www.dol.gov/sites/default/files/ebsa/about-ebsa/our-activities/programs-and-initiatives/outreach-and-education/hbec/CAGHDP.pdf).

Department to re-examine the disability claims process. Specifically, in 2012, the ERISA Advisory Council undertook a study on issues relating to managing disability in an environment of individual responsibility. The Council concluded based on the public input it received that “[n]ot all results have been positive for the participant under ERISA-covered plans and the implementing claim procedures regulations, even though these rules were intended to protect participants” and noted that “[t]he Council was made aware of reoccurring issues and administrative practices that participants and beneficiaries face when appealing a claim that may be inconsistent with the existing regulations.” The Advisory Council’s report included the following recommendation for the Department:

Review current claims regulations to determine updates and modifications, drawing upon analogous processes described in health care regulations where appropriate, for disability benefit claims including: (a) Content for denials of such claims; (b) rule regarding full and fair review, addressing what is an adequate opportunity to develop the record and address retroactive rescission of an approved benefit; (c) alternatives that would resolve any conflict between the administrative claims and appeals process and the participants’ ability to timely bring suit; (d) the applicability of the ERISA claim procedures to offsets and eligibility determinations.

2012 ERISA Advisory Council Report, *Managing Disability Risks in an Environment of Individual Responsibility*, available at www.dol.gov/sites/default/files/ebsa/about-ebsa/about-us/erisa-advisory-council/2012ACreport2.pdf.

The Department agreed that the amendments to the claims regulation for group health plans could serve as an appropriate model for improvements to the claims process for disability claims. Those amendments aimed to ensure full and fair consideration of health benefit claims by giving claimants ready access to the relevant evidence and standards; ensuring the impartiality of persons involved in benefit determinations; giving claimants notice and a fair opportunity to respond to the evidence, rationales, and guidelines for decision; and making sure that the bases for decisions are fully and fairly communicated to the claimant. In the Department’s view, these basic safeguards are just as necessary for a full and fair process in the disability context as in the health context. Moreover, as in the group health plan context, disability claims are often reviewed by a court under an abuse of discretion standard

based on the administrative record. Because the claimant may have limited opportunities to supplement the record, the Department concluded that it is particularly important that the claimant be given a full opportunity to develop the record that will serve as the basis for review and to respond to the evidence, rationales, and guidelines relevant to the decision.

The Department’s determination to revise the claims procedures was additionally affected by the aggressive posture insurers and plans can take to disability claims as described above coupled with the judicially recognized conflicts of interest insurers and plans often have in deciding benefit claims.⁹ In light of these concerns, the Department concluded that enhancements in procedural safeguards and protections similar to those required for group health plans under the Affordable Care Act were as important, if not more important, in the case of claims for disability benefits.

The Department decided to start by proposing to amend the current standards applicable to the processing of claims and appeals for disability benefits so that they included improvements to certain basic procedural protections in the current Section 503 Regulation, many of which already apply to ERISA-covered group health plans pursuant to the Department’s regulations implementing the requirements of the Affordable Care Act.

On November 18, 2015, the Department published in the **Federal Register** a proposed rule revising the claims procedure regulations for plans providing disability benefits under ERISA.¹⁰ The Department received 145 public comments in response to the proposed rule from plan participants, consumer groups representing disability benefit claimants, employer groups, individual insurers and trade groups representing disability insurance providers. The comments were posted on the Department’s Web site at www.dol.gov/agencies/ebsa/laws-and-regulations/rules-and-regulations/public-comments/1210-AB39. After careful consideration of the issues raised by the written public comments, the Department decided to adopt the improvements in procedural protections and other safeguards largely as set forth in the November 2015 proposal. The

¹⁰ 80 FR 7214.

Department revised some of the requirements in response to public comments as part of its overall effort to strike a balance between improving a claimant’s reasonable opportunity to pursue a full and fair review and the attendant costs and administrative burdens on plans providing disability benefits.

The Department believes that this action is necessary to ensure that disability claimants receive a full and fair review of their claims, as required by ERISA section 503, under the more stringent procedural protections that Congress established for group health care claimants under the ACA and the Department’s implementing regulation at 29 CFR 2590.715–2719 (“ACA Claims and Appeals Final Rule”).¹¹ This final rule will promote fairness and accuracy in the claims review process and protect participants and beneficiaries in ERISA-covered disability plans by ensuring they receive benefits that otherwise might have been denied by plan administrators in the absence of the fuller protections provided by this final regulation. The final rule also will help alleviate the financial and emotional hardship suffered by many individuals when they are unable to work after becoming disabled and their claims are denied.

II. Overview of Final Rule

A. Comments on Overall Need To Improve Claims Procedure Rules for Disability Benefits

Numerous disabled claimants and their representatives submitted comments stating general support for the proposed rule. For example, some commenters described the proposal as reinforcing the integrity of disability benefit plan administration and markedly improving the claims process by strengthening notice and disclosure protections, prescribing more exacting standards of conduct for review of denied claims, ensuring claimants’ more effective access to the claims process, and providing safeguards to ensure full court review of adverse benefit determinations. Some commenters supported the proposed amendments as “good first steps” towards providing more transparency and accountability, but advocated additional steps to strengthen, improve, and update the current rules. Some commenters emphasized that disability and lost earnings impose severe hardship on many individuals, arguing that disability claimants have a “poor” prospect of fair review under the current

¹¹ 80 FR 72192 (Nov. 18, 2015).

regulation primarily because of the economic incentive for insurance companies to deny otherwise valid claims and because plans are often able to secure a deferential standard of review in court.

Commenters, primarily disability insurers and benefit providers, commented that the disability claims regulation should not mirror Affordable Care Act requirements because unlike disability claims: (i) The vast majority of medical claims are determined electronically with little or no human involvement, *i.e.*, no reviewers studying materials and consulting with varied professionals; (ii) medical claims typically involve only a limited treatment over a relatively short period of time, whereas disability claims require a series of determinations over a period of several years; (iii) medical claims rarely involve a need to consult with outside professionals; (iv) medical claims involve an isolated issue, whereas disability claims involve a more complex, multi-layered analysis; and (v) medical claim files may consist of only a few pages of materials, whereas disability claim files can consist of hundreds, sometimes thousands of pages of information. As a result of these factors, the commenters stressed that it can take significant time to review and render a decision. Some of those commenters argued that applying ACA protections to disability benefit claims was contrary to Congressional intent because disability plans were not subject to the ACA's group health plan provisions. Some claimed that the proposed rules in their current form will have unintended consequences (undue delay and increased costs and litigation), and will result in expenses and burdens that will increase the cost of coverage and discourage employers from sponsoring disability benefit plans. Finally, some claimed that the increased protections and transparency that would be required under the proposal would weaken protection against disability fraud and were unnecessary because the current regulations provide ample protections for claimants, are written to benefit the insured, and have worked well for more than a decade as evidenced by the asserted fact that the vast majority of disability claims incurred by insurers are paid, and, of the claims denied, only a very small percentage are ultimately litigated. Some argued that technological advances that have expedited processing of health care claims do not apply to disability claims adjudication, contended that the Department had not

properly quantified or qualified the benefits associated with the proposed regulations or provided a sufficient cost analysis associated with the proposed regulations, and commented that the Department should withdraw the proposal until better data is collected.

After careful consideration of the issues raised by the written comments, the Department does not agree with the commenters' assertion that the ACA changes for group health plans are not an appropriate model for improving claims procedures for disability benefits. The enactment of the ACA, and the issuance of the implementing regulations, has resulted in disability benefit claimants receiving fewer procedural protections than group health plan participants even though litigation regarding disability benefit claims is prevalent today. As noted above, the Department's Section 503 Regulation imposes more stringent procedural protections on claims for group health and disability benefits than on claims for other types of benefits. The Department believes that disability benefit claimants should continue to receive procedural protections similar to those that apply to group health plans, and that it makes sense to model the final rule on the procedural protections and consumer safeguards that Congress and the President established for group health care claimants under the ACA. These protections and safeguards will allow some participants to receive benefits that might have been incorrectly denied in the absence of the fuller protections provided by the regulation. It will also help alleviate the financial and emotional hardship suffered by many individuals when they lose earnings due to their becoming disabled.

Moreover, the Department carefully selected among the ACA amendments to the claims procedures for group health plans, and incorporated into the proposal only certain of the basic improvements in procedural protections and consumer safeguards. The proposal, and final rule, also include several adjustments to the ACA requirements to account for the different features and characteristics of disability benefit claims.

The Department agrees with the commenters who supported the proposed changes who emphasized that disability and lost earnings impose severe hardship on many individuals. Under those circumstances, and considering the judicially recognized economic incentive for insurance companies to deny otherwise valid claims, the Department views enhancements in procedural safeguards

and protections similar to those required for group health plans under the Affordable Care Act as being just as important, if not more important, in the case of claims for disability benefits. This view was supported by the assertions by some plans and disability insurance providers that disability claims processing involves more human involvement, with reviewers studying pages of materials and consulting with varied professionals on claims that involve a more complex, multi-layered analysis. Even assuming the characteristics cited by the commenter fairly describe a percentage of processed disability claims, the Department does not believe those characteristics support a decision to treat the processing of disability benefits more leniently than group health benefits. The Department believes there is potential for error and opportunity for the insurer's conflict of interest to inappropriately influence a benefit determination under highly automated claims processing, as well as claims processing with more human involvement.¹² Increased transparency and accountability in all claims processes is important if claimants of disability benefits are to have a reasonable opportunity to pursue a full and fair review of a benefit denial, as required by ERISA section 503. Also, and as more fully discussed in the Regulatory Impact Analysis section of this document, the Department does not agree that the adoption of these basic procedural protections will cause excessive increases in costs and litigation, or result in expenses and burdens that will discourage employers from sponsoring plans providing disability benefits. In fact, comments from some industry groups support the conclusion that the protections adopted in the final rule reflect best practices that many insurers and benefit providers already follow on a voluntary basis.

Thus, while the Department has made some changes and clarifications in response to comments, the final rule, described below, is substantially the same as the proposal. Specifically, the major provisions in the final rule

¹² While commenters contended that disability claim files are larger than health benefit claim files, in the Department's view, this is not a reason for denying claimants the same procedural protections and safeguards that the ACA provided for group health benefit claims. Furthermore, in the 2000 claims regulation, the Department already accommodated differences between health and disability claims by allowing more time for decisions on disability claims. See 29 CFR 2560.503-1(f)(2)(iii)(B) (up to 30 days after receipt of claim with up to 15 days for an extension for post-service health claims); *id.* § 2560.503-1(f)(3) (up to 45 days after receipt of claim with two possible 30-day extensions for disability claims).

require that: (1) Claims and appeals must be adjudicated in a manner designed to ensure independence and impartiality of the persons involved in making the benefit determination; (2) benefit denial notices must contain a complete discussion of why the plan denied the claim and the standards applied in reaching the decision, including the basis for disagreeing with the views of health care professionals, vocational professionals, or with disability benefit determinations by the Social Security Administration (SSA); (3) claimants must be given timely notice of their right to access to their entire claim file and other relevant documents and be guaranteed the right to present evidence and testimony in support of their claim during the review process; (4) claimants must be given notice and a fair opportunity to respond before denials at the appeals stage are based on new or additional evidence or rationales; (5) plans cannot prohibit a claimant from seeking court review of a claim denial based on a failure to exhaust administrative remedies under the plan if the plan failed to comply with the claims procedure requirements unless the violation was the result of a minor error; (6) certain rescissions of coverage are to be treated as adverse benefit determinations triggering the plan's appeals procedures; and (7) required notices and disclosures issued under the claims procedure regulation must be written in a culturally and linguistically appropriate manner.

B. Comments on Major Provisions of Final Rule

1. Independence and Impartiality—Avoiding Conflicts of Interest

Consistent with the ACA Claims and Appeals Final Rule governing group health plans, paragraph (b)(7) of this final rule explicitly provides that plans providing disability benefits “must ensure that all claims and appeals for disability benefits are adjudicated in a manner designed to ensure the independence and impartiality of the persons involved in making the decision.” Therefore, this final rule requires that decisions regarding hiring, compensation, termination, promotion, or similar matters with respect to any individual must not be made based upon the likelihood that the individual will support the denial of disability benefits. For example, a plan cannot provide bonuses based on the number of denials made by a claims adjudicator. Similarly, a plan cannot contract with a medical expert based on the expert's reputation for outcomes in contested cases, rather than based on the expert's

professional qualifications. These added criteria for disability benefit claims address practices and behavior which cannot be reconciled with the “full and fair review” guarantee in section 503 of ERISA, and with the basic fiduciary standards that must be followed in implementing the plan's claims procedures. For the reasons described below, paragraph (b)(7) of the final rule therefore remains largely unchanged from the proposal.

The Department received numerous comments either generally supporting or not objecting to the idea that the independence and impartiality requirements for claims procedures for disability claims should be consistent with the ACA's claims procedures requirements for group health plans. Several commenters pointed out that even prior to the proposal, many disability plans had already taken affirmative steps to ensure the independence and impartiality of the persons involved in the decision-making process. Other commenters who opposed the provision as unnecessary similarly cited the fact that the proposed amendments reflect current industry practice and argued that issues regarding the independence and impartiality of the appeal process is already the subject of the well-developed body of case law. Although the Department agrees that the proposal was intended to be consistent with industry best practice trends and developing case law in the area, the Department does not believe that industry trends or court decisions are an acceptable substitute for including these provisions in a generally applicable regulation.

Several commenters suggested that the examples of individuals covered by this provision should include vocational experts. The commenters pointed out that vocational experts are often actively involved in the decision-making process for disability claims and play a role in the claims process similar to the role of a medical or health care professional. They noted that opinions of vocational experts are often relied on in making determinations on eligibility for and the amount of disability benefits. Although the list in the proposed provision was intended to merely reflect examples, not be an exhaustive list, the Department nonetheless agrees that it would be appropriate to add vocational experts to avoid disputes regarding their status under this provision of the final rule. This clarification of the provision from its proposed form is also consistent with the current regulation's express acknowledgement of the important role of vocational experts in the disability

claims process. Specifically, paragraph (h)(3)(iv) of the current regulation already requires that the claims procedure for disability benefit claims must provide for the identification of medical or vocational experts whose advice was obtained on behalf of the plan in connection with a claimant's adverse benefit determination, without regard to whether the advice was relied upon in making the benefit determination. Accordingly, the final rule adds “vocational expert” to the examples of persons involved in the decision-making process who must be insulated from the plan's or issuer's conflicts of interest. Decisions regarding hiring, compensation, termination, promotion, or other similar matters must not be based upon the likelihood that the individual will support the denial of benefits.

Commenters also asked the Department to clarify whether “consulting experts” are “involved in making the decision” for purposes of the independence and impartiality requirements. Some commenters were concerned that consulting experts would fall outside of these requirements because plans or claims administrators might assert that consulting experts merely supply information and do not decide claims. In the Department's view, the text of paragraph (b)(7) is clear that the independence and impartiality requirements are not limited to persons responsible for making the decision. For example, paragraph (b)(7) of the final rule, as in the proposal, refers to a “medical expert” as an example of a person covered by the provision. The text also refers to individuals who may “support the denial of benefits.” Thus, in the Department's view, the independence and impartiality requirements apply to plans' decisions regarding hiring, compensation, termination, promotion, or other similar matters with respect to consulting experts. Although some commenters suggested that the Department expand the regulatory text to expressly include “consulting experts,” in the Department's view, the regulatory text is sufficiently clear to address commenters' concerns especially with the inclusion of “vocational experts” in this provision of the final rule as described above. The Department also believes that it should avoid creating differences in the text of parallel provisions in the rules for group health benefits under the ACA Claims and Appeals Final Rule and disability benefits absent a reason that addresses a specific issue for disability claims

(like the vocational expert issue discussed above).

Several commenters asked the Department to clarify that the independence and impartiality requirements apply even where the plan does not directly hire or compensate the individuals “involved in making the decision” on a claim. The text of the rule does not limit its scope to individuals that the plan directly hires. Rather, the rule’s coverage extends to individuals hired or compensated by third parties engaged by the plan with respect to claims. Thus, for example, if a plan’s service provider is responsible for hiring, compensating, terminating, or promoting an individual involved in making a decision, this final rule requires the plan to take steps (*e.g.*, in the terms of its service contract and ongoing monitoring) to ensure that the service provider’s policies, practices, and decisions regarding hiring, compensating, terminating, or promoting covered individuals are not based upon the likelihood that the individual will support the denial of benefits.

One commenter, who supported applying independence and impartiality requirements, expressed concern about a statement in the preamble to the proposed rule that a plan cannot contract with a medical expert based on the expert’s reputation for outcomes in contested cases rather than based on the expert’s professional qualifications. The commenter did not object to the prohibition on hiring a medical expert based on a reputation for denying claims, but expressed concern that the statement in the preamble might result in claimants requesting statistics and other information on cases in which the medical expert expressed opinions in support of denying rather than granting a disability benefit claims. Another commenter who opposed the provision also expressed concern about court litigation and discovery regarding “reputation” issues arising from the text in the preamble. In the Department’s view, the preamble statement accurately describes one way that the independence and impartiality standard could be violated. That said, the independence and impartiality requirements in the rule do not modify the scope of “relevant documents” subject to the disclosure requirements in paragraphs (g)(1)(vii)(C) and (h)(2)(iii) of the Section 503 Regulation, as amended by this rule. Nor do the independence and impartiality requirements in the rule prescribe limits on the extent to which information about consulting experts would be discoverable in a court proceeding as part of an evaluation of

the extent to which the claims administrator or insurer was acting under a conflict of interest that should be considered in evaluating an adverse benefit determination.

Several commenters urged the Department to implement the independence and impartiality requirements with specific quantifiable limitations on the relationship between plans and consultants. For example, one commenter suggested a medical consultant be required to certify that no more than 20% of the consultant’s income is derived from reviewing files for insurance companies and/or self-funded disability benefit plans. Several commenters recommended that plans be required to disclose to claimants a range of quantifiable information regarding its relationship with certain consultants (*e.g.*, number of times a plan has relied upon the third-party vendor who hired the expert in the past year). A few commenters suggested that the Department establish rules on the qualifications, credentials, or licensing of an expert and the nature and type of such expert’s professional practice. For example, one commenter suggested that the rule provide that when a fiduciary relies on a physician or psychologist or other professional, such as a vocational specialist, the person must be licensed in the same jurisdiction where the plan beneficiary resides. Although the Department agrees that more specific quantifiable or other standards relating to the nature and type of an expert’s professional practice might provide additional protections against conflicts of interest, the parallel provisions in the claims procedure rule for group health plans under the ACA Claims and Appeals Final Rule do not contain such provisions. Moreover, an attempt to establish specific measures or other standards would benefit from a further proposal and public input. Accordingly, the final rule does not adopt the commenters’ suggestions.

2. Improvements to Disclosure Requirements

The Department proposed to improve the disclosure requirements for disability benefit claims in three respects. First, the proposal included a provision that expressly required adverse benefit determinations on disability benefit claims to contain a “discussion of the decision,” including the basis for disagreeing with any disability determination by the SSA or other third party disability payer, or any views of health care professionals treating a claimant to the extent the determination or views were presented by the claimant to the plan. Second,

notices of adverse benefit determinations must contain the internal rules, guidelines, protocols, standards or other similar criteria of the plan that were relied upon in denying the claim (or a statement that such criteria do not exist). Third, consistent with the current rule applicable to notices of adverse benefit determinations at the review stage, a notice of adverse benefit determination at the initial claims stage must contain a statement that the claimant is entitled to receive, upon request, relevant documents.

In the Department’s view, the existing claims procedure regulation for disability claims already imposes a requirement that denial notices include a reasoned explanation for the denial.¹³ For example, the rule requires that the notice must be written in a manner calculated to be understood by the claimant, must include any specific reasons for the adverse determination, must reference the specific provision in governing plan documents on which the determination is based, must include a description of any additional information required to perfect the claim, must include a description of the internal appeal process, and must include the plan’s rules, if any, that were used in denying the claim (or a statement that such rules are available upon request).

The Department’s experience in enforcing the claims procedure requirements and its review of litigation activity, however, leads it to conclude that some plans are providing disability claim notices that are not consistent with the letter or spirit of the Section 503 Regulation. Accordingly, the Department believes that expressly setting forth additional requirements in the regulation, even if some may already apply under the current rule, is an appropriate way of reinforcing the need for plan fiduciaries to administer the plan’s claims procedure in a way that is transparent and that encourages an appropriate dialogue between a claimant and the plan regarding adverse benefit determinations that ERISA and the current claims procedure regulation contemplate.

Commenters generally either supported or did not object to the requirement to explain a disagreement with a treating health care professional in adverse benefit determinations. The

¹³ For example, the Department noted in the preamble to the proposed rule the fact that several federal courts concluded that a failure to provide a discussion of the decision or the specific criteria relied upon in making the adverse benefit determination could make a claim denial arbitrary and capricious.

Department, accordingly, is adopting this provision from the proposal. This provision in the final rule would not be satisfied merely by stating that the plan or a reviewing physician disagrees with the treating physician or health care professional. Rather, the rule requires that the adverse benefit determination must include a discussion of the basis for disagreeing with the health care professional's views. Several commenters suggested, similar to their comments described above on the need to subject vocational experts to the independence and impartiality requirements, that this disclosure provision should also apply to vocational professionals. As noted above, the commenters pointed out that vocational experts have a role somewhat similar to the role of a medical or health care professional in the claims determination process. The Department agrees, and, accordingly, added "vocational professional" to this provision.

An issue raised in the comments related to whether the plan is required to address only third party views presented to the plan by the claimant. The concern was that plans may not know whether other third party views even exist so that any requirement to address third party views should be limited to third party findings where they are presented by the claimant. Although the Department does not believe it would be appropriate to require plans to address views that they were not aware of and had no obligation to discover, the Department's consideration of this comment led it to conclude that the provision needed to be revised to include medical or vocational experts whose advice was obtained on behalf of the plan in connection with a claimant's adverse benefit determination. The Department's experience enforcing the current regulation has revealed circumstances where claims adjudicators may consult several experts and deny a claim based on the view of one expert when advice from other experts who were consulted supported a decision to grant the claim. Some of these cases may have involved intentional "expert shopping." Requiring plans to explain the basis for disagreeing with experts whose advice the plan sought would not present the problem raised in the comments of addressing third party views the plan does not know even exist, but it would be consistent with and enhance the requirement in paragraph (h)(3)(iv) of the current regulation which already requires that the claims procedure for disability benefit claims must provide

for the identification of medical or vocational experts whose advice was obtained on behalf of the plan in connection with a claimant's adverse benefit determination, without regard to whether the advice was relied upon in making the benefit determination. In fact, the Department believes that a request for relevant documents under the current regulation would require the plan to disclose materials related to such a consultation. The plan would also be required under the current regulation to explain its basis for not adopting views of an expert the plan consulted who supported granting the claim if the claimant raised the expert's views as part of an appeal of an adverse benefit determination. In the Department's view, this is not a new substantive element of the requirement that plans explain the reasons for a denial, but rather is a process enhancement that removes unnecessary procedural steps for claimants to get an explanation of the reasons the plan disagrees with the views of its own consulting experts.

Accordingly, the final rule revises paragraphs (g)(1)(vii)(A) and (j)(6)(i) to require that adverse benefit determinations on disability benefit claims contain a discussion of the basis for disagreeing with the views of health care professionals who treated the claimant or vocational professionals who evaluated the claimant, when the claimant presents those views to the plan. The final rule also revises paragraphs (g)(1)(vii)(A) and (j)(6)(i) to clarify that adverse benefit determinations on disability benefit claims must contain a discussion of the basis for disagreeing with the views of medical or vocational experts whose advice was obtained on behalf of the plan in connection with a claimant's adverse benefit determination, without regard to whether the advice was relied upon in making the benefit determination.

One commenter suggested that references to the "views" of treating health care professionals is very broad and that it is not clear what is intended to be covered by this reference. The commenter argued that "views" is not synonymous with an opinion or conclusion about whether a claimant is disabled, and that, in many cases, health care professionals do not provide an opinion on the claimant's disability at all, and if they do, they are not providing an opinion on disability as defined by the plan. Another commenter asserted that a health care professional's focus is on the patient's diagnosis and treatment and that the claims adjudicator considers the long-

term effect of the individual's condition on their ability to work. These commenters argued that claims adjudicators are not necessarily agreeing or disagreeing with medical findings by a treating health care provider, rather they are considering if the claimant's disease or illness significantly impairs their work skills. The commenters said that to require a plan to discuss why it did not agree with the views expressed by a myriad of health care professionals does nothing to help explain why a claims administrator found that the claimant was not disabled under the terms of the plan.

The Department does not believe it is appropriate to limit the scope of the final rule to opinions or conclusions about whether a claimant is disabled. Medical and vocational professionals provide views that may be important to the ultimate determination of whether a person is disabled. In the Department's view, to the extent the claims adjudicator disagrees with foundational information in denying a claim, the claimant has a right to know that fact to the same extent the claimant should be made aware that the claims adjudicator disagrees with an opinion from a medical or vocational expert that the claimant is disabled. Further, it is part of the fiduciary role of the ERISA claims adjudicator to weigh input from medical and vocational experts in reaching a conclusion on a benefit claim. When the claims adjudicator acting in a fiduciary capacity disagrees with the judgments of medical and vocational professionals in denying a claim, the claims adjudicator as a matter of basic fiduciary accountability should be able to identify those circumstances and explain the basis for that decision. The Department also notes that the final rule requires this explanation in cases where the plan or claims adjudicator disagrees with the views of the medical or vocational expert. There is no disagreement to explain if, as the commenter posed, a treating health care consultant expresses a view only on a diagnosis or treatment which the plan fully accepts in evaluating the question of whether the claimant meets the definition of a disability under the plan. Rather, in such a case, the plan would be under the same obligation that exists under the current regulation to explain why it reached the conclusion that the diagnosed illness or treatment did not impair the claimant's work skills or ability to work or otherwise failed to satisfy the plan's definition of disability. In summary, the Department believes that an explanation of the basis for disagreement with the judgments of

health care and vocational professionals is required in order to be responsive to the information submitted by the claimant or developed during evaluation of the claim, and is also necessary for a reasoned explanation of a denial.

With respect to the requirement to explain the basis for disagreeing with or not following disability determinations by the SSA and other payers of disability benefits, several commenters who supported the requirement pointed out that reviewing courts in evaluating whether a plan's adverse benefit determination was arbitrary and capricious have found an SSA determination to award benefits to be a factor that the plan fiduciary deciding a benefit should consider. Courts have criticized the failure to consider the SSA determination, especially if a plan's administrator operates under a conflict of interest and if the plan requires or encourages claimants to pursue SSA decisions in order to offset any SSA award against the amount they pay in disability benefits. *See, e.g., Montour v. Hartford Life and Accident Ins. Co.*, 588 F.3d 623, 637 (9th Cir. 2009) ("failure to explain why it reached a different conclusion than the SSA is yet another factor to consider in reviewing the administrator's decision for abuse of discretion, particularly where, as here, a plan administrator operating with a conflict of interest requires a claimant to apply and then benefits financially from the SSA's disability finding."); *Brown v. Hartford Life Ins. Co.*, 301 F. App'x 772, 776 (10th Cir. 2008) (insurer's discussion was "conclusory" and "provided no specific discussion of how the rationale for the SSA's decision, or the evidence the SSA considered, differed from its own policy criteria or the medical documentation it considered"). Other commenters, however, urged the Department to remove the requirement to discuss the basis for disagreeing with the disability determinations of the SSA or other payers of benefits. Those commenters argued that it would not be reasonable to require an ERISA plan fiduciary to go outside the plan's governing document and make a judgment about a disability determination made by some other party that is based upon another plan or program's definition of disability, which may have entirely different or inconsistent definitions of disability or conditions. The commenters further argued that the plan fiduciary might not be able to get from the SSA or other payer of benefits the documents, case file or other information necessary even

to try to conduct such an evaluation. Those commenters also requested that, if such a requirement was to be included in the final rule, then the rule should allow plans to take into account in the discussion of its decision the extent to which the claimant provided the plan, or gave the plan a way to obtain, sufficient documentation from the SSA or other third party to allow a meaningful review of such third-party findings.

The Department is persuaded that the final rule should limit the category of "other payers of benefits" to disability benefit determinations by the SSA. The Department accepts for purposes of this final rule that claims adjudicators generally are trained to understand their own plan or insurance policy requirements and apply those standards to claims in accordance with the internal rules, guidelines, policies, and procedures governing the plan. The Department also agrees that a determination that an individual is entitled to benefits under another employee benefit plan or other insurance coverage may not be governed by the same definitions or criteria, and that it may be difficult for the adjudicator to obtain a comprehensive explanation of the determination or relevant underlying information that was relied on by the other payer in making its determination.

The Department does not believe, however, that those same difficulties are involved in the case of SSA determinations. SSA determinations may include a written decision from an ALJ, and the definitions and presumptions are set forth in publicly available regulations and SSA guidance. Accordingly, the final rule revises paragraphs (g)(1)(vii)(A) and (j)(6)(i) to require that adverse benefit determinations on disability benefit claims contain a discussion of the basis for disagreeing with an SSA disability determination regarding the claimant presented by the claimant to the plan. Although the plan's claims procedures may place the burden on the claimant to submit any SSA determination that the claimant wants the plan to consider, claims administrators working with an apparently deficient administrative record must inform claimants of the alleged deficiency and provide them with an opportunity to resolve the stated problem by furnishing missing information. It also would not be sufficient for the benefit determination merely to include boilerplate text about possible differences in applicable definitions, presumptions, or evidence. A discussion of the actual differences would be necessary. Further, although

the final rule does not, as some commenters requested, require that plans defer to a favorable SSA determination, a more detailed justification would be required in a case where the SSA definitions were functionally equivalent to those under the plan.

Several commenters requested that the Department adopt a rule requiring deference to a treating physician's opinion for disability determinations, with some commenters suggesting a rule identical to the one applied under the SSA disability program. Nothing in ERISA or the Department's regulations mandates that a plan administrator give special weight to the opinions of a claimant's treating physician when rendering a benefit determination. The Department also does not believe the public record on this rulemaking supports the Department imposing such a rule. In the Department's view, a treating physician rule is not necessary to guard against arbitrary decision-making by plan administrators. In addition to the various improvements in safeguards and procedural protections being adopted as part of this final rule, courts can review adverse benefit determinations to determine whether the claims adjudicator acted unreasonably in disregarding evidence of a claimant's disability, including the opinions of treating physicians. Nor does the Department believe it would be appropriate to adopt the treating physician rule applicable under the Social Security disability program. That rule was adopted by the Commissioner of Social Security in regulations issued in 1991, to bring nationwide uniformity to a vast statutory benefits program and to address varying decisions by courts of appeals addressing the question. ERISA, by contrast, governs a broad range of private benefit plans to which both the statute and implementing regulations issued by the Secretary of Labor permit significant flexibility in the processing of claims. Moreover, the SSA's treating physician rule has not been uniformly or generally applied even under statutory disability programs other than Social Security. *See* Brief for the United States as amicus curiae supporting petitioner, *Black & Decker Disability Plan v. Nord*, 538 U.S. 822 (2003).

Under the current Section 503 Regulation, if a claim is denied based on a medical necessity, experimental treatment, or similar exclusion or limit, the adverse benefit determination must include either an explanation of the scientific or clinical judgment for the determination, applying the terms of the plan to the claimant's medical circumstances, or a statement that such

explanation will be provided free of charge upon request. These requirements in paragraphs (g)(1)(v)(B) and (j)(5)(ii) apply to notices of adverse benefit determinations for both group health and disability claims. In proposing new paragraphs (g)(1)(vii) and (j)(6) applicable to disability claims, these requirements were intended to be subsumed in the general requirement in the proposal that adverse benefit determinations include a “discussion of the decision.” The Department is concerned, however, that removing the explicit requirement in the disability claims procedure to explain a denial based on medical necessity, experimental treatment, or similar exclusion may be misinterpreted by some as eliminating that requirement (especially with the group health plan claims procedures continuing to have that explicit requirement). That clearly was not the Department’s intention, and, accordingly, the final rule expressly sets forth in paragraphs (g)(1)(vii)(B) and (j)(6)(ii) the requirement of an explanation of the scientific or clinical judgment for such denials.¹⁴

The Department received numerous comments in favor of the disclosure requirement in paragraphs (g)(1)(vii)(B) and (j)(6)(ii) of the proposal that notices of adverse benefit determinations include the internal rules, guidelines, protocols, standards or other similar criteria of the plan that were relied upon in denying the claim (or a statement that such criteria do not exist). Commenters who supported the proposal noted that the proposed requirement should not be onerous given that adverse benefit determinations are already required to include the reasons for the denial and the applicable plan terms, and also argued that this further level of

transparency would promote the dialogue between claimant and plan regarding adverse benefit determinations that ERISA contemplates. These commenters also pointed out that this requirement would address a problem confronted by some claimants where a plan or claims adjudicator says it is relying on an internal rule in denying a claim, and then refuses to disclose it to the claimant based on an assertion that the internal rule is confidential or proprietary. Commenters who opposed the provision argued that the proposal would be overly burdensome for plans and insurers. They read the provision as requiring disclosure of “details of internal processes that are irrelevant to the claim decision and that would provide little in the way of useful information to claimants.” The comments included concerns about the time and cost to review claims manuals and other internal documents that may include rules, guidelines, protocols, standards or other similar criteria to determine that no provision has any application to a claim in order to make the statement that such internal rules, *etc.* do not exist.

The final rule, like the proposal, provides that internal rules, guidelines, protocols, standards or other similar criteria of the plan relied upon in making an adverse benefit determination must be provided with the adverse benefit determination. The Department does not agree with commenters who asserted that the requirement will be overly burdensome to plans. Even under the existing claims procedure regulation, internal rules, guidelines, protocols, standards or similar criteria relied upon in denying the claim already must be provided to the claimant upon request. Although the additional requirement to affirmatively include them in the adverse benefit determination adds an incremental paperwork burden, where a plan utilizes a specific internal rule or protocol, understanding the terms of the specific protocol may be crucial to a claimant’s ability to successfully contest the denial on review. With respect to the comments about disclosing an internal process that is irrelevant to the claim decision, it is hard to see how something that is in fact “irrelevant” can be something that was “relied upon” in denying the claim. Furthermore, the Department does not agree that it should change the proposed text based on expressed concerns about the time and cost to review claims manuals and other internal documents to determine that nothing in those

materials have application to a claim. Aside from the fact that this provision of the final rule requires the plan to affirmatively include only rules, guidelines, protocols, standards or other similar criteria that were relied on in denying the claim, in the Department’s view, it would present substantial questions about whether the plan or claims adjudicator complied with ERISA’s fiduciary standards if a claim was denied without the claims adjudicator having considered a rule, guideline, protocol or standard that was intended to govern the determination of the claim. Moreover, the current Section 503 regulation for disability plans gives claimants the right to reasonable access to and copies of documents, records, and other information “relevant” to the claimant’s claim for benefits. In addition to capturing documents, records, and other information “relied upon” in making the benefit determination, the definition of “relevant” also captures information submitted, considered or generated in the course of making the benefit determination or that demonstrates compliance with the administrative processes and safeguards designed to ensure and verify that benefit claim determinations have been made in accordance with governing plan documents and that those provisions have been applied consistently with respect to similarly situated claimants. In the case of plans providing group health or disability benefits, “relevant” also includes documents, records, or other information that constitutes a statement of policy or guidance with respect to the plan concerning the denied treatment option or benefit, without regard to whether such advice or statement was relied upon in making the benefit determination. Such a statement of policy or guidance would include any policy or guidance generated or commissioned by the plan or issuer concerning the denied benefit that would or should contribute to deciding generally whether to pay the claim (*e.g.*, studies, surveys or assessments generated or commissioned by the plan or issuer that implicate a denied treatment option or benefit but do not relate specifically to the plan itself). Thus, in the Department’s view, even under the current rule, plans would be required, on request, to verify that the plan has produced all the internal rules, guidelines, protocols, standards or other similar criteria concerning the denied claim that were or should have been considered in deciding the claim.

Another commenter argued that it did not make sense to require plans to

¹⁴ The current Section 503 Regulation in paragraph (j)(5)(iii) requires a statement concerning voluntary dispute resolution options in notices of adverse benefit determinations on review for both group health and disability claims. The Department previously issued an FAQ on that provision noting that information on the specific voluntary appeal procedures offered under the plan must be provided under paragraph (j)(4) of the regulation in the notice of adverse benefit determination, along with a statement of the claimant’s right to bring a civil action under section 502(a) of ERISA. The Department, therefore, stated in the FAQ that, pending further review, it will not seek to enforce compliance with the requirements of paragraph (j)(5)(iii). See FAQs About The Benefit Claims Procedure Regulation, D–13 (www.dol.gov/sites/default/files/ebsa/about-ebsa/our-activities/programs-and-initiatives/outreach-and-education/hbec/CAGHDP.pdf). In light of the fact that this proposal was limited to disability benefit claims, the Department does not believe it would be appropriate to modify the requirement in paragraph (j)(5)(iii) as part of this final rule. Accordingly, the Department will continue the enforcement position articulated in FAQ D–13.

affirmatively state in an adverse benefit determination that plans did not rely on any rule or guideline. They argued that, if the adverse benefit determination failed to cite reliance on such a rule or guideline, the claimant could ask and the plan would respond with a statement that none were relied on. They argued that such a process gives the claimant the ability to obtain that information in cases where the claimant believes that information is important to understanding or contesting the basis for the denial. It is the Department's view, however, that an affirmative statement would be helpful to the claimant by providing certainty about the existence of any applicable rule or guideline. The Department also does not believe the absence of a statement of reliance in an adverse benefit statement fairly puts a claimant on notice to request confirmation that no rule or guideline was relied upon. Further, the Department does not believe merely requiring such an affirmative statement is burdensome on plans because the plan should know whether it relied on a rule or guideline in denying a claim.

Finally, the existing Section 503 regulation already requires that rules, guidelines, protocols, standards or other similar criteria that were relied on in denying the claim must be disclosed to claimants on request. Nothing in the current regulation allows a plan fiduciary to decline to comply with that requirement based on an assertion that the information is proprietary or confidential. Indeed, the Department has taken the position that internal rules, guidelines, protocols, or similar criteria would constitute instruments under which a plan is established or operated within the meaning of section 104(b)(4) of ERISA and, as such, must be disclosed to participants and beneficiaries. See *FAQs About The Benefit Claims Procedure Regulation*, C-17 (www.dol.gov/sites/default/files/ebsa/about-ebsa/our-activities/programs-and-initiatives/outreach-and-education/hbec/CAGHDP.pdf).¹⁵

¹⁵ FAQ C-17 states: "It is the view of the department that where a rule, guideline, protocol, or similar criterion serves as a basis for making a benefit determination, either at the initial level or upon review, the rule, guideline, protocol, or criterion must be set forth in the notice of adverse benefit determination or, following disclosure of reliance and availability, provided to the claimant upon request. However, the underlying data or information used to develop any such rule, guideline, protocol, or similar criterion would not be required to be provided in order to satisfy this requirement. The department also has taken the position that internal rules, guidelines, protocols, or similar criteria would constitute instruments under which a plan is established or operated within the meaning of section 104(b)(4) of ERISA and, as such, must be disclosed to participants and beneficiaries.

Similarly, this final rule does not permit a plan to conceal such information from the claimant under an assertion that the information is proprietary or constitutes confidential business information.

The third new disclosure requirement, set forth in paragraph (g)(1)(vii)(C) of the proposal, adds a requirement that an adverse benefit determination at the initial claims stage must include a statement that the claimant is entitled to receive, upon request, documents relevant to the claim for benefits. Although the current Section 503 Regulation provides that claimants challenging an initial denial of a claim have a right to request relevant documents, a statement advising claimants of their right to relevant documents currently is required only in notices of an adverse benefit determination on appeal. No commenters objected to the addition of this statement to the adverse benefit determination at the initial claims stage. The Department believes such a statement in the initial denial notice simply confirms rights claimants already have under the current claims regulation and will help ensure claimants understand their right of access to the information needed to understand the reasons for the denial and decide whether and how they may challenge the denial on appeal. Accordingly, this provision was adopted without change in the final rule.

3. Right To Review and Respond to New Information Before Final Decision

The Department continues to believe that a full and fair review requires that claimants have a right to review and respond to new evidence or rationales developed by the plan during the pendency of the appeal and have the opportunity to fully and fairly present his or her case at the administrative appeal level, as opposed merely to having a right to review such information on request only after the claim has already been denied on appeal. Accordingly, the final rule adopts those provisions of the proposal with certain modifications described below.

Paragraph (h)(4) of the final rule, consistent with the proposal, requires that plans provide claimants, free of charge, with new or additional evidence considered, relied upon, or generated by the plan, insurer, or other person making the benefit determination (or at the direction of the plan, insurer or such

other person) during the pendency of the appeal in connection with the claim. Consistent with the proposal, paragraph (h)(4) also provides a similar disclosure requirement for an adverse benefit determination based on a new or additional rationale. The evidence or rationale must be provided as soon as possible and sufficiently in advance of the date on which the notice of adverse benefit determination on review is required to be provided to give the claimant a reasonable opportunity to address the evidence or rationale prior to that date. These requirements already apply to claims involving group health benefits under the ACA Claims and Appeals Final Rule. Further, the Department has interpreted ERISA section 503 and the current Section 503 Regulation as already requiring that plans provide claimants with new or additional evidence or rationales upon request and provide them an opportunity to respond in at least certain circumstances.¹⁶

The objective of these provisions is to ensure the claimant's ability to obtain a full and fair review of denied disability claims by explicitly providing that claimants have a right to review and respond to new or additional evidence or rationales developed by the plan during the pendency of the appeal, as opposed merely to having a right to such information on request only after the claim has already been denied on appeal, as some courts have held under the Section 503 Regulation. These protections are direct imports from the ACA Claims and Appeals Final Rule, and they would correct procedural problems evidenced in litigation even predating the ACA.¹⁷ It was and continues to be the view of the Department that claimants are deprived of a full and fair review, as required by

¹⁶ As a practical matter, these requirements to provide claimants with evidence or rationales that were relied on or used as a basis for an adverse benefit determination largely conforms the rule to the existing process by which benefits claims should be handled in such cases. *E.g.*, *Saffon v. Wells Fargo & Co. Long Term Disability Plan*, 511 F.3d 1206, 1215 (9th Cir. 2008) (finding that a full and fair review requires a plan administrator to disclose the reasons for denial in the administrative process); 75 FR at 43333 n.7 (noting the DOL's position that the existing claims procedure regulation already requires plans to provide claimants with new or additional evidence or rationale upon request and an opportunity to respond in certain circumstances).

¹⁷ See, *e.g.*, *Metzger v. Unum Life Ins. Co. of America*, 476 F.3d 1161, 1165–67 (10th Cir. 2007) (holding that "subsection (h)(2)(iii) does not require a plan administrator to provide a claimant with access to the medical opinion reports of appeal-level reviewers prior to a final decision on appeal."); *Accord Glazer v. Reliance Standard Life Ins. Co.*, 524 F.3d 1241 (11th Cir. 2008); *Midgett v. Washington Group Int'l Long Term Disability Plan*, 561 F.3d 887 (8th Cir. 2009).

See § 2560.503–1(g)(v) (A) and (j)(5)(i); 65 FR at 70251. Also see § 2560.503–1(h)(2)(iii) and 2560.503–1(m)(8)(i); Advisory Opinion 96–14A (July 31, 1996).

section 503 of ERISA, when they are prevented from responding, at the administrative stage level, to all evidence and rationales.¹⁸

As an example of how these new provisions would work, assume the plan denies a claim at the initial stage based on a medical report generated by the plan administrator. Also assume the claimant appeals the adverse benefit determination and, during the 45-day period the plan has to make its decision on appeal, the plan administrator causes a new medical report to be generated. The proposal and the final rule would require the plan to automatically furnish to the claimant any new or additional evidence in the second report. The obligation applies to any new or additional evidence, including, in particular, evidence that may support granting the claim. The plan would have to furnish the new or additional evidence to the claimant before the expiration of the 45-day period. The evidence would have to be furnished as soon as possible and sufficiently in advance of the applicable deadline (including an extension if available) in order to give the claimant a reasonable opportunity to address the new or additional evidence. The plan would be required to consider any response from the claimant. If the claimant's response happened to cause the plan to generate a third medical report containing new or additional evidence, the plan would have to automatically furnish to the claimant any new or additional evidence in the third report. The new or additional evidence would have to be furnished as soon as possible and sufficiently in advance of the applicable deadline to allow the claimant a reasonable opportunity to respond to the new or additional evidence in the third report.

Several commenters asked for clarification regarding the application of the rights in paragraph (h)(4)(i) of the proposal which would have required that the plan's claims procedures must allow a claimant to review the claim file and to present evidence and testimony as part of the "disability benefit *claims* and appeals process." The commenters noted that, although subsection (h) deals with the appeals portion of the claim process, use of the phrase "*claims and appeals process*" could cause confusion as to whether the requirements of that subsection are intended to apply only to the appeals portion of the process or also to the initial stage of the claim

process. Those commenters also suggested that this provision be deleted in its entirety because it was redundant and unnecessary. They pointed out that paragraph (g)(1)(vii)(C) of the proposal already added a requirement that claimants be notified as part of a denial at the initial claims stage of their right to review copies of documents and other information relevant to the claim for benefits. They pointed to the definition of "relevant" in the current regulation at paragraph (m)(8), which includes documents, records or other information that were relied upon in making the benefit determination, submitted, considered or generated in the course of making the benefit determination, demonstrates compliance with the certain administrative safeguards and requirements required under the regulation, or constitutes a statement of policy or guidance with respect to the plan concerning a denied treatment option or benefit or the claimant's diagnosis. The commenters also noted that paragraph (h)(2)(ii) of the regulation currently gives claimants the right to "submit written comments, documents, records, and other information" as part of an initial claim. Consequently, they asserted that a provision stating that they can also submit "evidence" and "testimony" does not appear to add to the current requirements.

The text in paragraph (h)(4)(i) was intended to parallel text in the regulation for group health plans under the ACA Claims and Appeals Final Rule. The ACA Claims and Appeals Final Rule specifically addressed rights to review and respond to new or additional evidence or rationales during the appeal stage. The Department agrees with the commenters that the provision is intended to be limited to the appeal stage. The Department also agrees that the new text in proposed paragraph (h)(4)(i) on rights to review the claims file and to present evidence is unnecessary in the disability claims procedure regulation because those rights already exist under the current Section 503 regulation. Accordingly, because that provision in the proposal would not have added new substantive requirements, the Department has deleted the provision from the final rule. In light of the deletion of proposed paragraph (h)(4)(i) from the final rule, the definition in the proposal of "claim file" is also unnecessary, and, accordingly, the Department is not including that definitional provision in the final rule. The changes from the proposal should not be viewed, however, as in any way restricting claimant's rights to documents, records,

or other information under the regulation, or to restrict claimant's rights to present evidence. For example, in the Department's view, if the plan or claims adjudicator maintains a claims file or other similar compilation of documents, records, and other information, such a file by definition would constitute relevant materials and be subject to mandatory disclosure under the final rule.

In response to the paragraph (h)(4)(i) as drafted in the proposal, several commenters expressed concern that some plans would have read the language as imposing courtroom evidentiary standards for claimants submitting proof of their claim. Others expressed concern about a statement in the proposal's preamble that referenced "written" testimony because they thought some plans might rely on that reference to prohibit claimants from submitting audio or video evidence. The Department did not intend that the provision be read to limit the types of evidence that claimants can submit or otherwise put claimants in a worse position than they face under the current regulation. For example, the Department does not believe that plans could refuse to accept evidence submitted in the form of video, audio or other electronic media. Further, in the Department's view, even under the current regulation, it would not be permissible for a plan to impose courtroom evidentiary standards in determining whether the plan will accept or consider information or materials submitted by a claimant.

Several commenters argued that giving claimants new or additional evidence or rationales developed during the pendency of the appeal and requiring plans to consider and address claimant submissions regarding the new or additional evidence or rationale would set up an unnecessary cycle of review and re-review leading to delay and increased costs. The Department is not persuaded by this argument. The requirement conforms the disability claims regulation to the group health plan claims process requirements under the ACA Claims and Appeals Final Rule. Granting both parties (the claimant and the plan) the opportunity to address the other side's evidence has not resulted in an endless loop of submissions in group health claims under the ACA Claims and Appeals Final Rule, and there is no reason to believe that this would occur in the disability claims administrative process. The Department also has previously stated its view that the supposed "endless loop" is necessarily limited by claimants' ability to generate new or

¹⁸ Brief of the Secretary of Labor, Hilda L. Solis, as *Amicus Curiae* in Support of Plaintiff-Appellant's Petition for Rehearing, *Midgett v. Washington Group Int'l Long Term Disability Plan*, 561 F.3d 887 (8th Cir. 2009) (No. 08–2523).

additional evidence requiring further review by the plan. Such submissions ordinarily become repetitive in short order, and are further circumscribed by the limited financial resources of most claimants. If a claimant's assertions do not include new factual information or medical diagnoses, a plan need not generate report after report rather than relying on the reports it already has in hand merely because a claimant objects to or disagrees with the evidence or rationale. The process also necessarily resolves itself when the plan decides it has enough evidence to properly decide the claim and does not generate new or additional evidence or rationales to support its decision.¹⁹ The fiduciary obligation to pay benefits in accordance with the terms of the plan does not require a fiduciary to endlessly rebut credible evidence supplied by a claimant that, if accepted, would be sufficient to justify granting the claim. In fact, an aggressive claims processing practice of routinely rejecting or seeking to undermine credible evidence supplied by a claimant raises questions about whether a fiduciary, especially one operating under a conflict of interest, is violating the fiduciary's loyalty obligation under ERISA to act solely in the interest of the plan's participants and beneficiaries.

Several commenters complained about the possibility of claimants arguing that plans failed to comply with the claims procedure whenever any additional evidence was relied on to support a rationale that was already used as a basis for denying a claim. They expressed similar concerns about determining whether a rationale relied on in denying a claim on review was a "new" or "additional" rationale. They asked the Department to include in the final rule a definition of what constitutes "new or additional" evidence or a "new or additional" rationale. They asserted that the rule might be read to permit a claimant to receive and rebut medical opinion reports generated in the course of an administrative appeal, even when those reports contain no new factual information and deny benefits on the same basis as the initial decision.

The Department does not believe it is necessary or appropriate to include definitions of the terms "new evidence" or "new rationale" in the final rule. Those same terms exist in the parallel claims procedure requirement applicable to group health plans under

the ACA Claims and Appeals Final Rule, and have been part of the claims procedure requirements for those plans for several years. The Department does, however, intend that the terms be applied broadly so that claimants have the opportunity to respond at the administrative stage level to all evidence and rationales. Many federal courts have held that in reviewing a plan administrator's decision for abuse of discretion, the courts are limited to the "administrative record"—the materials compiled by the administrator in the course of making his or her decision. See *Miller v. United Welfare Fund*, 72 F.3d 1066, 1071 (2d Cir.1995) (compiling cases and stating that "[m]ost circuits have declared that, in reviewing decisions of plan fiduciaries under the arbitrary and capricious standard, district courts may consider only the evidence that the fiduciaries themselves considered"). While some courts have held that when conducting a de novo review, any party may be free to submit additional evidence outside the administrative record,²⁰ most circuits have adopted rules allowing the admission of additional evidence in de novo cases only in limited circumstances. In addition to requiring the deciding fiduciary to consider the claimant's response to new or additional evidence or rationales, the Department believes it is important that the claimant have the right and opportunity to ensure that a full administrative record is before a reviewing court when new or additional evidence or rationales are introduced into the record by the plan or deciding fiduciary.²¹

The Department requested comments on whether, and to what extent, modifications to the existing timing rules are needed to ensure that disability benefit claimants and plans will have ample time to engage in the back-and-forth dialogue that is contemplated by these new review and response rights. The current Section 503

²⁰ See *Moon v. Am. Home Assurance Co.*, 888 F.2d 86, 89 (11th Cir.1989).

²¹ Some commenters suggested that the Department define "new or additional evidence" to be "new and additional medical reviews, including independent medical reports." As noted above, these requirements already apply to claims involving group health benefits under the ACA Claims and Appeals Final Rule and we do not think that it is appropriate to restrict this rule to medical reviews since other types of evidence, if new, would clearly need to be provided to claimants to ensure the full and fair review as described above. For example, if a plan were to obtain video evidence of a disability benefit claimant during the pendency of the appeal, but only provide the claimant with a portion of that video evidence, e.g., the portion that supports the denial of benefits, while withholding the portions that favor the claimant, that would be a failure by the plan to provide new evidence developed to the claimant.

Regulation requires that the plan must decide claims and appeals within a reasonable period, taking into account all circumstances. The following timeframes reflect the maximum period by which a plan must make a determination: (1) *Initial claim*: 45 days after submission; additional 30 days with prior notice for circumstances beyond control of the plan; and (2) *Appeal*: 45 days after receipt of appeal; additional 45 days with prior notice for "special circumstances." A special deadline for deciding appeals applies when the named fiduciary is a board or committee of a multiemployer plan that meets at least quarterly. The Department received several comments with suggestions on possible new timing requirements for the claimant to respond to the new evidence and a time deadline for the claims administrator to make its final decision. Other commenters asserted that the current regulations are sufficient for the needs of consumers covered under this final regulation and provide "ample" time for plans and claimants to engage in the necessary dialogue. One commenter raised an issue concerning this rule and its impact on the prompt administration of disability claims. The commenter described, by way of example, that the plan would have to send claimants new or additional evidence before the plan may have determined whether and how the evidence may contribute to an adverse appeal decision, claimants would receive new or additional evidence piecemeal as the appeals process continues and claimants could be required to provide comments back without necessarily knowing how that information may, if at all, affect the decision. The Department does not believe that the rule envisions this kind of process. This provision by its terms does not apply if a plan grants the claim on appeal. Instead, when the plan has decided that it is going to deny the claim on appeal, that is the point at which the rule requires new or additional evidence must be provided to the claimant, sufficiently in advance of final decision so that the claimant can address such evidence. The provision does not require that the plan provide the claimant with information in a piecemeal fashion without knowing whether, and if so how, that information may affect the decision.

The Department noted in the preamble to the proposal that the group health plan claims regulation provides that if the new or additional evidence or rationale is received by a plan so late that it would be impossible to provide it to the claimant in time for the

¹⁹ Brief of the Secretary of Labor, Hilda L. Solis, as *Amicus Curiae* in Support of Plaintiff-Appellant's Petition for Rehearing, *Midgett v. Washington Group Int'l Long Term Disability Plan*, 561 F.3d 887 (8th Cir. 2009) (No. 08–2523), p. 13.

claimant to have a reasonable opportunity to respond, the period for providing a notice of final internal adverse benefit determination is tolled until such time as the claimant has a reasonable opportunity to respond. The Department did not include this special tolling provision in the proposed amendments because the current disability claims regulation, as described above, already permits plans to take extensions at the appeals stage. In the Department's view, the current disability claims regulation "special circumstances" provision permits the extension and tolling expressly added to the group health plan rule under the ACA Claims and Appeals Final Rule.²² Although the Department is not including special timing provisions in the final rule, the Department is open to considering comments on whether sub-regulatory guidance regarding the current provisions on extensions and tolling would be helpful in the context of the new review and response rights.

Commenters asked the Department to confirm that a plan could satisfy the new review and response requirements through a current procedure, which was described as "universal and a result of established case law." Specifically the commenters stated that some plans currently provide claimants with a voluntary opportunity to appeal any rationale raised for the first time in an appeal denial letter. They contended that this process works well because it gives the claimant a choice of whether to appeal and supplement the administrative record based on a challenge to the new evidence or rationale. They also asserted that the procedure would address commenters' concern that this requirement may conflict with claims administrator's obligation to meet the requisite time requirements for deciding claims and appeals. In fact, a few other commenters specifically asked that the new requirement not apply to plans that currently offer a voluntary additional

level of appeal. The Department does not agree that a voluntary additional level of appeal provides the same rights to claimants because the additional level of appeal is not subject to the rule's provisions on timing of notification of benefit determinations on appeal. In the Department's view, it would not be appropriate to condition a claimant's right to review and respond to new evidence on the claimant effectively being required to give up rights to a timely review and decision at the appeal stage.

Finally, the Department's experience enforcing the current regulation for group health plans has revealed circumstances where claims adjudicators assert that they are satisfying this requirement by providing claimants with a notice informing them that the plan relied on new or additional evidence or a new or additional rationale in denying the claim, and offering to provide the new evidence or rationale on request. As the Department explained in the preamble to the ACA Claims and Appeals Final Rule for group health plans,²³ in order to comply with this requirement, a plan or issuer must send the new or additional evidence or rationale automatically to the claimant as soon as it becomes available to the plan. Merely sending a notice informing claimants of the availability of such information fails to satisfy the requirement, and if a plan's claims procedure says the plan will send a notice of the availability of such information, the responsible plan fiduciary similarly would fail to have met the requirement under ERISA section 503 for the plan to establish and

maintain a reasonable procedure governing the filing of benefit claims, notification of benefit determinations, and appeal of adverse benefit determinations.

4. Deemed Exhaustion of Claims and Appeals Processes

The final rule tracks the proposal and provides that if a plan fails to adhere to all the requirements in the claims procedure regulation, the claimant would be deemed to have exhausted administrative remedies, with a limited exception where the violation was (i) *de minimis*; (ii) non-prejudicial; (iii) attributable to good cause or matters beyond the plan's control; (iv) in the context of an ongoing good-faith exchange of information; and (v) not reflective of a pattern or practice of non-compliance. The rule thus mirrors the existing standard applicable to group health plans under the ACA Claims and Appeals Final Rule and is stricter than a mere "substantial compliance" requirement.

The Department received a number of generally favorable comments regarding the deemed exhaustion provisions in paragraphs (l)(1) and (2) of the proposal. Those commenters argued that claimants should not have to follow a claims and appeals process that is less than full, fair, and timely. Some of those commenters expressed concern that the language in proposed paragraph (l)(2)(i) was potentially inconsistent with language in the preamble. The commenters noted that the preamble stated that "in those situations when the minor errors exception does not apply, the proposal clarifies that the reviewing tribunal should not give special deference to the plan's decision, but rather should review the dispute *de novo*." By contrast, they point out that proposed paragraph (l)(2)(i) provides that "[i]f a claimant chooses to pursue remedies under section 502(a) of ERISA under such circumstances, the claim or appeal is deemed denied on review without the exercise of discretion by an appropriate fiduciary." According to the commenters, plans could argue that the language in proposed paragraph (l)(2)(i) does not go far enough and suggested that the regulation should expressly require *de novo* review.

The Department does not intend to establish a general rule regarding the level of deference that a reviewing court may choose to give a fiduciary's decision interpreting benefit provisions in the plan's governing documents. However, the cases reviewing a plan fiduciary's decision under a deferential arbitrary or capricious standard are based on the idea that the plan

²² In connection with the ACA Claims and Appeals Final Rule, the Department explained the process as follows: "To address the narrow circumstance raised by some comments that the new or additional information could be first received so late that it would be impossible to provide it, these final regulations provide that if the new or additional evidence is received so late that it would be impossible to provide it to the claimant in time for the claimant to have a reasonable opportunity to respond, the period for providing a notice of final internal adverse benefit determination is tolled until such time as the claimant has a reasonable opportunity to respond. After the claimant responds, or has a reasonable opportunity to respond but fails to do so, the plan or issuer must notify the claimant of the benefit determination as soon as a plan or issuer acting in a reasonable and prompt fashion can provide the notice, taking into account the medical exigencies."

²³ That rulemaking notice (at 80 FR 72207) included the following explanation in responding to public comments on that rule: "Commenters requested additional guidance related to the timing and amount of information required to be provided in order to satisfy this requirement. Specifically, individuals asked whether such information actually must be provided automatically to participants and whether or not it would be sufficient to send participants a notice informing them of the availability of new or additional evidence or rationale. The Departments retain the requirement that plans and issuers provide the new or additional evidence or rationale automatically. In the Departments' view, fundamental fairness requires that participants and beneficiaries have an opportunity to rebut or respond to any new or additional evidence upon which a plan or issuer may rely. Therefore, plans and issuers that wish to rely on any new or additional evidence or rationale in making a benefit determination must send such new or additional evidence or rationale to participants as soon as it becomes available to the plan or issuer. In order to comply with this requirement, a plan or issuer must send the new or additional evidence or rationale to the participant. Merely sending a notice informing participants of the availability of such information fails to satisfy this requirement." This same explanation applies with equal force to the identical requirement in this final rule applicable to disability benefit claims.

documents give the fiduciary discretionary authority to interpret the plan documents. By providing that the claim is deemed denied without the exercise of fiduciary discretion, the regulation relies on the regulatory authority granted the Department in ERISA sections 503 and 505 and is intended to define what constitutes a denial of a claim. The legal effect of the definition may be that a court would conclude that *de novo* review is appropriate because of the regulation that determines as a matter of law that no fiduciary discretion was exercised in denying the claim.

A number of commenters expressed concern with proposed paragraph (l)(2)(i), arguing that the proposal encourages claimants to circumvent a plan's claims and appeals process, to seek remedies in court in the case of insignificant missteps in claims management practices that have no impact on claim outcomes, and, therefore, will result in increased litigation. One commenter asked that the proposal be deleted. A few commenters suggested alternative approaches to the proposal. For example, they suggested that the Department consider a rule which first requires claimants to notify the plan that they intend to pursue judicial review based upon the plan's procedural error, and provide plans with a reasonable period of time to cure the error before the claimant can dispense with further administrative review. The Department does not believe that the typical participant pursuing a disability benefit claim in the context of a fair and timely review process will, as the commenters claimed, seek remedies in court in the case of insignificant missteps in claims management processes that have no impact on the ultimate decision on the claim. Further, the Department does not believe it would be appropriate to create a rule that could create incentives for plans and insurers to violate procedural requirements designed to protect claimants and ensure transparency in the decision-making process knowing that before the claimant could seek redress that the claimant would have to identify the violation, notify the plan of the violation, and give the plan time to cure the error. Rather, after careful consideration of these comments, the Department continues to believe that claimants should not have to follow a claims and appeals process that is less than full, fair, and timely. Accordingly, the Department decided to retain the deemed exhaustion provisions as proposed, including the exception to the

strict compliance standard for errors that are minor and that meet certain other specified conditions.²⁴

5. Coverage Rescissions—Adverse Benefit Determinations

Paragraph (m)(4) of the final rule amends the definition of an adverse benefit determination to include, for plans providing disability benefits, a rescission of disability benefit coverage that has a retroactive effect, except to the extent it is attributable to a failure to timely pay required premiums or contributions towards the cost of coverage. The Department did not receive any comments objecting to this provision in the proposed rule, and, accordingly, the provision is adopted without change in the final rule.

Several commenters suggested that the provision be expanded to expressly include situations, particularly in cases involving mental health and substance use disorder claims, where a plan approves treatment for a period less than that requested, but defers the right to appeal until the date the approved benefits end. The Department did not make such a modification to paragraph (m)(4) in the final rule because the Department does not agree that such cases should be addressed as rescissions.

Rather, it appears that the commenters were making a more general point that the claims procedure regulation should expressly define an adverse benefit determination to include instances in which such a limitation is invoked. In that regard, the current regulation provides that the term "adverse benefit determination" includes any denial, reduction, or termination of, or a failure to provide or make payment (in whole or in part) for, a benefit. The Department issued a set of FAQs under the current regulation explaining the application of that definition to various situations. One FAQ stated that if a plan provides for the payment of disability benefits for a pre-determined, fixed period (e.g., a specified number of weeks or months or until a specified date), the termination of benefits at the end of the specified period would not constitute an adverse benefit determination under the regulation. Rather, the Department concluded that any request by a

²⁴ The provisions in this final rule supersede any and all prior Departmental guidance with respect to disability benefit claims to the extent such guidance is contrary to this final rule, including but not limited to the deemed exhaustion discussion in FAQ F-2 in FAQs About The Benefit Claims Procedure Regulation. (www.dol.gov/sites/default/files/ebsa/about-ebsa/our-activities/programs-and-initiatives/outreach-and-education/hbec/CAGHDP.pdf).

claimant for payment of disability benefits beyond the specified period would constitute a new claim.²⁵

Another FAQ, however, addressed the different situation where the plan pays less than the total amount of expenses submitted with regard to a post-service claim. We explained that, while the plan is paying out the benefits to which the claimant is entitled under its terms, the claimant is nonetheless receiving less than full reimbursement of the submitted expenses. Therefore, in order to permit the claimant to challenge the plan's calculation of how much it is required to pay, that decision is required to be treated as an adverse benefit determination under the regulation.²⁶ Whether the situation presented by the commenters should be treated more like the former or latter FAQ will depend on the terms of the plan and the particular facts and circumstances.

One commenter asked whether the proposed rule regarding rescissions of coverage applies to adjustments or suspensions of benefits that reduce or eliminate a disability pension benefit under section 305 of ERISA, which corresponds to section 432 of the Internal Revenue Code of 1986 (Code). It is the Department's view that a retroactive reduction or elimination of disability pension benefits pursuant to section 305 of ERISA is not a rescission of coverage under paragraph (m)(4)(ii) of the final rule. However, a retroactive reduction or elimination of disability pension benefits, that results from a finding by the plan that the claimant was not disabled within the meaning of the plan when the disability pension benefits were reduced or eliminated under ERISA section 305, would be an adverse benefit determination under the claims procedure regulation. If the claims adjudicator must make a determination of disability in order to decide a claim, the claim must be treated as a disability claim for purposes of the Section 503 Regulation.²⁷

²⁶ See FAQs About The Benefit Claims Procedure Regulation, C-12 (www.dol.gov/sites/default/files/ebsa/about-ebsa/our-activities/programs-and-initiatives/outreach-and-education/hbec/CAGHDP.pdf).

²⁷ See footnote 3, *supra*, and FAQs About The Benefit Claims Procedure Regulation, A-9 (www.dol.gov/sites/default/files/ebsa/about-ebsa/our-activities/programs-and-initiatives/outreach-and-education/hbec/CAGHDP.pdf) discussing when a benefit is a disability benefit, subject to the special rules for disability claims under the Section 503 Regulation.

6. Culturally & Linguistically Appropriate Notices

Paragraphs (g)(1)(vii)(C), (j)(7) and (o) of the final rule require plans to provide notice to claimants in a culturally and linguistically appropriate manner. The final rule adopts the standards already applicable to group health plans under the ACA Claims and Appeals Final Rule. Specifically, if a claimant's address is in a county where ten percent or more of the population residing in that county are literate only in the same non-English language as determined in guidance based on American Community Survey data published by the United States Census Bureau, notices of adverse benefit determinations to the claimant would have to include a statement prominently displayed in the applicable non-English language clearly indicating how to access language services provided by the plan. In addition, plans must provide a customer assistance process (such as a telephone hotline) with oral language services in the non-English language and provide written notices in the non-English language upon request.²⁸

A few commenters requested clarification that the culturally and linguistically appropriate standards (CLAS) requirements in the regulation apply only to notices of adverse benefit determinations and not to other communications regarding disability claims. In the Department's view, the text of paragraphs (g)(1)(vii)(C) and (j)(7) is clear that the CLAS requirements are applicable to notices of adverse benefit determinations. The final rule does not address whether, and under what circumstances, the fiduciary duty or other provisions in ERISA would require plans to provide plan participants and beneficiaries with access to language services (see, for example, the discussion below regarding summary plan description (SPD) requirements).

A few commenters requested that the Department remove the CLAS standards. Other commenters supported the CLAS requirements but requested that the Department provide a reasonable time for compliance with this provision, citing operational changes and costs associated with the CLAS requirements. Other commenters requested that the threshold percentage

that triggers the CLAS requirements be reduced to a lower percentage to capture a greater number of counties or to reflect a percentage of plan participants as opposed to the population of a relevant county. One commenter suggested that the Department may have unintentionally reduced protections for non-English speaking participants. The commenter pointed out that although a particular county may not meet the threshold under this rule, particular workforces may meet the Department's thresholds under section § 2520.102–2(c).

In light of all the comments received, this final rule retains the CLAS requirements as set forth in the proposal. The Department believes that the CLAS requirements impose reasonable language access requirements on plans and appropriately balance the objective of protecting claimants by providing reasonable language assistance to individuals who communicate in languages other than English with the goal of mitigating administrative burdens on plans. The Department continues to believe that it is important to provide claims denial notices in a culturally and linguistically appropriate manner to ensure that individuals get the important information needed to properly evaluate the decision denying a claim and to allow for an informed decision on options for seeking review of a denial. Therefore, the final rule adopts the requirements in the proposal without change.

The Department does not agree that the final rule supersedes the summary plan description foreign language rules in § 2520.102–2(c) which include a requirement to offer assistance (which could include language services) calculated to provide participants with a reasonable opportunity to become informed as to their rights and obligations under the plan. Non-English speaking participants could be eligible for language services under either this final rule or § 2520.102–2(c), depending on the circumstances.

Finally, one commenter asked that the Department clarify that the English version of the notices takes precedence in the event of any conflict with the translated documents. Another commenter asked for clarification that the requirement to provide “assistance with filing claims and appeals in any applicable non-English language” is limited to procedural, not substantive, assistance. The Department was not persuaded that including such provisions in the final rule is necessary or appropriate. Notices provided to participants or beneficiaries should be

complete and accurate notwithstanding the language used. Further, a “substantive versus procedural” distinction between the type of assistance required is not, in the Department's view, particularly meaningful or helpful. Rather, the final rule requires plan fiduciaries to provide disability benefit claimants with the requisite level and amount of assistance necessary to assist the claimants in understanding their rights and obligations so that they can effectively file claims and appeals in pursuing a claim for disability benefits.

7. Miscellaneous

a. Technical Correction

The Department determined that a minor technical fix to the Section 503 Regulation is required with respect to disability claims. The Department proposed to clarify that the extended time frames for deciding disability claims, provided by the quarterly meeting rule found in the current regulation at 29 CFR 2560.503–1(i)(1)(ii), are applicable only to multiemployer plans. The Department did not receive any adverse comments on the proposed technical fix, and, accordingly, the final rule amends paragraph (i)(3) to correctly refer to the appropriate subparagraph in (i)(1) of the Section 503 Regulation.

b. Contractual Limitations Periods for Challenging Benefit Denials

In the proposal, the Department asked for comments on whether the claims procedure rule should address limitations periods in plans that govern the period after a final adverse benefit determination within which a civil action may be filed under section 502(a)(1)(B) of ERISA. We pointed out that ERISA does not specify that period and noted that the federal courts have generally looked to analogous state laws to determine an appropriate limitations period. Analogous state law limitations periods vary, but they generally start with the same event, the plan's final benefit determination. We acknowledged that the Supreme Court recently upheld the use of contractual limitations periods in plan documents and insurance contracts which may override analogous state laws so long as they are reasonable. *See Heimeshoff v. Hartford Life & Accident Ins. Co.*, 134 S.Ct. 604, 611 (2013). We pointed out that contractual limitations periods are not uniform, the events that trigger the clock vary, and the documents in which the limitations periods are embedded may be difficult for claimants to obtain and understand. We also highlighted a

²⁸ Each year the U.S. Census Bureau publishes a list of counties that meet the 10% threshold. For 2016, the applicable languages are Chinese, Tagalog, Navajo and Spanish. A complete list of counties is available at www.dol.gov/agencies/ebsa/laws-and-regulations/laws/affordable-care-act/for-employers-and-advisers/internal-claims-and-appeals.

separate issue, not before the Supreme Court in *Heimeshoff*, of whether plans must provide participants notice with respect to contractual limitations periods in adverse benefit determinations on review. Although many federal courts have held that plans should provide such notice under the Section 503 Regulation, the court decisions are not uniform.²⁹

²⁹ See *Moyer v. Metropolitan Life Ins. Co.*, 762 F.3d 503, 505 (6th Cir. 2014) (“The claimant’s right to bring a civil action is expressly included as a part of those procedures for which applicable time limits must be provided” in the notice of adverse benefit determination on review) and *Kienstra v. Carpenters’ Health & Welfare Trust Fund of St. Louis*, 2014 WL 562557, at *4 (E.D. Mo. Feb. 13, 2014), aff’d sub nom. *Munro-Kienstra v. Carpenters’ Health & Welfare Trust Fund of St. Louis*, 790 F.3d 799 (8th Cir. 2015) (“an adverse benefit determination must include [a] description of the plan’s review procedures and the time limits applicable to such procedures, including a statement of the claimant’s right to bring a civil action under section 502(a) of [ERISA] following an adverse benefit determination on review.”); *Ortega Candelaria v. Orthobiologics LLC*, 661 F.3d 675, 680 (1st Cir.2011) (“[The employer] was required by [29 CFR 2560.503–1(g)(1)(iv)] to provide [the employee] with notice of his right to bring suit under ERISA, and the time frame for doing so, when it denied his request for benefits.”); *McGowan v. New Orleans Empl’rs Int’l Longshoremen’s Ass’n*, 538 F. App’x 495, 498 (5th Cir.2013) (finding that a benefit termination letter substantially complied with 29 CFR 2560.503–1(g)(1)(iv) because, in addition to enclosing the benefit booklet and specifying the pages containing the review procedures and time limits, the letter “mentioned McGowan’s right to file suit under § 502(a) of ERISA, as well as the one-year time limit”); *White v. Sun Life Assurance Co. of Canada*, 488 F.3d 240, 247 n. 2 (4th Cir.2007) (emphasizing that the right to bring a civil action is an integral part of a full and fair benefit review and that the adverse benefit determination letter must include the relevant information related to that right) (abrogated on other grounds by *Heimeshoff v. Hartford Life & Acc. Ins. Co.*, 134 S.Ct. 604, 612 (2013)); *Novick v. Metropolitan Life Ins. Co.*, 764 F.Supp.2d 653, 660–64 (S.D.N.Y.2011) (concluding that 29 CFR 2560.503–1(g) requires that the adverse benefit determination letter include the time limits for judicial review); *Solien v. Raytheon Long Term Disability Plan # 590*, 2008 WL 2323915, at 8 (D.Ariz. June 2, 2008) (holding that “[j]udicial review is an appeal procedure for an adverse benefit determination and is therefore a part of the claim procedures covered by these regulations, especially when the time limit for filing a judicial action is established contractually by the Plan”). But see *Wilson v. Standard Ins. Co.*, 613 F. App’x 841, 844 n.3 (11th Cir. 2015) (unpublished) (finding that 29 CFR 2560.503–1(g)(1)(iv) “can also be reasonably read to mean that notice must be given of the time limits applicable to the ‘plan’s review procedures,’ and the letter must also inform the claimant of her right to bring a civil action without requiring notice of the time period for doing so”); *Scharff v. Raytheon Co. Short Term Disability Plan*, 581 F.3d 899, 907–08 (9th Cir. 2009) (declining to supplement ERISA’s comprehensive scheme for regulating disclosures to participants with a California law requiring the express disclosure of a statute of limitations). In an unpublished decision, the Tenth Circuit similarly interpreted language in a plan that was virtually identical to section 2560.503–1(g)(1)(iv) as only requiring denial letters to include time limits applicable to internal review procedures. See *Young v. United Parcel Services*, 416 F. App’x 734, 740 (10th Cir. 2011)

Accordingly, the Department solicited comments on whether the final regulation should require plans to provide claimants with a clear and prominent statement of any applicable contractual limitations period and its expiration date for the claim at issue in the final notice of adverse benefit determination on appeal and with an updated notice of that expiration date if tolling or some other event causes that date to change.

In response, the Department received many comments from claimants and participant advocates supporting a contractual limitations period notice requirement. Numerous commenters further requested that any required notice include the date on which the relevant contractual limitations period expires. They also asked the Department to include a definition of a “reasonable limitations period.” One commenter argued to the contrary that a rule requiring inclusion of a specific date would create confusion for claimants and carries a risk that the insurer or other administrative entity is seen as providing legal advice. Another commenter urged that such a rule should not be adopted because the date by which suit must be filed may be subject to dispute in litigation. A commenter expressed concern that such a notice requirement is largely unnecessary as the information is generally already included in plan documents, (e.g., the summary plan description), and that it could impose significant administrative burden. The commenter suggested that a more appropriate rule would be to require that the notice of adverse benefit determination on review include a statement alerting participants that they should review the terms of the applicable plan documents to determine any deadline by which they must file a civil action. Finally, a number of commenters asked the Department to specifically address whether it is allowable for a contractual limitations period to be structured so that it could actually expire before the plan’s appeals process is completed.

In light of the issues identified regarding contractual limitations periods, the Department concluded that it was appropriate in this final rule to address certain basic points.

First, section 503 of ERISA requires that a plan afford a reasonable opportunity to any participant whose claim for benefits has been denied for a

(unpublished) (concluding that requiring a notification of the time limit for filing suit “conflates the internal appeals process, and its associated deadlines, with the filing of a legal action after that process has been fully exhausted”).

full and fair review of that decision by an appropriate named fiduciary. The Department does not believe that a claims procedure would satisfy the statutory requirement if the plan included a contractual limitations period that expired before the review was concluded. In the Department’s view, this is clear from the Supreme Court’s holding in *Heimeshoff*. In that case, the Supreme Court held that an ERISA disability plan’s three-year limitations period, running from the date of proof of loss, was enforceable even though the statute of limitations began to run before the participant’s cause of action accrued. The Court pointed out that there was nothing to suggest the 3-year contractual limitations period was not “reasonable” in light of the Department’s regulation that would require the internal claims and appeals process to be completed well inside a three-year period. *Heimeshoff*, 134 S.Ct. at 612 (citing *Order of United Commercial Travelers of America v. Wolfe*, 67 S.Ct. 1355 (1947)). A limitations period that expires before the conclusion of the plan’s internal appeals process on its face violates ERISA section 503’s requirement of a full and fair review process. A process that effectively requires the claimant to forego the right to judicial review and thereby insulates the administrator from impartial judicial review falls far short of the statutory fairness standard and undermines the claims administrator’s incentives to decide claims correctly.

Further, in rejecting the challenge to the contractual limitations period at issue in *Heimeshoff*, the Court emphasized that the claimant was allowed a year or more to bring suit after the close of the internal claims review process.³⁰ A contractual limitations period that does not allow such a reasonable period after the conclusion of the appeal in which to bring a lawsuit is unenforceable.³¹ Moreover, as the

³⁰ *Heimeshoff*, 134 S.Ct. at 612 (“Neither *Heimeshoff* nor the United States claims that the Plan’s 3-year limitations provision is unreasonably short on its face. And with good reason: the United States acknowledges that the regulations governing internal review mean for ‘mainstream’ claims to be resolved in about one year, Tr. of Oral Arg. 22, leaving the participant with two years to file suit. Even in this case, where the administrative review process required more time than usual, *Heimeshoff* was left with approximately one year in which to file suit. *Heimeshoff* does not dispute that a hypothetical 1-year limitations period commencing at the conclusion of internal review would be reasonable. Id., at 4”) (footnote omitted).

³¹ The Department also believes that additional public input beyond the public record for this rulemaking would be needed for the Department to define a minimum period of time necessary for such a period to constitute a reasonable period in which to bring an action under ERISA section 502(a).

Supreme Court also recognized in *Heimeshoff*, even in cases with an otherwise enforceable contractual limitations period, traditional doctrines, such as waiver and estoppel, may apply if a plan's internal review prevents a claimant from bringing section 502(a)(1)(B) actions within the contractual period. *Heimeshoff*, 134 S.Ct. at 615. In addition to such traditional remedies, plans that offer appeals or dispute resolution beyond what is contemplated in the claims procedure regulations must agree to toll the limitations provision during that time. See 29 CFR 2560.503–1(c)(3)(ii).

Second, the Department agrees with the conclusion of those federal courts that have found that the current regulation fairly read requires some basic disclosure of contractual limitations periods in adverse benefit determinations. In fact, in the Department's view, the statement of the claimant's right to bring a civil action under section 502(a) of ERISA following an adverse benefit determination on review would be incomplete and potentially misleading if it failed to include limitations or restrictions in the documents governing the plan on the right to bring such a civil action. Accordingly, this final rule includes in new paragraph (j)(4)(ii) a requirement that the notice of an adverse benefit determination on review must include a description of any applicable contractual limitations period and its expiration date.

The Department is not persuaded that inclusion in the notice of adverse benefit determination on review of any applicable contractual limitations period and its expiration date will result in confusion. The Department also does not agree that a statement of the plan's view as to the exact date the limitations period expires will somehow inappropriately foreclose or otherwise prejudice legitimate arguments about application of the limitations period in individual cases. Nor does the Department believe that disclosure of a contractual limitations period requires the plan to provide legal advice. Additionally, as described below, the Department does not believe that including a description of any contractual limitations period, including the date by which the claimant must bring a lawsuit, would impose more than a minimal additional burden. Although the final rule provision is technically applicable only to disability benefit claims, as explained above, the Department believes that notices of adverse benefit determinations on review for other benefit types would be required to

include some disclosure about any applicable contractual limitations period. What would be sufficient will depend on the controlling judicial precedent and the individual facts and circumstances, but the Department would consider the inclusion of the information in paragraph (j)(4)(ii) to be an appropriate disclosure for all plan types.

Several comments raised other issues pertaining to the disclosure of contractual and statutory limitations on a claimant's right to bring a civil action under section 502(a) of ERISA. Issues beyond this final rule may be addressed in a future regulatory action or other guidance by the Department.

c. Comments Beyond the Scope of the Rulemaking

Some commenters raised disability claims procedure issues pertaining to matters that the Department considers to be beyond the scope of this rulemaking. For example, one commenter suggested that the Department amend its Model Statement of ERISA Rights for SPDs for disability plans to include notification of eligibility for language services. Other commenters requested that the Department propose a rule requiring that adverse benefit determinations on review notify disability benefit claimants of the ERISA venue provisions. Other issues raised by some commenters relate to substantive limitations on recoupment of benefit overpayments, rights to supplement the administrative record for court review, and the validity of discretionary clauses in plans that are used as a basis for seeking a deferential "arbitrary or capricious" standard for court review of benefit denials. Although the Department agrees that the issues raised by the commenters may merit an evaluation of additional regulatory actions on procedural safeguards and protections, those subjects are beyond the scope of this rulemaking. As the Department noted in the preamble to the proposal, this rulemaking was a start to improving the current standards applicable to the processing of claims and appeals for disability benefits so that they include improvements to certain basic procedural protections in the current Section 503 Regulation. Issues beyond this final rule may be addressed in a future regulatory action or other guidance by the Department.

III. Economic Impact and Paperwork Burden

A. Background and Need for Regulatory Action

As discussed in Section I of this preamble, the final amendments would revise and strengthen the current rules regarding claims and appeals applicable to ERISA-covered plans providing disability benefits primarily by adopting several of the new procedural protections and safeguards made applicable to ERISA-covered group health plans by the Affordable Care Act. Before the enactment of the ACA, group health plan sponsors and sponsors of ERISA-covered plans providing disability benefits were required to implement claims and appeal processes that complied with the Department's regulation establishing minimum requirements for benefit claims procedures for employee benefit plans covered by Title I of ERISA.³² The enactment of the ACA and the issuance of the implementing interim final regulations in 2010 resulted in disability benefit claimants receiving fewer procedural protections than group health plan participants even though disputes and litigation regarding disability benefit claims are more prevalent than health care benefit claims.³³ In order to ensure fundamental fairness in the claim and appeals procedure process, health and disability plan claimants are entitled to receive the same procedural protections as they did when the 2000 regulation was issued.

The Department believes this action is necessary to ensure that disability claimants receive a full and fair review of their claims under the more stringent procedural protections that Congress established for group health care claimants under the ACA. The final rule will promote fairness and accuracy in the claims review process and protect participants and beneficiaries in ERISA-covered disability plans by ensuring they receive benefits that otherwise might have been denied by plan administrators in the absence of the fuller protections provided by this final regulation. The final rule also will help alleviate the financial and emotional hardship suffered by many individuals when they are unable to work after becoming disabled and their claims are denied.

As stated earlier in this preamble, this action also is necessary to correct

³² 65 FR 70246 (Nov. 21, 2000), amended at 66 FR 35877 (July 9, 2001).

³³ See Sean M. Anderson, *ERISA Benefits Litigation: An Empirical Picture*, 28 ABA J. Lab. & Emp. L. 1(2012).

procedural problems evidenced in litigation under the 2000 regulation predating the ACA, which in the Department's view, resulted in claimants not receiving a full and fair review as required by ERISA section 503. Specifically, some courts held that under the 2000 regulation, claimants only have the right to review and respond to new evidence or rationales developed during the pendency of an appeal after the claim has been denied on appeal. The final rule levels the playing field by explicitly requiring plan administrators to provide claimants, free of charge, with any new evidence or rationale relied upon, considered, or generated by the plan in connection with the claim and a reasonable opportunity for the claimant to respond.

The Department disagrees with commenters' assertion that disability plan claim procedures should not mirror the ACA group health plan amendments because of the difference between health and disability claims. For reasons discussed earlier in this preamble, after careful consideration, the Department incorporated into the final rule only certain of the ACA group health plan claims procedure amendments to ensure that disability plan claimants receive the same opportunity to pursue a full and fair review of their claims as required by ERISA section 503 with the procedural safeguards and consumer protections that are aligned with those required by group health plans under the ACA and the Department's implementing

regulation at 29 CFR 2590.715–2719. This final rule aligns the disability claims procedures with the ACA procedural safeguards and consumer protections for group health plans. The Department did not amend other provisions of the 2000 regulation that affect how disability plan claims are processed or the timing requirements. Therefore, as discussed more fully below, the Department does not expect that the final rule will lead to delays and significant increased cost for disability claims and appeals processes. The Department considered comments asserting that some of its cost estimates in the proposed Regulatory Impact Analysis ("RIA") were underestimated and made adjustments where appropriate.

The Department has crafted these final regulations to secure the protections of those submitting disability benefit claims. In accordance with OMB Circular A–4, the Department has quantified the costs where possible and provided a qualitative discussion of the benefits that are associated with these final regulations.

B. Executive Order 12866 and 13563

Executive Orders 12866 and 13563 direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects; distributive impacts; and equity). Executive Order 13563 emphasizes the importance of

quantifying both costs and benefits, of reducing costs, of harmonizing rules, and of promoting flexibility.

Under Executive Order 12866 (58 FR 51735), "significant" regulatory actions are subject to review by the Office of Management and Budget (OMB). Section 3(f) of the Executive Order defines a "significant regulatory action" as an action that is likely to result in a rule (1) having an annual effect on the economy of \$100 million or more in any one year, or adversely and materially affecting a sector of the economy, productivity, competition, jobs, the environment, public health or safety, or State, local or tribal governments or communities (also referred to as "economically significant"); (2) creating a serious inconsistency or otherwise interfering with an action taken or planned by another agency; (3) materially altering the budgetary impacts of entitlement grants, user fees, or loan programs or the rights and obligations of recipients thereof; or (4) raising novel legal or policy issues arising out of legal mandates, the President's priorities, or the principles set forth in the Executive Order. It has been determined that this rule is significant within the meaning of section 3(f) (4) of the Executive Order. Therefore, OMB has reviewed the final rule pursuant to the Executive Order. The Department provides an assessment of the potential costs and benefits of the final rule below, as summarized in Table 1, below. The Department concludes that the economic benefits of these final regulations justify their costs.

TABLE 1—ACCOUNTING TABLE

Category	Estimate	Year dollar	Discount rate	Period covered
Benefits—Qualitative	The Department expects that these final regulations will improve the procedural protections for workers who become disabled and make claims for disability benefits from ERISA-covered employee benefit plans. This would result in some participants receiving benefits they might otherwise have been denied absent the fuller protections provided by the final regulation. Greater certainty and consistency in the handling of disability benefit claims and appeals and improved access to information about the manner in which claims and appeals are adjudicated will be achieved. Fairness and accuracy will increase as fuller and fairer disability claims processes provide claimants with sufficient information to evaluate the claims process and defend their rights under their plan.			
Costs:				
Annualized	\$15,806,000	2016	7%	2018–2027
Monetized	15,806,000	2016	3%	2018–2027

TABLE 1—ACCOUNTING TABLE—Continued

Category	Estimate	Year dollar	Discount rate	Period covered
Qualitative	The Department believes that these requirements have modest costs associated with them, since many chiefly clarify provisions of the current DOL claims procedure regulation. As discussed in detail in the cost section below, the Department quantified the costs associated with two provisions of the final regulations for which it had sufficient data: The requirements to provide (1) additional information to claimants in the appeals process and (2) information in a culturally and linguistically appropriate manner.			

1. Estimated Number of Affected Entities

The Department does not have complete data on the number of plans providing disability benefits or the total number of participants covered by such plans. ERISA-covered welfare benefit plans with more than 100 participants generally are required to file the Form 5500 Annual Return/Report. Currently, only a small number of ERISA-covered welfare benefit plans with less than 100 participants are required to file the form. Based on current trends in the establishment of pension and health plans, there are many more small plans than large plans, but the majority of participants are covered by the large plans.

Data from the 2014 Form 5500 Schedule A indicates that there are 39,135 plans reporting a code indicating they provide temporary disability benefits covering 40.1 million participants, and 26,171 plans reporting a code indicating they provide long-term disability benefits covering 22.4 million participants.³⁴ To put the number of large and small plans in perspective, the Department estimates that there are 150,000 large group health plans and 2.1 million small group health plans using 2016 Medical Expenditure Panel Survey-Insurance Component. While most plans are small plans most participants are in large plans.

2. Benefits

In developing these final regulations, the Department closely considered their potential economic effects, including both benefits and costs. The Department does not have sufficient data to quantify the benefits associated with these final regulations due to data limitations and a lack of effective measures. Therefore, the Department provides a qualitative discussion of the benefits below.

These final regulations implement a more uniform, rigorous, and fair

disability claims and appeals process as required by ERISA section 503 that conforms to a carefully selected set of the requirements applicable to group health plans under the ACA Claims and Appeals Final Rule. In general, the Department expects that these final regulations will improve the procedural protections for disabled workers who make claims for disability benefits from ERISA-covered employee benefit plans. This will cause some participants to receive benefits that, absent the fuller protections of the regulation, they might otherwise have been incorrectly denied. In other circumstances, expenditures in the claims process incurred by plans may be reduced as a fuller and fairer system of claims and appeals processing helps facilitate participant acceptance of cost management efforts. The Department expects that greater certainty and consistency in the handling of disability benefit claims and appeals and improved access to information about the manner in which claims and appeals are adjudicated will lead to efficiency gains in the system, both in terms of the allocation of spending at a macro-economic level as well as operational efficiencies among individual plans. This certainty and consistency also are expected to benefit, to varying degrees, all parties within the system and lead to broader social welfare gains, particularly for disability benefit plan claimants.

The Department expects that these final regulations also will improve the efficiency of disability benefit plans by improving their transparency and fostering participants' confidence in their fairness. The enhanced disclosure and notice requirements contained in these final regulations will help ensure that benefit participants and beneficiaries have a clear understanding of the reasons underlying adverse benefit determinations and their appeal rights.

For example, the final regulations require all adverse benefit determinations to contain a discussion of the decision, including an

explanation of the basis for disagreeing with the views of a treating health care professional or vocational professional who evaluated the claimant or any disability determination regarding the claimant made by the Social Security Administration and presented to the plan by the claimant. This provision would address the confusion often experienced by claimants when there is little or no explanation provided for their plan's determination and/or their plan's determination is contrary to their treating professional's opinion or their SSA award of disability benefits.

The final rule also requires adverse benefit determinations to contain the internal rules, guidelines, protocols, standards or other similar criteria of the plan that were relied upon in denying the claim (or a statement that these do not exist), and a notice of adverse benefit determination at the claims stage must contain a statement that the claimant is entitled to receive, upon request and free of charge, reasonable access to, and copies of, all documents, records, and other information relevant to the claimant's benefit claim. These provisions will benefit claimants by ensuring that they fully understand the reasons why their claim was denied so they are able to meaningfully evaluate the merits of pursuing an appeal or litigation.

The requirement to include a discussion of the decision, as well as the requirement to include specific internal rules, guideline, protocols, standards, or similar criteria relied upon by the plan will improve the accuracy of claims determinations. The process of documenting and explaining the reasoning of the decision will help ensure that plans' terms are followed and accurate information is used, and will enable plan participants to challenge inadequate or faulty evidence or reasoning.

Under the final rule, adverse benefit determinations must be provided in a culturally and linguistically appropriate manner for certain participants and beneficiaries that are not fluent in

³⁴ Almost all plans reporting this code are welfare plans.

English. Specifically, if a claimant's address is in a county where 10 percent or more of the population residing in that county, as determined based on American Community Survey (ACS) data published by the United States Census Bureau, are literate only in the same non-English language, notices of adverse benefit determinations to the claimant would have to include a prominent one-sentence statement in the relevant non-English language about the availability of language services. This provision will ensure that certain disability claimants that are not fluent in English understand the notices received from the plan regarding their disability claims and their right to appeal denied claims.

These important protections would benefit participants and beneficiaries by correcting procedural wrongs evidenced in the litigation even predating the ACA.

The voluntary nature of the employment-based benefit system in conjunction with the open and dynamic character of labor markets make explicit as well as implicit negotiations on compensation a key determinant of the prevalence of employee benefits coverage. The prevalence of benefits is therefore largely dependent on the efficacy of this exchange. If workers perceive that there is the potential for inappropriate denial of benefits or handling of appeals, they will discount the value of such benefits to adjust for this risk. This discount drives a wedge in compensation negotiation, limiting its efficiency. If workers undervalue the full benefit of disability coverage, fewer employers will provide such coverage or fewer participants will enroll. To the extent that workers perceive that the final rule, supported by the Department's enforcement authority, will reduce the risk of inappropriate denials of disability benefits, the differential between the employers' costs and workers' willingness to accept wage offsets is minimized.

These final regulations would reduce the likelihood of inappropriate benefit denials by requiring all disability claims and appeals to be adjudicated by persons that are independent and impartial. Specifically, the final rule would prohibit hiring, compensation, termination, promotion, or other similar decisions with respect to any individual (such as a claims adjudicator or a medical or vocational expert) to be made based upon the likelihood that the individual will support the plan's benefits denial. This will ensure that all disability benefit plan claims and appeals processes are adjudicated in a manner designed to ensure the

independence and impartiality of persons involved in making the decisions and enhance participants' perception that their disability plan's claims and appeals processes are operated in a fair manner.

As stated above, the final rule requires claimants to have the right to review and respond to new evidence or rationales developed by the plan during the pendency of an appeal, as opposed merely to having a right to such information upon request only after the claim has already been denied on appeal, as some courts have held under the Section 503 Regulation. These provisions will benefit claimants by correcting certain procedural flaws that currently occur when disability benefit claims are litigated and ensuring that they have a right to review and respond to new evidence or rationales developed by the plan during the pendency of the appeal.

In summary, the final rules provide more uniform standards for handling disability benefit claims and appeals that are comparable to the rules applicable to group health plans under the ACA Claims and Appeals Final Rule. These rules will reduce the incidence of inappropriate denials, averting serious financial hardship and emotional distress for participants and beneficiaries that are impacted by a disability. They also would enhance participants' confidence in the fairness of their plans' claims and appeals processes. Finally, by improving the transparency and flow of information between plans and claimants, the final regulations will enhance the efficiency of labor and insurance markets.

3. Costs and Transfers

The Department has quantified the costs related to the final regulations' requirements to (1) provide the claimant free of charge with any new or additional evidence considered, and (2) to providing notices of adverse benefit determinations in a culturally and linguistically appropriate manner. These requirements and their associated costs are discussed below

Provision of new or additional evidence or rationale: As stated earlier in this preamble, before a plan providing disability benefits can issue an adverse benefit determination on review on a disability benefit claim, these final regulations require such plans to provide the claimant, free of charge, with any new or additional evidence considered, relied upon, or generated by (or at the direction of) the plan or any new or additional rationale upon which the adverse determination is based as soon as possible and

sufficiently in advance of the date the notice of adverse benefit determination on review is required to be provided. This requirement may increase the administrative burden on plans to prepare and deliver the enhanced information to claimants. The Department is not aware of a data source substantiating how often plans rely on new or additional evidence or rationale during the appeals process or the volume of materials that comprise the new evidence or rationale. Based on comments and discussions with the regulated community, the Department understands that few plans base adverse benefit determinations on appeal on new evidence or rationales. The Department also understands that the most critical new information relied on by plans when issuing adverse benefit determinations on review are new independent medical reports, and that at least some plans and insurers have a practice of providing claimants with rights to a voluntary additional level of appeal to respond to the new independent medical report if they disagree with its findings.

These final rules further require adverse benefit determinations on review for disability benefit plans to include a description of any contractual limitations period, including the date by which the claimant must bring a lawsuit. In the regulatory impact analysis for the proposal, the Department estimated these costs by assuming that compliance will require medical office staff, or other similar staff for another service provider with a labor rate of \$30, five minutes³⁵ to collect and distribute the additional evidence or rationale considered, relied upon, or generated by (or at the direction of) the plan during the appeals process. Additionally, including a description of any contractual limitations period, including the date by which the claimant must bring a lawsuit would have minimal additional burden as plans already maintain such information in the ordinary course of their claims administration process and would just need to add it to the notice.

One commenter questioned the Department's assumption asserting that it does not account for time to identify the additional or new information or rationale and for staff to respond. Commenters also asserted that providing the information will trigger a response by the claimant to which they

³⁵ For a description of the Department's methodology for calculating wage rates, see <https://www.dol.gov/sites/default/files/ebsa/laws-and-regulations/rules-and-regulations/technical-appendices/labor-cost-inputs-used-in-ebsa-opr-ria-and-pra-burden-calculations-august-2016.pdf>.

will have to respond. The commenter provided no alternative estimates or data supporting their assertions that the Department could use to revise its cost estimate.

In the absence of such data, the Department disagrees with the comments. While some effort is required to provide claimants with the new information or rationale, the Department does not find the commenters' assertion of significant burden to be credible. As part of its customary and usual business practices, the insurer or TPA should have an existing system in place to track any new information or rationale it relies on in making an adverse benefit determination in order to identify, document, and evaluate the information during its claim adjudication process. The Department acknowledges, however, that an average of five minutes may be inadequate time to collect the information and provide it to the claimants; therefore, it has increased the estimate to an average of 30 minutes, which should provide a reasonable amount of time to perform this task.

The Department also agrees that making the new or additional information or rationale available to the claimant may trigger a response from the claimant. However, the Department does not have sufficient data to estimate the number of claimants that will respond with information that the insurer or TPA will need to evaluate or how much time will be required to evaluate the information. Moreover, the Department's consultations with EBSA field investigators that investigate disability plan issues indicate that many disability plans already allow claimants to respond to the new information or rationale in a back-and-forth process. The requirement imposes no new costs on these plans, insurers, and TPAs. The requirement does impose an additional burden on plans that do not allow claimants to respond to the new information or rationale, but the Department does not have sufficient data to estimate the increased costs. One industry commenter agreed that that it would be difficult to estimate the burden associated with responding to claimants.

Commenters also raised concern regarding a potentially endless cycle of appeals, responses, and reconsiderations that would extend the claim determination process and substantially increase costs. As discussed elsewhere in the preamble, the Department also does not find this claim to be credible. The requirement only requires action if the insurer or TPA produces new or additional information or rationale after reviewing

the new information submitted by the claimant, not if it just evaluates the information submitted by the claimant, and the Department's consultations with its investigators indicated that this occurs infrequently.

Additionally, while a plan fiduciary has a responsibility to ensure the accurate evaluation of all claims, that responsibility does not require the fiduciary to rebut every piece of evidence submitted or seek to deny every claim. Indeed, an endless effort to rebut every piece of evidence submitted by the claimant would call into question whether the fiduciary was impartially resolving claims as required by the duties of prudence and loyalty.

Furthermore, the Department has interpreted ERISA section 503 and the current Section 503 Regulation as already requiring that plans provide claimants with new or additional evidence or rationales upon request and an opportunity to respond in certain circumstances. See Brief of the Secretary of Labor, Hilda L. Solis, as Amicus Curiae in Support of Plaintiff-Appellant's Petition for Rehearing, *Midgett v. Washington Group Int'l Long Term Disability Plan*, 561 F.3d 887 (8th Cir. 2009) (No. 08–2523), (expressing disagreement with cases holding that there is no such requirement). The supposed "endless loop" is necessarily limited by claimants' ability to generate new evidence requiring further review by the plan. Such submissions ordinarily become repetitive in short order, and are further circumscribed by the limited financial resources of most claimants.

For purposes of this regulatory impact analysis, the Department assumes, as an upper bound, that all appealed claims will involve a reliance on additional evidence or rationale. Based on that assumption, the Department assumes that this requirement will impose an annual aggregate cost of \$14.5 million. The Department estimates this cost by assuming that compliance will require medical office staff, or another service providers' similar staff with a labor rate of \$42.08, thirty minutes³⁶ to collect and distribute the additional evidence considered, relied upon, or generated by (or at the direction of) the plan during the appeals process. The Department estimates that on average, material, printing and postage costs will total \$2.15 per mailing (20 pages * 0.05 cents per copy + \$1.15 postage). The

³⁶ For a description of the Department's methodology for calculating wage rates, see <https://www.dol.gov/sites/default/files/ebsa/laws-and-regulations/rules-and-regulations/technical-appendices/labor-cost-inputs-used-in-ebsa-opr-ria-and-pra-burden-calculations-august-2016.pdf>.

Department further assumes that 30 percent of all mailings will be distributed electronically with no associated material, printing or postage costs.³⁷

The Department does not have sufficient data on the number of disability claims that are filed or denied. Therefore, the Department estimates the number of short- and long-term disability claims based on the percentage of private sector employees (122 million)³⁸ that participate in short- and long-term disability programs (approximately 39 and 33 percent respectively).³⁹ The Department estimates the number of claims per covered life for long-term disability benefits based on the percentage of covered individuals that file claims under the Social Security Disability Insurance Program (SSDI) (two percent of covered individuals). The Department notes that SSDI uses a standard for disability determinations that is stricter than the standard used in many long-term disability plans offered by private employers. However, the number of claims filed with the SSDI is an acceptable proxy as most employer plans require claimants to file with the SSDI as a condition of receiving benefits from the plan as they offset the benefits paid by plan with the amount received from SSDI.

The Department does not have sufficient data to estimate the percentage of covered individuals that file short-term disability claims. Therefore, for purposes of this analysis, the Department estimates, as it did in

³⁷ Commenters disagreed in general with the estimates of the burden for providing the notice in a culturally and linguistically appropriate manner. Their concern was that most notices would be delivered on paper and not electronically. While one commenter did not provide any supporting evidence for this assertion, another commenter reported that a large company's past experience was that 30 percent of the claims filed under its disability plan were electronic. For purposes of this regulatory impact analysis, the Department accepted the suggestion posited in the comment that a significant percentage of disability benefit claimants are at home without access to an electronic means of communication at work that is required by the Department's electronic disclosure rule. Therefore, the Department assumes that a higher percentage of notices will be transmitted via mail even though data was provided only for a single company.

³⁸ BLS Employment, Hours, and Earnings from the Current Employment Statistics survey (National) Table B–1, May 2016. It should be noted that this estimate differs from the estimates from the Form 5500 reported in the affected entities section. The Form 5500 numbers only include large plans, and some filings could combine estimates for both short and long term disability.

³⁹ "Beyond the Numbers: Disability Insurance Plans Trends in Employee Access and Employer Cost," February 2015 Vol. 4 No. 4. <http://www.bls.gov/opub/btn/volume-4/disability-insurance-plans.htm>.

the proposal, that six percent of covered lives file such claims, because it believes that short-term disability claims rates are higher than long-term disability claim rates. The Department received no comments regarding this assumption.

The Department estimates the number of denied claims that would be covered by the rule in the following manner: For long-term disability, the percent of

claims denied is estimated using the percent of denied claims for the SSDI Program (75 percent). This estimate may overstate the denial rates for ERISA-covered long-term disability plans, because as discussed above, many plans require claimants to file for SSDI benefits as a requirement to receive benefits from their plan. Plans often have a lower benefit determination standard, at least initially, than the SSDI

Program resulting in less denied claims. Therefore, using the SSDI denied claims rate as a proxy for the ERISA-covered plan claims denial rate may overstate the number of private long-term disability plan denied claims. For short-term disability, the estimate of denied claims (three percent) is an assumption based on previous regulations and feedback. The estimates are provided in the table below.

TABLE 2—FAIR AND FULL REVIEW BURDEN

[In thousands]

	Short-term		Long-term		Total		
	Electronic	Paper	Electronic	Paper	Electronic	Paper	All
Denied Claims and lost Appeals with Additional Information	26	60	168	391	193	451	644
Mailing cost per event	\$0.00	\$2.15	\$0.00	\$2.15	\$0.00	\$2.15	
Total Mailing Cost	\$0.00	\$129	\$0.00	\$841	\$0.00	\$969	\$969
Preparation Cost per event	\$21.04	\$21.04	\$21.04	\$21.04	\$21.04	\$21.04	\$21.04
Total Preparation cost	\$540	\$1,260	\$3,526	\$8,227	\$4,066	\$9,487	\$13,553
Total	\$540	\$1,388	\$3,526	\$9,068	\$4,066	\$10,456	\$14,522

Adverse benefit determinations on disability benefit claims would have to contain a discussion of the decision, including the basis for disagreeing with SSA Disability Determination and Views of Treating Physician: Commenters on the proposal noted that costs were not quantified for the added burden of including in the benefit determination a discussion of why the plan did not follow the determination of the SSA or views of health care professionals that treated the claimant. Commenters did not provide data or information that would provide the Department with sufficient data to quantify such costs. Thus, while the Department agrees that there could be added burden imposed on plans to provide this discussion in adverse benefit determinations, the Department is unable to estimate the burden because it does not have sufficient data on the number or percent of claims that would need to contain this discussion.

Departmental investigators reviewing disability claims report that if the plan deviates from an attending physician's recommendation, a review is conducted by a supervisor, nurse, medical director or a consultant. This additional review usually generates documentation in the claim file. While this documentation may not be adequate in its current form to satisfy the requirement, the incremental costs to comply could be small, because it appears that deviations from physician's recommendations are documented currently. Plans or insurers may still need to prepare a response

using the already available information. The Department does not know how many claim determinations would require this discussion. The average hourly labor rate of a nurse is \$46.02 and that of a physician is \$157.80, and the Department estimates that preparing a report with information already available should not take more than one hour.

Adverse benefit determination would have to contain the internal rules, guidelines, protocols, standards, or other similar criteria of the plan used in denying the claim. The Department believes that this requirement will have minimal costs. In the process of determining a claim, plans will know, or should know, the internal rules, guidelines or protocols that were used to make a benefit determination. A commenter was concerned about the time and costs that would be required to comb through hundreds of pages of a claim manual to determine that no provision has any conceivable application to a particular claim in order to substantiate this requirement. The Department believes that neither the proposal nor the final rule requires this type of costly and time consuming process. The rule requires only the inclusion of those items that were relied upon and that should already be documented in the claim file at the time it was used to make a determination.

A notice of adverse benefit determination at the claims stage would have to contain a statement that the claimant is entitled to receive relevant

documents upon request. The Department believes that this requirement will have a negligible cost impact, because an insignificant amount of time will be required to add the statement to the notice. Although the current claims procedure regulation provides claimants with the right to request relevant documents when challenging an initial claims denial, a statement was required to be included only in notices of adverse benefit determinations on appeal. Including the statement in the initial denial notice as required by the final rule, in the Department's view, merely confirms claimants' rights under the current claims procedure regulation and will help ensure that they understand their right to receive such information to help them understand the reasons for the denial and to make informed decisions regarding whether and how they challenge a denial on appeal. The Department acknowledges that it is likely that more claimants will request this information when they are informed of their right to receive it; however, the Department does not have sufficient data to estimate the number of requests that will be made.

Culturally and Linguistically Appropriate Notices: The final regulations require notices of adverse benefit determinations with respect to disability benefits to be provided in a culturally and linguistically appropriate manner in certain situations. This requirement is satisfied if plans provide oral language services including

answering questions and providing assistance with filing claims and appeals in any applicable non-English language. The final regulations also require each notice sent by a plan to which the requirement applies to include a one-sentence statement in the relevant non-English language that translation services are available. The Department believes that this requirement will have a negligible cost impact. Plans also must provide, upon request, a notice in any applicable non-English language.

Although, one commenter reported that oral translation services are not provided by plans, the Department's conversations with the regulated community indicate that oral translation services generally are offered as a standard service. Based on this

information, the Department assumes that only a small number of plans will need to begin offering oral translation services for the first time upon the issuance of the final rule. Therefore, the Department assumes that this requirement will impose minimal additional costs.

The Department expects that the largest cost associated with the requirement is for plans to provide notices in the applicable non-English language upon request. Based on 2014 ACS data, the Department estimates that there are about 22.7 million individuals living in covered counties that are literate only in a covered non-English language.⁴⁰ To estimate the number of these individuals that might request a notice in a non-English language, the Department estimated the number of

workers in each county (total population in county * state labor force participation rate * (1—state unemployment rate))^{41 42} and calculated the number with access to short-term and long-term disability insurance by multiplying those estimates by the estimates of the share of workers participating in disability benefit programs (39 percent for short-term and 33 percent for long term disability.)⁴³ It should be noted that the sums in the right two columns are all workers in the county with disability insurance, not just workers with disability insurance that are eligible to receive notices in the applicable non-English language, because the calculation for the number of requests for translation is based on workers with insurance.

TABLE 3—WORKERS IN AFFECTED COUNTIES BY STATE

	Pop in the county	Total effected foreign language pop in county	State labor force participation rate (2015) (%)	State unemployment rate (2015) (%)	Workers with short-term disability coverage	Workers with long-term disability coverage

Total	57,212,542	22,699,670			12,825,893	10,852,679

The Department's discussions with the regulated community indicate that in California, which has a State law requirement for providing translation services for health benefit claims,

requests for translations of written documents averages 0.098 requests per 1,000 members (note that requirement applies to all members not just foreign language speaking) for health claims.

While the requirements of California differ from those contained in these final regulations and the demographics for California do not match those of covered counties, for purposes of this

⁴⁰ <http://www.cms.gov/CCIIO/Resources/Fact-Sheets-and-FAQs/Downloads/2009-13-CLAS-County-Data.pdf>.

⁴¹ Labor force Participation rate: <http://www.bls.gov/lau/staadata.txt>. Unemployment rate: <http://www.bls.gov/lau/lastrk14.htm>.

⁴² Please note that using state estimates of labor participation rates and unemployment rates could lead to an over estimate as those reporting in the ACS survey that they speak English less than "very well" are less likely to be employed. Also, this estimate includes both private and public workers,

instead of just private workers leading to an overestimate of the costs.

⁴³ "Beyond the Numbers: Disability Insurance Plans Trends in Employee Access and Employer Cost," February 2015 Vol. 4 No. 4. <http://www.bls.gov/opub/btn/volume-4/disability-insurance-plans.htm>.

analysis, the Department used this percentage to estimate the number of translation service requests that plans could expect to receive. The Department believes that this estimate significantly overstates the number of translation requests that will be received, because there are fewer disability claims than health claims. Industry experts also told the Department that while the cost of translation services varies, \$500 per document is a reasonable approximation of translation cost, and the Department used this amount in its cost estimate for the final rule. This number was provided to the Department in 2010; therefore, for purposes of this analysis, the Department has adjusted this amount to \$553 to account for inflation.⁴⁴

Based on the foregoing, the Department estimates that the cost to provide translation services pursuant to the final rule will be approximately \$1,283,840 annually (23,678,572 lives * 0.098/1000 * \$553).

Commenters questioned the data the Department used in the regulatory impact analysis for the proposed rule to estimate the costs incurred by TPAs and insurers to provide culturally and linguistically appropriate notices. One commenter questioned whether the \$500 per document translation cost accurately reflects the costs to comply with this provision. The commenter, however, failed to explain its rationale or provide any alternative information the Department could use to refine its estimate.

Another commenter questioned whether it was valid to rely on cost estimates to translate a notice into a non-English language based on data used by the Department to quantify the costs of complying with the a similar ACA requirement for group health plans. The Department believes that its experience with ACA group health plan claims and appeals regulations is directly applicable to this final regulation regarding disability claims and appeals. Contrary to the commenter's assertion that disability claims are so different from health claims that information about one cannot inform the other, the Department believes that translation of a notice into a different language is very similar for health and disability benefits, particularly as the same translation companies offer services for both types of notices. Also, while commenters argue that disability claims files are

much larger than medical claim files, the distinction is not relevant here, because the claim file is not required to be translated; only the notice is.

Another comment received was that there would be additional costs due to privacy issues arising from sharing personal information with a third-party. The same privacy issues arise in the health claims context. Pricing for translation services used in the analysis, therefore already have the costs for privacy issues built into the estimates.

The Department did not have sufficient data to quantify other costs associated with the final rule; and therefore, has provided a qualitative discussion of these costs below and a response to cost-related comments received in response to the regulatory impact analysis for the proposed regulation.

Independence and Impartiality-Avoiding Conflicts of Interest: The Department's claims and appeals regulation required certain standards of independence for persons making claims decisions before the final rules were issued. These final rules add new criteria for avoiding conflicts that require plans providing disability benefits to ensure "that all claims and appeals for disability benefits are adjudicated in a manner designed to ensure the independence and impartiality of the persons involved in making the decisions." Also decisions regarding hiring, compensation, termination, promotion, or other similar matters must not be made based on the likelihood that the individual will support the denial of benefits.

These requirements provide protections to claimants by ensuring that their claims are processed impartially and already are considered best practice by many plan administrators who comply with this standard. Some plans and insurers may need to evaluate their policies and procedures to ensure they are compliant with this requirement. The Department did not have sufficient data to quantify the costs of these requirements.

One commenter, who supported applying independence and impartiality requirements, expressed concern about a statement in the preamble to the proposed rule where the Department explained, as an example, that a plan cannot contract with a medical expert based on the expert's reputation for outcomes in contested cases rather than based on the expert's professional qualifications. The commenter expressed concern that the statement in the preamble might result in claimants requesting statistics and other

information on cases in which the medical expert expressed opinions in support of denying versus granting a disability benefit claims.

In the Department's view, the preamble statement is an accurate example of one way that the independence and impartiality standard would be violated, and, accordingly, does not believe it would be appropriate to disclaim or caveat the statement in the final rule. That said, the independence and impartiality requirements in the rule do not modify the scope of what would be "relevant documents" subject to the disclosure requirements in paragraphs (g)(1)(vii)(C) and (h)(2)(iii) of the Section 503 Regulation, as amended by this rule. Nor does the rule prescribe limits on the extent to which information about consulting experts would be discoverable in a court proceeding as part of an evaluation of the extent to which the claims administrator or insurer was acting under a conflict of interest that should be considered in evaluating an adverse benefit determination. Thus, the Department acknowledges that plans may incur costs to respond to claimants' requests for statistics and other information described by the commenter. However, the commenter provided no evidence or data to support their assertion and did not quantify the additional cost, thus the Department does not have sufficient data to quantify such costs.

Deemed Exhaustion of Claims and Appeals Process: The final rule tracks the proposal and provides that if a plan fails to adhere to all the requirements in the claims procedure regulation, the claimant would be deemed to have exhausted administrative remedies, with a limited exception where the violation was (i) *de minimis*; (ii) non-prejudicial; (iii) attributable to good cause or matters beyond the plan's control; (iv) in the context of an ongoing good-faith exchange of information; and (v) not reflective of a pattern or practice of non-compliance. Litigation costs are the primary cost related to this requirement, because claimants may proceed directly to court after a deemed exhaustion. Pursuing litigation is more expensive than the plan appeals process, however, it may be the only option claimants have available to obtain denied benefits. Deemed exhaustion is available for the situations when plans are not following the procedural rules of the regulation. At times it may still be in a claimant's best interest to pursue an appeal inside the plan due to cost and time to resolve issues instead of using the court system. Commenters raised a concern the

⁴⁴ The 2010 and 2016 GDP Deflator was 100.056 in 2010 and 110.714 in 2016. The adjustment is $500 * (110.714/100.056) = \$553$. <https://fred.stlouisfed.org/series/GNPDEF>.

claimants would be hurt by the higher costs and delay in obtaining a resolution if they sought resolution through litigation. However, this provision allows claimants to decide if the added costs and time of litigation are offset by the cost to them of remaining in an appeals process that is in violation of the procedural rules.

Some commenters maintained that their liability exposure increases when claimants' ability to go to court is enhanced. These commenters expressed concern about the expense of discovery to even determine if the procedural requirements have not been followed and asserted that claimants will allege that plans have violated their procedures and go to court to force a settlement.

While all of these scenarios are possible, the Department does not know of, nor did commenters provide, any data or information that would even be suggestive of, the frequency of these events, or the added expense resulting from their occurrence. The Department is not aware of systematic abuses or complaints of abuse with respect to a similar deemed exhaustion requirement contained in the ACA and the Departments' implementing regulation at 29 CFR 2590.715.2719. Thus, the Department believes these occurrences will be infrequent.

Covered Rescissions-Adverse Benefit Determinations: The final rule adds a new provision to address coverage rescissions. Specifically, the 2000 regulation already covered a rescission if it is the basis, in whole or in part, of an adverse benefit determination. The final regulation amends the definition of adverse benefit determination to include a rescission of disability benefit coverage that has a retroactive effect, whether or not there is an adverse effect on a benefit at that time.

The Department understands that this situation occurs infrequently. When it does occur, plans will incur the cost of providing an appeal of the rescission. The Department does not have sufficient data to estimate the cost to review and appeal a rescission of coverage. However, the Department expects that it would be less than the cost to appeal other disability benefit denials because medical or vocation professionals are not needed to review the claim. Instead, the facts of the coverage situation are required. When a rescission is reversed, the provision of future benefits would be considered a transfer from the plan to the claimant whose rescission was reversed.

C. Regulatory Flexibility Act

The Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*) (RFA) imposes certain requirements with respect to the notice and comment requirements of section 553(b) of the Administrative Procedure Act (5 U.S.C. 551 *et seq.*) and which are likely to have a significant economic impact on a substantial number of small entities. Unless an agency determines that a final rule is not likely to have a significant economic impact on a substantial number of small entities, section 604 of the RFA requires the agency to present a final regulatory flexibility analysis (FRFA) of the final rule describing the rule's impact on small entities and explaining how the agency made its decisions with respect to the application of the rule to small entities. Pursuant to section 605(b) of the RFA, the Assistant Secretary of the Employee Benefits Security Administration hereby certifies that the final rule will not have a significant economic impact on a substantial number of small entities. The Department discusses the impacts of the final rule and the basis for its certification below.

Need for and Objectives of the Rule: As discussed in section II above, the final rule will revise and strengthen the current rules regarding claims and appeals applicable to ERISA-covered plans providing disability benefits primarily by adopting several of the new procedural protections and safeguards made applicable to ERISA-covered group health plans by the Affordable Care Act. Before the enactment of the Affordable Care Act, group health plan sponsors and sponsors of ERISA-covered plans providing disability benefits were required to implement internal claims and appeal processes that complied with the Section 503 Regulation. The enactment of the Affordable Care Act and the issuance of the implementing interim final regulations resulted in disability plan claimants receiving fewer procedural protections than group health plan participants even though litigation regarding disability benefit claims is prevalent today.

The Department believes this action is necessary to ensure that disability claimants receive the same protections that Congress and the President established for group health care claimants under the Affordable Care Act. This will result in some participants receiving benefits they might otherwise have been incorrectly denied in the absence of the fuller protections provided by the final

regulation. This will help alleviate the financial and emotional hardship suffered by many individuals when they lose earnings due to their becoming disabled.

Affected Small Entities: The Department does not have complete data on the number of plans providing disability benefits or the total number of participants covered by such plans. ERISA-covered welfare benefit plans with more than 100 participants generally are required to file a Form 5500. Only some ERISA-covered welfare benefit plans with less than 100 participants are required to file for various reasons, but this number is very small. Based on current trends in the establishment of pension and health plans, there are many more small plans than large plans, but the majority of participants are covered by the large plans.

Data from the 2014 Form 5500 Schedule A indicates that there are 39,135 plans reporting a code indicating they provide temporary disability benefits covering 40.1 million participants, and 26,171 plans reporting a code indicating they provide long-term disability benefits covering 22.4 million participants. To put the number of large and small plans in perspective, the Department estimates that there are 150,000 large group health plans and 2.1 million small group health plans using 2016 Medical Expenditure Panel Survey-Insurance Component.

Impact of the Rule: The Department has quantified some of the costs associated with these final regulations' requirements to (1) provide the claimant free of charge with any new or additional evidence considered, and (2) to providing notices of adverse benefit determinations in a culturally and linguistically appropriate manner. These requirements and their associated costs are discussed in the Costs and Transfers section above. Additionally other costs are qualitatively discussed in the Costs section. Comments addressing the burden of the regulations were received and are discussed above as well.

Provision of new or additional evidence or rationale: As stated earlier in this preamble, before a plan can issue a notice of adverse benefit determination on review, the final rule requires plans to provide disability benefit claimants, free of charge, with any new or additional evidence considered, relied upon, or generated by (or at the direction of) the plan as soon as possible and sufficiently in advance of the date the notice of adverse benefit determination on review is required to be provided and any new or additional

rationale sufficiently in advance of the due date of the response to an adverse benefit determination on review.

The Department is not aware of data suggesting how often plans rely on new or additional evidence or rationale during the appeals process or the volume of materials that are received. The Department estimated the cost per claim by assuming that compliance will require medical office staff, or other similar staff in other service setting with a labor rate of \$30, 30 minutes to collect and distribute the additional evidence considered, relied upon, or generated by (or at the direction of) the plan during the appeals process. The Department estimates that on average, material, printing and postage costs will total \$2.50 per mailing. The Department further assumes that 30 percent of all mailings will be distributed electronically with no associated material, printing or postage costs.

Providing Notices in a Culturally and Linguistically Appropriate Manner: The final rule would require notices of adverse benefit determinations with respect to disability benefits to be provided in a culturally and linguistically appropriate manner in certain situations. This requirement is satisfied if plans provide oral language services including answering questions and providing assistance with filing claims and appeals in any applicable non-English language. The final rule also requires such notices of adverse benefit determinations sent by a plan to which the requirement applies to include a one-sentence statement in the relevant non-English language about the availability of language services. Plans also must provide, upon request, such notices of adverse benefit determinations in the applicable non-English language.

The Department expects that the largest cost associated with the requirement for culturally and linguistically appropriate notices will be for plans to provide notices in the applicable non-English language upon request. Industry experts also told the Department that while the cost of translation services varies, \$553 per document is a reasonable approximation of translation cost.

In discussions with the regulated community, the Department found that experience in California, which has a State law requirement for providing translation services, indicates that requests for translations of written documents averages 0.098 requests per 1,000 members for health claims. While the California law is not identical to the final rule, and the demographics for California do not match other counties,

for purposes of this analysis, the Department used this percentage to estimate of the number of translation service requests plans could expect to receive. Based on the low number of requests per claim, the Department expects that translation costs would be included as part of a package of services offered to a plan, and that the costs of actual requests will be spread across multiple plans.

Duplication, Overlap, and Conflict With Other Rules and Regulations: The Department does not believe that the final rule will conflict with any relevant regulations, federal or other.

D. Paperwork Reduction Act

In accordance with the requirements of the Paperwork Reduction Act of 1995 (PRA) (44 U.S.C. 3506(c)(2)), the Department submitted an information collection request (ICR) to OMB regarding the ICRs contained in the final rule in accordance with 44 U.S.C. 3507(d), for OMB's review. OMB approved the ICR under OMB Control Number 1210-0053, which currently is scheduled to expire on November 30, 2019.

As discussed earlier in this preamble, the Department's final amendments to its claims and appeals procedure regulation would revise and strengthen the current rules regarding claims and appeals applicable to ERISA-covered plans providing disability benefits primarily by adopting several of the procedural protections and safeguards made applicable to ERISA-covered group health plans by the ACA. Some of these amendments revise disclosure requirements under the current rule that are information collections covered by the PRA. For example, benefit denial notices must contain a full discussion of why the plan denied the claim, and to the extent the plan did not follow or agree with the views presented by the claimant to the plan or health care professional treating the claimant or vocational professionals who evaluated the claimant, or a disability determination regarding the claimant presented by the claimant to the plan made by the SSA, the discussion must include an explanation of the basis for disagreeing with the views or disability determination. The notices also must include either (1) the specific internal rules, guidelines, protocols, standards or other similar criteria of the plan relied upon in making the adverse determination or, alternatively, or (2) a statement that such rules, guidelines, protocols, standards or other similar criteria of the plan do not exist.

A copy of the ICR may be obtained by contacting the PRA addressee shown

below or at <http://www.RegInfo.gov>. PRA ADDRESSEE: G. Christopher Cosby, Office of Policy and Research, U.S. Department of Labor, Employee Benefits Security Administration, 200 Constitution Avenue NW., Room N-5718, Washington, DC 20210. Telephone: (202) 693-8410; Fax: (202) 219-4745. These are not toll-free numbers.

After the implementation of the ACA claims regulations, disability plans claimants received fewer procedural protections than group health plan participants even though disability plan claimants experience more issues with the claims review process. These final regulations will reduce the inconsistent procedural rules applied to health and disability benefit plan claims and provide similar procedural protections to claimants of both types of plans.

The burdens associated with the regulatory requirements of the ICRs contained in the final rule are summarized below.

Type of Review: Revised collection.

Agencies: Employee Benefits Security Administration, Department of Labor.

Title: ERISA Claims Procedures.

OMB Number: 1210-0053.

Affected Public: Business or other for-profit; not-for-profit institutions.

Total Respondents: 5,808,000.

Total Responses: 311,790,000.

Frequency of Response: Occasionally.

Estimated Total Annual Burden

Hours: 516,000.

Estimated Total Annual Burden Cost: \$814,450,000.

IV. Congressional Review Act

The final rule is subject to the Congressional Review Act provisions of the Small Business Regulatory Enforcement Fairness Act of 1996 (5 U.S.C. 801 *et seq.*) and will be transmitted to Congress and the Comptroller General for review. The final rule is not a "major rule" as that term is defined in 5 U.S.C. 804, because it is not likely to result in an annual effect on the economy of \$100 million or more.

V. Unfunded Mandates Reform Act

For purposes of the Unfunded Mandates Reform Act of 1995 (2 U.S.C. 1501 *et seq.*), as well as Executive Order 12875, this final rule does not include any federal mandate that may result in expenditures by state, local, or tribal governments, or the private sector, which may impose an annual burden of \$100 million or more (as adjusted for inflation).

VI. Federalism Statement

Executive Order 13132 outlines fundamental principles of federalism,

and requires the adherence to specific criteria by Federal agencies in the process of their formulation and implementation of policies that have “substantial direct effects” on the States, the relationship between the national government and States, or on the distribution of power and responsibilities among the various levels of government. Federal agencies promulgating regulations that have federalism implications must consult with State and local officials and describe the extent of their consultation and the nature of the concerns of State and local officials in the preamble to the final regulation.

In the Department of Labor’s view, these final regulations have federalism implications because they would have direct effects on the States, the relationship between the national government and the States, or on the distribution of power and responsibilities among various levels of government to the extent states have enacted laws affecting disability plan claims and appeals that contain similar requirements to the final rule. The Department believes these effects are limited, because although section 514 of ERISA supersedes State laws to the extent they relate to any covered employee benefit plan, it preserves State laws that regulate insurance, banking, or securities. In compliance with the requirement of Executive Order 13132 that agencies examine closely any policies that may have federalism implications or limit the policy making discretion of the States, the Department solicited input from affected States, including the National Association of Insurance Commissioners and State insurance officials, regarding this assessment at the proposed rule stage but did not receive any comments.

List of Subjects in 29 CFR Part 2560

Claims, Employee benefit plans.

For the reasons stated in the preamble, the Department of Labor amends 29 CFR part 2560 as set forth below:

PART 2560—RULES AND REGULATIONS FOR ADMINISTRATION AND ENFORCEMENT

■ 1. The authority citation for part 2560 is revised to read as follows:

Authority: 29 U.S.C. 1132, 1135, and Secretary of Labor’s Order 1–2011, 77 FR 1088 (Jan. 9, 2012). Section 2560.503–1 also issued under 29 U.S.C. 1133. Section 2560.502c–7 also issued under 29 U.S.C. 1132(c)(7). Section 2560.502c–4 also issued under 29 U.S.C. 1132(c)(4). Section 2560.502c–8 also issued under 29 U.S.C. 1132(c)(8).

■ 2. Section 2560.503–1 is amended by:

- a. Adding paragraph (b)(7).
- b. Revising paragraph (g)(1)(v).
- c. Adding paragraphs (g)(1)(vii) and (viii).
- d. Revising paragraphs (h)(4) and (i)(3)(i).
- e. Revising paragraphs (j)(4) and (j)(5) introductory text.
- f. Adding paragraphs (j)(6) and (7).
- g. Revising paragraphs (l) and (m)(4).
- i. Redesignating paragraph (o) as (p), and adding new paragraph (o).
- j. Revising newly redesignated paragraph (p).

The revisions and additions read as follows:

§ 2560.503–1 Claims procedure.

* * * * *

(b) * * *

(7) In the case of a plan providing disability benefits, the plan must ensure that all claims and appeals for disability benefits are adjudicated in a manner designed to ensure the independence and impartiality of the persons involved in making the decision. Accordingly, decisions regarding hiring, compensation, termination, promotion, or other similar matters with respect to any individual (such as a claims adjudicator or medical or vocational expert) must not be made based upon the likelihood that the individual will support the denial of benefits.

* * * * *

(g) * * * (1) * * *

(v) In the case of an adverse benefit determination by a group health plan—

* * * * *

(vii) In the case of an adverse benefit determination with respect to disability benefits—

(A) A discussion of the decision, including an explanation of the basis for disagreeing with or not following:

(i) The views presented by the claimant to the plan of health care professionals treating the claimant and vocational professionals who evaluated the claimant;

(iii) The views of medical or vocational experts whose advice was obtained on behalf of the plan in connection with a claimant’s adverse benefit determination, without regard to whether the advice was relied upon in making the benefit determination; and

(iii) A disability determination regarding the claimant presented by the claimant to the plan made by the Social Security Administration;

(B) If the adverse benefit determination is based on a medical necessity or experimental treatment or similar exclusion or limit, either an explanation of the scientific or clinical

judgment for the determination, applying the terms of the plan to the claimant’s medical circumstances, or a statement that such explanation will be provided free of charge upon request;

(C) Either the specific internal rules, guidelines, protocols, standards or other similar criteria of the plan relied upon in making the adverse determination or, alternatively, a statement that such rules, guidelines, protocols, standards or other similar criteria of the plan do not exist; and

(D) A statement that the claimant is entitled to receive, upon request and free of charge, reasonable access to, and copies of, all documents, records, and other information relevant to the claimant’s claim for benefits. Whether a document, record, or other information is relevant to a claim for benefits shall be determined by reference to paragraph (m)(8) of this section.

(viii) In the case of an adverse benefit determination with respect to disability benefits, the notification shall be provided in a culturally and linguistically appropriate manner (as described in paragraph (o) of this section).

* * * * *

(h) * * *

(4) *Plans providing disability benefits.* The claims procedures of a plan providing disability benefits will not, with respect to claims for such benefits, be deemed to provide a claimant with a reasonable opportunity for a full and fair review of a claim and adverse benefit determination unless, in addition to complying with the requirements of paragraphs (h)(2)(ii) through (iv) and (h)(3)(i) through (v) of this section, the claims procedures—

(i) Provide that before the plan can issue an adverse benefit determination on review on a disability benefit claim, the plan administrator shall provide the claimant, free of charge, with any new or additional evidence considered, relied upon, or generated by the plan, insurer, or other person making the benefit determination (or at the direction of the plan, insurer or such other person) in connection with the claim; such evidence must be provided as soon as possible and sufficiently in advance of the date on which the notice of adverse benefit determination on review is required to be provided under paragraph (i) of this section to give the claimant a reasonable opportunity to respond prior to that date; and

(ii) Provide that, before the plan can issue an adverse benefit determination on review on a disability benefit claim based on a new or additional rationale, the plan administrator shall provide the

claimant, free of charge, with the rationale; the rationale must be provided as soon as possible and sufficiently in advance of the date on which the notice of adverse benefit determination on review is required to be provided under paragraph (i) of this section to give the claimant a reasonable opportunity to respond prior to that date.

* * * * *

(i) * * *

(3) *Disability claims.* (i) Except as provided in paragraph (i)(3)(ii) of this section, claims involving disability benefits (whether the plan provides for one or two appeals) shall be governed by paragraph (i)(1)(i) of this section, except that a period of 45 days shall apply instead of 60 days for purposes of that paragraph.

* * * * *

(j) * * *

(4)(i) A statement describing any voluntary appeal procedures offered by the plan and the claimant's right to obtain the information about such procedures described in paragraph (c)(3)(iv) of this section, and a statement of the claimant's right to bring an action under section 502(a) of the Act; and,

(ii) In the case of a plan providing disability benefits, in addition to the information described in paragraph (j)(4)(i) of this section, the statement of the claimant's right to bring an action under section 502(a) of the Act shall also describe any applicable contractual limitations period that applies to the claimant's right to bring such an action, including the calendar date on which the contractual limitations period expires for the claim.

(5) In the case of a group health plan—

* * * * *

(6) In the case of an adverse benefit decision with respect to disability benefits—

(i) A discussion of the decision, including an explanation of the basis for disagreeing with or not following:

(A) The views presented by the claimant to the plan of health care professionals treating the claimant and vocational professionals who evaluated the claimant;

(B) The views of medical or vocational experts whose advice was obtained on behalf of the plan in connection with a claimant's adverse benefit determination, without regard to whether the advice was relied upon in making the benefit determination; and

(C) A disability determination regarding the claimant presented by the claimant to the plan made by the Social Security Administration;

(ii) If the adverse benefit determination is based on a medical necessity or experimental treatment or similar exclusion or limit, either an explanation of the scientific or clinical judgment for the determination, applying the terms of the plan to the claimant's medical circumstances, or a statement that such explanation will be provided free of charge upon request; and

(iii) Either the specific internal rules, guidelines, protocols, standards or other similar criteria of the plan relied upon in making the adverse determination or, alternatively, a statement that such rules, guidelines, protocols, standards or other similar criteria of the plan do not exist.

(7) In the case of an adverse benefit determination on review with respect to a claim for disability benefits, the notification shall be provided in a culturally and linguistically appropriate manner (as described in paragraph (o) of this section).

* * * * *

(l) *Failure to establish and follow reasonable claims procedures.* (1) *In general.* Except as provided in paragraph (l)(2) of this section, in the case of the failure of a plan to establish or follow claims procedures consistent with the requirements of this section, a claimant shall be deemed to have exhausted the administrative remedies available under the plan and shall be entitled to pursue any available remedies under section 502(a) of the Act on the basis that the plan has failed to provide a reasonable claims procedure that would yield a decision on the merits of the claim.

(2) *Plans providing disability benefits.*

(i) In the case of a claim for disability benefits, if the plan fails to strictly adhere to all the requirements of this section with respect to a claim, the claimant is deemed to have exhausted the administrative remedies available under the plan, except as provided in paragraph (l)(2)(ii) of this section. Accordingly, the claimant is entitled to pursue any available remedies under section 502(a) of the Act on the basis that the plan has failed to provide a reasonable claims procedure that would yield a decision on the merits of the claim. If a claimant chooses to pursue remedies under section 502(a) of the Act under such circumstances, the claim or appeal is deemed denied on review without the exercise of discretion by an appropriate fiduciary.

(ii) Notwithstanding paragraph (l)(2)(i) of this section, the administrative remedies available under a plan with respect to claims for

disability benefits will not be deemed exhausted based on *de minimis* violations that do not cause, and are not likely to cause, prejudice or harm to the claimant so long as the plan demonstrates that the violation was for good cause or due to matters beyond the control of the plan and that the violation occurred in the context of an ongoing, good faith exchange of information between the plan and the claimant. This exception is not available if the violation is part of a pattern or practice of violations by the plan. The claimant may request a written explanation of the violation from the plan, and the plan must provide such explanation within 10 days, including a specific description of its bases, if any, for asserting that the violation should not cause the administrative remedies available under the plan to be deemed exhausted. If a court rejects the claimant's request for immediate review under paragraph (l)(2)(i) of this section on the basis that the plan met the standards for the exception under this paragraph (l)(2)(ii), the claim shall be considered as re-filed on appeal upon the plan's receipt of the decision of the court. Within a reasonable time after the receipt of the decision, the plan shall provide the claimant with notice of the resubmission.

* * * * *

(m) * * *

(4) The term "adverse benefit determination" means:

(i) Any of the following: A denial, reduction, or termination of, or a failure to provide or make payment (in whole or in part) for, a benefit, including any such denial, reduction, termination, or failure to provide or make payment that is based on a determination of a participant's or beneficiary's eligibility to participate in a plan, and including, with respect to group health plans, a denial, reduction, or termination of, or a failure to provide or make payment (in whole or in part) for, a benefit resulting from the application of any utilization review, as well as a failure to cover an item or service for which benefits are otherwise provided because it is determined to be experimental or investigational or not medically necessary or appropriate; and

(ii) In the case of a plan providing disability benefits, the term "adverse benefit determination" also means any rescission of disability coverage with respect to a participant or beneficiary (whether or not, in connection with the rescission, there is an adverse effect on any particular benefit at that time). For this purpose, the term "rescission" means a cancellation or discontinuance

of coverage that has retroactive effect, except to the extent it is attributable to a failure to timely pay required premiums or contributions towards the cost of coverage.

* * * * *

(o) *Standards for culturally and linguistically appropriate notices.* A plan is considered to provide relevant notices in a “culturally and linguistically appropriate manner” if the plan meets all the requirements of paragraph (o)(1) of this section with respect to the applicable non-English languages described in paragraph (o)(2) of this section.

(1) *Requirements.* (i) The plan must provide oral language services (such as a telephone customer assistance hotline) that include answering questions in any applicable non-English language and providing assistance with filing claims and appeals in any applicable non-English language;

(ii) The plan must provide, upon request, a notice in any applicable non-English language; and

(iii) The plan must include in the English versions of all notices, a statement prominently displayed in any applicable non-English language clearly indicating how to access the language services provided by the plan.

(2) *Applicable non-English language.* With respect to an address in any United States county to which a notice is sent, a non-English language is an applicable non-English language if ten percent or more of the population residing in the county is literate only in

the same non-English language, as determined in guidance published by the Secretary.

(p) *Applicability dates and temporarily applicable provisions.* (1) Except as provided in paragraphs (p)(2), (p)(3) and (p)(4) of this section, this section shall apply to claims filed under a plan on or after January 1, 2002.

(2) This section shall apply to claims filed under a group health plan on or after the first day of the first plan year beginning on or after July 1, 2002, but in no event later than January 1, 2003.

(3) Paragraphs (b)(7), (g)(1)(vii) and (viii), (j)(4)(ii), (j)(6) and (7), (l)(2), (m)(4)(ii), and (o) of this section shall apply to claims for disability benefits filed under a plan on or after January 1, 2018, in addition to the other paragraphs in this rule applicable to such claims.

(4) With respect to claims for disability benefits filed under a plan from January 18, 2017 through December 31, 2017, this paragraph (p)(4) shall apply instead of paragraphs (g)(1)(vii), (g)(1)(viii), (h)(4), (j)(6) and (j)(7).

(i) In the case of a notification of benefit determination and a notification of benefit determination on review by a plan providing disability benefits, the notification shall set forth, in a manner calculated to be understood by the claimant—

(A) If an internal rule, guideline, protocol, or other similar criterion was relied upon in making the adverse determination, either the specific rule,

guideline, protocol, or other similar criterion; or a statement that such a rule, guideline, protocol, or other similar criterion was relied upon in making the adverse determination and that a copy of such rule, guideline, protocol, or other criterion will be provided free of charge to the claimant upon request; and

(B) If the adverse benefit determination is based on a medical necessity or experimental treatment or similar exclusion or limit, either an explanation of the scientific or clinical judgment for the determination, applying the terms of the plan to the claimant's medical circumstances, or a statement that such explanation will be provided free of charge upon request.

(ii) The claims procedures of a plan providing disability benefits will not, with respect to claims for such benefits, be deemed to provide a claimant with a reasonable opportunity for a full and fair review of a claim and adverse benefit determination unless the claims procedures comply with the requirements of paragraphs (h)(2)(ii) through (iv) and (h)(3)(i) through (v) of this section.

Signed at Washington, DC, this 9th day of December, 2016.

Phyllis C. Borzi,

Assistant Secretary, Employee Benefits Security Administration, U.S. Department of Labor.

Recognition of Organizations and Accreditation of Non-Attorney
Representatives; Final Rule

DEPARTMENT OF JUSTICE**Executive Office for Immigration Review****8 CFR Parts 1001, 1003, 1103, 1212, and 1292**

[EOIR Docket No. 176; A.G. Order No. 3783–2016]

RIN 1125–AA72

Recognition of Organizations and Accreditation of Non-Attorney Representatives**AGENCY:** Executive Office for Immigration Review, Department of Justice.**ACTION:** Final rule.

SUMMARY: This rule amends the regulations governing the requirements and procedures for authorizing representatives of non-profit religious, charitable, social service, or similar organizations to represent persons in proceedings before the Executive Office for Immigration Review (EOIR) and the Department of Homeland Security (DHS). The rule also amends the regulations concerning EOIR's disciplinary procedures.

DATES: This rule is effective on January 18, 2017.

FOR FURTHER INFORMATION CONTACT: Jean King, General Counsel, Executive Office for Immigration Review, 5107 Leesburg Pike, Suite 2600, Falls Church, Virginia 22041, telephone (703) 305–0470 (not a toll-free call).

On October 1, 2015, the Department published in the **Federal Register** a rule proposing to amend the regulations governing the requirements and procedures for authorizing representatives of non-profit religious, charitable, social service, or similar organizations to represent persons in proceedings before the Executive Office for Immigration Review (EOIR) and the Department of Homeland Security (DHS). 80 FR 59514 (Oct. 1, 2015). The rule also proposed amendments to the regulations concerning EOIR's disciplinary procedures. *Id.* The Department received 63 comments from various sources, including non-profit organizations, bar associations, government agencies, legal clinics, attorneys, and law students. Both in response to these comments and as a result of further consideration, the Department has decided to revise the proposed rule as discussed below. Except for those revisions, the proposed rule is adopted without change.

II. Regulatory Background

The rule amends 8 CFR part 1292 by removing § 1292.2, revising §§ 1292.1, 1292.3, and 1292.6, and adding §§ 1292.11 through 1292.19. It amends 8 CFR 1001.1 and 8 CFR part 1003 at §§ 1003.0, 1003.1, and 1003.101 through 1003.108, and it adds §§ 1003.110 and 1003.111. The rule also amends 8 CFR part 1103 at § 1103.3 and 8 CFR part 1212 at § 1212.6. The rule transfers the administration of the Recognition and Accreditation (R&A) program within EOIR from the Board of Immigration Appeals (Board) to the Office of Legal Access Programs (OLAP) (8 CFR 1003.0); amends the qualifications for recognition of organizations and accreditation of their representatives (8 CFR 1292.11 and 1292.12); institutes administrative procedures to enhance the management of the R&A roster (8 CFR 1292.13 through 1292.19); and updates the disciplinary process to make recognized organizations, in addition to accredited representatives, attorneys, and other practitioners, subject to sanctions for conduct that contravenes the public interest (8 CFR 1003.101 *et seq.*).

III. Comments and Responses

As noted above, the Department received sixty-three comments in response to the proposed rule. Twenty-nine comments were from currently-recognized non-profit organizations and other non-profit organizations. Three comments were from bar associations, 11 comments were from private

individuals, 19 comments were anonymously submitted, and 1 comment came from a government entity.

In response to the comments, the Department changed a number of provisions. First, the final rule makes a number of changes to the requirements for recognition. The final rule retains the requirement that organizations must have an accredited representative to be recognized or renewed if the organization is seeking recognition for the first time or is a currently recognized organization without an accredited representative on the effective date of the rule. However, once an organization is recognized, the organization will not have its recognition administratively terminated if it no longer has an accredited representative. Such organizations will be placed on inactive status. The final rule details the rules and procedures for inactive status. (Section III.B.1.a.) The final rule removes the substantial amount standard for recognition and the associated waiver provision set forth in the proposed rule. (Section III.B.1.d.) Instead, the focus in the recognition process is placed on whether organizations are non-profit, federally tax-exempt religious, charitable, social service, or similar organizations and whether they are providing immigration legal services primarily to low-income and indigent clients in the United States. The final rule provides that these requirements will be considered together. (Section III.B.1.e.)

Second, the final rule makes no changes to the character and fitness provision for accreditation. Therefore, immigration status remains a factor in that determination. However, further clarification and guidance regarding why and how immigration status may be used as a factor is provided in the supplementary information. (Section III.B.2.a.)

Third, as mentioned above, the final rule unlinks recognition and accreditation, which allows the validity period for recognition to be increased to six years and to run independent of the three-year period of accreditation for an organization's representatives. Accordingly, organizations and their representatives will seek renewal of recognition and accreditation separately at the conclusion of their respective recognition and accreditation cycles. (Section III.B.5.)

Fourth, the final rule amends the reporting requirement in the proposed rule. The final rule renames the annual report as the "annual summary of immigration legal services provided" to avoid confusion with other annual

reports that organizations may prepare. More significantly, the information required to be submitted has shifted to focus on the legal services provided by the organization as a whole, rather than by its accredited representatives individually. (Section III.B.8.)

Fifth and finally, the final rule includes the following additional changes: Removes the requirement of renewal for all other organizations recognized at the effective date of the final rule if they seek extension of recognition or accreditation of a new representative (Section III.B.6); adds provisions that give OLAP the ability to permit electronic communications and filings among OLAP, prospective and current organizations, DHS, the EOIR disciplinary counsel, and the anti-fraud officer (Section III.E.); and adds provisions that enable organizations to request reconsideration of OLAP determinations that disapprove requests for recognition or accreditation or that administratively terminate recognition or accreditation and that permit organizations to seek administrative review of denied reconsideration requests before the Director (Section III.F.).

Below, the Department summarizes in greater detail the comments received and explains the changes, if any, that the Department has made in response. Note that because some comments overlap and commenters raised multiple subjects, the comments are generally addressed by topic rather than by reference to a specific commenter.

A. Transfer of R&A Program From the Board to OLAP

The Department received nine comments addressing the transfer of the administration of the R&A Program within EOIR from the Board to OLAP. Six comments from non-profit organizations, bar associations, and a government body supported the transfer as “well-placed and appropriate” because of OLAP’s mission to facilitate access to legal representation and counseling and its record in doing so. Two of these commenters expressed concern that the public and DHS staff may be confused by the change in administrator, and another commenter stated that the transfer may cause confusion because advocates have educated the public about “BIA recognized organizations” and “BIA accredited representatives.” However, all three commenters that had concerns asserted that the confusion may be alleviated through clear public guidance from OLAP on its role and responsibilities and the use of a commonly recognized term, such as

“DOJ recognized organization” or “DOJ accredited representative.”

Three commenters opposed the transfer based on concerns about whether OLAP’s current staffing and resources are adequate to enable OLAP to take on the new duties and responsibilities provided by the rule.

The Department has made no change to the proposed rule and accordingly the administration of the R&A Program will be transferred from the Board to OLAP. See final rule at 8 CFR 1003.0. The Department is committed to providing OLAP with sufficient resources to successfully administer its new duties and responsibilities under this rule. As suggested by the commenters, the Department will endeavor to engage in significant education and outreach with the public and government stakeholders regarding the R&A program, the changes in this rule, and OLAP’s role. Furthermore, the effective date of the final rule on January 18, 2017, leaves considerable time after the date of publication to provide time for public awareness and outreach and to effectively and efficiently manage the transfer of the program. See 80 FR at 59523 n. 70 (“At the effective date of the final rule, a pending application for initial recognition, initial accreditation, or renewal of accreditation before the Board would be transferred to OLAP to review. Organizations with such pending applications would have to meet the new requirements of the final rule to be approved for recognition or accreditation. OLAP will provide organizations with pending applications the opportunity to amend the applications, if necessary, to conform to the new requirements of the final rule. Further guidance will be provided prior to the effective date of the final rule”).

B. Recognition and Accreditation

1. Recognition Qualifications

a. Accredited Representative Required and Inactive Status

The Department received 20 comments regarding the requirement that an organization have at least one accredited representative to be recognized, to maintain recognition, and to have its recognition renewed. Of the 20 comments received, one supported the requirement, eight generally supported the requirement, and 11 opposed the requirement. The commenters that opposed the requirement and those that generally supported it were primarily concerned that an organization could have its recognition terminated if it lost its accredited representative at any time during the validity period or if it did not

have one on staff at renewal because of the linking of recognition and accreditation in the proposed rule. The commenters suggested that if recognition and accreditation must be linked, the rule should provide a grace period to give recognized organizations time to replace their only accredited representative when the representative leaves the organization or is otherwise terminated. The commenters asserted that the grace period could come through the inactive status provision but asked for clarification regarding whether placement on inactive status was automatic or required an organization to request this status and how long an organization could be permitted to remain on inactive status. Commenters also raised a concern that one year after the effective date of the final rule would not be sufficient time for organizations that are currently recognized without an accredited representative to obtain an accredited representative and come into compliance with the rule.

The final rule retains the accredited representative requirement for organizations to be recognized or renewed if the organization is seeking recognition for the first time or is a currently recognized organization without an accredited representative on the effective date of the rule. See final rule at 8 CFR 1292.11(a)(3). The Department believes that the requirement is a foundational element of the rule because the purpose of recognizing an organization is to allow for the accreditation of non-attorney representatives. The Department believes that currently recognized organizations without an accredited representative on the effective date of the rule will have sufficient time to hire, train, and seek accreditation for a new representative, given that the rule provides such organizations with an additional year beyond the effective date to submit their application for renewal of their recognition under this rule.¹

Based on the comments, however, the Department recognizes that a rigid requirement that an organization have an accredited representative at all times does not account for the practical realities that organizations face with limited budgets, the hiring process, and employee turnover. In this regard, once an organization is recognized, the final rule has unlinked recognition and

¹ This provision also applies to currently recognized organizations that only have attorneys on staff on the effective date of the rule, January 18, 2017. Such organizations will have one year from January 18, 2017, to seek accreditation for a new representative and submit an application for renewal of recognition.

accreditation so that an organization will not have its recognition administratively terminated if it no longer has an accredited representative. Recognized organizations that lose their only accredited representative will be placed on inactive status, which is clarified in the final rule at 8 CFR 1292.16(i), and they will be allowed a reasonable amount of time to obtain a new accredited representative before risking termination of recognition.

The final rule moves the regulatory text regarding inactive status from proposed § 1292.17(e) to 8 CFR 1292.16(i) and revises it so that organizations are placed on inactive status when they have no currently approved accredited representative on staff and they have promptly notified OLAP of that situation as mandated by the reporting requirements.² Inactive status provides the organization with a grace period of two years from the date the organization was placed on inactive status to apply for and have approved at least one accredited representative. The grace period provided by inactive status prevents an organization from having its recognition administratively terminated and gives it sufficient time to obtain a new representative. Under the final rule, the OLAP Director has the discretion to extend an organization's time on inactive status when warranted.

The final rule makes clear that organizations on inactive status must request renewal of recognition if their renewal period occurs while on inactive status. *See* final rule at 8 CFR 1292.16(i). The OLAP Director has the discretion to renew an inactive organization's recognition without a currently approved accredited representative as long as the organization otherwise meets the requirements for renewal and attests that it intends to apply for and have approved a new representative within two years of renewal. *See* final rule at 8 CFR 1292.11(a)(3), 1292.16(a), (i). If the renewal request is granted under such circumstances, the organization will remain on inactive status and have 2 years from the date of renewal to obtain a new accredited representative.

Organizations on inactive status remain subject to administrative termination of recognition under 8 CFR 1292.17. Specifically, their recognition may be administratively terminated when they do not request renewal of recognition while on inactive status or do not have an individual approved for accreditation during the time period specified at 8 CFR 1292.16(i).

Finally, an organization on inactive status is not authorized to provide immigration legal services, unless it has at least one attorney on staff. *See* final rule at 8 CFR 1292.16(i). Organizations on inactive status that continue to provide immigration legal services without an attorney on staff may be subject to disciplinary sanctions for the unauthorized practice of law. The final rule adds a ground of discipline for organizations at 8 CFR 1003.110(b)(5), if the organization provides immigration legal services without an attorney or accredited representative on staff.

b. Federal Tax-Exempt Status

The Department received 19 comments regarding the proposed requirement that an organization establish that it is federally tax-exempt. The Department asked for comment on this requirement and specifically asked whether the requirement would be too restrictive and whether Federal tax-exempt status should be limited to organizations exempted under 26 U.S.C. 501(c)(3). *See* 80 FR at 59528.

Fourteen commenters supported the requirement, one commenter generally supported the provision, and four commenters did not support the provision. The majority of the fourteen commenters who supported the provision urged that the final rule be as broad as possible to extend to social service or similar organizations that do not fall within the section 501(c)(3) Federal tax-exemption. Commenters asked that a range of documents suffice to prove Federal tax-exempt status. The commenter that expressed general support for the Federal tax-exemption requirement stated that waivers of the requirement should be given sparingly. Three of the commenters against the requirement asserted that the burden of cost and time associated with seeking Federal tax-exempt status would discourage capacity building. The fourth comment in opposition stated that the requirement was too stringent because it excluded certain institutions from becoming recognized like public schools and libraries.

The final rule retains the requirement that organizations be federally tax-exempt to be recognized,³ while changing the proof required to show Federal tax-exempt status to include a variety of supporting documents. *See*

final rule at 8 CFR 1292.11(a)(2), (c). The rule modifies the proof required to include an organization's currently valid Internal Revenue Service tax exemption letter (under 26 U.S.C. 501(c)(3) or some other section of the Federal tax code),⁴ alternative documentation to establish Federal tax-exempt status, or proof that it has applied for Federal tax-exempt status. *See* final rule at 8 CFR 1292.11(d).

As under the proposed rule, if an organization has not yet received an IRS tax-exemption determination letter at the time it applies for recognition, it may satisfy this requirement by submitting proof that it has applied for Federal tax-exempt status. 80 FR at 59517. The final rule, however, clarifies at 8 CFR 1292.11(f) that such organizations will be granted conditional recognition. Conditional recognition allows these organizations to begin providing services while their applications for tax exemptions are pending and gives OLAP the opportunity to evaluate the organizations at an earlier renewal date to ensure that they have become federally tax-exempt and otherwise meet the requirements for recognition. *See generally* 80 FR at 59524.

c. Elimination of Nominal Charges Requirement

The Department received 22 comments regarding the elimination of the "nominal charges" requirement. Eighteen comments supported the elimination of the requirement that a recognized organization charge only a nominal fee for its immigration legal services because it tended to impede the ability of organizations to serve greater numbers of individuals in need and discouraged new organizations from seeking recognition. Three commenters were against the elimination of the requirement because they believed that it would place recognized organizations in financial competition with private attorneys and could lead to market-rate fees. The fourth comment against the change opposed it because of concerns that the proposed substantial amount standard would be even more burdensome for organizations than the "nominal charges" requirement. This sentiment was shared by many of the commenters who expressed support for

⁴ Government entities, such as libraries, schools, or local government offices, may provide a government information letter from the Internal Revenue Service to show that the entity is exempt from Federal taxes. This letter can be requested from the IRS free-of-charge. Government Information Letter, Internal Revenue Service (Jan. 26, 2016), <https://www.irs.gov/Government-Entities/Federal,-State-&-Local-Governments/Governmental-Information-Letter>.

² A recognized organization on inactive status would remain on the R&A roster with a designation that it has no accredited representatives.

³ In addition to establishing Federal tax-exempt status, as discussed in section III.B.1.e below, an organization must also establish that it is a non-profit religious, charitable, social service, or similar organization that provides immigration legal services primarily to low-income and indigent clients within the United States in order to qualify for recognition.

the elimination of the nominal charges requirement and is addressed more fully in the next section.

The final rule eliminates the “nominal charges” requirement, as proposed. The Department believes, as noted by the commenters, that the elimination of the nominal charges requirement for recognition is supported by the rule’s other requirements that ensure that organizations are non-profit, federally tax-exempt religious, charitable, social service, or similar organizations that are primarily serving low-income or indigent clients. These requirements mandate that any “[l]egal fees, membership dues, or donations charged or requested by a recognized organization are expected to be at a rate meaningfully less than the cost of hiring competent private immigration counsel in the same geographic area,” so that low-income and indigent clients are able to access the organization’s immigration legal services. 80 FR at 59519.

d. Substantial Amount of Budget Is Not Derived From Client Charges

The Department received 30 comments on the requirement that organizations demonstrate that a substantial amount of its immigration legal services budget is derived from sources other than funds provided by or on behalf of immigration clients themselves, such as legal fees, donations, or membership dues. The Department specifically requested public comment on the substantial amount standard.

Twenty-four commenters opposed the substantial amount requirement. The commenters objected to the standard because it placed an impractical reliance on outside funding sources of revenue that was unreflective of the diversity of ways in which organizations provide immigration legal services or of the availability of outside funding. They stated that many organizations depend on fees to provide legal services and that even when they may have outside funding sources, those funds may only be applied to certain legal services while other services must be supported by fees. The commenters criticized the requirement as being just as burdensome for organizations as the nominal fee restriction because it lacked enough specificity for the organizations to understand or OLAP to implement with ease or consistency. They speculated that regardless of the percentage of outside funding applied the requirement could lead organizations to provide less services and volume of service in order to reduce their fee revenue and meet the standard.

Three commenters who supported the requirement even noted that a too-stringent focus on outside sources of funding could lead to organizations being unable to meet the standard or a greater need for waivers of the requirement to the point that the requirement would have no meaning. The commenters in opposition recommended that the Department remove the substantial amount standard from the final rule and shift the focus to whether organizations are non-profit, federally tax-exempt religious, charitable, social service, or similar organizations that are primarily providing immigration legal services to low-income and indigent clients in the United States.

The final rule removes the substantial amount standard for recognition and the associated waiver provision set forth in the proposed rule. The Department agrees with the concerns of commenters who opposed the standard that a requirement that an organization have outside sources of funding would be unduly burdensome and act as a potential deterrent to capacity building. The proper focus in the recognition process is whether organizations are non-profit, federally tax-exempt religious, charitable, social service, or similar organizations that are primarily providing immigration legal services to low-income and indigent clients in the United States. Accordingly, as discussed below, the funding sources of an organization are one of several relevant factors in that assessment.

e. Serving Primarily Low-Income and Indigent Persons and Non-Profit Status

The Department received 16 comments on the proposed provision requiring that an organization provide immigration legal services primarily to low-income and indigent clients within the United States. The Department specifically requested comment on this provision and the corresponding requirement that, if an organization charges fees, the organization has a written policy for accommodating clients unable to pay for immigration legal services.

Ten commenters generally supported the requirements that recognized organizations primarily serve low-income and indigent clients and have a written policy to accommodate those unable to pay for immigration legal services. However, these commenters and two additional commenters stated that the proof required to demonstrate that organizations primarily serve low-income and indigent clients was too burdensome. In particular, commenters objected to producing guidelines to

determine whether individuals are low-income and indigent because of the difficulty in verifying the income of clients with unconventional work circumstances or inadequate documentation. They asserted that organizations target the low-income and indigent communities as part of their mission without defining the terms low-income and indigent. The commenters recommended, as they did above regarding the substantial amount standard, that the Department focus on an organization’s non-profit status, mission, and all of its other charitable reporting duties to the Federal Government or local donors.

Four commenters stated that the final rule should set a standard or provide guidance for what constitutes low-income and indigent. One commenter recommended the Federal poverty standard, whereas another commenter suggested a standard of household assets less than \$10,000, excluding the value of the client’s residence and vehicle. A third commenter stated that the rule should require organizations to show that clients who are not low-income or indigent fall within some multiple of the low-income standard. The last commenter stated that an income percentage should be set so that organizations would know who they may serve in order to be recognized.

The final rule retains the requirements that recognized organizations primarily serve low-income and indigent clients and have a written policy to accommodate those unable to pay for immigration legal services and joins it with the requirement that the organization be a non-profit religious, charitable, social service, or similar organization. See final rule at 8 CFR 1292.11(a)(1). As discussed in the proposed rule, these requirements are related. See 80 FR at 59518 (“In order to avoid recognizing organizations with for-profit motives and to advance the requirement that organizations have a religious, charitable, social service, or similar purpose, the proposed rule would require an organization to establish that it provides immigration legal services primarily to low-income and indigent clients.”). The Department has determined that they should be considered together in the final rule and, accordingly, has combined and amended the proof required to satisfy these requirements. Under the final rule at 8 CFR 1292.11(b), an organization must submit: a copy of its organizing documents, including a statement of its mission or purpose; a declaration from its authorized officer attesting that it serves primarily low-income and

indigent clients; a summary of the legal services to be provided; if it charges fees for legal services, fee schedules and organizational policies or guidance regarding fee waivers or reduced fees based on financial need; and its annual budget. The organization may also submit additional documentation to demonstrate non-profit status and service to primarily low-income and indigent individuals, such as tax filings, reports prepared for funders, or information about other free or low-cost immigration-related services that it provides like educational or outreach events.

These amendments to the proof required address the comments raised and more accurately and simply allow organizations to show whether they are non-profit religious, charitable, social service, or similar organizations that primarily serve low-income and indigent clients. As discussed in the proposed rule, the proof required to make this showing cannot be limited to demonstrating tax-exempt status under 26 U.S.C. 501(c)(3) (concerning entities organized for religious, charitable, social service, or other specified purposes), because such a designation is for tax purposes and more significantly, organizations may be recognized that are tax-exempt under other sections of the Federal tax code. 80 FR at 59517. The rule thus requires an organization's charter, by-laws, articles of incorporation, or similar documents that show its religious, charitable, social service, or similar mission.

The rule also includes as proof the organization's fee schedules and organizational policies or guidance regarding fee waivers or reduced fees based on financial need, if it charges fees for services. As stated in the proposed rule:

Requiring recognized organizations to serve primarily low-income and indigent clients necessarily affects the magnitude of legal fees, membership dues, or donations, if any, that an organization may charge or request. Charging or requesting excessive fees, membership dues, or donations would not be consistent with the aim of serving primarily low-income and indigent clients. An organization that charges or requests such fees, dues, or donations would be less likely to primarily serve low-income and indigent clients, who have a limited ability to pay fees, and would be more likely to have an impermissible profit-seeking motive and prey upon vulnerable populations. Thus, while fees, dues, and donations for immigration legal services are not defined under the proposed rule, recognized organizations are expected to limit fees, dues, and donations charged or requested so that low-income and indigent clients are able to access the organization's immigration legal services . . . Legal fees, membership dues, or donations

charged or requested by a recognized organization are expected to be at a rate meaningfully less than the cost of hiring competent private immigration counsel in the same geographic area.

80 FR at 59518–19. Thus, while the Department no longer intends to scrutinize these fee schedules under the final rule because the substantial amount requirement has been removed, the fee schedules may be used to evaluate whether an organization is serving primarily low-income and indigent clients and serve as a baseline when a complaint is received about the fees charged by an organization. With respect to the organizational policies or guidance regarding fee waivers or reduced fees based on financial need, the Department does not require organizations to produce guidelines to determine whether individuals are low-income and indigent but it does expect that an organization's policies or guidance mention the factors or standards used when deciding to provide a fee waiver or reduced fees. Such information informs the Department's understanding of the organization's non-profit purpose to serve primarily low-income and indigent clients and gives the organization's clients some sense of the circumstances that would warrant fee waivers or reduced fees.

Finally, the organization must include its annual budget for immigration legal services. Under the proposed rule, the budget was necessary for an analysis of the organization's funding under the substantial amount standard. Now, the budget will serve as further evidence that the organization is a non-profit that primarily serves low-income and indigent clients. The budget will show sources of revenue apart from fees, like grants and monetary or in-kind donations. To the extent that an organization cannot make such a showing of outside funding sources and is fee-dependent, the factors discussed above in addition to other documentation, such as its tax filing, letters of recommendation from the community, its annual report, or information about other free or low-cost immigration-related services that it provides, will be considered.

f. Knowledge and Experience

Fifteen commenters sent the Department comments on the recognition requirement that an organization have "access to adequate knowledge, information, and experience in all aspects of immigration law and procedure," 80 FR at 59538, and the related accreditation requirement that a proposed representative possess "broad

knowledge and adequate experience in immigration law and procedure," 80 FR at 59539. Both requirements are consistent with the Board's current decisions regarding the knowledge and experience sufficient to warrant recognition and accreditation. 80 FR at 59519–59520. For the reasons set forth below, the final rule retains the requirements for knowledge and experience for recognition and accreditation as stated in the proposed rule. *See* final rule at 8 CFR 1292.11(a)(4), 1292.12(a)(6).

Four commenters expressed support for the recognition and accreditation requirements regarding knowledge and experience. Three of these commenters further stated that they appreciated that the rule allowed for flexibility in showing education, training, and experience by not mandating a specific number of formal training hours, specific courses, or testing.

Eight commenters objected to the requirements because they lacked specificity regarding the knowledge and experience required for recognition and accreditation. They contended that the rule may fail to properly advise organizations as to the level of knowledge and experience required, or in the alternative, it could permit unqualified individuals to become accredited. Some of these commenters urged the Department to develop and administer a test for accreditation, or to require a minimum number of hours of on-the-job training or supervised practice before seeking accreditation. Others recommended that the Department develop a uniform, standardized training program on its own or in collaboration with DHS or other non-profit organizations, or require a specified number of immigration legal trainings per year. Two commenters stated that the Department should, as discussed in the proposed rule, make known, or even require completion of, recommended education, testing, training courses and hours, or internships that would satisfy the knowledge and experience requirements for accreditation.

Five commenters asserted that the rule should require that organizations have attorney supervision or mentors in order to satisfy the knowledge and experience requirement to be recognized. According to these commenters, an attorney supervision or mentoring requirement would provide much needed oversight to avoid the improper handling of cases while also preventing unscrupulous individuals from attempting to obtain recognition and accreditation. Attorney supervision or mentoring could be achieved through

an attorney on staff or a formal arrangement with an attorney or another recognized organization with attorneys on staff. A waiver of the requirement could be provided when it was cost-prohibitive or not feasible due to a lack of attorneys in an area.

While the Department understands the concerns raised regarding the need for attorney supervision or mentoring and more specific testing or training requirements, such requirements would not advance the rule's goal to increase capacity because they would result in increased costs for non-profit organizations. The flexible approach adopted by the rule allows organizations to meet the knowledge and experience requirements in a number of ways, and it is currently used by the Department in the recognition and accreditation process.

Nonetheless, the Department recognizes that the knowledge and experience requirements would benefit from some parameters. As stated in the proposed rule, the Department intends to provide guidance on the knowledge and experience required for accreditation so that organizations are generally aware of the education, testing, training courses and hours, or internships that could satisfy the standard. 80 FR at 59520. Similarly, the Department encourages, but does not require, organizations to have attorney supervision or mentors because attorney supervision or mentorship will likely show that an organization has access to adequate knowledge, information, and experience in order to be recognized. 80 FR at 59519.

Furthermore, to the extent that an organization or representative engages in unscrupulous behavior or unprofessional conduct during the course of representation, the conduct may be remedied through the disciplinary process or the rule's other oversight procedures.

g. Authorized Officer

The Department received eight comments regarding the recognition requirement that an organization designate an authorized officer who is empowered to act on its behalf for all matters related to recognition and accreditation. All of the comments supported the requirement, and the only concern raised was that organizations did not want to be unduly penalized because staff turnover leads an organization to lack an authorized officer briefly. The Department acknowledges that organizations and their appointed authorized officer may change over time, and the final rule requires organizations to promptly

report such changes pursuant to 8 CFR 1292.14(a). The Department believes that 30 days will generally be sufficient time for organizations to appoint someone to act in the capacity of an authorized officer until a replacement is designated, if they cannot designate a permanent replacement within that time, and to notify the OLAP Director of the change. The final rule without change adopts the requirement for an organization to designate an authorized officer. *See* final rule at 8 CFR 1292.11(a)(5).

2. Accreditation Qualifications

a. Character and Fitness

The Department received a number of comments on the replacement of the requirement that an accredited representative be a person of good moral character, with the requirement that a proposed representative possess the "character and fitness" to represent clients before the immigration courts, the Board, or DHS. The Department specifically asked for comments on the change and what factors may be relevant to the character and fitness assessment. In relation to the factors, the Department asked whether current immigration status should be a factor and to what extent EOIR should consider whether the individual has employment authorization, has been issued a notice of intent to revoke or terminate an immigration status (or other relief), such as asylum or withholding of removal or deportation, or is in pending deportation, exclusion, or removal proceedings.

The Department received 16 comments on the change from good moral character to character and fitness. Eleven of the comments expressed opposition to the change, although two of the comments voiced opposition to the change without any stated reason. One comment in opposition was expressly adopted by five other commenters and reiterated by two other commenters. The commenters objected to the character and fitness requirement because it is the same requirement applied to attorneys in order for them to practice law. The commenters claimed that the requirement is not appropriate for accredited representatives because they differ from attorneys in that they can only provide immigration legal services and can only do so through a recognized organization. Three commenters also raised a concern that the character and fitness requirement may increase administrative burdens for the organization in the accreditation process. In particular, they recommended that the organization's

attestation of good moral character and letters of recommendation, rather than background check documentation, should be sufficient to demonstrate good moral character.

Five commenters expressed support for the change to the character and fitness requirement. Two of these commenters stated that the character and fitness requirement was appropriate because it would align the accreditation process with the process for attorneys to be admitted to their State bars to practice law. In contrast, one commenter asserted that while a general character and fitness standard was appropriate, the standard should not be identical to the standard applied to attorneys.

The final rule retains the character and fitness requirement for accreditation. The Department agrees with the commenters who supported the requirement. Accredited representatives should be held to a similar standard of character and fitness as attorneys for the admission to practice law because accreditation allows an individual to provide immigration legal services. The fact that accredited representatives are limited to providing immigration legal services and are required to work through a recognized organization is immaterial because they are permitted to perform a function that is generally limited to attorneys held to the character and fitness standard.

Additionally, the Department does not believe that the character and fitness requirement will create administrative burdens for organizations because organizations would not have to submit the extensive documentation that attorneys submit to obtain admission to a State bar. In fact, the same documents that may be used under the current regulation to show good moral character may be used to show character and fitness. Board of Immigration Appeals, *Frequently Asked Questions about the Recognition and Accreditation Program* 22 (Sept. 2015), <https://www.justice.gov/eoir/recognition-and-accreditation-faqs/download>. The character and fitness requirement may be satisfied through attestations of the authorized officer of the organization and the proposed representative and letters of recommendation or favorable background checks. 80 FR at 59520. Additional documentation beyond this would only be necessary if the proposed representative has an issue in the proposed representative's record regarding the proposed representative's honesty, trustworthiness, diligence, professionalism, or reliability. 80 FR at 59520 & n.42.

The Department received 29 comments regarding whether immigration status should be considered as a factor in the character and fitness assessment. Twenty-five commenters objected to the use of immigration status as a factor, and three other commenters expressed general concerns about how immigration status as a factor would negatively affect the ability to provide legal services through immigrants or volunteers. The 25 comments in objection generally rejected the proposition that there was an “inherent conflict in having accredited representatives represent individuals before the same agencies before whom they are actively appearing in their personal capacities.” 80 FR at 59520. Seventeen commenters stressed that a representative’s personal immigration experience enhances the representative’s ability to effectively represent others and guide them through the process. Four of the seventeen commenters further noted that they employed accredited representatives who are immigrants and had not witnessed or dealt with any conflict of interest during these representatives’ representation of other immigrants as a result of their own personal immigration experience. Eight commenters stated that attorneys are not restricted from appearing in a professional capacity before courts in which they may have a personal matter pending and that immigrants are not typically excluded from the legal profession because of their immigration status alone. The commenters concluded that individuals should not be excluded from eligibility for accreditation based on their immigration status alone, regardless of whether they have employment authorization, are in removal proceedings, or are recipients of Deferred Action for Childhood Arrivals, because immigration status does not create an inherent conflict. They argued that immigration status is not related to the character and fitness assessment as it has no bearing on an individual’s honesty, trustworthiness, diligence, or professionalism and that considering it would potentially reduce capacity by excluding a segment of individuals who are likely to become representatives.

Six commenters also rejected the proposition that an individual’s immigration status would have any more effect on the continuity of representation than any other factor. They asserted that the same concern could be raised by other circumstances unrelated to immigration status, such as a new job, an illness, or maternity leave.

Two commenters noted that the rule’s goal of increasing capacity would be best served by allowing willing and capable individuals to become accredited representatives, even if they may be unable to represent a client on occasion or to completion of the client’s matter.

Five commenters that opposed immigration status as a factor offered suggestions for dealing with potential conflicts of interest or disruption in representation. One stated that the potential conflicts could be addressed through existing safeguards, such as the Rules of Professional Conduct for Practitioners. Another commenter asserted that potential conflicts should be handled on a case-by-case basis, rather than a categorical rule disqualifying individuals from accreditation. In this same regard, two commenters suggested that if a representative was in active removal proceedings, the representative could withdraw or EOIR could disqualify the representative from cases before the Immigration Judge hearing the representative’s case. The fifth commenter suggested that a representative could name another person to continue the representation if the representative is removed from the United States while representing other persons.

One commenter suggested that immigration status could be a factor in the character and fitness determination, acknowledging that an individual’s immigration status may present a conflict of interest. The commenter stated that the level of immigration status required to satisfy the character and fitness standard depends on an examination of the individual’s employment relationship with the organization, the resources of the organization, and the type of accreditation sought.

After considering the comments received, the Department has determined that no change will be made to the proposed rule and that immigration status may be considered as a factor in the character and fitness determination for accreditation in certain circumstances. See final rule at 8 CFR 1292.12(a)(1). The Department recognizes that individuals who have been through the immigration system can provide valuable insight and assistance to others going through the system. However, as with any applicant for accreditation, not all individuals are fit to be accredited by the Department to provide immigration legal services. The Department has and will continue to consider issues relating to immigration status in determining whether an

immigration practitioner is fit to appear before DHS and EOIR.⁵ Thus, the Department will make case-by-case assessments regarding accreditation, but as suggested by some commenters, the Department will likely not accredit individuals who are in active deportation, exclusion, or removal proceedings or who have been issued a notice of intent to revoke or terminate an immigration status (or other relief) until the matter is concluded.⁶ In these circumstances, the Department, through OLAP, will make the case-by-case assessment of whether an individual’s immigration status presents an actual or perceived conflict of interest after such information arises that calls into question the individual’s fitness to appear as a representative and, as the rule provides, the organization is given the opportunity to respond to the information. Similarly, individuals who are under an order of removal will generally not be eligible for accreditation unless they have received, for example, temporary protected status or Deferred Enforced Departure.⁷ The rule, however, does not require an organization to present proof of any immigration status during the application process.⁸

b. Employee or Volunteer

The Department received four comments on the requirement that a proposed representative for accreditation be an employee or volunteer of an organization so that the representative would be subject to the direction and supervision of the organization. The four comments all supported the requirement and stressed that the rule’s explicit permission for volunteers to become accredited representatives would help increase capacity.⁹ The final rule retains without

⁵ See, e.g., *Matter of Ravindra Singh Kanwal*, D2009–053 (OCIJ July 8, 2009), and *Matter of Noel Peter Mpaka Canute*, D2010–124 (OCIJ Mar. 16, 2011), available at https://www.justice.gov/sites/default/files/eoir/legacy/2014/02/03/CanuteMpakaNoelPeter_FinalOrder.pdf (last visited June 28, 2016).

⁶ For purposes of this rule, individuals whose proceedings have been administratively closed would not be considered to be in active proceedings.

⁷ This restriction does not apply to individuals who have been granted withholding of removal pursuant to 8 U.S.C. 1231(b)(3) or the Convention Against Torture, although under an order of removal.

⁸ We note that when an accredited representative is an employee of the organization, the organization has an independent obligation to verify that its accredited representative employee is authorized to work in the United States. 8 U.S.C. 1324a; see also 80 FR at 59520 n.43. Therefore, the Department will not consider employment authorization in its character and fitness assessment.

⁹ UFW Foundation, although in agreement with the employee/volunteer requirement, suggested that

change the requirement that the proposed representative be an employee or volunteer of an organization to be accredited. *See* final rule at 8 CFR 1292.12(a)(2).

c. No Attorneys, No Orders Restricting Practice of Law or Representation, No Serious Crimes

The Department received three comments on the provision that precludes attorneys, individuals under an order restricting their practice of law, and individuals convicted of a serious crime from being accredited. The first comment supported the restriction from accreditation of attorneys and those under an order restricting their practice of law. The other comments objected to the bar to accreditation of an individual convicted of a serious crime because it conflicts with the character and fitness requirement and may prevent otherwise qualified individuals from becoming accredited.

The final rule does not change the restriction against accreditation of attorneys, individuals under an order restricting their practice of law, and individuals convicted of a serious crime. *See* final rule at 8 CFR 1292.12(a)(3)–(5). Regarding those convicted of a serious crime, this prohibition supplements the character and fitness requirement, as the Department has determined that individuals with serious crimes are not qualified to be accredited. Unlike with attorneys permitted to appear before EOIR and DHS, the Department has the authority to decide whether non-lawyers should be accredited and permitted to provide immigration legal services in the first instance and need not be limited to pursuing discipline against them based on a serious crime after they have been accredited.

3. Applying for Recognition and Accreditation

The Department received four comments related to the provisions governing the application process for

the rule should permit an individual to become an accredited representative even though that individual may not be an employee or volunteer of an organization provided that the individual has adequate supervision and direction from a recognized organization. UFW Foundation posited that this circumstance would likely occur in rural communities where two organizations partner—one provides legal oversight and supervision and the other provides staff and space—in order to create a legal service infrastructure that neither could provide alone. The rule does not directly address such a circumstance, and as a result, contrary to UFW Foundation's assertion, it may be permissible in some form. For instance, a recognized organization may be able to extend its recognition and provide legal services through its own accredited representative at a location of another non-recognized organization.

recognition and accreditation. The four comments conveyed general support for the application process but expressed some concerns. One commenter stated that EOIR should have a formal process for training and communicating with United States Citizenship and Immigration Services (USCIS), Department of Homeland Security, regarding its role in the recommendation process for recognition and accreditation. Relatedly, another commenter stated that the process for service on the USCIS district director in the jurisdictions where the organization offers or intends to offer legal services should be simplified. This commenter asserted that the current EOIR Form-31 only has space to indicate service on one USCIS district director and suggested that service should be limited to the USCIS district director who is located in the jurisdiction of the proposed representative's primary office. This commenter also requested that a list of contact information for USCIS district directors be made available. Two commenters asserted seemingly opposing concerns about the length of the application process due to the ability of OLAP to request more information from an organization in order to avoid adverse determinations. One commenter worried that the procedure could lead to increased processing times, whereas the other commenter suggested that organizations should have at least 90 days to respond to requests for information.

The final rule adopts the application procedures as proposed, except for changes that allow an organization to request reconsideration of a disapproved request,¹⁰ and that permit OLAP to allow requests, notifications, recommendations, and determinations in the application process to be done electronically.¹¹ *See* final rule at 8 CFR 1292.13(a). As mentioned above, the Department intends upon publication of the final rule to engage in significant education and outreach with government stakeholders like USCIS so that they are aware of its implementation and their role in the process. The Department has not amended the service procedure in the final rule, as recommendations from all USCIS offices where an organization provides or intends to provide services ensures consideration of the greatest possible amount of information about an

organization and its proposed representatives. The updated EOIR Form-31 for recognition-related requests and EOIR Form 31–A for accreditation requests should simplify the procedure for service, as they include several lines to indicate service has been made on multiple USCIS offices. The Department will also publicize a list of USCIS offices that is readily available.¹² The Department has not included a specified time period for organizations to respond to a request for information from OLAP, but OLAP will ensure that the response times are reasonable. *See* 80 FR at 59521 n.54 (stating that EOIR intends to regularly make available average processing time for recognition and accreditation applications). Additionally, for timely-filed requests for renewal, the recognition of an organization and the accreditation of representatives remain valid pending OLAP's consideration of the renewal request. *See* final rule at 8 CFR 1292.16(b)(3). Accordingly, the processing times for renewal requests will not prejudice organizations or their representatives.

4. Extending Recognition and Accreditation

The Department received 20 comments regarding the provision that permits OLAP the discretion to extend an organization's recognition and the accreditation of its representatives from a headquarters or other designated office to other offices or locations where the organization provides immigration legal services. Nineteen commenters overwhelmingly supported this provision as a means of increasing capacity and reducing the administrative burden on organizations to file a separate application for recognition and accreditation at each location offering legal services. One commenter opposed the provision, unless an organization had attorney supervision of its accredited representatives.¹³ The final rule adopts the provision as proposed and adds that OLAP may permit requests for extension of recognition and accreditation and determinations on the requests to be made electronically. *See* final rule at 8 CFR 1292.15.

¹² *See* USCIS Office of Public Engagement, *USCIS District Offices* (Dec. 2011), available at <https://www.uscis.gov/sites/default/files/USCIS/Outreach/Notes%20from%20Previous%20Engagements/2011/December%202011/District%20Office%20Mailing%20Addresses.pdf> (last visited Feb. 29, 2016).

¹³ *See supra* section III.B.1.f. ("Knowledge and experience") (stating that attorney supervision is encouraged but not required to be recognized).

¹⁰ *See infra* section III.F. ("Request for Reconsideration and Administrative Review") (discussing requests for reconsideration).

¹¹ *See infra* section III.E. ("Recognition and Accreditation for Practice Before DHS") (regarding electronic requests, notifications, recommendations, and determinations).

5. The Validity Period, Renewal of Recognition and Accreditation

Twenty-one commenters provided input regarding the three-year validity period for both recognition and accreditation and renewal thereof. The commenters generally supported or did not mention the three-year validity period and renewal process for accredited representatives. Instead, the comments were directed in opposition to the three-year validity period for recognition and concurrent renewal of recognition and accreditation. The commenters generally did not oppose a validity period and renewal process for recognized organizations in order to improve oversight, but they contended that the proposed three-year period was too short and recommended a period of up to nine years. They claimed that the three-year period was unnecessarily burdensome in that organizations do not change in substantial ways in a three-year period and because the renewal process would require organizations to shift resources away from providing immigration legal services in order to comply with the renewal requirements, such as the annual report. The commenters noted that the burden would be compounded because organizations and their representatives would have to seek renewal concurrently every three years. The commenters also asserted that concurrent renewal of recognition and accreditation may serve as a disincentive to apply for accreditation if the organization's recognition period was set to expire in a short period of time. The majority of commenters urged the Department to un-link the validity periods for recognition and accreditation and to provide a longer validity period for recognized organizations.

After considering the comments, the Department has decided to retain the three-year validity period for accredited representatives but to modify the validity period for recognized organizations. *See* final rule at 8 CFR 1292.12(d); 8 CFR 1292.11(f). Under the final rule, recognition will be valid for a period of six years, unless the organization has been granted conditional recognition, which is valid only for two years, or the organization has its recognition administratively terminated or is disciplined (through revocation or termination) prior to the conclusion of its recognition period. *See* final rule at 8 CFR 1292.11(f). An organization's six-year recognition period would run independently of the three-year period of accreditation for its

representatives.¹⁴ Therefore, organizations and their representatives will seek renewal of recognition and accreditation separately at the conclusion of their respective recognition and accreditation cycles. *See* final rule at 8 CFR 1292.16(b).

The final rule retains the renewal process for recognized organizations and accredited representatives, except for changes that allow an organization to request reconsideration of a disapproved request,¹⁵ and that authorize OLAP to allow requests, notifications, recommendations, and determinations in the application process to be made electronically.¹⁶ *See* final rule at 8 CFR 1292.16.

6. Organizations and Representatives Recognized and Accredited Prior to the Effective Date of the Final Rule

The Department received three comments regarding the provision governing when organizations and representatives recognized and accredited prior to the effective date of this final rule would have to seek renewal. The three comments generally opposed the provision that required recognized organizations without an accredited representative on staff at the effective date of the final rule to seek renewal and comply with the accredited representative requirement within one year of the effective date of the rule. These commenters also stated that the requirement that an organization would have to seek renewal of its recognition and the accreditation of its representatives if they sought to extend recognition to an additional office or location or to accredit a new representative would cause organizations to refrain from either action and discourage capacity building.

The final rule, as discussed above, retains the requirement that recognized organizations without an accredited representative on staff at the effective date of the final rule request renewal within one year of the effective date of the rule.¹⁷ *See* final rule at 8 CFR 1292.16(h)(2)(i). However, the Department agrees with the commenters

and has removed the provision requiring renewal for all other organizations recognized at the effective date of the final rule if they seek extension of recognition or accreditation of a new representative. Consistent with the changes made elsewhere in the final rule, renewal of organizations and representatives recognized and accredited prior to the effective date of the rule has been de-coupled. Such organizations will only be subject to the renewal timelines as proposed and maintained in the final rule. *See* final rule at 8 CFR 1292.16(h)(2)(ii), (iii). Accredited representatives, on the other hand, will have to seek renewal at the expiration of their three-year accreditation period under the current regulation. *See* final rule at 8 CFR 1292.16(h)(3).

7. Conditional Recognition

The Department received 12 comments regarding the proposed rule's provision for conditional recognition of organizations that have not been previously recognized or that are recognized anew after having lost recognition due to an administrative termination or disciplinary sanctions. Conditional recognition provides a probationary period and requires the specified organizations to apply for renewal within two years of the date that OLAP granted conditional recognition. The Department specifically asked for public comment on conditional recognition and whether conditionally recognized organizations would be able to remove the conditional status after one year instead of two.

Eleven commenters generally supported the provision, but the majority of these commenters wanted to exclude established, federally tax-exempt non-profit organizations that were adding immigration legal services to their service portfolio from conditional recognition. They sought to limit conditional recognition to organizations with pending Federal tax-exempt status and organizations reapplying after an administrative termination or disciplinary sanctions. One commenter in support of the provision stated that the public may view the designation of conditional recognition as a sign of mistrust or lack of ability, whereas another suggested that the time period for renewal should be shortened from two years to 18 months. The dissenting comment stated that conditional recognition was an unnecessary administrative burden and that all organizations should be treated equally.

The final rule adopts the conditional recognition provision as proposed and

¹⁴ *See supra* section III.B.1.a. ("Accredited representative required & inactive status") (addressing accredited representative requirement and inactive status).

¹⁵ *See infra* section III.F. ("Request for Reconsideration and Administrative Review") (discussing requests for reconsideration).

¹⁶ *See infra* section III.E. ("Filings and Communications") (regarding electronic requests, notifications, recommendations, and determinations).

¹⁷ *See supra* section III.B.1.a. ("Accredited representative required & inactive status") (discussing accredited representative requirement).

adds as clarification that it also applies to organizations whose Federal tax-exempt status is pending at the time of recognition. *See* final rule at 8 CFR 1292.11(f). While the Department appreciates the thoughtful comments on this issue, it has determined that because the final rule provides a six-year renewal period for established recognized organizations,¹⁸ a two-year initial renewal period is appropriate for organizations that have not been previously recognized, whose Federal tax-exempt status is pending at the time of recognition, or that have been previously administratively terminated or subject to disciplinary sanctions. These organizations, regardless of their history as non-profits, must show within two years of recognition that they can maintain the qualifications for recognition and establish a track record of offering immigration legal services through accredited representatives without issue. Any organization that has been conditionally recognized will not be identified as such on the R&A roster; rather, the roster will show that the organization's renewal date is in two years rather than six.

8. Reporting, Recordkeeping, and Posting Requirements

The Department received 16 comments related to the reporting, recordkeeping, and posting requirements imposed on organizations by the proposed rule. One commenter supported all three requirements. Three other commenters stated their agreement with the posting requirement and none dissented. Seven commenters addressed the reporting requirements and stated general support for the duty to report changes. Six of these commenters, however, requested that the number and type of changes that need to be reported should be limited to changes that affect the R&A roster and that electronic submission of the changes should be permitted. The other commenter stated that changes should be reported in an annual report, unless OLAP requests an update at an earlier date. Fourteen commenters asserted concerns regarding the recordkeeping requirements. All of these commenters voiced concerns regarding the annual report because it would create a new burden in time and money for organizations and shift resources away from the provision of legal services. Some of the commenters stated that they do not currently track the information

requested in the proposed rule for the annual report and that recordkeeping should be limited to documents that organizations already maintain, such as fee schedules, tax filings, and annual budgets. One commenter suggested that if the annual report would be required under the final rule, it should concern the immigration legal services of the organization as a whole. Eight of the commenters urged the Department to consider whether organizations should be required to compile and submit annual reports and fee schedules at the time of renewal. They recommended that organizations should only be required to submit such documentation with cause or while under investigation.

The final rule adopts the posting requirement as proposed, *see* final rule at 8 CFR 1292.14(c), but amends the reporting and recordkeeping requirements. The final rule revises the duty to report to permit electronic notification of changes to be submitted to OLAP. *See* final rule at 8 CFR 1292.14(a). The Department has not otherwise modified the scope or timing of the duty to report because the scope has been appropriately limited to changes in information that would be listed on the R&A roster or that would affect an organization's or representative's eligibility to be recognized or accredited. Due to the nature of these types of changes, they must be reported promptly. 80 FR at 59524. The Department believes that 30 days will generally constitute prompt notification.

The final rule revises but does not remove the recordkeeping requirement. *See* final rule at 8 CFR 1292.14(b). The Department understands the concerns raised by commenters regarding the recordkeeping requirement—in particular the annual report—but has retained the requirement because it provides OLAP with a means to monitor organizations and ensure compliance with the recognition requirements. An organization's annual report on the services provided assists in the evaluation of whether a recognized organization is actually providing immigration legal services and is a non-profit primarily serving low-income and indigent clients. Nonetheless, based on the comments received, the final rule renames the annual report as the “annual summary of immigration legal services provided” to avoid confusion with other annual reports that organizations may prepare. More significantly, the information required to be submitted is more concise and has shifted to a focus on the legal services provided by the organization as a whole, rather than by its accredited

representatives individually. The annual summary of immigration legal services provided must include: The total number of clients served (whether through client intakes, applications prepared and filed with USCIS, cases in which the organization's attorneys or accredited representatives appeared before the Immigration Courts or, if applicable, the Board, or referrals to attorneys or other organizations) and clients to which it provided services at no cost; a general description of the immigration legal services and other immigration-related services (*e.g.*, educational or outreach events) provided; a statement regarding whether services were provided pro bono or clients were charged in accordance with a fee schedule and organizational policies or guidance regarding fee waivers and reduced fees; and a list of the offices or locations where the immigration legal services were provided. The summary may include the total amount of fees, donations, and membership dues, if any, charged or requested of immigration clients. Organizations likely have such information for their own purposes because it tracks the work that they perform and it is information that they likely provide to funders and donors. If organizations do not compile such information presently, it should not be difficult to start because of its general nature. For organizations recognized at the time of the effective date of this rule, information would only be requested from the effective date of the rule (*i.e.*, January 18, 2017).

C. Administrative Termination of Recognition and Accreditation

The Department received nine comments on the provision regarding administrative termination of recognition and accreditation. Six commenters generally supported the administrative termination provision as a means for removing an organization or representative from the R&A roster for administrative, non-disciplinary reasons. However, these commenters recommended several changes to the provision. They stated that the OLAP Director should request information from an organization, representative, DHS, or EOIR prior to terminating recognition or accreditation. They also expressed concern that termination of recognition would lead to termination of a representative's accreditation and asserted that the representative should be given a limited amount of time to transfer to another recognized organization so that clients would not lose representation. Likewise, the commenters stated that an organization

¹⁸ *See supra* section III.B.5 (“The Validity Period, Renewal of Recognition and Accreditation”) (discussing validity period of recognition and accreditation).

should be placed on inactive status and given time to find a new representative if its only accredited representative is terminated, rather than have its recognition terminated, so that it would not have to go through the process of seeking recognition anew when it found a new individual to be accredited.

One of the three remaining commenters stated that the Board should have authority for administrative termination of recognition and accreditation, instead of OLAP, because of the opportunity for a hearing. The two other commenters asserted that accreditation should only be terminated if there is an adverse determination.

The Department has adopted the administrative termination provision of the proposed rule, except as modified to accommodate the changes made in relation to the request for reconsideration and inactive status provisions added to the rule and discussed above. The Department has not amended the regulatory text to require that the OLAP Director request information from an organization, representative, DHS, or EOIR prior to terminating recognition or accreditation because not all grounds for termination require OLAP to contact anyone. For example, if an organization or representative voluntarily requests termination of their recognition or accreditation, OLAP has no reason to contact the organization for further information. However, the Department notes that the rule specifically requires the OLAP Director to contact the organization and provide it with the opportunity to respond to certain deficiencies affecting eligibility for recognition or accreditation prior to determining whether to issue a termination notice. 80 FR at 59525; *see also* final rule at 8 CFR 1292.17(b)(5), (6), (c)(6).

The final rule addresses the concern that an organization could be administratively terminated through the inactive status provision added to the final rule and discussed above. The final rule, however, does not make any changes regarding the administrative termination of accreditation where the representative's organization has its recognition terminated. Accreditation is dependent on the supervision and resources of a recognized organization, and an accredited representative should not be permitted to maintain accreditation, even if time limited, if the representative no longer has a connection to a recognized organization.

D. Sanctioning Recognized Organizations and Accredited Representatives

The Department received four comments regarding the rule's updates and additions to the disciplinary process, from three non-profit organizations and one bar association. Three of the commenters stated their general support for the provisions. The fourth commenter also expressed general agreement with the provisions but inquired into some aspects. In particular, the commenter stated that the rule adds a ground for organizational discipline for failure to adequately supervise its accredited representative but was unclear as to whether the EOIR disciplinary counsel or OLAP would be required to share complaints, warning letters, admonitions, or agreements in lieu of discipline in order to put the organization on notice of a representative's conduct and give it the opportunity to remedy the conduct. The commenter also inquired into the standards that would be applied to determining the appropriate sanction for organizations and suggested that the rule should impose a time period during which an adjudicating official would have to render a decision on a petition for an interim suspension due to the urgency of the possible situation.

The Department has adopted the changes to the disciplinary provisions set forth in the proposed rule, except for the modifications discussed above regarding inactive status and below regarding a drafting error about reinstatement in the proposed rule. The Department acknowledges that the rule does not require the EOIR disciplinary counsel or OLAP to share information about accredited representatives with their organizations but clarifies that the EOIR disciplinary counsel will provide an organization with notice prior to taking disciplinary action against an organization for failure to supervise. 80 FR at 59526; *see also* final rule at 8 CFR 1003.108(b). The rule also does not prescribe standards for the application of sanctions to organizations but would apply the same flexible framework that is applied to immigration practitioners when determining the level of sanction. Generally, adjudicators examine the type of misconduct that occurred, whether it was done intentionally, knowingly, or inadvertently, the harm caused, and any aggravating or mitigating factors.¹⁹ Finally, although

the rule also does not impose a time period for an adjudicator's decision on a petition for interim suspension so as to not interfere with the adjudicator's discretion, it would be expected that a decision would be issued within a reasonable period of time based on the nature of the petition.

E. Filings and Communications

Six commenters recommended that the Department facilitate the duty to report changes by permitting electronic submissions. The Department agrees that electronic filings and communications would be beneficial. EOIR is considering, in the future, permitting the electronic submission of a wide range of documents related to the R&A program. Such documents could include: Requests for recognition and accreditation, renewal, and extension of recognition and accreditation; responses to inquiries and notices from EOIR; recommendations from DHS and the EOIR disciplinary counsel and anti-fraud officer, and responses thereto; reports and notifications of changes in organization information or status; and complaints against recognized organizations and accredited representatives. EOIR is also considering communicating electronically with prospective and current organizations, DHS, and the EOIR disciplinary counsel and anti-fraud officer. EOIR may electronically transmit documents such as: Decisions to approve or disapprove requests for recognition and accreditation, renewals, extensions of recognition and accreditation, extension of time requests; inquiries to organizations for additional information or disclosing unfavorable information; and determinations regarding inactive status and administrative termination of recognition and accreditation. In anticipation of such electronic filings and communications, the Department has revised §§ 1292.13(a), 1292.14(a), 1292.15, 1292.16(e), 1292.17(a), (d), (e), and (f), and 1292.18(a). No notice-and-comment period is required for the revisions described in this paragraph, as they pertain to "agency organization, procedure, or practice" under 5 U.S.C. 553(b).

F. Request for Reconsideration and Administrative Review

The proposed rule solicited comments on whether an opportunity for administrative review should be provided for adverse OLAP determinations regarding recognition

¹⁹ *See* ABA, *Standards for Imposing Lawyer Sanctions* (1992); *see, e.g., Matter of Ramos*, 23 I&N Dec. 843 (BIA 2005) (finding that expulsion was an

appropriate sanction based on his disbarment from a state bar due to extensive unethical conduct).

and accreditation, given that the prior regulation also had no such procedures. The solicitation further inquired as to the extent to and contexts in which such review should be provided, if it was deemed necessary. The Department received 10 comments, which all stated general support for an additional review process.

Five commenters supported an appeal process for denied recognition and accreditation applications but provided no further explanation. One commenter suggested an appeal process for disapproved recognition and accreditation requests in order to provide additional information to overcome the disapproval or to identify information overlooked in requests that should have been approved. The commenter asserted that organizations should have 45 days to submit an appeal and that the process should be a prompt review, rather than the three or four months that it would take to reach a determination on a re-filed request. Similarly, a commenter stated that an appeal process for disapproved applications should only be established if it can avoid re-filing of requests for issues that can be fixed easily and it is less burdensome than the initial process for requests for recognition and accreditation. Another commenter suggested that the administrative review or appeal process should be completed within 60 days.

Two commenters requested an administrative review process before the Board in the administrative termination context. Both commenters were concerned about terminations that may occur as organizations adjust to the new requirements of this rule or due to errors in eligibility determinations. One of these commenters recommended that organizations retain recognition during the review process.

The final rule adopts the provisions of the proposed rule that afford an applicant an opportunity to be heard before the issuance of a determination on an initial or renewal application for recognition and accreditation or a determination on administrative termination based on deficiencies regarding the requirements for recognition or accreditation or reporting, recordkeeping, and posting. See final rule at 8 CFR 1292.13(a); 8 CFR 1292.16(e); 8 CFR 1292.17(b)(5), (b)(6), (c)(6). In keeping with the spirit and purpose of this rule to maintain and increase capacity, OLAP will take these opportunities to engage with organizations in order to limit adverse determinations so the concerns about adverse determinations arising from organizations being unable to adjust to

the new requirements are unlikely. Nevertheless, the Department realizes that adverse determinations are likely to occur and that organizations may have the ability to correct any deficiencies that led to the adverse determination or otherwise point to an error in the determination. For these situations, the final rule adds further review in the form of a 30-day request for reconsideration of the OLAP Director's final determinations at 8 CFR 1292.13(e), 1292.16(f), and 1292.17(d). The filing of a request for reconsideration automatically stays the OLAP Director's determination until a decision issues on the reconsideration request and allows recognized organizations and its accredited representatives to continue to provide immigration legal services during the reconsideration process. The reconsideration process should provide for a faster decision-making process and avoid the need for organizations to go through the potentially lengthy request process anew to correct the types of simple errors or issues raised by the commenters.

Additionally, the final rule provides that organizations whose requests for reconsideration are denied may seek administrative review by the Director of EOIR. See final rule at 8 CFR 1292.18. This provision responds to concerns that OLAP would be the sole decision-maker regarding recognition and accreditation and that another entity should be able to review OLAP's decisions. Like with requests for reconsideration, a request for administrative review stays the OLAP Director's determination until a decision issues on the review request and allows recognized organizations and their accredited representatives to continue to provide immigration legal services during the review process. See *id.* at 1292.18(a)(3).

G. Recognition and Accreditation for Practice Before DHS

As the Department stated in the proposed rule, as of the effective date of this final rule, EOIR will apply the standards and procedures for recognition and accreditation set forth in this rule governing EOIR's activities, not the DHS regulations set forth in 8 CFR part 292. In addition, DHS has informed the Department that it plans to publish a rule relating to the same subject matter. Until DHS revises 8 CFR part 292 to conform its recognition and accreditation provisions with this final rule, the regulations codified in this rule will govern to the extent that they are inconsistent with those DHS regulations.

IV. Other Revisions

The final rule adds paragraph (b)(3) to 8 CFR 1003.107. This paragraph explains the decisions the Board may make in the early reinstatement context and was inadvertently omitted in the proposed rule. It is substantially similar to paragraph (b)(2) in the same section of the current regulation at 8 CFR 1003.107.

V. Notice and Comment

The revisions to the proposed rule do not require a new notice-and-comment period. The revisions pertaining to electronic filings and communications, at §§ 1292.13(a), 1292.14(a), 1292.15, 1292.16(e), and 1292.17(a), (d), (e), and (f), pertain to "agency organization, procedure, or practice" under 5 U.S.C. 553(b). The Department has "good cause" under 5 U.S.C. 553(b)(B) to add paragraph (b)(3) to 8 CFR 1003.107 because it is substantially similar to paragraph (b)(2) in the same section of the current regulation. The other provisions are logical outgrowths of those in the proposed rule. See, e.g., *Env'tl. Def. Ctr., Inc. v. EPA*, 344 F.3d 832, 851–52 (9th Cir. 2003); *Am. Water Works Ass'n v. EPA*, 40 F.3d 1266, 1274 (D.C. Cir. 1994).

VI. Regulatory Requirements

A. Regulatory Flexibility Act

In accordance with the Regulatory Flexibility Act, the Department certifies that this rule will not have a significant economic impact on a substantial number of small entities. See 5 U.S.C. 605(b).

Currently, there are almost 1,000 recognized organizations and more than 1,900 accredited representatives. This rule seeks to increase the number of recognized organizations and accredited representatives that are competent and qualified to provide immigration legal services primarily to low-income and indigent persons. The Department, however, cannot estimate with certainty the actual increase in the number of recognized organizations and accredited individuals that may result from the rule. That figure is subject to multiple external factors, including changes in immigration law and policy and fluctuating needs for representation and immigration legal services.

While EOIR does not keep statistics on the size of recognized organizations, many of these organizations and their accredited representatives may be classified as, or employed by, "small entities" as defined under 5 U.S.C. 601. In particular, recognized organizations, which are by definition non-profit entities, may also be classified as "small

organizations” and thus, as “small entities” under section 601.

Although the exact number of recognized organizations that may be classified as “small entities” is not known, the Department certifies that this rule will not have a significant economic impact on a substantial number of these entities. The rule, like the prior regulations, does not assess any fees on an organization to apply for initial recognition or accreditation, to renew recognition or accreditation, or to extend recognition.

The Department, however, acknowledges that organizations may incur some costs to apply for recognition or accreditation, renew recognition or accreditation, or extend recognition. Based on the most recent Bureau of Labor Statistics reports that state the median hourly wage for lawyers is \$64.17, and the average burden hours to apply for recognition or accreditation, renew recognition or accreditation, or extend recognition, discussed below in the Paperwork Reduction Act section, *see infra* section VI.G, and in the proposed rule, the Department estimates the costs as follows. If an organization hires a lawyer to assist with the application process, the organization would incur costs of approximately \$128.34 to apply for initial recognition (\$64.21 hour $\times$ 2 hours); \$449.16 to renew recognition (\$64.17 hour $\times$ 7 hours), and \$128.34 to apply for or to renew accreditation (\$64.21 hour $\times$ 2 hours). For organizations that prepare their applications without a practitioner, there is an estimated cost of \$10 per hour for completing the form (the individual’s time and supplies) in lieu of the attorney cost such that those organizations would incur costs of approximately \$20.00 to apply for initial recognition (\$10.00/hour $\times$ 2 hours), \$70.00 to renew recognition (\$10.00/hour $\times$ 7 hours), and \$20.00 to apply for or to renew accreditation (\$10.00/hour $\times$ 2 hours).

The Department also recognizes that the rule imposes a new recordkeeping requirement on recognized organizations to compile and maintain fee schedules, if the organization charges any fees, and annual summaries of immigration legal services for a period of six years. However, the Department does not believe that the recordkeeping requirement will have a significant economic impact on recognized organizations. The annual summaries, as modified by this final rule, would be compiled from information already in the possession of recognized organizations, and based on the estimates from the Paperwork

Reduction Act section below, the Department estimates that it would cost an organization approximately \$64.21 per year to have a lawyer compile the annual summary, and \$10.00 per year for a non-lawyer to do so.²⁰ Maintaining the fee schedules and annual summaries after their creation for six years should not impose a significant economic impact on recognized organizations because such records may be retained in the normal course of business like other records, such as client files, that organizations are obligated to retain for State or Federal purposes.

Despite the costs mentioned above, the Department notes that the rule may economically benefit recognized organizations. The rule eliminates the requirement that recognized organizations assess only “nominal charges” for their immigration legal services. The final rule shifts the primary focus of eligibility for recognition from the fees an organization charges its clients to an examination of whether it is a non-profit religious, charitable, social service, or similar organization that primarily serves low-income and indigent clients. This change is intended to provide organizations with flexibility in assessing fees, which should improve their financial sustainability and their ability to serve more persons.

B. Unfunded Mandates Reform Act of 1995

This rule will not result in the expenditure by State, local, and tribal governments, in the aggregate, or by the private sector, of \$100 million or more in any one year, and it will not significantly or uniquely affect small governments. Therefore, no actions were deemed necessary under the provisions of the Unfunded Mandates Reform Act of 1995.

C. Small Business Regulatory Enforcement Fairness Act of 1996

This rule is not a major rule as defined in section 251 of the Small Business Regulatory Enforcement Fairness Act of 1996. *See* 5 U.S.C. 804. As discussed in the certification under the Regulatory Flexibility Act, organizations and representatives will not be assessed a fee to either apply for or seek renewal of recognition and accreditation, and the burden of seeking renewal of recognition has been reasonably mitigated. The Department recognizes, however, that the rule’s elimination of the “nominal charges”

restriction may affect competition and employment in the market for legal services because a recognized organization could charge higher fees (but less than market rates) to clients. The rule balances the elimination of the “nominal charges” restriction by also requiring that non-profit organizations primarily serve low-income and indigent persons. Legal fees charged by a non-profit organization are expected to be at a rate meaningfully less than the cost of hiring competent private immigration counsel in the same geographic area. Accordingly, this rule will not result in an annual effect on the economy of \$100 million or more, a major increase in costs or prices, or significant adverse effects on competition, employment, investment, productivity, innovation, or on the ability of United States-based enterprises to compete with foreign-based enterprises in domestic and export markets.

D. Executive Order 12866 and Executive Order 13563 (Regulatory Planning and Review)

The rule is considered by the Department to be a “significant regulatory action” under section 3(f)(4) of Executive Order 12866. Accordingly, the regulation has been submitted to the Office of Management and Budget (OMB) for review.

The Department certifies that this regulation has been drafted in accordance with the principles of Executive Order 12866, section 1(b), and Executive Order 13563. Executive Orders 12866 and 13563 direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health, and safety effects, distributive impacts, and equity). Executive Order 13563 emphasizes the importance of quantifying costs and benefits, reducing costs, harmonizing rules, and promoting flexibility.

The rule seeks to address the critical and ongoing shortage of qualified legal representation for underserved populations in immigration cases before Federal administrative agencies. Specifically, the rule would revise the eligibility requirements and procedures for recognizing organizations and accrediting their representatives to provide immigration legal services to underserved populations. To expand the availability of such legal services, the rule permits recognized organizations to extend their recognition and the accreditation of their representatives to

²⁰ Note that the total average burden (and cost) for renewing recognition includes the burden (and cost) of compiling six annual summaries of immigration legal services provided.

multiple offices or locations and to have flexibility in charging fees for services. The rule also imposes greater oversight over recognized organizations and their representatives in order to protect against potential abuse of vulnerable immigrant populations by unscrupulous organizations and individuals.

The rule will greatly benefit organizations, DHS, EOIR, and most importantly, persons who need legal representation in immigration matters. The rule is expected to increase the availability of competent and qualified legal representation in underserved areas and particularly for indigent and low-income persons for whom there is an ongoing and critical shortage of such representation. For example, the elimination of the nominal fee restriction will allow organizations the flexibility to assess fees so that organizations will be able to sustain their operations and potentially expand them to serve more persons. In addition, the extension of recognition and accreditation to multiple offices or locations will permit organizations and their representatives, through mobile or technological means, to reach underserved persons who may currently have difficulty finding legal representation in remote or rural locations. These two provisions will greatly increase legal representation for persons in administrative cases before EOIR and DHS, and in turn, will substantially aid the administration of justice.

The rule will provide EOIR with greater tools to manage and oversee the recognition and accreditation program. The rule requires organizations to renew their recognition every six years and the accreditation of their representatives every three years, and it imposes limited reporting, recordkeeping, and posting requirements on the organizations. The Department acknowledges that the new oversight provisions impose some burdens on organizations. However, the burdens on the organizations are necessary to protect vulnerable immigrant populations from unscrupulous organizations and individuals and to legitimize reputable organizations and representatives.

Although the renewal requirement adds a new burden on recognized organizations, the Department has reasonably mitigated this burden. The rule maintains the same three-year renewal period for accredited representatives as under the current regulations and only requires organizations to seek renewal of recognition every six years. Also, at renewal, organizations would not be required to submit documentation

previously submitted at initial recognition or accreditation, unless there have been changes that affect eligibility for recognition or accreditation. Organizations would only have to submit documentation that would support renewal of recognition and accreditation. The information and documentation required to renew recognition and accreditation should be in the possession of the organization in the normal course of its operations.

The reporting requirement expands the reporting obligation of organizations under the current regulations, which only require organizations to report changes in the organization's name, address, or public telephone number, or in the employment status of an accredited representative. This final rule expands the current requirement so as to include any changes that would affect the organization's recognition (such as a merger), or a representative's accreditation (such as a change in the representative's name). The reporting requirement should not impose a significant cost to organizations because organizations may comply with the requirement by simply contacting EOIR to report such changes.

The recordkeeping requirement will primarily aid EOIR in evaluating an organization's request to renew recognition. The recordkeeping requirement requires an organization to compile fee schedules, if it charges any fees, and annual summaries of immigration legal activities, and maintain them for a period of six years. The recordkeeping requirement is not unduly burdensome, as modified by the final rule, because organizations should have such information in their possession, and the six-year record retention requirement is consistent with the organization's obligation to retain records, such as client files, for State or Federal purposes.

The posting requirement will require organizations to post public notices about the approval period of an organization's recognition and the accreditation of its representatives, the requirements for recognition and accreditation, and the process for filing a complaint against a recognized organization or accredited representative. EOIR will provide the notices to the organizations, and the organizations should not incur any tangible costs for the minimal burden of posting the notices. In fact, the public notices should greatly benefit organizations because the notices will legitimize organizations and notify the public that they are qualified to provide immigration legal services.

As detailed above in section VI.A ("Regulatory Flexibility Act"), and below in section VI.G ("Paperwork Reduction Act"), EOIR anticipates that if an organization hires a lawyer to assist with the application process, the organization will incur costs of approximately \$128.34 to apply for initial recognition, \$449.16 to renew recognition, and \$128.34 to apply for or to renew accreditation. If an organization prepares its applications on its own, the organization will incur costs of approximately \$20.00 to apply for initial recognition, \$70.00 to renew recognition, and \$20.00 to apply for or to renew accreditation.

E. Executive Order 13132: Federalism

This rule may have federalism implications but, as detailed below, will not have substantial direct effects on the States, on the relationship between the National Government and the States, or on the distribution of power and responsibilities among the various levels of government.

The rule, like the current regulations it would replace, permits non-lawyer accredited representatives to provide immigration legal services in administrative cases before EOIR and DHS. The provision of immigration legal services by non-lawyers may constitute the unauthorized practice of law under some State laws and rules prohibiting the unauthorized practice of law. However, the Supreme Court's decision in *Sperry v. Florida ex rel. Florida Bar*, 373 U.S. 379 (1963), provides that Federal agency laws and regulations authorizing the practice of law in administrative cases before Federal agencies preempt conflicting State laws that would otherwise prohibit authorized representatives from participating in those Federal administrative cases.²¹ This principle has long been applicable with respect to accredited representatives providing representative services in administrative cases before EOIR and DHS.

Despite the preemptive effects of this rule, the federalism implications are minimal. The rule merely updates the current, well-established regulations permitting non-lawyer accredited representatives to provide immigration legal services in administrative cases before EOIR and DHS. The rule does not alter or extend the scope of the limited authorization to provide immigration

²¹ *Sperry* held that a statute and implementing regulation authorizing non-lawyers to practice before the Patent Office preempted a contrary state law prohibition on the unauthorized practice of law to the extent that the state law prohibition was incompatible with the Federal rules. See 373 U.S. at 385.

legal services before Federal administrative agencies provided under the current regulations. In addition, following *Sperry*, States have expressly determined that non-lawyers providing immigration legal services before EOIR and DHS does not constitute the unauthorized practice of law under their State laws and rules.²²

Under these circumstances, in accordance with section 6 of Executive Order 13132, it is determined that this rule does not have sufficient federalism implications to warrant the preparation of a federalism summary impact statement.

F. Executive Order 12988: Civil Justice Reform

This rule meets the applicable standards set forth in sections 3(a) and 3(b)(2) of Executive Order 12988.

G. Paperwork Reduction Act

The Department received two comments in relation to its requests under the Paperwork Reduction Act (PRA) of 1995 to revise the currently approved information collections contained in this rule: (1) The form for non-profit religious, charitable, or social service organizations to apply for recognition (Form EOIR-31); (2) the form for recognized organizations to apply for accreditation of non-attorney representatives (Form EOIR-31A); and (3) the form for filing a complaint against an immigration practitioner (Form EOIR-44). These information collections were previously approved by OMB under the provisions of the PRA, and the information collections were assigned OMB Control Numbers 1125-0012 (EOIR-31), 1125-0013 (EOIR-31A), and 1125-0007 (EOIR-44). The Department requested revisions to these information collections based on the proposed rule regarding the R&A program.

The two commenters addressed the estimated average time to apply for recognition and accreditation using the Form EOIR-31 and Form EOIR-31A. One commenter asserted that under the prior regulations it took an organization about 10 hours to prepare a Form EOIR-31. The other commenter stated that under the prior regulations, organizations needed three to four hours to prepare and complete a Form EOIR-

31 or a Form EOIR-31A. The commenter acknowledged that most of the additional documentation required under the rule was standard non-profit documentation but that renewal of recognition under the proposed rule would require an additional amount of time because the annual report (in the final rule now called the summary of immigration legal services provided) was not routinely prepared by all organizations. The commenter estimated that the proposed annual report would take three to four hours to prepare each year. Based on the Department's amendments to the final rule as discussed in section III above and the two comments discussed here, the Department has made changes to the final Form EOIR-31 and Form EOIR-31A.

1. Request for Recognition, Renewal of Recognition, or Extension of Recognition for a Non-Profit, Federal Tax-Exempt Religious, Charitable, Social Service, or Similar Organization (Form EOIR-31)

The Department has modified the final Form EOIR-31 and the instructions thereto for consistency with the changes in the final rule regarding the requirements for recognition and renewal of recognition. First, the final form does not require organizations to provide information regarding whether a substantial amount of their immigration legal services budget is from outside funding sources. Second, the instructions have been modified to say that the form will generally be used every six years (rather than three years) in connection with a request to renew recognition, and that the request need not be accompanied by a request for accreditation of a representative. Third and finally, the final form has been amended to reflect the changes to the annual reports required to be submitted at renewal. In the final rule, the annual report has been renamed the summary of immigration legal services provided. More significantly, the substance of the summary has been modified to include information already gathered for other purposes like funder reports or otherwise readily accessible to the organization, such as: The total number of clients served (whether through client intakes, applications prepared and filed with USCIS, cases in which the organization's attorneys or accredited representatives appeared before the Immigration Courts or, if applicable, the Board, or referrals to attorneys or other organizations) and clients to which it provided services at no cost; a general description of the immigration legal services and other immigration-related

services (e.g., educational or outreach events) provided; a statement regarding whether services were provided pro bono or clients were charged in accordance with a fee schedule and organizational policies or guidance regarding fee waivers and reduced fees; and a list of the offices or locations where the immigration legal services were provided.

The Department has determined that the estimated average time to review the form, gather necessary materials, complete the form, and assemble the attachments is 2 hours for initial recognition, which is the same as the current information collection. The current Form EOIR-31 has been in use for several years, and the Department has not received any comments regarding the accuracy of this estimate. The Department has now received two comments in response to the proposed rule's revisions to the form suggesting that the time estimate may not be accurate. However, the commenters did not specifically address the revised form, as no individual requested it during the comment period. Notwithstanding the comments received, the Department has kept the estimated average total response time of 2 hours for initial recognition because initial recognition requires the same materials as the current information collection and the revised form provides much improved detail and specificity that will assist organizations in preparing and completing the form in a timely manner.

For renewal of recognition, the Department clarifies that an organization will not be required to submit the information previously submitted at initial recognition, unless such information has changed since the initial recognition and it affects the organization's recognition. Instead, an organization will only be required to complete the form and submit fee schedules and six annual summaries of immigration legal services provided (formerly called the annual report in the proposed rule). The Department understands that these summaries, though simplified under the final rule, will place some additional burdens on organizations. Therefore, the Department has adjusted the estimated time to account for the burdens associated with preparation and retention of the summaries of immigration legal services provided. The Department estimates that the average time to review the form, gather necessary materials, complete the form, and assemble the attachments for each application to renew recognition will be 7 hours in total. The estimate includes

²² See *Ariz. Rev. Stat. Ann.* § 12-2702(A)(4) (stating that an accredited representative is not engaging in the unauthorized practice of immigration law by providing immigration legal services); *N.M. Stat. Ann.* § 36-3-4(A)(4) (same); *N.J. Stat. Ann.* § 2 C:21-31(d) (similar); *Va. Unauthorized Practice R.* 9-103 (similar); *North Carolina State Bar, Preventing Unlicensed Legal Practice*, <http://www.ncbar.gov/public/upl.asp> (last visited Sept. 15, 2015) (similar).

1 hour for review and completion of the form, and an additional 6 hours divided over 6 years to prepare the annual summaries of immigration legal services provided. This estimate and the one for initial recognition are minimized by the time saved from streamlining the recognition process to allow an organization to file a single application for multiple locations.

2. Request by Organization for Accreditation or Renewal of Accreditation of Non-Attorney (Form EOIR-31A)

Based on changes in the final rule, the instructions to the final Form EOIR-31A have been modified to reflect that requests for renewal of accreditation must be requested every three years, and that requests for accreditation do not need to be submitted with requests for renewal of recognition, unless the renewal dates for both are the same.

The Department finds no reason to adjust the estimated average time to complete Form EOIR-31A, despite the comments received about the time burden to request recognition and accreditation. The comments did not directly address the use of the revised form, as no individual requested the form. The comments generally concerned requests for accreditation, which may have related to the period in which there was no form to request accreditation. Even if the comments concerned the current information collection, the final form is improved in clarity and specificity such that organizations should be able to prepare and complete the form in an expeditious manner.

3. Immigration Practitioner Complaint Form (Form EOIR-44)

The two comments received did not concern the revisions to the Form EOIR-44, which was updated to reflect that the public may use the form to file a complaint against a recognized organization in addition to an immigration practitioner. Therefore, the final rule adopts the revisions to the EOIR-44 as proposed.

List of Subjects

8 CFR Part 1001

Administrative practice and procedure, Aliens, Immigration, Organizations and functions (Government agencies).

8 CFR Part 1003

Administrative practice and procedure, Aliens, Immigration, Legal services, Organizations and functions (Government agencies).

8 CFR Part 1103

Administrative practice and procedure, Authority delegations (Government agencies), Reporting and recordkeeping requirements.

8 CFR Part 1212

Administrative practice and procedure, Aliens, Immigration, Passports and visas, Reporting and recordkeeping requirements.

8 CFR Part 1292

Administrative practice and procedure, Immigration, Lawyers, Reporting and recordkeeping requirements.

Accordingly, for the reasons set forth in the preamble, 8 CFR parts 1001, 1003, 1103, 1212, and 1292 are amended as follows:

PART 1001—DEFINITIONS

- 1. The authority citation for part 1001 is revised to read as follows:

Authority: 5 U.S.C. 301; 8 U.S.C. 1101, 1103; Pub. L. 107-296, 116 Stat. 2135; Title VII of Pub. L. 110-229.

- 2. In § 1001.1, add paragraphs (x) and (y) to read as follows:

§ 1001.1 Definitions.

* * * * *

(x) The term *OLAP* means the Office of Legal Access Programs.

(y) The term *OLAP Director* means the Program Director of the Office of Legal Access Programs.

* * * * *

PART 1003—EXECUTIVE OFFICE FOR IMMIGRATION REVIEW

- 3. The authority citation for part 1003 continues to read as follows:

Authority: 5 U.S.C. 301; 6 U.S.C. 521; 8 U.S.C. 1101, 1103, 1154, 1155, 1158, 1182, 1226, 1229, 1229a, 1229b, 1229c, 1231, 1254a, 1255, 1324d, 1330, 1361, 1362; 28 U.S.C. 509, 510, 1746; sec. 2 Reorg. Plan No. 2 of 1950; 3 CFR, 1949-1953 Comp., p. 1002; section 203 of Pub. L. 105-100, 111 Stat. 2196-200; sections 1506 and 1510 of Pub. L. 106-386, 114 Stat. 1527-29, 1531-32; section 1505 of Pub. L. 106-554, 114 Stat. 2763A-326 to -328.

- 4. In § 1003.0, revise paragraphs (a) and (e)(1), redesignate paragraph (f) as paragraph (g), and add new paragraph (f), to read as follows:

§ 1003.0 Executive Office for Immigration Review.

(a) *Organization.* Within the Department of Justice, there shall be an Executive Office for Immigration Review (EOIR), headed by a Director who is appointed by the Attorney General. The Director shall be assisted

by a Deputy Director and by a General Counsel. EOIR shall include the Board of Immigration Appeals, the Office of the Chief Immigration Judge, the Office of the Chief Administrative Hearing Officer, the Office of Legal Access Programs, and such other staff as the Attorney General or the Director may provide.

* * * * *

(e) * * *

(1) *Professional standards.* The General Counsel shall administer programs to protect the integrity of immigration proceedings before EOIR, including administering the disciplinary program for practitioners and recognized organizations under subpart G of this part.

* * * * *

(f) *Office of Legal Access Programs and authorities of the Program Director.* Within EOIR, there shall be an Office of Legal Access Programs (OLAP), consisting of a Program Director and such other staff as the Director deems necessary. Subject to the supervision of the Director, the Program Director of OLAP (the OLAP Director), or the OLAP Director's designee, shall have the authority to:

(1) Develop and administer a system of legal orientation programs to provide education regarding administrative procedures and legal rights under immigration law;

(2) Develop and administer a program to recognize organizations and accredit representatives to provide representation before the Immigration Courts, the Board, and DHS, or DHS alone. The OLAP Director shall determine whether an organization and its representatives meet the eligibility requirements for recognition and accreditation in accordance with this chapter. The OLAP Director shall also have the authority to administratively terminate the recognition of an organization and the accreditation of a representative and to maintain the roster of recognized organizations and their accredited representatives;

(3) Issue guidance and policies regarding the implementation of OLAP's statutory and regulatory authorities; and

(4) Exercise such other authorities as the Director may provide.

* * * * *

- 5. In § 1003.1, revise paragraph (b)(13), the first sentence of paragraph (d)(2)(iii), and paragraph (d)(5) to read as follows:

§ 1003.1 Organization, jurisdiction, and powers of the Board of Immigration Appeals.

* * * * *

(b) * * *

(13) Decisions of adjudicating officials in disciplinary proceedings involving practitioners or recognized organizations as provided in subpart G of this part.

* * * * *

(d) * * *

(2) * * *

(iii) *Disciplinary consequences.* The filing by a practitioner, as defined in § 1003.101(b), of an appeal that is summarily dismissed under paragraph (d)(2)(i) of this section, may constitute frivolous behavior under § 1003.102(j).

* * *

* * * * *

(5) *Discipline of practitioners and recognized organizations.* The Board shall have the authority pursuant to § 1003.101 *et seq.* to impose sanctions upon practitioners who appear in a representative capacity before the Board, the Immigration Courts, or DHS, and upon recognized organizations. The Board shall also have the authority pursuant to § 1003.107 to reinstate disciplined practitioners to appear in a representative capacity before the Board and the Immigration Courts, or DHS, or all three authorities.

* * * * *

■ 6. In § 1003.101, add paragraph (c) to read as follows:

§ 1003.101 General provisions.

* * * * *

(c) The administrative termination of a representative's accreditation under 8 CFR 1292.17 after the issuance of a Notice of Intent to Discipline pursuant to § 1003.105(a)(1) shall not preclude the continuation of disciplinary proceedings and the imposition of sanctions, unless counsel for the government moves to withdraw the Notice of Intent to Discipline and the adjudicating official or the Board grants the motion.

■ 7. In § 1003.102, revise paragraph (f)(2), remove the word "or" from the end of paragraph (t)(2), remove the period and add "; or" in its place at the end of paragraph (u), and add paragraph (v).

The revision and addition read as follows:

§ 1003.102 Grounds.

* * * * *

(f) * * *

(2) Contains an assertion about the practitioner or the practitioner's qualifications or services that cannot be substantiated. A practitioner shall not state or imply that the practitioner has been recognized or certified as a specialist in immigration or nationality

law unless such certification is granted by the appropriate State regulatory authority or by an organization that has been approved by the appropriate State regulatory authority to grant such certification. An accredited representative shall not state or imply that the accredited representative:

(i) Is approved to practice before the Immigration Courts or the Board, if the representative is only approved as an accredited representative before DHS;

(ii) Is an accredited representative for an organization other than a recognized organization through which the representative acquired accreditation; or

(iii) Is an attorney.

* * * * *

(v) Acts outside the scope of the representative's approved authority as an accredited representative.

■ 8. In § 1003.103, revise paragraph (c) to read as follows:

§ 1003.103 Immediate suspension and summary disciplinary proceedings; duty of practitioner or recognized organization to notify EOIR of conviction or discipline.

* * * * *

(c) *Duty of practitioner and recognized organizations to notify EOIR of conviction or discipline.* A practitioner and if applicable, the authorized officer of each recognized organization with which a practitioner is affiliated must notify the EOIR disciplinary counsel within 30 days of the issuance of the initial order, even if an appeal of the conviction or discipline is pending, when the practitioner has been found guilty of, or pleaded guilty or nolo contendere to, a serious crime, as defined in § 1003.102(h), or has been disbarred or suspended by, or while a disciplinary investigation or proceeding is pending has resigned from, the highest court of any State, possession, territory or Commonwealth of the United States, or the District of Columbia, or any Federal court. A practitioner's failure to do so may result in an immediate suspension as set forth in paragraph (a) of this section and other final discipline. An organization's failure to do so may result in the administrative termination of its recognition for violating the reporting requirement under 8 CFR 1292.14. This duty to notify applies only to convictions for serious crimes and to orders imposing discipline for professional misconduct entered on or after August 28, 2000.

■ 9. In § 1003.104, revise paragraph (b) to read as follows:

§ 1003.104 Filing of Complaints; preliminary inquiries; resolutions; referrals of complaints.

* * * * *

(b) *Preliminary inquiry.* Upon receipt of a disciplinary complaint or on its own initiative, the EOIR disciplinary counsel will initiate a preliminary inquiry. If a complaint is filed by a client or former client, the complainant thereby waives the attorney-client privilege and any other privilege relating to the representation to the extent necessary to conduct a preliminary inquiry and any subsequent proceedings based thereon. If the EOIR disciplinary counsel determines that a complaint is without merit, no further action will be taken. The EOIR disciplinary counsel may, in the disciplinary counsel's discretion, close a preliminary inquiry if the complainant fails to comply with reasonable requests for assistance, information, or documentation. The complainant and the practitioner shall be notified of any such determination in writing.

* * * * *

■ 10. In § 1003.105, revise the paragraph (a) subject heading and paragraph (a)(1), the first sentence of paragraph (c)(1), the last sentence of paragraph (c)(2), and paragraphs (c)(3), (d)(2) introductory text, and (d)(2)(ii) to read as follows:

§ 1003.105 Notice of Intent to Discipline.

(a) *Issuance of Notice.* (1) If, upon completion of the preliminary inquiry, the EOIR disciplinary counsel determines that sufficient prima facie evidence exists to warrant charging a practitioner with professional misconduct as set forth in § 1003.102 or a recognized organization with misconduct as set forth in § 1003.110, the EOIR disciplinary counsel will file with the Board and issue to the practitioner or organization that was the subject of the preliminary inquiry a Notice of Intent to Discipline. In cases involving practitioners, service of the notice will be made upon the practitioner either by certified mail to the practitioner's last known address, as defined in paragraph (a)(2) of this section, or by personal delivery. In cases involving recognized organizations, service of the notice will be made upon the authorized officer of the organization either by certified mail at the address of the organization or by personal delivery. The notice shall contain a statement of the charge(s), a copy of the preliminary inquiry report, the proposed disciplinary sanctions to be imposed, the procedure for filing an answer or requesting a hearing, and the mailing address and telephone number of the Board. In summary disciplinary

proceedings brought pursuant to § 1003.103(b), a preliminary inquiry report is not required to be filed with the Notice of Intent to Discipline. If a Notice of Intent to Discipline is filed against an accredited representative, the EOIR disciplinary counsel shall send a copy of the notice to the authorized officer of the recognized organization through which the representative is accredited at the address of the organization.

* * * * *

(c) *Answer*—(1) *Filing*. The practitioner or, in cases involving a recognized organization, the organization, shall file a written answer to the Notice of Intent to Discipline with the Board within 30 days of the date of service of the Notice of Intent to Discipline unless, on motion to the Board, an extension of time to answer is granted for good cause. * * *

(2) * * * The practitioner or, in cases involving a recognized organization, the organization, may also state affirmatively special matters of defense and may submit supporting documents, including affidavits or statements, along with the answer.

(3) *Request for hearing*. The practitioner or, in cases involving a recognized organization, the organization, shall also state in the answer whether a hearing on the matter is requested. If no such request is made, the opportunity for a hearing will be deemed waived.

(d) * * *

(2) Upon such a default by the practitioner or, in cases involving a recognized organization, the organization, the counsel for the government shall submit to the Board proof of service of the Notice of Intent to Discipline. The practitioner or the organization shall be precluded thereafter from requesting a hearing on the matter. The Board shall issue a final order adopting the proposed disciplinary sanctions in the Notice of Intent to Discipline unless to do so would foster a tendency toward inconsistent dispositions for comparable conduct or would otherwise be unwarranted or not in the interests of justice. With the exception of cases in which the Board has already imposed an immediate suspension pursuant to § 1003.103 or that otherwise involve an accredited representative or recognized organization, any final order imposing discipline shall not become effective sooner than 15 days from the date of the order to provide the practitioner opportunity to comply with the terms of such order, including, but not limited to, withdrawing from any pending

immigration matters and notifying immigration clients of the imposition of any sanction. Any final order imposing discipline against an accredited representative or recognized organization shall become effective immediately. A practitioner or a recognized organization may file a motion to set aside a final order of discipline issued pursuant to this paragraph, with service of such motion on counsel for the government, provided:

* * * * *

(ii) The practitioner's or the recognized organization's failure to file an answer was due to exceptional circumstances (such as serious illness of the practitioner or death of an immediate relative of the practitioner, but not including less compelling circumstances) beyond the control of the practitioner or the recognized organization.

■ 11. In § 1003.106, revise paragraph (a)(2) introductory text, paragraphs (a)(2)(i) through (iii), paragraph (a)(3) introductory text, and paragraphs (a)(3)(ii), (b), and (c) to read as follows:

§ 1003.106 Right to be heard and disposition.

(a) * * *

(2) The procedures set forth in paragraphs (b) through (d) of this section apply to cases in which the practitioner or recognized organization files a timely answer to the Notice of Intent to Discipline, with the exception of cases in which the Board issues a final order pursuant to § 1003.105(d)(2) or § 1003.106(a)(1).

(i) The Chief Immigration Judge shall, upon the filing of an answer, appoint an Immigration Judge as an adjudicating official. At the request of the Chief Immigration Judge, the Chief Administrative Hearing Officer may appoint an Administrative Law Judge as an adjudicating official. The Director may appoint either an Immigration Judge or Administrative Law Judge as an adjudicating official if the Chief Immigration Judge or the Chief Administrative Hearing Officer does not appoint an adjudicating official or if the Director determines it is in the interest of efficiency to do so. An Immigration Judge or Administrative Law Judge shall not serve as the adjudicating official in any case in which the Judge is the complainant, in any case involving a practitioner who regularly appears before the Judge, or in any case involving a recognized organization whose representatives regularly appear before the Judge.

(ii) Upon the practitioner's or, in cases involving a recognized organization, the

organization's, request for a hearing, the adjudicating official may designate the time and place of the hearing with due regard to the location of the practitioner's practice or residence or of the recognized organization, the convenience of witnesses, and any other relevant factors. When designating the time and place of a hearing, the adjudicating official shall provide for the service of a notice of hearing, as the term "service" is defined in § 1003.13, on the practitioner or the authorized officer of the recognized organization and the counsel for the government. The practitioner or the recognized organization shall be afforded adequate time to prepare a case in advance of the hearing. Pre-hearing conferences may be scheduled at the discretion of the adjudicating official in order to narrow issues, to obtain stipulations between the parties, to exchange information voluntarily, and otherwise to simplify and organize the proceeding. Settlement agreements reached after the issuance of a Notice of Intent to Discipline are subject to final approval by the adjudicating official or, if the practitioner or organization has not filed an answer, subject to final approval by the Board.

(iii) The practitioner or, in cases involving a recognized organization, the organization, may be represented by counsel at no expense to the government. Counsel for the practitioner or the organization shall file the appropriate Notice of Entry of Appearance (Form EOIR-27 or EOIR-28) in accordance with the procedures set forth in this part. Each party shall have a reasonable opportunity to examine and object to evidence presented by the other party, to present evidence, and to cross-examine witnesses presented by the other party. If the practitioner or the recognized organization files an answer but does not request a hearing, then the adjudicating official shall provide the parties an opportunity to submit briefs and evidence to support or refute any of the charges or affirmative defenses.

* * * * *

(3) *Failure to appear in proceedings*. If the practitioner or, in cases involving a recognized organization, the organization, requests a hearing as provided in § 1003.105(c)(3) but fails to appear, the adjudicating official shall then proceed and decide the case in the absence of the practitioner or the recognized organization in accordance with paragraph (b) of this section, based on the available record, including any additional evidence or arguments presented by the counsel for the

government at the hearing. In such a proceeding the counsel for the government shall submit to the adjudicating official proof of service of the Notice of Intent to Discipline as well as the Notice of the Hearing. The practitioner or the recognized organization shall be precluded thereafter from participating further in the proceedings. A final order imposing discipline issued pursuant to this paragraph shall not be subject to further review, except that the practitioner or the recognized organization may file a motion to set aside the order, with service of such motion on counsel for the government, provided:

* * * * *

(ii) The practitioner's or the recognized organization's failure to appear was due to exceptional circumstances (such as serious illness of the practitioner or death of an immediate relative of the practitioner, but not including less compelling circumstances) beyond the control of the practitioner or the recognized organization.

(b) *Decision.* The adjudicating official shall consider the entire record and, as soon as practicable, render a decision. If the adjudicating official finds that one or more grounds for disciplinary sanctions enumerated in the Notice of Intent to Discipline have been established by clear and convincing evidence, the official shall rule that the disciplinary sanctions set forth in the Notice of Intent to Discipline be adopted, modified, or otherwise amended. If the adjudicating official determines that the practitioner should be suspended, the time period for such suspension shall be specified. If the adjudicating official determines that the organization's recognition should be revoked, the official may also identify the persons affiliated with the organization who were directly involved in the conduct that constituted the grounds for revocation. If the adjudicating official determines that the organization's recognition should be terminated, the official shall specify the time restriction, if any, before the organization may submit a new request for recognition. Any grounds for disciplinary sanctions enumerated in the Notice of Intent to Discipline that have not been established by clear and convincing evidence shall be dismissed. The adjudicating official shall provide for service of a written decision or memorandum summarizing an oral decision, as the term "service" is defined in § 1003.13, on the practitioner or, in cases involving a recognized organization, on the authorized officer

of the organization and on the counsel for the government. Except as provided in paragraph (a)(2) of this section, the adjudicating official's decision becomes final only upon waiver of appeal or expiration of the time for appeal to the Board, whichever comes first, and does not take effect during the pendency of an appeal to the Board as provided in § 1003.6. A final order imposing discipline against an accredited representative or recognized organization shall take effect immediately.

(c) *Appeal.* Upon issuance of a decision by the adjudicating official, either party or both parties may appeal to the Board to conduct a review pursuant to § 1003.1(d)(3). Parties must comply with all pertinent provisions for appeals to the Board, including provisions relating to forms and fees, as set forth in Part 1003, and must use Form EOIR-45. The decision of the Board is the final administrative order as provided in § 1003.1(d)(7), and shall be served upon the practitioner or, in cases involving a recognized organization, the organization, as provided in § 1003.1(f). With the exception of cases in which the Board has already imposed an immediate suspension pursuant to § 1003.103 or cases involving accredited representatives or recognized organizations, any final order imposing discipline shall not become effective sooner than 15 days from the date of the order to provide the practitioner opportunity to comply with the terms of such order, including, but not limited to, withdrawing from any pending immigration matters and notifying immigration clients of the imposition of any sanction. A final order imposing discipline against an accredited representative or recognized organization shall take effect immediately. A copy of the final administrative order of the Board shall be served upon the counsel for the government. If disciplinary sanctions are imposed against a practitioner or a recognized organization (other than a private censure), the Board may require that notice of such sanctions be posted at the Board, the Immigration Courts, or DHS for the period of time during which the sanctions are in effect, or for any other period of time as determined by the Board.

* * * * *

■ 12. In § 1003.107, revise paragraphs (a) and (b), redesignate paragraph (c) as paragraph (d), and add new paragraph (c) to read as follows:

§ 1003.107 Reinstatement after disbarment or suspension.

(a) *Reinstatement upon expiration of suspension.* (1) Except as provided in paragraph (c)(1) of this section, after the period of suspension has expired, a practitioner who has been suspended and wishes to be reinstated must file a motion to the Board requesting reinstatement to practice before the Board and the Immigration Courts, or DHS, or before all three authorities. The practitioner must demonstrate by clear and convincing evidence that notwithstanding the suspension, the practitioner otherwise meets the definition of attorney or representative as set forth in § 1001.1(f) and (j), respectively, of this chapter. The practitioner must serve a copy of such motion on the EOIR disciplinary counsel. In matters in which the practitioner was ordered suspended from practice before DHS, the practitioner must serve a copy of such motion on the DHS disciplinary counsel.

(2) The EOIR disciplinary counsel and, in matters in which the practitioner was ordered suspended from practice before DHS, the DHS disciplinary counsel, may reply within 13 days of service of the motion in the form of a written response objecting to the reinstatement on the ground that the practitioner failed to comply with the terms of the suspension. The response must include supporting documentation or evidence of the petitioner's failure to comply with the terms of the suspension. The Board, in its discretion, may afford the parties additional time to file briefs or hold a hearing to determine if the practitioner meets all the requirements for reinstatement.

(3) If a practitioner does not meet the definition of attorney or representative, the Board shall deny the motion for reinstatement without further consideration. If the practitioner failed to comply with the terms of the suspension, the Board shall deny the motion and indicate the circumstances under which the practitioner may apply for reinstatement. If the practitioner meets the definition of attorney or representative and the practitioner otherwise has complied with the terms of the suspension, the Board shall grant the motion and reinstate the practitioner.

(b) *Early reinstatement.* (1) Except as provided in paragraph (c) of this section, a practitioner who has been disbarred or who has been suspended for one year or more may file a petition for reinstatement directly with the Board after one-half of the suspension period has expired or one year has

passed, whichever is greater, provided that notwithstanding the suspension, the practitioner otherwise meets the definition of attorney or representative as set forth in § 1001.1(f) and (j), respectively, of this chapter. A copy of such a petition shall be served on the EOIR disciplinary counsel. In matters in which the practitioner was ordered disbarred or suspended from practice before DHS, a copy of such petition shall be served on the DHS disciplinary counsel.

(2) A practitioner seeking early reinstatement must demonstrate by clear and convincing evidence that the practitioner possesses the moral and professional qualifications required to appear before the Board, the Immigration Courts, or DHS, and that the practitioner's reinstatement will not be detrimental to the administration of justice. The EOIR disciplinary counsel and, in matters in which the practitioner was ordered disbarred or suspended from practice before DHS, the DHS disciplinary counsel, may reply within 30 days of service of the petition in the form of a written response to the Board, which may include, but is not limited to, documentation or evidence of the practitioner's failure to comply with the terms of the disbarment or suspension or of any complaints filed against the disbarred or suspended practitioner subsequent to the practitioner's disbarment or suspension.

(3) If a practitioner cannot meet the definition of attorney or representative, the Board shall deny the petition for reinstatement without further consideration. If the petition for reinstatement is found to be otherwise inappropriate or unwarranted, the petition shall be denied. Any subsequent petitions for reinstatement may not be filed before the end of one year from the date of the Board's previous denial of reinstatement, unless the practitioner is otherwise eligible for reinstatement under paragraph (a). If the petition for reinstatement is determined to be timely, the practitioner meets the definition of attorney or representative, and the petitioner has otherwise established by the requisite standard of proof that the practitioner possesses the qualifications set forth herein, and that reinstatement will not be detrimental to the administration of justice, the Board shall grant the petition and reinstate the practitioner. The Board, in its discretion, may hold a hearing to determine if the practitioner meets all of the requirements for reinstatement.

(c) *Accredited representatives.* (1) An accredited representative who has been suspended for a period of time greater than the remaining period of validity of

the representative's accreditation at the time of the suspension is not eligible to be reinstated under § 1003.107(a) or (b). In such circumstances, after the period of suspension has expired, an organization may submit a new request for accreditation pursuant to 8 CFR 1292.13 on behalf of such an individual.

(2) *Disbarment.* An accredited representative who has been disbarred is permanently barred from appearing before the Board, the Immigration Courts, or DHS as an accredited representative and cannot seek reinstatement.

* * *

■ 13. In § 1003.108, revise paragraph (a) introductory text, paragraphs (a)(1)(i) through (iv), and paragraph (a)(2)(v), add paragraph (a)(3), and revise paragraph (b) to read as follows:

§ 1003.108 Confidentiality.

(a) *Complaints and preliminary inquiries.* Except as otherwise provided by law or regulation, information concerning complaints or preliminary inquiries is confidential. A practitioner or recognized organization whose conduct is the subject of a complaint or preliminary inquiry, however, may waive confidentiality, except that the EOIR disciplinary counsel may decline to permit a waiver of confidentiality if it is determined that an ongoing preliminary inquiry may be substantially prejudiced by public disclosure before the filing of a Notice of Intent to Discipline.

(1) * * *

(i) A practitioner or recognized organization has caused, or is likely to cause, harm to client(s), the public, or the administration of justice, such that the public or specific individuals should be advised of the nature of the allegations. If disclosure of information is made pursuant to this paragraph, the EOIR disciplinary counsel may define the scope of information disseminated and may limit the disclosure of information to specified individuals and entities;

(ii) A practitioner or recognized organization has committed criminal acts or is under investigation by law enforcement authorities;

(iii) A practitioner or recognized organization is under investigation by a disciplinary or regulatory authority, or has committed acts or made omissions that may reasonably result in investigation by such authorities;

(iv) A practitioner or recognized organization is the subject of multiple disciplinary complaints and the EOIR disciplinary counsel has determined not to pursue all of the complaints. The

EOIR disciplinary counsel may inform complainants whose allegations have not been pursued of the status of any other preliminary inquiries or the manner in which any other complaint(s) against the practitioner or recognized organization have been resolved.

(2) * * *

(v) To the practitioner or recognized organization who is the subject of the complaint or preliminary inquiry or the practitioner's or recognized organization's counsel of record.

* * *

(3) *Disclosure of information for the purpose of recognition of organizations and accreditation of representatives.*

The EOIR disciplinary counsel, in the exercise of discretion, may disclose information concerning complaints or preliminary inquiries regarding applicants for recognition and accreditation, recognized organizations or their authorized officers, or accredited representatives to the OLAP Director for any purpose related to the recognition of organizations and accreditation of representatives.

(b) *Resolutions reached prior to the issuance of a Notice of Intent to Discipline.* Resolutions reached prior to the issuance of a Notice of Intent to Discipline, such as warning letters, admonitions, and agreements in lieu of discipline are confidential, except that resolutions that pertain to an accredited representative may be disclosed to the accredited representative's organization and the OLAP Director. However, all such resolutions may become part of the public record if the practitioner becomes subject to a subsequent Notice of Intent to Discipline.

* * *

■ 14. Add §§ 1003.110 and 1003.111 to read as follows:

§ 1003.110 Sanction of recognized organizations.

(a) *Authority to sanction.* (1) An adjudicating official or the Board may impose disciplinary sanctions against a recognized organization if it is in the public interest to do so. It will be in the public interest to impose disciplinary sanctions if a recognized organization has engaged in the conduct described in paragraph (b) of this section. In accordance with the disciplinary proceedings set forth in this subpart, an adjudicating official or the Board may impose the following sanctions:

(i) Revocation, which removes the organization and its accredited representatives from the recognition and accreditation roster and permanently bars the organization from future recognition;

(ii) Termination, which removes the organization and its accredited representatives from the recognition and accreditation roster but does not bar the organization from future recognition. In terminating recognition under this section, the adjudicating official or the Board may preclude the organization from submitting a new request for recognition under 8 CFR 1292.13 before a specified date; or

(iii) Such other disciplinary sanctions, except a suspension, as the adjudicating official or the Board deems appropriate.

(2) The administrative termination of an organization's recognition under 8 CFR 1292.17 after the issuance of Notice of Intent to Discipline pursuant to § 1003.105(a)(1) shall not preclude the continuation of disciplinary proceedings and the imposition of sanctions, unless counsel for the government moves to dismiss the Notice of Intent to Discipline and the adjudicating official or the Board grants the motion.

(3) The imposition of disciplinary sanctions against a recognized organization does not result in disciplinary sanctions against that organization's accredited representatives; disciplinary sanctions, if any, against an organization's accredited representatives must be imposed separately from disciplinary sanctions against the organization. Termination or revocation of an organization's recognition has the effect of terminating the accreditation of representatives of that organization, but such individuals may retain or seek accreditation through another recognized organization.

(b) *Grounds.* It shall be deemed to be in the public interest for an adjudicating official or the Board to impose disciplinary sanctions against any recognized organization that violates one or more of the grounds specified in this paragraph, except that these grounds do not constitute the exclusive grounds for which disciplinary sanctions may be imposed in the public interest. A recognized organization may be subject to disciplinary sanctions if it:

(1) Knowingly or with reckless disregard provides a false statement or misleading information in applying for recognition or accreditation of its representatives;

(2) Knowingly or with reckless disregard provides false or misleading information to clients or prospective clients regarding the scope of authority of, or the services provided by, the organization or its accredited representatives;

(3) Fails to adequately supervise accredited representatives;

(4) Employs, receives services from, or affiliates with an individual who performs an activity that constitutes the unauthorized practice of law or immigration fraud; or

(5) Engages in the practice of law through staff when it does not have an attorney or accredited representative.

(c) *Joint disciplinary proceedings.* The EOIR disciplinary counsel or DHS disciplinary counsel may file a Notice of Intent to Discipline against a recognized organization and one or more of its accredited representatives pursuant to § 1003.101 *et seq.* Disciplinary proceedings conducted on such notices, if they are filed jointly with the Board, shall be joined and referred to the same adjudicating official pursuant to § 1003.106. An adjudicating official may join related disciplinary proceedings after the filing of a Notice of Intent to Discipline.

§ 1003.111 Interim suspension.

(a) *Petition for interim suspension—*

(1) *EOIR Petition.* In conjunction with the filing of a Notice of Intent to Discipline or at any time thereafter during disciplinary proceedings before an adjudicating official, the EOIR disciplinary counsel may file a petition for an interim suspension of an accredited representative. Such suspension, if issued, precludes the representative from practicing before the Board and the Immigration Courts during the pendency of disciplinary proceedings and continues until the issuance of a final order in the disciplinary proceedings.

(2) *DHS Petition.* In conjunction with the filing of a Notice of Intent to Discipline or at any time thereafter during disciplinary proceedings before an adjudicating official, the DHS disciplinary counsel may file a petition for an interim suspension of an accredited representative. Such suspension, if issued, precludes the representative from practicing before DHS during the pendency of disciplinary proceedings and continues until the issuance of a final order in the disciplinary proceedings.

(3) *Contents of the petition.* In the petition, counsel for the government must demonstrate by a preponderance of the evidence that the accredited representative poses a substantial threat of irreparable harm to clients or prospective clients. An accredited representative poses a substantial threat of irreparable harm to clients or prospective clients if the representative committed three or more acts in violation of the grounds of discipline described at § 1003.102, when actual harm or threatened harm is

demonstrated, or engages in any other conduct that, if continued, will likely cause irreparable harm to clients or prospective clients. Counsel for the government must serve the petition on the accredited representative, as provided in § 1003.105, and send a copy of the petition to the authorized officer of the recognized organization at the address of the organization through which the representative is accredited.

(4) *Requests to broaden scope.* The EOIR disciplinary counsel or DHS disciplinary counsel may submit a request to broaden the scope of any interim suspension order such that an accredited representative would be precluded from practice before the Board, the Immigration Courts, and DHS.

(b) *Response.* The accredited representative may file a written response to the petition for interim suspension within 30 days of service of the petition.

(c) *Adjudication.* Upon the expiration of the time to respond to the petition for an interim suspension, the adjudicating official will consider the petition for an interim suspension, the accredited representative's response, if any, and any other evidence presented by the parties before determining whether to issue an interim suspension. If the adjudicating official imposes an interim suspension on the representative, the adjudicating official may require that notice of the interim suspension be posted at the Board and the Immigration Courts, or DHS, or all three authorities. Upon good cause shown, the adjudicating official may set aside an order of interim suspension when it appears in the interest of justice to do so. If a final order in the disciplinary proceedings includes the imposition of a period of suspension against an accredited representative, time spent by the representative under an interim suspension pursuant to this section may be credited toward the period of suspension imposed under the final order.

PART 1103—APPEALS, RECORDS, AND FEES

■ 15. The authority citation for part 1103 continues to read as follows:

Authority: 8 U.S.C. 1101, 1103, 1304, 1356; 31 U.S.C. 9701; 28 U.S.C. 509, 510.

■ 16. In § 1103.3, revise paragraph (a), remove and reserve paragraph (b), and revise paragraph (c).

The revisions read as follows:

§ 1103.3 Denials, appeals, and precedent decisions.

(a) *DHS regulations.* The regulations pertaining to denials, appeals, and precedent decisions of the Department of Homeland Security are contained in 8 CFR Chapter I.

* * * * *

(c) *DHS precedent decisions.* The Secretary of Homeland Security, or specific officials of the Department of Homeland Security designated by the Secretary with the concurrence of the Attorney General, may file with the Attorney General decisions relating to the administration of the immigration laws of the United States for publication as precedent in future proceedings, and upon approval of the Attorney General as to the lawfulness of such decision, the Director of the Executive Office for Immigration Review shall cause such decisions to be published in the same manner as decisions of the Board and the Attorney General.

PART 1212—DOCUMENTARY REQUIREMENTS: NONIMMIGRANTS; WAIVERS; ADMISSION OF CERTAIN INADMISSIBLE ALIENS; PAROLE

- 17. The authority citation for part 1212 continues to read as follows:

Authority: 8 U.S.C. 1101 and note, 1102, 1103, 1182 and note, 1184, 1187, 1223, 1225, 1226, 1227, 1255; 8 U.S.C. 1185 note (section 7209 of Pub. L. 108–458); Title VII of Public Law 110–229.

- 18. Revise § 1212.6 to read as follows:

§ 1212.6 Border crossing identification cards.

The regulations of the Department of Homeland Security pertaining to border crossing identification cards can be found at 8 CFR 212.6.

PART 1292—REPRESENTATION AND APPEARANCES

- 19. Revise the authority citation for part 1292 to read as follows:

Authority: 8 U.S.C. 1103, 1362.

- 20. In part 1292, before § 1292.1, add an undesignated center heading to read “In General”.

- 21. In § 1292.1, revise paragraph (a)(4) to read as follows:

§ 1292.1 Representation of others.

(a) * * *

(4) *Accredited representative.* An individual whom EOIR has authorized to represent immigration clients on behalf of a recognized organization, and whose period of accreditation is current and has not expired. A partially accredited representative is authorized to practice solely before DHS. A fully

accredited representative is authorized to practice before DHS, and upon registration, to practice before the Immigration Courts and the Board.

* * * * *

§ 1292.2 [Removed and Reserved]

- 22. Remove and reserve § 1292.2.

- 23. Revise § 1292.3 to read as follows:

§ 1292.3 Conduct for practitioners and recognized organizations—rules and procedures.

Practitioners, as defined in § 1003.101(b) of this chapter, and recognized organizations are subject to the imposition of sanctions as provided in 8 CFR part 1003, subpart G, § 1003.101 *et seq.*, and 8 CFR 292.3 (pertaining to practice before DHS).

- 24. Revise § 1292.6 to read as follows:

§ 1292.6 Interpretation.

Interpretations of §§ 1292.1 through 1292.6 will be made by the Board, subject to the provisions of part 1003 of this chapter. Interpretations of §§ 1292.11 through 1292.20 will be made by the OLAP Director.

- 25. Add §§ 1292.11 through 1292.20, with an undesignated center heading preceding § 1292.11, to read as follows:

Sec.

Recognition of Organizations and Accreditation of Non-Attorney Representatives**§ 1292.11 Recognition of an organization.**

(a) *In general.* The OLAP Director, in the exercise of discretion, may recognize an eligible organization to provide representation through accredited

representatives who appear on behalf of clients before the Immigration Courts, the Board, and DHS, or DHS alone. The OLAP Director will determine whether an organization is eligible for recognition. To be eligible for recognition, the organization must establish that:

(1) The organization is a non-profit religious, charitable, social service, or similar organization that provides immigration legal services primarily to low-income and indigent clients within the United States, and, if the organization charges fees, has a written policy for accommodating clients unable to pay fees for immigration legal services;

(2) The organization is a Federal tax-exempt organization established in the United States;

(3) The organization is simultaneously applying to have at least one employee or volunteer of the organization approved as an accredited representative by the OLAP Director and at least one application for accreditation is concurrently approved, unless the organization is seeking renewal of recognition and has an accredited representative or is seeking renewal of recognition on inactive status as described in § 1292.16(i);

(4) The organization has access to adequate knowledge, information, and experience in all aspects of immigration law and procedure; and

(5) The organization has designated an authorized officer to act on behalf of the organization.

(b) *Proof of status as non-profit religious, charitable, social service, or similar organization established in the United States and service to low-income and indigent clients.* The organization must submit: A copy of its organizing documents, including a statement of its mission or purpose; a declaration from its authorized officer attesting that it serves primarily low-income and indigent clients; a summary of the legal services to be provided; if it charges fees for legal services, fee schedules and organizational policies or guidance regarding fee waivers or reduced fees based on financial need; and its annual budget. The organization may also submit additional documentation to demonstrate non-profit status and service to primarily low-income and indigent individuals, such as reports prepared for funders or information about other free or low-cost immigration-related services that it provides (*e.g.*, educational or outreach events).

(c) *Annual budget.* The organization must submit its annual budget for providing immigration legal services for

the current year and, if available, its annual budget for providing immigration legal services for the prior year. If the annual budgets for both the current and prior years are unavailable, the organization must submit its projected annual budget for the upcoming year. The annual budget should describe how the organization is funded and include information about the organization's operating expenses and sources of revenue for providing immigration legal services. Sources of revenue may include, but are not limited to, grants, fees, donations, or dues.

(d) *Proof of tax-exempt status.* The organization must submit a copy of its currently valid IRS tax-exemption determination letter, alternative documentation to establish Federal tax-exempt status, or proof that is has applied for Federal tax-exempt status.

(e) *Proof of knowledge, information, and experience.* The organization must submit: A description of the immigration legal services that the organization seeks to offer; a description of the legal resources to which the organization has access; an organizational chart showing names, titles, and supervisors of immigration legal staff members; a description of the qualifications, experience, and breadth of immigration knowledge of these staff members, including, but not limited to resumes, letters of recommendation, certifications, and a list of all relevant, formal immigration-related trainings attended by staff members; and any agreement or proof of a formal arrangement entered into with non-staff immigration practitioners and recognized organizations for consultations or technical legal assistance.

(f) *Validity period of recognition.* Recognition is valid for a period of six years from the date of the OLAP Director's approval of recognition, unless the organization has been granted conditional recognition. Conditional recognition is granted to an organization that has not been recognized previously, that has Federal tax-exempt status pending, or that has been approved for recognition after recognition was previously terminated pursuant to § 1292.17 or 8 CFR 1003.101 *et seq.* Conditional recognition is valid for two years from the date of the OLAP Director's approval of conditional recognition. Any organization's recognition is subject to being terminated pursuant to § 1292.17 or upon the issuance of disciplinary sanctions (termination or revocation) under 8 CFR 1003.101 *et seq.*

§ 1292.12 Accreditation of representatives.

(a) *In general.* Only recognized organizations, or organizations simultaneously applying for recognition, may request accreditation of individuals. The OLAP Director, in the exercise of discretion, may approve accreditation of an eligible individual as a representative of a recognized organization for either full or partial accreditation. An individual who receives full accreditation may represent clients before the Immigration Courts, the Board, and DHS. An individual who receives partial accreditation may represent clients only before DHS. In the request for accreditation, the organization must specify whether it seeks full or partial accreditation and establish eligibility for accreditation for the individual. To establish eligibility for accreditation, an organization must demonstrate that the individual for whom the organization seeks accreditation:

(1) Has the character and fitness to represent clients before the Immigration Courts and the Board, or DHS, or before all three authorities. Character and fitness includes, but is not limited to, an examination of factors such as: Criminal background; prior acts involving dishonesty, fraud, deceit, or misrepresentation; past history of neglecting professional, financial, or legal obligations; and current immigration status that presents an actual or perceived conflict of interest;

(2) Is employed by or is a volunteer of the organization;

(3) Is not an attorney as defined in 8 CFR 1001.1(f);

(4) Has not resigned while a disciplinary investigation or proceeding is pending and is not subject to any order disbaring, suspending, enjoining, restraining, or otherwise restricting the individual in the practice of law or representation before a court or any administrative agency;

(5) Has not been found guilty of, or pleaded guilty or nolo contendere to, a serious crime, as defined in 8 CFR 1003.102(h), in any court of the United States, or of any State, possession, territory, commonwealth, or the District of Columbia, or of a jurisdiction outside of the United States; and

(6) Possesses broad knowledge and adequate experience in immigration law and procedure. If an organization seeks full accreditation for an individual, it must establish that the individual also possesses skills essential for effective litigation.

(b) *Request for accreditation.* To establish that an individual satisfies the requirements of paragraph (a) of this section, the organization must submit a

request for accreditation (Form EOIR-31A and supporting documents). The request for accreditation must be signed by the authorized officer and the individual to be accredited, both attesting that the individual satisfies these requirements.

(c) *Proof of knowledge and experience.* To establish that the individual satisfies the requirement in paragraph (a)(6) of this section, the organization must submit with its request for accreditation, at minimum: A description of the individual's qualifications, including education and immigration law experience; letters of recommendation from at least two persons familiar with the individual's qualifications; and documentation of all relevant, formal immigration-related training, including a course on the fundamentals of immigration law, procedure, and practice. An organization must also submit documentation that an individual for whom the organization seeks full accreditation has formal training, education, or experience related to trial and appellate advocacy.

(d) *Validity period of accreditation.* Accreditation is valid for a period of three years from the date of the OLAP Director's approval of accreditation, unless the organization's recognition or the representative's accreditation is terminated pursuant to § 1292.17 or the organization or the representative is subject to disciplinary sanctions (termination, revocation, suspension, or disbarment) under 8 CFR 1003.101 *et seq.*

(e) *Change in accreditation.* An organization may request to change the accreditation of a representative from partial to full accreditation at any time during the validity period of accreditation or at renewal. Such a request will be treated as a new, initial request for full accreditation and must comply with this section.

§ 1292.13 Applying for recognition of organizations or accreditation of representatives.

(a) *In general.* An organization applying for recognition or accreditation of a representative must submit a request for recognition (Form EOIR-31) or a request for accreditation (Form EOIR-31A) to the OLAP Director with proof of service of a copy of the request on the appropriate USCIS office(s) in the jurisdictions where the organization offers or intends to offer immigration legal services. An organization must submit a separate request for accreditation (Form EOIR-31A) for each individual for whom it seeks accreditation. To determine whether an

organization has established eligibility for recognition or accreditation of a representative, the OLAP Director shall review all information contained in the request for recognition or accreditation and may review any publicly available information or any other information that OLAP may obtain or possess about the organization, its authorized officer, or the proposed representative or may have received pursuant to paragraphs (b), (c), and (d) of this section. Unfavorable information obtained by the OLAP Director that may be relied upon to disapprove a recognition or accreditation request, if not previously served on the organization, shall be disclosed to the organization, and the organization shall be given a reasonable opportunity to respond. Prior to determining whether to approve or disapprove a request for recognition or accreditation, the OLAP Director may request additional information from the organization pertaining to the eligibility requirements for recognition or accreditation. The OLAP Director, in writing, shall inform the organization and each USCIS office in the jurisdictions where the organization offers or intends to offer immigration legal services of the determination approving or disapproving the organization's request for recognition or accreditation of a representative. The OLAP Director may, in the exercise of discretion, extend the deadlines provided in this section. The OLAP Director is authorized to allow requests, notifications, recommendations, and determinations described in this section to be made electronically.

(b) *USCIS recommendation and investigation.* Within 30 days from the date of service of the request for recognition or accreditation, the USCIS office served with the request may submit to the OLAP Director a recommendation for approval or disapproval of the request for recognition or accreditation, including an explanation for the recommendation, or may request from the OLAP Director a specified period of additional time, generally no more than 30 days, in which to conduct an investigation or otherwise obtain relevant information regarding the organization, its authorized officer, or any individual for whom the organization seeks accreditation. The OLAP Director shall inform the organization if the OLAP Director grants a request from USCIS for additional time to conduct an investigation, or if, in the exercise of discretion, the OLAP Director has requested that USCIS conduct an investigation of the organization, its

authorized officer, or any individual for whom the organization seeks accreditation. USCIS must submit any recommendation with proof of service of a copy of the recommendation on the organization. Within 30 days of service of an unfavorable recommendation, the organization may file with the OLAP Director a response to the unfavorable recommendation, along with proof of service of a copy of such response on the USCIS office that provided the recommendation.

(c) *ICE recommendation.* Upon receipt of a request for recognition or accreditation, the OLAP Director may request a recommendation or information from ICE in the jurisdictions where the organization offers or intends to offer immigration legal services regarding the organization, its authorized officer, or any individual for whom the organization seeks accreditation. Within 30 days from the date of receipt of the OLAP Director's request, ICE may make a recommendation or disclose information regarding the organization, its authorized officer, or individuals for whom the organization seeks accreditation. ICE must submit any recommendation with proof of service of a copy of the recommendation on the organization. Within 30 days of service of an unfavorable recommendation, the organization may file with the OLAP Director a response to the unfavorable recommendation, along with proof of service of a copy of such response on the ICE office that provided the recommendation. The OLAP Director, in writing, shall inform ICE of the determination approving or disapproving the organization's request for recognition or accreditation of a representative.

(d) *EOIR investigation.* Upon receipt of a request for recognition or accreditation, the OLAP Director may request that the EOIR disciplinary counsel or anti-fraud officer conduct an investigation into the organization, its authorized officer, or any individual for whom the organization seeks accreditation. Within 30 days from the date of receipt of the OLAP Director's request, the EOIR disciplinary counsel or anti-fraud officer may disclose to the OLAP Director information, including complaints, preliminary inquiries, warning letters, and admonitions, relating to the organization, its authorized officer, or any individual for whom the organization seeks accreditation.

(e) *Finality of decision.* The OLAP Director's determination to approve a request for recognition or accreditation is final. An organization whose request

for recognition or accreditation was disapproved may make one request for reconsideration of the disapproval within 30 days of the determination. An organization whose request for recognition or accreditation was disapproved, or whose request for reconsideration after disapproval and, if applicable, request for administrative review pursuant to § 1292.18 was denied, may submit a new request for recognition or accreditation at any time unless otherwise prohibited.

§ 1292.14 Reporting, recordkeeping, and posting requirements for recognized organizations.

(a) *Duty to report changes.* A recognized organization has a duty to promptly notify the OLAP Director in writing or electronically of changes in the organization's contact information, changes to any material information the organization provided in Form EOIR-31, Form EOIR-31A, or the documents submitted in support thereof, or changes that otherwise materially relate to the organization's eligibility for recognition or the eligibility for accreditation of any of the organization's accredited representatives. These changes may include alterations to: The organization's name, address, telephone number, Web site address, email address, or the designation of the authorized officer of the organization; an accredited representative's name or employment or volunteer status with the organization; and the organization's structure, including a merger of organizations that have already been individually accorded recognition, or a change in non-profit or Federal tax-exempt status.

(b) *Recordkeeping.* A recognized organization must compile each of the following records in a timely manner, and retain them for a period of six years from the date the record is created, as long as the organization remains recognized:

(1) The organization's immigration legal services fee schedule, if the organization charges any fees for immigration legal services, for each office or location where such services are provided; and

(2) An annual summary of immigration legal services provided by the organization, which includes: The total number of clients served (whether through client intakes, applications prepared and filed with DHS, cases in which its attorneys or accredited representatives appeared before the Immigration Courts or, if applicable, the Board, or referrals to attorneys or other organizations) and clients to whom it provided services at no cost; a general

description of the immigration legal services and other immigration-related services (e.g., educational or outreach events) provided; a statement regarding whether services were provided pro bono or clients were charged in accordance with a fee schedule and organizational policies or guidance regarding fee waivers and reduced fees; and a list of the offices or locations where the immigration legal services were provided. The summary should not include any client-specific or client-identifying information. OLAP may require the organization to submit such records to it or DHS upon request.

(c) *Posting.* The OLAP Director shall have the authority to issue public notices regarding recognition and accreditation and to require recognized organizations and accredited representatives to post such public notices. Information contained in the public notices shall be limited to: The names and validity periods of a recognized organization and its accredited representatives, the requirements for recognition and accreditation, and the means to complain about a recognized organization or accredited representative.

§ 1292.15 Extension of recognition and accreditation to multiple offices or locations of an organization.

Upon approving an initial request for recognition or a request for renewal of recognition, or at any other time, the OLAP Director, in the OLAP Director's discretion, may extend the recognition of an organization to any office or location where the organization offers services. To request extension of recognition, an organization that is seeking or has received recognition must submit a Form EOIR-31 that identifies the name and address of the organization's headquarters or designated office and the name and address of each other office or location for which the organization seeks extension of recognition. The organization must also provide a declaration from its authorized officer attesting that it periodically conducts inspections of each such office or location, exercises supervision and control over its accredited representatives at those offices and locations, and provides access to adequate legal resources at each such office or location. OLAP may require an organization to seek separate recognition for an office or location of the organization, for example, when a subordinate office or location has distinct operations, management structure, or funding sources from the

organization's headquarters. The OLAP Director's determination to extend recognition to the offices or locations identified in Form EOIR-31 permits the organization's accredited representatives to provide immigration legal services out of those offices or locations. OLAP will post the address of each office or location to which recognition has been extended on the roster of recognized organizations and accredited representatives. The OLAP Director is authorized to allow requests and determinations described in this section to be made electronically.

§ 1292.16 Renewal of recognition and accreditation.

(a) *In general.* To retain its recognition and the accreditation of its representatives after the conclusion of the validity period specified in § 1292.11(f) or § 1292.12(d), an organization must submit a request for renewal of its recognition or the accreditation of its representatives (Form EOIR-31, Form EOIR-31A, and supporting documents). In the exercise of discretion, as provided in paragraph (i) of this section, the OLAP Director may approve an organization's request for renewal of recognition without a currently approved accredited representative.

(b) *Timing of renewal—(1) Recognition.* An organization requesting renewal of recognition must submit the request on or before the sixth anniversary date of the organization's last approval or renewal of recognition or, for a conditionally recognized organization, on or before the second anniversary of the approval date of the conditional recognition. Any request must include proof of service of a copy of the request on the appropriate USCIS office(s) in the jurisdictions where the organization offers or intends to offer immigration legal services.

(2) *Accreditation.* An organization requesting renewal of accreditation of its representative must submit the request on or before the third anniversary date of the representative's last approval or renewal of accreditation, with proof of service of a copy of the request on the appropriate USCIS office(s) in the jurisdictions where the organization offers or intends to offer immigration legal services.

(3) The OLAP Director, in the OLAP Director's discretion, may grant additional time to submit a request for renewal or accept a request for renewal filed out of time. The recognition of the organization and the accreditation of any representatives for whom the organization timely requests renewal shall remain valid pending the OLAP

Director's consideration of the renewal requests, except in the case of an interim suspension pursuant to 8 CFR 1003.111.

(c) *Renewal requirements—(1) Recognition.* The request for renewal of recognition must establish that the organization remains eligible for recognition under § 1292.11(a), include the records specified in § 1292.14(b) regarding fee schedules and the summary of immigration legal services provided that the organization compiled since the last approval of recognition, and describe any unreported changes that impact eligibility for recognition from the date of the last approval of recognition.

(2) *Accreditation.* Each request for renewal of accreditation must establish that the individual remains eligible for accreditation under § 1292.12(a) and has continued to receive formal training in immigration law and procedure commensurate with the services the organization provides and the duration of the representative's accreditation.

(d) *Recommendations and investigations.* Each USCIS office served with a request for renewal of recognition or a request for renewal of accreditation may submit to the OLAP Director a recommendation for approval or disapproval of that request pursuant to § 1292.13(b). The OLAP Director may request a recommendation from ICE or an investigation from the EOIR disciplinary counsel or anti-fraud officer, pursuant to § 1292.13(c) and (d).

(e) *Renewal process.* The OLAP Director shall review all information contained in the requests and may review any publicly available information or any other information that OLAP may possess about the organization, its authorized officer, or any individual for whom the organization seeks accreditation or renewal of accreditation or that OLAP may have received pursuant to § 1292.13(b) through (d). Unfavorable information obtained by the OLAP Director that may be relied upon to disapprove a recognition or accreditation request, if not previously served on the organization, shall be disclosed to the organization, and the organization shall be given a reasonable opportunity to respond. Prior to determining whether to approve or disapprove a request for renewal of recognition or accreditation, the OLAP Director may request additional information from the organization pertaining to the eligibility requirements for recognition or accreditation. The OLAP Director, in writing, shall inform the organization and the appropriate DHS office(s) in the jurisdictions where

the organization offers or intends to offer immigration legal services of the determination to approve or disapprove a request for renewal of recognition. If the OLAP Director renews recognition, the OLAP Director shall issue a written determination approving or disapproving each request for accreditation or renewal of accreditation. The OLAP Director is authorized to allow requests, notifications, recommendations, and determinations described in this section to be made electronically.

(f) *Finality of decision.* The OLAP Director's determination to approve a request to renew recognition or accreditation is final. An organization whose request for renewal of recognition or accreditation of its representatives has been disapproved may make one request for reconsideration of the disapproval within 30 days of the determination. The recognition of the organization and the accreditation of any representatives for whom the organization timely requests reconsideration shall remain valid pending the OLAP Director's consideration of the reconsideration request, except in the case of an interim suspension pursuant to 8 CFR 1003.111. An organization whose recognition or accreditation of its representatives is terminated because the organization's request to renew recognition or accreditation is disapproved or whose request for reconsideration after disapproval and, if applicable, request for administrative review pursuant to § 1292.18 was denied, may submit a new request for recognition and accreditation at any time unless otherwise prohibited.

(g) *Validity period of recognition and accreditation after renewal.* After renewal of recognition, the recognition of the organization is valid for a period of six years from the date of the OLAP Director's determination to renew recognition, unless the organization's recognition is terminated pursuant to § 1292.17 or the organization is subject to disciplinary sanctions (*i.e.*, termination or revocation) under 8 CFR 1003.101 *et seq.* After renewal of accreditation, the accreditation of a representative is valid for a period of three years from the date of the OLAP Director's determination to renew accreditation, unless the organization's recognition or the representative's accreditation is terminated pursuant to § 1292.17 or the organization or the representative is subject to disciplinary sanctions (termination, revocation, suspension, or disbarment) under 8 CFR 1003.101 *et seq.*

(h) *Organizations and representatives recognized and accredited prior to January 18, 2017—(1) Applicability.* An organization or representative that received recognition or accreditation prior to January 18, 2017, through the Board under former § 1292.2 is subject to the provisions of this part. Such an organization or representative shall continue to be recognized or accredited until the organization is required to request renewal of its recognition and accreditation of its representatives as required by paragraphs (h)(2) and (3) of this section and pending the OLAP Director's determination on the organization's request for renewal if such a request is timely made, unless the organization's recognition or the representative's accreditation is terminated pursuant to § 1292.17 or the organization or the representative is subject to disciplinary sanctions (termination, revocation, suspension, or disbarment) under 8 CFR 1003.101 *et seq.*

(2) *Renewal of recognition.* To retain its recognition, an organization that received recognition prior to January 18, 2017, must request renewal of its recognition pursuant to this section on or before the following dates:

(i) Within 1 year of January 18, 2017, if the organization does not have an accredited representative on the effective date of this regulation;

(ii) Within 2 years of January 18, 2017, if the organization is not required to submit a request for renewal at an earlier date under paragraph (h)(2)(i) of this section, and the organization has been recognized for more than 10 years as of the effective date of this regulation; or

(iii) Within 3 years of January 18, 2017, if the organization is not required to submit a request for renewal at an earlier date under paragraph (h)(2)(i) or (ii) of this section.

(3) *Renewal of accreditation.* To retain the accreditation of its representatives who were accredited prior to January 18, 2017, an organization must request renewal of accreditation of its representatives on or before the date that the representative's accreditation would have expired under the prior rule.

(i) *Inactive status.* An organization shall be placed on inactive status if it has no currently approved accredited representative, and it promptly notified OLAP that it no longer has an accredited representative, as required by § 1292.14(a). An organization on inactive status is precluded from providing immigration legal services unless it has an attorney on staff. An organization shall be on inactive status

for two years from the date the organization is placed on inactive status in order for the organization to apply for and have approved the accreditation of one or more representatives. If an organization on inactive status is subject to renewal while on inactive status, the organization must request renewal of recognition at the time required for renewal. The OLAP Director, in the OLAP Director's discretion, may approve a request to renew an organization's recognition without a currently approved accredited representative, provided that the organization satisfies the renewal requirements under § 1292.16(c)(1) and attests that it intends to apply for and have approved the accreditation of one or more representatives within two years from the date of renewal. An organization renewed under such circumstances shall be on inactive status for two years from the date of renewal in order for the organization to apply for and have approved the accreditation of one or more representatives. The OLAP Director, in the OLAP Director's discretion, may grant an organization additional time on inactive status beyond the time limits provided in this paragraph.

§ 1292.17 Administrative termination of recognition and accreditation.

(a) *In general.* The OLAP Director may administratively terminate an organization's recognition or a representative's accreditation and remove the organization or representative from the recognition and accreditation roster. Prior to issuing a determination to administratively terminate recognition or accreditation, the OLAP Director may request, in writing or electronically, information from the organization, representative, DHS, or EOIR, regarding the bases for termination. The OLAP Director, in writing or electronically, shall inform the organization or the representative, as applicable, of the determination to terminate the organization's recognition or the representative's accreditation, and the reasons for the determination.

(b) *Bases for administrative termination of recognition.* The bases for termination of recognition under this section are:

(1) An organization did not submit a request to renew its recognition at the time required for renewal;

(2) An organization's request for renewal of recognition is disapproved or request for reconsideration after disapproval and if applicable, request for administrative review pursuant to § 1292.18 is denied;

(3) All of the organization's accredited representatives have been terminated pursuant to this section or suspended or disbarred pursuant to 8 CFR 1003.101 *et seq.*, and the organization is not on inactive status as described in § 1292.16(i);

(4) An organization submits a written request to the OLAP Director for termination of its recognition;

(5) An organization fails to comply with its reporting, recordkeeping, or posting requirements under § 1292.14, after being notified of the deficiencies and having an opportunity to respond;

(6) An organization fails to maintain eligibility for recognition under § 1292.11, after being notified of the deficiencies and having an opportunity to respond; or

(7) An organization on inactive status fails to have an individual approved as an accredited representative within the time provided under § 1292.16(i).

(c) *Bases for administrative termination of accreditation.* The bases for termination of accreditation under this section are:

(1) An individual's organization has had its recognition terminated pursuant to this section or terminated or revoked pursuant to 8 CFR 1003.101 *et seq.*;

(2) An organization does not submit a request for renewal of the individual's accreditation at the time required for renewal;

(3) An organization's request for renewal of an individual's accreditation is disapproved or request for reconsideration after disapproval and, if applicable, request for administrative review pursuant to § 1292.18, is denied;

(4) An accredited representative submits a written request to the OLAP Director for termination of the representative's accreditation;

(5) An organization submits a written request to the OLAP Director for termination of the accreditation of one or more of its representatives; or

(6) An individual fails to maintain eligibility for accreditation under § 1292.12, after the individual's organization has been notified of the deficiencies and has had an opportunity to respond.

(d) *Request for reconsideration.* An organization whose recognition is terminated pursuant to paragraph (b)(5) or (6) of this section or the accreditation of its representative(s) is terminated pursuant to paragraph (c)(6) of this section may make one request for reconsideration of the disapproval within 30 days of the determination. The recognition of the organization and the accreditation of any representatives for whom the organization timely requests reconsideration shall remain

valid pending the OLAP Director's consideration of the reconsideration request. The OLAP Director is authorized to allow requests and determinations described in this paragraph to be made electronically.

(e) *Effect of administrative termination of recognition.* The OLAP Director's determination to terminate recognition is final as of the date of service of the administrative termination notice. Upon service or electronic delivery of an administrative termination of recognition notice to the organization's accredited representatives by OLAP, the organization's representatives shall no longer be authorized to represent clients before the Immigration Courts, the Board, or DHS on behalf of that organization, but the notice shall not affect an individual's accreditation through another recognized organization unless otherwise specified. An organization whose recognition is terminated may submit a new request for recognition at any time after its termination unless otherwise prohibited.

(f) *Effect of administrative termination of accreditation.* The OLAP Director's determination to terminate accreditation is final as of the date of service of the administrative termination notice. Upon service or electronic delivery of an administrative termination of accreditation notice to an accredited representative by OLAP, the individual shall no longer be authorized to represent clients before the Immigration Courts, the Board, or DHS on behalf of that organization, but the notice does not affect the individual's accreditation through another organization unless specified in the determination. An organization may submit a request for accreditation on behalf of any individual whose accreditation has been terminated unless otherwise prohibited.

§ 1292.18 Administrative review of denied requests for reconsideration.

(a) *Authority of the Director.* The Director has the discretionary authority to review a request for reconsideration pursuant to § 1292.13(e), § 1292.16(f), or § 1292.17(d) that has been denied. The Director may delegate this authority to any officer within EOIR, except the OLAP Director.

(1) An organization whose request for reconsideration pursuant to § 1292.13(e), § 1292.16(f), or § 1292.17(d) has been denied may request administrative review from the Director within ten (10) days of the denial, identifying the alleged factual or legal errors in the underlying

determination. The request for administrative review shall be submitted to the OLAP Director, who will forward the request to the Director.

(2) The Director may review a request for reconsideration pursuant to § 1292.13(e), § 1292.16(f), or § 1292.17(d) that has been denied on the Director's own initiative by issuing a notification of administrative review within ten (10) days of the denial. This notification shall state the issues to be reviewed.

(3) The recognition of the organization and the accreditation of any representatives that are subject to administrative review as described in this section shall remain valid pending the Director's consideration of the request, except in the case of an interim suspension pursuant to 8 CFR 1003.111.

(b) *Review.* The Director shall review the record before OLAP and the organization's request for administrative review, and, in the Director's discretion, may request additional filings from the organization. The Director may affirm the denial of the request for reconsideration or vacate the denial and return the matter to the OLAP Director for further action consistent with the Director's determination. The Director may not approve a request for recognition or accreditation or renewal thereof.

§ 1292.19 Complaints against recognized organizations and accredited representatives.

(a) *Filing complaints.* Any individual may submit a complaint to EOIR or DHS that a recognized organization or accredited representative has engaged in behavior that is a ground of termination or otherwise contrary to the public interest. Complaints must be submitted in writing or on Form EOIR-44 to the EOIR disciplinary counsel or DHS disciplinary counsel and must state in detail the information that supports the basis for the complaint, including, but not limited to: The name and address of each complainant; the name and address of each recognized organization and accredited representative that is a subject of the complaint; the nature of the conduct or behavior; the individuals involved; and any other relevant information. EOIR disciplinary counsel and DHS disciplinary counsel shall notify each other of any complaint that pertains, in whole or in part, to a matter involving the other agency. EOIR may authorize that complaints submitted to the EOIR disciplinary counsel may be made electronically.

(b) *Preliminary inquiry.* Upon receipt of the complaint, the EOIR disciplinary counsel shall initiate a preliminary

inquiry. If a complaint is filed by a client or former client of a recognized organization or any of its accredited representatives, the complainant waives the attorney-client privilege and any other privilege relating to the representation to the extent necessary to conduct a preliminary inquiry and any subsequent proceedings based thereon. If the EOIR disciplinary counsel determines that a complaint is without merit, no further action will be taken. The EOIR disciplinary counsel may also, in the disciplinary counsel's discretion, dismiss a complaint if the complainant fails to comply with reasonable requests for information or

documentation. If the EOIR disciplinary counsel determines that a complaint has merit, the EOIR disciplinary counsel may disclose information concerning the complaint or the preliminary inquiry to the OLAP Director pursuant to 8 CFR 1003.108(a)(3) or initiate disciplinary proceedings through the filing of a Notice of Intent to Discipline pursuant to 8 CFR 1003.105. If a complaint involves allegations that a recognized organization or accredited representative engaged in criminal conduct, the EOIR disciplinary counsel shall refer the matter to DHS or the appropriate United States Attorney, and if appropriate, to the Inspector General,

the Federal Bureau of Investigation, or other law enforcement agency.

§ 1292.20 Roster of recognized organizations and accredited representatives.

The OLAP Director shall maintain a roster of recognized organizations and their accredited representatives. An electronic copy of the roster shall be made available to the public and updated periodically.

Dated: December 6, 2016.

Loretta E. Lynch,
Attorney General.

Part VIII

Department of Education

34 CFR Part 300

Assistance to States for the Education of Children With Disabilities;
Preschool Grants for Children With Disabilities; Final Rule

DEPARTMENT OF EDUCATION**34 CFR Part 300****[Docket ID ED–2015–OSERS–0132]****RIN 1820–AB73****Assistance to States for the Education of Children With Disabilities; Preschool Grants for Children With Disabilities****AGENCY:** Office of Special Education and Rehabilitative Services, Department of Education.**ACTION:** Final regulations.

SUMMARY: The Secretary amends the regulations under Part B of the Individuals with Disabilities Education Act (IDEA) governing the Assistance to States for the Education of Children with Disabilities program and the Preschool Grants for Children with Disabilities program. With the goal of promoting equity under IDEA, the regulations will establish a standard methodology States must use to determine whether significant disproportionality based on race and ethnicity is occurring in the State and in its local educational agencies (LEAs); clarify that States must address significant disproportionality in the incidence, duration, and type of disciplinary actions, including suspensions and expulsions, using the same statutory remedies required to address significant disproportionality in the identification and placement of children with disabilities; clarify requirements for the review and revision of policies, practices, and procedures when significant disproportionality is found; and require that LEAs identify and address the factors contributing to significant disproportionality as part of comprehensive coordinated early intervening services (comprehensive CEIS) and allow these services for children from age 3 through grade 12, with and without disabilities.

DATES:

Effective Date: These regulations are effective January 18, 2017.

Compliance Date: Recipients of Federal financial assistance to which these regulations apply must comply with these final regulations by July 1, 2018, except that States are not required to include children ages three through five in the calculations under § 300.647(b)(3)(i) and (ii) until July 1, 2020.

FOR FURTHER INFORMATION CONTACT:

Mary Louise Dirrigl, U.S. Department of Education, 400 Maryland Avenue SW., Room 5156, Potomac Center Plaza,

Washington, DC 20202–2600.

Telephone: (202) 245–7324.

If you use a telecommunications device for the deaf (TDD) or a text telephone (TTY), call the Federal Relay Service (FRS), toll free, at 1–800–877–8339.

SUPPLEMENTARY INFORMATION:**Executive Summary**

Purpose of This Regulatory Action: The purpose of these final regulations is to promote equity in IDEA. Specifically, the final regulations will help to ensure that States meaningfully identify LEAs with significant disproportionality and that States assist LEAs in ensuring that children with disabilities are properly identified for services, receive necessary services in the least restrictive environment, and are not disproportionately removed from their educational placements by disciplinary removals. These final regulations also address the well-documented and detrimental over-identification of certain students for special education services, with particular concern that over-identification results in children being placed in more restrictive environments and not taught to challenging academic standards.

While these regulations only establish a system for identifying significant disproportionality based on overrepresentation, the regulations acknowledge that overrepresentation may be caused by under-identification of one or more racial or ethnic groups and the regulations allow funds reserved for comprehensive CEIS to be used to address these issues if they are identified as a factor contributing to the significant disproportionality. LEAs are legally obligated to identify students with disabilities and provide the resources and supports they need to have equal access to education. Thus we, encourage States to ensure that the State's and LEAs' child find policies, practices, and procedures are working effectively to identify all children with disabilities, regardless of race or ethnicity.

IDEA requires States and local educational agencies (LEAs) to take steps to determine the existence of and address significant disproportionality in special education. The statute and regulations for IDEA, Part B, include important provisions for how States and LEAs must address significant disproportionality, including an examination of significant disproportionality and remedies where findings of significant disproportionality occur.

Under IDEA section 618(d) (20 U.S.C. 1418(d)) and § 300.646, States are

required to collect and examine data to determine whether significant disproportionality based on race or ethnicity is occurring in the State and the LEAs of the State with respect to the identification of children as children with disabilities, including identification as children with particular impairments; the placement of children in particular educational settings; and the incidence, duration, and type of disciplinary actions, including suspensions and expulsions. States must make this determination annually.

When a State educational agency (SEA) identifies LEAs with significant disproportionality in one or more of these areas based on the collection and examination of their data, States must: (1) Provide for the review (and if appropriate) revision of the LEA's policies, procedures, and practices for compliance with IDEA; (2) require the LEA to reserve the maximum amount (15 percent) of its Part B funds to be used for comprehensive coordinated early intervening services (comprehensive CEIS) to serve children in the LEA, particularly, but not exclusively, children in those groups that were significantly over-identified; and (3) require the LEA to publicly report on the revision of its policies, procedures, and practices. Under the statute and regulations, each State has considerable discretion in how it defines significant disproportionality.

To address and reduce significant disproportionality, the final regulations establish a standard methodology that each State must use in its annual determination under IDEA section 618(d) (20 U.S.C. 1418(d)) of whether significant disproportionality based on race and ethnicity is occurring in the State and the LEAs of the State.

Further, the final regulations clarify ambiguities in the existing regulations concerning significant disproportionality in the disciplining of children with disabilities. Specifically, these regulations adopt the Department's long-standing interpretation that the required remedies in IDEA section 618(d)(2) apply when there is significant disproportionality in identification, placement, or any type of disciplinary removal from placement. In addition, funds reserved for comprehensive CEIS now must be used to identify and address the factors contributing to significant disproportionality and may be used to serve children from age 3 through grade 12, with and without disabilities.

Summary of Major Provisions of This Regulatory Action

Significant provisions of these final regulations include:

- §§ 300.646(b) and 300.647(a) and (b) provide the standard methodology that States must use to determine whether there is significant disproportionality based on race or ethnicity in the State and its LEAs;

- As part of the standard methodology, § 300.647(b)(1) requires States to set reasonable risk ratio thresholds, reasonable minimum n-sizes, reasonable minimum cell sizes, and if a State uses the flexibility described in § 300.647(d)(2), standards for measuring reasonable progress, all with input from stakeholders (including their State Advisory Panels), subject to the Department's oversight;

- § 300.647(b)(1)(iv) sets a rebuttable presumption that a minimum cell size of no greater than 10 and a minimum n-size of no greater than 30 are reasonable.

- § 300.647(d) provides flexibilities that States, at their discretion, may consider when determining whether significant disproportionality exists. States may choose to identify an LEA as having significant disproportionality after an LEA exceeds a risk ratio threshold for up to three prior consecutive years. States may also choose not to identify an LEA with significant disproportionality if the LEA is making reasonable progress, as defined by the State, in lowering risk ratios in each of the two consecutive prior years, even if the risk ratios exceed the State's risk ratio thresholds;

- § 300.646(c) clarifies that the remedies in IDEA section 618(d)(2) are triggered if a State makes a determination of significant disproportionality with respect to disciplinary removals from placement;

- § 300.646(c)(1) and (2) clarify that the review of policies, practices, and procedures must occur in every year in which an LEA is identified with significant disproportionality and that LEA reporting of any revisions to policies, practices, and procedures must be in compliance with the confidentiality provisions of the Family Educational Rights and Privacy Act (FERPA), (20 U.S.C. 1232), its implementing regulations in 34 CFR part 99, and IDEA section 618(b)(1); and

- § 300.646(d) describes which populations of children may receive comprehensive CEIS when an LEA has been identified with significant disproportionality. Comprehensive CEIS may be provided to children from age 3 through grade 12, regardless of whether

they are children with disabilities, and, as part of implementing comprehensive CEIS, an LEA must identify and address the factors contributing to the significant disproportionality.

Costs and Benefits: Due to the considerable discretion allowed States (e.g. flexibility to determine their own reasonable risk ratio thresholds, reasonable minimum n-sizes and cell size, and the extent to which LEAs have made reasonable progress under § 300.647(d)(2) in lowering their risk ratios or alternate risk ratios, we cannot evaluate the costs of implementing the final regulations with absolute precision. However, we estimate the total cost of these regulations over ten years would be between \$50.1 and \$91.4 million, plus transfers between \$298.4 and \$552.9 million. These estimates assume discount rates of three to seven percent.

There are several benefits of the regulations that include: Increased transparency regarding each State's definition of significant disproportionality; an increased role for State Advisory Panels in determining States' risk ratio thresholds, minimum n-sizes, and minimum cell sizes; and State review and, if appropriate, revision of the policies, procedures, and practices used in the identification, placement, or discipline of children with disabilities, to ensure that the policies, procedures, and practices comply with the requirements of IDEA; and, ultimately, better identification, placement, and discipline of children with disabilities.

Additionally, the Department believes that expanding the eligibility of children ages three through five to receive comprehensive CEIS would give LEAs new flexibility to use additional funds received under Part B of IDEA to provide appropriate services and supports at earlier ages to children who might otherwise later be identified as having a disability, which could reduce the need for more extensive special education and related services for such children in the future. The Department believes this regulatory action to standardize the methodology States use to identify significant disproportionality will provide clarity to the public, increase comparability of data across States, and improve upon current policy, which has resulted in State definitions which vary widely and may prevent States from identifying the magnitude of racial and ethnic overrepresentation in special education. We provide further detail regarding costs and benefits in the *Regulatory Impact Analysis* section.

General

On March 2, 2016, the Secretary published a notice of proposed rulemaking (NPRM) in the **Federal Register** (81 FR 10967) to amend the regulations in 34 CFR part 300 governing the Assistance to States for the Education of Children with Disabilities program and the Preschool Grants for Children with Disabilities program. Specifically, in the NPRM, we proposed changes to the regulation regarding significant disproportionality based on race and ethnicity in the identification, placement, and discipline of children with disabilities.

In the preamble of the NPRM, we discussed on pages 10980 and 10981 the major changes proposed in that document. These included the following:

- Adding §§ 300.646(b) and 300.647(a) and (b) to provide the standard methodology that States must use to determine whether there is significant disproportionality based on race or ethnicity in the State and its LEAs;

- Adding § 300.647(c) to provide the flexibilities that States, at their discretion, may consider when determining whether significant disproportionality exists. States may choose to identify an LEA as having significant disproportionality after an LEA exceeds a risk ratio threshold for up to three prior consecutive years. A State also has the flexibility not to identify an LEA with significant disproportionality if the LEA is making reasonable progress under § 300.647(d)(2) in lowering the risk ratios, even if they exceed the State's risk ratio thresholds, where reasonable progress is defined by the State;

- Amending current § 300.646(b) (proposed § 300.646(c)) to clarify that the remedies in IDEA section 618(d)(2) are triggered if a State makes a determination of significant disproportionality with respect to disciplinary removals from placement;

- Amending current § 300.646(b)(1) and (3) (proposed § 300.646(c)(1) and (2)) to clarify that the review of policies, practices, and procedures must occur in every year in which an LEA is identified with significant disproportionality, and that LEA reporting of any revisions to policies, practices, and procedures must be in compliance with the confidentiality provisions of the Family Educational Rights and Privacy Act (FERPA), (20 U.S.C. 1232), its implementing regulations in 34 CFR part 99, and IDEA section 618(b)(1); and

- Amending current § 300.646(b)(2) (proposed § 300.646(d)) to define which

populations of children may receive comprehensive CEIS when an LEA has been identified with significant disproportionality. Comprehensive CEIS may be provided to children from age 3 through grade 12, regardless of whether they are children with disabilities, and, as part of implementing comprehensive CEIS, an LEA must identify and address the factors contributing to the significant disproportionality.

These final regulations contain several significant changes from the NPRM, including:

- A revised § 300.646(d)(1)(ii) to include additional factors that may contribute to significant disproportionality;
- A new § 300.646(d)(1)(iii) to clarify that in implementing comprehensive CEIS an LEA must address a policy, practice, or procedure it identifies as contributing to significant disproportionality;
- A new § 300.646(e) to clarify that LEAs that serve only children with disabilities are not required to reserve IDEA Part B funds for comprehensive CEIS;
- A new § 300.646(f) to make clear that these regulations do not authorize a State or an LEA to develop or implement policies, practices, or procedures that result in actions that violate any IDEA requirements, including requirements related to child find and ensuring that a free appropriate public education is available to all eligible children with disabilities.
- A revised § 300.647(a) to include a definition of comparison group, minimum n-size, and minimum cell size;
- A revised § 300.647(b)(1) to require States to set reasonable risk ratio thresholds, reasonable minimum cell sizes, reasonable minimum n-sizes, and, if a State is using the flexibility in § 300.647(d)(2), standards for measuring reasonable progress, all with input from stakeholders (including their State Advisory Panels) and subject to the Department's oversight. As revised, § 300.647(b)(1) also clarifies that a State may, but is not required to, set these standards at different levels for each of the categories described in paragraphs (b)(3) and (4);
- States may delay the inclusion of children ages three through five in the review of significant disproportionality with respect to the identification of children as children with disabilities, and with respect to the identification of children as children with a particular impairment, until July 1, 2020;
- A revision of § 300.647(b)(4) to no longer require States to calculate the risk ratio for children with disabilities

ages 6 through 21, inside a regular class more than 40 percent of the day and less than 79 percent of the day;

- An amendment to § 300.647(b)(5) to require States to use the alternate risk ratio when the number of children in the comparison group fails to meet either the State's reasonable minimum n-sizes or the State's reasonable minimum cell sizes;
- A new § 300.647(b)(7) requiring States to report all risk ratio thresholds, minimum cell sizes, minimum n-sizes, standards for measuring reasonable progress, and the rationales for each, to the Department at a time and in a manner determined by the Secretary. Rationales for minimum cell sizes and minimum n-sizes must include a detailed explanation of why the numbers are reasonable and how they ensure appropriate analysis for significant disproportionality.
- A new § 300.647(c) to clarify that States are not required to calculate a risk ratio or alternate risk ratio if the particular racial or ethnic group being analyzed does not meet the minimum n-size or minimum cell size, or in calculating the alternate risk ratio under § 300.647(b)(5), the comparison group in the State does not meet the minimum cell size or minimum n-size; and
- A revision to proposed § 300.647(c)(2)—now § 300.647(d)(2)—to allow States the flexibility to not identify an LEA that exceeds a risk ratio threshold if it makes reasonable progress under § 300.647(d)(2) in lowering the applicable risk ratio or alternate risk ratio in each of two consecutive prior years.

We fully explain these changes in the Analysis of Comments and Changes elsewhere in this preamble.

Effective Date of These Regulations

As noted in the Dates section, these regulations become part of the Code of Federal Regulations on January 18, 2017. However, States and LEAs are not required to comply with these regulations until July 1, 2018, or to include children ages three through five in the review of significant disproportionality with respect both to the identification of children as children with disabilities and to the identification of children as children with a particular impairment, until July 1, 2020.

The Department recognizes the practical necessity of allowing States time to plan for implementing these final regulations, including to the extent necessary, time to amend the policies and procedures necessary to comply. States will need time to develop the policies and procedures necessary to

implement the standard methodology in § 300.647 and the revised remedies in § 300.646(c) and (d). In particular, States must consult with their stakeholders and State Advisory Panels under § 300.647(b)(1) to develop reasonable risk ratio thresholds, reasonable minimum n-sizes, reasonable minimum cell sizes, and if a State uses the flexibility in § 300.647(d)(2), standards for measuring reasonable progress. States must also determine which, if any, of the available flexibilities they will adopt. To the extent States need to amend their policies and procedures to comply with these regulations, States will also need time to conduct public hearings, ensure adequate notice of those hearings and provide an opportunity for public comment, as required by § 300.165.

Accordingly, States must implement the standard methodology under § 300.647 in school year (SY) 2018–19. In doing so, States must identify LEAs with significant disproportionality under § 300.647(d)(1) in SY 2018–2019 using, at most, data from the three most recent school years for which data are available. We note that, in the case of discipline, States may be using data from four school years prior to the current year, as data from the immediate preceding school year may not yet be available at the time the State is making its determinations (*i.e.*, final discipline data from SY 2017–2018 may not yet be available at the time during SY 2018–2019 the State is calculating risk ratios).

In SY 2018–2019, States must implement the standard methodology contained in these regulations by ensuring that the identification of any LEAs with significant disproportionality based on race and ethnicity in the identification, placement, or disciplinary removal of children with disabilities, is based on the standard methodology in § 300.647, and implements the revised remedies in accordance with § 300.646(c) and (d). In the spring of 2020, therefore, States will report (via IDEA Part B LEA Maintenance of Effort (MOE) Reduction and CEIS data collection, OMB Control No. 1820–0689) whether each LEA was required to reserve 15 percent of its IDEA Part B funds for comprehensive CEIS in SY 2018–19.

States may, at their option, accelerate this timetable by one full year. In other words, States may implement the standard methodology in SY 2017–18 and assess LEAs for significant disproportionality using data from up to the most recent three consecutive school years for which data are available.

States that choose to implement the standard methodology in § 300.647 to

identify LEAs with significant disproportionality in SY 2017–2018 may also require those LEAs to implement the revised remedies in accordance with § 300.646(c) and (d). Similarly, in SY 2017–18, States may choose to implement the revised remedies without implementing the standard methodology.

Whether a State begins compliance in SY 2017–2018 or 2018–2019, it need not include children ages three through five in the review of significant disproportionality, with respect to both the identification of children as children with disabilities and to the identification of children as children with a particular impairment, until July 1, 2020.

Finally, the delayed compliance date does not mean that States are excused from making annual determinations of significant disproportionality in the intervening years. States must still make these determinations in accordance with the current text of § 300.646.

Public Comment: In response to our invitation in the NPRM, 316 parties submitted comments on the proposed regulations. We group major issues according to subject under these headings:

- I. General Comments
 - Introduction
 - Glossary of Terms
 - Terminology
 - The Department Should Await Congressional Action
 - Under-Identification of Children With Disabilities by Race and Ethnicity

Analysis of Comments and Changes:

An analysis of the comments and of any changes in the regulations since publication of the NPRM follows. Generally, we do not address: (a) Minor changes, including technical changes made to the language published in the NPRM; or (b) comments that express concerns of a general nature about the U.S. Department of Education (Department) or other matters that are not germane.

I. General Comments

Introduction

We provide a glossary as an aid to reading and understanding the technical discussions surrounding a standard methodology for determining significant disproportionality. Some terms in this glossary are defined in these final regulations.

Glossary of Terms

Alternate Risk Ratio means a calculation performed by dividing the risk of a particular outcome for children in one racial or ethnic group within an LEA by the risk of that outcome for children in all other racial or ethnic groups in the State. (§ 300.647(a)).

Cell Size means the number of children experiencing of a particular outcome, to be used as the numerator when calculating either the risk for a particular racial or ethnic group or the risk for children in all other racial or ethnic groups.

Comparison Group consists of the children in all other racial or ethnic groups within an LEA or within the State, when reviewing a particular racial or ethnic group within an LEA for significant disproportionality.

N-Size means the number of children enrolled in an LEA with respect to identification, and the number of children with disabilities enrolled in an LEA with respect to placement and discipline, to be used as the denominator when calculating either the risk for a particular racial or ethnic group or the risk for children in all other racial or ethnic groups.

Population Requirement means the minimum number of children required before a racial or ethnic group within an LEA will be reviewed for significant disproportionality, such as a minimum cell size or minimum n-size.

Risk means the likelihood of a particular outcome (identification, placement, or disciplinary removal) for a specified racial or ethnic group (or groups), calculated by dividing the number of children from a specified racial or ethnic group (or groups) experiencing that outcome by the total number of children from that racial or ethnic group (or groups) enrolled in the LEA. (§ 300.647(a)).

Risk Ratio means a calculation performed by dividing the risk of a particular outcome for children in one racial or ethnic group within an LEA by the risk for children in all other racial and ethnic groups within the LEA. (§ 300.647(a)).

Risk Ratio Threshold means a threshold, determined by the State, over which disproportionality based on race or ethnicity is significant under § 300.646(a) and (b). (§ 300.647(a)).

Weighted Risk Ratio means a variation on the risk ratio in which the risk to each racial and ethnic group within the comparison group is multiplied by a weight that reflects that group's proportionate representation within the State.

Terminology

Comment: None.

Discussion: In the NPRM, the Department noted that many States have minimum cell size requirements to restrict their assessment of significant disproportionality to include only those LEAs that have sufficient numbers of children to generate stable calculations. The Department further noted that, while different States use different definitions of “minimum cell size,” the most common definition placed a requirement on the number of children with disabilities in the racial or ethnic subgroup being analyzed. This common

definition describes the population used in the denominator when calculating the risk of placement or disciplinary removal for a racial or ethnic group.

Based on this information, the Department used the term “minimum cell size” in its description of proposed § 300.647(b)(3) and (4), in which we intended to allow States not to apply the standard methodology when analyzing for significant disproportionality with respect to identification when a racial or ethnic group in an LEA had fewer than 10 children (or, when analyzing for placement or discipline, when a racial or ethnic group in an LEA had fewer than 10 children with disabilities). Put another way, it was the Department’s intent to allow States not to apply the standard methodology when, in calculating the risk of identification, placement, or discipline for a racial or ethnic group, the denominator of the risk calculation included fewer than 10 children.

In response to the NPRM, many commenters raised concerns about the effects of particularly small groups of children on the calculation of risk for particular racial or ethnic groups and the benefits and drawbacks of setting a minimum number of children for either the numerator or denominator in the risk calculation. Upon review of these comments, the Department determined that using a single term (*i.e.*, “minimum cell size”) to refer to both of these requirements would be potentially confusing. Therefore, in this NFR, the Department uses the term “n-size” to refer to the denominator of a risk calculation and “cell size” to refer to the numerator of the risk calculation. We note that this use of terms is different than what was used in the NPRM, but we believe this differentiation will provide the greatest clarity in our discussion of the requirements of the final rule.

Consistent with this approach, we have interpreted comments regarding the proposed § 300.647(b)(3) and (4), and comments regarding risk denominators, to be referring to n-size, and refer to those comments using that terminology. Further, we have interpreted comments regarding risk numerators to be referring to cell size, and refer to those comments using that terminology.

Change: We have revised proposed § 300.647 to include definitions for the terms “minimum cell size” and “minimum n-size” and have utilized those terms through the regulation to increase specificity and clarity.

The Department Should Await Congressional Action

Comments: Some commenters argued that the Department should withdraw the proposed rule and first allow Congress to address significant disproportionality in the next reauthorization of IDEA.

Discussion: The Department has an obligation to implement and enforce the requirements of IDEA as they exist today. While we will work with Congress to reauthorize IDEA, including any potential changes to section 618(d), we must continue to ensure that States and LEAs are appropriately implementing the current requirements to ensure that every child has access to a free appropriate public education in the least restrictive environment. As we have stated in the NPRM, following the Government Accountability Office (GAO) report, the Department conducted its own review of State approaches, as well as a review of the extent to which States identified significant disproportionality. Additionally, we examined research related to significant disproportionality and analyzed data collected under section 618 of IDEA.

The Department’s analysis found several nationwide examples of disparity across racial and ethnic groups. For example in 2012: American Indian and Alaska Native students were 60 percent more likely to be identified for an intellectual disability, while Black children were more than twice as likely as other groups to be so identified. Similarly, American Indian or Alaska Native students were 90 percent more likely, Black students were 50 percent more likely, and Hispanic students were 40 percent more likely to be identified as a student with a learning disability. In addition, Black children were more than twice as likely to be identified with an emotional disturbance. These national-level data are troubling, given the number of States that have not identified any LEAs with significant disproportionality.

As published in the NPRM, in SY 2012–13, only 28 States and the District of Columbia identified any LEA with significant disproportionality, and of the 491 LEAs identified, 75 percent were located in only seven States. Of the States that identified LEAs with significant disproportionality, only the District of Columbia and four States identified significant disproportionality in all three categories of analysis—identification, placement, and in discipline. In short, these data suggest that there are likely LEAs that are not, but should be, identified with

significant disproportionality, and thus that many children in these districts are not receiving proper services.

The Department’s decision now to require States to follow a standard methodology is intended to promote consistency between States and to help ensure compliance with IDEA section 618(d). We are adopting the standard methodology to ensure proper implementation of the statute and so that LEAs with significant disparities, based on race and ethnicity, in identification, placement and discipline are appropriately identified; that significant disproportionality is appropriately addressed; and that children with and without disabilities receive the services they need.

Changes: None.

Under-Identification of Children With Disabilities by Race and Ethnicity

Comments: Several commenters responded to Directed Question #11 and expressed various concerns about under-identification. Other commenters did the same independently of the question. Several commenters expressed support for the Department’s efforts to remediate the problems of overrepresentation and over-identification of children with disabilities based on race and ethnicity.¹ However, other commenters, some citing research, asserted that the under-identification of children of color for special education and related services is a greater and more serious problem than their overrepresentation in special education, and that, by not addressing the proper problem, the proposed regulations would allow harm to children of color to continue. One commenter stated that lawyers around the country have noted a systemic neglect of children of color with disabilities in education systems, and another stated that many families have reported delays in the identification of disabilities and, in some cases, the misidentification of disabilities. Still other commenters shared personal experiences of under-identification. Two commenters stated that the proposed regulations should be withdrawn and revised to address this more pressing problem, and one suggested that the Department withdraw the regulation in favor of other efforts to promote the proper implementation of

¹ We distinguish “overrepresentation” and “underrepresentation,” which describe disparities in the relative proportion of a racial or ethnic subgroup in special education and their relative proportion in the population, from “over-identification” and “under-identification,” which describe the appropriateness of a child’s identification as a child with a disability.

child find procedures and the early and appropriate identification of children with disabilities.

Discussion: The Department agrees that when under-identification of children of color occurs it is problematic. These children, like all children with disabilities, are entitled to a free appropriate public education. States should ensure that their child find procedures are robust enough to appropriately identify all children with disabilities in a timely manner.

The Department's long-standing interpretation of IDEA section 618(d) (20 U.S.C. 1418(d)), has been that it requires States to address overrepresentation, not under-identification or underrepresentation, consistent with the intent of Congress when it authorized that provision. (See, Office of Special Education Programs (OSEP) Memorandum 08-09 (July 28, 2008)).

The basis for congressional action was largely due to a concern that students of color were being identified too often for special education services, and placed too frequently in segregated settings, in ways that were detrimental to their education. There is also an increased understanding that appropriate identification and delivery of special education services would ensure that students with disabilities have access to, and an opportunity to fully participate in, the general education curriculum.

We understand that overrepresentation of one racial or ethnic group that rises to the level of significant disproportionality may occur for a variety of reasons, including over-identification of that racial or ethnic group, under-identification of another racial or ethnic group or groups, or appropriate identification with higher prevalence of a disability in a particular racial or ethnic group.

For example, consider an LEA in which the risk ratio for African American students with an emotional disturbance exceeds the State determined risk ratio threshold and is identified as having significant disproportionality. The overrepresentation of African American students could be due to: (1) The LEA inappropriately identifying African American students as having an emotional disturbance and needing special education and related services even though they do not (over-identification); (2) the LEA failing to appropriately identify students in other racial or ethnic groups as having an emotional disturbance and needing special education and related even though they do (under-identification); or (3) the LEA appropriately identifying all

students in the LEA who have an emotional disturbance but underlying variations in the prevalence of those disabilities across racial and ethnic groups results in an overrepresentation of African American students.

We encourage States and LEAs to consider multiple sources of data when attempting to determine the factors contributing to significant disproportionality, including school level data, academic achievement data, relevant environmental data that may be correlated with the prevalence of a disability, or other data relevant to the educational needs and circumstances of the specific group of students identified.

Changes: We have added a new § 300.646(d)(1)(iii), requiring an LEA, in implementing comprehensive CEIS, to address any policy, practice, or procedure it identifies as contributing to significant disproportionality, including any policy, practice or procedure that results in a failure to identify, or the inappropriate identification of, a racial or ethnic group (or groups).

Comments: Several commenters requested that the Department address both over-identification and under-identification based on race and ethnicity in special education. These commenters recommended that the Department require States to report racial and ethnic disparities in the identification of children with disabilities, and children with particular impairments, due to under-identification. These commenters also requested that the Department require States to provide technical assistance to LEAs with under-identification, by race or ethnicity, but not require those LEAs to implement the statutory remedies under IDEA section 618(d).

Similarly, one commenter asked the Department to amend proposed § 300.646(c)(1) to clarify that, in cases of significant disproportionality in the over-identification or the under-identification of children as children with disabilities, an LEA must undergo a review and, if necessary, revision of its policies, practices, and procedures.

One commenter suggested that addressing both over-identification and under-identification was particularly important in the context of autism and emotional disturbance identification. The commenter further observed that these are both areas where recent research has suggested that girls in particular are under-identified.

A few commenters, however, opposed any expansion of the proposed regulations to address under-identification due to concerns that this will weaken their ability to address overrepresentation. One of these

commenters stated that, when the Department previously required States to address under-identification by race and ethnicity as part of the State Performance Plan/Annual Performance Report (SPP/APR), the result was confusion among States.

Discussion: As we stated earlier, while this regulation only establishes a system for identifying significant disproportionality based on overrepresentation, nothing in these regulations prevents States from working with their LEAs to ensure appropriate identification of children with disabilities and address any potential under-identification that may exist. In cases where LEAs find that a factor contributing to the overrepresentation of one racial or ethnic group is the under-identification of a different racial or ethnic group, the LEA may use funds reserved for comprehensive CEIS to address that under-identification. In particular, we remind States that, consistent with IDEA child find requirements, each State must have policies and procedures to ensure that all children residing in the State who are in need of special education and related services are identified, located, and evaluated, regardless of race or ethnicity.

We also note that nothing in these regulations establishes or authorizes the use of racial or ethnic quotas limiting a child's access to special education and related services, nor do they restrict the ability of Individualized Education Program (IEP) Teams or others to appropriately identify and place children with disabilities. In fact, an LEA's use of quotas to artificially reduce the number of children who are identified as having a disability, in an effort to avoid a finding of significant disproportionality, would almost certainly conflict with their obligations to comply with other Federal statutes, including civil rights laws governing equal access to education. States have an obligation under IDEA both to identify significant disproportionality, based on race and ethnicity, in the identification of children with disabilities and to ensure that LEAs implement child find procedures appropriately and make a free appropriate public education available to all eligible children with disabilities. (20 U.S.C. 1412(a)(1), (3) and (11); 34 CFR 300.101, 300.111, and 300.149). To clarify that these regulations must be implemented in a manner that is consistent with all other requirements of this part, we have added § 300.646(f) to make clear that these regulations do not authorize a State or an LEA to develop or implement policies, practices, or

procedures that result in actions that violate any IDEA requirements, including requirements related to child find and ensuring that a free appropriate public education is available to all eligible children with disabilities.

Changes: As described above, we have added a new § 300.646(f).

Comment: One commenter recommended that the Department address the under-identification of children with disabilities by supporting States and LEAs in collecting child-level data on developmental screenings and referrals for services to better understand where child find efforts are effective.

Discussion: We appreciate the commenter's proposal to expand awareness and understanding of child find implementation, and of the potential under-identification of children with disabilities, through better data collection. The Department is committed to ensuring that all children with disabilities are appropriately identified, evaluated, and provided with special education services. However, we believe that any requirement to collect data regarding developmental screenings and referrals would be beyond the scope of IDEA section 618(d), which directs States to collect and examine data for the purpose of identifying significant disproportionality by race and ethnicity. We believe it is more appropriate to consider the merits of the commenter's proposal separately from regulation.

Changes: None.

Comments: Several commenters requested that the proposed regulations be withdrawn until there is more research available regarding under-identification and over-identification in special education, including better information as to whether over-identification or under-identification is the more pressing problem. Similarly, one commenter stated that the regulations were based on a flawed understanding of research on racial and ethnic disparities in special education.

One other commenter asserted that the research that the Department is using to justify its current regulations to address significant disproportionality has been repeatedly identified as having serious methodological limitations, including a lack of statistical controls for known confounds.

Discussion: The Department agrees that there is a continued need for research to support Federal, State, and local efforts to address racial and ethnic disparities in special education, though we do not agree that the research we relied upon is flawed. We also agree that additional research is necessary to

continue to examine both over- and under-representation in special education, and the Department plans to direct additional resources to research these issues. However, we do not agree that these regulations should be delayed until further research is conducted because there is sufficient evidence of significant disproportionalities going uninvestigated or unaddressed.

We also agree that some research suggests that there are children with disabilities who are not, but should be, receiving special education services under IDEA. However, there is a corresponding body of research that children of certain races or ethnicities are disproportionately identified with disabilities, educated in more restrictive placements, and disciplined at greater rates than their peers. We do not believe that over- and under-representation in special education based on race or ethnicity are mutually exclusive. In fact, it is possible, if not probable, that both over- and under-representation are occurring, which is why the Department's effort to standardize the way in which States examine LEAs for significant disproportionality is necessary.

The Department believes that § 300.646(b), which requires States to apply a standard methodology to identify significant disproportionality due to overrepresentation, will help to build greater knowledge about existing State practice and the extent of these disparities and encourage additional research to investigate their causes and potential solutions for them. That said, States are required to ensure that they are appropriately implementing these new regulations in conjunction with appropriate child find procedures. These regulations should not be used to exclude children with disabilities from receiving services under IDEA.

Changes: None.

Recommendations Regarding Technical Assistance and Guidance

Comment: A number of commenters called upon the Department to provide to States and LEAs technical assistance and guidance for implementing the proposed regulations. Some commenters asserted that the Department should provide technical assistance to States in order to ensure that LEAs appropriately identify children of color, rather than under-identifying them, to avoid a designation of significant disproportionality. In the absence of sufficient supports for LEAs, the commenters stated, LEAs may implement shortcuts so that they appear to be reducing disparities. These shortcuts could include under-reporting

of disciplinary removals, under-identifying children of color as children with disabilities, or referring fewer children from overrepresented racial or ethnic groups for special education services. Similarly, another commenter stated that the Department could ensure that LEAs do not under-identify children with disabilities by supporting States' efforts to utilize appropriate cell sizes, risk ratio thresholds, and significance testing.

Other commenters recommended that the Department provide suggestions to States about evidence-based practices that may reduce disproportionality and that the Department tailor technical assistance to the needs of the agencies served.

One commenter suggested that the Department provide specific information on evaluation and identification of children who may need special education, the use of schoolwide approaches such as positive behavioral interventions and supports, developing multi-tiered systems of support to provide intensive services before referral to special education, and the use of multi-disciplinary teams of specialized instructional support personnel to support children with and without disabilities. Another commenter also requested that the Department provide research-based root cause analysis tools, targeted to each of the areas of significant disproportionality, as well as assistance with cultural responsive evaluation, appropriate academic and behavioral interventions prior to referral for special education services, and the monitoring of highly mobile children within a multi-tiered system of support.

One commenter recommended that the Department provide guidance that indicates how LEAs can compare the number of children identified, placed, or disciplined to the number of children who should have been identified, placed, or disciplined and how best to use risk ratio methods with small populations.

One commenter requested that the Department provide guidance on, monitor, and enforce IDEA provisions governing evaluation procedures and encourage States to implement school-age hearing screening programs as part of their implementation of child find.

One commenter recommended that the Department provide more technical assistance and guidance on the importance of health care providers in helping identify all children with disabilities.

Other commenters suggested that the Department enhance State capacity to train and counsel parents about IDEA,

disability, and the implications when a child is found eligible for special education and related services.

Discussion: We agree that supporting States and LEAs in implementing these regulations is important. The Department provides technical assistance through numerous investments funded under part D of IDEA, and it provides easy access to information from its research to practice efforts at www.osepideasthatwork.org. In general, the Department funds technical assistance centers to work with States and LEAs to provide a variety of products and services to support children with disabilities, teachers, special education service providers, policy makers, and parents of children with disabilities with the implementation of IDEA requirements, including those provisions and activities required to address significant disproportionality based on race or ethnicity. We agree with commenters that there are many distinct but overlapping provisions under IDEA that will need to be addressed to help States and their stakeholders comply with the requirements of these regulations. The Department will continue to provide technical assistance to help States and stakeholders address significant disproportionality based on race or ethnicity. In addition, the Department plans to identify new Federal resources to support States' work to implement these regulations through the Technical Assistance and Dissemination network and Department staff. When these resources are available, the Department will work to ensure that States are aware of Federal technical assistance resources that can be used to support their implementation of these regulations.

Changes: None.

Comment: One commenter requested that the Department issue guidance to States on monitoring and analyzing LEA placement data with regard to disability category, gender, ethnicity, and socioeconomic status to help create transparency in decision-making that results in LEA-level disparities.

Discussion: We appreciate the suggestion and will take it into consideration as we develop guidance and technical assistance for these regulations after they are published.
Changes: None.

Causes of Racial and Ethnic Disparity That Originate Outside of School

Comments: Several commenters stated that the proposed regulations are based on a flawed assumption, that the percentage of children of color with disabilities who receive special education and related services should

reflect the percentage of children of color in the general population. Other commenters asserted that one should expect certain subgroups of children to be identified with disabilities (or particular impairments) at higher rates than others due to the effects of poverty, concentrated poverty, poor education, lack of adequate health care parental incarceration, limited language proficiency, drug abuse, environmental toxins, the lack of specialized instructional support or parent training, and other factors that (according to the commenters) increase the risk of disabilities and the need for special education services. Others asserted that achieving proportionality among all races and ethnicities in special education is not an appropriate goal, and that the statistical assumption of equal rates of identification across all groups is erroneous.

Discussion: The Department recognizes that there will be variations in the proportion of individuals across racial and ethnic groups who are identified as children with disabilities. The purpose of these regulations is not to artificially force the identification rate to be equal across all subgroups or to fit any preconceived proportion. The regulation does, however, seek to promote more accurate identification of LEAs in which disproportionality between racial and ethnic groups has become significant and, therefore, possibly indicative of an underlying problem in the identification, placement, or disciplinary removal of children with disabilities.

While various risk factors associated with poverty may be associated with greater risk of disability among children, those factors are by no means determinative of whether a child should be identified as a child with a disability under IDEA. Ideally, children exposed to these risk factors are screened for developmental delays, and other academic and behavioral challenges, so that their needs may be addressed early and appropriately. Further, IDEA requires that the individual needs of children with disabilities—as opposed to their exposure to risk—be central to determining the need for special education and related services.

Changes: None.

Comment: Many commenters stated that risk factors—such as poverty, concentrated poverty, poor education, and lack of access to health care—contribute to the incidence of disability and may confound attempts to effectively examine racial and ethnic disparity in special education. Similarly, one commenter suggested that recent increases in K–12

enrollment, the number of English Learners, and the prevalence of poverty may account for increases in the number of children of color in special education.

In this same context, a few other commenters warned that a simple comparison of percentages of populations must not be taken as evidence of bias, misidentification, or racial discrimination by school officials. Rather, these commenters argued that approaches such as the risk ratio are oversimplifications that may lead to the withdrawal or denial of special education services to children who need them. Similarly, another commenter stated that there are situations where a risk ratio alone will not provide enough information to determine whether an LEA has or does not have significant disproportionality.

Discussion: The Department understands that there are many complex factors that may influence the need for special education services, placement decisions, and disciplinary removals, and that schools alone cannot address all of these factors, particularly those associated with poverty. The Department also understands that risk ratios do not identify the causes of significant disproportionality.

However, risk ratios do identify those LEAs where there are large racial and ethnic disparities and, where these are considered significant, States and LEAs must review the policies, procedures, and practices related to identification, placement, or discipline and, through the implementation of comprehensive coordinated early intervening services, identify and address the causes of these disparities, as appropriate. Even in situations where differential exposure to risk factors contributes to racial disparities in special education, we believe that schools may help to mitigate the effects of these risk factors by screening children early and by providing early and appropriate interventions and supports. Donovan and Cross, 2002. This is a major purpose of comprehensive CEIS, and one reason, as we discuss in the section *Expanding the Scope of Comprehensive Coordinated Early Intervening Services*, that the Department has expanded the scope of comprehensive CEIS to include children ages three through five.

Changes: None.

Comments: Many commenters expressed concern that the Department's overall approach to addressing significant disproportionality, as well as the standard methodology in § 300.647(b), fails to address the underlying causes of racial and ethnic disparities. A large number of commenters noted that there are many

societal and systemic factors that lead to disproportionality. These commenters argued that final regulations should be postponed until these other societal and systemic factors, such as access to mental health care and access to quality early-childhood education, are addressed. Another commenter argued that the issue of significant disproportionality is beyond the responsibility of educators and beyond the scope of their role, and efforts to identify and address it must take into account factors such as poverty, urbanicity, medical care accessibility, and the presence of schools specifically for children with disabilities.

One commenter requested that—once these broad societal and educational problems are addressed—States only report on special education indicators (which we understand the commenter to mean data showing racial and ethnic disparities, similar to what was proposed under § 300.646(b)(3) and (4)) until systems are in place to hold general education accountable as well. Similarly, other commenters asserted that as special education programs typically have little influence over general education programs, it will be difficult to improve services using a mandate on special education.

Discussion: The Department recognizes that racial and ethnic disparities in the identification, placement, and discipline of children with disabilities can have a wide range of causes, including systemic issues well beyond the typical purview of most LEAs. Again, however, this does not mean that LEAs, schools, and educators are wholly incapable of addressing, or mitigating, any of the causes of significant disproportionality. In fact, the Department believes that effective elementary and secondary education, with appropriate supports for children with and without disabilities is essential to addressing the very issues the commenters raise. Delaying the examination of data to make determinations of significant disproportionality (and the review and revision of problematic policies, practices, and procedures) until these broader issues are resolved would overlook both the statutory requirement that States annually collect and examine data and strategies currently available to address these inequities.

The commenters' concerns about holding general education accountable suggest a false dichotomy between special and general education. That is, LEAs are responsible for providing a high quality education to every child, both in general education and special education. When children are

inappropriately identified, placed, or disciplined on the basis of race or ethnicity, all parties are, and should be, held accountable. In fact, this realization of the benefits of a holistic approach to addressing the causes of significant disproportionality led to the Department's expansion of comprehensive CEIS to serve both children with and without disabilities.

Changes: None.

Comment: One commenter suggested that the Department develop funding priorities to examine the connections between race, culture, socio-economic status, and disability. Many commenters noted that additional Federal funds should be made available to address disproportionality in special education and general education programs.

Discussion: Although we view this as beyond the scope of these regulations, we appreciate the suggestion. The Department will take this recommendation under consideration as we develop funding priorities for fiscal years 2017 and 2018.

Changes: None.

Causes of Racial and Ethnic Disparities That Originate in School

Comments: Several commenters asserted that disproportionality in special education occurs due to children not receiving the necessary interventions early in their academic career. Disproportionality, according to the commenters, must be addressed in the regular educational environment and earlier in the school process, with administrators responsible for title I programs as partners, and cannot be addressed once children have been referred for evaluation for special education.

Discussion: The Department believes that these regulations address the commenters' concerns. Under § 300.646(d)(3), LEAs identified with significant disproportionality may use funds reserved for comprehensive CEIS to support the needs of both children with and without disabilities. Section 300.646(d) requires the State to identify and address the factors contributing to the significant disproportionality which may include a wide range of factors, some of which were mentioned by commenters. Moreover, under § 300.646(d) the LEA may not limit comprehensive coordinated early intervening services to children with disabilities. To the extent, then, that an LEA identifies the lack of early interventions in the general education program as a factor contributing to the significant disproportionality, it may use funds reserved for comprehensive

CEIS to provide access to early interventions.

As to partnering with administrators of title I programs, we understand the commenters to suggest that title I funds should be used in conjunction with CEIS funds when providing early intervening services. Title I funds may be used this way, provided that all of the requirements attached to the funds are met. Further, CEIS funds may be used to carry out services aligned with activities funded by and carried out under ESEA, if IDEA funds are used to supplement, and not supplant, funds made available under the ESEA for those activities.

Changes: None.

Comments: One commenter noted that, while research suggests that there is disproportionate representation of children of color in special education, in restrictive special education settings, and in exclusionary disciplinary actions, the commenter does not believe this is the result of discriminatory practices. The commenter suggested that the Department should, therefore, concentrate its efforts on guidance, for example, on the appropriate identification of students with disabilities from diverse backgrounds. Similarly, another commenter suggested that instead of focusing on significant disproportionality, the Department should reevaluate the causes of ineffective practices in special education and focus directly upon appropriate services for students with disabilities in special education. Another commenter made this point more generally and suggested that the proposed regulations attempt to solve a problem that may not exist.

Discussion: IDEA section 618(d)(1) (20 U.S.C. 1418(d)(1)) requires States to provide for the collection and examination of data to determine if significant disproportionality based on race and ethnicity is occurring in the State and LEAs of the State. IDEA section 618(d)(2) (20 U.S.C. 1418(d)(2)) specifies that the review of—and if appropriate, revision of—policies, practices, and procedures is a consequence of, rather than a part of, a determination of significant disproportionality. Therefore, the Department does not have the authority to relieve States of their responsibility to determine whether significant disproportionality is occurring in an LEA, or require the review of policies, practices, and procedures, even in the absence of evidence showing discriminatory practices. Moreover, once identified with significant disproportionality, the LEA's review of policies, procedures, and practices and

implementation of comprehensive CEIS under § 300.646(d) could reasonably encompass determinations of whether proper identification practices are in place or determinations of the effectiveness of specific services.

Congress intended for States and LEAs to address significant disproportionality, by race and ethnicity, in special education. We noted in the NPRM various data points from our IDEA section 618 data, and using the standard methodology, indicating that children from certain racial or ethnic groups are overrepresented in special education, particularly in the categories of emotional disturbance, specific learning disabilities, and intellectual disabilities. 81 FR 10967. Further, we noted that some children are overrepresented, by race and ethnicity, with respect to their placement in restrictive settings and with respect to their exposure to disciplinary removals from placement. Therefore, we believe that the Department has both a congressional mandate and factual support for proceeding with this rule.

Changes: None.

Comment: One commenter asserted that the proposed regulations did not address the underlying issues that result in racial and ethnic disparities in the identification of children with disabilities, among them the failure to strictly follow procedures for child find, referral for evaluation, the evaluation itself, and subsequent identification of children as children with disabilities.

Discussion: We disagree and believe that these regulations are designed to directly address any underlying factors and IDEA noncompliance that result in or contribute to significant disproportionality.

Under § 300.646(c), States must provide for a review, and, if necessary, revision of policies, practices, and procedures to ensure compliance with IDEA's requirements if an LEA is identified as having significant disproportionality.

Under § 300.646(d)(1)(ii), an LEA identified as having significant disproportionality must reserve 15 percent of its IDEA part B funds for comprehensive CEIS, to identify and address the factors contributing to the significant disproportionality. If the underlying cause of significant disproportionality is found to be rooted in inappropriate practices, such as a failure to appropriately implement evaluation procedures, this provision would help to identify that issue and require that the problematic practices be changed. In addition, addressing the factors contributing to the significant

disproportionality could include training school personnel on the appropriate implementation of evaluation procedures.

Changes: None.

Proposed Regulations Would Create Racial Quotas

Comment: Many commenters asserted that proposed §§ 300.646(b) and 300.647 would put into place racial quotas that would interfere with the appropriate identification of children with disabilities based purely on the children's needs. Commenters raised concerns that the regulations might generally discourage appropriate identification of children of color, and, in so doing, harm children of color and children from low-income backgrounds. One commenter argued that the regulations will exacerbate inequality for children of color with disabilities and lead to a surge in class action lawsuits by families arbitrarily denied services based on their children's race or ethnicity. Other commenters stated that, if the determination of significant disproportionality is based strictly on numerical data, then the remedy for significant disproportionality, for some LEAs, will be denying access to special education services to children of color. One commenter suggested that to bias LEAs against serving eligible children with special education services is worse than providing these services to children who are only marginally eligible.

Discussion: The Department recognizes the possibility that, in cases where States select particularly low risk ratio thresholds, LEAs may have an incentive to avoid identifying children from particular racial or ethnic groups in order to avoid a determination of significant disproportionality. For this reason, § 300.647(b)(1) provides States the flexibility to set their own reasonable risk ratio thresholds, with input from stakeholders and State Advisory Panels. As part of the process of setting risk ratio thresholds, States must work with stakeholders to identify particular risk ratio thresholds that help States and LEAs to address large racial and ethnic disparities without undermining the appropriate implementation of child find procedures.

Further, nothing in these regulations establishes or authorizes the use of racial or ethnic quotas limiting a child's access to special education and related services, nor do they restrict the ability of IEP Teams to appropriately identify and place children with disabilities. In fact, an LEA's use of racial or ethnic quotas to artificially reduce the number

of children who are identified as having a disability, or inappropriately segregating children in LEAs that serve only children with disabilities, in an effort to avoid a finding of significant disproportionality, would almost certainly conflict with the LEA's obligations to comply with other Federal statutes, including civil rights laws governing equal access to education. States have an obligation under IDEA both to identify significant disproportionality, based on race and ethnicity, in the identification of children with disabilities and to ensure that LEAs implement child find procedures appropriately. (20 U.S.C. 1412(a)(3); 34 CFR 300.111). We agree that the establishment of any such quotas would almost certainly result in legal liability under Federal civil rights laws, including title VI of the Civil Rights Act of 1964 and the Constitution.

We generally believe that the appropriate and timely identification of children with disabilities and the prevention of significant disproportionality on the basis of race and ethnicity are goals that work in concert with one another. In fact, a finding of significant disproportionality could be a signal that an LEA's child find procedures are not working appropriately. One of the goals of § 300.646(b) and (c) is to help LEAs identified with significant disproportionality to review and if appropriate, revise policies, practices, and procedures—including child find procedures—to ensure compliance with IDEA.

At the same time, we are interested in the impact that these regulations may have on the appropriate identification of children with disabilities. As a result, the Department intends to conduct an evaluation of the implementation of this regulation to assess its impact, if any, on how LEAs identify children with disabilities. This evaluation will include an examination of the extent to which school and LEA personnel incorrectly interpret the risk ratio thresholds and implement racial quotas in an attempt to avoid findings of significant disproportionality by States, contrary to IDEA.

Changes: As described above, we have added a new § 300.646(f) to make clear that these regulations do not authorize a State or an LEA to develop or implement policies, practices, or procedures that result in actions that violate any IDEA requirements, including requirements related to child find and ensuring that a free appropriate public education is available to all eligible children with disabilities.

The Purpose of the Proposed Regulations

Comments: One commenter expressed concern that the Department's discussion of the ability to grant waivers to States and the content of the NPRM's directed questions indicate that the Department understands that the proposed regulations do not provide a solution to disproportionality.

Discussion: The NPRM did not include any discussion regarding waivers of IDEA section 618(d). 81 FR 10967. As the commenter points out, IDEA does not include a provision that would allow either the Department, or States, to waive the statutory remedies—including the review and revision of policies, practices, and procedures and reservation of funds for comprehensive CEIS—for LEAs identified with significant disproportionality.

The Department disagrees that the directed questions in the NPRM were an indication that the standard methodology and the flexibilities included in the NPRM will not appropriately identify LEAs with significant disproportionality. Rather, these questions were a means to gather informed input from the public about, among other things, how a standard methodology (and the accompanying flexibilities) should be structured to ensure proper implementation of the requirements of IDEA section 618(d). We appreciate the many informed and thoughtful responses that we received in public comment and have made several changes to the final regulations based on input from the public to improve comparability and transparency while providing States and LEAs sufficient flexibility to appropriately identify and address significant disproportionality.

Changes: None.

Comments: A commenter generally expressed confidence in their LEAs' ability to properly determine eligibility and placement for children with disabilities and to follow board policy with regard to the discipline of all children with disabilities. The Department interpreted this comment to suggest that these regulations are not necessary.

Discussion: The Department agrees with commenters that, in many LEAs, school personnel and LEA officials appropriately implement IDEA's requirements. However, we interpret IDEA section 618(d) to require States to examine data and make determination whether LEAs have significant disproportionality, based on race and ethnicity, irrespective of whether the practices, procedures, and policies of the LEA are appropriate and comply

with IDEA. Given the remedies that States and LEAs must implement following a determination of significant disproportionality, we believe the statute anticipates that the significant disproportionality within the LEA may be addressed by reviewing, and if appropriate, modifying policies, practices, and procedures not in compliance with IDEA, by providing children and staff with additional supports through the implementation of comprehensive CEIS, or by doing both. IDEA section 618(d)(2)(A) and (B), 20 U.S.C. 1418(d)(2)(A) and (B).

Changes: None.

Comment: A few commenters requested assurance that the purpose of the proposed regulations was more substantive than a means of identifying a larger number of LEAs with significant disproportionality.

Discussion: While it is possible that more LEAs may be identified with significant disproportionality as a result of these regulations, this outcome is a consequence of, rather than the purpose of, these regulations. The purpose of these regulations is to increase comparability and transparency in the examination of data and identification of LEAs with significant disproportionality across States to ensure that States are more uniform in implementing IDEA section 618(d). As the GAO noted in its 2013 report, the flexibility States were given to define significant disproportionality, in the absence of this regulation, provided "no assurance that the problem [was] being appropriately identified across the nation." The Department believes that these revised regulations will improve implementation of IDEA section 618(d), build greater knowledge about the extent of these disparities, and provide additional opportunities for stakeholders to understand and shape how LEAs are identified with significant disproportionality.

Ultimately, the purpose of the regulations is to help ensure that LEAs are appropriately identified with significant disproportionality, however many LEAs that may be, so that the children with disabilities in those LEAs receive the services that are appropriate to each of them. Even under a possible scenario where the first years of implementing these regulations increases the number of LEAs with significant disproportionality, using comprehensive CEIS to properly address the contributing factors should also reduce the number of LEAs with significant disproportionality in subsequent years.

Changes: None.

Comment: A number of commenters noted that ensuring proper implementation of IDEA section 618(d) would reinforce existing legal protections under the Civil Rights Act of 1964, the Americans with Disabilities Act, title IX of the Education Amendments Act of 1972, and Section 504 of the Rehabilitation Act.

Discussion: The Department generally agrees with the commenters that the proper implementation of IDEA section 618(d) may serve to reinforce and advance civil rights for all children.

Changes: None.

Comments: None.

Discussion: The Department believes it would be helpful to States and LEAs to clearly state that nothing in this rule supersedes or replaces other applicable constitutional, statutory, or regulatory requirements including those related to ensuring proper implementation of IDEA requirements for child find, free appropriate public education (FAPE), or placement in the least restrictive environment (LRE). Similarly, this rule does not abrogate, conflict with, or identify a specific violation of, any Federal civil rights protection from discrimination, including discrimination based on race, color, national origin, sex, or disability. Further, in establishing the methodology required under this rule (specifically the use of risk ratios and risk ratio thresholds to determine significant disproportionality), the Department does not intend that this methodology be presumed to apply or otherwise occupy the field in other legal contexts where examination of numerical data for racial and ethnic disparities may be relevant, such as enforcement of Federal civil rights laws.

Changes: We have added a new § 300.646(f) to make clear that these regulations do not authorize a State or an LEA to develop or implement policies, practices, or procedures that result in actions that violate any IDEA requirements, including requirements related to child find and ensuring that a free appropriate public education is available to all eligible children with disabilities.

The Cost and Burden of the Regulations

Comment: One commenter anticipated that the implementation of the regulations would be more costly and time intensive than the estimates in the NPRM due to the costs associated with changes to data analysis protocols, documentation and technical assistance to data personnel to assure accurate implementation, and communication with schools and communities.

Discussion: The Department appreciates the commenter's concern and agrees that the initial time estimates to implement the regulation were too conservative. We agree that accurate and high-quality data are necessary to ensure appropriate implementation of the regulation.

Changes: We have increased the time estimates for modified data collection protocols, technical assistance activities, and communication required for implementation and increased the cost estimates for these regulations. In addition, the Department increased the estimated costs associated with consulting with State Advisory Panels to account for the additional time that will now be required for States to identify reasonable minimum n-sizes, reasonable minimum cell sizes, and standards for reasonable progress.

Comment: A few commenters expressed concerns about the amount of staff time that will be needed to implement the regulations. These commenters argued that some States simply do not have the staff the Department suggests are needed, and that there are no additional funds being made available to States for the increase in workload, including workload required to collect and analyze data. One of these commenters therefore recommended that the regulations be withdrawn until adequate funding is provided to support the additional State personnel needed to implement the regulations. Another commenter recommended that the Department work with those States or entities with limited staff support to help them implement the requirements of the proposed regulations. The commenter further argued that, in the past, States and entities could rely on the Regional Resource Centers (RRCs) to assist them in meeting their responsibilities under IDEA. With the elimination of the RRCs, the commenter suggested that some of the currently funded data technical assistance centers be tasked with making staff members available to support the States and other entities to undertake this work. One commenter asserted that if the State's offices responsible for special education oversight are required to monitor action plans to address significant disproportionality, then these new responsibilities will dilute the State's other monitoring responsibilities.

Discussion: While we recognize that States vary widely both in their staffing and financial resources, all States that receive funds under Part B of IDEA must meet the requirements of that Act, including those outlined in IDEA section 618(d), regardless of the funding

provided under the Act. Therefore, the Department disagrees with commenters who requested that the Department delay the implementation of the regulations until adequate funding is provided to support additional State personnel for both this and other requirements of the Act.

However, the Department recognizes that there is burden associated with implementing these final regulations, and States will need varying levels of support to appropriately implement these regulations. Therefore, the Department plans to identify Federal resources to support States' work through the Technical Assistance and Dissemination network and Department staff. When these resources are available, the Department will work to ensure that States are aware of Federal technical assistance resources that can be used to support their implementation of these new regulations.

Changes: None.

Comments: Some commenters requested that the Department clarify whether the examples contained in the report in the NPRM, Racial and Ethnic Disparities in Special Education, were intended to be illustrative or were intended to be duplicated by States or LEAs in setting risk ratios. Other commenters stated that the regulations would cost large amounts of money, both up front and over time, based on the Department's report published with the NPRM, Racial and Ethnic Disparities in Special Education. One commenter stated that the actual cost of the regulation would be \$12 billion, as, according to the commenter, the Department estimated that 8,148 LEAs could be found with significant disproportionality. The commenter stated that, as the Department recommended no increase in the Federal budget for special education, the overall result of the regulation would be a reduction in Federal funding for special education. Another commenter stated that the methodology used in the Department's report would mean a five-fold increase in the number of LEAs identified in one State, which exceeds the State's capacity to address through a review of policies, practices, and procedures and through technical assistance.

Several commenters offered other projections of the number of LEAs that would be identified with significant disproportionality due to these regulations. In general, commenters provided projections based on either the Department's report—Racial and Ethnic Disparities in Special Education—or a projected number of false-positive identifications of LEAs due to small

numbers. According to many of these commenters, over 80 percent of LEAs in one State would be identified with significant disproportionality and would have to transfer tens of millions of dollars away from supporting children with disabilities. We understand this concern to reference the mandatory reservation of funds for comprehensive CEIS by LEAs that are identified with significant disproportionality. Similarly, another commenter stated that Department projects that 23 States will require 50–80 percent of all LEAs to set aside 15 percent of their Federal share for comprehensive CEIS, a redirection of some \$550 million away from direct services for special education.

Discussion: The Department's purpose in creating the Racial and Ethnic Disparities in Special Education report was to provide the public the number and percentage of LEAs that would be identified with significant disproportionality if the Department's example risk ratio thresholds were adopted by all 50 States and the District of Columbia. We did not intend the tables to be indicative of the actual numbers of LEAs that would be identified with significant disproportionality under the proposed regulations, although we can understand how the commenters read the report this way. The tables do not represent an estimated number of LEAs that would be identified under the final regulations, and the risk ratio thresholds included in those tables do not represent the risk ratios thresholds that States must adopt or the standard that the Department will use to determine whether or not specific risk ratio thresholds are reasonable. Under final § 300.647, States retain the flexibility to set reasonable risk ratio thresholds in excess of those identified in the table without necessarily being subject to enforcement actions. Further, as described in greater detail elsewhere, these final regulations provide States with additional flexibilities that were not included in the proposed regulations to set reasonable minimum n-sizes and minimum cell sizes, both of which we expect would reduce the number of LEAs included in the analyses and the number of so-called "false positives" (e.g., LEAs identified due to small changes in the student population that result in large changes in the risk ratio that do not represent any systemic problems giving rise to significant disproportionality). As such, we do not believe that the tables in the Department's report reflect the actual number of LEAs that will be identified

as having significant disproportionality under these final regulations.

The Department therefore does not agree with the cost estimates produced by commenters who used the report as a basis for estimating costs or the number of LEAs that will be identified with significant disproportionality.

Changes: None.

Comment: A few commenters challenged the Department's estimate in the Regulatory Impact Analysis of the NPRM of how many LEAs would be identified with significant disproportionality, stating that the regulation would significantly increase the number of LEAs identified with significant disproportionality. One commenter noted that the Department provided little explanation for its estimates that 400 to 1,200 LEAs could be affected by the regulations.

Discussion: As stated in the NPRM, the Department does not know with a high degree of certainty how many LEAs would be newly identified in future years, particularly given the wide flexibilities provided to States in the final regulations. To address this uncertainty, the Department used SY 2012–13 IDEA section 618 data, in which States identified 449 out of approximately 16,000 LEAs as having significant disproportionality. Using that year's data as a baseline, the Department's estimates were based on the overall number of LEAs identified with significant disproportionality roughly doubling under the proposed regulations. However, to fully examine the sensitivity of our analysis to this estimate, we also included estimates for the number of identified LEAs tripling and quadrupling over the baseline. As discussed in the NPRM, we believe it would be highly unlikely that such an increase would be realized.

Changes: None.

Comment: One commenter expressed that, if only 400 LEAs would be impacted, there is little need for the regulation.

Discussion: We disagree with the commenter's assertion that the likelihood that a small number of LEAs will be affected should determine the appropriateness of regulatory action. Under IDEA, each and every child with a disability is entitled to a free appropriate public education in the least restrictive environment. If the regulations can help to identify and address racial disparities in special education—which may result from inappropriate identification, placement, and discipline of children with disabilities—regulatory action is fully warranted.

Changes: None.

Evaluating the Impact of the Regulation

Comment: One commenter requested that the Department withdraw the proposed regulations due to concerns that they do not include sufficient detail to allow the public to provide informed comments. In particular, the commenter expressed concern that the proposed regulations do not include any national standard, criteria, benchmarks, or goals upon which to gauge State compliance with them. The Department interprets these comments to refer to the impact of the proposed standard methodology.

Discussion: In its 2013 audit, the GAO noted that the wide variability in States' approaches to identifying significant disproportionality made it difficult to determine the extent of significant disproportionality across the Nation, or the extent to which it is being addressed. The Department agrees with the GAO's assessment, and believes States' current implementation of IDEA section 618(d)—with only 28 States and the District of Columbia identifying any significant disproportionality—would not provide an appropriate baseline from which to establish benchmarks or goals for the reduction of significant disproportionality.

The Department's goal in issuing these regulations, as discussed in the NPRM, is to ensure the appropriate review of data and examination for significant disproportionality, and to help States and LEAs address and reduce significant disproportionality. To accomplish this goal, as well as facilitate a better understanding of the extent of significant disproportionality across the Nation, the Department did not propose to decide for States the point at which specific racial or ethnic overrepresentation becomes significant disproportionality; rather, the Department proposed to require States to follow a standard methodology, with flexibility to account for State differences, consistent with the GAO's 2013 recommendation. Further, a key area of flexibility, under § 300.647(b)(1)(i), allows States to set reasonable risk ratio thresholds, with input from stakeholders and State Advisory Panels, under § 300.647(b)(1)(i), subject to the Department's review and enforcement for reasonableness. As the risk ratio threshold is the point at which an LEA is determined to have significant disproportionality, this aspect of the standard methodology has a strong impact on the total cost. Accordingly, the Department's proposal to allow States to select reasonable risk ratio thresholds means that, to a great extent, the final impact of these regulations will

be determined by the States themselves. This relationship between the flexibility afforded to States, and the Department's estimates of the costs of the regulation, were explained in the NPRM. The Department continues to believe that allowing States the flexibility to set reasonable risk ratio thresholds is necessary to account for differences between States, despite the fact that Department-established risk ratio thresholds would allow for a more precise assessment of the costs of the regulation.

Changes: None.

Comment: Several commenters responded to Directed Question #13 in the NPRM, which requested suggestions for the metrics the Department should establish to assess the regulations once they are final. We received a variety of responses.

One commenter suggested that the regulations be measured by whether they reduce or eliminate the number of States and LEAs with significant disproportionality. A different commenter, by contrast, suggested that measures focus on children, not LEAs and suggested that the Department give consideration to the number of children attending LEAs identified with significant disproportionality and the proportion of all children that represents. Another made a similar suggestion, that the Department should compare proportions of children with disabilities identified, placed, and disciplined over three years—within an LEA and across LEAs with comparable demographics—to determine, first, whether there is a decrease in significant disproportionality over the years within LEAs and, second, if trends in significant disproportionality are similar across LEAs with comparable demographics. Still another suggested that the Department monitor metrics that focus on the placement of children with particular impairments—specifically, children with autism, emotional disturbance, or intellectual disability—outside of the regular classroom. The commenter argued that a child's disability should not be the determining factor for where the child spends the school day. Last, a few commenters recommended that the Department assess the regulation's impact on the appropriate identification, placement, and discipline of children with disabilities; increases in placement in the regular classroom for children of color with disabilities; increases in access to the general curriculum for children of color with disabilities; and movement of children of color from restrictive settings to placement in the regular

classroom 80 percent or more of the school day.

A few commenters suggested that the Department use monitoring metrics that include State baseline and progress data but insisted that these data not be used in any ranking or accountability ratings. Another commenter suggested that the Department monitor baseline and progress data that integrate IDEA results-driven accountability measures with measures from Federal elementary and secondary, as well as career and technical, education programs. Another commenter recommended that metrics used to assess the regulation include academic, social, and emotional outcomes.

Finally, a few other commenters interpreted the question broadly, perhaps more broadly than intended. One commenter suggested that the Department develop self-assessments for States, similar to what the Department previously provided for dispute resolution and correctional education. Another commenter suggested the Department measure impact by monitoring and enforcing the requirement in proposed § 300.647(b)(1)(i), which requires States to use advice from stakeholders.

Discussion: The Department appreciates the comments we received addressing what metrics should be established to assess these regulations once they become final, and will take them all into consideration. Further, as States take the steps necessary to implement the regulations, we will be in a better position to determine what evaluation metrics, monitoring, and technical assistance, will be most meaningful and appropriate.

Changes: None.

Reporting Requirements

Comment: A few commenters generally opposed any attempt by the Department to require States to take on additional reporting burden.

Discussion: We recognize the commenters' concern about reporting burden. Under IDEA section 618(d) (20 U.S.C. 1418(d)), States are required to collect and examine data to determine whether significant disproportionality based on race and ethnicity is occurring in the State and the LEAs of the State. Prior to these regulations, the Department clarified in guidance the specific data that States must collect and review with respect to the identification of children as children with disabilities, including the identification of children with particular impairments, placement and disciplinary removals. OSEP Memorandum 08–09 (July 28, 2008).

The Department made a concerted effort, both in our prior guidance and in these final regulations, to ensure that States were only required to collect and examine data that they, and their LEAs, are otherwise obligated to collect and report to the Department and the public under IDEA section 618(a) (20 U.S.C. 1418(a)). We have added a new § 300.647(b)(7) requiring States to report all risk ratio thresholds, minimum cell sizes, minimum n-sizes, standards for measuring reasonable progress and the rationales for each to the Department. Prior to the development of a new data collection to be submitted to the Department at a time and in a manner determined by the Secretary, the *EMAPS User Guide: State Supplemental Survey—IDEA* will be revised to clarify what specific information States should include within their definition of significant disproportionality. The updated survey instructions will be released in February of 2017. The Department is sensitive to the reporting burdens upon States, but believes that the additional reporting requirements created by this regulation will be minimal as States are required to select risk ratio thresholds, minimum cell sizes, and minimum n-sizes, and States will have sufficient time to prepare before that information is required. We also believe that this information will help the Department analyze the impact of this regulation. As noted in the regulation, this information will be collected in a time and manner determined by the Secretary and will not be collected until an information collection request has been completed.

Changes: We have added a new § 300.647(b)(7) requiring States to report all risk ratio thresholds, minimum cell sizes, minimum n-sizes, standards for measuring reasonable progress, and the rationales for each to the Department at a time and in a manner determined by the Secretary. We are currently revising the *EMAPS User Guide: State Supplemental Survey—IDEA* to clarify what specific information States should include within their definition of significant disproportionality. These include requests of States to include information on risk ratio thresholds and minimum cell and n-sizes. The revised survey instructions will publish in February 2017. States will then submit SY 15–16 data.

Comments: Commenters requested that States each be required to submit a long-term plan to the Department for addressing significant disproportionality that includes how they will implement the new regulations and provide support to LEAs.

Discussion: The Department recognizes the value of States having long-term plans to reduce significant disproportionality. Indeed, we believe such an approach, including the setting of appropriate risk ratio thresholds, minimum n-sizes, and minimum cell sizes, can serve to help States identify the most pressing issues facing their students and provide adequate support to LEAs as they work to reduce significant disproportionalities.

In addition, we note that to the extent that implementation of these regulations, including establishing reasonable risk ratio thresholds, cell sizes, n-sizes and a measure for reasonable progress, would require changes to a State's policies and procedures, under § 300.165, States must conduct public hearings, ensure adequate notice of those hearings, and provide an opportunity for public comment. We would expect that States, in consulting with stakeholders, including their State Advisory Panels, would engage in planning to ensure the best results for their students. However, we believe that requiring States to report these plans to the Department would place an unnecessary burden upon them. As such, we decline to require this reporting.

Changes: None.

Comments: A few commenters suggested that the Department add a requirement for States to publicly report risk ratios, including LEA-level risk ratios, regarding placement, noting that they are rarely reported and that LEAs are rarely aware of their own performance. One commenter requested that the Department require States to publish LEA-wide data on suspensions of children of color with disabilities.

Discussion: Under IDEA section 618(a)(3) (20 U.S.C. 1418(a)(3)), the Department has broad authority to require States to collect, and report to the Department and the public, data and information related to Part B of IDEA. In general, the Department does not exercise this authority by including specific reporting requirements in regulations. Rather, the Department issues an information collection request, which is subject to public comment, to specify the data States must collect and report. Under the Department's current information collection (OMB Control No. 1875–0240), States are required to submit counts of children with disabilities, by race, who are (1) identified with a particular impairment, (2) placed in particular educational settings, and (3) subjected to disciplinary removals. We agree with the commenters' suggestion that all of the risk ratios and alternate risk ratios

the States calculate for their LEAs should be made public. This increased transparency allows States, LEAs, and stakeholders alike to monitor significant disproportionality and reinforces the review and revision of risk ratio thresholds, cell sizes, and n-sizes as an iterative public process within each State. The Department therefore anticipates that all risk ratios and alternative risk ratios will be made public but has not yet determined the precise time and manner for this to occur. We anticipate doing so through an information collection request, through the Department's own publication of these data, or some combination of the two.

Changes: None.

Comments: A few commenters suggested that the Department add a requirement for States to publicly report risk ratios calculated to determine disproportionate representation, under IDEA section 612(a)(24).

Discussion: These regulations pertain only to IDEA section 618(d) (20 U.S.C. 1418(d)), which outlines the obligation of each State to collect and examine data to determine if significant disproportionality, based on race or ethnicity, is occurring in the State and LEAs of the State with respect to the identification, placement, or discipline of children with disabilities. A different provision of IDEA—section 612(a)(24) (20 U.S.C. 1412(a)(24))—requires States, consistent with the purposes of IDEA and IDEA section 618(d), to develop policies and procedures designed to prevent the inappropriate over-identification or disproportionate representation by race and ethnicity of children as children with disabilities, including children with disabilities with a particular impairment. Under Indicators 9 and 10 of the Part B State Performance Plan/Annual Performance Report (SPP/APR), consistent with section 616(a)(3)(C) (20 U.S.C. 1416(a)(3)(C)), States are required to report the percent of districts with disproportionate representation of racial and ethnic groups in special education and in specific disability categories that is the result of inappropriate identification. It would be outside the scope of these regulations to prescribe how States collect, calculate, or report data regarding the identification of LEAs with disproportionate representation due to inappropriate identification.

Changes: None.

Comments: One commenter requested that the Department require States to report data on all children who are deaf and hard of hearing, regardless of whether another disability is considered the child's primary disability, in its

IDEA section 618 data collection. The commenter stated that up to 55 percent of deaf and hard of hearing children are reported to have an additional disability. The commenter believed that, if they are counted in the category of their additional disability, but not in the category of hearing impairment, data on the number of deaf and hard of hearing children is incomplete or inaccurate.

Discussion: The Department appreciates the commenter's concern that if children who are deaf or hard of hearing are not counted in the categories of deafness or hearing impairment, but are counted in the another category that is considered the child's "primary disability," the State's section 618 data on the number of deaf and hard of hearing children is incomplete or inaccurate. The commenter's suggestion that the Department change the section 618 data collection for children who are deaf or hard of hearing is outside the scope of this regulation. We also note that children who are deaf or hard of hearing are not included as a category of analysis under § 300.647(b)(3). Therefore, States are not required to determine if significant disproportionality is occurring with respect to the identification of children who are deaf or hard of hearing.

Changes: None.

Comments: A few commenters requested that the Department require States to annually report additional discipline data—suspensions of one day or more disaggregated by impairment, race and ethnicity, gender, and English language proficiency—to the public. These commenters suggested that this data would help address the problem that children identified with deafness, blindness, or traumatic brain injury are often disciplined due to improper school discipline policies or inadequate staff training.

One commenter stated that, under IDEA section 618(a)(1), while States are already required to do this reporting, as of 2013, only 16 States had reported any discipline data for children with disabilities, and only 1 State provided the disaggregated data as required by Statute. The commenter requested that the Department reinforce for the States that compliance with the public reporting requirements of IDEA will be reviewed by the Secretary and could influence the Department's determination of whether risk ratio thresholds are reasonable.

Discussion: The Department declines to require States to annually report additional discipline data under IDEA section 618(a) through these regulations. Further, in the exercise of our responsibilities to ensure compliance

with IDEA, the Department annually reviews each State's SPP/APR, in which each State reports to the Secretary on the performance of the State and makes an annual determination of the State's performance under section 616(d) of IDEA (20 U.S.C. 1416(d)). The Department considers the timeliness and accuracy of data reported by the State under section 618 of IDEA, when making annual determinations for each State under IDEA section 616(d) (20 U.S.C. 1416(d)). The Department would typically address noncompliance with section 618(a) reporting requirements through this process and, as such, we decline to address them as part of this regulation.

Further, States' compliance with the requirement to report to the Department under IDEA section 618(a) is a separate issue from the State's compliance with the requirement to establish reasonable risk ratio thresholds under § 300.647 of the final regulation, which implements IDEA section 618(d). For this reason, we decline the commenters' request to consider States' reporting under section 618(a) in the Department's review of the reasonableness of States' risk ratio thresholds.

Changes: None.

Comments: One commenter requested that the Department eliminate SPP/APR Indicators 4 (rates of suspension and expulsion), 9 (disproportionate representation in special education resulting from inappropriate identification), and 10 (disproportionate representation in specific disability categories resulting from inappropriate identification). The commenter asserted that the standard methodology will require States to duplicate analyses of the same data, albeit with varying definitions, and to report it twice.

Discussion: We are sensitive to concerns about duplicative reporting requirements and seek to reduce them wherever possible. However, multiple distinct provisions of IDEA require States to analyze similar data sets to identify LEAs where racial or ethnic disparities exist. These provisions include IDEA sections 612(a)(24) and 616(a)(3)(C) (20 U.S.C. 1412(a)(24) and 1416(a)(3)(C)), under which States must identify LEAs with disproportionate representation that is the result of inappropriate identification; IDEA section 612(a)(22) (20 U.S.C. 1412(a)(22)), under which States must identify LEAs that have a significant discrepancy in the rate of long-term suspensions and expulsions; and IDEA section 618(d), which is the focus of these regulations. While the Department acknowledges that these provisions may require States to use similar data (*i.e.*,

identification and discipline data disaggregated by race and ethnicity), the data analysis required to identify LEAs with disproportionate representation, a significant discrepancy, and significant disproportionality is different. As States have an obligation under IDEA to comply with each of these provisions, we believe it is appropriate for the Department to monitor their implementation separately.

Further, the Department does not have flexibility to eliminate Indicators 9 and 10 of the SPP/APR—under which States report their implementation of IDEA section 612(a)(24)—as States are explicitly required to submit this information under IDEA section 616(a)(3)(C) (20 U.S.C. 1416(a)(3)(C)).

Changes: None.

Additional State and Local Standards

Comments: One commenter requested that the Department set State and local standards, as well as national standards, for identifying and addressing significant disproportionality.

Discussion: To the extent that the commenter means that the Department should, in addition to the standard methodology, require States and LEAs to adopt additional standards for identifying significant disproportionality, we believe this is unnecessary. The standard methodology in § 300.647 implements the requirement in IDEA section 618(d) (20 U.S.C. 1416(d)) that each State annually collect and examine data to determine if significant disproportionality based on race and ethnicity is occurring in the State and the LEAs of the State with respect to the identification, placement, and discipline of children with disabilities. Section 300.647 sets common parameters for analysis, which each State must use to determine whether significant disproportionality is occurring at the State and local level. As such, there is no need for the Department to set any separate State or local standards.

To the extent that the commenter means that the Department should set State and local standards for addressing significant disproportionality once it is identified in LEAs, we believe that this is not the best approach given the potential variability in the needs of students with and without disabilities in the various States and LEAs and that further prescribing the ways that States and LEAs must respond to significant disproportionality is unnecessary at this time and in these regulations.

IDEA section 618(d)(2)(B) (20 U.S.C. 1418(d)(2)(B)), requires LEAs identified with significant disproportionality to reserve 15 percent of their IDEA Part B

funds for comprehensive CEIS. The Department believes that the specifics of how those funds are to be used to address the underlying factors is best left to State and local officials. The Department notes that IDEA section 613(f) (20 U.S.C. 1413(f)) already sets out examples of the kinds of activities that may be funded. Section 300.646(d) of these regulations does the same and adds, in § 300.646(d)(1)(ii), that comprehensive CEIS must be directed to identifying and addressing the factors contributing to the significant disproportionality in the LEA. Regulations specifically prescribing how this is to be done cannot possibly address the myriad circumstances and needs that local officials will encounter when determining how best to provide comprehensive CEIS.

Changes: None.

Noncompliance With IDEA

Comments: One commenter requested that the Department not consider a finding of significant disproportionality as a finding of noncompliance with IDEA which, as explained in OSEP Memorandum 09–02 (October 17, 2008), would require correction at the individual and systems levels within one year of the finding. IDEA sections 616 and 642 (20 U.S.C. 1416 and 20 U.S.C. 1442). The commenter stated that a finding of significant disproportionality is merely an indication that policies, practices, and procedures warrant further attention due to the number of children of a race or ethnicity that have been identified, placed, or disciplined, as opposed to an indication that the LEA has taken inappropriate action. Further, the commenter, along with one other, argued that a State would not be able to enforce the correction of non-compliance for individual children affected by disproportionality with respect to identification or placement, as these are IEP Team decisions.

Discussion: The Department generally agrees with the commenters' description of a finding of significant disproportionality. An LEA found to have significant disproportionality is not necessarily out of compliance with IDEA; rather, as the commenter indicated, the significant disproportionality is, among other things, an indication that the policies, practices, and procedures in the LEA may warrant further attention.

If an LEA is identified with significant disproportionality, the State must provide for review and, if appropriate, revision of policies, practices, and procedures used in identification or placement in particular education

settings, including disciplinary removals, to ensure they comply with the requirements of IDEA.

If the State identifies noncompliance with a requirement of IDEA through this review, then under § 300.600(e), the State must ensure that the noncompliance is corrected as soon as possible, and in no case later than one year after the State's identification of the noncompliance. When verifying the correction of identified noncompliance, the State must ensure that the LEA has corrected each individual case of noncompliance, unless the child is no longer within the jurisdiction of the LEA and the State determines that the LEA is correctly implementing the specific regulatory requirement(s) based on a review of updated data such as data subsequently collected through on-site monitoring or a State data system, as explained in OSEP Memorandum 09–02, dated October 17, 2008.

Changes: None.

General Opposition to the Regulation

Commenters: A number of commenters expressed general opposition to the proposed regulations, which they understood to cut special education funding. A few commenters expressed general opposition to the Department's proposed regulations as a whole, without further clarification.

Discussion: Final §§ 300.646 and 300.647 do not change the level of funding under IDEA provided to States or their LEAs. To the extent that these commenters are referring to the required reservation of funds to provide comprehensive CEIS, we note that IDEA section 618(d)(2)(B) (20 U.S.C. 1418(d)(2)(B)) makes the reservation mandatory upon a finding of significant disproportionality in an LEA. The Department does not have the authority to alter this statutory requirement. As to the commenters who express general opposition, we set out throughout this document our reasons for proceeding with these regulations.

Changes: None.

Comments on the Racial and Ethnic Disparities Report

Changes: None.

Comments: A few commenters expressed concern that they were unable to reproduce the example risk ratio thresholds or verify the calculations published in the Department's report, Racial and Ethnic Disparities in Special Education. Other commenters requested that we publish the business rules associated with the report.

Discussion: We apologize for any concern or confusion the report may

have caused. We attempted to include the necessary details and explanations with the report, which we believe are responsive to the request for business rules. It was, however, not necessary, nor was it our intent, for States to reproduce the risk ratio thresholds or minimum n-size used in the report. The Department did not intend for States to adopt the risk ratios or minimum n-size in the report (referred to as “cell size” in the NPRM and the report), and the report did not account for the flexibilities provided in the regulations. Rather, the purpose of including the report was to provide the public with a set of tables showing the number and percentage of LEAs that would be identified with significant disproportionality if the Department’s example risk ratio thresholds and minimum n-size were adopted by all 50 States and the District of Columbia.

Changes: None.

Timeline and Effective Date of the Regulation

Comment: A number of commenters expressed concerns about the timeline for the implementation of the new regulations. One commenter stated that, if the regulations go into effect immediately, it would be costly to require States to retroactively implement the standard methodology, determine significant disproportionality, and notify LEAs. The commenter added that this timeline would present a challenge for States that have already made their significant disproportionality determinations for the next year. The commenter concluded by recommending a phase-in period for the implementation of the new standard methodology and the consequences for LEAs.

Similarly, another commenter stated that the Department should first run a pilot year in selected States. This, the commenter said, would allow States to prepare new personnel to implement the regulations (as, according to the commenter, there has been personnel turnover since the last regulation of IDEA section 618(d)); provide the Department with additional time to prepare comprehensive guidance and technical assistance; provide the Department an opportunity to determine whether these regulations are likely to address racial and ethnic disparities; and support more accurate and complete national data, due to the availability of stronger guidance. Finally, other commenters requested that the Department give States and LEAs additional time to understand the new standard methodology and

proactively make efforts to address racial and ethnic disparities.

Discussion: The Department agrees that additional time is needed to implement these regulations. With time for compliance delayed, we believe there is no need for a phase-in year or a pilot year in selected States.

These regulations become part of the Code of Federal Regulations on January 18, 2017. However, States and LEAs will not be required to comply with these regulations until July 1, 2018, and, in the case of § 300.647(b)(3)(iii), States may delay including children ages three through five in the review of significant disproportionality with respect both to the identification of children as children with disabilities and to the identification of children as children with a particular impairment, until July 1, 2020.

The Department recognizes the practical necessity of allowing States time to plan for implementation of these final regulations, including time to amend the policies and procedures necessary for compliance. States will need time to develop the policies and procedures necessary to implement the standard methodology in § 300.647 and the revised remedies in § 300.646(c) and (d). In particular, States must consult with their stakeholders and State Advisory Panels under § 300.647(b)(1) to develop reasonable risk ratio thresholds, a reasonable minimum n-size, a reasonable minimum cell size, and, if a State uses the flexibility described in § 300.647(d)(2), standards for determining whether an LEA has achieved reasonable progress under § 300.647(d)(2) in lowering a risk ratio. States must also determine which, if any, of the available flexibilities under § 300.647(d) they will adopt. To the extent States need to amend their policies and procedures to comply with these regulations, States will also need time to conduct public hearings, ensure adequate notice of those hearings, and provide an opportunity for public comment, as required by § 300.165.

Accordingly, States must implement the standard methodology under § 300.647 in SY 2018–19. In doing so, States must identify LEAs with significant disproportionality under § 300.647(c)(1) in SY 2018–2019 using, at most, data from the three most recent school years for which data are available. We note that, in the case of discipline, States may be using data from four school years prior to the current year, as data from the immediate preceding school year may not yet be available at the time the State is making its determinations (*i.e.*, final discipline data from SY 2017–2018 may not yet be

available at the time during SY 2018–2019 the State is calculating risk ratios).

States must ensure that the identification of LEAs with significant disproportionality based on race and ethnicity in the identification, placement, or disciplinary removal of children with disabilities in SY 2018–2019, is based on the standard methodology in § 300.647, and then implement the revised remedies in accordance with § 300.646(c) and (d). In the spring of 2020, therefore, States will report (via IDEA Part B Maintenance of Effort (MOE) Reduction and Coordinated Early Intervening Services (CEIS) data collection, OMB Control No. 1820–0689) whether each LEA was required to reserve 15 percent of their IDEA Part B funds for comprehensive CEIS in SY 2018–19.

States may, at their option, accelerate this timetable by one full year. States may implement the standard methodology in SY 2017–18 and assess LEAs for significant disproportionality using data from up to the most recent three school years for which data are available. States that choose to implement the standard methodology in § 300.647 to identify LEAs with significant disproportionality in SY 2017–2018 may also require those LEAs to implement the revised remedies in accordance with § 300.646(c) and (d).

Whether a State begins compliance in SY 2017–2018 or 2018–2019, it need not include children ages three through five in the review of significant disproportionality with respect both to the identification of children as children with disabilities and to the identification of children as children with a particular impairment, until July 1, 2020.

Finally, the delayed compliance date does not mean that States are excused from making annual determinations of significant disproportionality in the intervening years. States must still make these determinations in accordance with the current text of § 300.646.

Changes: None.

Appropriate Placement of Children With Disabilities

Comments: Commenters expressed concerns that the Department is encouraging the placement of children with disabilities in the regular classroom, irrespective of their needs or IEP Team decisions. One commenter expressed concern at the Department’s perceived suggestion that children placed in restrictive environments receive substandard education and do not receive appropriate services. The commenter noted that, while the Department stated its intention not to

limit services for children with disabilities who need them, its suggestion that over-identification results in restrictive placements and less challenging academic standards suggests otherwise. The commenter noted that private, specialized education programs that serve children with disabilities publicly placed by LEAs are required to meet the same academic standards as public schools and that each public agency is required to ensure that a continuum of alternative placements and services is available to children with disabilities.

Discussion: The Department agrees with commenters that it would be inappropriate to place all children with disabilities in the general education classroom 100 percent of the time without regard to their individual needs or IEP Team decisions, including decisions about supplementary aids and services that will enable the child to be involved in, and make progress in, the general education curriculum. Section 300.115 explicitly requires that each public agency ensure that a continuum of alternative placements is available to meet the needs of children with disabilities for special education and related services. Further, § 300.116 requires that each child's placement decision must be made in conformity with the least restrictive environment (LRE) provisions in §§ 300.114 through 300.118. The LRE provision in IDEA section 612(a)(5), (20 U.S.C. 1412(a)(5)) and its implementing regulation in § 300.114 require, to the maximum extent appropriate, that children with disabilities, including children in public or private institutions or other care facilities, be educated with children who are not disabled. Special classes, separate schooling, or other removal of children with disabilities from the regular educational environment should occur only when the nature or severity of the disability of a child is such that education in regular classes with the use of supplementary aids and services cannot be achieved satisfactorily. Unnecessarily removing children with disabilities from an integrated setting and concentrating them in separate schools runs contrary to the integration goal that lies at the heart of the Americans with Disabilities Act (ADA). (See, e.g., 28 CFR 35.130(b)(1)(ii), (b)(1)(iv), (b)(2); see also, *Olmstead v. L.C.*, 527 U.S. 581, 597 (1999) ("Unjustified isolation, we hold, is properly regarded as discrimination based on disability" under title II of the ADA).) Additionally, under § 300.116, a child's placement must be determined at least annually, be based on the child's

individualized education program (IEP), and be as close as possible to the child's home. The overriding rule is that placement decisions must be determined on an individual, case-by-case basis, depending on each child's unique needs and circumstances and, in most cases, based on the child's IEP. Further, eligibility determinations and placement decisions must be made at the local level with parental input and in accordance with the requirements of IDEA and its implementing regulations.

These regulations do not override either the requirement under § 300.306(a) that eligibility determinations must be made by a group of qualified professionals and the parent of the child or the requirement under § 300.116(a)(1) that placement decisions must be made by a group of persons, including the parents, and other persons knowledgeable about the child, the meaning of the evaluation data, and placement options.

However, to the extent that a State identifies significant disproportionality based on race or ethnicity with respect to identification and placement in an LEA, we believe it is fully appropriate, as IDEA section 618(d)(2)(A) (20 U.S.C. 1418(d)(2)(B)) requires, for there to be a review, and, if necessary, revision, of the policies, practices, and procedures of the LEA to ensure that eligibility and placement decisions are consistent with IDEA's focus on providing children with disabilities a free appropriate public education in the least restrictive environment based on their individual needs.

Changes: None.

Comments: Many commenters raised concerns that a standard methodology would be inconsistent with the individualized nature of IDEA. Some were concerned that proposed § 300.647(b) would lead LEAs to establish strict, albeit unofficial, quotas on the numbers of children with disabilities who could be identified, placed in particular settings, or disciplined in order for the LEA to avoid being identified with significant disproportionality. These commenters stated that this practice, or any uniform mathematical calculation, would fail to consider each child's individual needs. Other commenters had similar concerns, noting that identification and placement decisions are appropriately made by IEP teams on an individual basis—based on a full, fair, and complete evaluation, consistent with IDEA's requirements—and argued that it would be inappropriate for the Department to promulgate a regulation that could exert undue pressure on those decisions. These commenters said that discipline

decisions alone should be subject to analysis for significant disproportionality, as it was the only category that was an administrative decision and not the purview of IEP teams.

Discussion: Under IDEA section 601(d)(1)(A) (20 U.S.C. 1400(d)(1)(A)), one of the purposes of IDEA is to ensure that all children with disabilities have available to them a free appropriate public education that emphasizes special education and related services designed to meet their unique needs. The Department disagrees with the assertion that any uniform methodology for determining significant disproportionality in LEAs would be inconsistent with IDEA's emphasis on addressing the unique needs of individual children. In fact, one of the main goals of these regulations is to help ensure, through improved implementation of section 618(d) of IDEA, that identification and placement decisions are, in fact, based on the unique needs of individual children, rather than the result of problematic policies, practices, and procedures that may differentially and inappropriately affect children in various racial and ethnic groups.

Once an LEA is identified as having significant disproportionality, it would not be appropriate for the LEA to overturn prior decisions regarding the identification of children as children with disabilities or the placement of children with disabilities in particular educational environments simply to prevent future findings of significant disproportionality.

Moreover, it is a violation of IDEA for LEAs to attempt to avoid determinations of significant disproportionality by failing to identify otherwise eligible children as children with disabilities. IDEA sections 612(a)(3)(A) and 613(a)(1), 20 U.S.C. 1412(a)(3)(A) and 20 U.S.C. 1413(a)(1). Imposing artificial numerical targets on the groups responsible for making eligibility determinations under § 300.306(a)(1) or placement decisions under § 300.116(a)(1), or restricting their ability to make eligibility determinations or placement decisions based on the unique needs of the child are also inconsistent with IDEA. IDEA requires that the individual needs of children with disabilities, as described in their IEPs, be central to determining eligibility for IDEA services and appropriate placement.

Furthermore, IDEA and its implementing regulations currently include provisions to safeguard individualized decision-making. States must ensure that all LEAs, including

those determined to have significant disproportionality with respect to identification, implement the States' child find procedures. (20 U.S.C. 1412(a)(3) and (a)(11) and 20 U.S.C. 1416 (a)(1)(C)) (34 CFR 300.111, 300.149 and 300.600). States must also ensure that LEAs comply with specific evaluation procedures under IDEA section 614(b) (20 U.S.C. 1414(b)) to determine a child's eligibility for special education services and ensure that a child's placement in a particular education setting is based on his or her IEP (§ 300.116(b)) and is in the least restrictive environment (IDEA section 612(a)(5)) (20 U.S.C. 1412(a)(5)). Under IDEA section 618(d)(2)(A) (20 U.S.C. 1418(d)(2)(A)), States must provide for an annual review, and, if appropriate, revision of policies, practices, and procedures to ensure that LEAs identified with significant disproportionality are in compliance with IDEA's requirements. Through this review process and their monitoring procedures, States have an opportunity to ensure that LEAs identified with significant disproportionality appropriately implement child find, evaluation, and placement procedures.

Last, while the Department will require all States to use a standard methodology to implement IDEA section 618(d), we believe that § 300.647(b) provides States with sufficient flexibility to prevent unintended consequences associated with the use of a numerical formula to identify significant disproportionality. When risk ratio thresholds are set too low, we believe there is some risk that LEAs may face pressure to inappropriately limit or reduce the identification of children with disabilities to avoid a determination of significant disproportionality. For this reason, we believe it is important for States to take time to consult with their stakeholders and State Advisory Panels to ensure that, when setting risk ratio thresholds, they balance the need to identify significant disproportionality in LEAs with the need to avoid perverse incentives that would inhibit a child with a disability from being identified or placed in the most appropriate setting based on the determination of the IEP Team.

Changes: None.

Special Education—Generally

Comments: A few commenters asserted that special education must be seen as a support for children, not as bad for children or as a punishment, and that it was inappropriate for the Department to suggest that special

education services are generally of low quality.

Discussion: We agree that special education and related services provided in conformity with a child's IEP are essential for children with disabilities to receive a free appropriate public education. We do not agree that we in any way suggested that special education services are of low quality or that they are a punishment of any kind. To the extent that children in particular racial or ethnic groups are disproportionately identified as children with disabilities, placed in particular educational environments, and disciplined, it is possible that the special education and related services that those children are receiving are inappropriate for their specific needs. This says nothing about the quality of the services that LEAs provide to children with disabilities generally.

Changes: None.

Results-Driven Accountability

Comments: Some commenters expressed concerns that the proposed regulations divert OSEP away from results-driven accountability—which includes consideration of both compliance and results data in measuring States' performance under IDEA annual determinations process—and back towards IDEA compliance alone.

Discussion: We disagree. The Department's re-conceptualized IDEA accountability system—results-driven accountability—is designed to support States in improving results for children with disabilities, while continuing to assist States in ensuring compliance with IDEA's requirements. We believe that an effective accountability system is attentive to both goals. High quality results do not mitigate a State's responsibility to comply with the statute, just as compliance with the statute does not reduce the imperative for States to achieve improved results for children with disabilities. While significant disproportionality has not been included as a compliance indicator in the SPP/APR, States are still responsible for complying with IDEA section 618(d) (20 U.S.C. 1418(d)), and for ensuring that LEAs identified with significant disproportionality carry out the statutory remedies. Nothing in the regulations changes these obligations, and the Department maintains its responsibility to monitor and enforce the implementation of this requirement.

Changes: None.

II. A Standard Methodology for Determining Significant Disproportionality (§ 300.647)

General

Comments: The Department received several comments in support of proposed § 300.647(b), which would require States to follow a standard methodology to identify significant disproportionality in the State and the LEAs of the State. Many supported particular features of the proposed methodology, including the use of a standard method to compare racial and ethnic groups and minimum n-size requirements, and others expressed support for having a general or common methodology.

One commenter also noted that proposed § 300.647(b) addressed the GAO's recommendation to develop a standard approach for defining significant disproportionality. One commenter described observing racial and ethnic disparities within LEAs that went unaddressed by States and that State definitions of significant disproportionality were so complex that they were difficult to comprehend. Other commenters stated that the standard methodology in proposed § 300.647(b) would provide much needed clarity and draw attention to potentially inappropriate policies, practices, and procedures for the identification, placement, and discipline of children with disabilities. Some of these commenters stated that common standards are the only way for the public and the Department to judge the efforts of the States and to ensure transparency in this area.

Discussion: The Department appreciates the comments in support of the creation of a standard methodology to identify significant disproportionality in the identification, placement, and discipline of children with disabilities. We agree that these regulations will help to improve comparability of significant disproportionality determinations across States, increase transparency in how States make determinations of LEAs with significant disproportionality, improve public comprehension of a finding of significant disproportionality (or lack thereof), and address concerns raised by the GAO.

Changes: None.

Comments: Many commenters expressed concern that the standard methodology is unnecessary, has not been sufficiently reviewed, or should be further researched before its adoption is required to prevent potential harm to States that already address significant disproportionality well. Another

commenter argued that, without substantive analysis of the intended and unintended results, it was premature to implement the standard methodology at a national level. Further, the commenter recommended that the standard methodology be subject to a pilot test to explore fiscal, data analysis, and systems change issues after a full review of public comment. Another commenter recommended that the Department postpone issuing these regulations until it had better knowledge of appropriate methods for measuring racial differences. One commenter acknowledged the complexity involved in measuring racial and ethnic disparities but stated that there is no reason why a measurement strategy cannot be selected, implemented, and studied after the regulations are in place. The Department interpreted this comment to suggest that is not necessary to study, or pilot, a particular method of measuring racial and ethnic disparities before State use of the method is required by regulation.

Discussion: The Department appreciates all of the comments about § 300.647(b). However, for the reasons that follow, we do not believe it is necessary to remove the requirement that States use the standard methodology in § 300.647 to determine if significant disproportionality based on race and ethnicity is occurring in the State and LEAs of the State. Further, we disagree with commenters' concerns that the standard methodology requires further research before being implemented or could cause substantial harm to States that are doing well in addressing significant disproportionality.

In developing the standard methodology, the Department drew heavily from current State practices. As we noted in the NPRM, most States, as part of their methodology for comparing racial and ethnic groups for the purpose of identifying significant disproportionality, already use a version of the risk ratio, a minimum n-size or cell size, a threshold over which LEAs are identified with significant disproportionality, and up to three years of data when making an annual determination.

States also have flexibility to tailor the standard methodology to the needs of their populations. This flexibility includes the ability to set reasonable risk ratio thresholds and reasonable minimum cell sizes and n-sizes (all with input from stakeholders, including the State Advisory Panel), the choice to use up to three years of data before making a determination of significant disproportionality, and the option to not

identify LEAs that exceed the risk ratio threshold but are making reasonable progress under § 300.647(d)(2) in lowering their risk ratios in each of the two prior consecutive years. We provided this flexibility because we believe it is appropriate for States to tailor their implementation of these regulations to their unique circumstances—and, as they feel necessary, make adjustments—rather than delay the implementation of the regulations. Nothing in the regulations prohibits States from changing their risk ratio thresholds, population requirements, or flexibilities in accordance with § 300.647 if, after implementation of the regulations, they determine that reasonable adjustments are needed.

The Department appreciates the suggestion that States pilot the standard methodology and analyze its effects prior to adopting the regulations nationwide; however, we decline to accept the suggestion. Given that the standard methodology is largely based on approaches currently in use among States, we agree with the commenter who asserted that additional study of the standard methodology after the regulations are in place, rather than before, is appropriate. Accordingly, we plan to evaluate the impact of these regulations, including the implications of using risk ratios to compare racial and ethnic groups. We also believe that the considerable flexibility provided to States will allow researchers to collect and study valuable data regarding different applications of the standard methodology across States.

Changes: None.

Comments: One commenter suggested that the States' loss of flexibility to define significant disproportionality may create other, more significant forms of inequity and inappropriate identification. The commenter did not further detail the types of inequity that might arise.

Discussion: While § 300.647(b) requires that all States follow a standard methodology to identify significant disproportionality, we believe that these regulations provide States with sufficient flexibility to tailor their implementation to their unique circumstances. This flexibility includes the ability to set reasonable risk ratio thresholds, reasonable minimum cells sizes and n-sizes (with input from stakeholders, including the State Advisory Panel), the choice to use up to three years of data before making a determination of significant disproportionality, and the option to not identify LEAs that exceed the risk ratio threshold but are making reasonable

progress under § 300.647(d)(2) in lowering their risk ratios in each of the two prior consecutive years.

Changes: None.

Comments: Numerous commenters noted that each State's disproportionality processes have been approved by the Department and recommended that, in lieu of these regulations, the Department address any concerns regarding disproportionality, or definitions of significant disproportionality, State by State.

Discussion: The Department does not believe that approach would achieve the goals of improved transparency and consistency among States. We believe that the standard methodology adopted in these final regulations is a necessary step to achieve those goals.

Changes: None.

Comments: One commenter was concerned about the Department's contention that States' current methodologies of identifying significant disproportionality were inappropriate, given that the Department's contention is based on a data analysis that uses a methodology different from the States' methodologies.

Discussion: The Department disagrees that the basis for these regulations is a single analysis conducted by the Department. The standard methodology provides basic guidelines to facilitate greater consistency among States, consistent with the GAO's recommendations, and to promote greater transparency in State efforts to address significant disproportionality. The recommendations of the GAO, public comments the Department received in a response to a 2014 request for information (79 FR 35154), and the Department's review of State definitions of significant disproportionality all informed the Department's decision to require that all States follow a standard methodology.

Comments: One commenter stated that, because there is no flexibility once an LEA is identified with significant disproportionality, States make decisions about their methodologies to ensure LEAs are not inappropriately identified for arbitrary factors unrelated to policies, practices, and procedures.

Discussion: While it is important for States to appropriately identify LEAs for significant disproportionality, we disagree with the commenter that identification of significant disproportionality is arbitrary if it is based on factors unrelated to an LEA's policies, practices, or procedures. IDEA section 618(d) (20 U.S.C. 1418(d)) is not intended solely to address significant disproportionality that results from inappropriate policies, practices, or

procedures. Under IDEA section 618(d)(2) (20 U.S.C. 1418(d)(2)), a review of policies, practices, and procedures is a consequence of, not a part of, a determination of significant disproportionality. Under this provision, once LEAs are identified with significant disproportionality, States are required to ensure the review and, if appropriate, revision of the LEAs' policies, practices, and procedures to ensure they comply with IDEA.

Changes: None.

Comments: One commenter argued that the ability to make comparisons among States, if that is the Department's goal with these regulations, does not result in meaningful discussion or problem-solving as each State is unique.

Discussion: By requiring that all States follow a standard methodology, it is the Department's intent to foster greater comparability in the approaches States use to identify significant disproportionality. While States will have flexibility to determine their own reasonable risk ratio thresholds, to determine reasonable population requirements, such as a minimum n-size or cell size, and to use up to three consecutive years of data, we believe the standard methodology provides comparability that is key to promoting transparency in the States' implementation of IDEA section 618(d), and, in turn, meaningful discussion with stakeholders and State Advisory Panels regarding the State's progress in addressing significant disproportionality. These comparisons among States are currently not possible, given, for example, the vastly different methods States currently use to compare racial and ethnic groups, as was described in the NPRM.

Changes: None.

Comments: One commenter expressed concern that the Department's standard methodology is inconsistent with IDEA. The commenter stated that, when reauthorizing IDEA in 2004, Congress expanded the law's focus on issues related to disproportionality by including consideration of racial disparities and by adding certain enforcement provisions out of a "desire to see the problems of over-identification of minority children strongly addressed." The commenter noted that Congress did not define the term "significant disproportionality" or impose a methodology to determine whether significant disproportionality based on race or ethnicity in the State and its LEAs is occurring. According to the commenter, each State was left to choose its own methodology for determining whether there is significant disproportionality in the State and its

LEAs with respect to identification, placement, and discipline of racial and ethnic minority children with disabilities. The commenter argued that this intent was reflected in final IDEA Part B regulations, promulgated by the Department in August 2006, which stated that "[w]ith respect to the definition of significant disproportionality, each State has the discretion to define the term for the LEAs and for the State in general." The commenter stated that, in 2006, the question of whether to impose a methodology for determining significant disproportionality was rejected by the Department as inconsistent with the law. The commenter also argued that an expansion of the Department's authority to determine whether States' risk ratio thresholds are reasonable conflicts with congressional intent, as the law does not support a national standard for determining significant disproportionality. Other commenters expressed similar concerns, stating that proposed § 300.647(b) was an example of Federal overreach—an improper attempt to control local education.

Discussion: We agree with the commenter that, at the time of the 2006 regulations, the Department declined to include a definition of significant disproportionality in the regulations. At the time, the Department stated that there are multiple factors to consider in making a determination of significant disproportionality—such as population size, the size of individual LEAs, and composition of State population—and determined that States were in the best position to evaluate those factors. 71 FR 46738. However, the Department did not state that a definition of significant disproportionality would be inconsistent with the law.²

The fact that the Department chose not to regulate on these issues in 2006, based on information and experience available at the time, does not preclude the Department from doing so now under our authority to issue regulations under IDEA section 607(a) (20 U.S.C. 1406(a)). Under IDEA section 618(d)(1) (20 U.S.C. 1418(d)(1)), States must collect and examine data to determine each year whether significant disproportionality based on race and ethnicity is occurring in the State and its LEAs with respect to the

identification, placement, and discipline of children with disabilities. The Department has the authority to issue regulations to the extent regulations are necessary to ensure compliance with the requirements of Part B of IDEA (IDEA section 607(a) (20 U.S.C. 1406(a)). As we noted in the NPRM, the Department concurs with findings by the GAO that the variability in State definitions of significant disproportionality has made it difficult to assess the extent to which States are appropriately identifying LEAs with significant disproportionality. Based on the GAO's findings, comments received in response to a June 2014 request for information on addressing significant disproportionality under IDEA section 618(d), and the field's experience with IDEA section 618(d) over the last 12 years, the Department now believes that these proposed changes are necessary to ensure that States meaningfully identify LEAs with significant disproportionality and that the statutory remedies are implemented in a manner that addresses any significant disproportionality identified.

We do not believe that standardization of an analysis required under a Federal statute, consistent with the authority provided to us in that same statute, while providing a great deal of flexibility to States, constitutes Federal overreach. Nothing in these regulations requires the adoption of particular educational practices at the local level or seeks to exert control of local education decision-making.

Changes: None.

Comments: One commenter noted that Directed Questions #5, #9, #10, and #12 all inquire whether the Department should place future mandates, requirements, or restrictions upon the States relating to creation of risk ratio thresholds or State flexibility to define "reasonable progress." The commenter stated that additional Federal oversight in the form of mandates, requirements, or restrictions is unwarranted and inappropriate. The commenter claimed the States and their respective State boards or departments of education are most knowledgeable about the issues affecting them. As such, the commenter argued that those issues are best left to the discretion of individual States.

Discussion: As the Department has explained in detail, both in the NPRM and in this document, we believe these regulations are necessary to ensure consistent State action in examining LEAs for significant disproportionality based on race and ethnicity in the identification, placement, and discipline of children with disabilities. Again, as the GAO found in its 2013

² In the 2006 IDEA regulation, just prior to the Department's discussion regarding a definition of significant disproportionality, the Department did note that another commenter's suggestion was inconsistent with IDEA. This commenter had proposed that the Department amend the regulation to clarify that the determination of significant disproportionality should be based on a review of LEA policies and procedures, and not just a numerical determination. 71 FR 46738.

study, only two percent of more than 15,000 LEAs nationwide were required in SY 2010–11 to provide comprehensive CEIS, and the Department found, in SY 2012–13 that 22 States did not identify any LEAs as having significant disproportionality.

That said, we agree that flexibility is necessary for States, and these final regulations give States the flexibility to determine reasonable risk ratio thresholds, reasonable minimum cell sizes and n-sizes, and standards for reasonable progress after consultation with stakeholders and State Advisory Panels. Section 300.647(d) of the final regulations provides additional flexibilities to States.

Under § 300.647(d)(1) a State is not required to identify an LEA with significant disproportionality until it has exceeded the risk ratio threshold set by the State for up to three years. Under § 300.647(d)(2), a State is not required to identify an LEA that has exceeded the risk ratio threshold with significant disproportionality until the LEA ceases to make reasonable progress in lowering its risk ratio in each of two prior consecutive years.

Changes: None.

Comments: One commenter stated that it is discriminatory to create a formula for how many children of color can be identified as having disabilities. Another commenter stated that the Department's proposal would force LEAs to serve children based on the Department's understanding of how many children should be served, rather than on the individual needs of each child. A number of commenters argued that individual children need to be assessed without consideration of their race, ethnicity, socioeconomic status, sexual orientation, or gender.

Discussion: The Department agrees with commenters that the determination of whether a child is eligible for special education services must not include consideration of his or her race, ethnicity, socioeconomic status, sexual orientation, or gender, or any numerical formula associated with these characteristics. LEAs must also follow specific evaluation procedures under IDEA section 614(b) (20 U.S.C. 1414(b)) to determine a child's eligibility for special education services.

However, we disagree that the standard methodology under § 300.647(b) represents a formula indicating how many children of color, or children in general, may be identified as children with disabilities. As we note elsewhere in this section, we believe that restricting the ability to make eligibility determinations by imposing artificial numerical targets on the groups

responsible for making eligibility determinations under § 300.306(a)(1) is inconsistent with IDEA. The standard methodology is not intended to guide determinations of eligibility for special education; rather, it is designed to help States to appropriately determine whether significant disproportionality, based on race and ethnicity, is occurring within an LEA with respect to the identification, placement, and discipline of children as children with disabilities. For LEAs determined to have significant disproportionality, the statute requires that the State provide for a review, and, if necessary, revision of policies, practices, and procedures to ensure compliance with IDEA and require each LEA to implement comprehensive CEIS to address the factors contributing to the significant disproportionality.

Changes: None.

Comments: One commenter stated that the proposed regulations do little to address significant disproportionality and that the only way to address disparities in identification is to provide guidance to States and LEAs on the appropriate identification of children with disabilities from diverse backgrounds.

Discussion: While we generally agree that guidance about the appropriate identification of children with disabilities would be helpful to States and LEAs, we do not believe it is the only way to address disparities in identification. By requiring States to use a standard methodology, it is our intent to help States to make more appropriate determinations of significant disproportionality, and, consistent with IDEA section 618(d)(2)(A) (20 U.S.C. 1418(d)(2)(A)), help ensure that LEAs identified with significant disproportionality undergo a review, and, if necessary, revision, of policies, practices, and procedures to ensure compliance with IDEA. We believe that guidance regarding the appropriate identification of children as children with disabilities will be more valuable when paired with strategies that require LEAs determined to have with significant disproportionality to take steps to review their policies, practices, and procedures.

Consistent with the commenters' suggestion, it is the Department's intent to publish guidance to help schools to prevent racial discrimination in the identification of children as children with disabilities, including over-identification, under-identification, and delayed identification of disabilities by race.

Changes: None.

Comments: A large number of commenters opposed the standard methodology based on their view that any standard method for calculating disproportionality is inherently flawed because numbers and data cannot reveal the cause of the disproportionality.

Discussion: While we agree with commenters that data analysis does not identify or address the causes of numerical disparities, the identification of LEAs as having significant disproportionality nevertheless is a first step that will require LEAs to identify and address the causes of the significant disproportionality. Under § 300.646(d)(1)(ii), in implementing comprehensive CEIS, LEAs identified with significant disproportionality are required to identify and address the factors contributing to the significant disproportionality.

Changes: None.

Comments: Many commenters stated that any rules to address disproportionality in special education must be based on solid theoretical foundations and research-based, reliable mechanisms for the identification of disproportionality that are not skewed by extraneous factors and not based on single, arbitrary calculations.

Discussion: While we generally agree that efforts to address racial and ethnic disparities in special education should be informed by research, theory, and reliable data, we also interpret IDEA section 618(d) to require States to make a determination of significant disproportionality based on a numerical calculation and to take specific steps to address any significant disproportionality identified. This has been our long-standing position and we believe that it is the best interpretation based on the language in section 618(d) that requires States to collect and examine "data" to determine if significant disproportionality is occurring. Congress placed the significant disproportionality provision in section 618(d) and under section 618(a), States are required to provide "data" on the number and percentage of children with disabilities by race and ethnicity who are: Receiving FAPE; participating in regular education; in separate classes, separate schools or residential facilities; removed to interim alternative education setting; and subject to long-term suspensions and expulsions and other disciplinary actions. To develop a standard methodology consistent with the requirements of IDEA section 618(d), the Department drew heavily from current State practices implemented and adjusted over the course of the 12 years since the last reauthorization of IDEA.

As we noted in the NPRM, most States, as part of their methodology for comparing racial and ethnic groups for the purpose of identifying significant disproportionality, already use a version of the risk ratio and a threshold over which LEAs are identified with significant disproportionality. Further, States use population requirements—such as a minimum n-size or cell size—and up to three years of data when making an annual determination to offset the volatility of risk ratios.

The standard methodology under § 300.647 includes these features, but also provides States with flexibility to tailor them to the needs of their populations. This flexibility includes the ability to set reasonable risk ratio thresholds, reasonable minimum cell sizes and n-sizes (with input from stakeholders, including the State Advisory Panel), the choice to use up to three years of data before making a determination of significant disproportionality, and the option to not identify LEAs that exceed the risk ratio threshold but are making reasonable progress, under § 300.647(d)(2), in lowering their risk ratios in each of the two prior consecutive years.

Given that the standard methodology is largely based on approaches currently in use among States and includes a large degree of flexibility, it will help States to make appropriate, and not arbitrary, determinations of significant disproportionality.

Changes: None.

Comments: Several other commenters requested that the analysis for significant disproportionality include not only a risk ratio or other mathematical calculation but also a review of factors such as inappropriate identification, discriminatory practices, State performance indicators, graduation rates, and academic performance. One commenter suggested that the Department use a two-step approach to ensure that States are focusing on LEAs where compliance indicators may have impacted the performance of children with disabilities. The Department would first examine performance indicators and identify agencies significantly discrepant from the median. This information would then be combined with data from compliance indicators, including information on disproportionality, to determine how to provide States and LEAs with technical assistance and support. A few commenters suggested that LEAs first undergo a review for discriminatory practices, and, if none exist, no further action should be taken.

Discussion: Based on the plain language of IDEA section 618(d) (20 U.S.C. 1418(d)), States are required to make a determination of whether significant disproportionality, based on race and ethnicity, is occurring by collecting and examining data. We interpret this language to limit States' determinations of significant disproportionality to a review of the numerical disparities between racial and ethnic groups with respect to identification, placement, and discipline. Given this language, we do not believe it would be consistent with IDEA to allow the multi-factor standard methodology for determining significant disproportionality that the commenters suggested.

Changes: None.

Comments: Several commenters argued that, if States must adopt a standard methodology for determining significant disproportionality, then States need greater flexibility to exempt LEAs from reserving Part B funds for comprehensive CEIS.

Discussion: Once an LEA has been determined to have significant disproportionality in identification, placement or discipline, the LEA is required under IDEA section 618(d)(2)(B) (20 U.S.C. 1418(d)(2)(B)) to reserve the maximum amount of funds under section 613(f) to provide comprehensive CEIS. IDEA does not include any provision that would allow the Department or States to waive the statutory remedies for LEAs identified with significant disproportionality.

Changes: None.

Comments: Some commenters likened the standard methodology to a one-size metric that would fail to account for factors that might influence measurements of significant disproportionality. These include, according to one commenter, the size of the LEA, its location, and the popularity of an LEA's programs. Similarly, one commenter noted that data may be misinterpreted in a one-size-fits-all model, especially where there are outliers that do not fit the model.

Discussion: The Department disagrees with the assertion that the proposed standard methodology is a one-size-fits-all approach to identifying significant disproportionality. The final regulations provide States with a great deal of flexibility within the standard methodology to identify significant disproportionality only in those LEAs with the greatest racial and ethnic disparities.

Section 300.647(b)(1) of the final regulations requires States to set reasonable risk ratio thresholds to determine the threshold above which an

LEA may be identified with significant disproportionality and to determine reasonable minimum cell sizes and n-sizes to exclude from their review for significant disproportionality those racial and ethnic groups within LEAs with too few children to calculate stable risk ratios. These standards must be based on advice from stakeholders, including State Advisory Panels. Section 300.647(d)(1) of the final regulation allows States flexibility not to identify an LEA until it has exceeded the risk ratio threshold for up to three consecutive years. Lastly, § 300.647(d)(2) allows States not to identify LEAs that exceed the risk ratio thresholds if LEAs are making reasonable progress in lowering their risk ratios in each of the two prior consecutive years.

Changes: None.

Comments: Many commenters requested that the standard methodology be flexible enough to allow LEAs to appeal any findings of significant disproportionality that are outside the control of school personnel. One commenter requested that the Department establish a waiver system, whereby LEAs could exceed risk ratio thresholds for the identification of children with disabilities without a finding of significant disproportionality, so long as the LEAs provide adequate justification.

Another commenter suggested that LEAs with specialized programs, when identified with significant disproportionality, have the option to submit an explanation to the State as to why their numerical disparities are not indicative of any inappropriate identification, placement, or discipline of children. The commenter suggested that the State then consider this explanation, along with compliance data, to determine whether a finding of significant disproportionality is appropriate.

Two commenters requested that States have flexibility to consider mitigating circumstances; the commenters shared that, as a result of one LEA's location near a children's hospital, the LEA has an identification rate for autism much higher than the State rate.

Discussion: The Department appreciates the request to create a waiver and appeals system for certain LEAs with risk ratios above the State-selected risk ratio threshold. However, IDEA does not allow for such a system, and we believe there are sufficient flexibilities in the final regulations to address the commenters' underlying concerns. Further, the Department believes that, even if it had the authority

to allow this system, it would be inconsistent with the goal of maximizing consistent enforcement of the statute and comparability of data across States, which were issues raised by the GAO.

Changes: None.

Comments: Several commenters included a request that States be allowed to waive the requirements of IDEA section 618(d) for very small LEAs.

Discussion: IDEA section 618(d) (20 U.S.C. 1418(d)) requires States to collect and analyze data to determine whether significant disproportionality based on race and ethnicity is occurring in the State and the LEAs of the State. There is no provision in the statute that allows a State to exempt an LEA from this analysis solely because of the size of its overall enrollment.

However, with these regulations, it is our goal to help ensure that LEAs with significant disproportionality based on race and ethnicity in identification, placement, or discipline are appropriately identified and that the significant disproportionality is appropriately addressed. For certain racial and ethnic groups within small LEAs, specifically those groups with very small populations, the risk ratio method of measuring significant disproportionality is susceptible to volatility—the possibility that small changes in population will result in large changes in the risk ratio that do not represent any systemic problems giving rise to significant disproportionality. Therefore, in order to ensure that LEAs are not inappropriately identified because their data would not produce valid results, § 300.647(c) of the final regulation allows States to exclude from their review any racial and ethnic groups within LEAs that do not meet the State-set population requirements. This is consistent with various IDEA provisions that require States and LEAs to use valid and reliable data when meeting IDEA requirements. (See, IDEA section 614(b)(3)(A)(iii), requiring public agencies to use assessments that are valid and reliable; IDEA section 616(b)(2)(B)(i), requiring States to report valid and reliable data in their State Performance Plans/Annual Performance Reports (SPPs/APRs); and IDEA section 616(i)(1), requiring the Secretary to review the data collection and analysis capacity of States to ensure that data and information determined necessary for implementation of section 616 is collected, analyzed, and accurately reported to the Secretary).

Changes: None.

Comment: Several commenters requested that States be allowed to waive the standard methodology in proposed § 300.647(b) in extraordinary circumstances, including environmental disasters that may impact children's health, such as the recent water contamination in Flint, Michigan. Other commenters urged the Department to allow States discretion to determine the appropriate set-aside amount if an LEA is suffering both a fiscal and environmental crisis, or if there should even be a set-aside for LEAs that are recovering from a substantial health or environmental crisis, as the demand for basic special education programs and services for eligible children may be extremely high. One commenter urged the Department to consider the needs of children in these circumstances, rather than simple measures of disparity, to determine whether the identification of significant disproportionality is appropriate.

Discussion: IDEA section 618(d) (20 U.S.C. 1418(d)) requires States to collect and examine data to determine if significant disproportionality based on race and ethnicity is occurring in the State and the LEAs of the State. A specific exemption for LEAs that have experienced an environmental disaster, or other extraordinary circumstances, is not contemplated under IDEA. We think it would be inappropriate to assume that all such crises would create, or worsen, prolonged and significant racial and ethnic disparities in special education. Therefore, we do not think it would be appropriate to exempt LEAs that have experienced an environmental disaster or other extraordinary circumstances from the analysis for significant disproportionality.

If an LEA is identified with significant disproportionality, IDEA section 618(d)(2) (20 U.S.C. 1418(d)(2)) requires the State to provide for the review and, if necessary, revision, of the LEA's policies, practices, and procedures to ensure they comply with IDEA. The section also requires the LEA to publicly report on any revisions and reserve 15 percent of its IDEA Part B funds to provide comprehensive CEIS. Specifically, IDEA section 618(d)(2)(B) (20 U.S.C. 1418(d)(2)(B)) requires an LEA identified with significant disproportionality to reserve the maximum amount of funds under IDEA section 613(f), which is 15 percent of its IDEA Part B funds, to provide comprehensive CEIS. Therefore, the Department does not have the authority to allow LEAs to adjust the amount that they are required to reserve for comprehensive CEIS.

Changes: None.

Comments: Some commenters shared their concerns that LEAs with a high population turnover due to highly mobile families or school choice might be inappropriately identified with significant disproportionality under the standard methodology in § 300.647(b). One commenter suggested that, if a school's mobility rate is significantly higher than the State average, the standard methodology should not be applied. One commenter argued that there is nothing that an LEA can do to address significant disproportionality when it is the result of children simply enrolling or moving into the LEA. Another commenter requested that the Department address the issue of transfers, both interstate and intrastate, and their potential impact on findings of significant disproportionality. One commenter stated that, in one LEA, families are transient due to military connections, making it highly likely that the children transferring into the LEA were identified with a disability outside of the LEA. One commenter supported the exclusion of transfer children from the LEA counts of children with disabilities used to determine significant disproportionality. Last, one commenter opposed the omission of highly mobile children from the State's review for significant disproportionality because children transfer in and out of LEAs, and, in general, this movement does not result in a significant net gain in children. Further, the commenter argued that omitting those children from the analysis would be burdensome for States.

Discussion: The Department recognizes that particular LEAs are more likely to serve high numbers of highly mobile children, including children of military families. In such LEAs, it is particularly likely that eligibility determinations were initially made by LEAs other than the one currently providing special education and related services to the student. Highly mobile children include children experiencing frequent family moves into new school districts, such as military-connected children, migrant children, children in the foster care system, and children who are homeless. There is no reason States cannot determine, in accordance with § 300.647, whether significant disproportionality is occurring in LEAs with highly mobile children. To the extent that highly mobile children make an LEA vulnerable to large swings in the risk ratio from year to year, the standard methodology will help to prevent inappropriate identification due to rapid changes in enrollment by allowing States to take into consideration up to

three years of data prior to making a determination of significant disproportionality.

However, under IDEA section 614(a)(1) (20 U.S.C. 1414(a)(1)), all children who are suspected of having a disability and who are in need of special education and related services, including highly mobile children, must be evaluated in a timely manner and without undue delay so that eligible children can receive a free appropriate public education (FAPE). (34 CFR 300.101, 300.111, and 300.201.) When a child transfers to a new school district in the same school year, whether in the same State or in a different State, after the previous school district has begun but has not completed the evaluation, both school districts must coordinate to ensure completion of the evaluation. This must occur as expeditiously as possible, consistent with applicable Federal regulations. Under IDEA section 614(a)(2)(B) (20 U.S.C. 1414(a)(2)(B)), all LEAs are required to reevaluate each child with a disability not more frequently than once a year, and at least once every three years, unless the child's parent and the LEA agree otherwise. As such, each LEA must ensure, through proper implementation of its child find procedures, appropriate identification and placement of all children with disabilities for whom it is responsible for making FAPE available, regardless of how long that child has resided in the LEA.

For this reason, and because providing that exception would be particularly complex and burdensome to implement, the Department declines the recommendation to exempt highly mobile children, or to exempt LEAs with large numbers of mobile children, from the State's analysis for significant disproportionality.

Changes: None.

Comments: A few commenters urged the Department to allow States, in implementing § 300.647(b)(3), to count only those children with disabilities identified by the LEA. Of these, one commenter noted that it would not be fair for LEAs to be held accountable for children who are not identified by the LEA's own school personnel. Another commenter stated that there are some LEAs, such as vocational LEAs and charters schools, that educate children with disabilities identified by other LEAs. According to the commenter, these LEAs are often identified with disproportionate representation and would likely be inappropriately identified with significant disproportionality under the Department's proposed standard methodology. Similarly, another

commenter recommended that States have flexibility to determine if the disproportionality based on race or ethnicity is due not to the actions of the LEA but to disparities in the enrollment of children previously identified with disabilities.

Discussion: Children with disabilities, like all children, may transfer from school to school for a variety of reasons, ranging from a family relocation—including relocations related to the military—to homelessness, foster care, or because they are members of migrant families, to name a few. The Department has provided guidance to States regarding how they should collect and report IDEA section 618 data, including child count data. As explained in the guidance, children who reside in one LEA but received services in another LEA should be reported by the LEA that has responsibility for providing a free appropriate public education to the children. OSEP Memorandum 08–09, Response to Question 18 and FILE C002, 2013. In general, the Department expects that States will use the same data annually submitted to the Department under IDEA section 618 to make determinations of significant disproportionality.

Further, as we discussed elsewhere in this section, the Department believes that the standard methodology contains sufficient flexibility to prevent the inappropriate identification of LEAs with specialized programs as having significant disproportionality.

Changes: None.

Comments: Many commenters requested that States have the flexibility to exempt an LEA from examination for significant disproportionality under IDEA section 618(d) if the LEA houses any residential facilities, foster homes (or high numbers of children in foster care), or group homes. One commenter stated that the standard methodology does not properly account for residential placements and the locations of facilities, including incarcerated children.

Discussion: IDEA section 618(d) (20 U.S.C. 1418(d)) requires States to collect and examine data to determine if significant disproportionality based on race and ethnicity is occurring in the State and the LEAs of the State. However, a specific exemption for LEAs that house residential facilities, foster homes, or group homes is not contemplated under IDEA. We also do not believe that exemption would be appropriate. There could be significant racial and ethnic disparities in LEAs that house residential facilities, foster homes, or group homes, and nothing prevents the State from doing a reliable

data analysis in those LEAs. For these reasons, the Department declines to exempt an LEA from examination for significant disproportionality under IDEA section 618(d) if it houses any residential facilities, foster homes (or high numbers of children in foster care), or group homes.

The Department has previously provided guidance on how children with disabilities placed in a residential facility or group home by an educational or noneducational agency should be counted for the purpose of calculating significant disproportionality. All children with disabilities placed in a residential facility or group home in the same State by an educational agency must be included in the calculation of significant disproportionality. However, a State should assign responsibility for counting children with disabilities placed in out-of-district placements to the LEA that is responsible for providing FAPE for those children, rather than the LEA in which the child has been placed.

Children with disabilities placed in a residential facility or group home in a different State by an educational agency should be included in a State's calculation of significant disproportionality in the LEA responsible for providing FAPE for that child (the placing LEA).

Children with disabilities placed in residential facilities or group homes in the same State by a noneducational agency (e.g., court systems; departments of corrections; departments of children, youth and families; departments of social services; etc.) may be excluded from a State's calculation of significant disproportionality if the State has valid and reliable procedures for determining which children should be excluded.

Children with disabilities placed in a residential facility or group home in a different State by a noneducational agency (e.g., court systems; departments of corrections; departments of children, youth and families; departments of social services; etc.) may be excluded from the calculation of significant disproportionality by both the State in which the child resides and the State where the residential facility or group home is located, if the State has valid and reliable procedures for determining which children should be excluded. (See, IDEA section 618(d); Questions and Answers on Disproportionality, June 2009, Response to Question B–1.)

Changes: None.

Comments: One commenter shared that, in one State, only LEAs—and not State-run facilities or group homes housed within LEAs—are accountable for significant disproportionality.

Discussion: IDEA section 618(d) (20 U.S.C. 1418(d)) requires States to collect and examine data to determine whether the LEAs within the State have significant disproportionality. In general, the term “local educational agency” means a public board of education or other public authority legally constituted within a State for administrative control or direction of, or to perform a service function for, public elementary schools or secondary schools in a city, county, township, school district, or other political subdivision of a State, or for such combination of school districts or counties as are recognized in a State as an administrative agency for its public elementary schools or secondary schools. (See, IDEA section 602(19) (20 U.S.C. 1401(19) and 34 CFR 300.28).) For this reason, we do not expect States to determine whether State-run facilities or group homes housed within LEAs have significant disproportionality, unless those facilities or group homes are LEAs under § 300.28.

Changes: None.

Comments: A number of commenters responded to Directed Question #1 in the NPRM, which requested public input about the appropriate application of the standard methodology to LEAs serving only children with disabilities and LEAs with special schools and programs. We received comments with varying suggestions.

Several commenters stated that special schools and programs should be excluded from a State’s review of an LEA for standard methodology, whereas others stated that these special schools must be included. Numerous commenters opposed to including special schools or programs in the identification of significant disproportionality stated that States should have discretion to include children in specialized schools in their review for significant disproportionality. One commenter stated that, in one State, only LEAs are held accountable for significant disproportionality—not schools serving only children with disabilities or offering specialized programs. Another commenter inquired whether programs serving children with disabilities from multiple LEAs should be excluded from the State’s determination of significant disproportionality.

One commenter noted that, while LEAs specially constituted as special education LEAs may have the appearance of disproportionality, these LEAs have legitimate reasons for overrepresentation of certain racial and ethnic populations. One commenter stated that the standard methodology

cannot be used, as the risk ratio cannot be calculated, for an LEA that enrolls only children with disabilities. This commenter suggested that States monitor disproportionality in those LEAs through performance reports.

Discussion: The Department disagrees with the commenters that requested that LEAs with specialized schools or programs, and the children within those schools or programs, should be excluded from a review of significant disproportionality. IDEA section 618(d)(1) (20 U.S.C. 1418(d)(1)) requires States to collect and examine data to determine whether significant disproportionality based on race and ethnicity is occurring in the State and the LEAs of the State. As a general matter, therefore, if a special school or program is an LEA, consistent with the definition of LEA in § 300.28, and serves children with and without disabilities, the State must apply the standard methodology in § 300.647 to determine if significant disproportionality is occurring in that LEA, and all of the remedies in § 300.647(c) and (d) apply.

However, the Department has carefully considered the commenters’ concerns about LEAs serving only children with disabilities. In accordance with IDEA section 618(d)(1) (20 U.S.C. 1418(d)(1)), a State must annually collect and examine data to determine, using the standard methodology under § 300.647, if significant disproportionality is occurring in LEAs that serve only children with disabilities. Consistent with IDEA section 618(d)(2)(A) and (C), and § 300.346(c), if such an LEA is identified with significant disproportionality, the State must provide for the review and, if appropriate, revision of the policies, practices, and procedures used in identification or placement in particular education settings, including disciplinary removals, to ensure they comply with the IDEA. The State must also require the LEA to publicly report on any revisions.

However, we note that it would be impossible for LEAs that serve only children with disabilities to comply with the requirement in IDEA section 618(d)(2)(B) following a determination of significant disproportionality. Under our interpretation of that section, LEAs must use at least some of the IDEA Part B funds reserved for comprehensive CEIS to serve children without disabilities, and we have adopted this interpretation in § 300.646(d)(3). This would require an LEA that serves only children with disabilities to reserve IDEA Part B funds to provide comprehensive CEIS, which under § 300.646(d)(3) must include services to

children without disabilities, a population that the LEA does not serve. Therefore, an LEA that serves only children with disabilities is not required to reserve 15 percent of its IDEA Part B funds to provide comprehensive CEIS.

That said, suggestions that specialized schools or programs that are housed in an LEA that serves children with disabilities and children without disabilities or only children with disabilities should be exempt from the standard methodology are inconsistent with the goal of addressing significant disproportionality, by race or ethnicity, in the most restrictive placements. By allowing States to ignore children in those placements when reviewing LEAs, the Department could inadvertently create an incentive to place children with disabilities in special schools—instead of separate classrooms. Further, as noted earlier, a State should assign responsibility for counting a child who is placed in a specialized school or program housed in an LEA to the “placing LEA,” if that LEA remains responsible for providing FAPE to that child, rather than to the LEA in which the specialized school or program is housed.

Changes: The Department has added § 300.646(e) to clarify that LEAs that serve only children with disabilities are not required to reserve IDEA Part B funds for comprehensive CEIS.

Comments: A few commenters suggested that States have flexibility to exclude from their review children with disabilities who are placed in special schools by non-education agencies, such as courts or mental health agencies.

Discussion: Children with disabilities placed in special schools in the same State by a noneducational agency (e.g., court systems; departments of corrections; departments of children, youth and families; departments of social services; etc.) may be excluded from a State’s calculation of significant disproportionality, if the State has valid and reliable procedures for determining which children should be excluded. Children with disabilities placed in a special school in a different State by a noneducational agency (e.g., court systems; departments of corrections; departments of children, youth and families; departments of social services; etc.) may be excluded from the calculation of significant disproportionality by both the State in which the child resides and the State where the residential facility or group home is located, if each State has valid and reliable procedures for determining which children should be excluded. (See, IDEA section 618(d); and Questions and Answers on

Disproportionality, June 2009, Response to Question B–1.)

Changes: None.

Comments: One commenter stated that, while LEAs specially constituted as special education LEAs may have the appearance of disproportionality, these LEAs have legitimate reasons for overrepresentation of certain racial and ethnic populations. Another commenter suggested that States, when calculating risk ratios for LEAs with specialized schools, use an alternate method of calculating risk for the racial or ethnic group of interest. The Department understood this commenter to suggest that States adjust the denominator used to calculate risk to include children from the racial or ethnic group from that LEA and children from the same racial or ethnic group from a similarly sized LEA without children with disabilities. A few commenters suggested that States should have discretion to include additional calculations of disproportionality of the LEAs with special schools. Commenters in favor of including special schools indicated that the LEAs are responsible for the children within their LEAs and, therefore, should be held accountable for those children. One commenter stated that, because children in one State remain assigned to the LEA responsible for accountability and reporting purposes, specialized populations have not had an effect on the State's ability to capture significant disproportionality data.

One commenter stated that, in its State, the data from the children placed in the specialized school are included in the receiving LEA's counts of children. A number of commenters expressed a belief that when a child is placed in a specialized school, the referring LEA should retain the child's data for this count. One commenter requested that the Department clarify the impact of the standard methodology on programs serving children with disabilities across multiple LEAs, and clarify the implications of the standard methodology for the LEA in which the program operates and LEA in which attending children are residents. The commenter asked about the possibility of sharing accountability for these children between the resident and operating (or "sending" and "receiving") LEAs.

Discussion: The Department considered the different approaches commenters recommended. As noted earlier, using the standard methodology under § 300.647, a State must annually collect and examine data to determine if significant disproportionality is occurring in LEAs that serve only

children with disabilities. However, we have clarified in § 300.646(e) that LEAs that serve only children with disabilities are not required to reserve IDEA Part B funds for comprehensive CEIS.

That said, there is no specific exemption in IDEA section 618(d)(1) (20 U.S.C. 1418(d)(1)) for LEAs that house special schools and serve children with and without disabilities or only children with disabilities. We do not believe an exemption for those LEAs is appropriate because by allowing States to ignore children in special schools when reviewing LEAs, the Department could inadvertently create an incentive to place children with disabilities in special schools instead of separate classrooms, for example. For these reasons, the Department declines to exempt LEAs that house special schools and serve children with and without disabilities or only children with disabilities from a determination of significant disproportionality under IDEA section 618(d).

Further, current IDEA section 618 data collection procedures are consistent with the commenters' recommendation that children with disabilities placed in a special school should be counted by the LEA that placed the children in the special school (what one commenter refers to as the "sending LEA") and is responsible for providing FAPE to the child. (See, FILE C002, 2013 and OMB Control No. 1875–0240.) The Department expects that States will use the same data annually submitted under IDEA section 618(a) (20 U.S.C. 1418(a)) to make determinations of significant disproportionality. Consistent with the guidelines that govern that reporting, children publicly placed in special schools should be included in the enrollment counts for the LEA that is responsible for providing FAPE to the child. FILE C002, 2013. This means that many children in special schools or programs in LEAs, to the extent they are publicly placed by another LEA, will not affect LEAs count of children, for purposes of significant disproportionality, because these children are already attributed to the LEA responsible for providing FAPE to the child.

Changes: None.

Comment: Many commenters were concerned that highly regarded schools for children with disabilities with open enrollment policies often draw their children from across the State or region. In fact, one commenter expressed that families might relocate within the borders of some LEAs with reputations for higher quality services, resources, and outcomes for a particular disability.

This commenter stated that LEAs are not able to address significant disproportionality by race or ethnicity that is due to self-selection.

Discussion: The Department appreciates these concerns. However, data do not exist that could distinguish these LEAs from other LEAs or determine the intent of families that move into these LEAs. Further, there is no reason to exclude LEAs from the analysis for significant disproportionality because parents elect to enroll their children in LEAs with a reputation for high quality services. Therefore, the Department declines to create an exception for LEAs that include highly regarded schools with open enrollment policies that often draw their children from across the State or region.

Change: None.

Comments: In response to Directed Question #8, which inquired how best to address significant disproportionality in LEAs with homogenous populations, we received a few comments that LEAs with homogenous populations should not be examined for disproportionality, positing that "if there is no comparison group, there can be no disproportionality." However, we received more comments that indicated LEAs with homogenous populations should be included in significant disproportionality calculations. A few commenters offered that these LEAs should use an unspecified alternate method in place of, or in addition to, the standard methodology in proposed § 300.647(b). A few more commenters offered that these LEAs should use an unspecified calculation in addition to the standard risk ratio method.

Another commenter suggested that, for LEAs with homogenous populations, the Department closely analyze the performance data that States submit and use compliance monitoring to identify problems and provide technical assistance. Some commenters suggested that the data from the LEAs with homogenous populations should be compared to similarly sized LEAs, to a statewide risk ratio, or to national data.

One commenter suggested that the Department allow the use of alternate calculations to identify instances of significant disproportionality because, where no comparison group exists, it is not possible to obtain valid and reliable data by using a risk ratio or alternate risk ratio calculation. Another commenter suggested that a different risk ratio method should be used to identify significant disproportionality in homogenous populations (e.g., urban special education schools comprised primarily of children from one racial or

ethnic background), using data from LEAs or other States with more racially and ethnically diverse populations, yet similar in other demographic factors.

One commenter suggested that States undertake a longitudinal examination of homogenous LEAs over a period of five years and only take action if nearly all individuals from a race or ethnic subgroup have been identified or disciplined. This commenter disagreed with suggestions that these LEAs be compared with national or State data and suggested that comparisons to LEAs of similar size and demographics would be most appropriate. Two commenters expressed concern that homogenous LEAs would not fare well under the proposed regulations.

Discussion: The Department appreciates all of these suggestions. We believe it is important that States review LEAs, whenever possible, for significant disproportionality, even when LEAs may have homogenous populations. We do not agree with the suggestion that there cannot be disparity where there is no comparison group within the LEA. To the contrary, it is quite possible for children with disabilities from a particular racial or ethnic subgroup to be identified, disciplined, or placed in restrictive settings at rates markedly higher than their peers in other LEAs within the State. The fact that there is no comparison group within the LEA does not mean that the LEA should not be reviewed for significant disproportionality, particularly since IDEA section 618(d)(1) (20 U.S.C. 1418(d)(1)) requires States to determine whether significant disproportionality is occurring within the State and the LEAs of the State. For this reason, under § 300.647(a) and (b)(5), States are required to calculate the alternate risk ratio—using a State-level comparison group—whenever the comparison group within the LEA does not meet the States' population requirements. While we considered commenters' suggestions to allow States to use an approach other than the alternate risk ratio to examine homogenous LEAs, we continue to believe that the alternate risk ratio is the strongest option, given its close similarity to the risk ratio in ease of calculation and interpretation. As with the risk ratio, we anticipate that the stability of the alternate risk ratio will be improved by the flexibility States have to set reasonable population requirements and use up to three consecutive years of data to identify significant disproportionality.

However, in reviewing the commenters' feedback, we recognize that there may be certain situations when using an alternate risk ratio may

not be adequate for evaluating a homogenous LEA. These instances include homogenous LEAs within homogenous States or unitary systems where an LEA and its State cover the same geographic area. In a homogenous unitary system, the risk ratio, which uses an LEA-level comparison group, and the alternate risk ratio, which uses a State-level comparison group, would be the same; therefore, if a unitary system has too small a comparison group to calculate a risk ratio, it would also have too small a comparison group to calculate the alternate risk ratio and therefore would produce an unreliable, or meaningless result. In this situation, we believe that IDEA does not require a review for significant disproportionality.

Changes: We have added § 300.647(c)(2), which excludes States from calculating the risk ratio or alternate risk ratio for a racial or ethnic group when, for both the risk ratio and the alternate risk ratio, there is an insufficient number of children in all other racial or ethnic groups to serve as a comparison group.

Comment: One commenter requested that the Department consider a unique methodology for determining significant disproportionality in LEAs with clusters of recent immigrants. This methodology should accommodate the special influences in language and culture, differences in access to education in immigrants' country of origin, or post-traumatic stress. A few commenters also noted that, as their LEA is now home to an office that provides adjustment services to refugees and immigrants, it may have the appearance of disproportionality even though it has legitimate reasons for overrepresentation of certain populations.

Discussion: The Department appreciates these concerns. However, there is no specific exemption in IDEA section 618(d) (20 U.S.C. 1418(d)(1)) for LEAs with clusters of immigrants. Such an exemption would not be appropriate because we believe that it is particularly important to review LEAs with clusters of recent immigrants for significant disproportionality. Therefore, the Department declines to create an exception for these LEAs.

Changes: None.

Comment: Several commenters requested that because certain LEAs have atypical demographic distributions that could create data anomalies, the Department should exempt certain types of LEAs from providing comprehensive CEIS and from reviewing, revising, and publishing, as appropriate, policies, procedures, and practices if identified

with significant disproportionality. Many commenters asserted that States should have authority to exempt LEAs from these statutory remedies if there is a small population of children, where the addition or subtraction of a few children alters a finding of significant disproportionality. Other commenters requested that LEAs with very low rates of special education identification, restrictive placements, or exclusionary discipline for all children should not be automatically required to set aside funding to provide comprehensive CEIS. The Department interprets the comment to suggest that LEAs with very low rates of identification, restrictive placement, and discipline will likely be identified with significant disproportionality due to high risk ratios. A few commenters requested further consideration of how significant disproportionality is applied to States and rural LEAs. One commenter expressed strong concerns that the regulation would, without just cause, negatively affect its small, rural LEA, where children of color make up less than five percent of the school population.

Discussion: IDEA section 618(d) (20 U.S.C. 1418(d)) requires States to collect and analyze data to determine whether significant disproportionality based on race and ethnicity is occurring in the State and the LEAs of the State.

However, the Department agrees with commenters that LEAs with small populations or small populations of specific racial or ethnic subgroups with disabilities, such as those in small rural or charter schools, could potentially produce risk ratios that are misleading due to volatility associated with calculating risk ratios for small numbers of children. The Department appreciates the feedback of commenters and agrees that a minimum n-size of 10, as proposed in the NPRM, is insufficient to account for issues related to LEAs with small populations.

We describe in the section *Minimum Cell Sizes and Minimum N-Sizes* (§ 300.647(b)(3) and (4); § 300.647(b)(6)), the changes to these regulations to give States added flexibility to exempt LEAs from a review for significant disproportionality when a racial or ethnic group does not meet a reasonable minimum cell size or reasonable minimum n-size set by the State with input from the stakeholders, including the State Advisory Panel.

This change will give the States increased flexibility to use a minimum cell size—a minimum number of children in the risk numerator when calculating a risk ratio—to avoid identifying LEAs with significant disproportionality due to the

identification, placement, or disciplinary removal of a small number of children. The minimum cell size should also help to prevent identification of LEAs with low prevalence of identification, placement, discipline—which may be subject to more volatile risk ratios—to the extent that these LEAs also have a small population of children.

Again, however, IDEA does not contain any provisions allowing either States, or the Department, to waive the statutory remedies once an LEA is identified with significant disproportionality. When an LEA is identified with significant disproportionality, the statute specifies that the State must require the LEA to reserve the maximum amount of funds under section 613(f)—15 percent of its IDEA, Part B funds—to provide comprehensive CEIS.

Changes: Please see the discussion on changes to minimum cell and n-sizes in the section *Minimum Cell Sizes and Minimum N-Sizes* (§ 300.647(b)(3) and (4); § 300.647(b)(6)).

Comment: One commenter requested clarification about the responsibilities of virtual schools and the LEAs within which children attending the virtual schools live. The commenter stated that there has been a significant increase in the number of children with disabilities who receive part or all of their education through virtual schools, raising the need for guidance on this issue.

Discussion: IDEA requires that each State make FAPE available to all eligible children with disabilities aged 3 through 21 within the State's mandated age range and residing in the State. (20 U.S.C. 1412). This includes the identification and evaluation of children with disabilities, the development of an IEP, the provision of special education and related services in the least restrictive environment, and the provision of procedural safeguards to children with disabilities and their families. The requirements of IDEA apply to States and LEAs, regardless of whether a child is enrolled in a virtual school that is a public school of the LEA or a virtual school that is constituted as an LEA by the State.³ IDEA and its

implementing regulations do not make any exceptions to these requirements to allow States to waive or relax requirements for virtual schools, including those virtual schools constituted as LEAs. Therefore, the requirements that States must use to determine whether significant disproportionality based on race or ethnicity is occurring in LEAs applies to LEAs with virtual schools and to virtual schools that are constituted as LEAs, consistent with § 300.28. Letter to Texas Education Agency Associate Commissioner Susan Barnes, 2003.

Changes: None.

Comment: Another commenter observed that in its State, a high school LEA has been identified as having significant disproportionality based on the identification of children with disabilities, simply because of the combining of elementary school LEAs into one population. The commenter stated that there was no significant disproportionality at the elementary level.

Discussion: With regard to States that include elementary school LEAs and high school LEAs, the Department's standard methodology offers States sufficient flexibility to ensure that the identification of those LEAs is appropriate. When calculating risk ratios under § 300.647(b)(1), States are required to select reasonable minimum cell sizes (to be applied to the risk numerator) and minimum n-sizes (to be applied to the risk denominator). This will allow States to focus their attention on the most systemic disparities and avoid the identification of LEAs based on volatile risk ratios.

Changes: None.

Comments: One commenter recommended that the Department require States use to use a tiered standard methodology that takes into consideration the type, size, and poverty within an LEA.

Discussion: As we noted in the NPRM, part of the purpose of the standard methodology is to foster greater transparency in how States identify significant disproportionality. Given this, it is critical that the standard methodology consist of simple and easily interpreted analyses. The Department believes that a tiered methodology would be inconsistent with this goal because it would require

special education and related services in the least restrictive environment (20 U.S.C. 1412(a)(5)), and the provision of procedural safeguards to children with disabilities and their families (20 U.S.C. 1412(a)(6)). The IDEA statute and its corresponding regulations do not make any exceptions to these requirements or allow States to waive or relax these requirements for virtual schools."

States to adjust the methodology for different types of LEAs, adding greater complexity and, possibly, ambiguity.

Instead of a tiered methodology, the Department has proposed a standard methodology that provides States with adequate flexibility to consider the needs of different types of LEAs. This flexibility includes the ability to set reasonable risk ratio thresholds, reasonable minimum cells sizes and n-sizes (with input from State Advisory Panels), the ability consider up to three years of data before making a determination of significant disproportionality, and the option to not identify LEAs that exceed the risk ratio threshold and are making reasonable progress in lowering their risk ratios.

Changes: None.

Comments: Many commenters requested greater clarity as to the count of children that should be used for the denominator when calculating risk ratios for a particular racial or ethnic group. One commenter noted that, for discipline risk ratios, one State uses a cumulative count of children rather than a snapshot, point-in-time count. These commenters note that States should be allowed to use the denominators that most closely align with the numerators of the risk calculations, where alignment refers both to the timing of the counts and to the inclusion or exclusion of certain groups of children (e.g., parentally placed private school children, children ages three through five, children receiving transition services, etc.)

Discussion: In the NPRM, we noted that, with respect to the specific categories of analysis—identification, placement, and discipline—the Department's intended to incorporate in the regulations the required categories of analysis, which are consistent with the States' current IDEA section 618 data submissions.

In reviewing LEAs for significant disproportionality with respect to identification, we generally expect that States will use the same IDEA section 618 data that is reported to the Department (for data regarding children with disabilities) and data submitted to the Institute for Education Sciences for the Common Core of Data (for enrollment data). OMB Control No. 1875–0240. In reviewing LEAs for significant disproportionality with respect to placement, we generally expect that States will use the same IDEA section 618 data that is reported to the Department. OMB Control No. 1875–0240.

In reviewing LEAs for significant disproportionality with respect to discipline, we generally expect that

³ See, OSEP Dear Colleague Letter, August 5, 2016, citing Letter to Texas Education Agency Associate Commissioner Susan Barnes, December 18, 2003. As stated in the Barnes letter, "... IDEA requires that each State make available a free appropriate public education to all children with disabilities (as defined by the IDEA) aged 3 through 21 residing in the State (20 U.S.C. 1412(a)(1)). This includes the identification and evaluation of children with disabilities (20 U.S.C. 1412(a)(3)), the development of an individualized educational program (20 U.S.C. 1412(a)(4)), the provision of

States will use the same section 618 data reported to the Department. For IDEA section 618 data, discipline data is a cumulative count from July 1st through June 30th, while IDEA section 618 child count and placement data is a point-in-time count that occurs in the fall. OMB Control No. 1875–0240. After the final regulations are published, the Department plans to provide States with additional guidance about the counts of children that States should use when analyzing LEA data for significant disproportionality with respect to identification, placement, and discipline.

Changes: None.

Comments: A few commenters recommended that the Department convene workgroups and invest in research to explore issues related to significant disproportionality. A few commenters recommended that the Department establish a workgroup to make recommendations for researching how to address common issues and identify the root causes of disproportionality. One commenter recommended that Department build a workgroup to identify evidence-based practices in the implementation of IDEA's child find provisions so that these practices can be distributed widely to the field. This commenter also recommended that the Department convene an expert group to identify the issues and possible solutions to under-identification, including the under-identification of children who are twice exceptional. Another commenter recommended that the Department more carefully examine the impacts of poverty on significant disproportionality, including the linkages between poverty and the identification, placement, and discipline of children with disabilities.

Discussion: The Department appreciates the suggestions to develop workgroups and expand research into the causes of significant disproportionality, under-identification, and evidence based practices States and LEAs can use to address significant disproportionality. The Department agrees that it will be valuable to undertake more research on the impact of these regulations and on significant disproportionality in general. We also agree that it will be beneficial to help develop communities of practice for addressing significant disproportionality and expand technical assistance to support the work of States and LEAs. After the publication of these regulations, the Department plans to identify additional resources to support expanded research and technical assistance to improve the identification,

placement, and discipline of children with disabilities.

Changes: None.

Risk Ratios (§ 300.646(b); § 300.647(a)(2); § 300.647(a)(3); § 300.647(b))

Comment: Several commenters responded to Directed Question #2, which requested additional strategies to address the shortcomings of the risk ratio method and inquired whether the Department should allow or require States to use another method in combination with the risk ratio method. A few commenters stated that the risk ratio has a definite advantage over other methods because it is easy to explain and duplicate. Other commenters agreed, stating that the risk ratio is relatively simple and straightforward, which is especially important for a standard methodology. Two commenters appreciated that the NPRM included a review of several possible methods for defining significant disproportionality and had no concerns with the selection of the risk ratio as the approach that is currently most widely used and best understood among States. One commenter stated that its State has primarily used the risk ratio method and found success in identifying LEAs as having significant disproportionality each year. A few commenters stated that the use of the risk ratio will provide an opportunity to make comparisons between LEAs and States to ensure children are appropriately served through IDEA.

Discussion: The Department appreciates the comments in support of the use of the risk ratio as part of the standard methodology. We agree that States' use of this method will help to improve comparability of significant disproportionality determinations across States, increase transparency in how States make determinations of LEAs with significant disproportionality, improve public comprehension of a finding of significant disproportionality (or lack thereof), and address concerns raised by the GAO.

Changes: None.

Comments: Several commenters expressed concerns about the risk ratio. A few of these commenters expressed that sole reliance on the risk ratio may result in a failure to fully address the problem of racial or ethnic disproportionality. A number of commenters expressed concern that, in general, the risk ratio will not provide enough information to determine whether an LEA has significant disproportionality. A few commenters were concerned that the Department

proposed the risk ratio as the standard methodology due to its ease of implementation by States and comprehension by the public rather than the robustness of the method itself in determining disproportionality in identification, placement, and discipline.

Discussion: In developing the standard methodology, the Department drew heavily from current State practices. As we noted in the NPRM, most States, as part of their methodology for comparing racial and ethnic groups for the purpose of identifying significant disproportionality, already use a version of the risk ratio, along with a threshold over which LEAs are identified with significant disproportionality. Further, States using a risk ratio pair this method with a minimum n-size or cell size and use up to three years of data when making an annual determination to prevent inappropriate determinations of significant disproportionality due to risk ratio volatility. While the risk ratio method will allow States to conduct simple analyses that are easy to interpret, we also believe this approach is sufficiently robust to help States to appropriately identify significant disproportionality.

While we agree with commenters that while the use of risk ratios—or any data analysis alone—does not identify or address the causes of numerical disparities, risk ratios are sufficient to determine whether an LEA has sufficiently large disparities to determine whether significant disproportionality is occurring. This determination is an important first step that will require the LEA to identify and address the causes of the significant disproportionality. Further, as we note in *A Standard Methodology for Determining Significant Disproportionality—General*, we interpret IDEA section 618(d) (20 U.S.C. 1418(d)) to require efforts to address the causes of significant disproportionality as a consequence of, rather than a part of, the determination of significant disproportionality.

Changes: None.

Comments: Several commenters requested that the Department allow the use of additional criteria to address limitations in the risk ratio method. One commenter suggested that methods in addition to, or instead of, risk and alternate risk ratio should be allowed. One commenter recommended that States adopt other risk ratio methods, provide the Department with a rationale for doing so, and that the Federal government evaluate each State's approach. Two commenters

recommended that States be allowed to demonstrate to the Department why the use of a risk ratio or alternate risk ratio may not provide the best analysis of disproportionality in their State, and then demonstrate the effectiveness of an alternate calculation. These commenters stated that the primary purpose of the regulation should be to identify significant disproportionality and that methods other than the risk ratio can be effective in doing so. A few commenters requested that the Department allow States to use multiple measures to identify LEAs with significant disproportionality. One commenter stated that States' use of multiple risk ratio methods emerged based on careful analysis of false positive identifications that occurred when applying a single risk ratio, possibly complemented by the alternate risk ratio. This commenter stated that States would not have moved to more complex measures if it were not considered important for the analysis to have integrity.

A second commenter stated that one State currently uses two measurements for disproportionality—the alternate risk ratio and the e-formula. This commenter stated that using both methods—with an appropriate minimum cell size and minimum n-size—identifies both large and small LEAs that have real racial and ethnic disparities. Another commenter encouraged the use of multiple methods of identifying LEAs, as the sole reliance on the relative risk ratio can lead to unintended results (e.g., an inability to calculate the risk ratio when a comparison group has 0 percent risk).

Discussion: In reviewing these comments, the Department carefully considered the need to provide States adequate flexibility to adjust the standard methodology to their needs, while ensuring that the Department's goal of promoting uniformity and transparency is addressed. As mentioned in the NPRM, a 2013 GAO study found that “the discretion that States have in defining significant disproportionality has resulted in a wide range of definitions that provides no assurance that the problem is being appropriately identified across the nation.” Further, the GAO found that “the way some states defined overrepresentation made it unlikely that any districts would be identified and thus required to provide early intervening services.” (GAO, 2013). To better understand the extent of racial and ethnic overrepresentation in special education and to promote consistency in how States determine which LEAs are required to provide comprehensive CEIS, the GAO recommended that the Department “develop a standard

approach for defining significant disproportionality to be used by all States” and added that “this approach should allow flexibility to account for state differences and specify when exceptions can be made.” (GAO, 2013.)

In keeping with these recommendations, the Department believes that restricting States to the risk ratio will foster greater transparency, as well as comparability between States, and thereby strengthen the Department's ability to review and report on States' implementation of IDEA section 618(d). To allow States to generate and adopt additional criteria—even if only a second criterion—would interfere with the goal of greater comparability while adding to the complexity of the standard methodology as a whole.

However, the Department is sensitive to the commenters' concerns and has included some limited flexibilities that States may consider when making determinations of significant disproportionality. Under § 300.647, States have the flexibility to set their own reasonable risk ratio thresholds and to identify only those LEAs that exceed the risk ratio threshold for a number of consecutive years, but no more than three. Section 300.647(d)(2) also allows States to not identify LEAs that exceed the risk ratio threshold if they demonstrate reasonable progress, as determined by the State, in lowering the risk ratio for the group and category in each of two consecutive prior years. This latter flexibility enables States to identify significant disproportionality only in those LEAs where the level of disproportionality is the same or not decreasing at a reasonable rate and does not require those LEAs that are reasonably reducing disparities to implement the remedies required under IDEA section 618(d)(2), even if those LEAs have risk ratios that exceed the State's risk ratio threshold.

Last, while in the NPRM the Department proposed to allow States to set a minimum n-size of up to 10 children (or children with disabilities), the Department has amended the regulation to allow States to set reasonable minimum n-sizes, as well as reasonable minimum cell sizes, that apply to the risk numerator when calculating risk ratios. The Department's intent with this change was to allow States to account for the volatility of risk ratio calculations, deem as significant only the most systemic cases of significant disproportionality, and prevent the identification of significant disproportionality based on the enrollment of, or the LEA's responses to the needs of, one or two children. It is our belief that, by allowing States the

flexibility to determine both minimum n-sizes and minimum cell sizes, the Department has dramatically reduced the likelihood of inappropriate identifications of significant disproportionality (false positives) that could occur when broadly applying the risk ratio methodology. Further, allowing States to use minimum cell and n-sizes to determine when to use an alternate risk ratio would allow States to examine racial and ethnic groups for significant disproportionality in the absence of an LEA-level comparison group or when the comparison group has a risk of 0 percent.

With these provisions, the Department believes these regulations achieve an appropriate balance between the need for flexibilities to ensure valid data analysis when evaluating significance and the need for greater consistency among the States' systematic reviews.

Changes: See, discussion on changes to minimum cell and n-sizes in the section *Minimum Cell Sizes and Minimum N-Sizes* (§ 300.647(a)(3) and (4); § 300.647(b)(1)(i)(B) and (C); § 300.647(b)(3) and (4); § 300.647(c)(1)). See also, discussion on the reasonable progress flexibility in the section, *Reasonable Progress*, § 300.647(c)(2).

Comments: A large number of commenters noted that the risk ratio method does not work well with small populations. Although most of these comments cited issues with the Department's proposed cap on minimum n-sizes, which we address in the section *Minimum Cell Sizes and Minimum N-Sizes* (§ 300.647(a)(3) and (4); § 300.647(b)(1)(i)(B) and (C); § 300.647(b)(3) and (4); § 300.647(c)(1)), some commenters were concerned that the standard risk ratio method would be inappropriately sensitive to racial and ethnic disparities in smaller LEAs that have fewer children with disabilities.

Many commenters also recommended that States have flexibility to add criteria beyond risk ratio and minimum n-size to avoid inappropriately identifying significant disproportionality due to small numbers. Several of these commenters reported that a large number of LEAs in their States and regions are small and use varying benchmarks for identification. One commenter noted that this flexibility would be necessary for small LEAs, whether using a risk ratio or weighted risk ratio calculation.

A few commenters recommended that, in States with small populations, the Department permit the use of a second method of calculating risk ratio, such as the e-formula, statistical significance testing, or n-size criteria,

since small populations are vulnerable to year-to-year fluctuations and a second method helps to ensure risk is not due to chance alone. A few commenters noted that the use of the risk ratio alone, without adequate minimum n-sizes or additional significance testing, will result in many LEAs being identified as having significant disproportionality when the disproportionality is due to small numbers of children identified with disabilities, placed in restrictive settings, and disciplined, and not to any underlying cause.

Discussion: The Department appreciates all of these comments and has considered the suggestion to permit States to use additional methods, beyond the use of the risk ratio alone, to address the potential for false positive identification of significant disproportionality when risk ratios are applied to small populations. As discussed earlier, in the interest of increasing both comparability and transparency across States, with respect to their implementation of IDEA section 618(d), we believe it is necessary to require States to use a common analytical method for determining significant disproportionality and to allow limited flexibilities within that methodology rather than allowing or requiring additional methodologies.

For example, as discussed elsewhere in this section, the Department received various comments that the minimum n-size initially proposed in the NPRM did not adequately protect small communities. The Department agrees that additional criteria—beyond the risk ratio and minimum n-size—would help to ensure appropriate identification of LEAs with significant disproportionality. In addition to minimum n-sizes, which States may use to ensure risk denominators are sufficiently large to calculate a stable risk ratio, States may also use minimum cell sizes to ensure that risk numerators are sufficiently large to reduce the potential for false positive identification due to small numbers.

Likewise, the ability to use up to three years of data when determining significant disproportionality could be used to address the year-to-year fluctuations that may occur in a State with many small LEAs. Finally, because States, in consultation with the State Advisory Panel, must set a reasonable risk ratio threshold and a measure of reasonable progress, the Department believes that the regulations provide sufficient flexibilities for ensuring that IDEA section 618(d) can be properly implemented using this methodology.

Changes: See, discussion on changes to minimum cell and n-sizes in the

section *Minimum Cell Sizes and Minimum N-Sizes* (§ 300.647(a)(3) and (4); § 300.647(b)(1)(i)(B) and (C); § 300.647(b)(3) and (4); § 300.647(c)(1)). See also, discussion on the reasonable progress flexibility in the section, *Reasonable Progress*, § 300.647(c)(2).

Comment: Several commenters expressed concern about efforts to identify significant disproportionality in LEAs with low incidence in any of the categories of analysis. A few commenters argued that there are situations in which a risk ratio alone will not provide enough information to determine whether an LEA has or does not have significant disproportionality. For example, comparing two very low risks for discipline of children with disabilities can result in a high risk ratio, even though both the racial or ethnic group being examined and the comparison group's discipline rates are low. Similarly, a few commenters noted that sole reliance on the risk ratio can produce similar results when examining disability identification and restrictive placement.

A few commenters argued that the risk ratio is dependent on scale and may unduly penalize LEAs with a low overall prevalence in the disability or discipline categories. For example, an LEA with an overall rate of suspension for all children of less than one percent would be regarded by most as exemplary. According to the commenter, the same LEA—if it were suspending 1.5 percent of children with disabilities in one racial or ethnic group, and 0.5 percent from a comparison group—would be treated the same as an LEA that was suspending 30 percent of children with disabilities in one group, and 10 percent from a comparison group.

One commenter suggested that States have flexibility to consider a low incidence of disciplinary removals as reasonable progress, or to exempt LEAs with low incidence from any review of significant disproportionality with respect to discipline.

Discussion: The Department appreciates the suggestions to expand the flexibilities included in the NPRM. Under § 300.647(d)(1), States may choose not to identify any LEAs as having significant disproportionality until a risk ratio for a particular racial or ethnic group for a particular category of analysis has exceeded a risk ratio threshold for up to three consecutive years. The Department believes that, in cases where an LEA that exceeds the minimum cell and n-sizes achieves persistently low rates of disciplinary action, such as a suspension, but a particular racial or ethnic group faces

consistently disproportionate treatment over the course of multiple years, it would be appropriate for the LEA to be identified with significant disproportionality.

Further, the Department believes that allowing the use of up to three years of data provides LEAs the time and opportunity to encourage schools to use, and train personnel to use, alternatives to disciplinary removals prior to a State determination of significant disproportionality. The Department also believes that allowing States to use up to three years of data to identify significant disproportionality will promote the appropriate identification of LEAs, including LEAs with low incidence rates.

Changes: None.

Comments: Several commenters argued that the risk ratio will fail to detect significant disproportionality in areas where the risk levels in an LEA for identification, placement, or discipline are extraordinarily high for children in all racial and ethnic groups. That LEA could nevertheless have a small risk ratio. Similarly, one commenter argued that the risk ratio is an illogical measure of the association between two groups; for example, a risk ratio of 1.85 for outcome rates of 37 percent and 20 percent means the same thing as a risk ratio of 2.60 for rates of 13 percent and 5 percent.

Discussion: While that there may be LEAs where children with disabilities are inappropriately identified, placed in overly restrictive settings, or disciplined at higher rates than national averages, IDEA section 618 and its requirement for an annual review for significant disproportionality does not operate in isolation. There are other provisions of IDEA beyond section 618(d) that promote appropriate practices in these areas. For example, States and LEAs share responsibility for ensuring appropriate implementation of State child find procedures (IDEA section 612(a)(3)) and evaluation and reevaluation procedures (IDEA section 614(a)–(c)); children with disabilities must receive FAPE in the least restrictive environment (IDEA section 612(A)(5)); and finally, specific discipline procedures and protections must be followed (IDEA section 615(k)).

In addition, Congress included specific language that allows States to address higher incidences of discipline for children with disabilities under IDEA section 612(a)(22)(A). This provision requires that States examine data to determine if LEAs have significant discrepancies, by disability status or by race and ethnicity, in rates of long-term suspensions and

expulsions, either among the LEAs in the State or when comparing rates for disabled and nondisabled children within each LEA.

There are still other sections of IDEA that support the provision of services for children in need of behavioral supports and that could be used to address any high incidence of disciplinary removals among children with disabilities.

Section 614(d)(3)(B)(i) (20 U.S.C. 1414(d)(3)(B)(i)), for example, requires IEP teams to, in the case of a child whose behavior impedes the child's learning or that of others, consider the use of positive behavioral interventions and supports, and other strategies, to address that behavior.

In 2016, the Department released guidance to clarify that, while IDEA section 615(k)(1)(B) (20 U.S.C. 1415(k)(1)(B)) authorizes school personnel to remove from their current placement children who violate a code of student conduct, that authority in no way negates the obligation of schools to provide behavioral supports to children with disabilities as needed to ensure FAPE. OSEP Dear Colleague Letter, August 1, 2016.

As noted earlier, significant discrepancies in the rates of long-term suspension and expulsions among LEAs in a State or when comparing rates for children with and without disabilities are addressed by IDEA section 612(A)(22), but section 618(d) does not contain comparable language mandating those examinations.

Finally, consistent with earlier discussions, the Department declines to require or allow additional criteria that would reduce the proposed levels of comparability and transparency.

Changes: None.

Comments: Many commenters suggested that the Department allow States to compare LEA risk to a risk index. Some argued that if the Department allowed States to include comparisons to risk indices in the standard methodology, States could reduce the number of LEAs identified with significant disproportionality where risk levels are very low for all groups (but where the risk ratios are high). Similarly, others recommended that while any LEA with a racial or ethnic group risk ratio above the specified risk ratio threshold would be considered for a finding of significant disproportionality, any LEA with a racial or ethnic group risk that was to some degree below the State mean risk index would not be determined to have significant disproportionality. Still other commenters suggested many variations on ways that a comparison to a risk index could be used, such as comparing

the risk of a particular outcome for a racial or ethnic group in an LEA to a statewide risk or a national risk for that same group. These recommendations addressed the use of risk indices for different areas of analysis, different racial or ethnic groups, and different disabilities. In short, the commenters suggested ways to use risk indices in conjunction with the risk ratio for all of the analysis required under § 300.647(b).

Discussion: To begin with, the Department understands *risk index* to mean the likelihood of a particular outcome (identification, placement or disciplinary removal) for an aggregate population of children—such as all children within a State, or all children nationally—to which risk may be compared. The Department is not aware of, and no commenters provided, a research basis for selecting a particular magnitude of difference—such as one or two percentage points—between racial or ethnic subgroup risk and a risk index that would allow the risk index to be used as a measure of significant disproportionality in a way that is not arbitrary.

That aside, LEAs must use extreme caution to avoid actions based on race or ethnicity that could violate Federal civil rights laws and the Constitution. Moreover, LEAs must ensure that the requirements for individualized decisions about evaluations, placement, and disciplinary removals are properly and fully implemented.

Under IDEA, a child's identification, placement, and discipline are determined through specific individualized means. The Department has determined that allowing or requiring States to compare and control for racial or ethnic group risk and an overall risk index—that is, including in the standard methodology measures that would require States to adjust for, and thereby artificially mandate, the overall incidence of identification, placement, or discipline—would create strong incentives for impermissible quotas in overall identification, placements, and disciplinary removals. The Department believes that restrictions that would inhibit the ability of an evaluation team to make eligibility determinations, a placement team to make placement decisions based on the child's unique needs, or an IEP Team to determine if conduct subject to discipline was a manifestation of the child's disability, would result in violations of IDEA section 612(a)(3) (child find), section 614(a)–(c) (evaluation and reevaluation) section 612(a)(5) (placement in the least restrictive environment), or section 615(k) (disciplinary removals).

As such, the Department believes that creating an exception to a determination of significant disproportionality based on a comparison between racial or ethnic group risk and a risk index, or modifying the standard methodology to include this use of the risk index, would undermine the determinations required under 618(d) and create strong incentives to violate IDEA's requirements for identification, placement, and disciplinary removals.

The Department appreciates the various suggestions for addressing certain potential issues when using risk ratios to identify LEAs with significant disproportionality. In line with the GAO's recommendations, the Department also believes that restricting States to the risk ratio will foster greater transparency, as well as comparability between States, and thereby strengthen the Department's ability to evaluate States' implementation of IDEA section 618(d). To allow States to add additional criteria—even if only a second criterion—would reduce comparability between States' approaches while adding to the complexity of the standard methodology as a whole and creating additional burdens.

Changes: None.

Comments: Several commenters requested that States be permitted to use risk difference along with, or instead of, risk ratios because it has a number of advantages over the risk ratio for measuring racial and ethnic disparities.

First, commenters stated that risk differences can be calculated even when the comparison group has a risk level of zero, and therefore the risk ratio cannot be calculated. According to commenters, the most serious racial disparities are those in which only one racial or ethnic group is subjected to the harshest disciplinary actions; for this reason, commenters supported the use of risk difference to properly analyze significant disproportionality in suspensions and expulsions exceeding 10 days.

Second, commenters argued that risk differences could capture disparities in LEAs that have very high rates of restrictive settings and disciplinary exclusion for all groups. Commenters expressed their concerns that those LEAs would be overlooked if risk ratios alone are used.

Third, as discussed elsewhere in this section, commenters stated that risk difference can ensure that significant disproportionality would not be triggered when incidence levels are very low for all groups.

Finally, commenters stated that risk differences are easy to calculate,

interpret, and use to compare LEAs. These commenters suggested that the Department define a range of acceptable risk difference thresholds and review each State's thresholds for reasonableness. The commenters also expressed that, because risk differences are simple to calculate and easy to understand, the Department should not find it difficult to review States' risk difference thresholds for reasonableness. Further, commenters suggested that, as most of the States finding zero LEAs with significant disproportionality use a risk ratio, the preferences of States for risk ratios should not prejudice the Department against the use of risk difference in addition to, or instead of, a risk ratio.

Discussion: The Department carefully considered the optional use of a second measure of significant disproportionality, either instead of or in addition to, the risk ratio. The Department agrees that risk difference has certain advantages that the risk ratio does not. However, the Department also believes that, at the present time, the risk ratio also has advantages not shared by the risk difference.

First, as risk ratio method is widely used by States, its strengths and weaknesses are well known, as are the approaches needed to address its shortfalls (e.g., multiple years of data and minimum n-sizes and minimum cell sizes). While we agree that the risk difference can be calculated when risk in the comparison group is zero, and may help States to avoid inappropriate identification of LEAs with low incidence rates, we believe that the standard methodology, as a whole, allows States to appropriately measure racial and ethnic disparities in LEAs experiencing these issues. Further, while risk differences may identify racial and ethnic disparities when LEAs have high incidence rates, we believe there are other provisions of IDEA beyond section 618(d) that promote appropriate practices to address those high incidence rates, which we list earlier in this section.

Second, due to the widespread use of risk ratio thresholds, the Department anticipates that § 300.646(b), which would require States to follow a standard methodology, will create less burden for States if the methodology includes a more common measure of racial and ethnic group disparity. Based on the Department's review of State definitions of significant disproportionality, as noted in the NPRM, fewer than five States used risk difference, while nearly 45 States used some form of the risk ratio (e.g., risk ratio, alternate risk ratio, weighted risk

ratio), and 21 used the risk ratio proposed in the Department's standard methodology.

Third, the States' experience with risk ratios provides the Department with some historical knowledge of what risk ratio thresholds have previously been considered as indicative of significant disproportionality. In the NPRM, we noted that, of States utilizing a risk ratio, 16 States used a risk ratio threshold of 4.0, while seven States each used thresholds of 3.0 and 5.0. This history will help inform the Department's review of reasonableness. With so few States utilizing risk difference, this same history is not available to the Department. For these reasons, the Department considers the risk ratio to be superior to risk difference as the primary measure of racial and ethnic disparities for the standard methodology.

Further, the Department does not believe the benefits of the risk difference outweigh the consequences. While the risk difference method may serve to clarify the significance of racial disproportionality between LEAs with identical risk ratios, its application would still require the development of a threshold of risk difference for determination of significant disproportionality. The use of two different thresholds for significant disproportionality is contrary to the objective of promoting consistency and transparency in how States determine disproportionality, as recommended by the GAO report. In addition, we believe that the measures implemented in these final regulations to promote consistency and transparency also will lead to more appropriate identification of significant disproportionality and do not believe that the low incidence of identification in the past is a result of the risk ratio method itself.

Changes: None.

Comments: Two commenters asserted that the weighted risk ratio is the most accurate and effective measurement because it allows the State to standardize across LEAs that are very different. These commenters argued that, while the risk ratio is simple and straightforward, the weighting of findings using State data provides standardization that makes comparability across LEAs possible. These commenters also argued that the weighted risk ratio formula is not too difficult for States to utilize. Further, commenters argued that the States currently using a weighted risk ratio—nearly half of all States—would be prohibited from doing so under proposed § 300.647(b), apparently because of its complexity and lack of

public understanding—rather than specified weaknesses in the methodology itself. Some commenters suggested allowing States to calculate significant disproportionality using either the risk ratio method or the weighted risk ratio method. One commenter stated that the weighted risk ratio ensures that two LEAs are treated similarly if the risk for the racial or ethnic group of interest is the same in both LEAs, even if the racial demographics in each LEA are different.

Other commenters, meanwhile, supported regulations that would disallow States' use of the weighted risk ratio. These commenters agreed that weighted risk ratios add a high level of complexity that makes the decision to identify an LEA difficult for the layperson to follow. These commenters stated as well that weighted risk ratios are not necessary if the alternative risk ratio is available. One of these commenters stated that it was important for special education administrators to be able to calculate current racial and ethnic disparities independent from a State report, which is based on prior year data. A few commenters stated that the use of the weighted risk ratio alone, without adequate minimum n-sizes or additional significance testing, would result in many LEAs being identified as having significant disproportionality when the disproportionality is due only to small numbers of children identified with disabilities, placed in restrictive settings, and disciplined. Some commenters observed that the Department's proposal did not include permission to use weighted risk ratio but requested that the Department explicitly prohibit its use.

Discussion: As we noted in the NPRM, with a weighted risk ratio, the comparison group is adjusted by adding different weights to each racial and ethnic group, typically based on State-level representation. The weighted risk ratio method has the drawback of volatility across years, similar to the risk ratio, but does not support straightforward interpretation as well as the risk ratio does.

Given that we proposed three mechanisms to help States account for risk ratio volatility—(1) the alternate risk ratio, (2) the allowance for using up to three consecutive years of data before making a significant disproportionality determination, and (3) the minimum n-size and cell size requirements—the Department previously determined that the potential benefits of the weighted risk ratio method were exceeded by the costs associated with complexity and decreased transparency. Although the final regulations adopt additional

flexibility, and potential variability, through the requirement for a minimum cell size, the Department continues to believe that use of the weighted risk ratio is not justified for the same reasons.

While a number of States currently use the weighted risk ratio method, the Department believes that method fails to provide LEAs and the public with a transparent comparison between risk to a given racial or ethnic group and risk to peers in other racial or ethnic groups, as the risk ratio and alternate risk ratio methodologies are designed to do. We believe that the final regulations, as drafted, clearly disallow use of the weighted risk ratio as part of the standard methodology and that additional clarification on this point is not necessary.

Changes: None.

Comment: A few commenters stated that States should be encouraged to add a test of statistical significance to the standard methodology. Two commenters requested that the Department allow States to use appropriate tests of statistical significance to assess the statistical significance of any preliminary result produced through risk ratio analysis.

Another commenter suggested that, if the Department only allows States to set a minimum n-size, it should allow States to conduct a test of statistical significance to determine if the risk ratio is truly significant.

Discussion: Statistical significance testing is applicable only to samples rather than population data, and therefore is not an appropriate method of determining significant disproportionality in an LEA. As we noted in the NPRM, States have access to population data, including actual counts of children identified with a disability, placed into particular settings, or subjected to a disciplinary removal from placement. With this information, States can simply calculate whether an LEA's risk ratio for a given subgroup is different from the risk ratio for a comparison group.

Changes: None.

Comment: A commenter argued that, when calculating a risk ratio, White children would be a more appropriate comparison group than "all other racial and ethnic groups" as specified in the definition of "risk ratio" in the proposed § 300.647(a)(3) (now § 300.647(a)(6)). To help States make use of this comparison, while ensuring that White children are not precluded from the States' review for significant disproportionality, the commenter recommended that States be required to calculate both the Department's

proposed risk ratio and a second risk ratio where White children replace all other racial and ethnic groups. The commenter noted that the additional data analysis and reporting burden associated with the addition of this risk ratio would be negligible. Another commenter recommended that, in addition to the risk ratio, the Department allow States to compare all racial or ethnic groups to the State risk index for White children only, in order to prevent States from identifying significant disproportionality in LEAs where risk for a given racial or ethnic group is low.

Discussion: The Department acknowledges that, in general, it may be a common practice to utilize White children as a comparison group when examining data for racial and ethnic disparities. However, for purposes of IDEA section 618(d), it would be inappropriate to use one method for children of color with disabilities—a comparison to White children—and a separate method for White children in which they are compared to all other racial and ethnic groups. We do not find it appropriate for one racial or ethnic group to be treated differently from the others in these regulations.

Changes: None.

Categories of Analysis (§ 300.647(b)(3) and (4))

Comment: One commenter stated that, in one State, children with disabilities are not categorized by impairment, noting that IDEA does not require that children be classified by their disability. The commenter requested that, to preserve this State's current policy, the Department revise proposed § 300.647(b)(3) to clarify that States need only calculate risk ratios for particular impairments if those States or their LEAs identify children with particular impairments.

Discussion: The Department does not believe that a revision to § 300.647(b)(3) is necessary to allow a State that currently does not classify children by disability to continue in its current practice. The standard methodology in § 300.647 does not require States to classify children by impairment in order to comply with the requirement to identify and address significant disproportionality. Rather, under § 300.647(b)(3), the State is required to review those racial or ethnic groups within LEAs that meet the State's population requirements, including a minimum cell size. Because a State that does not classify children by disability would, in assessing LEAs for significant disproportionality, have a cell size of zero for each of the impairments

enumerated under § 300.647(b)(3)(ii) for all racial and ethnic groups and for all LEAs, that State would not be required to calculate risk ratios for any of the impairments. Under § 300.647(b)(3)(i), however, the State must calculate risk ratios for the category of all children with disabilities, by racial and ethnic group.

Changes: None.

Comments: Several commenters responded to Directed Question #3 in the NPRM, which inquired whether the Department should remove any of the six impairments from, or add additional impairments to, proposed § 300.647(b)(3)(ii). That section listed the impairments that States must examine in determining whether an LEA has significant disproportionality with respect to the identification of particular impairments.

One commenter responded that the Department need not expand the list of impairments because the remaining impairments under IDEA section 602(3) that could be added to those listed in § 300.647(b)(3)(ii) are low incidence, and the qualifying factors for these are so specific, that there is limited room for varying interpretations that might lead to significant disproportionality. Two commenters recommended that all six impairments included in proposed § 300.647(b)(3)(ii) remain if the Department allows States to limit their review of significant disproportionality only to those racial and ethnic groups where at least 10 children (or, as an alternative, at least 15 children) have been identified with that particular impairment. One commenter asserted that all impairments listed in proposed § 300.647(b)(3)(ii) should remain and that the Department should further include all of the impairments in IDEA section 602(3), including those impairments enumerated under IDEA section 603(3)(B) that are applicable to children, aged 3 through 9, who experience developmental delays in physical development, cognitive development, communication development, social or emotional development, or adaptive development. Another commenter also supported the inclusion of developmental delay in States' review for significant disproportionality.

Two commenters recommended that blindness, orthopedic impairment, and hearing impairments be added to the list of impairments in proposed § 300.647(b)(3)(ii).

Discussion: The Department agrees that it is unnecessary to require States to examine the seven low-incidence impairments listed in IDEA section 602(3) and in § 300.8 that were not

included in proposed § 300.647(b)(3)(ii) for significant disproportionality. Given the low incidence of these impairments, the Department continues to believe that disproportionality based on race or ethnicity will not be reliably identified as systemic or otherwise indicative of persistent underlying problems. Further, given that the Department has not previously required States to examine these impairments, doing so now would impose a new data analysis burden that the Department does not believe is necessary. For this same reason, the Department declines to add to § 300.647(b)(3)(ii) blindness, orthopedic impairment, hearing impairments, or the developmental impairments applicable to children aged three through nine defined under IDEA section 602(3)(B).

Changes: None.

Commenter: One commenter recommended the use of an alternative risk ratio method to capture the disability categories in IDEA section 602(3). The commenter suggested that the alternative risk ratio method be used when a racial or ethnic group does not meet a minimum population requirement for any of the disability categories. The commenter suggested this approach to help address the possible under-identification of hearing loss.

Discussion: Again, the Department believes that it is unnecessary to require States to examine the seven low-incidence impairments listed in IDEA section 602(3) that were not included in proposed § 300.647(b)(3)(ii) for significant disproportionality. Given the low incidence of these impairments, disproportionality based on race or ethnicity may not be reliably identified as systemic or otherwise indicative of persistent underlying problems, and the Department has not previously required States to examine these impairments. Nothing, however, would prevent a State from examining low-incidence disabilities for racial and ethnic disparities—or for disproportionate overrepresentation—if it chose to do so. Moreover, while a State may choose to review an LEA's policies, procedures, and practices for compliance with IDEA requirements related to identification and evaluation under its separate general supervisory authority in IDEA section 612(a)(22) or monitoring authority in section 616, the consequences set out in IDEA section 618(d)(2) and these regulations, including mandating the use of comprehensive CEIS, do not apply.

Change: None.

Comments: One commenter recommended that the Department

exclude any of the six impairments from a review for significant disproportionality that were not part of the research base informing the 2004 IDEA regulations related to significant disproportionality in special education.

According to the commenter, concerns regarding overrepresentation in special education were limited to the identification of intellectual disabilities, specific learning disabilities, and emotional disturbance.

Discussion: We decline to make the commenter's requested change to § 300.647(b)(3). IDEA section 618(d) (20 U.S.C. 1418(d)) requires that States examine LEAs for significant disproportionality based on race and ethnicity in the identification of particular impairments. We believe there is a sufficient statutory basis to extend the requirement for States to examine LEAs for significant disproportionality to all of the impairments included in IDEA section 602(3); however, the Department has determined that, given the low incidence of several of the listed impairments, it may be difficult to reliably identify significant disproportionality with respect to these impairments that is systemic or otherwise indicative of persistent underlying problems.

Change: None.

Comments: One commenter recommended that under proposed § 300.647(b)(3)(ii), States should not be required to examine LEAs for significant disproportionality in the identification of children with specific learning disabilities. This commenter noted that some States have put in place a process whereby children must receive certain services—specifically, response to intervention—prior to being identified with specific learning disabilities. This commenter suggested that the use of evidence-based interventions has reduced the number of children requiring special education services.

Discussion: The Department appreciates the comment and agrees that the provision of multi-tiered systems of support, such as response to intervention, can be useful and important in serving children with disabilities. At the same time, we note that States and LEAs have an obligation under §§ 300.304 to 300.311 to ensure that the evaluation of children suspected of having a disability is not delayed or denied because of the implementation of specific strategies or interventions. Under § 300.307, States must adopt criteria for determining whether a child has a specific learning disability. The criteria adopted by the State: (1) Must not require the use of a

severe discrepancy between intellectual ability and achievement for determining whether a child has an specific learning disability; (2) must permit the use of a process based on the child's response to scientific, research-based interventions; and (3) may permit the use of other alternative research-based procedures for determining whether a child has a specific learning disability. (34 CFR 300.307, OSEP Memorandum 11-07, January 21, 2011).

We decline to revise

§ 300.647(b)(3)(ii) as suggested by the commenter. In its 37th Annual Report to Congress on the Implementation of the Individuals with Disabilities Education Act (2015) (37th IDEA Annual Report), the Department noted that the percentage of the resident population ages 6 through 21 served under IDEA, Part B, identified with specific learning disabilities was 39.5 percent of children, the highest of all impairments.

The fact that specific learning disabilities, as a category, has the highest incidence of all the impairments recognized by IDEA suggests that it may be one of the most important disability categories to review for significant disproportionality. Moreover, given that it is a high-incidence category, removing specific learning disabilities from the analysis may have the unintended effect of increasing identification of this impairment to minimize any appearance of racial and ethnic disparities in the identification of children with impairments that are subject to examination for significant disproportionality. To prevent this possibility and encourage the appropriate identification of children with disabilities, the Department believes it best to continue to require States to review LEAs for significant disproportionality with respect to specific learning disabilities.

Changes: None.

Comments: Several commenters recommended that the Department remove autism from the list of impairments under proposed § 300.647(b)(3)(ii) that States must examine in LEAs for significant disproportionality. Of these commenters, one noted that autism identification generally follows a medical diagnosis. Several explained that some States require that a medical evaluation be conducted or a medical diagnosis be considered before a child can be identified with autism. Several others generally noted that it is rare that an LEA diagnoses a child as having autism. As a result, one commenter concluded, any over-identification of autism may be attributable to a medical professional in the LEA and not

necessarily indicative of an issue in the LEA itself. Another commenter noted that, since a diagnosis of autism is not under the control of the LEA, the LEA would have no means or capacity to remedy and correct a finding of significant disproportionality.

Several other commenters stated that a failure to provide children with special education services after a medical diagnosis of autism could result in noncompliance with IDEA. Finally, several commenters examined the Department's report—*Racial and Ethnic Disparities in Special Education: A Multi-Year Disproportionality Analysis by State, Analysis Category, and Race/Ethnicity (2015)*—and found that the most egregious disparities with respect to autism applied to White children. These commenters believed that requiring LEAs to address significant disproportionality with respect to White children was not the intention of IDEA.

With respect to special education eligibility determinations, a last commenter stated that LEAs generally do not make clinical diagnoses. Rather, LEAs and schools are charged with determining whether children meet State and Federal criteria to be eligible for special education and require specialized instruction.

Discussion: In its 37th Annual Report, the Department noted that the percentage of the resident population of children with autism ages 6 through 21 served under IDEA, Part B, increased markedly between 2004 and 2013. Specifically, the percentages of three age groups—ages 6 through 11, 12 through 17, and 18 through 21—that were reported under the category of autism were 145 percent, 242 percent, and 258 percent larger in 2013 than in 2004, respectively.

Given those increases, and to encourage the appropriate identification of children with disabilities, the Department believes it best to continue to require States to review LEAs for significant disproportionality with respect to autism.

We further note that, even if disparities in an LEA's identification of autism tend to result from disparities in the medical diagnosis of autism, it may be the case that the latter disparities are due to factors such as unequal access to medical care, which may result in children not being referred for an evaluation. In this instance, the broader use of developmental screening for young children—which may be supported using comprehensive CEIS—may help to identify children in other racial or ethnic groups that may currently be underrepresented among children with impairments such as

autism that may follow a medical diagnosis.

Last, we disagree with the commenters' suggestion that IDEA section 618(d) was not intended to address significant disproportionality that impacts White children. The plain language of IDEA section 618(d) (20 U.S.C. 1418(d)) requires States to identify significant disproportionality, based on race or ethnicity, without any further priority placed on specific racial or ethnic groups. For that reason, the Department believes that the statute directs States to address significant disproportionality impacting all children.

Changes: None.

Comments: A number of commenters recommended that the Department remove other health impairments (OHI) from the list of impairments under proposed § 300.647(b)(3)(ii) that States must examine for significant disproportionality. Of these, some commenters noted that some States require that a medical evaluation be conducted, or a medical diagnosis be considered, before a child is determined to have OHI. Still others noted that it is rare for an LEA to diagnose a child with OHI and that failure to provide children with special education services when an evaluation indicates OHI could result in non-compliance with IDEA. One commenter stated that, since a diagnosis of OHI is not under the control of the LEA, the LEA would have no means or capacity to remedy and correct a finding of significant disproportionality. Finally, some commenters stated that the Department's data show that the most egregious disproportionality with respect to OHI applies to White children, but requiring LEAs to address significant disproportionality with respect to White children was not the intention of IDEA.

With respect to special education eligibility determinations, a last commenter stated that LEAs generally do not make clinical diagnoses. Rather, LEAs and schools are charged with determining whether children meet State and Federal criteria to be eligible for special education and require specialized instruction.

Discussion: In its 37th Annual Report, the Department noted that the percentage of the resident population with OHI ages 6 through 21 and served under IDEA, part B, increased markedly between 2004 and 2013. Specifically, the percentages of three age groups reported—ages 6 through 11, 12 through 17, and 18 through 21—were 45 percent, 624 percent, and 104 percent larger in 2013 than in 2004, respectively.

Given recent increases in the percentage of children identified with OHI, and to encourage the appropriate identification of children with disabilities, the Department believes it best to continue to require States to review LEAs for significant disproportionality in OHI. Also, we note that, even if disparities in the identification of OHI tend to result from disparities in the medical or clinical diagnosis of OHI, it may be the case that the latter disparities are due to factors such as unequal access to medical care, which may result in children not being referred for an evaluation. In this instance, the broader use of developmental screening for young children—which may be supported using comprehensive CEIS—may help to identify children in other racial or ethnic groups that may currently be underrepresented in disability categories, like OHI, that may follow a medical diagnosis.

Last, we disagree with commenters' suggestion that IDEA section 618(d) was not intended to address significant disproportionality that impacts White children. The plain language of IDEA section 618(d) requires States to identify significant disproportionality, based on race or ethnicity, without any further priority placed on specific racial or ethnic groups. For that reason, the Department believes that the statute directs States to address significant disproportionality impacting all children.

Changes: None.

Comment: Several commenters responded to Directed Question #4 of the NPRM, which inquired whether the Department should continue to require States to review LEAs for significant disproportionality based on race or ethnicity in the placement of children with disabilities inside the regular classroom between 40 percent and 79 percent of the day.

Multiple commenters suggested that the Department continue the requirement. Of these commenters, a few noted that this type of placement data is already collected by States and might be helpful in addressing other issues of disproportionality. One commenter advocated for leaving this placement in the regulations and noted that 50 percent of the day is the equivalent of lunch, recess, gym, morning meeting, and art class. In the commenter's opinion, placement in the classroom only 50 percent of the day is a significant amount of isolation, and may mean a potential lack of access to the general education curriculum.

One commenter stated that research shows that almost every child of color

with disabilities who takes an alternate assessment based on alternate academic achievement standards is segregated from their peers for all or most of the day, and that the lack of integration in the regular classroom is associated with lower performance on State general assessments. The commenter suggested that this information supports the continued inclusion of placement inside the regular classroom between 40 percent and 79 percent of the day in States' review for significant disproportionality.

Conversely, a few commenters expressed their preference that the Department not require States to review for significant disproportionality placement in the regular classroom between 40 and 79 percent of the school day. These commenters noted that data regarding this placement provides little information about the severity of a child's disability, the classroom supports the child receives, or the quality of the services in that setting. Many commenters noted that 40 percent to 79 percent of the school day covers a wide range that encompasses anywhere from 2.4 to 4.7 hours. These commenters stated that while only 2.4 hours in the regular classroom may be more restrictive, 4.7 hours may not be; therefore, this placement is difficult to categorize.

Several commenters noted that it is generally meaningless to draw conclusions about the percentage of time a child is in a regular class and whether it means the LEA has provided services in the least restrictive environment.

One commenter asserted that one State may have difficulty collecting data regarding this placement, as the State reports placement using different percentages of time spent in the regular classroom (*i.e.*, 20 percent or less, less than 60 percent and greater than 20 percent, 60 percent or more). The commenter expressed concern that requiring States to change their placement categories would require changes to State special education regulations, resulting in significant increases in paperwork and resource expenditures.

Additionally, several commenters stated that reporting additional placement data will be a burden for LEAs and will not provide useful information.

Discussion: IDEA section 618(d) (20 U.S.C. 1418(d)) requires States to examine data to determine if significant disproportionality based on race and ethnicity is occurring in the State and LEAs of the State with respect to the placement of children with disabilities.

To meet their general data reporting obligations under IDEA section 618(a) (20 U.S.C. 1418(a)), States currently submit to the Department a count of children with disabilities, disaggregated by race and ethnicity, who are placed inside the regular classroom between 40 percent and 79 percent of the day, inside the regular classroom less than 40 percent of the day (*i.e.*, inside self-contained classrooms) and inside separate settings (*i.e.*, separate schools and residential facilities). OSEP Memorandum 08–09 and FILE C002, OMB Control Nos. 1875–0240 and 1820–0517. Consistent with this reporting requirement, the Department initially proposed requiring States to review each of these three placements for significant disproportionality, as racial and ethnic disparities in these placements may suggest that some children with disabilities have less access to the least restrictive environment to which they are entitled under IDEA section 612(a)(5) (20 U.S.C. 1412(a)(5)). The Department did not include in the NPRM any requirements that States expand the scope of their data collection with respect to placement.

However, the Department asked Directed Question #4 to ascertain whether States and LEAs should be required to determine whether there is significant disproportionality in LEAs with respect to placement in the regular classroom between 40 percent and 79 percent of day. After reviewing the perspectives shared by commenters, the Department agrees to no longer require that States determine whether significant disproportionality, by race or ethnicity, is occurring within an LEA with respect to placement in the regular classroom between 40 percent and 79 percent of the day. The Department acknowledges that there could be significant qualitative differences in the opportunities for interaction with nondisabled peers for students at the lower end of this range and students at the upper end. While the Department emphasizes that placement decisions must be individualized, we also recognize that, given these differences, for students on the lower end of this range, there could be unintended incentives to improperly place them in settings where they spend less classroom time with nondisabled students rather than more. Given the qualitative differences and the broad range of class time addressed in this category, we no longer believe that addressing significant disproportionality in LEAs with regard

to this placement category is appropriate.

The Department appreciates the comments supporting the proposed requirement and we recognize that an examination of the placement of children with disabilities outside of the regular classroom more than 40 percent of the day and less than 79 percent of the day could, in some limited cases, help to highlight systemic issues. In the Department's view, on balance, the continued use of this category for determining significant disproportionality is not warranted.

Changes: The Department has revised proposed § 300.647(b)(4) to remove the requirement that States identify significant disproportionality with respect to the placement of children with disabilities ages 6 through 21, inside a regular class more than 40 percent of the day and less than 79 percent of the day.

Comment: One commenter expressed concern that the standard methodology requires States to examine risk ratios for each placement type separately, rather than recognizing their interconnectedness. The commenter suggested, for example, that an LEA could evade a finding of what the commenter calls "significant discrepancy" by moving children from partial inclusion to a substantially separate classroom. The commenter stated that this would cause the LEA to not be identified with "significant discrepancy" with respect to the number of children being educated in partially inclusive settings. The commenter concluded that this approach would not create the right incentives for LEAs.

Discussion: We appreciate the commenter's concern. The Department has heard from several commenters regarding our initial proposal to require States to review for significant disproportionality the placement of children with disabilities in the regular classroom for no more than 79 percent of the day and no less than 40 percent of the day. After reviewing the comments, we agree that this placement covers too broad a range of hours within the school day to help States to identify significant disproportionality with respect to placement. In considering this commenter's perspective, we find it may also be the case that, to avoid a determination of significant disproportionality with respect to placement in the regular class for no more than 79 percent of the day and no less than 40 percent of the day, LEAs may have an incentive to shift children with disabilities from this more inclusive placement to self-contained

classrooms or separate schools. With this in mind, the Department will remove the proposed language requiring States to review LEAs, or their racial or ethnic groups, for significant disproportionality with respect to placement in the regular classroom for no more than 79 percent of the day and no less than 40 percent of the day from § 300.647(b)(4). With this change, the Department has narrowed States' review of significant disproportionality to the most restrictive placements, including self-contained classrooms, separate schools, and residential facilities. We believe that § 300.647(b)(4), as revised, encourages LEAs to focus on placing children in the proper setting by requiring them to analyze only the most significant removals from the regular classroom.

Changes: As discussed above, the Department has revised proposed § 300.647(b)(4) to remove the requirement that States identify significant disproportionality with respect to the placement of children with disabilities ages 6 through 21, inside a regular class more than 40 percent of the day and less than 79 percent of the day.

Comment: Several commenters noted that the Department should not expand data collection regarding disproportionality in placements as discretion regarding placement is not entirely within the hands of the LEA. Instead, these commenters asserted, placement involves difficult decisions by IEP Teams, including parents, that can change significantly from year to year (and sometimes throughout the year). The commenters added that the only way to address significant disproportionality would be to change a child's educational placement, which by law is the decision of an IEP Team that includes the parents. We interpreted these comments to refer to the requirements of § 300.116(a)(1), which specifies that placement is to be determined by a group of persons, including the parents, and other persons knowledgeable about the child. One commenter expressed concern that LEAs will stop thinking about the individual needs of the child and instead include them in regular classes to avoid a determination of significant disproportionality.

Discussion: IDEA section 618(d) (20 U.S.C. 1418(d)) explicitly requires States to review LEAs for significant disproportionality based on race and ethnicity with respect to placement, and, when significant disproportionality is identified, to (1) require LEAs to undergo a review and, if appropriate, revision of policies, practices, and

procedures; (2) publicly report on any revisions; and (3) reserve 15 percent of their IDEA Part B funds for comprehensive CEIS. This statutory language is consistent with the mandate that all children with disabilities receive special education and related services in the least restrictive environment. (IDEA section 612(a)(5) (20 U.S.C. 1412(a)(5))).

When LEAs have significant disproportionality with respect to placement, the LEA must review its policies, practices, and procedures to ensure that the policies and procedures conform with IDEA requirements and that the practice of placement teams in implementing these policies and procedures is also consistent with IDEA—such as involving parents in placement decisions, and ensuring placement decisions are made in conformity with least restrictive environment requirements. (34 CFR 300.114 and 116(a)(1)). In any case, these regulations do not include an expansion of data collections to support State review for significant disproportionality in placement. In Question 14 of OSEP Memorandum 08–09 (July 28, 2008), the Department clarified that States had an obligation to use the data collected for reporting under IDEA section 618 and must, at a minimum, examine data for three of IDEA section 618 reporting categories: Children who received educational and related services in the regular class no more than 79 percent of the day and no less than 40 percent of the day, children who received special education and related services in the regular class for less than 40 percent of the day, and children who received special education and related services in separate schools and residential facilities. However, as we note in this section of this document, the Department is revising proposed § 300.647(b)(4) to no longer require States to review LEAs for significant disproportionality with respect to placement in the regular class no more than 79 percent of the day and no less than 40 percent of the day.

Changes: None.

Comment: Several commenters expressed that it is worth noting how much time a child spends in a self-contained classroom as it is a unique placement.

Discussion: The Department agrees and has retained the requirement that States review LEAs for significant disproportionality with respect to placement in the regular classroom less than 40 percent of the day. In general, when children spend less than 40 percent of the day in the regular classroom, the Department considers

most of these children to be placed in self-contained classrooms.

Changes: None.

Comment: One commenter noted that the populations reviewed under proposed § 300.647(b)(3) do not align with the populations reviewed under proposed § 300.647(b)(4). The commenters specifically noted that none of the subsections under § 300.647(b)(4) reference the six specific impairments enumerated under § 300.647(b)(3)(ii). The commenter also noted that the two provisions include differences in the ages of the children reviewed. The commenter requested that the Department revise both provisions so that the populations reviewed for significant disproportionality are consistent across the review of identification, placement, and discipline.

Discussion: In OSEP Memorandum 08–09, the Department previously provided guidance on the data that IDEA section 618(d) requires States to examine to determine if significant disproportionality based on race and ethnicity was occurring with respect to the identification, placement, or discipline of children with disabilities. This data is consistent with that already required of States to meet their reporting obligations under IDEA section 618(a), and which were established, following notice and comment, in OMB-approved data collections 1875–0240 and 1820–0517. FILE C002, 2013. As we noted in the NPRM, the Department intentionally designed § 300.647(b)(3) and (4) to mirror the guidance previously provided in OSEP Memorandum 08–09, and current data collection requirements, so as not to introduce confusion or add unnecessary burden.

Changes: None.

Comments: Various commenters requested that the Department extend the list of placements that States must review to determine whether significant disproportionality based on race or ethnicity is occurring within their States.

Several commenters requested that the Department require States to review LEAs for significant disproportionality in the placement of children in hospital, homebound and correctional settings, as well as private schools, if they include more than 10 children. Several commenters specifically argued that children with disabilities in correctional education programs should be included, generally, in the calculations for significant disproportionality.

Commenters reported that, according to advocates and attorneys, the number of children with disabilities placed in homebound or tutoring programs—and,

as a consequence, provided with only one or two hours of instruction a day—is increasing due to unaddressed disability-related behaviors in school and efforts to reduce the use of suspension and expulsion. In many cases, according to the commenters, no attempt is made to provide these children with supplementary aids and services in less restrictive settings. The commenters stated that these practices likely have a greater impact on low-income families and children of color and concluded that the need to review this low-incidence placement for significant disproportionality is worth the risk of false positive identification of LEAs.

Further, commenters stated that LEAs play a role in the placement of children with disabilities in correctional facilities through the use of school-based arrests and juvenile justice referrals. One commenter clarified that States need to answer the question of whether children with disabilities were receiving special education services and supports in correctional facilities and whether there is significant disproportionality in those placements.

Discussion: The Department continues to believe that it is inappropriate to require States to examine placement in correctional facilities, or in homebound or hospital settings, given that LEAs generally have little, if any, control over a child's placement in those settings. Further, given that the Department has not previously required States to examine data to determine if significant disproportionality is occurring in these placements, a new requirement that States examine these placements in LEAs would represent a new data analysis burden that the Department does not believe is warranted.

Change: None.

Comments: A commenter requested that the Department require States to: (1) Report the number and proportion of inmates in correctional facilities within the State who have been identified as children with disabilities and are receiving special education services, and (2) make a determination of significant disproportionality, by disability status, with respect to placement in correctional facilities.

Discussion: We decline to require States to take either action. First, States already report to the Department counts of children with disabilities in correctional facilities as part of IDEA Part B Child Count and Educational Environments Collection. OMB Control No. 1875–0240 and File C002, 2013. Further, IDEA section 618(d) (20 U.S.C. 1418(d)) explicitly requires States to

collect and examine data to identify significant disproportionality by race and ethnicity in the LEAs of the State. Insofar as correctional facilities are not constituted as LEAs in the State, IDEA section 618(d) does not require States to conduct a significant disproportionality analysis there, and it would be an inappropriate expansion of the statutory requirement to mandate that analyses. However, to the extent that the educational programs in specific correctional facilities or systems are constituted as LEAs, States are required under IDEA to assess whether there is significant disproportionality by race and ethnicity whenever the populations are of sufficient size.

Changes: None.

Comment: One commenter requested that the Department require States to measure disparities in placement within separate schools for children who are blind and children who are deaf. (0221, 0227). The commenter stated that these schools often have separate sub-campuses or separate residential placements and academic tracks for children with multiple disabilities, and that is likely that children of color with disabilities are at greater risk of placement into these sub-campuses.

Discussion: IDEA section 618(d) (20 U.S.C. 1418(d)) requires SEAs to collect and examine data to determine if significant disproportionality based on race and ethnicity is occurring in the State or the LEAs of the State. Accordingly, unless a separate school is an LEA in its own right, it will not be reviewed for significant disproportionality.

Further, as we have stated elsewhere in this document, a State must annually collect and examine data to determine, using the standard methodology in § 300.647, if significant disproportionality is occurring in LEAs that serve only children with disabilities. However, we have clarified in § 300.646(e) that LEAs that serve only children with disabilities are not required to reserve IDEA Part B funds for comprehensive CEIS.

Changes: None.

Comment: One commenter expressed concern that disciplinary removal data may not be collected consistently. The commenter stated that proposed § 300.647(b)(4) allows States to either compare rates for children with disabilities to rates for nondisabled children within an LEA or compare among LEAs for children with disabilities in the State.

A second commenter requested that the Department clarify whether a State might use the same calculation to determine significant disproportionality

with respect to disciplinary removal that it currently uses to identify significant discrepancy for purposes of APR/SPP Indicator 4. The commenter added that the State currently compares children with disabilities to children without disabilities within an LEA, and does not make comparisons between children with disabilities across LEAs.

Discussion: We appreciate the comments seeking to interpret or recommend the comparisons required under § 300.647(b)(4). This provision does not require, nor does it allow, States to compare children with disabilities to children without disabilities within an LEA or across LEAs for the purpose of identifying significant disproportionality. Rather, § 300.647(b)(4) requires States to compare children with disabilities in one racial or ethnic group to children with disabilities in all other racial groups within an LEA. When reviewing a racial or ethnic group within an LEA with a comparison group that does not meet the State's population requirements, the State will compare children with disabilities in one racial or ethnic group to children with disabilities in all other racial or ethnic groups within the State.

Moreover, we note that unlike the language in IDEA section 618(d), the language in section 612(a)(22) expressly provides for an examination of data for significant discrepancies (in the rates of long-term suspensions and expulsions of children with disabilities) among the LEAs in the State or compared to rates of nondisabled children in those LEAs. Thus, Congress knew how to require comparisons and expressly did so in IDEA section 612(a)(22), but not in sections 618(d), which is the subject of these regulations.

Change: None.

Comments: One commenter suggested that the Department remove from proposed § 300.647(b)(4)(vi), (vii) and (viii) all mention of in-school suspensions, as the term is not defined and the implementation of in-school suspension varies greatly from LEA to LEA.

Discussion: We generally expect that States will review LEAs for significant disproportionality using the same IDEA section 618 data reported to the Department. Under the IDEA Part B Discipline Collection, in-school suspension is defined as “instances in which a child is temporarily removed from his/her regular classroom(s) for disciplinary purposes but remains under the direct supervision of school personnel, including but not limited to children who are receiving the services in their IEP, appropriately participate in

the general curriculum, and participate with children without disabilities to the extent they would have in their regular placement. Direct supervision means school personnel are physically in the same location as students under their supervision.” OMB Control No. 1875–0240; Data Accountability Center, 2013.

Change: None.

Comments: A few commenters requested that the Department modify the proposed regulations to require States to collect and analyze data to determine if significant disproportionality by English language proficiency or gender is occurring with respect to the identification, placement, or discipline of children with disabilities. These commenters argued that IDEA provides the Department with authority to require States to submit demographic data on children with disabilities beyond race and ethnicity. Some of these commenters stated that the ability to disaggregate and cross-tabulate data is essential to understanding disparities in treatment between subgroups of children. One commenter noted that, according to the NPRM, English Learners are at greater risk for being disproportionately identified as children with a disability. This commenter stated that there are other demographic factors—beyond race and ethnicity—that should be considered when evaluating significant disproportionality across identification, placement, and discipline, including socioeconomic and linguistic status.

A few commenters cited research suggesting that school-age boys are over-identified as having disabilities, while school-age girls are under-identified. A last commenter stated that gender deserved heightened attention, especially as it relates to identification for autism and emotional disturbance.

Discussion: IDEA section 618(d) (20 U.S.C. 1418(d)) requires States to collect and examine data to determine whether significant disproportionality based on race and ethnicity is occurring with respect to the identification, placement, and discipline of children with disabilities in the State or the LEAs of the State. The Department believes that requiring, or permitting, analysis for significant disproportionality based on sex, English language proficiency, or socioeconomic status is beyond the scope of IDEA section 618(d) and inappropriate for these regulations. Accordingly, the Department will only require States to identify significant disproportionality based on race and ethnicity and will not require States to expand their review to include significant disproportionality based on factors such as sex, English language

proficiency, or socioeconomic status. As with other areas of review, there is nothing in IDEA that would prevent review of data for significant disproportionality based on factors such as sex or English language proficiency. In addition, States may choose to review policies, procedures, and practices of an LEA for compliance with IDEA requirements under its general supervisory authority in IDEA section 612(a)(11) or monitoring authority in section 616; however, the consequences of a determination of significant disproportionality based on other factors not set out in these regulations—e.g., sex or English language proficiency—may not include mandating the use of comprehensive CEIS as set out in IDEA section 618(d)(2) and these regulations.

Changes: None.

Comments: A large number of commenters offered perspectives as to whether children ages three through five should be included in States’ review for significant disproportionality in the identification of children as children with disabilities and in the identification of children as children with a particular impairment.

Several commenters expressed that it is inappropriate to consider ages three through five in a determination of significant disproportionality, as some LEAs are not responsible for early intervention. One commenter stated that data used to identify significant disproportionality is also used in Indicators 9 and 10 of the SPP/APR, in which States have been instructed to use data only on children ages 6 through 21. The commenter requested that the age ranges used to identify disproportionate representation under IDEA section 612(a)(24) (20 U.S.C. 1412(a)(24)) and those used to identify significant disproportionality under IDEA section 618(d) (20 U.S.C. 1418(d)) remain consistent. Another commenter noted that the proposed regulations require States to report data on three through five year olds that is not currently reported. This commenter noted that States cannot calculate data regarding placement for children ages three through five because there are no peers in the regular classroom to compare the numbers. Two commenters noted that most States do not have a data collection mechanism to make determinations of whether significant disproportionality, based on either identification or discipline, for children ages three and four, is occurring. These commenters urged the Department to eliminate the requirement to determine significant disproportionality for three and four year olds. Another commenter

built on this argument, stating that, in a State without universal preschool, a majority of the children enrolled in public preschool are children with disabilities ages three to five. The commenter stated that this disproportional loading of preschool children into the analysis will result in the identification of nearly all of one State’s small regional elementary LEAs.

One commenter suggested that the Department require States to review LEAs for significant disproportionality with respect to identification only among children age 6 through 21. Other commenters noted that the inclusion of preschool-aged children is problematic because, without universal preschool, there is no reliable method for determining the total population of children ages three through five and, therefore, no appropriate denominator for the risk calculation. One commenter noted that, because preschoolers without disabilities do not have the same guarantee of a free appropriate public education as their peers with disabilities, States would have to use general census data, rather than enrollment, to identify the population of three and four year olds for purposes of determining significant disproportionality. In one State, according to one commenter, the State is the LEA responsible for the education of children with disabilities ages three through five. Given this context, the commenter expressed concern that the requiring States to review ages three through five for significant disproportionality will create a disincentive to offer non-mandated early intervention programs.

Conversely, several commenters suggested that the Department require States to review the identification of three through five year old children with disabilities only when there is a valid comparison or reliable baseline group within the public school.

A number of commenters generally supported the Department’s proposal to lower the age range for the calculation of disproportionality for identification and discipline from ages 6 to 21 to ages 3 to 21. Commenters noted that lowering the age limit of each State’s review of significant disproportionality in both identification and discipline is an important step in addressing the importance of the preschool years, and focusing attention on early childhood discipline.

Discussion: The Department has previously issued guidance explaining which specific disability categories, types of discipline removals, and placements that States must review for significant disproportionality based on

race and ethnicity under IDEA section 618(d). OSEP Memorandum 08–09, July 28, 2008. This guidance included only those identification categories, disciplinary removals, and placements—as well as the age ranges to be reviewed for each—that were consistent with the data collection that States submit to the Department each year to satisfy their reporting obligations under IDEA section 618(a) (20 U.S.C. 1418(a)). OMB Control Nos. 1875–0240 and 1820–0517 and File C002, 2013. At present, States submit to the Department data on children identified with any disability, autism, intellectual disability, emotional disturbance, specific learning disabilities, other hearing impairments, speech and language impairment for ages 3 through 21, and data on discipline removals for children ages 3 through 21.

It was the Department's intention to align the proposed regulations, to the extent possible, with IDEA section 618 data collection requirements so as to avoid any new data collection burden and any new data analysis burden on the States. At the same time, however, we must balance our desire to minimize burden with our interest in ensuring that children are not mislabeled. As this may be especially critical for young children, we agree with commenters that including children ages three through five is a meaningful step in recognizing the importance of preschool and early childhood education.

To that end, the Department will maintain the requirement for States to examine populations age 3 through 21, for purposes of significant disproportionality due to identification. We also agree, however, that the inclusion of children ages three through five in the State's review for significant disproportionality—with respect to the identification of disabilities and impairments—may create some complications or additional burden related to data collection and comparison. We acknowledge, for example, that some LEAs do not yet provide universal preschool, making a determination about the total population of children ages three through five more difficult. We also recognize that this collection would not correspond with current Indicators 9 and 10 of the SPP/APR, which focus on children ages 6 through 21.

As it is our expectation that States will use the same IDEA section 618 data reported to the Department to examine LEAs for significant disproportionality, we anticipate that States will use their IDEA, Part B child count data (rather than Federal census data) to examine significant disproportionality for

children ages 3 through 21. Additionally, to provide States more time to modify State analyses and consider how to identify and address factors associated with significant disproportionality in children with disabilities ages three through five, the Department will delay the requirement for including children ages three through five in their examination of significant disproportionality—with respect to the identification of disabilities and impairments—until July 1, 2020, in anticipation of more widespread provision of preschool programs in the future.

We disagree that States do not have data collection procedures to review LEAs for significant disproportionality due to discipline for populations ages 3 through 21, as States are currently required to collect data for purposes of IDEA section 618(a). For that reason, we will leave unchanged the requirement that States examine populations ages 3 through 21 for purposes of identifying significant disproportionality due to discipline.

Finally, we disagree that requiring the review of children ages three through five for significant disproportionality will create a disincentive for States or LEAs to offer non-mandated early intervention programs. We believe that early education and early intervention can have a number of salutary effects—not least being the reduced need for later, more intensive services—that serve as ample incentive for States to invest in these programs. Moreover, even in those instances in which States, not LEAs, are responsible for the provision of early intervention, the benefits of ensuring that this population is not subject to significant disproportionality outweigh any potential disincentives. Therefore, we will delay the inclusion of children ages three through five in the review of significant disproportionality with respect to the identification of children as children with disabilities, and with respect to the identification of children as children with a particular impairment, until July 1, 2020.

Changes: None.

Comments: Several commenters suggested that the Department allow States to use a single factor analysis and consider the total disability population when calculating disproportionality with respect to placement. We understood these comments to suggest that the Department allow States to identify LEAs with significant disproportionality based on the extent to which race or ethnicity is predictive of a child's placement.

Discussion: As we discussed in *Under-Identification of Children with Disabilities by Race and Ethnicity*, the Department interprets IDEA section 618(d) (20 U.S.C. 1418(d)) to require States to identify significant disproportionality based on race and ethnicity, irrespective of the causes of the disparity. The statute anticipates that the investigation of the causes of the disparity will take place after the significant disproportionality has been identified, as part of the implementation of the statutory remedies provided for under IDEA section 618(d)(2) (20 U.S.C. 1418(d)(2)). For this reason, we decline to allow States to identify LEAs with significant disproportionality based on the extent to which the State believes race or ethnicity may predict the placement of a child with a disability.

Changes: None.

Comments: Several commenters offered perspectives on the requirements for States to review LEAs for significant disproportionality with respect to disciplinary removals.

A number of commenters recommended that the Department eliminate the requirement to calculate disciplinary removals of 10 days or fewer, both in-school and out-of-school, in proposed § 300.647(b)(4)(iv)–(vii). Of these, some commenters suggested that the requirement itself is excessive and punitive. Some commenters suggested that schools need some flexibility to manage behavior. These short-term removals, other commenters stated, respond to behaviors that are best managed through IEPs and are typically not as serious as the behaviors that give rise to removals of more than 10 days. Still other commenters stated that the requirement hampers school officials' ability to manage behavior, indicating that LEAs may feel constrained in their options for short-term removals if removals of fewer than 10 days and removals of 10 days or more are treated in the same way in the significant disproportionality calculation. In addition, these commenters stated that, by not requiring the review of short-term removals, the Department would enable States to focus more on the disproportionate results for schools placing children in disciplinary settings more than 10 days, which constitutes a change of placement.

Some commenters recommended removing the requirement for calculating total disciplinary removals under proposed § 300.647(b)(4)(viii) so as not to double count removals. The commenter also stated that it is unfair to treat LEAs that have a few short-term suspensions where behaviors are resolved through changes in IEPs in the

same way as LEAs that have repeated removals of more than 10 days and make no changes in IEPs or services for the children involved.

One commenter suggested that, to reduce confusion, the Department should rewrite proposed § 300.647(b)(4) to separate disciplinary removals from educational placements and place them under a heading of discipline. The commenter stated that data must be collected on exclusionary removals of all students with disabilities, regardless of the restrictiveness of the setting in which they are served.

One commenter expressed concern that, by including the entire range of disciplinary options in the required risk ratio calculations—from alternative education settings to removals by a hearing officer—the Department will force schools to constantly watch their data for quota targets for each type of discipline because there are no acceptable options not subject to the test for significant disproportionality.

Finally, one commenter requested that only discretionary discipline actions be monitored for significant disproportionality.

Discussion: The Department appreciates all of these comments. We disagree, however, with several and believe that many of these comments misstate either the discipline requirements or the requirements in these regulations. First, it is not clear to the Department that determining whether significant disproportionality exists for suspensions of any length in any way burdens the overall ability of LEAs or schools to manage behavior. Further, § 300.646(c) is intended, in part, to identify systemic issues in discipline practices, whether discretionary or not, in order to correct them and improve the ability of schools to manage behavior overall. Examining LEAs for significant disproportionality in discipline gives State and local school officials the opportunity to see where policies, procedures and practices should be changed—to determine, for example, whether schools might do more to manage behavior through IEPs, services, and supports which could be used to address or reduce both short-term and long-term suspensions. We especially note that under IDEA section 615(k) and the current regulations at §§ 300.530 and 300.531, there is significant involvement by the IEP Team members in making a range of decisions related to discipline including manifestation determinations and interim alternative settings for services. Likewise, in 2016, the Department released guidance to clarify that, while IDEA section

615(k)(1)(B) (20 U.S.C. 1415(k)(1)(B)) authorizes school personnel to remove from their current placement children who violate a code of student conduct, that authority in no way negates the obligation of schools to provide behavioral supports to children with disabilities as needed to ensure FAPE. OSEP Dear Colleague Letter, August 1, 2016.

We further disagree that collecting discipline data in any way leads to the punitive treatment of LEAs. When we published the NPRM, States already were required under § 300.646(a) to determine whether there was significant disproportionality in disciplinary removals of fewer than 10 days, disciplinary removals of more than 10 days, and total disciplinary removals, and States were already obligated to collect and report the data upon which these determinations were made. See, OMB Control No. 1875–0240; OSEP Memorandum 07–09, April 24, 2007. The requirements under § 300.647(b), therefore, cannot reasonably be considered excessive.

Further, while calculating risk ratios for total disciplinary removals under § 300.646(b)(4)(vii) does involve using the data already included in § 300.646(b)(4)(iii) through (vi), is the Department does not view this as double counting but as an amalgamation of various types of removals. That is, § 300.646(b)(4)(vii) is intended to allow for a separate review of disciplinary removals that could include lower-incidence disciplinary actions that may happen too rarely to allow for a stable risk ratio calculation. This is similar to the inclusion, in § 300.646(b)(3)(i), of categories of disabilities set out in § 300.646(b)(3)(ii) and all other categories, including low-incidence disabilities.

With respect to the comment suggesting that the Department reorganize § 300.647(b)(4), we believe that the current structure is sufficiently clear to avoid confusion. The Department further disagrees that the requirements under § 300.647(b)(4) will force LEAs to develop quota targets for different types of discipline so as to avoid a finding of significant disproportionality. Nothing in these regulations is intended to require LEAs to overturn appropriate prior decisions or to otherwise affect individual decisions regarding the identification of children as children with disabilities, the placement of children with disabilities in particular educational environments, or the appropriate discipline of children with disabilities.

Finally, nothing in § 300.647 is intended to unfairly target those LEAs

that have a few short-term suspensions where behaviors are resolved through changes in IEPs by grouping these districts with those that have repeated removals of more than 10 days, whether or not the IEP Teams make changes in IEPs or services for the children involved. It is true that all LEAs are subject to the same State methodology for determining significant disproportionality, and every LEA where the State determines there is significant disproportionality is subject to the same statutory remedies of reserving 15 percent of IDEA Part B funds for comprehensive CEIS and reviewing, and revising, if appropriate, policies, practices, and procedures related to disciplinary removals. One of the purposes of the analyses, however, is to identify and address significant disproportionality that is indicative of systemic or otherwise persistent underlying problems, which may not be revealed when there are too few short-term or long-term suspensions, whether or not behaviors are proactively resolved through changes in IEPs.

Changes: None.

Comments: One commenter expressed a concern regarding the completeness of IDEA section 618 data with respect to the disciplinary removals of children ages three through five. The commenter stated that the field of early childhood often does not use the terms suspension or expulsion to describe a disciplinary removal.

Discussion: As we have discussed previously, the Department designed § 300.647(b)(4) to mirror IDEA section 618(a) (20 U.S.C. 1418(a)) provisions with respect to the collection of discipline data and the use of these data to review disciplinary removals, as explained in our previous guidance. OSEP Memorandum 08–09 (July 28, 2008). This guidance clearly specified our interpretation that States' review for significant disproportionality with respect to disciplinary removal must include children with disabilities, ages three through five.

That said, the Department generally agrees with the commenter that data completeness and quality is important and will consider ways to support the work of States to properly collect and report data to the Department, especially in situations where a State's terminology differs from the Department's data definitions.

Changes: None.

Comment: A commenter expressed concerns about the inclusion of residential facilities in proposed § 300.647(b)(4), as LEAs are generally not the agency responsible for placing children in residential facilities. In the

commenter's State, children are counted in the LEA where the facility is located.

Discussion: When States examine their data to determine whether an LEA has significant disproportionality, the Department expects that States will use education placement data that is consistent with those submitted to the Department for purposes of IDEA section 618(a) and OMB Control No. 1875-0240. Final § 300.647(b)(4) is consistent with these data collection requirements and with the Department's previous guidance regarding States' review of significant disproportionality with respect to placement in residential facilities. (See, IDEA section 618(d); and Questions and Answers on Disproportionality, June 2009, Response to Question B-1.) We repeat the Department's position here for convenience.

We interpret IDEA section 618(d) to require States to include, or exclude, a child with a disability in its calculation of significant disproportionality depending on the agency that placed the child in a residential facility and the location of the residential facility. All children with disabilities placed in a residential facility in the same State by an educational agency must be included in the calculation of significant disproportionality. For purposes of calculating significant disproportionality, however, a State should assign responsibility for counting a child with a disability placed in an out-of-district placement to the LEA that is responsible for providing FAPE for the child (the "sending" LEA) rather than the LEA in which the child has been placed (the "receiving" LEA). Children with disabilities placed in residential facilities or group homes in the same State by a noneducational agency (e.g., court systems, Department of Corrections, Department of Children, Youth and Families, Social Services, etc.) may be excluded from a State's calculation of significant disproportionality. Children with disabilities placed in a residential facility in a different State by an educational agency should be included in a State's calculation of significant disproportionality in the LEA responsible for providing FAPE for that child (the sending LEA). Children with disabilities placed in a residential facility in a different State by a noneducational agency (e.g., court systems, Department of Corrections, Department of Children, Youth and Families, Social Services, etc.) may be excluded from the calculation of significant disproportionality by both the State in which the child resides and

the State where the residential facility is located.

Changes: None.

Risk Ratio Thresholds (§ 300.647(a)(7); § 300.647(b)(1) and (2); § 300.647(b)(6))

Comments: One commenter questioned whether proposed § 300.647(b)(1) requires States to identify additional LEAs and noted that, expressing concern that the potential costs of the regulations outweigh the benefits. The commenter noted that, in the NPRM, the Department stated that it would examine each State's risk ratio threshold to determine its reasonableness.

Discussion: The section in the NPRM containing the analysis of costs and benefits, and the same section in this document, states that the standard methodology, applied nationwide, will likely result in more LEAs identified with significant disproportionality. That is different, however, than requiring States to identify additional LEAs. Under §§ 300.646 and 300.647, States are not required to identify additional LEAs.

Similarly, while the Department stated that the risk ratio thresholds selected by the States would be subject to its review, the Department did not state that this review must strictly adhere to a particular outcome that may be overly burdensome to States. In general, the Department does not intend to require States to submit their risk ratio thresholds for approval prior to the implementation of the standard methodology. Rather, after these regulations take effect, the Department will monitor States for any use of risk ratio thresholds that may be unreasonable and take steps, as needed, to ensure the States' compliance with § 300.647(b)(1).

To ensure that the Department may accurately and uniformly monitor all risk ratio thresholds for reasonableness, we have added a requirement that each State report to the Department all of its risk ratio thresholds and the rationale for each. The Department has not yet determined the precise time and manner of these submissions, but it will do so through an information collection request. States are not obligated to comply with this reporting requirement until the Office of Management and Budget approves the Department's information collection request.

Changes: The Department has added § 300.647(b)(7), which requires States to report to the Department, at a time and in a manner specified by the Secretary, all risk ratio thresholds developed under § 300.647(b)(1)(i)(A) and the rationale for each.

Comments: A number of commenters raised issues with respect to the process by which States will develop reasonable risk ratio thresholds. Several of these commenters strongly supported the Department's proposal to require States to involve their State Advisory Panels in setting the thresholds. One of these commenters added that we should require States currently using a method similar to the standard methodology to review their thresholds with stakeholders prior to gaining Department approval. One commenter requested that the Department, prior to the issuance of the final regulations, clarify the process by which States would assess the reasonableness of their proposed risk ratio thresholds.

Other commenters suggested that the Department require States to use a uniform standard-setting process to inform the State Advisory Panels in developing risk ratio thresholds. One commenter suggested that the Department require States to undertake a standard-setting process with stakeholders, including the State Advisory Panels, to revisit their existing risk ratio thresholds using the new calculations; generate impact data using these thresholds; and then apply different thresholds to examine the impact upon disability subgroups, placement categories, and impairments. The commenter also recommended that States' risk ratio thresholds, as well as their business rules for the application of the thresholds, be publicly posted. The commenter further suggested that States reexamine risk ratio thresholds every three years to study their impact, adjust for population changes or new research, and to revise the opportunities for stakeholder input. Finally, these commenters urged the Department to require States to include epidemiologists on State Advisory Panels.

Discussion: We agree with commenters that State Advisory Panels should play a critical role in the development of States' reasonable risk ratio thresholds. Under IDEA section 612(a)(21)(D)(iii) (20 U.S.C. 1412(a)(21)(D)(iii)), State Advisory Panels have among their duties a responsibility to "advise the State educational agency in developing evaluations and reporting on data to the Secretary under section 618." As the selection of risk ratio thresholds will affect the data States will submit to the Department under the IDEA Part B Maintenance of Effort (MOE) Reduction and Coordinated Early Intervening Services (CEIS) data collection required under IDEA section 618—including the LEAs identified with significant

disproportionality and the category or categories under which the LEA was identified (*i.e.*, identification, identification by impairment, placement, or discipline)—the State Advisory Panel should have a meaningful role in advising the State on methods to use in establishing reasonable risk ratio thresholds for determining significant disproportionality.

However, while the Department does not preclude either a State or State Advisory Panel from undertaking a standard-setting process and evaluating impact data in developing a reasonable risk ratio threshold, we do not find it necessary to prescribe the exact steps States must take in order to gain input from State Advisory Panels in that process. Likewise, at this time, the Department does not intend to mandate a specific process by which a State and its State Advisory Panel should assess the reasonableness of its proposed threshold, nor do we currently find it necessary to require States to reestablish their risk ratio thresholds every three years. As a State has the flexibility to establish its own reasonable risk ratio threshold, and is required to do so with input from its State Advisory Panel, the Department expects that either or both entities may, at any time, seek to reexamine whether the State's risk ratio threshold continues to be reasonable. Absent any indication that this practice would not be effective, the Department currently prefers to allow States and State Advisory Panels the flexibility to review and revise risk ratio thresholds as necessary or appropriate, rather than increase their burden by requiring regular reviews or mandating a specific standard-setting process.

Finally, while epidemiologists may be useful stakeholders for States as they create reasonable risk ratio thresholds, we believe that States have sufficient expertise to determine the appropriate composition of their State Advisory Panels.

Changes: None.

Commenter: A few commenters recommended that the Department ensure that the regulations outline specific ways that States and LEAs can meaningfully include all stakeholders in addressing significant disproportionality. The commenters recommended that States be required to demonstrate outreach and incorporation of diverse stakeholder input and advice in setting thresholds and addressing significant disproportionality through: Documentation of outreach to stakeholders (including efforts to recruit a diverse State Advisory Panel); posting of detailed minutes of State Advisory

Panel meetings; transparent publication and communication about State efforts to set reasonable risk ratio thresholds; demonstration of how stakeholder feedback was incorporated in defining final thresholds above which disproportionality is significant; demonstration of stakeholder input in reviewing and revising State policies, practices, and procedures related to the identification or placement of children with disabilities in LEAs identified as having significant disproportionality; and transparency in noting State efforts and progress in remedying significant disproportionality.

Discussion: We do not believe it necessary to outline in these regulations the specific ways that States must document their efforts to involve stakeholders in the development of risk ratio thresholds. Under IDEA section 612(a)(21)(D)(iii) (20 U.S.C. 1412(a)(21)(D)(iii)), State Advisory Panels already have among their duties a responsibility to “advise the State educational agency in developing evaluations and reporting on data to the Secretary under section 618.” Given these and other long-standing responsibilities, it is the Department's belief that States already have in place processes and procedures to secure input from their State Advisory Panels. Further specific requirements for stakeholder involvement could add a new data collection or reporting burden on States, which we do not believe is necessary. As most of the commenters' suggestions would dramatically increase paperwork burden for States, and because we believe there are already sufficient procedures in place for States to work with their State Advisory Panels, the Department declines to include those requirements in these regulations.

As discussed elsewhere in this analysis of comments, we also note that public participation in the adoption and amendment of policies and procedures needed to comply with IDEA Part B is already addressed by IDEA section 612(a)(19) and § 300.165. To the extent that commenters sought requirements for public participation requirements beyond the ones contained in those provisions, we decline to adopt them for the reasons discussed above.

Changes: None.

Comments: One commenter expressed concerns that these regulations will weaken the role of State Advisory Panels and other stakeholder groups in each LEA. Another commenter asked the Department to clarify the authority of State Advisory Panels under the proposed regulations.

Discussion: We believe that these regulations help make more explicit and strengthen the role of State Advisory Panels and other stakeholders in how States identify significant disproportionality. Section 300.647(b)(1)(ii)(A) requires consultation with stakeholders, including the State Advisory Panels, in developing the State's risk ratio thresholds, minimum cell sizes, minimum n-sizes, and standards for determining reasonable progress under § 300.647(d)(2). As discussed elsewhere in this analysis of comments, we also note that public participation in the adoption and amendment of policies and procedures needed to comply with IDEA Part B is addressed by IDEA section 612(a)(19) and § 300.165 would apply, as appropriate. This helps to ensure greater public awareness, transparency, and input into how States establish these values and implement these regulations.

Further, in the future, the Department anticipates that all risk ratios and alternative risk ratios will be made public but has not yet determined the precise time and manner for this to occur. We anticipate doing so through an information collection request, through the Department's own publication of these data, or some combination of the two. This will help reinforce the review and revision of risk ratio thresholds, cell sizes, and n-sizes as an iterative public process within each State.

Changes: None.

Comments: A few commenters asserted that, as State Advisory Panels have limited family participation, Parent Training and Information Centers and Community Parent Resource Centers should be required participants in States' implementation of the standard methodology.

Discussion: The Department agrees with commenters about the importance of the meaningful involvement of families in the development of reasonable risk ratio thresholds. We note that State Advisory Panels are composed of individuals “involved in, or concerned with, the education of children with disabilities,” and must include “parents of children with disabilities.” 20 U.S.C. 1412(a)(21)(B). Section 300.647(b)(1)(i) requires that States involve stakeholders, including State Advisory Panels, in the development of each State's risk ratio thresholds.

This advisory role is within the scope of the statutory responsibility of State Advisory Panels to advise States in developing evaluations and reporting on data to the Department under IDEA

section 618. IDEA section 612(a)(21)(D)(iii); 20 U.S.C. 1412(a)(21)(D)(iii). While IDEA does not include a similar statutory requirement for either Parent Training and Information Centers or Community Parent Resource Centers, nothing in these regulations that would prevent a State, or other members of the State Advisory Panel, from consulting with those entities in the development of risk ratio thresholds. To the extent that States believe that their input would be valuable, we encourage States to include Parent Training and Information Centers and Community Parent Resource Centers in their deliberations regarding the standard methodology.

Changes: None.

Comments: A number of commenters responded to Directed Question #9, which inquired, in part, whether there are any circumstances under which the use of different risk ratio thresholds for different categories of analysis could result in an unlawful disparate impact on racial and ethnic groups.

A few commenters expressed their general support for allowing States to use different risk ratio thresholds for different categories of analysis. Of these, one commenter specifically supported allowing three different risk ratio thresholds—one for identification, one for placement, and one for disciplinary removals. Other commenters noted that, given the varying incidence rates and resulting cell sizes across disability categories, placements, and discipline rates, different risk ratio thresholds would be important in helping to ensure that any identified disproportionality is indeed significant. A last commenter noted that States should be allowed to consider setting different risk ratio thresholds for different categories of analysis (e.g., analysis of identification, placement, and discipline) if those thresholds are consistent with advice from stakeholders, including State Advisory Panels.

Some commenters indicated only partial support for using different risk ratio thresholds for different categories of analysis. Of these, one commenter supported the use of different thresholds for the analyses regarding disciplinary removals, as well as different thresholds for placement categories, but suggested that all thresholds used to analyze impairments must be consistent. Other commenters agreed that thresholds used to determine significant disproportionality in identification should not change for each impairment.

Several commenters expressed concerns about, or opposed the use of, different risk ratio thresholds for

different categories of analysis. Of these, some suggested that different risk ratio thresholds would impede transparency for parents, educators, and the public at large; impede Federal efforts to monitor States; and make it difficult to understand why some LEAs would be identified as having significant disproportionality and not others. Two commenters suggested that the language allowing different thresholds for different categories of analysis appeared unconstitutional.

Several commenters cautioned that States should not be permitted to set higher risk ratios for the categories where racial disproportionality is most likely to negatively impact historically disadvantaged groups of children. Some of these commenters suggested that this flexibility would allow States to avoid identifying LEAs where disparities have historically been most problematic. These commenters noted that racial disparities in special education—notably, identification of intellectual disability and emotional disturbance, and placement outside the regular classroom—were the result of local efforts to use disability identification and placement to resist desegregation requirements and deny children of color access to the regular classroom and curriculum.

One commenter noted that the LEAs in one State have historically (1) only over-identified Black children in intellectual disability; (2) mostly over-identified Hispanic children in speech and language impairment; and (3) over-identified Black and Native American children in emotional disturbance and specific learning disabilities. This commenter and another commenter stated that when specific races are mostly or always over-identified in specific disability categories, then the use of different risk ratio thresholds for different categories of analysis may result in unlawful disparate impact on racial and ethnic groups.

One commenter suggested that the use of different thresholds for different disability categories might allow States to conceal disproportionality in disability categories that are commonly known to be significantly disproportionate.

Discussion: The Department agrees with commenters that States may need different risk ratio thresholds in order to reasonably identify significant disproportionality for categories with different degrees of incidence rates, and, therefore, different degrees of disparity. The Department sees no specific legal obstacle to setting different thresholds for different categories of analysis, though we recognize that it is possible

that any race-neutral threshold, just like any race-neutral policy, could have a disparate impact. In addition, as we state later in this section, setting different risk ratio thresholds for different racial or ethnic groups within the same category of analysis is unlikely to withstand constitutional scrutiny.

Further, under § 300.647(b)(1), the Department intends for States to have the flexibility to set reasonable risk ratio thresholds for each impairment and for various placements and disciplinary removals. With this provision, States have the flexibility to set up to 15 different risk ratio thresholds. While the Department understands commenters' concerns that States could set race-neutral risk ratio thresholds that may have a disparate impact on a particular race or ethnicity based on historical numbers, in the Department's view, a requirement to apply uniform race-neutral risk ratio thresholds across all impairments would be unlikely to address this concern. We believe that States will have greater flexibility to establish reasonable risk ratio thresholds that do not have a disparate impact based on race or ethnicity if allowed to set different thresholds for different disability categories. As it works with States as they determine their risk ratio thresholds, the Department will decide whether additional guidance in analyzing potential disparate impact in setting reasonable risk ratio thresholds is necessary. For general guidance about the application of the legal theory of disparate impact in other contexts, please see the joint Department of Education and Department of Justice Dear Colleague Letter on the Nondiscriminatory Administration of School Discipline at <http://www2.ed.gov/about/offices/list/ocr/letters/colleague-201401-title-vi.pdf> and the Department of Education Dear Colleague Letter on Resource Comparability at <http://www2.ed.gov/about/offices/list/ocr/letters/colleague-resourcecomp-201410.pdf>.

While we acknowledge that allowing States to set multiple risk ratio thresholds may mean some increase in the complexity of the standard approach, we do not believe that permitting multiple risk ratio thresholds substantively impedes the goals of improved transparency or comparability in State implementation of the standard methodology. For any one category of analysis—emotional disturbance, for example—it will still be possible to compare the reasonable risk ratio thresholds each State uses to identify significant disproportionality. Meanwhile, we believe that allowing

States this flexibility actually increases the likelihood that they may take action to address racial and ethnic disparities in each of the categories of analysis, rather than limit their efforts to only those categories with the greatest disparities.

The involvement and impact of State Advisory Panels in the State's setting of risk ratio thresholds is discussed elsewhere in this analysis of comments.

Changes: None.

Comment: Directed Question #9 also inquired whether there are any circumstances under which the use of different risk ratio thresholds for different racial and ethnic groups (within the same category of analysis) could be appropriate and meet constitutional scrutiny. A number of commenters opposed the use of different risk ratio thresholds for different racial or ethnic groups of children. One commenter stated that different thresholds for different racial or ethnic groups would not be useful or fair. Two commenters believed that allowing different thresholds for different racial or ethnic groups would make transparency difficult and make data analysis much more complex. Another commenter noted that, with different risk ratio thresholds, one could not make comparisons across racial or ethnic groups. One commenter noted that these thresholds would not likely meet constitutional scrutiny.

Discussion: The Department agrees with the concerns raised by the commenters. We believe that the use of different risk ratio thresholds, by race or ethnicity within the same category of analysis, would be unlikely to meet constitutional scrutiny because it is difficult to articulate a compelling justification for analyzing certain groups differently based on their race or ethnicity. For this reason, the Department will not change § 300.647(b)(2), which clarifies that the risk ratio thresholds developed for each category of analysis (under § 300.647(b)(1)) must be the same for each racial and ethnic group.

Changes: None.

Commenters: Several commenters suggested that the Department establish a cap above which States may not establish a risk ratio threshold, or otherwise limit States to a range of risk ratio thresholds.

A few commenters suggested 3.0 as a cap. One of the commenters noted that, in the years between 2006 and 2009, six States increased their risk ratio thresholds and asked that the Department establish an absolute maximum risk ratio threshold of 3.0 (based, according to the commenter, on

two median absolute deviations above the national median of all LEA risk ratios). Another commenter suggested a risk ratio threshold cap of 2.0. Still another commenter noted that using risk ratio thresholds over 2.0 may well mask significant disproportionality in identification, especially for impairments where children of color with disabilities have historically been over-identified, such as intellectual disability and emotional disturbance.

Several commenters suggested that the Department recommend a range within which States may choose to set their risk ratio threshold. These commenters recommended a range between 1.5 and 3.0, with some flexibility to allow States to use higher thresholds. The commenters suggested that, so long as the State has identified some LEAs in the prior two years and is able to provide evidence that it will identify some LEAs using a threshold that is higher than the recommended range, the State be allowed to set risk ratio thresholds that exceed the established range. Two commenters believed that no State with a risk ratio exceeding a level of two times discrepant or above the national average should be allowed to identify zero LEAs as having significant disproportionality.

Discussion: The Department considered and rejected the possibility of establishing an absolute cap on the States' choice of risk ratio thresholds and limiting States' choice to a range of thresholds. At this time, the Department has not identified a sufficient, broadly applicable justification on which to establish these limitations at any specific threshold. In lieu of a mandate that all States use the same risk ratio thresholds, or set thresholds within limits established by the Department, § 300.647(b)(1) requires States to develop risk ratio thresholds that are reasonable and to consider the advice of stakeholders in establishing these thresholds. Moving forward, we will review State policies and practices to determine whether there emerges a standard practice or set of practices that may provide sufficient rationale for those limitations.

As mentioned earlier in this section, we have added a requirement that States submit to the Department the risk ratio thresholds they set and the rationales for setting them. Though the principal purpose of the requirement is to enable the Department's uniform monitoring of risk ratio thresholds, submitting risk ratio thresholds and their underlying rationales will inform the Department's review of the question of the need for a nationwide risk ratio threshold.

Changes: As mentioned above, the Department has added § 300.647(b)(7), which requires States to report to the Department, at a time and in a manner specified by the Secretary, all risk ratio thresholds, the standard for measuring progress under § 300.647(b)(1)(i)(A)–(D) and the rationale for each.

Comment: A number of commenters requested additional clarification regarding how the Department will determine whether States' risk ratio thresholds are reasonable. Of these, some commenters' requests were general in nature. One commenter noted that, theoretically, the provision could allow States to continue to set unreasonably high standards that will continue to result in the identification of few or no LEAs. Another commenter suggested that the Department presume risk ratio thresholds for certain categories of analysis to be unreasonable—if there has been consistent overrepresentation in a category—and require States to provide a reasonable justification. A few commenters noted that, if States are given too much flexibility to set their risk ratio thresholds, then the requirement that they collect and analyze data to identify significant disproportionality becomes less meaningful or results in little meaningful information. Another commenter expressed concern that a standard of reasonableness, without further qualification in the regulations, might be result in a different determination of reasonableness from State to State, and from year to year.

Other commenters recommended that the Department use specific definitions of reasonableness. One commenter expressed concern that the Department's proposal offers no national standard, criteria, benchmarks, or goals and targets on which to gauge State compliance with the proposed regulations and requested that the Department withdraw the regulations until it can clearly specify its standard of "reasonableness." One commenter requested that the Department notify all States of any Federal enforcement action taken to ensure the reasonableness of a State's risk ratio threshold.

Other commenters recommended that the Department make clear that States that did not identify a single LEA in any area in the past, or that identified very few LEAs because of an unreasonably high threshold, will be unlikely to have their threshold deemed "reasonable" if it exceeds a set range, or remains unchanged (even if falling within a range recommended by the Department).

Some commenters suggested that the Department include factors unique to each State when considering the reasonableness a risk ratio threshold. One commenter suggested that the Department consider both the racial and ethnic composition of States and LEAs and the presence of factors correlated with disability when evaluating risk ratio thresholds. Other commenters suggested that the Department provide States the flexibility to establish risk ratio thresholds that reflect the composition of States' and LEAs' unique demography.

One commenter suggested that, so long as the State's proposed risk ratio threshold represents a decision that is unbiased, data-driven, and responsive to the particular needs of the State, it should be deemed reasonable when analyzed by the Department.

Discussion: We appreciate all of the comments regarding the Department's review of a State's risk ratio thresholds. It is our intention to clarify in forthcoming guidance the specific processes the Department will use to review for reasonableness a State's risk ratio thresholds, including information on how, and under what circumstances, the Department will undertake this review. In the interim, however, States may choose to consider the four conditions that the Department included in the NPRM in their development of risk ratio thresholds.

First, if the selected threshold leads to a reduction in disparities on the basis of race or ethnicity in the State or if it results in identification of LEAs in greatest need of intervention, then the Department may be more likely to determine that a State has selected a reasonable threshold. Second, the Department may be more likely to determine that a State has selected an unreasonable risk ratio threshold if the State avoids identifying any LEAs (or significantly limits the identification of LEAs) with significant disproportionality in order to, for example, preserve State or LEA capacity that would otherwise be used for a review of policies, practices, and procedures and reserving IDEA Part B funds for comprehensive CEIS, or to protect LEAs from needing to implement comprehensive CEIS. Third, the Department noted that establishing a risk ratio threshold solely on an objective calculation does not guarantee that the Department would consider the resulting threshold to be reasonable when examined in light of racial and ethnic disparities taking place at the LEA level. As States have access to population data, there is no need to use statistical methods to make inferences

about the population data using sample data. Fourth, a State's selection of a risk ratio threshold that results in no determination of significant disproportionality may nonetheless be reasonable, particularly if that State has little or no overrepresentation on the basis of race or ethnicity.

Given this, § 300.647(b)(1)(ii), and § 300.647(b)(7), under which any State's selection of risk ratio threshold is submitted to the Department and subject to its monitoring and enforcement for reasonableness, we disagree with those commenters concerned that allowing States to set their own reasonable risk ratio thresholds will allow them to set inappropriately high thresholds or that this flexibility will undermine the value of the required data collection and analysis. While States have the flexibility to set reasonable risk ratio thresholds and will not be required to seek Departmental approval of risk ratio thresholds prior to the implementation of the standard methodology, the Department intends to review risk ratio thresholds, and, in cases where a risk ratio threshold may not appear reasonable on its face, request that a State justify how the risk ratio threshold is reasonable. If, upon review of a State's explanation, the Department determines that the threshold is not reasonable, the Department may notify the State that it is not in compliance with the requirement in these regulations to set a reasonable risk ratio threshold. The Department may then take appropriate enforcement action authorized by law, ranging from requiring a corrective action plan, to imposing special conditions, to designating the State as high-risk status, to withholding a portion of the State's IDEA Part B funds. While we currently do not intend to issue a separate notification to all States in each instance in which the Department takes enforcement action with respect to any one State, we note that many of the aforementioned examples of possible enforcement actions result in publicly available information.

Like the commenters, we believe it possible that States currently not identifying LEAs with significant disproportionality are using risk ratio thresholds that are not reasonable (for those States that are using the risk ratio as part of their current methodology for determining significant disproportionality). However, while we currently believe it would be unlikely for any State to have no significant disproportionality in any category of analysis, for purposes of these regulations, we do not find it appropriate to automatically consider a

State's selection of risk ratio threshold unreasonable solely because no LEAs are identified. Theoretically, if risk ratio thresholds were always unreasonable simply because no LEAs were identified, it would be impossible for a State to resolve its significant disproportionality. In this circumstance, significant disproportionality would become an ever-moving target, where States would be forced to reduce thresholds again and again, potentially to a degree where disproportionality could no longer be considered significant. That is, the Department does not believe that any and all levels of disparity are significant.

The Department also agrees with commenters that a State's unique characteristics can be helpful for the State and its stakeholders to consider when developing risk ratio thresholds. We believe it is reasonable, for example, for States to consider the racial and ethnic composition of the State and LEAs, unique enrollment demographics, as well as factors correlated with disability, when developing their risk ratio thresholds. These considerations should not, however, serve as bases for setting risk ratio thresholds that could allow LEAs with significant disproportionality not to be identified. In the end, the Department will assess the reasonableness of a given threshold by examining its capability to identify and address disproportionality that is significant and by taking into consideration all facts that bear upon the choice of a risk ratio threshold. The Department will, in short, determine reasonableness in the totality of the circumstances.

Finally, the Department agrees with commenters that unbiased, data-driven decision-making, tailored to the needs of a State, would more likely lead to the creation of a reasonable risk ratio threshold. However, we remind these commenters that, in setting risk ratio thresholds, States should do so with the intent of helping LEAs to identify, investigate, and address significant disproportionality.

Changes: None.

Comment: Several commenters requested the Department create a safe harbor for risk ratio thresholds that States could voluntarily adopt with the knowledge that it is reasonable under these regulations. Of these, one commenter suggested that the safe harbor be set in advance of the effective date of the regulations in order to ensure that the thresholds set by States do not result in an unlawful disparate impact on racial and ethnic groups and to minimize costs to States to correct risk ratio thresholds found to be

unreasonable. Another commenter recommended that the Department consider risk ratio thresholds within a range of 2.5 to 3.5 as a safe harbor. One commenter urged the Department to monitor whether States using thresholds higher than 2.0 are indeed capturing instances of significant disproportionality where they occur. Another commenter recommended that the final regulations include additional clarity regarding the criteria the Department will use to determine if a State's established threshold is reasonable, especially if risk ratio threshold is greater than those published in the Racial and Ethnic Disparities in Special Education: A Multi-Year Disproportionality Analysis by State, Analysis Category, and Race and Ethnicity.

Discussion: We appreciate the comments, in response to Directed Question #5, about a possible "safe harbor" that would allow States to set risk ratio thresholds that they know would be considered reasonable by the Department. The Department does not believe, however, that it is in a position to mandate a particular risk ratio threshold. We have yet to justify the establishment of specific requirements regarding thresholds, including ranges, "safe harbors," or other limitations. Moving forward, however, we intend to review State policies and practices to determine whether there emerges a standard practice or set of practices that may provide sufficient rationale for a particular threshold, a range of thresholds, or a cutoff under which the Department would consider a threshold reasonable.

We note that the Department's published set of example risk ratio thresholds—in Racial and Ethnic Disparities in Special Education: A Multi-Year Disproportionality Analysis by State, Analysis Category, and Race/Ethnicity—were intended to provide the public with an illustration of racial and ethnic disparities in special education, and provide examples of what reasonable risk ratio threshold might look like. It was not the intent of the Department, in publishing those examples, to offer these thresholds to States as a "safe harbor," to suggest that higher thresholds could not be reasonable, or to otherwise restrict States' to those example thresholds. Further, we note the risk ratio thresholds were calculated with consideration for the standard methodology as proposed in the NPRM. Now that the Department has amended portions of the standard methodology—including the provisions regarding population requirements—the risk ratio

thresholds published in the report no longer function as appropriate examples.

Changes: None.

Comments: One commenter suggested that the median absolute deviation (MAD) may be inappropriate as a method to compute risk ratio thresholds. The commenter requested that the Department explain and justify, prior to the issuance of the final regulations, the use of risk ratio thresholds that exceed two MADs above the national median to determine significant disproportionality. The commenter also requested more detailed guidance to assist States in running this calculation on their own.

Discussion: The Department did not intend to mandate that States use median absolute deviations as a method to compute risk ratio thresholds; rather, the approach was intended to illustrate one way to develop risk ratio thresholds that might be considered reasonable given national IDEA section 618 data. While acknowledging that the NPRM could have provided greater clarity on this point, it was not the Department's prime objective to suggest that States use median absolute deviations on their own to calculate risk ratio thresholds. This is especially true given that States, in examining only their own data, would have fewer LEAs, and, therefore, fewer risk ratio calculations from which to calculate the MADs, which could lead to significantly higher, and potentially unreasonable, risk ratio thresholds.

The Department intends to provide guidance to States regarding how to work with stakeholders, and review data, to set reasonable risk ratio thresholds.

Changes: None.

Comment: A number of commenters responded to Directed Question #5, which inquired whether the Department should, at a future date, mandate national maximum risk ratio thresholds. Some commenters opposed this possibility outright. One commenter noted that a single national standard may not be feasible across the wide variety of regional, State, and local differences.

Commenters strongly supported allowing States to determine, in conjunction with stakeholders, how their own thresholds will identify disproportionality that is significant. Other commenters supported leaving States flexibility to set their own thresholds, so long as the Department is able to ensure that those thresholds are reasonable. Some commenters noted that, given the statutory and fiscal consequences associated with

significant disproportionality, States need to be able to defend their selected risk ratio thresholds to the States' constituents, which include legislators, State Education Departments, and LEAs. One commenter noted that each State is unique, and has its own plans with respect to IDEA and other Federal education programs to address those needs. The commenter concluded that requiring the same risk ratio thresholds in every State would fail to recognize each State's uniqueness. A number of commenters expressed support for permitting States to retain the discretion to determine the risk ratio threshold above which disproportionality is significant, so long as that threshold is reasonable and based on advice from their stakeholders, including their State Advisory Panels. One commenter stated that, if there is to be a mandated Federal requirement for consistent calculation of significant disproportionality across States using a risk ratio formula, States must be granted flexibility in applying those calculations and setting thresholds without onerous Federal involvement.

On the other hand, a few commenters strongly believed that the Department should move toward mandating that all States use the same risk ratio threshold. One commenter generally noted that a clear picture of national disparities was precluded due to different States using different thresholds for significant disproportionality.

Discussion: The Department recognizes the potential advantages and disadvantages of setting national risk ratio thresholds, and we thank the commenters for their thoughtful input on this important issue. At this time, the Department does not believe it has identified a sufficient justification for mandating any particular national risk ratio thresholds. However, moving forward, we will review State policies and practices to determine whether there emerges standard industry practice that may provide sufficient rationale at a later date for such a requirement.

Changes: None.

Minimum Cell Sizes and Minimum N-Sizes (§ 300.647(a)(3) and (4); § 300.647(b)(1)(i)(B) and (C); § 300.647(b)(3) and (4); § 300.647(c)(1))

Comments: This "comment/response/changes" section is not intended to respond to specific comments, but rather to provide a general introduction to minimum cell and n-sizes, and lay the foundation for responding to specific comments in the following sections.

Discussion: Risk ratios may produce unreliable results when the calculation is done with small numbers of children in a particular category of analysis, and this could result in LEAs being inappropriately identified with significant disproportionality. The most common method States use to address this problem is to identify a minimum number of children who must be enrolled in an LEA within a specific racial or ethnic group or experiencing a particular outcome in order for the LEA to be analyzed for significant disproportionality. That is, risk ratios are not calculated for a specific racial or ethnic group within a specific category of analysis if LEAs do not have or enroll a minimum number of children from that racial or ethnic group within that category of analysis or a minimum number of children not in that racial or ethnic group experiencing that particular outcome.

In this regulation, we refer to these minimum population requirements as minimum cell sizes and minimum n-sizes. (As noted elsewhere in this document, the term “minimum n-size” in this document aligns with the use of the term “minimum cell size” in the NPRM and the term “minimum cell size” herein refers to the number of children in a particular racial or ethnic group or groups experiencing a particular outcome.) As the minimum cell size and minimum n-size increase, the relative stability of the calculated risk ratios tends to increase. However, as these minimum population requirements increase, the number of districts that are excluded from the analysis in one or more specific categories of analysis also increases. The Department believes that States can balance the risks of inappropriately identifying districts because of small minimum cell sizes or n-sizes against the risk of inappropriately excluding large numbers of districts from analysis because of particularly large minimum cell sizes or n-sizes.

In the NPRM, we proposed that States would be required to use a minimum n-size (the number of children in a particular racial or ethnic group enrolled in an LEA) of not more than 10 to determine significant disproportionality. We received numerous comments about the importance of allowing States to establish an additional minimum cell size requirement (a minimum number of children within a race or ethnicity experiencing a particular outcome in an LEA). Those comments are set out and discussed in greater detail elsewhere in this section. Upon reflection, we agree with the commenters, and thus in the

final regulations, we will require States to set minimum n-sizes *and* cell sizes.

Additionally, as discussed elsewhere in this section, the proposed requirement of minimum n-size of 10 was questioned by a number of commenters. Following publication of the NPRM, we became aware of significant vulnerabilities in applying the analysis utilized in the primary article on which we relied to support the n-size requirements in the NPRM to the standard methodology. Therefore, in these final regulations, we do not include an n-size of 10 or less, but rather specify that the n- and cell sizes States set must be reasonable. We also establish in § 300.647(b)(1)(iv)(A) and (B), a rebuttable presumption that a minimum cell size of no greater than 10 and n-size of no greater than 30 are reasonable. A rebuttable presumption, in this context, means that, in reviewing minimum cell sizes and n-sizes established by States for reasonableness, and absent additional information to the contrary, the Department would consider a State’s use of 10 or less for cell size and 30 or less for n-size to be reasonable.

A Department review of data submitted through the IDEA State Supplemental Survey for school year 2013–14 found that States that used risk ratios in their determinations of significant disproportionality tended to set their cell size or n-size requirements at 30 or less. Based on these data, the Department determined that cell sizes of 10 and n-sizes of 30 would allow the majority of States currently using risk ratios to retain their already established population requirements. We note that, to the extent States publicly report their calculations or share data with stakeholders, the cell size of 10 is a recognized standard in data suppression to protect privacy. We also note that reasonable n-sizes and cell sizes could be less than 10 and 30 if smaller numbers are needed to maximize the number of LEAs examined for significant disproportionality. This is particularly relevant in categories of analysis where LEAs have small numbers, such as discipline. States, in making these determinations in consultation with their stakeholders, including State Advisory Panels, must carefully balance inclusion of LEAs and volatility.

Changes: Changes made in response to this issue are discussed in more depth throughout this section.

Comment: One commenter stated that, in the description of States’ current population requirements in the NPRM, it was not clear whether the requirements described by the

Department were minimum n-sizes or minimum cell sizes. The commenter further asserted that, in discussions with States, it appeared that many States are using a minimum cell size, and not a minimum n-size, as was proposed in the NPRM. One commenter expressed confusion as to whether the Department intended to allow States to set a minimum cell size of up to 10 children, or a minimum n-size of up to 10 children, or both.

Discussion: The Department intended with proposed § 300.647(b)(3) and (4) to limit States’ selection of minimum n-size to a figure no larger than 10. The NPRM included no provisions allowing States to set a minimum cell size. However, as we note earlier in this section, we agree with the commenters that States should be allowed to use a minimum cell size, in addition to a minimum n-size, in order to prevent inappropriate determinations of significant disproportionality.

To ensure that these provisions are clear, we have also included in the notice a definition of minimum n-size and a definition of minimum cell size.

Changes: We have revised § 300.647(a) to include a definition of minimum n-size and a definition of minimum cell size.

Comment: A few commenters agreed that, in combination with proposed § 300.647(c)(1) allowing States to determine significant disproportionality by looking across three consecutive years of data, it is appropriate to have a minimum n-size in the calculation of significant disproportionality under proposed § 300.647(b). These commenters stated that this will mean that the greatest number of LEAs will be able to examine their practices and to use funds to remediate the concerns they find.

Discussion: With § 300.647, it is the Department’s goal to support State efforts to appropriately identify LEAs with significant disproportionality. We agree with the commenters’ suggestion that, when LEAs are appropriately identified, they will benefit from the review (and, if necessary, revision) of policies, practices, and procedures, and from comprehensive CEIS. We also agree with the commenters that a reasonable minimum n-size, as well as the flexibility to use up to three consecutive years of data, will help States to both reduce and account for risk ratio volatility before making a determination of significant disproportionality. In this way, States can focus their efforts on LEAs with consistently high risk ratios, which may indicate systemic racial and ethnic disparities in need of intervention.

Changes: None.

Comment: A large number of commenters expressed their general support for efforts to standardize minimum n-sizes. Several commenters expressed support for retaining proposed § 300.647(b)(3) and (4), with a minimum n-size of 10, and expressed concerns about using a higher figure that would exclude racial and ethnic groups from a review for significant disproportionality. One commenter noted that States' selection of high minimum n-sizes for each racial and ethnic group, such as 25 or higher, has likely been one method of reducing the identification of significant disproportionality. The commenter expressed concerns that large n-sizes would weight monitoring towards large urban LEAs and inappropriately exclude smaller LEAs.

Discussion: The Department agrees with commenters that, as minimum n-sizes increase, fewer LEAs and fewer subgroups within LEAs are examined for significant disproportionality using the standard methodology. N-sizes that are too high increase the likelihood that States may fail to analyze and identify LEAs with highly disproportionate rates of identification, placement in particular settings, or discipline among racial and ethnic groups as having significant disproportionality. In such instances, States and LEAs may miss important opportunities to review and, if necessary, revise policies, practices, and procedures to ensure that all children are provided with the supports that they need to be successful.

The Department initially proposed in § 300.647(b)(3) and (4) to limit States' selection of minimum n-size (referred to as cell size in the NPRM) to a figure no larger than 10, based on an understanding that this figure represented an appropriate balance between two competing interests: the need to examine as many LEAs (and as many racial and ethnic groups within LEAs) as possible for significant disproportionality and the need to prevent inappropriate identification of LEAs due to risk ratio volatility. Smaller minimum n-sizes will include a larger number of LEAs in a State's annual analysis for significant disproportionality. However, smaller minimum n-sizes increase the volatility of the risk ratio, *i.e.* small changes in data from year to year could cause large changes in the risk ratio that do not reflect any other underlying change.

Our use of the proposed requirement for the minimum n-size of 10 was questioned by a number of commenters. Following publication of the NPRM, we became aware of significant

vulnerabilities in the application of the analysis behind the primary article on which we relied to support that proposal. Therefore, in these final regulations, we will not include the proposed minimum n-size requirement of 10, but rather specify that States must set, with input from stakeholders, a reasonable minimum n-size and cell size.

That said, § 300.647(b)(1)(iv)(A) and (B) establish a rebuttable presumption that a minimum cell size of no greater than 10 and a minimum n-size of no greater than 30 are reasonable. The Department's review of data submitted through the IDEA State Supplemental Survey for school year 2013–14 found that States that used risk ratios in their determinations of significant disproportionality tended to set their cell size or n-size requirements at 30 or less. Based on these data, the Department determined that cell sizes of up to 10 and n-sizes of up to 30 would allow the majority of States currently using risk ratios to retain their already established population requirements.

We also note that to the extent States publicly report their calculations or share data with stakeholders, the cell size of 10 is a recognized standard in data privacy. We note as well that, in adopting the rebuttable presumption, the Department is, in part, responding to the requests of commenters for flexibility in the standard methodology. We think this addition provides significant flexibility to States in implementing the standard methodology.

Further, as stated in § 300.647(b)(1)(iv), the Department will review the States' selections of risk ratio thresholds for reasonableness. To ensure that the Department may accurately and uniformly monitor all cell and n-sizes for reasonableness, and to inform our policy position, we have added a requirement in § 300.647(b)(7) that each State report to the Department all of its cell and n-sizes and the rationale for each. The Department has not yet determined the precise time and manner of these submissions, but it will do so through an information collection request. States are not obligated to comply with this reporting requirement until the Office of Management and Budget approves the Department's information collection request.

If the Department identifies a State that may have unreasonable minimum cell or n-sizes, it would notify the State and may request clarification regarding how the State believes the minimum cell or n-sizes the State is using are reasonable. If a State provides an insufficient response, the Department

would notify the State that it is not in compliance with § 300.647(b)(1)(i)(B) or (C), and the Department may take any enforcement action that is appropriate and authorized by law. Enforcement actions range from requiring a corrective action plan, imposing special conditions on the State's IDEA Part B grant, designating the State as a high-risk grantee, or withholding a portion of the State's IDEA Part B funds.

Generally, while there are a number of factors that may influence whether certain minimum cell or n-sizes are reasonable for a State, the optimal choice will be a balance between the need to examine as many LEAs (and as many racial and ethnic groups within LEAs) as possible for significant disproportionality and the need to prevent inappropriate identification of LEAs due to risk ratio volatility. For example, the Department is more likely to consider minimum cell and n-sizes to be reasonable if, in comparison to lower minimum cell and n-sizes, it substantially reduces the volatility of risk ratio calculations. By contrast, the Department is more likely to determine that a State has selected unreasonable minimum cell or n-sizes if it results in the widespread exclusion of a racial or ethnic group from review for significant disproportionality in any of the categories of analysis. The Department may also consider smaller minimum cell or n-sizes to be reasonable for categories of analysis with lower incidence, such as some placement and discipline categories, to increase the number of LEAs analyzed despite the possibility of additional volatility. Further, the Department is more likely to determine that a State has selected unreasonable minimum cell or n-sizes if they result in the widespread exclusion of LEAs from any review for significant disproportionality. As such, the Department has added in § 300.647(b)(7) a requirement that the rationales submitted for the minimum cell- and n-sizes not presumptively reasonable must include a detailed explanation of why these numbers are reasonable and how they ensure that the State is appropriately analyzing LEAs for significant disproportionality.

Changes: We have revised proposed § 300.647(b)(3) and (4) to no longer limit States to a minimum n-size of up to 10. Section 300.647(b)(1)(i) now requires States to select reasonable minimum cell and n-sizes, with advice from stakeholders, including the State Advisory Panel, subject to the Department's enforcement. Section 300.647(b)(1)(iv)(A) and (B) state that a minimum cell size of no greater than 10 and a minimum n-size of no greater than

30, respectively, are presumptively reasonable. We have added § 300.647(b)(7), which requires States to report to the Department, at a time and in a manner specified by the Secretary, all n- and cell sizes developed under § 300.647(b)(1)(i)(B) and (C) and the rationale for each. Rationales for n- and cell sizes that are not presumptively reasonable must include a detailed explanation of why the cell- and n-sizes chosen are reasonable and how they help ensure an appropriate analysis for significant disproportionality.

Comments: Many commenters stated that Federal investigators (which the Department interpreted to refer to the GAO) did not recommend that the Department set minimum n-sizes.

Discussion: We agree that the GAO did not specifically recommend that the Department establish a minimum n-size. However, the GAO did recommend that the Department establish a standard method for determining significant disproportionality, and nothing in the GAO report precludes a minimum n-size as part of the standard methodology. Indeed, to the extent that establishing a minimum n-size is consistent with establishing a standard methodology, it is in keeping with the GAO's primary recommendation.

Changes: None.

Comments: A large number of commenters expressed their strong opposition to any attempt by the Department to place limits on States' minimum n-sizes. Many commenters noted that there is no Federal n-size in the latest authorization of the ESEA or other Federal education laws.

Discussion: When possible, the Department prefers to provide States and LEAs with comparable policy provisions across programs, so long as those provisions meet the individual needs of both programs. However, nothing in the ESEA or IDEA precludes the Department from establishing requirements and provisions regarding the minimum n-size used for the analysis for significant disproportionality under IDEA section 618(d) that are different from the provisions affecting school accountability under ESEA.

Further, we believe that some limitation on States' selection of minimum cell and n-sizes is appropriate. As we note earlier in this section, as minimum cell and n-sizes increase, fewer LEAs and fewer racial and ethnic subgroups within LEAs are examined for significant disproportionality using the standard methodology. As a result, it becomes increasingly likely that States may fail to identify LEAs with highly

disproportionate rates of identification, placement in particular settings, or discipline among racial and ethnic groups as having significant disproportionality. For this reason, we believe it appropriate to limit States' choice of minimum cell and n-sizes to those that meet a standard of reasonableness that will be monitored and enforced by the Department.

Changes: As discussed previously, we have revised proposed § 300.647(b)(3) and (4) to no longer limit States to a minimum n-size of up to 10. Section 300.647(b)(1)(i) now requires States to select reasonable minimum cell and n-sizes, with advice from stakeholders, including the State Advisory Panel, subject to the Department's enforcement. Section 300.647(b)(1)(iv)(A) and (B) state that a minimum cell size of no greater than 10 and a minimum n-size of no greater than 30, respectively, are presumptively reasonable. We have added § 300.647(b)(7), which requires States to report to the Department, at a time and in a manner specified by the Secretary, all n- and cell sizes developed under § 300.647(b)(1)(i)(B) and (C) and the rationale for each. Rationales for n- and cell sizes that are not presumptively reasonable must include a detailed explanation of why the cell- and n-sizes chosen are reasonable and how they help ensure an appropriate analysis for significant disproportionality.

Comments: One commenter stated that Congress, in recent Federal education legislation, considered and rejected a federally imposed minimum n-size, clearly showing its preference that those decisions be left to States. Another commenter suggested that, in mandating that States use a Federal calculation, the regulation takes the opposite approach of the Every Student Succeeds Act, recent legislation that, according to the commenter, focuses on returning decision-making to States and LEAs, and that the matter is best left to Congress when it reauthorizes IDEA.

Discussion: The Department appreciates these and other recommendations to provide States additional flexibility to set n-sizes. After considering comments, the Department revised the final regulations to provide States a great deal of flexibility to set reasonable minimum n-sizes and cell sizes while balancing the need to place reasonable limits on this flexibility to ensure that as many LEAs are analyzed for significant disproportionality as is appropriate using the standard methodology. The Department has an interest in monitoring the conditions under which any LEA is so exempted from IDEA section 618(d). As we

discuss in *A Standard Methodology for Determining Significant Disproportionality* (§ 300.647)—General, as the risk ratio method of measuring significant disproportionality is susceptible to volatility, the Department aims to prevent “false positive” identification of significant disproportionality. Accordingly, States may exclude from their review any racial and ethnic groups within LEAs that do not meet State-set, reasonable population requirements, consistent with § 300.647(b)(1). Unreasonably high minimum cell or n-sizes may inappropriately exclude LEAs, or racial and ethnic groups within LEAs, from a State's review of significant disproportionality, increasing the likelihood that States may fail to appropriately identify LEAs with highly disproportionate rates of identification, placement, and discipline.

Given these issues, these regulations are an appropriate exercise of the Department's authority—in this case, to set reasonable population requirements necessary to ensure compliance with specific requirements of the statute. 20 U.S.C. 1406(a). Further, they are an appropriate exercise of the Department's authority—as the agency charged with administering IDEA (IDEA section 603(a), 20 U.S.C. 1402(a))—to monitor and enforce IDEA's implementing regulations.

When Congress begins the process of reauthorization, the Department intends to work closely with it on significant disproportionality, among other issues. In the interim, nothing in the ESEA or IDEA precludes the Department from establishing provisions regarding the minimum n-size used for the analysis for significant disproportionality under IDEA section 618(d), and it is appropriate for the Department to do so.

Changes: As described earlier, we have revised proposed § 300.647(b)(3) and (4) to no longer limit States to a minimum n-size of up to 10. Section 300.647(b)(1)(i) now requires States to select reasonable minimum cell and n-sizes, with advice from stakeholders, including the State Advisory Panel, subject to the Department's enforcement. Section 300.647(b)(1)(iv)(A) and (B) state that a minimum cell size of no greater than 10 and a minimum n-size of no greater than 30, respectively, are presumptively reasonable. We have added § 300.647(b)(7), which requires States to report to the Department, at a time and in a manner specified by the Secretary, all n- and cell sizes developed under § 300.647(b)(1)(i)(B) and (C) and the rationale for each. Rationales for minimum n- and cell sizes that are not

presumptively reasonable must include a detailed explanation of why the cell- and n-sizes chosen are reasonable and how they help ensure an appropriate analysis for significant disproportionality.

Comments: A large number of commenters argued that there would be confusion and less accurate data if LEAs were required to use one minimum n-size for assessment purposes and disaggregation (which the Department interpreted to refer to school assessment for purposes of ESEA accountability) and a different minimum n-size for significant disproportionality. Other commenters requested that States have the flexibility to use the same minimum n-sizes used for other Federal education programs. Another commenter stated that, in one State, the minimum n-size used for accountability purposes was 25 and that it might make sense to align the minimum n-size with that requirement.

Discussion: The Department appreciates the commenters' concerns about setting different population requirements across different Federal programs. When possible, the Department prefers to provide States and LEAs with comparable requirements across programs, so long as those requirements meet the individual needs of both programs.

As we discussed earlier in this section, we have adjusted our original proposal to allow States to set their own reasonable minimum n-sizes based on input from stakeholders, including State Advisory Panels, subject to the Department's monitoring and enforcement for reasonableness. With this change, States may set minimum cell and n-sizes comparable to what they use for other Federal programs.

However, to the extent that aligning population requirements between ESEA and IDEA would result in a minimum cell or n-size that is unreasonable for purposes of IDEA section 618(d)—that is, it would result in a failure to identify LEAs with significant disproportionality who are identifying or disciplining certain racial and ethnic subgroups, or placing them in restrictive settings, at highly disproportionate rates—the choice of cell or n-size would not comply with the requirements of IDEA.

Changes: None.

Comments: A large number of commenters felt that, generally, States are best positioned to determine minimum n-size.

Discussion: In the NPRM, the Department proposed to limit States' selection of a minimum n-size to a figure no larger than 10. Again, however, after further consideration and review of public comment, the

Department has modified the final regulations to provide States greater flexibility in determining reasonable minimum n- and cell sizes.

At the same time, we continue to believe that the Department has an interest—pursuant to OSEP's statutory obligation to ensure States' implementation of IDEA section 618(d)—in ensuring that States do not unreasonably exclude LEAs, or racial and ethnic groups within LEAs, from their review. Thus, we will monitor and enforce with regard to n- and cell-size reasonableness.

To ensure that the Department may accurately and uniformly monitor all cell and n-sizes, and to inform our policy position, we have added a requirement in § 300.647(b)(7) that each State report to the Department all of its cell and n-sizes and the rationale for each. The Department has not yet determined the precise time and manner of these submissions, but it will do so through an information collection request. States are not obligated to comply with this reporting requirement until the Office of Management and Budget approves the Department's information collection request.

Generally, while there are a number of factors that may influence whether certain minimum cell or n-sizes are reasonable for a State, the optimal choice will be a balance between the need to examine as many LEAs (and as many racial and ethnic groups within LEAs) as possible for significant disproportionality and the need to prevent inappropriate identification of LEAs due to risk ratio volatility. For example, the Department is more likely to consider minimum cell and n-sizes to be reasonable if, in comparison to lower minimum cell and n-sizes, they substantially reduce the volatility of risk ratio calculations. By contrast, the Department is more likely to determine that a State has selected unreasonable minimum cell or n-sizes if they result in the widespread exclusion of a racial or ethnic group from review for significant disproportionality in any of the categories of analysis. The Department may also consider smaller minimum cell or n-sizes to be reasonable for categories of analysis with lower incidence, such as some placement and discipline categories, to increase the number of LEAs analyzed despite the possibility of additional volatility. Further, the Department is more likely to determine that a State has selected unreasonable minimum cell or n-sizes if they result in the widespread exclusion of LEAs from any review for significant disproportionality. As such, the Department has added in § 300.647(b)(7)

a requirement that the rationales submitted for the minimum cell- and n-sizes which are not presumptively reasonable must include a detailed explanation of why these numbers are reasonable and how they ensure that the State is appropriately analyzing LEAs for significant disproportionality.

Changes: Section 300.647(b)(1)(i) now requires States to select reasonable minimum cell and n-sizes, with advice from stakeholders, including the State Advisory Panel, subject to the Department's enforcement. Section 300.647(b)(1)(iv)(A) and (B) state that a minimum cell size of no greater than 10 and a minimum n-size of no greater than 30, respectively, are presumptively reasonable. We have added § 300.647(b)(7), which requires States to report to the Department, at a time and in a manner specified by the Secretary, all n- and cell sizes developed under § 300.647(b)(1)(i)(B) and (C) and the rationale for each. Rationales for n- and cell sizes that are not presumptively reasonable which must include a detailed explanation of why the cell- and n-sizes chosen are reasonable and how they help ensure an appropriate analysis for significant disproportionality.

Comments: Many commenters noted that a minimum n-size of 10 will result in many LEAs, particularly small LEAs, being identified with significant disproportionality. One commenter stated that the Department should do away with regulatory language that would lead to the identification of almost every LEA, as, when this result occurred under another Federal education statute, subsequent legislative efforts reversed much of what the regulations intended to accomplish.

Discussion: As we note earlier in this section, the Department has amended its original proposal to restrict States to a minimum n-size no greater than 10, and, instead, will require States to set reasonable minimum cell and n-sizes. We believe this change to be responsive to both of the comments raised.

However, we wish to note that, in circumstances where a State has identified a large number of LEAs, it is not necessarily the case that these determinations are inappropriate. By requiring States to follow the standard methodology under § 300.647, it is the Department's intent to support more appropriate identification of significant disproportionality based on race and ethnicity in the identification, placement, and discipline of children with disabilities. If, in implementing the standard methodology (which will include State-selected risk ratio thresholds, a State-selected minimum n-

size, and a State-selected minimum cell size) the State identifies a large number of LEAs, it may indicate the need for a broad-based State effort to improve practices and policies to address racial and ethnic disparities in special education.

In cases where small LEAs are disproportionately, and inappropriately, identified with significant disproportionality due to the use of a low minimum cell or n-size, it may be appropriate for a State to review its data, and consult with stakeholders and State Advisory Panels, to determine whether adjustments should be made to the State's implementation of the standard methodology.

Changes: We have amended § 300.647(b)(3) and (4) to no longer restrict States to a minimum n-size of 10. Section 300.647(b)(1)(i) now requires States to select reasonable minimum cell and n-sizes, with advice from stakeholders, including the State Advisory Panel, subject to the Department's enforcement. Section 300.647(b)(1)(iv)(A) and (B) state that a minimum cell size of no greater than 10 and a minimum n-size of no greater than 30, respectively, are presumptively reasonable. We have added § 300.647(b)(7), which requires States to report to the Department, at a time and in a manner specified by the Secretary, all n- and cell sizes developed under § 300.647(b)(1)(i)(B) and (C) and the rationale for each. The rationales for n-sizes and cell sizes that are not presumptively reasonable which must include a detailed explanation of why the cell- and n-sizes chosen are reasonable and how they help ensure an appropriate analysis for significant disproportionality.

Comment: One commenter added that, if States used a minimum n-size of 10, then many States and LEAs would spend a significant amount of time, money, and labor on addressing issues that may not be able to be simply changed by utilizing early intervening dollars. Other commenters have experienced issues with small n-sizes, where LEAs are identified and must develop solutions for problems that rarely existed. Still more commenters stated that, with an n-size of 10, it will be virtually impossible for LEAs identified with significant disproportionality to correct the disparity. One commenter expressed concerns that flaws in the proposed regulation—specifically, the potential for LEAs to implement mandatory comprehensive CEIS due a finding of significant disproportionality that is the result of small numbers of children—will make it impossible to identify

metrics that could evaluate the connection between a finding of significant disproportionality in an LEA and improved outcomes for all children.

Other commenters generally stated that a small LEA might be identified with significant disproportionality due to a few new families enrolling in the LEA with a child already diagnosed with autism.

Discussion: As we note earlier in this section, the Department has amended its original proposal so that it no longer restricts States to a minimum n-size no greater than 10. Instead, the Department will require States to set reasonable minimum cell or n-sizes. We believe this change to be responsive to the comments raised by reducing the likelihood that an LEA may be identified with significant disproportionality due to minor changes in LEA enrollment. We agree with commenters that States should focus on systemic cases of significant disproportionality—rather than LEAs with simple numerical disparities based on the enrollment or changing needs of one or two children—and that the statutory remedies provided under IDEA section 618(d)(2) (20 U.S.C. 1418(d)(2)) will be most effective in addressing the needs of LEAs with systemic racial and ethnic disparities.

Changes: As noted above, § 300.647(b)(1)(i) now requires States to select reasonable minimum cell and n-sizes, with advice from stakeholders, including the State Advisory Panel, subject to the Department's enforcement. Sections 300.647(b)(1)(iv)(A) and (B) state that a minimum cell size of no greater than 10 and a minimum n-size of no greater than 30, respectively, are presumptively reasonable. We have added § 300.647(b)(7), which requires States to report to the Department, at a time and in a manner specified by the Secretary, all n- and cell sizes developed under § 300.647(b)(1)(i)(B) and (C) and the rationale for each. Rationales for n- and cell sizes that are not presumptively reasonable must include a detailed explanation of why the cell- and n-sizes chosen are reasonable and how they help ensure an appropriate analysis for significant disproportionality.

Comment: One commenter noted that a minimum n-size of 10 was empirically validated, and, based on literature, could guarantee risk ratio reliability.

Two commenters stated that there is a significant increase in reliability in moving from a minimum n-size of 5 to 10 and a slightly greater increase when cell size moved up to 15. According to one commenter, one State chose to use a minimum n-size of 15, rather than 10,

in recognition of slightly greater reliability and LEA feedback. One commenter supported giving States flexibility to select a minimum n-size between 10 and 15. Another commenter supported a minimum n-size of 15 only if States made a determination of significant disproportionality based on a single year of data.

Two commenters stated that using a minimum n-size of 10 can lead to problems with reliability when using the risk ratio. The commenters stated that, in the case of an n-size of 10 in the denominator, very small numbers can lead to unstable estimates of the risk index, leading to large swings in the risk ratio and a possible finding of significant disproportionality for very few children identified in the target group. Commenters opposing a cap of 10 for the minimum n-size offered other suggestions: A few suggested 20, many suggested 30, and a few suggested 40. One commenter stated that a minimum n-size of 25 or higher has likely been one method of reducing the identification of significant disproportionality.

Discussion: The Department generally agrees with commenters that risk ratios are not reliable when calculated for a racial or ethnic group with too few children. As multiple commenters have expressed their concern that a minimum n-size of 10 may be small, and have provided a list of consequences that may ensue if minimum n-sizes are too low to safeguard against volatility (e.g., resistance to identifying children as children with disabilities or identifying children of a particular race or ethnicity as having disabilities, inability of small LEAs to resolve significant disproportionality, vulnerability of LEAs to small changes in enrollment), we now believe that it is appropriate to allow States flexibility to set their own reasonable minimum cell and n-sizes. We also find it appropriate that the States consult with stakeholders prior to setting minimum cell and n-sizes, as was done in one State mentioned by a commenter.

In the NPRM, the Department proposed to limit States' selection of minimum n-size to a figure no larger than 10, based on an understanding that this figure represented an appropriate balance between risk ratio reliability and LEA inclusion. Bollmer, J., Bethel, J., Garrison-Mogren, R., & Brauen, M., 2007. However, upon further examination of the study, which relied on 2001–2002 data from a non-representative, non-random sample of three States—we now believe that the study includes too many limitations to

provide the basis to mandate a national minimum n-size of 10.

In these final regulations, States must set reasonable cell and n-sizes, and in § 300.647(b)(1)(iv)(A) and (B), we are establishing a rebuttable presumption that a minimum cell size of no greater than 10 and n-size of no greater than 30, respectively, are reasonable thresholds. Again, as we stated earlier in this section, support for these thresholds includes information we have from the IDEA State Supplemental Survey, which shows that States tend to set their n-size or cell size at 30 or less. We also note that to the extent States publicly report their calculations or share data with stakeholders, the cell size of 10 is a recognized standard in data privacy. We do not have comparable or sufficient support for a national n-size of less than 30.

States have the option, but are not required, to set the same cell or n-size for each category of analysis. States should consider, in consultation with their stakeholders, the impact of minimum n- and cell sizes in conjunction with the risk ratio thresholds they select for each category of analysis. The Department encourages States to consider a smaller minimum n-size for categories of analysis where LEAs have small numbers, such as discipline. States, in making these determinations in consultation with their stakeholders, including State Advisory Panels, must carefully balance inclusion of LEAs and volatility. Further, in certain circumstances such as when coupled with a larger minimum n-size, it may be reasonable for a State to select a minimum cell size of zero or one. However, the Department notes that selecting different n- or cell sizes based on race or ethnicity is problematic and could raise issues of constitutionality. As we evaluate additional data and information in the future, we may consider whether there is additional guidance we can provide to States about what constitutes a reasonable cell or n-size.

Changes: Section 300.647(b)(1)(i) now requires States to select reasonable minimum cell and n-sizes, with advice from stakeholders, including the State Advisory Panel, subject to the Department's enforcement. Section 300.647(b)(1)(iv)(A) and (B) state that a minimum cell size of no greater than 10 and a minimum n-size of no greater than 30, respectively, are presumptively reasonable. We have added § 300.647(b)(7), which requires States to report to the Department, at a time and in a manner specified by the Secretary, all n- and cell sizes developed under § 300.647(b)(1)(i)(B) and (C) and the

rationale for each. Rationales for n- and cell sizes that are not presumptively reasonable must include a detailed explanation of why the cell- and n-sizes chosen are reasonable and how they help ensure an appropriate analysis for significant disproportionality.

Comments: Some commenters noted that a minimum n-size of 10 is unrealistic and will result in unintended and inappropriate negative consequences for the LEAs (including charter schools) in one State. One commenter observed that, in its State, parent choice and charter schools create unique configurations in enrollment that may give the appearance of significant disproportionality when a minimum cell size of 10 is used. A large number of commenters noted that the Department must allow States to use minimum n-sizes greater than 10 to reduce the likelihood of "false positives" due to small numbers. One commenter claimed that a minimum n-size of 10 would impact one State's ability to screen out false positive findings of significant disproportionality of White children, given that many LEAs in the State are homogenous.

Discussion: As we note earlier in this section, the Department has amended its original proposal so that it no longer restricts States to a minimum n-size no greater than 10. Instead, the Department will require States to set reasonable minimum cell and n-sizes.

Changes: As noted previously, § 300.647(b)(1)(i) now requires States to select reasonable minimum cell and n-sizes, with advice from stakeholders, including the State Advisory Panel, subject to the Department's enforcement. Section 300.647(b)(1)(iv)(A) and (B) state that a minimum cell size of no greater than 10 and a minimum n-size of no greater than 30, respectively, are presumptively reasonable. We have added § 300.647(b)(7), which requires States to report to the Department, at a time and in a manner specified by the Secretary, all n- and cell sizes developed under § 300.647(b)(1)(i)(B) and (C) and the rationale for each. Rationales for n- and cell sizes that are not presumptively reasonable must include a detailed explanation of why the cell- and n-sizes chosen are reasonable and how they help ensure an appropriate analysis for significant disproportionality.

Comment: A few commenters described the experience of one State that previously used a minimum n-size of 10, with a risk ratio threshold of 2.0, to review LEAs for significant disproportionality. The commenters did not provide the number of years taken

into consideration. These commenters stated that the State experienced a number of unintended consequences.

First, the LEAs in the State perceived the calculations to be an implicit quota system, where LEAs delayed or refused to evaluate children for possible identification and parents were led to believe that the LEA had already exceeded a limit on the number of children in their racial group that could be identified. Second, LEAs questioned the ethnicity reported by parents, and more than one LEA provided photos of individual children and requested that their reported ethnicity be changed. Third, when the State used a minimum n-size of 10, it had to greatly increase the amount of State staff time devoted to identifying which calculations produced false positives. Meanwhile, both LEAs and State-level staff devoted considerable resources to the creation of corrective action plans and the implementation of prevention activities that impacted only one or two children. Fourth, the approach to identifying significant disproportionality often resulted in calculations that were not statistically significant.

The commenter further stated that, after the State adjusted its minimum n-size and risk ratio threshold to align with the State's accountability plan, it had better confidence that those LEAs that were identified had potential to benefit from the required comprehensive CEIS and corrective action planning.

One commenter provided a list of factors that, according to the commenter, unduly influenced an LEA's risk of identification with significant disproportionality when the State's minimum n-size was 10. The list includes small, rural LEAs with court-placed children from urban areas, families who adopt several non-White children with disabilities, charter schools with a special education focus, LEAs receiving families of color moving out of urban areas, and single events resulting in the discipline of multiple children.

Discussion: We appreciate commenters' sharing their experience implementing IDEA section 618(d). The example provided highlights some of the methods that comprise the standard methodology as required under § 300.647, including a minimum n-size and a risk ratio threshold.

We think the commenters' experience with a minimum n-size of 10 and how it potentially contributed to the inappropriate identification of LEAs with significant disproportionality is instructive. We note that, along with a minimum n-size of 10, the State also

used a relatively low risk ratio threshold of 2.0, which could have exacerbated issues of inappropriate identification of LEAs with significant disproportionality. The Department believes that it is important for States to consider both the impact of the reasonable minimum cell and n-sizes they select in conjunction with their selection of reasonable risk ratio thresholds. These factors can all potentially contribute to an inappropriate determination of significant disproportionality.

As we note earlier in this section, the Department has amended its original proposal in the NPRM, which should address the concerns raised by these and other commenters. These final regulations do not restrict States to a minimum n-size of no greater than 10. Instead, the Department will require States to set reasonable minimum cell and n-sizes.

Finally, we disagree with the commenters' suggestion that LEAs should only be identified with significant disproportionality if they have racial and ethnic disparities that are statistically significant. Given that States have access to population data on the identification, placement, and discipline of children with disabilities, tests of statistical significance are inappropriate for States' determination of significant disproportionality given that those analyses are intended to be used to draw inferences when working with sample data.

Changes: As noted previously, § 300.647(b)(1)(i) now requires States to select reasonable minimum cell and n-sizes, with advice from stakeholders, including the State Advisory Panel, subject to the Department's enforcement. Section 300.647(b)(1)(iv)(A) and (B) state that a minimum cell size of no greater than 10 and a minimum n-size of no greater than 30, respectively, are presumptively reasonable. We have added § 300.647(b)(7), which requires States to report to the Department, at a time and in a manner specified by the Secretary, all n- and cell sizes developed under § 300.647(b)(1)(i)(B) and (C) and the rationale for each. Rationales for n- and cell sizes that are not presumptively reasonable must include a detailed explanation of why the cell- and n-sizes chosen are reasonable and how they help ensure an appropriate analysis for significant disproportionality.

Comment: A number of commenters expressed concerns that the Department provided insufficient research support for its minimum n-size in proposed § 300.647(b)(3) and (4). Specifically, many commenters stated that there is no

data available to support 10 as an appropriate number for a minimum n-size. Other commenters noted that the Department provided little rationale for selecting 10 for the minimum n-size, instead of any other number.

Discussion: The Department recognizes commenters' concerns regarding the appropriateness of the research base to support our proposal to limit States to a minimum n-size no larger than 10. At the time of the NPRM, the Department's proposal was based on an understanding that this figure represented an appropriate balance between risk ratio reliability and LEA inclusion. However, upon further examination of the study, which relied on 2001–2002 data from a non-representative, non-random sample of three States, we now find that the study includes too many limitations to provide a basis for a minimum n-size of 10. Bollmer, J., Bethel, J., Garrison-Mogren, R., & Brauen, M., 2007.

Accordingly, the Department has amended the regulation so that it does not mandate a national minimum n-size. We will, rather, specify that States must set, with input from stakeholders, reasonable minimum n-size and cell sizes. In addition, § 300.647(b)(1)(iv)(A) and (B) establish a rebuttable presumption that a minimum cell size of 10 and n-size of 30, respectively, are reasonable thresholds. Again, as we stated earlier, Department review of data submitted through the IDEA State Supplemental Survey for school year 2013–14 found that States that used risk ratios in their determinations of significant disproportionality tended to set their cell-size or n-size requirements at 30 or less. Based on these data, the Department determined that cell-sizes of no greater than 10 and n-sizes of no greater than 30 would allow the majority of States currently using risk ratios to retain their already established population requirements. We note that to the extent States publicly report their calculations or share data with stakeholders, the cell size of 10 is a recognized standard in data privacy.

Changes: Section 300.647(b)(1)(i) now requires States to select reasonable minimum cell and n-sizes, with advice from stakeholders, including the State Advisory Panel, subject to the Department's enforcement. Section 300.647(b)(1)(iv)(A) and (B) state that a minimum cell size of no greater than 10 and a minimum n-size of no greater than 30, respectively, are presumptively reasonable. We have added § 300.647(b)(7), which requires States to report to the Department, at a time and in a manner specified by the Secretary, all n- and cell sizes developed under

§ 300.647(b)(1)(i)(B) and (C) and the rationale for each. Rationales for n- and cell sizes that are not presumptively reasonable must include a detailed explanation of why the cell- and n-sizes chosen are reasonable and how they help ensure an appropriate analysis for significant disproportionality.

Comment: A large number of commenters provided input as to whether the Department should allow States to set a minimum cell size—to apply to the numerator when calculating risk for a racial or ethnic group—as well as the appropriateness of particular minimum cell sizes. These commenters strongly cautioned the Department against limiting States solely to a minimum n-size of 10 when reviewing racial or ethnic groups within an LEA, as, in the absence of any consideration for the minimum cell size, these reviews will lead to false positive identifications of LEAs with significant disproportionality. A large number of commenters suggested that the Department allow States to adopt a minimum cell size, particularly when reviewing for significant disproportionality in the identification of children with disabilities, to decrease the likelihood of false positive identifications of significant disproportionality.

A few commenters stated that using only a minimum n-size of 10 allows very small groups of children—and potentially only one identified child (or one newly enrolled child with a disability)—to result in the LEA appearing to have significant disproportionality. Other commenters warned that, based on their previous experience with small n-sizes, having only one child in a subgroup has previously caused LEAs to be cited for significant disproportionality. One commenter provided examples of the number of LEAs, by State, that would be flagged for significant disproportionality, based on one child, if the Department's original proposal were implemented.

A few commenters stated that, without the adoption of a minimum cell size, there is an increased likelihood that a risk ratio of a certain size will be likely to have occurred by chance. Another commenter argued that the identification, placement, or discipline of a single child from a particular racial or ethnic group could occur by chance.

Discussion: The Department appreciates the commenters' suggestion to allow States to select a minimum cell size. The standard methodology, as originally proposed in § 300.647, did not contemplate minimum population requirements other than minimum

n-size when examining racial and ethnic groups within LEAs for significant disproportionality. However, we agree with the commenters that States should be allowed to use minimum cell sizes, as a component of the standard methodology in addition to a minimum n-size, in order to prevent inappropriate determinations of significant disproportionality, such as a finding of significant disproportionality based only on one or two children.

States will have the flexibility to set their own reasonable minimum cell sizes, limited, as is the selection of risk ratio threshold, by consultation with stakeholders, including the State Advisory Panels. It should be noted that States have the option to set a minimum cell size of zero or one if the State and its stakeholders believe their selection of a reasonable minimum n-size addresses the issues associated with small populations or low incidence categories of analysis.

Accordingly, we have amended the regulation to allow States to select reasonable minimum cell sizes in the standard methodology.

Changes: We have amended proposed § 300.647(b)(1) to require States to select a reasonable minimum cell size with advice from stakeholders, including the State Advisory Panel, subject to the Department's enforcement.

Comment: One commenter noted that most disabilities are rare events, meaning that only one or two percent of the children will be identified as having them. As a result, when analyzing LEA-level data, many LEAs will have no children with a given disability, and for an LEA in which children are identified, the result may be a large risk ratio. One commenter stated that LEAs with only 10 children in any given racial or ethnic group will be automatically disadvantaged for low incidence disabilities like autism, intellectual disability, and emotional disturbance, which the commenter cited as having an incidence rate of one percent or less. The commenter concluded that, even if an LEA qualifies only one child of a racial or ethnic group in any of the three categories, it will be found to have significant disproportionality.

Discussion: We appreciate these commenters for raising their concerns regarding the low incidence of some impairments. In general, we agree with the commenters that LEAs with low incidence rates are likely to have more volatile risk ratios.

We have amended proposed § 300.647(b)(1)(i) to require States to select reasonable minimum cell sizes. With this change, States' use of minimum cell sizes will prevent the

inappropriate identification of LEAs with low incidence rates to the extent that those rates coincide with small populations of children.

Changes: Section 300.647(b)(1)(i)(B) requires States to set reasonable minimum cell sizes.

Comment: Two commenters warned that LEAs identified with significant disproportionality due to only one or two children will continue to be identified due to those children so long as they remain in school. Another commenter argued that the identification, placement, or discipline of a single child from a particular racial or ethnic could occur by chance, and is not sufficient to demonstrate bias or discrimination within an LEA. A few commenters expressed concern that, if LEAs are identified with significant disproportionality based on one or two children, the regulation could discourage LEAs from identifying children of color with disabilities, or encourage LEAs to stigmatize the child that is identified. One commenter stated that there may be FERPA issues inherent in basing a determination of significant disproportionality on a single child, especially if the child's recent enrollment pushes the LEA's risk ratio over the State's threshold.

Discussion: We agree with the commenters that a number of negative outcomes could result if LEAs are at risk of being identified with significant disproportionality based on the identification, placement, or discipline of only one or two children. We have amended proposed § 300.647(b)(1) to require States to select a reasonable minimum cell size so that, when a racial or ethnic group of interest within an LEA has too few children experiencing a particular outcome, the State is not required to calculate the risk ratio for that racial or ethnic group, for that outcome, for that LEA. We believe this amendment to be responsive to the concerns the commenters' raised.

Changes: Section 300.647(b)(1)(i)(B) requires States to set a reasonable minimum cell size.

Comment: To avoid risk ratio volatility, a few commenters noted that minimums should apply to both the numerator and denominator. These commenters indicated that allowing States to apply the minimum cell size to the numerator of the risk calculations for the target racial or ethnic group would ensure that the risk calculations are based on a sufficient number of identified children. One commenter noted that, among the current population requirements employed by the States, one requirement was a minimum cell size for all impairments.

Discussion: We agree with commenters that allowing the use of a minimum cell size and a minimum n-size will help prevent risk ratio volatility. We have amended the regulation to allow States to set both a reasonable minimum cell size and a reasonable minimum n-size.

Changes: Section 300.647(b)(1)(i) now requires States to select reasonable minimum cell and n-sizes, with advice from stakeholders, including the State Advisory Panel, subject to the Department's enforcement. Section 300.647(b)(1)(iv)(A) and (B) state that a minimum cell size of no greater than 10 and a minimum n-size of no greater than 30, respectively, are presumptively reasonable.

Comment: One commenter suggested that the Department allow States the flexibility to choose a minimum cell size between two and four, and not so high that the State overlooks disproportionality for low-incidence populations. The commenter noted that, for one western State, if the minimum cell size is set at 10, only about 10 percent of significant disproportionality findings would be for non-White children because of the small size of those populations. A number of commenters supported a minimum of 10, if applied to both the minimum cell size and minimum n-size. Two commenters suggested that a minimum cell size of at least six or greater would remove the possibility of an LEA being flagged for significant disproportionality based on chance. A few commenters noted that a minimum cell size and a minimum n-size for the target racial and ethnic group are necessary to avoid the inappropriate identification of LEAs and requested a minimum cell size of five to avoid false positive identification of significant disproportionality. Several commenters suggested the use of specific minimum cell sizes when calculating the risk of identification of a particular disability for a racial or ethnic group. A few commenters encouraged a minimum cell size of five children with a particular disability. Many more commenters encouraged minimum cell size of 10 children with a particular disability. One commenter noted that a minimum cell size of at least 10 is necessary for reliability and privacy and to avoid findings of significant disproportionality based on very small numbers of children. This commenter supported giving States flexibility to select a minimum cell size between 10 and 15. A few commenters noted that a minimum cell size of five would result in fewer false positive identification of significant disproportionality.

Discussion: The Department appreciates the suggestions to select various minimum cell sizes in order to limit risk ratio volatility and the potential for inappropriate finding of significant disproportionality. In response to these comments, these final regulations provide States the flexibility to set their own reasonable minimum cell sizes, limited, as is the selection of risk ratio threshold, by consultation with stakeholders, including the State Advisory Panels and subject to the Departments monitoring and review for reasonableness. Accordingly, as with n-size, to ensure that the Department may accurately and uniformly monitor all cell sizes, we have added a requirement that each State report to the Department the cell sizes it selects and the rationale for selecting each. The Department has not yet determined the precise time and manner of these submissions, but it will do so through a subsequent information collection request. States are not obligated to comply with this reporting requirement until the Office of Management and Budget approves the Department's request.

As to reasonableness of cell sizes in general, the Department assumes that a minimum cell size of up to 10 may be reasonable for most States. Of commenters that suggested a particular minimum cell size, all but one requested that the Department allow States to use a minimum cell size of up to 10. The Department also found that—based on a review of the SY 2013–2014 State Supplement Survey (SSS)—States that used risk ratios in their determinations of significant disproportionality tended to set their cell-size or n-size requirements at 30 or less. Based on these data, the Department determined that cell- of 10 and n-sizes of 30 would allow the majority of States currently using risk ratios to retain their already established population requirements. We note that to the extent States publicly report their calculations or share data with stakeholders, the cell size of 10 is a recognized standard in data privacy.

Further, when reviewing States' minimum cell sizes for reasonableness, the Department may consider the same criteria used for minimum n-size, with one addition: the Department is more likely to consider a minimum cell size reasonable if, in comparison to a lower minimum cell size, it substantially reduces the potential that an LEA will be identified with a significant disproportionality based on small fluctuations in the number of children.

The Department encourages States to consider a smaller minimum n-size for categories of analysis with particularly

low incidence, as appropriate, in order to include a larger percentage of LEAs in the review for significant disproportionality. Further, in certain circumstances such as when coupled with a larger minimum n-size, it may be reasonable for a State to select a minimum cell size of zero.

The Department will continue to collect data and review research to help refine the selection of reasonable minimum cell sizes in order to ensure that States are reviewing as many LEAs for significant disproportionality as possible while limiting the volatility of risk ratios if cell sizes that are too low. The obligation to report cell sizes and their rationales will assist in this effort.

Changes: The Department has added § 300.647(b)(7), which requires States to report to the Department, at a time and in a manner specified by the Secretary, all cell sizes selected under § 300.647(b)(1)(i)(B) and the rationale for each. Rationales for n- and cell sizes that are not presumptively reasonable must include a detailed explanation of why the cell- and n-sizes chosen are reasonable and how they help ensure an appropriate analysis for significant disproportionality.

Comment: One commenter suggested that the Department consider scaling the minimum n-size to be larger for lower incidence disabilities.

Discussion: As we note earlier in this section, § 300.647(b)(1) requires States to select reasonable minimum cell sizes. Nothing in these final regulations precludes a State from setting higher minimum cell sizes or n-sizes for particular categories of analysis based, in part, on the level of incidence of a particular disability and the potential impact it could have on the volatility of calculated risk ratios. However, as noted previously, any minimum cell size or n-size set by the State, in consultation with stakeholders, must be reasonable. With this change, States' use of minimum cell sizes, along with States' flexibility to use up to three consecutive years of data to make a determination of significant disproportionality, should prevent the inappropriate identification of LEAs due to low incidence rates in either the racial or ethnic group of interest or the comparison group.

Changes: None.

Comment: One commenter argued that a minimum cell size would be particularly important when analyzing LEAs for significant disproportionality due to suspensions and expulsions. The commenter stated that LEAs cannot fully control the administration of disciplinary removals, as State or LEA regulations may require a child to be moved when weapons or drugs are

brought in the school. The commenter concluded that a minimum cell size would prevent those incidents from resulting a finding of significant disproportionality for the LEA.

Discussion: We agree with the commenter that a single incident that requires a mandatory disciplinary removal generally should not result in a finding of significant disproportionality by race and ethnicity and that States should have the flexibility to focus on their efforts on LEAs with consistently high risk ratios, which may indicate systemic racial and ethnic disparities in need of intervention. We believe that the standard methodology is responsive to the commenter, as, under § 300.647(b)(1), States may establish reasonable minimum cell sizes and, under § 300.647(d)(1), States may use up to three consecutive years of data prior to making a determination of significant disproportionality.

However, we also believe that, in cases where an LEA experiences multiple incidents requiring a mandatory removal, and, as a result, a particular racial or ethnic group faces consistently disproportionate treatment over the course of multiple years, it would be appropriate for the LEA to be identified with significant disproportionality.

Changes: None.

Comments: Two commenters noted that, when the n-size of a risk calculation falls below 20 children, at least 6 children are required in the numerator to achieve sufficient statistical power for results to be reliable.

Discussion: The Department agrees that the selection of minimum cell sizes should be made with consideration for minimum n-sizes and encourages States to take any interactions between the two into account when setting these two minimums. Further, we would encourage States to also take into consideration how its particular combination of reasonable risk ratio threshold, minimum n-sizes, and minimum cell sizes will help or hinder its efforts to identify significant disproportionality.

Changes: None.

Comment: A few commenters responded to Directed Question #6 in the NPRM, which inquired whether the Department's proposed limit on minimum n-size aligned with State privacy laws.

A few commenters indicated that Department's proposal to allow States to set a minimum n-size up to 10 was compliant with State privacy laws. Other commenters noted that a minimum n-size of 10 would not

comply with State privacy laws, but that a minimum cell size of 10 would. One of these commenters noted that a minimum cell size of less than 10 would raise privacy concerns. One commenter stated that a Federal statistical agency recommended a minimum population requirement of 10 for confidentiality purposes. (The Department was unable to determine whether the commenter intended to refer to cell size or n-size.)

A few commenters spoke more generally about the relationship between minimum cell sizes, minimum n-sizes, and privacy. One commenter noted that a minimum cell size requirement would resolve the issue of publishing data that violates privacy laws. However, a few commenters stated that, as there did not appear to be any requirement that States make the data utilized in the risk ratio calculations publicly available, the issue of privacy was not applicable. One commenter questioned how, if the Department limits minimum n-sizes to 10 for significant disproportionality, and States choose higher minimum n-sizes for other calculations to safeguard privacy, the inconsistency would be explained to the public.

One commenter recommended that the Department research the implications of its proposal for existing State privacy laws with the goal of ensuring the privacy rights of children with disabilities. Another commenter generally recommended that the Department require FERPA protections in situations in which there are fewer than 10 children in a group.

Discussion: We appreciate the thoughtful comments that we received on this issue and recognize that, at particular minimum n-sizes and minimum cell sizes, States would potentially have to suppress some data prior to public reporting, as they do in other reporting instances. As State and Federal privacy laws apply, additional privacy protections in these regulations are not necessary.

Changes: None.

Comment: A number of commenters requested that States have flexibility to apply both a minimum n-size and a minimum cell size to the comparison group. Commenters indicated that allowing States to apply the minimum cell size to the numerator of the risk calculations for the comparison group would ensure that the risk calculations are based on a sufficient number of identified children. One commenter suggested that the Department allow States to adopt a minimum cell size that will decrease the likelihood of identifying an LEA as having significant

disproportionality when the results are likely to have occurred by chance.

Another commenter strongly opposed the use of a minimum cell size for the comparison group, if the result was that the racial or ethnic group of interest would not be reviewed for significant disproportionality. The commenter expressed concern that the starkest disparities would be overlooked in racially homogenous LEAs.

Discussion: In reviewing the commenters' suggestions and perspectives, we were not always certain whether the commenters assumed that a population requirement, when applied to a comparison group, would (1) determine whether a particular racial or ethnic group in an LEA would be exempted from a review of significant disproportionality, or (2) determine whether the alternate risk ratio was necessary to review that racial or ethnic group.

We believe the challenge associated with an inappropriately low minimum cell size or minimum n-size for racial and ethnic groups is similar to those that arise when dealing with comparison groups—namely, risk ratio volatility. For this reason, it is our intent that, under § 300.647(b)(5), States will use their reasonable minimum cell sizes and n-sizes to determine whether there is an adequate number of children in the comparison group to calculate the risk ratio or if the alternate risk ratio must be used.

In general, the Department does not believe that the absence of a comparison group—or a small comparison group—within an LEA is a sufficient basis to exclude a racial or ethnic group from States' review for significant disproportionality. It is the Department's intention, rather, that States calculate the alternate risk ratio—using a State-level comparison group—when the comparison group within the LEA includes too few children for a reliable analysis or when the risk to the comparison group within the LEA is zero.

However, we have also added § 300.647(c)(2) to clarify that, when the alternate risk ratio is required, and the comparison group within the State does not meet the minimum cell size or minimum n-size, the State is not required to calculate either the risk ratio or alternate risk for the applicable racial and ethnic group and category.

Changes: We have added § 300.647(c)(2) to allow States to not calculate either the risk ratio or alternate risk ratio for a given racial or ethnic group if the comparison groups at the LEA level and State level do not meet

the State's minimum n-sizes and minimum cell sizes.

Comment: A large number of commenters strongly suggested that the Department not mandate an n-size of 10 be applied to number of children in the comparison group as this might lead to false positives.

Discussion: As we note earlier in this section, the Department has amended its original proposal so that it no longer restricts States to a minimum n-size no greater than 10. Instead, the Department will require States to set reasonable minimum n-sizes. We believe this change to be responsive to the comments raised by reducing the likelihood that an LEA may be identified with significant disproportionality due to small numbers of children.

Changes: None.

Comment: One commenter stated that a minimum cell size need not apply to the comparison group, as the commenter recommends that States use a different approach, including a risk ratio and risk difference to examine LEAs that are mostly homogenous. The Department interprets the comment to suggest that, as risk difference should be used to analyze homogenous LEAs, and can be calculated even when a comparison group has a cell size of zero, there is no need for a minimum cell size for the comparison group.

Discussion: As we explain earlier in *Risk Ratios* (§ 300.646(b); § 300.647(a)(2); § 300.647(a)(3); § 300.647(b)), we decline to allow States to use risk difference to examine LEAs for significant disproportionality. States are required under § 300.646(b)(3), (4), and (5) to calculate the risk ratio—or the alternate risk ratio—and these methods cannot be calculated when the comparison group has a cell size of 0, and cannot be calculated reliably when the comparison group has a low cell or n-size. For these reasons, we disagree with the commenter and will require States to apply minimum cell sizes to comparison groups, under § 300.646(b)(5), to determine whether the alternate risk ratio will be used in place of the risk ratio.

Changes: None.

Comments: A number of commenters requested that, without the flexibility to include both a minimum n-size and a minimum cell size, States be allowed to include a test of statistical significance to determine whether the risk ratio is statistically different from the risk ratio threshold. Other commenters inquired about the use of statistical significance tests on specific pieces of the risk calculation prior to a finding of significant disproportionality.

Discussion: Given that States have access to population data on the identification, placement, and discipline of children with disabilities, tests of statistical significance would be inappropriate.

Further, the Department notes that commenters generally wanted States to have the flexibility to conduct these tests in the absence of flexibility to use minimum cell sizes. Given that States may set their own reasonable minimum cell sizes and minimum n-sizes, we believe the commenters' concerns to be addressed without allowing the use of statistical significance testing.

Changes: None.

Comments: A large number of commenters requested that the Department offer States flexibility to determine how to apply a minimum population requirement to LEAs. These commenters wanted States to have flexibility to add additional criteria beyond the minimum n-size to avoid identifying significant disproportionality that is simply the result of small numbers. One commenter noted that a minimum n-size of 10 fails to account for the overall size of an LEA. Another commenter noted that one State uses a population requirement for the general student population. A few commenters encouraged the Department to allow States to consider, in implementing the standard methodology, the size of the racial and ethnic group size in relation to the size of the LEA. One commenter requested flexibility to use additional criteria beyond a minimum n-size, such as requiring 30 or more children with an IEP for calculations.

Discussion: The Department recognizes that there are multiple ways that States could use data on the number of children in an LEA to determine whether to exclude that LEA from its analysis for significant disproportionality. For example, it is possible to devise a system in which LEAs that do not have at least 500 children enrolled are not subject to the standard methodology, or one in which an LEA is excluded from analyzing a particular racial or ethnic group if that group constitutes less than 1 percent of total enrollment in an LEA. However, we believe that exclusions on these bases would be inappropriate, as they are not closely related to concerns about data volatility and could result in an inappropriately high number of LEAs being excluded. Further, as every child with a disability is entitled to a free appropriate public education in the least restrictive environment, regardless of the size of the LEA or the proportion of enrolled children who are in their

particular racial or ethnic subgroup, we believe it would be inappropriate to allow the exclusion of LEAs for reasons unrelated to data volatility. We believe that State flexibility to set reasonable minimum cell sizes and minimum n-sizes is sufficient to address commenters' concerns regarding small numbers of children.

Changes: None.

Commenter: A commenter recommended that the Department require States to report risk ratios that are corrected—using advanced mathematical methods of correction or estimation—when LEAs have a cell size of zero.

Discussion: In developing the standard methodology, the Department placed a priority on selecting methods that were easy to comprehend, that supported transparency, and that facilitated comparisons between States' approaches to identifying significant disproportionality. With a population requirement, such as the minimum cell size included in § 300.647(b)(1), LEAs can easily determine which racial and ethnic groups the State will review for significant disproportionality, and what categories of analysis will be reviewed. Further, they can calculate for themselves the likely outcome of the review.

While the commenters' suggestion might enable States to review additional LEAs for significant disproportionality, it would do so at the cost of transparency, given the complexity of the analysis. For this reason, the Department declines to require States to use this analysis.

Changes: None.

Comment: One commenter stated that population requirements have varied between LEAs, with some having a minimum of just 9 children while other LEAs have set the minimum as large as 30 children. The commenter expressed concern that population requirements that require a greater number of children may result in significant disproportionality being missed entirely in some LEAs.

Discussion: We agree with the commenter that, in general, LEAs with significant disproportionality may be overlooked if either minimum n-sizes or minimum cell sizes are too large. For this reason, under § 300.647(b)(1), States will be required to set reasonable minimum cell sizes and reasonable minimum n-sizes with input from State Advisory Panels, and the States' chosen population requirements would also be subject to the Department's enforcement of reasonableness. Further, this provision requires States to identify and apply minimum n-sizes and minimum

cell sizes. LEAs will not be permitted to set their own population requirements to determine whether the LEA, or if the racial and ethnic groups within the LEA, will be reviewed by the State for significant disproportionality.

Changes: None.

Alternate Risk Ratios (§ 300.647(a)(1); § 300.647(b)(5); § 300.647(c)(2))

Comment: A number of commenters responded to Directed Question #7 in the NPRM, which requested public input regarding the use of the alternate risk ratio method in situations where the comparison group does not meet the minimum n-size. Directed Question #7 also asked for input on whether the use of the alternate risk ratio method would be appropriate in other situations.

Some commenters opposed the use of an alternate risk ratio method. Of these, some stated that an alternate risk ratio method would seldom be appropriate because, in some States, few LEAs have demographics that are similar to the State's overall demographics. This commenter suggested that using an alternate risk ratio method will increase the likelihood of false positive identification of LEAs with significant disproportionality. A number of commenters expressed concern that, with the alternate risk ratio, LEAs would be dependent upon States to provide the data to calculate their risk ratios. These commenters expressed a preference for calculations that LEAs would run independent of the State. Another commenter expressed opposition to a standard methodology in general and stated that the alternate risk ratio method is similarly deficient because it fails to take into account factors, such as poverty, that could affect the need for special education services. Similarly, some commenters stated that, while the use of an alternate risk ratio method may be appropriate in certain situations, the Department should further consider allowing States to use methodologies other than a risk ratio.

A few commenters expressed support for the use of an alternate risk ratio approach in limited situations, such as when subgroup sizes are small in number, or when the risk ratio is volatile across three years of data. Other commenters supported the Department's proposal to allow States to use the alternate risk ratio in instances where the total number of children in a comparison group is less than 10 or when the risk to children in a comparison group is zero.

Discussion: Under proposed § 300.647(b)(5), States would have used the alternate risk ratio, instead of the

risk ratio, whenever the comparison group at the LEA-level had an n-size of fewer than 10 children (or children with disabilities, as appropriate) or had a risk of 0 percent (*i.e.*, had a cell size of 0). This requirement was designed to prevent the possibility that States might, from LEA to LEA, choose from either the risk ratio or alternate risk ratio with the goal of avoiding an identification of significant disproportionality.

As the Department has revised § 300.647(b)(1) to allow States, with input from stakeholders (including the State Advisory Panel), to set reasonable minimum n-sizes and minimum cell sizes, we have likewise revised § 300.647(b)(5) to require States the use of the alternate risk ratio when, within an LEA, the comparison group does not meet either a reasonable minimum n-size or minimum cell size. While the flexibility to determine reasonable minimum n-sizes and minimum cell sizes will not allow States the option to simply choose, from LEA to LEA, whether to apply the alternate risk ratio due to concerns about risk ratio volatility, it would provide States the ability to avoid risk ratio volatility due to small comparison group sizes. Likewise, the ability of a State to determine reasonable minimum cell sizes and minimum n-sizes should provide sufficient flexibility to avoid false positives identification of significant disproportionality that might result when examining small target or comparison groups.

With respect to the comment regarding the potential difficulty in obtaining State data for use in the alternative risk ratio, we note that the requirement to analyze LEAs is applicable to States, and States have access to the State-wide data necessary to use when applying the alternate risk ratio method. In reviewing LEAs for significant disproportionality with respect to identification, we generally expect that States will use the same IDEA section 618 data that is reported to the Department for data regarding children with disabilities, and data submitted to the Institute for Education Sciences for the Common Core of Data, for enrollment data. OMB Control No. 1875–0240. In reviewing LEAs for significant disproportionality with respect to placement or discipline, we generally expect that States will use the same section 618 data reported to the Department. For IDEA section 618 data, discipline data is a cumulative count from July 1st through June 30th, while IDEA section 618 child count data is a point-in-time count that occurs in the fall. OMB Control No. 1875–0240.

We disagree with commenters that the Department should allow States to consider additional factors that might affect significant disproportionality. Under the current regulations, the GAO noted that “the discretion that states have in defining significant disproportionality has resulted in a wide range of definitions that provides no assurance that the problem [of significant disproportionality] is being appropriately identified across the nation.” It was this finding by the GAO, public comments the Department received in a response to a 2014 request for information (79 FR 35154), and the Department’s review of State definitions of significant disproportionality that convinced the Department to issue regulations to require that all States follow a standard methodology. The Department believes that the proposed standard methodology—including the use of the risk ratio or alternative risk ratio method—is a necessary step to achieve those goals.

Changes: We have revised § 300.647(b)(5) to require States the use of the alternate risk ratio when, within an LEA, the comparison group does not meet either a reasonable minimum n-size or minimum cell size, as determined by the State in accordance with revised § 300.647(b)(1).

Comment: A number of commenters suggested the Department provide the flexibility to allow States to determine when and under what circumstances the alternate risk ratio method would be most appropriate. One of these commenters noted that one State currently uses the alternate risk ratio in all instances and urged the Department to allow this State to continue to do so rather than limiting the use of the alternate risk ratio method to those situations when the risk ratio method is not applicable. According to the commenter, the LEAs in this State are familiar with the alternate risk ratio and understand its calculation. In addition, the commenter asserted that the alternate risk ratio provides the ability for comparability of results among the LEAs in the State.

Other commenters asserted that while flexibility to use the alternate risk ratio may be appropriate, a requirement to use the alternate risk ratio method was not. Some of these commenters argued that the alternate risk ratio, which uses the State’s risk for the comparison group, is inappropriate in States in which the racial and ethnic composition of LEAs differs significantly from that of the State. These commenters indicated that allowing States to use a minimum cell size for both the racial or ethnic group of interest and the comparison

group would eliminate the need for the alternate risk ratio calculation.

Another commenter noted that the use of an alternate risk ratio for some LEAs or some subgroups within an LEA will create disparities in the application of the regulation. The commenter requested that States have the flexibility to use either the risk ratio or the alternate risk ratio for all of the LEAs and subgroups within the State.

Still another commenter suggested that the Department allow, but not require, the alternate risk ratio method, stating that, while the alternate risk ratio may solve the problem of low cell size for the comparison population, it precludes an accurate measure of disproportionality because it relies on a comparison of two dissimilar populations. According to the commenter, if referral rates in an LEA are high in general, application of the risk ratio method would not suggest significant disproportionality; use of the alternate risk ratio method, however, where the LEA’s generally high referral rates would be compared to the State’s average referral rates, would result in all groups being found to be disproportionate. This commenter further stated that the alternate risk ratio will create a substantial risk in States with predominantly White rural areas that a large number of LEA findings will be due to significant overrepresentation for White children. The commenter questioned whether Congress, in framing IDEA in 2004, intended to address the disparate treatment of White children. The commenter argued that, while the issue of over-referral to special education could be an issue for OSEP or SEAs to address, comprehensive CEIS should be a vehicle to monitor significant disproportionality, not referral rates.

Another commenter noted that, when an LEA suspends just one or two children of one racial or ethnic group and none of any other racial or ethnic group, the alternate risk ratio will kick in and, due to small numbers that produce a high risk for one particular racial or ethnic group, a high alternate risk ratio will be produced and trigger a finding of significant disproportionality. Other commenters arrived at a similar conclusion: They advised the Department to not require the use of the alternate risk ratio calculation as, according to them, it only provides a viable option for examining racial or ethnic disparities in a limited number of circumstances (*e.g.*, when the comparison group does not meet the minimum n-size or cell size), failing to address very small target populations.

Discussion: We appreciate the comments regarding the required use of the alternative risk ratio. With respect to comments suggesting that the Department permit States to apply the alternate risk ratio whenever they deem it appropriate, we reiterate that the alternative risk ratio may be used only when the risk ratio method is not available. As we stated in the NPRM, it is the Department's position that, whenever possible, analyses for significant disproportionality under IDEA section 618(d) should compare identification, placement, and discipline rates in an LEA to those rates for other racial and ethnic groups in the same LEA.

We disagree with commenters suggesting that States should have flexibility to exclude from a review of significant disproportionality those racial or ethnic groups within LEAs that do not have a sufficiently large comparison group. For similar reasons, we disagree with commenters objecting to the alternate risk ratio due to demographic differences between the State and LEA. The Department believes that, in racially or ethnically homogenous LEAs—including rural, predominantly White districts—and LEAs with markedly different demographic characteristics than a State, there is a possibility that a particular racial or ethnic group is identified, placed, or disciplined, at markedly higher rates than their peers. In these cases, the absence of a comparison group should not excuse either the State or the LEA from their responsibility under IDEA section 618(d) to identify and address significant disproportionality.

We disagree with the suggestion that IDEA section 618(d) was not intended to address significant disproportionality that impacts White children. The plain language of IDEA section 618(d) (20 U.S.C. 1418(d)) requires States to identify significant disproportionality, based on race or ethnicity, without any further priority placed on specific racial or ethnic groups. For that reason, the Department believes that the statute directs States to address significant disproportionality impacting all children with disabilities.

We further disagree with commenters that an alternate risk ratio requirement does not measure racial and ethnic disparity. Most measures of racial and ethnic disparity include some comparison of risk; in the case of the alternate risk ratio, the comparison is not to a State risk index, but to a State-level comparison group (e.g., Black children in an LEA, compared with non-Black children in the State).

Finally, with respect to the possibility that, for any one LEA with high referral rates across all groups, all racial and ethnic groups could trigger a finding of significant disproportionality if an alternate risk ratio is required, we do not believe that there is a high likelihood of that scenario occurring. The alternate risk ratio would only be utilized in cases where, for a particular racial or ethnic group, there is a small comparison group at the LEA-level or the comparison group's risk is zero at the LEA-level. Likewise, the flexibility to set reasonable minimum cell sizes and minimum n-sizes should allow States to avoid identifying LEAs based on a small number of children in a particular group. In either case, it is likely that the racial and ethnic groups that comprise the comparison group would not be reviewed for significant disproportionality, as, per § 300.647(c)(1), States will have the flexibility to exclude from their review for significant disproportionality those racial and ethnic groups they do not meet both a minimum n-size and minimum cell size.

Changes: None.

Comment: One commenter suggested that the alternate risk ratio would be appropriate in situations where an LEA is home to highly specialized programs for children with autism or hearing impairments, or where the mobility rate is significantly discrepant from the State average.

Discussion: We disagree. As we stated in the NPRM, it is the Department's position that, whenever possible, analyses for significant disproportionality under IDEA section 618(d) should compare identification, placement, and discipline rates in an LEA to those rates for other racial and ethnic groups in the same LEA. Generally, variations from statewide trends is not an ideal indicator of whether significant disproportionality exists, which is why the Department initially proposed to limit the use of the alternate risk ratio to instances in which the comparison group is particularly small or the risk to that group is zero. In instances where an intra-LEA analysis either does not create mathematical quandaries (i.e., dividing by zero) or does not rely on particularly small comparison groups, racial and ethnic groups within an LEA should be compared with other groups within the LEA. Under § 300.647(b)(5), the Department will limit the use of the risk ratio to instances where the comparison group does not meet either the State's reasonable minimum cell size or minimum n-size.

In instances where LEAs have highly specialized programs, LEAs should work to ensure that these programs are equally accessible to all children eligible for the program, regardless of race or ethnicity. Similarly, LEAs should ensure that decisions to place particular children with disabilities in segregated settings are based on the individual needs of those children consistent with civil rights laws. Unnecessarily removing children with disabilities from an integrated setting and concentrating them in separate schools runs contrary to the integration goal that lies at the heart of the Americans with Disabilities Act (ADA). (See, e.g. 28 CFR 35.130(b)(1)(ii), (b)(1)(iv), (b)(2); see also, *Olmstead v. L.C.*, 527 U.S. 581, 597 (1999) (“Unjustified isolation, we hold, is properly regarded as discrimination based on disability” under title II of the ADA).)

Further, as discussed earlier, the level of student mobility in an LEA does not obviate that LEA's obligation under IDEA to ensure that all children with disabilities have access to a free appropriate public education in the least restrictive environment. LEAs should ensure that they are meeting this obligation for all children, and that they are doing so without regard to a child's race or ethnicity.

Finally, it is not clear to the Department how a calculation of an alternate risk ratio, rather than a risk ratio, would result in a more accurate assessment of significant disproportionality for LEAs with specialized programs or highly mobile student populations.

Changes: None.

Comments: One commenter suggested that if an SEA uses multiple years of data, and an LEA's racial composition requires the use of the alternate risk ratio in one year, then the State should have the flexibility to use the alternate risk ratio in the other years to determine significant disproportionality. The commenter suggested, for example, that an SEA using three years of data be permitted to apply the alternate risk ratio to years one and three of the data even if the alternate risk ratio was only triggered in year two of the data.

Discussion: The Department does not believe it appropriate to allow States to use the alternate risk ratio for LEAs in the years just prior to, or immediately following, years when it is required to do so because the comparison group does not meet the State's reasonable minimum n-size or reasonable minimum cell size. As we stated in the NPRM, it is the Department's position that, whenever possible, LEA data is

preferable to State-wide data for the purpose of identifying significant disproportionality as they best represent the practices of the LEA and the experiences of the children enrolled in the LEA. 81 FR 10967. In years when an LEA has a sufficiently large population of children, or children with disabilities, to meet the State's reasonable minimum cell size and minimum n-size, it is the Department's preference that States use the LEA's information to identify if significant disproportionality is taking place.

Changes: None.

Flexibilities—Three Consecutive Years of Data, § 300.647(d)(1)

Comment: One commenter expressed concern that allowing States to identify LEAs with significant disproportionality by examining up to three prior consecutive years in proposed § 300.647(c)(1) is ambiguous. Further, the commenter stated that it is not clear whether the regulation is written to mean that an LEA could be identified in the year in which their data exceeded the State-defined threshold or if the LEA could exceed the threshold for three years and then be determined to have significant disproportionality in the fourth year. If the regulation is written to mean the latter, the commenter expressed that four years is an unnecessarily long delay. Another commenter stated that it is unclear whether the State may begin consideration of the three years of data on the date the regulations go into effect.

Discussion: The Department appreciates the opportunity to clarify this flexibility. Under final § 300.647(d)(1), States may make a determination that an LEA has significant disproportionality after the LEA has exceeded a risk ratio threshold for a particular racial or ethnic group and category of analysis for up to three prior consecutive years preceding the identification. Under this provision, a State is prohibited from waiting four years to identify an LEA with significant disproportionality if it has exceeded the State's risk ratio threshold for up to three prior consecutive years. The use of the term "prior" is meant to clarify that any determination of significant disproportionality uses the most recent year for which data are available and up to two previous consecutive years of data.

For example, if a State is making a determination in the 2018–2019 school year, it can rely on up to three years of data to make its determinations (e.g., 2015–2016, 2016–2017, and 2017–2018). If an LEA exceeds the risk ratio

threshold for a particular racial or ethnic group for a particular category of analysis in each of those years, the State must identify that LEA as having significant disproportionality. The fact that the determination made in 2018–2019 is based, in part, on data from 2015–2016 does not constitute a delay of four years to make a determination, but is a result of data lags that occur regardless of how many prior years of data a State analyzes (e.g., 2018–2019 child count, placement, and discipline data are not typically available in time for States' determinations in the 2018–2019 school year).

The flexibility to determine significant disproportionality after one, two, or three consecutive years was designed to account for volatility—small changes in data from year to year that may cause large changes in a risk ratio and cause an LEA to be identified with significant disproportionality. Allowing States to take into consideration up to three consecutive years of data provides an opportunity for the States to determine which LEAs have significant disproportionality on the basis of consistently elevated risk ratios, rather than what may be a single year increase.

Also, as we noted in the NPRM, using three consecutive years of data was the most common approach to identifying significant disproportionality among the States in 2012–2013. Of the 23 States that reported using multiple years of data in the SY 2012–2013 State Supplement Survey (SSS), 13 States required an LEA to exceed the threshold for three consecutive years before finding significant disproportionality, while 9 States required 2 consecutive years.

Changes: None.

Comment: Regarding proposed § 300.647(c)(1), a large number of commenters expressed support for requiring, rather than allowing, States to rely on three years of data before making a determination of significant disproportionality. Several other commenters supported States choosing to identify an LEA as having significant disproportionality only after the LEA exceeds a risk ratio threshold over a period of time (such as three consecutive years) as a matter of best practice to avoid the identification of significant disproportionality due to data anomalies.

Discussion: Final § 300.647(d)(1) will permit, but not require, States to rely on up to three years of data in order to make a determination of significant disproportionality. The Department believes that States should have the flexibility to make a determination of significant disproportionality based on

one, two, or three consecutive years of data. The Department also believes that this flexibility will help States both account for year-to-year volatility in the risk ratio and focus on LEAs with consistently high risk ratios.

At the same time, we do not believe it appropriate to require States to use three consecutive years of data—rather than two consecutive years, or only one year—prior to identifying significant disproportionality. Given the flexibility States will have under § 300.647 to set reasonable population requirements—which will also reduce risk ratio volatility—reasonable risk ratio thresholds, and standards for reasonable progress, States may determine that a particular combination of these methods appropriately identifies significant disproportionality using one or two years of data. In these cases, the Department does not want to require States to wait an additional year, or an additional two years, to make an identification of significant disproportionality when they have confidence that the racial and ethnic disparities within an LEA require more immediate intervention.

Changes: None.

Comment: Many commenters expressed general support for allowing States to use up to three consecutive years of data, under proposed § 300.647(c)(1), prior to making a determination of significant disproportionality. One commenter expressed support for allowing up to three consecutive years of data, so long as States continue to be required to annually calculate risk ratios to determine significant disproportionality. That same commenter argued that analyzing three consecutive years of data gives LEAs more advanced notice, flexibility, and support in which to implement systemic changes before a finding of significant disproportionality can occur. A few commenters expressed that allowing States to wait for more than three consecutive years—that is, longer than the period specified in the Department's proposal—before identifying significant disproportionality would mean that thousands of misidentified, misplaced, and over-disciplined children would continue to be denied the high quality education they need.

Discussion: The Department appreciates the commenters' support and believes that this flexibility will help States account for volatility in risk ratios. Allowing States to take into consideration the data of up to three consecutive years provides an opportunity for the States to focus their efforts on LEAs with consistently high

risk ratios year over year, rather than only those with a single year of a high risk ratio. Further, we agree with the commenter's interpretation of proposed § 300.647(c)(1) (now § 300.647(d)(1)) that States must examine their LEAs for significant disproportionality every year. The flexibility in this section allows the State to limit their findings of significant disproportionality to LEAs that exceed the State's risk ratio threshold for up to three prior consecutive years, as is already the common practice in a number of States. As we noted in the NPRM (81 FR 10985), based on the SY 2013–14 State Supplement Survey, 23 States require that LEAs exceed a specified level of disparity for multiple years for at least one category of analysis for at least one racial or ethnic group before the LEA is identified as having significant disproportionality. Of these 23 States, 13 require 3 consecutive years of risk ratios exceeding an established threshold. We therefore agree with the comment that a longer period of analysis would not be appropriate.

Changes: None.

Flexibilities—Reasonable Progress, § 300.647(d)(2)

Comment: Many commenters expressed support for proposed § 300.647(c)(2) allowing States to exempt LEAs from a determination of significant disproportionality if they show reasonable progress.

Discussion: The Department appreciates commenters' support for this flexibility. We believe it is important to allow States the flexibility to not identify LEAs with significant disproportionality if, for example, a prior review and revision of policies, practices, and procedures and effective use of funds for comprehensive CEIS has resulted in a reasonable reduction in risk ratios in each of the two prior consecutive years. In such an LEA, a continued finding of significant disproportionality, including an ongoing annual review of policies, practices, and procedures, may actually divert State attention from LEAs in which substantial problems continue to occur and are not improving.

Changes: None.

Comments: Two commenters asked for additional Federal guidance regarding what constitutes reasonable progress because allowing States to interpret "reasonable progress" may allow LEAs to "backslide." One commenter stated that the Department should place restrictions on the definition of "reasonable progress" if trend data indicates that different rates of progress are appropriate for different

demographic groups across identification, placement, and discipline. Other commenters recommended clearly defining "reasonable progress" and including a rubric for determining whether the State is correctly applying "reasonable progress" and monitoring trends across States for appropriate definitions of reasonable progress. Finally, one commenter posited that, without a clearer definition of reasonable progress, the flexibility may become a loophole allowing States to avoid identifying LEAs.

Discussion: We appreciate commenters' concerns regarding the reasonable progress flexibility. While the Department believes that States should retain broad flexibility to set a standard for "reasonable progress," it was not our intent to allow States unfettered flexibility in this area. We have revised the regulations to ensure that a State's standard for reasonable progress is meaningful, and to reduce the likelihood that an LEA might meet the standard due to reductions in risk ratios resulting from a data anomaly. Under final § 300.647(d)(2), LEAs must be making reasonable progress in lowering the risk ratio or alternate risk ratio for the group and category for each of the two prior consecutive years, rather than the immediate preceding year. As such, if an LEA is not reducing risk ratios over each of the two prior consecutive years, a State cannot exercise this flexibility. Further, we have revised § 300.647(b)(1), to require each State to consult with its stakeholders, including State Advisory Panels, before setting a standard for reasonable progress. This revision also clarifies that the State's standard for reasonable progress, under § 300.647(d)(2), is subject to the Department's monitoring and enforcement for reasonableness.

While, in the NPRM, the Department suggested that States might make a determination of "reasonable progress" on a case-by-case basis, we no longer find this degree of flexibility to be appropriate. While States would retain the flexibility to set a standard for reasonable progress—including the flexibility to set a standard that requires different risk ratio reductions for each of the categories in paragraphs (b)(3) and (4)—this standard must be developed with the advice of stakeholders, including the State Advisory Panel, and implemented uniformly across the State. We do not, however, believe that a standard that requires different risk ratio reductions for LEAs that exceed the State's risk ratio threshold for different

racial or ethnic groups would meet constitutional scrutiny.

The proposed regulations also included additional restrictions to how a State may implement § 300.647(d)(2), which we retain in these final regulations. If an LEA is reducing risk ratios generally, but not for the specific group and category for which its risk ratio exceeded the State's risk ratio threshold, a State cannot exercise this flexibility. Similarly, if an LEA exceeds the risk ratio threshold in four areas and is making reasonable progress in only three of them, a State could not use this flexibility to not identify the LEA with significant disproportionality in the area in which the LEA is not making reasonable progress. Therefore, while States can determine specific standards for what constitutes reasonable progress (e.g., a reduction of the risk ratio by 0.5 in each of the two prior consecutive years), they can do so only within a specified set of circumstances.

In sum, the Department does not believe that this flexibility represents an unchecked loophole for States. The Department plans to monitor States' implementation of this flexibility and, as appropriate, will provide technical assistance on best practices as they become evident. The Department may also take appropriate enforcement action, ranging from requiring a corrective action plan, to imposing special conditions, to designating the State as high-risk status, to withholding a portion of the State's IDEA Part B funds.

Changes: We have revised § 300.647(b)(1) to clarify that the State's standard of "reasonable progress" must be developed with the advice of stakeholders, including State Advisory Panels, and is subject to the Department's monitoring and enforcement for reasonableness. We have also revised § 300.647(b)(1) to clarify that a State may, but is not required to, set the standards for measuring reasonable progress at different levels for each of the categories described in paragraphs (b)(3) and (4). In addition, we have revised § 300.647(d)(2) to require that an LEA make reasonable progress in reducing the appropriate risk ratio (or alternate risk ratio) in each of two prior consecutive years, rather than the immediate preceding year.

Comments: Several commenters supported giving States significant flexibility in defining "reasonable progress," and emphasized that there should be no additional restrictions on State flexibility to define "reasonable progress."

Discussion: We appreciate the commenters' perspective. While we believe that States should have broad flexibility to set a standard for "reasonable progress," it was the Department's intent to restrict States to only those standards that are reasonable and are indicative of meaningful progress. As we note earlier in this section, we believe that two changes to regulation are necessary to help States to select a standard that is reasonable and to reduce the likelihood that data anomalies will prevent the appropriate identification of LEAs with significant disproportionality.

Changes: We have revised § 300.647(b)(1) to clarify that the State's standard of "reasonable progress" must be developed with the advice of stakeholders, including State Advisory Panels, and is subject to the Department's monitoring and enforcement for reasonableness. We have revised § 300.647(d)(2) to require that an LEA make reasonable progress in reducing the appropriate risk ratio (or alternate risk ratio) in each of the two prior consecutive years, rather than the immediate preceding year.

Comment: A commenter requested clarity regarding the best way to determine whether an LEA has achieved reasonable progress such that a determination of significant disproportionality is no longer required.

Discussion: In general, the Department expects that States implementing the revised final § 300.647(d)(2) will examine LEAs for reasonable progress in reducing their risk ratios in each of the two prior consecutive years. For example, a State may choose to review LEAs for significant disproportionality in SY 2018–2019 based on data from SYs 2017–18, 2016–17, and 2015–16. Should the State identify an LEA that exceeds a particular risk ratio threshold for all three years, the State has the option, under final § 300.647(d)(2), not to make a finding of significant disproportionality if the LEA has achieved at least a reasonable decrease in their risk ratios between SYs 2015–2016 and 2016–17, and between SYs 2016–2017 and 2017–2018. The State does not have the option to postpone a finding of significant disproportionality if the LEA has only achieved a decrease in their risk ratios over a multiple year period; that is, if an LEA reduced its risk ratio from 2015–2016 to 2017–2018, but not from 2015–2016 to 2016–2017, the State does not have the flexibility to not identify the LEA as having significant disproportionality if it otherwise exceeds the State's risk ratio threshold. So long as an LEA exceeds a risk ratio

threshold, the LEA must make continuous progress, in each of the two prior consecutive years, in reducing its risk ratio to avoid a finding of significant disproportionality.

Changes: None.

Comment: One commenter stated that, in a State that uses three years of data, the data used to consider a determination of significant disproportionality is old and likely includes a substantial number of children who no longer attend the LEA. The commenter also stated that, because of the time it will take for the LEA to develop a plan, and report to the Department any improvement, years will have passed between the original identification of significant disproportionality and data showing the results of LEA-level changes.

Discussion: We recognize that, given the time necessary to collect, prepare, and analyze data, the information States will use to identify significant disproportionality may be delayed a number of years, particularly when States are also exercising the flexibility under § 300.647(d)(1) to consider up to three prior consecutive years of data. The data analyzed may indeed include children no longer enrolled within the LEA. However, the data lag is, in part, necessary to ensure accuracy of the information on which findings are based. It would be impossible for a State to make a determination of significant disproportionality regarding discipline for the current year based on the current year's data, as the school year is currently ongoing and the State would therefore be basing determinations on incomplete data. These limitations do not reduce the value of these analyses, particularly as IDEA section 618(d) was intended to address those LEAs with systemic racial and ethnic disparities in special education, rather than providing specific relief to specific children with disabilities. Other provisions of IDEA are meant to address the individual rights of children with disabilities to a free appropriate public education in the least restrictive environment.

Changes: None.

Comments: Two commenters suggested that reasonable progress should be defined so that it is meaningful.

Discussion: We agree with the commenters that the standard for reasonable progress should represent a meaningful degree of improvement in the performance of the LEA. To ensure this, the Department will now require States to consult with stakeholders, including State Advisory Panels, prior to setting a standard for reasonable progress under § 300.647(d)(2). Further,

each State's standard for reasonable progress will be subject to the Department's monitoring and enforcement for reasonableness.

In addition, States should set their reasonable progress standards based on whether the progress realized by LEAs in lowering risk ratios represents a meaningful benefit to children in the LEA, rather than statistical noise or chance. To increase the likelihood that States' standards will accomplish this goal, the Department will now allow States to make a determination of reasonable progress only after an LEA has made reasonable progress in reducing its risk ratio in each of the two prior consecutive years.

Changes: We have revised § 300.647(b)(1) to clarify that the State's standard for "reasonable progress" must be developed with the advice of stakeholders, including State Advisory Panels, and is subject to the Department's monitoring and enforcement for reasonableness. We have revised § 300.647(d)(2) to require that an LEA make reasonable progress in reducing the risk ratio (or alternate risk ratio) in each of the two prior consecutive years, rather than only from the immediate preceding year.

Comments: One commenter suggested that, to show reasonable progress, an LEA must consistently reduce risk ratios across a three year period and requested clarification as to how consistent progress must be for a State using three years of data.

Discussion: The Department appreciates the recommendation. We understood the commenter to be recommending that, when looking across a three year period (e.g., 2015–16, 2016–17, and 2017–18), an LEA should both show a year to year decrease in their risk ratio and an overall downward trend across the period, regardless of whether the first year of the period (e.g., 2015–16) was a decrease from the preceding year (e.g., 2014–15). We agree with the commenter that the LEA should make progress each year in reducing its risk ratio, and have revised the regulations to allow States to not identify an LEA with significant disproportionality if the LEA achieves reasonable progress, under § 300.647(d)(2), in reducing its risk ratio (or alternate risk ratio) from the preceding year in each of the two prior consecutive years. We believe this mirrors the recommendation of the commenter. We decline to require that LEAs reduce their risk ratio over a longer period of time, as it would require States to examine four or more years of data to determine whether the LEA had achieved reasonable progress.

Under the revised regulation, the Department will allow States to implement both § 300.647(d)(1) and (2) using only three prior consecutive years of data.

For example, State A has a risk ratio threshold of 3.0 and two LEAs in the State have risk ratios 3.6 (LEA 1) and 4.3 (LEA 2) in SY 2020–2021. If the State opts to use the reasonable progress flexibility, the State would have to examine the risk ratios for those LEAs,

for the particular group and category, for the two preceding years. If LEA 1 had a risk ratio of 4.9 in 2018–2019 and a risk ratio of 4.3 in 2019–2020, the State could determine that this LEA had demonstrated reasonable progress in reducing its risk ratios and not make a determination of significant disproportionality (assuming a reduction from 4.9 to 4.3 to 3.6 met the State's identified standard).

However, if LEA 2 had a risk ratio in 2018–2019 of 4.9 and a risk ratio of 3.6 in 2019–2020, the State must identify that LEA as having significant disproportionality because it did not reduce its risk ratio in each year for two consecutive years. Even though the risk ratio of 4.3 in 2020–2021 is less than the risk ratio in 2018–2019, the increase from 2019–2020 to 2020–2021 means the LEA has not made reasonable progress in reducing its risk ratio.

TABLE 1—EXAMPLE RISK RATIOS BY YEAR IN DEMONSTRATING REASONABLE PROGRESS

	2019	2020	2021	Notes
LEA 1	4.9	4.3	3.6	State can determine LEA made reasonable progress because of decrease in risk ratio from prior year for two consecutive years.
LEA 2	4.9	3.6	4.3	State may not determine LEA made reasonable progress because risk ratio increased from 2020 to 2021.

Changes: None.

Comment: A commenter suggested that the Department allow States to determine that an LEA has made reasonable progress if the LEA provides evidence that it is actively addressing the significant disproportionality, regardless of whether the LEA's data reflects that progress has been achieved.

Discussion: As noted above, § 300.647(d)(2) allows a State not to identify an LEA with significant disproportionality if it is making reasonable progress in lowering the risk ratios for the group or category in each of the two prior consecutive years. Further, IDEA section 618(d) (20 U.S.C. 1418(d)) requires States to base their determination of significant disproportionality on a collection and examination of data. For these reasons, States are not permitted to use information other than data on racial and ethnic disparities to distinguish whether significant disproportionality is occurring within an LEA or to determine whether that LEA is making reasonable progress under § 300.647(d)(2).

Changes: None.

Comments: One commenter stated that providing States with the flexibility not to identify LEAs demonstrating reasonable progress in lowering the risk ratio will not remedy matters of identification due solely to small cell size. The Department interpreted this comment to suggest that proposed § 300.647(c)(2) will not prevent the inappropriate identification of LEAs due to small populations of children.

Discussion: The Department agrees with the commenter and did not intend for proposed § 300.647(c)(2) (now § 300.647(d)(2)) to prevent the identification of LEAs with significant

disproportionality due to the volatility in risk ratios that can result from small numbers of children. Two other provisions are intended to address that issue. Under § 300.647(b)(1)(i)(B) and (C), States must set minimum n-sizes and minimum cell sizes. If a particular racial or ethnic group being analyzed in an LEA does not meet the minimum n-size and minimum cell size established by the State, the State is not required to use the standard methodology. We believe that this flexibility is sufficient to address concerns about identification of an LEA as having significant disproportionality on the basis of small numbers of children.

Changes: None.

Comment: Multiple commenters expressed concerns with the use of risk ratio as a measurement of reasonable progress under proposed § 300.647(c)(2). These commenters argued that absolute reductions in risk, and not risk ratios, should be used to measure progress, especially for restrictive placements and discipline.

Discussion: The Department appreciates the concerns raised by commenters. However, as noted above, IDEA section 618(d) (20 U.S.C. 1418(d)) is primarily concerned with significant disproportionality across racial and ethnic groups, rather than the specific rates of identification, placement in particular settings, or discipline for children with disabilities. As such, we believe it would be inappropriate to provide States the flexibility not to identify an LEA with significant disproportionality on the basis of a criterion that is not related to the relative numbers of children (or children with disabilities) experiencing

a particular outcome across racial or ethnic groups.

Changes: None.

Comments: A number of commenters stated that risk ratios are inappropriate measures of progress when the underlying risk of placement in restrictive settings or of disciplinary removal is unacceptably high. For example, they argued that increasing the risk level for the lower incidence group in the risk ratio comparison would also reduce the risk ratio but not the overall exclusion of children from the classroom; according to the commenters, that scenario should never be considered reasonable progress. Commenters stated that a necessary component of any State's determination of reasonable progress must be that the racial or ethnic group with the highest risk level sees a reduction in its risk level.

Discussion: The Department recognizes and appreciates the commenters' concerns. For several years, the Department has worked to assist States to strengthen behavioral supports to children with the goal of reducing schools' reliance on suspensions and expulsions. For this reason, the Department appreciates that commenters examined this component of the regulation for potential unintended incentives that could inhibit the progress of States and LEAs in reducing disciplinary removals. However, in considering the issues that the commenters have raised, the Department disagrees that allowing States to use the risk ratio to measure reasonable progress with respect to disciplinary removals would create an incentive to raise rates of suspension or expulsion.

We find it highly unlikely that LEAs would respond to a finding of significant disproportionality by systematically seeking out children with disabilities in other racial or ethnic groups and suspending or expelling them solely to meet the State's definition of reasonable progress. Further, to the extent that an LEA was engaging in those practices, we would expect a State to take strong administrative action to prevent them, as they clearly represent a denial of a free appropriate public education in the least restrictive environment.

The Department has worked to provide educators and schools with easy access to information regarding school discipline reform. Tools, data, and resources are available at www.ed.gov/school-discipline.

Changes: None.

Comment: One commenter noted that, in general, reducing discipline frequencies will tend to increase, not reduce, relative difference in discipline rates.

Discussion: We recognize that, in an LEA that is generally reducing rates of discipline for all children with disabilities, it may become markedly more difficult to demonstrate reasonable progress in lowering risk ratios. For example, if an LEA suspended 15 percent of Hispanic children with disabilities and 3 percent of all other children with disabilities, it would have a risk ratio of 5.0. In order to demonstrate a reduction in the risk ratio of 0.1, the LEA would have to reduce the suspension rate for Hispanic children with disabilities to 14.7 percent if the rate for all other children remained the same. However, if the LEA reduced the suspension rates for non-Hispanic children with disabilities to 2 percent, an LEA would actually have to reduce its suspension rate for Hispanic children with disabilities to 9.8 percent to achieve the same 0.1 reduction in their risk ratio, a much larger reduction for the same "effect size." Nonetheless, the difficulty of demonstrating reasonable progress in lowering the risk ratio does not invalidate the worthy goal of reducing disparities on the basis of race and ethnicity. Further, we note that, to the extent that the number of children with disabilities being suspended or expelled in an LEA decreases below the State's minimum cell size, a State is not required to use the standard methodology for determining whether there is significant disproportionality in the LEA.

Changes: None.

Comment: One commenter suggested that proposed § 300.647 include a flexibility to not identify LEAs with

significant disproportionality if the State can identify through a review of data that the disproportionality is not the result of the actions of the LEA.

Discussion: The Department recognizes that States have a vested interest in ensuring that their support of LEAs identified with significant disproportionality is appropriately targeted and may wish to avoid the statutory remedies in the event that an LEA with apparently strong policies, practices, and procedures nonetheless has significantly disproportionate rates of identification, placement and discipline for particular racial or ethnic groups. However, as noted above, IDEA section 618(d) (20 U.S.C. 1418(d)) clearly establishes that the basis for a finding of significant disproportionality is a disparity in the identification, placement and discipline of children on the basis of race and ethnicity and the review of policies, practices, and procedures a consequence of, rather than a part of, a determination of significant disproportionality. As such, the Department is precluded from waiving, or allowing States to waive, such a finding on the basis of criteria unrelated to those disparities. Further, regardless of whether any particular disparity in the identification, placement, and discipline of children on the basis of race and ethnicity can be linked to a specific LEA action, LEAs may still benefit from the review and, if necessary, revision of their policies, practices, and procedures and the reservation of funds for comprehensive CEIS to address those disparities.

Changes: None.

Comment: None.

Discussion: Upon further consideration of the regulatory language originally proposed under § 300.647(c)(2), we believe that provision includes an inappropriate, and potentially confusing, reference to alternate risk ratio thresholds. Under § 300.647(b)(1), States are required to establish one or more reasonable risk ratio thresholds, and, under § 300.647(b)(6), identify an LEA with significant disproportionality if any of the LEA's risk ratios or alternate risk ratios exceed the reasonable risk ratio threshold. The Department did not include in § 300.647 any provision that would allow States to establish an alternate risk ratio threshold—both risk ratios and alternate risk ratios are to be compared to the State's reasonable risk ratio threshold.

While it was the Department's intention, with proposed § 300.647(c)(2), to allow States the flexibility to not identify an LEA that exceeds a risk ratio threshold when the

LEA makes reasonable progress in reducing the risk ratio or alternate risk ratio for the applicable racial and ethnic group and category of analysis, the proposed provision inappropriately extended this flexibility to circumstances where LEAs exceeded an alternate risk ratio threshold. This gives the mistaken impression that States have the option to create separate alternate risk ratio thresholds.

Changes: We have revised proposed § 300.647(c)(2), now § 300.647(d)(2), to remove the reference to an alternate risk ratio threshold.

III. Clarification that Statutory Remedies Apply to Disciplinary Actions (§ 300.646(a)(3) and (c))

Comments: A number of commenters supported our clarification in proposed § 300.646(c) that States must address significant disproportionality in the incidence, duration, and type of disciplinary actions for children with disabilities, including suspensions and expulsions, just as they address significant disproportionality in the identification and placement of children with disabilities—by ensuring the review of and, if necessary, the revision of and reporting on LEAs' policies, practices, and procedures and by setting aside 15 percent of Part B IDEA funds to provide comprehensive CEIS.

Discussion: We appreciate commenters' support for the proposed regulation that would incorporate the Department's long-standing position on this issue.

Changes: None.

Comments: One commenter argued that the clarification, even if it embodies a long-standing position of the Department, misreads the statute. The plain language of IDEA section 618(d)(1) (20 U.S.C. 1418(d)(1)) requires States to determine whether in the State and its LEAs there is significant disproportionality with respect to race and ethnicity in the identification, placement, and discipline of children with disabilities. Section 618(d)(2) (20 U.S.C. 1418(d)(2)), however, only mentions identification and placement. As such, the commenter argued that the application of the statutory remedies based on a finding related to discipline was not supported by the statute, a reading the commenter stated was supported by a number of canons of statutory construction.

Discussion: As we stated in the NPRM, when Congress added discipline to IDEA section 618(d)(1) (20 U.S.C. 1418(d)(1)), it made no corresponding change to IDEA section 618(d)(2) (20 U.S.C. 1418(d)(2)), which created an ambiguity because IDEA section

618(d)(2) does not explicitly state that the remedies in IDEA section 618(d)(2) apply to removals from placement that are the result of disciplinary actions. The Department reads the term “placement” in the introductory paragraph of section 618(d)(2) to include disciplinary actions that are also removals of the child from his or her current placement for varying lengths of time, including removals that may constitute a change in placement under certain circumstances. IDEA section 615(k)(1), 20 U.S.C. 1415(k)(1). A disciplinary removal of up to 10 school days is considered a removal from placement under section 615(k)(1)(B) (“[s]chool personnel under this subsection may remove a child with a disability who violates a code of student conduct from their current placement to an appropriate interim alternative educational setting, another setting, or suspension, for not more than 10 school days (to the extent such alternatives are applied to children without disabilities)”), while a disciplinary removal from placement that exceeds 10 school days is considered a change in placement under section 615(k)(1)(C).

The Department is the agency charged with administering IDEA and has the authority under IDEA section 607(a) (20 U.S.C. 1406(a)) to issue regulations to ensure compliance with the specific requirements of IDEA. Therefore, the Department has the authority to resolve the statutory ambiguity and incorporate into the regulations its long-standing interpretation, which is and has been that the required remedies in IDEA section 618(d)(2) apply when there is significant disproportionality in identification, placement, or any type of disciplinary removal from placement. (See, 71 FR 46540, 46738 (August 14, 2006); OSEP Memorandum 07–09, April 24, 2007; OSEP Memorandum 08–09, July 28, 2008; June 3, 2008, letter to Ms. Frances Loose, Supervisor, Michigan Office of Special Education and Early Intervention.)

Changes: None.

Comments: Some commenters sought stronger monitoring, technical assistance, and guidance from the Department on significant disproportionality in discipline, others wrote in favor of applying discipline consistently, and one commenter asked the Department to establish national criteria for disciplining children and consistent guidelines for documenting and reporting disproportionate disciplinary actions.

Discussion: While these issues are largely beyond the scope of these regulations, we appreciate the

opportunity to address them. We agree with the commenters that discipline should be applied consistently regardless of race or ethnicity. The Department has recently engaged in extensive outreach, technical assistance, and guidance activities related to discipline, which can be found online at www.ed.gov/rethinkdiscipline. However, many aspects of this issue, including establishing national standards for school discipline, are beyond the Department’s statutory authority in the context of these regulations.

Changes: None.

Comments: One commenter recommended a minor wording change in the regulation, to reduce confusion. This commenter suggested that the Department rewrite proposed § 300.647(b)(4) so that disciplinary removals, or proposed § 300.647(b)(4)(iv) through (viii), are separated from educational placements in proposed § 300.647(b)(4)(i) through (iii), and placed under a heading of discipline. The commenter argued that “given that many students with disabilities are removed from regular class settings, it is important to make clear that data must be collected on exclusionary removals of all students with disabilities regardless of the restrictiveness of the setting in which that are served.”

Discussion: We do not think it necessary, nor appropriate, to change proposed § 300.647(b)(4) so that disciplinary removals are separated and placed under a heading of discipline. As written, § 300.647(b)(4) is consistent with the language of IDEA section 618(d) (20 U.S.C. 1418(d)), which directs States to collect and examine data to determine whether significant disproportionality based on race and ethnicity is occurring with respect to “the incidence, duration and type of disciplinary actions, including suspensions and expulsion”. As we explained in the NPRM, we interpret the statute to require States to apply the statutory remedies if an LEA is identified with significant disproportionality with respect to disciplinary removals from placement. Therefore, we decline to change proposed § 300.647(b)(4) so that disciplinary removals are separated and placed under a heading of discipline.

Changes: None.

IV. Clarification of the Review and Revision of Policies, Practices, and Procedures (§ 300.646(c))

Review of Policies, Practices, and Procedures—Requirements

Comments: A number of commenters supported proposed § 300.646(c) and our clarifying the requirement for the annual review of an LEA’s policies, practices, and procedures in the case of a determination of significant disproportionality. One commenter noted that this review can change the behavior of LEAs that are improperly identifying children for special education and related services. Other commenters, however, objected to proposed § 300.646(c), stating that an annual review was unnecessary and burdensome.

Another commenter objected and suggested that most significant disproportionality arises as a result of poor practices, a problem not addressed by a review of policies and procedures. This commenter recommended that the review of policies and procedures only occur when an LEA amends its policies or procedures. Another commenter suggested that no review be required if an LEA’s policies, procedures, and practices are compliant with IDEA, appropriate, and fair, and suggested that a review occur only once every three years or at the end of a CEIS “cycle.” Additional commenters argued that the underlying issues affecting disproportionality in an LEA do not change as quickly as annually, and so the annual review, which can be expensive, does not make sense.

Discussion: As we stated in the NPRM, the requirement to review policies, practices, and procedures subsequent to a determination of significant disproportionality would impose no new obligations. Under IDEA section 618(d) (20 U.S.C. 1418(d)), every year a State is required to collect and examine data to determine whether significant disproportionality based on race and ethnicity is occurring the State and the LEAs of the State with respect to the identification, placement, and discipline of children with disabilities. Under IDEA section 618(d)(2)(A) (20 U.S.C. 1418(d)(2)(A)) and final § 300.646(c)(1), the review of policies, practices, and procedures must be conducted in every year in which an LEA is identified as having significant disproportionality. As the review and determinations occur annually, each year an LEA is identified as having significant disproportionality represents a separate determination and therefore triggers the requirements of IDEA section 618(d)(2). As such, the

requirements of final § 300.646(c)(1) are consistent with the statute and the Department does not have the authority to reduce the frequency of the review or change the conditions under which it is required by statute.

We understand and appreciate the complexity of the many social and societal factors that contribute to disproportionality. Nonetheless, under IDEA section 618(d)(2) (20 U.S.C. 1418(d)(2)), the review of policies, procedures, and practices must occur in every year in which an LEA is identified with significant disproportionality.

Changes: None.

Comments: A number of commenters suggested that the Department emphasize that, under proposed § 300.646(c)(1), an annual review of an LEA's policies, practices, and procedures in the case of a determination of significant disproportionality should include making certain that the LEA adheres to child find procedures; conducting robust and timely screenings and assessments, manifestation determinations, and functional behavioral assessments; and developing appropriate IEPs and behavioral intervention Plans.

Another commenter suggested that the review should include a review of any disciplinary practices that disrupt a child's placement, even if the disruption does not amount to a change in placement, such as a suspension for fewer than 10 days.

Discussion: We appreciate the commenters' suggestions regarding the scope of review required whenever a LEA reviews its policies, practices, and procedures subsequent to a determination of significant disproportionality. Under IDEA section 618(d)(2)(A) (20 U.S.C. 1418(d)(2)(A)) the State must provide for the review, and if appropriate, revision of policies, procedures, and practices used in the area in which an LEA is identified with significant disproportionality (identification, placement or disciplinary removals) to ensure they comply with the requirements of IDEA.

For example, in an LEA identified with significant disproportionality with respect to identification, the State must provide for the review of policies, practices, and procedures used in identification. This should include a review of child find and evaluation policies, practices, and procedures to ensure they comply with IDEA. Consider that LEA Y has a risk ratio for identification of white students as students with autism that exceeds the State-defined risk ratio threshold. As a result, the State identifies LEA Y as

having significant disproportionality and provides for a review of the LEA's policies, procedures, and practices as required by IDEA section 618(d)(2)(A). This review results in the LEA identifying that it has a long-standing practice of requiring students to have a medical diagnosis of autism in order to receive special education services as a child with autism. However, minority students in LEA Y were much less likely to be able to obtain such a diagnosis for a number of reasons, including a lack of consistent care and early screening and referral conducted by health professionals. Given that LEAs are not allowed, under the IDEA, to set eligibility criteria for special education and related services absent a State-wide requirement or criteria that is consistent with the IDEA (*i.e.*, the child's parent does not incur a cost for the medical diagnosis and the requirement does not result in a delay in the special education and related services that are required for a child to receive a free appropriate public education) and the fact that the State where LEA Y is located does not require a medical diagnosis for autism, the LEA's practice is inconsistent with IDEA.

In this instance, the overrepresentation that resulted in the LEA being identified with significant disproportionality in the identification of white children as children with autism is due to under-identification of minority children, as a result of a district practice that does not comply with the requirements of the IDEA and a failure of the LEA to appropriately screen children and help them secure diagnostic testing. To address the significant disproportionality, the LEA must eliminate or revise its practice of requiring students to have a medical diagnosis of autism in order to receive special education services. In addition, the LEA could address the impact of that criteria by using funds reserved for comprehensive CEIS to increase developmental screenings.

Similarly, for an LEA identified with significant disproportionality with respect to discipline, the State must provide for the review of policies, practices, and procedures used in the discipline of children with disabilities. This should include a review of the LEA's policies, practices, and procedures related to manifestation determinations, functional behavioral assessments, or behavioral intervention plans or school-wide discipline rules to ensure they comply with IDEA.

Changes: None.

Guidance

Comments: A number of commenters, remarking upon the complexity of the various underlying social and societal causes that may contribute to significant disproportionality and the limited ability of schools to provide a remedy through a review of its policies, practices and procedures, asked for additional oversight and guidance from the Department. Some sought evidence-based practices that address economic, cultural, and linguistic barriers to instruction. Others invited the Department to consult with the States to find alternative means of addressing the causes of significant disproportionality.

Discussion: Under IDEA section 618(d)(2)(A) (20 U.S.C. 1418(d)(2)(A)), when States make a determination of significant disproportionality, they must provide for the review and, if appropriate, revision of the policies, procedures, and practices used in the identification, placement or discipline of children with disabilities. The purpose of the review is to determine if the policies, practices, and procedures comply with the requirements of IDEA. The review is statutorily required by IDEA section 618(d)(2) as a consequence of a determination of significant disproportionality in an LEA.

The Department understands that not all factors contributing to a determination of significant disproportionality can be remedied through a review of policies, practices, and procedures. However, when aligned with the other remedies required in final § 300.646(c) and (d), we believe that the review of policies, practices and procedures can be a valuable tool to LEAs when addressing significant disproportionality. IDEA does not prohibit States from using remedies, other than those required in § 300.646(c) and (d), to address significant disproportionality in conjunction with those required in § 300.646.

That said, as we evaluate additional information and research in the future, we will consider whether there is further guidance or technical assistance we can provide that will make evidence-based practices available.

Changes: None.

Clarifications

Comment: One commenter asked whether, under proposed § 300.646(c)(2), an LEA must publicly report on the revision of policies, practices, and procedures if it concludes after review of its policies, practices, and procedures that no change is necessary.

Discussion: No, an LEA is not required to publicly report if no

revisions to its policies, practices, or procedures are necessary.

Changes: None.

Comments: One commenter supported the Department's clarification, in proposed § 300.646(c)(2), that LEAs must safeguard children's individual confidential information when publicly posting any revisions to policies, practices, and procedures.

Discussion: We appreciate the commenter's support for incorporating into the regulation that LEAs must safeguard children's individual confidential information when publicly posting any revisions to their policies, practices, or procedures.

Changes: None.

Comment: Another commenter requested that the Department clarify whether and how the annual review of policies, practices, and procedures are not duplicative of a one-year verification process for correcting noncompliance as required by § 300.600(e) and explained in OSEP Memorandum 09–02. The commenter stated that, as correction of noncompliance in larger LEAs generally takes up to one year, a requirement that LEAs repeat review of policies practices, and procedures the following year is duplicative.

Discussion: A State's identification of significant disproportionality within an LEA is not the same as a finding of noncompliance. An LEA identified with significant disproportionality is not necessarily out of compliance with IDEA; rather, the significant disproportionality is an indication that the policies, practices, and procedures in the LEA warrant further attention. If an LEA is identified with significant disproportionality, the State must provide for review and, if appropriate, revision of policies, practices, and procedures used in identification or placement in particular education settings, including disciplinary removals, to ensure they comply with the requirements of IDEA. If the State identifies noncompliance with a requirement of IDEA through this review, the State must ensure, in accordance with § 300.600(e), that the noncompliance is corrected as soon as possible, and in no case later than one year after the State's identification of the noncompliance. As explained in OSEP Memorandum 09–02 when verifying the correction of identified noncompliance, the State must ensure that the LEA has corrected each individual case of noncompliance, unless the child is no longer within the jurisdiction of the LEA and the State determines that the LEA is correctly implementing the

specific regulatory requirement(s) based on a review of updated data such as data subsequently collected through on-site monitoring or a State data system. If in a subsequent year, the LEA continues to be identified with significant disproportionality, the State must continue to provide for a review of policies, practices, and procedures to determine if there is any new or continuing non-compliance with IDEA. The fact that an LEA was previously identified with noncompliance through the review process does not relieve the State of its responsibility to conduct an annual review of the LEA's policies, practices, and procedures. We note that while IDEA section 618(d)(2)(A) requires that States provide for the review of policies, practices, and procedures, the State may select another entity, such as the LEA, to actually conduct the review.

Changes: None.

V. Expanding the Scope of Comprehensive Coordinated Early Intervening Services (§ 300.646(d))

Use of Comprehensive CEIS for Specific Populations

Comments: Most commenters supported proposed § 300.646(d)(2), which would expand the population of children who can be served with IDEA Part B funds reserved for comprehensive CEIS to include children with disabilities and children ages three through five, with and without disabilities. One commenter provided a legal argument supporting the Department's interpretation of IDEA to allow the use of comprehensive CEIS to serve children with disabilities and children ages three through five. The commenter argued that canons of statutory construction support the Department's position. Further, the commenter added that the proposed flexibility ensures that an LEA can address the significant disproportionality in ways appropriate to the context. The commenter also stated that the flexibility to serve children with disabilities recognizes that these children have the potential to develop behavioral needs if their disability is misidentified, if their placement is inappropriate, or if they receive inappropriate behavioral assessments and plans. Another commenter noted that the expansion of comprehensive CEIS removes a source of inequity in previous interpretations, in which the very children treated disproportionately could not be the beneficiaries of comprehensive CEIS. One commenter argued that providing comprehensive CEIS only to non-

disabled children is unlikely to address significant disproportionality in the discipline of children with disabilities.

Most commenters supported the use of funds reserved for comprehensive CEIS for children with disabilities and preschool children ages three through five, with and without disabilities. Some of these commenters elaborated on their reasons for supporting § 300.646(d)(2), noting that research on early intervention shows that it improves outcomes and reduces disproportionality. One noted that the existing requirement that comprehensive CEIS funds be used only for non-disabled children was a disincentive to change inappropriate practices in special education. Another commenter noted that the change would make clear that children with disabilities can participate in whole-school programs meant to address disproportionality, and a few stated that the change would be consistent with the September 14, 2015, statement by Federal agencies on including children with disabilities in early childhood programs. U.S. Department of Education & U.S. Department of Health and Human Services, 2015.

Discussion: We appreciate the commenters' support for the proposal, and agree that the expansion of comprehensive CEIS to include children with disabilities and children ages three through five, with and without disabilities, is consistent with IDEA section 618(d) (20 U.S.C. 1418(d)) and will help LEAs to better address significant disproportionality.

Changes: None.

Comments: Several commenters argued that the Department lacks the authority to expand the population that can be served with IDEA Part B funds reserved for comprehensive CEIS under IDEA. In particular, they argued that proposed § 300.646(d)(2) is inconsistent with IDEA because IDEA section 613(f) (20 U.S.C. 1413(f)) allows LEAs to voluntarily reserve IDEA Part B funds to provide coordinated early intervening services only to children in kindergarten through grade 12 who have not been identified as needing special education and related services.

These commenters also noted that proposed § 300.646(d)(2) represents a change in the Department's position. The commenters pointed out that OSEP Memorandum 08–09, dated July 28, 2008, stated that IDEA section 613(f) permits "IDEA funds for CEIS for children in kindergarten through grade 12 . . . who are not currently identified as needing special education or related services" The commenters also pointed out that the Department's

preamble to the 2006 IDEA Part B regulations, in discussing current § 300.226, stated that early intervening services “are for children who are not currently identified as needing special education or related services.” 71 FR 46626 (August 14, 2006).

Discussion: We disagree that the Department lacks the authority to permit LEAs identified with significant disproportionality to use IDEA Part B funds reserved for comprehensive CEIS to serve children with disabilities and preschool children ages three through five, with and without disabilities. We acknowledged in the NPRM that the Department has previously interpreted the terms “CEIS” and “comprehensive CEIS” to apply to children in kindergarten through grade 12 who are not currently identified as needing special education and related services but who need additional academic and behavioral support to succeed in a general education environment. (81 FR 10979)

The Department proposed to change its interpretation in a proper and legally permissible manner. Under IDEA section 607(a) (20 U.S.C. 1406(a)), the Secretary has the authority to issue regulations to the extent regulations are necessary to ensure compliance with the requirements of Part B of IDEA. Based on information in the 2013 GAO report, comments received in response to the June 2014 request for information expressing concern about the effectiveness of comprehensive CEIS, and the Department’s experience over the last twelve years in implementing IDEA section 618(d) (20 U.S.C. 1418(d)), the Department believes that these changes are necessary to ensure that the statutory remedies are implemented in a manner that meaningfully addresses any significant disproportionality identified.

Our proposal to change our interpretation was based on careful review of the statutory language and legislative history of the significant disproportionality provision in IDEA section 618(d) (20 U.S.C. 1418(d)).

Under IDEA section 613(f) (20 U.S.C. 1413(f)), an LEA may voluntarily reserve up to 15 percent of its IDEA Part B funds to provide coordinated early intervening services to students in kindergarten through grade 12 who have not been identified as needing special education or related services, but who need additional academic and behavioral support to succeed in a general education environment (K–12 children). IDEA section 618(d)(2)(B) (20 U.S.C. 1418(d)(2)(B)) provides that in a case of a determination of significant disproportionality, an LEA must reserve the maximum amount of funds under

section 613(f) (15 percent of its IDEA Part B funds) to provide “comprehensive” CEIS to serve children in the LEA, particularly children in those groups that were significantly overidentified. Congress did not define “comprehensive,” nor did it explain how “comprehensive CEIS” in IDEA section 618(d) differs from the “CEIS” in IDEA section 613(f). Congress’ inclusion of the term “comprehensive” in one provision and not the other creates an ambiguity. Therefore, the Department has the authority to interpret the term “comprehensive CEIS.”

We believe that this interpretation is consistent with the legislative history of this provision, which indicates that in prior versions of the bills, the House used the phrase “comprehensive coordinated prereferral support services” in section 618(d) and section 613(f) and that the Senate version did not include any provision for using section 613(f) funds for CEIS in section 618(d)(2)(B) but did use the phrase “coordinated, early intervening educational services” in section 613(f). In the final conference bill and enacted statute, however, without a clear explanation, Congress used “comprehensive” to describe CEIS only in section 618(d)(2)(B)—omitting the term from section 613(f).

We also believe that our interpretation, under final § 300.646(d), is reasonable given the purpose of the statutory remedies in IDEA section 618(d)(2) (20 U.S.C. 1418(d)(2)). Other commenters, both to the NPRM and to the June 2014 request for information, agreed and noted that States currently cannot use IDEA Part B funds reserved for comprehensive CEIS to provide services to children with disabilities, even if they were in the groups with significant disproportionality in identification, placement, and disciplinary removal. In other words, it is difficult for the very children whose significant disproportionality gives rise to the requirement to provide comprehensive CEIS to directly benefit from comprehensive CEIS.

It is our intent that § 300.646(d) improve comprehensive CEIS as a remedy for significant disproportionality. For example, as we noted in the NPRM, providing comprehensive CEIS to preschool children may help LEAs to address significant disproportionality in identification by allowing funds reserved for comprehensive CEIS to be used to provide more timely supports and services to younger children. For example, an LEA identified with significant disproportionality might use

IDEA Part B funds reserved for comprehensive CEIS to implement universal screening to better identify and support children with developmental delays before they enter kindergarten. These activities will also assist in ensuring that children with disabilities in the LEA are appropriately identified.

Further, as we noted in the NPRM, providing comprehensive CEIS to children with disabilities is more likely to address significant disproportionality in placement and discipline by allowing LEAs to directly improve the supplementary aids and services and positive behavioral interventions and supports provided to children with disabilities. We believe that final § 300.646(d)(2) is, therefore, consistent with the purpose of the statutory remedies, which is to reduce significant disproportionality.

Section 300.646(d)(2) does not address voluntary CEIS, implemented under IDEA section 613(f) (20 U.S.C. 1413(f)) and IDEA Part B funds an LEA voluntarily reserves for CEIS must be used to serve students in kindergarten through grade 12 who have not been identified as needing special education or related services, but who need additional academic and behavioral support to succeed in a general education environment.

Changes: None.

Comments: Some commenters did not support the expansion of comprehensive CEIS to preschool children with or without disabilities. Some of these commenters stated that comprehensive CEIS was unproven and ineffective and that “more of the same” does not make for good public policy. Others took a broader view, stating that disproportionality in race and ethnicity has many causes beyond the ability of schools and LEAs to solve, such as poverty, drug abuse, incarceration, and the disproportionality of adverse childhood experiences among children of color. Expanding the use of comprehensive CEIS funds, some of these commenters stated, cannot address these causes, and, therefore, redirecting IDEA funds to comprehensive CEIS is unfair to the LEAs and the children who stand to lose the use of, and services funded by, the money diverted. Some commenters noted that, generally, comprehensive CEIS would negatively impact LEAs, especially small LEAs, by adversely impacting their ability to provide for the needs of children with disabilities.

Discussion: We understand that disproportionality is deeply complicated and that many social and societal causes may contribute to racial

disparities in special education. Nonetheless, the Department has an obligation to work within the statutory framework in IDEA and with the tools it provides.

The Department recognizes that providing comprehensive CEIS will not, by itself, eliminate all causes of racial and ethnic disproportionality and that LEAs cannot reach all of the causes of disproportionality. There are, however, causes of significant disproportionality that LEAs can address and effects that LEAs can mitigate. It is our intention that, in implementing final § 300.647(d)(1)(ii), an LEA will identify and address the factors that contribute to the significant disproportionality by carrying out activities that LEAs typically conduct, such as providing services and supports to students or professional development to staff.

We do not regard using comprehensive CEIS funds to identify and address factors contributing to the significant disproportionality and allowing LEAs to provide comprehensive CEIS to preschool children and children with disabilities as “more of the same.” Previously, IDEA’s implementing regulations did not require LEAs to identify and address factors contributing to the significant disproportionality as part of their implementation of comprehensive CEIS. In addition, we believe allowing LEAs to use funds reserved for comprehensive CEIS to serve children with disabilities is more likely to address significant disproportionality in placement and discipline. For example, as one commenter suggested, if LEAs can use IDEA Part B funds reserved for comprehensive CEIS to implement a schoolwide program to address problems in discipline and serve both children with and without disabilities, then significant disproportionality in discipline may be reduced or eliminated. Similarly, using funds reserved for comprehensive CEIS to serve preschool children, where their needs can be assessed and addressed early, is likely to address significant disproportionality in the identification of children with disabilities.

Based on its identification of the factors contributing to the significant disproportionality, an LEA may use IDEA Part B funds reserved for comprehensive CEIS to provide a targeted array of services and supports to address those factors, including professional development and educational and behavioral evaluations, services and supports in both the general and special education population. Section 300.646(d) underscores the importance of allowing

an LEA to determine which factors contribute to a determination of significant disproportionality and how to effectively target IDEA Part B funds reserved for comprehensive CEIS to address those factors.

It is important to note that while States are required to include preschool children in the State’s determination of significant disproportionality related to discipline and to identification (beginning July 1, 2020), final § 300.646(d)(2) allows, but does not require, LEAs to provide comprehensive CEIS to preschool children, with or without disabilities (unless, under § 300.646(d)(1)(ii), a State determines that there is significant disproportionality in an LEA, and the LEA determines that providing comprehensive CEIS to preschool children is necessary to address the factors contributing to the disproportionality).

Change: None.

Comments: One commenter recommended that the Department revise proposed § 300.646(d)(3) to limit the use of comprehensive CEIS for children with disabilities to an established proportion, set by the Department and based on an evidence-based determination of the relative advantages of (1) early intervention to prevent disparities in disability identification and (2) subsequent interventions to address disparities in placement and disciplinary removal.

Discussion: While we agree with the commenter that apportioning funds reserved for comprehensive CEIS based, in part, on the expectation that specific uses will lead to reducing significant disproportionality in the area or areas in which the LEA is identified, we do not believe it would be appropriate to set a single, national percentage of funds to be dedicated to each allowable activity under comprehensive CEIS. Those decisions are best made by LEAs based on determining the best ways to address the specific issues that face each LEA, in accordance with final § 300.646(d)(1)(ii). Therefore, we decline to make this change.

Further, under final § 300.646(d)(3), an LEA may not limit the provision of comprehensive CEIS to children with disabilities. Therefore, an LEA must use some of the funds reserved for comprehensive CEIS to serve children who are not currently identified as needing special education and related services, but who need additional academic and behavioral support to succeed in a general education environment. However, we decline to limit the amount of comprehensive CEIS funds an LEA may use to serve children

with disabilities because we want to give each LEA the flexibility to determine the amount of funds it will use for children with disabilities based on its analysis of the factors contributing to significant disproportionality in the LEA.

Change: None.

Comments: Some commenters, stating both that IDEA is underfunded and that there is a possibility of additional reservations of IDEA Part B money for comprehensive CEIS, argued that IDEA funds should be used primarily or exclusively for children with disabilities, not children without disabilities. One of the commenters suggested an amendment to the language at § 300.646(d)(3) which prohibits LEAs from providing comprehensive CEIS solely to children with disabilities.

Discussion: We understand these comments to refer to proposed § 300.646(d)(3), which prohibits LEAs from providing comprehensive CEIS solely to children with disabilities. As we explained in the NPRM at 81 FR 10986, recognizing the statutory emphasis on providing early behavioral and academic supports before a child is identified, we believe allowing LEAs to provide comprehensive CEIS only to children with disabilities works directly against the aims and intentions of IDEA. For example, limiting comprehensive CEIS solely to children with disabilities would prohibit an LEA from providing early behavioral and academic supports and services to children before they are identified as having a disability, which is one way to reduce significant disproportionality in the identification of children as children with disabilities. Limiting comprehensive CEIS solely to children with disabilities would prohibit an LEA from using IDEA Part B funds reserved for comprehensive CEIS to implement a schoolwide program to address problems in discipline, which is one way to reduce significant disproportionality in discipline. Therefore, the Department declines to revise § 300.646(d)(3) to allow LEAs to provide comprehensive CEIS solely to children with disabilities.

Under final § 300.646(d)(1)(ii), LEAs would have to use IDEA Part B funds reserved for comprehensive CEIS to identify and address the factors contributing to the significant disproportionality identified by the State. Nothing in the regulations prohibits an LEA from providing comprehensive CEIS primarily, but not exclusively, to children with disabilities.

Changes: None.

Comments: One commenter noted that the prohibition in proposed § 300.646(d)(3) on using comprehensive CEIS funds solely for children with disabilities does not make sense in the context of placement in a restrictive educational setting because only children with disabilities who have IEPs are subject to this kind of placement.

Discussion: We agree that final § 300.646(d)(3) prohibits an LEA identified with significant disproportionality in placement from using comprehensive CEIS funds solely to provide comprehensive CEIS to children with disabilities. However, we note that, in many instances, circumstances in the LEA that may give rise to disproportionate placement in segregated settings may have an impact on children with and without disabilities. We encourage LEAs that are identified with significant disproportionality to closely examine their policies, practices, and procedures to identify the root causes of their disproportionality and target their use of funds reserved for comprehensive CEIS to address those causes. There are appropriate ways that an LEA identified with significant disproportionality related to placement may use IDEA Part B funds reserved for comprehensive CEIS for children without disabilities. For example, an LEA may provide professional development to regular education teachers on the supports that they can provide to enable a child with a disability to be educated in the regular class and participate in extracurricular and other nonacademic activities with nondisabled children. We understand some LEAs may find that there are a number of children without disabilities who are impacted by the same root cause in other ways and could also benefit from the funding.

Changes: None.

Comments: One commenter objected on practical grounds to proposed § 300.646(d)(2) and the use of comprehensive CEIS funds for preschool children. The commenter indicated that, in some States, the range of possible placements for preschool children with disabilities includes settings where the State does not have general supervision authority to regulate discipline procedures or practices or require data reporting.

Discussion: We appreciate the commenter's concern and note that under final § 300.646(d)(2), an LEA may, but is not required to, use funds reserved for comprehensive CEIS for children ages three through five.

Separately, we note that under IDEA section 612(a), a State must make FAPE available to all eligible children with

disabilities residing in the State, including children with disabilities aged three through five, and in some States, two year old children who will turn three during the school year. Thus, all of the requirements in Part B of IDEA apply equally to all preschool children with disabilities. The SEA must ensure that a child with a disability, including a preschool child, who is placed in or referred to a private school or facility by a public agency is provided special education and related services in conformity with his or her IEP and at no cost to the parents; is provided an education that meets the standards that apply to education provided by the SEA and LEAs, including the requirements of IDEA; and has all of the rights of a child with a disability who is served by a public agency. (See, 34 CFR 300.146.)

Changes: None.

Funding Comprehensive CEIS

Comment: A number of commenters indicated that IDEA has never been fully funded, and a few of these commenters stated that they could not support proposed § 300.646(d) until Federal funding under Part B of IDEA is increased. Commenters stated that, as current IDEA funding only covers a fraction of special education's high total cost, some LEAs choose to devote the full amount of their Federal dollars to special education.

Discussion: The Department understands the concern about reserving IDEA Part B funds to provide comprehensive CEIS when IDEA is not funded at the maximum level allowed under IDEA section 611(a)(2)(B). However, under IDEA section 618(d) (20 U.S.C. 1418(d)), an LEA found to have significant disproportionality based on race or ethnicity must reserve 15 percent of its IDEA B funds for comprehensive CEIS while continuing to properly identify children in need of special education and related services and to provide them with a FAPE in accordance with the requirements of IDEA and its implementing regulations. Under IDEA sections 612(a)(11) and 616(a)(1)(C) (20 U.S.C. 1412(a)(11) and 1416(a)(1)(C)), the State must conduct monitoring activities to ensure that all LEAs meet these statutory requirements.

Changes: None.

Comment: Some commenters opposed proposed § 300.646(d), concerned that it would result in LEAs reserving more money for comprehensive CEIS. This, these commenters stated, may or may not address significant disproportionality but would create hardships for children with disabilities and their teachers and staff, such as reduced services and the inability to

hire special education teachers and other support staff. Other commenters noted that some LEAs already struggle to support the needs of children with disabilities. One commenter noted that any reduction in funding for special education services would be harmful, due to increases in the number of children identified with autism.

Discussion: The Department appreciates the commenters' concerns and recognizes that LEAs function within challenging funding environments. However, regardless of IDEA funding levels, States must comply with all IDEA requirements, including the requirements related to significant disproportionality.

Under IDEA section 618(d) (20 U.S.C. 1418(d)), an LEA found to have significant disproportionality based on race or ethnicity must reserve 15 percent of its IDEA B funds for comprehensive CEIS. Under § 300.646(d)(1)(ii), in implementing comprehensive CEIS, the LEA must identify and address the factors contributing to the significant disproportionality. We acknowledge that the provision of comprehensive CEIS has the potential to benefit both special education and general education. However, we emphasize that the LEA has the flexibility to determine, based on its identification of factors contributing to the significant disproportionality identified in the LEA, which activities will be funded using IDEA Part B funds reserved for comprehensive CEIS.

Changes: None.

Comment: Some commenters noted that ESEA, rather than IDEA, is the most appropriate mechanism for providing children not yet identified with disabilities with support and that IDEA is not the appropriate vehicle for addressing significant disproportionality. These commenters also stated that other Federal funds, such as those made available through title I of the ESEA, as amended, should also be used to provide comprehensive CEIS.

Discussion: The Department supports the flexible use of Federal funds, particularly in the area of school-wide reforms, as long as the Federal funds are used in accordance with applicable requirements. To that end, we issued guidance on maximizing flexibility in the administration of Federal grants. OESE Letter to State Directors (September 13, 2013).

Further, we note that section 613(f)(5) of IDEA states that funds an LEA voluntarily reserves for CEIS may be used to carry out services aligned with activities funded by, and carried out

under, ESEA if those funds are used to supplement, and not supplant, funds made available under the ESEA for those activities. Thus, if IDEA funds an LEA voluntary reserves for CEIS, or is required to reserve for comprehensive CEIS, do not supplant ESEA funds, they may be used to supplement school improvement activities conducted under other programs, such as title I, that are being implemented in an LEA. See, IDEA section 613(f)(5) (20 U.S.C. 1413(f)(5)); OSEP Memorandum 08–09 (July 28, 2008).

That said, however, the Department does not have the authority to require the reservation of funds under the ESEA pursuant to a determination of significant disproportionality under IDEA unless specified in law.

Changes: None.

Comments: A number of commenters objected to proposed § 300.646(d), which would require an LEA, upon a determination of significant disproportionality by the State, to reserve 15 percent of its IDEA Part B funds, the “maximum amount of funds under section 613(f),” for comprehensive CEIS. These commenters argued that the requirement is rigid and unnecessarily redirects money from children with disabilities. The commenters suggested a variety of alternatives to requiring reservation of IDEA Part B funds to address significant disproportionality.

Some commenters suggested limiting the requirement for reserving 15 percent of IDEA Part B funds to only those circumstances in which a State finds an LEA uses discriminatory policies, practices, and procedures in implementing IDEA. Some commenters suggested taking the 15 percent from unspecified administrative costs or sources other than IDEA Part B funds. Others suggested that LEAs found with significant disproportionality be required to create remediation plans that may include reserving IDEA Part B funds for comprehensive CEIS. Still others suggested allowing LEAs to remedy significant disproportionality using whatever percentage of IDEA funds (up to 15 percent) is appropriate to the circumstances and the interventions needed. One commenter suggested that the Department provide an exemption from the 15 percent mandate for LEAs that already remedy significant disproportionality effectively. Another encouraged the Department to approach the regulation by providing supports, rather than administering punitive action, such as providing additional funds and support to LEAs with disproportionate disciplinary actions and identification

methods, since the root cause of disproportionality is an under-informed or under-resourced work force. A few commenters suggested eliminating the 15 percent mandate altogether or to allow Congress to address the issue in the next reauthorization of IDEA.

Discussion: We appreciate both the range of ideas suggested and the difficulties that reserving 15 percent of IDEA Part B funds may cause LEAs. Nevertheless, the language of IDEA section 618(d)(2)(B) is explicit: “the State shall . . . require” any LEA identified with significant disproportionality “to reserve the maximum amount of funds under section 613(f) to provide” comprehensive CEIS to serve children in the LEA. Under section 613(f)(1), the maximum amount that can be reserved is 15 percent of the amount of IDEA Part B funds the LEA receives for any fiscal year. Therefore, the Department lacks the authority either to vary the amount that must be reserved or to eliminate the requirement altogether.

Further, each LEA, in implementing comprehensive CEIS, may carry out activities that include professional development, behavioral evaluations, hiring reading or math specialists or providing other supports and services that the LEA has determined will address the factors contributing to the significant disproportionality. In addition, under certain conditions, comprehensive CEIS funds may be used in combination with funds available under title I to supplement school improvement activities that are being implemented in the LEA to address an “under-informed and under-resourced” work force, as long as IDEA funds and ESEA funds are used in accordance with applicable program requirements. See, OESE Letter to State Directors (September 13, 2013).

Changes: None.

Comments: A few commenters asked whether funds for providing comprehensive CEIS to preschool children under proposed § 300.646(d)(2) would have to come from funds awarded to an LEA under IDEA Part B section 611, IDEA section 619, or both.

Discussion: Neither the final regulations nor IDEA specify the specific source of funding (section 611 or section 619) from which an LEA is required to reserve funds if it is determined that said LEA has significant disproportionality. While the amount of the 15 percent reservation must be calculated on the basis of both the LEA’s section 611 and 619 allocations, LEAs retain full flexibility regarding whether they actually take the reservation from section 611 funds,

section 619 funds, or both. LEAs also retain this flexibility regardless of the age of the children receiving comprehensive CEIS.

Changes: None.

Comment: None.

Discussion: When an LEA is identified as having significant disproportionality, it is required to reserve funds for the provision of comprehensive CEIS. This requirement is, clearly, an LEA-level requirement. Each LEA is required to maintain documentation that 15 percent of its IDEA Part B funds were reserved for that purpose and that those funds were used to support allowable activities under § 300.646(d). However, an LEA does have flexibility in how these funds are allocated within the LEA how these funds are expended. Nothing in these regulations prevents an LEA from distributing funds reserved for comprehensive CEIS to its schools to carry out activities authorized under final § 300.646(d), nor are there requirements for the process an LEA must use when deciding how to allocate those funds if they choose to do so. As such, if an LEA determines that it is best able to address the root cause of the identified significant disproportionality by providing a portion of its reserved funds to a particular subset of schools to support comprehensive CEIS activities, it is permitted to do so under these regulations, so long as it ensures that those funds are expended in accordance with final § 300.646(d). Under § 300.202(a)(1), an LEA must expend IDEA Part B funds in accordance with the applicable provisions of Part B. Under 34 CFR 76.731, an LEA must keep records to show its compliance with program requirements. Therefore, an LEA must maintain documentation to demonstrate that it expended IDEA Part B funds reserved for comprehensive CEIS in accordance with final § 300.646(d).

In a growing number of LEAs nationwide, schools are implementing the flexibilities provided under ESEA section 1114(b) to consolidate Federal funds in a schoolwide program. Section 300.206(a) makes clear that IDEA Part B funds may be consolidated in such a school and instructs States and LEAs how to calculate the amount of funds that may be used for this purpose. Further, § 300.206(b)(1) and (2) provide that these funds must be considered Federal Part B funds for the purposes of calculating LEA MOE and excess cost under § 300.202(a)(2) and (3), and that these funds may be used without regard to the requirements of § 300.202(a)(1). Regardless, the LEA is still responsible for meeting all other requirements of

IDEA Part B, including ensuring that children with disabilities in schoolwide program schools “[r]eceive services in accordance with a properly developed IEP [individualized education program]” and “[a]re afforded all of the rights and services guaranteed to children with disabilities under the Act [IDEA].” See, § 300.206(c)(1) and (2).

LEAs are not prohibited from providing funds reserved for comprehensive CEIS to schools operating a schoolwide program. Further, the requirement to reserve funds for comprehensive CEIS does not override the flexibilities described in § 300.206. Instead, LEAs are only required to ensure that any school operating a schoolwide program to which it provides funds for comprehensive CEIS is able to appropriately document that at least the amount of funds provided to the school for that purpose were so expended. For example, if an LEA provides \$100 of the funds it has reserved for comprehensive CEIS to a school implementing a schoolwide program, that school is not required to separately track and account for those funds if it is otherwise consolidating IDEA Part B funds. Instead, the LEA would only need to ensure that it can document that the school spent at least \$100 on allowable activities under comprehensive CEIS. It is not required to demonstrate that the school expended \$100 of IDEA Part B funds. We believe that this interpretation of the applicable statutes and regulations provide maximum flexibility to both schools and LEAs in implementing both title I schoolwide programs and comprehensive CEIS.

Changes: None.

Implications for IEPs

Comments: Many commenters responded to the Department’s Directed Question #12, which sought comments on whether additional restrictions, beyond the requirement in § 300.646(d) to use comprehensive CEIS to identify and address the factors contributing to significant disproportionality, on the use of comprehensive CEIS funds, are appropriate for children who are already receiving services under Part B of IDEA. Most commenters objected to any restriction of how comprehensive CEIS funds should be used for children already receiving services under Part B of IDEA. Instead, these commenters discussed the many supports and services where comprehensive CEIS could be used to enhance student progress. For example, some suggested that the funds be used to provide functional behavioral assessments (FBAs) and behavioral intervention

plans (BIPs). Additionally, the commenters noted that comprehensive CEIS funds could be used to train key personnel on how to develop effective FBAs and BIPs or other instructional supports. Some of these commenters stated that local officials are best positioned to say how comprehensive CEIS funds should be used and that they should not be limited in their choices in how to address significant disproportionality.

Discussion: We appreciate the concerns expressed by the commenters and note that the services and activities they mention—training and professional development on effective FBAs and BIPs, a review of behavioral intervention and supports included in IEPs, positive behavioral interventions and supports, multi-tiered systems of supports—are all permitted under § 300.646(d)(1)(i) (“An LEA may carry out activities that include professional development and educational and behavioral evaluations, services, and supports . . .”). These services and activities are also permitted under § 300.646(d)(1)(ii) to the extent that they address factors that the LEA has identified as contributing to the significant disproportionality identified in the LEA. We agree that local officials should have the flexibility and discretion to decide how comprehensive CEIS funds are best allocated and spent.

Under proposed § 300.646(d)(1)(ii), the LEA must use comprehensive CEIS funds to address factors contributing to the significant disproportionality identified by the State. These factors may include, as enumerated in proposed § 300.646(d)(1)(ii), a lack of access to scientifically based instruction and economic, cultural, or linguistic barriers to appropriate identification or placement in particular educational settings, including disciplinary removals. This requirement is fundamental to the use of comprehensive CEIS funds, and it carries with it a practical limitation: An LEA may use comprehensive CEIS funds for training and professional development and behavioral evaluations and supports, such as FBAs, BIPs, and positive behavioral interventions and supports, but only to the extent that it is doing so to address the factors identified by the LEA as contributing to the significant disproportionality identified by the State. Therefore, if comprehensive CEIS funds are used to provide services that address factors contributing to the significant disproportionality identified by the State, then the fact that those services are also identified in some children’s IEPs does not make the services

impermissible or the expenditures improper. Conversely, however, we generally would not expect that using comprehensive CEIS funds for the purpose of providing services already identified on a child’s IEP would address factors contributing to the significant disproportionality identified by the State, as is required by proposed § 300.646(d).

Changes: None.

Comment: One commenter asked for further explanation about how including children with disabilities within the scope of comprehensive CEIS under proposed § 300.646(d)(2)(ii) would affect services provided to these children in accordance with their IEPs. The commenter stated that, if a child is receiving services under an IEP, then receiving comprehensive CEIS is “contradictory.” In particular, the commenter asked whether the provisions guaranteeing FAPE to a child with disabilities takes precedent over provisions governing comprehensive CEIS, who decides which services a child gets, and whether proposed § 300.646(d) created a two-tiered system of services that could treat some children unfairly.

Discussion: We believe that the commenter’s concerns conflate the obligation to provide FAPE to a child with disabilities and the obligation to reserve 15 percent of IDEA Part B funds upon a finding by the State of significant disproportionality.

To begin with, it is optional under final § 300.646(d)(2) for an LEA to use IDEA Part B funds reserved for comprehensive CEIS to serve children with disabilities. If an LEA chooses to do so, this in no way affects any child’s entitlement to a FAPE.

In implementing comprehensive CEIS, an LEA must identify and address the factors contributing to the significant disproportionality identified by the State. As we stated earlier, these services may, but do not necessarily, overlap with services identified on a child’s IEP, given that we generally would not expect that using funds reserved for comprehensive CEIS to provide services already identified on a child’s IEP would address factors contributing to the significant disproportionality identified by the State. The fact that services provided as comprehensive CEIS may in some cases overlap with services already identified on a child’s IEP does not relieve the LEA of its responsibility to ensure that all of the special education and related services and supplementary aids and services identified on a child’s IEP are provided to that child in accordance with his or her IEP. There is no

contradiction, no displacement of IEP services by comprehensive CEIS services, and no “two-tier” system created.

To the extent that the commenter is concerned about there being insufficient Part B funds to fund services to children with disabilities if 15 percent of an LEA’s IDEA Part B funds are reserved for comprehensive CEIS, we address that issue under *Use of Comprehensive CEIS for Specific Populations* elsewhere in this document.

Implications for LEA Maintenance of Effort (MOE)

Comment: A few commenters asked whether extending comprehensive CEIS to children with disabilities would increase LEA maintenance of effort (MOE) expenditures under § 300.203. Several commenters indicated that they did not support these regulations because it could increase the amount of local, or State and local, funds an LEA would be required to expend for the education of children with disabilities to meet the LEA MOE requirement in subsequent years including years in which an LEA is no longer identified with significant disproportionality.

For example, one commenter wrote that if an LEA shifts special education spending from its Part B funds to local funds in order to meet its obligation to set aside 15 percent of its Part B funds for comprehensive CEIS, its local MOE expenditure increases. However, when the LEA is no longer identified with significant disproportionality, the LEA can’t subsequently reduce its local MOE expenditures. Further, to ensure that LEAs maintain their local expenditures in case of a year-over-year reduction in IDEA, Part B allocation, some commenters requested that the Department require that the maximum amount of funds available for comprehensive CEIS be reduced by the reduction in the subgrant. Similarly, another commenter noted that, given that IDEA is underfunded, the regulation would force LEAs to pass tax increases so that local funds could support the regulation. Other commenters expressed that, since special education must be provided regardless of Federal funding, LEAs will be forced to use State and local funds to backfill 15 percent used for comprehensive CEIS.

Discussion: Using IDEA Part B funds reserved to provide comprehensive CEIS for children with disabilities may, but does not necessarily, affect the amount of local, or State and local funds, an LEA must expend to meet the MOE requirement in § 300.203.

Generally, under § 300.203(b), an LEA may not reduce the amount of local, or State and local, funds that it spends for the education of children with disabilities below the amount it spent from the same source for the preceding fiscal year. The calculation is based only on local, or State and local—not Federal—funds.

We understand that when an LEA identified with significant disproportionality is required to use 15 percent of its IDEA Part B funds for comprehensive CEIS, it should consider the effect that decreasing the available IDEA Part B funds might have on the amount of local or State and local funds an LEA must expend to meet the LEA MOE requirement. As one commenter noted, if under § 300.646(d) an LEA is required to reserve 15 percent of its IDEA Part B funds for comprehensive CEIS after a determination of significant disproportionality, it may choose to use local, or State and local, funds to provide special education and related services to children with disabilities to replace IDEA Part B funds used to provide comprehensive CEIS. If that is the case, then the higher level of local, or State and local, expenditures for the education of children with disabilities becomes the LEA’s new required level of effort for the subsequent year.

The effect would be the same under prior § 300.646 if, after a finding of significant disproportionality, an LEA reserved 15 percent of its IDEA Part B funds for comprehensive CEIS and increased by 15 percent the amount of local, or State and local, funds it used to provide special education and related services to children with disabilities.

In short, § 300.646(d) makes no changes to the regulations governing LEA MOE.

We note that an LEA identified with significant disproportionality will not be able to take advantage of the LEA MOE adjustment that would otherwise be available under § 300.205 because of the way that the MOE adjustment provision and the authority to use Part B funds for CEIS are interconnected. As a result, no matter how much is available for comprehensive CEIS or for the MOE adjustment, an LEA that is required to reserve the maximum 15 percent of its Part B allocation for comprehensive CEIS will not be able to use § 300.205(a) to reduce its MOE obligation.

Appendix D to part 300 of the Code of Federal Regulations sets out a number of examples for the basic calculation. We provide the following example involving practical applications over multiple fiscal years.

Generally, an LEA may reserve IDEA Part B funds that it is required to reserve for comprehensive CEIS either from the funds awarded for the Federal fiscal year (FFY) following the date on which the State identified the significant disproportionality or from funds awarded from the appropriation for a prior FFY. For example, State X uses data on identification collected for school year 2015–2016, which is reported in April 2016, to make a determination in February 2017 that LEA Y has significant disproportionality related to identification and therefore must set aside 15% of its IDEA Part B funds for comprehensive CEIS. The State makes this determination before FFY 2017 funds become available on July 1, 2017. The LEA has the following three options. The LEA may set aside: (1) 15 percent of the funds that the LEA receives from its FFY 2017 IDEA Part B allocation (available for obligation from July 1, 2017, through September 30, 2019); (2) 15 percent of the funds that the LEA received from its FFY 2016 IDEA Part B allocation (available for obligation from July 1, 2016, through September 30, 2018); or (3) 15 percent of the funds that it received from the FFY 2015 IDEA Part B allocation (available for obligation from July 1, 2015 through September 30, 2017) only if the LEA did not use the adjustment to reduce its required level of effort in the fiscal year covering school year (FY) 2015–2016 under § 300.205.

If an LEA selects option 1, the LEA will not be able to use the adjustment to reduce its required level of effort under § 300.205 in FY 2017–2018.

If an LEA selects option 2, the LEA will not be able to use the adjustment to reduce its required level of effort under § 300.205 in FY 2016–2017.

An LEA can only select option 3 if the LEA did not use the adjustment in § 300.205 to reduce its required level of effort in FY 2015–2016. Because FY 2015–2016 would have ended at the time the LEA is identified with significant disproportionality in February 2017, the LEA would already know whether it used the adjustment in § 300.205 to reduce its required level of effort in FY 2015–2016, and if it had done so, could not use its FFY 2015 IDEA Part B funds to provide comprehensive CEIS because of the way the MOE adjustment provision and the authority to use IDEA Part B funds for comprehensive CEIS are interconnected.

Information describing the actions that States and LEAs must take to meet MOE requirements and answers to frequently asked questions about LEA MOE can be found at www2.ed.gov/about/offices/list/osep/policy.htm.

(See, OSEP Memorandum 08–09, Coordinated Early Intervening Services (CEIS) under Part B of the Individuals with Disabilities Education Act (IDEA) dated July 28, 2008, response to Question #23.)

Changes: None.

Comment: Some commenters indicated that an expansion of the allowable uses of comprehensive CEIS to include K–12 children with disabilities and preschool children with and without disabilities would cause a significant increase in the burden associated with the Department's IDEA Part B Maintenance of Effort (MOE) Reduction and Coordinated Early Intervening Services (CEIS) data collection. Others suggested that the Department will have to expand this data collection to account for the additional children served by, and for the funds spent on, comprehensive CEIS. Some commenters suggested that the Department require States to submit data on CEIS expenditures, disaggregated to show spending related to identification, placement, and disciplinary removals.

Discussion: Current § 300.226(d) requires each LEA that implements CEIS to report to the State on the number of children who received CEIS and the number of those children who subsequently received special education and related services under Part B during the preceding two-year period (*i.e.*, the two years after the child has received CEIS). 71 FR 46540, 46628 (Aug. 14, 2006). A State's decision to provide comprehensive CEIS to children with disabilities and preschool children with or without disabilities may expand the number of children who receive CEIS and may increase the numbers reported. We are sensitive to the practical difficulties that might arise. After these regulations become final, the Department will consider what, if any, modifications to IDEA Part B Maintenance of Effort (MOE) Reduction and Coordinated Early Intervening Services (CEIS) data collection may be needed to assist States and LEAs in meeting their obligations under IDEA section 613(f)(4) (20 U.S.C. 1413(f)(4)) and 34 CFR 300.226(d)). As we noted in the NPRM, after finalizing these regulations, the Department intends to provide additional guidance on relevant data collection and reporting requirements. (81 FR 10979).

Changes: None.

General Uses of Comprehensive CEIS Funds

Comments: Commenters suggested many uses for IDEA Part B funds reserved for comprehensive CEIS. These

included a wide variety of detailed suggestions for training and professional development in particular subject areas or in interventions, assessments, and forms of instruction; hiring teachers and staff with specific credentials, licenses, or experience; implementing various school-wide programs; and investing in technology.

Some of these commenters asked the Department whether comprehensive CEIS funds, when used to identify and address the factors contributing to significant disproportionality, could be “braided” with other funds.

Discussion: While the commenters suggested important uses for IDEA Part B funds reserved for comprehensive CEIS, the question of whether they are permissible uses of those funds depends upon a State's specific finding and analysis of significant disproportionality. That is, funds reserved for comprehensive CEIS must be used in accordance with the requirements of § 300.646(d)(1)(i) and (ii). Under § 300.646(d)(1)(i), comprehensive CEIS funds may be used to carry out a broad range of activities that “include professional development and educational and behavioral evaluations, services, and supports.” Under § 300.646(d)(1)(ii), comprehensive CEIS funds must be used to identify and address factors contributing to the significant disproportionality identified by the State.

Finally, CEIS funds may be combined with other Federal funds, provided that the applicable requirements for both funding streams are met. On September 13, 2013, the Department issued guidance on maximizing flexibility in the administration of Federal grants. OESE Letter to State Directors.

Changes: None.

Comments: Some commenters supported proposed § 300.646(d)(1)(ii), which would require that in implementing comprehensive CEIS, an LEA must identify and address the factors contributing to significant disproportionality. These commenters stated that this promotes improved outcomes and a more focused use of resources and further added that the exercise of identifying and addressing contributing factors promoted better transparency and accountability when addressing significant disproportionality. Other commenters asked that the Department provide specific technical assistance to help States and LEAs to identify these factors and evidence-based practices to address significant disproportionality in the LEA. One of these commenters pointed out that there are practical limitations

on personnel and funds and, therefore, that States' ability to provide assistance to LEAs is limited. Another commenter noted that simply requiring LEAs to identify and address the factors contributing to disproportionality does not provide sufficient guidance or information for an LEA to know what those factors would be or how to bring about systems change. That commenter further noted that multiple indicators, beyond the risk ratio, might be necessary to self-assess and determine effective methods of addressing these factors. One commenter stated that, unless States are required to assist LEAs in their efforts to identify and address the factors contributing to the significant disproportionality, this portion of the § 300.646(d)(1)(ii) will be meaningless.

Discussion: We recognize the commenters' concern that LEAs would like additional guidance or information on identifying and addressing the factors that may contribute to significant disproportionality. Therefore, we have added examples such as inappropriate use of disciplinary removals; lack of access to appropriate diagnostic screenings; differences in academic achievement levels; and policies, practices, or procedures that contribute to the significant disproportionality to the list of factors in § 300.646(d)(1)(ii) that may contribute to significant disproportionality. We encourage LEAs identified with significant disproportionality in identification that determine the overrepresentation of one racial or ethnic group is occurring due to under-identification of another racial or ethnic group or groups, to consider how differences in academic achievement levels may contribute to the significant disproportionality in identification.

We have also added a new § 300.646(d)(1)(iii) to clarify that as part of implementing comprehensive CEIS, an LEA must address a policy, practice, or procedure it identifies as contributing to the significant disproportionality, including a policy, practice, or procedure that results in a failure to identify, or the inappropriate identification of, a racial or ethnic group (or groups). An LEA has the discretion as to how to address the policy, practice or procedure, by eliminating, revising or changing how it is implemented to ensure that it does not contribute to the significant disproportionality, including that it does not result in a failure to identify, or the inappropriate identification of, a racial or ethnic group (or groups).

In addition, the Department intends to issue guidance to provide responsible

public agencies with information to assist them in meeting their obligations under IDEA and its implementing regulations, including those provisions related to significant disproportionality. To that end, the Department maintains a technical assistance and dissemination network of services and supports that address a variety of topics. For more information, see

www.osepideasthatwork.org.

Changes: We have revised § 300.646(d)(1)(ii) to include additional factors that may contribute to significant disproportionality and added a new § 300.646(d)(1)(iii) to clarify that in implementing comprehensive CEIS, an LEA must address policies, practices, or procedures it identifies as contributing to significant disproportionality.

Comment: One commenter noted that, while administrators may choose to use Federal funding for de-leading, this type of expenditure may not be a wise use of Federal special education resources.

Discussion: While using funds reserved for comprehensive CEIS for de-leading activities is not specifically prohibited by the final regulations, it is our intention that LEAs will identify and address the factors that contribute to the significant disproportionality identified by the State by carrying out activities that LEAs typically conduct, such as providing services and supports to students or professional development to staff. We agree with the commenter that using funds reserved for comprehensive CEIS for de-leading activities may not be an effective use of IDEA Part B funds reserved for comprehensive CEIS, especially given other potential funding sources available for de-leading activities and the amount of funds that may be needed to carry out these activities. We note that under IDEA section 605 (20 U.S.C. 1404), an LEA must obtain approval from the State prior to using IDEA Part B funds for equipment, construction, or alteration of facilities. See also, 2 CFR 200.439.

Changes: None.

Implications for Voluntary Implementation of CEIS

Comments: Many commenters provided recommendations to address the low utilization rate of voluntary CEIS under IDEA section 613(f)(20 U.S.C. 1413(f)). A number of these commenters suggested that the Department should, or asked whether the Department intended to, extend voluntary CEIS to children with disabilities and children ages three through five under current § 300.226 ("voluntary CEIS"). One commenter in particular noted that this would enable

States and LEAs to provide CEIS prior to being identified for significant disproportionality and would address the current low rate of voluntary CEIS use among LEAs.

Further, commenters noted that the voluntary use of IDEA funds to provide early intervention services comes with additional reporting requirements.

Discussion: Under IDEA section 613(f) (20 U.S.C. 1413(f)), an LEA may voluntarily use up to 15 percent of its IDEA Part B funds to provide CEIS to children in kindergarten through grade 12 (with a particular emphasis on children in kindergarten through grade 3) who have not been identified as needing special education or related services but who need additional academic and behavioral support to succeed in a general education environment. Therefore, the Department lacks the authority to expand the population of children who can be provided voluntary CEIS under IDEA section 613(f).

As to reporting requirements, the State must report in the IDEA Part B LEA Maintenance of Effort Reduction and Coordinated Early Intervening Services data collection on the amount of IDEA Part B funds each LEA in the State voluntarily uses for CEIS and, consistent with the information each LEA must report annually to the State under § 300.226(d), the total number of children who received CEIS during the reporting period, and the number of children who received CEIS during the two school years prior to the reporting period and received special education and related services during the reporting year for each LEA. See, www.ed.gov/edfacts for further information.

Changes: None.

Comments: A few commenters, though not opposing proposed § 300.646(d)(2), noted that including children with disabilities and children from ages three through five within the scope of comprehensive CEIS, but not voluntary CEIS, could create some practical difficulties. One of these commenters noted that this would create different reporting requirements for comprehensive and voluntary CEIS. Another commenter stated that having different reporting requirements was burdensome and asked that the disparate reporting requirements be streamlined. Still another commenter noted that the different eligibility requirements for comprehensive CEIS might create budgeting, accounting, or documentation problems because voluntary CEIS funds cannot be freely substituted for comprehensive CEIS funds. Services for children with disabilities begun with funds reserved

for comprehensive CEIS, for example, could not be continued with funds reserved for voluntary CEIS, which cannot be used to provide comprehensive early intervening services to preschool children.

Discussion: We are sensitive to the practical difficulties that might arise from the differences between comprehensive and voluntary CEIS. As part of the Part B Maintenance of Effort (MOE) Reduction and Coordinated Early Intervening Services (CEIS) data collection, States must report data submitted by LEAs, pursuant to IDEA section 613(f)(4) and § 300.226(d), including the total number of children who received CEIS during the reporting period, and the number of children who received CEIS during the two school years prior to the reporting period and received special education and related services during the reporting year.

After these regulations become final, the Department will consider what, if any, modifications to the Part B Maintenance of Effort (MOE) Reduction and Coordinated Early Intervening Services (CEIS) data collection may be needed to assist States and LEAs in meeting their obligations under IDEA section 613(f)(4) (20 U.S.C. 1413(f)(4)) and § 300.226(d).

However, the Department disagrees with commenters that the differences in eligibility between CEIS and comprehensive CEIS will present significant challenges to LEAs working to address significant disproportionality and to prevent its reoccurrence. Consider an LEA that includes children with disabilities in its implementation of comprehensive CEIS, and, in so doing, successfully addresses the factors contributing to the significant disproportionality. In a year in which the State does not identify the LEA with significant disproportionality, the LEA is not required to reserve 15 percent of its IDEA Part B funds for comprehensive CEIS. The LEA may not use funds it voluntarily reserves under IDEA section 613(f) (20 U.S.C. 1413(f)) to provide children with disabilities with CEIS; however, the LEA may continue to serve these children using its IDEA, Part B funds in accordance with § 300.202 and IDEA section 613(a)(2)(A) (20 U.S.C. 1413(a)(2)(A)). Further, the LEA may not use funds it voluntarily reserves under IDEA section 613(f) (20 U.S.C. 1413(f)) to provide CEIS to preschool children ages three through five who are not in kindergarten; however, the LEA may continue to serve preschool children with disabilities ages three through five using its IDEA, Part B funds in accordance with § 300.202 and IDEA

section 613(a)(2)(A) (20 U.S.C. 1413(a)(2)(A)).

Changes: None.

Miscellany

Comment: Some commenters argued that proposed § 300.646(d) would create an incentive to not identify children for special education and related services in order to reduce disproportionality numbers and show that comprehensive CEIS is working.

Discussion: As we noted earlier in this document, under *General—Proposed Regulation Would Create Racial Quotas*, the Department recognizes the possibility that, in cases where States select particularly low risk ratio thresholds, LEAs may have an inappropriate incentive to avoid identifying children from particular racial or ethnic groups in order to avoid a determination of significant disproportionality and the reservation of IDEA Part B funds for comprehensive CEIS. However, these actions would be inconsistent with IDEA's child find requirements in section 612(a)(3) (20 U.S.C. 1412(a)(3)) and the evaluation requirements in section 612(a)(7) and section 614(a)–(c) of IDEA (20 U.S.C. 1412(a)(7) and 20 U.S.C. 1414(a)–(c)). All these provisions require an individualized determination of whether a child has a disability and the nature and extent of the special education and related services that a child needs. IDEA requires that these decisions be based solely on the individual needs of the child, and not to avoid a determination of significant disproportionality. For this reason, § 300.647(b)(1) provides States the flexibility to set their own reasonable risk ratio thresholds, with input from stakeholders and State Advisory Panels. It is the Department's expectation that, as part of the process of setting risk ratio thresholds, States will work with stakeholders to identify particular risk ratio thresholds that help the State to address large racial and ethnic disparities without undermining the appropriate implementation of child find and evaluation procedures. We note that States have an obligation under IDEA both to identify significant disproportionality, based on race and ethnicity, in the identification of children with disabilities and to ensure that LEAs implement child find and evaluation procedures appropriately. (20 U.S.C. 1412(a)(3); 34 CFR 300.111).

Changes: None.

Comments: A commenter suggested that, in proposed § 300.646(d)(2), the Department replace the term “over-identified” with “overrepresented” to avoid misconceptions that the clause

only refers to the over-identification of disabilities.

Discussion: We appreciate the commenter's concern, however, the language in question is taken directly from IDEA and therefore we decline to change it. Section 300.646(d)(2) refers to comprehensive coordinated early intervening services. The underlying statute, IDEA section 618(d)(2)(B) (20 U.S.C. 1418(d)(2)(B)), specifically provides that States must require LEAs identified with significant disproportionality under section 618(d)(1) to reserve the maximum amount of funds under 613(f) to provide comprehensive coordinated early intervening services to children in the LEA, “particularly children in those groups that were significantly overidentified” under section 618(d)(1).

Changes: None.

Comment: One commenter suggested that the Department require States to specify, as part of their reporting on comprehensive CEIS, a listing of the types of technical assistance and professional development that will be offered to LEAs.

Discussion: While the Department encourages States to make technical assistance available to LEAs, and the Department intends to do the same, we decline to require States to specify, as part of their reporting on comprehensive CEIS, a listing of the types of technical assistance and professional development that will be offered to LEAs. We believe that the benefit of reporting on the technical assistance that will be offered to LEAs would not justify the burden of requiring States to collect and report this information to the Department.

Changes: None.

Executive Orders 12866 and 13563

Regulatory Impact Analysis

Under Executive Order 12866, the Secretary must determine whether this regulatory action is “significant” and, therefore, subject to the requirements of the Executive order and subject to review by the Office of Management and Budget (OMB). Section 3(f) of Executive Order 12866 defines a “significant regulatory action” as an action likely to result in a rule that may—

(1) Have an annual effect on the economy of \$100 million or more, or adversely affect a sector of the economy, productivity, competition, jobs, the environment, public health or safety, or State, local or tribal governments or communities in a material way (also referred to as an “economically significant” rule);

(2) Create serious inconsistency or otherwise interfere with an action taken or planned by another agency;

(3) Materially alter the budgetary impacts of entitlement grants, user fees, or loan programs or the rights and obligations of recipients thereof; or

(4) Raise novel legal or policy issues arising out of legal mandates, the President’s priorities, or the principles stated in the Executive order.

This regulatory action is a significant regulatory action subject to review by OMB under section 3(f) of Executive Order 12866.

We have also reviewed these regulations under Executive Order 13563, which supplements and explicitly reaffirms the principles, structures, and definitions governing regulatory review established in Executive Order 12866. To the extent permitted by law, Executive Order 13563 requires that an agency—

(1) Propose or adopt regulations only upon a reasoned determination that

their benefits justify their costs (recognizing that some benefits and costs are difficult to quantify);

(2) Tailor their regulations to impose the least burden on society, consistent with obtaining regulatory objectives and taking into account—among other things, and to the extent practicable—the costs of cumulative regulations;

(3) In choosing among alternative regulatory approaches, select those approaches that maximize net benefits (including potential economic, environmental, public health and safety, and other advantages; distributive impacts; and equity);

(4) To the extent feasible, specify performance objectives, rather than specifying the behavior or manner of compliance that regulated entities must adopt; and

(5) Identify and assess available alternatives to direct regulation, including providing economic incentives—such as user fees or marketable permits—to encourage the desired behavior, or provide information that enables the public to make choices.

Executive Order 13563 also requires an agency “to use the best available techniques to quantify anticipated present and future benefits and costs as accurately as possible.” The Office of Information and Regulatory Affairs of OMB has emphasized that these techniques may include “identifying changing future compliance costs that might result from technological innovation or anticipated behavioral changes.”

We are issuing these final regulations only upon a reasoned determination that their benefits justify their costs. In choosing among alternative regulatory approaches, we selected those approaches that maximize net benefits. Based on the analysis that follows, the Department believes that these regulations are consistent with the principles in Executive Order 13563.

We also have determined that this regulatory action would not unduly interfere with State, local, and tribal governments in the exercise of their governmental functions.

In this Regulatory Impact Analysis we discuss the need for regulatory action, alternatives considered, the potential costs and benefits, net budget impacts, assumptions, limitations, and data sources.

Need for These Regulations

As we set out in detail in the preamble to the NPRM, the overrepresentation of children of color in special education has been a national concern for more than 40 years. In its

revisions of IDEA, Congress noted the problem and put a mechanism in place through which States could identify and address significant disproportionality on the basis of race and ethnicity for children with disabilities. For a description of how the significant disproportionality statutory provisions apply to States and LEAs along with the corresponding remedies, please refer to the text of the preamble.

Also, as stated in the preamble, IDEA does not define “significant disproportionality,” and, in our August 2006 regulations, the Department left the matter to the discretion of the States. Since then, States have adopted different methodologies across the country, and, as a result, far fewer LEAs are identified as having significant disproportionality than may be anticipated given the widespread disparities in rates of identification, placement, and disciplinary removal across racial and ethnic groups, as noted by the GAO study and supported by the Department’s own data analysis. The lack of consistency, and relatively low number of LEAs identified as having significant disproportionality, raises concerns about whether the prior approach was being implemented to meet Congress’ intent to address racial and ethnic disparities in special education and to ensure compliance with IDEA. Therefore, there is a need for a common methodology for States to apply when making determinations of significant disproportionality, to address the complex, manifold causes of the issue and ensure compliance with the requirements of IDEA.

In addition, there is a corresponding need to expand comprehensive CEIS to include children from age 3 through grade 12, with and without disabilities, and to require LEAs to provide comprehensive CEIS to identify and address factors contributing to the significant disproportionality. The current allowable uses of IDEA Part B funds reserved for comprehensive CEIS prohibit LEAs from directing resources to children with disabilities directly impacted by inappropriate identification, placement, or discipline and also prohibit LEAs from providing early intervening services to preschool children. This latter prohibition is especially problematic, since early intervening services have been shown to reduce the need for more extensive services in the future. Therefore, expanding the provision of comprehensive CEIS to preschool children allows LEAs to identify and address learning difficulties in early childhood, reducing the need for interventions and services later on.

Alternatives Considered

Currently, IDEA does not define “significant disproportionality” or prescribe to States how it must be measured. As a result, States have adopted numerous methodologies for determining if LEAs demonstrated significant disproportionality based on race and ethnicity. In the NPRM, the Department proposed that all States use a standard methodology—the risk ratio—to make determinations of significant disproportionality in the LEAs of the State. The Department reviewed and considered various alternatives to the proposed regulations submitted by commenters in response to the NPRM.

The Department considered comments requesting that the Department withdraw the NPRM and not require States to apply a standard methodology to identify significant disproportionality. Some of these commenters suggested that the Department first pilot a standard methodology in several States, gather that data for analysis, and then provide resources and technical assistance to help States and LEAs address significant disproportionality. Other commenters stated that LEAs are better positioned to determine the factors that contribute to significant disproportionality and are uniquely positioned to address those factors without the imposition of a standard methodology that did not consider local demographics. Other commenters stated that schools had no control over the poverty, health factors or other social ills that contribute to disability and that mandating a standard methodology would do nothing to address those issues or the number of children of color in special education. The Department’s effort to establish a standard methodology for States and LEAs to determine whether significant disproportionality exists based on race or ethnicity is designed to: (1) Address Congress’ concern “that more minority children continue to be served in special education than would be expected from the percentage of minority children in the general education.” IDEA section 601(c)(12)(B) (20 U.S.C. 1400(c)(12)(B)); and (2) address the GAO report (GAO–13–137) which stated that the Department’s oversight of racial and ethnic overrepresentation in special education is hampered by the flexibility States have to individually define significant disproportionality. The GAO recommended that the Department, to promote consistency, develop a standard approach to defining significant disproportionality to be used

by all States. As to the potential impact of a standard methodology, the Department acknowledges that mandating a standard methodology to measure significant disproportionality will not resolve poverty, poor health and environmental conditions or other factors thought to contribute to significant disproportionality. However, the Department believes that there is a need for a common methodology for determinations of significant disproportionality in order for States and the Department to better identify and address the complex, manifold causes of the issue and ensure compliance with the requirements of IDEA.

In applying the risk ratio method to determine significant disproportionality, the proposed regulations required States to use a standard methodology which included a risk ratio, or if appropriate, an alternate risk ratio; a reasonable risk ratio threshold; and a minimum n-size (referred to as “cell size” in the NPRM) as the standard methodology to determine whether there is significant disproportionality based on race or ethnicity in the State and its LEAs. States would have to analyze an LEA for significant disproportionality if the LEA had at least 10 children in a racial or ethnic group (for purposes of identification), or at least 10 children with disabilities in the racial or ethnic group (for purposes of placement or discipline). In general, most comments about the minimum n-size addressed the tension between setting a n-size too low and producing unreliable results and setting a n-size too high and exempting LEAs from being reviewed for significant disproportionality. Many commenters opposed the n-size limitation of 10 and requested that it be raised to 30 or 40, or eliminated entirely and leave the n-size to State discretion. These commenters argued that a larger minimum n-size is necessary for reliable analysis to avoid LEA identification for significant disproportionality based on a very small numbers of children. Other commenters expressed support for the Department’s minimum n-size proposal of 10 but were willing to accept an increase to 15, to ensure that the maximum number of LEAs is reviewed for significant disproportionality. The Department recognizes that selecting an appropriate minimum number of children necessary to include an LEA in the State’s analysis of significant disproportionality can be difficult. If the minimum n-size is too small, more LEAs would be included in the analysis but the likelihood of dramatic,

statistically anomalous changes in risk ratio from one year to the next would increase. By contrast, if the minimum number is set too high, a larger number of LEAs would be excluded from the analysis and States would not identify as many LEAs with significant disproportionality as there might be. The Department has amended its proposal of a minimum n-size of 10 and will now allow States to select reasonable minimum n-sizes and reasonable minimum cell sizes, based on advice from stakeholders including State Advisory Panels and subject to monitoring and enforcement for reasonableness, that strike a balance between volatility and inclusion of LEAs in the analysis for significant disproportionality.

Many commenters agreed with the Department's requirement that all States use the risk ratio as the standard methodology for determining significant disproportionality. These commenters noted that the use of a common analytical method for determining significant disproportionality would increase transparency in LEA identification across States for LEA, State and Federal officials, as well as the general public. However, some commenters indicated that the Department should not allow States to set a reasonable risk ratio threshold or allow States to vary the application of the risk ratio analysis to account for State differences. These commenters stated that methodological alignment across States is needed to advocate on behalf of children with disabilities, reduce time and effort needed for data analysis and to enact appropriate policies, procedures and practices to address disproportionality on the basis of race or ethnicity. The Department considered these concerns and acknowledges the need for a common methodology for determinations of significant disproportionality in order to better identify and address the complex causes of significant disproportionality. However, as some commenters noted, LEAs vary widely as to size and population. Some LEAs include specialized schools, hospitals or community services that may draw large numbers of children with disabilities and their families. States are better positioned to identify and address the factors contributing to significant disproportionality in the LEAs. The final regulations allow States, in the determination of significant disproportionality, to set reasonable risk ratio thresholds, reasonable minimum cell sizes and reasonable minimum n-

sizes, based on advice from stakeholders including the State Advisory Panel.

Discussion of Costs, Benefits and Transfers

The Department has analyzed the costs of complying with the final requirements. Due to the considerable discretion the final regulations provide States (e.g., flexibility to determine their own risk ratio thresholds, reasonable minimum n-sizes and cell sizes, and the extent to which LEAs have made reasonable progress under § 300.647(d)(2) in lowering their risk ratios or alternate risk ratios), we cannot evaluate the costs of implementing the final regulations with absolute precision. However, we estimate that the total cost of these regulations over ten years would be between \$50.1 and \$91.4 million, plus additional transfers between \$298.4 and \$552.9 million. These estimates assume discount rates of three to seven percent. Relative to these costs, the major benefits of these requirements, taken as a whole, would include: Ensuring increased transparency regarding each State's definition of significant disproportionality; establishing an increased role for State Advisory Panels in determining States' risk ratio thresholds, minimum n-sizes, and minimum cell sizes; reducing the use of potentially inappropriate policies, practices, and procedures as they relate to the identification of children as children with disabilities, placements in particular educational settings for these children, along with the incidence, duration, and type of disciplinary removals from these placements, including suspensions and expulsions; and promoting and increasing comparability of data across States in relation to the identification, placement, and discipline of children with disabilities by race or ethnicity. Additionally, the Department believes that expanding the eligibility of children ages three through five to receive comprehensive CEIS would give LEAs new flexibility to use additional funds received under Part B of IDEA to provide appropriate services and supports at earlier ages to children who might otherwise later be identified as having a disability, which could reduce the need for more extensive special education and related services for these children in the future.

Benefits

The Department believes this regulatory action to standardize the methodology States use to identify significant disproportionality will provide clarity to the public, increase

comparability of data across States, and enhance the overall level of transparency regarding the appropriateness of State-level policies, practices, and procedures as they relate to the identification, placement, and discipline of children with disabilities in LEAs. The Department further believes that methodological alignment across States will improve upon current policy, which has resulted in numerous State definitions of significant disproportionality of varying complexity that may be difficult for stakeholders to understand and interpret. The wide variation in definitions and methodologies across States under current policy also makes it difficult for stakeholders to advocate on behalf of children with disabilities, and for researchers to examine the extent to which LEAs have adequate policies, practices, and procedures in place to provide appropriate special education and related services to children with disabilities. We believe that a standardized methodology will accrue benefits to stakeholders in reduced time and effort needed for data analysis and a greater capacity for meaningful advocacy. Additionally, we believe that the standardized methodology will accrue benefits to all children (including children with disabilities), by promoting greater transparency and supporting the efforts of all stakeholders to enact appropriate policies, practices, and procedures that address disproportionality on the basis of race or ethnicity.

Requiring that States set reasonable risk ratio thresholds, minimum n-sizes, and minimum cell sizes based on the advice from State Advisory Panels will also give stakeholders an increased role in setting State criteria for identifying significant disproportionality. The Department hopes that this will give States and stakeholders an opportunity, and an incentive, to thoughtfully examine existing State policies and ensure that they appropriately identify LEAs with significant and ongoing disparities in the identification of children with disabilities, their placements in particular educational settings, and their disciplinary removals. Further, we hope that States will also take this opportunity to consult with their State Advisory Panels on the States' approaches to reviewing policies, practices, and procedures, to ensure that they comply with IDEA and have the capacity to provide appropriate support.

In addition, there is widespread evidence on the short- and long-term negative impacts of suspensions and expulsions on student academic

outcomes. In general, suspended children are more likely to fall behind, to become disengaged from school, and to drop out of a school. (Lee, Cornell, Gregory, & Xitao, 2011; Brooks, Shiraldi & Zeidenberg, 2000; Civil Rights Project, 2000.) The use of suspensions and expulsions is also associated with an increased likelihood of contact with the juvenile justice system in the year following those disciplinary actions. (Council of State Governments, 2011.)

The Department believes that suspensions and expulsions can often be avoided, particularly if LEAs use appropriate school-wide interventions, and appropriate student-level supports and interventions, including proactive and preventative approaches that address the underlying causes or behaviors and reinforce positive behaviors. We believe that the final regulations clarify each State's responsibility to implement the statutory remedies whenever significant disproportionality in disciplinary removals is identified, and will prompt States and LEAs to initiate efforts to reduce schools' reliance on suspensions and expulsions as a core part of their efforts to address significant disproportionality. In so doing, we believe that LEAs will increase the number of children participating in the general education curriculum on a regular and sustained basis, thus accruing benefits to children and society through greater educational gains.

Under section 613(f) of IDEA and § 300.226, LEAs are not authorized to voluntarily use funds for CEIS to serve children with disabilities or children ages three through five. By clarifying that comprehensive CEIS can also be used to support children with disabilities and children ages three through five, the final regulations will allow LEAs to direct resources in a more purposeful and impactful way to improve outcomes for those children in subgroups that have been most affected by significant disproportionality. For example, LEAs would be able to use comprehensive CEIS to expand the use of multi-tiered systems of support, which could help LEAs determine whether children identified with disabilities have access to appropriate, targeted supports and interventions to allow them to succeed in the general education curriculum. Additionally, by expanding the eligibility of children ages three through five to receive comprehensive CEIS, LEAs identified as having significant disproportionality will have additional resources to provide high-quality early intervening services, which research has shown can

increase children's language, cognitive, behavioral, and physical skills, and improve their long-term educational outcomes. LEAs could use funds reserved for comprehensive CEIS to provide appropriate services and supports at earlier ages to children who might otherwise later be identified as having a disability, which could reduce the need for more extensive special education and related services for these children in the future.

While the Department cannot, at this time, meaningfully quantify the economic impacts of the benefits outlined above, we believe that they are substantial and outweigh the estimated costs of these final regulations.

The following section provides a detailed analysis of the estimated costs of implementing the requirements contained in the new regulations.

Number of LEAs Newly Identified

In order to accurately estimate the fiscal and budgetary impacts of these regulations, the Department must estimate not only the costs associated with State compliance with these regulations, but also the costs borne by any LEAs that would be identified as having significant disproportionality under this new regulatory scheme that would not have been identified had the Department not regulated. However, at this time, the Department does not know, with a high degree of certainty, how many LEAs will be newly identified in future years. Given that a large proportion of the cost estimates in this section are driven by assumptions regarding the number of LEAs that SEAs might identify in any given year, these estimates are highly sensitive to those assumptions. In 2012–2013, the most recent year for which data are available, States identified 449 out of approximately 16,000 LEAs nationwide as having significant disproportionality. For purposes of our estimates, the Department used this level of identification as a baseline, only estimating costs for the number of LEAs over 449 that would be identified in future years.

These regulations largely focus on methodological issues related to the consistency of State policies and do not require States to identify LEAs at a higher rate than they currently do. As such, it is possible that these regulations may not result in any additional LEAs being identified as having significant disproportionality. However, we believe that this is unlikely and therefore would represent an extreme lower bound estimate of the cost of this regulation.

We believe it is much more likely that the regulation will provide States and

advocates with an opportunity to make meaningful and substantive revisions to their current approaches to identifying and addressing significant disproportionality. To the extent that States and State Advisory Panels, as part of the shift to the new standard methodology, establish risk ratio thresholds, minimum n-sizes, and minimum cell sizes that identify more LEAs than they currently do, it is likely that there will be an increase in the number of LEAs identified nationwide. We do not specifically know what risk ratio thresholds, minimum n-sizes, and minimum cell sizes States will set in consultation with their State Advisory Panels and therefore do not know the number of LEAs that would be identified under those new thresholds. However, for purposes of these cost estimates, we assume that those changes would result in 400 additional LEAs being identified each year nationwide. This number represents an approximately ninety percent increase in the overall number of LEAs identified by States collectively each year. The Department assumes that changes in State policies and procedures are one potential and likely outcomes of these regulations; therefore, the number of new LEAs that may be identified is also reflected in our cost estimates.

As noted in the Costs and Burden of the Proposed Regulations section, the Department does not agree with commenters who assert that these final regulations will result in determinations of significant disproportionality for nearly half the LEAs in the country. Therefore, we have not changed the number of LEAs identified and corresponding costs associated with those LEAs. The Department also believes that changes in the final regulations, outlined in the Minimum Cell Sizes and Minimum N-Sizes Section, that allow States to set reasonable minimum n-sizes and cell sizes within the bounds prescribed in the preamble will likely result in far fewer LEAs identified than some commenters predict.

To the extent that States identify fewer than 400 additional LEAs in each year or that the number of LEAs identified decreases over time, the estimates presented below are overestimates of the actual costs. For a discussion of the impact of this assumption on our cost estimates, see the Sensitivity Analysis section of this Regulatory Impact Analysis.

General Changes in the Cost Estimates From the NPRM

The Department has increased the estimated cost of these regulations in

response to both changes to the final regulations and comments from the public. The final regulations require States to set reasonable minimum n-sizes, minimum cell sizes, and if the State uses the flexibility described in § 300.646(d)(2), standards for determining reasonable progress in consultation with their State Advisory Panels, which could result in additional burden for Federal and State level staff. States will also have some additional burden associated with reporting these data to the Department. The Department also agrees with commenters that the NPRM likely underestimated the time required to modify data collection protocols, technical assistance activities, and communication required to implement the rule. We have therefore increased the estimated number of hours to better reflect the work required to adequately implement these regulations in a number of sections, including the “State-level Review and Compliance With the New Rule,” the “Annual Calculation of Risk Ratios and Notification of LEAs,” and the “Federal Review of State Risk Ratio Thresholds” sections. Finally, the Department modified the State level cost estimates in the NPRM because the final regulations do not require the use of the standard methodology when both the LEA and the State fail to meet the State’s minimum n-size and minimum cell size. Therefore, in this final estimate, the Department removed costs associated the Bureau of Indian Education (BIE) because BIE will not typically have a comparison group and mathematically cannot calculate risk ratios for any racial or ethnic group. This change resulted in a slight decrease for State level costs associated with BIE.

Cost of State-Level Activities

These regulations require every State to use a standard methodology to determine if significant disproportionality based on race and ethnicity is occurring in the State and LEAs of the State with respect to the identification of children as children with disabilities, the placement in particular educational settings of these children, and the incidence, duration, and type of disciplinary removals from placement, including suspensions and expulsions. These regulations require States to set and report to the Department risk ratio thresholds, above which LEAs would be identified as having significant disproportionality, and provide States the flexibility to: (1) Use up to three years of data to make a determination of significant disproportionality; (2) set and report to the Department reasonable minimum n-

sizes and minimum cell sizes consistent with the limitations outlined in these regulations, and; (3) if a State uses the flexibility described in paragraph (d)(2), set and report standards for determining whether LEAs have made reasonable progress under § 300.647(d)(2) in lowering their risk ratios or alternate risk ratios. Finally, these regulations clarify that LEAs must identify and address the factors contributing to significant disproportionality when implementing comprehensive CEIS.

State-Level Review and Compliance With the New Rule

The extent of the initial burden placed on States by the regulation will depend on the amount of staff time required to understand the new regulation, modify existing data collection and calculation tools, meet with State Advisory Panels to develop and report to the Department risk ratio thresholds, minimum n-sizes, minimum cell sizes, and standards for reasonable progress, draft and disseminate new guidance to LEAs, and review and update State systems that examine the policies, practices, and procedures of LEAs identified as having significant disproportionality.

To comply with the final regulations, States will have to take time to review the regulations, determine how these regulations will affect existing State policies, practices, and procedures, and plan for any actions necessary to comply with the new requirements. To estimate the cost per State, we assume that State employees involved in this work would likely include a Special Education Director (\$63.04), a Database Manager (\$52.32), two Management Analysts (\$44.64), and a Lawyer (\$61.66), at 16 hours each for a total one-time cost for the 50 States, the District of Columbia, Puerto Rico, Guam, American Samoa, and the Virgin Islands of \$234,345.⁴

Since no State currently calculates significant disproportionality using the exact methodology in this regulation, each State will need to modify its data collection tools. To estimate the cost per State, the Department doubled the time estimates contained in the NPRM. We assume that State employees would likely include a Database Manager (\$52.32) and a Management Analyst (\$44.64) at 32 hours each for a total one-

time cost for the 50 States, the District of Columbia, Puerto Rico, Guam, American Samoa, and the Virgin Islands of \$170,648. While we recognize that these costs will vary widely from State to State, we believe that this total represents an appropriate estimate of the costs across all States.

States will also need to draft, issue, and disseminate new guidance documents to LEAs regarding these regulatory changes, including a discussion of any new data collection tools or processes and revised procedures for identifying and notifying LEAs. We assume States would have to communicate changes in policy and would likely use a mixture of teleconferences, Webinars, and guidance documents to ensure that LEAs understand and comply with revised policies. To estimate the cost per State, the Department doubled the previous time estimates from the NPRM. We assume that State employees would likely include a Special Education Director (\$63.04) for 6 hours, 5 Management Analysts (\$44.64) for 32 hours, 2 Administrative Assistants (\$25.69) for 16 hours, a Computer Support Specialist (\$35.71) for 4 hours, and 2 lawyers (\$61.66) for 32 hours, for a total one-time cost for the 50 States, the District of Columbia, Puerto Rico, Guam, American Samoa, and the Virgin Islands of \$683,748.

Additionally, changes under § 300.646(d) require LEAs identified as having significant disproportionality to use funds reserved for comprehensive CEIS to identify and address the factors contributing to significant disproportionality. States will have to review their existing processes to ensure that LEAs are provided with appropriate support to identify these contributing factors and use funds for comprehensive CEIS in ways that are appropriately targeted to address those factors. To estimate the cost per State, we assume that State employees involved in these activities would likely include a Special Education Director (\$63.04) for 4 hours, 2 Management Analysts (\$44.64) for 16 hours, an Administrative Assistant (\$25.69) for 2 hours, and a Manager (\$51.50) for 8 hours for a total one-time cost for the 50 States, the District of Columbia, Puerto Rico, Guam, American Samoa, and the Virgin Islands of \$117,922.

Under the new regulations, States must also determine risk ratio thresholds, minimum n-sizes, minimum cell sizes, and a standard for reasonable progress, based on the advice of stakeholders, including State Advisory Panels, as provided under IDEA section 612(a)(21)(D)(iii). In order to estimate

⁴ Unless otherwise noted, all hourly wages are loaded wage rates and are based on median hourly earnings as reported in the May 2014 National Occupational Employment and Wage Estimates from the Bureau of Labor Statistics (see www.bls.gov/oes/current/999201.htm) multiplied by an employer cost for employee compensation of 1.57 (see www.bls.gov/news.release/eecc.toc.htm).

the cost of implementing these requirements including the new requirement that States set reasonable minimum n-sizes and cell sizes, the Department doubled the previous time estimates from the NPRM. We assume that the average State would likely initially meet this requirement in Year 1 and revisit the thresholds and cell sizes every five years thereafter. We further assume that the meetings with the State Advisory Panels would include at least the following representatives from the statutorily required categories of stakeholders: One parent of a child with disabilities; one individual with disabilities; one teacher; one representative of an institution of higher education that prepares special education and related services personnel; one State and one local education official, including an official who carries out activities under subtitle B of title VII of the McKinney-Vento Homeless Assistance Act; one Administrator of programs for children with disabilities; one representative of other State agencies involved in the financing or delivery of related services to children with disabilities; one representative of private schools and public charter schools; one representative of a vocational, community, or business organization concerned with the provision of transition services to children with disabilities; one representative from the State child welfare agency responsible for foster care; and one representative from the State juvenile and adult corrections agencies. To estimate the cost of participating in these meetings for the required categories of stakeholders, we assume that each meeting would require 16 hours of each participant's time (including preparation for and travel to and from the meeting and the time for the meeting itself) and use the following national median hourly wages⁵ for full-time State and local government workers employed in these professions: Postsecondary education administrators, \$44.28 (1 stakeholder); primary, secondary, and special education school teachers, \$35.66⁶ (1 stakeholder); State social and community service managers, \$32.86 (5 stakeholders); local social and community service managers, \$37.13 (1

stakeholder); other management occupations, \$40.22 (1 stakeholder); elementary and secondary school education administrator, \$42.74 (1 stakeholder).⁷ For the opportunity cost for the parent and individual with disabilities, we use the average median wage for all workers of \$17.09. We also assume that State staff would prepare for and facilitate each meeting, including the Special Education Director (\$63.04) for 4 hours, one State employee in a managerial position (\$51.50) for 32 hours, one Management Analyst (\$44.64) for 32 hours, and one Administrative Assistant (\$25.69) for 32 hours. Based on these participants, we estimate that consultation with the State Advisory Panels would have a cumulative one-year cost of \$578,988 for the 50 States, the District of Columbia, Puerto Rico, Guam, American Samoa, and the Virgin Islands.

New § 300.647(b)(7) will require States to report all risk ratio thresholds, minimum cell sizes, minimum n-sizes, standards for measuring reasonable progress, and the rationales for each to the Department at a time and in a manner determined by the Secretary. To estimate the cost per State, we assume that State employees would likely include a Database Manager (\$52.32) for 5 hours and a Management Analyst (\$44.64) for 20 hours for an annual cost for the 50 States, the District of Columbia, Puerto Rico, Guam, American Samoa, and the Virgin Islands of \$63,491.

Annual Calculation of Risk Ratios and Notification of LEAs

In addition to the costs outlined above, States will incur annual costs associated with calculating risk ratios, making determinations of significant disproportionality, and notifying LEAs of determinations.

New § 300.647 requires every State to annually calculate significant disproportionality for each LEA using a risk ratio or alternate risk ratio method in every category of analysis (as defined in this document) that meets the minimum n-size and cell size requirements, as determined by the State. States are required to identify LEAs above the risk ratio threshold with significant disproportionality. When making a determination of significant disproportionality, States will be

allowed to use up to three years of data, and take into account whether LEAs demonstrate reasonable progress, under § 300.647(d)(2), in lowering their risk ratios or alternate risk ratios. To estimate the annual cost per State, the Department doubled the time estimates included in the NPRM. In this notice of final regulations, we assume that State employees involved in this calculation will include 3 Management Analysts (\$44.64) for 48 hours and one Administrative Assistant (\$25.69) for 12 hours for an annual cost of \$370,500 for the 50 States, the District of Columbia, Puerto Rico, Guam, American Samoa, and the Virgin Islands.

After identifying LEAs with significant disproportionality, States would have to notify LEAs of their determination. We assume that a State employee in a managerial position (\$51.50) would call each identified LEA with the assistance of one Administrative Assistant (\$25.69) and take approximately 15 minutes per LEA. We assume 400 new LEAs will be identified with significant disproportionality, resulting in an annual cost of \$7,719.

Review and Revision of Policies, Practices, and Procedures

States are required to provide for the review and, if appropriate, revision of policies, practices, and procedures related to the identification, placement, and discipline of children with disabilities to ensure the policies, practices, and procedures comply with requirements of IDEA and publicly report any revisions. We assume States will ensure LEAs are complying with these requirements through desk audits, meetings or phone calls with LEAs, analysis of data, or sampling of IEPs and evaluations. To estimate the annual cost at the State level, we assume that State employees would likely include one Special Education Director (\$63.04) for 0.5 hours, one State employee in a managerial position (\$51.50) for 1 hour, one Administrative Assistant (\$25.69) for 1 hour, and 1 Management Analyst (\$44.64) for 6 hours for each LEA. We assume 400 new LEAs are identified with significant disproportionality each year, the annual cost would be \$150,621 for the 50 States, the District of Columbia, Puerto Rico, Guam, American Samoa, and the Virgin Islands.

States are required to ensure that LEAs identified with significant disproportionality review their policies, practices, and procedures related to the identification, placement, and discipline of children with disabilities to ensure the policies, practices, and procedures comply with requirements

⁵ Wages in this section do not reflect loaded wage rates.

⁶ Hourly earnings were estimated using the annual salary for this job classification as reported in the May 2014 National Occupational Employment and Wage Estimates from the Bureau of Labor Statistics (see <http://www.bls.gov/oes/current/999201.htm>) divided by the number of workdays and hours per day assuming 200 workdays and 8 hours per day.

⁷ Hourly earnings were estimated using the annual salary for this job classification as reported in the May 2014 National Occupational Employment and Wage Estimates from the Bureau of Labor Statistics (see <http://www.bls.gov/oes/current/999201.htm>) divided by the number of work weeks and hours per week assuming 52 weeks and 40 hours per week.

of IDEA. We assume this would require LEAs to examine data, identify areas of concern, visit schools, review IEPs and evaluations, and review any other relevant documents. To estimate the annual cost to review policies, practices, and procedures at the LEA level, we assume that LEA employees would likely include one District Superintendent (\$85.74) for 5 hours, one local employee in a managerial position (\$58.20) for 60 hours, one local Special Education Director (\$66.52) for 20 hours, two local Administrative Assistants (\$28.43) for 15 hours, four Special Education teachers (\$58.47⁸) for 2 hours, and two Education Administrators (\$70.37⁹) for 8 hours for each LEA. If we assume 400 new LEAs are identified with significant disproportionality, the annual cost to LEAs would be \$3,079,030.

After reviewing their policies, practices, and procedures related to the identification, placement, and discipline of children with disabilities, LEAs are required, if appropriate, to revise those policies, practices, and procedures to ensure they comply with requirements of IDEA. We assume LEAs will have to spend time developing a plan to change any policies, practices, and procedures identified in their review based on relevant data. To estimate the annual cost to revise policies, practices, and procedures we assume that LEA staff would likely include one District Superintendent (\$85.74) for 2 hours, one local employee in a managerial position (\$58.20) for 60 hours, one local Special Education Director (\$66.52) for 20 hours, and two local Administrative Assistants (\$28.43) for 8 hours for each LEA. If we assume half of the new LEAs identified with significant disproportionality (200 LEAs) would need to revise their policies, practices, and procedures the annual cost would be \$1,089,730.

Planning for and Tracking the Use of Funds for Comprehensive CEIS

LEAs identified with significant disproportionality are required by statute to reserve 15 percent of their

IDEA Part B funds for comprehensive CEIS. Any LEAs fitting into this category will also have to plan for the use of funds reserved for comprehensive CEIS. To estimate the annual cost of planning for the use of IDEA Part B funds for comprehensive CEIS, we assume that LEA employees involved in these activities would likely include one District Superintendent (\$85.74) for 1 hour, one local employee in a managerial position (\$58.20) for 16 hours, one local Special Education Director (\$66.52) for 4 hours, and one local Budget Analyst (\$49.97) for 24 hours for each LEA. If we assume 400 new LEAs are identified with significant disproportionality, the annual cost would be \$992,890.

LEAs reserving IDEA Part B funds for comprehensive CEIS will also have to track the actual use of those funds. We assume LEAs will have to commit staff time to ensure they are meeting the fiscal requirements associated with the use of funds for comprehensive CEIS. To estimate the annual cost of tracking the use of funds for comprehensive CEIS, we assume that one local Budget Analyst (\$49.97) would be required for 8 hours for each LEA. If we assume 400 new LEAs are identified with significant disproportionality, the annual cost would be \$159,900.

LEAs providing comprehensive CEIS are also currently required to track the number of children served under comprehensive CEIS and the number of children served under comprehensive CEIS who subsequently receive special education and related services during the preceding two-year period. To estimate the annual cost of tracking children receiving services under comprehensive CEIS, we assume that LEA employees would likely include one Database Manager (\$50.63) for 40 hours and one local Administrative Assistant (\$28.43) for 8 hours for each LEA. If we assume 400 new LEAs are identified with significant disproportionality, the annual cost would be \$901,016.

States are required to annually review each LEA's application for a subgrant under IDEA Part B. As noted above, LEAs identified with significant disproportionality are required to reserve 15 percent of their Part B funds for comprehensive CEIS and many States require LEAs to reflect that reservation as part of their application for IDEA Part B funds. To estimate the annual cost stemming from State reviews of LEA applications to ensure compliance for all newly identified LEAs, we assume that State employees would likely include one Management Analyst (\$44.64) and take 0.25 hours for

each LEA. If we assume 400 new LEAs are identified with significant disproportionality, the annual cost would be \$4,464.

Federal Review of State Risk Ratio Thresholds

Under § 300.647(b)(1)(iii), the risk ratio thresholds, minimum n-sizes, minimum cell sizes, and standards for reasonable progress established by States are subject to monitoring and enforcement by the Department. At this time, the Department expects that it would conduct monitoring of all States in the first year that States set the thresholds, minimum n-sizes, minimum cell sizes, and standards for reasonable progress and then monitor the thresholds, minimum n-sizes, minimum cell sizes, and standards for reasonable progress again in any year in which a State changes these standards. To estimate the annual cost of reviewing risk ratio thresholds, minimum n-sizes, minimum cell sizes, and the standards for reasonable progress, the Department assumes the new requirements would increase staff time four fold. We assume that Department staff involved in these reviews would likely include one management analyst at the GS-13 level (\$73.95¹⁰), and take 4 hour each for the 50 States, the District of Columbia, Puerto Rico, Guam, American Samoa, and the Virgin Islands. If we assume the Department would have to review every State in year one, 25 States in year 2, 10 States in year 3, and 5 States in each year thereafter, the average annual cost over the ten year time horizon would be \$3,058 at a 7 percent discount rate.

Transfers

Under IDEA, LEAs identified with significant disproportionality are required to reserve 15 percent of their IDEA Part B allocation for comprehensive CEIS. Consistent with the Office of Management and Budget Circular A-4, transfers are monetary payments from one group to another that do not affect total resources available to society; therefore, this reservation constitutes a transfer. Using data collected under section 618 from the SY 2011-2012, the Department estimates that 15 percent of the average LEA section 611 and section 619 subgrants will be \$106,220. Assuming 400 new LEAs are identified with significant disproportionality each year, the total annual transfer would be \$42,488,000. It is important to note that

⁸ Hourly earnings were estimated using the annual salary for this job classification as reported in the May 2014 National Occupational Employment and Wage Estimates from the Bureau of Labor Statistics (see www.bls.gov/oes/current/999201.htm) divided by the number of work days and hours per day assuming 200 workdays and 8 hours per day.

⁹ Hourly earnings were determined using the annual salary for this job classification as reported in the May 2014 National Occupational Employment and Wage Estimates from the Bureau of Labor Statistics (see www.bls.gov/oes/current/999201.htm) divided by the number of work weeks and hours per week assuming 52 weeks and 40 hours per week.

¹⁰ This loaded hourly wage rate is based on the hourly earnings of a GS-13 step 3 federal employee in Washington, DC. (See: www.opm.gov/policy-data-oversight/pay-leave/salaries-wages/salary-tables/16Tables/html/DCB_h.aspx).

these formula funds would not be subgranted to new entities, but rather that the beneficiaries of these funds would change. As noted elsewhere in this final rule, the regulations clarify that funds reserved for comprehensive CEIS can be used to provide services to children with disabilities. To the extent that LEAs use their funds reserved for comprehensive CEIS to provide services to these children, the total amount of the transfer will be lower than what is estimated here.

Sensitivity Analysis

As noted elsewhere in the Discussion of Costs, Benefits, and Transfers, the estimated costs associated with this regulation are highly sensitive to the Department's assumption regarding the total number of LEAs nationwide that States will identify in each year. For purposes of the estimates outlined above, the Department assumed that 400 additional LEAs above the baseline of 449 would be identified in each year.

However, since we do not know how many LEAs States will actually identify as a result of the changes, for the purpose of this sensitivity analysis, we develop and present what we consider to be reasonable upper- and lower-bound estimates. To establish a reasonable lower-bound, we estimate that no additional LEAs above the baseline number would be identified in the out years. We believe that this would represent an extreme lower bound for the likely costs of this regulation because we consider it highly unlikely that there would be no additional LEAs identified. As noted above, the Department's estimate of 400 LEAs is based on a view that at least some, if not most, States will take advantage of the opportunity presented by the transition to the standard methodology to set risk ratio thresholds and reasonable n-size and cell size requirements that identify more LEAs. We believe that this assumption of 400 LEAs above baseline represents the most

reasonable estimate of the likely costs associated with these final rules. In order to estimate an upper bound, the Department assumes that States could set much more aggressive thresholds or small n-size or cell size requirements for identifying LEAs with significant disproportionality, ultimately identifying an additional 1,200 LEAs above baseline each year. As with the estimate of 400 LEAs, it is important to note that the regulation itself would not require States to identify additional LEAs. Rather, the Department is attempting to estimate a range of potential State-level responses to the regulation, including making proactive decisions to shift State policies related to identification of LEAs. In the table below, we show the impact of these varying assumptions regarding the number of additional LEAs identified on the estimated costs. Costs and transfers outlined in this table are calculated at a three percent discount rate.

TABLE 2—SENSITIVITY OF COST ESTIMATES TO NUMBER OF ADDITIONAL LEAS ASSUMED TO BE IDENTIFIED

Category	Costs		
	0 LEAs	400 LEAs	1,200 LEAs
State-level review and compliance with the new rule (modifying data collection tools, meeting with State Advisory Panels, drafting and issuing guidance to LEAs, reporting data)	\$3,362,902	\$3,362,902	\$3,362,902
Annual calculation of risk ratios and notification of LEAs	4,821,062	4,921,510	5,122,405
Review and, if necessary, revision of policies, practices, and procedures	0	56,312,177	168,722,536
Planning for and tracking the use of funds for comprehensive CEIS	0	26,782,849	80,348,546
Category	Transfers		
Reservation of funds for comprehensive CEIS	0	552,867,164	1,658,601,491

Paperwork Reduction Act of 1995

This final rule contains information collection requirements that are approved by OMB under OMB control number 1820–0689. It also contains a new regulatory requirement, in § 300.647(b)(7), that implicates the Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3520) (PRA). We will meet all applicable PRA requirements before we collect any information pursuant to the new requirement.

Intergovernmental Review

This program is subject to Executive Order 12372 and the regulations in 34 CFR part 79. One of the objectives of the Executive Order is to foster an intergovernmental partnership and a strengthened federalism. The Executive Order relies on processes developed by State and local governments for coordination and review of proposed Federal financial assistance. This document provides early notification of the Department's specific plans and actions for this program.

Assessment of Educational Impact

In the NPRM we requested comments on whether the proposed regulations would require transmission of information that any other agency or authority of the United States gathers or makes available. Based on the response to the NPRM and on our review, we have determined that these final regulations do not require transmission of information that any other agency or authority of the United States gathers or makes available. *Accessible Format:* Individuals with disabilities can obtain this document in an accessible format (e.g., braille, large print, audiotape, or compact disc) on request to the program contact person listed under **FOR FURTHER INFORMATION CONTACT**. *Electronic Access to This Document:* The official version of this document is the document published in the **Federal Register**. Free Internet access to the official edition of the **Federal Register** and the Code of Federal Regulations is

available via the Federal Digital System at: www.gpo.gov/fdsys. At this site you can view this document, as well as all other documents of this Department published in the **Federal Register**, in text or Adobe Portable Document Format (PDF). To use PDF you must have Adobe Acrobat Reader, which is available free at the site. You may also access documents of the Department published in the **Federal Register** by using the article search feature at: www.federalregister.gov. Specifically, through the advanced search feature at this site, you can limit your search to documents published by the Department. **List of Subjects in 34 CFR Part 300** Administrative practice and procedure, Education of individuals with disabilities, Elementary and secondary education, Equal educational opportunity, Grant programs—education, Privacy, Private schools, Reporting and recordkeeping requirements.

Dated: December 12, 2016.

John B. King, Jr.,

Secretary of Education.

For the reasons discussed in the preamble, the Secretary of Education amends title 34 of the Code of Federal Regulations as follows:

PART 300—ASSISTANCE TO STATES FOR THE EDUCATION OF CHILDREN WITH DISABILITIES

■ 1. The authority citation for part 300 continues to read as follows:

Authority: 20 U.S.C. 1221e–3, 1406, 1411–1419, 3474, unless otherwise noted.

■ 2. Section 300.646 is revised to read as follows:

§ 300.646 Disproportionality.

(a) *General.* Each State that receives assistance under Part B of the Act, and the Secretary of the Interior, must provide for the collection and examination of data to determine if significant disproportionality based on race and ethnicity is occurring in the State and the LEAs of the State with respect to—

(1) The identification of children as children with disabilities, including the identification of children as children with disabilities in accordance with a particular impairment described in section 602(3) of the Act;

(2) The placement in particular educational settings of these children; and

(3) The incidence, duration, and type of disciplinary removals from placement, including suspensions and expulsions.

(b) *Methodology.* The State must apply the methods in § 300.647 to determine if significant disproportionality based on race and ethnicity is occurring in the State and the LEAs of the State under paragraph (a) of this section.

(c) *Review and revision of policies, practices, and procedures.* In the case of a determination of significant disproportionality with respect to the identification of children as children with disabilities or the placement in particular educational settings, including disciplinary removals of such children, in accordance with paragraphs (a) and (b) of this section, the State or the Secretary of the Interior must—

(1) Provide for the annual review and, if appropriate, revision of the policies, practices, and procedures used in identification or placement in particular education settings, including disciplinary removals, to ensure that the policies, practices, and procedures comply with the requirements of the Act.

(2) Require the LEA to publicly report on the revision of policies, practices, and procedures described under paragraph (c)(1) of this section consistent with the requirements of the Family Educational Rights and Privacy Act, its implementing regulations in 34 CFR part 99, and Section 618(b)(1) of the Act.

(d) *Comprehensive coordinated early intervening services.* Except as provided in paragraph (e) of this section, the State or the Secretary of the Interior shall require any LEA identified under paragraphs (a) and (b) of this section to reserve the maximum amount of funds under section 613(f) of the Act to provide comprehensive coordinated early intervening services to address factors contributing to the significant disproportionality.

(1) In implementing comprehensive coordinated early intervening services an LEA—

(i) May carry out activities that include professional development and educational and behavioral evaluations, services, and supports.

(ii) Must identify and address the factors contributing to the significant disproportionality, which may include, among other identified factors, a lack of access to scientifically based instruction; economic, cultural, or linguistic barriers to appropriate identification or placement in particular educational settings; inappropriate use of disciplinary removals; lack of access to appropriate diagnostic screenings; differences in academic achievement levels; and policies, practices, or procedures that contribute to the significant disproportionality.

(iii) Must address a policy, practice, or procedure it identifies as contributing to the significant disproportionality, including a policy, practice or procedure that results in a failure to identify, or the inappropriate identification of, a racial or ethnic group (or groups).

(2) An LEA may use funds reserved for comprehensive coordinated early intervening services to serve children from age 3 through grade 12, particularly, but not exclusively, children in those groups that were significantly overidentified under paragraph (a) or (b) of this section, including—

(i) Children who are not currently identified as needing special education or related services but who need additional academic and behavioral support to succeed in a general education environment; and

(ii) Children with disabilities.

(3) An LEA may not limit the provision of comprehensive coordinated

early intervening services under this paragraph to children with disabilities.

(e) *Exception to comprehensive coordinated early intervening services.* The State or the Secretary of the Interior shall not require any LEA that serves only children with disabilities identified under paragraphs (a) and (b) of this section to reserve funds to provide comprehensive coordinated early intervening services.

(f) *Rule of construction.* Nothing in this section authorizes a State or an LEA to develop or implement policies, practices, or procedures that result in actions that violate the requirements of this part, including requirements related to child find and ensuring that a free appropriate public education is available to all eligible children with disabilities.

(Authority: 20 U.S.C. 1413(f); 20 U.S.C. 1418(d))

■ 3. Section 300.647 is added to read as follows:

§ 300.647 Determining significant disproportionality.

(a) *Definitions.* (1) *Alternate risk ratio* is a calculation performed by dividing the risk of a particular outcome for children in one racial or ethnic group within an LEA by the risk of that outcome for children in all other racial or ethnic groups in the State.

(2) *Comparison group* consists of the children in all other racial or ethnic groups within an LEA or within the State, when reviewing a particular racial or ethnic group within an LEA for significant disproportionality.

(3) *Minimum cell size* is the minimum number of children experiencing a particular outcome, to be used as the numerator when calculating either the risk for a particular racial or ethnic group or the risk for children in all other racial or ethnic groups.

(4) *Minimum n-size* is the minimum number of children enrolled in an LEA with respect to identification, and the minimum number of children with disabilities enrolled in an LEA with respect to placement and discipline, to be used as the denominator when calculating either the risk for a particular racial or ethnic group or the risk for children in all other racial or ethnic groups.

(5) *Risk* is the likelihood of a particular outcome (identification, placement, or disciplinary removal) for a specified racial or ethnic group (or groups), calculated by dividing the number of children from a specified racial or ethnic group (or groups) experiencing that outcome by the total number of children from that racial or

ethnic group or groups enrolled in the LEA.

(6) *Risk ratio* is a calculation performed by dividing the risk of a particular outcome for children in one racial or ethnic group within an LEA by the risk for children in all other racial and ethnic groups within the LEA.

(7) *Risk ratio threshold* is a threshold, determined by the State, over which disproportionality based on race or ethnicity is significant under § 300.646(a) and (b).

(b) *Significant disproportionality determinations.* In determining whether significant disproportionality exists in a State or LEA under § 300.646(a) and (b)—

(1)(i) The State must set a:
(A) Reasonable risk ratio threshold;
(B) Reasonable minimum cell size;
(C) Reasonable minimum n-size; and
(D) Standard for measuring reasonable progress if a State uses the flexibility described in paragraph (d)(2) of this section.

(ii) The State may, but is not required to, set the standards set forth in paragraph (b)(1)(i) of this section at different levels for each of the categories described in paragraphs (b)(3) and (4) of this section.

(iii) The standards set forth in paragraph (b)(1)(i) of this section:

(A) Must be based on advice from stakeholders, including State Advisory Panels, as provided under section 612(a)(21)(D)(iii) of the Act; and
(B) Are subject to monitoring and enforcement for reasonableness by the Secretary consistent with section 616 of the Act.

(iv) When monitoring for reasonableness under paragraph (b)(1)(iii)(B) of this section, the Department finds that the following are presumptively reasonable:

(A) A minimum cell size under paragraph (b)(1)(i)(B) of this section no greater than 10; and
(B) A minimum n-size under paragraph (b)(1)(i)(C) of this section no greater than 30.

(2) The State must apply the risk ratio threshold or thresholds determined in paragraph (b)(1) of this section to risk ratios or alternate risk ratios, as appropriate, in each category described in paragraphs (b)(3) and (4) of this section and the following racial and ethnic groups:

(i) Hispanic/Latino of any race; and, for individuals who are non-Hispanic/Latino only;
(ii) American Indian or Alaska Native;
(iii) Asian;

(iv) Black or African American;
(v) Native Hawaiian or Other Pacific Islander;
(vi) White; and
(vii) Two or more races.

(3) Except as provided in paragraphs (b)(5) and (c) of this section, the State must calculate the risk ratio for each LEA, for each racial and ethnic group in paragraph (b)(2) of this section with respect to:

(i) The identification of children ages 3 through 21 as children with disabilities; and

(ii) The identification of children ages 3 through 21 as children with the following impairments:

(A) Intellectual disabilities;
(B) Specific learning disabilities;
(C) Emotional disturbance;
(D) Speech or language impairments;
(E) Other health impairments; and
(F) Autism.

(4) Except as provided in paragraphs (b)(5) and (c) of this section, the State must calculate the risk ratio for each LEA, for each racial and ethnic group in paragraph (b)(2) of this section with respect to the following placements into particular educational settings, including disciplinary removals:

(i) For children with disabilities ages 6 through 21, inside a regular class less than 40 percent of the day;

(ii) For children with disabilities ages 6 through 21, inside separate schools and residential facilities, not including homebound or hospital settings, correctional facilities, or private schools;

(iii) For children with disabilities ages 3 through 21, out-of-school suspensions and expulsions of 10 days or fewer;

(iv) For children with disabilities ages 3 through 21, out-of-school suspensions and expulsions of more than 10 days;

(v) For children with disabilities ages 3 through 21, in-school suspensions of 10 days or fewer;

(vi) For children with disabilities ages 3 through 21, in-school suspensions of more than 10 days; and

(vii) For children with disabilities ages 3 through 21, disciplinary removals in total, including in-school and out-of-school suspensions, expulsions, removals by school personnel to an interim alternative education setting, and removals by a hearing officer.

(5) The State must calculate an alternate risk ratio with respect to the categories described in paragraphs (b)(3) and (4) of this section if the comparison group in the LEA does not meet the minimum cell size or the minimum n-size.

(6) Except as provided in paragraph (d) of this section, the State must identify as having significant disproportionality based on race or ethnicity under § 300.646(a) and (b) any LEA that has a risk ratio or alternate risk ratio for any racial or ethnic group in any of the categories described in paragraphs (b)(3) and (4) of this section that exceeds the risk ratio threshold set by the State for that category.

(7) The State must report all risk ratio thresholds, minimum cell sizes, minimum n-sizes, and standards for measuring reasonable progress selected under paragraphs (b)(1)(i)(A) through (D) of this section, and the rationales for each, to the Department at a time and in a manner determined by the Secretary. Rationales for minimum cell sizes and minimum n-sizes not presumptively reasonable under paragraph (b)(1)(iv) of this section must include a detailed explanation of why the numbers chosen are reasonable and how they ensure that the State is appropriately analyzing and identifying LEAs with significant disparities, based on race and ethnicity, in the identification, placement, or discipline of children with disabilities.

(c) *Exception.* A State is not required to calculate a risk ratio or alternate risk ratio, as outlined in paragraphs (b)(3), (4), and (5) of this section, to determine significant disproportionality if:

(1) The particular racial or ethnic group being analyzed does not meet the minimum cell size or minimum n-size; or

(2) In calculating the alternate risk ratio under paragraph (b)(5) of this section, the comparison group in the State does not meet the minimum cell size or minimum n-size.

(d) *Flexibility.* A State is not required to identify an LEA as having significant disproportionality based on race or ethnicity under § 300.646(a) and (b) until—

(1) The LEA has exceeded a risk ratio threshold set by the State for a racial or ethnic group in a category described in paragraph (b)(3) or (4) of this section for up to three prior consecutive years preceding the identification; and

(2) The LEA has exceeded the risk ratio threshold and has failed to demonstrate reasonable progress, as determined by the State, in lowering the risk ratio or alternate risk ratio for the group and category in each of the two prior consecutive years.

(Authority: 20 U.S.C. 1418(d).)

Promulgation of Certain Federal Water Quality Standards Applicable to
Maine; Final Rule

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 131

[EPA-HQ-OW-2015-0804; FRL-9952-99-OW]

RIN 2040-AF59

Promulgation of Certain Federal Water Quality Standards Applicable to Maine

AGENCY: Environmental Protection Agency (EPA).

ACTION: Final rule.

SUMMARY: The Environmental Protection Agency (EPA) is finalizing federal Clean Water Act (CWA) water quality standards (WQS) for certain waters under the state of Maine's jurisdiction, including human health criteria (HHC) to protect the sustenance fishing designated use in waters in Indian lands and in waters subject to sustenance fishing rights under the Maine Implementing Act (MIA). EPA is promulgating these WQS to address various disapprovals of Maine's standards that EPA issued in February, March, and June 2015, and to address the Administrator's determination that Maine's HHC are not adequate to protect the designated use of sustenance fishing for certain waters.

DATES: This final rule is effective on January 18, 2017. The incorporation by reference of certain publications listed in the rule is approved by the Director of the Federal Register as of January 18, 2017.

ADDRESSES: EPA has established a docket for this action under Docket ID No. EPA-HQ-OW-2015-0804. All

documents in the docket are listed on the <http://www.regulations.gov> Web site. Although listed in the index, some information is not publicly available, e.g., CBI or other information whose disclosure is restricted by statute. Certain other material, such as copyrighted material, is not placed on the Internet and will be publicly available only in hard copy form. Publicly available docket materials are available electronically through <http://www.regulations.gov>.

FOR FURTHER INFORMATION CONTACT:

Jennifer Brundage, Office of Water, Standards and Health Protection Division (4305T), Environmental Protection Agency, 1200 Pennsylvania Avenue NW., Washington, DC 20460; telephone number: (202) 566-1265; email address: Brundage.jennifer@epa.gov.

SUPPLEMENTARY INFORMATION: This final rule is organized as follows:

- I. General Information
 - A. Does this action apply to me?
 - B. How did EPA develop this final rule?
- II. Background and Summary
 - A. Statutory and Regulatory Background
 - B. Description of Final Rule
- III. Summary of Major Comments Received and EPA's Response
 - A. Overview of Comments
 - B. Maine Indian Settlement Acts
 - C. Sustenance Fishing Designated Use
 - D. Human Health Criteria for Toxics for Waters in Indian Lands
 - E. Other Water Quality Standards
- IV. Economic Analysis
 - A. Identifying Affected Entities
 - B. Method for Estimated Costs
 - C. Results
- V. Statutory and Executive Order Reviews

- A. Executive Order 12866 (Regulatory Planning and Review) and Executive Order 13563 (Improving Regulation and Regulatory Review)
- B. Paperwork Reduction Act
- C. Regulatory Flexibility Act
- D. Unfunded Mandates Reform Act
- E. Executive Order 13132
- F. Executive Order 13175 (Consultation and Coordination With Indian Tribal Governments)
- G. Executive Order 13045 (Protection of Children From Environmental Health and Safety Risks)
- H. Executive Order 13211 (Actions That Significantly Affect Energy Supply, Distribution, or Use)
- I. National Technology Transfer and Advancement Act of 1995
- J. Executive Order 12898 (Federal Actions To Address Environmental Justice in Minority Populations and Low-Income Populations)
- K. Congressional Review Act (CRA)

I. General Information

A. Does this action apply to me?

Entities such as industries, stormwater management districts, or publicly owned treatment works (POTWs) that discharge pollutants to waters of the United States in Maine could be indirectly affected by this rulemaking, because federal WQS promulgated by EPA are applicable to CWA regulatory programs, such as National Pollutant Discharge Elimination System (NPDES) permitting. Citizens concerned with water quality in Maine, including members of the federally recognized Indian tribes in Maine, could also be interested in this rulemaking. Dischargers that could potentially be affected include the following:

TABLE 1—DISCHARGERS POTENTIALLY AFFECTED BY THIS RULEMAKING

Category	Examples of potentially affected entities
Industry	Industries discharging pollutants to waters of the United States in Maine.
Municipalities	Publicly owned treatment works or other facilities discharging pollutants to waters of the United States in Maine.
Stormwater Management Districts ..	Entities responsible for managing stormwater runoff in the state of Maine.

This table is not intended to be exhaustive, but rather provides a guide for readers regarding entities that could be indirectly affected by this action. Any parties or entities who depend upon or contribute to the quality of Maine's waters could be affected by this rule. To determine whether your facility or activities could be affected by this action, you should carefully examine this rule. If you have questions regarding the applicability of this action to a particular entity, consult Jennifer Brundage, whose contact information

can be found in the **FOR FURTHER INFORMATION** section above.

B. How did EPA develop this final rule?

In developing this final rule, EPA carefully considered the public comments and feedback received from interested parties. EPA provided a 60-day public comment period after publishing the proposed rule in the **Federal Register** on April 20, 2016.¹ In

¹ See Proposal of Certain Federal Water Quality Standards Applicable to Maine, 81 FR 23239, April 20, 2016.

addition, EPA held two virtual public hearings on June 7 and 9, 2016, to discuss the contents of the proposed rule and accept verbal public comments.

Over 100 organizations and individuals submitted comments on a range of issues. Some comments addressed issues beyond the scope of the rulemaking, and thus EPA did not consider them in finalizing this rule. In section III of this preamble, EPA discusses certain public comments so that the public is aware of the Agency's position. For a full response to these

and all other comments, see EPA's Response to Comments (RTC) document in the official public docket.

II. Background and Summary

A. Statutory and Regulatory Background

1. Clean Water Act (CWA)

CWA section 101(a)(2) establishes as a national goal "water quality which provides for the protection and propagation of fish, shellfish, and wildlife, and recreation in and on the water, wherever attainable." These are commonly referred to as the "fishable/swimmable" goals of the CWA. EPA interprets "fishable" uses to include, at a minimum, designated uses providing for the protection of aquatic communities and human health related to consumption of fish and shellfish.²

CWA section 303(c) (33 U.S.C. 1313(c)) directs states to adopt water quality standards (WQS) for waters under their jurisdiction subject to the CWA. CWA section 303(c)(2)(A) and EPA's implementing regulations at 40 CFR part 131 require, among other things, that a state's WQS specify appropriate designated uses of the waters, and water quality criteria to protect those uses that are based on sound scientific rationale. EPA's regulations at 40 CFR 131.11(a)(1) provide that such criteria "must be based on sound scientific rationale and must contain sufficient parameters or constituents to protect the designated use." In addition, 40 CFR 131.10(b) provides that "[i]n designating uses of a waterbody and the appropriate criteria for those uses, the state shall take into consideration the water quality standards of downstream waters and ensure that its water quality standards provide for the attainment and maintenance of the water quality standards of downstream waters."

States are required to review applicable WQS at least once every three years and, if appropriate, revise or adopt new standards (CWA section 303(c)(1)). Any new or revised WQS must be submitted to EPA for review, to determine whether it meets the CWA's requirements, and for approval or disapproval (CWA section 303(c)(2)(A) and (c)(3)). If EPA disapproves a state's new or revised WQS, the CWA provides the state ninety days to adopt a revised WQS that meets CWA requirements, and if it fails to do so, EPA shall promptly propose and then within ninety days promulgate such standard

unless EPA approves a state replacement WQS first (CWA section 303(c)(3) and (c)(4)(A)). If the state adopts and EPA approves a state replacement WQS after EPA promulgates a standard, EPA then withdraws its promulgation. CWA section 303(c)(4)(B) authorizes the Administrator to determine, even in the absence of a state submission, that a new or revised standard is necessary to meet CWA requirements. Upon making such a determination, EPA shall promptly propose, and then within ninety days promulgate, any such new or revised standard unless prior to such promulgation, the state has adopted a revised or new WQS that EPA approves as being in accordance with the CWA.

Under CWA section 304(a), EPA periodically publishes water quality criteria recommendations for states to consider when adopting water quality criteria for particular pollutants to protect the CWA section 101(a)(2) goal uses. For example, in 2015, EPA updated its CWA section 304(a) recommended criteria for human health for 94 pollutants (the 2015 criteria update).³ Where EPA has published recommended criteria, states should adopt water quality criteria based on EPA's CWA section 304(a) criteria, section 304(a) criteria modified to reflect site-specific conditions, or other scientifically defensible methods (40 CFR 131.11(b)(1)). CWA section 303(c)(2)(B) requires states to adopt numeric criteria for all toxic pollutants listed pursuant to CWA section 307(a)(1) for which EPA has published CWA section 304(a) criteria, as necessary to support the states' designated uses.

2. Maine Indian Settlement Acts

There are four federally recognized Indian tribes in Maine represented by five governing bodies. The Penobscot Nation and the Passamaquoddy Tribe have reservations and trust land holdings in central and coastal Maine. The Passamaquoddy Tribe has two governing bodies, one on the Pleasant Point Reservation and another on the Indian Township Reservation. The Houlton Band of Maliseet Indians and the Aroostook Band of Micmacs have trust lands farther north in the state. To simplify the discussion, EPA will refer to the Penobscot Nation and the

Passamaquoddy Tribe together as the "Southern Tribes" and the Houlton Band of Maliseet Indians and Aroostook Band of Micmacs as the "Northern Tribes." EPA acknowledges that these are collective appellations the tribes themselves have not adopted, and the Agency uses them solely to simplify this discussion.

In 1980, Congress passed the Maine Indian Claims Settlement Act (MICSA) that resolved litigation in which the Southern Tribes asserted land claims to a large portion of the state of Maine. Public Law 96-420, 94 Stat. 1785. MICSA ratified a state statute passed in 1979, the Maine Implementing Act (MIA, 30 M.R.S. 6201, *et seq.*), which was designed to embody the agreement reached between the state and the Southern Tribes. In 1981, MIA was amended to include provisions for land to be taken into trust for the Houlton Band of Maliseet Indians, as provided for in MICSA. Public Law 96-420, 94 Stat. 1785 section 5(d)(1); 30 M.R.S. 6205-A. Since it is Congress that has plenary authority as to federally recognized Indian tribes, MIA's provisions concerning jurisdiction and the status of the tribes are effective as a result of, and consistent with, the Congressional ratification in MICSA.

In 1989, the Maine legislature passed the Micmac Settlement Act (MSA) to embody an agreement as to the status of the Aroostook Band of Micmacs. 30 M.R.S. 7201, *et seq.* In 1991, Congress passed the Aroostook Band of Micmacs Settlement Act (ABMSA), which ratified the MSA. Act of Nov. 26, 1991, Public Law 102-171, 105 Stat. 1143. One principal purpose of both statutes was to give the Micmacs the same settlement that had been provided to the Maliseets in MICSA. See ABMSA 2(a)(4) and (5). In 2007, the U.S. Court of Appeals for the First Circuit confirmed that the Micmacs and Maliseets are subject to the same jurisdictional provisions in MICSA. *Aroostook Band of Micmacs v. Ryan*, 484 F.3d 41 (1st Cir. 2007). Where appropriate, this preamble discussion will refer to the combination of MICSA, MIA, ABMSA, and MSA as the "Indian settlement acts" or "settlement acts."

3. EPA's Disapprovals of Portions of Maine's Water Quality Standards

On February 2, March 16, and June 5, 2015, EPA disapproved a number of Maine's new and revised WQS. These decision letters are available in the docket for this rulemaking. They were prompted by an ongoing lawsuit

² USEPA. 2000. Memorandum #WQSP-00-03. U.S. Environmental Protection Agency, Office of Water, Washington, DC. <https://www.epa.gov/sites/production/files/2015-01/documents/standards-shellfish.pdf>.

³ Final Updated Ambient Water Quality Criteria for the Protection of Human Health, (80 FR 36986, June 29, 2015). See also: USEPA. 2015. Final 2015 Updated National Recommended Human Health Criteria. U.S. Environmental Protection Agency, Office of Water, Washington, DC. <http://water.epa.gov/scitech/swguidance/standards/criteria/current/hhfinal.cfm>.

initiated by Maine against EPA.⁴ As discussed in the preamble to the proposed rule (see 81 FR 23239, 23241–23242), some of the disapprovals applied only to waters in Indian lands in Maine, while others applied to waters throughout the state or to waters in the state outside of Indian lands.⁵ EPA concluded that the disapproved WQS did not adequately protect designated uses related to the protection of human health and/or aquatic life.⁶ EPA requested the state to revise its WQS to address the issues identified in the disapprovals. The statutory 90-day timeframe provided to the state to revise its WQS has passed with respect to all of the disapproved WQS. EPA is required by the CWA to promptly propose and then, within 90 days of proposal, to promulgate federal standards unless, in the meantime, the state adopts and EPA approves state replacement WQS that address EPA's disapproval. The state has not adopted WQS revisions to address the disapprovals. Having published the proposed rule on April 20, 2016, EPA is today finalizing the rule. With the exception of minor revisions to several human health criteria as noted in

section II.B.1.a and two small changes discussed in section II.B.2, EPA's final rule is identical to the proposed rule.

4. Scope of Action

a. Scope of Promulgation Related to Disapprovals

To address the disapprovals discussed in section II.A.3, EPA is promulgating human health criteria (HHC) for toxic pollutants and six other WQS that apply only to waters in Indian lands; two WQS for all waters in Maine including waters in Indian lands; and one WQS for waters in Maine outside of Indian lands. For the purpose of this rulemaking, "waters in Indian lands" are those waters in the tribes' reservations and trust lands as provided for in the settlement acts.

b. Scope of Promulgation Related to the Administrator's Determination

On April 20, 2016, EPA made a CWA section 303(c)(4)(B) determination that, for any waters in Maine where there is a sustenance fishing designated use and Maine's existing HHC are in effect, new or revised HHC for the protection of human health in Maine are necessary to meet the requirements of the CWA. EPA proposed (see 81 FR 23239, 23242–23243), and is now finalizing, HHC for toxic pollutants, in accordance with the CWA section 303(c)(4)(B) determination, for the following waters: (1) Waters in Indian lands in the event that a court determines that EPA's disapprovals of HHC for such waters were unauthorized and that Maine's existing HHC are in effect;⁷ and (2) waters where there is a sustenance fishing designated use outside of waters in Indian lands.⁸

⁷ Maine has challenged EPA's disapprovals in federal district court, asserting that EPA did not have the authority to disapprove the HHC in waters in Indian lands. While EPA's position is that the disapprovals were authorized and Maine's existing HHC are not in effect, this determination ensures that EPA has the authority to promulgate the proposed HHC, and that the tribes' sustenance fishing use would be protected, even if Maine were to prevail in its challenge to EPA's disapproval authority.

⁸ In its February 2015 Decision, EPA concluded that section 6207(4) and (9) of MIA constituted a new or revised water quality standard and approved the provision as a designated use of sustenance fishing applicable to all inland waters of the Southern Tribes' reservations in which populations of fish are or may be found. Accordingly, EPA's approval of MIA section 6207(4) and (9) as a designated use of sustenance fishing applies to all waters where the Southern Tribes have a right to sustenance fish, irrespective of whether such waters are determined to be outside of the scope of their reservation for purposes other than sustenance fishing.

EPA notes that there may be one or more waters where the sustenance fishing designated use based on MIA section 6207(4) and (9) extends beyond "waters in Indian lands." For example, a federal

5. Applicability of Water Quality Standards

These water quality standards apply to the categories of waters for CWA purposes, as described in II.B below. Although EPA is finalizing WQS to address the standards that it disapproved or for which it has made a determination, Maine continues to have the option to adopt and submit to EPA new or revised WQS that remedy the issues identified in the disapprovals and determination, consistent with CWA section 303(c) and EPA's implementing regulations at 40 CFR part 131.

Some commenters urged EPA to finalize its rule without any further delay. Conversely, the state noted that EPA should give it additional time to adopt and submit its own WQS to address EPA's disapprovals. EPA acknowledges the perspectives of all of these commenters. EPA agrees that there is a compelling need to finalize the WQS, particularly in waters in Indian lands in Maine. For many pollutants, there are no criteria in effect for CWA purposes in waters in Indian lands, including most human health criteria, and it is important to remedy this gap in protection without further delay where possible. Further, the tribes have repeatedly expressed their desire for, and the importance of, their right to a sustenance fishing way of life, reserved for them under the settlement acts, to be protected. EPA, as a federal government agency, is taking action to protect that right, consistent with the settlement acts and CWA, as described further below.

EPA also agrees that the CWA is intended to protect the Nation's waters through a system of cooperative federalism, with states having the primary responsibility of establishing protective WQS for waters under their jurisdiction. However, Maine is challenging EPA's disapproval of the

district court recently held that the Penobscot Nation's "reservation" for sustenance fishing purposes, as contained in MIA section 6207(4), is broader in scope than its "reservation" under MIA section 6203(8). *Penobscot Nation v. Mills*, 151 F. Supp. 3d 181 (D. Maine Dec. 16, 2015) (formerly, *Penobscot v. Schneider*, appeal docketed, No. 16–1435 (1st Cir. April 26, 2016)). The court held that the Penobscot Nation has a right to sustenance fish throughout the main stem of the Penobscot River (from Indian Island to the confluence of the East and West Branches of the Penobscot River), though its reservation under section 6203(8) consists solely of the islands in that stretch of the river. The determination and corresponding final HHC apply to any water that is beyond the scope of "waters in Indian lands" and to which the sustenance fishing designated use based on MIA section 6207(4) and (9) applies. For a more detailed discussion, see section III.D.5 of this preamble, and also Topic 5 in EPA's Response to Comments document and the "Scope of Waters" Technical Support Document; both documents are in the docket for this rulemaking.

⁴ The state has filed an amended complaint in that lawsuit, challenging, among other things, EPA's February 2, 2015 approval of certain designated uses and disapprovals of Maine's HHC.

⁵ As discussed in the proposal for this rule, unlike in most other states, Maine has the authority to promulgate WQS for waters in Indian lands in Maine, as a result of the settlement acts.

⁶ After further consideration, by letter of January 19, 2016, EPA withdrew its February 2, 2015, disapprovals of Maine's HHC for six pollutants (copper, asbestos, barium, iron, manganese and nitrates) and instead approved them. EPA concluded that those criteria were not calculated using a fish consumption rate, and therefore the basis for EPA's disapprovals of the HHC in the February 2, 2015, decision letter did not apply. EPA approved them as being consistent with EPA's recommended CWA section 304(a) criteria. In addition, by letter of April 11, 2016, EPA withdrew its February 2, 2015, disapprovals of Maine's HHC for the following HHC and instead approved them: (1) For the consumption of water plus organisms for 1,2-dichloropropane, 1,4-dichlorobenzene, dichlorobromomethane, chlorodibromomethane, chrysene, methylene chloride, chlorophenoxy herbicide (2, 4, 5-TP), chlorophenoxy herbicide (2,4-D), and Nnitrosopyrrolidine; (2) for the consumption of organisms alone for acrolein and gamma-BHC (Lindane); and (3) for both the consumption of water plus organisms and for the consumption of organisms alone for 1,2-dichloroethane, acrylonitrile, benzidine, bis(chloromethyl) ether, chloroform, methyl bromide, and tetrachloroethylene. EPA calculated the HHC for these pollutants using the best science reflected in the 2015 criteria updates (which were finalized after the disapprovals), along with a fish consumption rate (FCR) of 286 g/day to protect the sustenance fishing use, and concluded that the resulting HHC were either the same or less stringent than Maine's HHC that EPA had disapproved. Accordingly, EPA withdrew the disapprovals and approved these HHC based on their being adequate to protect the sustenance fishing use.

HHC for waters in Indian lands in federal court, and it commented adversely on EPA's proposed HHC, pH, bacteria, and tidal temperature criteria for waters in Indian lands.

Consequently, EPA has no assurance that Maine will develop WQS that EPA can approve as scientifically defensible and protective of Maine's designated uses.

Having considered these comments, EPA, in keeping with its statutory obligation to promulgate WQS within 90 days after proposing them and the need for these WQS to meet the requirements of the CWA, is finalizing the WQS.

In the April 20, 2016, **Federal Register** notice, EPA proposed that if Maine adopted and submitted WQS that meet CWA requirements after EPA finalized its proposed rule, they would become effective for CWA purposes upon EPA approval and EPA's corresponding promulgated WQS would no longer apply. No commenters supported this proposal. Two commenters objected to it, and one asked that EPA specify that WQS

adopted by the state would have to be at least as stringent as the federally proposed WQS for EPA to approve and make the state WQS effective for CWA purposes.

Upon consideration of comments received on its proposed rule, EPA decided not to finalize the above proposed approach. Consistent with 40 CFR 131.21(c), EPA's federally promulgated WQS are and will be applicable for purposes of the CWA until EPA withdraws those federally promulgated WQS. EPA would undertake a rulemaking to withdraw the federal WQS if and when Maine adopts and EPA approves corresponding WQS that meet the requirements of section 303(c) of the CWA and EPA's implementing regulations at 40 CFR part 131.

B. Description of Final Rule

1. Final WQS for Waters in Indian Lands in Maine and for Waters outside of Indian Lands in Maine Where the Sustenance Fishing Designated Use Established by 30 M.R.S. 6207(4) and (9) Applies

a. Human Health Criteria for Toxic Pollutants

After consideration of all comments received on EPA's proposed rule, EPA is finalizing the proposed criteria for 96 toxic pollutants in this rule applicable to waters in Indian lands.⁹ Table 2 provides the criteria for each pollutant as well as the HHC inputs used to derive each one. These criteria also apply to any waters that are covered by the determination referenced in section II.A.4.

⁹ Final human health criteria for antimony, dichlorobromomethane, nickel, nitrosamines, N-nitrosodibutylamine, N-nitrosodiethylamine, PCBs, selenium, and zinc have been modified slightly from the criteria as proposed to better reflect the appropriate number of significant figures (*i.e.*, precision) in the value.

^a This bioaccumulation factor was estimated from laboratory-measured bioconcentration factors; EPA multiplied this bioaccumulation factor by the overall fish consumption rate of 286 g/day to calculate the human health criteria.

^b EPA's CWA section 304(a) HHC for benzene use a CSF range of 0.015 to 0.055 per mg/kg-day. EPA used the higher end of the CSF range (0.055 per mg/kg-day) to derive the final benzene criteria.

^c This criterion is expressed as the fish tissue concentration of methylmercury (mg methylmercury/kg fish) and applies equally to fresh and marine waters. See Water Quality Criterion for the Protection of Human Health: Methylmercury (EPA-823-R-01-001, January 3, 2001) for how this value is calculated using the criterion equation in EPA's 2000 Methodology rearranged to solve for a protective concentration in fish tissue rather than in water.

^d This criterion applies to total PCBs (*i.e.*, the sum of all congener or isomer or homolog or Aroclor analyses).

^e EPA multiplied this bioconcentration factor by the overall fish consumption rate of 286 g/day to calculate the human health criteria.

i. Sustenance Fishing Designated Use and Tribal Target Population

In its February 2015 decision, EPA concluded that MICA granted the state authority to set WQS in waters in Indian lands. EPA also concluded that in assessing whether the state's WQS were approvable for waters in Indian lands, EPA must effectuate the CWA requirement that WQS must protect applicable designated uses and be based on sound science in consideration of the fundamental purpose for which land was set aside for the tribes under the Indian settlement acts in Maine. EPA found that those settlement acts provide for land to be set aside as a permanent land base for the Indian tribes in Maine, in order for the tribes to be able to continue their unique cultural practices, including the ability to exercise sustenance fishing practices. Accordingly, EPA interpreted the state's "fishing" designated use, as applied to waters in Indian lands, to mean "sustenance fishing" and approved it as such. EPA also approved a specific sustenance fishing right reserved in MIA sections 6207(4) and (9) as a designated use for all inland waters of the Southern Tribes' reservations. Against this backdrop, EPA approved or disapproved all of Maine's HHC for toxic pollutants as applied to waters in Indian lands after evaluating whether they satisfied CWA requirements.

EPA determined that the tribal populations must be treated as the general target population in waters in Indian lands. EPA disapproved many of Maine's HHC for toxic pollutants based on EPA's conclusion that they do not adequately protect the health of tribal sustenance fishers in waters in Indian lands. EPA concluded that the disapproved HHC did not support the designated use of sustenance fishing in such waters because they were not based on the higher, unsuppressed fish consumption rates that reflect the tribes' sustenance fishing practices. Accordingly, EPA proposed, and is now finalizing, HHC that EPA has determined will protect the sustenance fishing designated use, based on sound science and consistent with the CWA and EPA regulations and policy.

ii. General Recommended Approach for Deriving HHC

HHC for toxic pollutants are designed to minimize the risk of adverse cancer and non-cancer effects occurring from lifetime exposure to pollutants through the ingestion of drinking water and consumption of fish/shellfish obtained from inland and nearshore waters. EPA's practice is to establish CWA

section 304(a) HHC for the combined activities of drinking water and consuming fish/shellfish obtained from inland and nearshore waters, and separate CWA section 304(a) HHC for consuming only fish/shellfish originating from inland and nearshore waters. The latter criteria apply in cases where the designated uses of a waterbody include supporting fish/shellfish for human consumption but not drinking water supply sources (e.g., in non-potable estuarine waters).

The criteria are based on two types of biological endpoints: (1) Carcinogenicity and (2) systemic toxicity (*i.e.*, all adverse effects other than cancer). EPA takes an integrated approach and considers both cancer and non-cancer effects when deriving HHC. Where sufficient data are available, EPA derives criteria using both carcinogenic and non-carcinogenic toxicity endpoints and recommends the lower value. HHC for carcinogenic effects are typically calculated using the following input parameters: Cancer slope factor, excess lifetime cancer risk level, body weight, drinking water intake rate, fish consumption rate(s), and bioaccumulation factor(s). HHC for noncarcinogenic and nonlinear carcinogenic effects are typically calculated using reference dose, relative source contribution (RSC), body weight, drinking water intake rate, fish consumption rate(s) and bioaccumulation factor(s). EPA selects a mixture of high-end and central (mean) tendency inputs to the equation in order to derive recommended criteria that "afford an overall level of protection targeted at the high end of the general population (*i.e.*, the target population or the criteria-basis population)." ¹⁰

EPA received comments supporting and opposing specific input parameters EPA used to derive the proposed HHC. The specific input parameters used are explained in the following paragraphs.

iii. Maine-Specific HHC Inputs

I. Cancer Risk Level. As set forth in EPA's 2000 Methodology for Deriving Ambient Water Quality Criteria for the Protection of Human Health (the "2000 Methodology"), EPA calculates its CWA section 304(a) HHC at concentrations corresponding to a 10^{-6} cancer risk level (CRL), meaning that if exposure were to occur as set forth in the CWA section 304(a) methodology at the prescribed concentration over the course of one's lifetime, then the risk of

developing cancer from the exposure as described would be a one in a million increment above the background risk of developing cancer from all other exposures.¹¹

In this rule, EPA derived the final HHC for carcinogens using a 10^{-6} CRL, consistent with EPA's 2000 Methodology and with Maine Department of Environmental Protection (DEP) Rule Chapter 584, which specifies that water quality criteria for carcinogens must be based on a 10^{-6} CRL, and which EPA approved for waters in Indian lands on February 2, 2015.¹² The HHC provide the tribes engaged in sustenance fishing in waters in Indian lands in Maine with an equivalent level of cancer risk protection (*i.e.*, 10^{-6}) as is afforded to the general population in Maine outside of waters in Indian lands.

EPA received comments in favor of using the proposed 10^{-6} CRL level as well as recommendations for higher and lower CRLs. Responses to those comments are summarized in section III.D.5.

II. Cancer Slope Factor and Reference Dose. For noncarcinogenic toxicological effects, EPA uses a chronic-duration oral reference dose (RfD) to derive HHC. An RfD is an estimate (with uncertainty spanning perhaps an order of magnitude) of a daily oral exposure of an individual to a substance that is likely to be without an appreciable risk of deleterious effects during a lifetime. For carcinogenic toxicological effects, EPA uses an oral cancer slope factor (CSF) to derive HHC. The oral CSF is an upper bound, approximating a 95% confidence limit, on the increased cancer risk from a lifetime oral exposure to a stressor.

EPA did not receive any comments on the pollutant-specific RfDs or CSFs used in the derivation of the proposed criteria, which were based on EPA's National Recommended Water Quality Criteria.¹³ EPA has used the same values to derive the final HHC.

III. Body Weight. The final HHC were calculated using the proposed body weight of 80 kilograms (kg), consistent with the default body weight used in EPA's most recent National

¹¹ Id., p. 2–6.

¹² The only exception from the requirement to use a CRL of 10^{-6} in Chapter 584 is for arsenic, for which a CRL of 10^{-4} is required. EPA disapproved the arsenic CRL for waters in Indian lands.

¹³ Final Updated Ambient Water Quality Criteria for the Protection of Human Health, 80 FR 36986 (June 29, 2015). See also: USEPA. 2015. Final 2015 Updated National Recommended Human Health Criteria. U.S. Environmental Protection Agency, Office of Water, Washington, DC. <https://www.epa.gov/wqc/human-health-water-quality-criteria>.

¹⁰ United States Environmental Protection Agency (U.S. EPA). 2000. *Methodology for Deriving Ambient Water Quality Criteria for the Protection of Human Health*. EPA-822-B-00-004, p. 2–1.

Recommended Water Quality Criteria.¹⁴ This body weight is the average weight of a U.S. adult age 21 and older, based on National Health and Nutrition Examination Survey (“NHANES”) data from 1999 to 2006.¹⁵ EPA received one comment regarding body weight, which requested that EPA use a body weight of 70 kg. However, the commenter did not present a sound scientific rationale to support the use of a different body weight. See Topic 6 of the RTC document for a more detailed response.

IV. Drinking water intake. The final HHC were calculated using the proposed drinking water intake rate of 2.4 liters per day (L/day), consistent with the default drinking water intake rate used in EPA’s most recent National Recommended Water Quality Criteria.¹⁶ This rate represents the per capita estimate of combined direct and indirect community water ingestion at the 90th percentile for adults ages 21 and older.¹⁷ EPA did not receive any comments regarding the proposed drinking water intake rate.

V. Bioaccumulation Factors (BAFs) and Bioconcentration Factors (BCFs). The final HHC were calculated using the proposed pollutant-specific BAFs or BCFs, consistent with the factors used in EPA’s most recent National Recommended Water Quality Criteria.¹⁸ These factors are used to relate aqueous pollutant concentrations to predicted pollutant concentrations in the edible portions of ingested species. EPA did

not receive any comments regarding specific proposed BAFs or BCFs.

VI. Fish Consumption Rate (FCR). In finalizing the HHC, EPA used the proposed FCR of 286 g/day to represent present day sustenance level fish consumption for waters in Indian lands. This FCR supports the designated use of sustenance fishing. EPA selected this consumption rate based on information contained in an historical/anthropological study, entitled the Wabanaki Cultural Lifeways Exposure Scenario¹⁹ (“Wabanaki Study”), which was completed in 2009. EPA also consulted with the tribes in Maine about the Wabanaki Study and their sustenance fishing uses of the waters in Indian lands. There has been no contemporary local survey of current fish consumption that documents fish consumption rates for sustenance fishing in the waters in Indian lands in Maine. In the absence of such information, EPA concluded that the Wabanaki Study contains the best currently available estimate for contemporary tribal sustenance level fish consumption for waters where the sustenance fishing designated use applies.

EPA received many comments that agreed and some that disagreed with EPA’s selection of the proposed FCR of 286 g/day. Responses to those comments can be found in section III.D of this preamble and, in further detail, in Topic 3 of the RTC document.

VII. Relative Source Contribution (RSC). For pollutants that exhibit a threshold of exposure before deleterious effects occur, as is the case for noncarcinogens and nonlinear carcinogens, EPA applied a RSC to account for other potential human exposures to the pollutant.²⁰ Other sources of exposure might include, but are not limited to, exposure to a particular pollutant from non-fish food consumption (e.g., consumption of fruits, vegetables, grains, meats, or poultry), dermal exposure, and inhalation exposure. For substances for which the toxicity endpoint is carcinogenicity based on a linear low-dose extrapolation, only the exposures from drinking water and fish ingestion are reflected in HHC; no other potential sources of exposure to pollutants or other potential exposure pathways have

been considered in developing HHC.²¹ In these situations, HHC are derived with respect to the incremental lifetime cancer risk posed by the presence of a substance in water, rather than an individual’s total risk from all sources of exposure.

As in the proposed HHC, for the pollutants included in EPA’s 2015 criteria update, EPA used the same RSCs in the final HHC as were used in the criteria update. Also as in the proposed HHC, for pollutants where EPA did not update the section 304(a) HHC in 2015, EPA used a default RSC of 0.20 to derive the final HHC except for antimony, for which EPA used an RSC of 0.40 consistent with the RSC value used the last time the Agency updated this criterion. EPA did not receive any comments on specific RSCs used in the derivation of the proposed criteria.

2. Final WQS for Waters in Indian Lands in Maine

a. Bacteria Criteria

i. Recreational Bacteria Criteria

EPA is finalizing the proposed year-round recreational bacteria criteria for Class AA, A, B, C, GPA, SA, SB and SC waters in Indian lands. The magnitude criteria are expressed in terms of *Escherichia coli* colony forming units per 100 milliliters (cfu/100 ml) for fresh waters and *Enterococcus spp.* colony forming units per 100 milliliters (cfu/100 ml) for marine waters and are based on EPA’s 2012 Recreational Water Quality Criteria (RWQC) recommendations.²²

Several comments supported EPA’s proposed rule and the year round applicability of the criteria. Maine DEP objected to EPA’s inclusion of wildlife sources in the scope of the bacteria criteria and requested that the criteria not be applicable from October 1–May 14, similar to Maine’s disapproved criteria. For the reasons discussed in section III.E.2., EPA has determined that, based on best available information, it is necessary to include wildlife sources in the scope of the criteria, and to apply the criteria year round, in order to protect human health and the designated use of recreation in and on the water.

ii. Shellfishing Bacteria Criteria

EPA’s final bacteria rule for Class SA shellfish harvesting areas for waters in

Indian lands differs slightly from the proposed numeric total coliform bacteria criteria, as a result of comments from the state. Maine DEP requested EPA to express the criteria in terms of fecal coliform bacteria rather than total coliform bacteria, noting that the National Shellfish Sanitation Program (NSSP) allows the use of either indicator, that Maine DEP sets permit limits on fecal coliform bacteria rather than total coliform, and that Maine Department of Marine Resources (DMR) uses fecal coliform bacteria as its indicator parameter when making shellfish area opening/closure decisions. Maine DMR requested EPA not to specify a specific numeric standard but rather to promulgate the same narrative criterion that applies to Class SB and SC waters. For those classes of waters, Maine's WQS provide that instream bacteria levels may not exceed the criteria recommended under the NSSP.

The NSSP is the federal/state cooperative program recognized by the U.S. Food and Drug Administration (FDA) and the Interstate Shellfish Sanitation Conference (ISSC) for the sanitary control of shellfish produced and sold for human consumption.

EPA agrees that the NSSP allows for the use of either fecal coliform bacteria or total coliform bacteria as the indicator organism to protect shellfish harvesting. The current NSSP recommendations²³ for those organisms are consistent with EPA's national recommended water quality criteria.²⁴ The NSSP recommendations for fecal coliform standards and sampling protocols are set forth in Section II. Model Ordinance Chapter IV. Growing Areas .02 Microbial Standards (pages 51–54). The NSSP recommendations for total coliform standards and sampling protocols are set forth in Section IV, Guidance Documents Chapter II. Growing Areas .01 Total Coliform Standards (pages 216–219). Both sets of recommendations apply to various types of shellfish growing areas including remote status, areas affected by point source pollution, and areas affected by nonpoint source pollution.

In light of the state's concerns and suggestions, EPA's final rule contains a narrative criterion similar to Maine's approved criterion for Class SB and SC waters. The final rule provides "The numbers of total coliform bacteria or other specified indicator organisms in

samples representative of the waters in shellfish harvesting areas may not exceed the criteria recommended under the National Shellfish Sanitation Program, United States Food and Drug Administration as set forth in the Guide for the Control of Molluscan Shellfish, 2015 Revision." EPA has added a specific reference to the date of the NSSP recommendations because there are legal constraints on incorporating future recommendations by reference. The NSSP 2015 recommendations are available online at: <http://www.fda.gov/Food/GuidanceRegulation/FederalStateFoodPrograms/ucm2006754.htm>. The recommendations are also included in the docket for this rulemaking, which is available both online at [regulations.gov](http://www.regulations.gov) and in person at the EPA Docket Center Reading Room, William Jefferson Clinton West Building, Room 3334, 1301 Constitution Avenue NW., Washington, DC 20004, and (202) 566–1744. Finally, the 2015 NSSP recommendations are obtainable from the U.S. Food and Drug Administration's Center for Food Safety and Applied Nutrition, Shellfish and Aquaculture Policy Branch, 5100 Paint Branch Parkway (HFS–325), College Park, MD 20740.

b. Ammonia Criteria for Fresh Waters

EPA is finalizing the proposed ammonia criteria for fresh waters in Indian lands to protect aquatic life. The criteria are based on EPA's 2013 updated CWA section 304(a) recommended ammonia criteria.²⁵ They are expressed as functions of temperature and pH, so the applicable criteria vary by waterbody, depending on the temperature and pH of those waters. EPA received several comments in support of the proposed ammonia criteria, and received no comments requesting changes.

c. pH Criterion for Fresh Waters

EPA is finalizing the proposed pH criterion of 6.5 to 8.5 to protect aquatic life in fresh waters in Indian lands. The criterion is based on EPA's 1986 national recommended criterion.²⁶ EPA received comments from the state and one industry, both requesting that Maine's pH criterion of 6.0–8.5 be retained. However, EPA does not agree

that 6.0 adequately protects aquatic life and notes in particular that pH values of 6.0 and lower have been shown to be detrimental to sensitive aquatic life, such as developing Atlantic salmon eggs and smolts.^{27 28 29} See Topic 11 of the RTC document for more detailed responses to comments.

d. Temperature Criteria for Tidal Waters

EPA is finalizing the proposed temperature criteria for tidal waters in Indian lands. The criteria will assure protection of the indigenous marine community characteristic of the intertidal zone at Pleasant Point in Passamaquoddy Bay, and are consistent with EPA's CWA section 304(a) recommended criteria for tidal waters.³⁰ They include a maximum summer weekly average temperature and a maximum weekly average temperature rise over reference site baseline conditions.

Maine DEP commented with concerns about the difficulty of finding reference sites to determine baseline temperatures and a question about whether there should be a baseline established for each season. EPA is confident that reference sites will not be difficult to identify, and there is no need to establish separate baselines outside the defined summer season. See Topic 12 of the RTC document for a more detailed response.

e. Natural Conditions Provisions

EPA is finalizing the proposed rule for waters in Indian lands that stated that Maine's natural conditions provisions in 38 M.R.S. 420(2.A) and 464(4.C) do not apply to water quality criteria intended to protect public health. EPA received several comments in support of the proposed rule, and received no comments requesting changes.

f. Mixing Zone Policy

EPA is finalizing the proposed mixing zone policy for waters in Indian lands with one small change to the

prohibition of mixing zones for bioaccumulative pollutants.

Specifically, in order to avoid confusion over what is meant by “bioaccumulative pollutants” for the purpose of this rule, EPA has added a parenthetical definition which specifies that bioaccumulative pollutants are those “chemicals for which the bioconcentration factors (BCF) or bioaccumulation factors (BAF) are greater than 1,000.” This definition is based on EPA’s definition of bioaccumulation for chemical substances found at 64 FR 60194 (November 4, 1999).

EPA received several comments in support of the mixing zone policy. One of those commenters added that a total ban on mixing zones would be preferable. Two commenters asserted that EPA does not have the legal authority or the scientific basis to ban mixing zones for bioaccumulative pollutants outside the Great Lakes. EPA disagrees, for the reasons discussed in section III.E.1 of this preamble. One commenter raised comments about thermal mixing zones specific to its facility, and EPA’s response to those comments are contained in the RTC document at Topic 9.

3. Final WQS for All Waters in Maine

a. Dissolved Oxygen for Class A Waters

EPA is finalizing the proposed dissolved oxygen criteria for all Class A waters in Maine. The rule provides that dissolved oxygen shall not be less than 7 ppm (7 mg/L) or 75% of saturation, whichever is higher, year-round. For the period from October 1 through May 14, in fish spawning areas, the 7-day mean dissolved oxygen concentration shall not be less than 9.5 ppm (9.5 mg/L), and the 1-day minimum dissolved oxygen concentration shall not be less than 8 ppm (8.0 mg/L). EPA received several comments in support of the proposed criteria, and received no comments requesting changes.

b. Waiver or Modification of WQS

EPA is finalizing the proposed rule stating that 38 M.R.S. 363–D, which allows waivers of state law in the event of an oil spill, does not apply to state or federal WQS applicable to waters in Maine, including designated uses, criteria to protect designated uses, and antidegradation requirements. EPA received several comments in support of the proposed rule, and received no comments requesting changes.

4. Final WQS for Waters in Maine Outside of Indian Lands

a. Phenol HHC for Consumption of Water Plus Organisms

EPA is finalizing the proposed phenol HHC for consumption of water plus organisms of 4000 µg/L, for waters in Maine outside of Indian lands. The criterion is consistent with EPA’s June 2015 national criteria recommendation,³¹ except that EPA used Maine’s default fish consumption rate for the general population of 32.4 g/day, consistent with DEP Rule Chapter 584.³² EPA received several comments in support of the proposed rule, and received no comments requesting changes.

III. Summary of Major Comments Received and EPA’s Response

A. Overview of Comments

EPA received 104 total comments, 100 of which are unique comments. The vast majority of the comments were general statements of support for EPA’s proposed rule from private citizens, including tribal members. Tribes and others provided substantive comments that also were generally supportive regarding the importance of protecting the designated use of sustenance fishing, identifying tribes as the target population, and using a 286 g/day fish consumption rate.

EPA also received comments critical of the proposal, principally from the Maine Attorney General and DEP, a single discharger and a coalition of dischargers, and two trade organizations. The focus of the remainder of this section III identifies and responds to the major adverse comments. Additionally, a comprehensive RTC document addressing all comments received is included in the docket for this rulemaking.

B. Maine Indian Settlement Acts

Before providing a more detailed discussion of the rationale relating to each element of EPA’s analysis supporting this promulgation, the Agency first addresses a general complaint made by several commenters that EPA has developed a complex rationale for its disapproval of Maine’s HHC and corresponding promulgation.

³¹ Final Updated Ambient Water Quality Criteria for the Protection of Human Health, 80 FR 36986 (June 29, 2015). See also: USEPA. 2015. Final 2015 Updated National Recommended Human Health Criteria. U.S. Environmental Protection Agency, Office of Water, Washington, DC. <https://www.epa.gov/wqc/human-health-water-quality-criteria>.

³² 06–096 Code of Maine Rules, Chapter 584, Surface Water Quality Criteria for Toxic Pollutants.

EPA acknowledges that there are several steps in the Agency’s analysis of how Maine’s WQS must protect the uses of the waters in Indian lands, including application of the Agency’s expert scientific and policy judgment. The basic concepts are as follows:

- The Indian settlement acts provide for the Indian tribes to fish for their individual sustenance in waters in Indian lands and effectively establish a sustenance fishing designated use cognizable under the CWA for such waters.
- The CWA and EPA’s regulations mandate that water quality criteria must protect designated uses of waters provided for in state law. Designated uses are use goals of a water, whether or not they are being attained.
- When analyzing how water quality criteria protect a designated use, an agency must focus on the population that is exercising that use, and must assess the full extent of that use’s goal, where data are available.

The relevant explanatory details for each step of this rationale are presented below. But the underlying structure of the analysis is straightforward and appropriate under and consistent with applicable law.

Another general comment EPA received was that the agency’s approach “would impermissibly give tribes in Maine an enhanced status and greater rights with respect to water quality than the rest of Maine’s population.” Comments of Janet T. Mills, Maine Attorney General, (page 2). EPA explains below why the analysis EPA presented in its February 2015 decision and the proposal for this action is not only permissible, but also mandated by the CWA as informed by the Indian settlement acts. But as a general matter EPA disagrees that this action is impermissible because it accords the tribes in Maine “greater rights” or somehow derogates the water quality protection provided to the rest of Maine’s population.

EPA is addressing the particular sustenance fishing use provided for these tribes under Maine law and ratified by Congress. Because that use is confirmed in provisions in the settlement acts that pertain specifically and uniquely to the Indian tribes in Maine, EPA’s analysis of the use and the protection of that use must necessarily focus on how the settlement acts intend for the tribes to be able to use the waters at issue here. However, Maine’s claim that EPA is providing tribes in Maine “greater rights” than the general population is incorrect. In this action, EPA is not granting “rights” to anyone. Rather, EPA is simply promulgating

WQS in accordance with the requirements of the CWA—*i.e.*, identifying the designated use for waters in Indian lands, and establishing criteria to protect the target population exercising that use. As explained above, in light of the Indian settlement acts, the designated use is sustenance fishing, the tribes are the target population, and EPA has selected the appropriate FCR of that target population. This approach, together with EPA's selection of 10⁻⁶ CRL, is consistent with Maine's approach to protecting the target population in Maine waters outside of Indian lands. EPA's rule provides a comparable level of protection for the target population (sustenance fishers) for the waters in Indian lands that Maine provides to the target population for its fishing designated use (recreational fishers) that applies to waters outside Indian lands.³³ Further, the resulting HHC that EPA is promulgating in this rule protect both non-tribal members and tribal members in Maine. The great majority of the waters subject to the HHC are rivers and streams that are shared in common with non-Indians in the state or that flow into or out of waters outside Indian lands. It is not just the members of the Indian tribes in Maine who will benefit from EPA's action today.

One striking aspect of the comments EPA received on its proposal is that every individual who commented supported EPA's proposed action, including many non-Indians. Nearly all of the comments were individualized expressions of support, ranging from a profound recognition of the need to honor commitments made to the tribes in the Indian settlement acts to an acknowledgement that everyone in Maine benefits from improved water quality. It is notable that the record for this action shows that individuals in Maine who commented did not express concern that the tribes are being accorded a special status or that this action will in any way disadvantage the rest of Maine's population.

As described in section II.B.1, EPA previously approved MIA sections 6207(4) and (9) as an explicit designated use for the inland waters of the reservations of the Southern Tribes and interpreted and approved Maine's designated use of "fishing" for all waters in Indian lands to mean "sustenance fishing." Several commenters challenged EPA's

conclusion that the Indian settlement acts in Maine have the effect of establishing a designated use that includes sustenance fishing. This section explains how the Indian settlement acts provide for the Indian tribes in Maine to fish for their sustenance, and responds to arguments that this conclusion violates the settlement acts. Section III.C explains how EPA, under the CWA, interprets those provisions of state law as a sustenance fishing designated use which must be protected by the WQS applicable to the waters where that use applies.

As explained in more detail in the RTC document, MICSA, MIA, ABMSA, and MSA include different provisions governing sustenance practices, including fishing, depending on the type of Indian lands involved. In the reservations of the Southern Tribes, MIA explicitly reserves to the tribes the right to fish for their individual sustenance.³⁴ In the trust lands of the Southern Tribes, MIA provides a regulatory framework that requires consideration of "the needs or desires of the tribes to establish fishery practices for the sustenance of the tribes," among other factors.³⁵ Congress clearly intended the Northern Tribes to be able to sustain their culture on their trust lands, consistent with Maine law, which amply accommodates a sustenance fishing diet.³⁶ Therefore, each of these provisions under the settlement acts in its own way is designed to establish a land base for these tribes where they may practice their sustenance lifeways. Indeed, EPA received an opinion from the Solicitor of the United States Department of the Interior (DOI), which analyzed the settlement acts and concluded that the tribes in Maine "have fishing rights connected to the lands set aside for them under federal and state statutes."³⁷

In its February 2015 decision, EPA analyzed how the settlement acts include extensive provisions to confirm and expand the tribes' land base. The legislative record makes it clear that a key purpose behind that land base is to preserve the tribes' culture and support their sustenance practices. MICSA section 5 establishes a trust fund to allow the Southern Tribes and the Maliseets to acquire land to be put into trust. In addition, the Southern Tribes' reservations are confirmed as part of

their land base.³⁸ MICSA combines with MIA sections 6205 and 6205-A to establish a framework for taking land into trust for those three Tribes, and laying out clear ground rules governing any future alienation of that land and the Southern Tribes' reservations. Sections 4(a) and 5 of the ABMSA and section 7204 of the state MSA accomplish essentially the same result for the Micmacs, consistent with the purpose of those statutes to put that tribe in the same position as the Maliseets.

EPA has concluded that one of the overarching purposes of the establishment of this land base for the tribes in Maine was to ensure their continued opportunity to engage in their unique cultural practices to maintain their existence as a traditional culture. An important part of the tribes' traditional culture is their sustenance lifeways. The legislative history for MICSA makes it clear that one critical purpose for assembling the land base for the tribes in Maine was to preserve their culture. The Historical Background in the Senate Report for MICSA opens with the observation that "All three Tribes [Penobscot, Passamaquoddy and Maliseet] are riverine in their land-ownership orientation."³⁹ Congress also specifically noted that one purpose of MICSA was to avoid acculturation of the tribes in Maine:

Nothing in the settlement provides for acculturation, nor is it the intent of Congress to disturb the cultural integrity of the Indian people of Maine. To the contrary, the Settlement offers protections against this result being imposed by outside entities by providing for tribal governments which are separate and apart from the towns and cities of the State of Maine and which control all such internal matters. The Settlement also clearly establishes that the Tribes in Maine will continue to be eligible for all federal Indian cultural programs.⁴⁰

As both the Penobscot and Maliseet extensively documented in their comments on this action, their culture relies heavily on sustenance practices, including sustenance fishing. So if a purpose of MICSA is to avoid acculturation and protect the tribes' continued political and cultural existence on their land base, then a key purpose of that land base is to support those sustenance practices.

Several comments dispute that the settlement acts are intended to provide for the tribes' sustenance lifeways, and assert instead that their key purpose was to subject the tribes to the jurisdictional

³³ EPA recognizes that the final HHC also reflect inputs consistent with EPA's 2015 section 304(a) recommendations, which are not currently reflected in Maine's HHC. EPA anticipates that Maine will update its HHC consistent with these inputs in its next triennial review.

⁴⁰ Id. at 17.

authority of the state and treat tribal members identically to all citizens in the state. These comments do not dispute the evidence EPA relied on in February 2015 to find that Congress intended to support the continuation of the tribes' traditional culture. Rather, the commenters argue that the overriding purpose of the settlement acts was to impose state law, including state environmental law, on the tribes, which the commenters believe the state could do without regard to the settlement act provisions for sustenance fishing. These assertions reflect an overly narrow interpretation of the settlement acts, and EPA, with a supporting opinion from DOI, has concluded that the settlement acts both provide for the tribes' sustenance lifeways and subject the tribal lands to state environmental regulation. Those two purposes are not inconsistent, but rather support each other. It would be inconsistent for the state to codify provisions for tribal sustenance fishing in one state law, which was congressionally ratified, and then in another state law subject that practice to environmental conditions that render it unsafe.

EPA disagrees with the comment that promulgation of the HHC violates the jurisdictional arrangement in MICSA and MIA. The assertion appears to be that the grant of jurisdiction to the state in the territories of the Indian tribes in Maine means that the tribes must always be subject to the same environmental standards as any other person in Maine. As EPA made clear in its February 2015 decision, the Agency agrees that MICSA grants the state the authority to set WQS in Indian territories. Making that finding, however, does not then lead to the conclusion that the state has unbounded authority to set WQS without regard to the factual circumstances and legal framework that apply to the tribes under both the CWA and the Indian settlement acts. No state has authority or jurisdiction to adopt WQS that do not comply with the requirements of the CWA. The state, like EPA and the tribes, is bound to honor the provisions of the Indian settlement acts. Here, the CWA, as informed by and applied in light of the requirements of the settlement acts, requires that WQS addressing fish consumption in these waters adequately protect the sustenance fishing use applicable to the waters. Because this use applies only to particular waters that pertain to the tribes, the WQS designed to protect the use will necessarily differ from WQS applicable to other waters generally in the state.

This result does not violate the grant of jurisdiction to the state. Rather, the state retains the authority to administer the WQS program throughout the state, subject to the same basic requirements to protect designated uses of the waters as are applicable to all states.

EPA also disagrees that promulgation of the HHC violates the so-called savings clauses in MICSA, Pub. L. 96–420, 94 Stat. 1785 sections 6(h) and 16(b), which block the application of federal law in Maine to the extent that law “accords or relates to a special status or right of or to any Indian” or is “for the benefit of Indians” and “would affect or preempt” the application of state law. EPA has consistently been clear that this action does not treat tribes in Maine in a similar manner as a state (TAS) or in any way authorize any tribe in Maine to implement tribal WQS under the federal CWA. Therefore, arguments about whether MICSA blocks the tribes from applying to EPA for TAS under CWA section 518(e) are outside the scope of, and entirely irrelevant to, EPA’s promulgation of federal WQS.

Additionally, EPA disagrees that its disapproval of certain WQS in tribal waters and this promulgation will “affect or preempt the application of the laws of the State of Maine” using a federal law that accords a special status to Indians within the meaning of MICSA section 6(h) or a federal law “for the benefit of Indians” within the meaning of section 16(b). With this promulgation, EPA is developing WQS consistent with the requirements of the CWA as applied to the legal framework and factual circumstances created by the Indian settlement acts. EPA here is acting under CWA section 303, which was not adopted “for the benefit of Indians,” but rather sets up a system of cooperative federalism typical of federal environmental statutes, where states are given the lead in establishing environmental requirements for areas under their jurisdiction, but within bounds defined by the CWA and subject to federal oversight. In this case, the Indian settlement acts provide for the tribes to fish for their sustenance in waters in or adjacent to territories set aside for them, which has the effect of establishing a sustenance fishing use in those waters. Because that sustenance fishing use applies in those waters, CWA section 303 requires Maine and EPA to ensure that use is protected. It cannot be the case that the savings clauses in MICSA are intended to block implementation of the Indian settlement acts or MICSA itself.

In the RTC document, EPA addresses in detail the distinctions contained in the Indian settlement acts for the Maine

tribes and comments received by EPA on this point. In short, the settlement acts clearly codify a tribal right of sustenance fishing for inland, anadromous, and catadromous fish in the inland waters of the Penobscot Nation’s and Passamaquoddy’s reservations.⁴¹ EPA approved this right, contained in state law, as an explicit designated use. The Southern Tribes also have trust lands, to which the explicit sustenance fishing right in section 6207 of MIA does not apply, but which are covered by a regulatory regime under MIA that specifically provides for the Southern Tribes to exercise their sustenance fishing practices. The statutory framework for the Northern Tribes’ trust lands provides for more direct state regulation of those tribes’ fishing practices. Nevertheless, as confirmed by an opinion from the U.S. Department of the Interior,⁴² the Northern Tribes’ trust lands include sustenance fishing rights appurtenant to those land acquisitions, subject to state regulation. Accordingly, EPA appropriately approved the “fishing” designated use as “sustenance fishing” for all waters in Indian lands.

Tribal representatives and members commented that EPA’s promulgation of HHC is consistent with EPA’s trust responsibility to the Indian tribes in Maine, and some suggested that EPA’s trust relationship with the tribes compels EPA to take this action. Conversely, one commenter argued that this action is not authorized because the federal government has no obligation under the trust responsibility to take this action, and the Indian settlement acts create no specific trust obligation to protect the tribes’ ability to fish for their sustenance. These comments raise questions about the nature and extent of the federal trust responsibility to the Indian tribes in Maine and the extent to which the trust is related to this action. EPA agrees that this action is consistent with the United States’ general trust responsibility to the tribes in Maine. EPA also agrees that the trust relationship does not create an independent enforceable mandate or specific trust requirement beyond the Agency’s obligation to comply with the legal requirements generally applicable to this situation under federal law, in this case the CWA as applied to the circumstances of the tribes in Maine under the settlement acts.

⁴¹ 30 M.R.S. section 6207.

⁴² Letter from Hilary C. Tompkins, Solicitor, Department of Interior, to Avi S. Garbow, General Counsel, EPA, January 30, 2015, a copy of which is in the docket supporting this action.

Consulting with affected tribes before taking an action that affects their interests is one of the cornerstones of the general trust relationship with tribes. EPA has fulfilled this responsibility to the tribes in Maine. EPA has consulted extensively with the tribes to understand their interests in this matter. EPA has also carefully weighed input from the tribes, as it has all the comments the Agency received on this action.

EPA does not agree that the substance of this action is compelled or authorized by the federal trust relationship with the tribes in Maine independent of generally applicable federal law. This action is anchored in two sets of legal requirements: First, the Indian settlement acts, which reserve the tribes' ability to engage in sustenance fishing; second, the CWA, which requires that this use must be protected. The trust responsibility does not enhance or augment these legal requirements, and EPA is not relying on the trust responsibility as a separate legal basis for this action. The Indian settlement acts created a legal framework with respect to these tribes that triggered an analysis under the CWA about how to protect the sustenance fishing use provided for under the settlement acts. This analysis necessarily involves application of EPA's WQS regulations, guidance, and science to yield a result that is specific to these tribes, but each step of the analysis is founded in generally applicable requirements under the CWA, not an independent specific trust mandate.

C. Sustenance Fishing Designated Use

Several commenters challenged EPA's approval, in its February 2015 Decision, of sections 6207(4) and (9) of the MIA as a designated use of sustenance fishing applicable to inland waters of the Southern Tribes' reservations. Several commenters also argued that EPA had no authority to approve Maine's "fishing" designated use with the interpretation that it means "sustenance fishing" for waters in Indian lands. Related to both approvals, the commenters argued that Maine had never adopted a designated use of "sustenance fishing," thus EPA could not approve such a use, and that EPA did not follow procedures required under the CWA in approving any "sustenance fishing" designated use. EPA disagrees, as discussed in sections III.C.1 and 2.

1. EPA's Approval of Certain Provisions in MIA as a Designated Use of Sustenance Fishing in Reservation Waters.

State laws can operate as WQS when they affect, create or provide for, among other things, a use in particular waters, even when the state has not specifically identified that law as a WQS.⁴³ EPA has the authority and duty to review and approve or disapprove such a state law as a WQS for CWA purposes, even if the state has not submitted the law to EPA for approval.⁴⁴ Indeed, EPA has previously identified and disapproved a Maine law as a "de facto" WQS despite the fact that Maine did not label or present it as such.⁴⁵

The MIA is binding law in the state, and sections 6207(4) and (9) in that law clearly establish a right of sustenance fishing in the inland reservation waters of the Southern Tribes. See Topic 3 of the RTC document for a more detailed discussion. In other words, the state law provides for a particular use in particular waters. It was therefore appropriate for EPA to recognize that state law as a water quality standard, and more specifically, as a designated use. EPA's approval of these MIA provisions as a designated use of sustenance fishing does not create a new federal designated use of tribal "sustenance fishing," but rather gives effect to a WQS in state law for CWA purposes in the same manner as other state WQS. Furthermore, contrary to commenters' assertions, EPA did not fail

⁴³ See *Florida Pub. Interest Grp v. EPA*, 386 F.3d 1070, 1089–90 (11th Cir. 2004) (holding that in order to determine whether a state law constitutes a WQS, a district court must "look beyond the [state's] characterization of [the law]" and "determine[] whether the practical impact of the [law] was to revise [the state's WQS]" irrespective of the state's "decision not to describe its own regulations as new or revised [WQS]"); *Pine Creek Valley Watershed Ass'n v. United States*, 137 F. Supp. 3d 767, 776 (E.D. Pa. 2015) (deferring to EPA's determination on whether or not a state law constitutes a WQS).

⁴⁴ See EPA, What is a New or Revised Water Quality Standard Under CWA 303(c)(3)? Frequently Asked Questions, October 2012. See also, *Friends of Merrymeeting Bay v. Olsen*, 839 F. Supp. 2d 366, 375 (D. Me. 2012) ("The EPA is under an obligation to review a law that changes a water quality standard regardless of whether a state presents it for review."); *Miccosukee Tribe of Indians v. EPA*, 105 F.3d 599, 602 (11th Cir. 1997) ("Even if a state fails to submit new or revised standards, a change in state water quality standards could invoke the mandatory duty imposed on the Administrator to review new or revised standards.");

⁴⁵ Letter from Stephen S. Perkins, Director of Office of Ecosystem Protection, EPA, to William J. Schneider, Maine Attorney General (July 9, 2012) (disapproving as a WQS a state law that required prevention of river herring passage on St. Croix River); see *Friends of Merrymeeting Bay*, 839 F. Supp. 2d at 375 (indicating EPA must consider whether such state law has the effect of changing a WQS).

to abide by any required procedures before approving the MIA provisions as a designated use. They were a "new" WQS for the purpose of EPA review, because EPA had never previously acted on them. When EPA acts on any state's new or revised WQS, there are no procedures necessary for EPA to undertake prior to approval.⁴⁶ The Maine state legislature, which has the authority to adopt designated uses, held extensive hearings reviewing the provisions of the MIA, including those regarding sustenance fishing.

2. EPA's Interpretation and Approval of Maine's "Fishing" Designated Use To Include Sustenance Fishing.

In addition to approving certain provisions of MIA as a designated use in the Southern Tribes' inland reservation waters, EPA also interpreted and approved Maine's designated use of "fishing" to mean "sustenance fishing" for all waters in Indian lands. EPA disagrees with comments that claim that EPA had no authority to do so because EPA had previously approved that use for all waters in Maine without such an interpretation. While EPA approved the "fishing" designated use in 1986 for other state waters, prior to its February 2015 decision, EPA had not approved any of the state's WQS, including the "fishing" designated use, as being applicable to waters in Indian lands.

Under basic principles of federal Indian law, states generally lack civil regulatory jurisdiction within Indian country as defined in 18 U.S.C. 1151.⁴⁷ Thus, EPA cannot presume a state has authority to establish WQS or otherwise regulate in Indian country. Instead, a state must demonstrate its jurisdiction, and EPA must determine that the state has made the requisite demonstration and has authority, before a state can implement a program in Indian country. Accordingly, EPA cannot approve a state WQS for a water in Indian lands if it has not first determined that the state has authority to do so.

EPA first determined on February 2, 2015, that Maine has authority to establish WQS for waters in Indian lands. Consistent with the principle articulated above, it is EPA's position that all WQS approvals that occurred prior to this date were limited to state

⁴⁶ See 33 U.S.C. 1313(c)(3) and 40 CFR part 131.

⁴⁷ *Alaska v. Native Vill. of Venetie Tribal Gov't*, 522 U.S. 520, 527 n.1. waters outside of waters in Indian lands. With regard to the “fishing” designated use, Maine submitted revisions to its water quality standards program now codified at 38 M.R.S. section 464–470, to EPA in 1986. This submittal included Maine’s designated use of “fishing” for all surface waters in the state. On July 16, 1986, EPA approved most of the revised WQS, including the designated uses for surface waters, without explicit mention of the “fishing” designated use or of the standards’ applicability to waters in Indian lands. Maine did not expressly assert its authority to establish WQS in Indian waters until its 2009 WQS submittal, and EPA did not expressly determine that Maine has such authority until February 2015. Therefore, EPA did not approve Maine’s designated use of “fishing” to apply in Indian waters in 1986, and EPA’s approval of that use for other waters in Maine at that time was not applicable to Indian waters in Maine.

EPA acknowledges the comment that, prior to February 2015, EPA had not previously taken the position that Maine’s designated use of “fishing” included a designated use of “sustenance fishing.” As explained herein, it was not until February 2, 2015, that EPA determined that Maine’s WQS were applicable to waters in Indian lands, so it was not until then that EPA reviewed Maine’s “fishing” designated use for those waters and concluded that, in light of the settlement acts, it must include sustenance fishing as applied to waters in Indian lands.

EPA disagrees with comments that asserted that EPA could not approve the “fishing” designated use as meaning “sustenance fishing” for waters in Indian lands unless EPA first made a determination under CWA section 303(c)(4)(B) that the “fishing” designated use was inconsistent with the CWA. Because EPA had not previously approved the “fishing” designated use for waters in Indian lands, EPA had the duty and authority to act on that use in its February 2015 decision, and was not required to make a determination under CWA section 303(c)(4)(B) before it could interpret and approve the use for waters in Indian lands. Additionally, because the term “fishing” is ambiguous in Maine’s WQS, even if EPA had previously approved it for all waters in the state, it is reasonable for EPA to explicitly interpret the use to include sustenance fishing for the waters in Indian lands in light of the Indian settlement acts.⁴⁸

⁴⁸ See *Arkansas v. Oklahoma*, 503 U.S. 91, 110 (1992) (holding that EPA’s interpretation of state

This is consistent with EPA’s recent actions and positions regarding tribal fishing rights and water quality standards in the State of Washington.⁴⁹

In acting on the “fishing” designated use for waters in Indian lands for the first time, it was reasonable and appropriate for EPA to explicitly interpret and approve the use to include sustenance fishing for the waters in Indian lands. This interpretation harmonized two applicable laws: The provision for sustenance fishing contained in the Indian settlement acts, as explained above in section III.B, and the CWA. Indeed, where an action required of EPA under the CWA implicates another federal statute, such as MICA, EPA must harmonize the two statutes to the extent possible.⁵⁰ This is consistent with circumstances where federal Indian laws are implicated and the Indian canons of statutory construction apply.⁵¹ Because the Indian settlement acts provide for sustenance fishing in waters in Indian lands, and EPA has authority to reasonably interpret state WQS when taking action on them, EPA necessarily interpreted the “fishing” use as “sustenance fishing” for these waters, lest its CWA approval action contradict and, as a practical matter, effectively limit or abrogate the Indian settlement acts (a power that would be beyond EPA’s authority).⁵² Accordingly, EPA’s interpretation of Maine’s “fishing” designated use reasonably and appropriately harmonized the intersecting provisions of the CWA and the Indian settlement acts.

Finally, one commenter argued that the settlement acts’ provisions for sustenance fishing are merely exceptions to otherwise applicable creel

WQS in the NPDES context is entitled to “substantial deference”).

limits and have no implications for the WQS that apply to the waters where the tribes are meant to fish. EPA does not agree with this narrow interpretation of the relationship between the provisions for tribal sustenance practices on the one hand and water quality on the other. Fundamentally, the tribes’ ability to take fish for their sustenance under the settlement acts would be rendered meaningless if it were not supported under the CWA by water quality sufficient to ensure that tribal members can safely eat the fish for their own sustenance.

When Congress identifies and provides for a particular purpose or use of specific Indian lands, it is reasonable and supported by precedent for an agency to consider whether its actions have an impact on a tribe’s exercise of that purpose or use and to ensure through exercise of its authorities that its actions protect that purpose or use. For example, the Ninth Circuit Court of Appeals recently determined that the right of tribes in the State of Washington to fish for their subsistence in their “usual and accustomed” places necessarily included the right to an adequate supply of fish, despite the absence of any explicit language in the applicable treaties to that effect.⁵³ Specifically, the Court held that “the Tribes’ right of access to their usual and accustomed fishing places would be worthless without harvestable fish.”⁵⁴ Similarly, it would defeat the purpose of MICA, MICA, MSA, and ABMSA for the

⁵³ *United States v. Washington*, No. 13–35474, 2016 U.S. App. Lexis 11709 (9th Cir. June 27, 2016). See also *United States v. Sunnyside Valley Irrigation District*, 763 F.2d 1032, 1033–34 (9th Cir. 1985) (tribe’s fishing right protected by enjoining water withdrawals that would destroy salmon eggs before they could hatch); *Grand Traverse Band of Ottawa and Chippewa Indians v. Director, Mich. Dept. of Nat. Resources*, 141 F.3d 635 (6th Cir. 1998) (treaty right to fish commercially in the Great Lakes found to include a right to temporary mooring of treaty fishing vessels at municipal marinas because without such mooring the Indians could not fish commercially); *Colville Confederated Tribes v. Walton*, 647 F.2d 42, 47–48 (9th Cir. 1981) (implying reservation of water to preserve tribe’s replacement fishing grounds); *Winters v. United States*, 207 U.S. 564, 576 (1908) (express reservation of land for reservation impliedly reserved sufficient water from the river to fulfill the purposes of the reservation); *Arizona v. California*, 373 U.S. 546, 598–601 (1963) (creation of reservation implied intent to reserve sufficient water to satisfy present and future needs).

⁵⁴ *United States v. Washington*, No. 13–35474, 2016 U.S. App. Lexis 11709 (9th Cir. June 27, 2016). The court also acknowledged that the fishing clause of the Stevens Treaties could give rise to other environmental obligations, but that those would need to be addressed on a case-by-case basis depending on the precise nature of the action. *Id.* at *18–19.

tribes in Maine to be deprived of the ability to safely consume fish from their waters at sustenance levels. Consistent with this case law, the Department of the Interior provided EPA with a legal opinion which concludes that “fundamental, long-standing tenets of federal Indian law support the interpretation of tribal fishing rights to include the right to sufficient water quality to effectuate the fishing right.”⁵⁵ If EPA were to ignore the impact that water quality, and specifically water quality standards under the CWA, could have on the tribes’ ability to safely engage in their sustenance fishing practices on their lands, the Agency would be contradicting the clear purpose for which Congress ratified the settlement acts in Maine and provided for the establishment of Indian lands in the state. Therefore, it is incumbent upon EPA when applying the requirements of the CWA to harmonize those requirements with this Congressional purpose.

D. Human Health Criteria for Toxics for Waters in Indian Lands

1. Target Population

EPA received two comments that it improperly and without justification identified the tribes as the target population, as opposed to a highly exposed subpopulation, for the HHC for waters in Indian lands. On the contrary, EPA’s approach is entirely consistent with EPA regulations and policy, as informed by the settlement acts.

Pursuant to 40 CFR 131.11(a)(1), water quality criteria must be adequate to protect the designated uses. Developing HHC to protect the sustenance fishing designated use in waters in Indian lands necessarily involves identifying the population exercising that use as the target population.⁵⁶ The tribes are not a highly exposed or high-consuming subpopulation in their own lands; they are the general population for which the federal set-aside of these lands and their waters was designed.⁵⁷ Treating tribes

as the target general population results in HHC sufficient under the CWA to ensure that the tribes’ ability to exercise the designated use of sustenance fishing, as provided for in the settlement acts, is not substantially affected or impaired. Therefore, the tribal population must be the focus of the risk assessment supporting HHC for the waters to which the sustenance fishing use applies. To do otherwise risks undermining the purpose for which Congress established and confirmed the tribes’ land base, as described more fully in section III.B.

Contrary to the commenters’ claims, EPA’s 2000 Methodology does not mandate that the tribes be treated as a highly exposed subpopulation. EPA’s general approach in the 2000 Methodology, and in deriving national CWA section 304(a) recommended criteria, is for HHC to provide a high level of protection for the general population, while recognizing that more highly exposed “subpopulations” may face greater levels of risk.⁵⁸ However, in addition to recommending protection of the general population based on fish consumption rates designed to represent “the general population of fish consumers,” the 2000 Methodology recommends that states assess whether there might be more highly exposed subpopulations or “population groups” that require the use of a higher fish consumption rate to protect them as the “target population group(s).”⁵⁹ The 2000 Methodology does not speak to or expressly envision the unique situation of setting HHC for waters where there is a tribal sustenance fishing designated use. Nevertheless, it is entirely consistent with the 2000 Methodology for EPA to identify the tribes as the target general population for protection, rather than as a highly exposed subpopulation, and to apply the 2000 Methodology’s recommendations on exposure for the general population, including the FCR and CRL, to the tribal target population.

waters. On major rivers such as the Penobscot River, for example, the general population has the right to pass through the waters in Indian lands. The presence of some nonmembers fishing on these waters, however, does not change the fact that the resident population in the Indian lands is made up of tribal members who expect to fish for their sustenance in the waters in Indian lands pursuant to the settlement acts.

⁵⁹ Id., pp. 4-24 to 4-25.

2. Wabanaki Study

EPA received several comments that the FCR of 286 g/day, derived to support the sustenance fishing use, and used in the calculation of the promulgated HHC, is too high and not based on sound science. In particular, commenters asserted that it was improper for EPA to rely on the Wabanaki Study because it is irrelevant and aspirational. These commenters instead prefer the use of a 1992 study conducted by McLaren/Hart—ChemRisk of Portland, Maine (“the 1992 ChemRisk Study”).⁶⁰ EPA disagrees for the following reasons.

After considering other sources, including the 1992 ChemRisk Study (see discussion below), EPA derived the FCR from a peer-reviewed estimate of traditional sustenance fish consumption from the Wabanaki Study. EPA finds that the Wabanaki Study used a sound methodology (peer reviewed, written by experts in risk assessment and anthropology), and contains the best currently available information for the purpose of deriving an FCR for HHC adequate to protect present day sustenance fishing for such waters. It is the only local study focused on the tribal members and areas most heavily used by those members today. While it relies on daily caloric and protein intake to derive heritage FCRs, the FCR of 286 g/day is also the best currently available estimate for contemporary tribal sustenance level fish consumption for waters where the sustenance fishing designated use applies.

In addition, EPA consulted with tribal governments to obtain their views on the suitability of the Wabanaki Study and any additional relevant information to select a FCR for this final rulemaking. The tribes represented that the Wabanaki study and corresponding rate of 286 g/day is an appropriate and accurate portrayal of their present day sustenance fishing lifeway, absent significant improvement in the availability of anadromous fish species, and EPA gave significant weight to the tribes’ representations.⁶¹

⁶⁰ ChemRisk, A Division of McLaren Hart, and HBRS, Inc., *Consumption of Freshwater Fish by Maine Anglers*, as revised, July 24, 1992.

⁶¹ Indeed, in developing its own 2014 tribal water quality criteria, the Penobscot Nation used a FCR of 286 g/day. The Nation explained that it chose the inland non-anadromous total FCR of 286 g/day presented in the Wabanaki Study because, although the Penobscot lands are in areas that would have historically supported an inland anadromous diet (with total FCR of 514 g/day), the contemporary populations of anadromous species in Penobscot waters are currently too low to be harvested in significant quantities. Penobscot Nation, Department of Natural Resources, *Response to Comments on Draft Water Quality Standards*, September 23, 2014, p. 9.

⁵⁵ Letter from Hilary C. Tompkins, Solicitor, Department of Interior, to Avi S. Garbow, General Counsel, EPA, January 30, 2015, a copy of which is in the docket supporting this action.

⁵⁶ One of the commenters, Maine’s Attorney General, concedes as much. Her objection to EPA’s approach rests on her assertion that there is no designated use of sustenance fishing for the waters in Indian lands. But she recognizes that had the Maine Legislature adopted proposed legislation for a “subsistence fishing” designated use for a portion of the Penobscot River, the adoption of that use would have protected the subsistence fishers as the target population for the stretch of the river to which the use applied. See Comments of Maine’s Attorney General at 11.

⁵⁷ EPA recognizes that tribal members will not be the only population fishing from some of these

As explained in EPA's disapproval and preamble to the proposed rule, the data from the ChemRisk Study are not suitable as a source for deriving the FCR for waters in Indian lands in Maine. That study was not a survey of tribal sustenance fishers in tribal waters. Rather, it was a statewide recreational angler survey that polled anglers with state fishing licenses and was not a survey intended to characterize tribal fish consumption in tribal waters. As explained by tribal representatives both in comments on Maine's 2012 revisions and in comments on this rule, and by DEP in its response to comments on the 2012 revisions, tribal members are not necessarily required to get state licenses to fish and therefore were likely underrepresented in the survey.⁶²

In addition, EPA disagrees with commenters who assert that there were no fish advisories or that there were an insignificant number of river miles covered by fish advisories during the time of the ChemRisk Study. It is well documented that fish advisories were in place on some waters in Maine at the time of the ChemRisk Study. As documented by Maine's Department of Health and Human Services in a 2008 history of dioxin fish consumption advisories in Maine,⁶³ fish advisories were first issued in Maine on the Androscoggin River in 1985 and on the Kennebec and Penobscot River in 1987, before the ChemRisk Study survey was conducted. While relative to the state as a whole this may seem to be a small portion of river miles that were affected by a fish consumption advisory, the Penobscot River is a very large portion of the sustenance fishery for the Penobscot Indian Nation, and it is a waterbody with a high profile and symbolic significance in the Indian community.

Further, as documented by DEP in its response to comments on its 2012 WQS revisions, during the time that the ChemRisk survey was conducted:

[P]ublic awareness of historical pollution in industrialized rivers can be expected to have suppressed fish consumption on a local basis. The Department is unable to quantify the extent of suppression due to historical pollution in the major rivers or the dioxin advisories in place at the time of the ChemRisk study, but believes that the ChemRisk (Ebert *et al.*) estimates of fish

consumption for rivers and streams as well as the inclusive 'all waters' categories are likely to have been affected to some degree.⁶⁴

3. Cancer Risk Level

With respect to the cancer risk management value used in deriving the HHC of 10^{-6} , one commenter noted that this value was unduly protective of public health while another implied the Agency could adopt a more protective risk management level, and several supported EPA's use of 10^{-6} . In promulgating HHC for the tribes in Maine, EPA incorporated an excess cancer risk level of 10^{-6} as the appropriate target level for two reasons. First, it is consistent with Maine DEP Rule 06-096, Chapter 584, which EPA approved for waters in Indian lands on February 2, 2015, and which specifies that water quality criteria for carcinogens must be based on a 10^{-6} CRL.⁶⁵ Second, it is consistent with EPA guidance that states, "For deriving CWA section 304(a) criteria or promulgating water quality criteria for states and tribes under Section 303(c) based on the 2000 Human Health Methodology, EPA intends to use the 10^{-6} risk level, which the Agency believes reflects an appropriate risk for the general population."⁶⁶ As explained above, EPA considers the tribes to be the general target population for waters in Indian lands. In promulgating HHC that correspond to an excess cancer risk level of 10^{-6} for tribes in Maine, not only is EPA acting consistent with both EPA guidance and Maine's existing rule, but EPA is providing the tribes engaged in sustenance fishing in waters in Indian lands with an equivalent level of cancer risk protection as is afforded to the general population in Maine outside of waters in Indian lands.

4. Trophic Level Specific Fish Consumption Rates

Since the Wabanaki Study presented estimates of the total amount of fish and aquatic organisms consumed but not the amount consumed from each trophic level, for the purpose of developing HHC for the Maine tribes, EPA assumed that Maine tribes consume the same relative proportion of fish and aquatic

organisms from the different trophic levels 2 through 4 as is consumed by the adult U.S. population. As identified in the 2015 criteria update, the relative percent of the total fish consumption rate for trophic levels 2 through 4 for the adult U.S. population amounts to 36%, 40%, and 24%.⁶⁷ Accordingly, EPA adjusted the 286 g/day total tribal fish consumption rate by these same percentages and arrived at trophic-specific fish consumption rates of 103 g/day (trophic level 2), 114 g/day (trophic level 3), and 68.6 g/day (trophic level 4). These trophic specific fish consumption rates were thus used in deriving the HHC for those compounds for which the 2015 criteria update included trophic level specific BAFs. For compounds where, in 2015, EPA estimated BAFs from laboratory-measured BCFs and therefore derived a single pollutant-specific BAF for all trophic levels, and where EPA's existing 304(a) recommended human health criteria for certain pollutants still incorporate a single BCF and those pollutants are included in this final rule, EPA derived the HHC using a total fish consumption rate of 286 g/day.

The Penobscot Nation requested EPA use a slightly different weighting scheme when refining the fish consumption rate based on the trophic levels of the fish and shellfish species they consume. While EPA recommends the use of local data relevant to the population of interest whenever possible in deriving human health criteria, such data must be from a sound scientific study before it can be utilized. The Penobscot Nation did not provide adequate information to support a different trophic level weighting scheme. See Topic 5 in the RTC document for a more detailed response.

5. Geographic Extent of Waters To Which the HHC Apply

The HHC contained in the rule are designed to protect the designated use of sustenance fishing as exercised by the tribes in Maine. The HHC thus apply to waters where that designated use is approved. EPA approved a sustenance fishing designated use in two general categories of waters: (1) Waters in Indian lands, and (2) waters outside Indian lands where the sustenance fishing right reserved in MIA section

⁶² Id., Exhibit 8, pages 14 and 19; June 20, 2016, Letter from Chief Brenda Commander, Houlton Band of Maliseet Indians, to Gina McCarthy, Administrator, EPA, page 15.

⁶⁵ The only exception from the requirement to use a CRL of 10^{-6} in Chapter 584 is for arsenic, for which a CRL of 10^{-4} is required. EPA disapproved the arsenic CRL for waters in Indian lands.

⁶⁶ USEPA. 2000. Methodology for Deriving Ambient Water Quality Criteria for the Protection of Human Health. U.S. Environmental Protection Agency, Office of Water, Washington, DC. EPA-822-B-00-004, p. 2-6.

⁶⁷ USEPA. 2014. Estimated Fish Consumption Rates for the U.S. Population and Selected Subpopulations (NHANES 2003-2010). EPA-820-R-14-002. <https://www.epa.gov/sites/production/files/2015-01/documents/fish-consumption-rates-2014.pdf>.

6207(4) applies.⁶⁸ The first category, “waters in Indian lands,” covers waters within the tribes’ reservations and trust lands as provided for under the settlement acts. The second category applies in the limited circumstances where it is determined that a Southern Tribe’s sustenance fishing right reserved in MIA section 6207(4) extends to a waterbody outside of its reservation as provided for under the settlement acts. As explained below, this situation currently exists in only one waterbody, a clearly delineated stretch of the Penobscot River.

The outer bounds of waters that may fall within the two categories of the rule are based on the settlement acts and are thereby generally identifiable. The rule, however, does not identify the specific boundaries of each waterbody or portion thereof to which the HHC apply. Whether a specific waterbody falls within one of these categories will depend on the status of such water under applicable federal and state law. The status of such a waterbody may therefore be determined as a result of litigation or other legal developments regarding that specific waterbody. The two general categories of waters to which the HHC apply, however, will remain constant.

Three commenters asserted that this approach is overly broad and vague. EPA disagrees. Here, EPA has clearly described the specific categories of waters to which this rule applies, which flow directly from and are bounded by the express provisions of the settlement acts. The purpose of the rule is to establish WQS that address EPA’s disapprovals and necessity determination and adequately protect applicable designated uses. It is both reasonable and appropriate, and consistent with prior practice under the CWA, for EPA to promulgate these WQS without a final adjudication or determination of the precise boundaries of each specific waterbody that falls within each category, so long as the WQS protect the uses and clearly apply only to waters subject to those uses. As

described below, the extent of waters in Indian lands is largely established under the settlement acts and subsequent trust conveyances that have occurred under the terms of those acts. But there are isolated disputes and one pending lawsuit regarding the boundaries of Indian lands and the geographic extent of tribal sustenance fishing rights. EPA’s approach is designed to be responsive to the potential that these disputes could result in clarifications of the particular boundaries of the disputed waters, while maintaining protection of the tribes’ sustenance fishing use.⁶⁹

a. Adequate Notice

Although this rulemaking does not identify the exact boundaries of each waterbody or portion thereof covered by the rule, it nevertheless provides adequate notice to potentially regulated parties because the categories are clearly described, and waters that could reasonably fall within these two categories are either precisely described in the settlement acts or, in circumstances where there are ongoing disputes or uncertainties, located in limited areas in Maine representing a small fraction of all waters within the state. In fact, any uncertainties as to the scope of waters in Indian lands largely pertain to particular stretches of the Penobscot and St. Croix Rivers. EPA anticipates that any existing uncertainty will be addressed by the current litigation regarding the Main Stem of the Penobscot River and DOI’s work with the Passamaquoddy Tribe to determine the status of the relevant stretch of the St. Croix River.

The first category—“waters in Indian lands”—covers waters within a tribe’s reservation or trust lands. The tribes’ trust lands are all the result of modern conveyances recorded after the 1980 settlements, the boundaries of which are described in the deeds for those parcels. Although there are ongoing disputes over the extent of some of the reservation lands, the Indian settlement acts identify the outer bounds of what could reasonably be identified as reservation land. In the Economic Analysis conducted for this rulemaking,

EPA took a conservative approach and identified all discharges for which there is any reasonable potential that they discharge to waters in Indian lands or their tributaries. In doing so, EPA identified a total of only 33 facilities, a small subset of the 478 Maine Pollutant Discharge Elimination System (MEPDES) permitted dischargers in the state.

One commenter expressed concern that the boundaries of the sustenance fishing designated use as it applies to the tribes’ trust lands may expand if any of the tribes exercise what remaining authority they may have under the settlement acts to purchase and take more land into trust outside the reservations. However, EPA did not intend for its approval and disapproval decisions on WQS for waters in Indian lands, or for this rule, to apply to waters that may be part of after-acquired trust lands. EPA’s promulgation of HHC to address the disapprovals is thus limited to waters in trust lands as of February 2, 2015, and waters in the Southern Tribes’ reservations. EPA’s promulgation of HHC in accordance with the Administrator’s determination is likewise limited. The sustenance fishing designated use and appropriate HHC would not apply to any waters in after-acquired trust lands until such time as the state or EPA took further action under the CWA. This step would give interested parties an opportunity to comment on that action. EPA also notes that where the settlement acts have not already specifically identified parcels that qualify to be taken into trust, they clearly provide for the state to receive notice of any trust acquisition.⁷⁰

The second category is quite narrow, limited to waterbodies outside of Indian lands where the Southern Tribes’ sustenance fishing right reserved in MIA section 6207(4) applies. Currently, the Main Stem of the Penobscot River is the only waterbody in the state that has been adjudicated to be a waterbody outside of Indian lands to which a tribe, the Penobscot Nation, has a right to sustenance fish based in MIA.⁷¹ The “Main Stem” addressed by the court in the *Mills* litigation is clearly identified as “a portion of the Penobscot River and stretches from Indian Island north to the confluence of the East and West Branches of the Penobscot River.”⁷² Significantly, the court in *Mills* concluded that the Penobscot Nation has a sustenance fishery reservation, under MIA section 6207, in “the waters

⁶⁸ For “waters in Indian lands,” this final rule promulgates HHC as well as six other WQS (narrative and numeric bacteria criteria for the protection of primary contact recreation and shellfishing; ammonia criteria for protection of aquatic life in fresh waters; provisions that ensure that WQS apply to HHC even if they are naturally occurring; a mixing zone policy; a pH criterion for fresh waters; and tidal temperature criteria). For the second category of waters, where there is a sustenance fishing designated use outside of waters in Indian lands, the rule promulgates only the HHC. This response focuses on the HHC because the HHC apply to the broadest set of tribal-related waters and because the comments addressing the geographical scope of the rule are largely framed in terms of concerns about the HHC.

⁶⁹ It is important to note that EPA has expressly answered the question of who has jurisdiction over all the waters involved in this matter, irrespective of which category they fall under or which use(s) and criteria apply. EPA did so in its February 2015 decision when it determined that the state has jurisdiction to set WQS over all waterbodies in Maine, including those within tribal reservations and trust lands. EPA is also determining that the HHC at issue will apply only where designated use of sustenance fishing applies. EPA is not, however, making any determinations in this rulemaking on the narrower technical question regarding the full extent of precise waters to which that use, and thus the HHC, apply.

⁷⁰ 30 MRSA 6205-A(1); 30 MRSA 7204.

⁷¹ *Penobscot Nation v. Mills*, 151 F. Supp. 3d at 222–223.

⁷² *Id.* at 186.

adjacent to its island reservation,” under MIA section 6203.⁷³ Accordingly, in scenarios like the one addressed by the court in *Mills*, waters that fall under this second category will likely share a geographic nexus with the Southern Tribes’ reservations.

This second category thus represents a limited universe of potential waters that fall outside the existing waters in Indian lands only to the extent the fishing right reserved in MIA section 6207(4) extends beyond the reservation of a Southern Tribe under MIA section 6203 under the reasoning of the U.S. District Court in the *Mills* litigation. In the event the law of the case in the *Mills* litigation changes, it is also possible that no waters would fall within this second category. Accordingly, the waters covered by this rule are at most the waters in Indian lands and the limited additional waters where a Southern Tribe has a right to sustenance fish, which will likely share a geographic nexus with the tribes’ reservations.

b. General Approach

Under the CWA, it is not uncommon for a state, authorized tribe, or EPA to take an approach, when promulgating WQS (*i.e.*, designated uses, water quality criteria, and antidegradation policies), of identifying a category of waters to which the WQS apply, where additional information will need to be gathered before the implementing agency can determine whether such WQS applies to any specific waterbody. For these WQS, any uncertainties regarding applicability to a specific waterbody are appropriately resolved as the standards are implemented through various actions under the CWA, such as NPDES permitting and listing of impaired waters under section 303(d) of the CWA, among others.

An example of this approach already in effect in Maine involves the state’s criteria for dissolved oxygen (DO). Maine’s longstanding DO criteria for Class B and C waters include generally applicable criteria as well as more protective criteria that apply only to fish spawning areas in the colder months.⁷⁴ The DO criteria do not list each specific fish spawning area in Class B or C waters, nor do the more general classifications of fresh waters at 38 M.R.S. 467 and 468. Rather, Maine must determine whether a spawning area is implicated on a permit-by-permit

basis.⁷⁵ Similarly, Maine’s WQS contain certain natural conditions provisions that alter the way in which pollutants may be treated for WQS purposes if they are naturally occurring.⁷⁶ The waters in which such conditions occur are not identified in the WQS themselves but rather must be determined on a case-by-case basis.

There are numerous examples from other states identifying general categories of waters to which certain standards apply. For example, the State of Wisconsin has several narrative water quality criteria that apply to “wetlands,” defined as “an area where water is at, near or above the land surface long enough to be capable of supporting aquatic or hydrophytic vegetation and which has soils indicative of wet conditions.”⁷⁷ Florida has promulgated numeric interpretations of its narrative nutrient criteria that apply to “streams,” defined as “a predominantly fresh surface waterbody with perennial flow in a defined channel with banks during typical climatic and hydrologic conditions for its region within the state,” but excluding certain non-perennial stream segments, ditches, canals, and other conveyances that have various characteristics as defined in the regulation.⁷⁸ Whether a specific discharge implicates a waterbody that falls within these general categories, and thus whether the associated water quality criteria apply, is left to the implementing agency to determine by applying the case-specific facts to the general category definition.

EPA is taking a similar approach here, by defining two general categories of waters covered by this rule. The determination of whether a specific waterbody falls within one of these categories will be made, in the first instance, by the implementing (*e.g.*, permitting) authority. Determining whether a waterbody is within one of the two categories covered by EPA’s rule will require application of the facts relevant to that particular waterbody to the definition of the category. However, disputes regarding the extent of waters which may be subject to this rule are

primarily limited to stretches of two waterbodies, as described above. Therefore, EPA anticipates that the case-by-case identification of whether a waterbody is covered by this rule will be straight-forward in most instances.

E. Other Water Quality Standards

1. Mixing Zone Policy for Waters in Indian Lands

Two commenters asserted that EPA does not have the legal authority or the scientific basis to ban mixing zones for bioaccumulative pollutants outside the Great Lakes. EPA disagrees. EPA’s authority to promulgate a mixing zone policy, and to prohibit its use for bioaccumulative pollutants, derives from section 303(c) of the CWA. While states are not required to adopt mixing zone policies, when a state includes a mixing zone policy in its water quality standards, the policy is subject to EPA’s review and approval or disapproval. 40 CFR 131.13. Adoption of a mixing zone policy is necessary for a mixing zone to be authorized in the issuance of a CWA discharge permit. EPA disapproved Maine’s mixing zone policy for waters in Indian lands because it did not meet the requirements of the CWA. Recognizing that Maine intended to authorize mixing zones as part of its water quality standards, EPA, pursuant to CWA section 303(c)(4)(A), is now promulgating a mixing zone policy that includes protections that were missing from Maine’s policy that EPA disapproved. EPA has determined that a ban on a mixing zone for bioaccumulating pollutants is reasonable and appropriate for the reasons discussed below, and nothing in CWA section 303(c) or EPA’s implementing regulations constrains EPA’s legal authority to do so.

EPA guidance has long cautioned states and tribes against mixing zone policies that allow mixing zones for discharges of bioaccumulative pollutants, since they may cause significant ecological and human health risks such that the designated use of the waterbody as a whole may not be protected.^{79 80 81} EPA’s WQS Handbook notes that this is particularly the case where mixing zones may encroach on

⁷⁵ 06–096–585 Code of Maine Rules, Chapter 584, Surface Water Quality Criteria for Toxic Pollutants.

⁷⁶ This rule includes provisions to ensure that these natural conditions WQS are not applied to HHC.

⁷⁷ Wis. Admin. Code NR section 103.03 (2016). For additional examples of states with WQS for “wetlands,” see 5 Colo. Code Regs. section 1002–31.11 (LexisNexis 2016); Iowa Admin. Code r. 567–61.3 (2016); Minn. R. 7050.0186 (2016); 117 Neb. Admin. Code section 7–001 (2015); 15A N.C. Admin. Code 02B.0231 (2016); Ohio Admin Code 3475–1–50.

⁷³ *Id.* at 221–222.

⁷⁴ 38 M.R.S. sections 465.3.B and 465.4.B, respectively. Note that as part of this rulemaking, EPA is promulgating dissolved oxygen criteria for Class A waters, also with specific criteria that apply to fish spawning areas.

areas used for fish harvesting. The waters in Indian lands, to which this mixing zone policy will apply, not only are used for fish harvesting but have a designated use of sustenance fishing. By their very nature, bioaccumulative pollutants are those that accumulate in fish and shellfish and other organisms. Moreover, as EPA has explained elsewhere, the effects of such pollutants are not short term, nor are they limited to a localized zone of initial dilution.⁸² Since the effects could be persistent and occur well beyond the mixing zone, there is no assurance that all designated uses would be protected. EPA is particularly concerned about the potential adverse effects of such a mixing zone on the sustenance fishing use for those reasons. EPA also notes that the state has not in the past granted mixing zones for bioaccumulative pollutants, and neither the state nor the regulated community in Maine have raised a concern in their comments about EPA's proposal that mixing zones cannot be authorized for bioaccumulative pollutants. Therefore, EPA's final rule includes the prohibition on a mixing zone for bioaccumulative pollutants.

2. Bacteria Criteria for Waters in Indian Lands

a. Recreational Bacteria Criteria

EPA received one comment in opposition to the proposed recreational bacteria criteria. Maine DEP objected to EPA's inclusion of wildlife sources in the scope of the bacteria criteria for several reasons. It argued that inclusion of wildlife sources is beyond the scope of the CWA, which DEP asserts is only concerned with human pollution, and that *E. coli* are used only as an indicator of human sewage. It also asserted that EPA incorrectly "construed 'animal sources' of bacteria from studies as equivalent to naturally occurring 'wildlife sources' in the proposed rule"; that EPA cited to only one study in EPA's 2012 Recreational Water Quality Criteria (RWQC) that links potential human health risks with non-human sources of fecal contamination; and that because bacteria from natural sources are likely to be "temporal," removing a use (recreation in and on the water) simply due to a high level of *E. coli* where the bacteria source is of natural origins "is, at best, unwise."⁸³ None of

these comments provides a basis for excluding wildlife sources from EPA's rule, which is based on the 2012 recommended RWQC.

First, the CWA does not limit EPA to consideration of human causes of pollution when developing water quality criteria protective of human health. CWA section 502(23) defines "pathogen indicator" to mean "a substance that indicates the potential for human infectious disease" with no limitation on source. EPA's recommended RWQC identify levels of fecal indicator bacteria (which include fecal coliforms, *E. coli*, enterococci or *Enterococcus* spp.) that will be protective of human health. Those pathogen indicators are not limited to pathogens coming only from human sources.⁸⁴

Second, *E. coli* are typically found in the digestive systems of warm-blooded animals, and can be used to indicate the presence of fecal material in surface waters regardless of their origin, whether from humans, domestic animals, or wildlife. The literature provides many studies documenting wildlife as sources of *E. coli*.^{85 86 87} For decades, EPA's regulatory premise concerning recreational water quality has been that nonhuman-derived human pathogens, including those from wildlife, in fecally contaminated waters present a potential risk to human health.⁸⁸ EPA has investigated sources of fecal contamination in its *Review of Published Studies to Characterize Relative Risks from Different Sources of Fecal Contamination in Recreational Waters*⁸⁹ and *Review of Zoonotic*

Pathogens in Ambient Waters,⁹⁰ and determined that both human and animal feces, including feces from wildlife, in recreational waters do pose potential risks to human health. EPA again confirmed, in the development of the 2012 RWQC, that wildlife can carry both zoonotic pathogens capable of causing illness in humans and fecal indicator bacteria, and these microbes can be transmitted to surface waters.⁹¹

Contrary to the commenter's assertion, EPA cited more than one study in the RWQC that links potential human health risks with non-human sources of fecal contamination.⁹² Furthermore, in the development of the RWQC, EPA did not, as the commenter claimed, equate bacteria from domestic animal sources to those of naturally occurring wildlife. On the contrary, EPA's research for the development of the RWQC clearly recognized that there is a risk differential between human and non-human animal sources, as well as among non-human animal sources.⁹³ Nevertheless, because zoonotic pathogens are present in animal (including wildlife) fecal matter, creating a potential risk from recreational exposure to zoonotic pathogens in animal-impacted waters, EPA found no scientific basis on which to exclude wildlife altogether from the scope of the RWQC, nor has the commenter provided any scientific basis for excluding wildlife sources altogether from the scope of the EPA's rule for waters in Indian lands in Maine.

Maine DEP commented that because bacteria from natural sources are likely to be "temporal," removing a use (recreation in and on the water) simply due to a high level of *E. coli* where the bacteria source is of natural origins "is, at best, unwise." This circumstance is not a justification for excluding wildlife sources altogether from the scope of recreational bacteria criteria. EPA recognizes that health risks associated with exposure to waters impacted by animal sources can vary substantially, depending on the animal source. In some cases, these risks can be similar to exposure to human fecal contamination, and in other cases, the risk is lower.^{94 95 96 97} In situations with

bacteria. . . ." EPA did not cite to that guidance in the context of the proposed bacteria criteria, and it has no bearing on EPA's decision to include wildlife sources in the scope of the criteria.

⁸² Id.

⁸³ The commenter also refers to the 1997 Guidance ("Establishing Site Specific Aquatic Life Criteria Equal to Natural Background") "cited by EPA," and states that it "stands for possible reevaluation of uses based on known background concentrations not establishing criteria which necessitates regulation of naturally occurring

non-human sources of fecal contamination, the state may choose to conduct sanitary surveys, epidemiological studies and/or a Quantitative Microbial Risk Assessment (QMRA). If sanitary surveys, water quality information, or health studies show the sources of fecal contamination to be non-human, and the indicator densities reflect a different risk profile, then the state has the option to develop and adopt site-specific alternative recreational bacteria criteria to reflect the local environmental conditions and human exposure patterns.⁹⁸ For waterbodies where non-human fecal sources predominate, QMRA can be used to determine a different enterococci or *E. coli* criteria value that is equally protective as the criteria EPA is promulgating today.⁹⁹

Maine DEP also objected to EPA's proposal to apply the bacteria criteria year round, and requested that EPA exclude the period of October 1–May 14, similar to Maine's disapproved criteria. The state asserted that EPA had not demonstrated that recreational activities occur in this time frame. Other commenters supported the year round criteria. EPA disagrees with the state's characterization of the record. First, the activities cited by EPA in the proposal were merely examples of readily available information that recreation does occur during the period October 1 to May 14. The record also included information from one tribal member confirming that activities in and on the Penobscot River occur whenever the waters are ice free. In its comment supporting the proposed criteria, the Penobscot Nation specifically noted that the tribe engages in year round activities in and on the Penobscot River, including for paddling, fishing, and ceremonial uses. EPA had invited

comment on whether a seasonal term shorter than October 1–May 14, during which the recreational bacteria criteria would not apply, would still adequately protect recreational uses. EPA received no comments that provided specific information that could support the establishment of a seasonal timeframe in which the absence of bacteria criteria would be protective of uses. Therefore, EPA has retained the year round applicability in the final rule.

IV. Economic Analysis

EPA is not required under CWA section 303(c) or its implementing regulations at 40 CFR part 131 to conduct an economic analysis regarding implementation of these EPA-promulgated WQS. For the purpose of transparency, EPA conducted a cost analysis for the WQS in this final rule. Potential economic effects of this rule are presented here.

These WQS may serve as a basis for development of NPDES permit limits. Maine has NPDES permitting authority and retains considerable discretion in implementing standards. EPA evaluated the potential costs to NPDES dischargers associated with state implementation of EPA's final criteria. This analysis is documented in "Final Economic Analysis for Promulgation of Certain Federal Water Quality Criteria Applicable to Maine," which can be found in the docket for this rulemaking.

Any NPDES-permitted facility that discharges pollutants for which the revised WQS are more stringent than the previously applicable WQS could potentially incur increased compliance costs. The types of affected facilities could include industrial facilities and POTWs discharging wastewater to surface waters (*i.e.*, point sources). EPA did not attribute compliance with water quality-based effluent limitations (WQBELs) reflective of Maine's existing (hereafter "baseline") WQS to the final rule. Once in compliance with WQBELs reflective of baseline criteria, EPA expects that dischargers will continue to use the same types of controls to come into compliance with any revised WQBELs reflective of the more stringent WQS.

The following final criteria are not expected to result in incremental costs to permitted dischargers: pH, temperature, ammonia, and all but one HHC (for waters in Indian lands); phenol (for state waters outside Indian lands); and dissolved oxygen (for all state waters). As described below, the cost analysis identifies potential costs of compliance with one HHC (bis(2-ethylhexyl)phthalate), bacteria, and the

final mixing zone policy for waters in Indian lands.

EPA did not fully evaluate the potential for costs to nonpoint sources. Very little data were available to assess the potential for the rule to result in WQS exceedances attributable to nonpoint sources. It is difficult to model and evaluate the potential cost impacts of this final rule to nonpoint sources because they are intermittent, variable, and occur under hydrologic or climatic conditions associated with precipitation events. Finally, legacy contamination (*e.g.*, in sediment) may be a source of ongoing loading. Atmospheric deposition may also contribute loadings of the pollutants of concern (*e.g.*, mercury). EPA did not estimate sediment remediation costs, or air pollution control costs, for this analysis.

A. Identifying Affected Entities

EPA identified 33 facilities (major and non-major) that discharge to waters in Indian lands or their tributaries, two facilities that discharge phenol to other state waters, and 26 facilities that discharge to Class A waters throughout the state. EPA identified 16 point source facilities that could incur additional costs as a result of this final rule. Of these potentially affected facilities, eight are major dischargers and eight are minor dischargers. Two are industrial dischargers and the remaining 14 are publicly owned treatment works (POTWs). EPA did not include general permit facilities in its analysis because data for such facilities are limited. EPA evaluated all of the potentially affected facilities.

EPA does not agree with the comment that its economic analysis ("EA") was deficient because uncertainty—including with respect to the geographic scope of the rule's applicability—constrained the Agency's ability to assess the economic impacts of the rule. Although the commenter is correct that the geographic extent of the waters covered by this promulgation could change due to litigation or other legal developments regarding Indian land status, EPA used an inclusive approach in its analysis that accounted for all facilities that could reasonably fall within the two general categories of waters to which the HHC may apply. If the geographic scope of waters to which the HHC apply is smaller, then fewer facilities will be affected by the rule and costs will be lower.

B. Method for Estimating Costs

For the 16 facilities that may incur costs, EPA evaluated existing baseline permit conditions and the potential to exceed new effluent limits based on the

recreational beaches. *Environmental Science and Technology* 44(7): 2286–2291.

⁹⁸ USEPA. 2012. Recreational Water Quality Criteria. U.S. Environmental Protection Agency, Office of Water, Washington, DC. Office of Water 820-F-12-058. Section 6.2.

⁹⁹ *Id.*, Section 6.2.2.

final rule. In instances of exceedances of projected effluent limitations under the final criteria, EPA determined the likely compliance scenarios and costs. Only compliance actions and costs that would be needed above the baseline level of controls are attributable to the rule.

EPA assumed that dischargers will pursue the least cost means of compliance with WQBELs. Incremental compliance actions attributable to the rule may include pollution prevention, end-of-pipe treatment, and alternative compliance mechanisms (e.g., variances). EPA annualized capital costs, including study (e.g., variance) and program (e.g., pollution prevention) costs, over 20 years using a 3% discount rate to obtain total annual costs per facility.

C. Results

1. Costs From Final Human Health Criteria Applicable to Waters in Indian Lands

Based on this approach, EPA identified one facility that has reasonable potential to exceed permit effluent limits based on one final criterion (bis(2-ethylhexyl)phthalate). EPA calculated a projected effluent limitation based on the same procedures utilized by Maine in its NPDES

permitting practices. To estimate potential costs to this facility from meeting the projected effluent limits, EPA considered source controls, end-of-pipe treatments, and alternative compliance mechanisms (e.g., variances). For this provision, EPA estimated total annual compliance costs of \$28,000 (for source controls) to \$43,000 (for end-of-pipe treatments).

2. Costs From Final Recreational Bacteria Criteria for Waters in Indian Lands

EPA does not expect the final recreational bacteria criteria to result in any new treatment processes being added to facilities, but does expect that 14 facilities with existing limitations for bacteria will need to operate their disinfection systems year-round, extending treatments for an additional 226 days per year. EPA estimated the costs of chemicals and monitoring during this extended period based on the facilities' effluent flow rate, type of treatment, and monitoring costs. For this provision, EPA estimated total annual compliance costs of \$185,000 to \$705,000.

3. Costs From Final Mixing Zone Policy

EPA identified one facility with an existing permit that establishes a

thermal mixing zone that may affect waters in Indian lands. It is unknown whether reductions in thermal loads will be necessary to reduce the mixing zone to a size and configuration that would meet the new mixing zone policy at this facility; possible outcomes include the need for facility-specific studies, revisions to permit conditions that could require recalculating thermal discharge limits, or changes in facility processes or operations to reduce the thermal load. To estimate the costs of this provision, EPA used as lower-bound the cost to conduct a study to characterize the discharger's existing thermal plume and support evaluation of whether the current mixing zone complies with the new mixing zone policy (\$1,000, annual cost for 20 years) and as upper-bound the potential cost impacts for installing new cooling towers at the facility (\$273,000, annualized over 30 years at a 3 percent discount rate).

4. Total Costs

Table 3 summarizes the estimated point source compliance costs from the final WQS. EPA estimates that the total annual compliance costs for all provisions may be in the range of \$214,000 to \$1.0 million.

TABLE 3—SUMMARY OF ESTIMATED POINT SOURCE COMPLIANCE COSTS

Final WQS	Annualized costs (thousands; 2014\$) ¹
Human health criteria for waters in Indian lands	\$28–\$43
Recreational bacteria criteria for waters in Indian lands	185–705
Mixing zone policy	1–273
Total	214–1,021

¹ One-time costs are annualized over 20 years (30 years in the case of cooling towers under the mixing zone policy) using a 3% discount rate.

V. Statutory and Executive Order Reviews

A. Executive Order 12866 (Regulatory Planning and Review) and Executive Order 13563 (Improving Regulation and Regulatory Review)

This action is a significant regulatory action that was submitted to the Office of Management and Budget (OMB) for review. Any changes made in response to OMB recommendations have been documented in the docket.

EPA prepared an analysis of the potential costs and benefits associated with this action. This analysis is summarized in section IV of the preamble and is available in the docket.

B. Paperwork Reduction Act

This action does not impose any direct new information collection burden under the provisions of the Paperwork Reduction Act, 44 U.S.C. 3501 *et seq.* Actions to implement these WQS could entail additional paperwork burden. Burden is defined at 5 CFR 1320.3(b). This action does not include any information collection, reporting, or record-keeping requirements.

C. Regulatory Flexibility Act

I certify that this action will not have a significant economic impact on a substantial number of small entities under the RFA. This action will not impose any requirements on small entities. Small entities, such as small businesses or small governmental

jurisdictions, are not directly regulated by this rule. This rule will thus not impose any requirements on small entities.

EPA-promulgated standards are implemented through various water quality control programs including the NPDES program, which limits discharges to navigable waters except in compliance with an NPDES permit. The CWA requires that all NPDES permits include any limits on discharges that are necessary to meet applicable WQS. Thus, under the CWA, EPA's promulgation of WQS establishes standards that the state implements through the NPDES permit process. The state has discretion in developing discharge limits, as needed to meet the standards. As a result of this action, the

State of Maine will need to issue permits that include limitations on discharges necessary to comply with the standards established in the final rule. In doing so, the state will have a number of approaches available to it associated with permit writing. While Maine's implementation of the rule may ultimately result in new or revised permit conditions for some dischargers, including small entities, EPA's action, by itself, does not directly impose any requirements on small entities. Any impact from EPA's action on small entities would therefore only be indirect because the requirements of this rule are not self-implementing.

D. Unfunded Mandates Reform Act

This action contains no federal mandates under the provisions of Title II of the Unfunded Mandates Reform Act of 1995 (UMRA), 2 U.S.C. 1531–1538 for state, local, or tribal governments or the private sector. As these water quality criteria are not self-implementing, EPA's action imposes no enforceable duty on any state, local or tribal governments or the private sector. Therefore, this action is not subject to the requirements of sections 202 or 205 of the UMRA.

This action is also not subject to the requirements of section 203 of UMRA because it contains no regulatory requirements that could significantly or uniquely affect small governments.

E. Executive Order 13132

This action does not have federalism implications. It will not have substantial direct effects on the states, on the relationship between the national government and the states, or on the distribution of power and responsibilities among the various levels of government. This rule does not alter Maine's considerable discretion in implementing these WQS, nor will it preclude Maine from adopting WQS in the future that EPA concludes meet the requirements of the CWA, which will eliminate the need for federal standards. Thus, Executive Order 13132 does not apply to this action.

F. Executive Order 13175 (Consultation and Coordination With Indian Tribal Governments)

This action has tribal implications, however, it would neither impose substantial direct compliance costs on federally recognized tribal governments, nor preempt tribal law. Therefore, consultation is not required under the Executive Order. In the state of Maine, there are four federally recognized Indian tribes represented by five tribal

governments. As a result of the unique jurisdictional provisions of the Maine Indian Claims Settlement Act, as described above, the state has jurisdiction for setting water quality standards for all waters in Indian lands in Maine. This rule will have no effect on that jurisdictional arrangement. This rule would affect federally recognized Indian tribes in Maine because the water quality standards will apply to all waters in Indian lands. Some will also apply to waters outside of Indian lands where the sustenance fishing designated use established by 30 M.R.S. 6207(4) and (9) applies. Finally, many of the final criteria for such waters are protective of the sustenance fishing designated use, which is based in the Indian settlement acts in Maine.

The EPA consulted with tribal officials under the EPA Policy on Consultation and Coordination with Indian Tribes early in the process of developing this rule to permit them to have meaningful and timely input into its development. Summaries of those consultations are provided in the following documents: "Maine WQS Tribal Leaders Consultation 4–27–16;" "Maine WQS Technical Consultation 4–11–16;" and "Summary of Tribal Consultations Regarding Water Quality Standards Applicable to Waters in Indian Lands within the State of Maine," which are available in the docket for this rulemaking.

G. Executive Order 13045 (Protection of Children From Environmental Health and Safety Risks)

The EPA interprets Executive Order 13045 as applying only to those regulatory actions that concern environmental health or safety risks that the EPA has reason to believe may disproportionately affect children, per the definition of "covered regulatory action" in section 2–202 of the Executive Order. This action is not subject to Executive Order 13045 because it does not concern an environmental health risk or safety risk that may disproportionately affect children.

H. Executive Order 13211 (Actions That Significantly Affect Energy Supply, Distribution, or Use)

This action is not a "significant energy action" because it is not likely to have a significant adverse effect on the supply, distribution or use of energy.

I. National Technology Transfer and Advancement Act of 1995

This action does not involve technical standards.

J. Executive Order 12898 (Federal Actions To Address Environmental Justice in Minority Populations and Low-Income Populations)

The human health or environmental risk addressed by this action will not have potential disproportionately high and adverse human health or environmental effects on minority, low-income or indigenous populations.

Conversely, this action will increase protection for indigenous populations in Maine from disproportionately high and adverse human health effects. EPA developed the criteria included in this rule specifically to protect Maine's designated uses, using the most current science, including local and regional information on fish consumption. Applying these criteria to waters in the state of Maine will afford a greater level of protection to both human health and the environment.

K. Congressional Review Act (CRA)

This action is subject to the CRA, and EPA will submit a rule report to each House of the Congress and to the Comptroller General of the United States. This action is not a "major rule" as defined by 5 U.S.C. 804(2).

List of Subjects in 40 CFR Part 131

Environmental protection, Incorporation by reference, Indians—lands, Intergovernmental relations, Reporting and recordkeeping requirements, Water pollution control.

Dated: December 8, 2016.

Gina McCarthy,
Administrator.

For the reasons set forth in the preamble, EPA amends 40 CFR part 131 as follows:

PART 131—WATER QUALITY STANDARDS

- 1. The authority citation for part 131 continues to read as follows:

Authority: 33 U.S.C. 1251 *et seq.*

Subpart D—Federally Promulgated Water Quality Standards

- 2. Add § 131.43 to read as follows:

§ 131.43 Maine.

(a) *Human health criteria for toxics for waters in Indian lands and for Waters outside of Indian lands where the sustenance fishing designated use established by 30 M.R.S. 6207(4) and (9) applies.* The criteria for toxic pollutants for the protection of human health are set forth in the following table 1:

TABLE 1—HUMAN HEALTH CRITERIA

Chemical name	CAS No.	Water and organisms (µg/L)	Organisms only (µg/L)
1. 1,1,2,2-Tetrachloroethane	79-34-5	0.09	0.2
2. 1,1,2-Trichloroethane	79-00-5	0.31	0.66
3. 1,1-Dichloroethylene	75-35-4	300	1000
4. 1,2,4,5-Tetrachlorobenzene	95-94-3	0.002	0.002
5. 1,2,4-Trichlorobenzene	120-82-1	0.0056	0.0056
6. 1,2-Dichlorobenzene	95-50-1	200	300
7. 1,2-Dichloropropane	78-87-5		2.3
8. 1,2-Diphenylhydrazine	122-66-7	0.01	0.02

91. Selenium	7782-49-2	20	60
92. Toluene	108-88-3	24	39
93. Toxaphene	8001-35-2	5.3E-05	5.3E-05
94. Trichloroethylene	79-01-6	0.3	0.5
95. Vinyl Chloride	75-01-4	0.019	0.12
96. Zinc	7440-66-6	300	400

^a This criterion is expressed as the fish tissue concentration of methylmercury (mg methylmercury/kg fish) and applies equally to fresh and marine waters.

^b This criterion applies to total PCBs (i.e., the sum of all congener or isomer or homolog or Aroclor analyses).

(b) *Bacteria criteria for waters in Indian lands.* (1) The bacteria content of Class AA and Class A waters shall be as naturally occurs, and the minimum number of *Escherichia coli* bacteria shall not exceed a geometric mean of 100 colony-forming units per 100 milliliters (cfu/100 ml) in any 30-day interval; nor shall 320 cfu/100 ml be exceeded more than 10% of the time in any 30-day interval.

(2) In Class B, Class C, and Class GPA waters, the number of *Escherichia coli* bacteria shall not exceed a geometric mean of 100 colony forming units per 100 milliliters (cfu/100 ml) in any 30-day interval; nor shall 320 cfu/100 ml be exceeded more than 10% of the time in any 30-day interval.

(3) The bacteria content of Class SA waters shall be as naturally occurs, and the number of *Enterococcus* spp. bacteria shall not exceed a geometric mean of 30 cfu/100 ml in any 30-day interval, nor shall 110 cfu/100 ml be exceeded more than 10% of the time in any 30-day interval.

(4) In Class SA shellfish harvesting areas, the numbers of total coliform bacteria or other specified indicator

organisms in samples representative of the waters in shellfish harvesting areas may not exceed the criteria recommended under the National Shellfish Sanitation Program, United States Food and Drug Administration, as set forth in the Guide for the Control of Molluscan Shellfish, 2015 Revision. The Director of the Federal Register approves this incorporation by reference in accordance with 5 U.S.C. 552(a) and 1 CFR part 51. You may obtain a copy from the U.S. Food and Drug Administration Center for Food Safety and Applied Nutrition, Shellfish and Aquaculture Policy Branch, 5100 Paint Branch Parkway (HFS-325), College Park, MD 20740 or <http://www.fda.gov/Food/GuidanceRegulation/FederalStateFoodPrograms/ucm2006754.htm>. You may inspect a copy at the U.S. Environmental Protection Agency Docket Center Reading Room, William Jefferson Clinton West Building, Room 3334, 1301 Constitution Avenue NW., Washington, DC 20004, (202) 566-1744, or at the National Archives and Records Administration (NARA). For information on the availability of this material at NARA, call 202-741-6030,

or go to: http://www.archives.gov/federal_register/code_of_federal_regulations/ibr_locations.html.

(5) In Class SB and SC waters, the number of *Enterococcus* spp. bacteria shall not exceed a geometric mean of 30 cfu/100 ml in any 30-day interval, nor shall 110 cfu/100 ml be exceeded more than 10% of the time in any 30-day interval.

(c) *Ammonia criteria for fresh waters in Indian lands.* (1) The one-hour average concentration of total ammonia nitrogen (in mg TAN/L) shall not exceed, more than once every three years, the criterion maximum concentration (i.e., the “CMC,” or “acute criterion”) set forth in Tables 2 and 3 of this section.

(2) The thirty-day average concentration of total ammonia nitrogen (in mg TAN/L) shall not exceed, more than once every three years, the criterion continuous concentration (i.e., the “CCC,” or “chronic criterion”) set forth in Table 4.

(3) In addition, the highest four-day average within the same 30-day period as in (2) shall not exceed 2.5 times the CCC, more than once every three years.

Table 2. Temperature and pH-Dependent Values of the CMC (Acute Criterion Magnitude)—*Oncorhynchus* spp. Present. (Figure 5a in Aquatic Life Ambient Water Quality Criteria for Ammonia-Freshwater, EPA 822-R-13-001, April 2013.)

(d) *pH Criteria for fresh waters in Indian lands.* The pH of fresh waters shall fall within the range of 6.5 to 8.5.

(e) *Temperature criteria for tidal waters in Indian lands.* (1) The maximum acceptable cumulative increase in the weekly average temperature resulting from all artificial sources is 1 °C (1.8 °F) during all seasons of the year, provided that the summer maximum is not exceeded.

(i) Weekly average temperature increase shall be compared to baseline thermal conditions and shall be calculated using the daily maxima averaged over a 7-day period.

(ii) Baseline thermal conditions shall be measured at or modeled from a site where there is no artificial thermal addition from any source, and which is in reasonable proximity to the thermal discharge (within 5 miles), and which has similar hydrography to that of the receiving waters at the discharge.

(2) Natural temperature cycles characteristic of the waterbody segment shall not be altered in amplitude or frequency.

(3) During the summer months (for the period from May 15 through September 30), water temperatures shall not exceed a weekly average summer maximum threshold of 18 °C (64.4 °F) (calculated using the daily maxima averaged over a 7-day period).

(f) *Natural conditions provisions for waters in Indian lands.* (1) The provision in Title 38 of Maine Revised Statutes 464(4.C) which reads: "Where natural conditions, including, but not limited to, marshes, bogs and abnormal concentrations of wildlife cause the dissolved oxygen or other water quality criteria to fall below the minimum standards specified in section 465, 465-A and 465-B, those waters shall not be considered to be failing to attain their classification because of those natural conditions," does not apply to water quality criteria intended to protect human health.

(2) The provision in Title 38 of Maine Revised Statutes 420(2.A) which reads "Except as naturally occurs or as provided in paragraphs B and C, the board shall regulate toxic substances in the surface waters of the State at the levels set forth in federal water quality criteria as established by the United States Environmental Protection Agency pursuant to the Federal Water Pollution Control Act, Public Law 92-500, Section 304(a), as amended," does not apply to water quality criteria intended to protect human health.

(g) *Mixing zone policy for waters in Indian lands.* (1) *Establishing a mixing zone.* (i) The Department of Environmental Protection

("department") may establish a mixing zone for any discharge at the time of application for a waste discharge license if all of the requirements set forth in paragraphs (g)(2) and (3) of this section are satisfied. The department shall attach a description of the mixing zone as a condition of a license issued for that discharge. After opportunity for a hearing in accordance with 38 MRS section 345-A, the department may establish by order a mixing zone with respect to any discharge for which a license has been issued pursuant to section 414 or for which an exemption has been granted by virtue of 38 MRS section 413, subsection 2.

(ii) The purpose of a mixing zone is to allow a reasonable opportunity for dilution, diffusion, or mixture of pollutants with the receiving waters such that an applicable criterion may be exceeded within a defined area of the waterbody while still protecting the designated use of the waterbody as a whole. In determining the extent of any mixing zone to be established under this section, the department will require from the applicant information concerning the nature and rate of the discharge; the nature and rate of existing discharges to the waterway; the size of the waterway and the rate of flow therein; any relevant seasonal, climatic, tidal, and natural variations in such size, flow, nature, and rate; the uses of the waterways that could be affected by the discharge, and such other and further evidence as in the department's judgment will enable it to establish a reasonable mixing zone for such discharge. An order establishing a mixing zone may provide that the extent thereof varies in order to take into account seasonal, climatic, tidal, and natural variations in the size and flow of, and the nature and rate of, discharges to the waterway.

(2) *Mixing zone information requirements.* At a minimum, any request for a mixing zone must:

(i) Describe the amount of dilution occurring at the boundaries of the proposed mixing zone and the size, shape, and location of the area of mixing, including the manner in which diffusion and dispersion occur;

(ii) Define the location at which discharge-induced mixing ceases;

(iii) Document the substrate character and geomorphology within the mixing zone;

(iv) Document background water quality concentrations;

(v) Address the following factors;

(A) Whether adjacent mixing zones overlap;

(B) Whether organisms would be attracted to the area of mixing as a result of the effluent character; and

(C) Whether the habitat supports endemic or naturally occurring species.

(vi) Provide all information necessary to demonstrate whether the requirements in paragraph (g)(3) of this section are satisfied.

(3) *Mixing zone requirements.* (i) Mixing zones shall be established consistent with the methodologies in Sections 4.3 and 4.4 of the "Technical Support Document for Water Quality-based Toxics Control" EPA/505/2-90-001, dated March 1991.

(ii) The mixing zone demonstration shall be based on the assumption that a pollutant does not degrade within the proposed mixing zone, unless:

(A) Scientifically valid field studies or other relevant information demonstrate that degradation of the pollutant is expected to occur under the full range of environmental conditions expected to be encountered; and

(B) Scientifically valid field studies or other relevant information address other factors that affect the level of pollutants in the water column including, but not limited to, resuspension of sediments, chemical speciation, and biological and chemical transformation.

(iii) Water quality within an authorized mixing zone is allowed to exceed chronic water quality criteria for those parameters approved by the department. Acute water quality criteria may be exceeded for such parameters within the zone of initial dilution inside the mixing zone. Acute criteria shall be met as close to the point of discharge as practicably attainable. Water quality criteria shall not be violated outside of the boundary of a mixing zone as a result of the discharge for which the mixing zone was authorized.

(iv) Mixing zones shall be as small as practicable. The concentrations of pollutants present shall be minimized and shall reflect the best practicable engineering design of the outfall to maximize initial mixing. Mixing zones shall not be authorized for bioaccumulative pollutants (*i.e.*, chemicals for which the bioconcentration factors (BCF) or bioaccumulation factors (BAF) are greater than 1,000) or bacteria.

(v) In addition to the requirements above, the department may approve a mixing zone only if the mixing zone:

(A) Is sized and located to ensure that there will be a continuous zone of passage that protects migrating, free-swimming, and drifting organisms;

(B) Will not result in thermal shock or loss of cold water habitat or otherwise

interfere with biological communities or populations of indigenous species;

(C) Is not likely to jeopardize the continued existence of any endangered or threatened species listed under section 4 of the Endangered Species Act of 1973, as amended (16 U.S.C. 1531 *et seq.*) or result in the destruction or adverse modification of such species' critical habitat;

(D) Will not extend to drinking water intakes and sources;

(E) Will not otherwise interfere with the designated or existing uses of the receiving water or downstream waters;

(F) Will not promote undesirable aquatic life or result in a dominance of nuisance species;

(G) Will not endanger critical areas such as breeding and spawning grounds, habitat for state-listed threatened or endangered species, areas with sensitive biota, shellfish beds, fisheries, and recreational areas;

(H) Will not contain pollutant concentrations that are lethal to mobile,

migrating, and drifting organisms passing through the mixing zone;

(I) Will not contain pollutant concentrations that may cause significant human health risks considering likely pathways of exposure;

(J) Will not result in an overlap with another mixing zone;

(K) Will not attract aquatic life;

(L) Will not result in a shore-hugging plume; and

(M) Is free from:

(1) Substances that settle to form objectionable deposits;

(2) Floating debris, oil, scum, and other matter in concentrations that form nuisances; and

(3) Objectionable color, odor, taste, or turbidity.

(h) *Dissolved oxygen criteria for class A waters throughout the State of Maine, including in Indian lands.* The dissolved oxygen content of Class A waters shall not be less than 7 ppm (7 mg/L) or 75% of saturation, whichever is higher, year-round. For the period

from October 1 through May 14, in fish spawning areas, the 7-day mean dissolved oxygen concentration shall not be less than 9.5 ppm (9.5 mg/L), and the 1-day minimum dissolved oxygen concentration shall not be less than 8 ppm (8.0 mg/L).

(i) *Waiver or modification of protection and improvement laws for waters throughout the State of Maine, including in Indian lands.* For all waters in Maine, the provisions in Title 38 of Maine Revised Statutes 363–D do not apply to state or federal water quality standards applicable to waters in Maine, including designated uses, criteria to protect existing and designated uses, and antidegradation policies.

(j) *Phenol criterion for the protection of human health for Maine waters outside of Indian lands.* The phenol criterion to protect human health for the consumption of water and organisms is 4000 micrograms per liter.

The President

Proclamation 9554—Bill of Rights Day, 2016

Presidential Documents

Title 3—

Proclamation 9554 of December 14, 2016

The President

Bill of Rights Day, 2016

By the President of the United States of America

A Proclamation

After much debate and deliberation among the Framers, the first 10 Amendments to our Constitution were written to reflect a compromise between preserving the rights of individual citizens and supporting a strong and secure Federal Government. Since its ratification on December 15, 1791, the Bill of Rights has enshrined many of our most fundamental liberties and unalienable rights—including the freedoms of speech, worship, and assembly; the rights to trial by jury and due process, and the protections from unreasonable search and seizure and cruel and unusual punishment. For 225 years, the Bill of Rights has shaped our Nation and protected our citizens, and today, in honor of all those who have worked to secure these freedoms, we strive to continue forming a more perfect Union guided by an enduring belief in these highest ideals.

As it was originally created, the Bill of Rights safeguarded personal liberties and ensured equal justice under the law for many—but not for all. In the centuries that followed its ratification, courageous Americans agitated and sacrificed to extend these rights to more people, moving us closer to ensuring opportunity and equality are not limited by one's race, sex, or circumstances. The desire and capacity to forge our own destinies have propelled us forward at every turn in history. The same principles that drove patriots to choose revolution over tyranny, a country to cast off the stains of slavery, women to reach for the ballot, and workers to organize for their rights still remind us that our freedom is intertwined with the freedom of others. If we are to ensure the sacred ideals embodied in the Bill of Rights are afforded to everyone, each generation must do what those who came before them have done and recommit to holding fast to our values and protecting these freedoms.

Two and a quarter centuries later, these 10 Constitutional Amendments remain a symbol of one of our Nation's first successful steps in our journey to uphold the rights of all citizens. On Bill of Rights Day, we celebrate the long arc of progress that transformed our Nation from a fledgling and fragile democracy to one in which civil rights are the birthright of all Americans. This progress was never inevitable, and as long as people remain willing to fight for justice, we can work to swing open more doors of opportunity and carry forward a vision of liberty and equality for generations to come.

NOW, THEREFORE, I, BARACK OBAMA, President of the United States of America, by virtue of the authority vested in me by the Constitution and the laws of the United States, do hereby proclaim December 15, 2016, as Bill of Rights Day. I call upon the people of the United States to mark this observance with appropriate ceremonies and activities.

IN WITNESS WHEREOF, I have hereunto set my hand this fourteenth day of December, in the year of our Lord two thousand sixteen, and of the Independence of the United States of America the two hundred and forty-first.

A handwritten signature in black ink, appearing to be "Barack Obama", with a large circular flourish and a horizontal line extending to the right.

LIST OF PUBLIC LAWS

This is a continuing list of public bills from the current session of Congress which have become Federal laws. This list is also available online at <http://www.archives.gov/federal-register/laws>.

The text of laws is not published in the **Federal Register** but may be ordered in "slip law" (individual pamphlet) form from the Superintendent of Documents, U.S. Government Publishing Office, Washington, DC 20402 (phone, 202-512-1808). The text will also be made available on the Internet from GPO's Federal Digital System (FDsys) at <http://www.gpo.gov/fdsys>. Some laws may not yet be available.

H.R. 3471/P.L. 114-256

Veterans Mobility Safety Act of 2016 (Dec. 14, 2016; 130 Stat. 1345)

H.R. 4419/P.L. 114-257

District of Columbia Judicial Financial Transparency Act (Dec. 14, 2016; 130 Stat. 1350)

H.R. 5111/P.L. 114-258

Consumer Review Fairness Act of 2016 (Dec. 14, 2016; 130 Stat. 1355)

H.R. 5509/P.L. 114-259

To name the Department of Veterans Affairs temporary

lodging facility in Indianapolis, Indiana, as the "Dr. Otis Bowen Veteran House". (Dec. 14, 2016; 130 Stat. 1360)

H.R. 5995/P.L. 114-260

GAO Civilian Task and Delivery Order Protest Authority Act of 2016 (Dec. 14, 2016; 130 Stat. 1361)

S. 795/P.L. 114-261

To enhance whistleblower protection for contractor and grantee employees. (Dec. 14, 2016; 130 Stat. 1362)

S. 817/P.L. 114-262

To provide for the addition of certain real property to the reservation of the Siletz Tribe in the State of Oregon. (Dec. 14, 2016; 130 Stat. 1364)

S. 818/P.L. 114-263

To amend the Grand Ronde Reservation Act to make technical corrections, and for other purposes. (Dec. 14, 2016; 130 Stat. 1366)

S. 1550/P.L. 114-264

Program Management Improvement Accountability Act (Dec. 14, 2016; 130 Stat. 1371)

S. 1555/P.L. 114-265

Filipino Veterans of World War II Congressional Gold Medal Act of 2015 (Dec. 14, 2016; 130 Stat. 1376)

S. 1632/P.L. 114-266

To require a regional strategy to address the threat posed by Boko Haram. (Dec. 14, 2016; 130 Stat. 1382)

S. 1808/P.L. 114-267

Northern Border Security Review Act (Dec. 14, 2016; 130 Stat. 1385)

S. 1915/P.L. 114-268

First Responder Anthrax Preparedness Act (Dec. 14, 2016; 130 Stat. 1387)

S. 2234/P.L. 114-269

Office of Strategic Services Congressional Gold Medal Act (Dec. 14, 2016; 130 Stat. 1391)

S. 2873/P.L. 114-270

Expanding Capacity for Health Outcomes Act (Dec. 14, 2016; 130 Stat. 1395)

S. 2974/P.L. 114-271

To ensure funding for the National Human Trafficking Hotline, and for other purposes. (Dec. 14, 2016; 130 Stat. 1398)

S. 3028/P.L. 114-272

To redesignate the Olympic Wilderness as the Daniel J. Evans Wilderness. (Dec. 14, 2016; 130 Stat. 1399)

S. 3076/P.L. 114-273

Charles Duncan Buried with Honor Act of 2016 (Dec. 14, 2016; 130 Stat. 1400)

S. 3183/P.L. 114-274

Better Online Ticket Sales Act of 2016 (Dec. 14, 2016; 130 Stat. 1401)

S. 3395/P.L. 114-275

Prescribed Burn Approval Act of 2016 (Dec. 14, 2016; 130 Stat. 1405)

S. 3492/P.L. 114-276

To designate the Traverse City VA Community-Based

Outpatient Clinic of the Department of Veterans Affairs in Traverse City, Michigan, as the "Colonel Demas T. Craw VA Clinic". (Dec. 14, 2016; 130 Stat. 1407)

H.R. 6297/P.L. 114-277

Iran Sanctions Extension Act (Dec. 15, 2016; 130 Stat. 1409)

Note: Upon expiration of the 10-day period prescribed by the Constitution of the United States, H.R. 6297 became law on Dec. 15, 2016, without the President's signature.

Last List December 14, 2016

Public Laws Electronic Notification Service (PENS)

PENS is a free electronic mail notification service of newly enacted public laws. To subscribe, go to <http://listserv.gsa.gov/archives/publaws-l.html>

Note: This service is strictly for E-mail notification of new laws. The text of laws is not available through this service. **PENS** cannot respond to specific inquiries sent to this address.
