ADDRESSES: The meeting will be held at the Mayfair Hotel, located at 3000 Florida Avenue, Coconut Grove, Miami, FL 33133; telephone: (305) 441-0000.

Council address: Gulf of Mexico Fishery Management Council, 2203 N. Lois Avenue, Suite 1100, Tampa, FL 33607; telephone: (813) 348-1630.

FOR FURTHER INFORMATION CONTACT: Steven Atran, Senior Fishery Biologist, Gulf of Mexico Fishery Management Council; steven.atran@gulfcouncil.org, telephone: (813) 348-1630.

SUPPLEMENTARY INFORMATION:

Tuesday, January 10, 2017; 1 p.m. to 5 p.m. and Wednesday, January 11, 2017; 8:30 a.m. to 5 p.m.

- I. Introductions and Adoption of Agenda
- II. Approval Minutes
 - a. Sept. 20-21, 2016 Standing, Reef Fish, Mackerel and Shrimp meeting summary
 - b. Sept. 20-21, 2016 Standing, Reef Fish, Mackerel and Shrimp verbatim minutes
 - c. Nov. 22, 2016 Standing and Reef Fish webinar summary
- III. Selection of SSC representative at January 30-February 2 Council meeting
- IV. Review of Updated National Standard Guidelines (webinar)
- Mackerel SSC Session
- V. Gulf migratory group king mackerel updated OFL and ABC yield streams for 2017/18 to 2019/20
- Reef Fish SSC Session
- VI. SEDAR 49 Data-limited Species Assessment, Part 1
 - a. Introduction and discussion of management framework (no final results until March)
- VII. Gag Update Assessment
- VIII. Mechanism for Allowing Carryover of Quota Underharvest
 - a. SEFSC analysis of carryover levels
- IX. Analysis of time for stocks to recover from MSST under different life history characteristics
- Socioeconomic SSC Session
- X. Discussion on economic and social implications of catch limits
 - a. Discussion of catch limits with respect to National Standard 5
 - b. Discussion of catch limits with respect to National Standard 8

Other Items

- XI. Dates for future SSC meetings
- Meeting Adjourns —

The meeting will be broadcast via webinar. You may register for SSC Meeting: Standing, Reef Fish, Mackerel and Socioeconomic on January 10-11, 2017 at: <https://attendee.gotowebinar.com/register/3383291116212545537>

The Agenda is subject to change, and the latest version along with other meeting materials will be posted on the Council's file server. To access the file server, the URL is <https://public.gulfcouncil.org:5001/webman/index.cgi>, or go to the Council's Web

site and click on the FTP link in the lower left of the Council Web site (<http://www.gulfcouncil.org>). The username and password are both "gulfguest". Click on the "Library Folder", then scroll down to "SSC meeting-2017-01".

The meeting will be webcast over the Internet. A link to the webcast will be available on the Council's Web site, <http://www.gulfcouncil.org>.

Although other non-emergency issues not on the agenda may come before the Scientific and Statistical Committee for discussion, in accordance with the Magnuson-Stevens Fishery Conservation and Management Act, those issues may not be the subject of formal action during this meeting. Actions of the Scientific and Statistical Committee will be restricted to those issues specifically identified in the agenda and any issues arising after publication of this notice that require emergency action under Section 305(c) of the Magnuson-Stevens Fishery Conservation and Management Act, provided the public has been notified of the Council's intent to take action to address the emergency.

Special Accommodations

This meeting is physically accessible to people with disabilities. Requests for sign language interpretation or other auxiliary aids should be directed to Kathy Pereira at the Gulf Council Office (see **ADDRESSES**), at least 5 working days prior to the meeting.

Dated: December 14, 2016.

Tracey L. Thompson,

Acting Deputy Director, Office of Sustainable Fisheries, National Marine Fisheries Service.

BILLING CODE 3510-22-P

CONSUMER PRODUCT SAFETY COMMISSION

[Docket No. CPSC-2006-0011]

Notice of Availability of Regulatory Flexibility Act Section 610 Review of the Standard for the Flammability (Open Flame) of Mattress Sets

AGENCY: Consumer Product Safety Commission.

ACTION: Notice of availability.

SUMMARY: The Consumer Product Safety Commission (CPSC) is announcing the availability of a completed rule review under section 610 of the Regulatory Flexibility Act (RFA) for the Standard for the Flammability (Open Flame) of Mattress Sets (Mattress Standard), 16 CFR part 1633. This regulatory review

concludes that the Mattress Standard should be maintained without change.¹

ADDRESSES: The completed review is available on the CPSC Web site at: <https://www.cpsc.gov/Business-Manufacturing/Business-Education/Business-Guidance/Mattresses>. The completed review will also be made available through the Federal eRulemaking Portal at <https://www.regulations.gov>, under Docket No. CPSC-2006-0011, Supporting and Related Materials. Copies may also be obtained from the Consumer Product Safety Commission, Office of the Secretary, Room 820, 4330 East West Highway, Bethesda, MD 20814; telephone (301) 504-7923; email cpsc-os@cpsc.gov.

FOR FURTHER INFORMATION CONTACT: Lisa L. Scott, Fire Protection Engineer, Laboratory Sciences, Consumer Product Safety Commission 5 Research Place, Rockville, MD 20850, Telephone: (301) 987-2064; email: lscott@cpsc.gov.

SUPPLEMENTARY INFORMATION: In 2006, the CPSC issued a Standard for the Flammability (Open Flame) of Mattress Sets under the Flammable Fabrics Act. (71 FR 13472, March 15, 2006). The Mattress Standard set forth test procedures and performance requirements that all mattress sets must meet before being introduced into commerce. These requirements are set forth at 16 CFR part 1633.

On April 3, 2015, the Commission published notice in the **Federal Register** (80 FR 18218) to announce that the CPSC would review the Mattress Standard in accordance with the regulatory review provisions of section 610 of the RFA (5 U.S.C. 610) and sought public comment on the rule review. This document announces the availability of completed regulatory review of the Mattress Standard.

The purpose of a rule review under section 610 of the RFA is to determine whether, consistent with the CPSC's statutory obligations, this standard should be maintained without change, rescinded, or modified to minimize any significant impact of the rule on a substantial number of small entities. Section 610 requires agencies to consider five factors in reviewing rules to minimize any significant economic impact of the rule on a substantial number of small entities including:

- (1) The continued need for the rule;

¹ The Commissioners voted 5-0 to approve publication of the notice in the **Federal Register**. Commissioner Joseph P. Mohorovic's Statement Regarding the Commission's Regulatory Flexibility Act Review of the Standard for the Flammability (Open Flame) Of Mattress Sets is available at: <https://www.cpsc.gov/About-CPSC/Commissioners/Joseph-Mohorovic/statements>.

- (2) The nature of complaints or comments received concerning the rule from the public;

- (3) The complexity of the rule;

- (4) The extent to which the rule overlaps, duplicates or conflicts with other Federal rules, and, to the extent feasible, with State and local governmental rules; and

- (5) The length of time since the rule has been evaluated or the degree to which technology, economic conditions, or other factors have changed in the area affected by the rule. 5 U.S.C. 610(b).

The CPSC received 16 written comments representing the views of mattress manufacturers, component manufacturers, fire safety representatives, third party testing bodies, environmental groups, trade associations, and consumers. Staff's briefing package reviews these comments and provides staff's analysis applying the factors listed in section 610 of the RFA to the Mattress Standard. As explained in the staff's briefing package, the staff concludes that the Mattress Standard should be continued without any changes. However, staff believes that stakeholders may benefit from additional outreach and training.

The staff's briefing package containing the review is available on the CPSC Web site at: <https://www.cpsc.gov/Business-Manufacturing/Business-Education/Business-Guidance/Mattresses>, www.regulations.gov, and from the Commission's Office of the Secretary at the location listed in the **ADDRESSES** section of this notice.

Dated: December 14, 2016.

Todd A. Stevenson,

Secretary, Consumer Product Safety Commission.

[FR Doc. 2016-30405 Filed 12-16-16; 8:45 am]

BILLING CODE 6355-01-P

DEPARTMENT OF DEFENSE

Department of the Air Force

Notice Is Given as a Reminder of the United Launch Alliance (ULA) Consent Order, Department of Defense (DoD) Compliance Officer and Consent Order Expiration Date

AGENCY: Department of Defense (DoD), Principal DoD Space Advisor.

ACTION: Publicize Consent Order and the DoD Compliance Officer; Inform Public of Consent Order Expiration; and Provide Points of Contact for Information and/or Comment Submittal.

SUMMARY: THIS IS NOT A NOTICE OF SOLICITATION ISSUANCE. The Director, Principal DoD Space Advisor

Staff, as the Compliance Officer under the Federal Trade Commission (FTC) Decision and Order (hereinafter referred to as the "Consent Order"), in the Matter of Lockheed Martin Corporation (LMC), the Boeing Company (Boeing), and United Launch Alliance, L.L.C. (ULA) (hereinafter referred to as the "Respondents"), Docket No. C-4188, dated May 1, 2007, is posting this notice to publicize the Consent Order, notify the Public of the DoD Compliance Officer, notify the Public that the Consent Order expires in 2017, and to provide points of contact for further information or for comment submittal.

DATES: Effective May 1, 2006.

FOR FURTHER INFORMATION CONTACT: For further information and inquiries, or to request a meeting with the DoD Compliance Officer or his Government Compliance Team, interested parties should contact either Mrs. Sarah Beth Cliatt (Compliance Division Chief), Tel: 571-241-2452; or Colonel Marc Berkstresser (Deputy Compliance Division Chief), Tel: 703-693-3634. Please note that Government compliance oversight activities will conclude following Consent Order expiration on May 1, 2017. The Compliance Officer is currently working with his Government team and the Respondents to accomplish an orderly close out of Consent Order compliance activities.

SUPPLEMENTARY INFORMATION:

The Consent Order: The Consent Order requires that with regard to covered Government programs, (1) ULA afford all space vehicle manufacturers non-discriminatory treatment for launch services that ULA may provide, and that (2) LMC and Boeing, as space vehicle manufacturers, consider all qualified launch service providers on a non-discriminatory basis. Covered programs are Government programs which are delivered in orbit and utilize medium-to-heavy launch services. The Consent Order also requires firewalls to prevent information from a space vehicle provider being shared by ULA with its Boeing or LMC parent company. Similarly, Boeing and LMC must have firewalls to ensure that other launch service information is not shared with ULA. The Consent Order also requires that the Department of Defense appoint a Compliance Officer to oversee compliance with the Consent Order by all three Respondents. The Consent Order remains in full effect through 30 April 2017 and expires on 1 May 2017. The complete text of the ULA Consent Order and supplementary information is located on the following FTC Web site: <http://www.ftc.gov/enforcement/cases->

[proceedings/0510165/lockheed-martin-corporation-boeing-company-united-launch](http://www.ftc.gov/enforcement/cases-proceedings/0510165/lockheed-martin-corporation-boeing-company-united-launch).

DoD Compliance Officer: The DoD Compliance Officer is the Director, Principal DoD Space Advisor Staff. The duties of this position are conducted by Mr. Winston A. Beauchamp.

Anh Trinh,

Air Force Federal Register Liaison Officer.

[FR Doc. 2016-30422 Filed 12-16-16; 8:45 am]

BILLING CODE 5001-10-P

DEPARTMENT OF EDUCATION

[Docket No. ED-2016-ICCD-0085]

Agency Information Collection Activities; Submission to the Office of Management and Budget for Review and Approval; Comment Request; Upward Bound and Upward Bound Math Science Annual Performance Report

AGENCY: Office of Postsecondary Education (OPE), Department of Education (ED).

ACTION: Notice.

SUMMARY: In accordance with the Paperwork Reduction Act of 1995 (44 U.S.C. chapter 3501 *et seq.*), ED is proposing an extension of an existing information collection.

DATES: Interested persons are invited to submit comments on or before January 18, 2017.

ADDRESSES: To access and review all the documents related to the information collection listed in this notice, please use <http://www.regulations.gov> by searching the Docket ID number ED-2016-ICCD-0085. Comments submitted in response to this notice should be submitted electronically through the Federal eRulemaking Portal at <http://www.regulations.gov> by selecting the Docket ID number or via postal mail, commercial delivery, or hand delivery. *Please note that comments submitted by fax or email and those submitted after the comment period will not be accepted.* Written requests for information or comments submitted by postal mail or delivery should be addressed to the Director of the Information Collection Clearance Division, U.S. Department of Education, 400 Maryland Avenue SW., LBJ, Room 2E-347, Washington, DC 20202-4537.

FOR FURTHER INFORMATION CONTACT: For specific questions related to collection activities, please contact Kenneth Waters, 202-453-6273.

SUPPLEMENTARY INFORMATION: The Department of Education (ED), in

accordance with the Paperwork Reduction Act of 1995 (PRA) (44 U.S.C. 3506(c)(2)(A)), provides the general public and Federal agencies with an opportunity to comment on proposed, revised, and continuing collections of information. This helps the Department assess the impact of its information collection requirements and minimize the public's reporting burden. It also helps the public understand the Department's information collection requirements and provide the requested data in the desired format. ED is soliciting comments on the proposed information collection request (ICR) that is described below. The Department of Education is especially interested in public comment addressing the following issues: (1) Is this collection necessary to the proper functions of the Department; (2) will this information be processed and used in a timely manner; (3) is the estimate of burden accurate; (4) how might the Department enhance the quality, utility, and clarity of the information to be collected; and (5) how might the Department minimize the burden of this collection on the respondents, including through the use of information technology. Please note that written comments received in response to this notice will be considered public records.

Title of Collection: Upward Bound and Upward Bound Math Science Annual Performance Report.

OMB Control Number: 1840-0831.

Type of Review: An extension of an existing information collection.

Respondents/Affected Public: State, Local, and Tribal Governments; Private Sector.

Total Estimated Number of Annual Responses: 975.

Total Estimated Number of Annual Burden Hours: 16,575.

Abstract: The purpose of the Upward Bound (UB) Program is to generate in program participants the skills and motivation necessary to complete a program of secondary education and to enter and succeed in a program of postsecondary education.

Authority for this program is contained in Title IV, Part A, Subpart 2, Chapter 1, Section 402C of the Higher Education Act of 1965, as amended by the Higher Education Opportunity Act of 2008. Eligible applicants include institutions of higher education, public or private agencies or organizations, including community-based organizations with experience in serving disadvantaged youth, secondary schools, and combinations of institutions, agencies, organizations, and secondary schools.

UB Program participants must be potential first-generation college students, low-income individuals, or individuals who have a high risk for academic failure, and have a need for academic support in order to pursue successfully a program of education beyond high school.

Required program services include: (1) Academic tutoring; (2) advice and assistance in secondary and postsecondary course selection; (3) preparation for college entrance exams and completing the college admission applications; (4) information on federal student financial aid programs including (a) federal Pell grant awards, (b) loan forgiveness, and (c) scholarships; (5) assistance completing financial aid applications; (6) guidance on and assistance in: (a) Secondary school reentry, (b) alternative education programs for secondary school dropouts that lead to the receipt of a regular secondary school diploma, (c) entry into general educational development (GED) programs or, (d) entry into postsecondary education; (7) education or counseling services designed to improve the financial and economic literacy of students or the students' parents, including financial planning for postsecondary education; and (8) projects funded for at least two years under the program must provide instruction in mathematics through pre-calculus; laboratory science; foreign language; composition; and literature.

Dated: December 14, 2016.

Kate Mullan,

Acting Director, Information Collection Clearance Division, Office of the Chief Privacy Officer, Office of Management.

[FR Doc. 2016-30472 Filed 12-16-16; 8:45 am]

BILLING CODE 4000-01-P

DEPARTMENT OF ENERGY

Request for Comment: Publication of the Draft Plan for a Defense Waste Repository

AGENCY: Office of Spent Fuel and Waste Disposition, Office of Nuclear Energy, Department of Energy.

ACTION: Notice of availability and request for comment.

SUMMARY: Consistent with the determination by the President in March 2015 and pursuant to its authorities under the Atomic Energy Act, the U.S. Department of Energy (DOE) is proceeding to evaluate the development of a repository for disposal of high-level radioactive waste (HLW) resulting from DOE's atomic energy defense activities. This defense waste repository (DWR)

could be used to dispose of some or all of the spent nuclear fuel (SNF) and HLW resulting from DOE's atomic energy defense activities and/or research and development activities. The DOE intends to use a consent-based process for siting the DWR, and is beginning that process by sharing the Draft Plan for a DWR for public comment.

DATES: The comment period will end March 20, 2017. Comments received after this date will be considered to the extent practicable.

ADDRESSES: The Draft Plan is available at energy.gov/DWR. Interested persons may submit comments by any of the following methods.

Email: Comments may be submitted by email to DWR@hq.doe.gov. Please include "Response to DWR RFC" in subject line.

Mail: Comments may be provided by mail to the following address: U.S. Department of Energy, Office of Nuclear Energy, Response to DWR RFC, 1000 Independence Ave. SW., Washington, DC 20585.

Fax: Responses may be faxed to 202-586-0544. Please include "Response to DWR RFC" on the fax cover page.

Online: Responses may be submitted online at www.regulations.gov.

FOR FURTHER INFORMATION CONTACT: Evangeline Chase at (202) 586-7965 or DWR@hq.doe.gov. Written inquiries should be mailed to Ms. Evangeline Chase at the Department of Energy, Office of Spent Fuel and Waste Disposition (NE-8), Office of Nuclear Energy, 1000 Independence Ave. SW., Washington, DC 20585.

SUPPLEMENTARY INFORMATION:

Background

Nuclear material is used to power naval vessels and was used to build the U.S. nuclear weapon stockpile during the Cold War. These activities have generated spent nuclear fuel (SNF) and high-level radioactive waste (HLW) that are currently stored at multiple DOE sites.

The United States no longer generates defense HLW from reprocessing of SNF associated with weapons production. The finite volume and lower heat output of the defense HLW compared to commercial SNF simplify the planning required to site and construct a DWR, in contrast to that for a common repository for both defense and commercial nuclear waste under the Nuclear Waste Policy Act (NWPA).

The United States does not have an operating permanent disposal site for SNF and HLW. Isolating this material from the biosphere is necessary to

ensure the long-term safety and security of the public and environment. DOE is responsible for removing defense HLW and SNF that is currently stored at several DOE sites. These environmental clean-up activities require a permanent disposal site for the defense waste.

In March 2015, the President issued a Presidential Memorandum in which he found that "the development of a repository for the disposal of high-level radioactive waste resulting from atomic energy defense activities only is required." This finding permits the Department to develop a separate DWR in accordance with its authority under the Atomic Energy Act. A DWR could be used to dispose of some or all of the SNF and HLW resulting from DOE's atomic energy defense activities and/or research and development activities.

The Department has begun early planning to identify various activities that need to be performed to evaluate and design a DWR. Although these plans are preliminary, they begin to describe the different components—including technical, regulatory, risk management, cost and schedule considerations—that need to come together to build a viable program, all within the framework of a consent-based siting process. A DWR could be sited, licensed, and built sooner than a common repository. This could potentially reduce ongoing storage, treatment, and management costs for defense waste currently stored at DOE facilities. Successful development of a DWR could play an important role in a broader nuclear waste strategy by providing important experience in the design, siting, licensing, and development of the facility that could be applied to the development of a future repository for commercial spent fuel.

It is now appropriate to share the Draft Plan and ask the public for its review and feedback. Ultimately, the final Plan would provide meaningful information to any community interested in learning more about what it would take to host such a facility.

Purpose

In this notice, DOE announces the availability of the Draft Plan for a Defense Waste Repository to inform the public and request feedback on the plan. The Draft Plan is available at the following Web site—energy.gov/DWR.

Next Steps

Comments received in response to this Request for Comments will be used to revise the Draft Plan and inform next steps.

Submitting Comments

Instructions: Submit comments via any of the mechanisms set forth in the **ADDRESSES** section. No individual responses to comments will be provided. DOE plans to publish all comments received in their entirety without change or edit, including any personal information provided, on the Office of Nuclear Energy Web site at the close of the public comment period. All submissions from individuals, organizations or businesses will be recorded and included in the public record, published and open to public inspection in their entirety.

Privacy Act: Data collected via the mechanism listed above will not be protected from the public view in any way.

Issued in Washington, DC, on December 6, 2016.

Andrew R. Griffith,

Deputy Assistant Secretary for Spent Fuel and Waste Disposition, Office of Nuclear Energy, Department of Energy.

BILLING CODE 6717–01–P

ENVIRONMENTAL PROTECTION AGENCY

[EPA–HQ–OPPT–2016–0718; FRL–9956–47]

Designation of Ten Chemical Substances for Initial Risk Evaluations Under the Toxic Substances Control Act

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: As required by the Toxic Substances Control Act (TSCA), as amended by the Frank R. Lautenberg Chemical Safety for the 21st Century Act in June 2016, EPA is publishing an initial list of ten (10) chemical substances that will be the subject of the Agency's chemical risk evaluations to determine whether the chemical substances present an unreasonable risk of injury to health or the environment. The law requires that EPA initiate risk evaluations on 10 chemical substances drawn from the 2014 update of the TSCA Work Plan for Chemical Assessments and that EPA publish this list within 180 days of enactment (*i.e.*, by December 19, 2016). EPA's designation of the first ten chemical substances constitutes the initiation of the risk evaluation process for each of these chemical substances, pursuant to the requirements of TSCA section 6(b)(4). For each chemical substance, within six months from the date of publication of this notice, EPA will issue a scoping document. EPA has also established dockets for each of these chemical substances to document each risk evaluation and to facilitate receipt of information that will be useful to the Agency's risk evaluation.

FOR FURTHER INFORMATION CONTACT: For technical information contact: Sheila Canavan, Chemical Control Division (Mail Code 7405M), Office of Pollution Prevention and Toxics, Environmental Protection Agency, 1200 Pennsylvania Ave. NW., Washington, DC 20460-0001; telephone number: (202) 566-1978; email address: canavan.sheila@epa.gov.

For general information contact: The TSCA-Hotline, ABVI-Goodwill, 422 South Clinton Ave., Rochester, NY 14620; telephone number: (202) 554-1404; email address: TSCA-Hotline@epa.gov.

SUPPLEMENTARY INFORMATION:

I. General Information

A. Does this action apply to me?

You may be potentially affected by this action if you manufacture (defined under TSCA to include import), process, distribute in commerce, use or dispose of any of the ten chemical substances identified in this document for risk evaluation. This action may be of particular interest to entities that are regulated under TSCA (e.g., entities identified under North American Industrial Classification System (NAICS) codes 325 and 324110, among others). Since other entities may also be interested, the Agency has not attempted to describe all the specific entities and corresponding NAICS codes for entities that may be interested in or affected by this action.

B. How can I get copies of this document and other related information?

The docket for this action, identified by docket identification (ID) number EPA-HQ-OPPT-2016-0718, is available at <http://www.regulations.gov> or at the Office of Pollution Prevention and Toxics Docket (OPPT Docket), Environmental Protection Agency Docket Center (EPA/DC), West William Jefferson Clinton Bldg., Rm. 3334, 1301 Constitution Ave. NW., Washington, DC. The Public Reading Room is open from 8:30 a.m. to 4:30 p.m., Monday through Friday, excluding legal holidays. The telephone number for the Public Reading Room is (202) 566-1744, and the telephone number for the OPPT Docket is (202) 566-0280. Please review the visitor instructions and additional information about the docket available at <http://www.epa.gov/dockets>.

II. What action is the Agency taking?

EPA is announcing the first 10 chemical substances that it will evaluate for potential risks to human health and the environment under TSCA section 6(b)(2)(A), as amended by the Frank R. Lautenberg Chemical Safety for the 21st

Century Act (https://www.epa.gov/assessing-and-managing-chemicals-under-tsca/evaluating-risk-existing-chemicals-under-tsca#chemical_names). As amended, the law requires that risk evaluation be initiated on 10 chemical substances drawn from the 2014 update of the TSCA Work Plan for Chemical Assessments (Ref. 1) and that EPA publish this list within 180 days of enactment (i.e., by December 19, 2016). The 10 chemical substances for which EPA is initiating risk evaluations are as follows:

- 1,4-Dioxane;
- 1-Bromopropane;
- Asbestos;
- Carbon Tetrachloride;
- Cyclic Aliphatic Bromide Cluster (HBCD);
- Methylene Chloride;
- N-Methylpyrrolidone (NMP);
- Pigment Violet 29 (Anthra[2,1,9-def:6,5,10-d'e'f]diisoquinoline-1,3,8,10(2H,9H)-tetrone);
- Trichloroethylene (TCE);
- Tetrachloroethylene (also known as perchloroethylene).

III. What is the authority for this action?

On June 22, 2016, the President signed into law the “Frank R. Lautenberg Chemical Safety for the 21st Century Act,” which amended TSCA (15 U.S.C. 2601 *et seq.*). The amendments give EPA improved authority to take actions to protect people and the environment from the effects of dangerous chemical substances. Additional information on the new law is available on EPA’s Web site at: <https://www.epa.gov/assessing-and-managing-chemicals-under-tsca/frank-r-lautenberg-chemical-safety-21st-century-act>. One of the key features of the new law is the requirement that EPA now systematically prioritize and assess existing chemical substances and manage identified risks. Through a combination of new authorities, a risk-based safety standard, mandatory deadlines for action, and minimum throughput requirements, TSCA effectively creates a pipeline by which EPA will conduct review and management of existing chemical substances. This new pipeline—from prioritization to risk evaluation to risk management (when warranted)—is intended to drive steady forward progress on evaluating and addressing risks from existing chemical substances. Risk evaluation is a key step in this process.

TSCA section 6(b) specifies the requirements for risk evaluations. Section 6(b)(2)(A) requires EPA to “ensure that risk evaluations are being

conducted on 10 chemical substances drawn from the 2014 update of the TSCA Work Plan for Chemical Assessments and shall publish the list of such chemical substances” not later than 180 days after enactment of the law.

IV. Initiation for Risk Evaluation

A. Statutory Requirements for Risk Evaluations

EPA’s designation in this document of the first 10 chemical substances for risk evaluation constitutes the initiation of the risk evaluation process for each of these chemical substances, pursuant to the requirements of section 6(b)(4) of TSCA. These chemical substances are now in the process of risk evaluation to determine whether they “present an unreasonable risk of injury to health or the environment, without consideration of costs or other non-risk factors, including an unreasonable risk to a potentially exposed or susceptible subpopulation identified as relevant to the risk evaluation by the Administrator, under the conditions of use.”

Within six months from the date of publication of this notice (i.e., June 19, 2017), EPA will issue a scoping document that will include information about the chemical substance, such as the hazards, exposures, conditions of use, and the potentially exposed or susceptible subpopulations the Agency expects to consider in the risk evaluation. TSCA generally requires that these chemical risk evaluations be completed within three years of initiation, allowing for a single 6-month extension.

For each risk evaluation that EPA completes (other than industry-requested risk evaluations under TSCA section 6(b)(4)(C)(ii)), TSCA requires that EPA begin another risk evaluation. Additional chemical substances will be designated as high priority for risk evaluation, and have their risks evaluated under section 6(b)(4). By the end of 2019, EPA must have at least 20 chemical risk evaluations ongoing at any given time.

B. How did EPA select the first 10 chemicals?

TSCA requires that EPA choose the first 10 chemical substances from the list of 90 chemical substances on the 2014 update of the TSCA Work Plan for Chemical Assessments. TSCA Work Plan chemicals were selected based on their hazard and potential exposure, as well as other considerations such as persistence and bioaccumulation. In selecting the first 10 chemical

substances, EPA took into account scientific information documented in the 2014 Work Plan, and recommendations from stakeholders and the public. EPA has established a separate docket for each of these chemical substances to document the risk evaluation process and to facilitate receipt of information which may be useful to the Agency's risk evaluations. The following list of the first 10 chemical substances includes their exposure and hazard information from the 2014 Work Plan and their docket ID number:

1,4-Dioxane. *Exposure Information from 2014 Work Plan:* Used in consumer products. Present in groundwater, ambient air and indoor environments. High reported releases to the environment. *Hazard Information from 2014 Work Plan:* Possible human carcinogen. *Docket ID No.:* EPA-HQ-OPPT-2016-0723.

1-Bromopropane. *Exposure Information from 2014 Work Plan:* Used in consumer products. Present in drinking water, indoor environments, surface water, ambient air, groundwater, soil. Estimated to have high releases to the environment. *Hazard Information from 2014 Work Plan:* Possible human carcinogen. *Docket ID No.:* EPA-HQ-OPPT-2016-0741.

Asbestos. *Exposure Information from 2014 Work Plan:* Used in chlor-alkali production, consumer products, coatings and compounds, plastics, roofing products, and other applications. Also found in certain imported products such as brakes, friction products, gaskets, packing materials and building materials. *Hazard Information from 2014 Work Plan:* Known human carcinogen; Acute and chronic toxicity from inhalation exposures. *Docket ID No.:* EPA-HQ-OPPT-2016-0736.

Carbon Tetrachloride. *Exposure Information from 2014 Work Plan:* Used in commercial/industrial products. Present in biomonitoring, drinking water, indoor environments, surface water, ambient air, groundwater, soil. High reported releases to the environment. *Hazard Information from 2014 Work Plan:* Probable human carcinogen. *Docket ID No.:* EPA-HQ-OPPT-2016-0733.

Cyclic Aliphatic Bromide Cluster (HBCD). *Exposure Information from 2014 Work Plan:* Flame retardant in extruded polystyrene foam, textiles, and electrical and electronic appliances. *Hazard Information from 2014 Work Plan:* Acute aquatic toxicity. *Docket ID No.:* EPA-HQ-OPPT-2016-0735.

Methylene Chloride. *Exposure Information from 2014 Work Plan:* Used

in consumer products. Present in drinking water, indoor environments, ambient air, groundwater, and soil. *Hazard Information from 2014 Work Plan:* Probable human carcinogen. *Docket ID No.:* EPA-HQ-OPPT-2016-0742.

N-Methylpyrrolidone (NMP). *Exposure Information from 2014 Work Plan:* Used in consumer products. Present in drinking water and indoor environments. High reported releases into the environment. *Hazard Information from 2014 Work Plan:* Reproductive toxicity. *Docket ID No.:* EPA-HQ-OPPT-2016-0743.

Pigment Violet 29 (Anthra[2,1,9-def:6,5,10-de'f]diisoquinoline-1,3,8,10(2H,9H)-tetrone). *Exposure Information from 2014 Work Plan:* Used in consumer products. Estimated to have moderate releases to the environment. *Hazard Information from 2014 Work Plan:* Aquatic toxicity. *Docket ID No.:* EPA-HQ-OPPT-2016-0725.

Trichloroethylene (TCE). *Exposure Information from 2014 Work Plan:* Used in consumer products. Present in drinking water, indoor environments, surface water, ambient air, groundwater, and soil. *Hazard Information from 2014 Work Plan:* Probable human carcinogen. *Docket ID No.:* EPA-HQ-OPPT-2016-0737.

Tetrachloroethylene (also known as perchloroethylene). *Exposure Information from 2014 Work Plan:* Used in consumer products and dry cleaning. Present in biomonitoring, drinking water, indoor environments, ambient air, groundwater, soil. High reported releases to the environment. *Hazard Information from 2014 Work Plan:* Probable human carcinogen. *Docket ID No.:* EPA-HQ-OPPT-2016-0732.

III. References

The following is a listing of the documents that are specifically referenced in this document. The docket includes these documents and other information considered by EPA, including documents that are referenced within the documents that are included in the docket, even if the referenced document is not physically located in the docket. For assistance in locating these other documents, please consult the person listed under **FOR FURTHER INFORMATION CONTACT**.

1. EPA. TSCA Work Plan for Chemical Assessments: 2014 Update. Office of Pollution Prevention and Toxics. <https://www.epa.gov/assessing-and-managing-chemicals-under-tsca/tsca-work-plan-chemical-assessments-2014-update>. October 2014.

Authority: 15 U.S.C. 2601 *et seq.*

Dated: December 13, 2016.

James J. Jones,

Assistant Administrator, Office of Chemical Safety and Pollution Prevention.

ENVIRONMENTAL PROTECTION AGENCY

[EPA-HQ-OW-2016-0715; FRL_9957-01-OW]

Request for Scientific Views: Draft Human Health Recreational Ambient Water Quality Criteria and/or Swimming Advisories for Microcystins and Cylindrospermopsin

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice of availability.

SUMMARY: The Environmental Protection Agency (EPA) announces the release of the draft of *Human Health Recreational Ambient Water Quality Criteria and/or Swimming Advisories for Microcystins and Cylindrospermopsin—2016* for a 60-day public comment. These are the draft recommended concentrations of the toxins microcystins and cylindrospermopsin in recreational water protective of human health while swimming or participating in other activities on the water. Recreational exposure to the microcystins and cylindrospermopsin produced by cyanobacteria has the potential to result in liver and kidney toxicity, respectively. The recommended values found in this draft document do not replace or supersede the 2012 Recreational Water Quality Criteria (RWQC) recommendations for *E. coli* and *Enterococcus*. Rather, once final, they will supplement the 2012 RWQC to provide further public health protection for additional, potentially hazardous conditions found in ambient recreational waters.

Following closure of this 60-day public comment period, EPA will consider the comments, revise the draft document, as appropriate, and then publish a final document that will provide recommendations for States and authorized Tribes to establish water quality standards under the Clean Water Act (CWA). Alternatively, States and authorized Tribes may use these same values as the basis of swimming advisories for public notification purposes.

DATES: Comments must be received on or before February 17, 2017.

ADDRESSES: Submit your comments, identified by Docket ID No. EPA-HQ-

OW-2016-0715, to the *Federal eRulemaking Portal*: <http://www.regulations.gov>. Follow the online instructions for submitting comments. Once submitted, comments cannot be edited or withdrawn. EPA may publish any comment received to its public docket. Do not submit electronically any information you consider to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Multimedia submissions (audio, video, etc.) must be accompanied by a written comment. The written comment is considered the official comment and should include discussion of all points you wish to make. EPA will generally not consider comments or comment contents located outside of the primary submission (*i.e.*, on the web, cloud, or other file sharing system). For additional submission methods, the full EPA public comment policy, information about CBI or multimedia submissions, and general guidance on making effective comments, please visit <http://www2.epa.gov/dockets/commenting-epa-dockets>.

FOR FURTHER INFORMATION CONTACT: John Ravenscroft, Health and Ecological Criteria Division, Office of Water (Mail Code 4304T), Environmental Protection Agency, 1200 Pennsylvania Avenue NW., Washington, DC 20460; telephone number: (202) 566-1101; email address: ravenscroft.john@epa.gov.

SUPPLEMENTARY INFORMATION:

I. General Information

A. How can I get copies of this document and other related information?

1. *Docket.* EPA has established a docket for this action under Docket ID No. EPA-HQ-OW-2016-0715. Publicly available docket materials are available either electronically through www.regulations.gov or in hard copy at the Water Docket in the EPA Docket Center, (EPA/DC) EPA West, Room 3334, 1301 Constitution Ave. NW., Washington, DC. The EPA Docket Center Public Reading Room is open from 8:30 a.m. to 4:30 p.m., Monday through Friday, excluding legal holidays. The telephone number for the Public Reading Room is (202) 566-1744, and the telephone number for the Water Docket is (202) 566-2426.

2. *Electronic Access.* You may access this Federal Register document electronically from the Government Printing Office under the “**Federal Register**” listings FDSys (<http://www.gpo.gov/fdsys/browse/collection.action?collectionCode=FR>).

II. What are cyanotoxins microcystins and cylindrospermopsin and why is EPA concerned about them?

Cyanobacteria, also commonly referred to as blue-green algae, are photosynthetic bacteria that grow in many diverse habitats. Sometimes cyanobacteria can grow to high cell densities and form blooms, known as harmful algal blooms (HABs). These situations can cause green and blue scums to form in surface water. Microcystins and Cylindrospermopsin are toxins that can be produced by a variety of cyanobacteria species and can be released from cyanobacterial cells at any time. During a HAB event, excessive growth of cyanobacteria in surface waters leads to situations in which elevated levels of cyanotoxins are more likely, however, exposure can occur even when there are no visible signs of a bloom.

Elevated levels of cyanotoxins affect not only the health of humans, but domestic animals and wildlife in contact with contaminated waters. At certain concentrations microcystins, and their associated cyanobacteria, can cause headaches, sore throats, vomiting and nausea, stomach pain, dry cough, diarrhea, blistering around the mouth, and pneumonia through recreational exposure. Cylindrospermopsin recreational exposure may cause fever, headache, vomiting, bloody diarrhea, hepatomegaly, and kidney damage with loss of water, electrolytes and protein.

III. Information on the Recreational Ambient Water Quality Criteria (AWQC) for the Cyanotoxins Microcystins and Cylindrospermopsin

EPA's draft recommended AWQC identify the concentration identify the following concentrations of microcystins and cylindrospermopsin that would be protective of human health given a primary contact recreational exposure scenario: 4 µg/L for microcystins and 8 µg/L for cylindrospermopsin. The recommended draft values supplement EPA's 2012 recreational AWQC to provide further public health protection for additional, potentially hazardous conditions found in ambient recreational waters.

The draft recommended AWQC are based on the same peer-reviewed science used to develop EPA's 10-Day Drinking Water Health Advisories for these same cyanotoxins published in 2015. The draft criteria document has gone through an internal work group review and includes information on the state of the science describing the human health effects from exposure to cyanobacteria and their toxins,

discussion of other domestic and international governmental and agency guidelines for recreational waters, and information on incidents involving exposure of domestic pets and other animals to cyanotoxins.

IV. What are section 304(a) water quality criteria?

Section 304(a) water quality criteria are recommendations developed by EPA under authority of section 304(a) of the Clean Water Act based on the latest scientific information on the relationship that the effect that a constituent concentration has on particular aquatic species and/or human health.

Section 304(a)(1) of the Clean Water Act directs the EPA to develop and publish and, from time to time, revise criteria for water quality accurately reflecting the latest scientific knowledge. Water quality criteria developed under section 304(a) are based solely on data and scientific judgments on the relationship between pollutant concentrations and environmental and human health effects. Section 304(a) criteria do not reflect consideration of economic impacts or the technological feasibility of meeting pollutant concentrations in ambient water.

Section 304(a) criteria provide guidance to States and authorized Tribes in adopting water quality standards that ultimately provide a basis for controlling discharges of pollutants. The criteria also provide guidance that EPA considers when promulgating federal regulations under section 303(c) when such action is necessary. Under the CWA and its implementing regulations, States and authorized Tribes are to adopt water quality criteria to protect designated uses (*e.g.*, aquatic life, recreational use). EPA's water quality criteria recommendations are not regulations. Thus, EPA's recommended criteria do not constitute legally binding requirements. States and authorized Tribes may adopt other scientifically defensible water quality criteria that differ from these recommendations. When adopting new or revised water quality standards, the States and authorized Tribes must adopt criteria that are scientifically defensible and protective of the designated uses of the bodies of water. States have the flexibility to do this by adopting criteria based on (1) EPA's recommended criteria, (2) EPA's criteria modified to reflect site-specific conditions, or (3) other scientifically defensible methods.

V. Use of the Values as Swimming Advisories

EPA is also publishing these values for consideration by States and authorized Tribes for use as swimming advisories for notification purposes in recreational waters to protect the public. States and authorized Tribes could consider using the values as swimming advisories in making decisions whether to close, open, warn about concerns in recreational waters in a manner consistent or similar to their current recreational water advisory programs. The values in this 304(a) recommended criteria, even if used as swimming advisories, are not regulations, and thus, do not constitute legally binding requirements.

VI. Solicitation of Scientific Views

EPA is soliciting additional scientific views, data, and information regarding the science and technical approach used in the derivation of the draft *Human Health Recreational Ambient Water Quality Criteria and/or Swimming Advisories for Microcystins and Cylindrospermopsin* document. EPA is proposing that these recommended criteria, if adopted by States or authorized Tribes as CWA section 303(c) WQS, be used for CWA section 303(d) assessment and listing purposes where the magnitude is not exceeded for more than 10 percent of days during a recreational season up to one calendar year as an indicator of long-term impairment from multiple short-term blooms. EPA is soliciting public comment on this 10 percent exceedance frequency as well as alternative exceedance frequencies. For swimming advisories, EPA is proposing that these recommended values could be used to trigger public notification whenever values are exceeded for one day. EPA is soliciting public comment on this recommended single day exceedance as well as alternative exceedance frequencies.

Dated: December 9, 2016.

Joel Beauvais,

Deputy Assistant Administrator, Office of Water.

BILLING CODE 6560-50-P

ENVIRONMENTAL PROTECTION AGENCY

[EPA-HQ-OGC-2016-0642; FRL 9956-69-OGC]

Proposed Settlement Agreement, Clean Air Act Citizen Suit

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice of proposed settlement agreement; request for public comment.

SUMMARY: In accordance with section 113(g) of the Clean Air Act, as amended ("CAA"), notice is hereby given of a proposed settlement agreement to settle a lawsuit filed by American Chemistry Council ("Petitioner"), in the United States Court of Appeals for the D.C. Circuit: *American Chemistry Council v. EPA* (Case Number 15-1146). On May 18, 2015, Petitioner and Eastman Chemical Company ("Eastman") filed petitions for review of an EPA rule titled "National Emission Standards for Hazardous Air Pollutants for Major Sources: Off-Site Waste Recovery Operations," published in the **Federal Register** on March 18, 2015 (the "Final Rule"). The proposed settlement agreement would establish deadlines for EPA to take specified actions.

DATES: Written comments on the proposed settlement agreement must be received by January 18, 2017.

ADDRESSES: Submit your comments, identified by Docket ID number EPA-HQ-OGC-2016-0642, online at www.regulations.gov. For comments submitted at www.regulations.gov, follow the online instructions for submitting comments. Once submitted, comments cannot be edited or removed from www.regulations.gov. The EPA may publish any comment received to its public docket. Do not submit electronically any information you consider to be Confidential Business Information ("CBI") or other information whose disclosure is restricted by statute. Multimedia submissions (audio, video, etc.) must be accompanied by a written comment. The written comment is considered the official comment and should include discussion of all points you wish to make. The EPA will generally not consider comments or comment contents located outside of the primary submission (i.e. on the web, cloud, or other file sharing system). For additional submission methods, please contact the person identified in the **FOR FURTHER INFORMATION CONTACT** section. For the full EPA public comment policy, information about CBI or multimedia submissions, and general guidance on

making effective comments, please visit <http://www2.epa.gov/dockets/commenting-epa-dockets>.

FOR FURTHER INFORMATION CONTACT:

Emily Seidman, Air and Radiation Law Office (2344A), Office of General Counsel, U.S. Environmental Protection Agency, 1200 Pennsylvania Ave. NW., Washington, DC 20460; telephone: (202) 564-0906; fax number (202) 564-5603; email address: seidman.emily@epa.gov.

SUPPLEMENTARY INFORMATION:

I. Additional Information About the Proposed Settlement Agreement

On May 18, 2015, Petitioner and Eastman filed petitions for review of an EPA rule titled "National Emission Standards for Hazardous Air Pollutants for Major Sources: Off-Site Waste Recovery Operations," published at 80 FR 14,248 (March 18, 2015) (the "Final Rule"). In addition, Petitioner and Eastman submitted to the EPA a Petition for Reconsideration of the Final Rule of two issues: (1) equipment leak detection provisions for connectors; and (2) monitoring requirements for pressure relief devices ("PRD") on portable containers. The EPA granted the request for reconsideration of the Final Rule on the issue of PRD monitoring requirements for portable containers but denied the request for reconsideration of the equipment leak detection provisions for connectors. The EPA provided public notice of this denial through a **Federal Register** notice published on May 16, 2016 at 81 FR 30,182. On September 26, 2016, Eastman filed an unopposed motion for voluntary dismissal which the court granted.

The proposed settlement agreement would settle Petitioner's lawsuit. Under the terms of the proposed settlement agreement, the EPA will reconsider the Final Rule's provisions relating to PRDs and take an initial action no later than July 20, 2017 and a final action no later than January 18, 2018, as long as Petitioner provides the EPA with the requested data on PRDs identified in Appendix A of the settlement agreement by no later than October 28, 2016, or a later date, as provided for in the settlement agreement. Please review the settlement agreement for additional details, available in the public docket at EPA-HQ-OGC-2016-0642.

For a period of 30 days following the date of publication of this notice, the Agency will receive written comments relating to the proposed settlement agreement from persons who were not named as parties or intervenors to the litigation in question. EPA or the Department of Justice may withdraw or withhold consent to the proposed

settlement agreement if the comments disclose facts or considerations that indicate that such consent is inappropriate, improper, inadequate, or inconsistent with the requirements of the Act. Unless EPA or the Department of Justice determines that consent to the agreement should be withdrawn or withheld, the terms of the agreement will be affirmed.

II. Additional Information About Commenting on the Proposed Settlement Agreement

A. How can I get a copy of the proposed settlement agreement?

The official public docket for this action under Docket ID No. EPA-HQ-OGC-2016-0642 contains a copy of the proposed settlement agreement. The official public docket is available for public viewing at the Office of Environmental Information (OEI) Docket in the EPA Docket Center, EPA West, Room 3334, 1301 Constitution Ave. NW., Washington, DC. The EPA Docket Center Public Reading Room is open from 8:30 a.m. to 4:30 p.m., Monday through Friday, excluding legal holidays. The telephone number for the Public Reading Room is (202) 566-1744, and the telephone number for the OEI Docket is (202) 566-1752.

An electronic version of the public docket is available through www.regulations.gov. You may use the www.regulations.gov to submit or view public comments, access the index listing of the contents of the official public docket, and to access those documents in the public docket that are available electronically. Once in the system, key in the appropriate docket identification number then select "search".

It is important to note that EPA's policy is that public comments, whether submitted electronically or in paper, will be made available for public viewing online at www.regulations.gov without change, unless the comment contains copyrighted material, CBI, or other information whose disclosure is restricted by statute. Information claimed as CBI and other information whose disclosure is restricted by statute is not included in the official public docket or in the electronic public docket. EPA's policy is that copyrighted material, including copyrighted material contained in a public comment, will not be placed in EPA's electronic public docket but will be available only in printed, paper form in the official public docket. Although not all docket materials may be available electronically, you may still access any of the publicly available docket

materials through the EPA Docket Center.

B. How and to whom do I submit comments?

You may submit comments as provided in the **ADDRESSES** section. Please ensure that your comments are submitted within the specified comment period. Comments received after the close of the comment period will be marked "late." EPA is not required to consider these late comments.

If you submit an electronic comment, EPA recommends that you include your name, mailing address, and an email address or other contact information in the body of your comment and with any disk or CD ROM you submit. This ensures that you can be identified as the submitter of the comment and allows EPA to contact you in case EPA cannot read your comment due to technical difficulties or needs further information on the substance of your comment. Any identifying or contact information provided in the body of a comment will be included as part of the comment that is placed in the official public docket, and made available in EPA's electronic public docket. If EPA cannot read your comment due to technical difficulties and cannot contact you for clarification, EPA may not be able to consider your comment.

Use of the www.regulations.gov Web site to submit comments to EPA electronically is EPA's preferred method for receiving comments. The electronic public docket system is an "anonymous access" system, which means EPA will not know your identity, email address, or other contact information unless you provide it in the body of your comment. In contrast to EPA's electronic public docket, EPA's electronic mail (email) system is not an "anonymous access" system. If you send an email comment directly to the Docket without going through www.regulations.gov, your email address is automatically captured and included as part of the comment that is placed in the official public docket, and made available in EPA's electronic public docket.

Dated: December 7, 2016.

Lorie J. Schmidt,

Associate General Counsel.

FEDERAL COMMUNICATIONS COMMISSION

[DA 16-1321]

Order Declares Redes Modernas de la Frontera SA de CV Section 214 Authorization Terminated

AGENCY: Federal Communications Commission.

ACTION: Notice.

SUMMARY: In this document, the International Bureau of the Federal Communications Commission (Commission) declares the international section 214 authorization granted to Redes Modernas de la Frontera SA de CV (Redes) terminated given Redes' inability to comply with an express condition for holding the authorization. It also concludes that Redes failed to comply with those requirements of the Communications Act of 1934, as amended (the Act) and the Commission's rules that ensure that the Commission can contact and communicate with the authorization holder and verify Redes is still providing service, which failures have prevented any way of addressing Redes' inability to comply with the condition of its authorization.

FOR FURTHER INFORMATION CONTACT:

Veronica Garcia-Ulloa, Telecommunications and Analysis Division, International Bureau at (202) 418-0481 or Veronica.Garcia-Ulloa@fcc.gov.

SUPPLEMENTARY INFORMATION: This is a summary of the Commission's Order, DA 16-1321, adopted and released November 30, 2016.

Background

Section 214(a) of the Act prohibits any carrier from constructing, extending, acquiring, or operating any line, and from engaging in transmission through any such line, without first obtaining a certificate of authorization from the Commission. Under section 214(c) of the Act, the Commission "may attach to the issuance of the certificate such terms and conditions as in its judgment the public convenience and necessity may require." On July 27, 2007, the International Bureau granted Redes an international section 214 authorization to provide international global or limited global facilities-based authority, and global or limited global resale authority, in accordance with section 63.18(e)(1) and 63.18(e)(2) of the Commission's rules. The International Bureau granted the application on the express condition that Redes abide by the commitments and undertakings

contained in its July 10, 2007 letter of assurance (LOA) to the U.S. Department of Justice (DOJ), U.S. Department of Homeland Security (DHS), and Federal Bureau of Investigation (FBI). The LOA outlines a number of commitments made by Redes to address national security, law enforcement, and public safety concerns.

On April 13, 2016, DOJ with the concurrence of DHS (collectively, the “Executive Branch Agencies”) notified the Commission of Redes’ non-compliance with the conditions of its authorization and requested that the Commission terminate, declare null and void and no longer in effect, the international section 214 authorization issued to Redes. The Executive Branch Agencies stated that on July 31, 2012, the designated point of contact informed DHS that Redes is no longer in business and open source research conducted by DHS confirms this fact. In addition, the Executive Branch Agencies stated that Redes has not filed any of its international traffic and revenue reports with the Commission since 2007. Based on this, the Executive Branch Agencies conclude that Redes is no longer providing services pursuant to its authorization.

The Commission has made significant efforts to communicate with Redes, but has also been unable to do so. On July 5, 2016, the International Bureau sent Redes a letter to the last addresses of record requesting that Redes respond to the *April 13, 2016 Executive Branch Letter* by August 3, 2016. Redes did not respond. Since that time, the International Bureau has provided Redes with additional opportunities to respond to these allegations. The International Bureau stated that failure to respond would result in termination of Redes’ international section 214 authorization for failure to comply with the condition of its authorization. To date, Redes has not responded to any of the International Bureau or the Executive Branch Agencies’ multiple requests to resolve this matter.

Discussion

We determine that Redes’ international section 214 authorization to provide services issued under File No. ITC–214–20070515–00189 has terminated for inability to comply with an express condition for holding the international section 214 authorization. The International Bureau provided Redes with notice and opportunity to respond to the allegations in the *April 13, 2016 Executive Branch Letter* concerning Redes’ non-compliance with the condition of the grant. Redes has not responded to any of our multiple

requests or requests from the Executive Branch Agencies. We find that Redes’ failure to respond to our multiple requests demonstrates that it is unable to satisfy the LOA commitments, upon which the Executive Branch Agencies relied in providing their non-objection to the grant of the authorization to Redes, and compliance with which is a condition of the grant of its international section 214 authorization.

Furthermore, after having received an international 214 authorization, a carrier “is responsible for the continuing accuracy of the certifications made in its application” and must promptly correct information no longer accurate, “and in any event, within thirty (30) days.” Redes has failed to inform the Commission of any changes in its business status of providing international telecommunications services, as required by the rules. Finally, as part of its authorization, Redes “must file annual international telecommunications traffic and revenue as required by § 43.62.” Section 43.62(b) states that “[n]ot later than July 31 of each year, each person or entity that holds an authorization pursuant to section 214 to provide international telecommunications service shall report *whether* it provided international telecommunications services during the preceding calendar year.” Our records indicate that Redes failed to file annual international telecommunications traffic and revenue reports indicating whether or not Redes provided services in 2014 and 2015, as required by section 43.62(b) of the Commission’s rules. Redes’ failure to adhere to the Commission’s rules designed to ensure its ability to communicate with the holder of the authorization and to verify the holder is still providing service also warrants termination, wholly apart from Redes’ non-compliance with the condition of its international section 214 authorization.

Ordering Clauses

Accordingly, *it is ordered*, pursuant to sections 4(i), 214, and 413 of the Communications Act of 1934, as amended, 47 U.S.C. 154(i), 214, 413, and sections 1.47(h), 43.62, 63.18, 63.21, 63.22(h), 63.23(e), and 64.1195 of the Commission’s rules, 47 CFR 1.47(h), 43.62, 63.18, 63.21, 63.22(h), 63.23(e), 64.1195, that the international section 214 authorization issued under File No. ITC–214–20070515–00189 is *hereby terminated and declared null and void*.

It is further ordered that the request of the U.S. Department of Homeland Security and U.S. Department of Justice, *is hereby granted*, to the extent set forth in this Order.

It is further ordered that a copy of this Order shall be sent by return receipt requested to Redes Modernas de la Frontera SA de CV at its last known addresses. In addition, this Order shall be posted in the Commission’s Office of the Secretary.

It is further ordered that a copy of this Order, or a summary thereof, shall be published in the **Federal Register**.

This Order is issued on delegated authority under 47 CFR 0.51, 0.261, and is effective upon release. Petitions for reconsideration under section 1.106 of the Commission’s rules, 47 CFR 1.106, or applications for review under section 1.115 of the Commission’s rules, 47 CFR 1.115, may be filed within 30 days of the date of the release of this Order.

Federal Communications Commission.

Denise Coca,

Chief, Telecommunications and Analysis Division, International Bureau.

FEDERAL COMMUNICATIONS COMMISSION

[DA 16–1322]

Order Declares IP To Go, LLC Section 214 Authorization Terminated

AGENCY: Federal Communications Commission.

ACTION: Notice.

SUMMARY: In this document, the International Bureau of the Federal Communications Commission (Commission) declares the international section 214 authorization granted to IP To Go, LLC (IPTG) terminated given IPTG’s inability to comply with an express condition for holding the authorization. It also concludes that IPTG failed to comply with those requirements of the Communications Act of 1934, as amended (the Act) and the Commission’s rules that ensure that the Commission can contact and communicate with the authorization holder and verify IPTG is still providing service, which failures have prevented any way of addressing IPTG’s inability to comply with the condition of its authorization.

FOR FURTHER INFORMATION CONTACT:

Veronica Garcia-Ulloa, Telecommunications and Analysis Division, International Bureau at (202) 418–0481 or Veronica.Garcia-Ulloa@fcc.gov.

SUPPLEMENTARY INFORMATION: This is a summary of the Commission’s Order, DA 16–1322, adopted and released November 30, 2016. The full text of this

document can be located at http://transition.fcc.gov/Daily_Releases/Daily_Business/2016/db1130/DA-16-1322A1.pdf.

Background

Section 214(a) of the Act prohibits any carrier from constructing, extending, acquiring, or operating any line, and from engaging in transmission through any such line, without first obtaining a certificate of authorization from the Commission. Under section 214(c) of the Act, the Commission “may attach to the issuance of the certificate such terms and conditions as in its judgment the public convenience and necessity may require.” On December 19, 2011, the International Bureau granted IPTG an international section 214 authorization to provide international global or limited global facilities-based authority, and global or limited global resale authority, in accordance with section 63.18(e)(1) and 63.18(e)(2) of the Commission’s rules. The International Bureau granted the application on the express condition that IPTG abide by the commitments and undertakings contained in its December 5, 2011 letter of assurance (LOA) to the U.S. Department of Justice (DOJ). The LOA outlines a number of commitments made by IPTG to address national security, law enforcement, and public safety concerns.

On April 11, 2016, DOJ notified the Commission of IPTG’s non-compliance with the conditions of its authorization and requested that the Commission terminate, declare null and void and no longer in effect, and/or revoke the international section 214 authorization issued to IPTG. DOJ believes that IPTG “is neither providing services pursuant to authorization file number ITC–214–20090508–00208 nor still in existence.” DOJ stated that it has been unable to contact IPTG using the telephone numbers listed in its application or through open source research since January 2016. Additionally, DOJ indicates that it contacted IPTG via the email addresses provided in IPTG’s application several times since January 2016, with no response. DOJ states that IPTG listed a telephone number on its application as belonging to Alonzo Bevene from the Regulatory Back Office, Inc., but that number belongs to Maldonado Law Group. DOJ stated that in February 2016, DOJ called and Mr. Maldonado answered this number advising DOJ “that the firm is no longer on retainer with IPTG and has no forwarding information for the company.” Finally, DOJ stated that the Florida Department of State Division of Corporations lists IPTG as an active

company as of May 22, 2007 with a mailing address for Hitstay, a travel company, also owned by IPTG business owner, Ricardo Mandini, but no telephone number was found for Hitstay.

The Commission has made significant efforts to communicate with IPTG, but has also been unable to do so. On July 5, 2016, the International Bureau sent IPTG a letter to the last addresses of record requesting that IPTG respond to the *April 11, 2016 Executive Branch Letter* by August 3, 2016. IPTG did not respond. Since that time, the International Bureau has provided IPTG with additional opportunities to respond to these allegations. The International Bureau stated that failure to respond would result in termination of IPTG’s international section 214 authorization for failure to comply with the condition of its authorization. In IPTG’s application, IPTG stated it was incorporated in Florida, and according to the Florida Department of State Division of Corporations, on October 14, 2016, IPTG filed a voluntary dissolution letter and is now listed as “inactive.” To date, IPTG has not responded to any of the International Bureau or DOJ’s multiple requests to resolve this matter.

Discussion

We determine that IPTG’s international section 214 authorization to provide services issued under File No. ITC–214–20090508–00208 has terminated for inability to comply with an express condition for holding the international section 214 authorization. The International Bureau provided IPTG with notice and opportunity to respond to the allegations in the *April 11, 2016 Executive Branch Letter* concerning IPTG’s non-compliance with the condition of the grant. IPTG has not responded to any of our multiple requests or requests from DOJ. We find that IPTG’s failure to respond to our multiple requests demonstrates that it is unable to satisfy the LOA commitments, upon which the Executive Branch Agencies relied in providing their non-objection to the grant of the authorization to IPTG, and compliance with which is a condition of the grant of its international section 214 authorization.

Furthermore, after having received an international section 214 authorization, a carrier “is responsible for the continuing accuracy of the certifications made in its application” and must promptly correct information no longer accurate, “and in any event, within thirty (30) days.” IPTG has failed to inform the Commission of any changes in its business status of providing

international telecommunications services, as required by the rules. Finally, as part of its authorization, IPTG “must file annual international telecommunications traffic and revenue as required by section 43.62.” Section 43.62(b) states that “[n]ot later than July 31 of each year, each person or entity that holds an authorization pursuant to section 214 to provide international telecommunications service shall report *whether* it provided international telecommunications services during the preceding calendar year.” Our records indicate that IPTG failed to file annual international telecommunications traffic and revenue reports indicating whether or not IPTG provided services in 2014 and 2015, as required by section 43.62(b) of the Commission’s rules. IPTG’s failure to adhere to the Commission’s rules designed to ensure its ability to communicate with the holder of the authorization and to verify if the holder is still providing service also warrants termination, wholly apart from IPTG’s non-compliance with the condition of its international section 214 authorization.

Ordering Clauses

Accordingly, *it is ordered*, pursuant to sections 4(i), 214, and 413 of the Communications Act of 1934, as amended, 47 U.S.C. 154(i), 214, 413, and sections 1.47(h), 43.62, 63.18, 63.21, 63.22(h), 63.23(e), and 64.1195 of the Commission’s rules, 47 CFR 1.47(h), 43.62, 63.18, 63.21, 63.22(h), 63.23(e), 64.1195, that the international 214 authorization issued under File No. ITC–214–20090508–00208 is *hereby terminated and declared null and void*.

It is further ordered that the request of the U.S. Department of Justice, *is hereby granted*, to the extent set forth in this Order.

It is further ordered that a copy of this Order shall be sent registered mail, return receipt requested to IP To Go, LLC at its last known addresses. In addition, this Order shall be posted in the Commission’s Office of the Secretary.

It is further ordered that a copy of this Order, or a summary thereof, shall be published in the **Federal Register**.

This Order is issued on delegated authority under 47 CFR 0.51, 0.261, and is effective upon release. Petitions for reconsideration under section 1.106 of the Commission’s rules, 47 CFR 1.106, or applications for review under section 1.115 of the Commission’s rules, 47 CFR 1.115, may be filed within 30 days of the date of the release of this Order.

Agency Forms Undergoing Paperwork Reduction Act Review

The Centers for Disease Control and Prevention (CDC) has submitted the following information collection request to the Office of Management and Budget (OMB) for review and approval in accordance with the Paperwork Reduction Act of 1995. The notice for the proposed information collection is published to obtain comments from the public and affected agencies.

Written comments and suggestions from the public and affected agencies concerning the proposed collection of information are encouraged. Your comments should address any of the following: (a) Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility; (b) Evaluate the accuracy of the agencies estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used; (c) Enhance the quality, utility, and clarity of the information to be collected; (d) Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other

technological collection techniques or other forms of information technology, e.g., permitting electronic submission of responses; and (e) Assess information collection costs.

To request additional information on the proposed project or to obtain a copy of the information collection plan and instruments, call (404) 639-7570 or send an email to omb@cdc.gov. Written comments and/or suggestions regarding the items contained in this notice should be directed to the Attention: CDC Desk Officer, Office of Management and Budget, Washington, DC 20503 or by fax to (202) 395-5806. Written comments should be received within 30 days of this notice.

Proposed Project

Development of CDC's Act Against AIDS Social Marketing Campaigns Targeting Consumers—New—National Center for HIV/AIDS, Viral Hepatitis, STD, and TB Prevention (NCHHSTP, Centers for Disease Control and Prevention (CDC).

Background and Brief Description

In an effort to refocus attention on domestic HIV and AIDS, CDC launched the Act Against AIDS (AAA) initiative in 2009 with the White House and the U.S. Department of Health and Human Services. AAA is a multifaceted national communication initiative that supports reduction of HIV incidence in the U.S. through multiple, concurrent communication and education campaigns for a variety of audiences including, the general public populations most affected by HIV and health care providers. The campaigns target consumers 18-64 years old and include the following audiences: (1) Men who have sex with men (MSM) of all races; (2) Blacks/African Americans; (3) Hispanics/Latinos; (4) Transgender individuals; (5) HIV-positive individuals; and (6) national audience

of all races. All campaigns support the comprehensive HIV prevention efforts of CDC and the National HIV/AIDS Strategy (NHAS).

The goal of this study is to qualitatively test messages and materials that will be used in specific HIV social marketing campaigns under the AAA initiative that target consumers in order to increase HIV testing rates, increase HIV awareness and knowledge, challenge commonly held misperceptions about HIV, and promote HIV prevention and risk reduction. The intended use of the resulting data is for CDC to revise and/or develop timely, relevant, clear, and engaging materials for these social marketing campaigns.

Qualitative methods will be used to collect the data include focus groups, intercept interviews, and in-depth interviews. Qualitative methods provide flexible in-depth exploration of the participants' perceptions and experience; and the interviews yield descriptions in the participants' own words. Qualitative methods also allow the interviewer flexibility to pursue relevant and important issues as they arise during the discussion.

The participants will also participate in a brief 15-minute brief survey. Data collected by the brief survey will provide a source of quantitative data supplementing the qualitative data collected during the interviews. The brief survey will be administered to participants before the individual in-depth interview and focus group. The survey will collect basic background information about the participants' knowledge, attitudes and beliefs about HIV, HIV testing behaviors, risk behaviors and demographics to enable us to more fully describe the participants.

There is no cost to participants other than their time. The total estimated annualized burden hours are 2,063.

Proposed Project

Developing Effective Messages about Excessive Alcohol Consumption: Formative Focus Groups with Adult Drinkers and Abstainers—New—National Center for Chronic Disease Prevention and Health Promotion (NCCDPHP), Centers for Disease Control and Prevention (CDC).

Background and Brief Description

Excessive alcohol use, including binge drinking, is responsible for approximately 88,000 deaths in the U.S. annually—including one in 10 deaths among working-age adults ages 20–64. On average, for each death due to alcohol, an individual's life is cut short by 30 years. Excessive alcohol use can also lead to motor vehicle crashes; intimate partner violence; and risky sexual behaviors, increasing the risk of HIV, other sexually transmitted infections, and unintended pregnancy. Over time, excessive alcohol use can lead to alcohol dependence, liver disease, high blood pressure, heart attack, stroke, and certain kinds of

cancer. Furthermore, in 2010, excessive alcohol use cost the United States government \$249 billion, or \$2.05 per drink.

Binge drinking (defined as four or more drinks on an occasion for women or five or more drinks on an occasion for men) accounts for more than half of the deaths and three-quarters of the economic costs of excessive drinking. More than 38 million U.S. adults binge drink about four times a month, averaging eight drinks per binge. However, most (90%) binge drinkers are not alcohol dependent, presenting an opportunity for prevention through messages that improve voluntary compliance with recommended guidelines. States and communities can prevent binge drinking by supporting evidence-based strategies, such as those recommended by the Community Preventive Services Task Force; however, these strategies are underused. Understanding the type of information and messages that the larger community—those who drink but not excessively or abstain from drinking in addition to those who engage in binge drinking—respond to will be essential in developing the communication strategy for future outreach.

CDC plans to collect information needed to improve understanding of current knowledge, perceptions, and attitudes related to excessive alcohol consumption. Respondents will be 72 adults ages 21–64 years who agree to participate in focus group discussions of about 1.5 hours each. A total of 12 focus groups are planned in three geographically diverse locations with appropriate facilities (four focus groups per location). Each focus group will involve six respondents and will be guided by a professional moderator. Through an initial screening process, CDC will also collect the information needed to assess knowledge,

perceptions, and attitudes across various audience segments: those who engage in binge drinking, those who drink but not excessively, and those who abstain from drinking.

The focus group discussions will be analyzed using qualitative tools and leverage a structured approach to thematic analysis. Findings from this

information collection will guide the CDC Alcohol Program in the development and refinement of targeted messages to effectively communicate the problem of excessive alcohol use, and encourage support for effective prevention strategies. The ultimate goal of the subsequent messaging is a

reduction in binge drinking, which will in turn reduce alcohol-related injuries and deaths among adults.

OMB approval is requested for one year. Participation is voluntary and there are no costs to respondents other than their time. The total estimated annual burden hours are 132.

ESTIMATED ANNUALIZED BURDEN HOURS

Type of respondents	Form name	Number of respondents	Number of responses per respondent	Average burden per response (in hours)
Adults aged 21–64	Questionnaire/Screening	288	1	5/60
	Focus Group	72	1	1.5
Total				

Leroy A. Richardson,

Chief, Information Collection Review Office, Office of Scientific Integrity, Office of the Associate Director for Science, Office of the Director, Centers for Disease Control and Prevention.

BILLING CODE 4163–18–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Centers for Medicare & Medicaid Services

[Document Identifier: CMS–10171]

Agency Information Collection Activities: Proposed Collection; Comment Request

AGENCY: Centers for Medicare & Medicaid Services, HHS.

ACTION: Notice.

SUMMARY: The Centers for Medicare & Medicaid Services (CMS) is announcing an opportunity for the public to comment on CMS' intention to collect information from the public. Under the Paperwork Reduction Act of 1995 (the PRA), federal agencies are required to publish notice in the **Federal Register** concerning each proposed collection of information (including each proposed extension or reinstatement of an existing collection of information) and to allow 60 days for public comment on the proposed action. Interested persons are invited to send comments regarding our burden estimates or any other aspect of this collection of information, including any of the following subjects: the necessity and utility of the proposed information collection for the proper performance of the agency's functions; the accuracy of the estimated burden; ways to enhance the quality, utility, and

clarity of the information to be collected; and the use of automated collection techniques or other forms of information technology to minimize the information collection burden.

DATES: Comments must be received by February 17, 2017.

ADDRESSES: When commenting, please reference the document identifier or OMB control number. To be assured consideration, comments and recommendations must be submitted in any one of the following ways:

1. *Electronically.* You may send your comments electronically to <http://www.regulations.gov>. Follow the instructions for “Comment or Submission” or “More Search Options” to find the information collection document(s) that are accepting comments.

2. *By regular mail.* You may mail written comments to the following address: CMS, Office of Strategic Operations and Regulatory Affairs, Division of Regulations Development, Attention: Document Identifier/OMB Control Number ___, Room C4–26–05, 7500 Security Boulevard, Baltimore, Maryland 21244–1850.

To obtain copies of a supporting statement and any related forms for the proposed collection(s) summarized in this notice, you may make your request using one of following:

1. Access CMS' Web site address at <http://www.cms.hhs.gov/PaperworkReductionActof1995>.

2. Email your request, including your address, phone number, OMB number, and CMS document identifier, to Paperwork@cms.hhs.gov.

3. Call the Reports Clearance Office at (410) 786–1326.

FOR FURTHER INFORMATION CONTACT:

Reports Clearance Office at (410) 786–1326.

SUPPLEMENTARY INFORMATION:

Contents

This notice sets out a summary of the use and burden associated with the following information collections. More detailed information can be found in each collection's supporting statement and associated materials (see **ADDRESSES**).

CMS–10171 Collecting Benefit Coordination Data

Under the PRA (44 U.S.C. 3501–3520), federal agencies must obtain approval from the Office of Management and Budget (OMB) for each collection of information they conduct or sponsor. The term “collection of information” is defined in 44 U.S.C. 3502(3) and 5 CFR 1320.3(c) and includes agency requests or requirements that members of the public submit reports, keep records, or provide information to a third party. Section 3506(c)(2)(A) of the PRA requires federal agencies to publish a 60-day notice in the **Federal Register** concerning each proposed collection of information, including each proposed extension or reinstatement of an existing collection of information, before submitting the collection to OMB for approval. To comply with this requirement, CMS is publishing this notice.

Information Collection

1. *Type of Information Collection Request:* Extension of a currently approved collection; *Title of Information Collection:* Collecting Benefit Coordination Data; *Use:* This collection of information request coordinates Part D plan prescription drug coverage with other prescription drug coverage. The collected information will assist CMS, Part D

plans and other payers with coordination of prescription drug benefits at the point-of-sale and tracking of the beneficiary's True out-of-pocket (TrOOP) expenditures using the Part D Transaction Facilitator (PDTF). *Form Number:* CMS-10171 (OMB control number: 0938-0978); *Frequency:* Yearly and occasionally; *Affected Public:* Business or other for-profits; *Number of Respondents:* 62,438; *Total Annual Responses:* 891,777,634; *Total Annual Hours:* 5,201,718. (For policy questions regarding this collection contact Shelly Winston at 410-786-3694.)

2.

Dated: December 14, 2016.

William N. Parham, III,

Director, Paperwork Reduction Staff, Office of Strategic Operations and Regulatory Affairs.

BILLING CODE 4120-01-P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. FDA-2015-E-3157]

Determination of Regulatory Review Period for Purposes of Patent Extension; TRULICITY

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice.

SUMMARY: The Food and Drug Administration (FDA) has determined the regulatory review period for TRULICITY and is publishing this notice of that determination as required by law. FDA has made the determination because of the submission of an application to the Director of the U.S. Patent and Trademark Office (USPTO), Department of Commerce, for the extension of a patent which claims that human biological product.

DATES: Anyone with knowledge that any of the dates as published (see the **SUPPLEMENTARY INFORMATION** section) are incorrect may submit either electronic or written comments and ask for a redetermination by February 17, 2017. Furthermore, any interested person may petition FDA for a determination regarding whether the applicant for extension acted with due diligence during the regulatory review period by June 19, 2017. See "Petitions" in the **SUPPLEMENTARY INFORMATION** section for more information.

ADDRESSES: You may submit comments as follows: June 19, 2017

Electronic Submissions

Submit electronic comments in the following way:

- **Federal eRulemaking Portal:** <https://www.regulations.gov>. Follow the instructions for submitting comments. Comments submitted electronically, including attachments, to <https://www.regulations.gov> will be posted to the docket unchanged. Because your comment will be made public, you are solely responsible for ensuring that your comment does not include any confidential information that you or a third party may not wish to be posted, such as medical information, your or anyone else's Social Security number, or confidential business information, such as a manufacturing process. Please note that if you include your name, contact information, or other information that identifies you in the body of your comments, that information will be posted on <https://www.regulations.gov>.

- If you want to submit a comment with confidential information that you do not wish to be made available to the public, submit the comment as a written/paper submission and in the manner detailed (see "Written/Paper Submissions" and "Instructions").

Written/Paper Submissions

Submit written/paper submissions as follows:

- **Mail/Hand delivery/Courier (for written/paper submissions):** Division of Dockets Management (HFA-305), Food and Drug Administration, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.

- For written/paper comments submitted to the Division of Dockets Management, FDA will post your comment, as well as any attachments, except for information submitted, marked and identified, as confidential, if submitted as detailed in "Instructions."

Instructions: All submissions received must include the Docket No. FDA-2015-E-3157 for "Determination of Regulatory Review Period for Purposes of Patent Extension; TRULICITY." Received comments will be placed in the docket and, except for those submitted as "Confidential Submissions," publicly viewable at <https://www.regulations.gov> or at the Division of Dockets Management between 9 a.m. and 4 p.m., Monday through Friday.

- **Confidential Submissions—**To submit a comment with confidential information that you do not wish to be made publicly available, submit your comments only as a written/paper submission. You should submit two copies total. One copy will include the

information you claim to be confidential with a heading or cover note that states "THIS DOCUMENT CONTAINS CONFIDENTIAL INFORMATION." The Agency will review this copy, including the claimed confidential information, in its consideration of comments. The second copy, which will have the claimed confidential information redacted/blacked out, will be available for public viewing and posted on <https://www.regulations.gov>. Submit both copies to the Division of Dockets Management. If you do not wish your name and contact information to be made publicly available, you can provide this information on the cover sheet and not in the body of your comments and you must identify this information as "confidential." Any information marked as "confidential" will not be disclosed except in accordance with 21 CFR 10.20 and other applicable disclosure law. For more information about FDA's posting of comments to public dockets, see 80 FR 56469, September 18, 2015, or access the information at: <http://www.fda.gov/regulatoryinformation/dockets/default.htm>.

Docket: For access to the docket to read background documents or the electronic and written/paper comments received, go to <https://www.regulations.gov> and insert the docket number, found in brackets in the heading of this document, into the "Search" box and follow the prompts and/or go to the Division of Dockets Management, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.

FOR FURTHER INFORMATION CONTACT: Beverly Friedman, Office of Regulatory Policy, Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 51, Rm. 6250, Silver Spring, MD 20993, 301-796-3600.

SUPPLEMENTARY INFORMATION:

I. Background

The Drug Price Competition and Patent Term Restoration Act of 1984 (Pub. L. 98-417) and the Generic Animal Drug and Patent Term Restoration Act (Pub. L. 100-670) generally provide that a patent may be extended for a period of up to 5 years so long as the patented item (human drug product, animal drug product, medical device, food additive, or color additive) was subject to regulatory review by FDA before the item was marketed. Under these acts, a product's regulatory review period forms the basis for determining the amount of extension an applicant may receive.

A regulatory review period consists of two periods of time: A testing phase and

an approval phase. For human biological products, the testing phase begins when the exemption to permit the clinical investigations of the biological becomes effective and runs until the approval phase begins. The approval phase starts with the initial submission of an application to market the human biological product and continues until FDA grants permission to market the biological product. Although only a portion of a regulatory review period may count toward the actual amount of extension that the Director of USPTO may award (for example, half the testing phase must be subtracted as well as any time that may have occurred before the patent was issued), FDA's determination of the length of a regulatory review period for a human biological product will include all of the testing phase and approval phase as specified in 35 U.S.C. 156(g)(1)(B).

FDA has approved for marketing the human biologic product TRULICITY (dulaglutide). TRULICITY is indicated as an adjunct to diet and exercise to improve glycemic control in adults with type 2 diabetes mellitus. Subsequent to this approval, the USPTO received a patent term restoration application for TRULICITY (U.S. Patent No. 7,452,966) from Eli Lilly and Company, and the USPTO requested FDA's assistance in determining this patent's eligibility for patent term restoration. In a letter dated October 15, 2015, FDA advised the USPTO that this human biological product had undergone a regulatory review period and that the approval of TRULICITY represented the first permitted commercial marketing or use of the product. Thereafter, the USPTO requested that FDA determine the product's regulatory review period.

II. Determination of Regulatory Review Period

FDA has determined that the applicable regulatory review period for TRULICITY is 3,303 days. Of this time, 2,937 days occurred during the testing phase of the regulatory review period, while 366 days occurred during the approval phase. These periods of time were derived from the following dates:

1. *The date an exemption under section 505(i) of the Federal Food, Drug, and Cosmetic Act (21 U.S.C. 355(i)) became effective:* September 4, 2005. FDA has verified the applicant's claim that the date the investigational new drug application became effective was on September 4, 2005.

2. *The date the application was initially submitted with respect to the human biological product under section 351 of the Public Health Service Act (42 U.S.C. 262):* September 18, 2013. The applicant claims September 17, 2013, as the date the biologics license application (BLA) for TRULICITY (BLA 125469) was initially submitted. However, FDA records indicate that BLA 125469 was submitted on September 18, 2013.

3. *The date the application was approved:* September 18, 2014. FDA has verified the applicant's claim that BLA 125469 was approved on September 18, 2014.

This determination of the regulatory review period establishes the maximum potential length of a patent extension. However, the USPTO applies several statutory limitations in its calculations of the actual period for patent extension. In its application for patent extension, this applicant seeks 1,249 days of patent term extension.

III. Petitions

Anyone with knowledge that any of the dates as published are incorrect may submit either electronic or written comments and ask for a redetermination (see **DATES**). Furthermore, any interested person may petition FDA for a determination regarding whether the applicant for extension acted with due diligence during the regulatory review period. To meet its burden, the petition must be timely (see **DATES**) and contain sufficient facts to merit an FDA investigation. (See H. Rept. 857, part 1, 98th Cong., 2d sess., pp. 41–42, 1984.) Petitions should be in the format specified in 21 CFR 10.30.

Submit petitions electronically to <https://www.regulations.gov> at Docket No. FDA-2013-S-0610. Submit written petitions (two copies are required) to the Division of Dockets Management (HFA-305), Food and Drug Administration,

5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.

Dated: December 14, 2016.

Agency Information Collection Activities; Announcement of Office of Management and Budget Approvals

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice.

SUMMARY: The Food and Drug Administration (FDA) is publishing a list of information collections that have been approved by the Office of Management and Budget (OMB) under the Paperwork Reduction Act of 1995.

FOR FURTHER INFORMATION CONTACT: FDA PRA Staff, Office of Operations, Food and Drug Administration, Three White Flint North, 11601 Landsdown St., North Bethesda, MD 20852, PRASStaff@fda.hhs.gov.

SUPPLEMENTARY INFORMATION: The following is a list of FDA information collections recently approved by OMB under section 3507 of the Paperwork Reduction Act of 1995 (44 U.S.C. 3507). The OMB control number and expiration date of OMB approval for each information collection are shown in table 1. Copies of the supporting statements for the information collections are available on the Internet at <http://www.reginfo.gov/public/do/PRAMain>. An Agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a currently valid OMB control number.

TABLE 1—LIST OF INFORMATION COLLECTIONS APPROVED BY OMB

Title of collection	OMB control No.	Date approval expires
Bar Code Label Requirements for Human Drug Products and Biological Products	0910–0537	9/30/2019
Clinical Laboratory Improvement Amendments Waiver Applications	0910–0598	9/30/2019
Current Good Manufacturing Practices for Positron Emission Tomography Drugs	0910–0667	9/30/2019
Medical Devices: Use of Certain Symbols in Labeling—Glossary to Support the Use of Symbols in Labeling	0910–0740	9/30/2019
Evaluation of the Program for Enhanced Review Transparency and Communication for New Molecular Entity New Drug Applications and Original Biologics License Applications in Prescription Drug User Fee Act	0910–0746	9/30/2019

TABLE 1—LIST OF INFORMATION COLLECTIONS APPROVED BY OMB—Continued

Title of collection	OMB control No.	Date approval expires
Medical Device Accessories	0910–0823	9/30/2019
Market Claims in Direct-to-Consumer Prescription Drug Print Ads	0910–0824	9/30/2019
Abbreviated New Animal Drug Applications	0910–0669	10/31/2019
Abbreviated New Drug Applications and 505(b)(2) Applications	0910–0786	11/30/2019

Dated: December 13, 2016.

DEPARTMENT OF HEALTH AND HUMAN SERVICES

National Institutes of Health

National Institute of Mental Health; Notice of Meeting

Pursuant to section 10(a) of the Federal Advisory Committee Act, as amended (5 U.S.C. App.), notice is hereby given of an Interagency Autism Coordinating Committee (IACC or Committee) meeting.

The purpose of the IACC meeting is to discuss business, agency updates, and issues related to autism spectrum

disorder (ASD) research and services activities. The Committee will discuss the 2016-2017 update of the IACC Strategic Plan. The meeting will be open to the public and will be accessible by webcast and conference call.

Name of Committee: Interagency Autism Coordinating Committee (IACC).

Type of meeting: Open Meeting.

Date: January 13, 2017.

Time: 9:00 a.m. to 5:00 p.m. * Eastern Time * Approximate end time.

Agenda: To discuss business, updates, and issues related to ASD research and services activities. The Committee will discuss updates of the IACC Strategic Plan.

Place: National Institute of Mental Health, 6001 Executive Boulevard, NSC, Conference Rooms C and D, Rockville, MD 20850.

Webcast Live: <https://videocast.nih.gov>.

Conference Call Access: Dial: 888-989-9784. Access code: 5757026.

Cost: The meeting is free and open to the public.

Registration: A registration web link will be posted on the IACC Web site (www.iacc.hhs.gov) prior to the meeting. Pre-registration is recommended to expedite check-in. Seating in the meeting room is limited to room capacity and on a first come, first served basis. Onsite registration will also be available.

Deadlines: Notification of intent to present oral comments: Monday, January 2, 2017 by 5:00 p.m. ET. Submission of written/electronic statement for oral comments: Thursday, January 5, 2017 by 5:00 p.m. ET. Submission of written comments: Thursday, January 5, 2017 by 5:00 p.m. ET. For IACC Public Comment guidelines please see: <https://iacc.hhs.gov/meetings/public-comments/guidelines/>.

Access: White Flint Metro Station (Red Line).

Contact Person: Ms. Angelice Mitras, Office of Autism Research Coordination, National Institute of Mental Health, NIH, 6001 Executive Boulevard, Room 6182A, Bethesda, MD 20892-9669, Phone: 301-435-9269, Email: IACCPublicInquiries@mail.nih.gov.

Public Comments: Any member of the public interested in presenting oral comments to the Committee must notify the Contact Person listed on this notice by 5:00 p.m. ET on Monday, January 2, 2017, with their request to present oral comments at the meeting, and a written/electronic copy of the oral presentation/statement must be submitted by 5:00 p.m. ET on Thursday, January 5th.

A limited number of slots for oral comment are available, and in order to ensure that as many different individuals are able to present throughout the year as possible, any given individual only will be permitted to present oral comments once per calendar year (2017). Only one representative of an organization will be allowed to present oral comments in any given meeting; other representatives of the same group may provide written comments. If the oral comment session is full, individuals who could not be accommodated are welcome to provide written comments instead. Comments to be read or presented in the meeting must not exceed 250 words or 3 minutes, but a longer version may be submitted in writing for the record. Commenters going beyond the 250 word or 3 minute time limit in the meeting may be asked to conclude immediately in order to allow other comments and presentations to proceed on schedule.

Any interested person may submit written public comments to the IACC prior to the meeting by emailing the comments to IACCPublicInquiries@mail.nih.gov or by submitting comments at the Web link: <https://iacc.hhs.gov/meetings/public-comments/submit/index.jsp> by 5:00 p.m. ET on Thursday, January 5, 2017. The comments should include the name, address, telephone number, and when applicable, the business or professional affiliation of the interested person. NIMH anticipates written public comments received by 5:00 p.m. ET on Thursday, January 5, 2017 will be presented to the Committee prior to the meeting for the Committee's consideration. Any written comments received after the 5:00 p.m. ET, January 5, 2017 deadline through January 12, 2017 will be provided to the Committee either before or after the meeting, depending on the volume of comments received and the time required to process them in accordance with privacy regulations and other applicable Federal policies. All written public comments and oral public comment statements received by the deadlines for both oral and written public comments will be provided to the IACC for their consideration and will become part of the public record. Attachments of copyrighted publications are not permitted, but web links or citations for any copyrighted works cited may be provided.

In the 2009 IACC Strategic Plan, the IACC listed the "Spirit of Collaboration" as one of its core values, stating that, "We will treat others with respect, listen to diverse views with open minds, discuss submitted public comments, and foster discussions where

participants can comfortably offer opposing opinions.” In keeping with this core value, the IACC and the NIMH Office of Autism Research Coordination (OARC) ask that members of the public who provide public comments or participate in meetings of the IACC also seek to treat others with respect and consideration in their communications and actions, even when discussing issues of genuine concern or disagreement.

Remote Access: The meeting will be open to the public through a conference call phone number and webcast live on the Internet. Members of the public who participate using the conference call phone number will be able to listen to the meeting but will not be heard. If you experience any technical problems with the webcast or conference call, please send an email to IACCPublicInquiries@mail.nih.gov.

Individuals wishing to participate in person or by using these electronic services and who need special assistance, such as captioning of the conference call or other reasonable accommodations, should submit a request to the Contact Person listed on this notice at least five days prior to the meeting.

Security: Visitors will be asked to show one form of identification (for example, a government-issued photo ID, driver's license, or passport) and to state the purpose of their visit. Also as a part of the security procedures, attendees should be prepared to present a photo ID at the meeting registration desk during the check-in process. Pre-registration is recommended. Seating will be limited to the room capacity and seats will be on a first come, first served basis, with expedited check-in for those who are pre-registered.

Meeting schedule subject to change.

Information about the IACC is available on the Web site: <http://www.iacc.hhs.gov>.

Dated: December 14, 2016.

Melanie J. Pantoja,
Program Analyst, Office of Federal Advisory Committee Policy.

DEPARTMENT OF HEALTH AND HUMAN SERVICES

National Institutes of Health

National Heart, Lung, and Blood Institute; Notice of Closed Meeting

Pursuant to section 10(d) of the Federal Advisory Committee Act, as

amended (5 U.S.C. App.), notice is hereby given of the following meeting.

The meeting will be closed to the public in accordance with the provisions set forth in sections 552b(c)(4) and 552b(c)(6), Title 5 U.S.C., as amended. The grant applications and the discussions could disclose confidential trade secrets or commercial property such as patentable material, and personal information concerning individuals associated with the grant applications, the disclosure of which would constitute a clearly unwarranted invasion of personal privacy.

Name of Committee: National Heart, Lung, and Blood Institute Special Emphasis Panel; Immunobiology of Transfusion.

Date: January 10, 2017.

Time: 1:00 p.m. to 4:00 p.m.

Agenda: To review and evaluate grant applications.

Place: National Institutes of Health, 6701 Rockledge Drive, Room 7202, Bethesda, MD 20892 (Telephone Conference Call).

Contact Person: Melissa E Nagelin, Ph.D., Scientific Review Officer, Office of Scientific Review/DERA, National Heart, Lung, and Blood Institute, 6701 Rockledge Drive, Room 7202, Bethesda, MD 20892, 301-435-0297, nagelinmh2@nhlbi.nih.gov.

DEPARTMENT OF HEALTH AND HUMAN SERVICES

National Institutes of Health

Office of the Director, National Institutes of Health; Notice of Meeting

Notice is hereby given of a meeting of the Big Data to Knowledge Multi-Council Working Group.

The teleconference meeting will be open to the public as indicated below. Individuals who plan to attend and need special assistance should notify the contact person listed below in advance of the meeting. No physical meeting location is provided for any interested individuals to listen to committee discussions. Any individual interested in listening to the meeting discussions must call: 1-877-668-4493 and use Passcode: 627 298 875 for access to the meeting.

Name of Working Group: Big Data to Knowledge Multi-Council Working Group.

Date: January 9, 2017.

Open Session: 11:00 a.m.–12:00 p.m. EST.

Agenda: Discussion will review current Big Data to Knowledge (BD2K) activities and newly proposed BD2K initiatives.

Open Session Presentations: ADDS Updates—“State of BD2K”. All-Hands Meeting and Open Data Science Symposium Recap.

Place: Teleconference.

Closed Session: 12:30 p.m.–3:30 p.m. EST.

Agenda: Discussion will focus on review of proposed Funding Plans for BD2K Funding Opportunity Announcements.

Place: Teleconference.

Contact Person: Tonya Scott, Building 1, Room 325, 1 Center Drive, Bethesda, MD 20814-0174, email: tonya.scott@nih.gov, Telephone: 301-402-9817.

Information is also available on the Office of the Associate Director for Data Science's home page: <https://datascience.nih.gov/index> where an agenda and any additional information for the meeting will be posted when available.

Dated: December 12, 2016.

BILLING CODE 4140-01-P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Substance Abuse and Mental Health Services Administration

Agency Information Collection Activities: Proposed Collection; Comment Request

In compliance with Section
3506(c)(2)(A) of the Paperwork

Reduction Act of 1995 concerning
opportunity for public comment on
proposed collections of information, the
Substance Abuse and Mental Health
Services Administration (SAMHSA)
will publish periodic summaries of
proposed projects. To request more
information on the proposed projects or
to obtain a copy of the information
collection plans, call the SAMHSA
Reports Clearance Officer on (240) 276-
1243.

Comments are invited on: (a) Whether
the proposed collections of information
are necessary for the proper
performance of the functions of the
agency, including whether the
information shall have practical utility;
(b) the accuracy of the agency's estimate
of the burden of the proposed collection
of information; (c) ways to enhance the
quality, utility, and clarity of the
information to be collected; and (d)
ways to minimize the burden of the
collection of information on
respondents, including through the use
of automated collection techniques or
other forms of information technology.

Proposed Project: SAMHSA SOAR Web-Based Data Form (OMB No. 0930- 0329)—REVISION

In 2009 the Substance Abuse and
Mental Health Services Administration
(SAMHSA) of the U.S. Department of
Health and Human Services created a
Technical Assistance Center to assist in
the implementation of the SSI/SSDI
Outreach Access and Recovery (SOAR)
effort in all states. The primary objective
of SOAR is to improve the allowance
rate for Social Security Administration
(SSA) disability benefits for people who
are experiencing or at risk of
homelessness, and who have serious
mental illnesses.

During the SOAR training, the
importance of keeping track of SSI/SSDI
applications through the process is

stressed. In response to requests from
states implementing SOAR, the
Technical Assistance Center under
SAMHSA's direction developed a web-
based data form that case managers can
use to track the progress of submitted
applications, including decisions
received from SSA either on initial
application or on appeal. This
password-protected web-based data
form is hosted on the SOAR Web site
(<https://soartrack.prainc.com>). Use of
this form is completely voluntary.

In addition, data from Part I of the
web-based form can be compiled into
reports on decision results and the use
of SOAR core components, such as the
SSA-1696 Appointment of
Representative, which allows SSA to
communicate directly with the case
manager assisting with the application.
These reports will be reviewed by
agency directors, SOAR state-level
leads, and the national SOAR Technical
Assistance Center to quantify the
success of the effort overall and to
identify areas where additional
technical assistance is needed. There are
no proposed changes to Part I of this
form.

The proposed additions to create a
new Part II of this form include
qualitative (open-ended) questions on
annual SOAR accomplishments,
identified challenges and collaborations.
There are 8 new questions that represent
new initiatives, challenges, funding
sources, steering committees and
training. There is also an additional
open-ended question on collaborations
with 8 potentially applicable areas (*e.g.*
Veterans, justice-involved persons,
hospitals) that could require a response.
The addition of Part II is for annual
reporting by state and local leads only.

The estimated response burden is as
follows:

Form name	Number of respondents	Responses per respondent	Total responses	Hours per response	Total hour burden	Hourly wage cost	Total hour cost (\$)
SOAR Data Form (Part I)	700	3	2,100	.25	525	\$20	\$10,500
Annual Report Ques- tions (Part II)	75	1	75	1	37.50	20	750
TOTAL	775		2,175		562.50		11,250

Send comments to Summer King, SAMHSA Reports Clearance Officer, Room 15E-57B, 5600 Fishers Lane, Rockville, MD 20857 OR email her a copy at summer.king@samhsa.hhs.gov. Written comments should be received by February 17, 2017.

Summer King,
Statistician.

BILLING CODE 4162-20-P

DEPARTMENT OF THE INTERIOR

Fish and Wildlife Service

[FW-HQ-ES-2016-N213;
FXFR131109WFHS0-FF09F10000-167]

Proposed Information Collection; Injurious Wildlife; Importation Certification for Live Fish and Fish Eggs

AGENCY: Fish and Wildlife Service,
Interior.

ACTION: Notice; request for comments.

SUMMARY: We (U.S. Fish and Wildlife Service) will ask the Office of Management and Budget (OMB) to approve the information collection (IC) described below. As required by the Paperwork Reduction Act of 1995 and as part of our continuing efforts to reduce paperwork and respondent burden, we invite the general public and other Federal agencies to take this opportunity to comment on this IC. This IC is scheduled to expire on March 31, 2017. We may not conduct or sponsor and a person is not required to respond to a collection of information unless it

displays a currently valid OMB control number.

DATES: To ensure that we are able to consider your comments on this IC, we must receive them by February 17, 2017.

ADDRESSES: Send your comments on the IC to the Information Collection Clearance Officer, U.S. Fish and Wildlife Service, MS BPHC, 5275 Leesburg Pike, Falls Church, VA 22041-3803 (mail); or tina_campbell@fws.gov (email). Please include "1018-0078" in the subject line of your comments.

FOR FURTHER INFORMATION CONTACT: To request additional information about this IC, contact Tina Campbell at tina_campbell@fws.gov (email) or 703-358-2676 (telephone).

SUPPLEMENTARY INFORMATION:

I. Abstract

The Lacey Act (18 U.S.C. 42) (Act) prohibits the importation of any animal deemed to be and prescribed by regulation to be injurious to:

- Human beings;
- The interests of agriculture, horticulture, and forestry; or
- Wildlife or the wildlife resources of the United States.

The Department of the Interior is charged with enforcement of this Act. The Act and regulations at 50 CFR 16 allow for the importation of animals classified as injurious if specific criteria are met. To effectively carry out responsibilities and protect the aquatic resources of the United States, we must gather information on the animals being imported with regard to their source, destination, and health status. It is also imperative that we ensure the qualifications of those individuals who

provide the fish health data and sign the health certificate upon which we base our decision to allow importation.

We use three forms to collect this information:

(1) FWS Form 3-2273 (Title 50 Certifying Official Form). New applicants and those seeking recertification as a title 50 certifying official provide information so that we can assess their qualifications.

(2) FWS Form 3-2274 (U.S. Title 50 Certification Form). Certifying officials use this form or their own health certificate to affirm the health status of the fish or their reproductive products to be imported.

(3) FWS Form 3-2275 (Title 50 Importation Request Form). We use the information on this form to ensure the safety of the shipment and to track and control importations.

II. Data

OMB Control Number: 1018-0078.

Title: Injurious Wildlife; Importation Certification for Live Fish and Fish Eggs, 50 CFR 16.13.

Service Form Numbers: 3-2273, 3-2274, and 3-2275.

Type of Request: Extension of a currently approved collection.

Description of Respondents: Aquatic animal health professionals seeking to be certified title 50 inspectors; certified title 50 inspectors who have performed health certifications on live salmonids; and any entity wishing to import live salmonids or their reproductive products into the United States.

Respondent's Obligation: Required to obtain or retain a benefit.

Frequency of Collection: On occasion.

Activity	Number of respondents	Number of responses	Completion time per response	Total annual burden hours
FWS Form 3-2273	20	20	1 hour	20
FWS Form 3-2274	25	50	30 minutes	25
FWS Form 3-2275	25	50	15 minutes	13
TOTALS	70	120		58

III. Comments

We invite comments concerning this information collection on:

- Whether or not the collection of information is necessary, including whether or not the information will have practical utility;
- The accuracy of our estimate of the burden for this collection of information;
- Ways to enhance the quality, utility, and clarity of the information to be collected; and

• Ways to minimize the burden of the collection of information on respondents.

Comments that you submit in response to this notice are a matter of public record. We will include or summarize each comment in our request to OMB to approve this IC. Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment, including your personal identifying information, may be made publicly available at any time.

While you can ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

Dated: December 14, 2016.

Tina A. Campbell,
Chief, Division of Policy, Performance, and Management Programs, U.S. Fish and Wildlife Service.

Archeology Permit Applications and
Reports**

AGENCY: National Park Service, Interior.

ACTION: Notice; request for comments.

SUMMARY: We (National Park Service, NPS) will ask the Office of Management and Budget (OMB) to approve the information collection (IC) described below. As required by the Paperwork Reduction Act of 1995 and as part of our continuing efforts to reduce paperwork and respondent burden, we invite the general public and other Federal agencies to take this opportunity to comment on this IC. This IC is scheduled to expire on July 31, 2017. We may not conduct or sponsor and a person is not required to respond to a collection of information unless it displays a currently valid OMB control number.

DATES: To ensure that we are able to consider your comments on this IC, we must receive them by February 17, 2017.

ADDRESSES: Send your comments on the IC to Madonna L. Baucum, Information Collection Clearance Officer, National Park Service, 12201 Sunrise Valley Dr., Mail Stop 242, Reston, VA 20192 (mail); or madonna_baucum@nps.gov (email). Please include “1024–0037” in the subject line of your comments.

FOR FURTHER INFORMATION CONTACT: To request additional information about this IC, contact Karen Mudar, Ph.D., Archeologist, Washington Support Office Archeology Program, National Park Service, 1849 C Street NW., Washington, DC 20240 (mail); Karen_Mudar@nps.gov (email); or (202) 354–2103 (telephone).

Mudar@nps.gov (email); or (202) 354–2103 (telephone).

SUPPLEMENTARY INFORMATION:**I. Abstract**

Section 4 of the Archeological Resources Protection Act (ARPA) of 1979 (16 U.S.C 470cc), and Section 3 of the Antiquities Act (AA) of 1906 (54 U.S.C. 320302), authorize any individual or institution to apply to Federal land managing agencies to scientifically excavate or remove archeological resources from public or Indian lands. A permit is required for any archeological investigation by non-NPS personnel occurring on parklands, regardless of whether or not these investigations are linked to regulatory compliance. Archeological investigations that require permits include excavation, shovel-testing, coring, pedestrian survey (with and without removal of artifacts), underwater archeology, photogrammetry, and rock art documentation. Individuals, academic and scientific institutions, museums, and businesses that propose to conduct archeological field investigations on parklands must first obtain a permit before the project may begin.

To apply for a permit, applicants submit DI Form 1926 (Application for Permit for Archeological Investigations). In general, an application includes, but is not limited to, the following information:

- Statement of Work.
- Statement of Applicant's Capabilities.
- Statement of Applicant's Past Performance.
- Curriculum vitae for Principal Investigator(s) and Project Director(s).
- Written consent by State or tribal authorities to undertake the activity on State or tribal lands that are managed by the NPS, if required by the State or tribe.

- Curation Authorization.
- Detailed Schedule of All Project Activities.

Persons receiving a permit must submit the following reports:

- Preliminary Reports—Within 6 weeks of completion of the field component of the research project, the permittee must submit a preliminary report that describes the fieldwork, including accomplishments, methods used to accomplish the work, names of individuals that carried out the fieldwork, maps, any GPS data, information about any newly recorded archeological sites, and any professional recommendations. If fieldwork involves only minor work and/or minor findings, a final report may be submitted in place of the preliminary report.

- Annual Reports—If the permit extends for more than 1 year, we require an annual progress report. The report must detail the extent of work accomplished to date, and how much work remains to be carried out.

- Final Reports—Within 6 months of completion of the field component of the research project, the permittee must submit a final report for review by the regional director.

II. Data

OMB Control Number: 1024–0037.

Title: Archeology Permit Applications and Reports—43 CFR 3 and 7.

Form Number(s): DI–1926, “Application for Permit for Archeological Investigations”.

Type of Request: Revision to a currently approved collection.

Description of Respondents: Individuals or organizations wishing to excavate or remove archeological resources from public or Indian lands.

Respondent's Obligation: Required to obtain or retain a benefit.

Frequency of Collection: On occasion.

Activity	Annual number of respondents	Number of annual responses	Average time per response (Hours)	Total annual burden hours
Applications for Archeology Permits	773	773	2.5	1,933
Reporting—Archeology Permits	773	773	.5	387
Totals	1,546	904	3.0	2,320

Estimated Annual Nonhour Cost Burden: None.

III. Comments

We invite comments concerning this information collection on:

- Whether or not the collection of information is necessary, including

whether or not the information will have practical utility;

- The accuracy of our estimate of the burden for this collection of information;

- Ways to enhance the quality, utility, and clarity of the information to be collected; and

- Ways to minimize the burden of the collection of information on respondents.

Comments that you submit in response to this notice are a matter of public record. We will include or summarize each comment in our request to OMB to approve this IC. Before including your address, phone number,

email address, or other personal identifying information in your comment, you should be aware that your entire comment, including your personal identifying information, may be made publicly available at any time. While you can ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

Dated: December 14, 2016.

Madonna L. Baucum,

*Information Collection Clearance Officer,
National Park Service.*

[FR Doc. 2016-30450 Filed 12-16-16; 8:45 am]

BILLING CODE 4312-52-P

DEPARTMENT OF THE INTERIOR

Bureau of Ocean Energy Management

[17XM1917XD/MMLL100000/
MD1EV0000.AAX00]

Proposed Information Collection: Beachgoer and Vessel Surveys

AGENCY: Bureau of Ocean Energy Management, Interior.

ACTION: 60-day notice and request for comments.

SUMMARY: In compliance with the Paperwork Reduction Act, the Bureau of Ocean Energy Management (BOEM) will ask the Office of Management and Budget (OMB) to approve a collection of information to support ocean observation planning and management on public lands and waters. The respondents will be recreationists visiting public and private Gulf Coast beaches, and coastal and offshore vessel (boat) operators in the Gulf of Mexico region. The BOEM invites public comments on this proposed collection. A Federal agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a currently valid OMB control number.

DATES: Please submit comments on the proposed information collection by February 17, 2017.

ADDRESSES: Comments may be submitted by mail, fax, or electronic mail.

Mail: Information Collection Clearance Officer, Anna Atkinson, U.S. Department of the Interior, Bureau of Ocean Energy Management, 45600 Woodland Road, Sterling, VA 20166.

Fax: to Anna Atkinson at 703-787-1209.

Electronic mail: anna.atkinson@boem.gov.

Please indicate “Attn: 1010-XXXX” regardless of the form of your comments.

FOR FURTHER INFORMATION CONTACT: Dr. Rex Caffey, Louisiana State University, Center for Natural Resource Economics & Policy, Baton Rouge, LA 70803; email: rcaffey@agcenter.lsu.edu; or phone: 225-578-2393.

SUPPLEMENTARY INFORMATION: OMB regulations at 5 CFR part 1320, which implement provisions of the Paperwork Reduction Act, 44 U.S.C. 3501-3521, require that interested members of the public and affected agencies be given an opportunity to comment on information collection and recordkeeping activities (see 5 CFR 1320.8 (d) and 1320.12(a)). This notice identifies an information collection that the BOEM plans to submit to OMB for approval. The Paperwork Reduction Act provides that an agency may not conduct or sponsor a collection of information unless it displays a currently valid OMB control number. Until OMB approves a collection of information, you are not obligated to respond.

I. Abstract

BOEM manages the exploration and development of oil, natural gas and other minerals and renewable energy alternatives on the nation's Outer Continental Shelf (OCS). Section 1346 of the Outer Continental Shelf Lands Act (OCSLA) mandates the conduct of environmental and socioeconomic studies needed for the assessment and management of environmental impacts on the human, marine, and coastal environments which may be affected by oil and gas, renewable energy, or other mineral development. Section 1345 of OCSLA authorizes the use of cooperative agreements with affected States to meet the requirements of OCSLA, which may include, but not be limited to, the sharing of information, the joint utilization of available expertise, the facilitating of permitting procedures, joint planning and review, and the formation of joint surveillance and monitoring arrangements to carry out applicable Federal and State laws, regulations, and stipulations relevant to the OCS operations both onshore and offshore.

This data collection effort is necessary in order to monetarily value benefits of coastal and oceanic data collected in the U.S. Gulf of Mexico, as part of the Gulf of Mexico Coastal Ocean Observing System (GCOOS). Information on the economic value of regional ocean observations is critical for sustained public and private support for the GCOOS, especially as the costs of

operation and maintenance for ocean monitoring systems are questioned in Federal, State, and private budgetary processes.

The data collection effort is part of a cooperative agreement between the Environmental Studies Program (ESP) of the BOEM and the Louisiana Coastal Marine Institute (CMI) at Louisiana State University (LSU). The objective of the ESP is to support research in topics that serve the public interest of safe and environmentally sound energy production and meet the goals of the BOEM.

The GCOOS is a regional ocean observing system consisting of Federal, State, and local infrastructure. The system provides a wide array of science-based data to both public and private sector decision makers tasked with the management of human-built infrastructure, centers of population, and environmental and natural resources in the southeastern United States. As a component of the U.S. Integrated Ocean Observing System (IOOS), the overall goal of GCOOS is to provide the science-based biological, chemical, and physical data, along with the appropriate analytic tools, that are needed by society to address important short- and long-term management problems associated with marine industrial operations (marine transportation, oil and gas exploration and production), coastal hazards (offshore obstructions, pollutant spill tracking, conditions for offshore operations), public health and safety (forecasting harmful algal bloom movement, search and rescue), healthy ecosystems, and water quality. The information provided through GCOOS supports the policy mandates and objectives of a number of Federal agencies, including the BOEM, National Marine Fisheries Service, Environmental Protection Agency, and the U.S. Geological Survey.

The information collection will be led by researchers at Louisiana State University and Mississippi State University, who will conduct two surveys to assess the impact of an improved and expanded GCOOS. The surveys will gauge public perceptions of coastal and ocean-related data and information products and how improvements to these could impact future recreation, boating, and weather-related preparation/evacuation choices. This information collection request covers two proposed surveys, which collect necessary data from residents of Texas, Louisiana, Mississippi, Alabama, and Florida. This information is not otherwise available.

We will use the information from these surveys to gauge public perceptions of coastal and oceanic data collected in the U.S. Gulf of Mexico, as part of the GCOOS, and to estimate how improvements and expansions of the GCOOS could affect future recreation, boating, and hurricane preparation/evacuation choices.

A *Beachgoers Survey* will be utilized to gauge preferences for, and valuation of, GCOOS-derived information to inform coastal access via land. A *Vessel Survey* will gauge the associated preferences and values of GCOOS information for informing decision-making for coastal and marine boating.

The data collection for the Beachgoers Survey will be conducted using an internet-based survey, administered to members of the GfK Custom Research Knowledge Panel. No personally identifiable information will be collected. The survey will cover beachgoers, and is divided into three parts. The first part is an introduction wherein the purpose of the survey is discussed, highlighting the cooperating agencies, institutions and organizations, the Paperwork Reduction Act of 1995, and a privacy statement. Respondents will be screened for those who have made a trip to a Gulf beach in the last 12 months. Another question will inquire about one's beach activities, which is used to help categorize beach use.

The second part of the survey introduces the beach conditions monitoring system and Web site currently available for select beaches in Florida, and asks questions about which beach conditions are most important to respondents when visiting or planning a visit to a beach. It then proposes a hypothetical program that would

expand the beach conditions monitoring Web site to a larger set of beaches across all five Gulf Coast states. Following the introduction of the hypothetical program, respondents will be asked whether they would be willing to support the proposed expanded program if it were to cost a randomly-assigned amount of money per household to provide it, using standard contingent-valuation methods. The third section closes with a series of demographic and general awareness questions.

Data collection for the Vessel Survey will be conducted using both postal and Internet surveying, depending on respondent preference. This survey will cover a representative sample of registered vessel owners in the five Gulf Coast states. The first part will introduce the purpose of the survey, highlighting the cooperating agencies, institutions and organizations, the Paperwork Reduction Act of 1995, and a privacy statement. Basic information on the respondent's coastal and marine boating history in the last 12 months will then be requested. These questions will address necessary information related to the primary vessel utilized and associated type and duration of activities (e.g. fishing, sailing, research, etc.).

The second part of the survey gauges respondent use of specific types of ocean monitoring information (current observations and forecasted conditions), and their preference for general categories of GCOOS-based information. A follow-up question proposes a hypothetical program that would expand the GCOOS infrastructure by 40%. Following the introduction of the hypothetical program, respondents will be asked whether they would be willing

to support the proposed expanded program if it were to cost a randomly-assigned amount of money per household to provide it, using standard contingent-valuation methods. The third section of this survey closes with some basic demographics from the participants. No personally identifiable information will be collected.

II. Data

The following information pertains to this request:

Title: GCOOS Beachgoers and Vessel Surveys.

OMB Control Number: This is a new collection; 1010-XXXX.

Description of Respondents: General-population beachgoers and coastal-marine vessel owners/operators in the five Gulf Coast states.

Respondent Obligation: Voluntary.

Frequency of Collection: These would be one-time collections, which would take place over a 1–2 month collection period.

Estimated Annual Responses: 1,100 completed Beachgoers Survey responses, 4,138 non-response and dropout Beachgoers Survey responses; 1,066 completed Vessel Survey responses, 4,014 non-response and dropout Vessel Survey responses; total of 10,318 estimated responses.

Estimated Annual Burden Hours: We estimate the estimated burden of response to be 15 minutes for completed surveys and 3 minutes for non-response/dropout responses, for a total of 950 estimated annual burden hours.

Estimated Annual Non-Hour Costs: There is no non-hour cost burden associated with this collection.

The estimated burdens are itemized in the following table:

Type of response A.	Number of responses B.	Time per response (minutes) C.	Total hours (Col. B × Col. C/60 minutes) D.
<i>Beachgoer Survey</i> : Complete respondents	1100	15	275
<i>Beachgoer Survey</i> : Non-respondents and drop-outs	4138	3	207
<i>Vessel Survey</i> : Complete respondents	1066	15	267
<i>Vessel Survey</i> : Non-respondents and drop-outs	4014	3	201
Total	10318		950

III. Request for Comments

Comments are invited on: (1) The practical utility of the information being gathered; (2) the accuracy of the agency's burden estimates; (3) ways to enhance the quality, utility and clarity of the information collection; and (4)

ways to minimize the information collection burden on respondents, such as use of automated means of collection of the information.

Agencies must also estimate the non-hour cost burdens to respondents or recordkeepers resulting from the collection of information. Therefore, if

you have costs to generate, maintain, and disclose this information, you should comment and provide your total capital and startup costs or annual cost components or annual operation, maintenance, and purchase of service components. You should describe the methods you use to estimate major cost

factors, including system and technology acquisition, expected useful life of capital equipment, discount rate(s), and the period over which you incur costs. Capital and startup costs include, among other items, computers and software you purchase to prepare for collecting information, monitoring, and record storage facilities. You should not include estimates for equipment or services purchased: (a) Before October 1, 1995; (b) to comply with requirements not associated with the information collection; (c) for reasons other than to provide information or keep records for the Government; or (d) as part of customary and usual business or private practices. We will summarize written responses to this notice and address them in our submission for OMB approval. Please note that the comments submitted in response to this notice are a matter of public record. We will include or summarize each comment in our request to OMB to approve this IC. As a result of your comments, we will make any necessary adjustments to the burden in our submission to OMB.

Public Disclosure Statement: OMB regulations at 5 CFR part 1320, which implement provisions of the Paperwork Reduction Act, 44 U.S.C. 3501–3521, require that interested members of the public and affected agencies be given an opportunity to comment on information collection and recordkeeping activities (see 5 CFR 1320.8 (d) and 1320.12(a)). This notice identifies an information collection that the BOEM plans to submit to OMB for approval. The Paperwork Reduction Act provides that

an agency may not conduct or sponsor a collection of information unless it displays a currently valid OMB control number. Until OMB approves a collection of information, you are not obligated to respond.

Public Availability of Comments: Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you can ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

Dated: December 9, 2016.

Deanna Meyer-Pietruszka,
Chief, Office of Policy, Regulation, and Analysis.

[FR Doc. 2016–30353 Filed 12–16–16; 8:45 am]

BILLING CODE 4310–MR–P

DEPARTMENT OF JUSTICE

Drug Enforcement Administration

[Docket No. DEA–392]

Bulk Manufacturer of Controlled Substances Application: Research Triangle Institute

ACTION: Notice of application.

DATES: Registered bulk manufacturers of the affected basic classes, and

applicants therefore, may file written comments on or objections to the issuance of the proposed registration in accordance with 21 CFR 1301.33(a) on or before February 17, 2017.

ADDRESSES: Written comments should be sent to: Drug Enforcement Administration, Attention: DEA Federal Register Representative/DRW, 8701 Morrisette Drive, Springfield, Virginia 22152.

SUPPLEMENTARY INFORMATION: The Attorney General has delegated her authority under the Controlled Substances Act to the Administrator of the Drug Enforcement Administration (DEA), 28 CFR 0.100(b). Authority to exercise all necessary functions with respect to the promulgation and implementation of 21 CFR part 1301, incident to the registration of manufacturers, distributors, dispensers, importers, and exporters of controlled substances (other than final orders in connection with suspension, denial, or revocation of registration) has been redelegated to the Assistant Administrator of the DEA Diversion Control Division (“Assistant Administrator”) pursuant to section 7 of 28 CFR part 0, appendix to subpart R.

In accordance with 21 CFR 1301.33(a), this is notice that on March 13, 2015, Research Triangle Institute, Kenneth S. Rehder, Hermann Building, East Institute Drive, P.O. Box 12194, Research Triangle Park, North Carolina 27709–2194 applied to be registered as a bulk manufacturer of the following basic classes of controlled substances:

Controlled substance	Drug code	Schedule
Marihuana	7360	I
Tetrahydrocannabinols	7370	I

The company will manufacture marihuana (7360) and tetrahydrocannabinols (7370) for use by their researchers under the above-listed controlled substances as Active Pharmaceutical Ingredients (API) for clinical trials.

In reference to drug code (7370) the company plans to bulk manufacture a synthetic tetrahydrocannabinol. No other activity for this drug code is authorized for this registration.

Dated: December 3, 2016.

Louis J. Milione,
Assistant Administrator.

[FR Doc. 2016–30368 Filed 12–16–16; 8:45 am]

BILLING CODE 4410–09–P

DEPARTMENT OF JUSTICE

[OMB Number 1121–NEW]

Agency Information Collection Activities; Proposed Collection Comments Requested; New Collection: Death in Custody Reporting Act Collection

AGENCY: Bureau of Justice Assistance, Department of Justice.

ACTION: 60-day notice.

SUMMARY: The Department of Justice (DOJ), Bureau of Justice Assistance will be submitting the following information collection request to the Office of Management and Budget (OMB) for review and approval in accordance with the Paperwork Reduction Act of 1995.

DATES: Comments are encouraged and will be accepted for 60 days until February 17, 2017.

FOR FURTHER INFORMATION CONTACT: If you have additional comments especially on the estimated public burden or associated response time, suggestions, or need a copy of the proposed information collection instrument with instructions or additional information, please contact Chris Casto, Bureau of Justice Assistance, 810 Seventh Street NW., Washington, DC 20531 (email: DICRAComments@usdoj.gov; telephone: 202–616–6500).

SUPPLEMENTARY INFORMATION: Written comments and suggestions from the public and affected agencies concerning the proposed collection of information

are encouraged. Your comments should address one or more of the following points:

- Evaluate the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;
- Evaluate whether the proposed collection will result in the collection of timely, accurate, complete, and reliable information;
- Evaluate whether and, if so, how the quality, utility, and clarity of the information to be collected can be enhanced;
- Evaluate the extent to which the information to be collected should be made publicly available; and
- Evaluate whether the burden of the collection of information on those who are to respond can be minimized and, if so, how, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology.

Overview of This Information Collection

(1) *Type of Information Collection:* New collection.

(2) *The Title of the Form/Collection:* Death in Custody Reporting Act Collection

(3) *The agency form number, if any, and the applicable component of the Department sponsoring the collection:* This collection includes the following newly-developed forms to respond to the Death in Custody Reporting Act (the DCRA), which respondents will be asked to complete through an online, web-based portal:

- *Form DCR-1: Quarterly Summary.* This summary form requires States to either (1) identify all reportable deaths that occurred in their jurisdiction during the corresponding quarter and provide basic information about the circumstances of the death, or (2) affirm that no reportable death occurred in the State during the reporting period.

- *Form DCR-1A: Incident Report, Law Enforcement.* This incident report form requires States to provide additional information for each reportable death identified in the Quarterly Summary that occurred during interactions with law enforcement personnel or while in their custody. The required information includes the circumstances surrounding the death and additional characteristics of the decedent.

- *Form DCR-1B: Incident Report, Corrections.* This incident report form

requires States to provide additional information for each reportable death identified in the Quarterly Summary that occurred while the decedent was in the custody of a jail, prison, or similar detention facility. The required information includes the circumstances surrounding the death and additional characteristics of the decedent.

- *Form DCR-2: Open Source Summary.* This summary form requires States to confirm whether the deaths identified through DOJ's open source review are qualifying reportable deaths and were already reported in the Quarterly Summary (Form DCR-1). For reportable deaths that were not included in the Quarterly Summary, the respondent is required to submit the corresponding Incident Report (Form DCR-1A or DCR-1B).

- *State Data Collection Plan.* By the beginning of each fiscal year, each State is required to submit its plan—or an update to an existing plan—on how it will collect the information that the DCRA requires the State to report on a quarterly basis that achieves maximum timeliness, accuracy, and completeness.

The applicable component of the Department of Justice sponsoring this collection is the Office of Justice Programs, Bureau of Justice Assistance.

(4) *Affected public who will be asked or required to respond, as well as a brief abstract:* In order to comply with the mandate of the DCRA, the Department of Justice, Bureau of Justice Assistance, is proposing a new data collection for State Administering Agencies to collect and submit information regarding the death of any person who is detained, under arrest, or is in the process of being arrested, is en route to be incarcerated, or is incarcerated at a municipal or county jail, State prison, State-run boot camp prison, boot camp prison that is contracted out by the State, any State or local contract facility, or other local or State correctional facility (including any juvenile facility).

For purposes of this collection, the term "State" includes any State of the United States, the District of Columbia, the Commonwealth of Puerto Rico, the Virgin Islands, American Samoa, Guam, and the Northern Mariana Islands. Thus, the affected public that will be asked to respond on a quarterly basis each federal fiscal year include 56 State actors. Indirectly, these States will be requesting information from approximately 19,450 State and local law enforcement agencies (LEAs), 50 State departments of corrections, and 2,800 local adult jail jurisdictions.

DOJ previously published a notice in the **Federal Register** on August 4, 2016, describing a plan to collect DCRA

information in Fiscal Years (FYs) 2016 and 2017. Based on comments received from the public, DOJ has amended its plan which is described more fully below.

Background

The Death in Custody Reporting Act (DCRA) requires states and federal law enforcement agencies to report certain information to the Attorney General regarding the death of any person occurring during interactions with law enforcement officers or while in custody. *See* 42 U.S.C. 13727(a) & (b), 13727a(a) & (b). It further requires the Attorney General and the Department of Justice (Department) to collect the information, establish guidelines on how it should be reported, annually determine whether each state has complied with the reporting requirements, and address any state's noncompliance.

The DCRA, which Congress enacted in December 2014, builds on an earlier law, also called the Death in Custody Reporting Act, enacted in 2000 (*P.L. 106-247*). The 2000 law required States to report "information regarding the death of any person who is in the process of arrest, is en route to be incarcerated, or is incarcerated at a municipal or county jail, State prison, or other local or State correctional facility (including any juvenile facility) . . ." In response, the Department of Justice through the Bureau of Justice Statistics (BJS) of the Office of Justice Programs developed a Deaths in Custody Reporting Program (DCRP), which had two parts. First, BJS collected data on deaths that occurred while the decedent was in the custody of local jails or State prisons. Second, BJS collected information on deaths that occurred during the process of arrest (arrest-related deaths, or ARDs). The DCRP collected information on deaths regardless of the manner of death, including those that resulted from accidents, suicides, natural causes, law enforcement homicides, and other homicides.

Although the 2000 law expired in 2006, BJS continued to collect data on deaths in jails and prisons. The most recent reports based on the prison and jails data collection can be found at <http://www.bjs.gov/index.cfm?ty=tp&tid=19>. BJS continued the ARD program as well, but it was suspended in 2014 due to an assessment which revealed that variations in data collection methodology and coverage among States resulted in an insufficient census of arrest-related deaths. BJS then tested a new methodology. Instead of relying solely on States to affirmatively

submit information on reportable ARDs, BJS piloted a mixed method approach using open sources to identify eligible cases, followed by data requests to law enforcement, medical examiners, and/or coroner offices for incident-specific information about the decedent and circumstances surrounding the event. During the follow-up, BJS also would request information on other ARDs that had not been identified through open sources. The results of the redesigned “open source review” approach, which are available at <http://www.bjs.gov>, showed substantial improvements in data coverage and quality.

In enacting the current DCRA, Congress maintained the reporting structure that places the primary responsibility of reporting DCRA information on States and added new provisions that were not in the 2000 law—namely that the Attorney General was granted authority to establish guidelines and to determine whether States are in compliance with those standards. A noncompliant State is subject, at the discretion of the Attorney General, to a 10% reduction of its Byrne Justice Assistance Grant (Byrne JAG), and the amount of any reduction is to be reallocated to States that are found to be in compliance. Because the new provisions envision the data collected to be used to determine compliance and potentially assess penalties on Byrne JAG grantees, the Department’s plan described below shifts the responsibility of DCRA data collection from BJS, which may collect data only for statistical and research purposes, to the Bureau of Justice Assistance. Thus, BJS in 2018 will suspend the current DCRP data collection efforts in jails and prisons and will not pursue a revised ARD program.

Collection Process

DOJ proposes the following plan to collect DCRA information in fiscal year 2017 and beyond (and also describes below a plan to collect DCRA information for fiscal year 2016). The plan, which constitutes “guidelines established by the Attorney General” pursuant to section 2(a) of the DCRA, combines elements of past approaches shown to increase data quality and coverage of reportable deaths with elements with provisions specifically required by the statute.

For purposes of this notice, the term “reportable death” means any death that the DCRA or the Department’s guidelines require States to report. Generally, these are deaths that occurred during interactions with law enforcement personnel or while the decedent was in their custody or in the

custody, under the supervision, or under the jurisdiction of a State or local law enforcement or correctional agency, such as a jail or prison. Specifically, the DCRA requires States to report information regarding “the death of any person who is detained, under arrest, or is in the process of being arrested, is en route to be incarcerated, or is incarcerated at a municipal or county jail, State prison, State-run boot camp prison, boot camp prison that is contracted out by the State, any State or local contract facility, or other local or State correctional facility (including any juvenile facility).” 42 U.S.C. 13727(a). The Department interprets the Act’s list of circumstances to include any deaths that occurred:

- Due to any use of force by law enforcement personnel (e.g., officer-involved shootings and deaths caused by law enforcement weapons or tactics).
- While the decedent’s freedom to leave was restricted by law enforcement prior to, during, or following an arrest—including during detention for questioning or investigation (e.g., a *Terry* stop); during the process of apprehension (e.g., the pursuit of a criminal suspect, or a standoff with law enforcement); while in the custody of, or shortly after restraint by, law enforcement personnel (even if the decedent was not formally under arrest); or while in transit by law enforcement personnel.
- During an interaction with law enforcement personnel responding to medical or mental health assistance (e.g., in response to suicidal persons).
- While the decedent was confined in a correctional or detention facility, including a prison, jail, boot camp, lockup, or booking center.
- While the decedent was under the jurisdiction or supervision of a law enforcement agency or correctional or detention facility but located elsewhere, such as special jail facilities (e.g., medical/treatment/release centers, halfway houses, or work farms), or in transit.

Please note that the DCRA information that States submit to the Department must originate from official government records, documents, or personnel.

The DCRA requires quarterly reporting. Because these data collection guidelines will not be finalized before the 2nd quarter of FY 2017, quarterly reporting will begin with the 3rd and 4th quarters of FY 2017 and continue quarterly thereafter. Reporting for the 3rd and 4th quarters of FY 2017 will include only reportable deaths occurring during interactions with law enforcement personnel or while in their

custody (i.e., deaths reportable on Form DCR–1A), and not deaths occurring in the jail, prison, or detention settings. Deaths in prisons and jails occurring during 2016 and 2017 will be captured by BJS through its existing data collection program on deaths in prisons and jails. Beginning with FY 2018, quarterly DCRA reporting will include all reportable deaths—deaths occurring during interactions with law enforcement personnel or while in their custody and deaths in jail, prison, or detention settings.

Please note that the Department will not make any compliance determination based on a State’s FY 2017 data reporting. States are expected to begin reporting pursuant to the DCRA during the 3rd and 4th Quarters of FY 2017, but the Department will not find a State to be in noncompliance or reduce a State’s grant funding for noncompliance because of reporting failures during FY 2017. This grace period for FY 2017 is necessary to allow States time to develop and implement their data collection and reporting plans. It will be important for States to report during FY 2017, however, so that they have an opportunity to test their abilities to report the data effectively, to identify and correct any flaws in their data collection and reporting systems before reporting for FY 2018 begins, and to develop the data collection plans that they will use for FY 2018. *The Department will assess states’ compliance with their reporting obligations over FY 2018, and States that fail to comply during FY 2018 will be subject to a reduction of their grant funding, pursuant to the DCRA.*

States will be required to complete the following four steps in order to be in compliance with DCRA requirements:

(1) *Quarterly Summary.* For each quarter in a fiscal year, a State must complete the Quarterly Summary (Form DCR–1) and submit it by the reporting deadline. The Quarterly Summary is a list of all reportable deaths that occurred in the State during the corresponding quarter with basic information about the circumstances of each death. If a State did not have a reportable death during the quarter, the State must so indicate on the Quarterly Summary. The reporting deadline to submit the Quarterly Summary is the last day of the month following the close of the quarter. For each quarter, DOJ will send two reminders prior to the reporting deadline.

Example. The second quarter of a fiscal year is January 1–March 31. The deadline to submit the second quarter Quarterly Summary is April 30. DOJ will send a reminder to States on March 31 and April 15.

(2) *Incident Reports.* For each reportable death identified in the Quarterly Summary, a State must complete and submit by the same reporting deadline an Incident Report (Form DCR-1A or DCR-1B depending on the agency involved or that had custody of the defendant at the time of death), which contains specific information on the circumstances of the death and additional characteristics of the decedent. These include:

- The decedent's name, date of birth, gender, and other demographic information.
- The date, time, and location of the death.
- The law enforcement or correctional agency involved.
- Precipitating events and reason for law enforcement personnel's initial contact with the decedent (e.g., whether the decedent committed or allegedly committed any crimes).
- The decedent's behavior during the incident (e.g., whether the decedent threatened or assaulted anyone; exhibited mental health or substance abuse issues; or possessed or appeared to possess a weapon).
- Law enforcement actions during the incident (e.g., engaged in pursuit or restraint tactics; used force; discharged a firearm, and if so, how many shots were fired; the number of officers responding to the incident).
- Manner of death.

States must answer all questions on the Incident Report before it can submit the form. If information about a death is unavailable due to an ongoing criminal or internal affairs investigation, the State may select the "unavailable, pending investigation" answer, if available. The State then must identify the type of investigation, which agency is conducting the investigation, and when the investigation is expected to be completed. If the State does not have sufficient information to complete one of the questions, then the State may select the "unknown" answer, if available, and then identify when the information is anticipated to be obtained. An "unknown" response is valid only if the State has contacted the law enforcement or correctional agency involved in the death and the information is not known to that agency. For "under investigation" or "unknown" responses, States are expected to provide that information when it becomes available, and DOJ will follow up with States in subsequent reporting periods to update previous entries.

(3) *Open Source Summary.* Within 15 days after each reporting deadline, DOJ will send to each State an Open Source

Summary (Form DCR-2) with a prepopulated list of deaths identified through the open source review for the relevant quarter. States will have until the following quarter's reporting deadline to submit an Incident Report (Form DCR-1A or DCR-1B) for any reportable death identified on the Open Source Summary that was NOT reported by the State on the Quarterly Summary (Form DCR-1). If a death identified in the Open Source Summary is determined by the State to not be reportable under the DCRA, the State must so indicate, also by the following quarter's reporting deadline.

Example. A State submits its second quarter Quarterly Summary (Form DCR-1) and corresponding Incident Reports by the reporting deadline—April 30. By May 15, DOJ will send to the State the Open Source Summary (Form DCR-2) that lists second quarter reportable deaths identified through the open source review. The State will have until the third quarter reporting deadline—July 31—to submit an Incident Report for any deaths on the Open Source Summary for which an Incident Report was not previously submitted.

(4) *State Data Collection Plan.* By the first day of each fiscal year, each State must submit to DOJ its plan for collecting the required information on reportable deaths on a quarterly basis that achieves maximum timeliness, accuracy, and completeness. The State Data Collection Plan should include, at a minimum, a description of how the State will communicate with relevant law enforcement and correctional agencies within its jurisdiction, receive accurate and complete information on reportable deaths, and conduct appropriate follow up to ensure reliability of the information transmitted. Each State must also identify a point of contact responsible for submitting the information to DOJ. On an annual basis, the State must review its plan and update it as necessary. States will not be required to submit its Data Collection Plans for FY 2017, but will be required to submit one for FY 2018 and update it thereafter. Information on State Data Collection Plans will aid DOJ in assisting States that are seeking to improve their collection plans and help DOJ evaluate the reliability of all data collected. DOJ will make each State Data Collection Plan available to the public but will not assess the merits of the plan for compliance purposes.

Compliance Determination

Beginning with FY 2018, DOJ will determine on an annual basis whether States have complied with the DCRA by completing the four requirements listed

above. A State found to be not in compliance with all of the DCRA reporting requirements will be subject to a penalty of 10% of its Byrne JAG award, consistent with the statutory language of the DCRA. This penalty, if applied, would reduce the State's Byrne JAG award for the following fiscal year. The penalty will be applied to the portion of the Byrne JAG award that is allocated to and controlled by the State, and not to amounts allocated to localities. The noncompliant State's penalty amount will be reallocated in accordance with Byrne JAG formula calculations to States that have been found to be in compliance for the corresponding fiscal year.

A noncompliant State, however, will have the opportunity, in lieu of the imposition of a 10% penalty, to elect to redirect a portion of its Byrne JAG award to use within the State to assess and improve its DCRA collection. The amount a State can voluntarily redirect internally under this "pre-penalty" option is as follows: for the first two noncompliance determinations, 5% of the State portion of its Byrne JAG award; for any subsequent noncompliance determinations, 10%. There is no limit to the number of times a State may choose the "pre-penalty" option.

Example. State X fails to submit two Quarterly Summaries in fiscal year 2019 and is thus found to be not in compliance. Instead of being penalized for noncompliance, State X may choose the pre-penalty option and use 5% of its fiscal year 2020 Byrne JAG award allocated to the State to improve its DCRA collection efforts. If State X does not choose the pre-penalty option, the State portion of its fiscal year 2020 Byrne JAG award is reduced by 10% and reallocated to States that were found to be in compliance for fiscal year 2019.

Should a State encounter an extraordinary circumstance preventing it from completing any of the DCRA requirements (e.g., a natural disaster that compromises a State's data collection and reporting infrastructure), the State may submit a letter to DOJ signed by its Governor certifying the reason for noncompliance and requesting specific relief. In considering such requests, DOJ will be guided by analyzing, among other things, the severity of the described extenuating circumstances, past history, if any, of the State's compliance with DCRA requirements, and the State's description of how it plans to modify its processes to address the extenuating circumstance.

Collection of Data From FY 2016 and the First Two Quarters of FY 2017

To collect data from FY 2016 and the 1st and 2nd Quarters of FY 2017, DOJ will send an Open Source Summary to States, which will contain all reportable deaths identified through the open source review as occurring during that timeframe and that did not occur in or under the jurisdiction of jails, prisons, or other correctional facilities. DOJ will send the Open Source Summary by May 31, 2017. DOJ will request States to submit Incident Reports for each of the identified deaths by November 30, 2017. Reportable deaths that occurred in jails, prisons, or other correctional facilities during 2016 and 2017 will be captured through BJS' existing jails and prisons collections. *DOJ will not be making any compliance determinations or assessing penalties on States based on States' reporting of FY 2016 or FY 2017 data.*

Publicly Available Information

To advance DCRA's aims of transparency and evidence-based policy development, DOJ will release certain information to the public each fiscal year, including the State plans, the number of deaths reported for each agency and facility, and data on the circumstances surrounding those deaths. The information released would otherwise be subject to public disclosure under the Freedom of Information Act. The release will be consistent with Department policies and any applicable federal laws, including federal privacy laws, and will not contain personally identifiable information.

(5) *An estimate of the total number of respondents and the amount of time estimated for an average respondent to respond:* For purposes of this burden calculation, it is estimated that for each fiscal year there will be a total of 1900 reportable deaths by 1,060 LEAs, 1,053 reportable deaths by 600 jails, and 3,483 reportable deaths by prisons.

For FY 2016, the total projected respondent burden is 2,124.00 hours. For States to review and complete the Open Source Summary (DCR-2) at 4.00 hours per Summary and to complete the corresponding Incident Reports (DCR-1A) at 0.25 hours per Report, the total estimated burden is 475.00 hours. For LEAs, the estimated burden to assist States in completing Incident Reports is 0.75 hours per Report for a total of 1,425.00 hours.

For FY 2017, the total projected respondent burden is 14,172 hours. States will need an estimated 4.00 hours to complete each Quarterly Summary for a total of 2,240.00 hours, 0.25 hours

to complete each corresponding Incident Reports (DCR-1A) for a total of 475.00 hours, and 4.00 hours for the Open Source Summaries (DCR-2) for a total of 224.00 hours. Additionally, States must develop the State Data Collection Plan in FY2017 to meet the October 1, 2017, deadline. The estimated burden is 160.00 hours for a total of 8,960.00 hours. For LEAs in FY 2017, the estimated burden to assist States in completing the Quarterly Summaries is 0.40 hours per Report for a total of 848.00 hours, and a total of 1,425.00 hours, at 0.75 hours for each corresponding Incident Report.

For FY2018, the total projected respondent burden is 14,428.49 hours. The increase over FY 2017 is due to requiring reportable deaths from jails and prisons in addition to arrest-related deaths but is offset by the need for each State to devote approximately significantly less time—approximately 8.00 hours, for a total of 448.00 hours—to update instead of develop its State Data Collection Plan. Additionally, based on the same per report estimates described for FY 2017, the projected aggregate burden for States is 4,480.00 hours to complete the Quarterly Summaries (DCR-1), 1,713.49 hours to complete the corresponding Incident Reports (DCR-1A and DCR-1B), and 224.00 hours to complete the Open Source Summaries (DCR-2).

For LEAs in FY 2018, the estimated burden to assist States in completing the Quarterly Summaries is a total of 1,696.00 hours, while the total to assist States in completing Incident Reports remains 1,425.00 hours. The estimated burden for jails is a total of 960.00 hours to assist States in completing the Quarterly Summaries and 789.75 hours in completing Incident Reports. Finally, the estimated burden for prisons to assist States in completing the Quarterly Summaries is a total of 80.00 hours, and a total of 2,612.25 hours to assist States in completing Incident Reports.

If additional information is required contact: Jerri Murray, Department Clearance Officer, United States Department of Justice, Justice Management Division, Policy and Planning Staff, Two Constitution Square, 145 N Street NE., 3E.405B, Washington, DC 20530.

Dated: December 13, 2016.

Jerri Murray,

Department Clearance Officer for PRA, U.S. Department of Justice.

BILLING CODE 4410-18-P

DEPARTMENT OF LABOR

Employment and Training Administration

Notice of Intent To Renew the Advisory Committee on Apprenticeship (ACA) Charter

AGENCY: Employment and Training Administration (ETA), Labor.

ACTION: Notice.

SUMMARY: The Secretary of Labor has determined that the renewal of the Advisory Committee on Apprenticeship is necessary and in the public interest. The Department of Labor intends to renew the ACA Charter with revisions. The revisions are not intended to change the purpose or the Committee's original intent. The revisions are a routine updating of the Charter to ensure closer alignment with the Department's current apprenticeship expansion goals.

FOR FURTHER INFORMATION CONTACT: The Designated Federal Officer, Mr. Daniel Villao, Deputy Administrator for National Office Policy, Office of Apprenticeship, Employment and Training Administration, U.S. Department of Labor, 200 Constitution Avenue NW., Room C-5321, Washington, DC 20210, Telephone: (202) 693-2796 (this is not a toll-free number).

SUPPLEMENTARY INFORMATION: Registered Apprenticeship is a unique public private partnership that is highly dependent on the engagement and involvement of its stakeholders and partners for its ongoing operational effectiveness. Apart from the ACA, there is no single organization or group with the broad representation of labor, employers, and the public available to consider the complexities and relationship of apprenticeship activities to other training efforts or to provide advice on such matters to the Secretary. It is particularly important to have such considerations at this time in light of the current national interest in apprenticeship and the Department of Labor's goal to double the number of apprentices across the country, in the next five years by expanding into a variety of non-traditional industries. The ACA's insight and recommendations on the best ways to grow apprenticeship to meet the emerging skill needs of employers is critical. For these reasons, the Secretary of Labor has determined that the renewal of a national advisory committee on apprenticeship is necessary and in the public interest. The ACA Charter is being renewed to

provide advice and recommendations to the Secretary on the following: (1) The development and implementation of policies, legislation and regulations affecting the National Registered Apprenticeship system; (2) strategies that can expand the use of the Registered Apprenticeship model in non-traditional industries such as, but not limited to, Hospitality, Financial Services, Transportation/Logistics, Healthcare, Energy, Advanced Manufacturing, and Information Technology and Communications; (3) ways to more effectively partner with the public workforce system, workforce intermediaries, International apprenticeship partners, and educational institutions and communities to leverage Registered Apprenticeship as a valued post-secondary credential; including policies related to the Registered Apprenticeship College Consortium; (4) priorities and strategic investments to help in the development of career pathways that can generate access for everyone and sustained employment for new and incumbent workers, youth, Veterans, women, minorities and other under-utilized and disadvantaged populations; and (5) efforts to improve performance, quality and oversight, and utilization of the National Registered Apprenticeship system. The current ACA Charter will expire on January 14, 2017. The ACA's Charter is required to be renewed every two years. Since the Charter was last renewed in January 2015, it has been revised in four sections to ensure alignment with departmental priorities. The following four sections have been updated (1) Objectives and Scope of Activities; (2) Designated Federal Officer; and (3) Representation under the Membership and Designation; and (4) Recordkeeping.

Summary of the Changes

1. *Objectives and Scope of Activities:* The objectives and scope section of the ACA Charter outlines the areas of focus where the ACA will provide advice and recommendations. ETA is expanding and engaging with non-traditional apprenticeship partners, such as workforce intermediaries, and international partners. ETA also seeks to have ongoing engagement and feedback from the ACA on the impact of funding investments being made under the ApprenticeshipUSA initiative. The current ACA Charter states that the ACA will advise on ways to more effectively partner with the public workforce system, educational institutions and communities to leverage Registered Apprenticeship as a valued post-secondary credential. The proposed

ACA Charter is being updated to reflect ETA's efforts to expand its partnerships to include workforce intermediaries, and interested partners from the international apprenticeship community. The proposed Charter is further updated to include the need for the ACA provide advice and recommendations on the impact of priorities and strategic investments being made under ApprenticeshipUSA.

2. *Designated Federal Officer:* The Designated Federal Officer (DFO) section of the Charter is being updated to reflect leadership changes within ETA and subsequent shift of the DFO responsibilities from the Administrator of the Office of Apprenticeship to the Deputy Administrator for National Office Policy from the Office of Apprenticeship.

3. *Representation:* The Representation section of the Charter is being updated to better align the ACA membership with the ACA's focus on Registered Apprenticeship. NAGLO does not focus solely on Registered Apprenticeship matters. The Representation section of the Charter is being further updated to streamline the number of ex-officio members from Federal agencies represented on the ACA. The current Charter reflects ex-officio membership for five Federal agencies: The U.S. Departments of (1) Commerce, (2) Education, (3) Energy, (4) Health and Human Services, and (5) Labor. A major part of ETA's apprenticeship expansion focuses on expanding Registered Apprenticeship as a premiere workforce development strategy among businesses, workforce development entities, post-secondary institutions, Career and Technical Education and other educational institutions. The proposed Charter is being updated to streamline the number of Federal agencies represented on the ACA to the Departments of Commerce, Education, and Labor. ETA will continue to engage with other Federal agencies as appropriate.

4. *Recordkeeping:* The Recordkeeping section of the Charter is being updated to reflect changes to the General Records Schedule for advisory committees. The current Charter states that the records of the ACA shall be handled in accordance with the General Records Schedule 26, item 2 and the approved records disposition schedule for the Employment and Training Administration. The proposed Charter is being updated to reflect changes in the General Records Schedule for advisory committees; records of the ACA will be handled in accordance with General Records Schedule 6.2, Federal Advisory Committee Records, and the approved

records disposition schedule for the Employment and Training Administration.

Signed at Washington, DC.

Portia Wu,

Assistant Secretary for the Employment and Training Administration.

DEPARTMENT OF LABOR

Office of the Secretary

Agency Information Collection Activities; Submission for OMB Review; Comment Request; Welding, Cutting, and Brazing Standard

ACTION: Notice.

SUMMARY: The Department of Labor (DOL) is submitting the Occupational Safety and Health Administration (OSHA) sponsored information collection request (ICR) titled, "Welding, Cutting, and Brazing Standard" to the Office of Management and Budget (OMB) for review and approval for continued use, without change, in accordance with the Paperwork Reduction Act of 1995 (PRA). Public comments on the ICR are invited.

DATES: The OMB will consider all written comments that agency receives on or before January 18, 2017.

ADDRESSES: A copy of this ICR with applicable supporting documentation; including a description of the likely respondents, proposed frequency of response, and estimated total burden may be obtained free of charge from the RegInfo.gov Web site at http://www.reginfo.gov/public/do/PRAViewICR?ref_nbr=201611-1218-008 (this link will only become active on the day following publication of this notice) or by contacting Michel Smyth by telephone at 202-693-4129, TTY 202-693-8064, (these are not toll-free numbers) or by email at DOL_PRA_PUBLIC@dol.gov.

Submit comments about this request by mail or courier to the Office of Information and Regulatory Affairs, Attn: OMB Desk Officer for DOL-OSHA, Office of Management and Budget, Room 10235, 725 17th Street NW., Washington, DC 20503; by Fax: 202-395-5806 (this is not a toll-free number); or by email: OIRA_submission@omb.eop.gov. Commenters are encouraged, but not required, to send a courtesy copy of any comments by mail or courier to the U.S. Department of Labor-OASAM, Office of the Chief Information Officer, Attn:

Departmental Information Compliance Management Program, Room N1301, 200 Constitution Avenue NW., Washington, DC 20210; or by email: DOL_PRA_PUBLIC@dol.gov.

FOR FURTHER INFORMATION CONTACT:

Contact Michel Smyth by telephone at 202-693-4129, TTY 202-693-8064, (these are not toll-free numbers) or by email at DOL_PRA_PUBLIC@dol.gov.

SUPPLEMENTARY INFORMATION: This ICR seeks to extend PRA authority for the Welding, Cutting, and Brazing Standard information collection. More specifically, regulations 29 CFR 1910.255(e) requires that a periodic inspection of resistance welding equipment be made by qualified maintenance personnel and a certification record generated and maintained. The certification shall include the date of the inspection, the signature of the person who performed the inspection and the serial number, or other identifier, for the equipment inspected. The maintenance inspection ensures that welding equipment is in safe operating condition, while the maintenance record provides evidence that employers performed the required inspections. Occupational Safety and Health Act sections 2(b)(3) and 8(c) authorize this information collection. See 29 U.S.C. 651(b)(3), 657(c).

This information collection is subject to the PRA. A Federal agency generally cannot conduct or sponsor a collection of information, and the public is generally not required to respond to an information collection, unless it is approved by the OMB under the PRA and displays a currently valid OMB Control Number. In addition, notwithstanding any other provisions of law, no person shall generally be subject to penalty for failing to comply with a collection of information that does not display a valid Control Number. See 5 CFR 1320.5(a) and 1320.6. The DOL obtains OMB approval for this information collection under Control Number 1218-0207.

OMB authorization for an ICR cannot be for more than three (3) years without renewal, and the current approval for this collection is scheduled to expire on February 28, 2017. The DOL seeks to extend PRA authorization for this information collection for three (3) more years, without any change to existing requirements. The DOL notes that existing information collection requirements submitted to the OMB receive a month-to-month extension while they undergo review. For additional substantive information about this ICR, see the related notice

published in the **Federal Register** on September 29, 2016 (81 FR 67003).

Interested parties are encouraged to send comments to the OMB, Office of Information and Regulatory Affairs at the address shown in the **ADDRESSES** section within thirty (30) days of publication of this notice in the **Federal Register**. In order to help ensure appropriate consideration, comments should mention OMB Control Number 1218-0207. The OMB is particularly interested in comments that:

- Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;
- Evaluate the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;
- Enhance the quality, utility, and clarity of the information to be collected; and
- Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, e.g., permitting electronic submission of responses.

Agency: DOL-OSHA.

Title of Collection: Welding, Cutting, and Brazing Standard.

OMB Control Number: 1218-0207.

Affected Public: Private Sector—business or other for profits.

Total Estimated Number of Respondents: 20,471.

Total Estimated Number of Responses: 81,884.

Total Estimated Annual Time Burden: 5,732 hours.

Total Estimated Annual Other Costs Burden: \$0.

Authority: 44 U.S.C. 3507(a)(1)(D).

Dated: December 12, 2016.

Michel Smyth,

Departmental Clearance Officer.

DEPARTMENT OF LABOR

Office of the Secretary

Agency Information Collection Activities; Submission for OMB Review; Comment Request; Office of Federal Contract Compliance Programs Recordkeeping and Reporting Requirements Under the Vietnam Era Veterans' Readjustment Assistance Act of 1974, as Amended

ACTION: Notice.

SUMMARY: The Department of Labor (DOL) is submitting the Office of Federal Contract Compliance Programs (OFCCP) sponsored information collection request (ICR) titled, "Office of Federal Contract Compliance Programs Recordkeeping and Reporting Requirements Under the Vietnam Era Veterans' Readjustment Assistance Act of 1974, as Amended," to the Office of Management and Budget (OMB) for review and approval for continued use, without change, in accordance with the Paperwork Reduction Act of 1995 (PRA). Public comments on the ICR are invited.

DATES: The OMB will consider all written comments that agency receives on or before January 18, 2017.

ADDRESSES: A copy of this ICR with applicable supporting documentation; including a description of the likely respondents, proposed frequency of response, and estimated total burden may be obtained free of charge from the RegInfo.gov Web site at http://www.reginfo.gov/public/do/PRAViewICR?ref_nbr=201610-1250-001 (this link will only become active on the day following publication of this notice) or by contacting Michel Smyth by telephone at 202-693-4129, TTY 202-693-8064, (these are not toll-free numbers) or by email at DOL_PRA_PUBLIC@dol.gov.

Submit comments about this request by mail or courier to the Office of Information and Regulatory Affairs, Attn: OMB Desk Officer for DOL-OFCCP, Office of Management and Budget, Room 10235, 725 17th Street NW., Washington, DC 20503; by Fax: 202-395-5806 (this is not a toll-free number); or by email: OIRA_submission@omb.eop.gov. Commenters are encouraged, but not required, to send a courtesy copy of any comments by mail or courier to the U.S. Department of Labor-OASAM, Office of the Chief Information Officer, Attn: Departmental Information Compliance Management Program, Room N1301, 200 Constitution Avenue NW.,

Washington, DC 20210; or by email: DOL_PRA_PUBLIC@dol.gov.

FOR FURTHER INFORMATION CONTACT:

Contact Michel Smyth by telephone at 202-693-4129, TTY 202-693-8064, (these are not toll-free numbers) or by email at DOL_PRA_PUBLIC@dol.gov.

SUPPLEMENTARY INFORMATION: This ICR seeks to extend PRA authority for the OFCCP Recordkeeping and Reporting Requirements Under the Vietnam Era Veterans' Readjustment Assistance Act of 1974, as Amended (VEVRAA) information collection. More specifically, this ICR covers the VEVRAA recordkeeping and third-party disclosure requirements codified in regulations 29 CFR 300.42 and 41 CFR 60-300. VEVRAA section 2012 authorizes this information collection. See 38 U.S.C. 4212(d).

This information collection is subject to the PRA. A Federal agency generally cannot conduct or sponsor a collection of information, and the public is generally not required to respond to an information collection, unless it is approved by the OMB under the PRA and displays a currently valid OMB Control Number. In addition, notwithstanding any other provisions of law, no person shall generally be subject to penalty for failing to comply with a collection of information that does not display a valid Control Number. See 5 CFR 1320.5(a) and 1320.6. The DOL obtains OMB approval for this information collection under Control Number 1250-0004.

OMB authorization for an ICR cannot be for more than three (3) years without renewal, and the current approval for this collection is scheduled to expire on January 31, 2017. The DOL seeks to extend PRA authorization for this information collection for three (3) more years, without any change to existing requirements. The DOL notes that existing information collection requirements submitted to the OMB receive a month-to-month extension while they undergo review. For additional substantive information about this ICR, see the related notice published in the **Federal Register** on August 26, 2016 (81 FR 58964).

Interested parties are encouraged to send comments to the OMB, Office of Information and Regulatory Affairs at the address shown in the **ADDRESSES** section within thirty (30) days of publication of this notice in the **Federal Register**. In order to help ensure appropriate consideration, comments should mention OMB Control Number 1250-0004. The OMB is particularly interested in comments that:

- Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;
- Evaluate the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;
- Enhance the quality, utility, and clarity of the information to be collected; and
- Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, e.g., permitting electronic submission of responses.

Agency: DOL-OFCCP.

Title of Collection: Office of Federal Contract Compliance Programs Recordkeeping and Reporting Requirements Under the Vietnam Era Veterans' Readjustment Assistance Act of 1974, as Amended.

DEPARTMENT OF LABOR

Office of the Secretary

Agency Information Collection Activities; Submission for OMB Review; Comment Request; Office of Federal Contract Compliance Programs Recordkeeping and Reporting Requirements Under Rehabilitation Act of 1973, as Amended Section 503

ACTION: Notice.

SUMMARY: The Department of Labor (DOL) is submitting the Office of Federal Contract Compliance Programs

(OFCCP) sponsored information collection request (ICR) titled, "Office of Federal Contract Compliance Programs Recordkeeping and Reporting Requirements Under Rehabilitation Act of 1973, as Amended Section 503," to the Office of Management and Budget (OMB) for review and approval for continued use, without change, in accordance with the Paperwork Reduction Act of 1995 (PRA). Public comments on the ICR are invited.

DATES: The OMB will consider all written comments that agency receives on or before January 18, 2017.

ADDRESSES: A copy of this ICR with applicable supporting documentation; including a description of the likely respondents, proposed frequency of response, and estimated total burden may be obtained free of charge from the RegInfo.gov Web site at http://www.reginfo.gov/public/do/PRAViewICR?ref_nbr=201610-1250-002 (this link will only become active on the day following publication of this notice) or by contacting Michel Smyth by telephone at 202-693-4129, TTY 202-693-8064, (these are not toll-free numbers) or by email at DOL_PRA_PUBLIC@dol.gov.

Submit comments about this request by mail or courier to the Office of Information and Regulatory Affairs, Attn: OMB Desk Officer for DOL-OFCCP, Office of Management and Budget, Room 10235, 725 17th Street NW., Washington, DC 20503; by Fax: 202-395-5806 (this is not a toll-free number); or by email: OIRA_submission@omb.eop.gov. Commenters are encouraged, but not required, to send a courtesy copy of any comments by mail or courier to the U.S. Department of Labor-OASAM, Office of the Chief Information Officer, Attn: Departmental Information Compliance Management Program, Room N1301, 200 Constitution Avenue NW., Washington, DC 20210; or by email: DOL_PRA_PUBLIC@dol.gov.

FOR FURTHER INFORMATION CONTACT: Contact Michel Smyth by telephone at 202-693-4129, TTY 202-693-8064, (these are not toll-free numbers) or by email at DOL_PRA_PUBLIC@dol.gov.

SUPPLEMENTARY INFORMATION: This ICR seeks to extend PRA authority for the OFCCP Recordkeeping and Reporting Requirements Under Rehabilitation Act of 1973, as Amended Section 503 information collection. More specifically, this ICR covers the section 503 recordkeeping and third-party disclosure requirements codified in regulations 41 CFR 60-710. Rehabilitation Act section 503 and Executive Order 11758, *Delegating*

Authority of the President Under the Rehabilitation Act of 1973, section 2 authorize this information collection. See 29 U.S.C. 793 and E.O. 11758 section 2.

This information collection is subject to the PRA. A Federal agency generally cannot conduct or sponsor a collection of information, and the public is generally not required to respond to an information collection, unless it is approved by the OMB under the PRA and displays a currently valid OMB Control Number. In addition, notwithstanding any other provisions of law, no person shall generally be subject to penalty for failing to comply with a collection of information that does not display a valid Control Number. See 5 CFR 1320.5(a) and 1320.6. The DOL obtains OMB approval for this information collection under Control Number 1250-0002.

OMB authorization for an ICR cannot be for more than three (3) years without renewal, and the current approval for this collection is scheduled to expire on January 31, 2016. The DOL seeks to extend PRA authorization for this information collection for three (3) more years, without any change to existing requirements. The DOL notes that existing information collection requirements submitted to the OMB receive a month-to-month extension while they undergo review. For additional substantive information about this ICR, see the related notice published in the **Federal Register** on August 26, 2016.

Interested parties are encouraged to send comments to the OMB, Office of Information and Regulatory Affairs at the address shown in the **ADDRESSES** section within thirty (30) days of publication of this notice in the **Federal Register**. In order to help ensure appropriate consideration, comments should mention OMB Control Number 1250-0005. The OMB is particularly interested in comments that:

- Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;
- Evaluate the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;
- Enhance the quality, utility, and clarity of the information to be collected; and
- Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated,

electronic, mechanical, or other technological collection techniques or other forms of information technology, e.g., permitting electronic submission of responses.

Agency: DOL-OFCCP.

Title of Collection: Office of Federal Contract Compliance Programs Recordkeeping and Reporting Requirements Under Rehabilitation Act of 1973, as Amended Section 503.

OMB Control Number: 1250-0005.

BILLING CODE 4510-CM-P

DEPARTMENT OF LABOR

Wage and Hour Division

Agency Information Collection Activities; Comment Request; Information Collections Application of the Employee Polygraph Protection Act

AGENCY: Wage and Hour Division, Department of Labor.

ACTION: Notice.

SUMMARY: The Department of Labor (DOL) is soliciting comments concerning a proposed extension to the information collection request (ICR) titled, "Application of the Employee Polygraph Protection Act." This comment request is part of continuing Departmental efforts to reduce paperwork and respondent burden in accordance with the Paperwork Reduction Act of 1995 (PRA). This program helps to ensure that requested data can be provided in the desired format, reporting burden (time and financial resources) is minimized, collection instruments are clearly understood, and the impact of collection requirements on respondents can be properly assessed. A copy of the proposed information request can be obtained by contacting the office listed below in the **FOR FURTHER INFORMATION CONTACT** section of this Notice.

DATES: Written comments must be submitted to the office listed in the **ADDRESSES** section below on or before February 17, 2017.

ADDRESSES: You may submit comments identified by Control Number 1235-0005, by either one of the following methods: *Email:* WHDPRAComments@dol.gov; *Mail, Hand Delivery, Courier:* Division of Regulations, Legislation, and Interpretation, Wage and Hour, U.S. Department of Labor, Room S-3502, 200 Constitution Avenue NW., Washington, DC 20210. *Instructions:* Please submit one copy of your comments by only one method. All submissions received must include the agency name and Control Number identified above for this information collection. Because we continue to experience delays in receiving mail in the Washington, DC area, commenters are strongly encouraged to transmit their comments electronically via email or to submit them by mail early. Comments, including any personal information provided, become a matter of public record. They will also be summarized and/or included in the request for Office of Management and Budget (OMB) approval of the information collection request.

FOR FURTHER INFORMATION CONTACT:

Robert Waterman, Compliance Specialist, Division of Regulations, Legislation, and Interpretation, Wage and Hour Division, U.S. Department of Labor, Room S-3502, 200 Constitution Avenue NW., Washington, DC 20210; telephone: (202) 693-0406 (this is not a toll-free number). Copies of this notice may be obtained in alternative formats (Large Print, Braille, Audio Tape, or Disc), upon request, by calling (202) 693-0023 (not a toll-free number). TTY/TTD callers may dial toll-free (877) 889-5627 to obtain information or request materials in alternative formats.

SUPPLEMENTARY INFORMATION:

I. *Background:* The Wage and Hour Division (WHD) of the Department of Labor (DOL) administers the Employee Polygraph Protection Act of 1988 (EPPA), 29 U.S.C. 2001 *et seq.* The EPPA prohibits most private employers from using any lie detector tests either for pre-employment screening or during the course of employment. The Act contains an exemption applicable to Federal, State and local government employers. The EPPA also contains several limited exemptions authorizing polygraph tests under certain conditions, including testing: (1) By the Federal Government of experts, consultants, or employees of Federal contractors engaged in national security intelligence or counterintelligence

functions; (2) of employees the employer reasonably suspects of involvement in a workplace incident resulting in economic loss or injury to the employer's business; (3) of some prospective employees of private armored cars, security alarm and security guard firms; and (4) of some current and prospective employees of certain firms authorized to manufacture, distribute, or dispense controlled substances. The WHD may assess civil money penalties of up to \$19,787 against employers who violate any EPPA provision. This amount increases annually due to the Federal Civil Penalties Inflation Adjustment Act Improvements Act of 2015. On November 2, 2015, President Obama signed into law the Federal Civil Penalties Inflation Adjustment Act Improvements Act of 2015 to advance the effectiveness of civil money penalties and to strengthen their deterrent effect. Outdated penalties are a problem because civil penalties are less effective when they do not keep pace with the cost of living. The new law directs agencies across the federal government to adjust their penalties for inflation each year in January.

II. *Review Focus*: The Department of Labor is particularly interested in comments which:

- Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;
- Enhance the quality, utility, and clarity of the information to be collected;
- Evaluate the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;
- Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, e.g., permitting electronic submissions of responses.

III. *Current Actions*: The Department of Labor seeks an approval for the extension of this information collection in order to ensure effective administration of the Employee Polygraph Protection Act.

Type of Review: Extension.

Agency: Wage and Hour Division.

Title: Application of the Employee Polygraph Protection Act.

OMB Number: 1235-0005.

Affected Public: Business or other for-profit, Not-for-profit institutions, Farms, State, Local, or Tribal Government.

Total Respondents: 593,400.

Total Annual Responses: 593,400.

Estimated Total Burden Hours: 68,739.

Estimated Time per Response: 30–45 minutes.

Frequency: On occasion.

Total Burden Cost (capital/startup): \$0.

Total Burden Cost (operation/maintenance): \$0.

Dated: December 12, 2016.

Melissa Smith,

Director, Division of Regulations, Legislation and Interpretation.

[FR Doc. 2016–30452 Filed 12–16–16; 8:45 am]

BILLING CODE 4510–27–P

NATIONAL MEDIATION BOARD

Notice of Proposed Information Collection Requests

AGENCY: National Mediation Board.

SUMMARY: The Assistant Chief of Staff, Administration invites comments on the proposed information collection requests as required by the Paperwork Reduction Act of 1995.

DATES: Interested persons are invited to submit comments within 30 days from the date of this publication.

SUPPLEMENTARY INFORMATION: Section 3506 of the Paperwork Reduction Act of 1995 (U.S.C. Chapter 35) requires that the Office of Management and Budget (OMB) provide interested Federal agencies and the public an early opportunity to comment on information collection requests. OMB may amend or waive the requirement for public consultation to the extent that public participation in the approval process would defeat the purpose of the information collection, violate State or Federal law, or substantially interfere with any agency's ability to perform its statutory obligations. The Assistant Chief of Staff, Administration publishes that notice containing proposed information collection requests prior to submission of these requests to OMB. Each proposed information collection contains the following: (1) Type of review requested, e.g. new, revision extension, existing or reinstatement; (2) Title; (3) Summary of the collection; (4) Description of the need for, and proposed use of, the information; (5) Respondents and frequency of collection; and (6) Reporting and/or Record keeping burden. OMB invites public comment.

Currently, the National Mediation Board is soliciting comments

concerning the proposed extension of the Application for Mediation Services and is interested in public comment addressing the following issues: (1) Is this collection necessary to the proper functions of the agency; (2) will this information be processed and used in a timely manner; (3) is the estimate of burden accurate; (4) how might the agency enhance the quality, utility, and clarity of the information to be collected; and (5) how might the agency minimize the burden of this collection on the respondents, including through the use of information technology.

Dated: December 13, 2016.

Samantha Jones,

Assistant Chief of Staff, Administration, National Mediation Board.

Application for Mediation Services

Type of Review: Extension.

Title: Application for Mediation Services, OMB Number: 3140-0002.

Frequency: On occasion.

Affected Public: Carrier and Union Officials, and employees of railroads and airlines.

Reporting and Recordkeeping Hour Burden:

Responses: 50 annually.

Burden Hours: 12.50.

Abstract: Section 5, First of the Railway Labor Act, 45 U.S.C., 155, First, provides that both, or either, of the parties to the labor-management dispute may invoke the mediation services of the National Mediation Board. Congress has determined that it is in the nation's best interest to provide for governmental mediation as the primary dispute resolution mechanism to resolve labor-management disputes in the railroad and airline industries. The Railway Labor Act is silent as to how the invocation of mediation is to be accomplished and the Board has not promulgated regulations requiring any specific vehicle. Nonetheless, 29 CFR1203.1 provides that applications for mediation services be made on printed forms which may be secured from the National Mediation Board. This section of the regulations provides that applications should be submitted in duplicate, show the exact nature of the dispute, the number of employees involved, name of the carrier and name of the labor organization, date of agreement between the parties, date and copy of notice served by the invoking party to the other and date of final conference between the parties. The application should be signed by the highest officer of the carrier who has been designated to handle disputes under the Railway Labor Act or by the chief executive of the labor

organization, whichever party files the application.

The extension of this form is necessary considering the information provided by the parties is used by the Board to structure a mediation process that will be productive to the parties and result in a settlement without resort to strike or lockout. The Board has been very successful in resolving labor disputes in the railroad and airline industries. Historically, some 97 percent of all NMB mediation cases have been successfully resolved without interruptions to public service. Since 1980, only slightly more than 1 percent of cases have involved a disruption of service. This success ratio would possibly be reduced if the Board was unable to collect the brief information that it does in the application for mediation services.

Requests for copies of the proposed information collection request may be accessed from www.nmb.gov or should be addressed to Denise Murdock, NMB, 1301 K Street NW., Suite 250 E, Washington, DC 20005 or addressed to the email address murdock@nmb.gov or faxed to 202-692-5081. Please specify the complete title of the information collection when making your request.

Comments regarding burden and/or the collection activity requirements should be directed to Samantha Jones at 202-692-5010 or via internet address jones@nmb.gov. Individuals who use a telecommunications device for the deaf (TDD/TDY) may call the Federal Information Relay Service (FIRS) at 1-800-877-8339.

BILLING CODE 7550-01-P

NATIONAL SCIENCE FOUNDATION

Agency Information Collection Activities: Comment Request

AGENCY: National Science Foundation.

ACTION: Submission for OMB review; comment request.

SUMMARY: The National Science Foundation (NSF) has submitted the following information collection requirement to OMB for review and clearance under the Paperwork Reduction Act of 1995, Public Law 104-13 (44 U.S.C. 3501 *et seq.*). This is the second notice for public comment; the first was published in the **Federal Register** at 81 FR 49689, and one comment was received. NSF is forwarding the proposed renewal submission to the Office of Management and Budget (OMB) for clearance simultaneously with the publication of

this second notice. The full submission may be found at: <http://www.reginfo.gov/public/do/PRAMain>.

Comments: Comments regarding (a) whether the collection of information is necessary for the proper performance of the functions of the NSF, including whether the information will have practical utility; (b) the accuracy of the NSF's estimate of the burden of the proposed collection of information; (c) ways to enhance the quality, utility and clarity of the information to be collected, including through the use of automated collection techniques or other forms of information technology; (d) ways to minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated or other forms of information technology should be addressed to: Office of Information and Regulatory Affairs of OMB, Attention: Desk Officer for National Science Foundation, 725 7th Street NW., Room 10235, Washington, DC 20503, and to Suzanne H. Plimpton, Reports Clearance Officer, National Science Foundation, 4201 Wilson Boulevard, Suite 1265, Arlington, Virginia 22230 or send email to splimpto@nsf.gov.

DATES: Comments regarding these information collections are best assured of having their full effect if received within 30 days of this notification. Copies of the submission may be obtained by calling 703-292-7556. NSF may not conduct or sponsor a collection of information unless the collection of information displays a currently valid OMB control number and the agency informs potential persons who are to respond to the collection of information that such persons are not required to respond to the collection of information unless it displays a currently valid OMB control number.

SUPPLEMENTARY INFORMATION

Comments: As required by 5 CFR 1320.8(d), comments on the information collection activities as part of this study were solicited through publication of a 60-Day Notice in the **Federal Register** on July 28, 2016, at 81 FR 49689. We received one comment, to which we here respond.

Commenter: The comment requested NSF consider the use of administrative records, specifically the National Student Clearinghouse, to obtain information on education background in lieu of asking this information from respondents on the National Survey of College Graduates (NSCG).

Response: NSF informed the commenter that, at the request of NSF, the Census Bureau's Center for

Administrative Records Research and Application is conducting research to compare administrative records data with the NSCG respondent-provided data. This research will inform survey content discussions for future NSCG cycles and will provide insight on the necessity of certain NSCG questionnaire items including the education background items.

After consideration of this comment, we are moving forward with our submission to OMB.

Title of Collection: 2015 National Survey of College Graduates.

OMB Approval Number: 3145-0141.

Type of Request: Intent to seek approval to renew an information collection for three years.

Abstract: The National Survey of College Graduates (NSCG) has been conducted biennially since the 1970s. The 2017 NSCG sample will be selected from the 2015 American Community Survey (ACS) and the 2015 NSCG. By selecting sample from these two sources, the 2017 NSCG will provide coverage of the college graduate population residing in the United States. The purpose of this longitudinal survey is to collect data that will be used to provide national estimates on the science and engineering workforce and changes in their employment, education, and demographic characteristics.

The National Science Foundation Act of 1950, as subsequently amended, includes a statutory charge to “. . . provide a central clearinghouse for the collection, interpretation, and analysis of data on scientific and engineering resources, and to provide a source of information for policy formulation by other agencies of the Federal Government.” The NSCG is designed to comply with these mandates by providing information on the supply and utilization of the nation's scientists and engineers.

The U.S. Census Bureau, as in the past, will conduct the NSCG for NSF. The survey data collection will begin in March 2017 using web and mail questionnaires. Nonrespondents to the web or mail questionnaire will be followed up by computer-assisted telephone interviewing. The individual's response to the survey is voluntary. The survey will be conducted in conformance with Census Bureau statistical quality standards and, as such, the NSCG data will be afforded protection under the applicable Census Bureau confidentiality statutes.

Use of the Information: NSF uses the information from the NSCG to prepare congressionally mandated reports such as *Women, Minorities and Persons with*

Disabilities in Science and Engineering and Science and Engineering Indicators. A public release file of collected data, designed to protect respondent confidentiality, will be made available to researchers on the Internet.

Expected Respondents: A statistical sample of approximately 123,500 persons will be contacted in 2017. This 123,500 sample is a 5,500 case increase over the sample size listed in the first notice for public comment in the **Federal Register** at 81 FR 49689. The larger sample size is needed to account for the increased size of the college-educated population as well as lower response rates in recent years. NSF estimates the 2017 NSCG response rate to be 70 to 80 percent.

Estimate of Burden: The amount of time to complete the questionnaire may vary depending on an individual's circumstances; however, on average it will take approximately 30 minutes to complete the survey. NSF estimates that the total annual burden will be no more than 49,400 hours (=123,500 respondents × 80% response × 30 minutes) during the 2017 survey cycle.

Dated: December 9, 2016.

Suzanne H. Plimpton,

Reports Clearance Officer, National Science Foundation.

BILLING CODE 7555-01-P

NATIONAL SCIENCE FOUNDATION

Notice of Intent to Seek Approval to Establish an Information Collection

AGENCY: National Science Foundation.

ACTION: Notice and Request for Comments.

SUMMARY: The National Science Foundation (NSF) is announcing plans to request clearance of this collection. After obtaining and considering public comment, NSF will prepare the submission requesting that OMB approve clearance of this collection for no longer than three years.

DATES: Written comments on this notice must be received by February 17, 2017 to be assured of consideration. Comments received after that date will be considered to the extent practicable.

FOR ADDITIONAL INFORMATION OR COMMENTS: Contact Suzanne H. Plimpton, Reports Clearance Officer, National Science Foundation, 4201 Wilson Boulevard, Suite 1265, Arlington, Virginia 22230; telephone (703) 292-7556; or send email to splimpto@nsf.gov. Individuals who use a telecommunications device for the deaf (TDD) may call the Federal

Information Relay Service (FIRS) at 1-800-877-8339 between 8 a.m. and 8 p.m., Eastern time, Monday through Friday. You also may obtain a copy of the data collection instrument and instructions from Ms. Plimpton.

SUPPLEMENTARY INFORMATION:

Comments: In accordance with the requirement of Section 3506(c)(2)(A) of the Paperwork Reduction Act of 1995 (Pub. L. 104-13), we are providing opportunity for public comment on this action. Comments are invited on (a) whether the proposed collection of information is necessary for the proper performance of the functions of the Agency, including whether the information shall have practical utility; (b) the accuracy of the Agency's estimate of the burden of the proposed collection of information; (c) ways to enhance the quality, utility, and clarity of the information on respondents, including through the use of automated collection techniques or other forms of information technology; and (d) ways to minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology.

Title of Collection: Grantee Reporting Requirements for National User Facilities managed by the NSF Division of Materials Research.

OMB Number: 3145-0234.

Expiration Date of Approval: March 31, 2017.

Type of Request: Intent to seek approval to renew an information collection.

Overview of this Information Collection: The NSF Division of Materials Research (DMR) supports a number of National User Facilities that provide specialized capabilities and instrumentation to the scientific community on a competitive proposal basis. In addition to the user program, these facilities support in-house research, development of new instrumentation or techniques, education, and knowledge transfer.

The facilities integrate research and education for students and post-docs involved in experiments, and support extensive K-12 outreach to foster an interest in Science Technology Engineering and Mathematics (STEM) and STEM careers. Facilities capitalize on diversity through participation in center activities and demonstrate leadership in the involvement of groups underrepresented in science and engineering.

National User Facilities will be required to submit annual reports on

progress and plans, which will be used as a basis for performance review and determining the level of continued funding. User facilities will be required to develop a set of management and performance indicators for submission annually to NSF via the Research Performance Project Reporting (RPPR) module in *Research.gov*. These indicators are both quantitative and descriptive and may include, for example, lists of successful proposal and users, the characteristics of facility personnel and students; sources of financial support and in-kind support; expenditures by operational component; research activities; education activities; knowledge transfer activities; patents, licenses; publications; degrees granted to students supported through the facility or users of the facility; descriptions of significant advances and other outcomes of this investment. Such reporting requirements are included in the cooperative agreement which is binding between the academic institution and the NSF.

Each facility's annual report will address the following categories of activities: (1) Research, (2) education and training, (3) knowledge transfer, (4) partnerships, (5) diversity, (6) management, and (7) budget issues.

For each of the categories the report will describe overall objectives and metrics for the reporting period, challenges or problems the facility has encountered in making progress towards goals, anticipated problems in the following year, and specific outputs and outcomes.

Facilities are required to file a final report through the RPPR. Final reports contain similar information and metrics as annual reports, but are retrospective and focus on the period that was not addressed in previous annual reports.

Use of the Information: NSF will use the information to continue funding of the DMR National User Facilities, and to evaluate the progress of the program.

Estimate of Burden: 200 hours per facility for three National User Facilities for a total of 600 hours.

Respondents: Non-profit institutions.

Estimated Number of Responses per Report: One from each of the DMR user facilities.

Dated: December 14, 2016.

Suzanne H. Plimpton,

Reports Clearance Officer, National Science Foundation.

NATIONAL SCIENCE FOUNDATION**Notice of Intent To Seek Approval to Establish an Information Collection System****AGENCY:** National Science Foundation.**ACTION:** Notice and request for comments.

SUMMARY: Under the Paperwork Reduction Act of 1995, and as part of its continuing effort to reduce paperwork and respondent burden, the National Science Foundation (NSF) is inviting the general public or other Federal agencies to comment on this proposed continuing information collection.

DATES: Written comments on this notice must be received by February 17, 2017, to be assured consideration. Comments received after that date will be considered to the extent practicable. Send comments to address below.

FOR FURTHER INFORMATION CONTACT: Ms. Suzanne H. Plimpton, Reports Clearance Officer, National Science Foundation, 4201 Wilson Boulevard, Suite 1265, Arlington, Virginia 22230; telephone (703) 292-7556; or send email to splimpto@nsf.gov. Individuals who use a telecommunications device for the deaf (TDD) may call the Federal Information Relay Service (FIRS) at 1-800-877-8339, which is accessible 24 hours a day, 7 days a week, 365 days a year (including federal holidays).

SUPPLEMENTARY INFORMATION:

Comments: Pursuant to the Paperwork Reduction Act, Pub. L. 104-13 (44 U.S.C. 3501 *et seq.*), comments are

invited on: (a) Whether the proposed collection of information is necessary for the proper performance of the functions of the Foundation, including whether the information will have practical utility; (b) the accuracy of the Foundation's estimate of the burden of the proposed collection of information; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the collection of information on those who are to respond, including through the use of automated collection techniques or other forms of information technology.

Title of Collection: Grantee Reporting Requirements for the Emerging Frontiers in Research and Innovation program
OMB Number: 3145-0233.

Expiration Date of Approval: March 31, 2017.

Type of Request: Intent to seek approval to renew an information collection system.

Abstract:

Proposed Project:

The Emerging Frontiers in Research and Innovation (EFRI) program recommends, prioritizes, and funds interdisciplinary initiatives at the emerging frontier of engineering research and education. These investments represent transformative opportunities, potentially leading to: new research areas for NSF, ENG, and other agencies; new industries or capabilities that result in a leadership position for the country; and/or significant progress on a recognized national need or grand challenge.

Established in 2007, EFRI supports cutting-edge research that is difficult to fund through other NSF programs, such as single-investigator grants or large research centers. EFRI seeks high-risk opportunities with the potential for a large payoff where researchers are encouraged to stretch beyond their ongoing activities. Based on input from workshops, advisory committees, technical meetings, professional societies, research proposals, and suggestions from the research community the EFRI program identifies those emerging opportunities and manages a formal process for funding their research. The emerging ideas tackled by EFRI are "frontier" because they not only push the understood limits of engineering but actually overlap multiple fields. The EFRI funding process inspires investigators with different expertise to work together on one emerging concept.

EFRI awards require multi-disciplinary teams of at least one Principal Investigator and two Co-Principal Investigators. The anticipated

duration of all awards is 4-years. The anticipated funding level for each project team may receive support of up to a total of \$2,000,000 spread over four years, pending the availability of funds. In that sense EFRI awards are above the average single-investigator award amounts.

EFRI-funded projects could include research opportunities and mentoring for educators, scholars, and university students, as well as outreach programs that help stir the imagination of K-12 students, often with a focus on groups underrepresented in science and engineering.

We are seeking to collect additional information from the grantees about the outcomes of their research that goes above and beyond the standard reporting requirements used by the NSF and spans over a period of 5 years after the award. This data collection effort will enable program officers to longitudinally monitor outputs and outcomes given the unique goals and purpose of the program. This is very important to enable appropriate and accurate evidence-based management of the program and to determine whether or not the specific goals of the program are being met.

Grantees will be required to submit this information on an annual basis to support performance review and the management of EFRI grants by EFRI officers. EFRI grantees will be required to submit these indicators to NSF via a data collection Web site that will be embedded in NSF's IT infrastructure. These indicators are both quantitative and descriptive and may include, for example, the characteristics of project personnel and students; sources of complementary cash and in-kind support to the EFRI project; characteristics of industrial and/or other sector participation; research activities; education activities; knowledge transfer activities; patents, licenses; publications; descriptions of significant advances and other outcomes of the EFRI effort. Such reporting requirements will be included in the cooperative agreement which is binding between the academic institution and the NSF.

Each submission will address the following major categories of activities: (1) Knowledge transfer across disciplines, (2) innovation of ideas in areas of greater opportunity, (3) potential for translational research, (4) project results advance the frontier/creation of new fields of study, (5) innovative research methods or discoveries are introduced to the classroom, and (6) fostering participation of underrepresented groups in science. For each of the

categories, the report will enumerate specific outputs and outcomes.

Use of the Information: The data collected will be used for NSF internal reports, historical data, and performance review by peer site visit teams, program level studies and evaluations, and for securing future funding for continued EFRI program maintenance and growth.

Estimate of Burden: Approximately 10 hours per grant for approximately 80 grants per year for a total of 800 hours per year.

Respondents: Principal Investigators who lead the EFRI grants.

Estimated Number of Responses per Report: One report collected for each of the approximately 80 grantees every year.

Dated: December 14, 2016.

Suzanne H. Plimpton,

Reports Clearance Officer, National Science Foundation.

[FR Doc. 2016-30447 Filed 12-16-16; 8:45 am]

BILLING CODE 7555-01-P

NATIONAL SCIENCE FOUNDATION

Agency Information Collection Activities: Comment Request

AGENCY: National Science Foundation.

ACTION: Submission for OMB review; comment request.

SUMMARY: The National Science Foundation (NSF) has submitted the following information collection requirement to OMB for review and clearance under the Paperwork Reduction Act of 1995. This is the second notice for public comment; the first was published in the **Federal Register** at 81 FR 49689, and one comment was received. NSF is forwarding the proposed renewal submission to the Office of Management and Budget (OMB) for clearance simultaneously with the publication of this second notice. The full submission may be found at: <http://www.reginfo.gov/public/do/PRAMain>.

Comments: Comments regarding (a) whether the collection of information is necessary for the proper performance of the functions of the NSF, including whether the information will have practical utility; (b) the accuracy of the NSF's estimate of the burden of the proposed collection of information; (c) ways to enhance the quality, utility and clarity of the information to be collected, including through the use of automated collection techniques or other forms of information technology; (d) ways to minimize the burden of the collection of information on those who are to respond, including through the

use of appropriate automated or other forms of information technology should be addressed to: Office of Information and Regulatory Affairs of OMB, Attention: Desk Officer for National Science Foundation, 725 7th Street NW., Room 10235, Washington, DC 20503, and to Suzanne H. Plimpton, Reports Clearance Officer, National Science Foundation, 4201 Wilson Boulevard, Suite 1265, Arlington, Virginia 22230 or send email to splimpto@nsf.gov.

DATES: Comments regarding these information collections are best assured of having their full effect if received within 30 days of this notification. Copies of the submission may be obtained by calling 703-292-7556. NSF may not conduct or sponsor a collection of information unless the collection of information displays a currently valid OMB control number and the agency informs potential persons who are to respond to the collection of information that such persons are not required to respond to the collection of information unless it displays a currently valid OMB control number.

SUPPLEMENTARY INFORMATION:

Comments: As required by 5 CFR 1320.8(d), comments on the information collection activities as part of this study were solicited through publication of a 60-Day Notice in the **Federal Register** on July 28, 2016, at 81 FR 49689. We received one comment, to which we here respond.

Commenter: The comment requested NSF consider the use of administrative records, specifically the National Student Clearinghouse, to obtain information on education background in lieu of asking this information from respondents on the National Survey of College Graduates (NSCG).

Response: NSF informed the commenter that, at the request of NSF, the Census Bureau's Center for Administrative Records Research and Application is conducting research to compare administrative records data with the NSCG respondent-provided data. This research will inform survey content discussions for future NSCG cycles and will provide insight on the necessity of certain NSCG questionnaire items including the education background items.

After consideration of this comment, we are moving forward with our submission to OMB.

Title of Collection: 2015 National Survey of College Graduates.

OMB Approval Number: 3145-0141.

Type of Request: Intent to seek approval to renew an information collection for three years.

Abstract: The National Survey of College Graduates (NSCG) has been conducted biennially since the 1970s. The 2017 NSCG sample will be selected from the 2015 American Community Survey (ACS) and the 2015 NSCG. By selecting sample from these two sources, the 2017 NSCG will provide coverage of the college graduate population residing in the United States. The purpose of this longitudinal survey is to collect data that will be used to provide national estimates on the science and engineering workforce and changes in their employment, education, and demographic characteristics.

The National Science Foundation Act of 1950, as subsequently amended, includes a statutory charge to “. . . provide a central clearinghouse for the collection, interpretation, and analysis of data on scientific and engineering resources, and to provide a source of information for policy formulation by other agencies of the Federal Government.” The NSCG is designed to comply with these mandates by providing information on the supply and utilization of the nation's scientists and engineers.

The U.S. Census Bureau, as in the past, will conduct the NSCG for NSF. The survey data collection will begin in March 2017 using web and mail questionnaires. Nonrespondents to the web or mail questionnaire will be followed up by computer-assisted telephone interviewing. The individual's response to the survey is voluntary. The survey will be conducted in conformance with Census Bureau statistical quality standards and, as such, the NSCG data will be afforded protection under the applicable Census Bureau confidentiality statutes.

Use of the Information: NSF uses the information from the NSCG to prepare congressionally mandated reports such as *Women, Minorities and Persons with Disabilities in Science and Engineering* and *Science and Engineering Indicators*. A public release file of collected data, designed to protect respondent confidentiality, will be made available to researchers on the Internet.

Expected Respondents: A statistical sample of approximately 123,500 persons will be contacted in 2017. This 123,500 sample is a 5,500 case increase over the sample size listed in the first notice for public comment in the **Federal Register** at 81 FR 49689. The larger sample size is needed to account for the increased size of the college-educated population as well as lower response rates in recent years. NSF estimates the 2017 NSCG response rate to be 70 to 80 percent.

Estimate of Burden: The amount of time to complete the questionnaire may vary depending on an individual's circumstances; however, on average it will take approximately 30 minutes to complete the survey. NSF estimates that the total annual burden will be no more than 49,400 hours (=123,500 respondents × 80% response × 30 minutes) during the 2017 survey cycle.

Dated: December 9, 2016.

AGENCY: Postal Regulatory Commission.

ACTION: Notice.

SUMMARY: The Commission is noticing recent Postal Service filings for the Commission's consideration concerning negotiated service agreements. This notice informs the public of the filing, invites public comment, and takes other administrative steps.

DATES: *Comments are due:* December 21, 2016 (Comment due date applies to Docket No. CP2014-85; Docket No. CP2017-70; Docket Nos. MC2017-45 and CP2017-71; Docket Nos. MC2017-46 and CP2017-72); and December 22, 2016 (Comment due date applies to Docket Nos. MC2017-47 and CP2017-73; Docket Nos. MC2017-48 and CP2017-74).

ADDRESSES: Submit comments electronically via the Commission's Filing Online system at <http://www.prc.gov>. Those who cannot submit comments electronically should contact the person identified in the **FOR FURTHER INFORMATION CONTACT** section by telephone for advice on filing alternatives.

FOR FURTHER INFORMATION CONTACT: David A. Trissell, General Counsel, at 202-789-6820.

SUPPLEMENTARY INFORMATION:

Table of Contents

- I. Introduction
- II. Docketed Proceeding(s)

I. Introduction

The Commission gives notice that the Postal Service filed request(s) for the Commission to consider matters related

to negotiated service agreement(s). The request(s) may propose the addition or removal of a negotiated service agreement from the market dominant or the competitive product list, or the modification of an existing product currently appearing on the market dominant or the competitive product list.

Section II identifies the docket number(s) associated with each Postal Service request, the title of each Postal Service request, the request's acceptance date, and the authority cited by the Postal Service for each request. For each request, the Commission appoints an officer of the Commission to represent the interests of the general public in the proceeding, pursuant to 39 U.S.C. 505 (Public Representative). Section II also establishes comment deadline(s) pertaining to each request.

The public portions of the Postal Service's request(s) can be accessed via the Commission's Web site (<http://www.prc.gov>). Non-public portions of the Postal Service's request(s), if any, can be accessed through compliance with the requirements of 39 CFR 3007.40.

The Commission invites comments on whether the Postal Service's request(s) in the captioned docket(s) are consistent with the policies of title 39. For request(s) that the Postal Service states concern market dominant product(s), applicable statutory and regulatory requirements include 39 U.S.C. 3622, 39 U.S.C. 3642, 39 CFR part 3010, and 39 CFR part 3020, subpart B. For request(s) that the Postal Service states concern competitive product(s), applicable statutory and regulatory requirements include 39 U.S.C. 3632, 39 U.S.C. 3633, 39 U.S.C. 3642, 39 CFR part 3015, and 39 CFR part 3020, subpart B. Comment deadline(s) for each request appear in section II.

II. Docketed Proceeding(s)

1. *Docket No(s)*: CP2014–85; *Filing Title*: Notice of United States Postal Service of Change in Prices Pursuant to Amendment to Priority Mail Contract 95; *Filing Acceptance Date*: December 13, 2016; *Filing Authority*: 39 CFR 3015.5; *Public Representative*: Jennaca D. Upperman; *Comments Due*: December 21, 2016.

2. *Docket No(s)*: CP2017–70; *Filing Title*: Notice of United States Postal Service of Filing a Functionally Equivalent Global Expedited Package Services 7 Negotiated Service Agreement and Application for Non-Public Treatment of Materials Filed Under Seal; *Filing Acceptance Date*: December 13, 2016; *Filing Authority*: 39 CFR 3015.5; *Public Representative*: Max

E. Schnidman; *Comments Due*: December 21, 2016.

3. *Docket No(s)*: MC2017–45 and CP2017–71; *Filing Title*: Request of the United States Postal Service to Add Priority Mail Contract 270 to Competitive Product List and Notice of Filing (Under Seal) of Unredacted Governors' Decision, Contract, and Supporting Data; *Filing Acceptance Date*: December 13, 2016; *Filing Authority*: 39 U.S.C. 3642 and 39 CFR 3020.30 *et seq.*; *Public Representative*: Gregory Stanton; *Comments Due*: December 21, 2016.

4. *Docket No(s)*: MC2017–46 and CP2017–72; *Filing Title*: Request of the United States Postal Service to Add Priority Mail Contract 271 to Competitive Product List and Notice of Filing (Under Seal) of Unredacted Governors' Decision, Contract, and Supporting Data; *Filing Acceptance Date*: December 13, 2016; *Filing Authority*: 39 U.S.C. 3642 and 39 CFR 3020.30 *et seq.*; *Public Representative*: Gregory Stanton; *Comments Due*: December 21, 2016.

5. *Docket No(s)*: MC2017–47 and CP2017–73; *Filing Title*: Request of the United States Postal Service to Add Priority Mail Contract 272 to Competitive Product List and Notice of Filing (Under Seal) of Unredacted Governors' Decision, Contract, and Supporting Data; *Filing Acceptance Date*: December 13, 2016; *Filing Authority*: 39 U.S.C. 3642 and 39 CFR 3020.30 *et seq.*; *Public Representative*: Christopher C. BILLING CODE 7710–FW–P

SECURITIES AND EXCHANGE COMMISSION

Proposed Collection; Comment Request

Upon Written Request, Copies Available From: Securities and Exchange Commission, Office of FOIA Services, 100 F Street NE., Washington, DC 20549–2736.

Extension:

Rule 103, SEC File No. 270–410, OMB Control No. 3235–0466.

Notice is hereby given that pursuant to the Paperwork Reduction Act of 1995 (“PRA”) (44 U.S.C. 3501 *et seq.*), the Securities and Exchange Commission (“Commission”) is soliciting comments on the existing collection of information provided for in Rule 103 of Regulation M (17 CFR 242.103), under the Securities Exchange Act of 1934 (15 U.S.C. 78a *et seq.*). The Commission plans to submit this existing collection of information to the Office of Management and Budget (“OMB”) for extension and approval.

Rule 103—Nasdaq Passive Market Making—permits passive market-making in Nasdaq securities during a distribution. A distribution participant that seeks use of this exception would be required to disclose to third parties its intention to engage in passive market making.

There are approximately 309 respondents per year that require an aggregate total of 309 hours to comply with this rule. Each respondent makes an estimated 1 annual response. Each response takes approximately 1 hour to complete. Thus, the total compliance burden per year is 309 burden hours. The total estimated internal labor cost of compliance for the respondents is approximately \$20,085.00 per year, resulting in an estimated internal labor cost of compliance per response of approximately \$65.00 (*i.e.*, \$20,085.00/309 responses).

Written comments are invited on: (a) Whether the proposed collection of information is necessary for the proper performance of the functions of the Commission, including whether the information shall have practical utility; (b) the accuracy of the Commission's estimates of the burden of the proposed collection of information; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology. Consideration will be given to comments and suggestions submitted in

writing within 60 days of this publication.

An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information under the PRA unless it displays a currently valid OMB control number.

Please direct your written comments to: Pamela Dyson, Director/Chief Information Officer, Securities and Exchange Commission, c/o Remi Pavlik-Simon, 100 F Street NE., Washington, DC 20549 or send an email to: PRA_Mailbox@sec.gov.

Dated: December 6, 2016.

Brent J. Fields,

Secretary.

BILLING CODE 8011-01-P

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34-79535; File No. SR-FICC-2016-008]

Self-Regulatory Organizations; Fixed Income Clearing Corporation; Notice of Filing and Immediate Effectiveness of a Proposed Rule Change To Modify the MBSD Schedule of Charges Dealer Account Group

December 13, 2016.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (“Act”),¹ and Rule 19b-4 thereunder,² notice is hereby given that on December 2, 2016, Fixed Income Clearing Corporation (“FICC”) filed with the Securities and Exchange Commission (“Commission”) the proposed rule change as described in Items I, II and III below, which Items have been prepared by the clearing agency. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Clearing Agency’s Statement of the Terms of Substance of the Proposed Rule Change

The proposed rule change consists of an amendment to the Mortgage-Backed Securities Division (“MBSD”) Clearing Rules (the “MBSD Rules”) to include an additional fee in the “Schedule of Charges Dealer Account Group,” as described in greater detail below.³ The proposed fee would be implemented as of January 1, 2017.

II. Clearing Agency’s Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the clearing agency included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The clearing agency has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of such statements.

(A) Clearing Agency’s Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

FICC is proposing to amend the MBSD “Schedule of Charges Dealer Account Group” to include an additional fee. The proposed rule change would allow FICC to pass through any daylight overdraft (“DOD”) fees that MBSD incurs from The Bank of New York Mellon (“BNY”) in connection with the settlement of Clearing Members’ securities obligations. FICC would pass through these BNY DOD fees to Clearing Members who settle their securities obligations at BNY.⁴

In October 2016, FICC began to incur the cost of the BNY DOD fees. FICC is proposing to amend the MBSD “Schedule of Charges Dealer Account Group” to allow FICC to pass through the BNY DOD fees to Clearing Members who settle their securities obligations at BNY.⁵ Specifically, each Clearing Member who settles securities obligations at BNY would be charged a pass-through fee, calculated as a percentage of the total of all such costs incurred by MBSD. This percentage would be calculated on a monthly basis as follows:

(Total dollar value of Pool Deliver Obligations and Pool Receive Obligations of such Clearing Member at BNY)

(Total dollar value of Pool Deliver Obligations and Pool Receive Obligations in all Dealer Accounts at BNY)

⁴ This proposed rule change would be consistent with the fee schedule in FICC’s Government Securities Division Rulebook, available at <http://www.dtcc.com/legal/rules-and-procedures>.

⁵ The proposed fee would not be applicable to Brokers because Brokers do not have securities settlement obligations.

2. Statutory Basis

Section 17A(b)(3)(D) of the Securities Exchange Act of 1934, as amended (“Act”) requires, in part, that the rules of the clearing agency provide for the equitable allocation of reasonable dues, fees and other charges among its participants.⁶ The proposed rule change would allow FICC to recover the costs of providing securities settlement services to Clearing Members by passing the BNY DOD fees incurred by MBSD to Clearing Members who settle their securities obligations at BNY. FICC believes that the proposed rule change is consistent with the requirements of the Act and the rules and regulations thereunder applicable to FICC, in particular Section 17A(b)(3)(D), because the proposed fee would be allocated among all Clearing Members who settle their securities obligations at BNY, calculated as a percentage of the total of such costs incurred by MBSD in connection with the services that FICC provide provides for such Clearing Members.⁷

(B) Clearing Agency’s Statement on Burden on Competition

FICC believes that the proposed rule change could have an impact on competition because the proposed rule change would impose an additional fee on Clearing Members who settle their securities obligations at BNY. FICC believes, however, that any burden on competition that would be created by the proposed rule change would be necessary and appropriate in furtherance of the Act. Specifically, the proposed rule change is necessary to allow FICC to recover the cost of providing services to Clearing Members by passing through the BNY DOD fees to Clearing Members who settle their securities obligations at BNY. The proposed rule change is appropriate because, as stated, it would only apply to Clearing Members who settle their securities obligations at BNY, which is the third party that is charging the fees being incurred by MBSD to provide FICC’s services.

(C) Clearing Agency’s Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

Written comments related to the proposed rule change have not been solicited or received. FICC will notify the Commission of any written comments received by FICC.

⁶ 15 U.S.C. 78q-1(b)(3)(D).

⁷ *Id.*

¹ 15 U.S.C. 78s(b)(1).

² 17 CFR 240.19b-4.

³ Capitalized terms used herein and not otherwise defined shall have the meaning assigned to such terms in the MBSD Rules, available at <http://www.dtcc.com/legal/rules-and-procedures>.

III. Date of Effectiveness of the Proposed Rule Change, and Timing for Commission Action

The foregoing rule change has become effective pursuant to Section 19(b)(3)(A)⁸ of the Act and paragraph (f) of Rule 19b-4⁹ thereunder. At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's Internet comment form (<http://www.sec.gov/rules/sro.shtml>); or
- Send an email to rule-comments@sec.gov. Please include File Number SR-FICC-2016-008 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE., Washington, DC 20549.
- All submissions should refer to File Number SR-FICC-2016-008. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's Internet Web site (<http://www.sec.gov/rules/sro.shtml>). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for Web site viewing and printing in the Commission's Public Reference Room, 100 F Street NE., Washington, DC 20549 on official business days between the hours of

10:00 a.m. and 3:00 p.m. Copies of the filing also will be available for inspection and copying at the principal office of FICC and on DTCC's Web site (<http://dtcc.com/legal/sec-rule-filings.aspx>). All comments received will be posted without change; the Commission does not edit personal identifying information from submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR-FICC-2016-008 and should be submitted on or before January 9, 2017.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.¹⁰

Eduardo A. Aleman,

Assistant Secretary.

[Release No. 34-79534; File No. SR-BatsBYX-2016-37]

Self-Regulatory Organizations; Bats BYX Exchange, Inc.; Notice of Filing and Immediate Effectiveness of a Proposed Rule Change To Amend Exchange Rule 11.27(b) Regarding the Data Collection Requirements of the Regulation NMS Plan To Implement a Tick Size Pilot Program

December 13, 2016.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (the "Act"),¹ and Rule 19b-4 thereunder,² notice is hereby given that on November 30, 2016, Bats BYX Exchange, Inc. (the "Exchange" or "BYX") filed with the Securities and Exchange Commission ("Commission") the proposed rule change as described in Items I and II below, which Items have been prepared by the Exchange. The Exchange has designated this proposal as a "non-controversial" proposed rule change pursuant to Section 19(b)(3)(A) of the Act³ and Rule 19b-4(f)(6)(iii) thereunder,⁴ which renders it effective upon filing with the Commission. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

¹⁰ 17 CFR 200.30-3(a)(12).

¹ 15 U.S.C. 78s(b)(1).

² 17 CFR 240.19b-4.

³ 15 U.S.C. 78s(b)(3)(A).

⁴ 17 CFR 240.19b-4(f)(6)(iii).

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange filed a proposal to amend Exchange Rule 11.27(b) regarding the data collection requirements of the Regulation NMS Plan to Implement a Tick Size Pilot Program ("Plan").

The text of the proposed rule change is available at the Exchange's Web site at www.batstrading.com, at the principal office of the Exchange, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in Sections A, B, and C below, of the most significant parts of such statements.

(A) Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

On August 25, 2014, the Exchange, and several other self-regulatory organizations (the "Participants") filed with the Commission, pursuant to Section 11A of the Act⁵ and Rule 608 of Regulation NMS thereunder,⁶ the Plan to Implement a Tick Size Pilot Program.⁷ The Participants filed the Plan to comply with an order issued by the Commission on June 24, 2014.⁸ The Plan was published for comment in the **Federal Register** on November 7, 2014, and approved by the Commission, as modified, on May 6, 2015.⁹ The Commission approved the Pilot on a two-year basis, with implementation to begin no later than May 6, 2016.¹⁰ On November 6, 2015, the SEC exempted the Participants from implementing the

⁷ See Letter from Brendon J. Weiss, Vice President, Intercontinental Exchange, Inc., to Secretary, Commission, dated August 25, 2014.

⁸ See Securities Exchange Act Release No. 72460 (June 24, 2014), 79 FR 36840 (June 30, 2014).

⁹ See Securities Exchange Act Release No. 74892 (May 6, 2015), 80 FR 27513 (May 13, 2015) ("Approval Order").

¹⁰ See Approval Order at 27533 and 27545.

⁸ 15 U.S.C. 78s(b)(3)(A).

⁹ 17 CFR 240.19b-4(f).

Pilot until October 3, 2016.¹¹ Under the revised Pilot implementation date, the Pre-Pilot data collection period commenced on April 4, 2016. On September 13, 2016, the SEC exempted the Participants from the requirement to fully implement the Pilot on October 3, 2016, to permit the Participants to implement the pilot on a phased-in basis, as described in the Participants' exemptive request.¹²

The Plan is designed to allow the Commission, market participants, and the public to study and assess the impact of increment conventions on the liquidity and trading of the common stock of small-capitalization companies. Each Participant is required to comply, and to enforce compliance by its member organizations, as applicable, with the provisions of the Plan.

The Exchange adopted rule amendments to implement the requirements of the Plan, including relating to the Plan's data collection requirements and requirements relating to Web site data publication.¹³ Specifically, with respect to the Web site data publication requirements pursuant to Section VII and Appendices B and C to the Plan, Exchange Rule 11.27(b)(2) provides, among other things, that the Exchange shall make the data required by Items I and II of Appendix B to the Plan, and collected pursuant to paragraph (b)(2)(A) of Rule 11.27, publicly available on the Exchange's Web site on a monthly basis at no charge and shall not identify the Trading Center that generated the data. Exchange Rule 11.27(b)(3)(C), provides, among other things, that the Exchange shall make the data required by Item IV of Appendix B to the Plan, and collected pursuant to paragraph (b)(3) of Rule 11.27, publicly available on the Exchange's Web site on a monthly basis at no charge and shall not identify the Trading Center that generated the data. Exchange Rule 11.27(b)(5) provides, among other things, shall collect and transmit to the Commission data

described in Item III of Appendix B of the Plan relating to daily Market Maker registration statistics, but does not currently include a provision requiring the Exchange to publish such data to its Web site.¹⁴ Interpretation and Policy .08 to Exchange Rule 11.27(b) provides, among other things, that the requirement that Exchange or Designated Examining Authority ("DEA") make certain data publicly available on their Web site pursuant to Appendix B and C to the Plan shall commence at the beginning of the Pilot Period.¹⁵

The Exchange is proposing amendments to Rule 11.27(b)(2) (regarding Appendix B.I and B.II data) and Rule 11.27(b)(3)(C) (regarding Appendix B.IV data), to provide that data required to be made available on Exchange's or DEA's Web site be published within 120 calendar days following month end. The Exchange also proposes to add a provision to Rule 11.27(b)(5) to state that the Exchange shall make data collected under Appendix B.III publicly available on the Exchange Web site within 120 calendar days following month end at no charge. In addition, the proposed amendments to Interpretation and Policy .08 to Exchange Rule 11.27(b) would provide that, notwithstanding the provisions of paragraphs (b)(2), (b)(3)(C), and (b)(5), the Exchange and DEA shall make data for the Pre-Pilot period publicly available on their Web site pursuant to Appendix B and C to the Plan by February 28, 2017.¹⁶ The purpose of delaying the publication of the Web site data is to address confidentiality concerns by providing for the passage of additional time between the market information reflected in the data and the public availability of such information. The Exchange has filed the proposed rule change for immediate effectiveness and has requested that the Commission waive the 30-day operative delay. If the Commission waives the 30-day

operative delay, the operative date of the proposed rule change will be the date of filing.

2. Statutory Basis

The Exchange believes that its proposal is consistent with Section 6(b) of the Act¹⁷ in general, and furthers the objectives of Section 6(b)(5) of the Act¹⁸ in particular, in that it is designed to promote just and equitable principles of trade, to foster cooperation and coordination with persons engaged in facilitating transactions in securities, to remove impediments to and perfect the mechanism of a free and open market and a national market system and, in general, to protect investors and the public interest.

The Exchange believes that this proposal is consistent with the Act because it is designed to assist the Participants in meeting their regulatory obligations pursuant to the Plan and is in furtherance of the objectives of the Plan, as identified by the SEC. The Exchange believes that the instant proposal is consistent with the Act in that it is designed to address confidentiality concerns by permitting the Exchange to delay Web site publication to provide for passage of additional time between the market information reflected in the data and the public availability of such information.

(B) Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will result in any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act. The Exchange notes that the proposed rule change implements the provisions of the Plan, and is designed to assist the Participants in meeting their regulatory obligations pursuant to the Plan.

The proposal is intended to address confidentiality concerns that may adversely impact competition, especially for Pilot Securities that may have a relatively small number of designated Market Makers, by permitting the Exchange to delay Web site publication to provide for passage of additional time between the market information reflected in the data and the public availability of such information. The proposal does not alter the information required to be submitted to the SEC.

¹⁴ Section VII.A. 4 of the Plan.

¹⁵ The Exchange understands that some Market Makers may utilize a DEA that is not a Participant to the Plan and that their DEA would not be subject to the Plan's data collection requirements. Exchange rules require members that are Market Makers whose DEA is not a Participant to the Plan to transmit transaction data for Market Maker participation and profitability calculations to FINRA. See paragraphs (3)(B) and (4)(B) of Exchange Rule 11.27(b).

¹⁶ With respect to data for the Pilot Period, the requirement that the Exchange and DEA make data publicly available on their Web site pursuant to Appendix B and C to the Plan shall continue to commence at the beginning of the Pilot Period. Thus, the first Web site publication date for Pilot Period data (covering October 2016) would be published on the Exchange's or DEA's Web site by February 28, 2017, which is 120 days following the end of October 2016.

¹¹ See Securities Exchange Act Release No. 76382 (November 6, 2015), 80 FR 70284 (November 13, 2015).

¹² See Letter from David S. Shillman, Associate Director, Division of Trading and Markets, Commission, to Eric Swanson, EVP, General Counsel and Secretary, Exchange, dated September 13, 2016; see also Letter from Eric Swanson, EVP, General Counsel and Secretary, Exchange, to Brent J. Fields, Secretary, Commission, dated September 9, 2016.

¹³ See, e.g., Securities Exchange Act Release Nos. 77418 (March 22, 2016), 81 FR 17213 (March 28, 2016); and 78795 (September 9, 2016), 81 FR 63508 (September 15, 2016). See also Letter from David S. Shillman, Associate Director, Division of Trading and Markets, Commission, to Marcia E. Asquith, Senior Vice President and Corporate Secretary, FINRA, dated February 17, 2016.

¹⁷ 15 U.S.C. 78f(b).

¹⁸ 15 U.S.C. 78f(b)(5).

(C) Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants or Others

Written comments were neither solicited nor received.¹⁹

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

Because the foregoing proposed rule change does not: (i) Significantly affect the protection of investors or the public interest; (ii) impose any significant burden on competition; and (iii) become operative for 30 days from the date on which it was filed, or such shorter time as the Commission may designate, it has become effective pursuant to Section 19(b)(3)(A) ²⁰ of the Act and Rule 19b-4(f)(6) thereunder.²¹

A proposed rule change filed under Rule 19b-4(f)(6) ²² normally does not become operative prior to 30 days after the date of the filing. However, pursuant to Rule 19b-4(f)(6)(iii),²³ the Commission may designate a shorter time if such action is consistent with the protection of investors and the public interest. The Exchange has filed the proposed rule change for immediate effectiveness and has requested that the Commission waive the requirement that the proposed rule change not become operative for 30 days after the date of the filing so that it may become operative immediately.

The Exchange notes that the proposed rule change implements the provisions of the Plan, and is designed to assist the Participants in meeting their regulatory obligations pursuant to the Plan. The proposal is intended to address confidentiality concerns by permitting the Exchange to delay Web site publication to provide for passage of additional time between the market information reflected in the data and the public availability of such information. The proposal also does not alter the information required to be submitted to the SEC.

The Commission believes that waiving the 30-day operative delay is consistent with the protection of investors and the public interest because it will allow the Exchange to implement proposed changes that are intended to address confidentiality concerns. The Commission notes that

some Pilot data was scheduled to be published on November 30, 2016. Therefore, the Commission hereby waives the 30-day operative delay and designates the proposed rule change to be operative as of November 30, 2016.²⁴

At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act.²⁵ If the Commission takes such action, the Commission shall institute proceedings to determine whether the proposed rule should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views and arguments concerning the foregoing, including whether the proposal is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's Internet comment form (<http://www.sec.gov/rules/sro.shtml>); or
- Send an email to rule-comments@sec.gov. Please include File No. SR-BatsBYX-2016-37 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE., Washington, DC 20549-1090. All submissions should refer to File No. SR-BatsBYX-2016-37. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's Internet Web site (<http://www.sec.gov/rules/sro.shtml>). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be

available for Web site viewing and printing in the Commission's Public Reference Room, 100 F Street NE., Washington, DC 20549, on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of such filing will also be available for inspection and copying at the principal office of the Exchange. All comments received will be posted without change; the Commission does not edit personal identifying information from submissions. You should submit only information that you wish to make available publicly.

All submissions should refer to File No. SR-BatsBYX-2016-37 and should be submitted on or before January 9, 2017.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority:²⁶

Eduardo A. Aleman,

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34-79540; File No. SR-CBOE-2016-082]

Self-Regulatory Organizations; Chicago Board Options Exchange, Incorporated; Notice of Filing of a Proposed Rule Change Related to Rules Regarding the Responsibility for Ensuring Compliance With Open Outcry Priority and Allocation Requirements and Trade-Through Prohibitions

December 13, 2016.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (the "Act"),¹ and Rule 19b-4 thereunder,² notice is hereby given that on December 1, 2016, Chicago Board Options Exchange, Incorporated (the "Exchange" or "CBOE") filed with the Securities and Exchange Commission (the "Commission") the proposed rule change as described in Items I, II, and III below, which Items have been prepared by the Exchange. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange seeks to amend Exchange rules regarding

The text of the proposed rule change is also available on the Exchange's Web site (<http://www.cboe.com/AboutCBOE/CBOELegalRegulatoryHome.aspx>), at the Exchange's Office of the Secretary, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

The Exchange proposes to amend CBOE Rules 6.45A, 6.45B, and 6.73 to identify the party to a transaction that is responsible for ensuring that a transaction is executed in accordance with the priority and allocation requirements as set forth in Rules 6.45A(b) and 6.45B(b) ³ and does not cause a "Trade-Through" (unless otherwise excepted) under Rule 6.81.⁴

³ Rules 6.45A(b) and 6.45B(b) set forth the Exchange's rules related to the allocation of orders represented in open outcry. Specifically, Rules 6.45A(b) and 6.45B(b) provide, among other things, that where two or more bids (offers) for the same option contract represent the highest (lowest) price, public customer orders in the electronic book shall have first priority.

⁴ A "Trade-Through" is a transaction in an options series, either as principal or agent, at a price that is lower than a Protected Bid or higher than a Protected Offer. CBOE Rule 6.81 provides that

The Exchange does not seek to absolve TPHs of the responsibility to ensure transactions are executed in accordance with the priority and allocation provisions or the Trade-Through prohibition provisions. Rather, the Exchange seeks to specify that the party or parties responsible for ensuring transactions are executed in accordance with the priority and allocation provisions and Trade-Through prohibitions is the initiator of the transaction when a Floor Broker is trading with a Market-Maker, both parties when a Floor Broker trades with a Floor Broker, and both parties when the transaction is between Market-Makers.⁵

Currently, if a transaction executed on the trading floor is executed at a Trade-Through price or was executed in violation of book priority, the Trade-Through or book priority violations are enforced against both parties to the transaction. With respect to transactions between Floor Brokers and transactions between Market-Makers, both parties will continue to be held responsible for the above violations. With respect to transactions between a Floor Broker and a Market-Maker, the Exchange believes the party that should be held responsible is the party that initiated the transaction on the trading floor. Generally speaking, Floor Brokers are the parties that initiate transactions on the trading floor by representing orders and executing the orders against bids and offers of other in-crowd market participants, including Market-Makers. For example, a typical open outcry transaction consists of a Floor Broker representing an order and requesting a quote from Market-Makers in the trading crowd. Market-Makers respond to the representation by indicating they are willing to buy (bid) the particular options series at X price and sell (offer) at Y price, which are based on the Market-Makers' theoretical values for the particular options. If the quoted market meets the requirements of the order as specified by the Floor Broker's client the Floor Broker executes the order against the best quoted bid or offer price(s). The Floor Broker, as initiator, controls the order and the execution price of the order; thus, it follows that

unless an exception applies, Trading Permit Holders ("TPHs") shall not effect Trade-Throughs.

⁵ In the case of a Floor Broker initiating a transaction with multiple counterparties, any Floor Broker counterparty would be held responsible in the same manner as a Floor Broker trading with one other Floor Broker. Similarly, in the case of a Market-Maker initiation [sic] a transaction with multiple counterparties, any Market-Maker counterparty would be held responsible in the same manner as a Market-maker initiation [sic] a transaction with one other counterparty.

the Floor Broker in this example should be responsible for ensuring priority and allocation consistent with the applicable rules and that Trade-Through requirements are satisfied.

Floor Brokers are also in a good position to prevent Trade-Throughs and book priority violations because Floor Brokers may utilize the Public Automatic Routing System ("PAR") to execute orders, which is not available to Market-Makers. PAR provides all of the necessary market data to avoid Trade-Throughs and book priority violations (e.g., PAR includes data related to electronic public customer books, CBOE best bid and offer ("BBO"), and national best bid and offer ("NBBO"), etc.). In addition, PAR calculates and displays a net price for complex orders held by a Floor Broker. Most importantly, however, PAR offers alerts that warn Floor Brokers that a proposed execution price for a given order may violate priority or result in a potential Trade-Through. These alerts occur via pop-up windows within PAR.

When Floor Brokers trade with Market-Makers the Market-Makers are not in as good of a position to prevent Trade-Throughs and book priority violations. Although Market-Makers have access to market data via screens on the trading floor and/or their own electronic devices, they do not have access to the specific terms and conditions of a Floor Broker's order on an electronic basis and must evaluate the CBOE BBO and the NBBO without the aid of PAR. Instead, a request for quote for a given order is verbally communicated by a Floor Broker to the trading crowd and the verbal information is taken into consideration by Market-Makers (and other in-crowd market participants) when providing a responsive quote. Furthermore, Market-Makers evaluate a Floor Broker's request for a quote against the Market-Maker's theoretical values for the given options series. This process becomes even more complicated when there are multiple options series that must be evaluated for a complex order. Ultimately, the Exchange believes it is reasonable for a Market-Maker to rely on a Floor Broker to ensure that an open outcry transaction is executed in accordance with the priority and allocation provisions and Trade-Through prohibition provisions when the Floor Broker is initiating the transaction. If a Market-Maker initiates a transaction with a Floor Broker the Market-Maker will be responsible for ensuring that the transaction is executed in accordance with the priority and allocation provisions and Trade-Through prohibition provisions.

The Exchange proposes to add Interpretation and Policy .05 to Rule 6.45A, .06 to Rule 6.45B, and .07 to Rule 6.73. As previously noted, the proposal does not amend who is responsible when an open outcry transaction is between Floor Brokers or between Market-Makers. As is the case today, for open outcry transactions between Floor Brokers or open outcry transactions between Market-Makers, both parties are responsible for ensuring that a transaction is executed in accordance with the priority and allocation rules and the Trade-Through prevention rules. For these scenarios the proposal simply sets forth the existing standard, which, again, calls for both parties being responsible for ensuring that a transaction is executed in accordance with the priority and allocation rules and the Trade-Through prohibition rules.

The Exchange notes that this rule change, consistent with the Options Intermarket Linkage Plan, is reasonably designed to prevent Trade-Throughs⁶ as well as book priority violations because the proposal places the responsibility for ensuring transactions are executed in accordance with the rules on the specific party or parties in a good position to ensure compliance. The Exchange also notes that this rule may help limit the number of priority and Trade-Through violations because the proposal identifies a particular party or parties to each transaction (as opposed to all parties) as being responsible for ensuring compliance with the rules. Furthermore, in all cases the responsibility will fall on all parties to the transaction (i.e., when Floor Broker trades with another Floor Broker or when a Market-Maker trades with another Market-Maker) or the initiator of the transaction.

2. Statutory Basis

The Exchange believes the proposed rule change is consistent with the Securities Exchange Act of 1934 (the "Act") and the rules and regulations thereunder applicable to the Exchange and, in particular, the requirements of Section 6(b) of the Act.⁷ Specifically, the Exchange believes the proposed rule change is consistent with the Section 6(b)(5)⁸ requirements that the rules of an exchange be designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, to foster cooperation

and coordination with persons engaged in regulating, clearing, settling, processing information with respect to, and facilitating transactions in securities, to remove impediments to and perfect the mechanism of a free and open market and a national market system, and, in general, to protect investors and the public interest. Additionally, the Exchange believes the proposed rule change is consistent with the Section 6(b)(5)⁹ requirement that the rules of an exchange not be designed to permit unfair discrimination between customers, issuers, brokers, or dealers.

In particular, the Exchange believes that the proposed rule change is appropriate because the vast majority of the time Floor Brokers are the initiators of open outcry transactions on the trading floor, and they are able to use PAR to assist them with ensuring that transactions are executed in accordance with priority and allocation rules and Trade-Through prohibition rules, which makes this proposal reasonably designed to ensure compliance with Exchange Rules. As a result, the Exchange believes this change will remove potential impediments to a free and open market and a national market system. The Exchange also believes this rule change may help limit the number of priority and Trade-Through violations, which generally helps to protect investors and the public interest, because the proposal more appropriately identifies the specific party or parties responsible for ensuring compliance with these rules (i.e., the initiator in the case of Floor Brokers trading with Market-Makers and both parties when Market-Makers trade with Market-Makers and both parties when Floor Brokers trade with Floor Brokers). Furthermore, in all cases the responsibility will fall on all parties to the transaction (i.e., when Floor Broker trades with another Floor Broker or when a Market-Maker trades with another Market-Maker) or the initiator of the transaction.

B. Self-Regulatory Organization's Statement on Burden on Competition

CBOE does not believe that the proposed rule change will impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act. CBOE does not believe that the proposed rule change will impose any burden on intramarket competition that is not necessary or appropriate in furtherance of the purposes of the Act because the proposed change will apply equally to all market participants that initiate

⁶ See generally Securities Exchange Act Release No. 43086 (July 28, 2000), 65 FR 48023 (August 4, 2000) (Order approving Options Intermarket Linkage Plan).

⁷ 15 U.S.C. 78f(b).

⁸ 15 U.S.C. 78f(b)(5).

⁹ *Id.*

transactions on the floor of the Exchange. Furthermore, any perceived burden on Floor Brokers or Market-Makers is misplaced because Floor Brokers and Market-makers are no worse off from this proposal as both parties are currently held responsible for book priority and trade-through violations. The Exchange does not believe that the proposed change will impose any burden on intermarket competition because it only applies to trading on CBOE.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

The Exchange neither solicited nor received comments on the proposed rule change.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

Within 45 days of the date of publication of this notice in the **Federal Register** or within such longer period up to 90 days (i) as the Commission may designate if it finds such longer period to be appropriate and publishes its reasons for so finding or (ii) as to which the Exchange consents, the Commission will:

- A. By order approve or disapprove such proposed rule change, or
- B. institute proceedings to determine whether the proposed rule change should be disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's Internet comment form (<http://www.sec.gov/rules/sro.shtml>); or
- Send an email to rule-comments@sec.gov. Please include File Number SR-CBOE-2016-082 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE., Washington, DC 20549-1090.

All submissions should refer to File Number SR-CBOE-2016-082. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will

post all comments on the Commission's Internet Web site (<http://www.sec.gov/rules/sro.shtml>). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for Web site viewing and printing in the Commission's Public Reference Room, 100 F Street NE., Washington, DC 20549, on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the Exchange. All comments received will be posted without change; the Commission does not edit personal identifying information from submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR-CBOE-2016-082 and should be submitted on or before January 9, 2017.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.¹⁰

Eduardo A. Aleman,

Assistant Secretary.

SECURITIES AND EXCHANGE COMMISSION

Submission for OMB Review; Comment Request

Upon Written Request, Copies Available From: Securities and Exchange Commission, Office of FOIA Services, 100 F Street NE., Washington, DC 20549-2736.

Extension:

Regulation S-AM, SEC File No. 270-548, OMB Control No. 3235-0609.

Notice is hereby given that, pursuant to the Paperwork Reduction Act of 1995 ("PRA") (44 U.S.C. 3501 *et seq.*), the Securities and Exchange Commission ("Commission") has submitted to the Office of Management and Budget ("OMB") a request for approval of extension of the previously approved collection of information provided for in Regulation S-AM (17 CFR part 248, subpart B), under the Fair Credit

Reporting Act (15 U.S.C. 1681 *et seq.*) ("FCRA"), the Securities Exchange Act of 1934 (15 U.S.C. 78a *et seq.*), the Investment Company Act of 1940 (15 U.S.C. 80a-1 *et seq.*), and the Investment Advisers Act of 1940 (15 U.S.C. 80b-1 *et seq.*).

Regulation S-AM implements the requirements of Section 624 of the FCRA (15 U.S.C. 1681s-3) with respect to investment advisers and transfer agents registered with the Commission, as well as brokers, dealers and investment companies (collectively, "Covered Persons"). Section 624 and Regulation S-AM limit a Covered Person's use of certain consumer financial information received from an affiliate to solicit a consumer for marketing purposes, unless the consumer has been given notice and a reasonable opportunity and a reasonable and simple method to opt out of such solicitations. Regulation S-AM potentially applies to all of the approximately 32,061 Covered Persons registered with the Commission, although only approximately 17,954 of them have one or more corporate affiliates, and the regulation requires only approximately 3,206 to provide consumers with an affiliate marketing notice and an opt-out opportunity.

The Commission staff estimates that there are approximately 17,954 Covered Persons having one or more affiliates, and that they each spend an average of 0.20 hours per year to review affiliate marketing practices, for, collectively, an estimated annual time burden of 3,591 hours at an annual internal staff cost of approximately \$1,798,991. The staff also estimates that approximately 3,206 Covered Persons provide notice and opt-out opportunities to consumers, and that they each spend an average of 7.6 hours per year creating notices, providing notices and opt-out opportunities, monitoring the opt-out notice process, making and updating records of opt-out elections, and addressing consumer questions and concerns about opt-out notices, for, collectively, an estimated annual time burden of 24,366 hours at an annual internal staff cost of approximately \$4,489,806. Thus, the staff estimates that the collection of information requires a total of approximately 17,954 respondents to incur an estimated annual time burden of a total of 27,957 hours at a total annual internal cost of compliance of approximately \$6,288,897.

An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information under the PRA unless it displays a currently valid OMB control number.

¹⁰ 17 CFR 200.30-3(a)(12).

The public may view background documentation for this information collection at the following Web site: www.reginfo.gov. Comments should be directed to: (i) Desk Officer for the Securities and Exchange Commission, Office of Information and Regulatory Affairs, Office of Management and Budget, Room 10102, New Executive Office Building, Washington, DC 20503, or by sending an email to: Shagufta.Ahmed@omb.eop.gov; and (ii) Pamela Dyson, Director/Chief Information Officer, Securities and Exchange Commission, c/o Remi Pavlik-Simon, 100 F Street NE., Washington, DC 20549, or by sending an email to: PRA_Mailbox@sec.gov. Comments must be submitted to OMB within 30 days of this notice.

Dated: December 6, 2016.

Brent J. Fields,

Secretary.

[FR Doc. 2016-30378 Filed 12-16-16; 8:45 am]

BILLING CODE 8011-01-P

SECURITIES AND EXCHANGE COMMISSION

Proposed Collection; Comment Request

Upon Written Request, Copies Available From: Securities and Exchange Commission, Office of FOIA Services, 100 F Street NE., Washington, DC 20549-2736.

Extension:

Rule 102, SEC File No. 270-409, OMB Control No. 3235-0467.

Notice is hereby given that pursuant to the Paperwork Reduction Act of 1995 ("PRA") (44 U.S.C. 3501 *et seq.*), the Securities and Exchange Commission ("Commission") is soliciting comments on the existing collection of information provided for in Rule 102 of Regulation M (17 CFR 242.102), under the Securities Exchange Act of 1934 (15 U.S.C. 78a *et seq.*). The Commission plans to submit this existing collection of information to the Office of Management and Budget ("OMB") for extension and approval.

Rule 102—Activities by Issuers and Selling Security Holders During a Distribution—prohibits distribution participants, issuers, and selling security holders from purchasing activities at specified times during a distribution of securities. Persons otherwise covered by these rules may seek to use several applicable exceptions such as exclusion for actively traded reference securities and the maintenance of policies regarding

information barriers between their affiliates.

There are approximately 998 respondents per year that require an aggregate total of 1,898 hours to comply with this rule. Each respondent makes an estimated 1 annual response. Each response takes on average approximately 1.902 hours to complete. Thus, the total compliance burden per year is 1,898 burden hours. The total internal compliance cost for all respondents is approximately \$123,370.00, resulting in an internal cost of compliance per response of approximately \$124.00 (*i.e.*, \$123,370.00/998 responses).

Written comments are invited on: (a) Whether the proposed collection of information is necessary for the proper performance of the functions of the Commission, including whether the information shall have practical utility; (b) the accuracy of the Commission's estimates of the burden of the proposed collection of information; (c) ways to enhance the quality, utility, and clarity of the information collected; and (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology. Consideration will be given to comments and suggestions submitted in writing within 60 days of this publication.

An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information under the PRA unless it displays a currently valid OMB control number.

Please direct your written comments to: Pamela Dyson, Director/Chief Information Officer, Securities and Exchange Commission, c/o Remi Pavlik-Simon, 100 F Street NE., Washington, DC 20549 or send an email to: PRA_Mailbox@sec.gov.

Dated: December 6, 2016.

Brent J. Fields,

Secretary.

BILLING CODE 8011-01-P

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34-79537; File No. SR-BatsEDGX-2016-70]

Self-Regulatory Organizations; Bats EDGX Exchange, Inc.; Notice of Filing and Immediate Effectiveness of a Proposed Rule Change To Amend Exchange Rule 11.22(b) Regarding the Data Collection Requirements of the Regulation NMS Plan To Implement a Tick Size Pilot Program

December 13, 2016.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (the "Act"),¹ and Rule 19b-4 thereunder,² notice is hereby given that on November 30, 2016, Bats EDGX Exchange, Inc. (the "Exchange" or "EDGX") filed with the Securities and Exchange Commission ("Commission") the proposed rule change as described in Items I and II below, which Items have been prepared by the Exchange. The Exchange has designated this proposal as a "non-controversial" proposed rule change pursuant to Section 19(b)(3)(A) of the Act³ and Rule 19b-4(f)(6)(iii) thereunder,⁴ which renders it effective upon filing with the Commission. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange filed a proposal to amend Exchange Rule 11.22(b) regarding the data collection requirements of the Regulation NMS Plan to Implement a Tick Size Pilot Program ("Plan").

The text of the proposed rule change is available at the Exchange's Web site at www.batstrading.com, at the principal office of the Exchange, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The

¹ 15 U.S.C. 78s(b)(1).

² 17 CFR 240.19b-4.

³ 15 U.S.C. 78s(b)(3)(A).

⁴ 17 CFR 240.19b-4(f)(6)(iii).

Exchange has prepared summaries, set forth in Sections A, B, and C below, of the most significant parts of such statements.

(A) Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

On August 25, 2014, the Exchange, and several other self-regulatory organizations (the "Participants") filed with the Commission, pursuant to Section 11A of the Act⁵ and Rule 608 of Regulation NMS thereunder,⁶ the Plan to Implement a Tick Size Pilot Program.⁷ The Participants filed the Plan to comply with an order issued by the Commission on June 24, 2014.⁸ The Plan was published for comment in the **Federal Register** on November 7, 2014, and approved by the Commission, as modified, on May 6, 2015.⁹ The Commission approved the Pilot on a two-year basis, with implementation to begin no later than May 6, 2016.¹⁰ On November 6, 2015, the SEC exempted the Participants from implementing the Pilot until October 3, 2016.¹¹ Under the revised Pilot implementation date, the Pre-Pilot data collection period commenced on April 4, 2016. On September 13, 2016, the SEC exempted the Participants from the requirement to fully implement the Pilot on October 3, 2016, to permit the Participants to implement the pilot on a phased-in basis, as described in the Participants' exemptive request.¹²

The Plan is designed to allow the Commission, market participants, and the public to study and assess the impact of increment conventions on the liquidity and trading of the common stock of small-capitalization companies. Each Participant is required to comply, and to enforce compliance by its

member organizations, as applicable, with the provisions of the Plan.

The Exchange adopted rule amendments to implement the requirements of the Plan, including relating to the Plan's data collection requirements and requirements relating to Web site data publication.¹³ Specifically, with respect to the Web site data publication requirements pursuant to Section VII and Appendices B and C to the Plan, Exchange Rule 11.22(b)(2) provides, among other things, that the Exchange shall make the data required by Items I and II of Appendix B to the Plan, and collected pursuant to paragraph (b)(2)(A) of Rule 11.22, publicly available on the Exchange's Web site on a monthly basis at no charge and shall not identify the Trading Center that generated the data. Exchange Rule 11.22(b)(3)(C), provides, among other things, that the Exchange shall make the data required by Item IV of Appendix B to the Plan, and collected pursuant to paragraph (b)(3) of Rule 11.22, publicly available on the Exchange's Web site on a monthly basis at no charge and shall not identify the Trading Center that generated the data. Exchange Rule 11.22(b)(5) provides, among other things, shall collect and transmit to the Commission data described in Item III of Appendix B of the Plan relating to daily Market Maker registration statistics, but does not currently include a provision requiring the Exchange to publish such data to its Web site.¹⁴ Interpretation and Policy .08 to Exchange Rule 11.22(b) provides, among other things, that the requirement that Exchange or Designated Examining Authority ("DEA") make certain data publicly available on their Web site pursuant to Appendix B and C to the Plan shall commence at the beginning of the Pilot Period.¹⁵

The Exchange is proposing amendments to Rule 11.22(b)(2) (regarding Appendix B.I and B.II data) and Rule 11.22(b)(3)(C) (regarding

Appendix B.IV data), to provide that data required to be made available on Exchange's or DEA's Web site be published within 120 calendar days following month end. The Exchange also proposes to add a provision to Rule 11.22(b)(5) to state that the Exchange shall make data collected under Appendix B.III publicly available on the Exchange Web site within 120 calendar days following month end at no charge. In addition, the proposed amendments to Interpretation and Policy .08 to Exchange Rule 11.22(b) would provide that, notwithstanding the provisions of paragraphs (b)(2), (b)(3)(C), and (b)(5), the Exchange and DEA shall make data for the Pre-Pilot period publicly available on their Web site pursuant to Appendix B and C to the Plan by February 28, 2017.¹⁶ The purpose of delaying the publication of the Web site data is to address confidentiality concerns by providing for the passage of additional time between the market information reflected in the data and the public availability of such information. The Exchange has filed the proposed rule change for immediate effectiveness and has requested that the Commission waive the 30-day operative delay. If the Commission waives the 30-day operative delay, the operative date of the proposed rule change will be the date of filing.

2. Statutory Basis

The Exchange believes that its proposal is consistent with Section 6(b) of the Act¹⁷ in general, and furthers the objectives of Section 6(b)(5) of the Act¹⁸ in particular, in that it is designed to promote just and equitable principles of trade, to foster cooperation and coordination with persons engaged in facilitating transactions in securities, to remove impediments to and perfect the mechanism of a free and open market and a national market system and, in general, to protect investors and the public interest.

The Exchange believes that this proposal is consistent with the Act because it is designed to assist the Participants in meeting their regulatory obligations pursuant to the Plan and is in furtherance of the objectives of the Plan, as identified by the SEC. The

¹⁶ With respect to data for the Pilot Period, the requirement that the Exchange and DEA make data publicly available on their Web site pursuant to Appendix B and C to the Plan shall continue to commence at the beginning of the Pilot Period. Thus, the first Web site publication date for Pilot Period data (covering October 2016) would be published on the Exchange's or DEA's Web site by February 28, 2017, which is 120 days following the end of October 2016.

⁷ See Letter from Brendon J. Weiss, Vice President, Intercontinental Exchange, Inc., to Secretary, Commission, dated August 25, 2014.

⁸ See Securities Exchange Act Release No. 72460 (June 24, 2014), 79 FR 36840 (June 30, 2014).

⁹ See Securities Exchange Act Release No. 74892 (May 6, 2015), 80 FR 27513 (May 13, 2015) ("Approval Order").

¹⁰ See Approval Order at 27533 and 27545.

¹¹ See Securities Exchange Act Release No. 76382 (November 6, 2015), 80 FR 70284 (November 13, 2015).

¹² See Letter from David S. Shillman, Associate Director, Division of Trading and Markets, Commission, to Eric Swanson, EVP, General Counsel and Secretary, Exchange, dated September 13, 2016; see also Letter from Eric Swanson, EVP, General Counsel and Secretary, Exchange, to Brent J. Fields, Secretary, Commission, dated September 9, 2016.

¹³ See, e.g., Securities Exchange Act Release Nos. 77416 (March 22, 2016), 81 FR 17225 (March 28, 2016); and 78798 (September 9, 2016), 81 FR 63532 (September 15, 2016). See also Letter from David S. Shillman, Associate Director, Division of Trading and Markets, Commission, to Marcia E. Asquith, Senior Vice President and Corporate Secretary, FINRA, dated February 17, 2016.

¹⁴ Section VII.A. 4 of the Plan.

¹⁵ The Exchange understands that some Market Makers may utilize a DEA that is not a Participant to the Plan and that their DEA would not be subject to the Plan's data collection requirements. Exchange rules require members that are Market Makers whose DEA is not a Participant to the Plan to transmit transaction data for Market Maker participation and profitability calculations to FINRA. See paragraphs (3)(B) and (4)(B) of Exchange Rule 11.22(b).

Exchange believes that the instant proposal is consistent with the Act in that it is designed to address confidentiality concerns by permitting the Exchange to delay Web site publication to provide for passage of additional time between the market information reflected in the data and the public availability of such information.

(B) Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will result in any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act. The Exchange notes that the proposed rule change implements the provisions of the Plan, and is designed to assist the Participants in meeting their regulatory obligations pursuant to the Plan.

The proposal is intended to address confidentiality concerns that may adversely impact competition, especially for Pilot Securities that may have a relatively small number of designated Market Makers, by permitting the Exchange to delay Web site publication to provide for passage of additional time between the market information reflected in the data and the public availability of such information. The proposal does not alter the information required to be submitted to the SEC.

(C) Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants or Others

Written comments were neither solicited nor received.¹⁹

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

Because the foregoing proposed rule change does not: (i) Significantly affect the protection of investors or the public interest; (ii) impose any significant burden on competition; and (iii) become operative for 30 days from the date on which it was filed, or such shorter time as the Commission may designate, it has become effective pursuant to Section 19(b)(3)(A) ²⁰ of the Act and Rule 19b-4(f)(6) thereunder.²¹

A proposed rule change filed under Rule 19b-4(f)(6) ²² normally does not become operative prior to 30 days after

the date of the filing. However, pursuant to Rule 19b-4(f)(6)(iii),²³ the Commission may designate a shorter time if such action is consistent with the protection of investors and the public interest. The Exchange has filed the proposed rule change for immediate effectiveness and has requested that the Commission waive the requirement that the proposed rule change not become operative for 30 days after the date of the filing so that it may become operative immediately.

The Exchange notes that the proposed rule change implements the provisions of the Plan, and is designed to assist the Participants in meeting their regulatory obligations pursuant to the Plan. The proposal is intended to address confidentiality concerns by permitting the Exchange to delay Web site publication to provide for passage of additional time between the market information reflected in the data and the public availability of such information. The proposal also does not alter the information required to be submitted to the SEC.

The Commission believes that waiving the 30-day operative delay is consistent with the protection of investors and the public interest because it will allow the Exchange to implement proposed changes that are intended to address confidentiality concerns. The Commission notes that some Pilot data was scheduled to be published on November 30, 2016. Therefore, the Commission hereby waives the 30-day operative delay and designates the proposed rule change to be operative as of November 30, 2016.²⁴

At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act.²⁵ If the Commission takes such action, the Commission shall institute proceedings to determine whether the proposed rule should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views and arguments concerning the foregoing, including whether the proposal is consistent with the Act. Comments may

be submitted by any of the following methods:

Electronic Comments

- Use the Commission's Internet comment form (<http://www.sec.gov/rules/sro.shtml>); or
- Send an email to rule-comments@sec.gov. Please include File No. SR-BatsEDGX-2016-70 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE., Washington, DC 20549-1090.

All submissions should refer to File No. SR-BatsEDGX-2016-70. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's Internet Web site (<http://www.sec.gov/rules/sro.shtml>). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for Web site viewing and printing in the Commission's Public Reference Room, 100 F Street NE., Washington, DC 20549, on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of such filing will also be available for inspection and copying at the principal office of the Exchange. All comments received will be posted without change; the Commission does not edit personal identifying information from submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File No. SR-BatsEDGX-2016-70 and should be submitted on or before January 9, 2017.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.²⁶

Eduardo A. Aleman,

Assistant Secretary.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34-79541; File No. SR-ISEGemini-2016-23]

Self-Regulatory Organizations; ISE Gemini, LLC; Notice of Filing of Proposed Rule Change To Amend ISE Gemini Rule 723 and To Make Pilot Program Permanent

December 13, 2016.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (the “Act”),¹ and Rule 19b-4 thereunder,² notice is hereby given that on December 12, 2016, ISE Gemini, LLC (the “Exchange” or “ISE Gemini”) filed with the Securities and Exchange Commission (“Commission”) the proposed rule change as described in Items I, II, and III below, which Items have been prepared by the Exchange. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization’s Statement of the Terms of Substance of the Proposed Rule Change

The Exchange proposes to amend ISE Gemini Rule 723, concerning its Price Improvement Mechanism (“PIM”). Certain aspects of PIM are currently operating on a pilot basis (“Pilot”), which is set to expire on January 18, 2017.³ The Pilot concerns (i) the termination of the exposure period by unrelated orders; and (ii) no minimum size requirement of orders eligible for PIM. ISE Gemini seeks to make the Pilot permanent, and also proposes to change the requirements for providing price improvement for Agency Orders of less than 50 option contracts.

The text of the proposed rule change is available on the Exchange’s Web site at <http://nasdaq.cchwallstreet.com>, at the principal office of the Exchange, and at the Commission’s Public Reference Room.

II. Self-Regulatory Organization’s Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these

statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization’s Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

The purpose of this proposed rule change is to make permanent certain pilots within Rule 723, relating to PIM. Paragraph .03 of the Supplementary Material to Rule 723 provides that there is no minimum size requirement for orders to be eligible for PIM. Paragraph .05 concerns the termination of the exposure period by unrelated orders. In addition, ISE Gemini proposes to modify the requirements for PIM auctions involving less than 50 contracts where the National Best Bid and Offer (“NBBO”) is only \$0.01 wide.

Background

The Exchange adopted PIM as part of its application to be registered as a national securities exchange under its previous name of Topaz Exchange, LLC (“Topaz”).⁴ In approving PIM, the Commission noted that it was largely based on a similar functionality offered by the International Securities Exchange, LLC (“ISE”).⁵ The PIM is a process that allows Electronic Access Members (“EAM”) to provide price improvement opportunities for a transaction wherein the Member seeks to execute an agency order as principal or execute an agency order against a solicited order (a “Crossing Transaction”). A Crossing Transaction is comprised of the order the EAM represents as agent (the “Agency Order”) and a counter-side order for the full size of the Agency Order (the

“Counter-Side Order”). The Counter-Side Order may represent interest for the Member’s own account, or interest the Member has solicited from one or more other parties, or a combination of both.

Rule 723 sets forth the criteria pursuant to which the PIM is initiated. Specifically, a Crossing Transaction must be entered only at a price that is equal to or better than the national best bid or offer (“NBBO”) and better than the limit order or quote on the Exchange order book on the same side of the Agency Order. The Crossing Transaction may be priced in one-cent increments. The Crossing Transaction may not be canceled, but the price of the Counter-Side Order may be improved during the exposure period.

Rule 723 also sets forth requirements relating to the exposure of orders in PIM and the termination of the exposure period. Upon entry of a Crossing Transaction into the Price Improvement Mechanism, a broadcast message that includes the series, price and size of the Agency Order, and whether it is to buy or sell, will be sent to all Members. This broadcast message will not be included in the ISE disseminated best bid or offer and will not be disseminated through OPRA. Members will be given 500 milliseconds to indicate the size and price at which they want to participate in the execution of the Agency Order (“Improvement Orders”). Improvement Orders may be entered by all Members for their own account or for the account of a Public Customer in one-cent increments at the same price as the Crossing Transaction or at an improved price for the Agency Order, and for any size up to the size of the Agency Order. During the exposure period, Improvement Orders may not be canceled, but may be modified to (1) increase the size at the same price, or (2) improve the price of the Improvement Order for any size up to the size of the Agency Order. During the exposure period, responses (including the Counter Side Order, Improvement Orders, and any changes to either) submitted by Members shall not be visible to other auction participants. The exposure period will automatically terminate (i) at the end of the 500 millisecond period, (ii) upon the receipt of a market or marketable limit order on the Exchange in the same series, or (iii) upon the receipt of a nonmarketable limit order in the same series on the same side of the market as the Agency Order that would cause the price of the Crossing Transaction to be outside of the best bid or offer on the Exchange.

Rule 723 also describes how orders will be executed at the end of the

⁴ See Securities Exchange Act Release No. 70050 (July 26, 2013), 78 FR 46622 (August 1, 2013) (File No. 10-209) (“Exchange Approval Order”). The Exchange subsequently changed its name to ISE Gemini. See Securities Exchange Act Release No. 71586 (February 20, 2014), 79 FR 10861 (February 26, 2014) (SR-Topaz-2014-06). In addition to the Exchange Approval Order and the filings cited above, the following proposed rule changes have been submitted in connection with PIM. See Securities Exchange Act Release Nos. 79253 (November 7, 2016), 81 FR 79540 (ISEGemini-2016-13); 78343 (July 15, 2016), 81 FR 47483 (July 21, 2016) (SR-ISE Gemini-2016-07); 75481 (July 17, 2015), 80 FR 43826 (July 23, 2015) (SR-ISE Gemini-2015-13); 73317 (October 8, 2014), 79 FR 61911 (October 15, 2014) (SR-ISEGemini-2014-26); 72553 (July 8, 2014), 79 FR 40813 (July 8, 2014) (SR-ISE Gemini-2014-19); 72466 (June 25, 2014), 79 FR 37378 (July 1, 2014) (SR-ISE Gemini-2014-17); 70636 (October 9, 2013), 78 FR 62838 (October 22, 2013) (SR-Topaz-2013-05).

⁵ See Exchange Approval Order, *supra* note 4.

exposure period. Specifically, at the end of the exposure period, the Agency Order will be executed in full at the best prices available, taking into consideration orders and quotes in the Exchange market, Improvement Orders, and the Counter-Side Order. The Agency Order will receive executions at multiple price levels if there is insufficient size to execute the entire order at the best price. At a given price, Priority Customer interest is executed in full before Professional Orders and any other interest of Members (*i.e.*, proprietary interest from Electronic Access Members and Exchange market makers).

After Priority Customer interest at a given price, Professional Orders and Members' interest will participate in the execution of the Agency Order based upon the percentage of the total number of contracts available at the price that is represented by the size of the Members' interest.

In the case where the Counter-Side Order is at the same price as Members' interest (after Priority Customer interest at a given price), the Counter-Side order will be allocated the greater of one (1) contract or forty percent (40%) of the initial size of the Agency Order before other Member interest is executed. Upon entry of Counter-Side orders, Members can elect to automatically match the price and size of orders, quotes and responses received during the exposure period up to a specified limit price or without specifying a limit price. In this case, the Counter-Side order will be allocated its full size at each price point, or at each price point within its limit price if a limit is specified, until a price point is reached where the balance of the order can be fully executed. At such price point, the Counter-Side order shall be allocated the greater of one contract or forty percent (40%) of the original size of the Agency Order, but only after Priority Customer Orders at such price point are executed in full. Thereafter, all other orders, Responses, and quotes at the price point will participate in the execution of the Agency Order based upon the percentage of the total number of contracts available at the price that is represented by the size of the order, Response or quote. An election to automatically match better prices cannot be cancelled or altered during the exposure period.

When a market order or marketable limit order on the opposite side of the market from the Agency Order ends the exposure period, it will participate in the execution of the Agency Order at the price that is mid-way between the best counter-side interest and the NBBO, so

that both the market or marketable limit order and the Agency Order receive price improvement. Transactions will be rounded, when necessary, to the \$.01 increment that favors the Agency Order.

The Pilot

As described above, two components of PIM are currently operating on a pilot basis: (i) The termination of the exposure period by unrelated orders; and (ii) no minimum size requirement of orders entered into PIM. The pilot has been extended until January 18, 2017.⁶

As described in greater detail below, during the pilot period the Exchange has been required to submit, and has been submitting, certain data periodically as required by the Commission, to provide supporting evidence that, among other things, there is meaningful competition for all size orders within the PIM, that there is significant price improvement for all orders executed through the PIM, and that there is an active and liquid market functioning on the Exchange both within PIM and outside of the Auction mechanism. The Exchange has also analyzed the impact of certain aspects of the Pilot; for example, situation in which PIM is terminated prematurely by an unrelated order.

The Exchange now seeks to have the Pilot approved on a permanent basis. In addition, the Exchange proposes to modify the scope of PIM so that, with respect to PIM orders for less than 50 option contracts, members will be required to receive price improvement of at least one minimum price improvement increment over the NBBO if the NBBO is only \$.01 wide. For orders of 50 contracts or more, or if the difference in the NBBO is greater than \$.01, the requirements for price improvement remain the same.

Price Improvement for Orders Under 50 Contracts

Currently, the PIM may be initiated if all of the following conditions are met. A Crossing Transaction must be entered only at a price that is equal to or better than the NBBO and better than the limit order or quote on the Exchange order book on the same side of the Agency Order. The Crossing Transaction may be priced in one-cent increments. The Crossing Transaction may not be canceled, but the price of the Counter-Side Order may be improved during the exposure period.

ISE Gemini proposes to amend Rule 723(b) to require Electronic Access Members to provide at least \$.01 price improvement for an Agency Order if

that order is for less than 50 contracts and if the difference between the NBBO is \$.01. For the period beginning January 19, 2017 until a date specified by the Exchange in a Regulatory Information Circular, which date shall be no later than April 15, 2017, ISE Gemini will adopt a member conduct standard to implement this requirement.⁷ Under this provision, ISE Gemini is proposing to amend the Auction Eligibility Requirements to require that, if the Agency Order is for less than 50 option contracts, and if the difference between the NBBO is \$.01, an Electronic Access Member shall not enter a Crossing Transaction unless such Crossing Transaction is entered at a price that is one minimum price improvement increment better than the NBBO on the opposite side of the market from the Agency Order, and better than any limit order on the limit order book on the same side of the market as the Agency Order. This requirement will apply regardless of whether the Agency Order is for the account of a public customer, or where the Agency Order is for the account of a broker dealer or any other person or entity that is not a Public Customer. Failure to provide such price improvement will subject Members to the fines set forth in Rule 1614(d)(4) of the International Securities Exchange, LLC ("ISE").⁸

The Exchange will conduct electronic surveillance of PIM to ensure that members comply with the proposed

⁷ The Exchange notes that its indirect parent company, U.S. Exchange Holdings, Inc. has been acquired by Nasdaq, Inc. See Securities Exchange Act Release No. 78119 (June 21, 2016), 81 FR 41611 (June 27, 2016) (SR-ISEGemini-2016-05). Pursuant to this acquisition, ISE Gemini platforms are migrating to Nasdaq platforms, including the platform that operates PIM. ISE Gemini intends to retain the proposed member conduct standard requiring price improvement for options orders of under 50 contracts where the difference between the NBBO is \$.01 until the ISE Gemini platforms and the corresponding symbols are migrated to the platforms operated by Nasdaq, Inc.

⁸ In a separate proposed rule change, ISE is proposing to adopt similar price improvement requirements for orders of less than 50 contracts for its PIM. As part of that rule change, ISE is proposing to amend ISE Rule 1614 (Imposition of Fines for Minor Rule Violations) to add Rule 1614(d)(4), which will provide that, beginning January 19, 2017, any Member who enters an order into PIM for less than 50 contracts, while the National Best Bid or Offer spread is \$.01, must provide price improvement of at least one minimum price improvement increment better than the NBBO on the opposite side of the market from the Agency Order, which increment may not be smaller than \$.01. Failure to provide such price improvement will result in members being subject to the following fines: \$500 for the second offense, \$1,000 for the third offense, and \$2,500 for the fourth offense. Subsequent offenses will subject the member to formal disciplinary action. ISE will review violations on a monthly cycle to assess these violations.

⁶ See note 3 above.

price improvement requirements for option orders of less than 50 contracts. Specifically, using an electronic surveillance system that produces alerts of potentially unlawful PIM orders, the Exchange will perform a frequent review of member firm activity to identify instances of apparent violations. Upon discovery of an apparent violation, the Exchange will attempt to contact the appropriate member firm to communicate the specifics of the apparent violation with the intent to assist the member firm in preventing submission of subsequent problematic orders. The Exchange will review the alerts monthly and determine the applicability of the MRVP and appropriate penalty. The Exchange is not limited to the application of the MRVP, and may at its discretion, choose to escalate a matter for processing through the Exchange's disciplinary program.

The Exchange is also proposing a systems-based mechanism to implement this price improvement requirement, which shall be effective following the migration of a symbol to INET, the platform operated by Nasdaq, Inc. that will also operate the PIM. Under this provision, if the Agency Order is for less than 50 option contracts, and if the difference between the National Best Bid and National Best Offer ("NBBO") is \$0.01, the Crossing Transaction must be entered at one minimum price improvement increment better than the NBBO on the opposite side of the market from the Agency Order and better than the limit order or quote on the ISE order book on the same side of the Agency Order.

The Exchange believes that these changes to PIM may provide additional opportunities for Agency Orders of under 50 option contracts to receive price improvement over the NBBO where the difference in the NBBO is \$0.01 and therefore encourage the increased submission of orders of under 50 option contracts. The Exchange notes that the statistics for the current pilot, which include, among other things, price improvement for orders of less than 50 option contracts under the current auction eligibility requirements, show relatively small amounts of price improvement for such orders. ISE Gemini believes that the proposed requirements will therefore increase the price improvement that orders of under 50 option contracts may receive in PIM.

The Exchange will retain the current requirements for auction eligibility where the Agency Order is for 50 option contracts or more, or if the difference between the NBBO is greater than \$0.01. Accordingly, the Exchange is amending

the Auction Eligibility Requirements to state that, if the PIM Order is for 50 option contracts or more or if the difference between the NBBO is greater than \$0.01, the Crossing Transaction must be entered only at a price that is equal to or better than the NBBO and better than the limit order or quote on the Exchange order book on the same side as the Agency Order.

No Minimum Size Requirement

Supplemental Material .03 to Rule 723 provides that, as part of the current Pilot, there will be no minimum size requirement for orders to be eligible for the Auction.⁹ As with the ISE PIM, the Exchange proposed the no-minimum size requirement for the PIM because it believed that this would provide small customer orders with the opportunity to participate in the PIM and to receive corresponding price improvement. In initially approving the ISE PIM, the Commission noted that the no minimum size requirement provided an opportunity for more market participants to participate in the auction.¹⁰ The Commission also stated that it would evaluate PIM during the Pilot Period to determine whether it would be beneficial to customers and to the options market as a whole to approve any proposal requesting permanent approval to permit orders of fewer than 50 contracts to be submitted to the PIM.¹¹

As noted above, throughout the Pilot, the Exchange has been required to submit certain data periodically to provide supporting evidence that, among other things, there is meaningful competition for all size orders within the PIM, that there is significant price improvement for all orders executed through the PIM, and that there is an active and liquid market functioning on the Exchange both within PIM and outside of the Auction mechanism.

The Exchange believes that the data gathered since the approval of the Pilot establishes that there is liquidity and competition both within PIM and outside of PIM, and that there are

opportunities for significant price improvement within PIM.¹²

In the period between January and June 2016, the PIM executed a total of 297,239 contracts, which represented 0.62% of total ISE Gemini contract volume and 0.01% of industry volume. The percent of ISE Gemini volume traded in PIM ranged from 0.47% in May 2016 to 0.69% in February 2016.

The Exchange compiled price improvement data in orders from January through June 2016 that divides the data into the following groups: (1) Orders of over 50 contracts where the Agency Order was on behalf of a Public Customer and ISE Gemini was at the NBBO; (2) orders of over 50 contracts where the Agency Order was on behalf of a Public Customer and ISE Gemini was not at the NBBO; (3) orders of over 50 contracts where the Agency Order was on behalf of a non-customer and ISE Gemini was at the NBBO; (4) orders of over 50 contracts where the Agency Order was on behalf of a non-customer and ISE Gemini was not at the NBBO; (5) orders of 50 contracts or less where the Agency Order was on behalf of a Public Customer and ISE Gemini was at the NBBO; (6) orders of 50 contracts or less where the Agency Order was on behalf of a Public Customer and ISE Gemini was not at the NBBO; (7) orders of 50 contracts or less where the Agency Order was on behalf of a non-customer and ISE Gemini was at the NBBO; and (8) orders of 50 contracts or less where the Agency Order was on behalf of a non-customer and ISE Gemini was not at the NBBO.

For January 2016, where the order was on behalf of a Public Customer, the order was for 50 contracts or less, and ISE Gemini was at the NBBO, the most contracts traded (4,192) occurred when the spread was between \$0.05 and \$0.10.¹³ Of these, the greatest number of contracts (1,400) received \$0.03 price improvement. There was an average number of three participants when the spread was between \$0.05 and \$0.10. In

¹² Specifically, the Exchange gathered and reported nine separate data fields relating to PIM orders of fewer than 50 contracts, including (1) the number of orders of fewer than 50 contracts entered into the PIM; (2) the percentage of all orders of fewer than 50 contracts sent to the Exchange that are entered into the PIM; (3) the spread in the option, at the time an order of fewer than 50 contracts is submitted to the PIM; and (4) of PIM trades, the percentage done at the NBBO plus \$.01, plus \$.02, plus \$.03, etc. See Exhibit B to Topaz Exchange Application, Securities Exchange Act Release No. 69012 (March 1, 2013), 78 FR 14847 (March 7, 2013) (File No. 10-209).

¹³ This discussion of January 2016 data is intended to be illustrative of data that was gathered between January 2016 and July 2016. The complete underlying data for January 2016 through June 2016 for these eight categories is attached as Exhibit 3.

⁹ The provision relating to the no minimum size requirement also requires the Exchange to submit certain data, periodically as required by the Commission, to provide supporting evidence that, among other things, there is meaningful competition for all size orders within the PIM, that there is significant price improvement for all orders executed through the PIM, and that there is an active and liquid market functioning on the Exchange outside of the PIM. Any raw data which is submitted to the Commission will be provided on a confidential basis.

¹⁰ See Securities Exchange Act Release No. 50819 (December 8, 2004), 69 FR 75093 (December 15, 2004) (SR-ISE-2003-06) ("ISE PIM Approval Order").

¹¹ *Id.*

comparison, 6 contracts that traded at this spread received no price improvement. When the spread was \$0.01 for this same category, a total of 499 contracts traded; 349 contracts received no price improvement, and 150 received \$0.01 price improvement. There was an average number of four participants when the spread was \$0.01.

In comparison, in January 2016, where the order was on behalf of a Public Customer, and the order was for greater than 50 contracts, and ISE Gemini was at the NBBO, the most contracts traded (1,495) occurred where the spread was \$0.02. Of those contracts, the greatest number of contracts (979) received \$0.01 price improvement, and 456 contracts received no price improvement. There was an average number of 4 participants where the spread was \$0.02.

In January 2016, where the order was on behalf of a Public Customer, the order was for 50 contracts or less, and ISE Gemini was not at the NBBO, the most contracts traded (1,403) occurred when the spread was between \$0.05 and \$0.10. Of this category, the greatest number of contracts (570) received \$0.01 price improvement. In comparison, when the spread was \$0.01 in this same category, a total of 80 contracts traded, and all received price improvement.

In comparison, in January 2016, where the order was on behalf of a Public Customer, and order was for greater than 50 contracts, and ISE Gemini was not at the NBBO, the most contracts traded (4,846) occurred where the spread was \$0.05–\$0.10. Of those contracts, the greatest number of contracts (1,234) received \$0.01 price improvement, and 1,008 contracts received no price improvement. There was an average number of 4 participants where the spread was \$0.05–\$0.10.

ISE Gemini believes that the data gathered during the Pilot period indicates that there is meaningful competition in PIM auctions for all size orders, there is an active and liquid market functioning on the Exchange outside of the auction mechanism, and that there are opportunities for significant price improvement for orders executed through PIM. The Exchange therefore believes that it is appropriate to approve the no-minimum size requirement on a permanent basis.

Early Conclusion of the PIM Auction

Supplemental Material .05 to Rule 723 provides that Rule 723(c)(5) and Rule 723(d)(4), which relate to the termination of the exposure period by unrelated orders shall be part of the current Pilot. Rule 723(c)(5) provides

that the exposure period will automatically terminate (i) at the end of the 500 millisecond period,¹⁴ (ii) upon the receipt of a market or marketable limit order on the Exchange in the same series, or (iii) upon the receipt of a nonmarketable limit order in the same series on the same side of the market as the Agency Order that would cause the price of the Crossing Transaction to be outside of the best bid or offer on the Exchange. Rule 723(d)(4) provides that, when a market order or marketable limit order on the opposite side of the market from the Agency Order ends the exposure period, it will participate in the execution of the Agency Order at the price that is mid-way between the best counter-side interest and the NBBO, so that both the market or marketable limit order and the Agency Order receive price improvement. Transactions will be rounded, when necessary, to the \$0.01 increment that favors the Agency Order.¹⁵

As with the no minimum size requirement, the Exchange has gathered data on these three conditions to assess the effect of early PIM Auction conclusions on the Pilot.¹⁶

¹⁴ As initially approved, this provision of Rule 723(c)(5) provided that the exposure period would automatically terminate at the end of a one second period. See Exhibit B to ISE Topaz Form 1 (10–209). This exposure period was subsequently reduced to the current 500 milliseconds, and the Exchange is further proposing to modify the exposure period to a time period of no less than 100 milliseconds and no more than one second. See Securities Exchange Act Release No. 79353 (November 18, 2016), 81 FR 85280 (November 25, 2016) (SR–ISEGemini–2016–14).

¹⁵ When the Pilot was initially approved, Rule 723(d)(5) was approved on a pilot basis, which was subsequently re-numbered as current Rule 723(d)(4). See Securities Exchange Act Release No. 72553 (July 8, 2014), 79 FR 40813 (July 8, 2014) (SR–ISEGemini–2014–19).

¹⁶ The Exchange agreed to gather and submit the following data on this part of the Pilot: (1) The number of times that a market or marketable limit order in the same series on the same side of the market as the Agency Order prematurely ended the PIM auction, and the number of times such orders were entered by the same (or affiliated) firm that initiated the PIM that was terminated; (2) the percentage of PIM early terminations due to the receipt of a market or marketable limit order in the same series on the same side of the market that occurred within a ½ second of the start of the PIM auction; the percentage that occurred within one second of the start of the PIM auction; the percentage that occurred within one and ½ second of the start of the PIM auction; the percentage that occurred within 2 seconds of the start of the PIM auction; the percentage that occurred within 2 and ½ seconds of the PIM auction; and the average amount of price improvement provided to the Agency Order where the PIM is terminated early at each of these time periods; (3) the number of times that a market or marketable limit order in the same series on the opposite side of the market as the Agency Order prematurely ended the PIM auction and at what time the unrelated order ended the PIM auction, and the number of times such orders were entered by the same (or affiliated) firm that initiated the PIM that was terminated; (4) the percentage of

For the period from January 2016 through June 2016, there were a total of 65 early terminated auctions. The number of orders in early terminated PIM auctions constituted 0.08% of total PIM orders. There were a total of 325 contracts that traded through early terminated auctions. The number of contracts in early terminated PIM auctions represented 0.11% of total PIM contracts. Of the early terminated auctions, 50.77% of those auctions received price improvement, and 52% of contracts that traded in an early-terminated auction received price improvement. The total amount of price improvement for PIM auctions that terminated early was \$7.96.

Based on the data gathered during the pilot, the Exchange does not anticipate that any of these conditions will occur with significant frequency, or will otherwise significantly affect the functioning of the PIM. The Exchange also notes that, of the early terminated auctions, 50.77% of those auctions received price improvement, and 52% of contracts that traded in an early-terminated auction received price improvement. The total amount of price improvement per contract for PIM

PIM early terminations due to the receipt of a market or marketable limit order in the same series on the opposite side of the market that occurred within a ½ second of the start of the PIM auction; the percentage that occurred within one second of the start of the PIM auction; the percentage that occurred within one and ½ second of the start of the PIM auction; the percentage that occurred within 2 seconds of the start of the PIM auction; the percentage that occurred within 2 and ½ seconds of the PIM auction; and the average amount of price improvement provided to the Agency Order where the PIM is terminated early at each of these time periods; (5) the number of times that a nonmarketable limit order in the same series on the same side of the market as the Agency Order that would cause the price of the Crossing Transaction to be outside of the best bid or offer on the Exchange prematurely ended the PIM auction and at what time the unrelated order ended the PIM auction, and the number of times such orders were entered by the same (or affiliated) firm that initiated the PIM that was terminated; (6) the percentage of PIM early terminations due to the receipt of a market or marketable limit order in the same series on the same side of the market as the Agency Order that would cause the price of the Crossing Transaction to be outside of the best bid or offer on the Exchange that occurred within a ½ second of the start of the PIM auction; the percentage that occurred within one second of the start of the PIM auction; the percentage that occurred within one and ½ second of the start of the PIM auction; the percentage that occurred within 2 seconds of the start of the PIM auction; the percentage that occurred within 2 and ½ seconds of the PIM auction; and the average amount of price improvement provided to the Agency Order where the PIM is terminated early at each of these time periods; and (7) The average amount of price improvement provided to the Agency Order when the PIM auction is not terminated early (*i.e.*, runs the full three seconds). See Exhibit B to Topaz Exchange Application, Securities Exchange Act Release No. 69012 (March 1, 2013), 78 FR 14847 (March 7, 2013) (File No. 10–209).

auctions that terminated early was \$7.96. The Exchange therefore believes it is appropriate to approve this aspect of the Pilot on a permanent basis.

2. Statutory Basis

The Exchange believes that the proposed rule change is consistent with the provisions of Section 6 of the Act,¹⁷ in general and with Section 6(b)(5) of the Act,¹⁸ in that it is designed to promote just and equitable principles of trade, to foster cooperation and coordination with persons engaged in regulating, clearing, settling, processing information with respect to, and facilitating transactions in securities, to remove impediments to and perfect the mechanism of a free and open market and a national market system, and, in general, to protect investors and the public interest; and is not designed to permit unfair discrimination between customers, issuers, brokers, or dealers, or to regulate by virtue of any authority conferred by the Act matters not related to the purposes of the Act or the administration of the Exchange.

The Exchange believes that the proposed rule change is also consistent with Section 6(b)(8) of the Act¹⁹ in that it does not impose any burden on competition not necessary or appropriate in furtherance of the purposes of the Act.

Specifically, the Exchange believes that PIM, including the rules to which the Pilot applies, results in increased liquidity available at improved prices, with competitive final pricing out of the complete control of the Electronic Access Member that initiated the auction. The Exchange believes that PIM promotes and fosters competition and affords the opportunity for price improvement to more options contracts. The Exchange believes that the changes to the PIM requiring price improvement of at least one minimum price improvement increment over the NBBO for Agency Orders of less than 50 option contracts where the difference in the NBBO is \$0.01 will provide further price improvement for those orders, and thereby encourage additional submission of those orders into PIM. The Exchange believes that the proposal, which subjects members to the Minor Rule Violation Plan for failing to provide the required price improvement, coupled with the Exchange's surveillance efforts, are designed to facilitate members' compliance with the proposed requirement.

The Exchange believes that approving the Pilot on a permanent basis is also consistent with the Act. With respect to the no minimum size requirement, the Exchange believes that the data gathered during the Pilot period indicates that there is meaningful competition in the PIM for all size orders, there is an active and liquid market functioning on the Exchange outside of the auction mechanism, and that there are opportunities for significant price improvement for orders executed through PIM, including for small customer orders.

With respect to the early termination of the PIM, the Exchange believes that it is appropriate to terminate an auction (i) at the end of the 500 millisecond period, (ii) upon the receipt of a market or marketable limit order on the Exchange in the same series, or (iii) upon the receipt of a nonmarketable limit order in the same series on the same side of the market as the Agency Order that would cause the price of the Crossing Transaction to be outside of the best bid or offer on the Exchange. The Exchange also believes that it is consistent with the Act to require that, when a market order or marketable limit order on the opposite side of the market from the Agency Order ends the exposure period, it will participate in the execution of the Agency Order at the price that is mid-way between the best counter-side interest and the NBBO, so that both the market or marketable limit order and the Agency Order receive price improvement. Based on the data gathered during the pilot, the Exchange does not anticipate that any of these conditions will occur with significant frequency, or will otherwise disrupt the functioning of the PIM. The Exchange also notes that a significant percentage of PIM auctions that terminated early executed at a price that was better than the NBBO at the time the auction began, and that a significant percentage of contracts in auctions that terminated early received price improvement.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition not necessary or appropriate in furtherance of the purposes of the Act. The proposal will apply to all Exchange members, and participation in the PIM process is completely voluntary. Based on the data collected by the Exchange during the Pilot, the Exchange believes that there is meaningful competition in the PIM for all size orders, there are opportunities for significant price improvement for orders executed through PIM, and that

there is an active and liquid market functioning on the Exchange outside of the PIM. The Exchange believes that requiring increased price improvement for Agency Orders may encourage competition by attracting additional orders to participate in the PIM. The Exchange believes that approving the Pilot on a permanent basis will not significantly impact competition, as the Exchange is proposing no other change to the Pilot beyond implementing it on a permanent basis.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received from Members, Participants, or Others

No written comments were either solicited or received.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

Within 45 days of the date of publication of this notice in the **Federal Register** or within such longer period (i) as the Commission may designate up to 90 days of such date if it finds such longer period to be appropriate and publishes its reasons for so finding or (ii) as to which the Exchange consents, the Commission shall: (a) By order approve or disapprove such proposed rule change, or (b) institute proceedings to determine whether the proposed rule change should be disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's Internet comment form (<http://www.sec.gov/rules/sro.shtml>); or
- Send an email to rule-comments@sec.gov. Please include File Number SR-ISEGemini-2016-23 on the subject line.

Paper Comments

- Send paper comments in triplicate to Brent J. Fields, Secretary, Securities and Exchange Commission, 100 F Street NE., Washington, DC 20549-1090. All submissions should refer to File Number SR-ISEGemini-2016-23. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's Internet Web site (<http://www.sec.gov/>

¹⁷ 15 U.S.C. 78f.

¹⁸ 15 U.S.C. 78f(b)(5).

¹⁹ 15 U.S.C. 78f(b)(8).

rules/sro.shtml). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for Web site viewing and printing in the Commission's Public Reference Room, 100 F Street NE., Washington, DC 20549, on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the Exchange. All comments received will be posted without change; the Commission does not edit personal identifying information from submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR-ISEGemini-2016-23 and should be submitted on or before January 9, 2017.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.²⁰

Eduardo A. Aleman,
Assistant Secretary.

BILLING CODE 8011-01-P

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34-79538; File No. SR-CHX-2016-21]

Self Regulatory Organizations; Chicago Stock Exchange, Inc.; Notice of Filing and Immediate Effectiveness of a Proposed Rule Change To Modify the Web Site Data Publication Requirements and Clarify Certain Data Reporting Obligations Related to the Regulation NMS Plan To Implement a Tick Size Pilot Program

December 13, 2016.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 ("Act"),¹ and Rule 19b-4² thereunder, notice is hereby given that on November 29, 2016, the Chicago Stock Exchange, Inc. ("CHX" or the "Exchange") filed with the Securities and Exchange Commission ("Commission") the proposed rule change as described in Items I and II below, which Items have

been prepared by the Exchange. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

CHX proposes to amend Article 20, Rule 13(b) of the Rules of the Exchange ("CHX Rules") to modify the Web site data publication requirements and clarify the Exchange's data reporting obligations relating to the Regulation NMS Plan to Implement a Tick Size Pilot Program.

The text of this proposed rule change is available on the Exchange's Web site at (www.chx.com) and in the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the CHX included statements concerning the purpose of and basis for the proposed rule changes and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The CHX has prepared summaries, set forth in sections A, B and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Changes

1. Purpose

On August 25, 2014, the Exchange, and several other self-regulatory organizations (the "Plan Participants")³ filed with the Commission, pursuant to Section 11A of the Act⁴ and Rule 608 of Regulation NMS thereunder,⁵ the Plan to Implement a Tick Size Pilot Program (the "Plan").⁶ The Plan Participants filed the Plan to comply with an order issued by the Commission

³ A "Participant" is a "member" of the Exchange for purposes of the Act. See CHX Article 1, Rule 1(s). For clarity, the Exchange proposes to utilize the term "CHX Participant" when referring to members of the Exchange and the term "Plan Participant" when referring to Participants of the Plan.

⁴ 15 U.S.C. 78k-1.

⁵ 17 CFR 242.608.

⁶ See Letter from Brendon J. Weiss, Vice President, Intercontinental Exchange, Inc., to Secretary, Commission, dated August 25, 2014.

on June 24, 2014.⁷ The Plan⁸ was published for comment in the **Federal Register** on November 7, 2014, and approved by the Commission, as modified, on May 6, 2015.⁹ The Commission approved the Pilot on a two-year basis, with implementation to begin no later than May 6, 2016.¹⁰ On November 6, 2015, the SEC exempted the Plan Participants from implementing the pilot until October 3, 2016.¹¹ As set forth in Appendices B and C to the Plan, data that is reported pursuant to the appendices shall be provided for dates starting six months prior to the Pilot Period through six months after the end of the Pilot Period. Under the revised Pilot implementation date, the Pre-Pilot data collection period commenced on April 4, 2016. On September 13, 2016, the Commission exempted the Plan Participants from the requirement to fully implement the Pilot on October 3, 2016, to permit the Plan Participants to implement the pilot on a phased-in basis, as described in the Plan Participants' exemptive request.¹²

The Plan is designed to allow the Commission, market participants, and the public to study and assess the impact of increment conventions on the liquidity and trading of the common stocks of small-capitalization companies. Each Plan Participant is required to comply, and to enforce compliance by its members, as applicable, with the provisions of the Plan.

On March 28, 2016, the Exchange filed with the Commission a proposed rule change to adopt Article 20, Rule 13(b), which was immediately effective upon filing, to implement the data collection requirements of the Plan, including requirements relating to Web site data publication.¹³ Specifically, current Article 20, Rule 13(b)(2)(A)(v) provides that the Exchange shall make Appendix B.I and B.II data of certain

CHX Participants that operate Trading Centers¹⁴ collected pursuant to current Article 20, Rule 13(b)(2)(A) publicly available on the Exchange Web site on a monthly basis at no charge and shall not identify the Trading Center that generated the data. Also, current Article 20, Rule 13(b)(B)(ii) provides that the Exchange shall make Appendix B.I and B.II data of the Exchange operated Trading Center collected pursuant to current Article 20, Rule 13(b)(2)(B)(i) publicly available on the Exchange Web site on a monthly basis at no charge and shall not identify the Trading Center that generated the data. In addition, current Article 20, Rule 13(b)(3)(C) provides that the Exchange shall make Appendix B.IV data collected pursuant to current Article 20, Rule 13(b)(3)(A) and (B) publicly available on the Exchange Web site on a monthly basis at no charge and shall not identify the Trading Center that generated the data.

The Exchange is now proposing amendments to Article 20, Rule 13(b)(2)(A)(v) (regarding Appendix B.I and B.II data for Trading Centers operated by CHX Participants), Article 20, Rule 13(b)(2)(B)(ii) (regarding Appendix B.I and B.II data for the Exchange operated Trading Center) and Article 20, Rule 13(b)(3)(C) (regarding Appendix B.IV data) to provide that data required to be made available on the Exchange Web site be published within 120 calendar days following the month end. The Exchange also proposes to adopt new language under Article 20, Rule 13(b)(5) (regarding Appendix B.III data) that provides that the Exchange shall make its Appendix B.III data publicly available on the CHX Web site within 120 calendar days following month end at no charge and shall not identify the Trading Center that generated the data.

Moreover, the Exchange is proposing to adopt Article 20, Rule 13(b)(4)(C) (regarding Appendix C data) to clarify that the Exchange, as a Designated Examining Authority ("DEA"), shall collect the data required by Item I of Appendix C to the Plan and current paragraph (b)(4)(A) for those CHX Participants that are Market Makers for which the Exchange is the DEA, and on a monthly basis transmit such data, categorized by the Control Group and each Test Group, to the SEC in a pipe

delimited format. Also, in light of the recently proposed amendment to the Financial Industry Regulatory Authority ("FINRA") Rule 6191(b)(4)(B),¹⁵ which provides, among other things, that FINRA shall aggregate and publish (i) Market Maker profitability statistics for Market Makers for which FINRA is the DEA; (ii) Market Maker profitability statistics collected from other Plan Participants that are DEAs; and (iii) Market Maker profitability statistics for Market Maker profitability statistics [sic] for Market Makers whose DEA is not a Plan Participant, the Exchange is proposing to adopt additional language that provides the Exchange, as DEA, shall also make the data collected pursuant to current paragraph (b)(4)(A) available to FINRA for aggregation and publication, categorized by the Control Group and each Test Group, on the FINRA Web site pursuant to FINRA Rules.

Furthermore, the Exchange is proposing amendments to paragraph .08 of the Interpretations and Policies under Article 20, Rule 13(b) to conform its provisions to the above proposed changes. Specifically, amended paragraph .08 would provide that with respect to data for the Pilot Period, the Exchange shall make the data collected pursuant to current paragraph (b)(4)(A) available to FINRA for aggregation and publication on the FINRA Web site pursuant to FINRA Rules and the Exchange will publish the data collected pursuant to current paragraphs (2) and (3) on the Exchange Web site, which shall commence at the beginning of the Pilot Period. Also, notwithstanding the provisions of amended paragraphs (b)(2)(A)(v), (b)(2)(B)(ii) and (b)(3)(C), the Exchange shall make data for the Pre-Pilot Period publicly available on the Exchange's Web site pursuant to Appendix B to the Plan by February 28, 2017.

The purpose of delaying the publication of the Web site data is to address confidentiality concerns by providing for the passage of additional time between the market information reflected in the data and the public availability of such information.¹⁶ In

addition, the purpose of adopting language that the Exchange will transmit Appendix C data to the SEC for the Market Making activity of a CHX Participant for which the Exchange is the DEA is to clarify the Exchange's data reporting obligations pursuant to the Plan. Moreover, the purpose of explicitly stating that the Exchange will publish the relevant Appendix B data on its Web site and that FINRA will publish the relevant Appendix C data on its Web site is to conform CHX Rules to the Web site publication procedures recently proposed by FINRA.¹⁷

The Exchange notes that the proposed rule change is similar to SR-FINRA-2016-042 in all material respects, except that the Exchange does not propose to adopt provisions regarding the calculation and public dissemination of Appendix C data as FINRA will be conducting that function on behalf of all Plan Participants. Also, the Exchange has filed the proposed rule change for immediate effectiveness and has requested that the Commission waive the 30-day operative delay. If the Commission waives the 30-day operative delay, the operative date of the proposed rule change will be the date of the filing.

2. Statutory Basis

The Exchange believes that its proposal is consistent with Section 6(b) of the Act¹⁸ in general, and furthers the objectives of Section 6(b)(5) of the Act¹⁹ in particular, in that it is designed to promote just and equitable principles of trade, to foster cooperation and coordination with persons engaged in facilitating transactions in securities, to remove impediments to and perfect the mechanism of a free and open market and a national market system and, in general, to protect investors and the public interest; and are not designed to permit unfair discrimination between customers, issuers, brokers, or dealers.

The Exchange believes that this proposal is consistent with the Act because it is designed to assist the Plan Participants in meeting their regulatory obligations pursuant to the Plan and is in furtherance of the objectives of the Plan, as identified by the SEC. The Exchange believes that the instant proposal is consistent with the Act in that it is designed to (1) address confidentiality concerns by permitting the Exchange to delay Web site publication to provide for passage of additional time between the market information reflected in the data and the

¹⁴ The Plan incorporates the definition of a "Trading Center" from Rule 600(b)(78) of Regulation NMS. Regulation NMS defines a "Trading Center" as "a national securities exchange or national securities association that operates an SRO trading facility, an alternative trading system, an exchange market maker, an OTC market maker, or any other broker or dealer that executes orders internally by trading as principal or crossing orders as agent." See 17 CFR 242.600(b).

¹⁵ See SR-FINRA-2016-042, filed November 15, 2016.

¹⁶ The Exchange understands that some Market Makers may utilize a DEA that is not a Plan Participant and that their Designated Examining Authority ("DEA") would not be subject to the Plan's data collection requirements. Prior to this proposal, the Plan Participants implemented rules that required members that were Market Makers whose DEA is not a Plan Participant to transmit transaction data for Market Maker profitability calculations to FINRA. See e.g., Securities Exchange Act Release No. 77469 (March 29, 2016), 81 FR 19275 (April 4, 2016) (SR-CHX-2016-03).

¹⁷ See *supra* note 15.

¹⁸ 15 U.S.C. 78f(b).

¹⁹ 15 U.S.C. 78f(b)(5).

public availability of such information, (2) clarify the Exchange's data reporting obligations pursuant to the Plan and (3) conform CHX Rules to the Web site publication procedures recently proposed by FINRA.²⁰

B. Self-Regulatory Organization's Statement of Burden on Competition

The Exchange does not believe that the proposed rule change will result in any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act. The Exchange notes that the proposed rule change implements the provisions of the Plan, and is designed to assist the Plan Participants in meeting their regulatory obligations pursuant to the Plan.

The proposal is intended to (1) address confidentiality concerns that may adversely impact competition by permitting the Exchange to delay Web site publication to provide for passage of additional time between the market information reflected in the data and the public availability of such information, (2) clarify the Exchange's data reporting obligations pursuant to the Plan and (3) conform CHX Rules with the Web site publication procedures recently proposed by FINRA.²¹ The Exchange notes that the proposed change will not affect the data reporting requirements for CHX Participants. The proposal also does not alter the information required to be submitted to the SEC.

C. Self-Regulatory Organization's Statement on Comments Regarding the Proposed Rule Changes Received From Members, Participants or Others

No written comments were either solicited or received.

III. Date of Effectiveness of the Proposed Rule Changes and Timing for Commission Action

Because the foregoing proposed rule change does not: (i) Significantly affect the protection of investors or the public interest; (ii) impose any significant burden on competition; and (iii) become operative for 30 days from the date on which it was filed, or such shorter time as the Commission may designate, it has become effective upon filing pursuant to Section 19(b)(3)(A) of the Act²² and Rule 19b-4(f)(6)²³ thereunder.

A proposed rule change filed under Rule 19b-4(f)(6) normally does not become operative prior to 30 days after the date of the filing. However, pursuant to Rule 19b-4(f)(6)(iii), the Commission

may designate a shorter time if such action is consistent with the protection of investors and the public interest. The Exchange has filed the proposed rule change for immediate effectiveness and has requested that the Commission waive the requirement that the proposed rule change not become operative for 30 days after the date of the filing so that it may become operative immediately.

The Exchange notes that the proposed rule change implements the provisions of the Plan, and is designed to assist the Participants in meeting their regulatory obligations pursuant to the Plan. The proposal is intended to address confidentiality concerns by permitting the Exchange to (1) delay Web site publication to provide for passage of additional time between the market information reflected in the data and the public availability of such information; and (2) allow for FINRA to aggregate and publish Market Maker profitability data for all Participant DEAs. The Exchange notes that the proposed change will not affect the data reporting requirements for members for which CHX is the DEA. The proposal also does not alter the information required to be submitted to the Commission.

The Commission believes that waiving the 30-day operative delay is consistent with the protection of investors and the public interest because it will allow the Exchange to implement these proposed changes that are intended to address confidentiality concerns. The Commission notes that some Pilot data was scheduled to be published on November 30, 2016. Therefore, the Commission hereby waives the 30-day operative delay and designates the proposed rule change to be operative on November 30, 2016.²⁴

At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act.²⁵ If the Commission takes such action, the Commission shall institute proceedings under Section 19(b)(2)(B)²⁶ of the Act to determine whether the proposed rule change should be approved or disapproved.

²⁴ For purposes only of waiving the operative delay for this proposal, the Commission has considered the proposed rule's impact on efficiency, competition, and capital formation. See 15 U.S.C. 78c(f).

²⁵ 15 U.S.C. 78s(b)(3)(C).

²⁶ 15 U.S.C. 78s(b)(2)(B).

IV. Solicitation of Comments

Interested persons are invited to submit written data, views and arguments concerning the foregoing, including whether the proposal is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's Internet comment form (<http://www.sec.gov/rules/sro.shtml>); or
- Send an email to rule-comments@sec.gov. Please include File No. SR-CHX-2016-21 on the subject line.

Paper Comments

- Send paper comments in triplicate to Robert W. Errett, Deputy Secretary, Securities and Exchange Commission, 100 F Street NE., Washington, DC 20549-1090.

All submissions should refer to File No. SR-CHX-2016-21. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's Internet Web site (<http://www.sec.gov/rules/sro.shtml>). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule changes between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for Web site viewing and printing in the Commission's Public Reference Room, 100 F Street NE., Washington, DC 20549 on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the CHX. All comments received will be posted without change; the Commission does not edit personal identifying information from submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File No. SR-CHX-2016-21 and should be submitted on or before January 9, 2017.

²⁷ 17 CFR 200.30-3(a)(12).

²⁰ See *supra* note 15.

²¹ See *supra* note 15.

²² 15 U.S.C. 78s(b)(3)(A).

²³ 17 CFR 240.19b-4(f)(6).

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.²⁷

Eduardo A. Aleman,

Assistant Secretary.

SECURITIES AND EXCHANGE COMMISSION

Proposed Collection; Comment Request

Upon Written Request, Copies Available

From: Securities and Exchange Commission, Office of FOIA Services, 100 F Street NE., Washington, DC 20549-2736.

Extension:

Rule 104, SEC File No. 270-411, OMB Control No. 3235-0465.

Notice is hereby given that pursuant to the Paperwork Reduction Act of 1995 ("PRA") (44 U.S.C. 3501 *et seq.*), the Securities and Exchange Commission ("Commission") is soliciting comments on the existing collection of information provided for in Rule 104 of Regulation M (17 CFR 242.104), under the Securities Exchange Act of 1934 (15 U.S.C. 78a *et seq.*). The Commission plans to submit this existing collection of information to the Office of Management and Budget ("OMB") for extension and approval.

Rule 104—Stabilizing and Other Activities in Connection with an Offering—permits stabilizing by a distribution participant during a distribution so long as the distribution participant discloses information to the market and investors. This rule requires disclosure in offering materials of the potential stabilizing transactions and that the distribution participant inform the market when a stabilizing bid is made. It also requires the distribution participants (*i.e.*, the syndicate manager) to maintain information regarding syndicate covering transactions and penalty bids and disclose such information to the Self-Regulatory Organization (SRO).

There are approximately 848 respondents per year that require an aggregate total of 170 hours to comply with this rule. Each respondent makes an estimated 1 annual response. Each response takes approximately 0.20 hours (12 minutes) to complete. Thus, the total compliance burden per year is 170 hours. The total estimated internal labor cost of compliance for the respondents is approximately \$11,050.00 per year, resulting in an estimated cost of compliance for each respondent per response of

approximately \$13.03 (*i.e.*, \$11,050/848 responses).

Written comments are invited on: (a) whether the proposed collection of information is necessary for the proper performance of the functions of the Commission, including whether the information shall have practical utility; (b) the accuracy of the Commission's estimates of the burden of the proposed collection of information; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology. Consideration will be given to comments and suggestions submitted in writing within 60 days of this publication.

An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information under the PRA unless it displays a currently valid OMB control number.

Please direct your written comments to: Pamela Dyson, Director/Chief Information Officer, Securities and Exchange Commission, c/o Remi Pavlik-Simon, 100 F Street NE., Washington, DC 20549 or send an email to: PRA_Mailbox@sec.gov.

Dated: December 6, 2016.

Brent J. Fields,

Secretary.

SECURITIES AND EXCHANGE COMMISSION

Submission for OMB Review; Comment Request

Upon Written Request Copies Available

From: Securities and Exchange Commission, Office of FOIA Services, 100 F Street NE., Washington, DC 20549-2736.

Extension:

Form 10-K, SEC File No. 270-48, OMB Control No. 3235-0063.

Notice is hereby given that, pursuant to the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*), the Securities and Exchange Commission ("Commission") has submitted to the Office of Management and Budget this request for extension of the previously approved collection of information discussed below.

Form 10-K (17 CFR 249.310) is filed by issuers of securities to satisfy their annual reporting obligations under to Section 13 or 15(d) of the Exchange Act

("Exchange Act") (15 U.S.C. 78m or 78o(d)). The information provided by Form 10-K is intended to ensure the adequacy of information available to investors and securities markets about an issuer. Form 10-K takes approximately 2003.7884 hours per response to prepare and is filed by approximately 8,137 respondents. We estimate that 75% of the approximately 2003.7884 hours per response (1,502.8413 hours) is prepared by the company for an annual reporting burden of 12,228,620 hours (1,502.8413 hours per response × 8,137 responses).

An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a currently valid control number.

The public may view the background documentation for this information collection at the following Web site, www.reginfo.gov. Comments should be directed to: (i) Desk Officer for the Securities and Exchange Commission, Office of Information and Regulatory Affairs, Office of Management and Budget, Room 10102, New Executive Office Building, Washington, DC 20503, or by sending an email to: Shagufta_Ahmed@omb.eop.gov; and (ii) Pamela Dyson, Director/Chief Information Officer, Securities and Exchange Commission, c/o Remi Pavlik-Simon, 100 F Street NE., Washington, DC 20549 or send an email to: PRA_Mailbox@sec.gov. Comments must be submitted to OMB within 30 days of this notice.

Dated: December 6, 2016.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34-79539; File No. SR-ISEMercury-2016-25]

Self-Regulatory Organizations; ISE Mercury LLC; Notice of Filing of Proposed Rule Change to Amend ISE Mercury Rule 723 and To Make Pilot Program Permanent

December 13, 2016

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (the "Act"),¹ and Rule 19b-4 thereunder,² notice is hereby given that on December 12, 2016, ISE Mercury, LLC (the "Exchange" or "ISE Mercury") filed with the Securities and Exchange

¹ 15 U.S.C. 78s(b)(1).

² 17 CFR 240.19b-4.

Commission ("Commission") the proposed rule change as described in Items I, II, and III below, which Items have been prepared by the Exchange. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange proposes to amend ISE Mercury Rule 723, concerning its Price Improvement Mechanism ("PIM"). Certain aspects of PIM are currently operating on a pilot basis ("Pilot"), which is set to expire on January 18, 2017.³ The Pilot concerns (i) the termination of the exposure period by unrelated orders; and (ii) no minimum size requirement of orders eligible for PIM. ISE Mercury seeks to make the Pilot permanent, and also proposes to change the requirements for providing price improvement for Agency Orders of less than 50 option contracts.

The text of the proposed rule change is available on the Exchange's Web site at <http://nasdaq.cchwallstreet.com>, at the principal office of the Exchange, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

The purpose of this proposed rule change is to make permanent certain pilots within Rule 723, relating to PIM. Paragraph .03 of the Supplementary Material to Rule 723 provides that there is no minimum size requirement for orders to be eligible for PIM. Paragraph .05 concerns the termination of the exposure period by unrelated orders. In

addition, ISE Mercury proposes to modify the requirements for PIM auctions involving less than 50 contracts where the National Best Bid and Offer ("NBBO") is only \$0.01 wide.

Background

The Exchange adopted PIM as part of its application to be registered as a national securities exchange.⁴ In approving PIM, the Commission noted that it was largely based on a similar functionality offered by the International Securities Exchange, LLC ("ISE").⁵ The PIM is a process that allows Electronic Access Members ("EAM") to provide price improvement opportunities for a transaction wherein the Member seeks to execute an agency order as principal or execute an agency order against a solicited order (a "Crossing Transaction"). A Crossing Transaction is comprised of the order the EAM represents as agent (the "Agency Order") and a counter-side order for the full size of the Agency Order (the "Counter-Side Order"). The Counter-Side Order may represent interest for the Member's own account, or interest the Member has solicited from one or more other parties, or a combination of both.

Rule 723 sets forth the criteria pursuant to which the PIM is initiated. Specifically, a Crossing Transaction must be entered only at a price that is equal to or better than the national best bid or offer ("NBBO") and better than the limit order or quote on the Exchange order book on the same side of the Agency Order. The Crossing Transaction may be priced in one-cent increments. The Crossing Transaction may not be canceled, but the price of the Counter-Side Order may be improved during the exposure period.

Rule 723 also sets forth requirements relating to the exposure of orders in PIM and the termination of the exposure period. Upon entry of a Crossing Transaction into the Price Improvement Mechanism, a broadcast message that includes the series, price and size of the Agency Order, and whether it is to buy or sell, will be sent to all Members. This broadcast message will not be included in the ISE Mercury disseminated best bid or offer and will not be disseminated through OPRA. Members will be given 500 milliseconds to indicate the size and price at which they want to participate in the execution of the Agency Order ("Improvement Orders"). Improvement Orders may be

entered by all Members for their own account or for the account of a Public Customer in one-cent increments at the same price as the Crossing Transaction or at an improved price for the Agency Order, and for any size up to the size of the Agency Order. During the exposure period, Improvement Orders may not be canceled, but may be modified to (1) increase the size at the same price, or (2) improve the price of the Improvement Order for any size up to the size of the Agency Order. During the exposure period, responses (including the Counter Side Order, Improvement Orders, and any changes to either) submitted by Members shall not be visible to other auction participants. The exposure period will automatically terminate (i) at the end of the 500 millisecond period, (ii) upon the receipt of a market or marketable limit order on the Exchange in the same series, or (iii) upon the receipt of a nonmarketable limit order in the same series on the same side of the market as the Agency Order that would cause the price of the Crossing Transaction to be outside of the best bid or offer on the Exchange.

Rule 723 also describes how orders will be executed at the end of the exposure period. Specifically, at the end of the exposure period, the Agency Order will be executed in full at the best prices available, taking into consideration orders and quotes in the Exchange market, Improvement Orders, and the Counter-Side Order. The Agency Order will receive executions at multiple price levels if there is insufficient size to execute the entire order at the best price. At a given price, Priority Customer interest is executed in full before Professional Orders and any other interest of Members (*i.e.*, proprietary interest from Electronic Access Members and Exchange market makers).

After Priority Customer interest at a given price, Professional Orders and Members' interest will participate in the execution of the Agency Order based upon the percentage of the total number of contracts available at the price that is represented by the size of the Members' interest.

In the case where the Counter-Side Order is at the same price as Members' interest (after Priority Customer interest at a given price), the Counter-Side order will be allocated the greater of one (1) contract or forty percent (40%) of the initial size of the Agency Order before other Member interest is executed. Upon entry of Counter-Side orders, Members can elect to automatically match the price and size of orders, quotes and responses received during the exposure period up to a specified

³ See Securities Exchange Act Release No. 78342 (July 15, 2016), 81 FR 47481 (July 21, 2016) (SR-ISEMercury-2016-13).

⁴ See Securities Exchange Act Release No. 76998 (January 29, 2016), 81 FR 6066 (February 4, 2016) (File No. 10-221) ("Exchange Approval Order").

⁵ See Exchange Approval Order, *supra* note 4.

limit price or without specifying a limit price. In this case, the Counter-Side order will be allocated its full size at each price point, or at each price point within its limit price if a limit is specified, until a price point is reached where the balance of the order can be fully executed. At such price point, the Counter-Side order shall be allocated the greater of one contract or forty percent (40%) of the original size of the Agency Order, but only after Priority Customer Orders at such price point are executed in full. Thereafter, all other orders, Responses, and quotes at the price point will participate in the execution of the Agency Order based upon the percentage of the total number of contracts available at the price that is represented by the size of the order, Response or quote. An election to automatically match better prices cannot be cancelled or altered during the exposure period.

When a market order or marketable limit order on the opposite side of the market from the Agency Order ends the exposure period, it will participate in the execution of the Agency Order at the price that is mid-way between the best counter-side interest and the NBBO, so that both the market or marketable limit order and the Agency Order receive price improvement. Transactions will be rounded, when necessary, to the \$.01 increment that favors the Agency Order.

The Pilot

As described above, two components of PIM are currently operating on a pilot basis: (i) The termination of the exposure period by unrelated orders; and (ii) no minimum size requirement of orders entered into PIM. The pilot has been extended until January 18, 2017.⁶

As described in greater detail below, during the pilot period the Exchange has been required to submit, and has been submitting, certain data periodically as required by the Commission, to provide supporting evidence that, among other things, there is meaningful competition for all size orders within the PIM, that there is significant price improvement for all orders executed through the PIM, and that there is an active and liquid market functioning on the Exchange both within PIM and outside of the Auction mechanism. The Exchange has also analyzed the impact of certain aspects of the Pilot; for example, situation in which PIM is terminated prematurely by an unrelated order.

The Exchange now seeks to have the Pilot approved on a permanent basis. In addition, the Exchange proposes to

modify the scope of PIM so that, with respect to PIM orders for less than 50 option contracts, members will be required to receive price improvement of at least one minimum price improvement increment over the NBBO if the NBBO is only \$0.01 wide. For orders of 50 contracts or more, or if the difference in the NBBO is greater than \$0.01, the requirements for price improvement remain the same.

Price Improvement for Orders Under 50 Contracts

Currently, the PIM may be initiated if all of the following conditions are met. A Crossing Transaction must be entered only at a price that is equal to or better than the NBBO and better than the limit order or quote on the Exchange order book on the same side of the Agency Order. The Crossing Transaction may be priced in one-cent increments. The Crossing Transaction may not be canceled, but the price of the Counter-Side Order may be improved during the exposure period.

ISE Mercury proposes to amend Rule 723(b) to require Electronic Access Members to provide at least \$0.01 price improvement for an Agency Order if that order is for less than 50 contracts and if the difference between the NBBO is \$0.01. For the period beginning January 19, 2017 until a date specified by the Exchange in a Regulatory Information Circular, which date shall be no later than September 15, 2017, ISE Mercury will adopt a member conduct standard to implement this requirement.⁷ Under this provision, the Exchange is proposing to amend the Auction Eligibility Requirements to require that, if the Agency Order is for less than 50 option contracts, and if the difference between the NBBO is \$0.01, an Electronic Access Member shall not enter a Crossing Transaction unless such Crossing Transaction is entered at a price that is one minimum price improvement increment better than the NBBO on the opposite side of the market from the Agency Order and better than any limit order on the limit order book on the same side of the market as the Agency Order. This

requirement will apply regardless of whether the Agency Order is for the account of a public customer, or where the Agency Order is for the account of a broker dealer or any other person or entity that is not a Public Customer. Failure to provide such price improvement will subject Members to the fines set forth in Rule 1614(d)(4) of the International Securities Exchange, LLC ("ISE").⁸

The Exchange will conduct electronic surveillance of PIM to ensure that members comply with the proposed price improvement requirements for option orders of less than 50 contracts. Specifically, using an electronic surveillance system that produces alerts of potentially unlawful PIM orders, the Exchange will perform a frequent review of member firm activity to identify instances of apparent violations. Upon discovery of an apparent violation, the Exchange will attempt to contact the appropriate member firm to communicate the specifics of the apparent violation with the intent to assist the member firm in preventing submission of subsequent problematic orders. The Exchange will review the alerts monthly and determine the applicability of the MRVP and appropriate penalty. The Exchange is not limited to the application of the MRVP, and may at its discretion, choose to escalate a matter for processing through the Exchange's disciplinary program.

The Exchange is also proposing a systems-based mechanism to implement this price improvement requirement, which shall be effective following the migration of a symbol to INET, the platform operated by Nasdaq, Inc. that will also operate the PIM. Under this provision, if the Agency Order is for less than 50 option contracts, and if the difference between the National Best Bid and National Best Offer ("NBBO") is \$0.01, the Crossing Transaction must

⁸ In a separate proposed rule change, ISE is proposing to adopt similar price improvement requirements for orders of less than 50 contracts for its PIM. As part of that rule change, ISE is proposing to amend ISE Rule 1614 (Imposition of Fines for Minor Rule Violations) to add Rule 1614(d)(4), which will provide that, beginning January 19, 2017, any Member who enters an order into PIM for less than 50 contracts, while the National Best Bid or Offer spread is \$0.01, must provide price improvement of at least one minimum price improvement increment better than the NBBO on the opposite side of the market from the Agency Order, which increment may not be smaller than \$0.01. Failure to provide such price improvement will result in members being subject to the following fines: \$500 for the second offense, \$1,000 for the third offense, and \$2,500 for the fourth offense. Subsequent offenses will subject the member to formal disciplinary action. ISE will review violations on a monthly cycle to assess these violations.

⁷ The Exchange notes that its indirect parent company, U.S. Exchange Holdings, Inc. has been acquired by Nasdaq, Inc. See Securities Exchange Act Release No. 78119 (June 21, 2016), 81 FR 41611 (June 27, 2016) (SR-ISEMercury-2016-10). Pursuant to this acquisition, ISE Mercury platforms are migrating to Nasdaq platforms, including the platform that operates PIM. ISE Mercury intends to retain the proposed member conduct standard requiring price improvement for options orders of under 50 contracts where the difference between the NBBO is \$0.01 until the ISE Mercury platforms and the corresponding symbols are migrated to the platforms operated by Nasdaq, Inc.

⁶ See note 3 above.

be entered at one minimum price improvement increment better than the NBBO on the opposite side of the market from the Agency Order and better than the limit order or quote on the ISE order book on the same side of the Agency Order.

The Exchange believes that these changes to PIM may provide additional opportunities for Agency Orders of under 50 option contracts to receive price improvement over the NBBO where the difference in the NBBO is \$0.01 and therefore encourage the increased submission of orders of under 50 option contracts. The Exchange notes that the statistics for the current pilot, which include, among other things, price improvement for orders of less than 50 option contracts under the current auction eligibility requirements, show relatively small amounts of price improvement for such orders. ISE Mercury believes that the proposed requirements will therefore increase the price improvement that orders of under 50 option contracts may receive in PIM.

The Exchange will retain the current requirements for auction eligibility where the Agency Order is for 50 option contracts or more, or if the difference between the NBBO is greater than \$0.01. Accordingly, the Exchange is amending the Auction Eligibility Requirements to state that, if the PIM Order is for 50 option contracts or more or if the difference between the NBBO is greater than \$0.01, the Crossing Transaction must be entered only at a price that is equal to or better than the NBBO and better than the limit order or quote on the ISE Mercury order book on the same side as the Agency Order.

No Minimum Size Requirement

Supplemental Material .03 to Rule 723 provides that, as part of the current Pilot, there will be no minimum size requirement for orders to be eligible for the Auction.⁹ As with the ISE PIM, the Exchange proposed the no-minimum size requirement for the PIM because it believed that this would provide small customer orders with the opportunity to participate in the PIM and to receive corresponding price improvement. In initially approving the ISE PIM, the Commission noted that the no minimum

size requirement provided an opportunity for more market participants to participate in the auction.¹⁰ The Commission also stated that it would evaluate PIM during the Pilot Period to determine whether it would be beneficial to customers and to the options market as a whole to approve any proposal requesting permanent approval to permit orders of fewer than 50 contracts to be submitted to the PIM.¹¹

As noted above, throughout the Pilot, the Exchange has been required to submit certain data periodically to provide supporting evidence that, among other things, there is meaningful competition for all size orders within the PIM, that there is significant price improvement for all orders executed through the PIM, and that there is an active and liquid market functioning on the Exchange both within PIM and outside of the Auction mechanism.

The Exchange believes that the data gathered since the approval of the Pilot establishes that there is liquidity and competition both within PIM and outside of PIM, and that there are opportunities for significant price improvement within PIM.¹²

In the period between February and June 2016, the PIM executed a total of 613,353 contracts, which represented 26.36% of total ISE Mercury contract volume and 0.04% of industry volume. The percent of ISE Mercury volume traded in PIM ranged from 0% in February 2016 to 37.88% in June 2016.

The Exchange compiled price improvement data in orders from February through June 2016 that divides the data into the following groups: (1) Orders of over 50 contracts where the Agency Order was on behalf of a Public Customer and ISE Mercury was at the NBBO; (2) orders of over 50 contracts where the Agency Order was on behalf of a Public Customer and ISE Mercury was not at the NBBO; (3) orders of over 50 contracts where the Agency Order was on behalf of a non-customer and ISE Mercury was at the NBBO; (4) orders of over 50 contracts where the

Agency Order was on behalf of a non-customer and ISE Mercury was not at the NBBO; (5) orders of 50 contracts or less where the Agency Order was on behalf of a Public Customer and ISE Mercury was at the NBBO; (6) orders of 50 contracts or less where the Agency Order was on behalf of a Public Customer and ISE Mercury was not at the NBBO; (7) orders of 50 contracts or less where the Agency Order was on behalf of a non-customer and ISE Mercury was at the NBBO; and (8) orders of 50 contracts or less where the Agency Order was on behalf of a non-customer and ISE Mercury was not at the NBBO.

For March 2016, where the order was on behalf of a Public Customer, the order was for 50 contracts or less, and ISE Mercury was at the NBBO, the most contracts traded (2,525) occurred when the spread was \$0.03, with an average number of two participants.¹³ All of these contracts received \$0.01 price improvement. When the spread was \$0.01 for this same category, a total of 734 contracts traded, with none of those contracts receiving price improvement. There was an average number of 3 participants when the spread was \$0.01.

In comparison, where the order was on behalf of a Public Customer, the order was for greater than 50 contracts, and ISE Mercury was at the NBBO, the most contracts traded (934) occurred when the spread was \$0.10 to \$0.20, with an average number of 3 participants. The greatest number of these contracts (429) received \$0.05–\$0.10 price improvement.

In March 2016, where the order was on behalf of a Public Customer, the order was for 50 contracts or less, and ISE Mercury was not at the NBBO, the most contracts traded (3,772) occurred when the spread \$0.01. Of this category, the greatest number of contracts (3,722) received no price improvement, and 50 contracts received \$0.01 price improvement. There was an average number of 2 participants when the spread was \$0.01.

In comparison, in March 2016, where the order was on behalf of a Public Customer, the order was for greater than 50 contracts, and ISE Mercury was not at the NBBO, the most contracts traded (1,431) occurred when the spread was \$0.02. Of these contracts, the greatest number of contracts (758) received no price improvement. There was an

¹⁰ See Securities Exchange Act Release No. 50819 (December 8, 2004), 69 FR 75093 (December 15, 2004) (SR-ISE-2003-06) (“ISE PIM Approval Order”).

¹¹ *Id.*

¹² Specifically, the Exchange gathered and reported nine separate data fields relating to PIM orders of fewer than 50 contracts, including (1) the number of orders of fewer than 50 contracts entered into the PIM; (2) the percentage of all orders of fewer than 50 contracts sent to the Exchange that are entered into the PIM; (3) the spread in the option, at the time an order of fewer than 50 contracts is submitted to the PIM; and (4) of PIM trades, the percentage done at the NBBO plus \$0.01, plus \$0.02, plus \$0.03, etc. See Exhibit B to ISE Mercury Exchange Application (File No. 10–209).

⁹ The provision relating to the no minimum size requirement also requires the Exchange to submit certain data, periodically as required by the Commission, to provide supporting evidence that, among other things, there is meaningful competition for all size orders within the PIM, that there is significant price improvement for all orders executed through the PIM, and that there is an active and liquid market functioning on the Exchange outside of the PIM. Any raw data which is submitted to the Commission will be provided on a confidential basis.

¹³ This discussion of March 2016 data is intended to be illustrative of data that was gathered between February 2016 and July 2016. The complete underlying data for February 2016 through June 2016 for these eight categories is attached as Exhibit 3.

average number of 2 participants when the spread was \$0.02.

ISE Mercury believes that the data gathered during the Pilot period indicates that there is meaningful competition in PIM auctions for all size orders, there is an active and liquid market functioning on the Exchange outside of the auction mechanism, and that there are opportunities for significant price improvement for orders executed through PIM. The Exchange therefore believes that it is appropriate to approve the no-minimum size requirement on a permanent basis.

Early Conclusion of the PIM Auction

Supplemental Material .05 to Rule 723 provides that Rule 723(c)(5) and Rule 723(d)(4), which relate to the termination of the exposure period by unrelated orders shall be part of the current Pilot. Rule 723(c)(5) provides that the exposure period will automatically terminate (i) at the end of the 500 millisecond period,¹⁴ (ii) upon the receipt of a market or marketable limit order on the Exchange in the same series, or (iii) upon the receipt of a nonmarketable limit order in the same series on the same side of the market as the Agency Order that would cause the price of the Crossing Transaction to be outside of the best bid or offer on the Exchange. Rule 723(d)(4) provides that, when a market order or marketable limit order on the opposite side of the market from the Agency Order ends the exposure period, it will participate in the execution of the Agency Order at the price that is mid-way between the best counter-side interest and the NBBO, so that both the market or marketable limit order and the Agency Order receive price improvement. Transactions will be rounded, when necessary, to the \$.01 increment that favors the Agency Order.

As with the no minimum size requirement, the Exchange has gathered data on these three conditions to assess the effect of early PIM conclusions on the Pilot.¹⁵

For the period from January 2016 through June 2016, there were a total of 77 early terminated auctions. The number of orders in early terminated PIM auctions constituted 0.35% of total PIM orders. There were a total of 1,581 contracts that traded through early terminated auctions. The number of contracts in early terminated PIM auctions represented 0.26% of total PIM contracts. Of the early terminated auctions, 46.75% of those auctions received price improvement, and 31.37% of contracts that traded in an early-terminated auction received price improvement. Of the PIM auctions that terminated early and received price improvement from February 2016 through June 2016, the total amount of price improvement received was \$16.53.

second of the start of the PIM auction; the percentage that occurred within one and ½ second of the start of the PIM auction; the percentage that occurred within 2 seconds of the start of the PIM auction; the percentage that occurred within 2 and ½ seconds of the PIM auction; and the average amount of price improvement provided to the Agency Order where the PIM is terminated early at each of these time periods; (3) the number of times that a market or marketable limit order in the same series on the opposite side of the market as the Agency Order prematurely ended the PIM auction and at what time the unrelated order ended the PIM auction, and the number of times such orders were entered by the same (or affiliated) firm that initiated the PIM that was terminated; (4) the percentage of PIM early terminations due to the receipt of a market or marketable limit order in the same series on the opposite side of the market that occurred within a ½ second of the start of the PIM auction; the percentage that occurred within one second of the start of the PIM auction; the percentage that occurred within one and ½ second of the start of the PIM auction; the percentage that occurred within 2 seconds of the start of the PIM auction; the percentage that occurred within 2 and ½ seconds of the PIM auction; and the average amount of price improvement provided to the Agency Order where the PIM is terminated early at each of these time periods; (5) the number of times that a nonmarketable limit order in the same series on the same side of the market as the Agency Order that would cause the price of the Crossing Transaction to be outside of the best bid or offer on the Exchange prematurely ended the PIM auction and at what time the unrelated order ended the PIM auction, and the number of times such orders were entered by the same (or affiliated) firm that initiated the PIM that was terminated; (6) the percentage of PIM early terminations due to the receipt of a market or marketable limit order in the same series on the same side of the market as the Agency Order that would cause the price of the Crossing Transaction to be outside of the best bid or offer on the Exchange that occurred within a ½ second of the start of the PIM auction; the percentage that occurred within one second of the start of the PIM auction; the percentage that occurred within one and ½ second of the start of the PIM auction; the percentage that occurred within 2 seconds of the start of the PIM auction; the percentage that occurred within 2 and ½ seconds of the PIM auction; and the average amount of price improvement provided to the Agency Order where the PIM is terminated early at each of these time periods; and (7) the average amount of price improvement provided to the Agency Order when the PIM auction is not terminated early. See Exhibit B to ISE Mercury Exchange Application (File No. 10–209).

Based on the data gathered during the pilot, the Exchange does not anticipate that any of these conditions will occur with significant frequency, or will otherwise significantly affect the functioning of the PIM. Of the early terminated auctions, 46.75% of those auctions received price improvement, and 31.37% of contracts that traded in an early-terminated auction received price improvement. The total amount of price improvement for PIM auctions that terminated early was \$16.53. The Exchange therefore believes it is appropriate to approve this aspect of the Pilot on a permanent basis.

2. Statutory Basis

The Exchange believes that the proposed rule change is consistent with the provisions of Section 6 of the Act,¹⁶ in general and with Section 6(b)(5) of the Act,¹⁷ in that it is designed to promote just and equitable principles of trade, to foster cooperation and coordination with persons engaged in regulating, clearing, settling, processing information with respect to, and facilitating transactions in securities, to remove impediments to and perfect the mechanism of a free and open market and a national market system, and, in general, to protect investors and the public interest; and is not designed to permit unfair discrimination between customers, issuers, brokers, or dealers, or to regulate by virtue of any authority conferred by the Act matters not related to the purposes of the Act or the administration of the Exchange.

The Exchange believes that the proposed rule change is also consistent with Section 6(b)(8) of the Act¹⁸ in that it does not impose any burden on competition not necessary or appropriate in furtherance of the purposes of the Act.

Specifically, the Exchange believes that PIM, including the rules to which the Pilot applies, results in increased liquidity available at improved prices, with competitive final pricing out of the complete control of the Electronic Access Member that initiated the auction. The Exchange believes that PIM promotes and fosters competition and affords the opportunity for price improvement to more options contracts. The Exchange believes that the changes to the PIM requiring price improvement of at least one minimum price improvement increment over the NBBO for Agency Orders of less than 50 option contracts where the difference in the NBBO is \$0.01 will provide further

¹⁴ The Exchange notes that it is proposing to modify the exposure period to a time period of no less than 100 milliseconds and no more than one second. See Securities Exchange Act Release No. 79354 (November 18, 2016), 81 FR 85295 (November 25, 2016) (SR-ISEMercury-2016-21).

¹⁵ The Exchange agreed to gather and submit the following data on this part of the Pilot: (1) The number of times that a market or marketable limit order in the same series on the same side of the market as the Agency Order prematurely ended the PIM auction, and the number of times such orders were entered by the same (or affiliated) firm that initiated the PIM that was terminated; (2) the percentage of PIM early terminations due to the receipt of a market or marketable limit order in the same series on the same side of the market that occurred within a ½ second of the start of the PIM auction; the percentage that occurred within one

¹⁶ 15 U.S.C. 78f.

¹⁷ 15 U.S.C. 78f(b)(5).

¹⁸ 15 U.S.C. 78f(b)(8).

price improvement for those orders, and thereby encourage additional submission of those orders into PIM. The Exchange believes that the proposal, which subjects members to the Minor Rule Violation Plan for failing to provide the required price improvement, coupled with the Exchange's surveillance efforts, are designed to facilitate members' compliance with the proposed requirement.

The Exchange believes that approving the Pilot on a permanent basis is also consistent with the Act. With respect to the no minimum size requirement, the Exchange believes that the data gathered during the Pilot period indicates that there is meaningful competition in the PIM for all size orders, there is an active and liquid market functioning on the Exchange outside of the auction mechanism, and that there are opportunities for significant price improvement for orders executed through PIM, including for small customer orders.

With respect to the early termination of the PIM, the Exchange believes that it is appropriate to terminate an auction (i) at the end of the 500 millisecond period, (ii) upon the receipt of a market or marketable limit order on the Exchange in the same series, or (iii) upon the receipt of a nonmarketable limit order in the same series on the same side of the market as the Agency Order that would cause the price of the Crossing Transaction to be outside of the best bid or offer on the Exchange. The Exchange also believes that it is consistent with the Act to require that, when a market order or marketable limit order on the opposite side of the market from the Agency Order ends the exposure period, it will participate in the execution of the Agency Order at the price that is mid-way between the best counter-side interest and the NBBO, so that both the market or marketable limit order and the Agency Order receive price improvement. Based on the data gathered during the pilot, the Exchange does not anticipate that any of these conditions will occur with significant frequency, or will otherwise disrupt the functioning of the PIM. The Exchange also notes that a significant percentage of PIM auctions that terminated early executed at a price that was better than the NBBO at the time the auction began, and that a significant percentage of contracts in auctions that terminated early received price improvement.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose

any burden on competition not necessary or appropriate in furtherance of the purposes of the Act. The proposal will apply to all Exchange members, and participation in the PIM process is completely voluntary. Based on the data collected by the Exchange during the Pilot, the Exchange believes that there is meaningful competition in the PIM for all size orders, there are opportunities for significant price improvement for orders executed through PIM, and that there is an active and liquid market functioning on the Exchange outside of the PIM. The Exchange believes that requiring increased price improvement for Agency Orders may encourage competition by attracting additional orders to participate in the PIM. The Exchange believes that approving the Pilot on a permanent basis will not significantly impact competition, as the Exchange is proposing no other change to the Pilot beyond implementing it on a permanent basis.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

No written comments were either solicited or received.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

Within 45 days of the date of publication of this notice in the **Federal Register** or within such longer period (i) as the Commission may designate up to 90 days of such date if it finds such longer period to be appropriate and publishes its reasons for so finding or (ii) as to which the Exchange consents, the Commission shall: (a) By order approve or disapprove such proposed rule change, or (b) institute proceedings to determine whether the proposed rule change should be disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's Internet comment form (<http://www.sec.gov/rules/sro.shtml>); or
- Send an email to rule-comments@sec.gov. Please include File Number SR-ISEMercury 2016-25 on the subject line.

Paper comments

- Send paper comments in triplicate to Brent J. Fields, Secretary, Securities and Exchange Commission, 100 F Street NE., Washington, DC 20549-1090.

All submissions should refer to File Number SR-ISEMercury-2016-25. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's Internet Web site (<http://www.sec.gov/rules/sro.shtml>). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for Web site viewing and printing in the Commission's Public Reference Room, 100 F Street NE., Washington, DC 20549, on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the Exchange. All comments received will be posted without change; the Commission does not edit personal identifying information from submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR-ISEMercury 2016-25 and should be submitted on or before January 9, 2017.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.¹⁹

Eduardo A. Aleman,
Assistant Secretary.

Extension:

¹⁹ 17 CFR 200.30-3(a)(12).

Rule 17a-13, SEC File No. 270-27, OMB Control No. 3235-0035.

Notice is hereby given that, pursuant to the Paperwork Reduction Act of 1995 ("PRA") (44 U.S.C. 3501 *et seq.*), the Securities and Exchange Commission ("Commission") is soliciting comments on the collection of information provided for in Rule 17a-13 (17 CFR 240.17a-13) under the Securities Exchange Act of 1934 (15 U.S.C. 78 *et seq.*) ("Exchange Act"). The Commission plans to submit this existing collection of information to the Office of Management and Budget ("OMB") for extension and approval.

Rule 17a-13(b) (17 CFR 240.17a-13(b)) generally requires that at least once each calendar quarter, all registered brokers-dealers physically examine and count all securities held and account for all other securities not in their possession, but subject to the broker-dealer's control or direction. Any discrepancies between the broker-dealer's securities count and the firm's records must be noted and, within seven days, the unaccounted for difference must be recorded in the firm's records. Rule 17a-13(c) (17 CFR 240.17a-13(c)) provides that under specified conditions, the count, examination, and verification of the broker-dealer's entire list of securities may be conducted on a cyclical basis rather than on a certain date. Although Rule 17a-13 does not require broker-dealers to file a report with the Commission, discrepancies between a broker-dealer's records and the securities counts may be required to be reported, for example, as a loss on Form X-17a-5 (17 CFR 248.617), which must be filed with the Commission under Exchange Act Rule 17a-5 (17 CFR 240.17a-5). Rule 17a-13 exempts broker-dealers that limit their business to the sale and redemption of securities of registered investment companies and interests or participation in an insurance company separate account and those who solicit accounts for federally insured savings and loan associations, provided that such persons promptly transmit all funds and securities and hold no customer funds and securities. Rule 17a-13 also does not apply to certain broker-dealers required to register only because they effect transactions in securities futures products.

The information obtained from Rule 17a-13 is used as an inventory control device to monitor a broker-dealer's ability to account for all securities held in transfer, in transit, pledged, loaned, borrowed, deposited, or otherwise subject to the firm's control or direction. Discrepancies between the securities

counts and the broker-dealer's records alert the Commission and applicable self-regulatory organizations ("SROs") to those firms experiencing back-office operational issues.

Currently, there are approximately 4,067 broker-dealers registered with the Commission. However, given the variability in their businesses, it is difficult to quantify how many hours per year each broker-dealer spends complying with Rule 17a-13. As noted, Rule 17a-13 requires a respondent to account for all securities in its possession or subject to its control or direction. Many respondents hold few, if any, securities; while others hold large quantities. Therefore, the time burden of complying with Rule 17a-13 will depend on respondent-specific factors, including a broker-dealer's size, number of customers, and proprietary trading activity. The staff estimates that the average time spent per respondent is 100 hours per year on an ongoing basis to maintain the records required under Rule 17a-13. This estimate takes into account the fact that more than half of the 4,067 respondents—according to financial reports filed with the Commission—may spend little or no time complying with the rule, given that they do not do a public securities business or do not hold inventories of securities. For these reasons, the staff estimates that the total compliance burden per year is 406,700 hours (4,067 respondents × 100 hours/respondent).

The records required to be made by Rule 17a-13 are available only to Commission examination staff, state securities authorities, and applicable SROs. Subject to the provisions of the Freedom of Information Act, 5 U.S.C. 522, and the Commission's rules thereunder (17 CFR 200.80(b)(4)(iii)), the Commission does not generally publish or make available information contained in any reports, summaries, analyses, letters, or memoranda arising out of, in anticipation of, or in connection with an examination or inspection of the books and records of any person or any other investigation.

Written comments are invited on: (a) Whether the proposed collection of information is necessary for the proper performance of the functions of the Commission, including whether the information has practical utility; (b) the accuracy of the Commission's estimates of the burden of the proposed collection of information; (c) ways to enhance the quality, utility, and clarity of the information collected; and (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information

technology. Consideration will be given to comments and suggestions submitted in writing within 60 days of this publication.

An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information under the PRA unless it displays a currently valid OMB control number.

Please direct your written comments to: Pamela Dyson, Director/Chief Information Officer, Securities and Exchange Commission, c/o Remi Pavlik-Simon, 100 F Street NE., Washington, DC 20549, or send an email to: PRA_Mailbox@sec.gov.

Dated: December 6, 2016.

Brent J. Fields,
Secretary.

SECURITIES AND EXCHANGE COMMISSION

Proposed Collection; Comment Request

Upon Written Request, Copies Available From: Securities and Exchange Commission, Office of FOIA Services, 100 F Street NE., Washington, DC 20549-2736.

Extension:

Rules 15Ba1-1 through 15Ba1-8, SEC File No. 270-619, OMB Control No. 3235-0681.

Notice is hereby given that pursuant to the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*), the Securities and Exchange Commission ("Commission") is soliciting comments on the collection of information provided for in Rules 15Ba1-1 to 15Ba1-8 (17 CFR 240.15Ba1-1 to 17 CFR 240.15Ba1-8)—Registration of Municipal Advisors, under the Securities Exchange Act of 1934 (15 U.S.C. 78a *et seq.*) (the "Act"). The Commission plans to submit this existing collection of information to the Office of Management and Budget for extension and approval.

On September 20, 2013 (*see* 78 FR 67468, November 12, 2013), the Commission adopted Rules 15Ba1-1 through 15Ba1-8 and Rule 15Bc4-1 under the Act to establish the rules by which a municipal advisor must obtain, maintain, and terminate its registration with the Commission. In addition, the rules interpret the definition of the term "municipal advisor," interpret the statutory exclusions from that definition, and provide certain additional regulatory exemptions. The rules became effective on January 13,

2014; however, on January 13, 2014, the Commission temporarily stayed such rules until July 1, 2014 (*see* 79 FR 2777, January 16, 2014). Section 15B(a)(1) of the Act makes it unlawful for a municipal advisor to provide advice to or on behalf of a municipal entity or obligated person with respect to municipal financial products or the issuance of municipal securities, or to undertake a solicitation of a municipal entity or obligated person, unless the municipal advisor is registered with the Commission. The rules, among other things (i) require municipal advisors to file certain forms (*i.e.*, Form MA, Form MA-A, Form MA/A, Form MA-I, Form MA-I/A, Form MA-NR, and Form MA-W) with the Commission to, as appropriate, obtain, maintain, or terminate their registration with the Commission and maintain certain books and records in accordance with the Act, and (ii) set forth how certain entities may meet the requirements of the statutory exclusions or regulatory exemptions from the definition of “municipal advisor.”

Form MA

The Commission estimates that approximately 75 respondents will submit new Form MA applications annually in each of the next three years. The Commission further estimates that each submission will take approximately 3.5 hours. Thus, the total annual burden borne by respondents for submitting an initial Form MA application will be approximately 263 hours.¹ The Commission estimates that respondents submitting new Form MA applications would, on average, consult with outside counsel for one hour, at a rate of \$400/hour. Thus, the Commission estimates that the average total annual cost that may be incurred by all respondents filing new Form MA applications will be \$30,000.² In addition to filing initial Form MA applications, the rules require municipal advisors to amend Form MA once annually (Form MA-A) and after the occurrence of any material event (Form MA/A). The requirement to amend Form MA applies to all registered municipal advisors. There are currently approximately 668 municipal advisors registered with the Commission and, as noted above, the Commission anticipates receiving 225 new Form MA submissions over the next three years. Therefore, the Commission expects that the rules’ requirement to amend Form MA will apply to approximately 743 municipal

advisors in year one, approximately 818 municipal advisors in year two, and approximately 893 municipal advisors in year three. The Commission estimates that completing an annual amendment would take a municipal advisor approximately 1.5 hours and completing a material event amendment would take 0.5 hours. The Commission further estimates that each municipal advisor will submit two amendments per year (one Form MA-A and one Form MA/A). Thus, the Commission estimates that the average annual burden borne by respondents for amending Form MA during the three-year period will be approximately 1,636 hours.³

Form MA-I

The Commission estimates that it will receive approximately 950 new Form MA-I submissions annually. The Commission further estimates that each Form MA-I submission will take approximately three hours to complete. Thus, the total annual burden borne by respondents submitting Form MA-I will be approximately 2,850 hours.⁴ The Commission also estimates that a Form MA-I respondent will submit 1.7 updating amendments per year (Form MA-I/A), and that each such amendment will take approximately 0.5 hours to complete. There are currently approximately 5,685 Form MA-IIs on file with the Commission and, as noted above, the Commission expects to receive 2,850 Form MA-I submissions over the next three years. Therefore, the Commission expects the rules’ requirement to amend Form MA-I to apply to approximately 6,635 Form MA-IIs in year one, approximately 7,585 Form MA-IIs in year two, and approximately 8,535 Form MA-IIs in year three. Thus, the Commission estimates that the average annual burden borne by respondents submitting Form MA-I amendments during the three-year period will be approximately 6,447 hours.⁵

Form MA-W

The Commission estimates that it will receive 40 new Form MA-W submissions annually. The Commission further estimates that each Form MA-W submission will take approximately 0.5 hours to complete. Thus, the total annual burden borne by respondents submitting Form MA-W will be approximately 20 hours.⁶

Form MA-NR

The Commission estimates that three municipal advisors will have a non-resident general partner, non-resident managing agent, or non-resident associated person and such advisors will submit a total of approximately nine Form MA-NRs annually. The Commission further estimates that each Form MA-NR submission will take approximately 1.5 hours to complete. Thus, the total annual burden borne by respondents submitting Form MA-NR will be approximately 13.5 hours.⁷ In addition, each respondent that submits a Form MA-NR must also provide an opinion of counsel. The Commission estimates that such an opinion of counsel would take three hours to complete, at a rate of \$400/hour. Thus, the Commission estimates that the total annual burden borne by respondents providing an opinion of counsel will be approximately nine hours.⁸ The estimated average total cost that may be incurred by all respondents providing an opinion of counsel will be \$3,600.⁹

Consent to Service of Process

The Commission estimates that 75 new municipal advisors will have to develop a template document to use in obtaining written consents to service of process from their associated persons annually. The Commission further estimates that each template document will take approximately one hour to draft. Thus, the Commission estimates that the total annual burden borne by respondents developing a template document will be approximately 75 hours.¹⁰ In addition, the Commission estimates that municipal advisors will need to obtain 950 new consents to service of process from associated persons annually. The Commission further estimates that, after the written consents are drafted, it will take municipal advisors approximately 0.10 hours to obtain each consent. Thus, the Commission estimates that the total annual burden borne by respondents obtaining consents to service of process will be 170 hours.¹¹

Books and Records To Be Maintained by Municipal Advisors

The Commission estimates 743, 818, and 893 municipal advisors will be subject to the books and records rules during each of the next three years, respectively. The Commission further

⁷ 3 respondents × (3 Form MA-NR submissions × 1.5 hours).

⁸ 3 respondents × 3 hours.

⁹ 3 respondents × (3.0 hours × \$400/hour).

¹⁰ 75 respondents × 1 hour.

¹¹ 75 hours + (950 × 0.1 hours).

³ 818 respondents × 2 hours.

⁴ 950 submissions × 3 hours.

⁵ 7,585 Form MA-I/As × (1.7 amendments × 0.5 hours).

⁶ 40 respondents × 0.5 hours.

¹ 75 respondents × 3.5 hours.

² 75 respondents × (\$400/hour × 1 hour).

estimates that the average annual burden for a municipal advisor to comply with the books and records requirement is approximately 182 hours. Thus, the Commission estimates that the average annual burden borne by respondents to comply with the books and records requirements during the three-year period will be approximately 148,876 hours.¹²

Independent Registered Municipal Advisor Exemption

The Commission estimates that approximately 150 persons will seek to rely on the independent registered municipal advisor exemption annually. The Commission further estimates that the one-time burden of developing a written template disclosure document will be approximately one hour. Thus, the Commission estimates that the total one-time burden borne by respondents developing a template disclosure document will be approximately 150 hours.¹³ The Commission also recognizes that respondents will be subject to a recurring burden each time they seek to rely on the exemption. The Commission estimates that respondents may seek the exemption on approximately 7,400 transactions annually. The Commission further estimates that the burden of obtaining the written representations needed from the municipal entity or obligated person client will be approximately 0.25 hours. Thus, the Commission estimates that the total annual burden borne by respondents seeking to rely on the independent registered municipal advisor exemption will be approximately 1,850 hours.¹⁴

Definition of Municipal Escrow Investments Exemption

The Commission estimates that approximately 700 respondents will seek to rely on the municipal escrow investments exemption. The Commission further estimates that the one-time burden of creating a template document to use in obtaining the written representations necessary to rely on the exemption will be approximately one hour. Thus, the Commission estimates that the total one-time burden borne by respondents developing a template document will be approximately 700 hours.¹⁵ The Commission also recognizes that respondents will be subject to a recurring burden each time they seek to rely on the exemption. The Commission

estimates the respondents will seek to rely on the exemption with approximately 8,620 municipal entity clients. The Commission further estimates that the burden of obtaining the required written representations from the respondent's client will be approximately 0.25 hours. Thus, the Commission estimates that the total annual burden borne by respondents seeking to rely on the municipal escrow investments exemption will be approximately 2,155 hours.¹⁶

Definition of Proceeds of Municipal Securities Exemption

The Commission estimates that approximately 880 respondents will seek to rely on the proceeds of municipal securities exemption. The Commission further estimates that the one-time burden of creating a template document to use in obtaining the written representations necessary to rely on the exemption will be approximately one hour. Thus, the Commission estimates that the total one-time burden borne by respondents developing a template document will be approximately 880 hours.¹⁷ The Commission also recognizes that respondents will be subject to a recurring burden each time they seek to rely on the exemption. The Commission estimates that respondents will seek to rely on the exemption in connection with services provided to approximately 25,420 clients. The Commission further estimates that the burden of obtaining the required written consents from the respondent's client will be approximately 0.25 hours. Thus, the Commission estimates that the total annual burden borne by respondents seeking to rely on proceeds of municipal securities exemption will be approximately 6,355 hours.¹⁸

Written comments are invited on: (a) Whether the proposed collection of information is necessary for the proper performance of the functions of the Commission, including whether the information shall have practical utility; (b) the accuracy of the Commission's estimates of the burden of the proposed collection of information; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology. Consideration will be given to comments and suggestions submitted in

writing within 60 days of this publication.

An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information under the PRA unless it displays a currently valid OMB control number. Please direct your written comments to: Pamela C. Dyson, Director/Chief Information Officer, Securities and Exchange Commission, c/o Remi Pavlik-Simon, 100 F Street NE., Washington, DC 20549 or send an email to: PRA_Mailbox@sec.gov.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34-79533; File No. SR-BatsBZX-2016-82]

Self-Regulatory Organizations; Bats BZX Exchange, Inc.; Notice of Filing and Immediate Effectiveness of a Proposed Rule Change to Amend Exchange Rule 11.27(b) Regarding the Data Collection Requirements of the Regulation NMS Plan to Implement a Tick Size Pilot Program

December 13, 2016

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (the "Act"),¹ and Rule 19b-4 thereunder,² notice is hereby given that on November 30, 2016, Bats BZX Exchange, Inc. (the "Exchange" or "BZX") filed with the Securities and Exchange Commission ("Commission") the proposed rule change as described in Items I and II below, which Items have been prepared by the Exchange. The Exchange has designated this proposal as a "non-controversial" proposed rule change pursuant to Section 19(b)(3)(A) of the Act³ and Rule 19b-4(f)(6)(iii) thereunder,⁴ which renders it effective upon filing with the Commission. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange filed a proposal to amend Exchange Rule 11.27(b) regarding the data collection requirements of the Regulation NMS

Plan to Implement a Tick Size Pilot Program (“Plan”).

The text of the proposed rule change is available at the Exchange’s Web site at www.batstrading.com, at the principal office of the Exchange, and at the Commission’s Public Reference Room.

II. Self-Regulatory Organization’s Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in Sections A, B, and C below, of the most significant parts of such statements.

(A) Self-Regulatory Organization’s Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

On August 25, 2014, the Exchange, and several other self-regulatory organizations (the “Participants”) filed with the Commission, pursuant to Section 11A of the Act⁵ and Rule 608 of Regulation NMS thereunder,⁶ the Plan to Implement a Tick Size Pilot Program.⁷ The Participants filed the Plan to comply with an order issued by the Commission on June 24, 2014.⁸ The Plan was published for comment in the **Federal Register** on November 7, 2014, and approved by the Commission, as modified, on May 6, 2015.⁹ The Commission approved the Pilot on a two-year basis, with implementation to begin no later than May 6, 2016.¹⁰ On November 6, 2015, the SEC exempted the Participants from implementing the Pilot until October 3, 2016.¹¹ Under the revised Pilot implementation date, the Pre-Pilot data collection period commenced on April 4, 2016. On September 13, 2016, the SEC exempted

the Participants from the requirement to fully implement the Pilot on October 3, 2016, to permit the Participants to implement the pilot on a phased-in basis, as described in the Participants’ exemptive request.¹²

The Plan is designed to allow the Commission, market participants, and the public to study and assess the impact of increment conventions on the liquidity and trading of the common stock of small-capitalization companies. Each Participant is required to comply, and to enforce compliance by its member organizations, as applicable, with the provisions of the Plan.

The Exchange adopted rule amendments to implement the requirements of the Plan, including relating to the Plan’s data collection requirements and requirements relating to Web site data publication.¹³ Specifically, with respect to the Web site data publication requirements pursuant to Section VII and Appendices B and C to the Plan, Exchange Rule 11.27(b)(2) provides, among other things, that the Exchange shall make the data required by Items I and II of Appendix B to the Plan, and collected pursuant to paragraph (b)(2)(A) of Rule 11.27, publicly available on the Exchange’s Web site on a monthly basis at no charge and shall not identify the Trading Center that generated the data. Exchange Rule 11.27(b)(3)(C), provides, among other things, that the Exchange shall make the data required by Item IV of Appendix B to the Plan, and collected pursuant to paragraph (b)(3) of Rule 11.27, publicly available on the Exchange’s Web site on a monthly basis at no charge and shall not identify the Trading Center that generated the data. Exchange Rule 11.27(b)(5) provides, among other things, shall collect and transmit to the Commission data described in Item III of Appendix B of the Plan relating to daily Market Maker registration statistics, but does not currently include a provision requiring the Exchange to publish such data to its

Web site.¹⁴ Interpretation and Policy .08 to Exchange Rule 11.27(b) provides, among other things, that the requirement that Exchange or Designated Examining Authority (“DEA”) make certain data publicly available on their Web site pursuant to Appendix B and C to the Plan shall commence at the beginning of the Pilot Period.¹⁵

The Exchange is proposing amendments to Rule 11.27(b)(2) (regarding Appendix B.I and B.II data) and Rule 11.27(b)(3)(C) (regarding Appendix B.IV data), to provide that data required to be made available on Exchange’s or DEA’s Web site be published within 120 calendar days following month end. The Exchange also proposes to add a provision to Rule 11.27(b)(5) to state that the Exchange shall make data collected under Appendix B.III publicly available on the Exchange Web site within 120 calendar days following month end at no charge. In addition, the proposed amendments to Interpretation and Policy .08 to Exchange Rule 11.27(b) would provide that, notwithstanding the provisions of paragraphs (b)(2), (b)(3)(C), and (b)(5), the Exchange and DEA shall make data for the Pre-Pilot period publicly available on their Web site pursuant to Appendix B and C to the Plan by February 28, 2017.¹⁶ The purpose of delaying the publication of the Web site data is to address confidentiality concerns by providing for the passage of additional time between the market information reflected in the data and the public availability of such information. The Exchange has filed the proposed rule change for immediate effectiveness and has requested that the Commission waive the 30-day operative delay. If the Commission waives the 30-day operative delay, the operative date of the proposed rule change will be the date of filing.

¹⁴ Section VII.A. 4 of the Plan.

¹⁵ The Exchange understands that some Market Makers may utilize a DEA that is not a Participant to the Plan and that their DEA would not be subject to the Plan’s data collection requirements. Exchange rules require members that are Market Makers whose DEA is not a Participant to the Plan to transmit transaction data for Market Maker participation and profitability calculations to FINRA. See paragraphs (3)(B) and (4)(B) of Exchange Rule 11.27(b).

¹⁶ With respect to data for the Pilot Period, the requirement that the Exchange and DEA make data publicly available on their Web site pursuant to Appendix B and C to the Plan shall continue to commence at the beginning of the Pilot Period. Thus, the first Web site publication date for Pilot Period data (covering October 2016) would be published on the Exchange’s or DEA’s Web site by February 28, 2017, which is 120 days following the end of October 2016.

¹⁰ See Approval Order at 27533 and 27545.

¹¹ See Securities Exchange Act Release No. 76382 (November 6, 2015), 80 FR 70284 (November 13, 2015).

¹² See Letter from David S. Shillman, Associate Director, Division of Trading and Markets, Commission, to Eric Swanson, EVP, General Counsel and Secretary, Exchange, dated September 13, 2016; see also Letter from Eric Swanson, EVP, General Counsel and Secretary, Exchange, to Brent J. Fields, Secretary, Commission, dated September 9, 2016.

¹³ See, e.g., Securities Exchange Act Release Nos. 77105 (February 10, 2016), 81 FR 8112 (February 17, 2016); 77310 (March 7, 2016), 81 FR 13012 (March 11, 2016); and 78795 (September 9, 2016), 81 FR 63508 (September 15, 2016). See also Letter from David S. Shillman, Associate Director, Division of Trading and Markets, Commission, to Marcia E. Asquith, Senior Vice President and Corporate Secretary, FINRA, dated February 17, 2016.

2. Statutory Basis

The Exchange believes that its proposal is consistent with Section 6(b) of the Act¹⁷ in general, and furthers the objectives of Section 6(b)(5) of the Act¹⁸ in particular, in that it is designed to promote just and equitable principles of trade, to foster cooperation and coordination with persons engaged in facilitating transactions in securities, to remove impediments to and perfect the mechanism of a free and open market and a national market system and, in general, to protect investors and the public interest.

The Exchange believes that this proposal is consistent with the Act because it is designed to assist the Participants in meeting their regulatory obligations pursuant to the Plan and is in furtherance of the objectives of the Plan, as identified by the SEC. The Exchange believes that the instant proposal is consistent with the Act in that it is designed to address confidentiality concerns by permitting the Exchange to delay Web site publication to provide for passage of additional time between the market information reflected in the data and the public availability of such information.

(B) Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will result in any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act. The Exchange notes that the proposed rule change implements the provisions of the Plan, and is designed to assist the Participants in meeting their regulatory obligations pursuant to the Plan.

The proposal is intended to address confidentiality concerns that may adversely impact competition, especially for Pilot Securities that may have a relatively small number of designated Market Makers, by permitting the Exchange to delay Web site publication to provide for passage of additional time between the market information reflected in the data and the public availability of such information. The proposal does not alter the information required to be submitted to the SEC.

(C) Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants or Others

Written comments were neither solicited nor received.¹⁹

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

Because the foregoing proposed rule change does not: (i) Significantly affect the protection of investors or the public interest; (ii) impose any significant burden on competition; and (iii) become operative for 30 days from the date on which it was filed, or such shorter time as the Commission may designate, it has become effective pursuant to Section 19(b)(3)(A)²⁰ of the Act and Rule 19b-4(f)(6) thereunder.²¹

A proposed rule change filed under Rule 19b-4(f)(6)²² normally does not become operative prior to 30 days after the date of the filing. However, pursuant to Rule 19b-4(f)(6)(iii),²³ the Commission may designate a shorter time if such action is consistent with the protection of investors and the public interest. The Exchange has filed the proposed rule change for immediate effectiveness and has requested that the Commission waive the requirement that the proposed rule change not become operative for 30 days after the date of the filing so that it may become operative immediately.

The Exchange notes that the proposed rule change implements the provisions of the Plan, and is designed to assist the Participants in meeting their regulatory obligations pursuant to the Plan. The proposal is intended to address confidentiality concerns by permitting the Exchange to delay Web site publication to provide for passage of additional time between the market information reflected in the data and the public availability of such information. The proposal also does not alter the information required to be submitted to the SEC.

The Commission believes that waiving the 30-day operative delay is consistent with the protection of investors and the public interest because it will allow the Exchange to implement proposed changes that are intended to address confidentiality concerns. The Commission notes that

¹⁹ See Letter from Mary Lou Von Kaenel, Managing Director, Financial Information Forum, to David S. Shillman, Associate Director, Division of Trading and Markets, Commission, dated August 16, 2016.

²⁰ 15 U.S.C. 78s(b)(3)(A).

²³ 17 CFR 240.19b-4(f)(6)(iii)

some Pilot data was scheduled to be published on November 30, 2016. Therefore, the Commission hereby waives the 30-day operative delay and designates the proposed rule change to be operative as of November 30, 2016.²⁴

At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act.²⁵ If the Commission takes such action, the Commission shall institute proceedings to determine whether the proposed rule should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views and arguments concerning the foregoing, including whether the proposal is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's Internet comment form (<http://www.sec.gov/rules/sro.shtml>); or
- Send an email to rule-comments@sec.gov. Please include File No. SR-BatsBZX-2016-82 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE., Washington, DC 20549-1090.
- All submissions should refer to File No. SR-BatsBZX-2016-82. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's Internet Web site (<http://www.sec.gov/rules/sro.shtml>). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the

²⁴ For purposes only of waiving the operative delay for this proposal, the Commission has considered the proposed rule's impact on efficiency, competition, and capital formation. See 15 U.S.C. 78c(f).

BILLING CODE 8011-01-P

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34-79536; File No. SR-BatsEDGA-2016-30]

Self-Regulatory Organizations; Bats EDGA Exchange, Inc.; Notice of Filing and Immediate Effectiveness of a Proposed Rule Change To Amend Exchange Rule 11.21(b) Regarding the Data Collection Requirements of the Regulation NMS Plan To Implement a Tick Size Pilot Program

December 13, 2016.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (the "Act"),¹ and Rule 19b-4 thereunder,² notice is hereby given that on November 30, 2016, Bats EDGA Exchange, Inc. (the "Exchange" or "EDGA") filed with the Securities and Exchange Commission ("Commission") the proposed rule change as described in Items I and II below, which Items have been prepared by the Exchange. The Exchange has designated this proposal as a "non-controversial" proposed rule change pursuant to Section 19(b)(3)(A) of the Act³ and Rule 19b-4(f)(6)(iii) thereunder,⁴ which renders it effective upon filing with the Commission. The Commission is publishing this notice to

solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange filed a proposal to amend Exchange Rule 11.21(b) regarding the data collection requirements of the Regulation NMS Plan to Implement a Tick Size Pilot Program ("Plan").

The text of the proposed rule change is available at the Exchange's Web site at www.batstrading.com, at the principal office of the Exchange, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in Sections A, B, and C below, of the most significant parts of such statements.

(A) Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

On August 25, 2014, the Exchange, and several other self-regulatory organizations (the "Participants") filed with the Commission, pursuant to Section 11A of the Act⁵ and Rule 608 of Regulation NMS thereunder,⁶ the Plan to Implement a Tick Size Pilot Program.⁷ The Participants filed the Plan to comply with an order issued by the Commission on June 24, 2014.⁸ The Plan was published for comment in the **Federal Register** on November 7, 2014, and approved by the Commission, as modified, on May 6, 2015.⁹ The Commission approved the Pilot on a two-year basis, with implementation to begin no later than May 6, 2016.¹⁰ On

November 6, 2015, the SEC exempted the Participants from implementing the Pilot until October 3, 2016.¹¹ Under the revised Pilot implementation date, the Pre-Pilot data collection period commenced on April 4, 2016. On September 13, 2016, the SEC exempted the Participants from the requirement to fully implement the Pilot on October 3, 2016, to permit the Participants to implement the pilot on a phased-in basis, as described in the Participants' exemptive request.¹²

The Plan is designed to allow the Commission, market participants, and the public to study and assess the impact of increment conventions on the liquidity and trading of the common stock of small-capitalization companies. Each Participant is required to comply, and to enforce compliance by its member organizations, as applicable, with the provisions of the Plan.

The Exchange adopted rule amendments to implement the requirements of the Plan, including relating to the Plan's data collection requirements and requirements relating to Web site data publication.¹³ Specifically, with respect to the Web site data publication requirements pursuant to Section VII and Appendices B and C to the Plan, Exchange Rule 11.21(b)(2) provides, among other things, that the Exchange shall make the data required by Items I and II of Appendix B to the Plan, and collected pursuant to paragraph (b)(2)(A) of Rule 11.21, publicly available on the Exchange's Web site on a monthly basis at no charge and shall not identify the Trading Center that generated the data. Exchange Rule 11.21(b)(3)(C), provides, among other things, that the Exchange shall make the data required by Item IV of Appendix B to the Plan, and collected pursuant to paragraph (b)(3) of Rule 11.21, publicly available on the Exchange's Web site on a monthly basis at no charge and shall not identify the Trading Center that generated the data. Exchange Rule 11.21(b)(5) provides,

² 17 CFR 240.19b-4.

³ 15 U.S.C. 78s(b)(3)(A).

⁴ 17 CFR 240.19b-4(f)(6)(iii).

among other things, shall collect and transmit to the Commission data described in Item III of Appendix B of the Plan relating to daily Market Maker registration statistics, but does not currently include a provision requiring the Exchange to publish such data to its Web site.¹⁴ Interpretation and Policy .08 to Exchange Rule 11.21(b) provides, among other things, that the requirement that Exchange or Designated Examining Authority (“DEA”) make certain data publicly available on their Web site pursuant to Appendix B and C to the Plan shall commence at the beginning of the Pilot Period.¹⁵

The Exchange is proposing amendments to Rule 11.21(b)(2) (regarding Appendix B.I and B.II data) and Rule 11.21(b)(3)(C) (regarding Appendix B.IV data), to provide that data required to be made available on Exchange’s or DEA’s Web site be published within 120 calendar days following month end. The Exchange also proposes to add a provision to Rule 11.21(b)(5) to state that the Exchange shall make data collected under Appendix B.III publicly available on the Exchange Web site within 120 calendar days following month end at no charge. In addition, the proposed amendments to Interpretation and Policy .08 to Exchange Rule 11.21(b) would provide that, notwithstanding the provisions of paragraphs (b)(2), (b)(3)(C), and (b)(5), the Exchange and DEA shall make data for the Pre-Pilot period publicly available on their Web site pursuant to Appendix B and C to the Plan by February 28, 2017.¹⁶ The purpose of delaying the publication of the Web site data is to address confidentiality concerns by providing for the passage of additional time between the market information reflected in the data and the public availability of such information. The Exchange has filed the proposed rule change for immediate effectiveness and has requested that the Commission

waive the 30-day operative delay. If the Commission waives the 30-day operative delay, the operative date of the proposed rule change will be the date of filing.

2. Statutory Basis

The Exchange believes that its proposal is consistent with Section 6(b) of the Act¹⁷ in general, and furthers the objectives of Section 6(b)(5) of the Act¹⁸ in particular, in that it is designed to promote just and equitable principles of trade, to foster cooperation and coordination with persons engaged in facilitating transactions in securities, to remove impediments to and perfect the mechanism of a free and open market and a national market system and, in general, to protect investors and the public interest.

The Exchange believes that this proposal is consistent with the Act because it is designed to assist the Participants in meeting their regulatory obligations pursuant to the Plan and is in furtherance of the objectives of the Plan, as identified by the SEC. The Exchange believes that the instant proposal is consistent with the Act in that it is designed to address confidentiality concerns by permitting the Exchange to delay Web site publication to provide for passage of additional time between the market information reflected in the data and the public availability of such information.

(B) Self-Regulatory Organization’s Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will result in any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act. The Exchange notes that the proposed rule change implements the provisions of the Plan, and is designed to assist the Participants in meeting their regulatory obligations pursuant to the Plan.

The proposal is intended to address confidentiality concerns that may adversely impact competition, especially for Pilot Securities that may have a relatively small number of designated Market Makers, by permitting the Exchange to delay Web site publication to provide for passage of additional time between the market information reflected in the data and the public availability of such information. The proposal does not alter the information required to be submitted to the SEC.

(C) Self-Regulatory Organization’s Statement on Comments on the Proposed Rule Change Received From Members, Participants or Others

Written comments were neither solicited nor received.¹⁹

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

Because the foregoing proposed rule change does not: (i) Significantly affect the protection of investors or the public interest; (ii) impose any significant burden on competition; and (iii) become operative for 30 days from the date on which it was filed, or such shorter time as the Commission may designate, it has become effective pursuant to Section 19(b)(3)(A)²⁰ of the Act and Rule 19b-4(f)(6) thereunder.²¹

A proposed rule change filed under Rule 19b-4(f)(6)²² normally does not become operative prior to 30 days after the date of the filing. However, pursuant to Rule 19b-4(f)(6)(iii),²³ the Commission may designate a shorter time if such action is consistent with the protection of investors and the public interest. The Exchange has filed the proposed rule change for immediate effectiveness and has requested that the Commission waive the requirement that the proposed rule change not become operative for 30 days after the date of the filing so that it may become operative immediately.

The Exchange notes that the proposed rule change implements the provisions of the Plan, and is designed to assist the Participants in meeting their regulatory obligations pursuant to the Plan. The proposal is intended to address confidentiality concerns by permitting the Exchange to delay Web site publication to provide for passage of additional time between the market information reflected in the data and the public availability of such information. The proposal also does not alter the information required to be submitted to the SEC.

The Commission believes that waiving the 30-day operative delay is consistent with the protection of investors and the public interest because it will allow the Exchange to implement proposed changes that are intended to address confidentiality concerns. The Commission notes that

¹⁴ Section VII.A. 4 of the Plan.

¹⁵ The Exchange understands that some Market Makers may utilize a DEA that is not a Participant to the Plan and that their DEA would not be subject to the Plan’s data collection requirements. Exchange rules require members that are Market Makers whose DEA is not a Participant to the Plan to transmit transaction data for Market Maker participation and profitability calculations to FINRA. See paragraphs (3)(B) and (4)(B) of Exchange Rule 11.21(b).

¹⁶ With respect to data for the Pilot Period, the requirement that the Exchange and DEA make data publicly available on their Web site pursuant to Appendix B and C to the Plan shall continue to commence at the beginning of the Pilot Period. Thus, the first Web site publication date for Pilot Period data (covering October 2016) would be published on the Exchange’s or DEA’s Web site by February 28, 2017, which is 120 days following the end of October 2016.

¹⁷ 15 U.S.C. 78f(b).

¹⁸ 15 U.S.C. 78f(b)(5).

¹⁹ See Letter from Mary Lou Von Kaenel, Managing Director, Financial Information Forum, to David S. Shillman, Associate Director, Division of Trading and Markets, Commission, dated August 16, 2016.

²⁰ 15 U.S.C. 78s(b)(3)(A).

²¹ 17 CFR 240.19b-4(f)(6).

²² 17 CFR 240.19b-4(f)(6).

²³ 17 CFR 240.19b-4(f)(6)(iii).

some Pilot data was scheduled to be published on November 30, 2016. Therefore, the Commission hereby waives the 30-day operative delay and designates the proposed rule change to be operative as of November 30, 2016.²⁴

At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act.²⁵ If the Commission takes such action, the Commission shall institute proceedings to determine whether the proposed rule should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views and arguments concerning the foregoing, including whether the proposal is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's Internet comment form (<http://www.sec.gov/rules/sro.shtml>); or
- Send an email to rule-comments@sec.gov. Please include File No. SR-BatsEDGA-2016-30 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE., Washington, DC 20549-1090.
- All submissions should refer to File No. SR-BatsEDGA-2016-30. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's Internet Web site (<http://www.sec.gov/rules/sro.shtml>). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be

available for Web site viewing and printing in the Commission's Public Reference Room, 100 F Street NE., Washington, DC 20549, on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of such filing will also be available for inspection and copying at the principal office of the Exchange. All comments received will be posted without change; the Commission does not edit personal identifying information from submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File No. SR-BatsEDGA-2016-30 and should be submitted on or before January 9, 2017.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.²⁶

Eduardo A. Aleman,

Assistant Secretary.

BILLING CODE 8011-01-P

SECURITIES AND EXCHANGE COMMISSION

Submission for OMB Review; Comment Request

Upon Written Request Copies Available From: Securities and Exchange Commission, Office of FOIA Services, 100 F Street NE., Washington, DC 20549-2736.

Extension:

Regulation C, SEC File No. 270-68, OMB Control No. 3235-0074.

Notice is hereby given that, pursuant to the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*), the Securities and Exchange Commission ("Commission") has submitted to the Office of Management and Budget this request for extension of the previously approved collection of information discussed below.

Regulation C (17 CFR 230.400 through 230.498) under the Securities Act of 1933 (15 U.S.C. 77a *et seq.*) provides standard instructions for persons filing registration statements under the Securities Act. The information collected is intended to ensure the adequacy of information available to investors. The information provided is mandatory. Regulation C is assigned one burden hour for administrative convenience because it does not directly impose information collection requirements.

An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information

unless it displays a currently valid control number.

The public may view the background documentation for this information collection at the following Web site, www.reginfo.gov. Comments should be directed to: (i) Desk Officer for the Securities and Exchange Commission, Office of Information and Regulatory Affairs, Office of Management and Budget, Room 10102, New Executive Office Building, Washington, DC 20503, or by sending an email to: ShaguftaAhmed@omb.eop.gov; and (ii) Pamela Dyson, Director/Chief Information Officer, Securities and Exchange Commission, c/o Remi Pavlik-Simon, 100 F Street NE., Washington, DC 20549 or send an email to: PRA_Mailbox@sec.gov. Comments must be submitted to OMB within 30 days of this notice.

Dated: December 6, 2016.

Brent J. Fields,
Secretary.

BILLING CODE 8025-01-P

SMALL BUSINESS ADMINISTRATION

Reporting and Recordkeeping Requirements Under OMB Review

AGENCY: Small Business Administration.

ACTION: Notice of 30 day Reporting Requirements Submitted for OMB Review.

SUMMARY: Under the provisions of the Paperwork Reduction Act, agencies are required to submit proposed reporting

²⁴ For purposes only of waiving the operative delay for this proposal, the Commission has considered the proposed rule's impact on efficiency, competition, and capital formation. See 15 U.S.C. 78c(f).

²⁵ 15 U.S.C. 78s(b)(3)(C).

²⁶ 17 CFR 200.30-3(a)(12).

and recordkeeping requirements to OMB for review and approval, and to publish a notice in the **Federal Register** notifying the public that the agency has made such a submission.

DATES: Submit comments on or before January 18, 2017. If you intend to comment but cannot prepare comments promptly, please advise the OMB Reviewer and the Agency Clearance Officer before the deadline.

ADDRESSES: Address all comments concerning this notice to: *Agency Clearance Officer*, Curtis Rich, Small Business Administration, 409 3rd Street SW., 5th Floor, Washington, DC 20416; and *OMB Reviewer*, Office of Information and Regulatory Affairs, Office of Management and Budget, New Executive Office Building, Washington, DC 20503.

FOR FURTHER INFORMATION CONTACT: Curtis Rich, Agency Clearance Officer, (202) 205-7030 curtis.rich@sba.gov.

SUPPLEMENTARY INFORMATION:

Copies: Request for clearance (OMB 83-1), supporting statement, and other documents submitted to OMB for review may be obtained from the Agency Clearance Officer.

Abstract: SBA Forms 2181, 2182 and 2183 provide SBA with the necessary information to make informed and proper decisions regarding the approval or denial of an applicant for a small business investment company (SBIC) license. SBA uses this information to assess an applicant's ability to successfully operate an SBIC within the scope of the Small Business Investment Act, as amended.

Title: SBIC License Application.

Frequency: On Occasion.

SBA Form Numbers: 2181, 2182, 2183.

Description of Respondents: Small Business Owners and Farmers.

Responses: 400.

Annual Burden: 7,370.

Authority: 44 U.S.C. Chapter 35.

Curtis Rich,
Management Analyst.

BILLING CODE P

DEPARTMENT OF TRANSPORTATION

Federal Highway Administration

Notice To Rescind a Notice of Intent for an Environmental Impact Statement: Dane County, Wisconsin

AGENCY: Federal Highway Administration (FHWA), DOT.

ACTION: Notice to Rescind a Notice of Intent for an Environmental Impact Statement.

SUMMARY: The FHWA is issuing this notice to advise the public that FHWA and Wisconsin Department of Transportation (WisDOT) will no longer prepare a Tier 1 EIS for the US 51 corridor in Dane County, Wisconsin generally between Interstate 39/90 east of the City of Stoughton and US 12/18 (Madison South Beltline Highway) because funding to complete improvements to be considered would not be available in the foreseeable future.

FOR FURTHER INFORMATION CONTACT:

Anna Varney, Major Projects Engineer, Federal Highway Administration, 525 Junction Road, Suite 8000, Madison, Wisconsin, 53717-2157, Telephone: (608) 829-7514. You may also contact Steve Krebs, Director, Bureau of Technical Services, Wisconsin Department of Transportation, P.O. Box 7965, Madison, Wisconsin 53707-7965, Telephone: (608) 246-7930.

SUPPLEMENTARY INFORMATION: A Notice of Intent (NOI) to prepare an Environmental Impact Statement (EIS) was published in 77 FR 5087, Feb. 1, 2012 for proposed transportation improvements in the United States Highway (US) 51 corridor in Dane County, Wisconsin generally between Interstate 39/90 east of the City of Stoughton and US 12/18 (Madison South Beltline Highway). A revised NOI was published in 80 FR 19111, Apr. 9, 2015 to advise that the environmental review process was being changed to a tiered process in which a Tier 1 EIS would be prepared to evaluate potential corridors for a future project-specific alignment.

A needs assessment was conducted for the project corridor in 2004 followed by initiation of the environmental review process for an EIS. The EIS review process examined factors contributing to the need for improvements within the U.S. 51 study corridor (long-term planning and corridor preservation, safety, roadway deficiencies, bike and pedestrian accommodations, and travel demand and capacity). Based on statewide transportation priorities, it was determined a commitment to improvements that address all of the need factors could not be made and the environmental review process was converted from a standard EIS to a Tier 1 EIS. FHWA, in cooperation with WisDOT, planned to prepare a Tier 1 EIS for proposed improvements to address safety, operational and capacity

concerns on approximately 18 miles of U.S. 51 between Interstate 39/90, east of the City of Stoughton, to U.S. 12/18 (Madison South Beltline Highway).

The federal fiscal constraint requirement applied to WisDOT environmental studies requires that funding be identified for the next major project action to advance the project within a reasonable timeframe. Based on statewide priorities, it was determined that the U.S. 51 corridor alternatives proposed in the DEIS would not receive funding for the next major action to advance the project. It is anticipated 30+ years might elapse before improvements recommended in a Tier 1 EIS might align with funding. As such, the preparation of the EIS for the U.S. 51 corridor in Dane County, Wisconsin generally between Interstate 39/90 east of the City of Stoughton and U.S. 12/18 (Madison South Beltline Highway) will not be completed. Any future transportation improvements along the U.S. 51 corridor will progress under a separate environmental review process in accordance with all applicable laws and regulations.

Issued on: December 8, 2016.

Anna Varney,

Major Projects Engineer, Federal Highway Administration, Madison, Wisconsin.

BILLING CODE 4910-22-P

DEPARTMENT OF TRANSPORTATION

Federal Railroad Administration

[Docket Number FRA-2016-0112]

Notice of Application for Approval of Discontinuance or Modification of a Railroad Signal System

In accordance with part 235 of Title 49 Code of Federal Regulations and 49 U.S.C. 20502(a), this document provides the public notice that by a document dated November 16, 2016, Union Pacific Railroad (UP) petitioned the Federal Railroad Administration (FRA) seeking approval for the discontinuance or modification of a signal system. FRA assigned the petition Docket Number FRA-2016-0112.

Applicant: Union Pacific Railroad, Mr. Kevin D. Hicks, AVP Engineering—Design, 1400 Douglas Street, MS 0910, Omaha, NE 68179.

UP seeks approval of the modification of the coded track circuits on the siding, between control point (CP) 0233 at Milepost (MP) 233.4 and CP 0235, MP 235.0, on the San Antonio Service Unit, Austin Subdivision, in the cities of Schertz and New Braunfels, TX. The

Red Over Yellow and Red Over Flashing Yellow signal aspects will be removed at each CP with the Red Over Flashing Red aspects remaining.

The reason given for the proposed modification is to accommodate an increased volume of switching operations, which will take place in the siding with the construction of a new rock facility adjacent to Corbyn Yard.

A copy of the petition, as well as any written communications concerning the petition, is available for review online at www.regulations.gov and in person at the U. S. Department of Transportation's (DOT) Docket Operations Facility, 1200 New Jersey Avenue SE., W12-140, Washington, DC 20590. The Docket Operations Facility is open from 9 a.m. to 5 p.m., Monday through Friday, except Federal Holidays.

Interested parties are invited to participate in these proceedings by submitting written views, data, or comments. FRA does not anticipate scheduling a public hearing in connection with these proceedings since the facts do not appear to warrant a hearing. If any interested party desires an opportunity for oral comment, they should notify FRA, in writing, before the end of the comment period and specify the basis for their request.

All communications concerning these proceedings should identify the appropriate docket number and may be submitted by any of the following methods:

- **Web site:** <http://www.regulations.gov>. Follow the online instructions for submitting comments.
- **Fax:** 202-493-2251.
- **Mail:** Docket Operations Facility, U.S. Department of Transportation, 1200 New Jersey Avenue SE., W12-140, Washington, DC 20590.
- **Hand Delivery:** 1200 New Jersey Avenue SE., Room W12-140, Washington, DC 20590, between 9 a.m. and 5 p.m., Monday through Friday, except Federal Holidays.

Communications received by February 2, 2017 will be considered by FRA before final action is taken. Comments received after that date will be considered as far as practicable.

Anyone is able to search the electronic form of any written communications and comments received into any of our dockets by the name of the individual submitting the comment (or signing the document, if submitted on behalf of an association, business, labor union, etc.). In accordance with 5 U.S.C. 553(c), DOT solicits comments from the public to better inform its processes. DOT posts these comments, without edit, including any personal information the

commenter provides, to www.regulations.gov, as described in the system of records notice (DOT/ALL-14 FDMS), which can be reviewed at www.dot.gov/privacy. See also <https://www.regulations.gov/privacyNotice> for the privacy notice of www.regulations.gov.

Issued in Washington, DC.

Robert C. Lauby,

Associate Administrator for Safety, Chief Safety Officer.

[FR Doc. 2016-30446 Filed 12-16-16; 8:45 am]

BILLING CODE 4910-06-P

DEPARTMENT OF TRANSPORTATION

Federal Railroad Administration

[Docket Number FRA-2016-0108]

Petition for Waiver of Compliance

In accordance with part 211 of Title 49 Code of Federal Regulations (CFR), this document provides the public notice that by a document dated November 2, 2016, Union Pacific Railroad Company (UP) has petitioned the Federal Railroad Administration (FRA) for a waiver of compliance from certain provisions of the Federal railroad safety regulations contained at 49 CFR part 236. FRA assigned the petition Docket Number FRA-2016-0108. UP seeks a waiver from compliance with cab signal system requirements found in 49 CFR 236.566—*Locomotive of each train operating in train stop, train control, or cab signal territory; equipped*.

Specifically, UP seeks relief to operate Positive Train Control (PTC) equipped controlling locomotives with the automatic cab signals (ACS) cut-out.

The relief would be within a PTC revenue service demonstration (RSD) area on UP's Portland Subdivision, on which a PTC system is installed and operative; the PTC system is successfully initialized; and a locomotive engineer trained and qualified in the operation of PTC is present for the operation of the train with the ACS cut-out.

Locations of requested relief on the Portland Subdivision are:

1. Between Milepost (MP) 81.6 and MP 15.6 for westward moves.
2. Between MP 15.6 and MP 81.6 for eastward moves.
3. Between MP 0.6 and MP 15.6 on the Graham Line.

The PTC system to be utilized is UP's implementation of the Interoperable Electronic Train Management System (I-ETMS).

If the PTC system fails and/or is cut-out enroute as a result of same, the train

crew will cut-in the ACS onboard system, perform a departure test, and, if successful, continue the trip through the project limits under ACS operation. If the ACS onboard system cut-in and/or departure test are not completed successfully, the train will continue to operate under the provisions of 49 CFR 236.567, restrictions imposed when device fails and/or is cut out en route.

UP notes that the ACS and PTC systems are not integrated on the locomotive and their concurrent use would potentially be confusing and distracting to the train crew, due to differences in the content of their displays, audible and visual alerts provided, and required acknowledgement protocols.

A copy of the petition, as well as any written communications concerning the petition, is available for review online at www.regulations.gov and in person at the Department of Transportation's Docket Operations Facility, 1200 New Jersey Avenue SE., W12-140, Washington, DC 20590. The Docket Operations Facility is open from 9 a.m. to 5 p.m., Monday through Friday, except Federal Holidays.

Interested parties are invited to participate in these proceedings by submitting written views, data, or comments. FRA does not anticipate scheduling a public hearing in connection with these proceedings since the facts do not appear to warrant a hearing. If any interested party desires an opportunity for oral comment, they should notify FRA, in writing, before the end of the comment period and specify the basis for their request.

All communications concerning these proceedings should identify the appropriate docket number and may be submitted by any of the following methods:

- **Web site:** <http://www.regulations.gov>. Follow the online instructions for submitting comments.
- **Fax:** 202-493-2251.
- **Mail:** Docket Operations Facility, U.S. Department of Transportation, 1200 New Jersey Avenue SE., W12-140, Washington, DC 20590.
- **Hand Delivery:** 1200 New Jersey Avenue SE., Room W12-140, Washington, DC 20590, between 9 a.m. and 5 p.m., Monday through Friday, except Federal Holidays.

Communications received by January 18, 2017 will be considered by FRA before final action is taken. Comments received after that date will be considered as far as practicable.

Anyone is able to search the electronic form of any written communications and comments received into any of our dockets by the

name of the individual submitting the comment (or signing the document, if submitted on behalf of an association, business, labor union, etc.). In accordance with 5 U.S.C. 553(c), DOT solicits comments from the public to better inform its processes. DOT posts these comments, without edit, including any personal information the commenter provides, to www.regulations.gov, as described in the system of records notice (DOT/ALL-14 FDMS), which can be reviewed at www.dot.gov/privacy. Robert C. Lauby,

Associate Administrator for Railroad Safety, Chief Safety Officer.

[FR Doc. 2016-30444 Filed 12-16-16; 8:45 am]

BILLING CODE 4910-06-P

DEPARTMENT OF TRANSPORTATION

Federal Railroad Administration

[Docket Number FRA-2016-0111]

Petition for Waiver of Compliance

In accordance with part 211 of Title 49 of the Code of Federal Regulations (CFR), this document provides the public notice that by a document dated November 14, 2016, The Belt Railway Company of Chicago (BRC) has petitioned the Federal Railroad Administration (FRA) for a waiver of compliance from certain provisions of the Federal railroad safety regulations contained at 49 CFR part 236. FRA assigned the petition docket number FRA-2016-0111.

BRC seeks relief from certain requirements of part 236; specifically sections 236.377 Approach Locking, 236.378 Time Locking, 236.379 Route Locking, 236.380 Indication Locking, and 236.381 Traffic Locking, on vital microprocessor-based systems. BRC proposes to verify and test signal locking systems controlled by microprocessor-based equipment by use of alternative procedures every 4 years after initial baseline testing or program change as follows:

- Verifying the Cyclic Redundancy Check (CRC)/Check Sum/Universal Control Number (UNC) of the existing location's specific application logic to the previously tested version.
- Testing the appropriate interconnection to the associated signaling hardware equipment outside of the processor (switch indication, track indication, searchlight signal indication, approach locking (if external)) to verify correct and intended

inputs to and outputs from the processor are maintained.

- Analyze and compare the results of the 4-year alternative testing with the results of the baseline testing performed at the location and submit the results to the FRA.

Many of BRC's Interlockings, control points, and other locations are controlled by solid-state, vital microprocessor-based systems. These systems use programmed logic equations in lieu of relays or other mechanical components for control of both vital and non-vital functions. The logic does not change once a microprocessor-based system has been tested and locking tests are documented on installation.

A copy of the petition, as well as any written communications concerning the petition, is available for review online at www.regulations.gov and in person at the Department of Transportation's (DOT) Docket Operations Facility, 1200 New Jersey Avenue SE., W12-140, Washington, DC 20590. The Docket Operations Facility is open from 9 a.m. to 5 p.m., Monday through Friday, except Federal Holidays.

Interested parties are invited to participate in these proceedings by submitting written views, data, or comments. FRA does not anticipate scheduling a public hearing in connection with these proceedings since the facts do not appear to warrant a hearing. If any interested party desires an opportunity for oral comment, they should notify FRA, in writing, before the end of the comment period and specify the basis for their request.

All communications concerning these proceedings should identify the appropriate docket number and may be submitted by any of the following methods:

- *Web site:* <http://www.regulations.gov> Follow the online instructions for submitting comments.
- *Fax:* 202-493-2251.
- *Mail:* Docket Operations Facility, US Department of Transportation, 1200 New Jersey Avenue SE., W12-140, Washington, DC 20590.
- *Hand Delivery:* 1200 New Jersey Avenue SE., Room W12-140, Washington, DC 20590, between 9 a.m. and 5 p.m., Monday through Friday, except Federal Holidays.

Communications received by February 2, 2017 will be considered by FRA before final action is taken. Comments received after that date will be considered as far as practicable.

Anyone is able to search the electronic form of any written communications and comments received into any of our dockets by the

name of the individual submitting the comment (or signing the document, if submitted on behalf of an association, business, labor union, etc.). In accordance with 5 U.S.C. 553(c), DOT solicits comments from the public to better inform its processes. DOT posts these comments, without edit, including any personal information the commenter provides, to www.regulations.gov, as described in the system of records notice (DOT/ALL-14 FDMS), which can be reviewed at www.dot.gov/privacy. BILLING CODE 4910-06-P

DEPARTMENT OF TRANSPORTATION

Federal Railroad Administration

[Docket Number FRA-2007-28049]

Petition for Waiver of Compliance

In accordance with part 211 of Title 49 of the Code of Federal Regulations (CFR), this provides the public notice that by a document dated November 29, 2016, Union Pacific Railroad Company (UP) has petitioned the Federal Railroad Administration (FRA) for extension of a waiver of compliance from certain provisions of the Federal railroad safety regulations contained at 49 CFR part 229, Railroad Locomotive Safety Standards. Specifically, UP seeks extension of the provision, which allows locomotives with increased pilot height (allowed in yard service under 49 CFR 229.123(b)) to operate in the lead position over approximately one mile of track between Englewood and Settegast yards in Houston, TX. This petition has been assigned Docket Number FRA-2007-28049. In the petition for extension, UP states that it has been operating under the conditions set out in the original approval for this waiver for a period of 9 years with no adverse impact on the safety of operations.

A copy of the petition, as well as any written communications concerning the petition, is available for review online at www.regulations.gov and in person at the Department of Transportation's (DOT) Docket Operations Facility, 1200 New Jersey Avenue SE., W12-140, Washington, DC 20590. The Docket Operations Facility is open from 9 a.m. to 5 p.m., Monday through Friday, except Federal Holidays.

Interested parties are invited to participate in these proceedings by submitting written views, data, or comments. FRA does not anticipate scheduling a public hearing in connection with these proceedings since the facts do not appear to warrant a hearing. If any interested party desires an opportunity for oral comment, they should notify FRA, in writing, before the end of the comment period and specify the basis for their request.

All communications concerning these proceedings should identify the appropriate docket number and may be submitted by any of the following methods:

- **Web site:** <http://www.regulations.gov>. Follow the online instructions for submitting comments.
- **Fax:** 202-493-2251.
- **Mail:** Docket Operations Facility, US Department of Transportation, 1200 New Jersey Avenue SE., W12-140, Washington, DC 20590.
- **Hand Delivery:** 1200 New Jersey Avenue SE., Room W12-140, Washington, DC 20590, between 9 a.m. and 5 p.m., Monday through Friday, except Federal Holidays.

Communications received by February 2, 2017 will be considered by FRA before final action is taken. Comments received after that date will be considered as far as practicable.

Anyone is able to search the electronic form of any written communications and comments received into any of our dockets by the name of the individual submitting the comment (or signing the document, if submitted on behalf of an association, business, labor union, etc.). In accordance with 5 U.S.C. 553(c), DOT solicits comments from the public to better inform its processes. DOT posts these comments, without edit, including any personal information the commenter provides, to www.regulations.gov, as described in the system of records notice (DOT/ALL-14 FDMS), which can be reviewed at <https://www.transportation.gov/privacy>. BILLING CODE 4910-06-P

DEPARTMENT OF TRANSPORTATION

National Highway Traffic Safety Administration

[Docket No. NHTSA-2016-0091]

Proposed Information Collection Submitted to the Office of Management and Budget; Request for Comments

ACTION: Notice and request for comments.

SUMMARY: In compliance with the Paperwork Reduction Act of 1995, this notice announces that the Information Collection Request (ICR) abstracted below is being forwarded to the Office of Management and Budget (OMB) for review and comments. A **Federal Register** Notice with a 60-day comment period soliciting comments on the following information collection was published on September 20, 2016 (81 FR 65709).

DATES: Comments must be submitted on or before January 18, 2017.

ADDRESSES: Send comments regarding the burden estimate, including suggestions for reducing the burden, to the Office of Management and Budget, Attention: NHTSA Desk Officer, 725 17th Street NW., Washington, DC 20503.

Comments are invited on the following:

- i. Whether the proposed collection of information is necessary for the proper performance of the functions of the Department, including whether the information will have practical utility;
- ii. The accuracy of the Department's estimate of the burden of the proposed information collection;
- iii. Ways to enhance the quality, utility and clarity of the information to be collected; and
- iv. Ways to minimize the burden of the collection of information on respondents, including the use of automated collection techniques or other forms of information technology.

FOR FURTHER INFORMATION CONTACT: Ms. Yvonne Clarke, NHTSA, 1200 New Jersey Avenue SE., Washington, DC 20590; Telephone (202) 366-1845; Facsimile: (202) 366-2106; email address: Yvonne.e.clarke@dot.gov.

For access to the docket to read background documents, go to <http://www.regulations.gov> or the street address listed above. Follow the online instructions for accessing the dockets.

SUPPLEMENTARY INFORMATION:

Title: Vehicle Performance Guidance.
OMB Control Number: Not assigned.
Type of Request: New Information Collection.

Abstract: On September 20, 2016, the Department of Transportation published

its *Federal Automated Vehicles Policy*. Recognizing the potential that highly automated vehicles (HAVs) have to enhance safety and mobility, the *Federal Automated Vehicles Policy* sets out an approach to enable the safe deployment of L2 and HAV systems. An HAV system is defined as one that corresponds to Conditional (Level 3), High (Level 4), and Full (Level 5) Automation, as defined in SAE J3016. HAV systems rely on the automation system (not on a human driver) to monitor the driving environment for at least certain aspects of the driving task. An L2 system, also described in SAE J3016, is different because the human driver is never relieved of the responsibility to monitor the driving environment.

The speed with which increasingly complex L2 and HAV systems are evolving challenges DOT and NHTSA to take approaches that ensure these technologies are safely introduced, provide safety benefits today, and achieve their full safety potential in the future. Consistent with its statutory purpose to reduce traffic accidents and deaths and injuries resulting from traffic accidents, NHTSA seeks to collect from, and recommend the recordkeeping and disclosure of information by vehicle manufacturers and other entities as described in *Federal Automated Vehicles Policy*. Specifically, NHTSA's recommendations in the policy section titled "Vehicle Performance Guidance for Automated Vehicles" (hereafter referred to as "Guidance") are the subject of this voluntary information collection request. This Guidance outlines recommended best practices, many of which should be commonplace in the industry, for the safe pre-deployment design, development, and testing of HAV and L2 systems prior to commercial sale or operation on public roads. Further, the Guidance identifies key areas to be addressed by manufacturers and other entities prior to testing or deploying HAV or L2 systems on public roadways.

To assist NHTSA and the public in evaluating how safety is being addressed by manufacturers and other entities developing and testing HAV and L2 systems, NHTSA is recommending the following documentation, recordkeeping, and disclosures that aid in that mission. The burden estimates contained in this notice are based on the Agency's present understanding of the HAV and L2 systems market. NHTSA seeks comment on the burden estimates in this notice in whole or in part.

Currently NHTSA expects up to approximately 45 OEMs and other entities producing level 3 through 5

vehicles or features will choose to voluntarily comply with the guidance set forth in the Federal Automated Vehicle Policy. The agency also expects that up to 45 manufacturers and other entities who are currently supplying level 2 functionality to voluntarily comply with the guidance. The estimated cost for complying with this regulation is \$100 per hour. Therefore, the total annual cost is estimated to be \$13,605,000 (time burden of 136,050 hours × \$100 cost per hour).

Affected Public: Business or other for profit.

Estimated Number of Respondents: 90.

Estimated Number of Responses: 90.
Annual Estimated Total Annual Burden Hours: 136,050 hrs.

Frequency of Collection: Annual.

On September 20, 2016, NHTSA published a notice announcing the proposed collection of information pursuant to 44 U.S.C. 3501 *et seq.* and providing a 60-day comment period (81 FR 65709). . The Agency received 11 comments on this notice from the general public, five of these commenters provided general comments on the Federal Automated Vehicles Policy (the Policy). The remaining commenters (Daimler Trucks North America, the Alliance of Automobile Manufacturers, Inc., Association of Global Automakers, Inc., Motor and Equipment Manufacturers Association (MEMA), Truck and Engine Manufacturers Association (EMA), and the Insurance Institute for Highway Safety (IIHS)) had comments that were responsive to the 60-Day notice. The Agency also received a number of substantive comments pertaining to the ICR as part of the overall general comments on the Policy (Docket # NHTSA–2016–0090). In general these comments were reflected in the specific comments received on the 60-Day Notice.

These comments can be grouped into the following categories:

1. Comments regarding the burden of voluntarily responding to the 15 point Safety Assessment
2. Comments regarding the burden hours imposed by the guidance (*e.g.* documentation related to the 15 point Safety Assessment) contained in the Federal Automated Vehicles Policy
3. Comments regarding the scope of the Safety Assessment Letter

4. Comments regarding submitting Safety Assessment Letters for test vehicles
5. Comments regarding submitting Safety Assessment Letters for vehicles meeting SAE International (SAE) Level 2 automation

It is important to note that the Federal Automated Vehicles Policy was effective on September 23, 2016, and is intended to be updated on an annual basis. Therefore the burden hours outlined in the 60-Day notice and this subsequent 30 Day notice are reflective of that version of the policy. Comments which suggested changes to the scope of the Safety Assessment Letter, removal of test vehicles and SAE Level 2 vehicles from the Policy, and similar comments are addressed in the supporting document. Additionally, the agency has provided and will continue to provide clarifications to the policy on its Web site.

The remaining comments regarding the burden of voluntarily submitting a Safety Assessment Letter and the burden of following the guidance contained inside the Policy can be summed up as “NHTSA has underestimated the burden of following its policy.” However, none of the commenters offered substantive information regarding the specific details of the Agency’s underestimation of the burden in following the Policy’s Guidance. In light of these comments, NHTSA has reevaluated its analysis of the burden hours and looked to voluntary industry standards such as the International Organization for Standardization’s (ISO) 26262—Road vehicles—Functional safety, SAE J3061—Cybersecurity Guidebook for Cyber-Physical Vehicle Systems, and NHTSA’s own experience with safety defect investigations as it relates to record keeping by companies. Based on this analysis and the Agency’s observation that the Policy is not suggesting new documentation procedures, we have not made any adjustments to the burden hours . . .

Authority: The Paperwork Reduction Act of 1995; 44 U.S.C. Chapter 35, as amended; and 49 CFR 1.95.

Nathaniel Beuse,

Associate Administrator for Vehicle Safety Research, National Highway Traffic Safety Administration.

BILLING CODE 4910–59–P

DEPARTMENT OF THE TREASURY

Office of Foreign Assets Control

Sanctions Actions Pursuant to Executive Order 13224

AGENCY: Office of Foreign Assets Control, Treasury.

ACTION: Notice.

SUMMARY: The Department of the Treasury’s Office of Foreign Assets Control (OFAC) is publishing the names of 1 individual and 2 entities whose property and interests in property are blocked pursuant to Executive Order 13224 of September 23, 2001, “Blocking Property and Prohibiting Transactions With Persons Who Commit, Threaten To Commit, or Support Terrorism.”

DATES: OFAC’s actions described in this notice were effective on December 13, 2016.

FOR FURTHER INFORMATION CONTACT:

Associate Director for Global Targeting, tel.: 202–622–2420, Assistant Director for Sanctions Compliance & Evaluation, tel.: 202–622–2490, Assistant Director for Licensing, tel.: 202–622–2480, Office of Foreign Assets Control, or Chief Counsel (Foreign Assets Control), tel.: 202–622–2410, Office of the General Counsel, Department of the Treasury (not toll free numbers).

SUPPLEMENTARY INFORMATION:

Electronic Availability

The SDN List and additional information concerning OFAC sanctions programs are available from OFAC’s Web site (www.treas.gov/ofac).

Notice of OFAC Actions

On December 13, 2016, OFAC blocked the property and interests in property of the following 1 individual and 2 entities pursuant to E.O. 13224, “Blocking Property and Prohibiting Transactions With Persons Who Commit, Threaten To Commit, or Support Terrorism”:

Individual

1. JUBAYR AL-RAWI, Fawaz Muhammad (a.k.a. AL-ARWEE, Hajji Fouaz; a.k.a. AL-RAWI, Hajj Fawaz; a.k.a. JABIR AL-RAWI, Fawaz Muhamed; a.k.a. JABUR AL-RAWI, Fawwaz; a.k.a. JUBAYR AL-RAWI, Fawwaz Muhammad), Syria; DOB 1974; POB Albu Kamal, Syria; Gender Male (individual) [SDGT] (Linked To: ISLAMIC STATE OF IRAQ AND THE LEVANT).

Entities

1. HANIFA MONEY EXCHANGE OFFICE (Arabic: شركة حنيفة للصرافة) (a.k.a. HANIFA EXCHANGE; a.k.a. HANIFAH CURRENCY EXCHANGE; a.k.a. HANIFAH EXCHANGE COMPANY; a.k.a. HANIFEH EXCHANGE; a.k.a. HUNAIFA OFFICE), Albu Kamal, Syria; Albu Kamal Branch only [SDGT] (Linked To: JUBAYR AL-RAWI, Fawaz Muhammad; Linked To: ISLAMIC STATE OF IRAQ AND THE LEVANT).
2. SELSELAT AL THAHAB (a.k.a. AL SILSILAH AL DHAHABA; a.k.a. GOLDEN CHAIN (Arabic: سلسله الذهب); a.k.a. SELSELAT AL THAHAB FOR MONEY EXCHANGE; a.k.a. SILSALAT AL DHAB; a.k.a. SILSILAH MONEY EXCHANGE COMPANY; a.k.a. SILSILAT MONEY EXCHANGE COMPANY; a.k.a. SILSILET AL THAHAB), Al- Kadhumi Complex, al Harthia, Baghdad, Iraq; al Abbas Street, Karbala, Iraq [SDGT] (Linked To: ISLAMIC STATE OF IRAQ AND THE LEVANT).

Dated: December 13, 2016.

BILLING CODE 4810-AL-P

DEPARTMENT OF THE TREASURY

Proposed Collection; Comment Request; Office of the Procurement Executive

AGENCY: Department of the Treasury, Departmental Offices.

ACTION: Notice and request for comments.

SUMMARY: The Department of the Treasury, Office of the Procurement

Executive, is soliciting comments concerning information collection No. 1505-0107—Regulation Agency Protests that is scheduled to expire February 28, 2017.

DATES: Written comments must be received on or before February 17, 2017 to be assured of consideration.

ADDRESSES: You may submit comments by any of the following methods:

Email: Thomas.olinn@treasury.gov. The subject line should contain the OMB number and title for which you are commenting. *Mail:* Thomas O'Linn, Office of the Procurement Executive, Department of the Treasury, 1722 I Street NW., Mezzanine, Washington, DC 20006. All responses to this notice will be included in the request for OMB's

approval. All comments will also become a matter of public record.

FOR FURTHER INFORMATION CONTACT: Requests for additional information or request a copy of the information collection should be directed to Thomas O'Linn (202) 622-2092.

SUPPLEMENTARY INFORMATION:

OMB Number: 1505-0107.

Type of Review: Extension without change of a currently approved collection.

Title: Regulation Agency Protests.

Abstract: This notice provides a request to continue including the designated OMB Control Number on information requested from contractors. The information is requested from contractors so that the Government will be able to evaluate protests effectively

and provide prompt resolution of issues to dispute when contractors file agency level protests.

Affected Public: Private Sector: Businesses or other for-profits.

Estimated Number of Respondents: 9.

Estimated Number of Responses per Respondent: 1.

Estimated Hours per Response: 2.

Estimated Total Annual Burden Hours: 18.

Request For Comments: The Department of the Treasury invites the general public and other Federal agencies to comment on an extension of an existing information collection, as required by the Paperwork Reduction Act of 1995, Public Law 104–13 (44 U.S.C. 3506(c)(2)(A)). Comments submitted in response to this notice will be summarized and included in the request for OMB approval. All comments will become a matter of public record. Comments are invited on: (a) Whether the collection of information is necessary for the proper performance of the functions of the agency, including whether the information has practical utility; (b) the accuracy of the agency's estimate of the burden of the collection of information, including the validity of the methodology and assumptions used; (c) ways to enhance the quality, utility, and clarity of the information to be collected; (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology, and (e) estimates of capital or start-up costs and costs of operation, maintenance, and purchase of services to provide information.

Bob Faber,

Acting Treasury PRA Clearance Officer.

[FR Doc. 2016–30403 Filed 12–16–16; 8:45 am]

BILLING CODE 4810–25–P

DEPARTMENT OF THE TREASURY

Submission for OMB Review; Comment Request

December 14, 2016.

The Department of the Treasury will submit the following information collection requests to the Office of Management and Budget (OMB) for review and clearance in accordance with the Paperwork Reduction Act of 1995, Public Law 104–13, on or after the date of publication of this notice.

DATES: Comments should be received on or before January 18, 2017 to be assured of consideration.

ADDRESSES: Send comments regarding the burden estimates, or any other aspect of the information collections, including suggestions for reducing the burden, to (1) Office of Information and Regulatory Affairs, Office of Management and Budget, Attention: Desk Officer for Treasury, New Executive Office Building, Room 10235, Washington, DC 20503, or email at OIRA_Submission@OMB.EOP.gov and (2) Treasury PRA Clearance Officer, 1750 Pennsylvania Ave. NW., Suite 8142, Washington, DC 20220, or email at PRA@treasury.gov.

FOR FURTHER INFORMATION CONTACT:

Copies of the submissions may be obtained by emailing PRA@treasury.gov, calling (202) 622–0934, or viewing the entire information collection request at www.reginfo.gov.

Internal Revenue Service (IRS)

OMB Control Number: 1545–1038.

Type of Review: Extension without change of a currently approved collection.

Title: Annual Certification of a Qualified Residential Rental Project.

Form: 8703

Abstract: Operators of qualified residential projects will use this form to certify annually that their projects meet the requirements of IRC section 142(d). Operators are required to file this certification under section 142(d)(7). Operators must indicate on the form the specific “set-aside” test the bond issuer elected under 26 U.S.C. Section 142(d) for the project period. They must also indicate the percentage of low-income units in the residential rental project.

Affected Public: Businesses or other for-profits.

Estimated Total Annual Burden Hours: 76,620.

OMB Control Number: 1545–1592.

Type of Review: Extension without change of a currently approved collection.

Title: Exception from the information reporting requirements in § 6045(e).

Abstract: This revenue procedure supersedes Rev. Proc. 98–20, 98–1 C.B. 549, and provides the written assurances that are acceptable to the Service for exempting a real estate reporting person from information reporting requirements for the sale of a principal residence under section 6045(e)5 of the Internal Revenue Code.

Affected Public: Individuals or Households.

Estimated Total Annual Burden Hours: 420,500.

OMB Control Number: 1545–1684.

Type of Review: Extension without change of a currently approved collection.

Title: Pre-Filing Agreements Program.

Abstract: This revenue procedure permits a taxpayer under the jurisdiction of the Large Business and International Division (LB&I) to request that the Service examine specific issues relating to tax returns before those returns are filed. This revenue procedure modifies and supersedes Rev. Proc. 2009–14, 2009–3 I.R.B. 324. This revenue procedure provides the framework within which a taxpayer and the Service may work together in a cooperative environment to resolve, after examination, issues accepted into the program.

Affected Public: Businesses or other for-profits.

Estimated Total Annual Burden Hours: 13,134.

OMB Control Number: 1545–1708.

Type of Review: Extension without change of a currently approved collection.

Title: Handbook for Authorized IRS e-file Providers.

Abstract: Publication 1345 provides important information for Authorized IRS e-file Providers of Individual Income Tax Returns, including information regarding return submission, record keeping requirements, payment options, and refunds.

Affected Public: Businesses or other for-profits.

Estimated Total Annual Burden Hours: 6,023,762.

OMB Control Number: 1545–1734.

Type of Review: Extension without change of a currently approved collection.

Title: Terminal Operator Report.

Form: 720–TO

Abstract: Representatives of the motor fuel industry, state governments, and the Federal government are working to ensure compliance with excise taxes on motor fuels. This joint effort has resulted in a system to track the movement of all products to and from terminals. Form 720–TO is an information return that will be used by terminal operators to report their monthly receipts and disbursements of products.

Affected Public: Businesses or other for-profits.

Estimated Total Annual Burden Hours: 2,347,020.

OMB Control Number: 1545–1875.

Type of Review: Extension without change of a currently approved collection.

Title: Guidance on how a state elects a health program for HCTC.

Abstract: Revenue Procedure 2004–12 informs states how to elect a health program to be qualified health insurance

for purposes of the health coverage tax credit (HCTC) under section 35 of the Internal Revenue Code. The collection of information is voluntary. However, if a state does not make an election, eligible residents of the state may be impeded in their efforts to claim the HCTC.

Affected Public: State, Local, and Tribal Governments.

Estimated Total Annual Burden Hours: 26.

OMB Control Number: 1545–2079.

Type of Review: Extension without change of a currently approved collection.

Title: Disclosure by taxable party to the tax-exempt entity.

Abstract: This document contains final regulations that provide guidance under section 4965 of the Internal Revenue Code (Code), relating to excise taxes with respect to prohibited tax shelter transactions to which tax-exempt entities are parties, and sections 6033(a)(2) and 6011(g) of the Code, relating to certain disclosure obligations with respect to such transactions.

Affected Public: Businesses or other for-profits.

Estimated Total Annual Burden Hours: 98,500.

Bob Faber,

Acting Treasury PRA Clearance Officer.

BILLING CODE 4830–01–P

UNITED STATES SENTENCING COMMISSION

Sentencing Guidelines for United States Courts

AGENCY: United States Sentencing Commission.

ACTION: Notice of proposed amendments to sentencing guidelines, policy statements, and commentary. Request for public comment, including public comment regarding retroactive application of any of the proposed amendments. Notice of public hearing.

SUMMARY: The United States Sentencing Commission is considering promulgating certain amendments to the sentencing guidelines, policy statements, and commentary. This notice sets forth the proposed amendments and, for each proposed amendment, a synopsis of the issues addressed by that amendment. This notice also sets forth a number of issues for comment, some of which are set forth together with the proposed amendments, and one of which (regarding retroactive application of

proposed amendments) is set forth in the **SUPPLEMENTARY INFORMATION** portion of this notice.

DATES: (1) Written Public Comment.—Written public comment regarding the proposed amendments and issues for comment set forth in this notice, including public comment regarding retroactive application of any of the proposed amendments, should be received by the Commission not later than February 20, 2017. Written reply comments, which may only respond to issues raised in the original comment period, should be received by the Commission on March 10, 2017. Public comment regarding a proposed amendment received after the close of the comment period, and reply comment received on issues not raised in the original comment period, may not be considered.

(2) Public Hearing.—The Commission may hold a public hearing regarding the proposed amendments and issues for comment set forth in this notice. Further information regarding any public hearing that may be scheduled, including requirements for testifying and providing written testimony, as well as the date, time, location, and scope of the hearing, will be provided by the Commission on its Web site at www.ussc.gov.

ADDRESSES: All written comment should be sent to the Commission by electronic mail or regular mail. The email address for public comment is PublicComment@ussc.gov. The regular mail address for public comment is United States Sentencing Commission, One Columbus Circle NE., Suite 2–500, Washington, DC 20002–8002, Attention: Public Affairs.

FOR FURTHER INFORMATION CONTACT: Christine Leonard, Director, Office of Legislative and Public Affairs, (202) 502–4500, pubaffairs@ussc.gov.

SUPPLEMENTARY INFORMATION: The United States Sentencing Commission is an independent agency in the judicial branch of the United States Government. The Commission promulgates sentencing guidelines and policy statements for federal courts pursuant to 28 U.S.C. 994(a). The Commission also periodically reviews and revises previously promulgated guidelines pursuant to 28 U.S.C. 994(o) and submits guideline amendments to the Congress not later than the first day of May each year pursuant to 28 U.S.C. 994(p).

The proposed amendments in this notice are presented in one of two formats. First, some of the amendments are proposed as specific revisions to a guideline, policy statement, or

commentary. Bracketed text within a proposed amendment indicates a heightened interest on the Commission's part in comment and suggestions regarding alternative policy choices; for example, a proposed enhancement of [2][4][6] levels indicates that the Commission is considering, and invites comment on, alternative policy choices regarding the appropriate level of enhancement. Similarly, bracketed text within a specific offense characteristic or application note means that the Commission specifically invites comment on whether the proposed provision is appropriate. Second, the Commission has highlighted certain issues for comment and invites suggestions on how the Commission should respond to those issues.

The proposed amendments and issues for comment in this notice are as follows:

(1) A multi-part proposed amendment to Chapters Four (Criminal History and Criminal Livelihood) and Five (Determining the Sentence), including (A) setting forth options for a new Chapter Four guideline, at § 4C1.1 (First Offenders), and amending § 5C1.1 (Imposition of a Term of Imprisonment) to provide lower guideline ranges for “first offenders” generally and increase the availability of alternatives to incarceration for such offenders at the lower levels of the Sentencing Table, and related issues for comment; and (B) revisions to Chapter Five to (i) amend the Sentencing Table in Chapter Five, Part A to expand Zone B by consolidating Zones B and C, (ii) amend the Commentary to § 5F1.2 (Home Detention) to revise language requiring electronic monitoring, and (iii) related issues for comment.

(2) a multi-part proposed amendment relating to the findings and recommendations contained in the May 2016 Report issued by the Commission's Tribal Issues Advisory Group, including (A) amending the Commentary to § 4A1.3 (Departures Based on Inadequacy of Criminal History Category (Policy Statement)) to set forth a non-exhaustive list of factors for the court to consider in determining whether, or to what extent, an upward departure based on a tribal court conviction is appropriate, and related issues for comment; and (B) amending the Commentary to § 1B1.1 (Application Instructions) to provide a definition of “court protection order,” and related issues for comment;

(3) a proposed amendment to § 4A1.2 (Definitions and Instructions for Computing Criminal History) to revise how juvenile sentences are considered for purposes of calculating criminal

history points, and to the Commentary to § 4A1.3 (Departures Based on Inadequacy of Criminal History Category (Policy Statement)) to account for cases in which a defendant had an adult conviction for an offense committed prior to age eighteen counted in the criminal history score that would have been classified as a juvenile adjudication (and therefore not counted) if the laws of the jurisdiction in which the defendant was convicted did not categorically consider offenders below the age of eighteen years as “adults;” and related issues for comment;

(4) a multi-part proposed amendment to Chapter Four, Part A (Criminal History), including (A) amending § 4A1.2 (Definitions and Instructions for Computing Criminal History) to revise how revocations of probation, parole, supervised release, special parole, or mandatory release are considered for purposes of calculating criminal history points, and related issues for comment; and (B) amending the Commentary to § 4A1.3 (Departures Based on Inadequacy of Criminal History Category (Policy Statement)) to account for cases in which the period of imprisonment actually served by the defendant was substantially less than the length of the sentence imposed for a conviction counted in the criminal history score, and a related issue for comment;

(5) a multi-part proposed amendment to respond to the Bipartisan Budget Act of 2015, Public Law 114–74 (Nov. 2, 2015), including (A) revisions to Appendix A (Statutory Index), and a related issue for comment; and (B) amending § 2B1.1 (Theft, Property Destruction, and Fraud) to address new increased penalties for certain persons who commit fraud offenses under certain Social Security programs, and related issues for comment;

(6) a proposed amendment to the Commentary to § 3E1.1 (Acceptance of Responsibility) to revise how the defendant’s challenge of relevant conduct should be considered in determining whether the defendant has accepted responsibility for purposes of the guideline, and a related issue for comment;

(7) a multi-part proposed amendment to the *Guidelines Manual* to respond to recently enacted legislation and miscellaneous guideline issues, including (A) amending § 2B5.3 (Criminal Infringement of Copyright or Trademark) to respond to changes made by the Transnational Drug Trafficking Act of 2015, Public Law 114–154 (May 16, 2016); (B) amending § 2A3.5 (Failure to Register as a Sex Offender), § 2A3.6 (Aggravated Offenses Relating to

Registration as a Sex Offender), and Appendix A (Statutory Index) to respond to changes made by the International Megan’s Law to Prevent Child Exploitation and Other Sexual Crimes Through Advanced Notification of Traveling Sex Offenders Act, Public Law 114–119 (Feb. 8, 2016); (C) revisions to Appendix A (Statutory Index) to respond to a new offense established by the Frank R. Lautenberg Chemical Safety for the 21st Century Act, Public Law 114–182 (June 22, 2016); and (D) a technical amendment to § 2G1.3 (Promoting a Commercial Sex Act or Prohibited Sexual Conduct with a Minor; Transportation of Minors to Engage in a Commercial Sex Act or Prohibited Sexual Conduct; Travel to Engage in Commercial Sex Act or Prohibited Sexual Conduct with a Minor; Sex Trafficking of Children; Use of Interstate Facilities to Transport Information about a Minor);

(8) a proposed amendment to make technical changes to § 2D1.1 (Unlawful Manufacturing, Importing, Exporting, or Trafficking (Including Possession with Intent to Commit These Offenses); Attempt or Conspiracy) to replace the term “marihuana equivalency” used in the Drug Equivalency Tables when determining penalties for controlled substances;

(9) a proposed amendment to make various technical changes to the *Guidelines Manual*, including (A) an explanatory note in Chapter One, Part A, Subpart 1(4)(b)(Departures) and clarifying changes to the Commentary to § 2B1.1 (Theft, Property Destruction, and Fraud); (B) technical changes to § 4A1.2 (Definitions and Instructions for Computing Criminal History) and to the Commentary of other guidelines to correct title references to § 4A1.3 (Departures Based on Inadequacy of Criminal History Category (Policy Statement)); and (C) clerical changes to § 2D1.11 (Unlawful Distributing, Importing, Exporting or Possessing a Listed Chemical; Attempt or Conspiracy), § 5D1.3 (Conditions of Supervised Release), Appendix A (Statutory Index), and to the Commentary of other guidelines;

The Commission requests public comment regarding whether, pursuant to 18 U.S.C. 3582(c)(2) and 28 U.S.C. 994(u), any proposed amendment published in this notice should be included in subsection (d) of § 1B1.10 (Reduction in Term of Imprisonment as a Result of Amended Guideline Range (Policy Statement)) as an amendment that may be applied retroactively to previously sentenced defendants. The Commission lists in § 1B1.10(d) the specific guideline amendments that the

court may apply retroactively under 18 U.S.C. 3582(c)(2). The background commentary to § 1B1.10 lists the purpose of the amendment, the magnitude of the change in the guideline range made by the amendment, and the difficulty of applying the amendment retroactively to determine an amended guideline range under § 1B1.10(b) as among the factors the Commission considers in selecting the amendments included in § 1B1.10(d). To the extent practicable, public comment should address each of these factors.

Publication of a proposed amendment requires the affirmative vote of at least three voting members of the Commission and is deemed to be a request for public comment on the proposed amendment. See Rules 2.2 and 4.4 of the Commission’s Rules of Practice and Procedure. In contrast, the affirmative vote of at least four voting members is required to promulgate an amendment and submit it to Congress. See Rule 2.2; 28 U.S.C. 994(p).

Additional information pertaining to the proposed amendments and issues for comment described in this notice may be accessed through the Commission’s Web site at www.ussc.gov.

Authority: 28 U.S.C. 994(a), (o), (p), (x); USSC Rules of Practice and Procedure 4.3, 4.4.

Patti B. Saris,
Chair.

1. First Offenders/Alternatives to Incarceration

Synopsis of Proposed Amendment: The proposed amendment contains two parts (Part A and Part B). The Commission is considering whether to promulgate either or both of these parts, as they are not necessarily mutually exclusive.

(A) First Offenders

Part A of the proposed amendment is primarily informed by the Commission’s multi-year study of recidivism, which included an examination of circumstances that correlate with increased or reduced recidivism. See United States Sentencing Commission, “Notice of Final Priorities,” 81 FR 58004 (Aug. 24, 2016). It is also informed by the Commission’s continued study of approaches to encourage the use of alternatives to incarceration. *Id.*

Under the *Guidelines Manual*, offenders with minimal or no criminal history are classified into Criminal History Category I. “First offenders,” offenders with no criminal history, are

addressed in the guidelines only by reference to Criminal History Category I. However, Criminal History Category I includes not only “first” offenders but also offenders with varying criminal histories, such as offenders with no criminal history points and those with one criminal history point. Accordingly, the following offenders are classified in the same category: (1) First time offenders with no prior convictions; (2) offenders who have prior convictions that are not counted because they were not within the time limits set forth in § 4A1.2(d) and (e); (3) offenders who have prior convictions that are not used in computing the criminal history category for reasons other than their “staleness” (e.g., sentences resulting from foreign or tribal court convictions, minor misdemeanor convictions or infractions); and (4) offenders with a prior conviction that received only one criminal history point.

Part A sets forth a new Chapter Four guideline, at § 4C1.1 (First Offenders), that would provide lower guideline ranges for “first offenders” generally and increase the availability of alternatives to incarceration for such offenders at the lower levels of the Sentencing Table (compared to otherwise similar offenders in Criminal History Category I). Recidivism data analyzed by the Commission indicate that “first offenders” generally pose the lowest risk of recidivism. See, e.g., U.S. Sent. Comm’n, “Recidivism Among Federal Offenders: A Comprehensive Overview,” at 18 (2016), available at <http://www.ussc.gov/research/research-publications/recidivism-among-federal-offenders-comprehensive-overview>. In addition, 28 U.S.C. 994(j) directs that alternatives to incarceration are generally appropriate for first offenders not convicted of a violent or otherwise serious offense. The new Chapter Four Guideline, in conjunction with the revision to § 5C1.1 (Imposition of a Term of Imprisonment) described below, would further implement the congressional directive at section 994(j).

The new Chapter Four guideline would apply if [(1) the defendant did not receive any criminal history points under the rules contained in Chapter Four, Part A, and (2)] the defendant has no prior convictions of any kind. Part A of the proposed amendment sets forth two options for providing such an adjustment.

Option 1 provides a decrease of [1] level from the offense level determined under Chapters Two and Three.

Option 2 provides a decrease of [2] levels if the final offense level determined under Chapters Two and Three is less than level [16], or a

decrease of [1] level if the offense level determined under Chapters Two and Three is level [16] or greater.

Part A also amends § 5C1.1 (Imposition of a Term of Imprisonment) to add a new subsection (g) that provides that if (1) the defendant is determined to be a first offender under § 4C1.1 (First Offender), (2) [the instant offense of conviction is not a crime of violence][the defendant did not use violence or credible threats of violence or possess a firearm or other dangerous weapon in connection with the offense], and (3) the guideline range applicable to that defendant is in Zone A or Zone B of the Sentencing Table, the court ordinarily should impose a sentence other than a sentence of imprisonment in accordance with the other sentencing options.

Finally, Part A of the proposed amendment also provides issues for comment.

(B) Consolidation of Zones B and C in the Sentencing Table

Part B of the proposed amendment is a result of the Commission’s continued study of approaches to encourage the use of alternatives to incarceration. See United States Sentencing Commission, “Notice of Final Priorities,” 81 FR 58004 (Aug. 24, 2016).

The *Guidelines Manual* defines and allocates sentencing options in Chapter Five (Determining the Sentence). This chapter sets forth “zones” in the Sentencing Table based on the minimum months of imprisonment in each cell. The Sentencing Table sorts all sentencing ranges into four zones, labeled A through D. Each zone allows for different sentencing options, as follows:

Zone A.—All sentence ranges within Zone A, regardless of the underlying offense level or criminal history category, are zero to six months. A sentencing court has the discretion to impose a sentence that is a fine-only, probation-only, probation with a confinement condition (home detention, community confinement, or intermittent confinement), a split sentence (term of imprisonment with term of supervised release with condition of confinement), or imprisonment. Zone A allows for probation without any conditions of confinement.

Zone B.—Sentence ranges in Zone B are from one to 15 months of imprisonment. Zone B allows for a probation term to be substituted for imprisonment, contingent upon the probation term including conditions of confinement. Zone B allows for non-prison sentences, which technically result in sentencing ranges larger than

six months, because the minimum term of imprisonment is one month and the maximum terms begin at seven months. To avoid sentencing ranges exceeding six months, the guidelines require that probationary sentences in Zone B include conditions of confinement. Zone B also allows for a term of imprisonment (of at least one month) followed by a term of supervised release with a condition of confinement (i.e., a “split sentence”) or a term of imprisonment only.

Zone C.—Sentences in Zone C range from 10 to 18 months of imprisonment. Zone C allows for split sentences, which must include a term of imprisonment equivalent to at least half of the minimum of the applicable guideline range. The remaining half of the term requires supervised release with a condition of community confinement or home detention. Alternatively, the court has the option of imposing a term of imprisonment only.

Zone D.—The final zone, Zone D, allows for imprisonment only, ranging from 15 months to life.

Part B of the proposed amendment expands Zone B by consolidating Zones B and C. The expanded Zone B would include sentence ranges from one to 18 months and allow for the sentencing options described above. Although the proposed amendment would in fact delete Zone C by its consolidation with Zone B, Zone D would not be redesignated. Finally, Part B makes conforming changes to §§ 5B1.1 (Imposition of a Term of Probation) and 5C1.1 (Imposition of a Term of Imprisonment).

Part B also amends the Commentary to § 5F1.2 (Home Detention) to remove the language instructing that (1) electronic monitoring “ordinarily should be used in connection with” home detention; (2) alternative means of surveillance may be used “so long as they are effective as electronic monitoring;” and (3) “surveillance necessary for effective use of home detention ordinarily requires” electronic monitoring.

Issues for comment are also provided.

(A) First Offenders

Proposed Amendment

Chapter Four is amended by inserting at the end the following new Part C:

Part C—First Offender

§ 4C1.1. First Offender

(a) A defendant is a first offender if [(1) the defendant did not receive any criminal history points from Chapter Four, Part A, and (2)] the defendant has no prior convictions of any kind.

[Option 1:

(b) If the defendant is determined to be a first offender under subsection (a), decrease the offense level determined under Chapters Two and Three by [1] level.]

[Option 2:

(b) If the defendant is determined to be a first offender under subsection (a), decrease the offense level as follows:

- (1) if the offense level determined under Chapters Two and Three is less than level [16], decrease by [2] levels; or
- (2) if the offense level determined under Chapters Two and Three is level [16] or greater, decrease by [1] level.]

Commentary*Application Note:*

1. *Cases Involving Mandatory Minimum Penalties.*—If the case involves a statutorily required minimum sentence of at least five years and the defendant meets the criteria set forth in subsection (a) of § 5C1.2 (Limitation on Applicability of Statutory Minimum Sentences in Certain Cases), the offense level determined under this section shall be not less than level 17. *See* § 5C1.2(b)."

Section 5C1.1 is amended by inserting at the end the following new subsection (g):

"(g) In cases in which (1) the defendant is determined to be a first offender under § 4C1.1 (First Offender), (2) [the instant offense of conviction is not a crime of violence][the defendant did not use violence or credible threats of violence or possess a firearm or other dangerous weapon in connection with the offense], and (3) the guideline range applicable to that defendant is in Zone A or B of the Sentencing Table, the court ordinarily should impose a sentence other than a sentence of imprisonment in accordance with the other sentencing options set forth in this guideline."

The Commentary to § 5C1.1 captioned "Application Notes" is amended by inserting at the end the following new Note 10:

"10. *Application of Subsection (g).*—(A) *Sentence of Probation*

Prohibited.—The court may not impose a sentence of probation pursuant to this provision if prohibited by statute or where a term of imprisonment is required under this guideline. *See* § 5B1.1 (Imposition of a Term of Probation).

[(B) *Definition of 'Crime of Violence'.*—For purposes of subsection (g), 'crime of violence' has the meaning given that term in § 4B1.2 (Definitions of Terms Used in Section 4B1.1).

(C) *Sentence of Imprisonment for First Offenders.*—A sentence of

imprisonment may be appropriate in cases in which the defendant used violence or credible threats of violence or possessed a firearm or other dangerous weapon in connection with the offense]."

Issues for Comment

1. The Commission seeks comment on "first offenders," defined in the proposed amendment as defendants with no prior convictions of any kind. Should the Commission broaden the scope of the term "first offender" to include other defendants who did not receive criminal history points and, if so, how? For example, should the term "first offender" include defendants who have prior convictions that are not used in computing criminal history points under Chapter Four (e.g., sentences resulting from foreign or tribal court convictions, misdemeanors and petty offenses listed in § 4A1.2(c))? Should the Commission instead limit the scope of the term? If so, how? Should the Commission provide additional or different guidance for determining whether a defendant is, or is not, a first offender?

2. Part A of the proposed amendment sets forth a new Chapter Four guideline that would apply if [(1) the defendant did not receive any criminal history points under the rules contained in Chapter Four, Part A, and (2)] the defendant has no prior convictions of any kind. One of the options set forth for this new guideline, Option 1, would provide that if the defendant is determined to be a first offender (as defined in the new guideline) a decrease of [1] level from the offense level determined under Chapters Two and Three would apply. Should the Commission limit the applicability of the adjustment to defendants with an offense level determined under Chapters Two and Three that is less than a certain number of levels? For example, should the Commission provide that if the offense level determined under Chapters Two and Three is less than level [16], the offense level shall be decreased by [1] level? What other limitations or requirements, if any, should the Commission provide for such an adjustment?

3. Part A of the proposed amendment would amend § 5C1.1 (Imposition of a Term of Imprisonment) to provide that if the defendant is determined to be a first offender under the new § 4C1.1 (First Offender), [the defendant's instant offense of conviction is not a crime of violence][the defendant did not use violence or credible threats of violence or possess a firearm or other dangerous weapon in connection with the offense],

and the guideline range applicable to that defendant is in Zone A or Zone B of the Sentencing Table, the court ordinarily should impose a sentence other than a sentence of imprisonment in accordance with the other sentencing options. Should the Commission further limit the application of such a rebuttable "presumption" and exclude certain categories of non-violent offenses? If so, what offenses should be excluded from the presumption of a non-incarceration sentence? For example, should the Commission exclude public corruption, tax, and other white-collar offenses?

4. If the Commission were to promulgate Part A of the proposed amendment, what conforming changes, if any, should the Commission make to other provisions of the *Guidelines Manual*?

*(B) Consolidation of Zones B and C in the Sentencing Table***Proposed Amendment**

Chapter Five, Part A is amended in the Sentencing Table by striking "Zone C"; by redesignating Zone B to contain all guideline ranges having a minimum of at least one month but not more than twelve months; and by inserting below "Zone B" the following: "[Zone C Deleted]".

The Commentary to Chapter Five, Part A (Sentencing Table) is amended by inserting at the end the following:

"*Background:* The Sentencing Table previously provided four "zones," labeled A through D, based on the minimum months of imprisonment in each cell. The Commission expanded Zone B by consolidating former Zones B and C. Zone B in the Sentencing Table now contains all guideline ranges having a minimum term of imprisonment of at least one but not more than twelve months. Although Zone C was deleted by its consolidation with Zone B, the Commission decided not to redesignate Zone D as Zone C, to avoid unnecessary confusion that may result from different meanings of "Zone C" and "Zone D" through different editions of the *Guidelines Manual*."

The Commentary to § 5B1.1 captioned "Application Notes" is amended in Note 1(B), in the heading, by striking "nine months" and inserting "twelve months"; and in Note 2 by striking "Zone C or D" and inserting "Zone D", and by striking "ten months" and inserting "fifteen months".

Section 5C1.1 is amended— in subsection (c) by striking "subsection (e)" both places such term appears and inserting "subsection (d)"; by striking subsection (d) as follows:

“(d) If the applicable guideline range is in Zone C of the Sentencing Table, the minimum term may be satisfied by—

(1) a sentence of imprisonment; or
(2) a sentence of imprisonment that includes a term of supervised release with a condition that substitutes community confinement or home detention according to the schedule in subsection (e), provided that at least one-half of the minimum term is satisfied by imprisonment.”; and by redesignating subsections (e) and (f) as subsections (d) and (e), respectively.

The Commentary to § 5C1.1 captioned “Application Notes” is amended—in Note 3 by striking “nine months” and inserting “twelve months”; by striking Note 4 as follows:

“4. Subsection (d) provides that where the applicable guideline range is in Zone C of the Sentencing Table (*i.e.*, the minimum term specified in the applicable guideline range is ten or twelve months), the court has two options:

(A) It may impose a sentence of imprisonment.

(B) Or, it may impose a sentence of imprisonment that includes a term of supervised release with a condition requiring community confinement or home detention. In such case, at least one-half of the minimum term specified in the guideline range must be satisfied by imprisonment, and the remainder of the minimum term specified in the guideline range must be satisfied by community confinement or home detention. For example, where the guideline range is 10–16 months, a sentence of five months imprisonment followed by a term of supervised release with a condition requiring five months community confinement or home detention would satisfy the minimum term of imprisonment required by the guideline range.

The preceding example illustrates a sentence that satisfies the minimum term of imprisonment required by the guideline range. The court, of course, may impose a sentence at a higher point within the guideline range. For example, where the guideline range is 10–16 months, both a sentence of five months imprisonment followed by a term of supervised release with a condition requiring six months of community confinement or home detention (under subsection (d)), and a sentence of ten months imprisonment followed by a term of supervised release with a condition requiring four months of community confinement or home detention (also under subsection (d)) would be within the guideline range.”;

by striking Note 6 as follows:

“6. There may be cases in which a departure from the sentencing options authorized for Zone C of the Sentencing Table (under which at least half the minimum term must be satisfied by imprisonment) to the sentencing options authorized for Zone B of the Sentencing Table (under which all or most of the minimum term may be satisfied by intermittent confinement, community confinement, or home detention instead of imprisonment) is appropriate to accomplish a specific treatment purpose. Such a departure should be considered only in cases where the court finds that (A) the defendant is an abuser of narcotics, other controlled substances, or alcohol, or suffers from a significant mental illness, and (B) the defendant’s criminality is related to the treatment problem to be addressed.

In determining whether such a departure is appropriate, the court should consider, among other things, (1) the likelihood that completion of the treatment program will successfully address the treatment problem, thereby reducing the risk to the public from further crimes of the defendant, and (2) whether imposition of less imprisonment than required by Zone C will increase the risk to the public from further crimes of the defendant.

Examples: The following examples both assume the applicable guideline range is 12–18 months and the court departs in accordance with this application note. Under Zone C rules, the defendant must be sentenced to at least six months imprisonment. (1) The defendant is a nonviolent drug offender in Criminal History Category I and probation is not prohibited by statute. The court departs downward to impose a sentence of probation, with twelve months of intermittent confinement, community confinement, or home detention and participation in a substance abuse treatment program as conditions of probation. (2) The defendant is convicted of a Class A or B felony, so probation is prohibited by statute (*see* § 5B1.1(b)). The court departs downward to impose a sentence of one month imprisonment, with eleven months in community confinement or home detention and participation in a substance abuse treatment program as conditions of supervised release.”;

by redesignating Notes 5, 7, 8, and 9 as Notes 4, 5, 6, and 7, respectively;

in Note 4 (as so redesignated) by striking “Subsection (e)” and inserting “Subsection (d)”;

in Note 5 (as so redesignated) by striking “subsections (c) and (d)” and inserting “subsection (c)”;

and in Note 7 (as so redesignated) by striking “Subsection (f)” and inserting “Subsection (e)”, and by striking “subsection (e)” and inserting “subsection (d)”.

The Commentary to § 5F1.2 captioned “Application Notes” is amended in Note 1 [by striking “Electronic monitoring is an appropriate means of surveillance and ordinarily should be used in connection with home detention” and inserting “Electronic monitoring is an appropriate means of surveillance for home detention”; and] by striking “may be used so long as they are as effective as electronic monitoring” and inserting “may be used if appropriate”.

The Commentary to § 5F1.2 captioned “Background” is amended by striking “The Commission has concluded that the surveillance necessary for effective use of home detention ordinarily requires electronic monitoring” and inserting “The Commission has concluded that electronic monitoring is an appropriate means of surveillance for home detention”; and by striking “the court should be confident that an alternative form of surveillance will be equally effective” and inserting “the court should be confident that an alternative form of surveillance is appropriate considering the facts and circumstances of the defendant’s case”.

Issues for Comment

1. The Commission requests comment on whether the zone changes contemplated by Part B of the proposed amendment should apply to all offenses, or only to certain categories of offenses. The zone changes would increase the number of offenders who are eligible under the guidelines to receive a non-incarceration sentence. Should the Commission provide a mechanism to exempt certain offenses from these zone changes? For example, should the Commission provide a mechanism to exempt public corruption, tax, and other white-collar offenses from these zone changes (*e.g.*, to reflect a view that it would not be appropriate to increase the number of public corruption, tax, and other white-collar offenders who are eligible to receive a non-incarceration sentence)? If so, what mechanism should the Commission provide, and what offenses should be covered by it?

2. The proposed amendment would consolidate Zones B and C to create an expanded Zone B. Such an adjustment would provide probation with conditions of confinement as a sentencing option for current Zone C

defendants, an option that was not available to such defendants before. The Commission seeks comment on whether the Commission should provide additional guidance to address these new Zone B defendants. If so, what guidance should the Commission provide?

2. Tribal Issues

Synopsis of Proposed Amendment: In August 2016, the Commission indicated that one of its priorities would be the “[s]tudy of the findings and recommendations contained in the May 2016 Report issued by the Commission’s Tribal Issues Advisory Group, and consideration of any amendments to the *Guidelines Manual* that may be appropriate in light of the information obtained from such study.” See United States Sentencing Commission, “Notice of Final Priorities,” 81 FR 58004 (Aug. 24, 2016). See also Report of the Tribal Issues Advisory Group (May 16, 2016), at <http://www.ussc.gov/research/research-publications/report-tribal-issues-advisory-group>. The Commission is publishing this proposed amendment to inform the Commission’s consideration of the issues related to this policy priority.

In 2015, the Commission established the Tribal Issues Advisory Group (TIAG) as an ad hoc advisory group to the Commission. Among other things, the Commission tasked the TIAG with studying the following issues—

(A) the operation of the federal sentencing guidelines as they relate to American Indian defendants and victims and to offenses committed in Indian Country, and any viable methods for revising the guidelines to (i) improve their operation or (ii) address particular concerns of tribal communities and courts;

(B) whether there are disparities in the application of the federal sentencing guidelines to American Indian defendants, and, if so, how to address them;

(C) the impact of the federal sentencing guidelines on offenses committed in Indian Country in comparison with analogous offenses prosecuted in state courts and tribal courts;

(D) the use of tribal court convictions in the computation of criminal history scores, risk assessment, and for other purposes;

(E) how the federal sentencing guidelines should account for protection orders issued by tribal courts; and

(F) any other issues relating to American Indian defendants and victims, or to offenses committed in Indian Country, that the TIAG considers

appropriate. See Tribal Issues Advisory Group Charter § 1(b)(3).

The Commission also directed the TIAG to present a final report with its findings and recommendations, including any recommendations that the TIAG considered appropriate on potential amendments to the guidelines and policy statements. See *id.* § 6(a). On May 16, 2016, the TIAG presented to the Commission its final report. Among the recommendations suggested in the Report, the TIAG recommends revisions to the *Guidelines Manual* relating to “the use of tribal court convictions in the computation of criminal history scores” and “how the federal sentencing guidelines should account for protection orders issued by tribal courts.”

The Commission is publishing this proposed amendment to inform the Commission’s consideration of these issues. The proposed amendment contains two parts. The Commission is considering whether to promulgate one or both of these parts, as they are not necessarily mutually exclusive.

(A) Tribal Court Convictions

Pursuant to Chapter Four, Part A (Criminal History), sentences resulting from tribal court convictions are not counted for purposes of calculating criminal history points, but may be considered under § 4A1.3 (Departures Based on Inadequacy of Criminal History Category (Policy Statement)). See USSG § 4A1.2(i). The policy statement at § 4A1.3 allows for upward departures if reliable information indicates that the defendant’s criminal history category substantially underrepresents the seriousness of the defendant’s criminal history. Among the grounds for departure, the policy statement includes “[p]rior sentences not used in computing the criminal history category (e.g., sentences for foreign and tribal offenses).” USSG § 4A1.3(a)(2)(A).

As noted in the TIAG’s report, in recent years there have been important changes in tribal criminal jurisdiction. In 2010, Congress enacted the Tribal Law and Order Act of 2010 (TLOA), Pub. L. 111–211, to address high rates of violent crime in Indian Country by improving criminal justice funding and infrastructure in tribal government, and expanding the sentencing authority of tribal court systems. In 2013, the Violence Against Women Reauthorization Act of 2013 (VAWA Reauthorization), Pub. L. 113–4, was enacted to expand the criminal jurisdiction of tribes to prosecute, sentence, and convict Indians and non-Indians who assault Indian spouses or dating partners or violate a protection

order in Indian Country. It also established new assault offenses and enhanced existing assault offenses. Both Acts increased criminal jurisdiction for tribal courts, but also required more robust court procedures and provided more procedural protections for defendants.

The TIAG notes in its report that “[w]hile some tribes have exercised expanded jurisdiction under TLOA and the VAWA Reauthorization, most have not done so. Given the lack of tribal resources, and the absence of significant additional funding under TLOA and the VAWA Reauthorization to date, it is not certain that more tribes will be able to do so any time soon.” TIAG Report, at 10–11. Members of the TIAG describe their experience with tribal courts as “widely varied,” expressing among their findings certain concerns about funding, perceptions of judicial bias or political influence, due process protections, and access to tribal court records. *Id.* at 11–12.

The TIAG report highlights that “[t]ribal courts occupy a unique and valuable place in the criminal justice system,” while also recognizing that “[t]ribal courts range in style”. *Id.* at 13. According to the TIAG, the differences in style and the concerns expressed above “make it often difficult for a federal court to determine how to weigh tribal court convictions in rendering a sentencing decision.” *Id.* at 11. It also asserts that “taking a single approach to the consideration of tribal court convictions would be very difficult and could potentially lead to a disparate result among Indian defendants in federal courts.” *Id.* at 12. Thus, the TIAG concludes that tribal convictions should not be counted for purposes of determining criminal history points pursuant to Chapter Four, Part A, and that “the current use of USSG § 4A1.3 to depart upward in individual cases continues to allow the best formulation of ‘sufficient but not greater than necessary’ sentences for defendants, while not increasing sentencing disparities or introducing due process concerns.” *Id.* Nevertheless, the TIAG recommends that the Commission amend § 4A1.3 to provide guidance and a more structured analytical framework for courts to consider when determining whether a departure is appropriate based on a defendant’s record of tribal court convictions. The guidance recommended by the TIAG “collectively . . . reflect[s] important considerations for courts to balance the rights of defendants, the unique and important status of tribal courts, the need to avoid disparate sentences in light of disparate tribal court practices and circumstances,

and the goal of accurately assessing the severity of any individual defendant's criminal history." *Id.* at 13.

The proposed amendment would amend the Commentary to § 4A1.3 to set forth a non-exhaustive list of factors for the court to consider in determining whether, or to what extent, an upward departure based on a tribal court conviction is appropriate.

Issues for comment are also provided.

(B) Court Protection Orders

Under the *Guidelines Manual*, the violation of a court protection order is a specific offense characteristic in three Chapter Two offense guidelines. See USSG §§ 2A2.2 (Aggravated Assault), 2A6.1 (Threatening or Harassing Communications; Hoaxes; False Liens), and 2A6.2 (Stalking or Domestic Violence). The Commission has heard concerns that the term "court protection order" has not been defined in the guidelines and should be clarified.

The TIAG notes in its report the importance of defining "court protection orders" in the guidelines, because—

[a] clear definition of that term will ensure that orders used for sentencing enhancements are the result of court proceedings assuring appropriate due process protections, that there is consistent identification and treatment of such orders, and that such orders issued by tribal courts receive treatment consistent with that of other issuing jurisdictions. TIAG Report, at 14.

The TIAG recommends that the Commission adopt a definition of "court protection order" that incorporates the statutory provisions at 18 U.S.C. 2265 and 2266. Section 2266(5) provides that the term "protection order" includes:

(A) any injunction, restraining order, or any other order issued by a civil or criminal court for the purpose of preventing violent or threatening acts or harassment against, sexual violence, or contact or communication with or physical proximity to, another person, including any temporary or final order issued by a civil or criminal court whether obtained by filing an independent action or as a pendente lite order in another proceeding so long as any civil or criminal order was issued in response to a complaint, petition, or motion filed by or on behalf of a person seeking protection; and

(B) any support, child custody or visitation provisions, orders, remedies or relief issued as part of a protection order, restraining order, or injunction pursuant to State, tribal, territorial, or local law authorizing the issuance of protection orders, restraining orders, or injunctions for the protection of victims of domestic violence, sexual assault, dating violence, or stalking. 18 U.S.C. 2266(5).

Section 2265(b) provides that

A protection order issued by a State, tribal, or territorial court is consistent with this subsection if—

(1) such court has jurisdiction over the parties and matter under the law of such State, Indian tribe, or territory; and

(2) reasonable notice and opportunity to be heard is given to the person against whom the order is sought sufficient to protect that person's right to due process. In the case of ex parte orders, notice and opportunity to be heard must be provided within the time required by State, tribal, or territorial law, and in any event within a reasonable time after the order is issued, sufficient to protect the respondent's due process rights. 18 U.S.C. 2265(b).

The proposed amendment would amend the Commentary to § 1B1.1 (Application Instructions) to provide a definition of court protection order derived from 18 U.S.C. 2266(5), with a provision that it must be consistent with 18 U.S.C. 2265(b).

Issues for comment are also provided.

(A) Tribal Court Convictions

Proposed Amendment

Section 4A1.3(a)(2) is amended by striking "subsection (a)" and inserting "subsection (a)(1)"; and by striking "tribal offenses" and inserting "tribal convictions".

The Commentary to § 4A1.3 captioned "Application Notes" is amended in Note 2 by inserting at the end the following new paragraph (C):

“(C) *Upward Departures Based on Tribal Court Convictions.*—In determining whether, or to what extent, an upward departure based on a tribal court conviction is appropriate, the court shall consider the factors set forth in § 4A1.3(a) above and, in addition, may consider relevant factors such as the following:

(i) The defendant was represented by a lawyer, had the right to a trial by jury, and received other due process protections consistent with those provided to criminal defendants under the United States Constitution.

(ii) The tribe was exercising expanded jurisdiction under the Tribal Law and Order Act of 2010, Pub. L. 111–211 (July 29, 2010), and the Violence Against Women Reauthorization Act of 2013, Pub. L. 113–4 (March 7, 2013).

(iii) The tribal court conviction is not based on the same conduct that formed the basis for a conviction from another jurisdiction that receives criminal history points pursuant to this Chapter.

(iv) The conviction is for an offense that otherwise would be counted under § 4A1.2 (Definitions and Instructions for Computing Criminal History).

[(v) At the time the defendant was sentenced, the tribal government had formally expressed a desire that

convictions from its courts should be counted for purposes of computing criminal history pursuant to the *Guidelines Manual*.]”.

Issues for Comment

1. The proposed amendment would provide a list of relevant factors that courts may consider, in addition to the factors set forth in § 4A1.3(a), in determining whether an upward departure based on a tribal court conviction may be warranted. The Commission seeks comment on whether the factors provided in the proposed amendment are appropriate. Should any factors be deleted or changed? Should the Commission provide additional or different guidance? If so, what guidance should the Commission provide?

In particular, the Commission seeks comment on how these factors should interact with each other and with the factors already contained in § 4A1.3(a). Should the Commission provide greater emphasis on one or more factors set forth in the proposed amendment? For example, how much weight should be given to factors that address due process concerns (subdivisions (i) and (ii)) in relation to the other factors provided in the proposed amendment, such as those factors relevant to preventing unwarranted double counting (subdivisions (iii) and (iv))? Should the Commission provide that in order to consider whether an upward departure based on a tribal court conviction is appropriate, and before taking into account any other factor, the court must first determine as a threshold factor that the defendant received due process protections consistent with those provided to criminal defendants under the United States Constitution?

Finally, the proposed amendment brackets the possibility of including as a factor that courts may consider in deciding whether to depart based on a tribal court conviction if, “at the time the defendant was sentenced, the tribal government had formally expressed a desire that convictions from its courts should be counted for purposes of computing criminal history pursuant to the *Guidelines Manual*.” The Commission invites broad comment on this factor and its interaction with the other factors set forth in the proposed amendment. Is this factor relevant to the court's determination of whether to depart? What are the advantages and disadvantages of including such a factor? How much weight should be given to this factor in relation to the other factors provided in the proposed amendment? What criteria should be used in determining when a tribal government has “formally expressed a

desire” that convictions from its courts should count? How would tribal governments notify and make available such statements?

2. Pursuant to subsection (i) of § 4A1.2 (Definitions and Instructions for Computing Criminal History), sentences resulting from tribal court convictions are not counted for purposes of calculating criminal history points, but may be considered under § 4A1.3 (Departures Based on Inadequacy of Criminal History Category (Policy Statement)). As stated above, the policy statement at § 4A1.3 allows for upward departures if reliable information indicates that the defendant’s criminal history category substantially underrepresents the seriousness of the defendant’s criminal history.

The Commission invites comment on whether the Commission should consider changing how the guidelines account for sentences resulting from tribal court convictions for purposes of determining criminal history points pursuant to Chapter Four, Part A (Criminal History). Should the Commission consider amending § 4A1.2(i) and, if so, how? For example, should the guidelines treat sentences resulting from tribal court convictions like other sentences imposed for federal, state, and local offenses that may be used to compute criminal history points? Should the Commission treat sentences resulting from tribal court convictions more akin to military sentences and provide a distinction between certain types of tribal courts? Is there a different approach the Commission should follow in addressing the use of tribal court convictions in the computation of criminal history scores?

(B) Court Protection Orders

Proposed Amendment

The Commentary to § 1B1.1 captioned “Application Notes” is amended in Note 1 by redesignating paragraphs (D) through (L) as paragraphs (E) through (M), respectively; and by inserting the following new paragraph (D):

“(D) ‘court protection order’ means ‘protection order’ as defined by 18 U.S.C. 2266(5) and consistent with 18 U.S.C. 2265(b).”.

Issues for Comment

1. The proposed amendment would include in the Commentary to § 1B1.1 (Application Instructions) a definition of court protection order derived from 18 U.S.C. 2266(5), that is consistent with 18 U.S.C. 2265(b). Is this definition appropriate? If not, what definition, if any, should the Commission provide?

2. The Commission has heard concerns about cases in which the offense involved the violation of a court protection order. As stated above, the violation of a court protection order is a specific offense characteristic in three Chapter Two offense guidelines (see §§ 2A2.2, 2A6.1, and 2A6.2). However, other guidelines in which the offense might involve a violation of a court protection order do not provide for such an enhancement.

The Commission seeks comment on whether the *Guidelines Manual* should provide higher penalties for cases involving the violation of a court protection order. How, if at all, should the Commission amend the guidelines to provide appropriate penalties in such cases?

For example, should the Commission address this factor throughout the guidelines by establishing a Chapter Three adjustment if the offense involved the violation of a court protection order? If so, how should this provision interact with other provisions in the *Guidelines Manual* that may involve the violation of an order, such as § 2B1.1(b)(9)(C) (“If the offense involved . . . (C) a violation of any prior specific judicial or administrative order, injunction, decree, or process not addressed elsewhere in the guidelines . . . increase by 2 levels.”), § 2J1.1 (Contempt), and § 3C1.1 (Obstructing or Impeding the Administration of Justice)?

Alternatively, should the Commission identify and amend particular offense guidelines in Chapter Two to include the violation of a court protection order as a specific offense characteristic? If so, which guidelines should be amended to include such a new specific offense characteristic? For example, should the Commission include such a new specific offense characteristic in the guidelines related to offenses against the person, sexual offenses, and offenses that create a risk of injury? Should the Commission include such a new specific offense characteristic in offenses that caused a financial harm, such as identity theft?

3. Youthful Offenders

Synopsis of Proposed Amendment: This proposed amendment is a result of the Commission’s study of the treatment of youthful offenders under the *Guidelines Manual*. See United States Sentencing Commission, “Notice of Final Priorities,” 81 FR 5280004 (Aug. 24, 2016). This policy priority stemmed from recommendations about the treatment of youthful offenders contained in the May 2016 Report issued by the Commission’s Tribal Issues Advisory Group. See Report of

the Tribal Issues Advisory Group (May 16, 2016), at <http://www.ussc.gov/research/research-publications/report-tribal-issues-advisory-group>.

Pursuant to Chapter Four, Part A (Criminal History), sentences for offenses committed prior to age eighteen are considered in the calculation of the defendant’s criminal history score. The guidelines distinguish between an “adult sentence” in which the defendant committed the offense before age eighteen and was convicted as an adult, and a “juvenile sentence” resulting from a juvenile adjudication.

Under § 4A1.2 (Definitions and Instructions for Computing Criminal History), if the defendant was convicted as an adult for an offense committed before age eighteen and received a sentence exceeding one year and one month, the sentence is counted so long as it was imposed, or resulted in the defendant being incarcerated, within fifteen years of the defendant’s commencement of the instant offense. See USSG § 4A1.2(d), (e). All other sentences for offenses committed prior to age eighteen are counted only if the sentence was imposed, or resulted in the defendant being incarcerated, within five years of the defendant’s commencement of the instant offense. See USSG § 4A1.2(d). The Commentary to § 4A1.2 provides that, to avoid disparities from jurisdiction to jurisdiction in the age at which a defendant is considered a “juvenile,” the rules set forth in § 4A1.2(d) apply to all offenses committed prior to age eighteen.

Juvenile adjudications are addressed in two other places in the guidelines. First, § 4A1.2(c)(2) provides a list of certain offenses that are “never counted” for purposes of the criminal history score, including “juvenile status offenses and truancy.” Second, § 4A1.2(f) provides that adult diversionary dispositions resulting from a finding or guilt, or a nolo contendere, are counted even if a conviction is not formally entered. However, the same provision further provides that “diversion from juvenile court is not counted.”

The proposed amendment amends § 4A1.2(d) to exclude juvenile sentences from being considered in the calculation of the defendant’s criminal history score. The proposed amendment also amends the Commentary to § 4A1.3 (Departures Based on Inadequacy of Criminal History Category (Policy Statement)) to provide an example of an instance in which a downward departure from the defendant’s criminal history may be warranted. Specifically, the proposed amendment provides that

a downward departure may be warranted if the defendant had an adult conviction for an offense committed prior to age eighteen counted in the criminal history score that would have been classified as a juvenile adjudication (and therefore not counted) if the laws of the jurisdiction in which the defendant was convicted did not categorically consider offenders below the age of eighteen years as “adults.”

Issues for comment are provided.

Proposed Amendment

The Commentary to § 4A1.1 captioned “Application Notes” is amended in Note 2 by striking “An adult or juvenile sentence” and inserting “An adult sentence”; and in Note 3 by striking “An adult or juvenile sentence” and inserting “An adult sentence”.

Section 4A1.2 is amended—

[in subsection (c)(2) by striking “Juvenile status offenses and truancy”]; in subsection (d) by striking “or juvenile” both places such term appears in paragraph (2), and by inserting at the end the following new paragraph (3):

“(3) Sentences resulting from juvenile adjudications are not counted.”;

[and in subsection (f) by striking: “, except that diversion from juvenile court is not counted”].

The Commentary to § 4A1.2 captioned “Application Notes” is amended in Note 7 by striking the following:

“Section 4A1.2(d) covers offenses committed prior to age eighteen. Attempting to count every juvenile adjudication would have the potential for creating large disparities due to the differential availability of records. Therefore, for offenses committed prior to age eighteen, only those that resulted in adult sentences of imprisonment exceeding one year and one month, or resulted in imposition of an adult or juvenile sentence or release from confinement on that sentence within five years of the defendant’s commencement of the instant offense are counted. To avoid disparities from jurisdiction to jurisdiction in the age at which a defendant is considered a ‘juvenile,’ this provision applies to all offenses committed prior to age eighteen.”,

and inserting the following:

“Section 4A1.2(d) applies only when the defendant was convicted as an adult for an offense committed prior to age eighteen. This provision also sets forth the time period within which such prior adult sentences are counted.”.

The Commentary to § 4A1.3 captioned “Application Notes” is amended in Note 3 by striking the following:

“*Downward Departures.*—A downward departure from the

defendant’s criminal history category may be warranted if, for example, the defendant had two minor misdemeanor convictions close to ten years prior to the instant offense and no other evidence of prior criminal behavior in the intervening period. A departure below the lower limit of the applicable guideline range for Criminal History Category I is prohibited under subsection (b)(2)(B), due to the fact that the lower limit of the guideline range for Criminal History Category I is set for a first offender with the lowest risk of recidivism.”,

and inserting the following:

“*Downward Departures.*—

(A) *Examples.*—A downward departure from the defendant’s criminal history category may be warranted based on any of the following circumstances:

(i) The defendant had two minor misdemeanor convictions close to ten years prior to the instant offense and no other evidence of prior criminal behavior in the intervening period.

(ii) The defendant had an adult conviction for an offense committed prior to age eighteen counted in the criminal history score that would have been classified as a juvenile adjudication (and therefore not counted) if the laws of the jurisdiction in which the defendant was convicted did not categorically consider offenders below the age of eighteen years as ‘adults.’

(B) *Downward Departures from Criminal History Category I.*—A departure below the lower limit of the applicable guideline range for Criminal History Category I is prohibited under subsection (b)(2)(A), due to the fact that the lower limit of the guideline range for Criminal History Category I is set for a first offender with the lowest risk of recidivism.”.

Issues for Comment

1. The Commission seeks comment on whether the Commission should consider changing how the guidelines account for juvenile sentences for purposes of determining the defendant’s criminal history pursuant to Chapter Four, Part A (Criminal History). Should the Commission amend the guidelines to provide that sentences resulting from juvenile adjudications shall not be counted in the criminal history score? Alternatively, should the Commission amend the guidelines to count juvenile sentences only if the offense involved violence or was an otherwise serious offense? Should the Commission provide instead that sentences for offenses committed prior to age eighteen are not to be counted in the criminal

history score, regardless of whether the sentence was classified as a “juvenile” or “adult” sentence?

2. If the Commission were to promulgate the proposed amendment, should the Commission provide that juvenile sentences may be considered for purposes of an upward departure under § 4A1.3 (Departures Based on Inadequacy of Criminal History Category (Policy Statement))? If so, should the Commission limit the consideration of such departures to certain offenses? For example, should the Commission provide that an upward departure under § 4A1.3 may be warranted if the juvenile sentence was imposed for an offense involving violence or that was an otherwise serious offense?

3. The proposed amendment would provide that a departure may be warranted in cases in which the defendant had an adult conviction for an offense committed prior to age eighteen counted in the criminal history score that would have been classified as a juvenile adjudication (and therefore not counted) if the laws of the jurisdiction in which the defendant was convicted did not categorically consider offenders below the age of eighteen years as “adults.” Should the Commission provide that a downward departure may be warranted for such cases? How would courts determine that the defendant would have received a juvenile adjudication if the laws of the jurisdiction in which the defendant was convicted did not categorically consider offenders below the age of eighteen years as “adults”? Should the Commission provide specific examples or guidance for determining whether a downward departure is warranted in such cases? If so, what guidance or examples should the Commission provide? Should the Commission use a different approach to address these cases and, if so, what should that approach be? Are there other circumstances that the Commission should identify as an appropriate basis for a downward departure?

4. Criminal History Issues

Synopsis of Proposed Amendment: This proposed amendment is a result of the Commission’s work in examining Chapter Four, Part A (Criminal History) “to (A) study the treatment of revocation sentences under § 4A1.2(k), and (B) consider a possible amendment of § 4A1.3 (Departures Based on Inadequacy of Criminal History Category (Policy Statement)) to account for instances in which the time actually served was substantially less than the length of the sentence imposed for a

conviction counted under the *Guidelines Manual*.” See United States Sentencing Commission, “Notice of Final Priorities,” 81 FR 58004 (Aug. 24, 2016).

(A) Treatment of Revocation Sentences Under § 4A1.2(k)

Pursuant to Chapter Four, Part A (Criminal History), revocations of probation, parole, supervised release, special parole, or mandatory release are counted for purposes of calculating criminal history points. Section 4A1.2(k) provides that a sentence of imprisonment given upon revocation should be added to the original sentence of imprisonment, if any, and the total should be counted as if it were one sentence for purposes of computing criminal history points under § 4A1.1(a), (b), or (c). The Commentary to § 4A1.2 provides that where a revocation applies to multiple sentences, and such sentences are counted separately under § 4A1.2(a)(2), the term of imprisonment imposed upon revocation is added to the sentence that will result in the greatest increase in criminal history points. See USSG § 4A1.2, comment. (n.11).

Section 4A1.2(k)(2) further provides that aggregating the revocation sentence to the original sentence of imprisonment may affect the time period under which certain sentences are counted under Chapter Four. See USSG § 4A1.2(d)(2) and (e). The resulting total of adding both sentences could affect the applicable time period by increasing the length of a defendant’s term of imprisonment or by changing the defendant’s date of release from imprisonment.

Part A of the proposed amendment would amend § 4A1.2(k) to provide that revocations of probation, parole, supervised release, special parole, or mandatory release are not to be counted for purposes of calculating criminal history points. It would also state that such revocation sentences may be considered under § 4A1.3 (Departures Based on Inadequacy of Criminal History Category (Policy Statement)).

Issues for comment are also provided.

(B) Departure Based on Substantial Difference Between Time-Served and Sentence Imposed

Section 4A1.3 (Departures Based on Inadequacy of Criminal History Category (Policy Statement)) provides for upward and downward departures where the defendant’s criminal history category substantially understates or substantially overstates the seriousness of the defendant’s criminal history or the likelihood of recidivism. The

Commentary to § 4A1.3 provides guidance in determining when a downward departure from the defendant’s criminal history may be warranted.

Part B of the proposed amendment would amend the Commentary to § 4A1.3 to provide that a downward departure from the defendant’s criminal history may warranted in a case in which the period of imprisonment actually served by the defendant was substantially less than the length of the sentence imposed for a conviction counted in the criminal history score.

An issue for comment is also provided.

(A) Treatment of Revocation Sentences Under § 4A1.2(k)

Proposed Amendment

The Commentary to § 4A1.1 captioned “Application Notes” is amended in Note 1 by striking “Where a prior sentence of imprisonment resulted from a revocation of probation, parole, or a similar form of release, see § 4A1.2(k).”; and in Note 2 by striking “Where a prior sentence of imprisonment resulted from a revocation of probation, parole, or a similar form of release, see § 4A1.2(k).”.

Section 4A1.2(k) is amended by striking paragraphs (1) and (2) as follows:

“(1) In the case of a prior revocation of probation, parole, supervised release, special parole, or mandatory release, add the original term of imprisonment to any term of imprisonment imposed upon revocation. The resulting total is used to compute the criminal history points for § 4A1.1(a), (b), or (c), as applicable.

(2) Revocation of probation, parole, supervised release, special parole, or mandatory release may affect the time period under which certain sentences are counted as provided in § 4A1.2(d)(2) and (e). For the purposes of determining the applicable time period, use the following: (A) in the case of an adult term of imprisonment totaling more than one year and one month, the date of last release from incarceration on such sentence (see § 4A1.2(e)(1)); (B) in the case of any other confinement sentence for an offense committed prior to the defendant’s eighteenth birthday, the date of the defendant’s last release from confinement on such sentence (see § 4A1.2(d)(2)(A)); and (C) in any other case, the date of the original sentence (see § 4A1.2(d)(2)(B) and (e)(2)).”, and inserting the following:

“Sentences upon revocation of probation, parole, supervised release, special parole, or mandatory release are not counted, but may be considered

under § 4A1.3 (Departures Based on Inadequacy of Criminal History Category (Policy Statement)).”.

The Commentary to § 4A1.2 captioned “Application Notes” is amended by striking Note 11 as follows:

“11. *Revocations to be Considered.*—Section 4A1.2(k) covers revocations of probation and other conditional sentences where the original term of imprisonment imposed, if any, did not exceed one year and one month. Rather than count the original sentence and the resentence after revocation as separate sentences, the sentence given upon revocation should be added to the original sentence of imprisonment, if any, and the total should be counted as if it were one sentence. By this approach, no more than three points will be assessed for a single conviction, even if probation or conditional release was subsequently revoked. If the sentence originally imposed, the sentence imposed upon revocation, or the total of both sentences exceeded one year and one month, the maximum three points would be assigned. If, however, at the time of revocation another sentence was imposed for a new criminal conviction, that conviction would be computed separately from the sentence imposed for the revocation.

Where a revocation applies to multiple sentences, and such sentences are counted separately under § 4A1.2(a)(2), add the term of imprisonment imposed upon revocation to the sentence that will result in the greatest increase in criminal history points. *Example:* A defendant was serving two probationary sentences, each counted separately under § 4A1.2(a)(2); probation was revoked on both sentences as a result of the same violation conduct; and the defendant was sentenced to a total of 45 days of imprisonment. If one sentence had been a ‘straight’ probationary sentence and the other had been a probationary sentence that had required service of 15 days of imprisonment, the revocation term of imprisonment (45 days) would be added to the probationary sentence that had the 15-day term of imprisonment. This would result in a total of 2 criminal history points under § 4A1.1(b) (for the combined 60-day term of imprisonment) and 1 criminal history point under § 4A1.1(c) (for the other probationary sentence).”; and by redesignating Note 12 as Note 11.

Issues for Comment

1. The Commission invites comment on whether the Commission should consider changing how the guidelines currently account for revocations of

probation, parole, supervised release, special parole, or mandatory release for purposes of determining criminal history points pursuant to Chapter Four, Part A (Criminal History). Should the Commission consider amending § 4A1.2(k) and, if so, how? For example, should revocation sentences not be counted in determining the criminal history score, as provided in the proposed amendment? Should the Commission provide instead a different approach for counting revocation sentences, such as counting the original sentence and the revocation sentences as separate sentences instead of aggregating them? If the Commission were to provide a different approach for counting revocation sentences, what should that different approach be?

2. The proposed amendment would amend § 4A1.2(k) to provide that revocations of probation, parole, supervised release, special parole, or mandatory release are not to be counted for purposes of calculating criminal history points, but may be considered under § 4A1.3 (Departures Based on Inadequacy of Criminal History Category (Policy Statement)). The policy statement at § 4A1.3 provides upward departures for cases in which reliable information indicates that the defendant's criminal history category substantially underrepresents the seriousness of the defendant's criminal history.

The Commission seeks comment on whether revocation sentences, if not counted for purposes of calculating criminal history points, may be considered for a departure under § 4A1.3. Should the Commission provide specific guidance for determining whether an upward departure based on a revocation sentence may be warranted? If so, what specific guidance should the Commission provide?

3. The Commission recently promulgated an amendment to the illegal reentry guideline at § 2L1.2 (Unlawfully Entering or Remaining in the United States) that, among other things, revised the specific offense characteristics to account for prior convictions primarily through a sentence-imposed approach rather than through a type of offense approach (*i.e.*, "categorical approach"). See USSG App. C, amendment 802 (effective November 1, 2016). The amendment retained in the Commentary to § 2L1.2 a definition of "sentence imposed" that includes as part of the length of the sentence "any term of imprisonment given upon revocation of probation, parole, or supervised release." USSG § 2L1.2, comment. (n.2).

If the Commission were to promulgate the proposed amendment changing how the guidelines account for revocation sentences for purposes of determining criminal history points, should the Commission revise the definition of "sentence imposed" at § 2L1.2 and, if so, how? How, if at all, should the Commission revise the "sentence imposed" definition to address any term of imprisonment given upon a revocation sentence? Should the Commission provide that revocation sentences should not be considered in determining the length of the "sentence imposed" for purposes of applying the enhancements at § 2L1.2?

(B) Departure Based on Substantial Difference Between Time-Served and Sentence Imposed

Proposed Amendment

The Commentary to § 4A1.3 captioned "Application Notes" is amended in Note 3 by striking the following:

" *Downward Departures.*—A downward departure from the defendant's criminal history category may be warranted if, for example, the defendant had two minor misdemeanor convictions close to ten years prior to the instant offense and no other evidence of prior criminal behavior in the intervening period. A departure below the lower limit of the applicable guideline range for Criminal History Category I is prohibited under subsection (b)(2)(B), due to the fact that the lower limit of the guideline range for Criminal History Category I is set for a first offender with the lowest risk of recidivism."

and inserting the following:

" *Downward Departures.*—

(A) *Examples.*—A downward departure from the defendant's criminal history category may be warranted based on any of the following circumstances:

(i) The defendant had two minor misdemeanor convictions close to ten years prior to the instant offense and no other evidence of prior criminal behavior in the intervening period.

(ii) The period of imprisonment actually served by the defendant was substantially less than the length of the sentence imposed for a conviction counted in the criminal history score.

(B) *Downward Departures from Criminal History Category I.*—A departure below the lower limit of the applicable guideline range for Criminal History Category I is prohibited under subsection (b)(2)(A), due to the fact that the lower limit of the guideline range for Criminal History Category I is set for a

first offender with the lowest risk of recidivism."

Issue for Comment

1. Part B of the proposed amendment would amend the Commentary to § 4A1.3 (Departures Based on Inadequacy of Criminal History Category (Policy Statement)) to provide that a downward departure from the defendant's criminal history may be warranted in a case in which the period of imprisonment actually served by the defendant was substantially less than the length of the sentence imposed for a conviction counted in the criminal history score. Should the Commission exclude the consideration of such a downward departure in cases in which the time actually served by the defendant was substantially less than the length of the sentence imposed due to reasons unrelated to the facts and circumstances of the defendant's case, *e.g.*, in order to minimize overcrowding or due to state budget concerns?

5. Bipartisan Budget Act

Synopsis of Proposed Amendment: This proposed amendment responds to the Bipartisan Budget Act of 2015, Pub. L. 114–74 (Nov. 2, 2015), which, among other things, amended three existing criminal statutes concerned with fraudulent claims under certain Social Security programs.

The three criminal statutes amended by the Bipartisan Budget Act of 2015 are sections 208 (Penalties [for fraud involving the Federal Old-Age and Survivors Insurance Trust Fund]), 811 (Penalties for fraud [involving special benefits for certain World War II veterans]), and 1632 (Penalties for fraud [involving supplemental security income for the aged, blind, and disabled]) of the Social Security Act (42 U.S.C. 408, 1011, and 1383a, respectively).

(A) Conspiracy To Commit Social Security Fraud

The Bipartisan Budget Act of 2015 added new subdivisions prohibiting conspiracy to commit fraud for substantive offenses already contained in the three statutes (42 U.S.C. 408, 1011, and 1383a). For each of the three statutes, the new subdivision provides that whoever "conspires to commit any offense described in any of [the] paragraphs" enumerated shall be imprisoned for not more than five years, the same statutory maximum penalty applicable to the substantive offense.

The three amended statutes are currently referenced in Appendix A (Statutory Index) to § 2B1.1 (Theft, Property Destruction, and Fraud). The

proposed amendment would amend Appendix A so that sections 408, 1011, and 1383a of Title 42 are referenced not only to § 2B1.1 but also to § 2X1.1 (Attempt, Solicitation, or Conspiracy (Not Covered by a Specific Office Guideline)).

An issue for comment is provided.

(B) Increased Penalties for Certain Individuals Violating Positions of Trust

The Bipartisan Budget Act of 2015 also amended sections 408, 1011, and 1383a of Title 42 to add increased penalties for certain persons who commit fraud offenses under the relevant Social Security programs. The Act included a provision in all three statutes identifying such persons as:

a person who receives a fee or other income for services performed in connection with any determination with respect to benefits under this title (including a claimant representative, translator, or current or former employee of the Social Security Administration), or who is a physician or other health care provider who submits, or causes the submission of, medical or other evidence in connection with any such determination

A person who meets this requirement and is convicted of a fraud offense under one of the three amended statutes may be imprisoned for not more than ten years, double the otherwise applicable five-year penalty for other offenders. The new increased penalties apply to all of the fraudulent conduct in subsection (a) of the three statutes.

The proposed amendment would amend § 2B1.1 to address cases in which the defendant was convicted under 42 U.S.C. 408(a), § 1011(a), or § 1383a(a) and the statutory maximum term of ten years' imprisonment applies. It provides an enhancement of [4][2] levels and a minimum offense level of [14][12] for such cases. It also adds Commentary specifying whether an adjustment under § 3B1.3 (Abuse of Position of Trust or Use of Special Skill) applies — bracketing two possibilities: if the enhancement applies, the adjustment does not apply; and if the enhancement applies, the adjustment is not precluded from applying.

Issues for comment are also provided.

(A) Conspiracy to Commit Social Security Fraud

Proposed Amendment

Appendix A (Statutory Index) is amended in the line referenced to 42 U.S.C. 408 by inserting “, 2X1.1” at the end; in the line referenced to 42 U.S.C. 1011 by inserting “, 2X1.1” at the end; and in the line referenced to 42 U.S.C. 1383a(a) by inserting “, 2X1.1” at the end.

Issue for Comment

1. Part A of the proposed amendment would reference the new conspiracy offenses under 42 U.S.C. 408, 1011, and 1383a to § 2X1.1 (Attempt, Solicitation, or Conspiracy (Not Covered by a Specific Office Guideline)). The Commission invites comment on whether the guidelines covered by the proposed amendment adequately account for these offenses. If not, what revisions to the guidelines would be appropriate to account for these offenses? Should the Commission reference these new offenses to other guidelines instead of, or in addition to, the guidelines covered by the proposed amendment?

(B) Increased Penalties for Certain Individuals Violating Positions of Trust

Proposed Amendment

Section 2B1.1(b) is amended by redesignating paragraphs (13) through (19) as paragraphs (14) through (20), respectively, and by inserting the following new paragraph (13):

“(13) If the defendant was convicted under 42 U.S.C. 408(a), § 1011(a), or § 1383a(a) and the statutory maximum term of ten years' imprisonment applies, increase by [4][2] levels. If the resulting offense level is less than [14][12], increase to level [14][12].”

The Commentary to § 2B1.1 captioned “Application Notes” is amended by redesignating Notes 11 through 20 as Notes 12 through 21, respectively, and by inserting the following new Note 11:

“11. *Interaction of Subsection (b)(13) and § 3B1.3.*—[If subsection (b)(13) applies, do not apply § 3B1.3 (Abuse of Position of Trust or Use of Special Skill).][Application of subsection (b)(13) does not preclude a defendant from consideration for an adjustment under § 3B1.3 (Abuse of Position of Trust or Use of Special Skill).]”.

Issues for Comment

1. The Bipartisan Budget Act of 2015 amended sections 408, 1011, and 1383a of Title 42 to include a provision in all three statutes increasing the statutory maximum term of imprisonment from five years to ten years for certain persons who commit fraud offenses under subsection (a) of the three statutes. The Act identifies such persons as:

a person who receives a fee or other income for services performed in connection with any determination with respect to benefits under this title (including a claimant representative, translator, or current or former employee of the Social Security Administration), or who is a physician or other health care provider who submits, or

causes the submission of, medical or other evidence in connection with any such determination

The Commission seeks comment on how, if at all, the guidelines should be amended to address cases in which the offense of conviction is 42 U.S.C. 408, § 1011, or § 1383a, and the statutory maximum term of ten years' imprisonment applies because the defendant was a person described in 42 U.S.C. 408(a), § 1011(a), or § 1383a(a). Are these cases adequately addressed by existing provisions in the guidelines, such as the adjustment in § 3B1.3 (Abuse of Position of Trust or Use of Special Skill)? If so, as an alternative to the proposed amendment, should the Commission amend § 2B1.1 only to provide an application note that expressly provides that, for a defendant subject to the ten years' statutory maximum in such cases, an adjustment under § 3B1.3 ordinarily would apply? If not, how should the Commission amend the guidelines to address these cases?

2. The proposed amendment would amend § 2B1.1 to provide an enhancement and a minimum offense level for cases in which the defendant was convicted under 42 U.S.C. 408(a), § 1011(a), or § 1383a(a) and the statutory maximum term of ten years' imprisonment applies because the defendant was a person described in 42 U.S.C. 408(a), § 1011(a), or § 1383a(a). However, there may be cases in which a defendant, who meets the criteria set forth for the new statutory maximum term of ten years' imprisonment, is convicted under a general fraud statute (e.g., 18 U.S.C. 1341) for an offense involving conduct described in 42 U.S.C. 408(a), § 1011(a), or § 1383a(a).

The Commission seeks comment on whether the Commission should instead amend § 2B1.1 to provide a general specific offense characteristic for such cases. For example, should the Commission provide an enhancement for cases in which the offense involved conduct described in 42 U.S.C. 408(a), § 1011(a), or § 1383a(a) and the defendant is a person “who receives a fee or other income for services performed in connection with any determination with respect to benefits [covered by those statutory provisions] (including a claimant representative, translator, or current or former employee of the Social Security Administration), or who is a physician or other health care provider who submits, or causes the submission of, medical or other evidence in connection with any such determination”? If so, how many levels would be appropriate for such an enhancement? How should

such an enhancement interact with the existing enhancements at § 2B1.1 and the Chapter Three adjustment at § 3B1.3 (Abuse of Position of Trust or Use of Special Skill)?

6. Acceptance of Responsibility

Synopsis of Proposed Amendment: In August 2016, the Commission indicated that one of its priorities would be the consideration of miscellaneous guideline application issues, “including possible consideration of whether a defendant’s denial of relevant conduct should be considered in determining whether a defendant has accepted responsibility for purposes of § 3E1.1.” See United States Sentencing Commission, “Notice of Final Priorities,” 81 FR 58004 (Aug. 24, 2016).

Section 3E1.1 (Acceptance of Responsibility) provides for a 2-level reduction for a defendant who clearly demonstrates acceptance of responsibility. Application Note 1(A) of § 3E1.1 provides as one of the appropriate considerations in determining whether a defendant “clearly demonstrate[d] acceptance of responsibility” the following:

truthfully admitting the conduct comprising the offense(s) of conviction, and truthfully admitting or not falsely denying any additional relevant conduct for which the defendant is accountable under § 1B1.3 (Relevant Conduct). Note that a defendant is not required to volunteer, or affirmatively admit, relevant conduct beyond the offense of conviction in order to obtain a reduction under subsection (a). A defendant may remain silent in respect to relevant conduct beyond the offense of conviction without affecting his ability to obtain a reduction under this subsection. However, a defendant who falsely denies, or frivolously contests, relevant conduct that the court determines to be true has acted in a manner inconsistent with acceptance of responsibility;

In addition, Application Note 3 provides further guidance on evidence that might demonstrate acceptance of responsibility, as follows:

Entry of a plea of guilty prior to the commencement of trial combined with truthfully admitting the conduct comprising the offense of conviction, and truthfully admitting or not falsely denying any additional relevant conduct for which he is accountable under § 1B1.3 (Relevant Conduct) (see Application Note 1(A)), will constitute significant evidence of acceptance of responsibility for the purposes of subsection (a). However, this evidence may be outweighed by conduct of the defendant that is inconsistent with such acceptance of responsibility. A defendant who enters a guilty plea is not entitled to an adjustment under this section as a matter of right.

The Commission has heard concerns that the Commentary to § 3E1.1 (particularly the provisions cited above)

encourages courts to deny a reduction in sentence when a defendant pleads guilty and accepts responsibility for the offense of conviction, but unsuccessfully challenges the presentence report’s assessments of relevant conduct. These commenters suggest this has a chilling effect because defendants are concerned such objections may jeopardize their eligibility for a reduction for acceptance of responsibility.

The proposed amendment amends the Commentary to § 3E1.1 to revise how the defendant’s challenge of relevant conduct should be considered in determining whether the defendant has accepted responsibility for purposes of the guideline. Specifically, it would amend Application Note 1(A) to delete the sentence that states “a defendant who falsely denies, or frivolously contests, relevant conduct that the court determines to be true has acted in a manner inconsistent with acceptance of responsibility.” The proposed amendment would instead provide that a defendant who makes a non-frivolous challenge to relevant conduct is not precluded from consideration for a reduction under § 3E1.1(a).

An issue for comment is also provided.

Proposed Amendment

The Commentary to § 3E1.1 captioned “Application Notes” is amended in Note 1(A) by striking “However, a defendant who falsely denies, or frivolously contests, relevant conduct that the court determines to be true has acted in a manner inconsistent with acceptance of responsibility” and inserting the following: “In addition, a defendant who makes a non-frivolous challenge to relevant conduct is not precluded from consideration for a reduction under subsection (a)”.

Issue for Comment

1. The Commission seeks comment on whether the Commission should amend the Commentary to § 3E1.1 (Acceptance of Responsibility) to change or clarify how a defendant’s challenge to relevant conduct should be considered in determining whether a defendant has accepted responsibility for purposes of § 3E1.1? If so, what changes should the Commission make to § 3E1.1?

For example, the proposed amendment would provide that a defendant who makes a non-frivolous challenge to relevant conduct is not precluded from consideration for a reduction under § 3E1.1(a). What additional guidance, if any, should the Commission provide on what constitutes “a non-frivolous challenge to

relevant conduct”? Should such challenges include informal challenges to relevant conduct during the sentencing process, whether or not the issues challenged are determinative to the applicable guideline range? Should the Commission broaden the proposed provision to include other sentencing considerations, such as departures or variances? Should the Commission instead remove from § 3E1.1 all references to relevant conduct for which the defendant is accountable under § 1B1.3, and reference only the elements of the offense of conviction?

7. Miscellaneous

Synopsis of Proposed Amendment: This proposed amendment responds to recently enacted legislation and miscellaneous guideline issues.

The proposed amendment contains four parts (Parts A through D). The Commission is considering whether to promulgate any or all of these parts, as they are not necessarily mutually exclusive. They are as follows—

Part A responds to the Transnational Drug Trafficking Act of 2015, Pub. L. 114–154 (May 16, 2016), by amending § 2B5.3 (Criminal Infringement of Copyright or Trademark).

Part B responds to the International Megan’s Law to Prevent Child Exploitation and Other Sexual Crimes Through Advanced Notification of Traveling Sex Offenders Act, Pub. L. 114–119 (Feb. 8, 2016), by amending § 2A3.5 (Failure to Register as a Sex Offender), § 2A3.6 (Aggravated Offenses Relating to Registration as a Sex Offender), and Appendix A (Statutory Index).

Part C responds to the Frank R. Lautenberg Chemical Safety for the 21st Century Act, Pub. L. 114–182 (June 22, 2016), by amending Appendix A (Statutory Index).

Part D amends § 2G1.3 (Promoting a Commercial Sex Act or Prohibited Sexual Conduct with a Minor; Transportation of Minors to Engage in a Commercial Sex Act or Prohibited Sexual Conduct; Travel to Engage in Commercial Sex Act or Prohibited Sexual Conduct with a Minor; Sex Trafficking of Children; Use of Interstate Facilities to Transport Information about a Minor) to clarify how the use of a computer enhancement at subsection (b)(3) interacts with its correlating commentary.

(A) Transnational Drug Trafficking Act of 2015

Synopsis of Proposed Amendment: Part A of the proposed amendment responds to the Transnational Drug Trafficking Act of 2015, Pub. L. 114–154

(May 16, 2016). The primary purpose of the Act is to enable the Department of Justice to target extraterritorial drug trafficking activity. Among other things, the Act clarified the *mens rea* requirement for offenses related to trafficking in counterfeit drugs, without changing the statutory penalties associated with such offenses. The Act amended 18 U.S.C. 2230 (Trafficking in Counterfeit Goods or Services), which prohibits trafficking in a range of goods and services, including counterfeit drugs. The amended statute is currently referenced in Appendix A (Statutory Index) of the *Guidelines Manual* to § 2B5.3 (Criminal Infringement of Copyright or Trademark).

In particular, the Act made changes relating to counterfeit drugs. First, the Act amended the penalty provision at section 2320, replacing the term “counterfeit drug” with the phrase “drug that uses a counterfeit mark on or in connection with the drug.” Second, the Act revised section 2320(f)(6) to define only the term “drug” instead of “counterfeit drug.” The amended provision defines “drug” as “a drug, as defined in section 201 of the Federal Food, Drug, and Cosmetic Act (21 U.S.C. 321).” The Act did not amend the definition of “counterfeit mark” contained in section 2230(f)(1), which provides that—

the term “counterfeit mark” means—

- (A) a spurious mark—
- (i) that is used in connection with trafficking in any goods, services, labels, patches, stickers, wrappers, badges, emblems, medallions, charms, boxes, containers, cans, cases, hangtags, documentation, or packaging of any type or nature;
- (ii) that is identical with, or substantially indistinguishable from, a mark registered on the principal register in the United States Patent and Trademark Office and in use, whether or not the defendant knew such mark was so registered;
- (iii) that is applied to or used in connection with the goods or services for which the mark is registered with the United States Patent and Trademark Office, or is applied to or consists of a label, patch, sticker, wrapper, badge, emblem, medallion, charm, box, container, can, case, hangtag, documentation, or packaging of any type or nature that is designed, marketed, or otherwise intended to be used on or in connection with the goods or services for which the mark is registered in the United States Patent and Trademark Office; and
- (iv) the use of which is likely to cause confusion, to cause mistake, or to deceive; or

(B) a spurious designation that is identical with, or substantially indistinguishable from, a designation as to which the remedies of the Lanham Act are made available by reason of section 220506 of title 36

Part A of the proposed amendment amends § 2B5.3(b)(5) to replace the term “counterfeit drug” with “drug that uses a counterfeit mark on or in connection with the drug.” The proposed amendment would also amend the Commentary to § 2B5.3 to delete the “counterfeit drug” definition and provide that “drug” and “counterfeit mark” have the meaning given those terms in 18 U.S.C. 2320(f).

Proposed Amendment

Section 2B5.3(b)(5) is amended by striking “counterfeit drug” and inserting “drug that uses a counterfeit mark on or in connection with the drug”.

The Commentary to § 2B5.3 captioned “Application Notes” is amended in Note 1 by striking the third undesignated paragraph as follows:

“‘Counterfeit drug’ has the meaning given that term in 18 U.S.C. 2320(f)(6).”, and by inserting after the paragraph that begins “‘Counterfeit military good or service’ has the meaning” the following new paragraph:

“‘Drug’ and ‘counterfeit mark’ have the meaning given those terms in 18 U.S.C. 2320(f).”.

(B) International Megan’s Law to Prevent Child Exploitation and Other Sexual Crimes Through Advanced Notification of Traveling Sex Offenders

Synopsis of Proposed Amendment: Part B of the proposed amendment responds to the International Megan’s Law to Prevent Child Exploitation and Other Sexual Crimes Through Advanced Notification of Traveling Sex Offenders Act (“International Megan’s Law”), Pub. L. 114–119 (Feb. 8, 2016). The Act added a new notification requirement to 42 U.S.C. 16914 (Information required in [sex offender] registration). Section 16914 states that sex offenders who are required to register under the Sex Offender Registration and Notification Act (SORNA) must provide certain information for inclusion in the sex offender registry. Those provisions include the offender’s name, Social Security number, address of all residences, name and address where the offender is an employee, the name and address where the offender is a student, license plate number and description of any vehicle. The International Megan’s Law added as an additional requirement that the sex offender must provide “information relating to intended travel

of the sex offender outside of the United States, including any anticipated dates and places of departure, arrival or return, carrier and flight numbers for air travel, destination country and address or other contact information therein, means and purpose of travel, and any other itinerary or other travel-related information required by the Attorney General.”

The International Megan’s Law also added a new criminal offense at 18 U.S.C. 2250(b) (Failure to register). The new subsection (b) provides that whoever is required to register under SORNA who knowingly fails to provide the above described information required by SORNA relating to intended travel in foreign commerce and who engages or attempts to engage in the intended travel, is subject to a 10 year statutory maximum penalty. Section 2250 offenses are referenced in Appendix A (Statutory Index) to § 2A3.5 (Failure to Register as a Sex Offender).

Part B of the proposed amendment amends Appendix A (Statutory Index) so the new offenses at 18 U.S.C. 2250(b) are referenced to § 2A3.5. The proposed amendment also brackets the possibility of adding a new application note to the Commentary to § 2A3.5 providing that for purposes of § 2A3.5(b), a defendant shall be deemed to be in a “failure to register status” during the period in which the defendant engaged in conduct described in 18 U.S.C. 2250(a) or (b).

Finally, Part B makes clerical changes to § 2A3.6 (Aggravated Offenses Relating to Registration as a Sex Offender) to reflect the redesignation of 18 U.S.C. § 2250(c) by the International Megan’s Law.

Proposed Amendment

The Commentary to § 2A3.5 captioned “Statutory Provisions” is amended by striking “§ 2250(a)” and inserting “§ 2250(a), (b)”.

[The Commentary to § 2A3.5 captioned “Application Notes” is amended by redesignating Note 2 as Note 3, and by inserting the following new Note 2:

“2. *Application of Subsection (b)(1).*— For purposes of subsection (b)(1), a defendant shall be deemed to be in a ‘failure to register status’ during the period in which the defendant engaged in conduct described in 18 U.S.C. 2250(a) or (b).”.]

Section 2A3.6(a) is amended by striking “§ 2250(c)” and inserting “§ 2250(d)”.

The Commentary to § 2A3.6 captioned “Statutory Provisions” is amended by striking “2250(c)” and inserting “2250(d)”.

The Commentary to § 2A3.6 captioned “Statutory provisions is amended—” in Note 1 by striking “Section 2250(c)” and inserting “Section 2250(d)”, and by inserting after “18 U.S.C. 2250(a)” the following: “or (b)”; in Note 3 by striking “§ 2250(c)” and inserting “§ 2250(d)”; and in Note 4 by striking “§ 2250(c)” and inserting “§ 2250(d)”.

Appendix A (Statutory Index) is amended in the line referenced to 18 U.S.C. 2250(a) by striking “§ 2250(a)” and inserting “§ 2250(a), (b)”; and in the line referenced to 18 U.S.C. 2250(c) by striking “§ 2250(c)” and inserting “§ 2250(d)”.

(C) Frank R. Lautenberg Chemical Safety for the 21st Century Act

Synopsis of Proposed Amendment: Part C of the proposed amendment responds to the Frank R. Lautenberg Chemical Safety for the 21st Century Act, Pub. L. 114–182 (June 22, 2016). The Act, among other things, amended section 16 of the Toxic Substances Control Act (15 U.S.C. 2615) to add a new subsection that provides that any person who knowingly and willfully violates certain provisions of the Toxic Substances Control Act and who knows at the time of the violation that the violation places an individual in imminent danger of death or bodily injury shall be subject to a fine up to \$250,000, imprisonment of up to 15 years, or both.

Part C of the proposed amendment amends Appendix A (Statutory Index) so that the new provision, 15 U.S.C. 2615(b)(2) is referenced to § 2Q1.1 (Knowing Endangerment Resulting From Mishandling Hazardous or Toxic Substances, Pesticides or Other Pollutants), while maintaining the reference to § 2Q1.2 (Mishandling of Hazardous or Toxic Substances or Pesticides; Recordkeeping, Tampering, and Falsification; Unlawfully Transporting Hazardous Materials in Commerce) for 15 U.S.C. 2615(b)(1).

Proposed Amendment

Appendix A (Statutory Index) is amended—

in the line referenced to 15 U.S.C. 2615 by striking “§ 2615” and inserting “§ 2615(b)(1)”; and by inserting before the line referenced to 15 U.S.C. 6821 the following new line reference: “15 U.S.C. 2615(b)(2) 2Q1.1”.

D) Use of a Computer Enhancement in § 2G1.3

Synopsis of Proposed Amendment: Part D of the proposed amendment

clarifies how the use of a computer enhancement at § 2G1.3(b)(3) interacts with its corresponding commentary at Application Note 4. Section 2G1.3 (Promoting a Commercial Sex Act or Prohibited Sexual Conduct with a Minor; Transportation of Minors to Engage in a Commercial Sex Act or Prohibited Sexual Conduct; Travel to Engage in Commercial Sex Act or Prohibited Sexual Conduct with a Minor; Sex Trafficking of Children; Use of Interstate Facilities to Transport Information about a Minor) applies to several offenses involving the transportation of a minor for illegal sexual activity. Subsection (b)(3) of § 2G1.3 provides a 2-level enhancement if—

the offense involved the use of a computer or an interactive computer service to (A) persuade, induce, entice, coerce, or facilitate the travel of, the minor to engage in prohibited sexual conduct; or (B) entice, encourage, offer, or solicit a person to engage in prohibited sexual conduct with the minor.

Application Note 4 to § 2G1.3 sets forth guidance on this enhancement providing as follows:

Subsection (b)(3) is intended to apply only to the use of a computer or an interactive computer service to communicate directly with a minor or with a person who exercises custody, care, or supervisory control of the minor. Accordingly, the enhancement in subsection (b)(3) would not apply to the use of a computer or an interactive computer service to obtain airline tickets for the minor from an airline’s Internet site.

An application issue has arisen as to whether Application Note 4, by failing to distinguish between the two prongs of subsection (b)(3), prohibits application of the enhancement where a computer was used to solicit a third party to engage in prohibited sexual conduct with a minor.

Most courts to have addressed this issue have concluded that Application Note 4 is inconsistent with the language of § 2G1.3(b)(3), and have permitted the application of the enhancement for use of a computer in third party solicitation cases. *See, e.g.,* United States v. Cramer, 777 F.3d 597, 606 (2d Cir. 2015) (“We conclude that Application Note 4 is plainly inconsistent with subsection (b)(3)(B). . . . The plain language of subsection (b)(3)(B) is clear, and there is no indication that the drafters of the Guidelines intended to limit this plain language through Application Note 4.”); United States v. McMillian, 777 F.3d 444, 449–50 (7th Cir. 2015) (“[The defendant] points out that Application Note 4 states that ‘Subsection (b)(3) is intended to apply only to the use of a computer or an interactive computer service to communicate directly with a

minor or with a person who exercises custody, care, or supervisory control of the minor.[.] . . . But the note is wrong. The guideline section provides a 2-level enhancement whenever the defendant uses a computer to ‘entice, encourage, offer, or solicit a person to engage in prohibited sexual conduct with the minor. . . . When an application note clashes with the guideline, the guideline prevails.”); United States v. Hill, 783 F.3d 842, 846 (11th Cir. 2015) (“Because the application note is inconsistent with the plain language of U.S.S.G. § 2G1.3(b)(3)(B), the plain language of the guideline controls.”); United States v. Pringler, 765 F.3d 455 (5th Cir. 2014) (“[W]e hold that the commentary in application note 4 is ‘inconsistent with’ Guideline § 2G1.3(b)(3)(B), and we therefore follow the plain language of the Guideline alone.”).

Part D of the proposed amendment would amend the Commentary to § 2G1.3 to clarify that the guidance contained in Application Note 4 refers only to subsection (b)(3)(A) and does not control the application of the enhancement for use of a computer in third party solicitation cases (as provided in subsection (b)(3)(B)).

Proposed Amendment

The Commentary to § 2G1.3 captioned “Application Notes” is amended in Note 4 by striking “(b)(3)” each place such term appears and inserting “(b)(3)(A)”.

8. Marihuana Equivalency

Synopsis of Proposed Amendment This proposed amendment makes technical changes to § 2D1.1 (Unlawful Manufacturing, Importing, Exporting, or Trafficking (Including Possession with Intent to Commit These Offenses); Attempt or Conspiracy) to replace the term “marihuana equivalency” which is used in the Drug Equivalency Tables when determining penalties for controlled substances.

The Commentary to § 2D1.1 sets forth a series of Drug Equivalency Tables. These tables provide a value termed “marihuana equivalency” for certain controlled substances that is used to determine the offense level for cases in which the controlled substance involved in the offense is not specifically listed in the Drug Quantity Tables, or where there is more than one controlled substance involved in the offense (whether or not listed in the Drug Quantity Table). *See* § 2D1.1, comment. (n.8). The tables are separated by drug type and schedule.

In a case involving a controlled substance that is not specifically referenced in the Drug Quantity Table,

the base offense level is determined by using the Drug Equivalency Tables to convert the quantity of the controlled substance involved in the offense to its marihuana equivalency, then finding the offense level in the Drug Quantity Table that corresponds to that quantity of marihuana. In a case involving more than one controlled substance, each of the drugs is converted into its marihuana equivalency, the converted quantities are added, and the aggregate quantity is used to find the offense level in the Drug Quantity Table.

The Commission received comment expressing concern that the term “marihuana equivalency” is misleading and results in confusion for individuals not fully versed in the guidelines. In particular, they suggested that the Commission should replace “marihuana equivalency” with another term.

The proposed amendment amends § 2D1.1 to replace “marihuana equivalency” in the Drug Equivalency Tables for determining penalties for controlled substances. It replaces that term throughout the guideline with the term “converted drug weight.” It also changes the title of the “Drug Equivalency Tables” to “Drug Conversion Tables.” The proposed amendment is not intended as a substantive change in policy.

Finally, the proposed amendment makes certain clerical and conforming changes to reflect the changes to the Drug Equivalency Tables.

Proposed Amendment

Section 2D1.1(c)(1) is amended by striking the period at the end of the line referenced to Flunitrazepam and inserting a semicolon, and by adding at the end the following:

” • 90,000 KG or more of Converted Drug Weight.”.

Section 2D1.1(c)(2) is amended by striking the period at the end of the line referenced to Flunitrazepam and inserting a semicolon, and by adding at the end the following:

” • At least 30,000 KG but less than 90,000 KG of Converted Drug Weight.”.

Section 2D1.1(c)(3) is amended by striking the period at the end of the line referenced to Flunitrazepam and inserting a semicolon, and by adding at the end the following:

” • At least 10,000 KG but less than 30,000 KG of Converted Drug Weight.”.

Section 2D1.1(c)(4) is amended by striking the period at the end of the line referenced to Flunitrazepam and inserting a semicolon, and by adding at the end the following:

” • At least 3,000 KG but less than 10,000 KG of Converted Drug Weight.”.

Section 2D1.1(c)(5) is amended by striking the period at the end of the line referenced to Flunitrazepam and inserting a semicolon, and by adding at the end the following:

” • At least 1,000 KG but less than 3,000 KG of Converted Drug Weight.”.

Section 2D1.1(c)(6) is amended by striking the period at the end of the line referenced to Flunitrazepam and inserting a semicolon, and by adding at the end the following:

” • At least 700 KG but less than 1,000 KG of Converted Drug Weight.”.

Section 2D1.1(c)(7) is amended by striking the period at the end of the line referenced to Flunitrazepam and inserting a semicolon, and by adding at the end the following:

” • At least 400 KG but less than 700 KG of Converted Drug Weight.”.

Section 2D1.1(c)(8) is amended by striking the period at the end of the line referenced to Flunitrazepam and inserting a semicolon, and by adding at the end the following:

” • At least 100 KG but less than 400 KG of Converted Drug Weight.”.

Section 2D1.1(c)(9) is amended by striking the period at the end of the line referenced to Flunitrazepam and inserting a semicolon, and by adding at the end the following:

” • At least 80 KG but less than 100 KG of Converted Drug Weight.”.

Section 2D1.1(c)(10) is amended by striking the period at the end of the line referenced to Flunitrazepam and inserting a semicolon, and by adding at the end the following:

” • At least 60 KG but less than 80 KG of Converted Drug Weight.”.

Section 2D1.1(c)(11) is amended by striking the period at the end of the line referenced to Flunitrazepam and inserting a semicolon, and by adding at the end the following:

” • At least 40 KG but less than 60 KG of Converted Drug Weight.”.

Section 2D1.1(c)(12) is amended by striking the period at the end of the line referenced to Flunitrazepam and inserting a semicolon, and by adding at the end the following:

” • At least 20 KG but less than 40 KG of Converted Drug Weight.”.

Section 2D1.1(c)(13) is amended by striking the period at the end of the line referenced to Flunitrazepam and inserting a semicolon, and by adding at the end the following:

” • At least 10 KG but less than 20 KG of Converted Drug Weight.”.

Section 2D1.1(c)(14) is amended by striking the period at the end of the line referenced to Schedule IV substances (except Flunitrazepam) and inserting a semicolon, and by adding at the end the following:

” • At least 5 KG but less than 10 KG of Converted Drug Weight.”.

Section 2D1.1(c)(15) is amended by striking the period at the end of the line referenced to Schedule IV substances (except Flunitrazepam) and inserting a semicolon, and by adding at the end the following:

” • At least 2.5 KG but less than 5 KG of Converted Drug Weight.”.

Section 2D1.1(c)(16) is amended by striking the period at the end of the line referenced to Schedule V substances and inserting a semicolon, and by adding at the end the following:

” • At least 1 KG but less than 2.5 KG of Converted Drug Weight.”.

Section 2D1.1(c)(17) is amended by striking the period at the end of the line referenced to Schedule V substances and inserting a semicolon, and by adding at the end the following:

” • Less than 1 KG of Converted Drug Weight.”.

The annotation to § 2D1.1(c) captioned “Notes to Drug Quantity Table” is amended by inserting at the end the following new Note (J):

“(J) The term ‘Converted Drug Weight,’ for purposes of this guideline, refers to a nominal reference designation that is to be used as a conversion factor in the Drug Conversion Tables set forth in the Commentary below, to determine the offense level for controlled substances that are not specifically referenced in the Drug Quantity Table or when combining differing controlled substances.”.

The Commentary to § 2D1.1 captioned “Application Notes” is amended—

in Note 6 by striking “marihuana equivalency” and inserting “converted drug weight” and by inserting after “the most closely related controlled substance referenced in this guideline.” the following: “See Application Note 8.”; in the heading of Note 8 by striking “Equivalency” and inserting “Conversion”;

in Note 8(A) by striking “Drug Equivalency Tables” both places such term appears and inserting “Drug Conversion Tables”; by striking “to convert the quantity of the controlled substance involved in the offense to its equivalent quantity of marihuana” and inserting “to find the converted drug weight of the controlled substance involved in the offense”; by striking “Find the equivalent quantity of marihuana” and inserting “Find the corresponding converted drug weight”; by striking “Use the offense level that corresponds to the equivalent quantity of marihuana”

and inserting “Use the offense level that corresponds to the converted drug weight determined above”; by striking “an equivalent quantity of 5 kilograms of marihuana” and inserting “5 kilogram of converted drug weight”; and by striking “the equivalent quantity of marihuana would be 500 kilograms” and inserting “the converted drug weight would be 500 kilograms”;

in Note 8(B) by striking “Drug Equivalency Tables” each place such term appears and inserting “Drug Conversion Tables”; by striking “convert each of the drugs to its marihuana equivalent” and inserting “convert each of the drugs to its converted drug weight”; by striking “For certain types of controlled substances, the marihuana equivalencies” and inserting “For certain types of controlled substances, the converted drug weights assigned”; by striking “e.g., the combined equivalent weight of all Schedule V controlled substances shall not exceed 2.49 kilograms of marihuana” and inserting “e.g., the combined converted weight of all Schedule V controlled substances shall not exceed 2.49 kilograms of converted drug weight”; by striking “determine the marihuana equivalency for each schedule separately” and inserting “determine the converted drug weight for each schedule separately”; and by striking “Then add the marihuana equivalencies to determine the combined marihuana equivalency” and inserting “Then add the converted drug weights to determine the combined converted drug weight”;

in Note 8(C)(i) by striking “of marihuana” each place such term appears and inserting “of converted drug weight”; and by striking “The total is therefore equivalent to 95 kilograms” and inserting “The total therefore converts to 95 kilograms”;

in Note 8(C)(ii) by striking the following:

“The defendant is convicted of selling 500 grams of marihuana (Level 6) and 10,000 units of diazepam (Level 6). The diazepam, a Schedule IV drug, is equivalent to 625 grams of marihuana. The total, 1.125 kilograms of marihuana, has an offense level of 8 in the Drug Quantity Table.”,

and inserting the following:

“The defendant is convicted of selling 500 grams of marihuana (Level 6) and 10,000 units of diazepam (Level 6). The amount of marihuana converts to 500 grams of converted drug weight. The diazepam, a Schedule IV drug, converts

to 625 grams of converted drug weight. The total, 1.125 kilograms of converted drug weight, has an offense level of 8 in the Drug Quantity Table.”;

in Note 8(C)(iii) by striking “is equivalent” both places such term appears and inserting “converts”; by striking “of marihuana” each place such term appears and inserting “of converted drug weight”; and by striking “The total is therefore equivalent” and inserting “The total therefore converts”;

in Note 8(C)(iv) by striking “marihuana equivalency” each place such term appears and inserting “converted drug weight”; by striking “76 kilograms of marihuana” and inserting “76 kilograms”; by striking “79.99 kilograms of marihuana” both places such term appears and inserting “79.99 kilograms of converted drug weight”; by striking “equivalent weight” each place such term appears and inserting “converted weight”; by striking “9.99 kilograms of marihuana” and inserting “9.99 kilograms”; and by striking “2.49 kilograms of marihuana” and inserting “2.49 kilograms”;

and in Note 8(D)—

in the heading, by striking “Equivalency” and inserting “Conversion”;

under the heading relating to Schedule I or II Opiates, by striking the heading as follows:

“Schedule I or II Opiates*”,

and inserting the following new heading:

“Schedule I or II Opiates* Converted Drug Weight”;

and by striking “of marihuana” each place such term appears;

under the heading relating Cocaine and Other Schedule I and II Stimulants (and their immediate precursors), by striking the heading as follows:

“Cocaine and Other Schedule I and II Stimulants (and their immediate precursors)*”,

and inserting the following new heading:

“Cocaine and Other Schedule I and II Stimulants (and their immediate precursors)* Converted Drug Weight”;

and by striking “of marihuana” each place such term appears;

under the heading relating to LSD, PCP, and Other Schedule I and II Hallucinogens (and their immediate precursors), by striking the heading as follows:

“LSD, PCP, and Other Schedule I and II Hallucinogens (and their immediate precursors)*”,

and inserting the following new heading:

“LSD, PCP, and Other Schedule I and II Hallucinogens (and their immediate precursors)* Converted Drug Weight”;

and by striking “of marihuana” each place such term appears; under the heading relating to Schedule I Marihuana, by striking the heading as follows:

“Schedule I Marihuana”,

and inserting the following new heading:

“Schedule I Marihuana Converted Drug Weight”;

and by striking “of marihuana” each place such term appears;

under the heading relating to Flunitrazepam, by striking the heading as follows:

“Flunitrazepam***”,

and inserting the following new heading:

“Flunitrazepam*** Converted Drug Weight”;

and by striking “of marihuana”; under the heading relating to Schedule I or II Depressants (except gamma-hydroxybutyric acid), by striking the heading as follows:

“Schedule I or II Depressants (except gamma-hydroxybutyric acid)”,

and inserting the following new heading:

“Schedule I or II Depressants (except gamma-hydroxybutyric acid) Converted Drug Weight”;

and by striking “of marihuana”; under the heading relating to Gamma-hydroxybutyric Acid, by striking the heading as follows:

“Gamma-hydroxybutyric Acid”,

and inserting the following new heading:

“Gamma-hydroxybutyric Acid Converted Drug Weight”;

and by striking “of marihuana”; under the heading relating to Schedule III Substances (except ketamine), by striking the heading as follows:

“Schedule III Substances (except ketamine)***”,

and inserting the following new heading:

“Schedule III Substances (except ketamine)*** Converted Drug Weight”;

by striking “1gm of marihuana” and inserting “1 gm”; by striking

The Commentary to § 2B1.1 captioned “Application Notes” is amended in

Note 2(A)(i) by striking “as determined under the provisions of § 1B1.2 (Applicable Guidelines) for the offense of conviction” and inserting the following: “specifically referenced in Appendix A (Statutory Index) for the offense of conviction, as determined under the provisions of § 1B1.2 (Applicable Guidelines)”.

(B) Title References to § 4A1.3

The Commentary to § 2Q1.3 captioned “Application Notes” is amended in Note 8 by striking “Adequacy of Criminal History Category” and inserting “Departures Based on Inadequacy of Criminal History Category (Policy Statement)”.

The Commentary to § 2R1.1 captioned “Application Notes” is amended in Note 7 by striking “Adequacy of Criminal History Category” and inserting “Departures Based on Inadequacy of Criminal History Category (Policy Statement)”.

Section 4A1.2 is amended in subsections (h) through (j) by striking “Adequacy of Criminal History Category” each place such term appears and inserting “Departures Based on Inadequacy of Criminal History Category (Policy Statement)”.

The Commentary to § 4A1.2 captioned “Application Notes” is amended in Notes 6 and 8 by striking “Adequacy of Criminal History Category” both places such term appears and inserting “Departures Based on Inadequacy of Criminal History Category (Policy Statement)”.

The Commentary to § 4B1.4 captioned “Background” is amended by striking “Adequacy of Criminal History Category” and inserting “Departures Based on Inadequacy of Criminal History Category (Policy Statement)”.

(C) Clerical Changes

The Commentary to § 1B1.13 captioned “Application Notes” is amended in Note 4 by striking “factors set forth 18 U.S.C. 3553(a)” and inserting “factors set forth in 18 U.S.C. 3553(a)”.

Section 2D1.11 is amended in subsection (d)(6) by striking “Pseudoephedrine” and inserting “Pseudoephedrine”;

and in subsection (e)(2), under the heading relating to List I Chemicals, by striking the period at the end and inserting a semicolon.

The Commentary to § 2M2.1 captioned “Statutory Provisions” is amended by striking “§ 2153” and inserting “§§ 2153”, and by inserting at the end the following: “For additional statutory provision(s), see Appendix A (Statutory Index).”.

The Commentary to § 2Q1.1 captioned “Statutory Provisions” is amended by striking “42 U.S.C. 6928(e)” and inserting “42 U.S.C. 6928(e), 7413(c)(5)”, and by inserting at the end the following: “For additional statutory provision(s), see Appendix A (Statutory Index).”.

The Commentary to § 2Q1.2 captioned “Statutory Provisions” is amended by striking “7413” and inserting “7413(c)(1)–(4)”.

The Commentary to § 2Q1.3 captioned “Statutory Provisions” is amended by striking “7413” and inserting “7413(c)(1)–(4)”.

Section 5D1.3(a)(4) is amended by striking “release on probation” and inserting “release on supervised release”.

Appendix A (Statutory Index) is amended in the line referenced to 18 U.S.C. 371 by rearranging the guidelines to place them in proper order, and in the line referencing 18 U.S.C. 1591 by rearranging the guidelines to place them in proper order.

[FR Doc. 2016–30493 Filed 12–16–16; 8:45 am]

BILLING CODE 2210–40–P

UNITED STATES SENTENCING COMMISSION

Sentencing Guidelines for United States Courts

AGENCY: United States Sentencing Commission.

ACTION: Request for public comment.

SUMMARY: In August 2016, the Commission indicated that one of its priorities would be the “[s]tudy of offenses involving MDMA/Ecstasy, synthetic cannabinoids (such as JWH–018 and AM–2201), and synthetic cathinones (such as Mephedrone, MDPV, and Mephedrone), and consideration of any amendments to the *Guidelines Manual* that may be appropriate in light of the information obtained from such study.” See 81 FR 58004 (Aug. 24, 2016). As part of its statutory authority and responsibility to analyze sentencing issues, including operation of the federal sentencing guidelines, the United States Sentencing Commission is publishing this issue for comment to inform the Commission’s consideration of the issues related to this policy priority. The issue for comment is set forth in the Supplementary Information portion of this notice.

DATES: Public comment regarding the issue for comment set forth in this notice should be received by the Commission not later than March 10, 2017.

ADDRESSES: All written comment should be sent to the Commission by electronic mail or regular mail. The email address for public comment is *PublicComment@ussc.gov*. The regular mail address for public comment is United States Sentencing Commission, One Columbus Circle NE., Suite 2–500, Washington, DC 20002–8002, Attention: Public Affairs.

FOR FURTHER INFORMATION CONTACT:

Christine Leonard, Director, Office of Legislative and Public Affairs, (202) 502–4500, *pubaffairs@ussc.gov*.

SUPPLEMENTARY INFORMATION: The United States Sentencing Commission is an independent agency in the judicial branch of the United States Government. The Commission promulgates sentencing guidelines and policy statements for federal courts pursuant to 28 U.S.C. 994(a). The Commission also periodically reviews and revises previously promulgated guidelines pursuant to 28 U.S.C. 994(o) and submits guideline amendments to the Congress not later than the first day of May each year pursuant to 28 U.S.C. 994(p).

In August 2016, the Commission indicated that one of its priorities would be the “[s]tudy of offenses involving MDMA/Ecstasy, synthetic cannabinoids (such as JWH–018 and AM–2201), and synthetic cathinones (such as Mephedrone, MDPV, and Mephedrone), and consideration of any amendments to the *Guidelines Manual* that may be appropriate in light of the information obtained from such study.” See 81 FR 58004 (Aug. 24, 2016). The Commission intends that this study will be conducted over a two-year period and will solicit input, several times during this period, from experts and other members of the public. The Commission further intends that in the amendment cycle ending May 1, 2018, it may, if appropriate, publish a proposed amendment as a result of the study.

MDMA, Synthetic Cathinones, and Synthetic Cannabinoids.—As part of the study related to this policy priority, the Commission intends to examine offenses involving the following controlled substances:

- Synthetic Cathinones*
 - MDPV (Methylenedioxypropylvalerone)
 - Mephedrone (3,4-Methylenedioxy-N-Methylcathinone)
 - Mephedrone (4-Methylmethcathinone (4–MMC))
 - Synthetic Cannabinoids*
 - JWH–018 (1-Pentyl-1-3-1-(1-Naphthoyl)Indole)
 - AM–2201 (1-(5-Fluoropentyl)-3-(1-Naphthoyl)Indole)
- MDMA/Ecstasy (3,4-Methylenedioxy-Methamphetamine)*

The synthetic cathinones and synthetic cannabinoids listed above are Schedule I controlled substances that are not currently referenced at § 2D1.1 (Unlawful Manufacturing, Importing, Exporting, or Trafficking (Including Possession with Intent to Commit These Offenses); Attempt or Conspiracy).

MDPV, methyldone, and mephedrone, are synthetic cathinones. According to the National Institute on Drug Abuse, synthetic cathinones, also known as “bath salts,” are man-made substances related to cathinone, a stimulant found in the khat plant. *See* National Institute on Drug Abuse, DrugFacts: Synthetic Cathinones (“Bath Salts”) (Revised January 2016) available at <https://www.drugabuse.gov/publications/drugfacts/synthetic-cathinones-bath-salts>.

JWH-018 and AM-2201 are synthetic cannabinoids, sometimes referred to as “Spice” or “K2.” These substances are also man-made and, in liquid form, can be sprayed on shredded plant material so they can be smoked. *See* National Institute of Drug Abuse, DrugFacts: Synthetic Cannabinoids (Revised November 2015) available at <https://www.drugabuse.gov/publications/drugfacts/synthetic-cannabinoids>.

MDMA is a synthetic drug that alters the user’s mood and perception of surrounding objects and conditions. MDMA, also known as “ecstasy” or “molly,” is both a stimulant and hallucinogen, and is typically taken in tablet or capsule form. *See* National Institute of Drug Abuse, DrugFacts: MDMA (Ecstasy/Molly) (Revised October 2016) available at <https://www.drugabuse.gov/publications/drugfacts/mdma-ecstasy-molly>.

Guidelines Penalty Structure.—When a drug trafficking offense involves a controlled substance not specifically referenced in the guidelines, the Commentary to § 2D1.1 instructs the court to “determine the base offense level using the marijuana equivalency of the most closely related controlled substance referenced in [§ 2D1.1].” *See* USSG § 2D1.1, comment. (n.6). The guidelines establish a three-step process for making this determination. *See* USSG § 2D1.1, comment. (n.6, 8).

First, courts must determine the most closely related controlled substance by considering the following factors to the extent practicable:

(A) Whether the controlled substance not referenced in § 2D1.1 has a chemical structure that is substantially similar to a controlled substance referenced in this guideline.

(B) Whether the controlled substance not referenced in § 2D1.1 has a stimulant, depressant, or hallucinogenic

effect on the central nervous system that is substantially similar to the stimulant, depressant, or hallucinogenic effect on the central nervous system of a controlled substance referenced in this guideline.

(C) Whether a lesser or greater quantity of the controlled substance not referenced in § 2D1.1 is needed to produce a substantially similar effect on the central nervous system as a controlled substance referenced in this guideline.

Once the most closely related controlled substance is determined, the next step is to refer to the marijuana equivalency from the Drug Equivalency Tables at Application Note 8(D) for the most closely related controlled substance to convert the quantity of controlled substance in the offense into its equivalent quantity of marijuana. The final step is to find the equivalent quantity of marijuana in the Drug Quantity Table at § 2D1.1(c) and use the corresponding offense level as the base offense level of the controlled substance involved in the offense.

For example, in cases involving methyldone, Commission data indicates that in fiscal year 2015, the courts always identified MDMA as its most closely related controlled substance. The marijuana equivalency of MDMA is 1 gm MDMA = 500 gm marijuana. Pursuant to the Drug Equivalency Tables, when sentencing methyldone offenders, this is the equivalency to be used. Thus, if an offender is accountable for 50 grams of methyldone, the base offense level at § 2D1.1 would be determined by multiplying the 50 grams by 500 grams of marijuana. The resulting equivalency of 25,000 grams of marijuana provides for a base offense level 16.

In recent years, the Commission has received comment from the public suggesting that questions regarding “the most closely related controlled substance” require courts to hold extensive hearings. In addition, the Commission has heard that courts have identified different controlled substances as the “most closely related controlled substance” to the synthetic cathinones and synthetic cannabinoids included in the Commission’s study and, in some cases, adjusted the marijuana equivalency to account for perceived differences between the “most closely related controlled substance” and the controlled substance involved in the offense. Both outcomes may result in sentencing disparities among similarly situated defendants. To possibly alleviate these issues, one possible outcome of the Commission’s study may be to establish marijuana

equivalencies for each of the synthetic cathinones (MDPV, methyldone, and mephedrone) and synthetic cannabinoids (JWH-018 and AM-2201). The Commission decided to include MDMA in its study because courts have identified MDMA as the most closely related controlled substance referenced in § 2D1.1 to methyldone.

Issue for Comment.—In determining the marijuana equivalencies for specific controlled substances, the Commission has considered, among other things, the chemical structure, the pharmacological effects, the legislative and scheduling history, potential for addiction and abuse, the pattern of abuse and harms associated with abuse, and the patterns of trafficking and harms associated with trafficking.

The Commission invites general comment on any or all of these factors as they relate to the Commission’s study of synthetic cathinones (MDPV, methyldone, and mephedrone) and synthetic cannabinoids (JWH-018 and AM-2201).

The Commission further seeks broad comment on offenses involving synthetic cathinones (MDPV, methyldone, and mephedrone) and synthetic cannabinoids (JWH-018 and AM-2201), and the offenders involved in such offenses. What is the conduct involved in such offenses and the nature and seriousness of the harms posed by such offenses? How these offenses and offenders compare with other drug offenses and drug offenders? How are these substances manufactured, distributed, possessed, and used? What are the characteristics of the offenders involved in these various activities? What harms are posed by these activities?

Which of the controlled substances currently referenced in § 2D1.1 should be identified as the “most closely related controlled substance” to any of the synthetic cathinones and synthetic cannabinoids included in the Commission’s study? To what extent does the synthetic cathinone or synthetic cannabinoid differ from its “most closely related controlled substance”?

Authority: 28 U.S.C. 994(a), (o), (p), (x); USSC Rules of Practice and Procedure 4.4.

Patti B. Saris,

Chair.

**DEPARTMENT OF VETERANS
AFFAIRS****Rehabilitation Research and
Development Service Scientific Merit
Review Board; Notice of Meetings**

The Department of Veterans Affairs
(VA) gives notice under the Federal

Advisory Committee Act, 5 U.S.C. App.
2 that the subcommittees of the
Rehabilitation Research and
Development Service Scientific Merit
Review Board will meet from 8:00 a.m.
to 5:00 p.m. on the dates indicated
below:

Subcommittee	Date(s)	Location
Psychological Health & Social Reintegration	February 28, 2017	VHA National Conference Center.
Rehabilitation Engineering & Prosthetics/Orthotics	February 28, 2017	VHA National Conference Center.
Sensory Systems/Communication Disorders	February 28, 2017	VHA National Conference Center.
Spinal Cord Injury	February 28, 2017	VHA National Conference Center.
Regenerative Medicine	March 1, 2017	VHA National Conference Center.
Career Development Award Program	March 1–2, 2017	VHA National Conference Center.
Musculoskeletal/Orthopedic	March 1–2, 2017	VHA National Conference Center.
Aging & Neurodegenerative Disease	March 2, 2017	VHA National Conference Center.
Brain Injury: TBI & Stroke	March 2–3, 2017	VHA National Conference Center.
VA–ORD Historically Black College and University Research Scientist Training Program.	March 3, 2017	*VA Central Office.

The addresses of the meeting sites are:
(*Teleconference). VA Central Office,
1100 First Street NE., Washington, DC
20002. VHA National Conference
Center, 2011 Crystal Drive, Arlington,
VA 22202.

The purpose of the Board is to review
rehabilitation research and development
applications and advise the Director,
Rehabilitation Research and
Development Service, and the Chief
Research and Development Officer on
the scientific and technical merit, the
mission relevance, and the protection of
human and animal subjects.

The subcommittee meetings will be
open to the public for approximately
one-half hour at the start of each
meeting to cover administrative matters
and to discuss the general status of the
program. Members of the public who
wish to attend the open portion of the

teleconference sessions may dial (800)
767–1750, participant code 35847. The
remaining portion of each subcommittee
meeting will be closed to the public for
the discussion, examination, reference
to, and oral review of the research
applications and critiques. During the
closed portion of each subcommittee
meeting, discussion and
recommendations will include
qualifications of the personnel
conducting the studies (the disclosure of
which would constitute a clearly
unwarranted invasion of personal
privacy), as well as research information
(the premature disclosure of which
would likely compromise significantly
the implementation of proposed agency
action regarding such research projects).
As provided by subsection 10(d) of
Public Law 92–463, as amended by
Public Law 94–409, closing the meeting

is in accordance with 5 U.S.C.
552b(c)(6) and (9)(B).

No oral or written comments will be
accepted from the public for either
portion of the meetings. Those who plan
to attend the open portion of a
subcommittee meeting should contact
Ms. Tiffany Asqueri, Designated Federal
Officer, Rehabilitation Research and
Development Service, at Department of
Veterans Affairs (10P9R), 810 Vermont
Avenue NW., Washington, DC, 20420,
or by email at tiffany.asqueri@va.gov at
least 5 days before the meeting. For
further information, please call Mrs.
Asqueri at (202) 443–5757.

Dated: December 13, 2016.

LaTonya L. Small,

Advisory Committee Management Officer.

FEDERAL REGISTER

Vol. 81

Monday,

No. 243

December 19, 2016

Part II

Department of Labor

Employment and Training Administration

29 CFR Parts 29 and 30

Apprenticeship Programs; Equal Employment Opportunity; Final Rule

DEPARTMENT OF LABOR**Employment and Training
Administration****29 CFR Parts 29 and 30**

RIN 1205-AB59

**Apprenticeship Programs; Equal
Employment Opportunity****AGENCY:** Employment and Training
Administration, Labor.**ACTION:** Final rule.

SUMMARY: The U.S. Department of Labor (DOL or Department) is issuing this rule to modernize the equal employment opportunity regulations that implement the National Apprenticeship Act of 1937. The existing regulations prohibit discrimination in registered apprenticeship on the basis of race, color, religion, national origin, and sex, and require that sponsors of registered apprenticeship programs take affirmative action to provide equal opportunity in such programs. This rule updates equal opportunity standards in part 30 to include age (40 or older), genetic information, sexual orientation, and disability among the list of protected bases upon which a sponsor must not discriminate; improves and clarifies the affirmative action provisions for sponsors by detailing with specificity the actions a sponsor must take to satisfy its affirmative action obligations, including affirmative action for individuals with disabilities; revises regulations to reflect changes made in October 2008 to Labor Standards for Registration of Apprenticeship Programs, the companion regulations governing the conduct of registered apprenticeship programs; and improves the overall readability of part 30 through restructuring and clarification of the text. Wherever possible, this final rule has attempted to streamline and simplify sponsors' obligations, while maintaining broad and effective equal employment opportunity protections for apprentices and those seeking entry into apprenticeship programs. The policies and procedures of this rule promote equality of opportunity in apprenticeship programs registered with the Department and in apprenticeship programs registered with federally recognized state apprenticeship agencies.

DATES: *Effective date:* These regulations are effective January 18, 2017.

Compliance date: Several sections in the final regulation pertaining to equal employment and affirmative action violations specify extended periods

beyond the effective date for sponsors to come into compliance with the rule. They are listed below, and described in more detail in the Section-by-Section Analysis and regulatory text. Unless otherwise indicated, sponsors must comply with the provisions of this regulation on the effective date:

- 180 days after effective date: Obligations under § 30.3
- 2 years after effective date (or 2 years after registration, for sponsors registered after the effective date): Obligations under §§ 30.4(e), 30.5(b), 30.7(d)(2), 30.9, and 30.11
- At first compliance review after effective date: §§ 30.5(c), 30.6

FOR FURTHER INFORMATION CONTACT: John Ladd, Administrator, Office of Apprenticeship, Employment and Training Administration, U.S. Department of Labor, 200 Constitution Avenue NW., Room N-5641, Washington, DC 20210, oa.administrator@dol.gov, (202) 693-2796 (this is not a toll-free number). Individuals with hearing or speech impairments may access this telephone number via TTY by calling the toll-free Federal Information Relay Service at 1-800-877-8339.

SUPPLEMENTARY INFORMATION:**Statement of Legal Authority and
Background Information**

The National Apprenticeship Act of 1937 authorizes the Department to formulate and promote the furtherance of labor standards necessary to safeguard the welfare of apprentices.¹ The responsibility for formulating and promoting these labor standards within the Department lies with the Employment and Training Administration's (ETA) Office of Apprenticeship (OA). As part of its duties, OA registers apprenticeship programs that meet certain minimum labor standards. These standards, set forth at 29 CFR parts 29 and 30, are intended to provide for more uniform training of apprentices and to promote equal opportunity in apprenticeship.

The regulations at 29 CFR part 29 implement the National Apprenticeship Act by setting forth labor standards that safeguard the welfare of apprentices, including: Prescribing policies and procedures concerning the registration, cancellation, and deregistration of apprenticeship programs; the recognition of State Apprenticeship Agencies (SAA) as Registration Agencies; and matters relating thereto. On October 29, 2008, the Department published an amended part 29 to

provide a framework that supports an enhanced, modernized apprenticeship system.²

Part 30 implements the National Apprenticeship Act by requiring registered apprenticeship program sponsors to provide equal opportunity for participation in their registered apprenticeship programs, and by protecting apprentices and applicants for apprenticeship from discrimination on certain protected bases. In addition, part 30 also requires that sponsors of registered apprenticeship programs take affirmative action to provide equal employment opportunity in such programs.

The Department first published part 30 on December 18, 1963, by order of the President that the Secretary of Labor, in implementing the National Apprenticeship Act and Executive Order 10925, require that the admission of young workers to apprenticeship programs be on a completely nondiscriminatory basis.³ At that time, the regulations prohibited discrimination based on race, color, religion, and national origin. Nondiscrimination on the basis of sex was added in 1971, as was the requirement for sponsors with five or more apprentices to develop and implement a written affirmative action plan (written AAP) for minorities.⁴ In 1978, the Department amended these regulations to require inclusion of female apprentices in written AAPs.⁵ This rule represents the first changes to these regulations since 1978.

Apprenticeship is an earn-and-learn strategy combining on-the-job training with related technical (classroom) instruction, blending the practical and theoretical aspects of training for highly-skilled occupations. Apprenticeship programs are sponsored voluntarily by a wide range of organizations, including individual employers, employer associations, joint labor-management organizations, and other workforce intermediaries. As of the close of Fiscal Year 2015, there were about 21,000 program sponsors representing about 200,000 employers that offer registered apprenticeship training to more than 455,000 apprentices.⁶

Registered apprenticeship is a voluntary national system under which the vast majority of program sponsors enter into agreements with their

Registration Agencies without direct funding. Potential apprenticeship sponsors deciding whether or not to register their programs weigh the net benefits derived from meeting state and national standards for registration.

There are numerous benefits to registering an apprenticeship program with the Department or an SAA. For the business sponsor, registration provides a structure and framework for developing skilled workers critical to a company's success, and connection to industry, education, and government resources for on-going management of the program and adaptation of new technologies and practices. For example, registered apprenticeships are automatically eligible to be listed as Eligible Training Providers within the workforce development system, the only such training model to have such treatment. Also, Federal government grants for apprenticeships are available to registered programs only. There are also economic incentives for apprenticeship employers in terms of the wage rates that apply to apprentices for work on projects covered by the Davis-Bacon Act and related Acts. For apprentices, registered apprenticeship comes with education and training without the high costs of a 4-year college education, and a nationally-recognized credential upon completion. American communities benefit from enhanced systems to develop skilled workers in high paying occupations through collaborative partnerships of education, industry, and government, working together and supporting quality training programs.

OA oversees the National Apprenticeship System. OA serves as the Registration Agency, and its staff members are directly responsible for, registered apprenticeship activities in 25 States. It also provides technical assistance and oversight to 25 SAAs in the other 25 States, in the District of Columbia, the Virgin Islands, and Guam. In these "SAA States," the SAA has requested and received recognition from the Secretary of Labor to serve as the entity authorized to register and oversee State and local apprenticeship programs for Federal purposes. Therefore, in SAA States, the SAA, in accordance with Federal regulations, serves as the Registration Agency and has responsibility for registering apprenticeship activities for Federal purposes.

Apprenticeship programs appear in traditional industries, such as construction (which has historically trained the majority of apprentices) and manufacturing, as well as in new and emerging industries, such as health care, information and communications

technology, transportation and logistics, and energy, which are projected to add substantial numbers of new jobs to the economy.

Apprenticeship has become increasingly attractive to workforce policy-makers in the U.S., and more in focus after witnessing the expansive growth in apprenticeship in some of our closest allies, such as the United Kingdom, Canada, and Australia. U.S. policy-makers have studied these countries as well as several other European countries, such as Germany, Switzerland, and Austria, where apprenticeships have been ingrained in the culture for centuries and train large percentages of their workforce. The United States Departments of Labor, Commerce, and Education have signed Joint Declarations of Intent to cooperate on workforce training with both Germany⁷ and Switzerland;⁸ apprenticeship systems and strategies are featured in both of these Joint Declarations.

In light of favorable policy research and the increased business demand for high-quality workforce skills and competencies, the Department substantially increased its investments in Registered Apprenticeship in recent years.⁹ The Department's new initiative, ApprenticeshipUSA, seeks to advance apprenticeship and build a strong pipeline of skilled workers, critical for companies to grow their business and compete in the global economy. The ApprenticeshipUSA initiative is stepping up efforts to expand apprenticeship into high-growth industries and to support a uniquely American apprenticeship system. The Department is lifting the image and quality of Registered Apprenticeship throughout the nation, and broadening its scope of training and development activities into an array of diverse industries and occupations.

Through ApprenticeshipUSA, the Department has taken steps to focus on

⁷ Joint Declaration of Intent between the U.S. and the Federal Republic of Germany signed June 5, 2015 [https://www.dol.gov/ilab/diplomacy/Signed%20US-Germany%20JDofI%20\(English\).pdf](https://www.dol.gov/ilab/diplomacy/Signed%20US-Germany%20JDofI%20(English).pdf).

⁸ Joint Declaration of Intent between the U.S. and the Swiss Confederation signed July 7–9, 2015 <https://www.dol.gov/ilab/diplomacy/Switzerland-JDoI.pdf>.

⁹ The Department awarded \$175 million in American Apprenticeship Grants in September 2015. See <https://www.dol.gov/opa/media/press/eta/ETA20151762.htm>. Congress also issued a supplemental appropriation of \$90 million to OA in Fiscal Year 2016, which OA is using for new investments through ApprenticeshipUSA to expand apprenticeship in the United States. See <https://www.whitehouse.gov/the-press-office/2016/04/21/fact-sheet-investing-90-million-through-apprenticeshipusa-expand-proven> (last accessed June 22, 2016).

sector-based and industry engagement in expansion efforts, such as promoting business engagement in the Leaders of Excellence in Apprenticeship Development, Education, and Research (LEADERS) and the Sectors of Excellence in Apprenticeship (SEAs) initiatives, designed to expand the number of employers training apprentices, to increase program quality, and to build pipelines of diverse populations into apprenticeship.

As apprenticeship expands in the U.S., the Department remains committed to long-standing principles of equal employment opportunity to ensure that this expansion draws from and benefits the entire American workforce, providing more Americans a path to good jobs and careers with living wages that apprenticeships offer, in line with the Administration's commitment to double and diversify apprenticeship. The Department is also committed to using these new initiatives and available resources, in conjunction with business, industry, and community partners, to collaborate and build new pipelines into apprenticeship programs, with diversity as a cornerstone of growth in our expansion efforts.

Increasing diversity in apprenticeship will further the goals and demonstrate support of the President's Administration's My Brother's Keeper¹⁰ (MBK) Task Force, a coordinated Federal effort to address persistent opportunity gaps faced by boys and young men of color and ensure that all young people can reach their full potential. This rule also builds upon programs such as the Women in Apprenticeship and Nontraditional Occupations (WANTO)¹¹ initiative, which provides technical assistance to improve outreach, recruitment, hiring, training, employment, and retention of women, including women of color and women with disabilities. The Department has additionally provided support for diversity in apprenticeship through the 2015 American Apprenticeship Initiative grant that supported programs with a focus upon including underrepresented populations, including women, people of color, and individuals with disabilities.

Building a sustained effort to ensure that the benefits apprenticeship programs provide are broadly available to all is a key goal of these revised regulations. The history, demographic

¹⁰ My Brother's Keeper initiative was announced by President Barack Obama on February 27, 2014, <https://www.whitehouse.gov/my-brothers-keeper> (last accessed May 11, 2016).

¹¹ The WANTO Act of 1992, Public Law 102–530, 29 U.S.C. 2501 *et seq.*

patterns, and documented experiences in apprenticeships of members of certain underrepresented groups demonstrate the continuing obstacles to the full participation of these groups in registered apprenticeship programs.

In evaluating the need for this rule, OA analyzed participant demographics in apprenticeship programs in construction and non-construction industries and the demographics of the national labor force. OA reviewed apprenticeship data from OA's Registered Apprenticeship Partners Information Data System (RAPIDS)¹² and analyzed national labor force data from the Current Population Survey (CPS). Using the data from these sources to compare the demographic characteristics of the national workforce to the demographics of individuals enrolled in apprenticeships makes clear that notable disparities exist in apprenticeship participation and completion.

¹² RAPIDS includes individual, apprentice-level data from the 25 states in which OA is the Registration Agency and from the nine SAA states that have chosen to participate. However, unless otherwise stated, the tables and discussions of RAPIDS data are limited to the apprentice data managed by OA staff. The analysis excludes apprentice data maintained by State Apprenticeship Agencies, including those that participate in the RAPIDS database, since the majority of the SAA states provide limited aggregated information which does not lend itself to detailed statistical analysis of demographic characteristics. Given the unique structure of the Registered Apprenticeship system, OA believes that data managed by OA staff is an acceptable proxy for the nation as a whole, because this individual record dataset contains 62 percent of the total active apprentices nationwide (excluding active military members—USMAP). It should be noted that the United Services Military Apprenticeship Program (USMAP) serves approximately 21 percent of all U.S. apprentices.

The comparisons made here between the demographics of the apprenticeship workforce and the demographics of the national labor force are made because using national-level data allows for the use of certain data breakdowns—such as looking at racial shares of the workforce of a particular level of educational attainment—that would not be possible to do using readily available public state-level data. The 25 states from which the RAPIDS data are drawn are, however, broadly demographically representative of the United States as a whole, and using aggregated data from only these 25 states would not have substantially impacted these comparisons. Looking at all participants in the labor force in calendar year 2015 over age 16, the shares that are women (46.8 percent) and Black or African American (12.3 percent) in the national labor force are not significantly different than the shares that are women and Black or African American in these 25 states (46.2 percent and 11.8 percent respectively), while the share of these states' labor forces that is Hispanic (19.7 percent) is actually somewhat higher than the share of the national labor force that is Hispanic (16.6 percent). Consequently, had aggregated state-level data from these 25 states been used instead of the national-level data, the disparities illustrated below would have likely looked largely identical or even slightly more substantial in the case of Hispanic workers.

As described in more detail below, these data and other available analyses indicate that certain groups continue to face substantial barriers to entry into and, for some groups, completion of registered apprenticeships. These barriers result in the following:

- Lower than expected enrollment rates in registered apprenticeships among women and specific minority groups;
- To the extent that women and minorities participate in registered apprenticeships, concentration of these groups in apprenticeships for lower-paying occupations; and
- Significantly lower apprenticeship completion rates among specific minority groups and lower construction apprenticeship completion rates among minority groups and women.

It should also be noted that OA lacks data on the apprenticeship experiences of individuals with disabilities, which complicates efforts both to measure the challenges faced by this group and to address the disparities in access and participation that are likely to exist given the disparities faced by these individuals in the labor force more broadly.

Women in Registered Apprenticeships

In general, women's enrollment in registered apprenticeship programs is significantly lower than would be expected based on labor market data. This disparity exists in comparison to the number of men in registered apprenticeships and also in comparison to the number of women in the wider civilian labor force. As shown in Table 1, in FY2015 the national labor force was 53.2 percent male and 46.8 percent female, and even when looking only at the labor force lacking a college degree—those workers most likely to participate in apprenticeship programs—the labor force was still 43.0 percent female.¹³

¹³ All figures derived from CPS data. Those participants in the labor force lacking a college degree consist of those with no high school diploma, those that completed high school but did not attend college, and those that attended some college but did not receive an associate's degree or bachelor's degree. Note that the Bureau of Labor Statistics only publishes educational attainment labor force statistics for individuals age 25 and over. Consequently, while the overall labor force shares presented in the Table 1 are for all individuals age 16 and above, the shares of labor force participants lacking a college degree are for individuals age 25 and above. While this means that the comparison between the latter set of figures and the apprenticeship workforce is not perfect given that many apprentices are below age 25, it nevertheless provides valuable insight into how the composition of the apprenticeship workforce compares to a group of workers of which they already are, or are likely to, become a part.

TABLE 1—MALE AND FEMALE SHARES OF NATIONAL LABOR FORCE IN FY2015

	Share of labor force (%)	Share of labor force with no college degree (%)
Men	53.2	57.0
Women	46.8	43.0

Source: Current Population Survey.

Yet, as Table 2 illustrates, in the last decade, on average, women comprised only 7.1 percent of all new enrollments in registered apprenticeships, whereas men accounted for 92.9 percent. Additionally, while the share of newly enrolled apprentices that are women has fluctuated up and down by small margins over this period, overall no noticeable progress has been made, and the share of newly enrolled apprentices in FY2015 that were women is identical to the share in FY2006 that were women.

TABLE 2—NEW ENROLLMENTS IN REGISTERED APPRENTICESHIP BY SEX AND FISCAL YEAR, ALL INDUSTRIES

Fiscal year	Female (%)	Male (%)
2006	7.1	92.9
2007	6.1	93.9
2008	6.7	93.3
2009	7.8	92.2
2010	8.3	91.7
2011	6.7	93.3
2012	7.5	92.5
2013	6.7	93.3
2014	6.7	93.3
2015	7.1	92.9
10 Year Average	7.1	92.9
CPS Share of Labor Force (FY2015)	46.8	53.2

Source: Query of RAPIDS database—May 2016.

Additionally, when looking at the 50 occupations with the largest number of apprenticeships, it becomes clear that women who are participating in the largest apprenticeship programs are disproportionately ending up in lower-paying occupations.¹⁴ As shown in Table 3 below, while women account for 9.6 percent of the enrollments in apprenticeship programs in the lowest paying apprenticeable occupations, they make up only 2.2 percent of enrollments in apprenticeship programs in the highest paying apprenticeable occupations. Also illustrative of this fact

¹⁴ Note that these 50 occupations accounted for 82.6 percent of all apprentices in the RAPIDS database as of September 2015.

is that while the 16 occupations comprising the lowest-paid tier of these

50 occupations account for only just over one-fifth of total apprenticeship

enrollments, they account for nearly half of female enrollments.¹⁵

TABLE 3—REPRESENTATION OF WOMEN IN REGISTERED APPRENTICESHIP IN TOP 50 (MOST POPULOUS) APPRENTICEABLE OCCUPATIONS IN FY2015

Category	Example job titles in the tier	Mean hourly wage	Women's share of enrollments (%)
Highest Paid Occupations Tier (17 occupations)	Electrician, Pipe Fitter, Plumber, Telecommunications Technician.	\$28.04	2.2
Intermediate Paid Occupations Tier (17 occupations)	Firefighter, Carpenter, Sheet Metal Worker, Glazier, Floor Layer.	22.70	4.3
Lowest Paid Occupations Tier (16 occupations)	Truck Driver, Roofer, Painter, Housekeeper, Cook, Child Care Development Specialist.	17.16	9.6

Source: Query of RAPIDS database—May 2016; Bureau of Labor Statistics May 2015 National Occupational Employment and Wage Estimates.

When analyzing the distribution of female apprentices on an industry basis, more pronounced disparities become apparent. As seen in Table 4 below, of the 20 major industries in which apprenticeship programs exist, women's share of apprenticeship enrollments is only greater than or equal to their share of the national labor force in three industries and greater than their share of

the national labor force without a college degree in four industries (Healthcare and Social Assistance, Retail Trade, Finance and Insurance, and Warehousing). Among the top five industries by total apprenticeship enrollments (the first five industries shown in the Table 4), women's share of enrollments is no more than 11.6 percent. While there are many reasons

that these apprenticeship enrollment rates do not equal the share of the labor force that is women or the share of the labor force without a college degree that is women, the magnitudes of the disparities present clearly indicate the presence of significant inequities in access and participation.

TABLE 4—NEW ENROLLMENTS IN REGISTERED APPRENTICESHIP BY SEX AND INDUSTRY IN FY2015

Industry	Total enrollments	Female share (%)
Construction ¹⁶	165,291	2.8
Public Administration	19,579	11.6
Manufacturing	17,154	8.0
Utilities	8,389	1.7
Transportation	4,951	5.9
Health Care and Social Assistance	2,274	71.2
Retail Trade	1,782	72.0
Education	1,755	17.1
Other Services, except Public Administration	1,658	15.6
Wholesale Trade	1,529	9.2
Administrative and Support and Waste Management and Remediation Services	959	18.6
Accommodation and Food Services	701	36.2
Agriculture, Forestry, Fishing and Hunting	701	8.0

Real Estate and Rental and Leasing	43	7.0
Warehousing	41	58.5

Source: Query of RAPIDS database—May 2016.

Disparities between male and female enrollment rates are particularly dramatic in the construction industry, where over 70 percent of apprentices were enrolled in FY2015.¹⁷ That year, only 2.8 percent of enrollments were women, the second lowest female

enrollment rate among all industries, trailing only the Utilities industry (1.7 percent). While historical and ongoing discrimination are not the sole explanations for this, the magnitude of the disparities seen in the data, along with several studies of the construction

industry and the anecdotal experience of the women working in the industry who submitted comments to the proposed rule, suggest that

¹⁵ Analysis of RAPIDS data from May 2016 query of RAPIDS database and BLS 2015 National Occupational Employment and Wage Estimates.

¹⁶ Joint apprenticeship training committees (JATCs) have been removed from the Education industry category and included in the Construction industry category.

¹⁷ Joint apprenticeship training committees (JATCs) have been removed from the Education industry category and included in the Construction industry category.

discrimination remains a significant factor.¹⁸

In the proposed rule, the Department stated that the construction trades have traditionally used informal networks and referrals and word of mouth to recruit for open apprenticeships. While we recognize, in response to comments submitted, that significant progress has been made in wider recruitment for apprenticeships and in opening these networks, historical barriers linger. Personal introductions and recommendations (as well as nepotism in the past) continue to be significant factors in selection for construction apprenticeships and work, and many potential female apprentices are not even be aware of the apprenticeship and job opportunities available.¹⁹ The

problem of underrepresentation then perpetuates itself; because women have historically been underrepresented in construction apprenticeships and jobs, many of them may not have access to the interpersonal relationships and informal networks necessary to receive information concerning these opportunities and be selected for them.²⁰ Barriers remain even after women gain entry into these programs. Several women submitted comments recounting discrimination they faced during registered apprenticeship programs, such as being assigned more arduous tasks than male counterparts or otherwise being required to work harder than male counterparts to receive equivalent recognition, being given less skilled and meaningful tasks than male

counterparts, being given fewer hours than male counterparts, and seeing men with less skill promoted ahead of them. Several female commenters described incidents of sexual harassment and retaliation that they experienced during their apprenticeships or while working in the trades.

In addition to low enrollment rates, women complete apprenticeships in the construction industry at lower rates than men. As shown in Table 5 below, while across all industries women complete apprenticeships at a higher rate (50.9 percent) than do men (42.0 percent), within the construction industry women completed apprenticeships at a rate of only 36.5 percent compared to 40.6 percent for men.

TABLE 5—APPRENTICESHIP COMPLETION RATES IN FY2015 BY SEX

FY2015 completion rates ²¹				
	Completions (all industries)	Completion rate (all industries)	Completions (construction)	Completion rate (construction) (%)
Male	23,763	42.0	11,685	40.6
Female	2,248	50.9	271	36.5

Source: Query of RAPIDS database—June 2016.

These disparities can be addressed, however, and evidence illustrates that women do participate and succeed in apprenticeship programs at higher levels when provided equal opportunity and support. The state of Oregon, for example, has been proactively working to increase diversity in its highway construction workforce since 2009 by providing potential highway construction workers with a variety of supports to help them complete relevant apprenticeships. The state's Highway Construction Workforce Development Program (WDP) provides pre-apprenticeship programs, support services including childcare and transportation subsidies, and mentoring

and retention services to help apprentices gain the training and credentials they need, with a particular emphasis on serving female and minority candidates.²² A 2014 poll of apprentices by WDP found that 80 percent of female active apprentices reported that WDP supports allowed them to take a job they would not otherwise have been able to take, and completion rates for female apprentices who received financial services from the WDP were significantly higher than those who did not receive any services (60.9 percent versus 31.5 percent).²³ Between 2005 and 2013, the share of all heavy highway construction apprentices in Oregon that were female apprentices

or apprentices of color increased from 16.5 percent to 26.9 percent, with the program likely playing a significant role in more recent years.²⁴

Examples such as that seen in Oregon demonstrate that progress can be made in improving women's participation and success in apprenticeship programs when doing so is made a priority. Making sure that women are aware of the apprenticeship opportunities available to them, that they receive equal opportunities to participate in those apprenticeship programs, and that they receive the same quality of training and mentorship in those programs are all critical to closing the significant utilization gaps we see today.

Minorities in Apprenticeship

The participation of racial and/or ethnic minorities in apprenticeships has been uneven and varies by group. In FY2015, the “Black or African American” demographic group²⁵ comprised 12.3 percent of the national labor force and 14.1 percent of the labor force without a college degree (see Table 6), but made up 10.0 percent of all apprenticeship enrollments. While those gaps are clearly substantially smaller than those seen among women, focusing only on this broad measure can mask significant underrepresentation of Black or African Americans in particular industries.

TABLE 6—RACIAL AND ETHNIC COMPOSITION OF LABOR FORCE IN FY2015

	Share of labor force (%)	Share of labor force with no college degree (9%)
White	78.8	78.5
Black or African American	12.3	14.1
Other Race	9.0	7.4
Hispanic or Latino ²⁶	16.6	22.7

Source: Current Population Survey.

For example, as can be seen in Table 7, while Black or African Americans were well-represented in apprenticeships in industries such as

Public Administration, Health Care and Social Assistance, and Other Services in FY2015, they comprised only 8.8 percent of apprentice enrollments in Construction, the industry with by far the largest number of apprentices. Black or African Americans also comprised under 10 percent of enrollments in seven other industries, including Utilities; Agriculture, Forestry, Fishing, and Hunting; and Professional, Scientific, and Technical Services among others. These disparities illustrate the uneven manner in which Black and African Americans participate in apprenticeships across industries and also speak to the importance of disaggregating such enrollment data so as to gain a more accurate picture of where and to what extent different groups are being underrepresented.

TABLE 7—NEW ENROLLMENTS IN REGISTERED APPRENTICESHIP BY RACE AND INDUSTRY IN FY2015

Warehousing	41	4.9	4.9	0.0	90.2

Source: Query of RAPIDS database—May 2016.

Studies examining apprenticeship data at the occupation level have also presented compelling evidence that Blacks or African Americans are underrepresented in certain

apprenticeable occupations. In an analysis of 2005–2007 ACS data broken down to the occupational level in the construction, extraction, and maintenance sector, researchers found

that Black or African-American men experienced underrepresentation in 81 percent of the 67 precisely-defined occupations that comprise this sector.²⁸

²⁵ We refer herein to “Black or African American” because that is the racial categorization used by the Bureau of Labor Statistics in CPS data, and is in turn used within the definition of “race” in the part 30 regulations. See Bureau of Labor Statistics Glossary, available at <http://www.bls.gov/bls/glossary.htm#R> (last accessed June 24, 2016); 29 CFR 30.2.

²⁶ Note that percentages in this table will not add up to 100 percent due to rounding and because there is overlap between the Hispanic or Latino

ethnic group and the racial groups presented in the table.

²⁷ Joint apprenticeship training committees (JATCs) have been removed from the Education industry category and included in the Construction industry category.

²⁸ The authors also found that across occupations in all sectors examined, Black or African-American men were underrepresented in 49 percent of occupations. To determine whether underrepresentation existed in a particular occupation, the authors compared the share

workers in the occupation that were Black or African American to the share of workers in the occupation that one would have expected to be Black or African American given the proportion of Black or African-American workers that have the education level associated with that occupation. See Hamilton, D. Algernon A., and William D., Jr., “Whiter Jobs, Higher Wages: Occupational Segregation and the Lower Wages of Black Men.” Economic Policy Institute, Washington, DC (Feb. 2011).

Examining the distribution of Hispanic apprentices illustrates a similar pattern of uneven participation of workers across industries and points to the existence of significant underrepresentation of Hispanics in a number of industries. In FY2015, Hispanics comprised 20.2 percent of apprenticeship enrollments, which was higher than their share of the national

labor force (16.6 percent) but below their share of the labor force without a college degree (22.7 percent). Looking specifically at industry employment, it can be seen in Table 8 that while Hispanics were relatively well represented in industries such as Education and Wholesale Trade, of the top seven industries by apprenticeship enrollment, Hispanics accounted for

less than 10 percent of enrollees in all but one (Construction). In total, Hispanics accounted for a share of enrollments that was below their share of the national labor force in 13 industries, and accounted for a share of enrollments that was below their share of the labor force without a college degree in 15 industries.

TABLE 8—NEW ENROLLMENTS IN REGISTERED APPRENTICESHIP BY ETHNICITY AND INDUSTRY IN FY2015

Industry	Total enrollments	Hispanic share (%)	Non-Hispanic share (%)	Unreported ethnicity share (%)
Construction ²⁹	165,291	21.2	55.7	23.1
Public Administration	19,579	7.2	46.8	46.0
Manufacturing	17,154	5.6	62.1	32.3
Utilities	8,389	7.2	61.7	31.1
Transportation	4,951	6.4	37.2	56.3
Health Care and Social Assistance	2,274	9.9	58.9	31.1
Retail Trade	1,782	4.7	14.9	80.4
Education	1,755	30.9	47.0	22.1
Other Services, except Public Administration	1,658	10.5	38.9	50.6
Wholesale Trade	1,529	24.0	61.7	14.3
Administrative and Support and Waste Management and Remediation Services	959	8.4	36.6	55.0
Accommodation and Food Services	701	8.1	47.9	43.9
Agriculture, Forestry, Fishing and Hunting	701	23.7	33.7	42.7
Information	673	22.1	44.7	33.1
Professional, Scientific, and Technical Services	270	7.4	55.6	37.0
Mining, Quarrying, and Oil and Gas Extraction	225	24.0	50.2	25.8

Warehousing	41	7.3	2.4	90.2

Source: Query of RAPIDS database—May 2016.

Further, minority groups tend to be more concentrated in apprenticeships for lower-paying occupations than are apprentices as a whole. RAPIDS data for the 50 occupations with the largest numbers of apprentices show that both Black or African-American enrollees and Hispanic enrollees in apprenticeship programs make up higher shares of apprentices in low-

wage occupations than of apprentices in high-wage occupations. As seen below in Table 9, while Black or African Americans comprise 17.3 percent of enrollees in the lowest-paid occupation tier, they account for only 7.8 percent of enrollees in the highest-paid tier, and while Hispanics comprise 22.4 percent of enrollees in the lowest-paid occupation tier, they account for only

15.6 percent of enrollees in the highest-paid tier. Further illustrating this point is that while enrollments in the bottom wage tier account for 21.2 percent of total apprenticeship enrollments among these 50 occupations, they account for 35.8 percent of Black or African American enrollments and 25.3 percent of Hispanic enrollments.

TABLE 9—REPRESENTATION BY RACE IN 50 MOST POPULOUS APPRENTICEABLE OCCUPATIONS FY2015

Source: Query of RAPIDS database—May 2016; Bureau of Labor Statistics May 2015 National Occupational Employment and Wage Estimates.

Finally, RAPIDS data also reveal that there are challenges for minority groups in completion rates as well. For example, the FY2015 completion rate for Black or African American apprentices in all industries was only 39.3 percent, and in the construction

industry it was only 30.6 percent (see Table 10). White apprentices, by comparison, had an all-industry completion rate of 47.3 percent, and a construction-industry completion rate of 44.6 percent. Similar patterns are seen among Hispanic apprentices, who had

an all-industry completion rate of 31.7 percent and a construction-industry completion rate of 34.0 percent in FY2015, compared to a 46.5 percent all-industry completion rate and a 43.2 construction-industry percent completion rate among Non-Hispanics.

TABLE 10—APPRENTICESHIP COMPLETION RATES IN FY2015 BY RACE AND ETHNICITY

	FY2015 completion rates ³⁰			
	Completions (all industries)	Completion rate (all industries) (%)	Completions (construction)	Completion rate (construction) (%)
White	17,853	47.3	9,168	44.6
Black or African American	3,000	39.3	816	30.6
Non-Hispanic	15,690	46.5	7,951	43.2
Hispanic	3,709	31.7	1,568	34.0

Source: Query of RAPIDS database—June 2016.

That such disparities and patterns of uneven participation exist is not surprising given the challenges often faced by many minorities and ethnic groups as they look to find work in the industries and occupations where apprenticeships are most common. These workers can be confronted by workplace cultures that are overtly or subtly hostile to workers of their race or ethnic background, and they often lack access to the types of interpersonal relationships and professional networks that would help them find jobs and receive the mentorship and training they need to complete their apprenticeships. One study of apprentices in the highway trades in Oregon published in 2015 documents all of these challenges.³¹ In surveying apprentices in the highway trades, it found that 21 percent of men of color and 30 percent of women of color reported feeling disadvantaged on the

job due to their race or ethnicity. Speaking to the issues surrounding minorities' access to critically important informal networks, the survey also found that while only 13 percent of white men stated that problems with journeyworkers were a challenge during their apprenticeship, 21 percent of men of color and 35 percent of women of color reported such problems. Indeed, while 79 percent of white men reported receiving mentoring on the job, only 60 percent of men of color and 38 percent of women of color reported the same.

All of these challenges and disparities can make it very difficult for minority workers to break in to trades in which they have not been traditionally well represented, but they can be successfully addressed by robust affirmative action efforts if these efforts are tailored to address the specific circumstances of the disparity.

Individuals With Disabilities in Apprenticeship

While the Department does not currently have data on the representation of persons with disabilities in apprenticeship programs, the underemployment of individuals with disabilities in the labor force more broadly is well documented. According to data from BLS, 30.5 percent of working-age individuals with disabilities were in the labor force in 2015, compared with 76.1 percent of working-age individuals with no disability.³² The unemployment rate for working-age individuals with disabilities was 11.7 percent in 2015, compared with a 5.2 percent unemployment rate for working-age individuals without a disability. Furthermore, wages for individuals with disabilities on average lag behind the rest of the workforce. The mean weekly earnings of employed full-time wage

³⁰ Completion rate means the percentage of an apprenticeship cohort who receives a certificate of apprenticeship completion within 1 year of the expected completion date. For more information see Bulletin FY 2011–07—Program Performance—Calculation of Registered Apprenticeship Program Completion Rates, available at http://doleta.gov/OA/bul10/Bulletin_2011-07_Completion_Rates.pdf.

³¹ M. Kelly et al., "When Working Hard is Not Enough for Female and Racial/Ethnic Minority Apprentices in the Highway Trades," 30 *Sociology Forum* no. 2 (June 2015).

³² Source: Current Population Survey data. 'Working age' refers to individuals between the ages of 16 and 64. As the Department's Section 503 Final

Rule noted, this acute disparity in the workforce participation and unemployment rates of working age individuals with disabilities persists, despite the many technological advances that now make it possible for a broad array of jobs to be successfully performed by individuals with severe disabilities.

and salary workers with a disability in 2015 were \$962 (with a median of \$737) compared to \$1,157 (median \$811) for those without a disability.³³ While 28.5 percent of individuals, ages 18 to 64, with a disability were in poverty in 2014, the data show that 12.3 percent of individuals without a disability were in poverty.³⁴

Affirmative efforts to seek out individuals with disabilities and ensure they have fair access to apprenticeship programs and the “ticket to the middle class” that apprenticeship programs provide has the potential to powerfully impact these profound inequalities.

Overview of the Apprenticeship Equal Employment Opportunity Notice of Proposed Rulemaking and Public Comments

Leading up to the publication of the Notice of Proposed Rulemaking (NPRM), OA received valuable input from a broad array of interested individuals, including SAAs; the National Association of State and Territorial Apprenticeship Directors (NASTAD); advocacy organizations; registered apprenticeship program sponsors such as employers, employer associations, and labor-management organizations; journeyworkers; former apprentices; and registered apprentices. This input addressed features of the existing rules that work well, those that could be improved, and additional requirements that might help to effectuate the overall goal of ensuring equal opportunity for all individuals who are participating in or seeking to participate in the National Registered Apprenticeship System. Recurring themes in these town halls, webinars, and listening sessions included the need for increased outreach efforts to attract women and minorities; focus on equal training and retention of apprentices; stricter enforcement of the Equal Employment Opportunity (EEO) obligations; recognition of the voluntary nature of apprenticeship programs; clarification of complaint procedures; and progressive actions by Registration Agencies to achieve sponsor compliance with the regulations.

In developing the proposed rule, the Department also consulted with its Advisory Committee on Apprenticeship (ACA). Chartered under the Federal Advisory Committee Act, the ACA provides advice and recommendations to the Secretary of Labor on a wide

range of matters related to apprenticeship. The ACA is comprised of approximately 30 members drawn equally from employers, labor organizations, and the public.

OA's NPRM was published in the **Federal Register** on November 6, 2015.³⁵ The NPRM sought public comment on a number of proposals designed to improve the regulations implementing EEO in apprenticeship. The NPRM was published for a 60-day public comment period. After receiving several requests to extend the public comment period, OA extended the public comment period an additional 15 days to January 20, 2016.³⁶

The NPRM contained four general categories of proposed revisions to the part 30 regulations: (1) Changes required to make part 30 consistent with the Labor Standards for Registration of Apprenticeship Programs set forth in part 29; (2) adding additional protected bases to those already delineated in part 30, and further clarifying the scope of some of the existing bases; (3) changes to enhance and clarify the affirmative steps sponsors must take to ensure equal employment opportunity, including the contents of affirmative action programs (AAPs), and how these obligations would be reviewed and enforced by Registration Agencies; and (4) changes to improve the overall readability of part 30. Wherever possible, this Final Rule has attempted to streamline and simplify sponsors' obligations, while maintaining broad and effective EEO protections for apprentices and those seeking entry into apprenticeship programs.

The first set of changes proposed to align the EEO regulations at part 30 with its companion regulations at part 29, and are necessary to ensure a cohesive, comprehensive regulatory framework for the National Registered Apprenticeship System. To that end, the Department proposed to revise or add several definitions and incorporate the procedures set forth in part 29 for deregistration of apprenticeship programs, derecognition of SAAs, and hearings. The use of a more uniform set of procedures streamlines management of the National Apprenticeship System. Also proposed were a few minor, conforming changes in 29 CFR part 29, the companion rule to part 30.

The second category of changes proposed to expand the protected bases upon which discrimination is unlawful and align the existing protected bases with current jurisprudence given the developments in EEO law since the

regulations were last revised in 1978. Categories added to update the rule included age, disability, sexual orientation, genetic information; the proposal also took the position that sex discrimination included discrimination on the basis of pregnancy and gender identity.

The third category of changes in the proposal was designed to improve the effectiveness of program sponsors' required affirmative action efforts and of Registration Agencies' efforts to enforce and support compliance with this rule. Among these proposed changes were the following:

- Listing specific steps all sponsors must undertake to ensure equal employment opportunity, including: Dissemination of EEO policy; outreach and recruitment obligations in an effort to increase diversity in applications for apprenticeship; taking steps to keep the workplace free from harassment, intimidation, and retaliation; and assigning an individual at the sponsor to oversee EEO efforts (proposed § 30.3);
- Specifying in clearer detail the components of a written AAP for those sponsors required to maintain one, allowing new sponsors more time to establish initial AAPs, and requiring an internal, annual review of all written AAP contents (with the possibility to extend the review to every two years if their review demonstrated compliance with all AAP elements) (proposed § 30.4);
- As part of an AAP, simplifying the process by which sponsors analyze whether the apprenticeship program is underutilizing women or minorities, and accordingly whether they need to set utilization goals (proposed §§ 30.5–30.6);
- Expanding the AAP to include affirmative action obligations on the basis of disability, including a 7% utilization goal for individuals with disabilities in apprenticeship programs and a self-identification mechanism allowing sponsors to quantitatively measure their progress against that goal (proposed §§ 30.7, 30.11);
- Clarifying the existing outreach and recruitment AAP obligation, which required engaging in a “significant number” of ten possible activities, by specifying four required, common-sense activities (proposed § 30.8);
- Requiring an annual review of personnel practices to ensure the program is operating free from discrimination (proposed § 30.9);
- Providing sponsors greater flexibility in how they may select apprentices for their programs, provided that such selection mechanisms are free from discrimination and comport with the Uniform Guidelines for Employee Selection Procedures that already governed selection in the existing regulations (proposed § 30.10); and
- Clarifying procedures for apprentices to file complaints of discrimination and the types of enforcement actions Registration Agencies may take in the event of violations (proposed §§ 30.12–30.15).

While progress has been made in some segments of the workforce since the

³⁵ 80 FR 68908.

³⁶ 80 FR 80307, Dec. 24, 2015.

promulgation of the existing part 30, these enhancements and improvements were proposed to address the ongoing widespread underutilization of historically disadvantaged worker groups in apprenticeship. The Department has a compelling interest in ensuring that its approval of a sponsor's apprenticeship program does not serve to support, endorse, or further promote discrimination.

The fourth category of changes was proposed to improve the overall readability of part 30 through a reorganization of the part 30 requirements, basic editing, providing clarifying language where needed, and adhering to plain language guidelines. This includes replacing the word "shall" with "must" or "will" as appropriate to the context. The proposed rule added a new section setting forth the effective date for this rule and for programs currently registered to come into compliance with the revised regulations.

OA received 245 comments on the NPRM. Commenters represented diverse perspectives including: 107 individuals; 45 advocacy and public interest groups; 27 Joint Apprenticeship Training Committees (state/local); 13 state government agencies; 11 industry association/business interests; 10 national unions; 9 state and local unions; and 5 private employers.

The commenters raised a broad range of issues. Most commenters supported the broader intent of increasing diversity and equal opportunity to bolster inclusion efforts, and many commenters strongly supported the expanded protections proposed in the NPRM. Other commenters raised various concerns with the cost and burden associated with the proposed rule, and questioned whether various proposals were feasible for sponsors to undertake and/or comply with. Among the primary issues raised by these commenters were:

- Whether the obligations under the new rule conflicted with the obligations of certain sponsors under Employee Retirement Income Security Act (ERISA) to act as a fiduciary for the training plans;
- The application of certain non-discrimination, affirmative action, and recordkeeping obligations to certain group sponsors, whom commenters believed would not have the ability to control personnel actions made and records kept by participating employers (proposed §§ 30.3–30.12);
- The definition of sex discrimination, which many commenters believed should specifically include discrimination on the basis of pregnancy, gender identity, and sexual orientation;

- The exemption from AAP obligations for those sponsors with fewer than 5 apprentices (proposed § 30.4), which was carried over from the existing rule. These comments were split between those who wanted the exemption eliminated altogether versus those who wanted the exemption expanded to include sponsors with larger apprenticeship programs;
- Questions of burden related to the frequency and extent of various elements of the AAP (proposed §§ 30.4–30.9);
- The burden of requiring sponsors to complete utilization analyses for race and sex (proposed §§ 30.5–30.6), given that, while required under the existing rule, many sponsors do not have experience undertaking this analysis and have in practice relied upon Registration Agencies to do so on their behalf. Related, a number of commenters cited a lack of clarity on various facets associated with utilization goals (§§ 30.5–30.6), such as defining a relevant recruitment area;
- The feasibility of the new 7% disability goal and attendant self-identification requirements (proposed § 30.7 and 30.11), with some commenters arguing for a lower goal and some a higher goal, as well as whether pre-offer self-identification inquiries comport with State and Federal laws; and
- The new enforcement measure that would allow Registration Agencies to suspend sponsors (proposed § 30.15), which some commenters believed lacked due process considerations and could be used punitively for political reasons by certain SAAs.

The active engagement from stakeholders to provide their ideas about and comments on the proposed rule resulted in a Final Rule that streamlines and simplifies the obligations of sponsors to the extent possible while maintaining broad equal employment opportunity protections for apprentices.

Overview of the Final Rule

This Final Rule responds to and incorporates the public input received during the open comment period and ACA consultation, as well as OA's analysis regarding barriers to entry, underutilization, and discrimination in apprenticeship and nontraditional occupations for underrepresented groups and best practices to address these challenges. The Final Rule includes the same basic structure and many of the same proposals that were announced in the NPRM. However, to focus the Final Rule more closely on key issues, incorporate public comment, and to reduce the burden to the extent possible while maintaining the efficacy of nondiscrimination and affirmative action efforts, the Final Rule also revises or eliminates some of the NPRM's proposals. A summary of the significant changes from the NPRM are as follows:

- Generally providing more time for sponsors—both those currently registered and those who may register programs in the future—to comply with the new non-discrimination and affirmative action obligations;
- Adjusting the workforce analysis so that it is conducted at the occupation level, and the utilization analysis at the major occupation category level, using a common source of data easily accessible to sponsors;
- Clarifying that Registration Agencies will significantly assist sponsors in conducting utilization analyses;
- Clarifying that failure to meet utilization goals will not, in and of itself, result in the assessment of any enforcement actions or sanctions. In so doing, the Final Rule clarifies the goals are not quotas, which in fact are legally impermissible, and that goals do not displace in any way merit selection principles; indeed, the rule specifically prohibits selections made on the basis of a protected category;
- Revising the proposed program suspension alternative in the enforcement action to address due process concerns raised by commenters; and
- Allowing SAAs more time to submit their State EEO plan to come into compliance with these regulations.

These and other changes to the Final Rule, as well as a full response to the significant comments received and clarifying guidance on how the rule should be interpreted, are set forth in the Section-by-Section Analysis below.

Section-by-Section Analysis

Description of Part 30

The description of part 30 in the existing regulations reads "Equal Employment Opportunity in Apprenticeship and Training." The NPRM proposed to delete the words "and Training" to clarify that the rule applies only to apprenticeship programs registered under the National Apprenticeship Act, and not to other training programs. The proposed change was also consistent with the recent change of the name of the Department's apprenticeship agency to the Office of Apprenticeship, from the Bureau of Apprenticeship and Training. We received no comments on this proposed change. Accordingly, the Department adopts the proposed language describing part 30 in the Final Rule.

Purpose, Applicability, and Relationship to Other Laws (§ 30.1)

The existing § 30.1 set forth the scope and purpose in one paragraph and laid out the range of activities to which the policies apply. The NPRM proposed to revise the title by replacing "Scope and purpose" with "Purpose, applicability, and relationship to other laws," organized the text to fall under these three categories, and provided clarifying

details to enhance readability of the section.

The Department received only one comment, from a national JATC, suggesting that the current text be retained because it contains the same information in a more concise manner. We respectfully disagree, and believe that the expanded nature of proposed § 30.1 makes it helpful to the reader to divide the section's provisions among three separate paragraphs: Proposed § 30.1(a) set forth the purpose of the rule; proposed § 30.1(b) addressed to whom the rule applies; and proposed § 30.1(c) discussed how this regulation relates to other laws that may apply to the entities covered by this regulation. We therefore adopt the structure of § 30.1 as proposed.

Paragraph 30.1(a): Purpose

Proposed § 30.1(a) added age (40 or older), genetic information, sexual orientation, and disability to the list of bases set forth in the rule upon which a sponsor of a registered apprenticeship program must not discriminate. The Department received numerous comments addressing these proposed changes, which were generally supportive, although one commenter cautioned the Department not to discount the fact that prohibiting discrimination on the basis of sexual orientation may raise implementation questions for sponsors and require technical assistance. The Department is prepared to undertake such assistance. Among the several commenters that were supportive of the expanded protections, many suggested additional clarifications.

Starting with those protected bases in the existing rule, the NPRM explained that the Department interprets discrimination on the basis of "sex" to include both pregnancy and gender identity discrimination, and clarified this interpretation in the proposed regulatory text at § 30.3(c), which provided the contents of sponsors' equal opportunity pledge, by explicitly including pregnancy and gender identity in a parenthetical following "sex" to make this clear. The Department received numerous comments advocating that pregnancy and gender identity be explicitly listed as separate grounds of discrimination, rather than considered under the umbrella of sex discrimination. Per the language of relevant authorities and case law, both pregnancy and gender identity have been analyzed as forms of sex discrimination.³⁷ The final rule retains,

in the E.O. pledge set forth in § 30.3(c), the proposed rule's parenthetical explaining that sex discrimination includes discrimination on the basis of gender identity and pregnancy. We include the parenthetical explanation in this one portion of the regulation because it is the language that will be incorporated into registered apprenticeship standards and apprenticeship opportunity announcements and thus more visible to those the rule protects, but this interpretation applies wherever sex is discussed in the regulation. As set forth in the discussion of § 30.3(a)(2) herein, the Department will look to the legal standards and defenses that apply under Title VII and Executive Order 11246, as applicable, in determining whether a sponsor has engaged in discrimination made unlawful by § 30.3(a)(1), including sex discrimination.

The NPRM also proposed to include four new grounds to the list of protected bases upon which a sponsor must not discriminate: Age (40 or older); genetic information; sexual orientation; and disability. The Department responds to the comments received on each in turn.

Age (40 or Older)

Of the few commenters who weighed in on the addition of age discrimination, including a national JATC, an advocacy organization, and one individual, all supported its inclusion as a prohibited ground of discrimination. Among these, a national JATC said its industry's

sex" include, but are not limited to, because of or on the basis of pregnancy, childbirth, or related medical conditions"; 41 CFR 60–20(a) (stating that under Executive Order 11246, sex discrimination includes discrimination on the basis of pregnancy, childbirth, or related medical conditions); *see also* EEOC Facts About Pregnancy Discrimination, available at <https://www.eeoc.gov/eeoc/publications/fs-preg.cfm> (last accessed Sept 14, 2016). Regarding gender identity, *see, e.g.*, 41 CFR 60–20.2(a) (stating that, under Executive Order 11246, discrimination on the basis of sex includes discrimination on the basis of gender identity); *Glenn v. Brumby*, 663 F.3d 1312 (11th Cir. 2011); *Kastl v. Maricopa Cnty. Cmty. Coll. Dist.*, 325 F. App'x 492 (9th Cir. 2009); *Smith v. City of Salem*, 378 F.3d 566 (6th Cir. 2004); *Fabian v. Hosp. of Cent. Conn.*, 2016 WL 1089178, * 14 (D. Conn. Mar. 18, 2016); *Schroer v. Billington*, 577 F. Supp. 2d 293 (D.D.C. 2008). The Department is aware of the recent decision in *Texas v. U.S.*, No. 7:16–cv–00054–O, 2016 WL 4426495 (N.D. Tex. Aug 21, 2016), in which the court issued a preliminary injunction enjoining several Federal agencies, including the Department, from enforcing certain guidance pertaining generally to the issue of transgender access to sex segregated facilities. As of when this rule was sent for publication, the effect of that injunction on the Department's programs is unclear and under consideration by the District Court. *See Order, Texas v. U.S.*, No. 7:16–cv–00054–O (N.D. Tex. Oct. 18, 2016), ECF No. 86 (ordering additional briefing as to whether the injunction applies to Title VII and whether and how the injunction applies to DOL). The Department will monitor this and other cases.

programs have been following the Equal Employment Opportunity Commission (EEOC) interpretations and/or State law and including age as a protected category, and that there are many examples of older workers entering the electrical industry through apprenticeship as second careers. An individual commenter relayed personal experience of being excluded from apprenticeship programs due to age, and thus could benefit from this added protection. Accordingly, the Final Rule adopts the addition of age as a protected basis, as proposed.

Genetic Information

With regard to genetic information, those few commenters weighing in all supported its addition to the list of prohibited grounds of discrimination. The national JATC said joint labor-management committees already are prohibited from discriminating against employees or applicants because of genetic information, so this will not be a change for these apprenticeship programs. Accordingly, the Final Rule adopts the addition of genetic information as a protected basis, as proposed.

Sexual Orientation

Numerous commenters, including advocacy organizations, individual commenters, a professional association, and a State Workforce Agency (SWA), supported the rule's explicit inclusion of sexual orientation on the list of protected bases. Several advocacy organizations said individuals who identify as lesbian, gay, or bisexual face high levels of discrimination and harassment at work based on their sexual orientation and this revision is in line with current law and within the Department's rulemaking authority.

Several of the above commenters plus additional advocacy organizations urged the Department to make clear that sexual orientation discrimination and sex stereotyping discrimination are also prohibited forms of sex discrimination. One of these commenters, an advocacy organization, stated that, while the legal landscape continues to evolve, it is now clear that a division between sexual orientation and sex discrimination is unsustainable and providing this additional clarification in the final regulation would provide the fullest protection for program participants. A national JATC urged some caution, noting that the interpretation announced by the EEOC in its 2015 *Baldwin* decision³⁸ that sexual

³⁷ Regarding pregnancy, *see* 42 U.S.C. 2000e(k) ("The terms "because of sex" or "on the basis of

³⁸ *Baldwin v. Foxx*, Appeal No. 0120133080, 2015 WL 4397641 (EEOC July 16, 2015).

orientation discrimination is *per se* sex discrimination under Title VII was not yet settled law.

The Final Rule adopts the NPRM's proposed inclusion of sexual orientation as a stand-alone protected category. As discussed in the NPRM, adding sexual orientation as a protected characteristic is consistent with both the statutory authority requiring the formulation of "labor standards necessary to safeguard the welfare of apprentices,"³⁹ and the Department's purpose and approach since part 30 was first established: to promote equality of opportunity in registered apprenticeship programs and prevent discrimination in the recruitment, selection, employment, and training of apprentices by requiring, among other things, that apprentices and applicants for registered apprenticeship are selected according to objective and specific qualifications relating to job performance. We note further that the addition of sexual orientation as a protected basis aligns with developments in legal protections over the last two decades. At the time of publication, 22 States and the District of Columbia, in addition to numerous additional counties and municipalities across the country, have laws explicitly prohibiting employment discrimination on the basis of sexual orientation in the public and private sectors.⁴⁰ Accordingly, the Final Rule retains sexual orientation as its own protected basis. We do note, as discussed more fully in later sections, that the Final Rule does not require sponsors to collect employee or applicant data on sexual orientation, conduct specific outreach, or otherwise include sexual orientation in the utilization analyses required under AAPs pursuant to § 30.4. This is consistent with the Department's Office of Federal Contract Compliance Programs' (OFCCP) approach to sexual orientation in its programs.

With regard to commenters' requests that the rule state that sexual orientation discrimination is also a *per se* form of sex discrimination, the Department supports this view as a matter of policy. Federal agencies have taken an increasing number of actions to ensure that lesbian, gay, and bisexual individuals are protected from discrimination,⁴¹ and court decisions

have increasingly made clear that individuals and couples deserve equal rights regardless of their sexual orientation.⁴² The Department further notes that this area of title VII law is still developing. In *Baldwin*, the EEOC—the lead Federal agency responsible for administering and enforcing title VII—offered a legal analysis and review of the title VII case law and its evolution, concluding that sexual orientation is inherently a "sex-based consideration" and that discrimination on the basis of sexual orientation is therefore prohibited by title VII as one form of sex discrimination.⁴³ As the EEOC noted in that case, in *Oncale v. Sundowner Offshore Services*, a unanimous Supreme Court stated that "statutory prohibitions often go beyond the principal evil [they were passed to combat] to cover reasonably comparable evils, and it is ultimately the provisions of our laws rather than the principal concerns of our legislators by which we are governed."⁴⁴ More than fifty years after the passage of the Civil Rights Act of 1964, the contours of the law governing sex discrimination in the workplace have changed significantly. Over the past two decades, an increasing number of Federal court cases, building on the *Price Waterhouse* rationale, have found protection under title VII for those asserting discrimination claims related to their

sexual orientation.⁴⁵ In light of this legal framework, and for consistency with the position taken by the Department's OFCCP in its recently issued Sex Discrimination regulations and the Department of Health and Human Services in its rule implementing Section 1557 of the ACA, the Department will interpret sex discrimination under this Final Rule to cover treatment of employees or applicants adversely based on their sexual orientation where the evidence establishes that the discrimination is based on gender stereotypes. The Department will continue to monitor the developing law on sexual orientation discrimination as sex discrimination, and will consider issuing further guidance on this subject as appropriate.

Disability

Multiple commenters supported the Department's proposal to add disability to the list of protected categories against which apprenticeship programs may not discriminate. An individual commenter asserted the need for more apprenticeship programs that are open to individuals with disabilities, as

45 CFR 155.120(c)(1)(ii) and 156.200(e) (HHS regulations barring discrimination on the basis of sexual orientation by Health Insurance Marketplaces and issuers offering qualified health plans); U.S. Citizenship and Immigration Services, Same Sex Marriages, <https://www.uscis.gov/family/same-sex-marriages> (last accessed May 13, 2016) (treating immigration visa petitions filed on behalf of same-sex spouses in the same manner as those filed on behalf of opposite-sex spouses).

42 For example, in 1996, the Supreme Court struck down an amendment to the Colorado constitution that prohibited the State government from providing any legal protections to gay, lesbian, and bisexual individuals. *Romer v. Evans*, 517 U.S. 620 (1996). And, just last year, the Supreme Court ruled in *Obergefell v. Hodges*, 135 S. Ct. 2584 (2015), that states may not prohibit same-sex couples from marrying and must recognize the validity of same-sex couples' marriages. See also *United States v. Windsor*, 133 S. Ct. 2675 (2013) (declaring unconstitutional the federal Defense of Marriage Act's definition of "marriage" as only a legal union between a man and a woman); *Lawrence v. Texas*, 539 U.S. 558 (2003) (declaring unconstitutional a state statute criminalizing consensual same-sex sexual conduct).

43 *Baldwin*, 2015 WL 4397641 (July 16, 2015). EEOC relied on several analyses to reach this conclusion: a plain reading of the term "sex" in the statutory language, an associational analysis of discrimination based on "sex," and the gender stereotype analysis announced in *Price Waterhouse v. Hopkins*, 490 U.S. 228 (1989).

44 *Id.* at 13 (quoting *Oncale v. Sundowner Offshore Servs.*, 523 U.S. 75, 79 (1998) (alteration in original) (internal quotation marks omitted)).

45 See, e.g., *Prowel*, 579 F.3d at 291–92 (harassment of a plaintiff because of his "effeminate traits" and behaviors could constitute sufficient evidence that he "was harassed because he did not conform to [the employer's] vision of how a man should look, speak, and act—rather than harassment based solely on his sexual orientation"); *Nichols v. Azteca Rest. Enter., Inc.*, 256 F.3d 864, 874–75 (9th Cir. 2001) (coworkers' and supervisors' harassment of a gay male because he did not conform to gender norms created a hostile work environment in violation of Title VII); *Hall v. BNSF Ry. Co.*, No. C13–2160 RSM, 2014 WL 4719007, at *3 (W.D. Wash. September 22, 2014) (plaintiff's allegation that "he (as a male who married a male) was treated differently in comparison to his female coworkers who also married males" stated a sex discrimination claim under title VII); *Terveer v. Billington*, 34 F. Supp. 3d 100 (D.D.C. 2014) (hostile work environment claim stated when plaintiff's "orientation as homosexual" removed him from the employer's preconceived definition of male); *Heller v. Columbia Edgewater Country Club*, 195 F. Supp. 2d 1212, 1224 (D. Or. 2002) ("[A] jury could find that Cagle repeatedly harassed (and ultimately discharged) Heller because Heller did not conform to Cagle's stereotype of how a woman ought to behave. Heller is attracted to and dates other women, whereas Cagle believes that a woman should be attracted to and date only men."); *Centola v. Potter*, 183 F. Supp. 2d 403 (D. Mass. 2002) ("Sexual orientation harassment is often, if not always, motivated by a desire to enforce heterosexually defined gender norms. In fact, stereotypes about homosexuality are directly related to our stereotype about the proper roles of men and women."). Cf. *Videckis v. Pepperdine Univ.*, No. CV 15–00298 DDP (JCx), 2015 WL 1735191, at *8 (C.D. Cal. April 16, 2015) (harassment and adverse treatment of students because of their sexual orientation may state a claim of sex discrimination under title IX, because it is a form of sex stereotyping; indeed, "discrimination based on a same-sex relationship could fall under the umbrella of sexual discrimination even if such discrimination were not based explicitly on gender stereotypes").

³⁹ 29 U.S.C. 50.

⁴⁰ <https://www.aclu.org/maps/non-discrimination-laws-state-state-information-map> (last accessed May 4, 2016).

⁴¹ See, e.g., 80 FR 9989 (Feb. 25, 2015) (DOL amendment of the regulatory definition of spouse under the Family and Medical Leave Act (FMLA) so that eligible employees in legal same-sex marriages are treated the same way for FMLA purposes as employees in opposite-sex marriages);

individuals with disabilities continue to struggle to find and keep employment. A number of comments raised specific questions about how the proposed disability non-discrimination and affirmative action obligations would be implemented. Many of these comments are addressed in the discussions of §§ 30.7 and 30.11, but we respond to two of these concerns here because they implicate the purpose of the proposed rule and, to some extent, questions of applicability that are germane to § 30.1. Specifically, one commenter cited other federal regulations to which they must adhere that prohibit the employment of workers who perform work that present dangers to themselves, co-workers, and the general public. Other commenters implied generally that employment of individuals with disabilities was problematic in their particular industry due to physical requirements of the position.

As to the first, nothing in this Final Rule requires sponsors to employ individuals who present dangers to themselves or others. The rule incorporates the “direct threat” defense that is well-established in disability law jurisprudence, which specifically allows an employer to require that an individual be able to perform the essential functions of the position held or desired without posing a direct threat to the health or safety of the individual or others in the workplace. As to the second, to the extent that commenters are seeking exemptions from the disability protection in the Final Rule due to their particular industry, the Department declines to grant such exemptions. Requests to exempt sponsors from disability-related obligations in this Final Rule for safety-sensitive positions or for physically demanding jobs are based on the fundamentally flawed notion that individuals with disabilities as a group are incapable of working in these jobs. The Department does not support this belief and will not construct an avenue to permit sponsors to avoid recruiting and selecting individuals with disabilities for certain apprenticeships. We acknowledge that some individuals with certain disabilities—as well as some individuals without disabilities—may not be able to perform some jobs; this does not countenance broader exclusions from the obligations set forth in this rule.⁴⁶ Not all disabilities have

physical limitations, and not all physical limitations will be relevant to the job at hand.

Proposed Additional Grounds

Several commenters suggested other possible bases for protection against discrimination in apprenticeship programs, including caregiving status (e.g., parental responsibilities), military service, and criminal background. These protected categories are beyond the scope of what was proposed in the NPRM, therefore we did not add them to the Final Rule. However, we note that discrimination based on some of these proposed additional categories may be actionable under already existing categories or under other, already applicable, laws.

Paragraph 30.1(b): Applicability

Proposed § 30.1(b) simplifies the earlier description of the scope of the provision by stating clearly that the rule applies “to all sponsors of apprenticeship programs registered with either the U.S. Department of Labor or a recognized SAA.” A number of comments raised questions regarding how the obligations of this rule would apply differently, if at all, to the different models of sponsors. Some sponsors employ the apprentices and thus their control over the terms and conditions of employment is more clear, while “group” sponsors work with groups of employers where apprentices may be hired or placed and the various types of employment actions prohibited by this rule may be undertaken by these employers, rather than the sponsor.

Throughout the Section-by-Section analysis below, the Department has provided clarification with respect to implementing particular requirements depending on the model of sponsorship. In general, per the text of § 30.1(b), the Department recognizes the sponsor as the entity assuming the equal employment opportunity and affirmative action obligations of this part. To the extent that the sponsor has the ability to control, or otherwise has input into, any of the various employment actions held unlawful by these regulations, its obligations under these regulations are clear. In those situations where discriminatory actions or other actions in violation of this part are taken by participating employers,

typically need no accommodation to work as [a] carpenter. A person with a significant stutter would ordinarily need no accommodation to operate machinery.’ These examples are not an exhaustive list and there are many additional disabilities that, with reasonable accommodation, would not preclude an individual from engaging in even more construction-industry jobs.” (internal citations omitted).

when the sponsor has knowledge of such actions it has an obligation to undertake steps to address the violation. Historically, this has been accomplished by written agreements entered into between the sponsor and employer setting forth “reasonable procedures . . . to ensure that employment opportunity is being granted,”⁴⁷ as well as through the recordkeeping requirements obligating the sponsor to keep adequate employment records of its apprentices. Were certain categories of sponsors exempted from these general obligations, it could render meaningless many portions of these regulations and the role of the apprenticeship sponsor to help ensure equal employment opportunity that has existed for several decades.

Paragraph 30.1(c): Relationship to Other Laws

Proposed § 30.1(c) clarified that part 30 would not invalidate or limit the remedies, rights, and procedures under any Federal law, or the law of any State or political subdivision, that provides greater or equal protection for individuals under the protected bases. One advocacy organization recommended that the Department work with the EEOC to ensure that part 30 is consistent with other agency directives, including the 2012 EEOC guidance on employer consideration of criminal records. To that end, we note, as we did in the NPRM, that these regulations generally follow Title VII legal principles in their interpretation of the non-discrimination protections in this Final Rule.

An advocacy organization and a State agency commented on the possible linkages between this proposed rule and the Workforce Innovation and Opportunity Act (WIOA). We agree that the two authorities interrelate in important ways to provide broad nondiscrimination protection to apprentices. WIOA encourages the use of registered apprenticeship and the public workforce system provides an opportunity to connect a broad talent pool with the opportunities of apprenticeship, as well as to provide resources and supportive services to assist in connecting individuals to apprenticeship and supporting them through successful completion and career attainment. Section 188 of WIOA also provides comprehensive nondiscrimination protections. The Department will work to ensure that these statutory regimes work in tandem to provide broad and consistent worker protection.

⁴⁷ See existing 29 CFR 30.4(c)(10).

⁴⁶ See *Associated Builders & Contractors, Inc. v. Shiu*, 30 F. Supp. 3d 25, 44 (D.D.C. 2014), *aff’d*, 773 F.3d 257 (D.C. Cir. 2014), *cert. denied*, 135 S. Ct. 2836 (U.S. June 15, 2015) (“Indeed, many disabilities would have little effect on employment by construction contractors. For example, ‘a person with an auditory processing disorder would

Proposed § 30.1(c) also recognized as a defense to a charge of violation of part 30 that a challenged action is required or necessitated by another Federal law or regulation, or that another Federal law or regulation prohibits an action that would otherwise be required by part 30. A national JATC noted that the proposed regulatory text states that “It may be a defense . . .,” and instead recommends that the Department change the word “may” to “shall” in the last sentence of § 30.1(c). The Department respectfully declines to make this change, as whether a defense will succeed is necessarily a fact-specific inquiry which amending the language to “shall” would foreclose. Further, this provision is identical to OFCCP’s regulations implementing section 503 of the Rehabilitation Act of 1973 (section 503) and the Vietnam Era Veterans Readjustment Assistance Act of 1974 (VEVRAA) programs,⁴⁸ and the consistency among these DOL programs is desirable, especially for those entities that may need to comply with both.

One specific potential conflict of laws clarification sought by multiple commenters was the interaction of certain obligations under this rule and obligations under the Employee Retirement Income Security Act of 1974 (ERISA). Many apprenticeship programs are employee benefit plans governed by ERISA. Among other things, ERISA provides that, subject to certain exceptions, the assets of an employee benefit plan shall never inure to the benefit of any employer and shall be held for the exclusive purpose of providing benefits to participants and defraying reasonable administrative expenses. In discharging their duties under ERISA, plan fiduciaries must act prudently and solely in the interests of the plan participants and beneficiaries, and in accordance with the documents and instruments governing the plan insofar as they are consistent with the provisions of ERISA.⁴⁹ Although apprenticeship plans may differ in structure and operations from other ERISA plans, the plan fiduciaries must still abide by the general fiduciary standards in part 4 of title I of ERISA. The Department’s Employee Benefits Security Administration (EBSA) is responsible for interpreting and enforcing the provisions of part 4 of title I of ERISA.

Some commenters asserted that using assets of apprenticeship plans to pay for many of the tasks required in the proposed regulations to gain or maintain registered status under the National

Apprenticeship Act would not be consistent with obligations imposed on plan fiduciaries under ERISA. These commenters cited guidance EBSA issued in 2012 concerning the use of apprenticeship plan assets for graduation ceremonies and to engage in outreach activities and advertise the program to potential apprentices.⁵⁰ The commenters asserted that a plan should have a defense against a violation of the proposed regulations if the apprenticeship plan’s governing board or committee determines that it would violate ERISA to expend plan assets to take compliance actions required to gain or maintain registered status.

EBSA has taken the position that there is a class of activities referred to as “settlor” functions that relate to the formation, design, and termination of plan, rather than the management of the plan, that generally are not activities subject to title I of ERISA. EBSA has concluded that although expenses attendant to settlor activities do not constitute reasonable plan expenses, expenses incurred in connection with the implementation of settlor decisions may constitute reasonable expenses of the plan.⁵¹ A plan sponsor’s decision to register an apprenticeship plan under the National Apprenticeship Act is such a settlor decision of plan design. In the Department’s view, established ERISA guidance on settlor activities supports the conclusion that reasonable expenses incurred in implementing a decision to be a registered apprenticeship plan would generally be payable by the plan to the extent permitted under the terms of the plan’s governing documents.

The commenters also expressed concern about the application of ERISA’s fiduciary standards because registered status may result in benefits for the apprentice plan’s sponsors in addition to the benefits provided to the plan’s participants. In Advisory Opinion 2001–01, dealing with the benefits an employer may secure from sponsoring a tax qualified pension plan, EBSA expressed the view that in the case of such a plan design decision that confers benefits on both the plan sponsor and the plan, a plan fiduciary is not required to take into account the benefits conferred on an employer in determining whether expenses for implementing the plan design decision constitute reasonable expenses of the plan.

A commenter asserted that ERISA may require plan fiduciaries to

withdraw from the Department’s registration program if the increased cost to the plan of compliance with the proposed regulations would be greater than the economic benefits to the plan from registered status. The commenter cited guidance issued by EBSA concerning investments selected because of the collateral economic or social benefits they may further in addition to their investment returns to the plan.⁵² Registered status is clearly connected to the purpose of an apprenticeship plan and provides a range of direct benefits to the plan and the apprentices participating in the plan. Accordingly, EBSA does not believe its guidance in Interpretive Bulletin 2015–02 applies to the decision of whether to maintain a plan as a registered apprenticeship plan.

ERISA requires that plan fiduciaries act prudently and solely in the interest of the plan’s participants in choosing how to comply with the federal regulatory requirements for registered status. Where an apprenticeship program is intended to be registered with the Department, the fiduciaries may treat the reasonable costs of compliance with registration regulations as appropriate means of carrying out the plan’s mission of training workers.

Some commenters requested clarification of ERISA’s impact on the proposal’s requirement that a registered apprenticeship plan establish linkage agreements enlisting the assistance and support of pre-apprenticeship programs, community-based organizations, and advocacy organizations in recruiting qualified individuals for apprenticeship, and in developing pre-apprenticeship programs. These commenters noted that participants in pre-apprenticeship programs are not participants in the apprenticeship plan and pointed out that ERISA plan fiduciaries must discharge their duties for the exclusive purpose of providing benefits to the plan participants and defraying reasonable plan administrative expenses. In the Department’s view, where plan fiduciaries prudently determine that supporting quality pre-apprenticeship programs and other workforce pipeline resources are necessary to maintain the plan’s registration, or are otherwise appropriate and helpful to carrying out the purposes for which the plan is established or maintained, assets of the plan may be used to defray the reasonable expenses of such support. Such advantages could include, among other things, more efficient outreach

and recruitment, and broadening the base of qualified and diverse applicants. For more information on what qualifies as a quality pre-apprenticeship program, see OA's Training and Employment Notice 13-12 (TEN 13-12), dated November 30, 2012.

Finally, one commenter said it is unclear why these defenses are limited to actions required by another Federal law or regulation, and recommended that these defenses be expanded to include actions required or prohibited by any applicable State law or regulation. This commenter did not specifically identify a provision of State law that would be in conflict with these regulations, and we would decline to introduce any such broad defense contrary to general principles of preemption.

Definitions (§ 30.2)

With regard to definitions included in the NPRM, we did not receive comments on the definitions for "administrator," "apprentice," "apprenticeship program," "Department," "EEO," "electronic media," "employer," "genetic information," "journeyworker," "major life activities," "Office of Apprenticeship," "physical or mental impairments," "race," "reasonable accommodation," and "Registration Agency." We made no changes to the proposed definitions for these terms. The others for which comments were received are discussed below.

"Apprenticeship Committee"

This proposed definition comes from part 29, where this term is also used. An SWA suggested that the definition of "apprenticeship committee" should be revised to encompass group sponsor structures as well as individual sponsor structures, and commented that the language throughout the rule is geared towards an individual sponsor structure and not inclusive of group sponsor structures. The Department notes that this definition is identical to the definition contained in part 29. As worded, it is intended to apply to group sponsors as well as individual sponsors. Accordingly, the Final Rule retains the definition as proposed.

"Direct Threat"

This term was added because the proposed rule included disability among the list of protected bases covered by part 30, and the "direct threat" defense is well-established under the Americans with Disabilities Act (ADA), as amended, and other disability laws. A national JATC expressed concern that the proposed

definition would require apprenticeship programs to hire medical professionals to provide "reasonable medical judgment" because this proposed definition states that the process for determining whether an individual poses a direct threat is based on "reasonable medical judgment." The commenter warned that this would pose a significant financial burden for sponsors, and said that the definition should either be changed or removed. As discussed above, the proposed definition for this term is taken directly from title I of the ADA, as amended, and from the EEOC implementing regulations. The Department intends that this proposed term will have the same meaning as that set forth in the Americans with Disabilities Act Amendments Act of 2008 (ADAAA) and implemented by the EEOC in 29 CFR part 1630. Sponsors and participating employers subject to the ADA, as amended, therefore are already required to comply with this provision under that authority. Any departure would create an unwanted discrepancy between federal disability laws. Further, we note that hiring medical professionals to provide "reasonable medical judgment" is not required by this rule (nor the ADA, as amended). EEOC guidance provides that determining whether a "direct threat" exists is an individual assessment "considering the most current medical knowledge *and/or the best available objective evidence.*"⁵³ (Emphasis added.) The Department interprets this rule consistently with that guidance. Even if medical knowledge were used, it often can be obtained from the individual's own physician, rather than an in-house physician hired for such purposes. Accordingly, the Final Rule retains the definition as proposed in the NPRM.

"Disability"

This term was added because the proposed rule included disability among the list of protected bases covered by part 30. One commenter explicitly supported this definition as consistent with other Federal laws, most notably the ADA and ADAAA. One commenter requested clarification of the term "disabled individual," and suggested that the definition and goals should differentiate between individuals with learning disabilities and other types of disabilities. Another commenter, in asking for clarification

about the definition of disability, expressed concern that the construction industry is physically demanding on both body and mind, and that its program asks applicants if they can perform the work required in the industry and if they are physically able regardless of any disabilities. Disability law does not distinguish between "types" of disabilities, but rather whether an individual has, or is regarded as having, an impairment that substantially limits one or more major life activities, or has a record of such impairment. We therefore decline to separate out particular "types" of disabilities for different treatment. With regard to selections in particular industries, again, disability law does not differentiate. It is a well-established tenet of disability law that an individual must be qualified to perform the essential functions of the job, with or without reasonable accommodation, in order to be protected. The proposed definition (as well as the selection provisions in § 30.10 herein) reflects that, and we adopt it as proposed.

Regarding the phrase "a record of such an impairment" in the proposed definition of disability, one commenter asked for clarification as to what type of record would be acceptable verification of an individual having a documented disability. Again, this language was intended to mirror identical language in the ADA, etc., and should be interpreted in the same manner as it is in the ADA. Generally, the phrase "record of" does not require a written record, but rather prohibits discrimination against someone because they are known to have had a disability, for instance, a person who has recovered from cancer or mental illness.

As discussed above, the proposed definition for this term is taken directly from title I of the ADA, as amended, and from the EEOC implementing regulations. The Department intends that this proposed term will have the same meaning as what was set forth in the ADAAA and implemented by the EEOC in 29 CFR part 1630.

"Employer"

The NPRM proposed slight modifications to the definition of "employer" in part 30 to conform to the definition of the term in part 29, where this term is also used. We did not intend this alteration to change how the term is interpreted.

Two national unions expressed concern that, by adopting the definitions of "sponsor" and "employer" in 29 CFR part 29, the proposed rule would allow for a sponsor to conduct its workforce analyses of the

⁵³ EEOC Enforcement Guidance on the Americans with Disabilities Act and Psychiatric Disabilities, available at <https://www.eeoc.gov/policy/docs/psych.html> (last accessed May 18, 2016).

relevant incumbent workforce (required in proposed § 30.5(b)) without accounting for “all occupational titles in its registered apprenticeship program,” should that sponsor include subcontractors or other entities owned or controlled by the sponsor in its apprenticeship program. In this way, they assert that a sponsor could otherwise delegate to an employer its obligations under the rule, thus avoiding enforcement and broad equal employment opportunity for apprentices. It proposed that the Department amend both the definition of “sponsor” and “employer” to include subcontractors and other entities owned and controlled by the sponsor or employer. This latter concern was addressed in the discussion of § 30.1, which clarified that the rule’s obligations apply broadly to all sponsors, and will require partnership and information-sharing with employers to effectuate their non-discrimination and affirmative action obligations. The obligations under § 30.5(b) will be discussed in that part of the Section-by-Section analysis. As the revised definition was offered solely to conform with the existing definition of “employer” in part 29, we retain it in the Final Rule as proposed.

“Ethnicity”

An SWA said that the term “Latino” should be used instead of “Hispanic” because the term “Latino” is broader and includes “Hispanic” groups, but the term “Hispanic” does not include all “Latino” groups. Additionally, the commenter said that “Latino” status should not be limited to “Spanish culture or origin” because some groups do not claim a European cultural or ancestral background, and not all groups speak Spanish as a first language (*e.g.*, Brazilians). In response to this comment, the Department notes that the proposed definition is the same as that used under the Office of Management and Budget’s standards for the classification of Federal data on race and ethnicity,⁵⁴ as well as the definition in the EEOC’s EEO-1 reporting requirements. For consistency with other Federal data collection requirements, we retain the definition as proposed.

“Pre-Apprenticeship Program”

The proposed rule included a definition of “pre-apprenticeship program” because the existing rule refers to such programs, but does not define this term. The proposed

definition, drawn from a Training and Employment Notice regarding pre-apprenticeship,⁵⁵ was intended to provide clarity on what constituted and/or qualified as a pre-apprenticeship program. It is worth noting that this Final Rule does not specifically require sponsors to develop their own pre-apprenticeship programs, but rather includes requirements that sponsors partner with appropriate entities, such as pre-apprenticeship programs, as part of an outreach and recruitment strategy to address underutilization and impediments to equal employment opportunity. The Department received numerous comments addressing this proposed definition, which were generally supportive, but which suggested improvements.

One commenter expressed concern that the proposed definition of “pre-apprenticeship program” does not capture the full scope and reach of high-quality pre-apprenticeship programs, and suggested that the definition of a pre-apprenticeship program should not be limited to programs that assist individuals in meeting the minimum qualifications for selection into an apprenticeship program, but should be expanded to include programs that provide training and education to individuals who meet the minimum requirements for selection into an apprenticeship program but seek additional training in order to remain competitive with other applicants. While this commenter identifies laudable objectives that many programs may accomplish, the Department’s primary focus for pre-apprenticeship programs is to enable participants to obtain minimum requirements for selection into apprenticeship programs to grow opportunities for those individuals. Nothing in the rule prevents sponsors and other entities from designing or linking with additional pre-apprenticeship programs that serve the ends noted by the commenter. The Department is, however, revising the definition to align with TEN 13–12, which addresses pre-apprenticeship programs. Among other things, TEN 13–12 provides that pre-apprenticeship programs maintain a documented partnership with at least one Registered Apprenticeship program, to help ensure that the pre-apprenticeship programs have the relationships in place to support the future success of its participants.

Two national unions commented that the Department should also clarify

whether Job Corps programs satisfy the definition of pre-apprenticeship. As indicated in the NPRM, many Job Corps programs have been used and can serve as pre-apprenticeship programs. While not all Job Corps programs are pre-apprenticeship programs, those Job Corps programs consistent with the requirements of TEN 13–12—specifically, those focusing on preparing individuals for entrance into and success in a registered apprenticeship program, and which maintain a partnership with a Registered Apprenticeship program—would qualify as a pre-apprenticeship program.

A national JATC asked for clarification about the intent of the requirement of collaboration in the definition of “pre-apprenticeship program.” The JATC commented that if the intent is for a minimum of two different types of entities to collaborate on a program, then two employers or a single-employer group or a local union could not operate a pre-apprenticeship program on its own. The JATC suggested that the Department should expressly recognize that a joint-labor management committee is an example of employer and union collaboration, and thus could operate a pre-apprenticeship program. The Department notes that the intent is to link the pre-apprenticeship program with an apprenticeship program. This definition is not intended to require a minimum of two entities given the different ways in which such a link could occur.

Several commenters suggested broadly that the proposed definition of “pre-apprenticeship program” should be in alignment with the definition as written in the Department’s TEN 13–12. Commenters encouraged the Department to adopt a definition of “pre-apprenticeship program” that includes elements that are essential for successful linkage of a pre-apprenticeship program to an apprenticeship program, and/or are otherwise described in TEN 13–12. The definition for “pre-apprenticeship” in the proposed rule was specifically drafted to be consistent with the TEN 13–12, including with its description of the elements described therein, and the Department does not view any change to the definition to be necessary. Sponsors should follow TEN 13–12 and other relevant guidance in their interpretation of the definition provided in the rule.

Numerous commenters recommended that the Department’s definition in proposed § 30.2 should otherwise be more expansive in specifically addressing: Barriers unique to women, people of color, and individuals with

⁵⁴ Available at http://www.whitehouse.gov/omb/fedreg_1997standards/ (last accessed June 3, 2016).

⁵⁵ Office of Apprenticeship Training and Employment Notice 13–12 (TEN 13–12), dated November 30, 2012.

disabilities; standards for EEO/affirmative action in technical instruction and selection procedures; and the length of tenure or manner of payment expected in pre-apprenticeship programs. Again, while one aim of pre-apprenticeship programs is to reach groups that are traditionally underrepresented in apprenticeships, and the Final Rule includes multiple ways in which that may happen (such as in the discussion of § 30.8), we believe that sort of elaboration is best accomplished in those sections and in guidance such as TEN 13–12, rather than in the definitions section of the regulation.

The last sentence of the proposed definition included the optional provision of supportive services, such as transportation, child care, and income support, to assist participants in the successful completion of the pre-apprenticeship program. Several comments underscored the need for resources, including from the Federal government, in order to provide support services. We recognize the resources required to provide such supportive services, which is a primary reason why the provision of such services was not mandated in the definition. The Department has generally expanded the role of apprenticeship and provided opportunities for supportive resources under its WIOA program. Additionally, many other Federal agencies offer some level of support for Registered Apprenticeships.⁵⁶ However, because these services are not a mandated part of pre-apprenticeship programs, and because they are not limited to pre-apprenticeship programs but could apply to apprenticeship programs generally, the Final Rule deletes the sentence on supportive services to avoid confusion.

A national JATC recommended that the Department provide guidance that would reduce certain legal risks in operating pre-apprenticeship programs to increase diversity and mitigate claims of reverse discrimination. The JATC suggested that the Department could significantly advance its efforts by providing final regulations that: (1) Permit apprenticeship programs to include in their standards, subject to Department approval, direct interview or direct entry from pre-apprenticeship programs specifically designed for one or more underrepresented groups and not others; (2) ensure that such options, once adopted, would not violate part 30 rights for any other group; and (3)

provide that it is the Department's interpretation that such approved methods do not violate title VII or other Federal civil rights laws and have the same level of protection against claims as if required under Federal law.

Providing guidance on the legality of direct entry programs necessarily requires fact-specific questions as to how, and in what context, that system is administered. Accordingly, we cannot provide broad guidance on the second and third points above. As to the first, generally speaking, an apprenticeship program may include in its standards, with Departmental approval, a direct entry program targeted toward a specific underrepresented group that is designed to address underutilization. Indeed, such measures are specifically countenanced by § 30.8, referenced below. Beyond that, any such guidance necessarily must proceed on a case-by-case basis. For instance, if a single-employer sponsor draws its apprenticeship pool entirely from a direct entry program that is specifically designed to target one racial minority group, resulting in an apprenticeship pool that consists entirely of members from that group, such a process could result in underutilization of another minority group. Such a program, used in concert with other selection mechanisms resulting in a less homogenous apprenticeship pool, may not. The Department is available to provide guidance, in consultation with its Office of the Solicitor, to sponsors with questions about specific scenarios involving direct entry.

Finally, one comment raised the question of further guidance and suggested updating TEN 13–12. One commenter suggested that the Department issue an update to TEN 13–12 that incorporates references to WIOA instead of the Workforce Investment Act of 1998 (WIA), and others suggested that the guidance be updated to link quality pre-apprenticeship programs with industry or sector partnerships as well as apprenticeship-related provisions in WIOA's implementing regulations. The Department updates its guidance periodically with a particular view towards ensuring that references to other complementary legislative schemes are correct, and will do so in this circumstance as well.

In conclusion, the definition is retained in the Final Rule as proposed.

“Qualified Applicant or Apprentice”

The NPRM proposed to add this definition because of the addition of disability to the list of protected bases covered by part 30. The only comments received related to this proposed

definition posed questions about how “qualified applicants” related to the requirement in proposed § 30.5(c)(2) that utilization analyses take into account the availability of those who have the “present or potential capacity for apprenticeship.” Neither of these commenters raised issues with the wording of this definition, which is taken directly from title I of the ADA, as amended and from the EEOC implementing regulations. The concerns raised by these commenters are addressed in the analysis of the comments received relating to § 30.5(c). The definition is incorporated into the Final Rule as proposed.

“Selection Procedure”

The NPRM proposed a definition of “selection procedure” that was consistent with the definition found in the Uniform Guidelines of Employee Selection Procedures (UGESP) at 41 CFR part 60–3,⁵⁷ because program sponsors are already required to comply with those regulations under the current part 30 and should be familiar with that definition. Commenters sought a few minor changes to the definition, but the Department declines to accept these changes in order to maintain consistency with the term as used in UGESP, which has applied to sponsors under these regulations for decades. Subsequent sections of this analysis, particularly the discussion of § 30.10, address some of the finer questions commenters raised about selection procedures. If further questions persist after publication of the rule, the Department will certainly consider further guidance on acceptable selection procedures.

“Undue Hardship”

This proposed definition was added because of the proposed addition of disability to the list of protected bases covered by part 30. The concept of “undue hardship” is a well-established one under the ADA, which provides that employers need not provide certain accommodations if they will cause an undue hardship to the employer. A national JATC suggested that the

⁵⁷ The intent behind UGESP, originally adopted in 1978 by several Federal agencies, including the Department, was to provide a uniform set of principles on the question of the use of tests and other selection procedures in making employment decisions. This uniform set of principles is designed to assist employers, labor organizations, employment agencies, and others to comply with Federal nondiscrimination requirements. UGESP requires that selection procedures which are found to result in an adverse impact on employment opportunities of members of any race, sex, or ethnic group be validated to show that they are correlated with, representative of, or characteristic of successful performance of the job in question.

⁵⁶ Federal Resources Playbook for Registered Apprenticeship, <https://www.doleta.gov/oa/federalresources/playbook.pdf>.

requirements for documentation of undue hardship should be reduced because they add the possibility of a significant administrative burden on a registered apprenticeship program. As discussed above, the proposed definition for this term is taken directly from title I of the ADA, as amended, and from the EEOC implementing regulations. The Department intends that this proposed term will have the same meaning as what was set forth in the ADAAA and implemented by the EEOC in 29 CFR part 1630. For the sake of consistency, the Department has determined that the requirements should remain the same.

An SWA requested clarification on the specific formula and threshold a sponsor would need to reach to meet the eligibility requirements for undue hardship. The EEOC has published guidance discussing in detail the various factors that should be considered in making an “undue hardship” determination,⁵⁸ but these factors focus broadly on the cost of the accommodation weighed against the financial resources of the employer, and thus are necessarily fact-specific. If sponsors have questions about undue hardship in particular circumstances, the Department can provide technical assistance.

Beyond these definitions proposed in the regulations, several commenters proposed additional definitions that should be included in the regulations. These are discussed in turn below.

“Industry” and “Relevant Labor Pools”

A JATC expressed concern that the proposed rule did not provide a definition of the term “industry,” and urged the Department to define the term (as used in proposed § 30.5(b)) more narrowly to avoid comparisons of occupations that require different levels of skill, education, and technical expertise. The commenter also asked the Department to define the term “relevant labor pools” (in proposed § 30.4(a)(2)) to clarify the relationship between the relevant recruitment area and the relevant labor pools. These terms are further discussed in the relevant sections specified above, and so we decline to define the term here. We note that the use of “industry” as the grouping for analyses under the proposed § 30.5 was not carried over into the Final Rule, and thus there is no need to define it.

“Self-Identification as an Individual With a Disability”

Another national JATC recommended that the Department add language to § 30.2 that defines the phrase “self-identification as an individual with a disability,” which is used in proposed § 30.11. The Department declines to define this compound phrase, the meaning of which can be understood in the context of proposed § 30.11.

“Sex”

Many advocacy groups, a professional association, and a national union, urged the Department to include a definition of “sex” in § 30.2 clarifying that discrimination on the basis of childbirth and medical conditions related to pregnancy or childbirth are prohibited forms of sex discrimination. This Department declines to address this concern by adding a definition, but notes that the issue is addressed in the discussion of §§ 30.1 and 30.3(c) herein.

Equal Opportunity Standards Applicable to All Sponsors (§ 30.3)

The existing § 30.3 was divided into six paragraphs and set forth the equal opportunity standards for registered apprenticeship programs: a sponsor’s obligation not to discriminate on the basis of race, color, religion, national origin, and sex and to engage in affirmative action (existing paragraph (a)); and a sponsor’s obligation to incorporate an equal opportunity pledge into its apprenticeship program standards (existing paragraph (b)). The remaining four paragraphs of existing § 30.3 set the effective date of the part 30 regulations for programs presently registered (existing paragraph (c)), the registration requirements for sponsors seeking registration of new programs (existing paragraph (d)); and the bases for exemption from the requirement to develop an AAP (existing paragraphs (e) and (f)).

Proposed § 30.3 reorganized this section by focusing upon the equal opportunity standards in paragraphs (a) and (b) and removed paragraphs (c) through (f), the substance of which was incorporated into other parts of the rule for the sake of clarity. Proposed § 30.3(a) and (b) built upon the equal employment opportunity standards that are contained in current § 30.3(a).

Paragraph 30.3(a)(1): Discrimination Prohibited

Proposed § 30.3(a)(1) set forth the general prohibition against discrimination on the bases of race, color, religion, national origin, and sex—those listed in the current part 30—and added prohibitions against

discrimination on the bases of age (40 or older), genetic information, sexual orientation, and disability. Proposed § 30.3(a)(1) still specified the same general range of aspects of apprenticeship programs that are covered, but reorganized the text, and reworded it to follow the framework used in other equal opportunity laws. This proposed paragraph received several comments.

Several commenters urged the Department to clarify throughout the text of part 30 that the regulations prohibit discrimination on the basis of pregnancy and gender identity as separate categories. As discussed in the analysis of § 30.1, the proposed rule modified the EEO pledge that a sponsor must include in its Standards of Apprenticeship, codified at § 30.3(c) herein, to contain a parenthetical after the listing of “sex” as a protected basis explicitly including discrimination on the basis of gender identity and pregnancy as forms of sex discrimination. This language is retained in the final rule.

Proposed paragraph (a)(1) also listed all the various employment actions that, if undertaken on the basis of a protected category, would be unlawful. One broader comment raised by an SWA, addressed in part in the discussion of § 30.1 above, was that some of the employment actions listed in paragraph (a)(1) were those undertaken by the employer, not the sponsor, in certain group sponsor structures. For instance, the commenter stated that group sponsors do not “hire” apprentices; rather, they place them with an employer. The commenter recommended that this provision include language for all sponsor types. We decline to change the regulatory text accordingly, as we believe it can apply broadly with the following guidance. In the apprenticeship model where the sponsor and the employer are the same entity or otherwise under the control of a common management structure, the prohibited employment actions listed herein are ones that can apply specifically to the sponsor. In the model where the sponsor and employer are different entities, such as the group sponsor structure identified by the commenter, we appreciate that the sponsor may not have direct control over certain of the employment decisions listed. For instance, a participating employer may discipline an apprentice or make a job assignment independent of the participating sponsor. However, as discussed in the analysis of § 30.1, sponsors and employers in such apprenticeship models have historically entered into

⁵⁸ See EEOC Enforcement Guidance: Reasonable Accommodation and Undue Hardship Under the Americans with Disabilities Act, available at <https://www.eeoc.gov/policy/docs/accommodation.html#undue> (last accessed May 5, 2016).

written agreements setting forth “reasonable procedures . . . to ensure that employment opportunity is being granted.”⁵⁹ To the extent that a participating employer enters into such an agreement and engages in discrimination unlawful under this part, or even absent such an agreement the sponsor otherwise learns of such discrimination (either through complaints or its recordkeeping obligations under part 30), the Department would expect that the sponsor take action to address the discrimination and, if unremedied, take steps to terminate its relationship with the discriminating employer. While this certainly requires a degree of oversight on the part of the sponsor, it is consistent with past practice in group sponsorships and is necessary so as to prevent expansive loopholes that could allow EEO elements of apprenticeship programs to go entirely unregulated, frustrating the purpose of this part.

Other comments were raised as to the specific employment actions delineated in paragraph (a)(1). One commenter noted that the term “placement” is more germane to a sponsor than the term “hiring” may be. Accordingly, we have revised the Final Rule to include “placement” in addition to “hiring,” to the extent that either is more applicable to a given sponsor. The same commenter also asked the Department to clarify the definition of “award of tenure” as used in this section. Upon review, this term does not appear to correspond to aspects of apprenticeship programs. Accordingly, this term is not included in the Final Rule.

Many commenters expressed the need for sponsors to ensure an equitable schedule of rotation, assignments, training, and mentoring to assure that all apprentices achieve core skill competencies. The Department notes that “rotation among work processes,” “hours of training,” and “job assignments” are already included in § 30.3(a)(1)(iii), (vii) and (viii), while a lack of “mentoring” on the basis of a protected category could fall under the proposed § 30.3(a)(1)(x), which covers “any other benefit, term, condition, or privilege associated with apprenticeship,” depending on the specific facts. Similarly, other advocacy organizations recommended that the Department add “work assignments and training opportunities” to the list of activities for which a sponsor cannot discriminate to ensure that these opportunities are afforded to all apprentices equally. The Department agrees that both of these terms describe

possible adverse employment actions, but believes that the proposed § 30.3(a)(1)(x) covers these terms. Finally, one commenter suggested adding a paragraph (a)(1)(xi) that would include supervision by a trained and skilled journeyworker, where “trained” means familiar with EEO concepts and with a passing knowledge of adult learning theory. This suggestion is out of place in this section, which lists types of adverse employment actions that could be unlawful if made on the basis of a protected category.

Paragraph 30.3(a)(2): Discrimination Standards and Defenses

Proposed § 30.3(a)(2) laid out the discrimination standards and defenses in a framework similar to that used in other equal opportunity laws. Proposed subparagraph (a)(2)(i) discussed standards and defenses for race, color, religion, national origin, sex, or sexual orientation; subparagraph (a)(2)(ii) discussed disability; subparagraph (a)(2)(iii) discussed age; and subparagraph (a)(2)(iv) discussed genetic information (numbered incorrectly in the NPRM as (a)(2)(iii)).

Numerous advocacy organizations urged the Department to clarify in § 30.3(a)(2) that, with respect to pregnancy, the Registration Agency will apply the same legal standards and defenses as those applied under the Pregnancy Discrimination Act (PDA) and the ADAAA, as well as EEOC implementing regulations and enforcement guidance when employers make or are obligated to make accommodations for a substantial percentage of others similar in their ability to work. This was the intent of the proposal and is the intent of the Final Rule, and the regulatory language should be interpreted consistent with this intent. Further, these commenters requested that the Department address the need to provide reasonable accommodations for pregnancy and related conditions, not only to the extent required to avoid discrimination on the basis of pregnancy under the Supreme Court’s recent decision in *Young v. United Parcel Service, Inc.*,⁶⁰ but also as an affirmative measure aimed at breaking down barriers to women’s acceptance and advancement in apprenticeship programs. The NPRM explicitly described its intent to follow all relevant PDA and ADA/ADAAA case law, including *Young*, in interpreting nondiscrimination obligations. With respect to the request to require any additional affirmative action to address and provide reasonable

accommodations on the basis of pregnancy, we decline to specifically include such a requirement as beyond the scope of what was proposed, but encourage sponsors to take steps to break down the barriers raised by this comment.⁶¹

An SWA requested clarification regarding the term “apply the same standards and defense” and asked how it would apply those standards to an individual sponsor. This subparagraph is intended to help stakeholders identify the corresponding source of legal standard for each prohibited ground of discrimination. The information included after each explanation is intended to be helpful as an initial reference but was not intended to be an exhaustive explanation. The Department is available to provide technical assistance, in conjunction with its Office of the Solicitor, to answer questions that arise as to what standards or defenses might apply to specific situations.

A commenter expressed concern that the proposed language “determining whether a sponsor has engaged in an unlawful employment practice” is not inclusive of a group sponsor structure because group sponsors are not employers and do not employ apprentices. As set forth in the analysis of § 30.1 and earlier in this section, we believe the non-discrimination provisions can apply to the range of sponsor models, allowing that in a group sponsorship model, certain specific employment actions may be undertaken by the employer, not the sponsor, and thus actionable against the employer under various other civil rights laws. However, the group sponsor, upon knowledge of such violation, retains an obligation to address the violating activity with the employer and, if continuing or otherwise unremedied, take steps to remove the employer from participating in the apprenticeship program it sponsors. For greater clarity beyond the language “unlawful employment practice,” however, the Final Rule revises the text at the end of this section to read “unlawful practice under § 30.3(a)(1),” the section which enumerates the types of actions that, if taken due to a protected basis, would constitute unlawful discrimination.

The Final Rule contains one additional clarifying edit to § 30.3(a)(2)(i), including Executive Order 11246 as a source for the

⁵⁹ See existing 29 CFR 30.4(c)(10).

⁶⁰ 135 S. Ct. 1338 (2015).

⁶¹ We note that states may have pregnancy discrimination laws detailing accommodation obligations beyond those in this Final Rule; if such laws apply to sponsors, they will need to take additional steps to comply with these laws.

standards and defenses that will apply to the protected bases listed under that paragraph. This addition was made because Executive Order 11246, like this Final Rule but unlike title VII, contains explicit protections from discrimination on the basis of sexual orientation and gender identity, and thus the Department will look to interpretations of the Executive Order when evaluating claims under those bases.

Paragraph 30.3(b): General Duty To Engage in Affirmative Action

Proposed § 30.3(b) strengthened and further detailed the affirmative action obligation contained in the existing § 30.3(a)(3), requiring that all sponsors, regardless of size, take a discrete series of affirmative steps to provide equal opportunity in apprenticeship.

Before turning to each of the specific requirements proposed in § 30.3(b), we address some general comments on this paragraph. An SWA expressed concern that the NPRM confounded the roles of sponsor and employer, asserting that some of the proposed requirements in § 30.3(b) do not make sense when considered from the perspective of a sponsor that does not have a relevant workforce but merely coordinates multiple employers in a group program (e.g., proposed requirements relating to training and dissemination of EEO policy). This commenter suggested that the rule should clarify that the sponsor, where different from the employer, must share the relevant affirmative action responsibilities and requested concrete guidance on how the sponsor should ensure employer compliance. The Department recognizes that there is a difference between the roles of sponsor and employer; it also recognizes that under the existing rules, many of these obligations are among the listed outreach and recruitment efforts of which sponsors must undertake “a significant number.”⁶² To be sure, complying with many of these obligations would be facilitated by involvement of participating employers to develop procedures to ensure equal opportunity is being granted; this is precisely the arrangement that has historically been created by sponsor-employer apprenticeship agreements that we expect to continue.

Paragraph 30.3(b)(1): Assignment of Responsibility

Proposed § 30.3(b)(1) requires sponsors to designate an individual to be responsible and accountable for overseeing the sponsor’s commitment to equal opportunity in apprenticeship. A

national JATC recommended that the Department clarify that it is the sponsor, whether employer or JATC, that bears responsibility for all aspects of meeting the requirements of this standard, rather than one individual. Several commenters expressed that identification of an individual to fulfill this role would be burdensome.

In reviewing the comments, the Department wishes to clarify that it is the sponsor that bears the responsibility for meeting the requirements of this standard. The proposed requirement is intended to facilitate the administration and accountability of the program. As stated in the NPRM, the Department anticipates that this requirement would be fulfilled by the individuals who are already providing oversight for the program, such as a named apprenticeship coordinator. This proposal would not create new duties for the sponsor that the sponsor would not already have; rather, it would require the sponsor to identify a point person for overseeing its commitments to equal employment opportunity, whether that person actually performs all the necessary tasks or instead coordinates or monitors the performance of those tasks. While proposed § 30.3(b)(1) requires each sponsor to identify “an individual,” in light of the comments indicating that some sponsors might find placing this responsibility on a single person burdensome, the language has been amended to require each sponsor to identify “an individual or individuals” to provide greater flexibility.

Paragraph 30.3(b)(2): Internal Dissemination of Equal Opportunity Policy

Proposed § 30.3(b)(2) required the sponsor to develop internal procedures to communicate its equal opportunity and affirmative action obligations to apprentices, applicants for apprenticeship, and personnel involved in the recruitment, screening, selection, promotion, training, and disciplinary actions of apprentices. This proposed requirement is similar to that in § 30.4(c)(4) of the existing part 30, which addresses internal communication of the sponsor’s equal opportunity policy. However, proposed § 30.3(b)(2) would be required of all sponsors, regardless of size, and would make this communication mandatory.

An individual commenter suggested that the Department strengthen the language in § 30.3(b)(2) that “the sponsor must require that individuals connected with the administration or operation of the apprenticeship program take the necessary action to aid the

sponsor in meeting its nondiscrimination and affirmative action obligations” by specifying that this includes interceding when observing suspected acts of harassment or discrimination on the job or at school. We respectfully decline to include this specific language in the regulation. It is a well-established principle of discrimination law that, if the employer learns of harassing conduct and fails to take reasonable care to prevent and promptly correct the harassment, the employer can be held liable.⁶³ This principle applies to sponsors in the apprenticeship context as well. Beyond this, we believe the anti-harassment measures and right to file complaints otherwise set forth in this part will address the issue raised by the commenter. We do include one change to the regulatory text in (b)(2), specifying that the target of the dissemination of the equal opportunity policy include “individuals connected with the administration or operation of the registered apprenticeship program.” This is made partly to make this paragraph consistent with others in § 30.3 that use this exact phrasing. It is also to clarify the intent that the dissemination of the equal opportunity policy should be broad, reaching, for instance, supervisors, foremen, journeyworkers, and other non-supervisory employees working alongside apprentices in the sponsor’s program.

Proposed §§ 30.3(b)(2)(i) and (ii) required a sponsor to publish its equal opportunity pledge in apprenticeship standards and in appropriate publications and post the pledge on bulletin boards, including through electronic media, accessible to apprentices and applicants for apprenticeship. Multiple commenters believed the proposed requirements requiring the equal opportunity pledge to be posted in apprenticeship standards and in appropriate publications, posted on bulletin boards, and through electronic media would not be burdensome, but a national JATC asserted the proposed requirement was at least partially redundant of part 29, which already requires insertion of the equal opportunity pledge. The Department notes that the proposed publishing requirement purposely goes beyond what is required in the part 29 equal opportunity pledge to include other appropriate publications. In

⁶³ See EEOC Enforcement Guidance: Vicarious Employer Liability for Unlawful Harassment by Supervisors, accessible at <https://www.eeoc.gov/policy/docs/harassment.html> (last accessed May 18, 2016).

⁶² See existing 29 CFR 30.4(c).

response to a question about what constitutes these “appropriate publications,” we note that the proposed regulation specified several types; providing more specificity than this isn’t feasible given that what is appropriate will likely vary from sponsor to sponsor. The Department can provide technical assistance on this issue on a more individualized basis. The Final Rule does make a minor correction to (b)(2)(i), deleting “and other appropriate publications,” which was duplicative language, and replacing it with “or other documents disseminated by the sponsor or that otherwise describe the nature of the sponsorship,” and another non-substantive minor edit for better readability.

While commending the intent of the proposed language requiring wide dissemination of EEO policies, an advocacy organization commented that the use of the term “accessible” in paragraph (b)(2)(ii) carries an additional meaning for individuals with disabilities and urged that dissemination of a sponsor’s EEO policies should be “accessible” in the broadest possible terms. Similarly, another advocacy organization recommended that the Department amend § 30.3(b)(2) to require that any electronic media platform used must be accessible to blind applicants (*i.e.*, compatible with screen-reading technology). The Department notes that here “accessible” was intended to be interpreted broadly, and each sponsors should make its EEO policies available in alternative formats (such as large print, Braille and other means to enable individuals with visual impairments to read for themselves) upon request. This is consistent with existing obligations under disability law that require accommodations of individuals unless to do so would impose an undue hardship on the sponsor’s operations.

An individual commenter recommended that the Department require sponsors to use an inclusion statement to make the workplace environment friendlier to current women in the trades, as well as more welcoming to women considering joining the trade. The requirements to publish and post the equal opportunity pledge are intended to communicate that the apprenticeship programs are welcoming to all apprentices regardless of race, color, religion, national origin, sex, sexual orientation, genetic information, age, or disability. A required inclusion statement was not proposed in the NPRM, and accordingly, the Department declines to so amend this provision. Nonetheless,

the Department encourages such statements to the extent that they serve to further signal to all prospective apprentices that they are welcome, which in turn may help sponsors obtain greater participation from members of certain underrepresented populations.

Proposed § 30.3(b)(2)(iii) required orientation and periodic information sessions for apprentices, journeyworkers who directly supervise apprentices, and other individuals connected with the administration or operation of the sponsor’s program. Many comments received with respect to this requirement were generally positive. One advocacy organization suggested that the Department go beyond the proposal to require sponsors to, at a minimum, hold orientation and information sessions for apprentices, supervisors, and other individuals associated with an apprenticeship program on an annual, rather than periodic, basis to ensure that individuals are aware of the sponsor’s EEO policy with regard to apprenticeship. We decline to incorporate this specificity in order to maintain sponsors’ flexibility to conduct these sessions at intervals that make sense given the schedule at which sponsors onboard new apprentices. Another commenter recommended that the Department reiterate the importance of broadening the awareness of the EEO policy among those on work sites who control the circumstances of training by, for example, making clear that “other individuals connected with the administration or operation” include the foreman and supervisors who establish the accepted practice on the job site. While not included in the regulatory text, we have provided this guidance in this preamble in the discussion of § 30.3(b). We have also clarified in the regulatory text of paragraph (b)(2)(iii) that sponsors include the anti-harassment training required by paragraph (b)(4) of the final rule in these orientation and information sessions in order to make clear at the outset that harassing conduct will not be tolerated.

Many commenters raised concerns regarding the costs of such orientation and information sessions. In crafting this Final Rule, the Department has attempted to balance the burden on sponsors with establishing a meaningful and effective equal opportunity policy dissemination process. For instance, the Department notes that sponsors, as a matter of effective program management, must communicate some information jointly to apprentices and at least some other individuals connected with the administration and operation

of its apprenticeship program during the course of its sponsorship. Accordingly, the sessions established in these regulations need not necessarily require new training sessions or timetables, but can incorporate the communication of the EEO policy information and anti-harassment training into existing sponsor-participant communications and training sessions. We additionally repeat that the schedule for these sessions remains “periodic” to provide sponsors with some timing flexibility.

Several commenters raised issues regarding the implementation of this requirement in various scenarios in which the sponsor is not the employer. These commenters noted generally that the requirement would place a particular burden on multi-employer sponsors, that the employers would generally be better placed to provide EEO training of this sort, and the constantly changing nature of the participating employers and employees further expanded the burden. Accordingly, one commenter recommended that the Department eliminate the proposed requirement that program sponsors conduct training and orientation for journeyworkers who supervise apprentices. The Department recognizes that sponsors operate apprenticeship programs in numerous industries and occupations, involving a wide range of working conditions and environments, and that sponsors are not always the employer of the apprentice. However, the proposal was largely based on existing actions already undertaken by sponsors, such as that set forth in the existing § 30.4(c)(10), to “develop[] reasonable procedures between the sponsor and employers of apprentices to ensure that employment opportunity is being granted” As discussed above, the Department has not prescribed in the proposed rule the exact nature and frequency of these sessions, to allow sponsors some flexibility depending on their circumstances, but expects sponsors to carry out these activities in good faith, which may in many cases involve coordinating with participating employers. Accordingly, we decline to diverge from the existing regulations and create different obligations for different models of sponsorship.

Cost concerns were also raised with respect to the maintenance of records required by proposed § 30.3(b)(2)(iv). To clarify, the Department notes that this obligation is consistent with recordkeeping already required in the existing regulations, which obligate maintenance of “information relative to the operation of the apprenticeship

program.”⁶⁴ For paragraphs (b)(2)(i) and (ii), the obligation could be met simply by retaining a copy of the documents where the EO pledge is included. For paragraph (iii), retaining a copy of any written materials used to effectuate the sessions, as well as some memorialization of when the session occurred and who attended, would suffice for compliance purposes.

Paragraph 30.3(b)(3): Universal Outreach and Recruitment

Proposed § 30.3(b)(3) required all sponsors to ensure that their outreach and recruitment efforts for apprentices extended to all persons available and qualified for apprenticeship within the sponsor’s recruitment area regardless of race, sex, ethnicity, or disability status. Many commenters, including advocacy organizations and an SWA, expressed support for the proposed universal outreach and recruitment requirements. Some advocacy organizations reasoned that, given historical outreach and hiring practices focused primarily on men, broader outreach efforts are necessary to increase women’s awareness of these opportunities.

Other commenters expressed concerns regarding the scope and cost of this outreach requirement. One commenter recommended that the Department remove the proposed requirement in § 30.3(b)(3)(i) that sponsors maintain lists of recruitment sources that will generate referrals from all demographic groups and the proposed requirement in § 30.3(b)(3)(iii) to notify recruitment sources in advance of apprenticeship opportunities, noting that existing advertising mechanisms were sufficient. The Department notes that the proposed revision mirrors outreach and recruitment efforts set forth in the existing § 30.4(c)(1), so the requirement to do so now should not be new for many sponsors. Further, the data in the introduction to this preamble showing widespread underutilization of certain groups indicate that existing advertising mechanisms may not be sufficient to draw interest from as broad and diverse a base as possible.

An SWA expressed concern regarding the costs of outreach activities for small sponsors, such as those with fewer than five apprentices, that were not previously required to conduct mandatory recruitment and outreach activities, and that it might serve as a deterrent to creating new registered apprenticeship programs. To this, in addition to the response above, we note the Department intends to provide guidance to sponsors who need

assistance finding sources for recruitment. While outreach and recruitment activities take some degree of time, when done purposefully they can provide immense benefits to the apprenticeship program, bringing a wide range of previously untapped talent into the workforce.

Finally, another commenter recommended that to limit costs the Department retain the proposed minimum activities but add to § 30.3(b)(3) that a sponsor must engage in recruitment that would “reasonably be expected” to encourage persons with a potential capacity for apprenticeship to submit an application, suggesting the following revised language:

(3) Universal outreach and recruitment. The sponsor will implement measures to ensure that its outreach and recruitment efforts for apprentices extend to all persons available for apprenticeship within the sponsor’s relevant recruitment area without regard to race, sex, ethnicity, or disability and are reasonably expected to encourage persons with a potential capacity for apprenticeship to submit an application regardless of sex, race, ethnicity, or disability.

The language proposed by the commenter appears to add another requirement, thus possibly adding to any burden that might be created. Insofar as the commenter is seeking to soften the requirement that a sponsor “implement measures to ensure that its outreach and recruitment efforts extend to all persons available,” to clarify, the implementation of this provision will be reviewed by evaluating the range of recruitment sources, not by checking that every available person was reached. As noted above, during compliance reviews the Department will consider a sponsor’s good faith efforts in this regard. The Department accordingly declines to amend the provision as requested.

Regarding the question of whether the required outreach activities would result in a benefit to justify the costs, a national JATC commented that the studies cited in the NPRM did not include any empirical evidence that additional outreach by construction industry training funds would result in greater participation of women and minorities in the apprenticeship programs. The commenter said that the studies cited in the NPRM showed that the barriers to female participation are societal and there are no consensus best practices to address them.

As an initial response to this comment, the Department does not agree that there is no evidence that additional outreach would result in greater participation by traditionally underrepresented groups. As stated in

the introduction of the rule, the experience of highway construction apprentices in Oregon, where extensive efforts to increase diversity have occurred, demonstrates that the participation rate of women and minorities can increase markedly when it is prioritized. In response to the comment that underutilization is strictly “societal,” which we interpret to mean out of the control of apprenticeship sponsors to address, while we do not suggest that discrimination is the entire reason for utilization disparities, there is ample evidence that it is a contributing factor. As described earlier, comments received from several women working in the construction trades, including those who have participated in apprenticeship programs, detail repeated examples of differential treatment in job assignments, training, and promotions, as well as sexually harassing work environments. Another commenter cited academic research demonstrating that, despite the ability and interest of women to work in these jobs, external barriers in recruitment, hiring, training, and retention of women persists. Indeed, a 2012 study funded by the U.S. Department of Labor identified “harassment and exclusion at male-dominated worksites” as one of three primary barriers underlying women’s low rate of participation in construction trades apprenticeships,⁶⁵ and a 2013 report from the National Women’s Law Center describes the ways in which both overt and subtle forms of discrimination discourage women from entering and remaining in the construction field.⁶⁶

A number of comments made suggestions for additional specificity. Several advocacy organizations recommended that the Department include all of the protected bases in § 30.3(b)(3) to ensure inclusive outreach and recruitment and avoid prohibited discrimination. Asserting that apprenticeship programs have a history of imposing maximum age requirements and other age-discriminatory practices, one advocacy organization urged the Department to add “age” to the bases on which registered apprenticeship programs have a general duty to engage in affirmative action in outreach and recruitment. As discussed above, the affirmative action provisions of this part follow generally other such affirmative

⁶⁴ See existing 29 CFR 30.8(a).

action programs which do not require specific outreach and recruitment obligations on the basis of age. Nothing in the rule, however, would prevent a sponsor from engaging in such activities.

Some advocacy organizations urged the Department to add to the list of examples of relevant recruitment sources in § 30.3(b)(3)(i) organizations that represent and serve women, people of color, and other underrepresented populations including individuals with disabilities. Further, these commenters suggested that the Department provide links to such resources on its Web site. As discussed above, the Department expects to provide technical assistance to sponsors to help them identify relevant recruitment sources, either through publication on its Web site or through more targeted communication.

To underscore that outreach alone is not sufficient to recruit women in particular, some advocacy organizations suggested that the Department include language in § 30.3(b)(3) to require that outreach is paired with career education that includes formal and informal apprenticeship information and orientation sessions describing what is entailed in the apprenticeship, the requirements and processes for applying, and explanations of the selection process. Related to this, these commenters recommended OA post on its Web site a list of resources for technical assistance and examples of career education materials, including links to WANTO-developed resources. These comments call for new provisions that, while laudable, go beyond the scope of the outreach efforts proposed in the NPRM, and we decline to require them in the Final Rule. As stated above, the Department intends to provide guidance to sponsors relating to relevant recruitment sources.

An advocacy organization urged the Department to strengthen the universal outreach requirements by requiring that apprenticeship programs report on the results of their outreach efforts (*e.g.*, how many candidates were received from each source, whether those candidates were accepted into the program, and why or why not) and modify outreach efforts over time in accordance with the reported results. The Final Rule requires such reporting in written AAPs for sponsors who are underutilized and required to engage in targeted recruitment, as data would be particularly important to sponsors in that standing, but we decline to extend it to the more general outreach requirement. Similarly, another advocacy organization recommended that the Department propose

accountability targets for outreach, recruitment, and retention. This is largely the purpose of the utilization goals set forth in the sections dealing with the written AAP obligations.

A national union and a national JATC said that the Department should clarify the scope of the “relevant recruitment area,” as that term is used throughout § 30.3(b)(3). Explaining that JATCs are often located in remote areas, such that the training centers are not in the same labor market as the work opportunities provided by the signatory contractors, these commenters recommended that the Department add clarifying language to § 30.3(b)(3). The Department addresses the proper interpretation of “relevant recruitment area” in the discussion of § 30.5, and submits that sponsors should use that interpretation to understand the meaning of the term in this section as well.

Commenters also recommended that the Department develop, update, and disseminate annually lists of recruitment resources, including contact information, by occupation and industry that sponsors can use. The commenters suggested that this would ease compliance determinations made by Registration Agencies, in addition to easing the cost burden on sponsors so that they could expend recruitment resources on direct contact and ongoing coordination with the staff of recruitment resources and meeting with groups of potential candidates. The Department and SAAs maintain relationships with some recruitment sources, and we provide such information to sponsors, as available and appropriate. The Department intends to increase technical assistance available to sponsors and provide additional recruitment sources to the extent that our resources allow.

Another commenter expressed concern that requiring sponsors to “develop and update annually a list of current recruitment sources that will generate referrals from all demographic groups within the relevant recruitment area,” could result in Registration Agencies holding sponsors accountable if recruitment and referral sources do not refer qualified applicants, despite good faith efforts on the part of the sponsor. For this reason, the commenter recommended revising the language from “sources that will generate referrals” to “sources likely to generate referrals” We decline to make this change. In the circumstance that the commenter raises, we would expect that the sponsor, upon realizing that the sources it is using are not fulfilling the intent of this provision, would seek alternative or additional sources that are

more effective at referring qualified applicants. The obligation is intended to be a dynamic one in which sponsors actively engage, rather than a rote, “check the box” requirement.

Regarding the proposed § 30.3(b)(3)(iii) requirement that sponsors provide recruitment sources advance notice, preferably 30 days, of apprenticeship openings, we received comments on all sides of the issue. Several commenters urged the Department to require no less than 30 days advance notice, which these commenters said would allow sufficient time for the notice of an opening to be processed, acted upon, and disseminated by the recruitment source and reach prospective applicants. These advocacy organizations stated that, historically, short public notice of opening periods disadvantaged nontraditional pools of applicants who did not have the benefit of familial or collegial connections to become aware of apprenticeship opportunities and the application processes, selection methods, and/or criteria for competitive candidates.

By contrast, another commenter recommended that the Department eliminate the requirement to provide 30 days advance notice of apprenticeship openings. This commenter reasoned that when an apprenticeship opening occurs, it may not always be feasible to provide referral sources with 30 days advance notice, particularly when new openings occur as a result of a new project or when someone suddenly discontinues participation in the apprenticeship program. Another proposed that the Department revise the provision to read “provide recruitment sources notice of such openings within 30 days of the opening being published,” that is, 30 days after the opening. Finally, one commenter said the time set forth in the regulation should not be “preferred,” but rather a concrete amount of time.

We note in the first instance that the proposed language mirrored a provision at § 30.4(c)(1) of the existing regulations that established 30 days in advance as a firm deadline, rather than a preferred one. Thus, the intent was to carry over an obligation that was familiar to sponsors, but provided more flexibility to account for differing logistical possibilities. Taking into consideration the comments we received on both sides, we believe this approach remains the best one for those reasons, and thus we retain the proposed text in the Final Rule.

Paragraph 30.3(b)(4): Maintaining Apprenticeship Programs Free From Harassment, Intimidation, and Retaliation

Proposed § 30.3(b)(4) required a sponsor to develop and implement procedures to ensure that its apprentices are not harassed because of their race, color, religion, national origin, sex, sexual orientation, age (40 or older), genetic information, or disability, and to ensure that its workplace is free from harassment, intimidation, and retaliation. The proposal included four specific requirements set forth in separate subparagraphs: (i) Communicating to all personnel that harassing conduct will not be tolerated; (ii) providing anti-harassment training for all personnel; (iii) ensuring that facilities and apprenticeship activities are available to apprentices without regard to protected bases; and (iv) establishing procedures for handling and resolving complaints about harassment.

Several commenters generally supported the proposal. Numerous advocacy organizations, a professional association, and individual commenters expressed support for anti-harassment protections as being critical to prevent and confront the discrimination that is often pervasive at work sites, including sexual harassment and stereotypes, and to increase retention over time. One individual commenter stated that when women apprentices are isolated on jobs with only men they are subject to harassment and unsafe working conditions. Several women submitted comments describing their personal experiences being subject to sexual harassment as an apprentice on a work site. An advocacy organization commented that age-based harassment is a growing problem, citing EEOC Enforcement & Litigation statistics.

Several advocacy organizations urged the Department to strengthen further the proposed anti-harassment provisions in § 30.3(b)(4). One of these organizations cited a study that it asserted shows that 3 in 10 women respondents in an interview study reported frequent sexual harassment, harassment on the basis of their sexual orientation, or on the basis of their race or ethnicity. In particular, these organizations asserted that strong anti-harassment measures will help ensure that more women complete their apprenticeship programs and recommended that the Department add to the anti-harassment measures at § 30.3(b)(4)(i)–(iv) a requirement that sponsors must make all work assignments and training opportunities available without regard to the protected

bases under the proposed rule. This principle is already protected by § 30.3(a)(1).

An industry association recommended that the Department clarify what “workplace” means in § 30.3(b)(4) because, in many cases, apprenticeship sponsors are not the employers of the apprentices and only have control over what takes place within their own facilities. To address this concern, the Department has replaced the term “workplace” with “apprenticeship program,” to clearly indicate the sponsor’s role in preventing harassment, intimidation, and retaliation. This can apply to both individual and group sponsors, in the manner discussed previously.

One commenter suggested strengthening the proposed § 30.3(b)(4)(i), which requires sponsors to communicate to all personnel that harassing conduct will not be tolerated, to include opportunities for apprentices to share information about harassment or intimidation on the job or at school to identify common problems, which could create a valuable feedback mechanism for sponsors interested in confronting harassment. The Department also received significant comments regarding proposed § 30.3(b)(4)(ii) requiring that sponsors “provide anti-harassment training to all personnel.” A number of commenters expressed concerns about the costs they asserted sponsors would incur as a result of the proposed requirement that sponsors must provide anti-harassment training to all personnel. For example, a national JATC urged the elimination of this provision in the Final Rule because many union-sponsored apprenticeship programs are statewide or regional and the costs of bringing in every journeyworker for anti-harassment training would impose a large burden on the program. Further, this commenter reasoned that the provision is unnecessary because contractors are required by law to maintain a nondiscriminatory workplace and union representatives can assist in helping them do so. In contrast to the comments raising the issue of burden, some commenters urged the Department to require additional training or add more specific language to the proposed requirement that sponsors must “provide anti-harassment training to all personnel.” These suggestions included requiring regular and ongoing professional development on cultural competency, anti-discrimination, and affirmative action requirements for apprenticeship training staff, instructors, administrators, and support staff, both in classroom-related

instruction and on work sites, as well as best practice guidelines.

To address these competing concerns, the Department has maintained the proposal’s requirements that sponsors communicate that harassment will not be tolerated and provide anti-harassment training, but we clarify the proposal in three ways. First, in response to concerns that the proposal’s requirement to provide training and communications to “all personnel” was too broad, we revise the Final Rule to state that sponsors must ensure these obligations reach “individuals connected with the administration and operation of the apprenticeship program, including all apprentices and journeyworkers who regularly work with apprentices.” This is narrower than the “all personnel” language proposed, but, as stated in the discussion of paragraph (b)(2) where this language is also used, should be broadly interpreted to include apprentices, supervisors, foremen, journeyworkers, and other non-supervisory employees working regularly alongside apprentices in the sponsor’s program. It would not require, for instance, communication to employees of participating employers who do not work in proximity to, or otherwise interact with, apprentices in these programs, although we maintain that the broadest possible communication of anti-harassment principles and obligations is a best practice.

Second, paragraph (b)(4)(i) of the Final Rule requires that sponsors are required to provide training for this same narrower category of personnel, and clarifies that this must not be a mere passive transmittal of information, but must include participation by trainees in a training program, such as attending a training in person or completing an interactive training program online.

Third, the Final Rule clarifies that the training content must include, at a minimum, the communication of the following information: A statement that harassing conduct will not be tolerated; a definition of harassment and examples of the types of conduct that would constitute unlawful harassment; and the right to file a harassment complaint. We believe communicating these elements as part of anti-harassment training is fundamental to creating an environment where it is broadly understood what constitutes harassment and that such harassment has no place in an apprenticeship program.

We expect that some sponsors, in the course of their normal business practices, already provide anti-

harassment training that covers some or all of what this Final Rule requires. To the extent that sponsors can simply modify existing training modules (including the orientation and information sessions set forth in paragraph (b)(2)(iii) above) to include this training obligation, doing so will limit the associated time and expense for compliance. Further, to help sponsors comply with this training obligation, the Department will provide technical assistance, including links to materials relevant to the required contents of the anti-harassment training, that sponsors and/or participating employers can use.

Proposed § 30.3(b)(4)(iii) required that “if the sponsor provides restrooms or changing facilities, the sponsor must provide separate or single-user restrooms and changing facilities to assure privacy between the sexes.” An individual commenter urged the Department to require job sites to have separate male and female restrooms. Some advocacy organizations urged the Department to require sponsors to have external locks on all single-user and sex-segregated restrooms and changing facilities and to ensure that all restrooms and changing facilities are enclosed, including a roof, to ensure privacy between the sexes and support safety and health measures in accordance with the findings and recommendations of the Advisory Committee on Occupational Safety and Health in its report “Women in the Construction Workplace: Providing Equitable Safety and Health Protection.” Commenting that unsafe sanitary facilities are a large challenge for women in nontraditional trades, two individual commenters also recommended that the regulations ensure that women have access to secure, safe, locked sanitary facilities. The Department notes that rules regarding the sanitation of restrooms and changing facilities apply more broadly to workplaces than to those that are part of an apprenticeship program and this type of specificity was not proposed in the NPRM. Nonetheless, the language “to assure privacy” implies that such restrooms and changing facilities must be secure. For this reason, the Department does not change the proposal on this account.

One advocacy organization suggested that the Department should include specific language regarding access to appropriate sex-segregated facilities for all workers in apprenticeship programs. Numerous other advocacy organizations urged the Department to clarify that program sponsors must permit transgender persons to access restrooms

and changing facilities based on their gender identity. As discussed earlier, § 30.3(a)(2) of the regulation provides that the Department will look to relevant legal authorities to interpret whether sponsors are engaging in unlawful sex discrimination.⁶⁷ The Department will continue to monitor the developing law related to the issues raised by the commenters, and will consider issuing further guidance on this subject as appropriate. Accordingly, the proposed paragraph (b)(4)(iii) is retained in the Final Rule as paragraph (b)(4)(ii).

Proposed § 30.3(b)(4)(iv) required that sponsors implement procedures for handling and resolving complaints about harassment and intimidation. An individual commenter requested that the Department require sponsors to post such internal procedures in common areas of schools, work sites, and meeting spaces. The requirement to “establish and implement” implies providing notice that such procedures exist and posting such procedures where apprentices would see them. The Final Rule retains proposed paragraph (b)(4)(iv) in the Final Rule as paragraph (b)(4)(iii), with the addition of a line stating that the establishment and implementation of procedures for handling and resolving complaints applies to complaints about retaliation, as well as harassment and intimidation. This is in keeping with the broader focus of paragraph (b)(4).

Paragraph 30.3(b)(5): Compliance With Federal and State Equal Employment Opportunity Laws

Proposed § 30.3(b)(5) required all sponsors to comply with all applicable Federal and State laws and regulations requiring EEO without regard to race, color, religion, national origin, sex, sexual orientation, age (40 or older), genetic information, or disability. Proposed paragraph (b)(5) largely duplicates the existing § 30.10.

An SWA commented that the § 30.3(b)(5) assignment of EEO obligations to the sponsor “or [in the case of a] joint apprenticeship training committee, parties represented on such

committee” seems to transfer responsibility from a sponsor to the applicable managers and union officials, which would protect the sponsor from ever being sanctioned (*i.e.*, deregistered). The commenter asked why this privilege applies only to joint committees and whether non-joint committees are materially different in this regard. The Department clarifies that, as stated earlier, the obligations of this part apply to all sponsors. It recognizes that the language in parentheses “or where the sponsor is a joint apprenticeship committee, the parties represented on such committee” could be understood as an exception. Therefore this language has been stricken.

Moreover, this commenter asserted that the reference to other laws in proposed § 30.3(b)(5) would require registered apprenticeship stakeholders to enforce policies of programs and systems that are outside of their familiar venue (*e.g.*, vocational rehabilitation, gender equity, or disability rights). The commenter asked whether officials in those other policy areas will have reciprocal duties to enforce registered apprenticeship standards. In response, the Department notes that proposed § 30.3(b)(5) carried forward the provisions from existing § 30.10. With this in mind, we clarify that this proposed provision is not intended to incorporate by reference the requirements of all Federal and State non-discrimination laws and regulations. Rather, it recognizes that many sponsors may already be subject to such laws, etc., and to the extent they are, they must comply with them. Failure to do so may be grounds for enforcement action under proposed § 30.15. Such action would only be taken if the violations of other Federal and State non-discrimination laws are applicable to the sponsor and relate to the employment opportunity of apprentices. To make this clear, language from existing § 30.10, “if such noncompliance is related to the equal employment opportunity of apprentices and/or graduates of such an apprenticeship programs under this part,” has been inserted in the Final Rule.

Paragraph 30.3(c): Equal Opportunity Pledge

Proposed § 30.3(c) carried forward the requirement set forth in the current § 30.3(b) for an equal opportunity pledge and include age (40 or older), genetic information, sexual orientation, and disability on the list of bases upon which a sponsor must not discriminate, and included a parenthetical stating that

⁶⁷ Multiple cases have held that failure to provide access to restrooms consistent with an individual's gender identity violated Title VII. See *Lusardi v. Dep't of Army*, EEOC Appeal Doc. 0120133395, 2015 WL 1607756, at *8 (April 1, 2015); *Hart v. Lew*, 973 F. Supp. 2d 561, 581–82 (D. Md. 2013) (recognizing a transgender plaintiff's title VII sex discrimination claim based in part on her employer's repeated denial of access to the women's restroom). However, as noted previously, the effect of the preliminary injunction issued in *Texas v. U.S.*, No. 7:16-cv-00054–O, 2016 WL 4426495 (N.D. Tex. Aug 21, 2016) is unclear at the time this rule went to publication.

sex discrimination included discrimination on the basis of gender identity and pregnancy. Apart from the comments addressed earlier recommending that the ground of sex discrimination expressly recognize sexual orientation discrimination and sex stereotyping as additional forms of sex discrimination, which has already been discussed, no other comments were received. Accordingly, the text is adopted as proposed.

Paragraph 30.3(d): Compliance

In order to clarify the time a sponsor has to comply with obligations in this rule, rather than a catch-all “effective date” provision as was set forth in the proposed § 30.20, the Final Rule sets forth in the specific sections, as needed, when a sponsor must come into compliance with the obligations set forth in that section. If no such date is provided, it is intended that the sponsor must comply with a particular section as of the effective date of the Final Rule.

Proposed § 30.20 required that currently registered apprenticeship programs have 180 days to come into compliance with the provisions of § 30.3, but did not specify a similar compliance deadline for sponsorships newly registered after the effective date. This new § 30.3(d) carries over the 180-day compliance date for currently registered programs from the proposed § 30.20, and clarifies that sponsors registered after the effective date will need to comply with § 30.3 upon registration or 180 days after the effective date of this rule, whichever is later. This is consistent with the proposal and will ensure that sponsors registered shortly after the rule’s effective date in no circumstance will have to come into compliance more quickly than currently registered sponsors.

Affirmative Action Programs (§ 30.4)

The existing § 30.4 set forth the regulatory requirements with respect to AAPs, addressing: The adoption of an AAP in § 30.4(a); the definition of affirmative action in § 30.4(b); the requirements for broad outreach and recruitment in § 30.4(c); the mandate that a sponsor include goals and timetables where underutilization occurs in § 30.4(d); the factors for determining whether goals and timetables are needed in § 30.4(e); the establishment and attainment of goals and timetables in § 30.4(f); and that the Secretary of Labor will make available to program sponsors data and information on minority and female labor force characteristics in § 30.4(g). Exemptions from the requirement to

adopt an AAP were found in the existing part 30 at § 30.3(e) and (f).

The NPRM proposed to restructure this section in order to streamline, clarify, update, and improve the AAP requirements by making clear the purpose of AAPs, stating who must adopt an AAP, listing the required elements of AAPs, explaining the exemptions for maintaining an AAP, and laying out the proposed new timing for internal review of AAPs.

A number of commenters expressed concern with the burden associated with maintaining AAPs generally. For example, a national JATC remarked that the proposed AAP requirements would put a time and resource burden on sponsors and an individual commenter warned that the proposed rule could divert already-limited resources away from training programs and opposed any rules that would increase costs for purposes of tracking and reporting. A national JATC expressed concern that proposed § 30.4 would make affirmative action requirements more difficult to understand and comply with in general.

The Department understands the voluntary nature of apprenticeship and that many program sponsors are under resource constraints, but notes that the requirement to maintain an AAP is not a new requirement and that all non-exempt sponsors (*i.e.*, sponsors with 5 or more apprentices) are currently required to develop and maintain such plans with respect to women and minorities. As explained in the NPRM, maintaining an AAP need not be an unduly burdensome undertaking. Thousands of registered apprenticeships with AAPs have been established under the existing regulations, and many have maintained and grown the number of apprenticeships and the skill of their individual workers notwithstanding the AAP obligations, and because of these obligations have taken strides to diversify their program to more closely reflect the available workforce. While these regulations add some new obligations to the AAP, the intent was to streamline and clarify the AAP as a whole, making it simpler to understand what compliance means and easier to measure and achieve meaningful success—both for existing apprenticeship programs and for the many companies looking to create apprenticeship programs now and in the future. The Department has thoroughly considered the concerns raised by the commenters with regard to burden and, as described in the discussions of sections 30.4–30.8 herein, the Final Rule contains several changes from the proposal designed to reduce further the burden of AAP compliance for sponsors

while maintaining an effective overall program.

Paragraph 30.4(a): Definition and Purpose

Proposed § 30.4(a) included a revised definition of “affirmative action program” and explained that, in addition to identifying and correcting underutilization, AAPs also are intended to institutionalize the sponsor’s commitment to inclusion and diversity by establishing procedures to monitor and examine the sponsor’s employment practices and decisions with respect to apprenticeship, so that the practices and decisions are free from discrimination, and barriers to equal opportunity are identified and addressed.

Multiple commenters, including a national JATC and SWAs, disagreed with the premise laid out in paragraph (a)(2) that “absent discrimination, over time a sponsor’s apprenticeship program, generally, will reflect the sex, race, ethnicity, and disability profile of the labor pools from which the sponsor recruits and selects.” These commenters argued that the goals set forth in § 30.4(a) do not take into account the societal and cultural factors that influence an individual’s decision to pursue apprenticeship and that lack of diversity is not necessarily a direct result of discrimination, and suggested that the Department remove paragraph (a)(2). Specifically, one commenter said that it is impossible for the sponsor to address underlying societal problems that influence lack of participation by underrepresented groups, such as lack of access to childcare or transportation. Some commenters remarked that compliance with affirmative action requirements should be determined by whether the sponsor has made significant efforts to meet its goals and timetables.

We respectfully disagree with many of the comments on this proposed language, which mirrors language in the OFCCP affirmative action regulations and describes well-established rationales for affirmative action. The idea behind maintaining an AAP is to combat any existing societal factors that may have been influenced by previous discriminatory norms and practices and that may continue to deter underrepresented groups from seeking jobs in certain sectors. The data cited at the beginning of this preamble demonstrates that stark underutilization of the protected groups persists to the present. While some amount of this disparity may not be directly attributable to discrimination, the comments we received from individuals

in the trades and advocacy organizations describing widespread harassment and other behavior that has a chilling effect on these groups entering apprenticeships cannot be ignored. While a sponsor's goals are aspirational, it should take underutilization as a signal that it should look closely at its employment and outreach practices to ensure that its practices are not preventing underrepresented groups from applying to, participating, and advancing in apprenticeship. The targeted outreach, recruitment, and retention practices outlined in § 30.8 are designed to help sponsors experiencing underutilization overcome societal barriers to apprenticeship that may exist in that field. As discussed more fully in § 30.6, this is not a purely arithmetic exercise. Each sponsor's compliance with its affirmative action obligations will be determined in significant part by reviewing the nature and extent of the sponsor's good faith affirmative action activities and the appropriateness of those activities to identify equal employment opportunity problems. A sponsor's compliance is measured by whether it has made good faith efforts to meet its goals; failure to meet goals is not itself a violation of these regulations.

An SWA requested a definition of the term "barriers" as it applies to § 30.4(a)(1) and (a)(2), and requested clarification about how to detect and remove barriers. A national JATC and a national union suggested that the Department provide guidance on "specific, practical steps" to address barriers to equal opportunity to comply with § 30.4(a)(2).

"Barriers" are any practices that prevent individuals from realizing an equal opportunity to apply for and participate in apprenticeship programs. These could include lack of effective outreach so that certain populations are unaware of apprenticeship opportunities, selection mechanisms that are not job related that disfavor certain protected groups, attitudes toward or treatment of certain individuals that are hostile or otherwise unwelcoming, or the failure to provide equal opportunity in training, pay, work assignments, discipline, or other employment actions. AAPs are tools designed to assist a sponsor in detecting and diagnosing where barriers may exist in its program and how they may be impacting certain groups. By documenting and collecting information at various stages of its program, including recruitment, selection, training, and assignment, a sponsor can analyze whether any element of its program is adversely impacting

individuals within certain racial, sex, or ethnic groups. If a sponsor discovers that its program is underutilized for women or one or multiple underrepresented groups, this may be a sign that barriers currently exist for those groups. The Department has identified specific steps that a sponsor must take with regards to its outreach, recruitment, and retention activities if it discovers that it is underutilized, as set forth in § 30.8, *infra*. Each sponsor is also encouraged to take any additional steps it concludes could help eliminate barriers. The Department can also provide more individualized guidance and technical assistance to sponsors in order to help identify and overcome any barriers to equal opportunity in apprenticeship.

Commenters, including a national JATC and a national union, suggested that the Department should clarify § 30.4(a)(3), which refers to internal auditing as a tool to measure the sponsor's progress in achieving an apprenticeship program that would be expected absent discrimination, by specifying where the discrimination is presumed to take place (*e.g.*, on the construction site or in the classroom or other training centers). One commenter suggested that this internal auditing should be used to find specific areas of the sponsor's program where practices might be causing a disparate impact on certain groups throughout different phases of the program.

AAPs are designed to assist sponsors in identifying possible discrimination that could be occurring at any point in the apprenticeship program, whether that discrimination is occurring in the application process, in job assignments, through harassment at a work site, or any other element of the program. There is no single step in the apprenticeship program where discrimination is presumed to occur and the internal audit and review that accompanies a sponsor's AAP should be thorough and detailed enough to allow the sponsor to learn of any potential discrimination throughout its program. The Department encourages each sponsor, when reviewing its compliance with AAP obligations, to identify any specific areas or practices that may be adversely affecting certain groups. An AAP is designed to be a tool to assist sponsors in identifying any specific practices that may be deterring or excluding women and/or minorities from participating fully in the program.

Commenters also sought guidance on how the EEO responsibilities of JATCs might differ from those of non-joint committees that directly employ apprentices. Similarly, an industry

association asserted that it would be difficult to meet the requirements detailed in § 30.4(a)(4) related to monitoring, examining, evaluating, and revising employment decisions and policies because apprentices may be involved in a JATC program that involves work for multiple employers, arguing that these programs would be unable to monitor the employment policies of each employer. An SWA commented that the proposed rule language confuses the roles of sponsors and employers, and suggested that the language could be clarified to define specific new responsibilities for sponsors.

These comments raise issues addressed previously in the discussion of §§ 30.1 and 30.3. Generally speaking, it is—and has been historically under these regulations—the responsibility of the sponsor to ensure that all aspects of its program are being administered in a non-discriminatory manner and to implement an AAP. This clearly applies to the sponsor's own employment practices, policies, and decisions. In programs where participating employers, rather than the sponsor, control certain aspects of the apprenticeship experience, ensuring the program's broad compliance with affirmative action obligations has been accomplished through written agreements between sponsor and employer setting forth procedures to ensure that employment opportunity is being granted. This would include sponsors communicating with participating employers about policies that could be resulting in discrimination and addressing complaints of discrimination. As stated previously, while this requires a degree of purposeful oversight on the part of the sponsor, it is consistent with past practice in group sponsorships and is necessary so as to prevent expansive loopholes that could frustrate the purpose of this part.

An industry association suggested that the Department should use the term "equal opportunity program," as opposed to "affirmative action program." The Department declines to accept this suggestion. As is made clear by the definition of "affirmative action program" that was contained in the NPRM, and that is adopted in this Final Rule, an AAP is "more than mere passive nondiscrimination" and requires sponsors to "take affirmative steps to encourage and promote equal opportunity, to create an environment free from discrimination, and to address any barriers to equal opportunity in apprenticeship." They share many similarities with "affirmative action

programs” administered by OFCCP. Referring to these programs as “affirmative action programs,” a broadly used and well understood concept, reinforces the idea that sponsors must not only refrain from discriminating against apprentices and applicants for apprenticeship, but must also take positive steps to correct any barriers to equal employment. Additionally, many sponsors already maintain AAPs under the current regulations, and changing the name of the program would create unnecessary confusion and inconsistency.

Paragraph 30.4(b): Adoption of Affirmative Action Programs

Proposed § 30.4(b) detailed who must adopt an AAP, and further stated that, unless otherwise exempted by proposed § 30.4(d), each sponsor must develop and maintain a written AAP, which must be made available to the Registration Agency any time thereafter upon request.

A comment from an SWA stated that affirmative action activities proposed would be difficult for smaller apprenticeship program sponsors with limited staffing and financial resources and may discourage potential new sponsors from registering their programs. An exemption for smaller apprenticeship programs is discussed in § 30.4(d), below. With regard to the more general burden concerns dissuading entities from entering into or continuing registered apprenticeship programs, the Final Rule allows sponsors, both existing and new, more time to comply with AAP requirements than was proposed in the NPRM. Sponsors will have two years, either from the effective date (for sponsors registered with a Registration Agency at the time this Final Rule becomes effective) or from the date of registration (for new sponsors) in which to complete a written AAP. Details regarding the compliance date of each of these components can be found in the respective sections of this Final Rule, but in general, the Final Rule provides more time than the NPRM to complete these steps, allows more time between subsequent reviews of these obligations, and increases the assistance provided by Registration Agencies to sponsors in order to complete these obligations. As one example, during a new apprenticeship program’s provisional review conducted within one year of registration, the Registration Agency will provide further guidance to assist in the completion of the initial written AAP.

Paragraph 30.4(c): Contents of Affirmative Action Programs

Proposed § 30.4(c) provided an outline of the five required elements of an AAP: (1) Utilization analyses for race, sex, and ethnicity; (2) establishment of utilization goals for race, sex, and ethnicity, if necessary; (3) establishment of utilization analyses and goal setting for individuals with disabilities; (4) targeted outreach, recruitment, and retention, if necessary; and (5) a review of personnel processes.

The Department’s responses to specific comments addressing the five required elements of AAPs are explained in those respective sections of the preamble (§ 30.5–§ 30.9). In addition to the five elements outlined above, a few advocacy organizations urged the Department to include sexual orientation in AAPs and suggested that individuals should be given the opportunity to self-identify as lesbian, gay, bisexual, or transgender (LGBT). The Final Rule adds sexual orientation as a protected basis upon which a sponsor may not discriminate, but, consistent with OFCCP’s AAPs, it does not include sexual orientation as a basis upon which a sponsor must collect information or engage in action-oriented programs.

A national JATC encouraged the Department to retain the existing § 30.4(c), which provides, in part, that “the Department may provide such financial or other assistance as it seems necessary to implement the requirements of this paragraph.” This commenter said that deleting this section sends the wrong message to the regulated community and the public because it appears the Department is leaving the JATCs to use their own resources to comply with requirements.

While the Department will provide extensive technical assistance to sponsors in complying with the AAP obligations of this Final Rule, as discussed in greater detail in later sections, it has always been and will continue to be the responsibility of each sponsor to allocate sufficient resources to ensure that its program is being operated in a non-discriminatory manner. Nonetheless, the Department does not need a regulatory requirement in order to provide such assistance and the Department may continue to offer such assistance in the future. Accordingly, the Department declines to retain the prior language of § 30.4(c), and adopts the language in proposed paragraph (c) without change.

Paragraph 30.4(d): Exemptions

Proposed § 30.4(d) set forth the two exemptions to the requirement that a sponsor develop an AAP: Programs with fewer than five apprentices; and programs already subject to an approved equal employment opportunity program providing for affirmative action in apprenticeship that includes the use of goals for each underrepresented group. These exemptions are the same as those that were contained in the existing regulations. With regards to the exemption for programs subject to an approved equal employment opportunity program, however, proposed § 30.4(d) required that a sponsor with an approved equal employment opportunity program agree to extend that program to include individuals with disabilities to ensure that all protected bases set forth in the proposal would be addressed and that the sponsor was taking the appropriate actions to ensure that protected individuals are employed as apprentices and advanced in employment.

Paragraph (d)(1) of this section exempted sponsors with fewer than five apprentices from the AAP obligations. Two industry associations, an SAA, and an individual commenter expressed support for the exemption for programs with fewer than five apprentices. One industry association commented that the exemption should be expanded to exempt even larger programs from the AAP requirement. In contrast, many commenters suggested that all sponsors should be required to create AAPs, regardless of the size of the apprenticeship program, arguing that the exemption would exclude a significant portion of apprenticeship programs from the equal opportunity requirements that the regulations aim to provide. Two national unions commented that the proposed exemption is contrary to the recommendation of the Advisory Committee on Apprenticeship. These commenters suggested that the Department should require all programs to maintain AAPs but support those programs with limited resources through technical assistance.

Commenters also expressed concern that exempting small programs would exclude programs in the early years of growth, when the AAP has the greatest potential for positive, long-term impact. A national union and a national JATC warned that there would be faster growth in small programs rather than large programs, and that these new programs would not have to maintain AAPs under the exemption. An SAA concluded that, at a minimum, small

sponsors should be required to provide a strategy for outreach and recruitment of a diverse workforce.

A national union and an industry association stated that the staff and resource capacity that would be needed to comply with the affirmative action requirements would also be needed to comply with the universal outreach requirements in § 30.3, and therefore there is no additional reason to exempt small programs from the AAP requirements. Similarly, two national unions argued that, by the Department's own analysis, the burden to develop and maintain an AAP would be minimal, and the benefits of ensuring EEO for all apprentices would outweigh whatever burden was associated with maintaining the AAP. Some commenters also argued that exempting small programs was inconsistent with other Departmental programs, including those applying to federal contractors.

Many commenters further argued that the exemption should not be based on number of apprentices, but on the resources available to the sponsor. For example, some commenters suggested that the exemption should be tied to the sponsor's total number of employees, rather than the number of apprentices, or to the contributions received by the sponsor. Several unions and an industry association commented that most large apprenticeship programs are trusts created by collective bargaining agreements and are funded by contributions, which often have limited flexibility in terms of resource allocation and subjects programs funded by collective bargaining to the same cost-sensitivity as small programs. On the other hand, a State agency commented that entities with fewer than five apprentices are often large employers with sufficient resources to comply with an AAP. A national union commented that the exemption should only apply to sponsors that truly do not have the resources to maintain an AAP, and should not just apply to small programs across the board.

An SWA also asked whether the exemption would apply to sponsors that operate multiple programs, each with fewer than five apprentices, but with more than five apprentices across all programs.

Acknowledging the range of opinions on this topic, the Final Rule retains the current exemption without change. Although some commenters argue that the AAP requirement is so burdensome that even fewer programs should be required to maintain these plans, the majority of commenters and the Advisory Committee on Apprenticeship supported eliminating the exemption

altogether, claiming that the benefits of EEO far outweighed any burden imposed by maintaining an AAP. The Department agrees that the exemption should not be expanded, as currently approximately seventy-five percent of apprenticeship programs already fall within this exemption, and no compelling evidence has been presented to increase the apprenticeship threshold for the exemption.

However, the Department believes that eliminating the exemption entirely would be detrimental as well. While the creation and management of an AAP need not be an unduly burdensome process, the exemption for programs with fewer than five apprentices is a longstanding one. We further disagree with the comment asserting that the obligations under § 30.3 are the same as those required by the AAP; the AAP contains data collection and analysis obligations that § 30.3 does not. Although some commenters noted that not all small programs have resource constraints and that, conversely, not all large programs have resources sufficient to conduct AAPs, the Department assumes that programs with fewer than five apprentices will generally have fewer staff members administering the program than those with significantly more apprentices. And, for any larger programs with limited resources, these programs are currently subject to the AAP requirements and should therefore have already absorbed the cost of conducting an AAP into their operational budget. Furthermore, the Department will provide technical assistance to programs in developing their AAPs to ease any burden associated with this requirement.

In addition to the Department's concerns regarding the burden imposed on small programs, the Department also notes that programs with fewer than five apprentices may be less likely to generate enough data to provide meaningful utilization analyses, given the smaller sample size presented by each apprenticeship class. Moreover, in light of the stronger equal opportunity standards—as outlined in § 30.3—that now apply to all sponsors, even those programs that are not required to maintain AAPs will be required to take specific, proactive steps to ensure nondiscrimination and increase their recruitment and outreach efforts. The Department believes that these requirements will increase the participation of underrepresented groups across all programs, including those with fewer than five apprentices.

In response to those comments claiming that the exemption for small sponsors is inconsistent with the

requirements imposed upon federal contractors, the Department notes that, while the nondiscrimination provisions of Executive Order 11246, which are administered by the Department's OFCCP, apply to contractors regardless of size so long as they have qualifying contracts totaling \$10,000 or more in a calendar year, OFCCP's AAP requirements only apply to those contractors with 50 or more employees and a single contract of \$50,000 or more.⁶⁸

Finally, in response to the SWA's question regarding the application of the exemption, any program that employs fewer than five apprentices is exempt from the AAP requirement, regardless of the size of any other programs that the sponsor may administer.

With regard to paragraph (d)(2)'s exemption of programs subject to approved equal employment opportunity programs, which is carried over from the existing rule in large part, many commenters supported the exemption for programs that were already in compliance with an AAP, so long as that AAP was extended to cover individuals with disabilities. Some commenters sought clarification on how the exemption would operate. For example, a State agency requested clarification as to whether a sponsor would need to develop an AAP under proposed § 30.4 if apprenticeship is not specifically dealt with as a sub-classification or sub-goal in a plan developed for compliance with other Federal programs such as E.O. 11246. Additionally, an industry association asked for clarification as to whether or not there would be an exemption for association program sponsors that obtain apprentices from participating employers that are already in compliance with other AAP requirements. With regard to the issue of including apprenticeship as a sub-classification or sub-goal, the sponsor would need to demonstrate that its plan extended to the operation of its apprenticeship program, meaning that the apprentices would need to be covered by the plan's nondiscrimination and affirmative action standards. The sponsor would not need to develop separate goals for its apprenticeship program, however, so long as the goals established pursuant to the pre-existing plan are likely to equal or exceed the goals that would be required pursuant to this Final Rule. With regard to the second request for clarification, a sponsor must develop its own AAP and may not simply rely on an AAP in place for its participating employers.

⁶⁸ See 41 CFR 60–1.5, 60–2.1.

Paragraph 30.3(e): Written Affirmative Action Plans

Finally, proposed § 30.4(e) incorporated the existing practice of requiring internal reviews of AAPs on an annual basis, but also allowed a sponsor who could demonstrate that it was not underutilized in any of the protected bases for which measurements are kept (race, sex, and disability) and that its review of personnel practices did not require any necessary modifications to meet nondiscrimination objectives, to wait two years to complete its next AAP review. The Department sought comments on this proposal, including specifically whether stakeholders believe such an approach would incentivize AAP success without compromising the overall goals of promoting and ensuring equal employment opportunity in registered apprenticeship.

Several advocacy organizations expressed support for allowing sponsors to wait two years to complete the next internal AAP review if the review does not indicate underutilization or any necessary modifications. These commenters suggested, however, that this extension on the review period should only be allowed for sponsors that have not received any substantiated complaints of discrimination, arguing that this would provide a strong incentive for meeting affirmative action and nondiscrimination obligation. An SWA expressed concern that this requirement might be overly burdensome, and requested guidance on how Registration Agencies should enforce the requirement to self-monitor. Some advocacy groups were also concerned that external review mechanisms should be in place. A few commenters suggested that sponsors should be required to submit their written AAPs, or a summary of their annual or biannual review, to the Registration Agency upon completion. Similarly, an individual commenter suggested that sponsors should be required to publish written AAPs, goals, and timetables on their Web sites to increase transparency, accountability, and community engagement. In order to better understand whether participation among underrepresented groups is improving, an advocacy organization also urged the Department to publish the participation of apprentices by sex, race, ethnicity, and disability status annually. Finally, an individual commenter asked for clarification as to whether or not AAPs need to be approved by the Registration Agency prior to implementation.

The Department removes the proposed paragraph 30.4(e) from the Final Rule and instead addresses the timeline for completing and/or updating the particular elements of an AAP within each of those respective sections of the Final Rule. As set forth in these sections, the schedule for each respective AAP element will also apply uniformly and will not depend whether a sponsor has met its utilization goals. While the biannual review schedule for sponsors meeting their goals would have reduced the burden for those sponsors from what is required under the existing regulations, the Final Rule's timeline for the review of AAP elements in many cases further reduces the frequency with which sponsors need to review certain elements of their AAPs, thereby reducing burden even further for all covered sponsors. This will also increase consistency in sponsor obligations and streamline compliance reviews for Registration Agencies.

In place of the proposed paragraph 30.4(e), the Final Rule sets forth the obligation for creating a written AAP document. Written AAPs are already required under the existing regulations, and are required to be updated annually per existing § 30.8. However, in practice, most sponsors did not fully update their written AAPs until they were scheduled for a compliance review, for reasons discussed further in § 30.5, below. Paragraph 30.4(e) establishes that initial written AAPs must be completed within 2 years of the effective date of the Final Rule for sponsors with existing apprenticeship programs, and within 2 years of registration for all apprenticeship programs registered after the effective date. Written AAPs must be subsequently revised every time the sponsor completes workforce analyses for race, sex, and disability as required by §§ 30.5(b) and 30.7(d)(2) of this part. In order to facilitate compliance and ease the burden of this obligation, the Department will provide model written AAPs that each sponsor may tailor to its own program. The Department will also provide a timeline chart that clearly sets out when the sponsor must comply with each AAP obligation.

In response to those commenters suggesting that sponsors should publish or submit their written AAPs to the Registration Agency, the Department declines to adopt these suggestions, as doing so would be unnecessarily burdensome both for the sponsor and the Registration Agency. Instead, the Registration Agency will ensure during the sponsor's compliance review that the sponsor properly conducted and documented all reviews and analyses

that were required between compliance evaluations. OA will also look into providing more information regarding diversity in apprenticeship on its Web site. Regarding the requests for clarification, existing written AAPs do not need to be submitted to the Registration Agency, but will be reviewed for compliance with this Final Rule at the sponsor's next compliance review.

Utilization Analysis for Race, Sex, and Ethnicity (§ 30.5)

In the NPRM, the Department proposed to move the topic in the existing § 30.5, selection of apprentices, to § 30.10. In its place, the Department proposed a new § 30.5, which provided guidelines for assessing whether possible barriers to apprenticeship exist for particular groups of individuals by determining whether the race, sex, and ethnicity of apprentices in a sponsor's apprenticeship program is reflective of the population available for apprenticeship by race, sex, and ethnicity in the sponsor's relevant recruitment area. This proposed § 30.5 clarifies and expands upon the existing § 30.4(e), "Analysis to determine if deficiencies exist," which requires the sponsor to compute availability for minorities and women in its program. The existing § 30.4(e) required that sponsors take at least five factors into account when determining whether deficiencies exist. It did not, however, explain how these factors relate to the availability of qualified individuals for apprenticeship, nor did it indicate how a sponsor should consider or weigh each of these factors when determining availability.

In short, proposed § 30.5 was intended to incorporate elements of the existing process for analyzing race, sex, and ethnicity utilization while clarifying and streamlining the process for determining availability and utilization. This was to be accomplished by decreasing the number of data sources sponsors must analyze in determining the labor market composition, clarifying the steps required to do the utilization analysis, and providing clear directions for establishing goals. However, we received a number of comments that the revisions were not clear, and placed additional burden on sponsors to conduct analyses that they historically had not undertaken, but rather were performed with the assistance of Registration Agencies at compliance reviews. As described below, in response to these comments, the Final Rule provides further clarity sought by the commenters and reassigns the

burden associated with these analyses so they more closely resemble existing practice.

Paragraph 30.5(a): Purpose

Proposed § 30.5(a) explained that the purpose of a utilization analysis was “to provide sponsors with a method for assessing whether possible barriers to apprenticeship exist for particular groups of individuals by determining whether the race, sex, and ethnicity for apprentices in a sponsor’s apprenticeship program is reflective of persons available for apprenticeship by race, sex, and ethnicity in the relevant recruitment area.” It further explained that where there was significant disparity between availability and representation in the sponsor’s apprenticeship program, the sponsor was required to establish a utilization goal.

The Department received one comment on this paragraph, which asked the Department to define or clarify what it meant by “significant disparity.” As discussed in reference to § 30.6, a sponsor may use several different methods for calculating underutilization, although the most frequently used are the “80 percent rule,” and the “two standard deviation rule.” A finding of underutilization pursuant to either of these methods means that there is a significant disparity between the sponsor’s utilization of that particular group within its apprenticeship workforce and that group’s availability in the relevant recruitment area.

Paragraph 30.5(b): Analysis of Apprenticeship Program Workforce

The NPRM laid out the first step of the utilization analysis in proposed § 30.5(b), which required sponsors to identify the racial, sex, and ethnic composition of their apprentice workforces. Rather than review the composition for each occupational title represented in a sponsor’s apprenticeship program, proposed § 30.5(b) simplified the analysis by only requiring the sponsor to group the occupational titles represented in its registered apprenticeship program by industry.

Some commenters were confused about the extent of the sponsor’s workforce that would be included in the program’s workforce analysis. For example, a State Department of Labor questioned whether journeyworkers should be included in the apprentice workforce, and a national union urged the Department to state that entities operated by the sponsor under another name should also be covered for

purposes of the utilization analysis. For purposes of conducting the apprentice program workforce analysis, sponsors should include all active apprentices. Sponsors should not include apprentices or employees who are not enrolled in the program in question. Unlike laws governing federal contractors, this Final Rule only regulates sponsors with regard to the administration of its apprenticeship program; this Rule does not require sponsors to conduct utilization analyses for its non-apprentice workforce.

Several commenters, including an SWA and a national union, expressed concern with assessing the racial, sex, and ethnic composition of a program by industry, as opposed to by occupation. Some commenters argued that grouping occupations by industry could result in industries that consist of occupations with varying skill level requirements, advancement opportunities, and compensation, and that this grouping could be conducted in an arbitrary manner. Other commenters were concerned that grouping occupations by industry would make it more difficult to know if female or minority apprentices were being concentrated in lower paying positions within an industry, or in positions with little potential for advancement. One commenter also asserted that the industry-wide requirement conflicts with the directive in proposed § 30.5(c)(3) that “in determining availability, the sponsor must consider at least the following factors for each occupational title represented in the sponsor’s registered apprenticeship program.”

The Department agrees with many of these comments, and therefore the Final Rule requires each sponsor to group its apprenticeship programs by occupational title, rather than by industry, for purposes of conducting the workforce analysis. This will require the sponsor to identify each occupation within its apprenticeship program according to the methods currently used (either by RAPIDS code or the appropriate six-digit Standard Occupational Classification (SOC) or O*NET code⁶⁹) and then, for each occupation represented, the sponsor must identify the race, sex, and ethnicity of its apprentices within that occupation. The Department believes that this approach will provide a more precise mechanism for assessing the demographic composition of a sponsor’s apprenticeship program, using the most discrete data set, and will allow each sponsor to review its workforce for

those issues identified in the comments, such as channeling or the concentration of women and minorities in certain occupations that may earn lower wages or have fewer advancement opportunities than other similar occupations. This method will also be more consistent with the methods many sponsors currently employ to evaluate their workforces, thereby making it easier for sponsors to come into compliance with this Final Rule. With regard to the last comment, the inclusion of “occupational title” in the proposed § 30.5(c)(3) was an inadvertent error; it was intended to be “industry,” for consistency with the remainder of the utilization analysis. As discussed below, however, the Final Rule contains a slight revision to the utilization and availability analyses, requiring that they be done according to “major occupation group” rather than industry, and so this provision has been changed in the Final Rule to say “major occupation group.”

The Final Rule also clarifies the timing for conducting the apprenticeship program workforce analysis. As detailed below, the Department received many comments from sponsors expressing concern with the potential burden of conducting their own availability analysis. In response, the Final Rule incorporates a procedure much more similar to the existing one, wherein Registration Agencies actively assist sponsors in conducting their availability analysis and setting their utilization goals. Under paragraph (c), therefore, a sponsor will be required to work with the Registration Agency at the time of its regular compliance review to reassess the availability of women and minority groups within its relevant recruitment area and to update its utilization goals, if necessary. Under paragraph (b), however, each sponsor will retain the responsibility for conducting its workforce analysis pursuant to the steps discussed above. The Department is adding paragraph 30.5(b)(2) to clarify that each sponsor must conduct a workforce analysis at each regular compliance review, and again if three years have passed without a compliance review.

The Department is also clarifying, in new paragraph 30.5(b)(3), when each sponsor will first need to come into compliance with this provision and conduct its initial workforce analysis pursuant to this section. For a sponsor registered with a Registration Agency as of the effective date of this Final Rule it will have up to two years from the effective date in which to conduct its initial workforce analysis. As discussed above, this does not require the sponsor to conduct an availability analysis, or to

⁶⁹ <https://www.onetonline.org/> (last accessed June 9, 2016).

set utilization goals. Each sponsor should continue operating under its existing goals until its next compliance review. A new sponsor registering after the effective date of this Final Rule will have two years from the date of its registration in which to complete its first workforce analysis. Following the initial workforce analysis, a covered sponsor will conduct workforce analyses at each regular compliance review and once between compliance reviews, no later than three years after the sponsor's most recent compliance review, as mentioned above.

Paragraph 30.5(c): Availability Analysis

The next step in the utilization analysis, under existing practice and pursuant to proposed § 30.5(c), was to determine the availability of qualified individuals by race, sex, and ethnicity. The purpose of the availability analysis, as explained in the NPRM, is to establish a benchmark against which the demographic composition of the sponsor's apprenticeship program can be compared in order to determine whether barriers to equal opportunity may exist with regard to the sponsor's apprenticeship program. Proposed paragraph § 30.5(c) described the steps required to perform an availability analysis, simplifying the process by reducing the number of factors sponsors must consider from five to two. The two factors proposed were: (i) The percentage of individuals available with the present or potential capacity for apprenticeship in the sponsor's relevant recruitment area broken down by race, sex, and ethnicity; and (ii) the percentage of the sponsor's employees with the present or potential capacity for apprenticeship broken down by race, sex, and ethnicity. In addition, proposed § 30.5 required that a sponsor consider the availability of qualified individuals for apprenticeship by race, sex, and ethnicity, rather than continue the current approach, which requires the sponsor to analyze availability and utilization for women and then for minorities as an aggregate group.

The Department received numerous comments on the availability analysis. The majority of comments received from sponsors expressed confusion over how to conduct an availability analysis and concern that conducting such an analysis would be unduly burdensome for sponsors. Many commenters urged the Department to retain current § 30.4(g), which states that the Department shall provide data and information on minority and female labor force characteristics for each Standard Metropolitan Statistical Area, rather than placing the burden on

sponsors to derive this information. Two national unions said its survey of affiliates' apprenticeship programs indicated that the process of establishing this benchmark is not something in which most sponsors currently engage, and that they were unaware of any data sources that measure abilities and interests. An industry association also sought guidance on how the construction industry specifically should be determining availability.

As mentioned above, in response to the perception held by many sponsors that conducting an availability analysis and setting a utilization goal would be challenging for sponsors to do themselves, the Department is revising § 30.5(c) to comport more closely with the current practice wherein Registration Agencies work closely with each sponsor at its regular compliance reviews to develop and conduct an availability analysis and to set or reassess utilization goals for race, sex, and ethnicity, if necessary. Paragraph 30.5(c)(3) has been revised to clarify that the responsibility for conducting availability analyses will not fall solely to the sponsor, and that the sponsor and the Registration Agency will work together to conduct availability analyses. The Department is also revising paragraph 30.5(c)(5) to remove references to specific data sources for use in availability analyses. This was included in the NPRM in order to help sponsors complete utilization analyses, but the Final Rule instead will follow the existing practice of Registration Agencies taking the lead in performing these analyses. Accordingly, paragraph 30.5(c)(5) of the Final Rule includes a more general statement that availability "will be derived from the most current and discrete statistical information available."

The Department also notes that, although it is adopting commenters' suggestion that the workforce analysis be conducted at the occupation level, the Final Rule requires that availability and utilization analyses be conducted according to major occupation group. A major occupation group, or job family, is a grouping of occupations based upon work performed, skills, education, training, and credentials.⁷⁰ All Standard Occupational Classification (SOC) codes are organized into 23 major occupation groups and the first two digits of an O*Net or SOC code correspond to the appropriate major occupation group.⁷¹

⁷⁰ <https://www.onetonline.org/find/family> (last accessed June 13, 2016).

⁷¹ http://www.bls.gov/soc/major_groups.htm (last accessed June 13, 2016).

As explained in the NPRM, the Department had proposed grouping occupations by industry in order to allow sponsors with small numbers of apprentices in each occupation to aggregate their apprentices in a way that would provide a more meaningful statistical analysis. The Department has determined that aggregating by major occupation group serves the same general purpose as aggregating by industry, but is more consistent with the format used for the occupation-level workforce analysis. Sponsors and Registration Agencies will more easily be able to group the program's occupations into major occupation groups than industries.

This system that combines occupation-level workforce review with major occupation group-level utilization analyses will allow each sponsor to review its workforce for barriers or problems at a more discrete level, but to then use a more aggregated data set for purposes of assessing availability (and setting utilization goals, if necessary). Furthermore, permitting sponsors to aggregate occupations into major occupation groups would minimize the administrative burden for sponsors and Registration Agencies performing the analyses, particularly for those sponsors who have apprenticeship programs in which more than one occupational title is represented. Accordingly, each sponsor will organize the occupational titles represented in its apprenticeship program by major occupation group or job family, and will then compare the racial, sex, and ethnic representations within each of those major occupation groups to the representations of those groups available in the relevant recruitment area according to each major occupation group. For the many sponsors with only one major occupation group represented in their program, this may involve performing a single utilization analysis for the entire program.

The Final Rule adds a paragraph 30.5(c)(6) to establish the schedule for conducting availability analyses. As indicated above, this new paragraph makes clear that a sponsor need only conduct an availability analysis in conjunction with the Registration Agency at the time of the sponsor's compliance review. A sponsor need not conduct separate availability analyses in between compliance reviews. At a sponsor's compliance review, the sponsor will work with the Registration Agency to define its relevant recruitment area, and the Registration Agency will assist the sponsor in calculating the availability of women

and minorities in the relevant recruitment area.

In the NPRM, the Department referred to those individuals who were eligible and available for apprenticeship as having “present or potential capacity for apprenticeship.” This term was drawn from § 30.4(e)(5) of the existing regulations. This fact notwithstanding, several commenters were unsure of what it meant to have present or potential capacity for apprenticeship, and how they were supposed to identify those available individuals that have present or potential capacity for apprenticeship within the broader labor force. An industry association said the requirement to measure “potential” capacity should be deleted because an applicant must have immediate capacity to enter the program. Relatedly, commenters also sought clarification on how to apply educational or skill requirements when calculating availability. Some commenters noted that, in addition to any educational requirements, an individual’s mechanical aptitude, high school transcript, prior work experience, and interest were all factors that should be considered in deciding who has “present or potential capacity.” A national union also asked whether JATCs may exclude persons who fail to meet physical standards in determining potential capacity for apprenticeship. An individual commenter asked if “potential capacity for apprenticeship” would refer to apprenticeship programs requiring prior occupational training as a minimum requirement.

Some commenters, on the other hand, were concerned that limiting the availability analysis to those individuals who had “present or potential capacity” could exclude relevant individuals from the sponsor’s availability analysis. Many commenters urged the Department to clarify explicitly that apprenticeships are entry-level positions, generally requiring no previous experience or minimal requirements other than being at least 18 years of age and holding a high school diploma or equivalent and that a particular group’s availability figures for apprenticeship programs would largely correspond its representation within the overall civilian labor force in the relevant recruitment area. To do otherwise, these commenters argue, could perpetuate existing underrepresentation of women and people of color in apprenticeship industries.

As discussed above, the Department hopes that its continued involvement in assisting sponsors with performing the availability analysis will help to answer these questions and allay commenters’

concerns. Additionally, in response to the comments received, the Department is replacing the term “individuals available with the present or potential capacity for apprenticeship” with “individuals who are eligible for enrollment in the apprenticeship program.” This change makes clear that the availability analysis should focus on those individuals who meet the basic qualifications for the apprenticeship program. However, in following with basic precepts of employment law, sponsors may not use basic qualifications or other criteria that have an adverse impact on one or more protected groups unless they are job-related and consistent with business necessity. This does not mean that every available individual would be accepted into an apprenticeship program, only that any one of those individuals could potentially be selected as an apprentice. A sponsor may still refine its applicant pool, through interviews or other selection procedures, by determining which individuals would be best suited for an apprenticeship.

In response to commenters inquiring about the source of data to use for determining availability, we note that this may vary depending on the nature of the apprenticeship, and so the Final Rule states only that current and discrete data shall be used. In some cases, such as in certain entry-level apprenticeships, the best data to determine eligibility may be the civilian labor force participation rate. Sponsors that apply minimum educational or certification requirements may work with their Registration Agency to further refine the relevant labor pool by calculating the availability of those individuals meeting the requirements of that program.

Many commenters also sought guidance on how to define their relevant recruitment area. One commenter was confused as to how to draw its relevant recruitment area because it advertises on the internet and could possibly draw applicants from anywhere. Another commenter asserted that the labor market areas cited in the existing rule, which are based on metro- and micro-political statistical boundaries and reflect workforce commuting patterns, are the most objective, unbiased, and realistic scope for recruitment. An SWA also explained that some sponsors are correctional facilities that recruit apprentices solely from inmates assigned to their facility and requested clarification that, in those cases, the “relevant recruitment area” for a correctional program could be limited to the actual facility, rather than the surrounding area.

The relevant recruitment area is defined in paragraph 30.5(c)(4) as the geographical area from which the sponsor usually seeks or reasonably could seek apprentices. A relevant recruitment area is similar to a labor market area, but focuses more on where the sponsor draws apprentices from, rather than where workers reside in surrounding geographic areas. A relevant recruitment area recognizes that individuals may be willing to relocate in order to participate in an apprenticeship program. So, for instance, if the sponsor regularly advertises and recruits in areas that would require an individual to relocate, that would make the sponsor’s relevant recruitment area broader than their labor market area.

Each sponsor’s relevant recruitment area is unique and may depend on how that sponsor chooses to advertise its apprenticeship program and the distance that past apprentices were willing to travel to attend the apprenticeship program. Proposed § 30.5 attempted to offer sponsors greater flexibility in defining this area so long as the sponsor justified the scope of its recruitment area and did not draw the relevant recruitment area in such a way as to have the effect of excluding individuals based on race, sex, or ethnicity from consideration. A sponsor may determine that a metro- and micro-political area, such as those used under the existing regulation, is the best representation of its relevant recruitment area. In that case, a sponsor may continue to utilize the availability data for that metro- and micro-political area.

While it is possible that a sponsor could attract an applicant from outside its standard recruitment area, the sponsor’s availability analysis need only account for those individuals available for apprenticeship who are likely to be reached by the sponsor’s recruitment efforts and who are likely able to commute or relocate to the program. For those sponsors advertising on the internet, the advertisement may reach a national or international audience, but the sponsor would need to consider whether individuals from other cities or states are likely to commute from those locations when the sponsor is drawing its relevant recruitment area. Similarly, a correctional facility sponsor that only recruits from within its own inmate population would simply need to explain in its written AAP that the recruitment area is limited to that facility because of the focus and requirements of the apprenticeship program. The Department will provide technical assistance to sponsors in

determining the appropriate relevant recruitment area, and sponsors are encouraged to work with their Registration Agency in unique situations.

With regards to the second factor in the availability analysis, two commenters took issue with the use of the term “employees” in proposed § 30.5(c)(3)(ii). An industry association said the requirement to analyze the numbers of current “employees” does not make sense for program sponsors that do not “employ” any apprentices. The commenter suggested that perhaps the proposed rule intended to reference minorities and women “participating” as apprentices, which is not as confusing as use of the term “employees.” Similarly, a national union stated the term “employee” is inapplicable to JATCs that do not employ apprentices or persons seeking to become apprentices. The commenter recommended that the Department provide guidance that is germane to joint labor-management committees in determining the availability of qualified individuals for apprenticeship.

The Department acknowledges that not all sponsors will recruit from within their own workforce, and that the sponsor’s current employees, or the employees of participating employers, may not be relevant to the sponsor’s availability. In response to these comments, the Department notes that sponsors may accord the two factors in determining availability different weights. So, for example, a sponsor that conducts only external recruiting, and does not accept any of its employees into the apprenticeship program, would not give this factor any weight. On the other hand, a sponsor that drew apprentices equally from external sources and from within its own workforce would weigh the two factors equally. Additionally, the Final Rule revises this factor to reflect that any employees being considered in the availability analysis should be those “who are eligible for enrollment in the apprenticeship program” rather than who have “the present and potential capacity for apprenticeship,” for the reasons discussed above.

Paragraph 30.5(d): Rate of Utilization

Finally, proposed § 30.5(d) required each sponsor to establish a utilization goal when the sponsor’s utilization of women, Hispanics or Latinos, or individuals of a particular racial minority group is “less than would be reasonably expected given the availability of such individuals for apprenticeship.” This requirement is

largely carried over from the existing regulations at § 30.4(d)(3) and (4).

Some commenters, including numerous advocacy organizations, urged the Department to clarify that the phrase “less than would be reasonably expected” means that the sponsor’s utilization of women, Hispanics or Latinos, and/or individuals of a particular ethnic or racial minority group is “less than the percentage available for apprenticeship in the relevant recruitment area.” Another advocacy organization asked the Department to clarify that “utilization” should be understood as a measure of the number of hours worked by women apprentices and apprentices of color, rather than a measure of the number of women apprentices or apprentices of color accepted into the program. A State Department of Labor requested that the language from the preamble clarifying the methods by which a sponsor can calculate underutilization (e.g., “the 80 percent rule”) be promulgated as part of the rule.

The Department adopts § 30.5(d) largely as proposed, but clarifies that a sponsor’s utilization of women, Hispanics or Latinos, or individuals of a particular racial minority group is “less than would be reasonably expected” when the utilization falls significantly below that group’s availability in the relevant recruitment area. Sponsors are permitted to calculate their utilization using any appropriate model, but recognizing that the “80 percent rule,” (i.e., whether actual employment of apprentices, broken down by race, sex, and ethnicity, is less than 80 percent of their availability) or the “two standard deviations” analysis, (i.e., whether the difference between availability and the actual employment of apprentices by race, sex, and ethnicity exceeds the two standard deviations test of statistical significance) are most commonly employed. The Department declines to include this in the regulatory text, but notes that either of these methods would be considered appropriate under the Final Rule. The Department also declines to measure utilization in terms of hours, as the availability data used in utilization analyses is recorded in terms of individuals, not hours worked, so it is unclear what benchmark a sponsor could use to compare the number of hours worked by individuals of particular racial, sex or ethnic groups. Additionally, sponsors are required to make job assignments in a non-discriminatory manner.

The Department also reiterates that a finding of underutilization does not by itself constitute a violation. However, as

described in § 30.8, upon determining that the sponsor is underutilizing a particular racial, sex, or ethnic group, and setting a utilization goal for that group, the sponsor must engage in targeted outreach, recruitment, and retention efforts to attempt to reduce or eliminate any barriers facing the underutilized group.

Establishment of Utilization Goals for Race, Sex, and Ethnicity (§ 30.6)

In the NPRM, the Department proposed to move current § 30.6, entitled “Existing lists of eligibles and public notice,” to § 30.10, and insert a new § 30.6 that described the procedures for establishing utilization goals. Proposed § 30.6 would carry over, clarify, and expand upon existing procedures set forth in § 30.4(f) of the existing part 30, which required a sponsor to establish goals and timetables based on the outcome of the sponsor’s analyses of its underutilization of minorities in the aggregate and women. The existing part 30 does not provide specific instructions on how to set a goal, and the form of goal that a sponsor is required to set depends on the nature of the selection procedure used.

Proposed § 30.6 simplified the goal-setting process by requiring only one type of goal, regardless of the selection procedure used, and eliminated references to timetables. It also specified that a sponsor’s utilization goal for a particular underutilized group in its apprenticeship program must be at least equal to the availability figure derived for that group in the utilization analysis, and only required that goals be set for the individual racial or ethnic group(s) that the sponsor identified as being underutilized, rather than for minorities in the aggregate. Finally, proposed § 30.6 made clear that quotas are expressly forbidden and that goals may not be used to create set-asides or supersede eligibility requirements for apprenticeship.

Many commenters, including JATCs, individuals, and SWAs, supported the establishment of goals generally, but stated that goals equal to the percentage of available apprentices in some segments of the population is unrealistic, particularly with regards to women in certain industries. Sponsors worried that, despite increased outreach efforts to women, they would still struggle to meet their goals because women were not applying for positions and suggested that sponsors not be unduly penalized in this situation. There were some commenters, though, that objected to the use of goals entirely, arguing that utilization goals would

coerce program sponsors to implement unconstitutional hiring quotas and cited to *Lutheran Church—Missouri Synod v. FCC*⁷² for the proposition that the imposition of goals encourages employers to grant preferences to applicants based on their race, ethnicity or gender.

Advocacy groups and individuals, however, wanted to ensure that sponsors made real progress in increasing the representation of women and minorities in their apprenticeship programs. An individual commenter suggested that the Department require apprenticeship programs with low numbers of female apprentices to report their utilization rate to the Registration Agency and that such programs be audited annually until their numbers rise. Others suggested that sponsors should implement interim goals to ensure steady progress towards accomplishing the § 30.6 utilization goal. Several commenters urged the Department to make clear that compliance with the AAP requirements will be determined by whether the sponsor has made a good faith effort to meet its goals and timetables. These commenters further stressed that good faith efforts should be judged by whether the sponsor is following its AAP and attempting to make it work, including evaluation and changes in the program when necessary to increase utilization of minorities.

The Department largely adopts proposed § 30.6 in the Final Rule, but amends paragraph (a) to make clear that a utilization goal is set for each major occupation group where underutilization is found and that a sponsor will set its utilization goals with the Registration Agency at the time of its regular compliance reviews. These goals will still reflect the availability percentage of the particular racial, sex, or ethnic group in the relevant recruitment area, as described in the NPRM. Again, the Registration Agency will assist the sponsor in conducting the availability analysis during the sponsor's compliance review and the goals established under this section will reflect the availability percentages as determined in that analysis. While some sponsors may fall short of these goals, the Department reminds sponsors that their determination that a utilization goal is required constitutes neither a finding nor an admission of discrimination, and that a sponsor's compliance will be determined based upon its good faith efforts to eliminate impediments to equal employment

opportunity and not purely on whether the sponsor has met its goals.

In response to concerns that these aspirational goals nevertheless have the effect of rigid quotas, the Final Rule, as did the NPRM, goes to great lengths to explicitly state that these goals are not and should not be interpreted to serve as quotas, and that they do not permit sponsors to create set-asides for specific groups. In response to the comment regarding *Lutheran Church—Missouri Synod v. FCC*, the Department notes that this Final Rule makes merit selection principles the basis for all employment decisions. This regulation requires both that employment decisions be made in a nondiscriminatory manner and that utilization goals may not be used to supersede merit selection or justify a preference being extended to any person on the basis of race, sex, or ethnicity. The clear distinction between this framework and a rigid quota system is further evidenced by the fact that sponsors will not be held liable for any violation of this part simply for failing to meet a utilization goal. By contrast, sponsors explicitly can be held liable for any personnel decisions made on the basis of a protected category, which would include preferential treatment in order to meet a goal.

The Department also declines to set any specific goals for women and minorities that sponsors must reach, and further declines to require sponsors to reach tiered or interim goals. If the Registration Agency determines that a sponsor is not meeting its goals, the Registration Agency will work with that sponsor to identify potential problem areas in the program and devise corrective, action-oriented programs pursuant to § 30.8.

Commenters also sought clarification on some aspects of proposed § 30.6. For example, a State agency requested clarification regarding what it meant to have “just one type of goal” for an apprenticeship program. To clarify, the new requirement that a sponsor only set “one type of goal” means that the sponsor will set the same type of utilization goal for each racial, sex, and ethnic group within its apprenticeship workforce, regardless of the way in which the sponsor selects its apprentices. This is in contrast to the existing requirement to set a different goal depending on which selection method the sponsor uses. For selections based on rank from a pool of eligible applicants, for instance, sponsors are currently required to establish a percentage goal and timetable for the admission of minority and/or female applicants into the eligibility pool. However, if selections are made from a

pool of current employees, sponsors are required to establish goals and timetables for actual selection into the apprenticeship program. The Final Rule will simplify this process, such that the sponsor's goals will simply reflect the utilization of that race, sex, or ethnic group in the sponsor's overall workforce.

Finally, the Final Rule slightly revises paragraph (d)(3), which reaffirms that goals do not create “set asides” nor are intended to achieve equal results, to more closely conform with similar language in OFCCP's 41 CFR part 60–2 regulations.

Utilization Goals for Individuals With Disabilities (§ 30.7)

The existing § 30.7 is reserved. In the NPRM, the Department proposed to assign a new section entitled “Utilization goals for individuals with disabilities” to § 30.7, which would establish a single, national utilization goal of 7 percent for individuals with disabilities that applies to all sponsors subject to the AAP obligations of this part. As with utilization goals for race, sex, and ethnicity, the utilization goals for individuals with disabilities is designed to establish a benchmark against which the sponsor must measure the representation of individuals with disabilities in the sponsor's apprentice workforce by major occupation group, in order to assess whether any barriers to EEO remain. However, in contrast to the framework set forth for establishing utilization goals for race, sex, and ethnicity, the proposed § 30.7 established one goal for every covered sponsor, regardless of the availability data in that sponsor's particular relevant recruitment area.

Paragraph 30.7(a): Utilization Goal

Proposed § 30.7(a) put forth the national utilization goal of 7 percent for individuals with disabilities, derived in part from disability data collected as part of the American Community Survey. This goal mirrors that established by OFCCP in the affirmative action obligations of its section 503 regulations, which now apply to hundreds of thousands of Federal contractor and subcontractor and Federally-assisted contractor and subcontractor establishments. Advocacy organizations generally supported the establishment of this utilization goal and stated that the goal, if met, could result in an additional 26,000 job training opportunities for persons with disabilities. Some commenters sought higher goals or inquiry into other data sources to establish this goal. One advocacy organization suggested that

⁷² 141 F.3d 344 (D.C. Cir. 1998).

the utilization rate should be 16.5 percent, which is equal to the current percentage of individuals with disabilities within the working-age population, or that sponsors should base their goal for individuals with disabilities on demographic statistics of persons with disabilities in their geographic location. Other advocacy organizations suggested that the Social Security Administration, the Department of Education, academic Rehabilitation Research and Training Centers, associations for State workforces, vocational rehabilitation agencies, special education transition programs, disability advocacy organizations, Independent Living Centers, Career One-stop centers, and IDEA-funded parent centers could all be sources of information on the availability of individuals with disabilities in the relevant area. Still other advocacy organizations recommended the Department raise the utilization goal by adopting a methodology that utilizes the ADA's broader definition of "disability," rather than the American Community Survey, which the commenter said uses a more narrow definition of "disability" than the ADA. To ensure that people who have severe disabilities are not neglected, an advocacy organization recommended that the Department establish an additional sub-goal of 3 percent for individuals with targeted severe disabilities.

A number of JATCs and industry associations, on the other hand, worried that the 7 percent goal was unrealistically high because of the physical demands of their apprenticeship programs and because self-identification is voluntary and persons with disabilities are reluctant to identify as disabled. For example, an industry association stated that this utilization goal would be particularly burdensome for the trucking industry because many individuals with disabilities are prohibited from driving commercial motor vehicles, and a local JATC stated that it would be difficult to place disabled individuals with its partner construction contractors because of their workers compensation insurance providers and the fact that a condition of their disability compensation may preclude them from working on a construction site. Some of these commenters recommended that the goal be phased in, or gradually increased over time. One company recommended that the Department observe each industry for two years and establish better-suited goals. Another commenter expressed concern with the

proposed 7 percent utilization goal, stating that persons with disabilities are already protected from discrimination by existing Federal regulations and expressed doubt that utilization goals are attainable given geographic disparities as well as differing abilities and qualifications of those seeking employment. An industry association suggested the Department adopt the same goals as established by the OFCCP under section 503, which applies to Federal contractors and subcontractors. A national JATC commented that the Department should review the goal on an annual basis.

As stated in the NPRM, the Department believes that a utilization goal for individuals with disabilities is a vital element that, in conjunction with other requirements of this part, will enable sponsors and Registration Agencies to assess the effectiveness of specific affirmative action efforts with respect to individuals with disabilities, and to identify and address specific workplace barriers to apprenticeship. Both the unemployment rate and the percentage of working-age individuals with disabilities who are not in the labor force remain significantly higher than that of the working-age population without disabilities. The establishment of a utilization goal for individuals with disabilities is not, by itself, a "cure" for this longstanding problem, but the Department believes that the establishment of this utilization goal could create more accountability within a sponsor's organization and provide a much-needed tool to help ensure that progress toward equal employment opportunity is achieved.

The Department explained in great detail in the NPRM the process that OFCCP used when it issued revised regulations implementing section 503 and established the same national utilization goal of 7 percent for individuals with disabilities for all covered contractors. OFCCP derived this utilization goal in part from the disability data collected as part of the American Community Survey (ACS). Although the definition of disability used by the ACS is not as broad as that in the ADA and proposed here, and therefore may not capture all of the individuals who would be considered disabled under this Final Rule, the Department has concluded, for reasons discussed extensively in the NPRM, that the ACS is the best source of nationwide disability data available today, and, thus, an appropriate starting place for developing a utilization goal. The Department, therefore, declines to change the goal, or to implement tiered goals that would not be reflective of the

availability of individuals with disabilities.

OFCCP arrived at the 7 percent figure by starting with the mean disability data for the "civilian labor force" and the "civilian population" across EEO-1 groups, based on the 2009 ACS data, which resulted in 5.7 percent as a starting point. This figure is the Department's estimate of the percentage of the civilian labor force that has a disability as defined by the ACS. However, the Department acknowledges that this number does not encompass all individuals with disabilities as defined under the broader definition in the ADA, as amended, and this part. Further, this figure most likely underestimates the percent of individuals with disabilities who are eligible for apprenticeship because it reflects the percentage of individuals with disabilities who are currently in the labor force with an occupation and individuals need not have an occupation or be in the labor force in order to be eligible for apprenticeship.

The Department was also concerned that this availability figure did not take into account discouraged workers, or the effects of historical discrimination against individuals with disabilities that has suppressed the representation of such individuals in the workforce. OFCCP estimated the size of the discouraged worker effect by comparing the percent of the civilian population with a disability (per the ACS definition) who identified as having an occupation to the percent of the civilian labor force with a disability who identified as having an occupation. Though not currently seeking employment, it might be reasonable to believe that those in the civilian population who identify as having an occupation, but who are not currently in the labor force, remained interested in working should job opportunities become available. Using the 2009 ACS EEO-1 category data, the result of this comparison is 1.7 percent. Adding this figure to the 5.7 percent availability figure above results in the 7.4 percent, which OFCCP rounded to 7 percent. OA agrees that this calculation reflects the most accurate availability figure currently available, and therefore adopts the 7 percent utilization goal. Pursuant to proposed 30.7(c), which the Department adopts in this Final Rule, OA will review the goal periodically and update the goal as appropriate.

The Department revises paragraph (a), however, to reflect that the utilization goal will apply to each major occupation group within a sponsor's apprentice workforce, rather than to each industry, as was proposed in the

NPRM. This is consistent with the changes adopted for the utilization analyses for race, sex, and ethnicity. The reasons for using major occupation groups, rather than industry, in the utilization analysis are addressed in the discussion of § 30.5(c).

In response to those commenters who advocated that sponsors should be able to derive their own availability figures for individuals with disabilities within the sponsor's relevant recruitment area, the Department notes that replicating the race, sex, and ethnicity goals framework would not be the most effective approach for the establishment of goals for individuals with disabilities. Sponsors establishing goals for minorities and women typically use the Special EEO Tabulation of census data to assist them. The results of the decennial census can be tabulated for hundreds of occupation categories and thousands of geographic areas. However, because the ACS disability data is based on sampling, and because the percentage of that sample who identify as having a disability is considerably smaller than the percentage that provide race and gender information, it cannot be broken down into as many job titles, or as many geographic areas as the data for race and gender. In addition, the race, sex, and ethnicity goals framework does not include consideration of discouraged workers in computing availability, a factor particularly important in the context of disability. Accordingly, the Department is retaining the 7 percent national utilization goal and declines to allow sponsors to set their own goals based on availability in the relevant recruitment area.

The Department also declines to adopt a sub-goal at this time. The commenters suggesting a sub-goal did not provide a clear methodology or data source for the identification of a sub-goal target. Moreover, establishing a sub-goal would, in many instances require sponsors to ask for detailed disability-related information, beyond the mere existence of a specific condition, so that the sponsor could determine whether an individual has a "severe" physical or mental impairment that is encompassed by the sub-goal. This does not mean that sponsors may not, on their own, for affirmative action purposes, establish appropriate mechanisms and goals to encourage the employment of individuals with significant or severe disabilities. However, these regulations do not include such requirements.

As stated above, many sponsors were concerned that they would not be able to meet the 7 percent utilization goal

because of the physical demands of their industry. First, the Department notes that the goal only applies to "qualified individuals with disabilities," and the application of a utilization goal does not require or authorize a sponsor to hire an individual who is not eligible or qualified for apprenticeship. The objection to adopting a utilization goal at all, however, is based on the flawed notion that individuals with disabilities as a group are incapable of working in these jobs. As stated previously in this preamble, the Department acknowledges that some individuals with certain disabilities may not be able to perform some jobs, but this Final Rule does not require a sponsor to hire an individual who cannot perform the essential functions necessary for apprenticeship, or who poses a direct threat to the health or safety of the individual or others.

Additionally, the goal is not a quota and failure to meet the goal will not, in and of itself, result in any violation or enforcement action. The Registration Agency will look at the totality of the sponsor's affirmative action efforts to determine whether it is in compliance with its affirmative action obligations under this section. As discussed below, if the sponsor has complied with the requirements of this part and no impediments to equal employment opportunity exist, then the fact that the sponsor does not meet the goal will not result in a violation.

Lastly, some sponsors were concerned that the new utilization goal would be unduly burdensome for sponsors to comply with. A regional JATC commented that forcing sponsors to identify individuals with disabilities, especially mental or intellectual disabilities, puts a burden on sponsors if the program must hire a psychiatric professional to conduct evaluations.

First, the Department notes that all sponsors covered by § 30.4(b) are currently required to maintain an AAP and conduct a utilization analysis for race, sex, and ethnicity, so the additional utilization analysis for individuals with disabilities will pose minimal burden, especially because the sponsor is not responsible for setting the utilization goal. Second, the identification of individuals within the apprenticeship workforce that have a disability is done through self-identification, and the sponsor should not be attempting to identify individuals with disabilities who do not self-identify. If an apprentice has an obvious visible disability (*i.e.*, someone is blind or missing a limb), a sponsor may include that individual as an individual

with a disability within its workforce analysis. Otherwise, a sponsor should be relying only on self-identification as the method for capturing disability within its apprenticeship workforce. A sponsor should also not be attempting to verify whether an apprentice does, in fact, have a disability. Further detail on how the self-identification mechanism should work is set forth in the discussion of § 30.11, below.

To further ease any burden upon sponsors associated with the implementation of the utilization goal for individuals with disabilities, sponsors will have additional time to come into compliance with these provisions. The revised compliance dates are detailed in paragraph 30.7(d)(2), below.

Paragraph 30.7(b): Purpose

Proposed § 30.7(b) explained that the purpose of the utilization goal for individuals with disabilities was to establish a benchmark against which the sponsor must measure the representation of individuals with disabilities in the sponsor's apprentice workforce and that the goal was to serve as an equal opportunity objective that should be attainable by complying with all of the affirmative action requirements of part 30.

The Department received no comments on this specific paragraph. The Final Rule changes the reference from "industry" to "major occupation group" to be consistent with changes in other sections, and makes other non-substantive edits so the text of the regulation conforms more closely to the corresponding section of OFCCP's section 503 regulations.

Paragraph 30.7(c): Periodic Review of Goal

Proposed § 30.7(c) stated that the Administrator of OA would periodically review and update the national utilization goal, as appropriate. The Department received one comment on this paragraph from a national JATC that expressed support for a fixed utilization goal but cautioned that because of the untested nature of the proposed 7 percent goal the Department should review the goal on an annual basis.

The Department declines to adopt a set review period for the goal. This flexibility will enable the Administrator to review the goal whenever it is deemed necessary. Accordingly, the Department adopts paragraph (c) without change.

Paragraph 30.7(d): Utilization Analysis

Proposed § 30.7(d) set out the steps that the sponsor must use to determine

whether it has met the utilization goal. Similar to the utilization analysis required under § 30.5 for race, sex, and ethnicity, proposed § 30.7(d) stated that the sponsor must first conduct a review of its apprenticeship workforce to evaluate the representation of individuals with disabilities in the sponsor's apprentice workforce grouped by industry. The sponsor identifies the number of apprentices with disabilities based on voluntary self-identification by the individual apprentices. This figure would then be compared to the 7 percent utilization goal to determine if the sponsor is underutilizing individuals with disabilities. Proposed § 30.7(d)(3) required that the sponsor evaluate its utilization of individuals with disabilities in each industry group annually (or every two years, if it meets the conditions set forth in the proposed § 30.4(e)).

An advocacy organization supported the proposed disability workforce analysis requirements in § 30.7(d)(2) because it would ensure that individuals with disabilities will be represented in all industries. A number of commenters, however, opposed the utilization analysis because it would require identifying those individuals within the sponsor's program that had a disability. Many commenters worried about asking applicants and apprentices to self-identify as having a disability and were concerned that a lack of self-identification would make it difficult for sponsors to meet the utilization goal. An industry association argued that although the D.C. Circuit upheld the OFCCP's adoption of a utilization goal for individuals with disabilities in the case of *Associated Builders and Contractors, Inc. v. Shiu*,⁷³ the holding in that case did not justify extension of the identical data collection and utilization analysis in the apprenticeship context. Finally, a State Department of Labor sought clarification as to when, under proposed § 30.7(d)(3), sponsors would be required to evaluate their utilization of individuals with disabilities and how that timing related to the timing for review of AAPs established in proposed § 30.4(e).

Comments expressing specific concerns about asking individuals to self-identify are addressed later in the preamble under § 30.11. In response to those commenters who expressed concerns with meeting the goal as a result of under-reporting by apprentices with disabilities, the Department concedes the possibility that self-reported data regarding disability, as with any demographic data employers

maintain, will not be entirely accurate. While not perfect, the data that will result from the invitation to self-identify will nevertheless provide the sponsor and the Department with important information that does not currently exist pertaining to the participation of individuals with disabilities in the sponsor's applicant pools and labor force. This will allow the sponsor and the Department to better identify and monitor the sponsor's hiring and selection practices with respect to individuals with disabilities, and to more effectively ensure that the benefits of apprenticeship are accessible to individuals with disabilities. The Department again reminds sponsors that failure to meet the utilization goal for individuals with disabilities is not itself a violation of this Final Rule, and so sponsors will not be penalized if they fail to meet the goal because some apprentices with disabilities choose not to self-identify.

As was the case for OFCCP in *Associated Builders and Contractors, Inc. v. Shiu*, the Department is concerned that individuals with disabilities have lower participation rates in the workforce and higher unemployment rates than those without disabilities. We therefore seek to advance the employment of qualified individuals with disabilities through this Final Rule. To do so is well within the Department's authority to "formulate and promote the furtherance of labor standards necessary to safeguard the welfare of apprentices . . ." ⁷⁴ In *ABC v. Shiu*, the court upheld the 7 percent national utilization goal established by OFCCP and stated that "the agency adequately explained why the best available data did not allow it to create a tailored goal and why the uniform goal advances its regulatory objective." ⁷⁵ The Department sees no reason to depart from that analysis here.

As we did for the workforce analysis for race, sex, and ethnicity (discussed in § 30.5(b)), the Department is requiring that each sponsor conduct its apprentice workforce analysis for individuals with disabilities at the occupation level and its utilization analysis for individuals with disabilities at the major occupation level. This, again, will allow sponsors to be able to review their workforce at a more granular level, but will only require that utilization goals apply at the major occupation group level.

With regard to the timing of the workforce analysis that sponsors must conduct under this section, this should

be conducted at the same time that a sponsor performs its workforce analysis for race, sex, and ethnicity, pursuant to § 30.5(b). As explained in revised paragraph 30.7(d)(2)(ii), this process should be performed at each regular compliance review and no later than three years after a sponsor's most recent compliance review. Paragraph 30.7(d)(2) is revised to reflect this new schedule. Again, this schedule will apply uniformly across covered sponsors and will not depend on whether a sponsor has met its utilization goals.

Furthermore, as mentioned above, the Department is allowing both existing and new sponsors additional time in which to implement the apprenticeship workforce analysis requirements for individuals with disabilities. Similar to the compliance dates established in § 30.5, an existing sponsor will have two years from the effective date of this Final Rule in which to incorporate the 7 percent utilization goal into its AAP and to conduct a workforce analysis under this section. Paragraph 30.7(d)(2)(iii)(A) is revised to reflect this change.

Also, as with the workforce analysis for race, sex, and ethnicity, detailed in § 30.5(b), a sponsor registered with a Registration Agency as of the effective date of this Final Rule will have up to two years from the effective date in which to conduct a conforming workforce analysis for individuals with disabilities, pursuant to § 30.7(d)(2). This section of the Final Rule also establishes that new sponsors registering after the effective date of this Final Rule will have two years from the date of their registration to complete their written AAP.

Generally, the workforce analyses required by §§ 30.5(b) and 30.7(d)(2) should be performed simultaneously. Following the initial workforce analysis, all covered sponsors will be required to conduct workforce analyses at each regular compliance review and again if they have gone three years since their last compliance review. The schedule of evaluations is discussed in more detail in paragraph (d)(3), below.

Paragraph 30.7(e): Identification of Problem Areas

When the percentage of apprentices with disabilities in one or more industry groups was less than the utilization goal proposed in § 30.7(a), proposed § 30.7(e) required that the sponsor take steps to determine whether and where impediments to equal opportunity exist. Proposed § 30.7(e) explained that when making this determination, the sponsor must look at the results of its assessment of personnel processes and the

⁷⁴ 29 U.S.C. 50.

⁷⁵ 773 F.3d at 265 (D.C. Cir. 2014).

⁷³ 773 F.3d 257 (D.C. Cir. 2014).

effectiveness of its outreach and recruitment efforts as required by proposed § 30.9.

The Department received a few comments in regards to paragraph (e). An advocacy organization commented that this type of self-education is important to raising sponsors' attention to the pool of individuals with disabilities that could contribute to and benefit from their apprenticeship program. An industry association suggested that the Department revisit the requirements of § 30.7(e) as the proposed rule implied that failure to reach the utilization goal for individuals with disabilities meant that there must automatically be a barrier to equal employment. The commenter also requested examples of "impediments to equal opportunity" and sought guidance on how sponsors would be able to identify and measure such impediments. A national JATC was concerned that such a review process would require the assistance of a professional. Another national JATC expressed concern that the regulations did not account for the fact that non-attainment of the disability utilization goal does not mean that a program is discriminatory in its practices; rather, non-attainment could be that disabled individuals did not apply to the program, that they could not meet the requirements of the program, or they were unwilling to self-disclose disabilities.

With the exception of two changes discussed below, the Final Rule adopts § 30.7(e) as it appeared in the NPRM. The Department emphasizes that, if a sponsor is underutilizing individuals with disabilities, it does not mean that a problem area definitely exists or that the cause of the underutilization is discrimination. This finding simply serves as a notification to the sponsor that they must review their personnel processes and outreach to determine if such problem areas do exist. A sponsor is only required to engage in action-oriented programs, pursuant to §§ 30.7(f) and 30.8, if it discovers problem areas during the course of this review. To reflect this understanding, the regulatory text is changed slightly to read "the sponsor must take steps to determine whether *and/or* where impediments to equal employment opportunity exist" (emphasis added). As for types of "impediments to equal opportunity," these would be the same as the "barriers" described in § 30.4(a)(2) of this Section-by-Section Analysis. The Department also revises this paragraph in the Final Rule to indicate that utilization analyses will be conducted according to major

occupation group, rather than industry, consistent with changes in other paragraphs.

Paragraph 30.7(f): Action-Oriented Programs

In proposed § 30.7(f), the NPRM stated that if, in reviewing its personnel processes, the sponsor identifies any barriers to equal opportunity, it would be required to undertake action-oriented programs designed to correct any problem areas that the sponsor identified. Only if a problem or barrier to equal opportunity is identified must the sponsor develop and execute an action-oriented program.

The Department received no comments on this paragraph that have not already been addressed elsewhere, and so adopts proposed § 30.7(f) without change.

Paragraph 30.7(g)

Proposed § 30.7(g) clarified that the sponsor's determination that it has not attained the utilization goal in one or more industry groups would not constitute either a finding or admission of discrimination in violation of part 30. The Department noted, however, that such a determination, whether by the sponsor or by the Registration Agency, would not impede the Registration Agency from finding that one or more unlawful discriminatory practices caused the sponsor's failure to meet the utilization goal and that, in that circumstance, the Registration Agency would take appropriate enforcement measures.

The Department received no comments on this paragraph. Accordingly, the Department is only revising this paragraph consistent with other changes throughout this section to clarify that the utilization analysis will be performed according to major occupation group.

Paragraph 30.7(h)

Finally, proposed § 30.7(h) stated that the 7 percent utilization goal must not be used as a quota or ceiling that limits or restricts the employment of individuals with disabilities as apprentices. One commenter argued that the proposed 7 percent utilization goal was essentially a national hiring quota for individuals with disabilities. An industry association expressed concern that even though the Department stated that the proposed 7 percent utilization rate for persons with disabilities was a "goal," program sponsors may feel pressure to meet the goal and hire individuals who may not be as qualified as other applicants. A local JATC argued that the proposed disability utilization

goal would invite claims of reverse discrimination and lawsuits by able-bodied persons who were not admitted to the program because of the inclusion of an applicant with a disability.

The Department declines to make any changes to paragraph (h), as these comments are premised on a flawed understanding of the function of the disability goal. The Department has made clear, both in this paragraph and throughout the preamble, that the goal is not a quota and failure to meet the goal will not, in and of itself, result in any violation or enforcement action. Rather, a failure to meet the goal simply triggers a review by the sponsor of its employment practices to determine if impediments to EEO exist. The goal is intended to serve as a management tool to help sponsors measure their progress toward achieving equal employment opportunity for individuals with disabilities and does not require disability-based decision making. The Department recognizes that a failure to meet the 7 percent utilization goal does not necessarily mean that the sponsor is discriminating against individuals with disabilities and that there may be other explanations. It is for this reason that proposed § 30.7(g) stated that a sponsor's determination that it has not attained the utilization goal in one or more job groups does not constitute either a finding or admission of discrimination in violation of this part. Finally, with regard to the comment fearing reverse discrimination actions, we note that the ADA, as amended, prohibits claims of discrimination because of an individual's lack of disability, and we interpret this Final Rule consistent with that.⁷⁶

Targeted Outreach, Recruitment, and Retention (§ 30.8)

The Department proposed to revise the existing § 30.8 entitled "Records" and to move that language to proposed § 30.12, as discussed later in the preamble. Proposed § 30.8 instead replaced the current requirements related to outreach and positive recruitment discussed in § 30.4(c) of the existing regulation by addressing the regulatory requirements related to targeted outreach, recruitment, and retention. Under proposed § 30.8, when a sponsor is underutilizing a specific group or groups pursuant to proposed § 30.6, and/or when a sponsor determines, pursuant to proposed § 30.7(f), that there were impediments to equal opportunity for individuals with

⁷⁶ 42 U.S.C. 12201(g).

disabilities,⁷⁷ the sponsor was required to undertake targeted outreach, recruitment, and retention activities likely to generate an increase in applications for apprenticeship and improve retention of apprentices from the targeted group or groups and/or from individuals with disabilities as appropriate. These targeted activities would be in addition to the sponsor's universal outreach and recruitment activities required under § 30.3(b)(3).

Paragraph 30.8(a): Minimum Activities Required

Proposed paragraph § 30.8(a)(1) set forth the minimum, specific targeted outreach, recruitment, and retention activities that the Department proposed to require of a sponsor that had found underutilization of a particular group or groups pursuant to § 30.6 and/or who had determined pursuant to § 30.7(f) that there were problem areas with respect to its outreach, recruitment, and retention activities impacting individuals with disabilities. These activities included, but were not limited to: (1) Dissemination of information to community-based organizations, local high schools, local community colleges, local vocational, career and technical schools, career centers at minority serving institutions (including Historically Black Colleges and Universities, Hispanic-Serving Institutions, and Tribal Colleges and Universities), and other groups serving the underutilized group; (2) advertising openings for apprenticeship opportunities by publishing advertisements in newspapers and other media, electronic or otherwise, that have wide-spread circulation in the relevant recruitment area; (3) cooperating with local school boards and vocational education systems to develop and/or establish relationships with pre-apprenticeship programs inclusive of students from the underutilized groups, preparing them to meet the standards and criteria required to qualify for entry into apprenticeship programs; and (4) establishing linkage agreements enlisting the assistance and support of pre-apprenticeship programs,

community-based organizations and advocacy organizations in recruiting qualified individuals for apprenticeship and in developing pre-apprenticeship programs. In the NPRM, the Department requested comments on whether there were circumstances under which sponsors would have difficulty completing any of these activities.

In addition, to foster awareness of the usefulness of a sponsor's outreach, recruitment, and retention activities, proposed § 30.8(a)(2) also required the sponsor to evaluate and document the overall effectiveness of its outreach, recruitment, and retention activities after every selection cycle for registering apprentices. This review was designed to allow the sponsor to refine these activities as needed, as set forth in proposed § 30.8(a)(3). Finally, proposed § 30.8(a)(4) required the sponsor to maintain records of its outreach, recruitment, and retention activities and any evaluation of these activities.

Several commenters supported the outreach, recruitment, and retention requirements in § 30.8. Multiple advocacy organizations stated that these minimum steps are among the most effective approaches, are more effective and efficient than general outreach, and should be reasonable for every program to undertake. Many advocacy organizations expressed support for the inclusion of linkage agreements between sponsors and groups representing underutilized populations given their proven success in increasing participation of underutilized populations. In response to the Department's request for information on how the proposed rule's targeted outreach requirements to organizations that serve individuals with disabilities would impact sponsors, an advocacy organization for persons with disabilities stated that it would welcome the opportunity to form relationships with apprenticeship sponsors.

Several commenters, on the other hand, asserted that the requirements in proposed § 30.8 would be too burdensome for apprenticeship programs. Unions and JATCs stated that the proposed requirements would be a drain on their resources and time. A national JATC said that while disseminating information on job opportunities was not a significant burden, as apprenticeship programs already do so, partnering with other groups would add a lot of time and work to the program. The commenter recommended that the current outreach, recruitment, and retention requirements under 29 CFR part 30 remain the same because the requirements to formally document its recruitment efforts after

every apprenticeship cycle, which are continuously occurring, would create even more burdens on their program. A number of JATCs and industry associations expressed concern about the proposed outreach, recruitment, and retention requirements and suggested that the § 30.8(a) activities should be suggestions, rather than requirements, and that sponsors should be given more flexibility in deciding what activities are most effective. An SWA also supported giving sponsors greater flexibility to encourage creative and diverse mechanisms to diversify their workforce.

The Department retains the four specific activities outlined in proposed § 30.8(a)(1) in the Final Rule, as several comments reinforced the Department's belief that these were effective mechanisms for outreach, recruitment, and retention, and that sponsors who discover they are underutilized should be required to use them to attempt to correct their underutilization. The Department believes that these minimum requirements provide sponsors with enough guidance to be effective in improving their outreach methods, but still leaves sponsors with flexibility to decide on other, additional recruitment mechanisms. The Department further believes that the four minimum activities outlined in § 30.8(a)(1) will not be overly burdensome for sponsors. As one sponsor pointed out, the requirements are largely representative of the kinds of good faith efforts the Department has required to date for a sponsor to meet its EEO obligations required in §§ 30.3 and 30.4 of the current part 30.

Many commenters stressed that retention was a major issue for women because they are often targets for isolation, harassment, discrimination, stereotyping, and a lack of training rotation on the job. An advocacy organization expressed concern with minority apprenticeship completion rates, stating that, in 2013, 30.3 percent of African Americans completed their program in the construction industry in comparison to 46.7 percent of whites. Some commenters suggested that the Department create a separate section in the rule to address apprentice retention specifically, which should include requirements that apprenticeship program sponsors: (1) Analyze their apprentice retention rates for women, people of color, and individuals with disabilities; (2) set forth in their written AAPs the specific retention activities they plan to take for the upcoming program year, as appropriate; (3) conduct exit interviews of each apprentice leaving the sponsor's

⁷⁷ As set forth in more detail in the discussion of § 30.7, the different "triggers" for engaging in action-oriented programs for race/sex versus disability are necessary because of the differences in labor market demographic data maintained for each. Because disability data is not available at the granular level that race/sex data is, and because there is not a data source for individuals with disabilities that matches exactly with the definition of disability found in the ADA, this Final Rule, like the Section 503 Final Rule, includes an additional step wherein sponsors must identify whether impediments to equal employment opportunity exist before the sponsor is required to engage in good faith efforts to correct the problem.

apprenticeship program prior to completion; and (4) implement policy and professional development practices designed to build staff capacity to support and serve traditionally underrepresented groups. Individual commenters recommended using members of the workforce that represent the marginalized populations to perform outreach to the particular underrepresented group and recommended that the Department encourage mentoring as a means for increasing retention.

The Department recognizes the importance of retention activities in building greater diversity within apprenticeship programs, but declines to include these specific suggestions as mandatory. Many of the retention activities suggested by commenters were, in fact, already included in proposed § 30.8(b). Furthermore, the Department anticipates that sponsors will evaluate their program's completion rates as part of their review of personnel processes under § 30.9.

An advocacy organization also recommended that language be added to § 30.8 to require apprenticeship programs to work with their local workforce development system as a fifth required outreach, recruitment, and retention activity because the workforce development system serves individuals that are largely members of populations currently underrepresented in the registered apprenticeship system. Similarly, two State vocational rehabilitation (VR) agencies recommended that the Department revise § 30.8(a) to specifically refer to State VR agencies.

The Department notes that, pursuant to § 30.3(b)(3)(i), all sponsors are already required to maintain a list of current recruitment sources that will generate referrals from all demographic groups within the relevant area, and that these sources could include One-Stop Centers. However, recognizing that the public workforce system can play a key role in linking sponsors to a diverse pool of apprenticeship candidates, § 30.8(a)(1)(i) of the Final Rule includes reference to workforce system partners, including One-Stop Career Centers, as examples of entities to which sponsors must disseminate information regarding its apprenticeship program.

Two advocacy organizations suggested that the Department add the language "including those who serve underrepresented populations" to each of the four requirements detailed in proposed § 30.8(a)(1) through (4). The commenters stated that this language would not create an additional burden to apprenticeship programs and would

signal the Department's intent to reach these populations, creating opportunities for further engagement with these groups.

The Department agrees with these comments that the activities outlined in § 30.8(a)(1) should focus more on what type of population these outreach and recruitment efforts are reaching, rather than prescribing the specific organizations that sponsors must reach out to. Accordingly, § 30.8(a)(1)(i) of the Final Rule is revised to focus on disseminating information to organizations serving the underutilized group regarding the nature of apprenticeship, requirements for selection for apprenticeship, availability of apprenticeship opportunities, and the equal opportunity pledge of the sponsor. The Final Rule further specifies that these organizations may include community-based organizations, local high schools, local community colleges, and local vocational, career and technical schools, thus providing the sponsor with greater flexibility in deciding which organizations will serve as the best partners in reaching out to the specific community in which the sponsor is underutilized.

Some commenters identified specific outreach, recruitment, and retention activities that they thought were not effective. A JATC stated that the proposed rule's newspaper advertising requirement in § 30.8(a)(1)(ii) would be a waste of money and suggested that the sponsors be given more flexibility to advertise in media formats that are more affordable and more effective in reaching targeted audiences. An industry association argued that registered apprenticeship programs should be encouraged—not required—to establish partnerships with pre-apprenticeship programs because this would effectively require apprenticeship programs to establish and operate their own pre-apprenticeship programs. Many commenters were concerned about what they perceived to be a requirement that sponsors establish pre-apprenticeship programs.

The Department agrees that some of these requirements, as written, may be overly prescriptive for sponsors. The Department is therefore making two additional changes to § 30.8(a). First, the Department will remove the requirement that sponsors advertise their apprenticeship opportunities in newspapers, referring instead to "appropriate media" which have a wide circulation in the relevant recruitment areas. Second, the Department reaffirms, as it did originally in the preamble to the NPRM, that linkage agreements need

not be highly formal, detailed arrangements, but rather are intended to be straightforward, dynamic partnerships that can be easily tailored to meet sponsors' needs. The Department also emphasizes that nothing in the Final Rule requires a sponsor to establish a pre-apprenticeship program; the rule only requires that sponsors leverage existing pre-apprenticeship programs as sources for recruitment into the sponsors' programs. To make this clear, the Department is amending § 30.8(a)(1)(iv) to read: "Establishment of linkage agreements or partnerships enlisting the assistance and support of pre-apprenticeship programs, community-based organizations, advocacy organizations, or other appropriate organizations, in recruiting qualified individuals for apprenticeship" (emphasis added). Amending the "and" to "or" also clarifies that linkage agreements need not be entered into with all of these organizations, but with any of the types of organizations that may assist in increasing outreach to underutilized groups.

Two national unions and a local JATC urged the Department to clarify whether the ERISA would permit joint labor-management programs governed by ERISA to use their resources to support pre-apprenticeship programs, such as by funding pre-apprenticeship programs or providing pre-apprenticeship training to the community. This comment was addressed within the larger discussion of how this rule coexists with ERISA fiduciary obligations in § 30.1, above.

A number of commenters also suggested examples of technical assistance that the Registration Agency could provide. For instance, several advocacy organizations recommended that the Department develop a standardized but customizable evaluation tool which would include the criteria that should be used to evaluate the effectiveness of such outreach, recruitment, and retention activity, and would allow sponsors to self-document deficiencies and self-identify remediation activities. Several advocacy organizations also recommended that the Department reference in the Final Rule and/or on its Web site the technical assistance tools and materials that can be used to facilitate sponsors' outreach, recruitment, and retention efforts, including those developed by Women in Apprenticeship Act (WANTO) grantees.

As resources permit, the Department will gather effective tools for compliance assistance and will work to provide guidance to sponsors reflecting

recommended practices for outreach, recruitment, and retention.

Paragraph 30.8(b): Other Activities

In addition to the activities required in proposed § 30.8(a), as a matter of best practice, proposed § 30.8(b) encouraged but did not require sponsors to consider other outreach, recruitment, and retention activities that may assist them in addressing any barriers to equal opportunity in apprenticeship. Such activities included but were not limited to: (1) Use of journeyworkers and apprentices from the underutilized group or groups to assist in the implementation of the sponsor's AAP; (2) use of individuals from the underutilized group or groups to serve as mentors and to assist with the sponsor's targeted outreach and recruitment activities; and (3) conducting exit interviews of each apprentice leaving the sponsor's apprenticeship program prior to receiving his/her certificate of completion to understand better why the apprentice is leaving and to help shape the sponsor's retention activities.

Several advocacy organizations recommended that the Department make it mandatory for sponsors to conduct an exit interview with each apprentice leaving the program early, rather than an encouraged activity under § 30.8(b), reasoning that it would help program sponsors better understand the reason for early departure. An advocacy organization also recommended that the Department add direct entry as an encouraged, but not required, approach to outreach. Further, this commenter suggested that the Department should encourage program sponsors to administer their own in-house programs to prepare the members of targeted classes for the program's entrance exam. The Department declines to incorporate these activities into the regulatory text. Nonetheless, sponsors are once again encouraged to use these, or any other outreach, recruitment, and retention method that it feels will be most useful in increasing the diversity of its program.

Finally, some commenters put forth suggestions, or sought clarification, on how parties can work together to conduct outreach activities. An industry association recommended that the Department give smaller programs the option to pool their outreach efforts and have their efforts be executed by a single entity or a third party. An industry association stated that, while they do not oppose the proposed four required recruitment activities, association-sponsored programs that rely primarily

on their employer members to supply apprentices to chapter programs should be entitled to rely on the outreach and recruitment efforts of the actual employers of the apprentices in question. In such circumstances, this commenter suggested that association program sponsors should be exempted from requirements of § 30.8, and/or should be permitted to rely on the affirmative action efforts that their participating employer members have engaged in to establish the necessary outreach and recruitment efforts.

Sponsors are encouraged to work with each other, with their employers, with outside parties and organizations, and with industry groups and consortia, as appropriate, to improve the effectiveness of their outreach and recruitment efforts. Ultimately, however, it will be the sponsor's responsibility to ensure that its program is meeting the standards established in this Final Rule. The Final Rule does not provide for exemptions for joint-programs, and the Department declines to include one, for the reasons discussed in previous sections addressing the joint sponsor issue.

Review of Personnel Practices (§ 30.9)

Proposed § 30.9 required that any sponsor subject to the AAP requirements in this proposed rule (*i.e.*, those with five or more apprentices who are not otherwise exempt) must review its personnel processes on at least an annual basis to ensure that it is meeting its obligations under part 30.

Paragraph 30.9(a)

Several advocacy groups supported the proposed annual personnel processes review requirements under § 30.9 and recommended that it would be beneficial to involve apprentices and journeyworkers in the review. Another advocacy group supported the proposed proactive review approach in § 30.9 and recommended reviewing affirmative action measures as frequently as monthly during the first year, making the results of such reviews public, and involving community stakeholders in the reviews.

In contrast, several commenters disagreed with the annual review requirements. A State Department of Labor asserted that the proposed annual review of personnel process may be excessive and costly and could deter the opening and expansion of apprenticeship programs. A national JATC stated that although personnel process reviews were good business practice, the reviews should not be required every year. Instead, the JATC recommended reviews only in the event

that data indicate a deficiency in certain demographics and that the review would be a part of the effort to correct the deficiency. An industry association requested the Department eliminate the requirement that program sponsors review personnel practices every year and instead recommended that reviews be conducted on an "as needed" basis or no less than every 3 years. Commenting that sponsors do not indenture new participants every year, a State Department of Labor recommended that the Department require personnel process reviews only in advance of recruitment and that sponsors maintain records of these reviews to supply to the Registration Agency upon request.

In the NPRM, the Department commented that this requirement was a good business practice that many entities should already be conducting themselves to help determine whether they are in compliance with the EEO obligations that they have undertaken under current part 30. Indeed, the proposal drew upon provisions in the existing regulations, such as those providing for "periodic audits of affirmative action programs and activities" set forth under current § 30.4(c)(10). We disagree with the commenter suggesting that such reviews should occur only when a sponsor is underutilized in women or a particular racial/ethnic group. This is because the aim of ensuring that an apprenticeship program is operating free from discrimination goes beyond the simple numbers of individuals from various protected groups, and discrimination can exist absent a finding of underutilization. For instance, a careful review of personnel policies at the program, industry, and occupational level can uncover occupational segregation in which women and/or minorities are more likely to be in lower paying occupations than higher paying occupations, as well as unequal treatment in compensation, work assignments, performance appraisals, discipline, the handling of accommodation requests—all of which are important elements of equal employment opportunity that may go largely undetected in utilization analyses. Indeed, the idea that an AAP is purely numerical-driven helps to feed the flawed notion that it constitutes "quotas." The Final Rule is revised to clarify that these reviews are required whether or not there is underutilization, and that this review must look at program, industry, and occupational policies and practices to fully examine

whether there are impediments to equal employment opportunity.

We understand the concerns of commenters asserting that an annual review may be burdensome and serve to discourage interest in new entities creating apprenticeship programs, but have concluded that this review is a valuable exercise for sponsors to follow so that they can uncover any barriers to EEO within their programs. One commenter suggested that AAP reviews should include employment practices as well as personnel processes and administration of the program, reasoning that diverse work assignments and rotation among work processes are critical to apprenticeship training. The commenter said that creating record systems to capture actual on-the-job training and maintaining those records throughout the course of an apprenticeship is necessary to ensure quality training. The proposed rule (and in turn the Final Rule) incorporated these ideas, listing a number of employment practices that would be part of the review in § 30.9, and the recordkeeping requirement of § 30.12 requires retaining information relative to the operation of the apprenticeship program, specifying a number of employment actions relevant to apprenticeship including “hours of training provided.”

Several commenters requested clarification of the requirements in proposed § 30.9 as they would relate to group sponsors. A national union and a national JATC stated that proposed § 30.9 does not distinguish between JATCs and employers and, thus, imposes obligations on JATCs that are inapplicable to these programs since they do not employ apprentices or individuals seeking to be apprentices. The commenters stressed that because JATCs do not promote apprentices or establish wages, only the employers have the ability and obligation to address harassment and discrimination affecting recruitment and retention. Specifically, an industry association recommended that the Department remove the requirements in § 30.9(a), reasoning that the requirements to review the listed personnel practices would be impossible for joint employer apprenticeship programs in the construction industry to meet. The commenter stressed that construction apprentice programs provide training to apprentices who at various times work for different construction employers, all of whom have separate employment policies and procedures. The commenter reasoned that the construction apprentice programs have no ability to monitor employment

policies or procedures of each individual employer.

The Final Rule requires the review of all sponsors. As discussed in several previous sections raising the issue of how the obligations will apply to group sponsors, we recognize that certain personnel actions may be undertaken by participating employers, rather than the sponsors themselves. In such cases, the reviews may correspond to the structure of the sponsor's program, but in keeping with historical practice and provisions of the existing rules, sponsors will need to coordinate with the participating employers in order to ensure that the sponsors are not coordinating apprenticeship programs with employers that are actively discriminating against the apprentices placed there. OA will provide further guidance modeling what an appropriate review will look like under these regulations.

An industry association requested clarification on how penalties would be assessed in the event of noncompliance with § 30.9. In particular, the commenter asked whether a penalty would be assessed against the sponsor entity or the individual EEO officer designated by the sponsor as “responsible” and “accountable” for overseeing and implementing the sponsor's AAP, per proposed § 30.3(b)(1). As has been the case historically, OA's interest is in apprenticeship programs that are successful—in the development of apprentices, employers, and in the promotion of equal employment opportunity. To that end, OA concentrates its resources on providing technical assistance so sponsors comply in the first place, and in the event violations occur, having sponsors voluntarily correct them. The latter part is embodied in the Final Rule's discussion of compliance evaluation findings at § 30.13(b), below. However, if sponsors refuse to correct deficiencies identified, OA ultimately may seek to deregister the program per § 30.15 of the Final Rule.

Finally, as with previous sections describing AAP obligations, the Final Rule adds a new paragraph to § 30.9, at 30.9(a)(1), describing when sponsors must come into compliance with the obligations specified therein. In short, those who are already sponsors of registered apprenticeships as of the effective date of this rule will have two years to come into compliance with this section. Sponsors who register apprenticeship programs for the first time after the effective date of the rule will have two years from the date of registration to comply with this section.

Paragraph 30.9(b)

Proposed § 30.9 also required a sponsor to retain records of its annual review of personnel practices, and to identify any modifications that the sponsor has made or plans to make as a result of this review. A SWA requested clarification on the proposed § 30.9(b) requirement that program sponsors “include a description of its review.” The commenter stated that the language was unclear as to whether the rule required the sponsor to detail when and how steps were conducted and present its findings, or if the program sponsor was required to publish the procedure used for the review. Generally speaking, the memorialization of the review could include both of these things, but the focus should be on the former—how, when, and which personnel processes were reviewed, as well as any modifications made as a result of this review. As stated above, OA will provide further guidance modeling what an appropriate review would look like under this section, including a model written AAP.

Finally, a commenter requested that the Department remove the proposed § 30.9(b) requirement that sponsors include descriptions of these reviews in their written AAPs, reasoning that personnel processes may need to be revised frequently and should not be tied to AAP review schedules. Furthermore, the commenter argued that these reviews of personnel processes may be difficult for the Registration Agencies to monitor because there would be little consistency among sponsors as to how they perform the review.

As to the first point, we first clarify that not all personnel process revisions need to be retained, but only those made to the program “as a result of its review” required by § 30.9(a), that is, the review for EEO compliance. We note that also this review under § 30.9(a) occurs annually and the schedule for updating the written AAP is less frequent, occurring at each compliance evaluation and then again three years later if there has been no intervening compliance evaluation. As a matter of best practice, we would expect the sponsor to memorialize any changes made to their personnel practice at the time they are being made, but OA will measure compliance by whether the sponsor has memorialized the changes in its written AAP. While updating the written AAP occurs not less than every three years, each update should include the results of the reviews from each year since its last written AAP. As for the point regarding consistency, as stated above,

OA will provide models for what the review should include, which should help to promote some consistency.

Selection of Apprentices (§ 30.10)

Under the existing section covering selection of apprentices, § 30.5, sponsors could select any one of four methods of selecting apprentices: (1) Selection on the basis of rank from pool of eligible applicants; (2) random selection from pool of eligible applicants; (3) selection from pool of current employees; or (4) an alternative selection method which allows the sponsor to select apprentices by means of any other method including its present selection method, subject to approval by the Registration Agency. Alternative selection methods could include, for example, the use of interviews as one of the factors to be considered in selecting apprentices, pre-apprenticeship programs, “direct entry” programs,⁷⁸ or a combination of two or more selection methods.

Proposed § 30.10 (renumbered due to reorganization of this part) sought to simplify the current regulatory requirements related to procedures used by sponsors to select apprentices to adopt any method for selection of apprentices, provided that the method used: (1) Complies with the UGESP at 41 CFR part 60–3; (2) is uniformly and consistently applied to all applicants for apprenticeship and apprentices; (3) complies with the qualification standards set forth in title I of the ADA; and (4) is facially neutral in terms of race, color, religion, national origin, sex, sexual orientation, age (40 or older), genetic information, and disability. Commenters expressed varying views, some general and some specific, on the proposed revisions.

With regard to general comments, a State JATC and an industry association supported the streamlined approach for apprenticeship programs articulated in § 30.10 and stated that the proposed rule would provide greater flexibility to apprenticeship programs in their selection methods. The State JATC argued that the current approach requiring program sponsors to utilize one apprenticeship selection process prevents programs from attracting a broader range of applicants because it does not account for factors like geographic location, wherein one selection method may be suitable for one location, but not another. The JATC reasoned that the “one size fits all”

approach disrupted the administration of intake practices at their training centers and was ineffective at reaching out to potential apprentices. Many commenters further supported the proposed requirement that sponsors’ selection method(s) be facially neutral in terms of race, color, religion, national origin, sex, sexual orientation, age (40 or older), genetic information, and disability (§ 30.10(b)(4)), as well as the requirement that sponsors must evaluate the impact of their selection procedure(s) on race, sex, and ethnic groups (Hispanic or Latino/non-Hispanic), but some requested that gender identity, pregnancy, and caregiver status be added to this list. We decline to do so, for reasons previously provided.

However, several commenters generally preferred the current requirements relating to selection of apprentices because they were specific and descriptive, and expressed concern that the proposed regulations were lacking in this regard and would not encourage or enable apprentice selection procedures that are more equitable than the processes already in use by apprenticeship programs. In addition, several commenters expressed concern that proposed § 30.10 would impose a significant burden upon sponsors. An SWA argued that the proposed regulations would require expenditure of financial and human capital resources to determine if their selection procedures meet the compliance requirements of UGESP, Title I of the ADA, and EEOC regulations. Another State agency expressed concern that the requirement to comply with UGESP regulations may drive away potential sponsors who find the administration of the regulation overly burdensome.

As to the burden concern connected with familiarization of the UGESP, we note that the existing regulations required that sponsors follow the procedures set forth in UGESP when they were selecting on the basis of rank from a pool of eligible applicants or any alternative selection methods using qualification standards.⁷⁹ The proposed regulation was therefore in keeping with the existing regulations in that respect, and thus should not add any additional burden.⁸⁰ Relatedly, with regard to

some commenters’ preference for previous selection models, the Final Rule does not prevent sponsors from using the same selection devices they’ve used under the previous regulations if they prefer to do so, so long as these selection devices do not discriminate as specified in this part. An industry association recommended language like this in the regulatory text, but given that references to “the previous edition of CFR 29 part 30” will soon become obsolete, we believe the guidance stated here is sufficient.

Numerous commenters recommended that the Department explicitly state that sponsors are permitted and encouraged to implement a different selection procedure(s) or extend or reopen selection periods if the initial selection procedure or period was not effective in complying with EEO requirements and/or making progress towards affirmative action goals. The proposed rule is broadly worded in order to provide flexibility to sponsors so that they may use the selection method or methods that fit their program, including any of the methods included in the formal rule. Thus clarified, there is no need to add this proposed wording to the rule.

Some commenters addressed direct entry programs as a selection procedure. An industry association expressed support for the proposed rule’s mention of direct entry programs as a potential selection processes, commenting that many of its members preferred this method. An advocacy organization also supported the Department’s express allowance of direct entry programs to apprenticeship selection, stating that it was an effective method for improving inclusion of underrepresented groups. In the NPRM and in this preamble, the Department has underscored that the flexible approach in the proposed § 30.10 would permit sponsors to use direct entry as a selection method, but does not believe that this approach must be explicitly mentioned in the language of the rule above other methods.

One national JATC was concerned that the proposed rule’s treatment of direct entry processes as a selection procedure would require them to discontinue using their direct entry program. It argued that direct entry methods should not be treated as selection procedures. The commenter asserted that although the proposed rule recognized direct entry programs as an acceptable selection procedure, the language in the preamble requiring that selection methods apply “to all applicants for apprenticeship and

selection procedure, random selection, also does lend itself to analysis under UGESP.

⁷⁸ Under this selection method, the application process is waived so that qualified applicants can enter directly into an apprenticeship program, where the individual applicant demonstrates specific education and/or skills previously attained.

⁷⁹ See existing 29 CFR 30.5(b)(1), 30.5(b)(4)(B).

⁸⁰ A third selection procedure in the existing regulations, selection from a pool of current employees, did not include a requirement for UGESP compliance, but this is largely because such selections are frequently based on seniority, and there is built into UGESP an exemption for bona fide seniority systems. 41 CFR 60–3.2(C). The fourth

apprentices' would result in apprenticeship programs not being able to obtain apprentices from any other source. The commenter stressed that its direct entry apprenticeship program was meant to supplement existing pools of applicants, not to be the sole entry into the apprenticeship program. In a similar vein, an industry association asked the Department to clarify that pre-apprenticeship programs are not required to be an exclusive source of apprentice recruitment, and suggested clarifying language to proposed § 30.10(b)(2) to address this. A State JATC stated that with the increasing potential for non-union apprenticeship programs, union apprenticeship programs should be permitted to employ more than one intake method to ensure that union apprenticeship programs would survive.

We have considered the commenters' points, and have clarified the regulatory text in response. The proposed § 30.10(b)(2) stated that "[t]he selection procedure must be uniformly and consistently applied to all applicants and apprentices." One reading of that language is that sponsors must use only one selection procedure; that was not the intent. The intent, as stated in the NPRM preamble, was to allow sponsors flexibility to use one or more selection procedures, and that the selection procedures must be uniformly and consistently applied to those applicants within each procedure. To clarify this point, the Department has revised "method" and "procedure" to include the plural as appropriate throughout this provision. The Department has also revised § 30.10(b)(2) by adding "within each selection procedure utilized."

A few commenters asked the Department to clarify how sponsors should comply with UGESP requirements. An SWA stated that the inclusion of UGESP and ADA regulations leave program sponsors with no clear idea of what is acceptable. An industry association echoed these comments and suggested that the Department should clarify that apprenticeship qualifications derived from the 29 CFR part 29 rules on apprenticeship standards are consistent with the UGESP. A State agency and an industry association stated that the UGESP regulations are complex and requested clarification on how the requirements would be applied to apprenticeship programs. For example, a State agency stated that 41 CFR part 60-3 requires validation of selection procedures but the proposed rule did not state how this provision would be applied. The commenter also raised a further question suggesting that the

implementation of this requirement to follow the UGSEP procedures could be complicated for group sponsors. The commenter stated that 41 CFR part 60-3 applies to individual employers with Federal contracts, whereas apprenticeship programs may or may not be individual employers. In particular, this commenter said that in the construction trade often sponsors are a joint apprenticeship committee or non-joint committee. The commenter stated that the apprenticeship program sponsors develop the selection procedures and the apprenticeship compliance review is conducted on the sponsor not the individual employer. Therefore, the commenter asserted that the Department's reference to UGESP must be clarified.

As noted above, under the current provisions addressing selection procedures, program sponsors, whether individual or group sponsors, are already required to comply with those regulations under the current part 30. In addition, as clarification, the procedures in 41 CFR part 60-3 are not limited to individual employers with Federal contracts; rather they provide a uniform framework to a variety of entities for the proper use of tests and other procedures. Nonetheless, the Department expects to provide guidance to stakeholders in order to facilitate implementation of the new rule.

Other commenters also encouraged the Department to provide guidance. An advocacy organization suggested that the Department should issue guidance on best practices in selection procedures. The commenter stated that this guidance should include references to linkages with pre-apprenticeship programs as an eligible pool of workers, as well as "analysis of selection procedures, such as relying on interviews or base apprenticeship program selection on a homogeneous pool of current candidates that can reinforce underrepresentation the regulations seek to remedy." An individual commenter suggested that the Department provide uniform guidelines on employee selection using the process that created the Advisory Committee on Apprenticeship's guidance on quality pre-apprenticeship programs. Numerous commenters recommended that the Department establish guidelines for standardizing direct entry into apprenticeships for graduates of pre-apprenticeship programs that adhere to the quality framework to be set out in § 30.2. As stated throughout, the Department anticipates issuing technical assistance guidance in advance of the applicable effective and/or compliance dates of this

rule, and will give strong consideration to incorporating these specific requests.

Numerous advocacy organizations suggested that the regulations should explicitly require that skills requirements, including strength and/or physical abilities tests or standards that are used to screen and/or rank apprenticeship candidates, must be related to and necessary for the actual on-the-job performance requirements and must meet the requirements listed in the current regulations at § 30.5(b)(1)(iii). Some of these commenters reasoned that these tests had sometimes been used to exclude certain groups of applicants. In response, the Department notes that the requirements of current § 30.5(b)(1)(iii) are carried forward by the requirement that the use of the selection procedure comply with the UGESP in 41 CFR part 60-3, as well as the standard non-discrimination obligations set forth in § 30.3.

Finally, some advocacy organizations stated that, if a program sponsor wanted to maintain a selection procedure that resulted in an adverse impact to underrepresented groups, it must demonstrate there is no alternate procedure available to meet the business necessity. This comment is already addressed by the rule, as it generally states the obligations for employers under the UGESP whose selection procedure(s) have resulted in an adverse impact. The Department notes that the term "underrepresented groups" is not necessarily synonymous with "protected groups," under the rule, and clarifies that UGESP applies only to race, sex, and ethnic groups.

Invitation To Self-Identify as an Individual With a Disability (§ 30.11)

The Department proposed to move the language in current § 30.11 entitled "Complaint procedure," to § 30.14, and to add a new § 30.11 entitled "Invitation to Self-Identify as an Individual with a Disability." This section of the NPRM proposed to require sponsors required to maintain an AAP to invite applicants for apprenticeship to voluntarily self-identify as an individual with a disability protected by this part at three stages: (1) At the time they apply or are considered for apprenticeship; (2) after they are accepted into the apprenticeship program but before they begin their apprenticeship; and (3) once they are enrolled in the program. Thereafter, proposed § 30.11 required sponsors to remind apprentices yearly that they may voluntarily update their disability status, thereby allowing those who have subsequently become disabled or who did not wish to self-

identify during the application and enrollment process to be counted. Proposed § 30.11 also clarified that sponsors would not be permitted to coerce individuals to self-identify, required that sponsors maintain self-identification information in a confidential manner, and emphasized sponsors' continuing responsibility to take affirmative action with respect to known disabilities and to refrain from discriminating against individuals with disabilities.

The Department received a number of comments regarding the requirement to invite self-identification. Many commenters opposed to the requirement argued that applicants or apprentices would not choose to self-identify and that this would result in inaccurate data. For example, unions worried that apprentices and trainees would be reluctant to disclose disabilities, particularly those working in the construction industry where the work often requires certain physical capabilities. These commenters also opposed any penalty that would be applied to sponsors for failing to meet their utilization goal for individuals with disabilities when the failure to reach the goal could be due to apprentices and applicants choosing not to self-identify. A number of other commenters, including SWAs, also questioned the accuracy of the data produced by self-identification and requested clarification on the proper disability eligibility determination procedures, including how apprentices would know if they have an eligible disability and how sponsors can determine if the individual has an eligible disability. One commenter suggested that sponsors be permitted to track and report applicants or apprentices who request and document that they need accommodations for a disability, even if they have not voluntarily self-identified.

The Department is retaining the requirement to invite self-identification in the Final Rule. We concede the possibility that there may be underreporting of individuals with disabilities reporting as such, especially at the beginning when the requirement is new. The Department does not think, however, that this is a sufficient reason to remove the requirement to invite self-identification. While not perfect, the data that will result from this requirement will provide, for the first time, some degree of quantitative data regarding the participation of individuals with disabilities in the sponsor's apprenticeship workforce and applicant pools. This, in turn, should allow the sponsor and the Department

to better identify, monitor, and evaluate the sponsor's recruitment and employment practices with respect to individuals with disabilities. We also believe that the response rate to the invitation to self-identify will increase over time, as people become accustomed to the invitation and workplaces become more welcoming to individuals with disabilities. The use of standardized language issued by the Administrator in the invitation will also reassure applicants that the request is routine and executed pursuant to obligations created by OA, and will hopefully also increase the response rate. Sponsors should also work to develop an inclusive and welcoming culture and provide support for its apprentices and applicants with disabilities. OA will provide technical assistance and guidance regarding methods for increasing participation in the self-identification process.

Additionally, the standardized invitation language contains information to help individuals know if they have, or had, a disability. Sponsors should accept the identification provided by the individual without seeking to further verify the nature of the individual's disability. The standardized language proposed in the NPRM, and adopted in the Final Rule, prescribes a narrow inquiry so as to minimize privacy concerns and the possibility of misuse of disability-related information. The required invitation asks only for self-identification as to the existence of a "disability," not as to the general nature or type of disability the individual has, or the nature or severity of any limitations the individual has as a result of their disability.

Furthermore, the Department reiterates that failure to meet the utilization goal for individuals with disabilities will not, by itself, result in any violations of this part. Therefore, even if apprentices with disabilities choose not to self-identify, the sponsor would not be subject to any enforcement actions as a result of its underutilization. Again, failure to meet the goals would simply require the sponsor to assess whether impediments to equal opportunity exist in its program. If a sponsor discovers that apprentices are refusing to self-identify, the sponsor could note that as a possible reason for its underutilization, and also attempt to take steps that would encourage apprentices to feel more comfortable self-identifying. We note that OFCCP has published on its Web site a video explaining why job applicants and employees are asked to voluntarily self-identify if they have a

disability under Section 503, the important role that self-identifying plays in ensuring equal employment opportunity for individuals with disabilities, and offering employers the option of disseminating the video to their applicants and employees as guidance to increase self-identification.⁸¹

With regard to the question of sponsors identifying individuals with disabilities who do not self-identify, the Department agrees that it is important that the reporting of disability demographic information be as accurate as possible. The Department therefore believes that it is appropriate to allow sponsors to identify an individual as having a disability for the purposes of § 30.7, if the individual does not voluntarily self-identify when: (1) The disability is obvious (*e.g.*, someone is blind or missing a limb) or (2) the disability is known to the sponsor (*e.g.*, an individual says that he or she has a disability or requests reasonable accommodation that is clearly related to a disability). This is consistent with the approach that OFCCP has used for disability identification in its Section 503 program, as well as the approach used to identifying ethnicity for those who have not disclosed under its Executive Order 11246 program.⁸² The Department believes that this approach strikes the appropriate balance between the privacy concerns of those with disabilities and the need for reporting information to be as accurate as possible. Sponsors may not guess or speculate when identifying an individual as having a disability. Nor may they assume that an individual has a disability because he or she "looks sickly" or behaves in an unusual way. As one commenter suggested, a sponsor may also include individuals who request reasonable accommodations as individuals with disabilities, even if those individuals choose not to self-identify.

Some commenters, including JATCs and a local union, asserted that the proposed § 30.11 requirements would place additional human resources, reporting, and cost burdens on apprenticeship programs and would delay the processing of applications. A State agency recommended that the Department should not require program sponsors to request that individuals self-

⁸¹ See Office of Federal Contract Compliance Programs: Disability Inclusion Begins with You, available at <https://www.dol.gov/ofccp/SelfIdVideo.html> (last accessed May 9, 2016).

⁸² See <http://kb.dol.gov/DOLArticlePage?agency=OFCCP&parentCatValue=Employer&article=ka10000000WEq1AAG> (last accessed June 21, 2016).

identify for one year and that the Department should take additional time to work through an implementation strategy for the new requirements. The commenter also stated that additional guidance and technical assistance would be necessary prior to sponsors implementing the requirements in § 30.11.

To ease the burden on sponsors in implementing this provision, the Department is giving sponsors more time to come into compliance with this provision, as detailed below in new paragraph 30.11(h). The Department will provide technical assistance to sponsors during the transition time. As discussed above, the Department is also prescribing the language that sponsors must use when inviting apprentices or applicants to self-identify. Sponsors, therefore, will not need to spend time creating their own self-identification language. The Department also notes that application processing need not be significantly slowed as a result of including the self-identification invitation form. As the Final Rule states that the invitation must be detachable from the application for apprenticeship, the applicant's self-identification form can be reviewed for data analysis purposes at a later time and need not be reviewed in conjunction with the application for apprenticeship.

Paragraph 30.11(a): Pre-Offer

Proposed § 30.11(a) required the sponsor to invite each applicant to voluntarily self-identify as an individual with a disability at the time they apply for or are considered for apprenticeship. Proposed § 30.11(a) further explained that the invitation may be included with the application materials, but must be separable or detachable from the application for apprenticeship and that the sponsor was required to use the language prescribed by the Administrator, pursuant to § 30.11(b).

Multiple commenters expressed concern with the pre-offer invitation, claiming that it conflicted with the ADA and its implementing regulations. One commenter requested that the term "voluntarily" be inserted prior to "inform the sponsor," as is currently the case under Section 30.11(1)(c). A Member of Congress asserted that, despite the EEOC's position that invitations to self-identify as part of an AAP would not violate the ADA, individuals could still pursue litigation against employers under the ADA. A number of commenters, including a company and a State agency, remarked that inquiring about an individual's disability status, particularly at the pre-offer stage, could conflict with state law

as well. An industry association asked how a person's status as an individual with a disability can be used for affirmative action purposes if it cannot be used by hiring managers in the decision-making process.

As detailed in the NPRM, the requirement to give applicants and employees the opportunity to self-identify is consistent with the ADA. Although the ADA generally prohibits inquiries about disability prior to an offer of employment, it does not prohibit the collection of this information by a sponsor in furtherance of its part 30 affirmative action obligation to provide equal opportunity in apprenticeship for qualified individuals with disabilities. The EEOC's regulations implementing the ADA state that the ADA "does not invalidate or limit the remedies, rights, and procedures of any Federal law . . . that provides greater or equal protection for the rights of individuals with disabilities" than does the ADA.⁸³ The OA part 30 rule is one such law. In the course of OFCCP's Section 503 rulemaking, counsel for the EEOC provided a letter stating that OFCCP's pre-offer self-identification process, which is functionally identical to that included in this Final Rule, was permissible under the ADA. That interpretation would apply with equal power to this Rule. Accordingly, the Department adopts § 30.11(a) as proposed.

With regard to the concern that, notwithstanding the legality of this provision, sponsors may face increased discrimination complaints as a result, we do not believe this will present a significant obstacle. While knowledge of the existence of a disability, like knowledge of a person's race, ethnicity, or gender, is a component of an intentional discrimination claim, to find intentional discrimination it must be proven not only that the sponsor knew that a person had a disability but that the sponsor treated the person less favorably because of his or her disability.⁸⁴ We note, moreover, that sponsors have long had knowledge of the disabilities of applicants who have visible disabilities, such as blindness, deafness, or paraplegia, but that the Department has had no means of knowing that such individuals were present in the applicant pool or their experience in the application and

selection process. Requiring sponsors to invite pre-offer self-identification will help fill this void.

The Department points out that, generally, self-identification information should not be provided to interviewing, testing, or hiring officials, as it is confidential information that must be kept separate from regular personnel records. This will help ensure that these officials do not, in fact, have knowledge of which applicants have chosen to self-identify as having a disability. In response to the question regarding how self-identification information can be used for affirmative action purposes if hiring managers cannot use it in the decision-making process, this fundamentally misunderstands the purpose of the data collection. The regulations make clear that selection officials should never base their employment decisions on a protected basis, including an individual's disability status. The purpose of the self-identification and utilization goal is to collect data that will enable the sponsor to assess whether barriers to apprenticeship exist for individuals with disabilities, *e.g.*, a decreasing rate of applications from individuals with disabilities over the years may suggest that further or different outreach and recruitment efforts should be conducted; it is not designed to encourage sponsors to select individuals based on their disability status.

As mentioned above, some commenters claimed that the requirement to invite self-identification could conflict with state laws, but did not indicate any specific provisions of state law that would be problematic. The Department notes that OFCCP's regulations implementing Section 503 of the Rehabilitation Act also require contractors to invite employees and applicants to self-identify as individuals with disabilities, and no contractor has yet raised the issue of a conflicting state law provision. Furthermore, to the extent that any provision of state law did conflict with these regulations, the Final Rule would preempt the state law provision, and would not serve as a defense for failing to comply with this Part.

Proposed § 30.11(a)(2) required that the sponsor invite applicants to self-identify "using the language and manner prescribed by the Administrator and published on the OA Web site." The Department sought comments on the specific language OA proposed to prescribe that the sponsor use when inviting applicants to self-identify at the pre-offer stage. That language was as follows:

⁸³ 29 CFR 1630.1(c)(2).

⁸⁴ In cases where there has been a denial of a reasonable accommodation, the knowledge that comes from a self-identification form provides no additional basis for a complaint, as individuals need to disclose their disability in order to request an accommodation.

1. Why are you being asked to complete this form? Because we are a sponsor of a registered apprenticeship program and participate in the National Registered Apprenticeship System that is regulated by the U.S. Department of Labor, we must reach out to, enroll, and provide equal opportunity in apprenticeship to qualified individuals with disabilities. [42] To help us measure how well we are doing, we are asking you to tell us if you have a disability or if you ever had a disability. Completing this form is voluntary, but we hope that you will choose to fill it out. If you are applying for apprenticeship, any answer you give will be kept private and will not be used against you in any way.

If you already are an apprentice within our registered apprenticeship program, your answer will not be used against you in any way. Because a person may become disabled at any time, we are required to ask all of our apprentices at the time of enrollment, and then remind them yearly, that they may update their information. You may voluntarily self-identify as having a disability on this form without fear of any punishment because you did not identify as having a disability earlier.

2. How do I know if I have a disability? You are considered to have a disability if you have a physical or mental impairment or medical condition that substantially limits a major life activity, or if you have a history or record of such an impairment or medical condition.

Disabilities include, but are not limited to: Blindness, deafness, cancer, diabetes, epilepsy, autism, cerebral palsy, HIV/AIDS, schizophrenia, muscular dystrophy, bipolar disorder, major depression, multiple sclerosis (MS), missing limbs or partially missing limbs, post-traumatic stress disorder (PTSD), obsessive compulsive disorder, impairments requiring the use of a wheelchair, intellectual disability (previously called mental retardation).

Please check one of the boxes below:

- ☐ YES, I HAVE A DISABILITY (or previously had a disability)
☐ NO, I DON'T HAVE A DISABILITY
☐ I DON'T WISH TO ANSWER

Your name:

Date:

Many advocacy organizations supported the proposed language regarding the invitation to self-identify because it mirrored OFCCP language used for Federal contractors in the regulations implementing Section 503 of the Rehabilitation Act. Some recommended, however, that the instructions for defining a disability should be clearer and broader. A state

agency also expressed concern that the sponsor may be a committee, rather than an individual employer and that, in that case, the committee may not be the entity extending the bona fide job offer.

The Department believes that the invitation language proposed in the NPRM is sufficiently clear to enable individuals to decide whether or not they have a disability. Additionally, the language states that "Disabilities include, but are not limited to . . .," indicating that conditions other than those listed on the invitation may qualify as a disability. Furthermore, this language is consistent with that used in other Department programs. As stated before, the Department thus adopts the proposed language without change and will make this invitation form available to sponsors. With regard to the question of sponsor structure, as addressed in previous sections where the issue has arisen, sponsors have historically entered into apprenticeship agreements with participating employers that have included provisions that the parties will coordinate to satisfy the obligations of part 30, and we expect this practice to continue. Sponsors should be extending the invitation to self-identify at the point at which apprentices are accepted into the apprenticeship program, even if sponsors are not the ones that would extend ultimate offers of employment to apprentices. For sponsors that are not responsible for selecting the apprentices that participate in this program, the sponsor would need to ensure that its participating employers invited apprentices and applicants for apprenticeship to self-identify at the time the employer reviews and selects the applicant. Sponsors would then be under a continuing duty to remind apprentices that they also have the opportunity to submit their self-identification to the sponsor.

Lastly, the reference to inviting self-identification as part of a sponsor's "general duty to engage in affirmative action" is amended to clarify that the requirement to invite apprentices and applicants to self-identify only applies to sponsors that are required to maintain an AAP, and that inviting self-identification is part of their AAP requirements. Inviting self-identification is not required as part of the sponsor's general duty to engage in affirmative action pursuant to 30.3(b), and sponsors that do not maintain an AAP should not invite apprentices to self-identify as individuals with disabilities.

Paragraph 30.11(b): Post Offer

Proposed § 30.11(b)(1) required that the sponsor invite applicants, after acceptance into the apprenticeship

program, but before they begin their apprenticeship, to voluntarily self-identify as individuals with disabilities. This post-offer invitation to self-identify is in addition to the invitation at the pre-offer stage, so that individuals with hidden disabilities who fear potential discrimination if their disability is revealed prior to being accepted into the program will, nevertheless, have the opportunity to provide this valuable data. Proposed § 30.11(b)(2) again required that the sponsor invite self-identification using the language and manner prescribed by the Administrator and published on the OA Web site.

The Department did not receive any specific comments on this paragraph that were not already discussed. The Department therefore adopts proposed § 30.11(b) as proposed.

Paragraph 30.11(c): Apprentices

In addition to the pre- and post-offer invitations to self-identify, proposed § 30.11(c) required that the sponsor invite each of its apprentices to voluntarily self-identify as an individual with a disability at the time the sponsor becomes subject to the requirements of part 30 and then remind apprentices yearly that they may update their disability status at any time. Allowing apprentices enrolled in a registered apprenticeship program to update their status will ensure that the sponsor has the most accurate data possible.

While some commenters supported the requirement to remind apprentices that they can update their disability status throughout the apprenticeship program, other sponsors questioned whether apprentices would falsely identify as having a disability because they simply do not possess the required skill for the trade and want to complete the program. These comments appear to misconstrue the proposal and/or the relevant law. At the outset, the Department notes that self-identifying as an individual with a disability does not entitle someone to preferential selection—indeed, that is unlawful under the rule—nor does it automatically entitle someone to an accommodation to stay in the program. It is a well-established principle of disability law that if the individual is unable to perform the essential functions of a position with or without reasonable accommodation, the individual is not entitled to remain in that position.

The Department is revising paragraph (c) to eliminate the requirement that sponsors must extend an invitation to those in its apprenticeship program "each time an apprentice is enrolled into an apprenticeship program." Upon

reflection, we believe this was largely redundant, given that the one-time invitation to the apprenticeship workforce during the first year of compliance, coupled with the invitation to all those that receive an offer to join the program, should ensure that everyone is provided the self-identification form to complete and return. The one-time self-ID solicitation for existing apprentices is set forth in paragraph (c)(1) of the new rule, and the time for compliance with this one-time self-ID invitation is set forth in new paragraph (h).

Paragraph 30.11(d)

Proposed § 30.11(d) emphasized that the sponsor is prohibited from compelling or coercing individuals to self-identify. A commenter had expressed concern that the proposed rule could cause sponsors to “encourage” or pressure applicants and apprentices to self-identify in order to meet the utilization goal. The Department adopts § 30.11(d) as proposed to make clear that all self-identifications should be submitted on a strictly voluntary basis and that sponsors are not permitted to coerce individuals to self-identify.

Paragraph 30.11(e)

Proposed § 30.11(e) emphasized that all information regarding self-identification as an individual with a disability must be kept confidential and maintained in a data analysis file in accordance with proposed § 30.12, and may not be included in an individual’s personnel file. Proposed § 30.11(e) also states that self-identification information must be provided to the Registration Agency upon request and that the information may only be used in accordance with this part.

Many commenters, including various State agencies and JATCs, expressed concerns regarding the interaction between this provision and the privacy protections afforded by the Health Insurance Portability and Accountability Act (HIPAA). Other commenters stated that the requirement to develop systems to maintain confidentiality and segregate information regarding self-identification from the actual hiring process may disproportionately burden small sponsors. This commenter suggested that employers would need technical assistance from Registration Agencies to comply with the proposed requirement to invite applicants to self-identify a disability.

The Department adopts proposed § 30.11(e) without change, and notes that it will provide assistance to

sponsors in complying with this part. The data analysis file need not be complex, but simply provide a method by which the sponsor can retain and track self-identification information in the aggregate, rather than as connected to each apprentice’s personnel file. Maintaining the disability demographic information in a file separate from each apprentice’s personnel file will also make it easier for sponsors to provide the self-identification information to OA when requested to do so.

In response to the concerns over sharing the self-identification information with the Registration Agency, the Department notes that HIPAA privacy requirements generally do not apply to employers in their capacity as employers.⁸⁵ Rather, the privacy standards of HIPAA only apply to covered entities under the statute, which are generally limited to health plans, health care clearinghouses, health care providers who transmit health information in electronic form, and their business associates. The regulations implementing HIPAA also exclude employment records from the definition of “protected health information.”⁸⁶ While HIPAA may not apply to this self-identification information, sponsors are obligated, under this part, to maintain this information in a confidential manner. This requirement does not prevent the sponsor from providing this information to the Registration Agency when requested.

Paragraph 30.11(f)

Proposed § 30.11(f) stated that nothing in this section may relieve the sponsor of its obligation to take affirmative action with respect to those applicants and apprentices of whose disability the sponsor has knowledge.

Regarding proposed § 30.11(f), an industry association requested that the Department provide further clarification of what it means for the sponsor’s “obligation to take affirmative action with respect to those applicants and apprentices of whose disability the sponsor has knowledge.” The Department included paragraph (f) to remind sponsors that they are under a continuing obligation to provide a reasonable accommodation to those individuals with a known disability, even if the individual chooses not to self-identify and even if the individual does not specifically request a reasonable accommodation.

Paragraph 30.11(g)

Proposed § 30.11(g) clarified that nothing in this proposed section may relieve the sponsor from liability for discrimination in violation of this part. The Department did not receive any comments on this specific provision, and so adopts § 30.11(g) as proposed.

Paragraph 30.11(h): Compliance Dates

As discussed above, in response to those comments expressing concern over the burden associated with complying with the self-identification requirements of this section, the Department is extending the time in which both current and new sponsors must come into compliance with this section. Paragraph (h) sets a compliance date two years after the effective date of the Final Rule for current sponsors. This means that the requirement to invite apprentices and applicants to self-identify will not apply until two years after the effective date of the Final Rule. Current sponsors will also have up to two years from the effective date in which to invite each of its current apprentices to voluntarily inform the sponsor whether the apprentice believes that he or she is an individual with a disability. The sponsor would be expected to complete a workforce analysis for individuals with disabilities pursuant to § 30.7(d)(2) as soon as it has completed this invitation to current apprentices, as this will provide some data upon which to base the analysis. Subsequent workforce analyses will be based on the pre-offer and post-offer self-identification data, as well as any changes to self-identification status that have been made as a result of the annual reminder per paragraph (c) of this section.

New sponsors will follow a similar timetable, but the two years will be based on the date their program is registered rather than the effective date of the rule. During the program’s provisional review conducted within one year of registration, the Registration Agency will provide further guidance on the AAP requirements for individuals with disabilities so that when the compliance date arrives the new sponsor is well equipped to take the necessary steps to satisfy its obligations.

Recordkeeping [§ 30.12]

Existing § 30.8 required sponsors to keep records for each applicant, including a summary of the qualifications of each applicant, the basis for evaluation and for selection or rejection of each applicant, the records pertaining to interviews of applicants,

⁸⁵ Public Law 104–191, sec. 1172 (a).

⁸⁶ 45 CFR 160.10.

the original application for each applicant, and other data. The rule states that records pertaining to individual applicants, selected or rejected, shall be maintained in such manner as to permit identification of minority and female (minority and nonminority) participants. Sponsors were also required, under the existing regulations, to retain a statement of its AAP required by § 30.4 and review their AAPs annually and update them where necessary, including the goals and timetables. Sponsors were also required to maintain evidence that their qualification standards have been validated in accordance with the requirements set forth in § 30.5(b), and maintain records for 5 years and make them available upon request to the Department or other authorized representative. The NPRM proposed to remove the existing § 30.12 entitled “Adjustments in schedule for compliance review or complaint processing” because the information contained within this section has been incorporated into the proposed sections addressing EEO compliance reviews and complaints, and reinsert a new section on recordkeeping in its place.

Proposed § 30.12 prescribed the recordkeeping requirements that would apply to registered apprenticeship program sponsors, and concluded that a sponsor’s failure to comply with these requirements would constitute noncompliance with the part 30 regulations. Proposed § 30.12 retained, in large part, the recordkeeping requirements currently in § 30.8, subject to basic editing, and updated them to reflect the development and use of electronic recordkeeping, and the broadened scope of the proposed rule to provide for equal opportunity, affirmative action, and nondiscrimination for applicants and apprentices with disabilities.⁸⁷ Proposed § 30.12, therefore, included a new provision regarding the confidentiality and use of medical information that is obtained pursuant to part 30, including information regarding whether an applicant or apprentice is an individual with a disability.

In addition, proposed § 30.12 removed the reference to the recordkeeping requirements of State Apprenticeship Councils. The Department proposed to move these requirements to proposed § 30.18, the section addressing SAAs. This proposed change would ensure that all requirements specific to SAAs can be found in one location.

Paragraph 30.12(a): General Obligation

Proposed paragraph (a) of Proposed § 30.12 required sponsors to collect data and maintain records as the Registration Agency finds necessary to determine whether the sponsor has complied or is complying with the requirements of this part. Proposed § 30.12(a)(3), in particular, required the sponsor to collect information relative to the operation of the apprenticeship program, including, but not limited to, job assignments in all components of the occupation as required under § 29.5(b)(3), promotion, demotion, transfer, layoff, termination, rates of pay, other forms of compensation, conditions of work, hours of work, hours of training provided, and any other personnel records relevant to EEO complaints filed with the Registration Agency under § 30.14 or with other enforcement agencies.

A national union and a national JATC commented that proposed § 30.12(a)(3) includes requirements for a sponsor to retain information that is inapplicable to the relationship between a JATC and a registered apprentice, including information related to promotion, demotion, termination, and layoff. The commenters urged the Department to revise this section as it applies to JATCs so that only those records that are applicable to the relationship between a JATC and its registered apprentices must be maintained. These commenters said that some of the terms that are inapplicable to JATCs may be applicable for programs administered solely by one or more employers since employer-sponsors have direct control over both an apprentice’s progression through a program and advancement on the job. The commenters suggested that separate recordkeeping requirements for JATCs and employer-sponsors may be necessary to ensure that employer-sponsors retain records that are pertinent to both roles.

The Department recognizes the distinction between group sponsors and their member employers, as well as JATC sponsors’ concerns about their responsibilities and how their duties to the apprentice are distinct from those of employers. However, the information required in § 30.12(a)(3) is important to

determining the relative success of a sponsor’s AAP. The language in § 30.12(a)(3) provides that sponsors must collect and maintain records relative to the operation of the apprenticeship program, and the Department will not require sponsors to record information that they do not have access to. The Department anticipates that JATCs will be able to collect this information from partner employers. We note that similar recordkeeping obligations were prescribed under the existing regulations and applied to sponsors generally. As has been detailed before, it is common practice currently for sponsors and their participating employers to enter into agreements detailing obligations and seeking the employers’ cooperation in the sponsor’s compliance with part 30. We expect that this will continue under this Final Rule.

An individual commenter suggested that summary information about gender, ethnicity, and disability status should be available to interested apprentices and journeyworkers in the relevant trade at no cost to them, and sought to add new paragraphs under §§ 30.12(a) and 30.12(f) seeking this data in a format accessible to apprentices and journeyworkers. While the information provided on a chart summarizing demographics of apprenticeship programs may be useful, the Department does not feel that creating an additional requirement for apprenticeship programs is necessary at this time. We note further that publication of this data could raise privacy, confidentiality, and other legal issues.

Paragraph 30.12(b): Sponsor Identification of Record

Proposed 30.12(b) stated that for any record that the sponsor maintains pursuant to the regulation, the sponsor must be able to identify the race, sex, ethnicity, and, when known, the disability status of each apprentice and supply this information upon request to the Registration Agency. When possible, the sponsor should identify the race, sex, ethnicity, and disability status of each applicant and supply this information upon request to the Registration Agency.

A State Department of Labor and an industry association expressed concern that current § 29.7(l) appears to be inconsistent with proposed § 30.12(b) in that § 29.7(l) requires a request for demographic data while proposed § 30.12(b) requires that sponsors be able to identify this data. The industry association requested clarification about how a program should maintain the information about race, sex, ethnicity, and disability status required in

⁸⁷ OA maintains guidance that provides more explanation on exactly what documents must be maintained, and how sponsors should maintain it. See Bulletin 2010–11a Apprenticeship Program Standards Section XVIII Maintenance of Records and Appendix D, Section VI Maintenance of Records <http://www.doleta.gov/OA/bul10/Bulletin%202010-11%20Revised%20Boilerplates.pdf>. (last accessed September 10, 2015). In addition, OA will provide publicly available materials in conjunction with this NPRM that will update this guidance consistent with this proposal.

proposed § 30.12(b) in cases where the apprentice refuses to provide the requested information. The industry association said that the § 30.12(b) language should be amended to clarify that the sponsor should be required to make a good faith effort to obtain the described information. A State Department of Labor similarly requested clarification of § 30.12(b) to ensure that sponsors must identify the demographics of their apprentices only when it is available.

At the outset, we note that sponsors address this issue already, because the existing regulations require them to conduct a workforce analysis establishing the race/sex/ethnicity makeup of its apprenticeship program in order to determine whether they are underutilized. To provide greater guidance on how to do so, the NPRM proposed the language in § 30.12(b), which is identical to that used in OFCCP's program at 41 CFR 60–1.12(c). This was purposeful, in order to set forth similar standards across AAPs to the extent possible, which would likely be more familiar to those in the employer community. In interpreting its regulation, OFCCP has stated the following:

[We have] not mandated a particular method of collecting the information. Self-identification is the most reliable method and preferred method for compiling information about a person's gender, race and ethnicity. Contractors are strongly encouraged to rely on employee self-identification to obtain this information. Visual observation is an acceptable method for identifying demographic data, although it may not be reliable in every instance. If self-identification is not feasible, post-employment records or visual observation may be used to obtain this information. Contractors should not guess or assume the gender, race or ethnicity of an applicant or employee. . . . OFCCP would not hold a contractor responsible for applicant data when the applicant declines to self-identify and there are no other acceptable methods of obtaining this information.⁸⁸

OA interprets the NPRM consistent with this interpretation. It does not mandate any particular collection method but notes with favor self-identification, allowing that sponsors may record the data by visual observation if there is a factual basis for doing so. Further, it will not hold sponsors responsible when certain documents cannot be identified by protected category if that information has not been provided or cannot otherwise be easily ascertained.

An advocacy organization urged the Department to amend the language at § 30.12(b) to require programs to identify the age of qualified applicants or apprentices so that patterns of age discrimination can be detected. We decline to require this. Generally speaking, data collection is sought in connection with a sponsor's AAP, and the part 30 AAP is limited to race, sex, ethnicity, and disability.

Paragraph 30.12(c): Affirmative Action Programs

Proposed paragraph 30.12 required that sponsors required to develop and maintain an AAP under § 30.4 must retain that written AAP and documentation of any efforts required by § 30.8. We note that most sections of the regulations comprising the AAP obligations have their own recordkeeping requirements that must be complied with. However, to ensure a broad overarching recordkeeping obligation, the proposed § 30.12(c) is revised to simply state that the AAP recordkeeping obligations applies to each of the component parts of the AAP.

Paragraph 30.12(d): Maintenance of Records

Proposed § 30.12(d) decreased the amount of time that sponsors are required to keep documentation from five to three years. An SWA suggested that the Department retain the current requirement that sponsors maintain records for 5 years, reasoning that under the proposal a sponsor that has a 4-year program would have the ability to discard an apprenticeship agreement before the apprentice leaves the program. Alternatively, this commenter suggested that the Department revise the requirement to retain records to align with the entire length of the apprenticeship program, which the commenter said is usually 4 years. An individual commenter recommended that the Department require records be kept for an additional amount of time after an apprentice's term has ended so that data is available for evaluations and tracking a sponsor's progress. The commenter expressed concern that recordkeeping could be disrupted by personnel changes or economic changes within a 3-year span and said that this could lead to incomplete records. In contrast, an industry association remarked that the amount of time sponsors are required to retain records should be further reduced to 2 years, reasoning that this would align with other labor laws already in place. This commenter also suggested that the rule specify the type of records to be retained.

Upon review of the comments, the Department has decided to revert to the existing requirement that records be maintained for 5 years. While the Department sought to decrease the time period for document retention in an effort to decrease burden, we believe the concerns raised about a document retention period that is shorter than the normal compliance review cycle, which is approximately 5 years, would be problematic, particularly given that under the Final Rule utilization analyses are to be performed concordant with sponsors' compliance review cycle and with significant input from the Registration Agency.

Paragraph 30.12(e): Confidentiality and Use of Medical Information

Proposed § 30.12(e) provided that any information collected that concerns the medical condition or history of an applicant or apprentice must be maintained in separate forms and in separate medical files and treated as confidential, and that such information must not be used for any purpose inconsistent with part 30.

Some commenters expressed concerns with proposed § 30.12(e). An industry association suggested that joint apprenticeship programs will need to develop and implement safeguards to ensure the confidentiality of medical records. An SAA expressed concern that developing systems to maintain confidentiality and segregate information regarding self-identification from the actual hiring process may disproportionately burden small entities or sponsors that do not have highly-developed human resource systems or personnel processes. And several commenters requested further guidance on how to comply with the proposed requirement.

We addressed many similar concerns in the discussion of § 30.11, above. As stated there, OA plans to provide guidance materials to sponsors regarding their recordkeeping responsibilities and ensuring the confidentiality of employee records.

Some commenters said that there is inconsistent terminology used in part 29 and part 30 to describe advancement of an apprentice through a program. The commenters remarked that the term "progression" is used in part 29 whereas "promotion" is used in part 30. These commenters also stated that there are discrepancies between the use of the terms "suspension" and "cancellation" in part 29 and "demotion" and "termination" in part 30. The commenters remarked that the term "transfer" in part 29 means transfer

⁸⁸ <http://kb.dol.gov/DOLArticlePage?agency=OFCCP&parentCatValue=Employer&article=ka1i000000WEq1AAG> (last accessed May 9, 2016).

from one program to another instead of from one job to another.

The Department has reviewed the language and does not believe further clarifying regulatory text is necessary. Each of the terms raised above in part 30 has specific significance in the equal employment opportunity context distinguishing them from how they or similar terms are used in part 29. For instance, “suspension” and “cancellation” in part 29 refer to actions taken against the apprenticeship program; “demotion” and “termination” in part 30 are describing personnel actions taken against an apprentice that could potentially be discriminatory if based on a protected basis.

Paragraph 30.12(f): Access to Records

Proposed § 30.12(f) set forth the obligations of sponsors to provide access to records for the purpose of conducting compliance reviews and investigations of complaints. We received no comments specific to this section not addressed elsewhere, so we adopt the proposed paragraph as § 30.12(f) in the Final Rule.

Equal Employment Opportunity Compliance Reviews [§ 30.13]

The NPRM sought to clarify exactly what is intended by EEO compliance reviews, with more specific accountabilities articulated for the sponsor and for the Registration Agency. Thus, the proposed rule provided a stand-alone § 30.13 devoted to EEO compliance reviews, as opposed to the existing regulation’s § 30.9 which addressed compliance reviews of all types. EEO compliance reviews are to be conducted along with overall program performance reviews. There is intended to be uniformity in EEO compliance reviews across Registered Apprenticeship programs and across Registration Agencies. The proposed rule outlined how compliance reviews would be conducted, how sponsors would be notified of compliance review findings, how sponsors can come into compliance if there is a finding of a violation, and when enforcement actions may occur.

Paragraph 30.13(a): Conduct of Compliance Reviews

In paragraph (a), the proposed rule sets forth that the Registration Agency would regularly conduct EEO compliance reviews to determine if the sponsor was in compliance with part 30, and will also conduct EEO compliance reviews when circumstances so warrant. It further detailed the variety of forms compliance reviews might take, including off-site reviews of records,

desk audits of records submitted to the Registration Agency, and on-site reviews at a sponsor’s establishment involving document review and interviews with relevant personnel.

Commenters expressed concern about what exactly “regularly” means in terms of frequency of conducting reviews and/or audits. There are no pre-set timelines for compliance reviews, and the review cycle will vary by the Registration Agency. Historically in states administered by OA, as a general matter reviews have been conducted approximately every five years during a program’s existence. There is somewhat more variance in states where apprenticeship is administered by an SAA. One commenter urged OA, once the regulation is adopted, to disseminate a circular detailing the minimum requirements for all EEO compliance reviews and “audits.” OA currently has a checklist of questions and protocols that can be sent to the sponsor before a compliance review. OA will continue to provide such technical assistance on EEO compliance reviews, but will take the comment under advisement in considering further guidance in the implementation of this rule.

Paragraph 30.13(b): Notification of Compliance Review Findings

The proposed rule provided that Registration Agencies would provide a Notice of Compliance Review Findings within 45 days of completing the review. If the review uncovered deficiencies in part 30 compliance, this Notice would identify them, how they could be remedied, the timeframe for doing such remedying, and specifying that failure to do so could result in an enforcement action. The overall intent of this proposed text is that increased specificity would again provide for greater consistency and standardization of procedures across the National Registered Apprenticeship System. We did not receive any specific comments for this provision, so we retain the proposed language in the Final Rule.

Paragraph 30.13(c): Compliance

The proposed § 30.13(c) set forth the next step in the compliance review process: When a Notice indicated deficiencies in compliance, the requirement that a sponsor must, within 30 business days, implement a compliance action plan. This plan included four specific provisions: A commitment to correct the deficiency, a listing of the actions that will be taken, how long it will take, and the name of the person responsible. Assuming these steps are undertaken, the sponsor would be considered in compliance.

There were a number of comments regarding this paragraph (c) proposed text. An SAA commented that the 30 business days for sponsors to develop an effective plan to address EEO compliance deficiencies did not provide enough time. This SAA suggested that sponsors should be given 30 business days to submit rebuttal arguments to the Registration Agency, and that the SAA should be given 30 days to respond to the rebuttal argument in writing. If the findings of noncompliance were upheld after the opportunity to contest allegations, this SAA recommended that the sponsor would then have 30 days to submit a remediation plan.

In response to these comments, we have modified the Final Rule in two ways. First, the Final Rule states that within 30 days the sponsor must either implement a compliance action or provide a written response responding to the specific violation(s) cited by the Registration Agency within 30 days. This latter option addresses commenters’ suggestions for an opportunity to respond to allegations. If, after reviewing the response, the Registration Agency upholds the findings of noncompliance, the sponsor then has 30 days to submit a remediation plan. Second, the Final Rule provides that the 30 day period may be extended for another 30 days by the Registration Agency for good cause shown. We note that this only applies to the original 30 day period; if the sponsor submits a rebuttal which the Registration Agency then denies, the Rule does not provide for an extension of the resulting 30 day period to come into compliance.

One advocacy organizational commenter suggested that sponsors in need of a compliance action plan should be provided with technical assistance to help rectify the situation: Specifically, a list of reliable technical assistance providers, as well as resources and materials to include in the design, development, and implementation of the compliance action plan (for example, resources developed via the Women in Apprenticeship and Nontraditional Occupations program). In particular, for sponsors falling short of EEO goals, this commenter recommended that the DOL provide a list of tradeswomen organizations for purposes of technical assistance. This type of technical assistance is already a part of Registration Agencies’ compliance review process; we will continue to provide this assistance, as resources permit, to assist in bringing sponsors into EEO compliance.

Several advocacy organizations commented that sponsors found to have

deficiencies need more attention and resources devoted to rectifying their situations, either through more rigorous EEO obligations or having compliance results published in a national registry for additional visibility. Some commenters went specifically further and suggested that the DOL should require the Registration Agency to evaluate a sponsor's compliance action plan for effectiveness "regularly" until the sponsor attains the plan goals. The Department acknowledges the comment, but declines to add these measures at this time. We believe the enhancements announced in this Final Rule will increase the efficacy of sponsor EEO and affirmative action efforts. Further, the Registration Agency's focus historically has been on a technical assistance model, helping sponsors succeed and come into compliance wherever possible, rather than a more punitive approach. We do note that for programs that will not take corrective action to cure violations, the Registration Agency retains the authority to deregister such programs.

Some commenters suggested that the Department include completion rates as a factor when evaluating whether a sponsor is making a good faith effort to comply with part 30 requirements, reasoning that completion rates are an important benchmark in assessing economic advancement of groups traditionally underrepresented in registered apprenticeship programs. As discussed in § 30.8 above, the Department recognizes the importance of retention activities in building greater diversity within apprenticeship programs, and has included some options for addressing retention issues in § 30.8(b).

Paragraph 30.13(d): Enforcement Actions

Proposed § 30.13(d) specified that any sponsor that fails to implement its compliance action plan within the specified timeframes may be subject to an enforcement action under proposed § 30.15. One commenter suggested that the word "may be subject" be replaced by "must be subject," to help underscore the need to enforce the regulation. The Department has reviewed the comment and declines to adopt the suggestion, as it would be inconsistent with current practice and eliminate certain flexibilities that may be helpful in a given matter.

Complaints [§ 30.14]

The Department proposed moving the existing § 30.14 entitled "Reinstatement of program registration" to § 30.16. In its place, the NPRM proposed a section

devoted to complaint processing and handling, borrowed in part from the existing § 30.11, with additional revisions to improve readability and clarify requirements of program sponsors and Registration Agencies for addressing complaints. For instance, proposed § 30.14 incorporated subheadings so that an apprentice or applicant for apprenticeship who wishes to file a complaint of discrimination under this part with a Registration Agency may easily identify the required components. Proposed § 30.14 deleted the provisions concerning private review bodies in the current part 30, at § 30.11(a) and (b). Through feedback received prior to the publication of the NPRM from the SAAs, stakeholders at the town hall meetings, and the administration of the National Registered Apprenticeship System, the Department has found that apprenticeship program sponsors generally do not have or use private review bodies. Additionally, stakeholders expressed the opinions that such bodies could not objectively evaluate or prescribe remedies for complaints of discrimination. Thus, the proposed rule eliminated the use of private review bodies.

Paragraph 30.14(a): Requirements for Individuals Filing Complaints

Proposed § 30.14(a)(1) through (3) describe who has standing to file a complaint, the time period for filing a complaint, and the required contents of the complaint.

Relating to the proposed § 30.14(a) requirements for individuals filing complaints, a number of comments suggested ways to broaden the procedure for filing complaints in order to increase its potential as an avenue of protecting the rights of apprentices. One commenter made the suggestion to allow journeyworkers or higher status workers to file complaints on behalf of apprentices, as it was believed that apprentices are not well positioned in the workplace hierarchy to file a complaint without fear of risking their job or personal safety. Similarly, another urged the ability to file anonymous complaints. Many commenters recommended that the Department establish opportunities for third party complaints from stakeholder organizations (*i.e.*, pre-apprenticeship programs and other referral agencies) challenging policies or practices that result in exclusionary outcomes for apprentices and provide suggested remedial actions. Finally, a commenter suggested a number of suggested changes to complaint procedures, including required onsite diversity and

compliance staff who are able to communicate with apprentices, gather feedback, identify areas of concern, and ultimately refer repeat offenders for training or additional counseling; dual-path complaint options so complaints are forwarded to a neutral party (to address situations in which the Registration Agency may not be perceived as neutral); and expansion of the complaint procedure window to 300 days (in line with EEOC regulations when a State law prohibits the discrimination on the same basis).

The Department recognizes that its primary objective is to safeguard the welfare of apprentices, and wishes to have as robust and effective a complaint procedure in order to effectuate the protections of this part. With regard to third-party complaints, either by higher ranking employees or stakeholder groups, we believe the NPRM already provided such mechanisms. The proposed rule allowed for individual complaints filed "through an authorized representative;" these parties could satisfy that role. Further, the proposed regulations in § 30.13 provide that the Registration Agency "will also conduct EEO compliance review when circumstances so warrant." If the Registration Agency receives specific evidence from a third party that a violation of part 30 has occurred, that could be a circumstance warranting such a compliance review. With regard to the question of anonymous complaints, the regulations are clear that, at least at some juncture prior to perfecting a complaint, the identity of the complainant must be made known to the Registration Agency so that it can furnish relief to the appropriate person(s). We finally note that, assuming the sponsor or employer that has discriminated is covered by EEOC's jurisdiction, apprentices may file complaints directly with the EEOC if they so choose. These entities are required to post "EEO is the Law" posters in their workplace which would provide information on how to file complaints with the EEOC. To clarify this, we have updated the language in the notice poster to indicate that apprentices may also file complaints with Federal, state, and local agencies assuming they have jurisdiction to review the sponsor and/or employer.

As for the filing period, we agree with the comment and extend the filing period to 300 days. As the commenter notes, this matches the statute of limitations for filing with the EEOC in all but the few "non-deferral" states that do not have their own State employment discrimination law.

In order to further effectuate the complaint process, the Department plans to issue guidance that sponsors can use to inform apprentices about their rights and the process for filing complaints in the course of the periodic orientation sessions set forth in § 30.3(b)(2)(iii).

The Final Rule retains § 30.14(a) as proposed with one revision—§ 30.14(a)(1) of the Final rule specifically lists retaliation as a basis on which individuals may file complaints. Retaliation was specifically prohibited in the proposed § 30.17, but it was inadvertently omitted as a basis upon which individuals could file complaints.

Paragraph 30.14(b): Requirements of Sponsors Relating to Complaints

Proposed § 30.14(b) requires sponsors to provide notice to all applicants for apprenticeship and apprentices of their right to file a discrimination complaint with the Registration Agency and the procedures for doing so. Proposed § 30.14(b) also specifies the required wording for this notice. A sponsor may combine this notice and its equal opportunity pledge in a single posting for the purposes of this proposed section and proposed § 30.3(b)(2)(ii). The Department received no comments specific to this section not addressed elsewhere, and thus retains the paragraph in the Final Rule as proposed.

Paragraph 30.14(c): Requirements of the Registration Agency Relating to Complaints

Also, in an effort to ensure consistency in how Registration Agencies process complaints and conduct investigations, proposed § 30.14(c) would add uniform procedures that Registration Agencies must follow. These uniform procedures would ensure that the Registration Agency acknowledges and thoroughly investigates complaints in a timely manner, parties are notified of the Registration Agency's findings, and the Registration Agency attempts to resolve complaints quickly through voluntary compliance.

Proposed § 30.14(c)(3) provides that a Registration Agency may, at any time, refer a complaint to an appropriate EEO enforcement agency. This provision would allow Registration Agencies to safeguard the welfare of apprentices by making use of existing Federal and State resources and authority. For example, a Registration Agency might refer a complaint to the EEOC if it finds a violation of title VII, the ADA, or the ADEA, but does not think it could achieve a complete remedy for the

complainant through voluntary compliance procedures or enforcement action under proposed § 30.15.

Proposed § 30.14(c)(4) would allow an SAA to adopt different complaint procedures, but only if it submits the proposed procedures to OA and receives OA's approval. This provision would codify the Department's current practice and would be consistent with § 29.12(f) of this title.

An SWA requested clarification as to whether the failure of SAAs to meet deadlines under § 30.14(c)(1) for conducting and reporting an investigation would lead to the sponsor being absolved. The commenter expressed concern that some complaints are impossible to analyze or resolve in the mandated time frame. Regarding the proposed § 30.14(c)(2) directive that, when a complaint investigation indicates a violation of nondiscrimination requirements, a "Registration Agency must resolve the matter quickly and informally whenever possible," this commenter requested clarification as to what it would mean to resolve a complaint informally. The Department agrees with this comment, noting that some complaints, depending on the facts and various other circumstances, may take longer to complete than the time proposed in the NPRM. Accordingly, paragraph 30.14(c) is revised to redact the specific timetables for Registration Agency completion of the various steps, and instead includes language similar to that suggested by the commenter that Registration Agencies will conduct its investigation as expeditiously as possible. Additionally, the Final Rule revises 30.14(c)(2) to state that Registration Agencies "should" attempt to resolve matters "at the Registration Agency level" and quickly whenever "appropriate," rather than "must" resolve them "informally" and when "possible," respectively. This is meant to communicate three things: First, that informal resolution of some matters, such as those raising particularly egregious violations, may not be appropriate; second, that the term "informally" can be interpreted in ways other than intended, which was to signify before referral to a federal or state equal opportunity agency; and third, for those matters where Registration Agency-level resolution may be appropriate, a quick resolution is desirable but not at the expense of arriving at one that effectively addresses the underlying problem. Toward that end, Registration Agencies should pursue resolutions that not only attempt to remedy the individual complainant, but those that include broader

programmatic relief—such as trainings, information sessions, or other modifications to personnel policies and practices—that would prevent the issue from recurring when appropriate.

A State Department of Labor expressed support for allowing Registration Agencies to maintain complaint review procedures that are already in place. This Registration Agency said that it currently requires discrimination complaints be referred for review by the State Division of Human Rights or a private review body established by a sponsor, and requested clarification as to whether or not it could continue to do so by having its complaint review procedure approved by the Administrator if it is not already permitted by the proposed rule at § 30.14(c)(3) without such approval. More broadly, this commenter remarked that the expertise in anti-discrimination laws and regulations necessary for ensuring compliance with the § 30.3 requirements is beyond the scope of a Registration Agency's role. The agency suggested that States should defer to EEO experts and provide assistance as a referral body to the proper regulating agency. In addition, the commenter warned that requiring Registration Agencies to assume responsibility for enforcement of laws and regulations already enforced by other entities would be duplicative and not cost-effective. This commenter recommended that the Department clarify or revise the regulation to permit complaints of discrimination filed with a Registration Agency to be referred to the proper oversight agency with jurisdiction over the complaint area.

To address these issues, the Final Rule builds in flexibility to adopt complaint review procedures for discrimination complaints, provided that they are approved by the Administrator, and the rule also allows the Registration Agency the discretion to refer matters to other agencies, including the EEOC or State Fair Employment Practices Agency, that may be more appropriate for a given case. Accordingly, we believe the rule offers sufficient flexibility as proposed and we retain it as written in the Final Rule.

Finally, an individual commenter recommended that each apprenticeship Registration Agency should have a designated contact person to handle discrimination complaints related to hiring and training, asserting that this is a normal function in other education and employment entities. We note that the NPRM included a requirement that the notice of rights "must include the address, phone number, and other contact information for the Registration

Agency that will receive and investigate complaints filed under this part,” and this is retained in the Final Rule.

Enforcement Actions [§ 30.15]

The Department proposed to revise current § 30.15 entitled “State Apprenticeship Councils” by moving that language to § 30.18 and incorporating provisions similar to those in the existing § 30.13, entitled “Sanctions,” into the proposed § 30.15. The existing § 30.13 stated that when the Department has reasonable cause to believe that an apprenticeship program is not operating in accordance with part 30, and where the sponsor fails to voluntarily take corrective action, the Department will initiate deregistration proceedings or refer the matter to the EEOC or the United States Attorney General with a recommendation for initiation of a court action. The rest of the section describes the procedures for deregistration proceedings.

In the NPRM, the Department proposed to change the title of § 30.15, to “Enforcement actions,” in order to demonstrate the Department’s emphasis on enforcing regulations governing discrimination in apprenticeship. Second, we proposed to replace “Department,” as used throughout this section, with the term “Registration Agency” to clarify that both the Department (more specifically, OA) and SAAs have the authority to take enforcement action against a non-complying sponsor. Third, proposed § 30.15(b) introduced a new enforcement procedure in which a Registration Agency would suspend registration of new apprentices until the sponsor has achieved compliance with part 30 through the completion of a compliance action plan or until a final order is issued in formal deregistration proceedings. Suspension pursuant to proposed § 30.15(b) was intended as a temporary, remedial measure to spur return to compliance with the proposed part 30 regulations; it was not intended to be punitive. If a sponsor had not taken the necessary corrective action within 30 days of receiving notice of suspension, the Registration Agency would initiate de-registration proceedings as provided in part 29. Fourth, proposed § 30.15(c) would adopt the deregistration procedures of §§ 29.8(b)(5) through (8) of this title, including the hearing procedures in § 29.10, for consistency and simplicity. And finally, proposed § 30.15(d) would authorize Registration Agencies to refer a matter involving a potential violation of equal opportunity laws to appropriate Federal or State EEO agencies.

Many commenters were concerned about punitive actions being taken against sponsors without the Registration Agency having explicitly defined criteria about how the judgment would be made or laying out the exact penalty structure. The continuum of technical assistance to punitive action was a source of concern and confusion for at least one commenter.

There were a significant number of comments regarding the Registration Agency’s ability to “suspend the sponsor’s right to register new apprentices” in § 30.15(b). Construction industry related entities (union and non-union) were particularly interested in this text. Although there was some commenter support for the “proposal to allow temporary suspension rather than program cancellations in the event of a violation,” other commenters expressed concern that the language could result in “damage” to Registered Apprenticeship training programs because of the Registration Agency suspension ability. Due process concerns, particularly related to apprentice suspension, were raised by a number of commenters. For example, some national unions noted that this proposed sanction is inconsistent with part 29, which only mentions deregistration as a sanction, not suspension of apprentices. Union commenters wanted to make clear that due process rights, including notice, hearing, and a written decision by the Secretary of Labor, must be afforded to a sponsor. There was also concern that the proposal contained “no durational limit” on the suspensions, with a commenter conclusion that “adoption of administrative hearing procedures such as those used in deregistration would address the issues discussed.”

As stated at the outset, the option of suspending a sponsor’s right to register new apprentices was not intended as a punitive measure, but rather as an intermediate step that Registration Agencies could take in an attempt to persuade sponsors to remedy violations of part 30 before taking the ultimate action to deregister the program. The proposed suspension afforded sponsors notice, in that it required a written notification from the Registration Agency of the specific violation(s) and allowed 30 days for the sponsor to address the violation before any action would be taken. It was also limited in duration; if the sponsor did not address the violation within 30 days of the suspension, the suspension would end with the initiation of formal deregistration proceedings, where a hearing is afforded. In order to further address the comments raised, however,

the Final Rule includes additional steps wherein, upon being notified of a violation, rather than requiring compliance within 30 days, the sponsor may submit a response to the notice of violation within 30 days which the Registration Agency will consider. If the Registration Agency upholds its initial determination, the sponsor has 30 days from notification of this decision to implement a compliance plan, or suspension proceedings may ensue. This opportunity to respond, in conjunction with the notice of violation and the limited duration of the suspension, affords adequate process rights to sponsors. Moreover, if the Registration Agency does not institute proceedings to deregister the suspended program within 45 days of the start of the suspension, the suspension is then lifted. The Department emphasizes, though, that a Registration Agency will work with all program sponsors prior to instituting any deregistration proceedings to offer technical assistance and attempt to bring the sponsor into compliance. This process will involve active communication between the sponsor and the Registration Agency, and a sponsor that disagrees with the Registration Agency’s findings regarding its compliance should bring that to the Registration Agency’s attention. The Department reiterates that enforcement is a last resort for non-complying sponsors.

Finally, several national unions warned about difficulty in enforcement due to a “lack of clarity as to scope and applications of duties of the program sponsor to other entities it owns and controls and to subcontractors,” a particular concern expected in the construction industry. These commenters want to see consistency in enforcement activity with that of the OFCCP in order to ensure a “consistent regulatory scheme,” regardless of whether a sponsor is operating under Federal contracting regulations or under the Registered Apprenticeship affirmative action regulations. This issue has been addressed in previous sections; the sponsor is ultimately responsible for maintaining an apprenticeship program that complies with part 30, which has historically included agreements between the sponsor and participating employers to ensure that all elements of the apprenticeship program are operating in accordance with these regulations.

Reinstatement of Program Registration [§ 30.16]

The NPRM removed the existing § 30.16, entitled “Hearings.” As explained earlier in the preamble, the

Department proposes to incorporate the part 29 procedures for hearings into part 30, so that a sponsor need only follow one set of procedures regardless of whether the issue at hand addresses the labor standards set forth in part 29 or the equal opportunity standards set forth in part 30. The existing § 30.14 stated that any apprenticeship program that had been deregistered pursuant to part 30 may be reinstated by the Secretary, upon presentation of adequate evidence that the program is operating in accordance with part 30. Proposed § 30.16 was revised to align with part 29, which provides that requests for reinstatement must be filed with and decided by the Registration Agency.

These proposed revisions, which are consistent with §§ 29.8, 29.9, 29.10 and 29.13 of this title, implement Secretary's Order 1–2002, 67 FR 64272, Oct. 17, 2002. Accordingly, the proposal provides that requests for reinstatement must be filed with and decided by the Registration Agency. The Department received no comments associated with this issue.

Intimidation and Retaliation Prohibited [§ 30.17]

The existing § 30.17 stated that a sponsor must not intimidate, threaten, coerce, or retaliate against any person for the purpose of interfering with any right or privilege secured by title VII or Executive Order 11246. Proposed § 30.17 revised this language to state that sponsors would be prohibited from intimidating or retaliating against any individual because he or she has opposed a practice prohibited by this part or any other Federal or State equal opportunity law or participated in any manner in any investigation, compliance review, proceeding, or hearing under part 30 or any Federal or State equal opportunity law.

An advocacy organization recommended that the Department include measures that would protect from retaliation those who help educate fellow program participants about the regulations and those who bring forward complaints or concerns.

The proposed language in § 30.17 prohibited discrimination and retaliation against “any individual” who files a complaint or opposes a practice prohibited by this regulation, and this language is retained in the Final Rule. This includes program participants and anyone else who brings forward complaints or concerns. As for specific scenarios that raise the question of whether protected activity has been undertaken such as the one proposed, we note that it is often a fact-based

inquiry and we will follow relevant title VII case law and interpretative guidance in analyzing such claims. The Final Rule does revise slightly paragraphs (a) and (b) to clarify the intent that it is unlawful for a participant to be retaliated against by anyone connected with the apprenticeship program.

State Apprenticeship Agencies [§ 30.18]

In the NPRM, the Department proposed to revise the existing § 30.18 entitled “Nondiscrimination,” which stated that the commitments contained in a sponsor's AAP must not be used to discriminate against an apprentice or applicant for apprenticeship on the basis of race, color, religion, national origin, and sex, and to incorporate those revisions into proposed § 30.4, as discussed earlier in the preamble.

Proposed § 30.18 revised current § 30.15, which requires State Apprenticeship Councils to adopt State plans. These proposed revisions were necessary to make proposed part 30 consistent with the part 29 procedures for recognition of SAAs. Proposed § 30.18 differed significantly from the current § 30.15, because proposed § 30.18 did not include State Apprenticeship Councils as entities eligible for recognition. As provided in § 29.13 of this title, the Department will only recognize an SAA that complies with the specified requirements, granting that Agency authority to register apprenticeship programs and apprentices for Federal purposes. Therefore, proposed § 30.18 would delete references to “State Apprenticeship Councils” as the entities required to submit a State EEO plan and the entities eligible for recognition, and replace it with the appropriate term, “State Apprenticeship Agency.”

A company commented that SAAs are underfunded and understaffed, and asserted that the burden of the proposed § 30.18 requirements would make it difficult to achieve the goal President Obama has set for apprenticeships.

In promulgating this Final Rule, the Department carefully considered balancing the interests of state agencies, sponsors, and apprentices, and the Department's need to implement these regulations in an efficient and effective manner. The Department believes that the standards it is establishing in this rulemaking for SAAs will not limit the growth of apprenticeship programs or create a significant burden for sponsors and state agencies.

Paragraph 30.18(a): State Plan

Proposed § 30.18(a) set forth requirements for a State EEO plan. The proposed rule would require, within

one year of the effective date of the Final Rule, with no extensions permitted, that SAAs provide to OA a State EEO plan that includes the State apprenticeship law that corresponds to the requirements of this part and requires all apprenticeship programs registered with the State for Federal purposes to comply with the requirements of the State's EEO Plan within 180 days from the date that OA provides written approval of the State EEO plan. The Department's determination of compliance with this part is separate from submission of the State EEO plan. Therefore, proposed § 30.18(a) also specified a collaborative, iterative process whereby SAAs seeking recognition can achieve conformity with this part. Proposed § 30.18(a) also would provide clarity regarding requirements for demonstration of conformity, while maintaining flexibility to accommodate the unique circumstances of a particular SAA.

A State Department of Labor said that it would be unreasonable to require SAAs to submit a State EEO plan and a copy of the State's statute within one year from the effective date of the final regulation. Asserting that implementation of the regulation would take well over a year to pass through State legislation, the Administrative Process Act, and internal agency review, the State suggested that the Department grant SAAs three years to submit a State EEO plan. Another State Department of Labor echoed the concern that one year would be an insufficient amount of time to complete the review process and requested that SAAs be given two years to submit their plan.

Regarding the proposed § 30.18(a)(1)(i) requirement that the State EEO plan submitted to OA include a copy of the State apprenticeship law that corresponds to the requirements of part 30, an SWA asked the Department to clarify if this means the SAA must submit proposed draft State regulations before rule finalization.

As for the proposed § 30.18(a)(1)(ii) requirement that the State EEO plan must require all registered apprenticeship programs in the State to comply with the requirements of the State's EEO plan within 180 days of OA approval, an industry association and an SWA said this was not enough time, reasoning that the State would need to host a series of town hall meetings to explain the new regulations to stakeholders and provide other technical assistance to sponsors. Instead, the SWA recommended that registered apprenticeship programs have two years to come into compliance with the new State EEO plan, and the

industry association said the timeline should be extended to one year from the date of OA State EEO plan approval.

The Department has carefully considered SAA's needs in accordance with the proposed regulations and has determined to amend this clause to require that, within one year, SAAs provide to OA a State EEO plan that includes, at a minimum, draft State apprenticeship authorizing language—which, depending on the State, could be either legislation, regulation, or executive order—corresponding to the requirements of this part. The Final Rule further requires all apprenticeship programs registered with the State for Federal purposes to comply with the requirements of the State's EEO Plan, within 180 days from the date that OA provides written approval of the State EEO plan. The State may request an extension from OA to the one-year State's EEO Plan requirement, which the Administrator may grant for good cause shown.

The Department believes that one year, with the opportunity for extension if there is good cause, is a reasonable amount of time to develop an EEO plan. The Department has also determined that 180 days is an adequate amount of time for registered apprenticeship programs to comply with the requirements of the State's EEO plan. The Department's intent is to have SAAs come into compliance with these regulations as quickly as possible. We understand there may be logistical difficulties with this in certain circumstances, which we believe the extension request provision addresses.

Paragraph 30.18(b): Recordkeeping Requirements

Proposed § 30.18(b) carried forward existing recordkeeping requirements from the existing § 30.8(d), using the term "State Apprenticeship Agency" instead of "State Apprenticeship Council." Regarding the proposed § 30.18(b) requirement that SAAs must keep all compliance records for three years from the date of creation, an individual commenter said that maintaining records on compliance reviews and complaints for five to 10 years would place SAAs in a "better position to monitor the impact of technical assistance over the course of an apprenticeship cohort's procession through an apprenticeship cycle as well as identify sponsors that exhibit patterns of stagnation in progress toward goals and/or repeated complaints."

The Department considered this suggestion and determined that it will amend the proposed rule to require

SAAs to keep all compliance records for five years, for consistency across program regulations.

Paragraph 30.18(c): Retention of Authority

Proposed § 30.18(c) also carried forward provisions in § 30.15(a)(4), which state that OA retains full authority to conduct EEO compliance reviews of apprenticeship programs, investigate complaints, deregister for Federal purposes an apprenticeship program registered with a recognized SAA, and refer any matter pertaining to these EEO compliance reviews or these complaints to the EEOC, the U.S. Attorney General, or the Department's OFCCP. In addition, proposed § 30.18(c) clarified that OA retains authority to conduct complaint investigations to determine whether any program sponsor registered for Federal purposes is operating in accordance with this part.

An SAA sought to confirm that the OA authority to conduct compliance reviews and complaint investigations only applies to programs registered for Federal purposes and not to programs that are not Federally registered or do not implicate Federal purposes. In response, we clarify that, in SAA states the Office of Apprenticeship will only conduct compliance reviews and complaint investigations on national programs that are registered with the Federal government, such as federal prisons or military bases.

Paragraph 30.18(d): Deregistration

Proposed § 30.18(d) clarified that SAAs will be subject to the deregognition procedures established in § 29.14 of this title, for failure to comply with the requirements of this part.

A SWA remarked that the rule seems to prevent the decertification of SAAs for failure to enforce EEO. The commenter stated that although proposed § 30.18(a)(3) and (d) reference § 29.14 deregistration proceedings, § 29.14 attributes that authority to parts 29 and 30, which would no longer provide that authority.

Section 29.14 is entitled "Deregognition of State Apprenticeship Agencies" and states that "The recognition for Federal purposes of a State Apprenticeship Agency may be withdrawn for the failure to fulfill, or operate in conformity with, the requirements of parts 29 and 30." Furthermore, that section provides that "deregognition proceedings for reasonable cause will be instituted in accordance with the following: (a) Deregognition proceedings for failure to adopt or properly enforce a State Plan for Equal Employment Opportunity in

Apprenticeship must be processed in accordance with the procedures prescribed in this part." Accordingly, we disagree with the comment, and believe that § 29.14 provides the Department with the authority to undertake deregognition for failure to comply with § 30.18.

Exemptions [§ 30.19]

Section 30.19 of the existing rule addresses exemptions. Under the existing § 30.19, a sponsor may submit a written request to the Secretary for an exemption from part 30, or any part thereof, and such a request may be granted by the Secretary for good cause. State Apprenticeship Councils are required to notify the Department of any such exemptions granted that affect a substantial number of employers and the reasons therefore.

The Department proposed minor revisions to this section. First, proposed § 30.19 required that requests for exemption be submitted to the Administrator, rather than the Secretary, to reflect a shift in Departmental decision-making. Second, proposed § 30.19 required that SAAs, not State Apprenticeship Councils, request and receive approval from the Administrator to grant an exemption from these regulations. As discussed above, State Apprenticeship Councils are not eligible for recognition under § 29.13 of this title. This proposed regulatory requirement is to ensure consistency with respect to when exemptions may be granted.

Under proposed § 30.19, a sponsor may submit a written request to the Registration Agency for exemption from part 30, or any part thereof, and such a request may be granted by the Registration Agency for good cause. A company inquired as to why the proposed part 30 did not include an exclusion for organizations that are already in compliance with EEO rules, as exists in the old part 30. The Final Rule does include such an exemption, at § 30.4(d)(2).

Effective Date [§ 30.20]

The proposed rule created a new § 30.20 that established the dates by which sponsors needed to come into compliance with certain provisions in the regulations. The Final Rule removes this section and instead incorporates the compliance dates in the individual sections to which they apply. Discussion of the comments on the compliance dates provided is therefore found in each of these sections, above.

Proposed Amendments to Part 29 Regulations, Labor Standards for Registration of Apprenticeship Programs

The part 29 regulations governing Labor Standards for Registration of Apprenticeship Programs include references to sections in part 30 that are changed through this proposed rule. This NPRM proposed technical, non-substantive changes for consistency and conformity with the proposed changes to part 30. We received no comments on these changes that have not been addressed in other sections of this preamble, so we adopt the proposed language changes to part 29 as proposed.

Regulatory Procedures

Executive Orders 12866 and 13563: Regulatory Planning and Review

Executive Order 13563 directs agencies to propose or adopt a regulation only upon a reasoned determination that its benefits justify its costs; tailor the regulation to impose the least burden on society, consistent with achieving the regulatory objectives; and in choosing among alternative regulatory approaches, select those approaches that maximize net benefits. Executive Order 13563 recognizes that some benefits are difficult to quantify and provides that, where appropriate and permitted by law, agencies may consider and discuss qualitatively values that are difficult or impossible to quantify, including equity, human dignity, fairness, and distributive impacts.

Under Executive Order 12866, the Office of Information and Regulatory Affairs must determine whether this regulatory action is “significant” and, therefore, subject to the requirements of the Executive Order and subject to review by the Office of Management and Budget (OMB). Section 3(f) of Executive Order 12866 defines a “significant regulatory action” as an action likely to result in a rule that may: (1) Have an annual effect on the economy of \$100 million or more, or adversely affect a sector of the economy, productivity, competition, jobs, the environment, public health or safety, or State, local or Tribal governments, or communities in a material way (also referred to as an “economically significant” rule); (2) create serious inconsistency or otherwise interfere with an action taken or planned by another agency; (3) materially alter the budgetary impacts of entitlement grants, user fees, or loan programs or the rights and obligations of recipients thereof; or (4) raise novel legal or policy issues arising out of legal

mandates, the President’s priorities, or the principles set forth in the Executive Order.

The Office of Management and Budget has determined that the Final Rule is not an economically significant regulatory action under paragraph 3(f)(1) of Executive Order 12866. This rulemaking is not expected to adversely affect the economy or any sector thereof, productivity, competition, jobs, the environment, or public health or safety in a material way. In fact, the Final Rule is expected to increase the effectiveness and efficiency of EEO compliance within apprenticeship programs and to reduce the burden imposed on sponsors in several respects. It has, however, been determined that the Final Rule is a significant regulatory action under paragraph 3(f)(4) of the Executive Order and, accordingly, OMB has reviewed the Final Rule.

1. Need for Regulation

As explained in the preamble, the Department is updating the equal opportunity regulations that implement the National Apprenticeship Act of 1937. The existing regulations set forth at 29 CFR part 30 prohibit discrimination in registered apprenticeship on the basis of race, color, religion, national origin, and sex, and require that sponsors take affirmative action to provide equal opportunity in such programs. The Final Rule updates the part 30 regulations by including age (40 or older), genetic information, sexual orientation, and disability among the list of protected bases upon which a sponsor must not discriminate, and by detailing mandatory actions a sponsor must take to satisfy its affirmative action obligations.

In part, the Department is making this update so that the part 30 regulations align with 2008 revisions made to the Department’s other set of regulations governing the National Registered Apprenticeship System at part 29. In addition, the part 30 regulations have not been amended since 1978 and EEO law has evolved since that time. The changes in the Final Rule will ensure that the National Registered Apprenticeship System is consistent and in alignment with EEO laws as they have developed over the past 30 years, as discussed in Section I of the Final Rule, and to ensure that apprentices and applicants for apprenticeship receive equal opportunity in apprenticeship programs.

The Department is concerned that many segments of society continue to face substantial barriers to equal opportunity in apprenticeship.

Accordingly, a principal goal for the Final Rule is to strengthen the EEO for the National Registered Apprenticeship System, and improve the effectiveness of an apprenticeship program sponsor’s required affirmative action efforts, as well as improve sponsors’ compliance with part 30. To achieve this goal, the Department is making several changes to part 30, including:

(1) Updating the equal opportunity standards to include age (40 or older), genetic information, sexual orientation, and disability to the list of protected bases upon which sponsors of registered apprenticeship programs must not discriminate;

(2) Requiring all sponsors, regardless of size, to take certain affirmative steps to provide equal opportunity in apprenticeship;

(3) Streamlining the utilization analysis required of sponsors with five or more apprentices to determine whether any barriers to apprenticeship exist for individuals based on race, sex, or ethnicity, and clarifying when and how utilization goals are to be established;

(4) Requiring targeted outreach, recruitment, and retention activities when underutilization of certain protected groups have been found and a utilization goal has been established per § 30.6 and/or where a sponsor has determined pursuant to § 30.7(e) that impediments to equal opportunity exist for individuals with disabilities;

(5) Simplifying procedures for selecting apprentices;

(6) Standardizing procedures Registration Agencies⁸⁹ must follow for conducting compliance reviews;

(7) Clarifying requirements of program sponsors and Registration Agencies for addressing complaints;

(8) Aligning more closely with 29 CFR part 29 procedures for deregistration of SAAs, derecognition of apprenticeship programs and hearings; and

(9) Requiring an invitation to self-identify as an individual with a disability.

These provisions will help to ensure that all individuals, including women, minorities, and individuals with disabilities, are afforded equal opportunity in registered apprenticeship programs. Moreover, the addition of age (40 or older), genetic information, sexual orientation, and disability to the

⁸⁹ As explained in Section I of the Final Rule, part 29 prescribes procedures concerning the recognition of State Apprenticeship Agencies as Registration Agencies that can then register, cancel, and deregister apprenticeship programs within that State with the same authority as the Department and in accordance with the policies and procedures in part 29.

list of those bases upon which a sponsor must not discriminate will bring the National Registered Apprenticeship System into alignment with the protected bases identified in the various Federal laws applicable to most apprenticeship sponsors. These provisions will also ensure these underrepresented groups have increased access to programs. The Department's interest in updating part 30 to improve the effectiveness of sponsors' affirmative action efforts, as well as Registration Agencies' efforts to enforce and support compliance with this rule, lies in assuring that the Department's approval of a sponsor's apprenticeship program does not serve to support, endorse, or perpetuate discrimination.

2. General Comments Received on the Economic Analysis in the Notice Period of Proposed Rulemaking

The Department received several public comments that addressed the economic analysis in the NPRM. We carefully considered the comments received. The significant comments and summaries of the Department's analyses and determinations are discussed below:

a. Specific Steps To Provide Equal Opportunity—Staff Designation

Comments: In the NPRM, the economic analysis estimated that no additional burden would be incurred by the requirement to designate an individual to be responsible and accountable for overseeing the sponsor's commitment to EEO. Several commenters questioned this assumption by stating that staff already had full time jobs and the assumption that a human resource manager is already on staff may be inaccurate.

Department Response: Because businesses already have EEO provisions that they have to comply with through other federal regulations, it is the Department's interpretation that businesses will not need to provide additional staffing and that these responsibilities will fall under the existing staffing infrastructure. Additionally, the Department is committed to providing adequate technical assistance to sponsors and does not expect to increase the sponsor's need for staffing or other resources. The Final Rule language has been modified to clarify that the EEO designation can be provided to one individual or to multiple individuals so it is not a single person that has to address the requirements of this rule.

b. Specific Steps To Provide Equal Opportunity—Orientation and Periodic Information Sessions

Comments: In the NPRM, the economic analysis estimated that 5 apprentices and 5 journeyworkers would attend orientation and periodic information sessions. Several commenters stated that many programs could have considerably more apprentices, which would require much more of their time and possibly entail additional logistical costs associated with hosting meetings of that size.

Department Response: Based on program data and the growth model for apprentices and sponsors in this analysis, the Department estimated that 24 apprentices and 24 journeyworkers would attend orientation and periodic information sessions for all sponsors in 2017. Over the 10-year analysis period (2017–2026) these numbers would gradually increase to 34 apprentices and 34 journeyworkers in 2026.⁹⁰ Because sponsors already have in place a system to provide training and messaging to apprentices and journeyworkers, the Department believes that sponsors will be able to work in the additional EEO requirements that need to be communicated into their existing outreach structure with minimal additional cost. Additionally, the Department intends to provide guidance to sponsors relating to areas such as relevant recruitment sources and links to materials that sponsors and/or participating employers can use for anti-harassment communications and training.

c. Revised Methodology for Utilization Analysis and Goal Setting

Comments: The NPRM estimated that the revised utilization methodology would have streamlined the process and resulted in a reduced burden of the Final Rule. Several commenters disagreed with that estimation and indicated that the revised guidelines required more statistical expertise than staff typically possess. The inference that the Department would no longer be providing “availability” percentages would also increase staffing requirements and labor.

Department Response: In response to these concerns, the Department has

⁹⁰ Using program data from the Registered Apprenticeship Partners Information Data System (RAPIDS) and the growth model for apprentices and sponsors used in the analysis, the Department estimated that there are on average 24 apprentices per sponsor in 2017; 26 in 2018; 27 in 2019; 28 in 2020; 29 in 2021; 31 in 2022; 32 in 2023; 32 in 2024; 33 in 2025; and 34 in 2026. The Department further assumes a one-to-one ratio between apprentice and journeyworker in estimating the cost of orientations and periodic information sessions.

revised the utilization analysis described in the Final Rule to largely revert to existing practice, in which the Registration Agency provides significant support, and lessened the frequency with which the analysis has to be done—resulting in minimal additional burden for sponsors. Further, the Department intends to build a data tool that will assist in future iterations of the utilization analysis. Although this data tool will reduce burden for sponsors to conduct the utilization analysis in the long-run, the Department's analysis has accounted for additional upfront costs for time associated with familiarization with the tool for sponsors that choose to use it. In total, the Department is providing a data tool that will assist sponsors with conducting their utilization analysis approximately every five years. The Department has calculated costs to sponsors both for familiarization with the data tool and for using the tool to assist in conducting the analysis.

d. Invitation to Self-Identify as an Individual With a Disability

Comments: The NPRM estimated that 10 individuals would apply to each of 5 job postings per year, would choose to self-identify their disability status, and that an administrative assistant would spend 30 minutes reviewing and record-keeping the identification forms. Several commenters pointed out that the proposed rule would require self-identification to happen at 3 different points in the process. Additionally, it was noted that if the Final Rule requires additional outreach, a job posting could receive more than 10 applicants.

Department Response: The Department has updated the economic analysis to reflect that the invitation to self-identify takes place two times. In addition, the Department has increased the assumed number of applicants to a job posting to 15 individuals based on our historical experience and in consultation with program staff. The Department has observed that rural areas tend to receive 10 applications per apprentice opening, high density areas receive 12–15, and statewide programs receive more than 15 applications. In order to avoid under-estimating the costs, the Department assumes 15 applications across all program sponsors. In addition, the Department has updated this provision to allow for a 2-year phase-in of the requirement.

e. Overall Rule Costs and ERISA

Comments: Several commenters indicated that many apprenticeship sponsors are joint labor-management apprenticeship funds covered by ERISA.

These sponsors are not legally allowed to use funds to promote social, environmental, or other public policy causes at the expense of the interests of the plans' participants and beneficiaries. Some indicated that this may reduce the number of apprenticeship sponsors because firms subject to both requirements (the Final Rule and ERISA) may leave the apprenticeship program.

Department Response: The Final Rule specifies that sponsors who are operating under employee benefit plans governed by ERISA may now be eligible to use certain plan assets that support quality pre-apprenticeship programs and other workforce pipeline resources. Where support for such programs is necessary to maintain the plan's registration, or is otherwise advantageous to the plan, assets of the plan may be used to defray the reasonable expenses of such support. Therefore, the Department does not anticipate the number of jointly-sponsored apprenticeship programs to decrease because of the requirements of the Final Rule.

f. Percentage of Firms With Fewer Than Five Apprentices

Comments: The NPRM estimated that 75 percent of sponsors would have fewer than 5 apprentices and thus be exempt from certain Final Rule requirements. One commenter took issue with the assumption that the 25 percent of sponsors with five or more apprentices will be static over time. Due to increased federal funding launching apprenticeship programs into fields not typically represented (e.g., information technology), the commenter predicted that much of the growth of the program would come from new programs with more than five apprentices.

Department Response: While the Department agrees that the percentage of sponsors with 5 or more apprentices may change year-to-year and we expect the number of sponsors to increase over time, we expect the increase to occur across all industries. This includes those with long-time apprenticeship programs and those within new industries. The Department is not aware of information suggesting that this growth would be biased in favor of large or small sponsors, as new programs can be developed by any size of sponsor. Consequently, we assume that the percentage of sponsors with 5 or more apprentices will remain constant as the Apprenticeship program grows.⁹¹

⁹¹ The Department has estimated that the average number of apprentices per sponsor will increase over time in its model of apprentice and sponsor

3. Economic Analysis

The Department derives benefit and cost estimates by comparing the baseline (the program benefits and costs under the 1978 Final Rule⁹²) with the benefits and costs of implementing the provisions in the Final Rule. Only the additional benefits and costs that are expected to be incurred due to the changes in this regulation are included in the analysis.

The Department sought to quantify and monetize the benefits and costs of the Final Rule where feasible. Where we were unable to quantify benefits and costs—for example, due to data limitations—we describe them qualitatively. This analysis covers a 10-year period (2017 through 2026) to ensure it captures major benefits and costs that accrue over time. In this analysis, we have sought to present benefits and costs both undiscounted and discounted at 7 and 3 percent, respectively, following OMB guidelines.⁹³

The 10-year monetized costs of the Final Rule range from \$370.27 million to \$458.90 million (with 7 and 3 percent discounting, respectively). The 10-year monetized benefits of the Final Rule range from \$4.56 million to \$5.83 million (with 7 and 3 percent discounting, respectively). The annualized costs of the Final Rule range from \$52.72 million (with 7 percent discounting) to \$53.80 million (with 3 percent discounting). The annualized monetized benefits of the Final Rule are \$0.65 million (with 7 percent discounting) and \$0.68 million (with 3 percent discounting).

In addition, we expect the Final Rule to result in several overarching benefits to apprenticeship programs as well as some specific benefits resulting from a clearer and more systematic rule. As discussed below, equal opportunity policies may result in both efficiency gains and distributional impacts for

growth. This does not, however, directly contradict the assumption that the share of sponsors with 5 or more apprentices will remain constant. The average number of apprentices per sponsor can increase because both small and large sponsors grow their programs, but if small programs continue to keep their programs below 5 apprentices, the shares that have 5 or more apprentices and that have fewer than 5 apprentices can remain constant. Without being aware of any information that suggests that growth will be biased in favor of large or small sponsors or that suggests a large number of small sponsors will choose to increase the size of their programs to 5 apprentices or above, the Department believes that assuming the percentage of sponsors with 5 more apprentices will remain constant is the correct approach.

⁹² 43 FR 20760, May 12, 1978 (requiring the inclusion of female apprentices in AAPs).

⁹³ OMB Circular No. A-4, "Regulatory Analysis," M-03-21 (Sept. 2003).

society. The Final Rule may reduce barriers to entry in apprenticeship programs for women, minorities, persons with disabilities, and LGBT individuals, fostering an equitable distributional effect, and may alleviate the inefficiencies in the job market these barriers create. After considering both the quantitative and qualitative benefits of the Final Rule, the Department has concluded that the benefits would justify the costs of the Final Rule.

In the remaining sections, we first present the overall benefits of the Final Rule, followed by a subject-by-subject analysis of the costs and benefits. We then present a summary of the costs and benefits, including total costs over the 10-year analysis period. Finally, we conclude with a cost-benefit analysis of five regulatory alternatives (including the Final Rule).

a. Potential Overall Benefits and Distributional Effects of the Final Rule

This subsection presents the economic benefits and distributional effects of policy interventions related to equal employment opportunity. Information on these impacts is derived from an extensive body of empirical labor market research published over the last two decades in peer-reviewed publications. We assume that similar effects would be attributable to this rule's combination of provisions, not necessarily to a single provision. Some additional benefits associated with specific provisions of the Final Rule are presented in the next section.

The Final Rule clarifies and improves the regulations on equal opportunity employment from the 1978 Final Rule by encouraging better recruiting and hiring practices. These improved affirmative action policies may lead to both efficiency effects and distributional effects, as directed by OMB Circular A-4.⁹⁴

Equal opportunity hiring practices increase diversity in the workplace, which has been shown to have positive effects. Several studies have found that well-managed diversity can add value by increasing the variety of perspectives in a team or company, therefore fostering creativity.⁹⁵ Research has also proven that diverse groups can perform better on problem-solving tasks than a

group of strong individual performers.⁹⁶ Having diverse perspectives and diverse ways of interpreting and acting on new information improves the collective ability to both anticipate challenges and find effective solutions. Increased diversity can also be beneficial to the employer, as evidenced by a 2007 paper by Hernandez and McDonald, which studied the effects of hiring workers with disabilities. They found that compared to those without a disability, disabled workers had longer tenure, reduced absenteeism, identical job performance, and did not require significantly more supervision.⁹⁷ Further, a study by Schotter and Weigelt (1992) showed that equal opportunity policies increase the efforts of all workers, not just the underutilized workers.⁹⁸

Among all diversity-improvement measures, affirmative action programs have been shown to lead to the broadest increases in diversity.⁹⁹ Further, they have not been found to generate losses in efficiency for an organization.¹⁰⁰ Although evidence suggests that minorities who benefit from affirmative action often have weaker *credentials*, there is little evidence suggesting that their labor market performance is weaker.¹⁰¹ Even when job applicants have comparable credentials, employers have still been found to discriminate based on race, and therefore lose out on this skilled workforce.¹⁰² Without policies to combat this discrimination, workers in groups that are subject to discrimination are often left with the belief that certain jobs are unattainable, and lack the incentive to improve their observable skills or invest in education. Personal education and training investments not only help the individual, but may have positive externalities in the long run, as

discussed further below. Additionally, by hiring more workers from underrepresented groups, firms naturally create mentors and expand networking opportunities for these groups.¹⁰³ These two factors can increase employee retention, directly benefiting the apprenticeship sponsors who will see the return on their initial recruitment and training investments.

Anti-discrimination policies provide economic benefits to disadvantaged groups, in the form of both higher wages and increased employment. One study estimated that 15 to 20 percent of aggregate wage growth between 1960 and 2008 was attributable to the increase in workforce participation by women and minorities, including participation increases from the adoption of civil rights laws and changing social norms.¹⁰⁴ The Civil Rights Act of 1964 improved both employment levels and wages for Black workers, as evidenced in cases such as the South Carolina textile industry.¹⁰⁵ The implementation of affirmative action policies has also been shown to increase the odds of women and minorities in management.¹⁰⁶ Not only do these efforts help disadvantaged workers, but effects such as reduced unemployment benefit the economy as a whole.

The Final Rule can also be expected to result in a beneficial distributional effect. The direct beneficiaries of the Final Rule will be underrepresented workers: Women, minorities, and persons with disabilities. According to Holzer and Neumark (2000), “affirmative action offers significant redistribution toward women and minorities.” Evidence indicates that women are more likely than men to be classified as working poor and that Blacks or African Americans and Hispanics or Latinos are more than twice as likely as their white counterparts to be among the working poor.¹⁰⁷ In addition, persons with disabilities have a poverty rate of 28.5 percent, over twice as high as the

poverty rate of persons without disabilities of 12.3 percent.¹⁰⁸ Education and training investments for these underrepresented groups can result in lifetime earnings benefits.

Apprenticeship participants see average lifetime earnings benefits of nearly \$100,000, and for those completing apprenticeships, there are average lifetime earnings benefits of over \$240,000 compared to similar individuals who do not enter an apprenticeship.¹⁰⁹ Construction, the largest represented industry sector in the National Registered Apprenticeship System, offers a higher median wage than many traditionally female-dominated jobs and many other jobs that do not require a college education for advancement, thus providing opportunity to move out of poverty or working poor status.¹¹⁰ Reducing barriers to entry in apprenticeship programs for women, minorities, persons with disabilities, people over age 40, and LGBT individuals can have additional long term impacts to beneficiaries; one study found that individuals that participated in an apprenticeship program are 8.6 percent more likely to be employed both six and nine years after participation.¹¹¹

As apprenticeship expands in the United States, the Department is committed to ensuring that this expansion benefits the entire American workforce, including individuals with disabilities, and that it provides them a path to good jobs and careers with living wages such as those that apprenticeships offer. To illustrate the impacts the Final Rule will have on individuals with disabilities, the

¹⁰⁸ These poverty rates are for individuals ages 18 to 64. U.S. Census Bureau, Current Population Reports, “Income and Poverty in the United States: 2014,” available at <https://www.census.gov/content/dam/Census/library/publications/2015/demo/p60-252.pdf> (last accessed June 10, 2016).

Department estimated the number of individuals with disabilities expected to benefit from its provisions if the Final Rule's utilization targets are met and apprenticeship increases by the growth rates assumed in this analysis. We first obtained estimates of the prevalence of disabilities among workers in different industries by analyzing American Community Survey (ACS) data on workers ages 18 to 64 from the years 2008 to 2012. These estimates are shown in Exhibit 1. Next, in the absence of data relating to the number of persons with disabilities enrolled in apprenticeship programs by industry, we assumed that in a given industry the share of new apprenticeship enrollees that are persons with disabilities will be

the same as the share of workers in that industry with disabilities. We see, for example that in the Construction industry, 5.4 percent of all workers have a disability. We assume, therefore, that 5.4 percent of apprentices in the Construction industry similarly have disabilities and that in the absence of the Final Rule that percentage would be maintained as employers enrolled new apprentices with disabilities at the same rate as they dismissed apprentices with disabilities. The utilization goal for individuals with disabilities set forth in the Final Rule is 7 percent of enrollees, thus an additional 1.6 percent of enrollees (7 percent goal minus the 5.4 percent assumed to be currently enrolled) will be expected to be persons

with disabilities if the utilization goal of 7 percent is attained. Because the number of new apprentices in a 10-year span (2017–2026) in Construction is projected by the Department to be 276,591 the Final Rule's goal of a 7 percent enrollment rate would result in $(0.07 - 0.054) \times 276,591 = 4,342$ more persons with disabilities as new apprentices in the Construction industry.

This calculation, when repeated over all industries, gives a total estimate of an additional 9,243 individuals with disabilities who would be enrolled out of the total of 541,061 new apprentices projected over the next 10 years (2017–2026).

EXHIBIT 1—IMPACT ESTIMATES FOR INDIVIDUALS WITH DISABILITIES

Industry	Share of workers in industry with disabilities (%)	Projected new apprentices over a 10-year period	Gap (%)	Projected new apprentices with disabilities
	(A)	(B)	(C) = 7% – A	(D) = B * C
Administrative-Support	5.5	2,389	1.5	36
Agriculture	6.2	759	0.8	6
Construction	5.4	276,591	1.6	4,342

4. Subject-by-Subject Analysis

The Department's analysis considers the expected benefits (beyond those discussed above) and costs of the changes to part 30. This analysis considers the impacts of each change to part 30 separately. This analysis measures the costs and benefits as they accrue to sponsors, the Office of Apprenticeship at the Department, and State partnering agencies. It is estimated that the number of sponsors will grow over time and our annual cost calculations reflect this growth. This analysis primarily discusses how the first-year costs were calculated and indicates that the analysis repeats that calculation across the 10-year time frame using the appropriate number of sponsors in any given year. Exhibit 2

presents the number of total and new sponsors in each year.¹¹²

¹¹² The Department determined the growth rates applied to apprenticeships and apprenticeship sponsors in each industry by examining previous program growth in the RAPIDS database and extrapolating based on historical trends and regulatory requirements. The growth model also accounted for the increased budgetary resources the program has received to expand the program. In the growth model, the Department used higher industry-specific growth rates in 2017 than in 2026 to reflect the fact that the Department expects faster initial growth in the first years of the 10-year window followed by somewhat slower steady growth in the final years. Over the course of the 10-year window, the growth rates steadily decrease from the higher 2017 rates to the lower 2026 rates. Were higher sponsor growth rates in each industry to be assumed to approximately account for the President's ambitious goal to double the number of apprentices by the end of 2019 and should those higher growth rates be continued in subsequent years, the total cost of the Final Rule would increase from \$370.27 million to \$708.65 million

EXHIBIT 2—TOTAL ACTIVE AND NEW SPONSORS (2017–2026)

Year	Total active sponsors	New sponsors ¹¹³
2017	23,811	2,942
2018	25,231	3,005
2019	26,606	3,046
2020	27,915	3,062
2021	29,137	3,052
2022	30,250	3,013
2023	31,233	2,946
2024	32,069	2,850
2025	32,739	2,727

(with 7 percent discounting) and from \$458.90 million to \$909.22 million (with 3 percent discounting) over the 10-year period (2017–2026). The monetized benefit would also increase from \$4.56 million to \$9.14 million (with 7 percent discounting) and from \$5.85 million to \$11.95 million (with 3 percent discounting) over the 10-year period.

EXHIBIT 2—TOTAL ACTIVE AND NEW SPONSORS (2017–2026)—Continued

Year	Total active sponsors	New sponsors ¹¹³
2026	33,230	2,578

a. Familiarization With the Final Rule

To estimate the cost of initial rule familiarization, we multiplied the number of apprenticeship sponsors in 2017 (23,811)—the first full year in which the Final Rule will be in effect—by the amount of time required to read the new rule (4 hours) and by the average hourly compensation of a private-sector human resources manager (\$73.90).¹¹⁴ In the first year of the Final Rule, the cost to sponsors amounts to approximately \$7.04 million in labor costs. We repeated this calculation for each remaining year in the analysis period using the estimated number of new sponsors for each year, resulting in an annualized cost ranging from \$1.69 million to \$1.57 million with 7 percent and 3 percent discounting, respectively.¹¹⁵ In subsequent years, this cost is only applied to new sponsors because existing sponsors will

¹¹³ Note that the number of new sponsors in a given fiscal year is larger than the difference between that year's total active sponsors and the previous year's total active sponsors because the Department has accounted for the fact that there will be some turnover among sponsors as some sponsors end their programs and are replaced by new sponsors. To calculate this annual turnover, the Department looked at historical RAPIDS data from FY2010 through FY2015, and determined that, on average, approximately 6.3 percent of total active sponsors in a given year were new sponsors that had simply replaced old sponsors in the total active sponsor count. To calculate total new sponsors in a given year in the analysis's 10-year window, the Department multiplied this 6.3 percent by the number of total active sponsors in a given year and added this to the difference between each year's total active sponsor count and the total active sponsor count of the preceding year.

¹¹⁴ We calculated the hourly compensation rate for a human resource manager (Occupation code 11–3121) by multiplying the median hourly wage of \$51.32 (source: Bureau of Labor Statistics (BLS), May 2015 National Occupation Employment and Wage Estimates by Ownership: Cross-industry, Private ownership only, <http://www.bls.gov/oes/current/000001.htm#11-0000>) by 1.44 to account for private-sector employee benefits (source: BLS, June 2016 Employer Costs for Employee Compensation, <http://www.bls.gov/news.release/ecec.nr0.htm> BLS ECI series CMU201000000000D, CMU202000000000D, CMU202000000000P). The hourly compensation rate for a human resource manager is thus \$73.90 (\$51.32 × 1.44).

¹¹⁵ To calculate the labor burden, we multiplied the time to complete the task by the hourly compensation rate for sponsors (\$73.90 × 4 = \$295.60). The total cost for sponsors in 2017 is the labor cost multiplied by the total number of sponsors (23,811), or \$7.04 million (\$295.60 × 23,811). This burden occurs in the first year of the analysis period for all sponsors, and every year thereafter only for new sponsors.

have already familiarized themselves with the Final Rule in previous years.

b. Addition of Age (40 or Older), Genetic Information, Sexual Orientation, and Disability to the List of Protected Bases

The Final Rule updates the EEO standards to include age (40 or older), genetic information, sexual orientation, and disability to the list of protected bases upon which sponsors of registered apprenticeship programs must not discriminate (§ 30.3(a)). As explained in the preamble, the addition of these bases to the types of discrimination prohibited by part 30 should not result in any significant additional cost to sponsors as most of the National Registered Apprenticeship System's sponsors must already comply with Federal, State, and local laws and regulations prohibiting or otherwise discouraging discrimination against applicants and employees based on age (40 or older), genetic information, sexual orientation, and disability. Even among those sponsors not covered by such laws, many have internal EEO policies that prohibit discrimination on these bases. Therefore, the Department does not expect that the addition of age (40 or older), genetic information, sexual orientation, and disability to the list of protected bases in §§ 30.1(a) and 30.3(a) would result in any significant costs to sponsors.

c. Specific Affirmative Steps To Provide Equal Opportunity

The Final Rule requires all sponsors, regardless of size, to take certain affirmative steps to provide equal opportunity in apprenticeship. The Final Rule language in § 30.3(b) will, for the first time, obligate sponsors to take the following basic steps to ensure EEO in apprenticeship.

First, sponsors are required to designate an individual or individuals to be responsible and accountable for overseeing the sponsor's commitment to EEO (§ 30.3(b)(1)). The Department expects the burden of this requirement on sponsors to be minimal. Most, if not all, sponsors have an apprenticeship coordinator who is in charge of the apprenticeship program. The Department anticipates that this requirement will be fulfilled by individuals currently providing coordination and administrative oversight functions for the program sponsor. We expect that the designation will be a relatively minor administrative matter, but one that will result in institutionalizing a sponsor's commitment to equal opportunity.

Second, the Final Rule requires for the first time that sponsors post their equal opportunity pledge on bulletin boards and through electronic media, such that it is accessible to all apprentices and applicants to apprenticeship programs (§ 30.3(b)(2)). We assume that sponsors choose to put up a physical copy of the pledge and also post it on their Web site.¹¹⁶ The cost of this requirement is minimal. The Department assumes it will take a sponsor 5 minutes (0.08 hour) to post the pledge and that this task will be performed by an administrative assistant at an hourly compensation rate of \$23.10.¹¹⁷ We multiplied the time estimate for this provision by the hourly compensation rate to obtain a total labor cost per sponsor of \$1.85 (\$23.10 × 0.08). Updating the EO pledge to include age (40 or older), genetic information, sexual orientation, and disability will not create any new burden because it is already covered by the existing requirements. To estimate the materials cost, the Department assumed that the pledge is one page, and that the cost per page for photocopying is \$0.08, resulting in a materials cost of \$0.08 (\$0.08 × 1) per sponsor. The total cost of putting up a physical copy of the pledge per sponsor is therefore \$1.93 (\$1.85 + \$0.08).

The Department also assumes it will take a sponsor 10 minutes (0.17 hours) to post the pledge on its Web site and that this task will be performed by a web developer at an hourly compensation rate of \$45.24.¹¹⁸ The cost of posting the pledge on the sponsor's Web site is \$7.69 (\$45.24 × 0.17). The total per sponsor cost of this provision, including the posting of physical copy of the pledge and the posting of the

¹¹⁶ Some sponsors may already be undertaking some actions that would count toward compliance with this obligation and, consequently, the cost calculation for this provision is likely an overestimate.

¹¹⁷ We calculated the hourly compensation rate for an administrative assistant (Occupation code: 43–6014) by multiplying the median hourly wage of \$16.04 (source: BLS, May 2015 National Occupation Employment and Wage Estimates by Ownership: Cross-industry, Private ownership only, <http://www.bls.gov/oes/current/000001.htm#11-0000>) by 1.44 to account for private-sector employee benefits. Thus, the hourly compensation rate for an administrative assistant is \$23.10 (\$16.04 × 1.44).

¹¹⁸ We calculated the hourly compensation rate for a web developer (Occupation code: 15–1134) by multiplying the median hourly wage of \$31.42 (source: BLS, May 2015 National Occupation Employment and Wage Estimates by Ownership: Cross-industry, Private ownership only, <http://www.bls.gov/oes/current/000001.htm#11-0000>) by 1.44 to account for private-sector employee benefits. Thus, the hourly compensation rate for a web developer is \$45.24 (\$31.42 × 1.44).

pledge on the sponsor's Web site, is therefore \$9.62 (\$1.93 + \$7.69).

Multiplying this sum (\$9.62) by the total number of sponsors (23,811) in the first year (2017) results in a cost of \$229,033 for this provision. The posting of the equal opportunity pledge is a one-time cost; costs after the first year are only incurred by new sponsors. Looking over the full ten-year period, the annualized cost of this provision is \$55,015 (with 7 percent discounting) and \$51,044 (with 3 percent discounting).

The Final Rule § 30.3(b)(2) also requires each sponsor to conduct orientation and periodic information sessions for apprentices, journeyworkers who directly supervise apprentices, and other individuals connected with the administration or operation of the sponsor's apprenticeship program to inform and remind such individuals of the sponsor's equal employment opportunity policy with regard to apprenticeship. The orientation and information sessions required by § 30.3(b)(2)(iii) underscore the sponsor's commitment to equal opportunity and its affirmation action obligations. These sessions also institutionalize a sponsor's EEO policies and practices, providing a mechanism by which the sponsor may inform everyone connected with the apprenticeship program of the sponsor's obligations under part 30, and ensure that all individuals involved in the program understand these obligations and the policies instituted to implement them. Under § 30.3(b)(4)(i), sponsors are also required to provide anti-harassment training, which will be incorporated into these periodic orientation and information sessions. This training must include active participation by trainees, such as attending a training session in person or completing an interactive training online and will include at a minimum communications to apprentices and journeyworkers who directly supervise apprentices that harassing conduct will not be tolerated, the definition of harassment and types of conduct that constitute harassment, and the right to file a harassment complaint.

Using 2015 data from the Registered Apprenticeship Partners Information Data System (RAPIDS) and the growth model for apprenticeship and sponsors in this analysis, the Department calculated that there are on average 24 apprentices per sponsor in 2017.¹¹⁹ The Department further assumes a one-to-

one ratio between apprentice and journeyworker in estimating the cost of orientations and periodic information sessions. The Department first estimated that the 23,811 sponsors in the first year (2017) will hold one 45-minute regular orientation and information session with an average of 24 apprentices (\$18.72 per hour)¹²⁰ and 21 journeyworkers (\$31.68 per hour)¹²¹ per sponsor. The Department estimated that a human resource manager (\$73.90 per hour) will need to spend 2 hours to develop and prepare written materials for the session in the first year, and the 2 hours also cover maintaining the training materials which were already saved on the computer (\$3.52 million = 23,811 sponsors × 2 hours × \$73.90).

This calculation results in a total cost for this provision of approximately \$26.44 million in the first year (2017).¹²² All sponsors are assumed to hold one 45-minute regular orientation and information session annually. This calculation is repeated in subsequent years (with the requirement that an HR manager develop written materials only applicable for new sponsors). The annualized cost ranges from \$34.18 million (with 7 percent discounting) to \$34.87 million (with 3 percent discounting).

Third, under the existing § 30.4(c) sponsors are required to engage in appropriate outreach and recruitment activities to organizations that serve women and minorities, and the regulations list the types of appropriate

activities a sponsor is expected to undertake. The exact mix of activities depends on the size and type of the program and its resources; each sponsor, however, is "required to undertake a significant number of appropriate activities" under the existing § 30.4. Under the Final Rule, all sponsors are required to reach out to a variety of recruitment sources, including organizations that serve individuals with disabilities, to ensure universal recruitment (§ 30.3(b)(3)). Including individuals with disabilities among the groups of individuals to be recruited is a new focus for sponsors. Sponsors are required to develop a list of recruitment sources that generate referrals of women, minorities, and persons with disabilities with contact information for each source. Further, sponsors are required to notify these sources in advance of any apprenticeship opportunities; while a firm deadline is not set, the Final Rule suggests 30 days' notice if possible under the circumstances. This may lead employers to incur costs due to the additional delay in the hiring process resulting from this rule. The Department, however, does not have enough information to estimate this potential cost.

The kinds of activities we anticipate the sponsor engaging in to satisfy this requirement include distributing announcements and flyers detailing job prospects, holding seminars, and visiting some of the sources that will likely provide access to individuals with disabilities. The Department assumed that the cost to sponsors to distribute information to persons with disabilities will be the labor cost to comply with this provision. We also assumed that the activity to satisfy this provision will be performed by a human resource manager and an administrative assistant with hourly compensation rates of \$73.90 and \$23.10, respectively. We assumed that this task will take 30 minutes (0.5 hour) of a human resource manager's time and 30 minutes (0.5 hour) of an administrative assistant's time per targeted source. We calculated the cost of this provision per affected sponsor by multiplying the time each staff member devotes to this task by their associated hourly compensation rates. We then multiplied the total labor cost by the assumed number of outreach sources (5) and by the total number of sponsors.¹²³ All sponsors are assumed

¹²⁰ We calculated the hourly compensation rate for an apprentice by multiplying the median hourly wage of \$13.00 (as published by PayScale for an apprentice electrician) by 1.44 to account for private-sector employee benefits (source: OES survey). Thus, the hourly compensation rate for an apprentice is \$18.72 (\$13.00 × 1.44). We used the wage rate for an apprentice electrician in this analysis because electrician is one of the most common occupations in the apprenticeship program.

¹²¹ We calculated the hourly compensation rate for a journeyworker by multiplying the median hourly wage of \$22.00 (as published by PayScale for a journeyworker electrician) by 1.44 to account for private-sector employee benefits (source: OES survey). Thus, the hourly compensation rate for a journeyworker electrician is \$31.68 (\$22.00 × 1.44). We used the wage rate for a journeyworker electrician in this analysis because electrician is one of the most common occupations in the apprenticeship program.

¹²² The total cost was derived from the cost for an HR manager to develop materials (2 hours) and attend the training (0.75 hours), as well as 24 apprentices and 24 journeyworkers to attend the training. In 2017, with 23,811 active sponsors, material development cost \$3.52 million (\$73.90 × 2 × 23,811), HR manager attendance cost \$1.32 million (\$73.90 × 0.75 × 23,811), apprentice attendance cost \$8.03 million (\$18.72 × 0.75 × 24 × 23,811), and journeyworker attendance cost \$13.58 million (\$31.68 × 0.75 × 24 × 23,811) the total cost for all 23,811 sponsors is \$23.74 million in 2017.

¹²³ To estimate the cost of this provision, we calculated the labor cost per affected sponsor by multiplying the time required for the task by the hourly compensation rate for both a human resource manager (\$73.90 × .5 = \$36.95) and an

¹¹⁹ The Department estimated that there are on average 24 apprentices per sponsor in 2017; 26 in 2018; 27 in 2019; 28 in 2020; 29 in 2021; 31 in 2022; 32 in 2023; 32 in 2024; 33 in 2025; and 34 in 2026.

to conduct this outreach in all years.¹²⁴ The resulting cost of this provision is \$5.77 million in the first year, with an annualized cost ranging from \$6.94 million (with 7 percent discounting) to \$7.02 million (with 3 percent discounting).

Because universal outreach may involve a range of activities, the Department conducted a sensitivity analysis on the total time allocated to universal outreach. Mirroring the calculation above, the Department estimated a low allocation of time (15 minutes, or 0.25 hour) and a high allocation of time (1 hour and 15 minutes, or 1.25 hour) for both the administrative assistant and the human resource manager. The resulting range of costs for the first year is \$2.89 million to \$14.44 million with an annualized cost ranging from \$3.47 million (with 7 percent discounting) to \$3.51 million (with 3 percent discounting) at the lower bound to \$17.35 million (with 7 percent discounting) to \$17.56 million (with 3 percent discounting) at the higher bound.¹²⁵

Fourth, the Final Rule requires that all sponsors develop and implement procedures to ensure that their apprentices are not harassed because of their race, color, religion, national origin, sex, sexual orientation, age (40 or older), genetic information, or disability and to ensure that the workplace is free from harassment, intimidation, and retaliation (§ 30.3(b)(4)(iv)). As explained in the preamble, this requirement should not result in new burdens on sponsors who are already

administrative assistant (\$23.10 × .5 = \$11.55). We then multiplied the total per-sponsor labor cost by the total number of sponsors in 2017 (23,811) and by the five sites for which each sponsor is to provide outreach. This results in a total cost of \$5.77 million (((\$36.95 + \$11.55) × 23,811 × 5) in 2017. We repeated this calculation for each year of the analysis period, using the projected number of sponsors for each year.

¹²⁴ This cost for all sponsors may be an overestimate because some sponsors are already undertaking some outreach activities on their own under the existing regulations.

¹²⁵ To estimate the range of costs for this provision, we calculated the labor cost per affected sponsor by multiplying the time required for the task by the hourly compensation rate for both a human resource manager (\$73.90 × 0.25 = \$18.48 for the low cost and \$73.90 × 1.25 = \$92.38 for the high cost) and an administrative assistant (\$23.10 × 0.25 = \$5.78 for the low cost and \$23.10 × 1.25 = \$28.88 for the high cost). We then multiplied the total per-sponsor labor cost by the total number of sponsors in 2017 (23,811) and by the five sites for which each sponsor is to provide outreach. This results in a total cost of \$2.89 million for the low time assumption (((\$18.48 + \$5.78) × 23,811 × 5)) and \$14.44 million for the high time assumption (((\$92.38 + \$28.88) × 23,811 × 5) in 2017. We repeated this calculation for each year of the analysis period, using the projected number of sponsors for each year. Totals may not add due to rounding.

subject to Federal laws that prohibit harassment in the workplace. Because title VII, Executive Order 11246 as amended by Executive Order 13672, the ADEA, GINA, and the ADA prohibit these actions, and most sponsors are already subject to these laws. Because time has been calculated for compliance with the periodic orientation/information sessions in 30.3(b)(2)(iii) of which the anti-harassment training is a part, the cost of this requirement has already been accounted for in this analysis. As mentioned in the preamble, the Department will also provide anti-harassment materials that can be used by sponsors.

d. Revised Methodology for Workforce and Utilization Analysis and Goal Setting

The Final Rule streamlines the workforce and utilization analysis required of sponsors with five or more apprentices and clarifies when and how utilization goals are to be established for women and minorities (§§ 30.5 through 30.7). Specifically, the Final Rule requires sponsors to consider two factors when determining the availability of individuals for apprenticeships rather than the five currently listed in the part 30 regulations: The percentage of individuals eligible for enrollment in apprenticeship programs within the sponsors relevant recruitment area and the percentage of the sponsor's employees eligible for enrollment in the apprenticeship program, both to be detailed by race, sex, and ethnicity. The Final Rule further reduces the frequency with which the workforce and utilization analyses must be conducted—from annually under the existing rule to at the time of the compliance review for the utilization analysis (every five years on average) and within three years of the compliance review for the workforce analysis (effectively every two and a half years on average). In addition, the Final Rule explains in clear terms the steps required to determine whether any particular groups of individuals are being underutilized and the Registration Agency will provide direction as to when and how goals are to be established. First, sponsors will conduct a workforce analysis to identify the racial, sex, and ethnic composition of their apprentices. Second, an availability analysis will establish a benchmark against which the existing composition of apprentices will be compared. Sponsors will establish utilization goals and engage in targeted outreach, recruitment, and retention efforts when the sponsor's utilization of

women, Hispanics or Latinos, or individuals in racial minority groups are “significantly less than would be reasonably expected given the availability of such individuals for apprenticeship.” Registration Agencies will work closely with sponsors during compliance reviews to assist in the development of an availability analysis and setting or reassessing utilization goals for race, sex, and ethnicity. The Department will be further developing a data tool to assist in the collection and analysis of relevant demographic data for the purposes of goal setting. The Department has determined that there are three types of costs associated with this provision: Costs associated with the development of and familiarization with the data tool, costs associated with the workforce analysis, and costs associated with the utilization analysis.

Although it is the Department's expectation that this activity will result in long-term efficiencies and burden reductions for both the Department and affected sponsors, it understands that there will be costs associated with both the development of the data tool and the time sponsors will need to familiarize themselves with the tool. To develop the tool, the Department estimates that it will use a GS-13 Department employee at an hourly compensation rate of \$64.71 for 60 hours¹²⁶ to advise a contractor to build the tool. Based on the Department's requirements for similar assignments, the cost of contracting for building the tool is estimated to be \$55,000. The total one-time cost to the Department for building the tool is therefore estimated to be \$58,883.

To quantify the cost associated with sponsor familiarization with the data tool, the Department assumed that the data tool is developed in 2017 and that the following year (2018) all sponsors (25,231) with 5 or more apprentices (25 percent) will incur one hour of HR manager labor (\$73.90 per hour) to familiarize the organization with the

¹²⁶ The GS-13 salary is from the Office of Personnel Management's 2015 Salary Table. This wage is further multiplied by the Federal benefits multiplier of 1.63 for an hourly compensation rate of \$64.71 (\$39.70 × 1.63). The Federal multiplier of 1.63 is the result of a two-step estimate: The average ratio of total compensation to total wages in the private sector in 2015 (1.44) multiplied by the ratio of loaded wage factors for federal workers compared to private sector workers (1.13). Totals may not add due to rounding. See Bureau of Labor Statistics. (2016). *2015 Employer Costs for Employee Compensation*. Retrieved from: http://www.bls.gov/schedule/archives/ecec_nr.htm; Congressional Budget Office. (2012). *Comparing the compensation of federal and private-sector employees*. Tables 2 and 4. Retrieved from: https://www.cbo.gov/sites/default/files/112th-congress-2011-2012/reports/01-30-FedPay_0.pdf.

tool. This is estimated to have a cost of \$466,143 ($25,231 \times 25$ percent $\times$ \$73.90 $\times$ 1) in 2018. We repeated this calculation for the following years only for new sponsors to the program who will still need to acclimate themselves with the tool. This provision has an annualized cost of \$98,197 (with 7 percent discounting) and \$93,348 (with 3 percent discounting).

To calculate the cost of the new workforce analysis, the Department first determined the baseline (current) cost of the workforce requirements under existing regulations. The existing workforce analysis required 1 hour of HR manager labor (\$73.90 per hour) for all sponsors (23,811 in 2017) with 5 or more apprentices (25 percent) annually.

The Department then determined that the new methodology for conducting workforce analyses under the Final Rule—including the conducting of workforce analyses for individuals with disabilities—would result in 2 hours of HR manager labor (\$73.90 per hour) for all sponsors (25,231 in 2018) with 5 or more apprentices (25 percent). All sponsors with 5 or more apprentices must conduct their first new workforce analysis within two years of the Final Rule's effective date and every 2.5 years after that. The Department calculated that the new workforce analyses in 2018—the first year in which the new workforce analyses would be undertaken per the compliance date set forth in § 30.5(b)(3) for all sponsors with 5 or more apprentices—will cost \$932,285 ($2 \text{ hours} \times \$73.90 \times (25,231 \times 25 \text{ percent})$). In calculating costs for the year 2019 and afterward, the Department divided the number of applicable sponsors in each year by 2.5 to reflect the assumption that in 2019 and after sponsors will conduct the analysis per the 2.5-year timeline. This means that in any given year 40 percent of these sponsors will conduct the new workforce analysis or that it would take 2.5 years to have these sponsors conduct the new workforce analysis. We repeated this calculation for the following years using the appropriate number of sponsors in any given year, resulting in an annualized cost of \$445,815 (with 7 percent discounting) and \$449,806 (with 3 percent discounting) for sponsors.

To calculate the cost of the new utilization analysis, the Department determined that the utilization analysis will result in 0.5 hour of HR manager time (\$73.90 per hour) for all sponsors (26,606 in 2019) with 5 or more apprentices (25 percent) every 5 years. There is no baseline cost for this portion of the analysis, as previously the Department was providing the analysis

with minimal burden to sponsors. The cost of conducting the first utilization analyses in 2019—the first year that utilization analyses are likely to be conducted—is \$49,155 ($0.5 \text{ hour} \times \$73.90 \times (26,606 \times 25 \text{ percent})/5 \text{ years}$). We repeated this calculation for the following years, and conducting utilization analyses has an annualized cost of \$41,235 (with 7 percent discounting) and \$43,348 (with 3 percent discounting) for sponsors.

Benefits

Once the data tool is developed, the Department estimates it will reduce the time required for its GS–13 employee (\$64.71 per hour) to conduct a utilization analysis from the existing 2 hours to 1 hour using the data tool jointly with sponsors. Furthermore, the frequency of conducting the utilization analysis is reduced from annually to once every 5 years. This will result in a cost saving to the Department of \$774,753 in 2019 ($(26,606 \times 25 \text{ percent} \times (2 \text{ hour} - (1 \text{ hour}/5 \text{ years})) \times \$64.71)$) and an annualized cost saving ranging from \$649,925 (with 7 percent discounting) to \$683,240 (with 3 percent discounting).

e. Requiring Targeted Outreach, Recruitment, and Retention for Underutilized Groups

In addition to the normal outreach, recruitment, and retention activities required of all sponsors under § 30.3(b), the Final Rule requires a sponsor of an apprenticeship program, whose utilization analyses revealed underutilization of a particular group or groups of individuals pursuant to § 30.6 and/or who has determined pursuant to § 30.7(e) that there are impediments to EEO for individuals with disabilities, to engage in targeted outreach, recruitment, and retention for all underutilized groups in § 30.8. We assume that this additional outreach will happen in the same manner as the universal outreach discussed above.

We further assume that this targeted outreach, recruitment, and retention is newly required for individuals with disabilities of all sponsors who employ five or more apprentices, who failed to meet the 7 percent utilization goal, and whose existing recruitment efforts are not effective and need to be revised, since the Final Rule now requires that such sponsors engage in affirmative action of individuals with disabilities. The Department recognizes, however, that some sponsors may already be meeting the 7 percent utilization goal for persons with disabilities. Others may be employing them at less than 7 percent, but nevertheless do not need to

engage in targeted outreach and recruitment because their review of their activities did not reveal any barriers to equal opportunity. Therefore, the analysis below may overestimate the number of sponsors that need to engage in targeted outreach and recruitment and consequently overestimate total costs of this provision.¹²⁷

We assume that the cost to sponsors to distribute information about apprenticeship opportunities to organizations serving individuals with disabilities will be the labor cost. We also assume that the labor for this provision will be performed by a human resource manager and an administrative assistant with hourly compensation rates of \$73.90 and \$23.10, respectively. Lastly, we assume that this additional outreach will first occur two years after the Final Rule goes into effect. At the first compliance review—which for the first group of sponsors to conduct compliance reviews will occur approximately two years after the Final Rule's effective date—sponsors need to conduct a utilization analysis and an internal review to identify underutilization for women, minority groups, or individuals with disabilities. Sponsors who need to engage in targeted outreach and recruitment for the first time should continue to do so annually until the next compliance review.

The Department estimated that this dissemination task will take 30 minutes (0.5 hour) of a human resource manager's time and 30 minutes (0.5 hour) of an administrative assistant's time per targeted source. A sensitivity analysis for a range of time spent conducting targeted outreach to organizations that serve individuals with disabilities is presented further below. The cost of this provision per affected sponsor is the time each staff member devotes to this task multiplied by their associated hourly compensation rates. This calculation resulted in a labor cost of \$48.50 ($(\$73.90 \times 0.5) + (\$23.10 \times 0.5)$) per source. We then multiplied this total labor cost by the number of outreach sources (5),¹²⁸ the

¹²⁷ For this analysis, we assumed that the percent of all sponsors employing five or more apprentices (25 percent) remains constant throughout the 10-year analysis period. In reality, this percentage will fluctuate as sponsors take on new apprentices and as apprentices complete their programs. We also expect that, over time, successful outreach will lead to more hiring of persons with disabilities and that sponsors will meet their recruitment goals and not be required to complete this additional outreach.

¹²⁸ The Department believes that most sponsors will not have underutilization in all AAP protected bases (race, ethnicity, sex, and disability) requiring outreach under § 30.8; however, this analysis

share of sponsors with five or more apprentices (25 percent), the share of sponsors that will undertake a utilization analysis in any given year (20 percent ¹²⁹) and the share of sponsors that will identify underutilization and/or problem areas in one or more of the relevant demographic groups—(95 percent ¹³⁰). This calculation ($\$48.50 \times 26,606 \times 5 \times 25 \text{ percent} \times 20 \text{ percent} \times 95 \text{ percent}$) results in a total cost of this provision of approximately \$306,468 in 2019. The number of sponsors who will undertake a utilization analysis and identify underutilization and/or problem areas in 2019 is 1,264 ($26,606 \times 25 \text{ percent} \times 20 \text{ percent} \times 95 \text{ percent}$). Because sponsors who need to engage in targeted outreach and recruitment for the first time must continue to do so annually until the next compliance review, the number of sponsors needing to engage in targeted outreach and recruitment in 2020 will become 2,590, which is the sum of 1,264 and 1,326 ($27,915 \text{ sponsors in } 2020 \times 25 \text{ percent} \times 20 \text{ percent} \times 95 \text{ percent}$). The number of sponsors who we estimate will need to engage in targeted outreach and recruitment will eventually reach 95 percent of the total sponsors with 5 or more apprentices in 2023 and after.¹³¹

We repeated this calculation for the following years using the appropriate number of sponsors in any given year. The annualized cost ranges from \$936,998 (with 7 percent discounting) to \$1.02 million (with 3 percent discounting).

f. Affirmative Action Program Reviews

Affirmative action program reviews in the Final Rule result in three additional activities beyond the baseline: personnel process reviews, written affirmative action plan updates during compliance reviews, and written

assumes that sponsors will, on average, engage in outreach to five different organizations in order to comply with its obligations under 30.8(a). This assumption is, if anything, likely an overestimate, as some sponsors may be able to address the underlying issues with connections to fewer organizations, and some sponsors will not have the underutilization/impediments to EEO that would trigger the § 30.8 outreach obligation in the first place.

¹²⁹ This is the percentage of sponsors who undergo compliance review each year, as determined by the 5-year schedule on which sponsors undergo compliance reviews.

¹³⁰ In the consultation with regional directors, the Department assumed that 95 percent of sponsors that conduct a utilization analysis will discover underutilization of a particular group or groups of individuals pursuant to § 30.6 and/or problems with respect to its outreach, recruitment, and retention activities pursuant to § 30.7(f).

¹³¹ Should the 95 percent (share of sponsors that will identify underutilization and/or problem areas) fall over time, the cost estimate of this provision will likely be an overestimate.

affirmative action plan updates within three years of compliance reviews (estimated to occur 2.5 years later in this analysis). The Final Rule requires sponsors with five or more apprentices to review personnel processes annually (§ 30.9). Requiring this scheduled review of personnel processes emphasizes the philosophy the Department intends to convey throughout the regulation that affirmative action is not a mere paperwork exercise but rather a dynamic part of the sponsor's management approach. Affirmative action requires ongoing monitoring, reporting, and revision to address barriers to EEO and to ensure that discrimination does not occur.

As required by the 1978 Final Rule (the analysis baseline), sponsors with 5 or more apprentices in a registered apprenticeship program are required to develop and maintain an affirmative action program. The scope of each sponsor's program depends on the size and type of its program and resources. However, each sponsor is required, under the existing rule, to undertake a significant number of appropriate activities to satisfy its affirmative action obligations. The 1978 Final Rule lists examples of the kinds of activities expected, including "periodic auditing of the sponsor's affirmative action programs and activities" (29 CFR 30.4(c)(10)). We assume that, at the very least, these program sponsors currently conduct this audit on an annual basis because elsewhere in the 1978 Final Rule, sponsors are required to review their affirmative action programs annually and update them where necessary (29 CFR 30.8).

To calculate the cost of these three activities, the Department first determined the cost of the baseline that is being replaced by the Final Rule (annual affirmative action program reviews). The Department calculated that all sponsors (25,231 in 2018) with 5 or more apprentices (25 percent) currently incur 8 hours of HR manager labor (\$73.90 per hour) to conduct the existing annual reviews. The cost of the baseline in 2017 is \$3.73 million ($25,231 \times 25 \text{ percent} \times 8 \text{ hours} \times \$73.90$). This baseline is being replaced by less frequent affirmative action program reviews and an annual personnel process review for all sponsors (all of these provisions do not begin until the second year (2018) due to the two-year phase-in).

To determine the cost of the new annual personnel process review, the Department calculated the cost for all sponsors in 2018 (25,231) with 5 or more apprentices (25 percent) to spend

8 hours of HR manager labor conducting the review. This provision will result in an undiscounted cost of \$3.73 million in 2018 ($25,231 \times 25 \text{ percent} \times 8 \text{ hours} \times \$73.90$).

To determine the cost of the written affirmative action plan update at the time of the compliance review, the Department calculated the cost for all sponsors in 2018 (25,231) with 5 or more apprentices (25 percent) to spend 12 hours ¹³² of HR manager labor every 5 years at the time of the compliance review. With the existing compliance review rate at 20 percent, this means that approximately one in five of these sponsors will undergo a compliance review every year. This provision will result in an undiscounted cost of \$1.12 million in 2018 ($25,231 \times 25 \text{ percent} \times 12 \text{ hours} \times (\frac{1}{5}) \times \$73.90$).

To determine the cost of the written affirmative action plan update within three years of the compliance review, the Department calculated the cost for all sponsors in 2018 (25,231) with 5 or more apprentices (25 percent) to spend 6 hours ¹³³ (estimated to be less because of the lesser workload from not overlapping with the compliance review) of HR manager time every 5 years. This provision results in an undiscounted cost of \$559,371 in 2018 ($25,231 \times 25 \text{ percent} \times 6 \text{ hours} \times (\frac{1}{5}) \times \$73.90$). We repeated this calculation for the following years using the appropriate number of sponsors in any given year.

The total cost of this provision is \$1.68 million in 2018 ($\$559,371 + \$1.12 \text{ million} + \$3.73 \text{ million} - \$3.73 \text{ million}$). The annualized cost ranges from \$1.69 million to \$1.75 million at 7 percent and 3 percent, respectively.

g. Simplified Procedures for Selecting Apprentices

Under the 1978 Final Rule, selection of apprentices must be made using one of four specific selection methods. Under the Final Rule (§ 30.10), sponsors are required to adopt any method for the selection of apprentices provided that

¹³² A workforce analysis (1); a utilization analysis (2); goal-setting (if necessary) (3); and a full update of the written affirmative action plan (4) need to be undertaken at the compliance review. Because we have already costed out (1), (2), and (3), the sponsor would need additional 12 hours to fully update the written affirmative action plan.

¹³³ A written affirmative action program review within three years of compliance reviews contains (1) workforce analysis and (2) updating the written affirmative action plan to include the updated workforce analysis and a description of the review of personnel practices and any changes made as a result of that review (see 30.9(b)). Because we have already costed out (1), the 6 hours are for including updated the workforce analysis and a description of the review of personnel practices and any changes made as a result of that review (see 30.9(b)).

the method (1) complies with Uniform Guidelines on Employee Selection Procedures (USGEP); (2) is uniformly and consistently applied to all applicants and apprentices; (3) complies with the qualification standards set forth in title I of the ADA; and (4) is facially neutral in terms of race, color, religion, national origin, sex, sexual orientation, age (40 or older), and disability. This approach greatly simplifies the regulatory structure currently governing selection procedures and affords sponsors greater flexibility in fashioning a selection procedure; it also aligns this provision of part 30 with how other equal opportunity laws regulate employers' use of selection procedures.

Benefits

This provision, aimed at simplifying selection procedures, is expected to reduce sponsors' cost of compliance because we expect that sponsors will be able to more quickly and easily adopt a method for selection consistent with how they currently select applicants or employees under other EEO laws. Although this analysis did not quantify any benefits under this provision, it is expected that this will result in efficiencies for sponsors.

h. Standardizing Compliance Review Procedures for Registration Agencies

The Final Rule standardizes procedures Registration Agencies must follow for conducting compliance reviews (§ 30.13). The provision on compliance reviews carries forward the existing provision at § 30.9 addressing compliance reviews and includes several modifications to improve readability. First, the Final Rule revises the title from "Compliance reviews" to "Equal employment opportunity compliance reviews" to clarify that the reviews are to assess compliance with the part 30 regulations and not the companion regulations at part 29.

Second, the term "Registration Agency" is used throughout § 30.13 instead of the term "Department," because this section applies to both the Department and to SAAs when conducting an EEO compliance review.

Third, the Final Rule provides more specificity for the procedures Registration Agencies must follow in conducting compliance reviews. This increased specificity provides for greater consistency and standardization of procedures across the National Registered Apprenticeship System. For instance, § 30.13(b) requires the Registration Agency to notify a sponsor of any findings through a written Notice of Compliance Review Findings within

45 days of completing a compliance review. The Notice of Compliance Review Findings must include whether any deficiencies (*i.e.*, failures to comply with the regulatory requirements) were found, how they are to be remedied, and the timeframe within which the deficiencies must be corrected. The Notice of Compliance Review Findings also must notify a sponsor that sanctions may be imposed for failing to correct the aforementioned deficiencies.

These changes add clarity to the procedures but do not fundamentally change the process and, therefore, do not represent a significant additional burden to sponsors or SAAs. The Department believes the additional specificity will ease some of the burden on States.

Sponsors are subject to onsite or offsite compliance reviews by either the SAA or OA where the corresponding agency is expected to notify the sponsor of the review findings. Although the notice of compliance reviews already occurs with SAAs and OA, the Final Rule makes the practice standard and common among all entities. Under the Final Rule, the notice of review findings is required to be sent via registered or certified mail, with return receipt requested within 45 days of the completed equal opportunity compliance review.

The costs associated with this provision are limited to the use of registered mail, the materials, and the labor to send the letter. The actual review process remains unchanged from the 1978 Final Rule. To determine the cost of the notice of compliance reviews, we estimated the labor cost to mail and compile the notice (assumed to be completed by an administrative assistant) and the cost of materials to send the notice. The labor cost is comprised of the time an administrative assistant dedicates to the task (15 minutes, or 0.25 hour) multiplied by the hourly compensation rate (\$29.55 for SAAs and \$30.68 for OA).¹³⁴ The total materials cost is the cost to send a letter via registered mail (\$12.20) plus the cost of the envelope (\$0.07) plus the cost to photocopy the one-page document (\$0.08), or \$12.35 (\$12.20 + \$0.07 + \$0.08).

To estimate the total cost of this provision in the first year, we summed labor and material costs and then

multiplied by the total number of reviewed sponsors resulting in \$46,997 for SAAs and \$47,670 for OA.¹³⁵ We then repeated this calculation for each year of the analysis period using the projected number of sponsors for each year. The annualized cost to SAAs ranges from \$56,499 (with 7 percent discounting) to \$57,163 (with 3 percent discounting) and the annualized cost to OA ranges from \$57,308 (with 7 percent discounting) to \$57,981 (with 3 percent discounting).

i. Clarifying Complaint Procedures

In an effort to ensure consistency with how Registration Agencies process complaints and conduct investigations, § 30.14(c) adds uniform procedures that Registration Agencies must follow. These uniform procedures ensure that Registration Agencies acknowledge and thoroughly investigate complaints in a timely manner, that parties are notified of the Registration Agency's findings, and that the Registration Agency attempts to quickly resolve violations. Since the complaint process is not a new process, the Department does not expect that these provisions will add significantly to the burden on Registration Agencies; they simply standardize the procedures and define a timeline. Therefore, while the Department does not expect significant changes in burden, there may still be negligible one-time costs as Registration Agencies adjust their complaint procedures to reflect newly standardized requirements. These procedures will benefit both sponsors and apprentice complainants since claims will be handled in a clear and consistent fashion.

j. Adopting Uniform Procedures Under 29 CFR Parts 29 and 30 for Deregistration, Derecognition, and Hearings

The Final Rule generally aligns part 30 with part 29 procedures for deregistration of apprenticeship programs, derecognition of SAAs, and hearings (§§ 30.15 through 30.16). For consistency and simplicity, § 30.15(c) adopts the deregistration procedures of § 29.8(b)(5) through (8) of this title, including the hearing procedures in § 29.10. This revision a more closely aligned set of procedures for matters arising from management of the

¹³⁴ We calculated the hourly compensation rate for an administrative assistant by multiplying the hourly wage of \$18.82 (GS-7 step 5) by 1.57 for the State agency and 1.63 for the Federal agency to account for public-sector employee benefits. Thus, the hourly compensation rate for an administrative assistant at a State agency is \$29.55 (\$18.82 × 1.57) and \$30.68 (\$18.82 × 1.63) at a Federal agency.

¹³⁵ To calculate the labor cost, we multiplied the time required by the hourly compensation rate, resulting in a cost of \$7.38 (0.25 × \$29.55) for State Apprenticeship Agencies and \$7.67 (0.25 × \$30.68) for OA. We then multiplied each labor cost by the percentage of sponsors subject to compliance reviews (20 percent) and by 50 percent (we assumed that half of the sponsors respond to SAAs and the rest respond to OA).

National Registered Apprenticeship System. These provisions are not expected to impose a burden because SAAs are already following these procedures in part 29.

k. Invitation To Self-Identify as an Individual With a Disability

The Final Rule under § 30.11 requires sponsors with 5 or more apprentices to invite applicants for apprenticeship to voluntarily self-identify as an individual with a disability protected by this part at two stages: (1) At the time they apply or are considered for apprenticeship; and (2) after they are accepted into the apprenticeship program but before they begin their apprenticeship. Within the first two years of the program, existing sponsors will be required to survey their current apprentices.

The purpose of this section is to collect important data pertaining to the participation of individuals with disabilities in the sponsor's applicant pools and apprenticeship program. This data will allow the sponsor and the Department to better identify and monitor the sponsor's enrollment and selection practices with respect to individuals with disabilities and also enable the Department and the sponsor to assess the effectiveness of the sponsor's recruitment efforts over time, and to refine and improve the sponsor's recruitment strategies, where necessary. In addition, data related to apprentices once they are in the program will help sponsors assess whether there may be barriers to equal opportunity in all aspects of apprenticeship and may improve the effectiveness of retention strategies or help sponsors evaluate whether such strategies are necessary.

Within the first two years of this program, sponsors with 5 or more apprentices will need to survey their current workforce with the invitation to self-identify. The Department assumed that sponsors would survey their current workforce for the first time in 2018 and calculated that sponsors (33,939 in 2018) with 5 or more apprentices (25 percent) will survey an average of 41 apprentices with an invitation to self-identify provided by the Department.¹³⁶ The Department estimated that it would take an

apprentice (\$18.72 per hour) 5 minutes (0.08 hours) to complete the form. Furthermore, an administrative assistant (\$23.10 per hour) would need to spend 0.5 hour annually to record and keep the forms. This provision has a cost in 2018 of \$458,811 $((25,231 \times 25 \text{ percent} \times 41 \times 0.08 \text{ hour} \times \$18.72) + (25,231 \times 25 \text{ percent} \times 0.5 \text{ hour} \times \$23.10))$.

In subsequent years, all sponsors with 5 or more apprentices will be required to administer the invitation to self-identify twice: Once to all applicants prior to the offer of apprenticeship, and once after the offer of apprenticeship to those who have been extended offers. The Department estimates that sponsors post 42 positions in 2019 and receive 15 applicants per posting.¹³⁷ Of those positions, the Department estimated that 42 offers of enrollment are made and 42 apprentices choose to enroll in 2019. This requirement has an undiscounted cost in 2019 of \$6.84 million $(26,606 \times 25 \text{ percent} \times ((15 \text{ applications} \times 42 \text{ job listings} \times .08) + (42 \text{ offers of apprenticeship} \times .08)) \times \$18.72 + 26,606 \times 25 \text{ percent} \times 0.5 \times \$23.10)$. For the 10-year analysis period, this provision has an annualized cost of \$6.54 million and \$6.91 million (at 7 percent and 3 percent discounting, respectively).¹³⁸ In addition, sponsors with 5 or more apprentices are required to remind apprentices yearly that they can update their invitation to self-identify. The Department assumed that these sponsors would send out an annual reminder email beginning in 2018 at the cost of \$12,292 $(25,231 \times 0.25 \text{ percent} \times 0.08 \text{ hour} \times \$23.10)$. We repeated this calculation for each remaining year in the analysis period using the estimated number of sponsors for each year. This provision in total has an annualized cost of \$4.53 million and \$4.76 million (at 7 percent and 3 percent discounting, respectively).

l. Other

The Final Rule will result in three additional costs. First, SAAs will be required to revise their State equal opportunity plan to conform to the new requirements. Second, the Final Rule will create an intermediary step between a registered sponsor and a deregistered sponsor (registration suspension). Third, sponsors will likely hire or retain more qualified apprentices

with disabilities under the Final Rule and this may result in additional costs of providing appropriate job accommodations.

Revision of State Equal Opportunity Plan

The process of updating a State equal opportunity plan may potentially involve various different people at different stages of implementation. Updating the plan will include drafting the new plan and completing all administrative procedures that may apply, such as revisions to a State's apprenticeship law or policy that may require a public notice and comment period, training for SAA staff on the revised State EEO Plan, and outreach to program sponsors to inform them of the relevant aspects of the revised State EEO plan once it has been approved by the Department. The updates to State equal opportunity plans include changing language and existing requirements such that they align with the regulatory changes herein. To calculate the costs, the Department assumed that the process to revise the State equal opportunity plan will take a full year of effort (2,080 hours) to complete.¹³⁹ This is the Department's best estimate for updating the existing State equal opportunity plan. For simplicity, we assumed that an SAA human resource manager will complete the task at an hourly compensation rate of \$62.33.¹⁴⁰ This amounts to a one-time cost of \$3.24 million in the first year $(2,080 \text{ hours} \times \$62.33 \times 25)$.¹⁴¹

Intermediate Step Between a Registered Sponsor and a Deregistered Sponsor

The Final Rule creates an intermediary step regarding suspending new apprentices before deregistration proceedings are instituted (§ 30.15(b)). Currently, deregistration of an

¹³⁹ Note that this calculation is only the administrative costs of updating the State equal opportunity plan, as opposed to the costs of implementing the new plan, or any new burdens on State Agencies. Since the updated State equal opportunity plan should reflect the Federal regulations, these costs should be accounted for and addressed elsewhere in the analysis under discussions of costs.

¹⁴⁰ We calculated the hourly compensation rate for a human resource manager at a State agency by multiplying the hourly wage of \$39.70 (GS-13 step 5) by 1.57 for the State agency. The hourly compensation rate for a human resource manager at a State agency is thus \$62.33 $(\$39.70 \times 1.57)$.

¹⁴¹ The estimated time to complete the revisions is 12 months (2,080 hours). The 2017 calculation used the hourly compensation rate for a state human resource manager (\$62.33) multiplied by 2,080 (the assumed number of work hours in a year) and by the total number of State Apprenticeship Agencies (25) to obtain a total cost of \$3.24 million $(2,080 \times \$62.33 \times 25)$. This cost only accrues in the first year of the ten-year analysis period.

¹³⁶ The average number of apprentices at sponsors with 5 or more apprentices using 2015 RAPIDS data was 33 in 2015. Over the 10-year analysis period, the Department assumed that the average number of apprentices for sponsors with 5 or more apprentices would grow at the same rates that were estimated for all sponsors. The Department estimated that there are on average 38 apprentices per sponsor with 5 or more apprentices in 2017; 41 in 2018; 42 in 2019; 44 in 2020; 46 in 2021; 49 in 2022; 50 in 2023; 50 in 2024; 52 in 2025; and 53 in 2026.

¹³⁷ The Department determined the number of positions posted from conversations with programs of various sizes. We determined that the largest, statewide programs post more than 15 jobs, but the Department used this as an average for all apprentices to avoid under-estimating the costs.

¹³⁸ It is assumed that there will be 100 percent participation in the invitation to self-identify and therefore, the cost of this provision is likely overestimated.

apprenticeship program occurs when the sponsors fails to demonstrate compliance with the 1978 Final Rule. The new suspension step allows sponsors an adequate span of time to update their practices and be in compliance without having to be deregistered and then reregistered at a later date. Under this procedure, a Registration Agency may suspend a registration of new apprentices until the sponsor has achieved compliance with part 30 through the completion of a voluntary compliance action plan or until deregistration proceedings are initiated by the Registration Agency.

The intermediary step represents a benefit because it allows sponsors to comply without having to be deregistered and then reregister or abandon their program. The benefits of this provision are difficult to quantify because some programs eligible for deregistration may seek deregistration voluntarily.

Workplace Accommodations for Apprentices With Disabilities

The Final Rule prohibits discrimination against individuals with disabilities and requires sponsors to take affirmative action to provide equal

opportunity in apprenticeship to qualified individuals with disabilities. With respect to the sponsor's duty to ensure non-discrimination based on disability, the sponsor must provide necessary reasonable accommodations to ensure applicants and apprentices with disabilities receive equal opportunity in apprenticeship. Since most, if not all, sponsors already are subject to the ADA as amended, and if a Federal contractor to section 503 of the Rehabilitation Act, sponsors already have a duty under existing law to provide reasonable accommodations for qualified individuals with disabilities, and thus there is no new burden associated with any duty to provide reasonable accommodation under part 30, as that duty already exists under Federal law. For any sponsor that may not already be required under the law to provide such accommodations (*e.g.*, any sponsor with fewer than 15 employees would not be covered by the ADA), we expect the resulting burden to be small. A recent study conducted by the Job Accommodation Network (JAN), a service of the Department's Office of Disability Employment Policy (ODEP), shows that the majority of employers in

the study (57 percent) reported no additional accommodation costs and the rest (43 percent) reported one-time costs of \$500 on average.¹⁴² This study shows that the benefits to employers, such as improving productivity and morale, retaining valuable employees, and improving workplace diversity, outweigh the low cost.

4. Summary of Cost-Benefit Analysis

Exhibit 3 presents a summary of the first-year costs of the Final Rule, as described above. As shown in the exhibit, the total first-year cost of the Final Rule is \$42.88 million. The Department was able to only quantify benefits (*i.e.*, cost-savings) of the Final Rule resulting from the benefit from more efficient utilization analysis and goal setting by the Department. The Department estimated that this time saving yield \$4.56 or \$5.83 million in benefits over the 10-year period (with 7 percent and 3 percent discounting, respectively).

¹⁴² Beth Loy, "Accommodation and Compliance Series Workplace Accommodations: Low Cost, High Impact," Job Accommodation Network (2014), <http://askjan.org/media/lowcosthighimpact.html>.

Exhibit 3: Summary of First-Year Cost			
	Provision	Entity Affected	Monetized Costs (\$ Million)
1	Post equal opportunity pledge	Sponsor	\$0.23
3	Universal outreach	Sponsor	\$5.77
4	Notice of compliance review	SSA	\$0.05
5	Notice of compliance review	OA	\$0.05
6	Revision of state EEO plan	SSA	\$3.24
7	Time required to read and review NPRM	Sponsor	\$7.04
8	Orientation and periodic information sessions	Sponsor/Apprentice	\$26.44
11	Data tool development	Sponsor	\$0.06
	<i>Total First-Year Cost</i>		\$42.88

Exhibit 4 presents a summary of the monetized costs and benefits associated with the Final Rule over the 10-year analysis period. The monetized costs

and benefits displayed are the yearly summations of the calculations described above. Costs and benefits are presented as undiscounted 10-year

totals, and as present values with 7 and 3 percent discount rates.

Exhibit 4: Summary of Monetized Benefits and Costs		
Year	Monetized Benefits	Monetized Costs
	\$ Million/year	\$ Million/year
2017	\$0.00	\$42.88
2018	\$0.00	\$36.84
2019	\$0.77	\$45.50
2020	\$0.81	\$49.32
2021	\$0.85	\$53.12
2022	\$0.88	\$58.28
2023	\$0.91	\$61.93
2024	\$0.93	\$63.50
2025	\$0.95	\$66.29
2026	\$0.97	\$68.76
<i>Undiscounted</i>	\$7.08	\$546.42
<i>7% Discounted</i>	\$4.56	\$370.27
<i>3% Discounted</i>	\$5.83	\$458.90
<i>Annualized 7%</i>	\$0.65	\$52.72
<i>Annualized 3%</i>	\$0.68	\$53.80

Primary estimates of the 10-year monetized costs of the Final Rule are \$370.27 million and \$458.90 million (with 7 and 3 percent discounting, respectively). The 10-year monetized benefits of the Final Rule are estimated at \$4.56 million or \$5.83 million (with 7 and 3 percent discounting, respectively).¹⁴³

Due to data limitations, the Department did not quantify several important benefits to society provided by the Final Rule. The Final Rule is expected to result in several overarching benefits to apprenticeship programs and specific benefits resulting from a clearer, more systematic rule. As discussed above, equal opportunity policies may lead to both efficiency gains and distributional impacts for society. The Final Rule may reduce barriers to entry in apprenticeship programs for women, minorities, and individuals with disabilities, fostering a distributional effect, and may alleviate the inefficiencies in the job market these barriers create. It may also benefit businesses, as discussed above.

The Final Rule focuses on making the existing EEO policy consistent and standard across the National Registered Apprenticeship System. In doing so, several tasks already undertaken by sponsors, apprentices, and Registration Agencies have been simplified. For instance, the clarified complaint process better informs apprentices, sponsors, and Registration Agencies of their roles and expectations. The Final Rule also develops a simpler methodology for the apprentice selection process and offers sponsors the flexibility to choose a mechanism that aligns with their State's specific equal opportunity regulations. Much of the new language provides consistency with existing equal opportunity laws and part 29 already applicable to these affected entities. Finally, the Final Rule streamlines procedures already in place under the 1978 Final Rule.

5. Regulatory Alternatives

In addition to the Final Rule, the Department has considered four

regulatory alternatives: (a) Take no action, that is, to leave the 1978 Final Rule intact; (b) increase the Department's enforcement efforts of the 1978 Final Rule; (c) apply the same affirmative action requirements set forth in this rule to all sponsors, regardless of size; and (d) rely on individuals participating in the National Registered Apprenticeship System to identify and report to Registration Agencies potential cases of discrimination based on race, color, religion, national origin, sex, sexual orientation, age (40 or older), genetic information, and disability.

The Department conducted economic analyses of the four alternatives to better understand their costs and benefits and the implied tradeoffs (in terms of the costs and benefits that would be realized) relative to the Final Rule. Below is a discussion of each alternative along with an estimation of their costs and benefits. All costs and benefits use the 1978 Final Rule as the baseline for the analysis. Finally, we summarize the total costs and benefits of each alternative.

a. Take No Action

This alternative yields no additional costs to society because it does not deviate from the baseline, that is, the 1978 Final Rule. This alternative, however, also yields no additional benefits in terms of ensuring equal opportunities for women, minorities, individuals with disabilities, LGBT individuals, and those ages 40 or older.

b. Increase Enforcement of Original Regulation

This alternative maintains the original 1978 Final Rule but increases the monitoring of apprenticeship programs. This alternative increases the burden on the SAAs and the Department to enforce the equal opportunity standards. To determine the cost of this alternative, we assumed that the frequency of compliance reviews will increase by 50 percent, implying that sponsors would be evaluated by the Registration Agency (the Department or SAAs) on a more frequent basis. With the existing

compliance review rate at 20 percent—meaning that approximately one in five sponsors undergoes a compliance review every year—a 50 percent increase would constitute an extra 10 percent of sponsors (20 percent $\times$ 0.5) undergoing compliance reviews each year for a total of 30 percent of sponsors (20 percent + 10 percent) undergoing annual compliance reviews.

To calculate the cost of this alternative, the Department assumed that each compliance review takes 40 hours to complete. This estimate includes time for preparation, conducting the review, writing up the findings and guidance to sponsors, reviewing and approving the final documents to be provided to sponsors, and providing technical assistance, where appropriate. We multiplied the 40 hours needed to complete a review by the increase in the annual number of reviews by 10 percent (2,381 = 23,811 $\times$ 10 percent in 2017) by the hourly compensation rate of an SAA human resource manager (\$62.33) and by the hourly compensation rate of an OA human resource manager (\$64.71).¹⁴⁴ We also multiplied this number by 50 percent, assuming that half of the sponsors report to a SAA and half report to OA. The cost of increased compliance reviews in the first year is \$2.97 million for SAAs (23,811 $\times$ 50 percent $\times$ \$62.33 $\times$ 40 $\times$ 10 percent) and \$3.08 million for OA (23,811 $\times$ 50 percent $\times$ \$64.71 $\times$ 40 $\times$ 10 percent). The annualized costs range from \$3.57 million to \$3.61 million for SAAs (with 7 and 3 percent discounting, respectively) and from \$3.70 million to \$3.75 million for OA (with 7 and 3 percent discounting, respectively). The 10-year costs for this alternative range from \$51.08 million to \$62.77 million (with 7 and 3 percent discounting, respectively).

Exhibit 5 presents a summary of the monetized costs of this alternative option over the 10-year analysis period. Costs are presented as undiscounted 10-year totals, and as present values, using 7 percent and 3 percent discount rates.

¹⁴³ The Department believes that the overhead costs associated with the Final Rule are small because the additional activities required by the Final Rule will be performed by existing employees whose overhead costs are already covered. The Department acknowledges that it is possible that additional overhead costs might be incurred, however, and has conducted a sensitivity analysis by calculating the impact of more significant overhead costs (an overhead rate of 17 percent). This rate, used by the U.S. Environmental Protection Agency (EPA) in its final rules (see, for example, EPA Electronic Reporting under the Toxic

Substances Control Act Final Rule, Supporting and Related Material), is based on a Chemical Manufacturers Association study. An overhead rate from chemical manufacturing might not be appropriate for all industries, so there may be substantial uncertainty concerning the estimates based on this illustrative example. Over the 10-year period, using an overhead rate of 17 percent would increase the total cost of the Final Rule from \$370.27 million to \$433.11 million and from \$458.90 million to \$536.79 million (with 7 and 3 percent discounting, respectively). For the reasons stated above, the Department believes this estimate

overestimates the additional costs arising from overhead costs while recognizing that there is not one uniform approach to estimating the marginal cost of labor.

¹⁴⁴ We calculated the hourly compensation rate for a human resource manager at OA by multiplying the hourly wage of \$39.70 (GS-13 step 5) by 1.63 to account for public-sector employee benefits. The hourly compensation rate for a human resource manager at a Federal agency is thus \$64.71 (\$39.70 $\times$ 1.63).

Exhibit 5: Costs of Increasing Enforcement				
Year	Costs	Sponsors	SAA	OA
	\$ Million/year	\$ Million/year	\$ Million/year	\$ Million/year
2017	\$6.05	\$0.00	\$2.97	\$3.08
2018	\$6.41	\$0.00	\$3.15	\$3.27
2019	\$6.76	\$0.00	\$3.32	\$3.44
2020	\$7.09	\$0.00	\$3.48	\$3.61
2021	\$7.40	\$0.00	\$3.63	\$3.77
2022	\$7.69	\$0.00	\$3.77	\$3.91
2023	\$7.94	\$0.00	\$3.89	\$4.04
2024	\$8.15	\$0.00	\$4.00	\$4.15
2025	\$8.32	\$0.00	\$4.08	\$4.24
2026	\$8.44	\$0.00	\$4.14	\$4.30
<i>Undiscounted</i>	\$74.25	\$0.00	\$36.43	\$37.82
<i>7% Discounted</i>	\$51.08	\$0.00	\$25.06	\$26.02
<i>3% Discounted</i>	\$62.77	\$0.00	\$30.80	\$31.97
<i>Annualized 7%</i>	\$7.27	\$0.00	\$3.57	\$3.70
<i>Annualized 3%</i>	\$7.36	\$0.00	\$3.61	\$3.75

Increasing monitoring and evaluation of current efforts will increase administrative costs to the Department and may improve compliance to the existing requirements, but it would not modernize the rule to be consistent with current law affecting workers with disabilities and older workers. Therefore this would not be a preferred option, as it excludes a major area of focus for the Department: Improving access to good jobs for individuals with disabilities, such as those offered by Registered Apprenticeship opportunities.

c. Apply the Same Affirmative Action Policy to All Sponsors Regardless of Size

The 1978 Final Rule and the Final Rule require that all sponsors with five or more apprentices maintain and update their AAPs. This alternative would apply the same AAP to all sponsors regardless of size. The Department believes that the incremental benefit of this action would be minimal compared to its incremental cost. This policy directly impacts the segment of the population that both qualifies as a small entity and also has few apprentices. Sponsors of small apprenticeship programs often have very few employees. Such sponsors would likely be overly burdened by the targeted outreach, recruitment, and retention requirements in § 30.8. For example, they might not have the staff and resource capacity to adequately conduct outreach to multiple organizations.

We believe that the original 1978 Final Rule restriction of requiring only those sponsors with five or more

apprentices to develop, maintain, and update their AAPs is an appropriate way to not disproportionately burden small entities.

To calculate the cost and benefits of this alternative, the Department completed the same calculations conducted for the Final Rule but increased the number of sponsors who have to establish an AAP. This new calculation assumed that all sponsors must determine utilization rates and underutilization and participate in targeted outreach and recruitment.

To calculate the costs associated with this alternative, we first calculated the cost for all sponsors to complete the utilization analysis. As discussed above, we assumed this process takes 0.5 hour of a human resource manager's time at an hourly compensation rate of \$73.39. We then divided the number of sponsors by 5 years to reflect that new utilization analyses occur approximately every five years. The resulting cost in 2019 is \$196,618 $((0.5 \times \$73.90 \times 26,606)/5)$. We repeated this calculation for each remaining year in the analysis period using the estimated number of sponsors for each year, resulting in an annualized cost ranging from \$164,939 (with 7 percent discounting) to \$173,394 (with 3 percent discounting).

To quantify the cost associated with sponsor familiarization with the data tool for the utilization analysis, the Department assumed that all sponsors (25,231 in 2018) will incur one hour of HR manager labor (\$73.90 per hour) to familiarize the organization with the tool. This is estimated to have a cost of \$1.86 million in 2018 $(25,231 \times \$73.90$

$\times 1)$. We repeated this calculation for the following years only for new sponsors to the program who will still need to acclimate themselves with the tool. This provision has an annualized cost of \$392,786 (with 7 percent discounting) and \$373,391 (with 3 percent discounting).

Once the data tool is developed, the Department estimates it will take one hour for a GS-13 employee (\$64.71 per hour) to conduct a utilization analysis for sponsors with fewer than 5 apprentices. This will result in a cost to the Department of \$258,251 in 2019 $(26,606 \times 75 \text{ percent} \times 1 \text{ hour} \times \$64.71/5)$ and an annualized cost ranging from \$216,642 (with 7 percent discounting) to \$178,378 (with 3 percent discounting).

The Department next calculated the costs for all sponsors to conduct a workforce analysis. All sponsors with five or more apprentices must conduct the first new workforce analysis within two years of the Final Rule's effective date and every 2.5 years after that. For these sponsors, this process is expected to take 2 hours of an HR manager's time (\$73.90 per hour) in 2018 compared to a baseline of 1 hour of an HR manager's time. We multiplied this 1 hour by an HR manager's wage and by 25 percent of active sponsors, resulting in a cost of \$466,143 $((25,231 \times 25 \text{ percent} \times 1 \text{ hour} \times \$73.90)$. For sponsors with fewer than five apprentices, this process is expected take 2 hours of an HR manager's time (\$73.90 per hour) and they are currently not required to conduct a workforce analysis. We multiplied \$73.90 by 75 percent of active sponsors and 2 hours for sponsors with fewer than 5 apprentices. The

resulting cost in 2018 is \$2.80 million ($(25,231 \times 75 \text{ percent} \times 2 \text{ hours} \times \$73.90)$) and the total cost for all sponsors in 2018 is \$3.26 million ($\$466,143 + \$2.80 \text{ million}$).

In subsequent years after 2018, for sponsors with five or more apprentices, this process is expected to take 2 hours of an HR manager's time (\$73.90 per hour) every 2.5 years compared to a baseline of 1 hour of an HR manager's time annually, for a net saving of 0.2 hour per year. We multiplied this 0.2 hour by an HR manager's wage and by 25 percent of active sponsors, resulting in cost savings in 2019—the first year in which new workforce analyses will be conducted—of \$98,309 ($(26,606 \times 25 \text{ percent} \times 0.2 \text{ hour} \times \$73.90)$). For sponsors with fewer than five apprentices, this process is expected take 2 hours of an HR manager's time (\$73.90 per hour) every 2.5 years and they are currently not required to conduct a workforce analysis. We multiplied \$73.90 by 75 percent of active sponsors and 2 hours, dividing by 2.5 years to reflect that the new workforce analyses occur approximately every two and a half years. The resulting cost in 2019 is \$1.18 million ($(26,606 \times 75 \text{ percent} \times 2 \text{ hours} \times \$73.90)/2.5$).

The cost for all sponsors to conduct a workforce analysis in 2019 is \$1.08 million (\$1.18 million less \$98,309). This calculation was repeated in subsequent years, resulting in an annualized cost ranging from \$1.31 million to \$1.32 million with 7 percent and 3 percent discounting, respectively.

We next calculated the costs of expanding the requirements for all apprenticeship sponsors to conduct targeted outreach. The cost of targeted outreach and recruitment mirrors the cost above except that we no longer scale it by the 25 percent of sponsors. We again assumed that each sponsor contacts five organizations; that a human resource manager would take 30 minutes (0.5 hour) to complete this task at an hourly compensation rate of \$73.90; and that an administrative assistant would spend 30 minutes (0.5 hours) at an hourly compensation rate of \$23.10.

The cost of this provision per affected sponsor is the time each staff member devotes to this task multiplied by their associated hourly compensation rates. This calculation resulted in a labor cost of \$48.50 ($(\$73.90 \times 0.5) + (\$23.10 \times 0.5)$) per source. We then multiplied this labor cost by the number of outreach sources (5); the number of sponsors (26,606 in 2019); 95 percent for sponsors whose utilization analyses revealed underutilization; and 20 percent for sponsors who undergo

compliance review each year. This calculation results in a total cost of \$1.23 million in 2019 ($\$48.50 \times 5 \times 26,606 \times 95 \text{ percent} \times 20 \text{ percent}$). We repeated this calculation for each remaining year in the analysis period using the estimated number of sponsors for each year, resulting in an annualized cost ranging from \$3.75 million to \$4.07 million with 7 percent and 3 percent discounting, respectively.

Within the first two years of this program, all sponsors will need to survey their current workforce with the invitation to self-identify. The Department calculated that sponsors (25,231 in 2018) will survey an average of 26 apprentices with an invitation to self-identify provided by the Department. The Department estimated that it would take an apprentice (\$18.72 per hour) 5 minutes (0.08 hours) to complete the form. Furthermore, an administrative assistant (\$23.10 per hour) would need to spend 0.5 hour annually to record and keep the forms. This provision has a cost of \$1.27 million in 2018 ($(25,231 \times 26 \times 0.08 \text{ hour} \times \$18.72) + (25,231 \times 0.5 \text{ hour} \times \$23.10)$).

In subsequent years, all sponsors will be required to administer the invitation to self-identify twice: once to all applicants prior to the offer of apprenticeship, and once after the offer of apprenticeship to those who have been extended offers. The Department estimates that sponsors post 27 positions per year and receive 15 applicants per posting in 2019. Of those positions, the Department estimated that 27 offers of enrollment are made and 27 apprentices choose to enroll. This requirement has an undiscounted second year (2019) cost of \$17.47 million ($26,606 \times ((15 \text{ applications} \times 27 \text{ job listings} \times .08) + (27 \text{ offers of apprenticeship} \times .08)) \times \$18.72 + 26,606 \times 0.5 \times \$23.10$). For the 10-year analysis period, this provision has an annualized cost of \$16.76 million and \$17.71 million (at 7 percent and 3 percent discounting, respectively).¹⁴⁵ In addition, all sponsors are required to remind apprentices yearly that they can update their invitation to self-identify. The Department assumed that sponsors would send out an annual reminder email beginning in 2018 at the cost of \$49,168 ($25,231 \times 0.08 \text{ hour} \times \$23.10$). We repeated this calculation for each remaining year in the analysis period using the estimated number of sponsors for each year. This provision in total has

¹⁴⁵ It is assumed that there will be 100 percent participation in the invitation to self-identify and therefore, the cost of this provision is likely overestimated.

an annualized cost of \$16.80 million and \$17.75 million (at 7 percent and 3 percent discounting, respectively).

Lastly, we calculated the cost of affirmative action plan reviews for all sponsors. Assuming a two-year phase-in and the same time requirements for each element of the review, we estimate that, in 2018, the personnel process review will cost \$14.92 million ($25,231 \times 8 \text{ hours} \times \$73.90$), the written affirmative action program review at the time of the compliance review will cost \$4.47 million ($(25,231 \times 12 \text{ hours} \times \$73.90)/5 \text{ years between reviews}$), and the written affirmative action program review conducted within three years of the compliance review will cost \$2.24 million ($(25,231 \times 6 \text{ hours} \times \$73.90)/5 \text{ years between reviews}$) for a total cost of \$21.63 million. We repeated this calculation for each remaining year in the analysis period using the estimated number of sponsors for each year, resulting in an annualized cost ranging from \$21.82 million to \$22.50 million with 7 percent and 3 percent discounting, respectively.

The remaining costs for this alternative are the same as for the Final Rule. The total 10-year costs of this alternative range from \$589.29 million to \$736.27 million (with 7 percent and 3 percent discounting, respectively).

d. Rely on Individuals Participating in the National Registered Apprenticeship System To Identify and Report Potential Cases of Discrimination

Under this alternative, individuals participating in the National Registered Apprenticeship System would be responsible for identifying and reporting potential cases of discrimination to Registration Agencies, in contrast to both the existing and the Final Rule's part 30 regulatory structures, which require Registration Agencies to monitor and enforce the EEO and affirmative action obligations via regular compliance reviews. This alternative reduces the burden on sponsors by relying on a complaint-based system.

Under this alternative, apprentices' rights for non-discrimination would still be protected, but Registration Agencies would have a more passive role in how they monitor and evaluate program sponsors' compliance with the regulations. OA and SAAs would still conduct compliance reviews (in § 30.11 and existing § 30.9) but not as frequently.

Under this alternative, to identify when discrimination may be occurring and whether sponsors are violating the non-discrimination and affirmative action requirements in the part 30 regulations, the Registration Agencies

would primarily rely on: (1) The complaints filed under § 30.12 and existing § 30.11 and self-evaluations from sponsors, and (2) a process where sponsors conduct a self-evaluation and report back to the Registration Agency. The Department believes that this approach to regulating discrimination and non-compliance with the part 30 regulations would not adequately prevent discrimination and promote equal opportunity in apprenticeship programs.

Registration Agencies under this alternative would provide sponsors with a format and process to conduct a self-evaluation relative to their compliance with these EEO regulations. Sponsors would then submit their self-evaluation to the Registration Agency for review and analysis. If the Registration Agency is satisfied with the findings from the self-evaluation, the sponsor would be informed accordingly, and no additional actions would be necessary at that time. If the Registration Agency's review of sponsor's self-evaluation identifies deficiencies, then the Registration Agency would conduct an on-site review and provide technical assistance as appropriate.

These complaints and self-evaluations would serve as a "trigger" for Registration Agencies to adopt a more active role of visiting program sites to conduct compliance reviews and provide technical assistance, as appropriate.

The Department assumes that the SAA and OA would reduce the number of compliance reviews by 20 percent. To calculate this cost savings, we multiplied the total number of sponsors (23,811 in 2017) by the percentage decrease in reviews. This results in 952 fewer reviews in the first year ($23,811 \times 20 \text{ percent} \times 20 \text{ percent}$). We then multiplied the total number of reviews by 50 percent assuming that the SAAs handle half the reviews and OA handles the remaining half. Finally, we multiplied the total reduction in reviews for each agency ($476 = 0.5 \times 952$) by the hours needed to complete each review (40 hours) and by the

human resource managers' wages (\$62.33 and \$64.71 per hour for the SAAs and OA respectively). The resulting cost savings in the first year is \$1.19 million ($476 \times \$62.33 \times 40$) for SAAs and \$1.23 million ($476 \times \$64.71 \times 40$) for OA. We repeated this calculation for each year using the projected number of sponsors in each year. This results in an annualized savings for the SAAs of \$1.42 million (with 7 percent discounting) to \$1.44 million (with 3 percent discounting) and \$1.48 million (with 7 percent discounting) to \$1.50 million (with 3 percent discounting) for OA.

To estimate the cost of completing the self-evaluations, the Department assumes that each sponsor completes one evaluation each year and that the sponsor will dedicate 8 hours to complete this review. We multiplied this labor time by the hourly compensation rate of a human resource manager (\$73.90) and by the total number of sponsors (23,811). The cost to the sponsors is thus \$14.08 million ($23,811 \times 1 \times 8 \times \$73.90$) in 2017. This calculation was repeated according to the projected number of sponsors each year, with an annualized cost ranging from \$16.92 million (with 7 percent discounting) to \$17.12 million (with 3 percent discounting).

The self-evaluations will then be reviewed by either the SAAs or OA. The Department calculates this burden by assuming that half of the evaluations are completed by the SAAs and the rest are completed by OA; thus each agency reviews 11,906 ($23,811 \times 50 \text{ percent}$) evaluations in the first year. We multiplied the number of self-evaluations by the time needed to review the evaluation, 5 hours, and finally by the corresponding hourly compensation rates (\$62.33 and \$64.71 for the SAAs and OA, respectively). The cost in 2017 is \$3.71 million for the SAAs and \$3.88 million for OA. This calculation was repeated according to the projected number of sponsors each year, with an annualized cost of \$4.49 million (with 7 percent discounting) to \$4.54 million (with 3 percent

discounting) for SAAs and \$4.66 million (with 7 percent discounting) to \$4.71 million (with 3 percent discounting) for OA.

Lastly, the Department estimated the cost of completing and reviewing the individual complaints. The apprentices would be filling out these individual complaints and although the process existed in the 1978 rule, the Department expects that through general outreach the number of complaints would increase by 100 per year. We assumed that each individual complaint takes 15 minutes to file (0.25 hours). We then multiplied the 0.25 hours by the hourly compensation rate for an apprentice (\$18.72) to estimate a labor cost of \$4.68 and a total cost of \$468 ($\$4.68 \times 100$) each year of the analysis period.¹⁴⁶

The Department again assumed that half of these complaints go to SAAs and half go to OA, or 50 complaints total for each agency. To calculate the cost, we multiplied the time needed to review each complaint (8 hours) by 50 complaints and by the compensation rate for a human resource manager. The resulting cost in 2017 is \$24,932 ($50 \times 8 \times \$62.33$) for the SAAs and \$25,884 ($50 \times 8 \times \$64.71$) for OA. This calculation was repeated for the nine remaining years in the analysis period. The total 10-year costs of this alternative range from \$183.08 million to \$224.95 million (with 7 percent and 3 percent discounting, respectively).

e. Summary of Alternatives

Exhibit 6 below summarizes the monetized benefits, costs, and net present values for the alternatives discussed above. We again use discount rates of 3 and 7 percent, respectively, to estimate the benefits, costs, and net present values of the alternatives over the 10-year analysis period.

¹⁴⁶ We calculated the hourly compensation rate for an apprentice by multiplying the median hourly wage of \$13.00 (as published by PayScale for an apprentice electrician) by 1.43 to account for private-sector employee benefits (source: OES survey). Thus, the hourly compensation rate for an apprentice is \$18.59 ($\$13.00 \times 1.43$).

Exhibit 6: Summary of Alternatives					
Totals (in Million \$)					
7-percent discount		Benefits	Annualized benefits	Costs	Annualized costs
	No action	\$0.00	\$0.00	\$0.00	\$0.00
	Final Rule	\$4.56	\$0.65	\$370.27	\$52.72
	Increased enforcement	\$0.00	\$0.00	\$51.08	\$7.27
	Same policies regardless of size	\$16.74	\$2.38	\$589.29	\$83.90
	Complaint-based	\$20.43	\$2.91	\$183.08	\$26.07
3-percent discount		Benefits	Annualized benefits	Costs	Annualized costs
	No action	\$0.00	\$0.00	\$0.00	\$0.00
	Final Rule	\$5.83	\$0.68	\$458.90	\$53.80
	Increased enforcement	\$0.00	\$0.00	\$62.77	\$7.36
	Same policies regardless of size	\$21.37	\$2.51	\$736.27	\$86.31
	Complaint-based	\$25.11	\$2.94	\$224.95	\$26.37

Regulatory Flexibility Act

The Regulatory Flexibility Act of 1980 (RFA), 5 U.S.C. 601 *et seq.*, as amended by the Small Business Regulatory Enforcement Fairness Act of 1996, Public Law 104–121 (March 29, 1996), requires federal agencies engaged in rulemaking to consider the impact of their proposals on small entities, consider alternatives to minimize that impact, and solicit public comment on their analyses.¹⁴⁷ The RFA requires the assessment of the impact of a regulation on a wide range of small entities, including small businesses, not-for-

profit organizations, and small governmental jurisdictions.

Agencies must perform a review to determine whether a proposed or final rule would have a significant economic impact on a substantial number of small entities. 5 U.S.C. 603 and 604. As part of a regulatory proposal, the RFA requires a federal agency to prepare, and make available for public comment, an initial regulatory flexibility analysis that describes the impact of the proposed rule on small entities. *Id.* at 603(a). When an agency expects that a proposed rule will not have a significant economic impact on small entities, or the number of small entities impacted would be less than substantial, the agency may certify those results to the

Chief Counsel for Advocacy of the Small Business Administration (SBA). *Id.* at 605(b). The certification must include a statement providing the factual basis for the agency's determination. *Id.*

Based on the analysis below, the Department has notified the Chief Counsel for Advocacy, SBA, under the RFA at 5 U.S.C. 605(b), and certifies that this rule will not have a significant economic impact on a substantial number of small entities.

1. Classes of Small Entities

A small entity is one that is independently owned and operated and that is not dominant in its field of operation. 5 U.S.C. 601(3); 15 U.S.C. 632. The definition of small entity

¹⁴⁷ Public Law 96–354 (Sept. 19, 1980), Public Law 104–121 (March 29, 1996).

varies from industry to industry to properly reflect industry size differences. 13 CFR 121.201. An agency must either use the SBA definition for a small entity or establish an alternative definition for the industry. Using SBA size standards, the Department has conducted a small entity impact analysis on small entities in the five industry categories with the most registered apprenticeship programs and for which data were available: Construction, Manufacturing, Service, Transportation and Communication, and Trade.¹⁴⁸ These top five industry categories account for 86 percent of the total number of apprenticeship sponsors who had active apprenticeships in FY 2015.¹⁴⁹

One industry, Public Administration, made the initial top-five list but is not included in this analysis because no data on the revenue of small local jurisdictions were available. Local jurisdictions are classified as small when their population is less than 50,000. 5 U.S.C. 601(5).

Registered apprenticeship program sponsors may be employers, employer associations, industry associations, or labor management organizations and, thus, may represent businesses, multiple businesses, and not-for-profit organizations. The requirements of the Final Rule, however, fall on the sponsor, and therefore we used sponsor data to create the industry breakdowns.

The Department has adopted the SBA small business size standard for each of the five industry categories. Since the industry categories include multiple NAICS sectors, some industry categories will reflect multiple SBA definitions. We accounted for industries included in each industry category. In broader NAICS categories, such as Manufacturing (NAICS 31–33), the SBA has designated different standards for each six-digit NAICS code within the larger category. The Department recorded these narrower standards in its

analysis; in this document, we offer the lowest and most restrictive standard where multiple standards exist. We follow the SBA standards, which are based on annual revenue for some industries and on number of employees for other industries.

The “Construction” industry category follows NAICS exactly (NAICS 23) and, thus, we used the SBA definitions of revenue less than or equal to \$36.5 million for NAICS 236 and 237 and \$15 million for NAICS 238. All sponsors included in the data fell into one of these three NAICS codes.

The “Manufacturing” industry category includes the standard sector for Manufacturing (NAICS 31–33), but also covers Logging (NAICS 113310); Sand, Gravel, Clay, and Ceramic and Refractory Minerals Mining and Quarrying (NAICS 21232); and Newspaper, Periodical, Book, and Directory Publishers (NAICS 5111). The corresponding SBA small size standards are as follows: Manufacturing—500 employees or less; Newspaper, Periodical, Book, and Directory Publishers—500 employees or less; Logging—500 employees or less; Sand, Gravel, Clay, and Ceramic—500 employees or less; and Refractory Minerals Mining and Quarrying—500 employees or less.¹⁵⁰

The “Service” industry category covers the largest number of NAICS sectors, subsectors, and industries.¹⁵¹ The majority of these industries use the SBA small business size standard of revenue of less than or equal to \$7.5 million, with the exception of Motion Picture and Video Production, which uses \$32.5 million; and Dental Laboratories, which uses 500 employees or less.

The “Transportation and Communication” industry category includes transportation and warehousing (NAICS 48–49), Marinas (NAICS 713930), Other Nonhazardous

Waste Treatment and Disposal (NAICS 562219), Telecommunication (NAICS 517), Radio and TV Broadcasting (NAICS 5151), and Utilities (NAICS 221). The SBA size standard for these industries is revenue less than or equal to \$7.5 million or 500 employees or less for Transportation and Warehousing and Marinas; \$32.5 million or 1,500 employees or less for Telecommunication; \$38.5 million for Other Nonhazardous Waste Treatment and Disposal; and \$32.5 million for Radio and TV Broadcasting.¹⁵²

The “Trade” industry category includes Merchant Wholesalers, Nondurable Goods (NAICS 424) and Durable Goods (NAICS 423); Retail Trade (NAICS 44–45); Retail Bakeries (NAICS 311811); and Food Services and Drinking Places (NAICS 722). The associated SBA size standards are: Merchant Wholesalers, Nondurable Goods and Durable Goods—less than or equal to 100 employees, Retail Trade—revenue less than or equal to \$7.5 million, Retail Bakeries—less than or equal to 1,000 employees and Food Services and Drinking Places—revenue less than or equal to \$7.5 million.

SBA small business size standards are based on a comprehensive survey of industries, and are specific to each industry. Because each industry category covers multiple sectors, each category includes several criteria that can be used to identify small entities.¹⁵³ To determine the average number of employees by small entity, the revenue per employee for a small entity, and the percent of entities that qualify as a small entity, the Department retrieved data on number of employees and annual revenue from ReferenceUSA, a business information provider, for approximately 1,600 randomly selected companies. Using the SBA small business definitions and through this categorization process, we determined that approximately 91 percent (or 1,459) of the sample are small entities.¹⁵⁴

2. Impact on Small Entities

The Department has estimated the incremental costs for small entities from

¹⁴⁸ According to RAPIDS, the percent of programs (of all sizes) in the selected sectors in 2015 were as follows: Construction, 40.2 percent; Manufacturing, 26.7 percent; Service, 8.6 percent; Transportation and Communication, 7.3 percent; and Trade, 2.7 percent.

¹⁴⁹ RAPIDS includes a portion of all registered apprenticeship programs and apprentices nationwide because SAAs that are recognized by the Department of Labor to serve as the Registration Agency may choose, but are not required, to participate in RAPIDS. Therefore, RAPIDS includes individual level apprentice and apprenticeship program data for the 25 states in which OA is the Registration agency and 7 SAAs that participate in RAPIDS. Therefore, RAPIDS includes data from 32 of the 50 states and the Department estimates that they represent 55 to 60 percent of all sponsors and 50 to 55 percent of all apprentices. We assume that our data set is a good predictor of the population of apprenticeship programs nationwide.

¹⁵⁰ When an industry breakdown uses multiple sector codes, we used the more specific NAICS code. Typically, the definition of the industry category centers on a particular sector (for example, Manufacturing) but it may also include some satellite industries. For example, Logging is the only industry in Agriculture, Forestry, Fishing, and Hunting (NAICS 11). Thus, including the entire sector would be a poor representation of the “Manufacturing” industry category.

¹⁵¹ The included industry sectors are Arts, Entertainment and Recreation (NAICS 71); Accommodation (NAICS 721); Other Services (NAICS 81); Administrative and Support and Waste Management and Remediation Services (NAICS 56); Professional, Scientific, and Technical Services (NAICS 541); Rental and Leasing Services (NAICS 532); Motion Picture and Video Production (NAICS 512110); Dental Laboratories (NAICS 339116); Radio, Television and Other Electronic Stores (NAICS 44312); Educational Services (NAICS 611); and Health Care and Social Assistance (NAICS 62).

¹⁵² Utilities are categorized as small when their total electric output does not exceed 4 million megawatt hours. Because we did not have readily available data on megawatt output, we set aside the Utilities subsector.

¹⁵³ The SBA classifies small entities at the industry level but, because our analysis considers affected sectors, we incorporate the most common industry standard for each sector or subsector.

¹⁵⁴ 91% represents an average of the five sectors. For construction, 91.6% of the sample is classified as small. For manufacturing, 87.1% of the sample is classified as small. For trade, 88.1% of the sample is classified as small. For services, 91.0% is classified as small. For transportation, 96.2% of the sample is classified as small.

the baseline of the 1978 Final Rule.¹⁵⁵ This analysis reflects the incremental cost of the Final Rule, as it adds to the requirements of the 1978 Final Rule. Using available data, we have estimated the costs of the following provisions: posting of the equal opportunity pledge, disseminating information about apprenticeship opportunities through universal outreach and recruitment, selected sponsors disseminating information about apprenticeship opportunities through targeted outreach, the time required to read and review the new regulatory requirements, offering periodic orientation and information sessions, developing a form for individuals to self-identify a disability, conducting utilization and workforce analyses, and reviewing affirmative action plans.

To examine the impact of this rule on small entities, we evaluated the impact of the incremental costs on a hypothetical small entity of average size. The total number of workers for the average small entity in the different sectors is as follows, based on ReferenceUSA sample data: Construction, 15.0; Manufacturing, 132.7; Service, 31.4; Transportation and Communication, 49.6; and Trade, 31.0.¹⁵⁶

Using 2015 data from ReferenceUSA we received revenue estimates for the sample of firms within each sector. The data showed that small entities within each sector had the following average revenue: Construction, \$3.10 million; Manufacturing, \$92.74 million; Service, \$1.58 million; Transportation and Communication, \$39.14 million; and Trade, \$11.48 million.

A significant economic burden results when the total incremental annual cost as a percentage of total average annual revenue is equal to or exceeds 3 percent.¹⁵⁷ Because the estimated annual burden of the Final Rule is less than 1 percent of the average annual revenue of each industry category, the Final Rule is not expected to cause a significant economic impact to small entities. These entities include individual employers, groups of

employers, labor management organizations, or industry associations that sponsor apprenticeships.

A provision-by-provision analysis of the estimated small entity impacts of the Final Rule is provided below.

3. Impacts of Final Rule Provisions

The following sections present the impacts that the Final Rule is estimated to have on small entities that sponsor apprentices.¹⁵⁸ These include: posting of the equal opportunity pledge, disseminating information about apprenticeship opportunities through universal outreach and recruitment to individuals with disabilities, disseminating information about apprenticeship opportunities through targeted outreach and recruitment, reading and reviewing the new regulatory requirements, offering periodic orientation and information sessions, providing a form for individuals to self-identify a disability, conducting utilization and workforce analyses, and reviewing affirmative action plans.

The Department estimated the per-entity cost for each one of these changes from the baseline, that is, the 1978 Final Rule. Because all the Final Rule provisions will have a similar impact on entities across economic sectors, we calculated impacts to a representative single entity.¹⁵⁹ As explained in detail below, the total impact amounts to approximately \$1,658.15 per affected small entity in the first year. Average annual cost per affected small entity in years 2 through 10 is \$2,098.23.¹⁶⁰ The analysis covers a 10-year period (2017 through 2026) to ensure it captures costs that accrue over time.

¹⁵⁸ The Department used ReferenceUSA data on number of employees per entity and annual revenue per entity to determine whether each entity in the sample was classified as small based on SBA definitions. The Department's previous treatment of sponsors with at least 5 apprentices or fewer than 5 apprentices is not directly relevant to this RFA analysis. Some sponsors with at least 5 apprentices may have been classified as small entities based on SBA standards if the number of employees or revenue did not exceed SBA standards for the corresponding NAICS code; similarly, some sponsors with fewer than 5 apprentices may have been classified as large if revenue exceeded SBA standards for the corresponding NAICS code.

¹⁵⁹ A large entity could have a single apprentice or a small entity could have multiple apprentices.

¹⁶⁰ Because the number of apprentices does not directly correlate with the size of the sponsor, we are unable to account for this difference. To avoid under-estimating the impacts, the Department assumed that the time to complete the review process is independent of the size of the entity and applied the same cost of this provision to entities regardless of their size.

a. Posting of the Equal Opportunity Pledge

The Final Rule requires sponsors to post their equal opportunity pledge at each individual sponsor location, including on bulletin boards and through electronic media (§ 30.3(b)(2)). The 1978 Final Rule did not contain a requirement for posting the pledge. This provision represents a cost to sponsors, and reflects the time needed to put up a physical copy of the pledge and post it on their Web site as well as the cost of the materials.

To estimate the labor cost of this provision, we assumed that it would take a sponsor 5 minutes (0.08 hours) to put up a physical copy of the pledge, and that this task would be performed by an administrative assistant at an average hourly compensation rate of \$23.10. We multiplied the time estimate for this provision by the average hourly compensation rate to obtain a total labor cost per sponsor of \$1.85 ($\$23.10 \times 0.08$).

To estimate the materials cost, we assumed that the pledge is one page, and that the cost per page for photocopying is \$0.08, resulting in a materials cost of \$0.08 ($\$0.08 \times 1$) per sponsor.

The Department also assumes it will take a sponsor 10 minutes (0.17 hours) to post the pledge on its Web site and that this task will be performed by a web developer at an hourly compensation rate of \$45.24. The cost of posting the pledge on the sponsor's Web site is \$7.69 ($\$45.24 \times 0.17$). Summing the labor and materials costs results in an annual per-entity cost of \$9.62 ($\$1.85 + \$0.08 + \$7.69$) due to this provision.

b. Disseminate Information About Apprenticeship Opportunities Through Universal Outreach and Recruitment, Including to Individuals With Disabilities

Under the 1978 Final Rule, sponsors with five or more apprentices are required to develop and maintain an affirmative action program, which requires, among other things, outreach and recruitment of women and minorities. The Final Rule requires that sponsors, in addition to contacting organizations that reach women and minorities, also contact organizations that serve individuals with disabilities. Sponsors are required to develop a list of recruitment sources that generate referrals from all demographic groups, women, minorities, and individuals with disabilities, with contact information for each source. Further, sponsors are required to notify these sources of any apprenticeship

¹⁵⁵ 43 FR 20760 (May 12, 1978) (requiring the inclusion of female apprentices in AAPs).

¹⁵⁶ Source: ReferenceUSA sample data, 2015. These figures originate from the average number of employees and average revenue by employee size for a business that qualifies as a small business based on the sector-specific size standard.

¹⁵⁷ See Small Business Association, *A Guide for Government Agencies: How to Comply with the Regulatory Flexibility Act*, 17–19 (June 2010), available at <http://www.sba.gov/content/guide-government-agencies-how-comply-with-regulatory-flexibility-act-0> (last accessed Apr. 7, 2011). The Department has used the 3 percent threshold in previous regulations.

opportunities, preferably with 30 days advance notice.

We assumed that the cost to sponsors to distribute the information about apprenticeship opportunities to organizations serving individuals with disabilities will be the labor cost. We also assumed that the labor for this provision will be performed by a human resource manager and an administrative assistant with average hourly compensation rates of \$73.90 and \$23.10, respectively.

The Department estimated that this dissemination task will take 0.5 hours of a human resource manager's time and 0.5 hours of an administrative assistant's time per targeted source. The cost of this provision per affected sponsor is, therefore, the time each staff member devotes to this task (0.5 hours for a human resource manager and 0.5 hours for an administrative assistant) multiplied by their associated average hourly compensation rates. This calculation resulted in a total labor cost of \$48.50 $((\$73.90 \times 0.5) + (\$23.10 \times 0.5))$ per source. This total labor cost is then multiplied by the number of outreach sources (5). The annual per-entity cost for this provision is \$242.50 $(\$48.50 \times 5)$ for each entity.

c. Disseminate Information About Apprenticeship Opportunities Through Targeted Outreach and Recruitment, Including to Individuals With Disabilities

In addition to the normal outreach, recruitment, and retention activities required of all sponsors under § 30.3(b), the Final Rule requires sponsors of apprenticeship programs, whose utilization analyses revealed underutilization of Hispanics or Latinos, women, or a particular racial minority group(s) and/or who have determined pursuant to § 30.7(f) that there are problem areas with respect to its outreach, recruitment, and retention activities of individuals with disabilities, to engage in targeted outreach, as discussed in § 30.8. We assume that this additional outreach will happen in the same manner as the universal outreach discussed above.

This additional outreach, recruitment, and retention will be required for sponsors who employ five or more apprentices and who are not effectively recruiting and retaining a particular underutilized group. We assume that 25 percent of all sponsors currently employ five or more apprentices, and are thus required to develop and maintain an

affirmative action program.¹⁶¹ However, the Department recognizes that some sponsors may already be employing persons with disabilities as registered apprentices and, therefore, this analysis overestimates those who need to set goals. Unfortunately, there are no available data on the number of sponsors who are employing persons with disabilities as registered apprentices.

For this analysis, we assumed that the 25 percent of all sponsors employing five or more apprentices remains constant throughout the 10-year analysis period. In reality, this percentage will fluctuate as sponsors take on new apprentices and as apprentices complete their programs. We also expect that, over time, successful outreach will lead to more hiring of persons with disabilities and that sponsors will meet their recruitment goals and not be required to complete this additional outreach.

We assumed that the cost to sponsors to distribute information about apprenticeship opportunities to organizations serving individuals with disabilities will be the labor cost. We also assumed that the labor for this provision will be performed by a human resource manager and an administrative assistant with average hourly compensation rates of \$73.90 and \$23.10, respectively.

The Department estimated that this dissemination task will take 0.5 hour of a human resource manager's time and 0.5 hour of an administrative assistant's time per targeted source. A sensitivity analysis for a range of time spent conducting targeted outreach to organizations that serve individuals with disabilities is presented below. The cost of this provision per affected sponsor is, therefore, the time each staff member devotes to this task (0.5 hour for a human resource manager and 0.5 hour for an administrative assistant) multiplied by their associated average hourly compensation rates. This calculation results in a total labor cost of \$48.50 $((\$73.90 \times 0.5) + (\$23.10 \times 0.5))$ per source. This total labor cost is then multiplied by the number of outreach sources (5), yielding a cost per small entity of \$242.50 $(\$48.50 \times 5)$ beginning in 2019. The total number of estimated sponsors is 26,606 in 2019. We assume that this additional outreach will occur 2 years after the Final Rule goes into effect.

¹⁶¹ The 25 percent of sponsors who employ five or more apprenticeships was estimated from the RAPIDS database maintained by the Department.

d. Reading and Reviewing the New Regulatory Requirements

During the first year after implementation of the Final Rule, sponsors will need to learn about the new regulatory requirements. We estimate this cost for a hypothetical small entity by multiplying the time required to read the new rule (4 hours) by the average hourly compensation rate of a human resources manager (\$73.90, as calculated above). Thus, the resulting cost per small entity is \$295.60 $(\$73.90 \times 4)$. This cost occurs only in the year after the Final Rule is published.

e. Orientation and Periodic Information Sessions

Section § 30.3(b)(2) requires each sponsor to conduct orientation and periodic information sessions for apprentices and journeyworkers who directly supervise apprentices, and other individuals connected with the administration or operation of the sponsor's apprenticeship program to inform and remind such individuals of the sponsor's equal employment opportunity policy with regard to apprenticeship and anti-harassment.

The Department estimated that in the first year a sponsor will hold one 45 minute regular orientation and information session with on average 24 apprentices (\$18.72 per hour) and 24 journeyworkers (\$31.68 per hour) in 2017.¹⁶² The Department estimated that a human resource manager (\$73.90 per hour) would need to spend 2 hours to develop and prepare written materials for the session in the first year. The first-year cost per small entity is \$1,110.43 $((24 \times 0.75 \times \$18.72) + (24 \times 0.75 \times \$31.68) + (1 \times (2.75) \times \$73.90))$. The average annual cost in year 2 through 10 per a small entity for this provision is \$1197.83¹⁶³

f. Invitation to Self-Identify as an Individual With a Disability

Section § 30.11 requires sponsors to invite applicants for apprenticeship to voluntarily self-identify as an individual with a disability protected by this part

¹⁶² Using 2015 data from the Registered Apprenticeship Partners Information Data System (RAPIDS) and the apprentice and sponsor growth model in the analysis, the Department calculated that there are on average 24 apprentices per sponsor in the program in 2017. While many small entity sponsors may employ fewer than 24 apprentices, the Department conservatively assumed that 24 apprentices and 24 journeyworkers would attend orientation and periodic information sessions for small entities.

¹⁶³ The Department estimated that there are on average 24 apprentices per sponsor in 2017; 26 in 2018; 27 in 2019; 28 in 2020; 29 in 2021; 31 in 2022; 32 in 2023; 32 in 2023; 32 in 2024; 33 in 2025; and 34 in 2026.

at two stages: (1) At the time they apply or are considered for apprenticeship and (2) after they are accepted into the apprenticeship program but before they begin their apprenticeship.

Within the first two years of this program, sponsors with 5 or more apprentices will need to survey their current workforce with the invitation to self-identify. The Department calculated that in 2018 the sponsor will survey an average of 26 apprentices (\$18.72) with an invitation to self-identify provided by the Department. Each apprentice will spend 5 minutes (0.08 hour) filling out the form. The Department estimated an administrative assistant (\$23.10 per hour) would need to spend 0.5 hour annually to record and keep the forms. The cost to the sponsor for this requirement in 2018 is \$50.49 (26 apprentices $\times$ \$18.72 $\times$ 0.08 hour) + (0.5 hour $\times$ \$23.10). In addition, the sponsor is required to remind apprentices yearly beginning in 2019 that they can update their invitation to self-identify. The Department assumed that the sponsor would send out a reminder email yearly at the cost of \$1.85 (0.08 hour $\times$ \$23.10). The total cost of this provision to the sponsor in 2019 is \$53.83 (\$43.00 + \$1.85). The average annual cost in year 2 through 10 per a small entity for this provision is \$58.45.¹⁶⁴

g. Utilization Analysis and Goal Setting and Workforce Analysis

The Final Rule requires the Department to develop a tool for utilization analyses and provides one hour for sponsors to train a human resource manager (\$73.90 per hour) on how to use the tool. This results in a one-time cost of \$73.90 per small entity sponsor in 2018.

The Final Rule also requires sponsors with five or more apprentices to conduct the utilization analysis every

five years and the workforce analysis every two and a half years. The resulting cost per small entity is \$7.39 for the utilization analysis (0.5 hour $\times$ \$73.90/5) in 2019. There will be a slight cost-saving for sponsors for conducting the workforce analysis. For sponsors with five or more apprentices, this process is expected to take 2 hours of an HR manager's time (\$73.90 per hour) every 2.5 years compared to a baseline of 1 hour of an HR manager's time annually, for a net saving of 0.2 hours or \$14.78 (\$73.90 $\times$ 0.2 hours) per small entity per year. However, this cost saving accruing only to sponsors with 5 or more apprentices was not accounted for in this analysis to conservatively estimate the costs to small entities.

h. Affirmative Action Plan Reviews

All sponsors are currently required to review their affirmative action plans annually. The Department estimates this process to take 8 hours of a human resource manager's (\$73.90 per hour) time for a baseline cost of \$591.20. Under the Final Rule, with a two-year phase-in, an HR manager would spend 8 hours annually conducting a personnel review, canceling out the baseline cost from 2018 forward. The Department also added the costs of conducting a written affirmative action plan update at the time of the compliance review every 5 years at 12 hours of an HR manager's time (12 $\times$ \$73.90/5) and conducting a written affirmative action plan update within three years of the compliance review every 5 years at 6 hours of an HR manager's time (6 $\times$ \$73.90/5) for a net cost of \$266.04 (\$177.36 + \$88.68).

4. Total Cost Burden for Small Entities

For a hypothetical small entity in the top five industry categories, the first year cost of this rule is \$1658.15 (\$9.62

+ \$242.50 + \$295.60 + \$1110.43).

Average annual cost in years 2 through 10 is \$2,098.23 (\$9.62 + \$242.50 + \$242.50 + \$1197.83 + \$58.45 + \$7.39 + \$73.90 + \$266.04).

The total cost impacts, as a percent of revenue, are all well below the 3 percent threshold for determining a significant economic impact. The estimated cost impacts to apprenticeship sponsors for the first year, as a percent of revenue, are as follows: Construction, 0.053 percent; Manufacturing, 0.002 percent; Trade, 0.014 percent; Service, 0.105 percent; and Transportation and Communication, 0.004 percent. None of these impacts for the first year are close to 3 percent of revenues, even if considering only the high cost estimates. The estimated annual cost impacts to apprenticeship sponsors are as follows: Construction, 0.068 percent; Manufacturing, 0.002 percent; Trade, 0.018 percent; Service, 0.133 percent; and Transportation and Communication, 0.005 percent. None of these impacts are close to 3 percent of revenues. Exhibit 7 shows the estimated first year and annual cost impacts to apprenticeship sponsors by industry.

The Department estimates the Final Rule would have a significant economic impact on ten out of the 1,459 small entities in the sample from the top five industries. However, this accounts for 0.7 percent of the total number of small entities in the sample, which is less than the 15 percent threshold set to be considered as substantial number of small entities. As a result of this analysis, the Final Rule is not expected to have a significant impact on a substantial number of small entities.

Exhibit 7: Summary of the Impacts on Small Entities

Category	Average revenue per small entity	First year cost as a percentage of revenue	Annualized annual cost as a percentage of revenue	Affected small entities in the Sample
Construction	\$3,100,572	0.053%	0.068%	283
Manufacturing	\$92,740,319	0.002%	0.002%	270
Trade	\$11,478,805	0.014%	0.018%	325
Services	\$1,575,143	0.105%	0.133%	252
Transportation and communication	\$39,138,842	0.004%	0.005%	329
Total				1,459

¹⁶⁴ The cost estimates for this provision excludes the costs incurred by applicants given that they are not borne by the small businesses themselves.

Paperwork Reduction Act (PRA)

The purpose of the Paperwork Reduction Act of 1995 (PRA), 44 U.S.C. 3501 *et seq.*, includes minimizing the paperwork burden on affected entities. The PRA requires certain actions before an agency can adopt or revise a collection of information, including publishing for public comment a summary of the collection of information and a brief description of the need for and proposed use of the information.

As part of its continuing effort to reduce paperwork and respondent burden, the Department conducts a preclearance consultation program to provide the public and Federal agencies with an opportunity to comment on proposed and continuing collections of information in accordance with the PRA. See 44 U.S.C. 3506(c)(2)(A). This activity helps to ensure that the public understands the Department's collection instructions, respondents can provide the requested data in the desired format, reporting burden (time and financial resources) is minimized, collection instruments are clearly understood, and the Department can properly assess the impact of collection requirements on respondents.

A Federal agency may not conduct or sponsor a collection of information unless it is approved by OMB under the PRA and displays a currently valid OMB control number. The public is also not required to respond to a collection of information unless it displays a currently valid OMB control number. In addition, notwithstanding any other provisions of law, no person will be subject to penalty for failing to comply with a collection of information if the collection of information does not display a currently valid OMB control number (44 U.S.C. 3512).

In accordance with the PRA, the Department submitted the identified information collections associated with the NPRM to OMB when the NPRM was published. The NPRM provided an opportunity for the public to comment on the information collections directly to the Department; commenters also were advised that comments under the PRA could be submitted directly to OMB. OMB issued a notice of action for each request asking the Department to resubmit the ICRs at the final rule stage and after considering public comments. The Department has submitted the related ICRs to OMB for approval; the reviews remain pending, and the Department will publish notices in the **Federal Register** to announce the results of those reviews once they are complete. The Department discusses the public

comments in this section of the preamble.

The Department received three comments concerning the paperwork requirements of this Final Rule. One commenter questioned the overall need for the rule, claiming that organization was already required to comply with other equal employment opportunity rules and adding recordkeeping requirements would increase paperwork and result in fewer potential sponsors of registered apprenticeship programs. The other two commenters also associated an increase in paperwork associated with the rule. No commenter, however, quantified the claims.

One of the commenters offered suggestions for the substantive provisions. These are addressed in the analysis for sections 30.3, 30.5, 30.7, 30.10, 30.11, and 30.12 in this preamble.

The Department acknowledges the final rule adds recordkeeping and paperwork requirements that may slightly increase paperwork burden. However, this final rule reduces paperwork burden in other ways. More specifically the final rule, streamlines the workforce and utilization analysis required of sponsors with five or more apprentices and clarifies when and how utilization goals are to be established for women and minorities (§§ 30.5 through 30.7); reduces the frequency with which the workforce and utilization analyses must be conducted—from annually under the existing rule to at the time of the compliance review for the utilization analysis (every five years on average) and within three years of the compliance review for the workforce analysis (§ 30.12). The Department has reconsidered the paperwork burden estimates and determined the increased recordkeeping burdens are substantially offset by the reductions.

The information collections in this Final Rule are summarized as follows.

Agency: DOL–ETA.

Title of Collection: Labor Standards for the Registration of Apprenticeship Programs.

Type of Review: Revision.

OMB Control Number: 1205–0223.

Affected Public: State, Local, and Tribal Governments, Individuals or Households and Private Sector.

Obligation to Respond: Required to obtain or retain a benefit.

Total Estimated Number of Respondents Annually: 138,229.

Total Estimated Number of Annual Responses: 138,229.

Frequency of Responses: Annually.

Total Estimated Annual Time Burden: 14,724.

Total Estimated Annual Other Costs Burden: \$0.

Regulations sections: § 29.3, § 29.7, § 29.5, § 29.13, § 29.14, § 29.6.

Overview and Response to Comments Received

Overview: Title 29 CFR 29.5 requires sponsors to meet apprenticeship standards to have a registered apprenticeship program. This information collection package contains the ETA Form 671, Apprenticeship Agreement Form. The form has been modified to provide voluntary self-identification of an individual with a disability. Such information is collected on a separate tear-off sheet that is maintained separately from the Apprenticeship Agreement Form and treated as confidential.

The Department received no comments on this information collection.

Agency: DOL–ETA.

Title of Collection: Equal Employment Opportunity in Apprenticeship.

Type of Review: Revision.

OMB Control Number: 1205–0224.

Affected Public: State, Local, and Tribal Governments; Individuals or Households.

Obligation to Respond: Required to Obtain or Retain Benefits.

Total Estimated Number of Respondents Annually: 19,277.

Total Estimated Number of Annual Responses: 34,490.

Total Estimated Annual Time Burden: 3,219 hours.

Total Estimated Annual Other Costs Burden: \$0.

Regulations sections: § 30.3, § 30.4, § 30.5, § 30.6, § 30.8, § 30.11, § 30.16, § 30.19.

Overview and Response to Comments Received

Overview: This information collection contains the requirements for SAAs to prepare State EEO plans conforming to the regulations, to maintain adequate records pertinent to compliance with the regulations, and to notify the Department of exemptions from the regulations granted to program sponsors.

The Department received no comments concerning this information collection.

Unfunded Mandates Reform Act of 1995

Title II of the Unfunded Mandates Reform Act of 1995 (2 U.S.C. 1531–1538) establishes requirements for Federal agencies to assess the effects of their regulatory actions on State, local, and tribal governments, and on the private sector. This Final Rule does not impose any Federal mandates on any State, local, or tribal governments, or the

private sector, within the meaning of the Unfunded Mandates Reform Act of 1995.

Executive Order 13132: Federalism

As with the NPRM, the Department reviewed the Final Rule in accordance with Executive Order 13132. The revisions to part 30 may have substantial direct effects on States and on the relationship between the Federal government and the States. Although matters of Federalism in the National Registered Apprenticeship System are primarily established through part 29, Labor Standards for Registration of Apprenticeship Programs, which establishes the requirements for the recognition of SAAs as Registration Agencies, the proposed revisions to part 30 also have direct effect on a State's method of administering registered apprenticeship for Federal purposes. In particular, the Final Rule requires an SAA that seeks to obtain or maintain recognition as the Registration Agency for Federal purposes, submit, at a minimum, draft State apprenticeship legislation corresponding to the requirements of part 30, and requires all program sponsors registered with the State for Federal purposes to comply with the State EEO plan. This NPRM also requires OA's Administrator to provide written concurrence on any subsequent modifications to the State EEO plan, as provided in paragraph 29.13(b)(9) of this title. The Department has determined that these requirements are essential to ensure that SAAs conform to the new requirements of part 30, as a precondition for recognition.

In the development of this Rule, the Department included several mechanisms for consultation with State officials. In 2010, OA conducted two listening sessions with members of the National Association of State and Territorial Apprenticeship Directors (NASTAD), the organization representing apprenticeship officials from the District of Columbia, 26 States, and three Territories, to request the members' recommendations for updating part 30. Additionally, as discussed earlier in the preamble, OA gave consideration to recommendations from the ACA, whose membership includes representatives from NASTAD and the National Association of State Government Labor Officials (NAGLO). OA invited State officials to participate in a series of "town hall" meetings and a webinar conducted in spring 2010 to elicit the agency's stakeholders' recommendations for updating part 30. The Department considered all of the issues raised in these fora, and incorporated many of them into the

NPRM and this Final Rule. Finally, the Department specifically solicited comments from State and local government officials on the NPRM.

In response, the Department received several comments raising questions as to whether the provisions of the proposed rule, hereby adopted into the Final Rule, were in conflict with other State or Federal laws, including principally ERISA and state disability laws regarding self-identification inquiries. This Final Rule has addressed these comments in the Section-by-Section analysis, specifying that no such conflict exists as to ERISA and no ascertainable conflict exists as to State law. To the extent any such conflict exists, preemption shall be restricted to the minimum level necessary to achieve the objectives of the National Apprenticeship Act.

Assessment of Federal Regulations and Policies on Families

The Department certifies that this Final Rule has been assessed according to § 654 of Pub. L. 105–277, 112 Stat. 2681, for its effect on family well-being. The Department concludes that this Final Rule will not adversely affect the well-being of the Nation's families. Rather, it should have a positive effect by safeguarding the welfare of registered apprentices.

Executive Order 13175: Consultation and Coordination With Indian Tribal Governments

The Department has reviewed this proposed rule in accordance with Executive Order 13175 and has determined that it does not have "tribal implications." This Final Rule does not "have substantial direct effects on one or more Indian tribes, on the relationship between the Federal government and Indian tribes, or on the distribution of power and responsibilities between the Federal government and Indian tribes."

Executive Order 12988: Civil Justice

This Final Rule has been drafted and reviewed in accordance with Executive Order 12988, Civil Justice Reform, and will not unduly burden the Federal court system. This Final Rule has been written so as to minimize litigation and provide a clear legal standard for affected conduct, and has been reviewed carefully to eliminate drafting errors and ambiguities.

List of Subjects

29 CFR Part 29

Apprentice agreement and complaints, Apprenticeship criteria, Program standards, registration and

deregistration, Sponsor eligibility, State Apprenticeship Agency recognition and derecognition.

29 CFR Part 30

Administrative practice and procedure, Apprenticeship, Employment, Equal employment opportunity, Reporting and recordkeeping requirements, Training.

Signed in Washington, DC.

Portia Wu,

Assistant Secretary, Employment and Training Administration.

For the reasons stated in the preamble, the Employment and Training Administration amends 29 CFR parts 29 and 30 as follows:

PART 29—LABOR STANDARDS FOR THE REGISTRATION OF APPRENTICESHIP PROGRAMS

- 1. The authority citation for part 29 continues to read as follows:

Authority: Section 1, 50 Stat. 664, as amended (29 U.S.C. 50; 40 U.S.C. 276c; 5 U.S.C. 301) Reorganization Plan No. 14 of 1950, 64 Stat. 1267 (5 U.S.C. App. P. 534).

- 2. Amend § 29.5 by revising paragraph (b)(21) to read as follows:

§ 29.5 Standards of apprenticeship.

* * * * *

(b) * * *

(21) Compliance with 29 CFR part 30, including the equal opportunity pledge prescribed in 29 CFR 30.3(c); an affirmative action program complying with 29 CFR 30.4; and a method for the selection of apprentices complying with 29 CFR 30.10, or compliance with parallel requirements contained in a State plan for equal opportunity in apprenticeship adopted under 29 CFR part 30 and approved by the Department. The apprenticeship standards must also include a statement that the program will be conducted, operated and administered in conformity with applicable provisions of 29 CFR part 30, as amended, or if applicable, an approved State plan for equal opportunity in apprenticeship.

* * * * *

- 3. In § 29.7, revise paragraph (j) and add paragraph (l) to read as follows:

§ 29.7 Apprenticeship agreement.

* * * * *

(j) A statement that the apprentice will be accorded equal opportunity in all phases of apprenticeship employment and training, without discrimination because of race, color, religion, national origin, sex, sexual

orientation, age (40 or older), genetic information, or disability.

* * * * *

(l) A request for demographic data, including the apprentice's race, sex, and ethnicity, and disability status.

■ 4. Amend § 29.8 by revising paragraph (b)(1)(i) to read as follows:

§ 29.8 Reinstatement of program registration.

* * * * *

(b) * * *

(1)(i) Deregistration proceedings may be undertaken when the apprenticeship program is not conducted, operated, or administered in accordance with the program's registered provisions or with the requirements of this part, including but not limited to: failure to provide on-the-job learning; failure to provide related instruction; failure to pay the apprentice a progressively increasing schedule of wages consistent with the apprentices skills acquired; or persistent and significant failure to perform successfully.

* * * * *

■ 5. Amend § 29.14 by revising paragraph (a) to read as to read as follows:

§ 29.14 Derecognition of State Apprenticeship Agencies.

* * * * *

(a) Derecognition proceedings for failure to adopt or properly enforce a State Plan for Equal Employment Opportunity in Apprenticeship must be processed in accordance with the procedures prescribed in this part.

* * * * *

■ 6. Revise part 30 to read as follows:

PART 30—EQUAL EMPLOYMENT OPPORTUNITY IN APPRENTICESHIP

Sec.

30.1 Purpose, applicability, and relationship to other laws.

30.2 Definitions.

30.3 Equal opportunity standards applicable to all sponsors.

30.4 Affirmative action programs.

30.5 Utilization analysis for race, sex, and ethnicity.

30.6 Establishment of utilization goals for race, sex, and ethnicity.

30.7 Utilization goals for individuals with disabilities.

30.8 Targeted outreach, recruitment, and retention.

30.9 Review of personnel processes.

30.10 Selection of apprentices.

30.11 Invitation to self-identify as an individual with a disability.

30.12 Recordkeeping.

30.13 Equal employment opportunity compliance reviews.

30.14 Complaints.

30.15 Enforcement actions.

30.16 Reinstatement of program registration.

30.17 Intimidation and retaliation prohibited.

30.18 State apprenticeship agencies.

30.19 Exemptions.

Authority: Sec. 1, 50 Stat. 664, as amended (29 U.S.C. 50; 40 U.S.C. 276c; 5 U.S.C. 301); Reorganization Plan No. 14 of 1950, 64 Stat. 1267, 3 CFR 1949–53 Comp. p. 1007.

§ 30.1 Purpose, applicability, and relationship to other laws.

(a) *Purpose.* The purpose of this part is to promote equal opportunity for apprentices and applicants for apprenticeship in registered apprenticeship programs by prohibiting discrimination based on race, color, religion, national origin, sex, sexual orientation, age (40 or older), genetic information, and disability. This part also prescribes affirmative action efforts sponsors must take to ensure equal opportunity for apprentices and applicants for apprenticeship. The regulations set forth the equal opportunity obligations of sponsors, the contents of affirmative action programs, procedures for the filing and processing of complaints, and enforcement procedures. These regulations also establish procedures for deregistration of an apprenticeship program in the event of noncompliance with this part and prescribe the equal opportunity requirements for recognition of State Apprenticeship Agencies (SAA) under part 29.

(b) *Applicability.* This part applies to all sponsors of apprenticeship programs registered with either the U.S. Department of Labor or a recognized SAA.

(c) *Relationship to other laws.* This part does not invalidate or limit the remedies, rights, and procedures under any Federal law or the law of any State or political subdivision of any State or jurisdiction that provides greater or equal protection for individuals based on race, color, religion, national origin, sex, sexual orientation, age (40 or older), genetic information, or disability than are afforded by this part. It may be a defense to a charge of a violation of this part that a challenged action is required or necessitated by another Federal law or regulation, or that another Federal law or regulation prohibits an action that would otherwise be required by this part.

§ 30.2 Definitions.

For the purpose of this part:

Administrator means the Administrator of the Office of Apprenticeship, or any person specifically designated by the Administrator.

Apprentice means a worker at least 16 years of age, except where a higher

minimum age standard is otherwise fixed by law, who is employed to learn an apprenticeable occupation as provided in § 29.4 of this chapter under standards of apprenticeship fulfilling the requirements of § 29.5 of this chapter.

Apprenticeship Committee

(*Committee*) means those persons designated by the sponsor to administer the program. A committee may be either joint or non-joint, as follows:

(1) A joint committee is composed of an equal number of representatives of the employer(s) and of the employees represented by a bona fide collective bargaining agent(s).

(2) A non-joint committee, which may also be known as a unilateral or group non-joint (which may include employees) committee, has employer representatives but does not have a bona fide collective bargaining agent as a participant.

Apprenticeship program means a plan containing all terms and conditions for the qualification, recruitment, selection, employment and training of apprentices, as required under 29 CFR parts 29 and 30, including such matters as the requirement for a written apprenticeship agreement.

Department means the U.S. Department of Labor.

Direct threat means a significant risk of substantial harm to the health or safety of the individual or others that cannot be eliminated or reduced by reasonable accommodation. The determination that an individual poses a "direct threat" must be based on an individualized assessment of the individual's present ability to safely perform the essential functions of the job. This assessment must be based on a reasonable medical judgment that relies on the most current medical knowledge and/or on the best available objective evidence. In determining whether an individual would pose a direct threat, the factors to be considered include:

(1) The duration of the risk;

(2) The nature and severity of the potential harm;

(3) The likelihood that the potential harm will occur; and

(4) The imminence of the potential harm.

*Disability*¹ means, with respect to an individual:

¹ The definitions for the term "disability" and other terms relevant to defining disability and disability discrimination standards, including "direct threat", "major life activities", "physical or mental impairment", "qualified applicant or apprentice", "reasonable accommodation", and "undue hardship, are taken directly from title I of the Americans with Disabilities Act (ADA), as

(1) A physical or mental impairment that substantially limits one or more major life activities of such individual;

(2) A record of such an impairment; or

(3) Being regarded as having such an impairment.

EEO means equal employment opportunity.

Electronic media means media that utilize electronics or electromechanical energy for the end user (audience) to access the content; and includes, but is not limited to, electronic storage media, transmission media, the Internet, extranet, lease lines, dial-up lines, private networks, and the physical movement of removable/transportable electronic media and/or interactive distance learning.

Employer means any person or organization employing an apprentice whether or not such person or organization is a party to an Apprenticeship Agreement with the apprentice.

Ethnicity, for purposes of recordkeeping and affirmative action, has the same meaning as under the Office of Management and Budget's Standards for the Classification of Federal Data on Race and Ethnicity, or any successor standards. Ethnicity thus refers to the following designations:

(1) Hispanic or Latino—A person of Cuban, Mexican, Puerto Rican, Cuban, South or Central American, or other Spanish culture or origin, regardless of race.

(2) Not Hispanic or Latino

Genetic information means:

(1) Information about—

(i) An individual's genetic tests;

(ii) The genetic tests of that individual's family members;

(iii) The manifestation of disease or disorder in family members of the individual (family medical history);

(iv) An individual's request for, or receipt of, genetic services, or the participation in clinical research that includes genetic services by the individual or a family member of the individual; or

(v) The genetic information of a fetus carried by an individual or by a pregnant woman who is a family member of the individual and the genetic information of any embryo legally held by the individual or family member using an assisted reproductive technology.

(2) Genetic information does not include information about the sex or age

of the individual, the sex or age of family members, or information about the race or ethnicity of the individual or family members that is not derived from a genetic test.²

Journeyworker means a worker who has attained a level of skill, abilities and competencies recognized within an industry as having mastered the skills and competencies required for the occupation. (Use of the term may also refer to a mentor, technician, specialist or other skilled worker who has documented sufficient skills and knowledge of an occupation, either through formal apprenticeship or through practical on-the-job experience and formal training).

Major life activities include, but are not limited to: Caring for oneself, performing manual tasks, seeing, hearing, eating, sleeping, walking, standing, sitting, reaching, lifting, bending, speaking, breathing, learning, reading, concentrating, thinking, communicating, interacting with others, and working. A major life activity also includes the operation of a major bodily function, including but not limited to, functions of the immune system, special sense organs and skin; normal cell growth; and digestive, genitourinary, bowel, bladder, neurological, brain, respiratory, circulatory, cardiovascular, endocrine, hemic, lymphatic, musculoskeletal, and reproductive functions. The operation of a major bodily function includes the operation of an individual organ within a body system.

Office of Apprenticeship (OA) means the office designated by the Employment and Training Administration of the U.S. Department of Labor to administer the National Registered Apprenticeship System or its successor organization.

Physical or mental impairment means:

(1) Any physiological disorder or condition, cosmetic disfigurement, or anatomical loss affecting one or more body systems, such as neurological, musculoskeletal, special sense organs, respiratory (including speech organs), cardiovascular, reproductive, digestive, genitourinary, immune, circulatory, hemic, lymphatic, skin, and endocrine; or

(2) Any mental or psychological disorder, such as intellectual disability (formerly termed "mental retardation"), organic brain syndrome, emotional or

mental illness, and specific learning disabilities.

Pre-apprenticeship program means a training model designed to assist individuals who do not currently possess the minimum requirements for selection into an apprenticeship program to meet the minimum selection criteria established in a program sponsor's apprenticeship standards required under part 29 of this chapter and which maintains at least one documented partnership with a Registered Apprenticeship program. It involves a form of structured workplace education and training in which an employer, employer group, industry association, labor union, community-based organization, or educational institution collaborates to provide formal instruction that will introduce participants to the competencies, skills, and materials used in one or more apprenticeable occupations.

Qualified applicant or apprentice is an individual who, with or without reasonable accommodation, can perform the essential functions of the apprenticeship program for which the individual applied or is enrolled.

Race, for purposes of recordkeeping and affirmative action, has the same meaning as under the Office of Management and Budget's Standards for the Classification of Federal Data on Race and Ethnicity, or any successor standards. Race thus refers to the following designations:

(1) White—A person having origins in any of the original peoples of Europe, the Middle East, or North Africa.

(2) Black or African American—A person having origins in any of the black racial groups of Africa.

(3) Native Hawaiian or Other Pacific Islander—A person having origins in any of the peoples of Hawaii, Guam, Samoa, or other Pacific Islands.

(4) Asian—A person having origins in any of the original peoples of the Far East, Southeast Asia, or the Indian Subcontinent including, for example, Cambodia, China, India, Japan, Korea, Malaysia, Pakistan, the Philippine Islands, Thailand, and Vietnam.

(5) American Indian or Alaska Native—A person having origins in any of the original peoples of North and South America (including Central America), and who maintains tribal affiliation or community attachment.

Reasonable accommodation—(1) The term *reasonable accommodation* means:

(i) Modifications or adjustments to a job application process that enable a qualified applicant with a disability to be considered for the position such qualified applicant desires; or

amended, and from the Equal Employment Opportunity Commission's regulations implementing the ADA at 29 CFR part 1630, to the extent that the ADA, as amended, did not provide a definition.

² The definition of the term "genetic information" is taken directly from the Genetic Information Nondiscrimination Act of 2008 (GINA) at 42 U.S.C. 2000ff(4) and the EEOC's implementing regulations at 29 CFR 1635.3(c).

(ii) Modifications or adjustments to the work environment, or to the manner or circumstances under which the position held or desired is customarily performed, that enable a qualified individual with a disability to perform the essential functions of that position; or

(iii) Modifications or adjustments that enable a sponsor's apprentice with a disability to enjoy equal benefits and privileges of apprenticeship as are enjoyed by its other similarly situated apprentices without disabilities.

(2) *Reasonable accommodation* may include but is not limited to:

(i) Making existing facilities used by apprentices readily accessible to and usable by individuals with disabilities; and

(ii) Job restructuring; part-time or modified work schedules; reassignment to a vacant position; acquisition or modifications of equipment or devices; appropriate adjustment or modifications of examinations, training materials, or policies; the provision of qualified readers or interpreters; and other similar accommodations for individuals with disabilities.

(3) To determine the appropriate reasonable accommodation it may be necessary for the sponsor to initiate an informal, interactive process with the qualified individual in need of the accommodation. This process should identify the precise limitations resulting from the disability and potential reasonable accommodations that could overcome those limitations.

Registration Agency means the Office of Apprenticeship or a recognized SAA that has responsibility for registering apprenticeship programs and apprentices; providing technical assistance; conducting quality assurance assessments and reviews of registered apprenticeship programs for compliance with the requirements of part 29 and this part.

Selection procedure means any measure, combination of measures, or procedure used as a basis for any decision in apprenticeship. Selection procedures include the full range of assessment techniques from traditional paper and pencil tests, performance tests, training programs, or probationary periods and physical, educational, and work experience requirements through informal or casual interviews and unscored application forms.

Sponsor means any person, association, committee or organization operating an apprenticeship program, and in whose name the program is (or is to be) registered or approved.

State Apprenticeship Agency (SAA) means an agency of a State government

that has responsibility and accountability for apprenticeship within the State. Only an SAA may seek recognition from OA as an agency which has been properly constituted under an acceptable law or Executive Order (E.O.), and authorized by OA to register and oversee apprenticeship programs and agreements for Federal purposes.

Undue hardship—(1) *In general.* Undue hardship means, with respect to the provision of an accommodation, significant difficulty or expense incurred by a sponsor, when considered in light of the factors set forth in paragraph (b) of this definition.

(2) *Factors to be considered.* In determining whether an accommodation would impose an undue hardship on a sponsor, factors to be considered include:

(i) The nature and net cost of the accommodation needed under this part, taking into consideration the availability of tax credits and deductions, and/or outside funding;

(ii) The overall financial resources of the facility or facilities involved in the provision of the reasonable accommodation, the number of persons employed at such facility, and the effect on expenses and resources;

(iii) The overall financial resources of the sponsor, the overall size of the registered apprenticeship program with respect to the number of apprentices, and the number, type and location of its facilities;

(iv) The type of operation or operations of the sponsor, including the composition, structure and functions of the workforce of such entity, and the geographic separateness and administrative or fiscal relationship of the facility or facilities in question to the sponsor; and

(v) The impact of the accommodation upon the operation of the facility, including the impact on the ability of other apprentices to perform their duties and the impact on the facility's ability to conduct business.

§ 30.3 Equal opportunity standards applicable to all sponsors.

(a)(1) *Discrimination prohibited.* It is unlawful for a sponsor of a registered apprenticeship program to discriminate against an apprentice or applicant for apprenticeship on the basis of race, color, religion, national origin, sex, sexual orientation, age (40 or older), genetic information, or disability with regard to:

(i) Recruitment, outreach, and selection procedures;

(ii) Hiring and/or placement, upgrading, periodic advancement,

promotion, demotion, transfer, layoff, termination, right of return from layoff, and rehiring;

(iii) Rotation among work processes;

(iv) Imposition of penalties or other disciplinary action;

(v) Rates of pay or any other form of compensation and changes in compensation;

(vi) Conditions of work;

(vii) Hours of work and hours of training provided;

(viii) Job assignments;

(ix) Leaves of absence, sick leave, or any other leave; and

(x) Any other benefit, term, condition, or privilege associated with apprenticeship.

(2) *Discrimination standards and defenses.* (i) *Race, color, religion, national origin, sex, or sexual orientation.* In implementing this section, the Registration Agency will look to the legal standards and defenses applied under title VII of the Civil Rights Act of 1964, 42 U.S.C. 2000e *et seq.* and Executive Order 11246, as applicable, in determining whether a sponsor has engaged in a practice unlawful under paragraph (a)(1) of this section.

(ii) *Disability.* With respect to discrimination based on a disability, the Registration Agency will apply the same standards, defenses, and exceptions to the definition of disability as those set forth in title I of the Americans with Disabilities Act (ADA), 42 U.S.C. 12112 and 12113, as amended, and the implementing regulations promulgated by the Equal Employment Opportunity Commission (EEOC) at 29 CFR part 1630, which include, among other things, the standards governing reasonable accommodation, medical examinations and disability-related inquiries, qualification standards, and direct threat defense. The Interpretive Guidance on title I of the ADA set out as an appendix to part 1630 issued pursuant to title I may be relied upon for guidance in complying with the nondiscrimination requirements of this part with respect to the treatment of individuals with disabilities.

(iii) *Age.* The Registration Agency will apply the same standards and defenses for age discrimination as those set forth in the Age Discrimination in Employment Act (ADEA), 29 U.S.C. 623, and the implementing regulations promulgated by the EEOC at 29 CFR part 1625.

(iv) *Genetic information.* The Registration Agency will apply the same standards and defenses for discrimination based on genetic information as those set forth in the Genetic Information Nondiscrimination

Act (GINA), 29 U.S.C. 2000ff *et seq.*, and the implementing regulations promulgated by the EEOC at 29 CFR part 1635.

(b) *General duty to engage in affirmative action.* For each registered apprenticeship program, a sponsor is required to take affirmative steps to provide equal opportunity in apprenticeship. These steps must include:

(1) *Assignment of responsibility.* The sponsor will designate an individual or individuals with appropriate authority under the program, such as an apprenticeship coordinator, to be responsible and accountable for overseeing its commitment to equal opportunity in registered apprenticeship, including the development and implementation of an affirmative action program as required by § 30.4. The individual(s) must have the resources, support of, and access to the sponsor leadership to ensure effective implementation. The individual(s) will be responsible for:

(i) Monitoring all registered apprenticeship activity to ensure compliance with the nondiscrimination and affirmative action obligations required by this part;

(ii) Maintaining records required under this part; and

(iii) Generating and submitting reports as may be required by the Registration Agency.

(2) *Internal dissemination of equal opportunity policy.* The sponsor must inform all applicants for apprenticeship, apprentices, and individuals connected with the administration or operation of the registered apprenticeship program of its commitment to equal opportunity and its affirmative action obligations. In addition, the sponsor must require that individuals connected with the administration or operation of the apprenticeship program take the necessary action to aid the sponsor in meeting its nondiscrimination and affirmative action obligations under this part. A sponsor, at a minimum, is required to:

(i) Publish its equal opportunity pledge—set forth in paragraph (c) of this section—in the apprenticeship standards required under § 29.5(c) of this title, and in appropriate publications, such as apprentice and employee handbooks, policy manuals, newsletters, or other documents disseminated by the sponsor or that otherwise describe the nature of the sponsorship;

(ii) Post its equal opportunity pledge from paragraph (c) of this section on bulletin boards, including through electronic media, such that it is

accessible to all apprentices and applicants for apprenticeship;

(iii) Conduct orientation and periodic information sessions for individuals connected with the administration or operation of the apprenticeship program, including all apprentices and journeyworkers who regularly work with apprentices, to inform and remind such individuals of the sponsor's equal employment opportunity policy with regard to apprenticeship, and to provide the training required by paragraph (b)(4)(i) of this section; and

(iv) Maintain records necessary to demonstrate compliance with these requirements and make them available to the Registration Agency upon request.

(3) *Universal outreach and recruitment.* The sponsor will implement measures to ensure that its outreach and recruitment efforts for apprentices extend to all persons available for apprenticeship within the sponsor's relevant recruitment area without regard to race, sex, ethnicity, or disability. In furtherance of this requirement, the sponsor must:

(i) Develop and update annually a list of current recruitment sources that will generate referrals from all demographic groups within the relevant recruitment area. Examples of relevant recruitment sources include: The public workforce system's One-Stop Career Centers and local workforce investment boards; community-based organizations; community colleges; vocational, career and technical schools; pre-apprenticeship programs; and Federally-funded, youth job-training programs such as YouthBuild and Job Corps or their successors;

(ii) Identify a contact person, mailing address, telephone number, and email address for each recruitment source; and

(iii) Provide recruitment sources advance notice, preferably 30 days, of apprenticeship openings so that the recruitment sources can notify and refer candidates. Such notification must also include documentation of the sponsor's equal opportunity pledge specified in paragraph (c) of this section.

(4) *Maintaining apprenticeship programs free from harassment, intimidation, and retaliation.* The sponsor must develop and implement procedures to ensure that its apprentices are not harassed because of their race, color, religion, national origin, sex, sexual orientation, age (40 or older), genetic information, or disability and to ensure that its apprenticeship program is free from intimidation and retaliation as prohibited by § 30.17. To promote an environment in which all apprentices feel safe, welcomed, and treated fairly,

the sponsor must ensure the following steps are taken:

(i) Providing anti-harassment training to all individuals connected with the administration or operation of the apprenticeship program, including all apprentices and journeyworkers who regularly work with apprentices. This training must not be a mere transmittal of information, but must include participation by trainees, such as attending a training session in person or completing an interactive training online. The training content must include, at a minimum, communication of the following:

(A) That harassing conduct will not be tolerated;

(B) The definition of harassment and the types of conduct that constitute unlawful harassment on the basis of race, color, religion, national origin, sex, sexual orientation, age (40 or older), genetic information, and disability; and

(C) The right to file a harassment complaint under § 30.14 of this part.

(ii) Making all facilities and apprenticeship activities available without regard to race, color, religion, national origin, sex, sexual orientation, age (40 or older), genetic information, or disability except that if the sponsor provides restrooms or changing facilities, the sponsor must provide separate or single-user restrooms and changing facilities to assure privacy between the sexes;

(iii) Establishing and implementing procedures for handling and resolving complaints about harassment and intimidation based on race, color, religion, national origin, sex, sexual orientation, age (40 or older), genetic information, and disability, as well as complaints about retaliation for engaging in protected activity described in § 30.17 of this part.

(5) *Compliance with Federal and State equal employment opportunity laws.* The sponsor must comply with all other applicable Federal and State laws and regulations that require equal employment opportunity without regard to race, color, religion, national origin, sex (including pregnancy and gender identity, as applicable), sexual orientation, age (40 or older), genetic information, or disability. Failure to comply with such laws if such noncompliance is related to the equal employment opportunity of apprentices and/or graduates of such an apprenticeship programs under this part is grounds for deregistration or the imposition of other enforcement actions in accordance with § 30.15.

(c) *Equal opportunity pledge.* (1) Each sponsor of an apprenticeship program must include in its Standards of

Apprenticeship and apprenticeship opportunity announcements the following equal opportunity pledge:

[Name of sponsor] will not discriminate against apprenticeship applicants or apprentices based on race, color, religion, national origin, sex (including pregnancy and gender identity), sexual orientation, genetic information, or because they are an individual with a disability or a person 40 years old or older. [Name of sponsor] will take affirmative action to provide equal opportunity in apprenticeship and will operate the apprenticeship program as required under Title 29 of the Code of Federal Regulations, part 30.

(2) The nondiscrimination bases listed in this pledge may be broadened to conform to consistent State and local requirements. Sponsors may include additional protected bases but may not exclude any of the bases protected by this part.

(d) *Compliance.*

(1) Current sponsors: A sponsor that has a registered apprenticeship program as of the effective date of this regulation must comply with all obligations of this section within 180 days of the effective date of this rule.

(2) New sponsors: A sponsor registering with a Registration Agency after the effective date of this regulation shall comply with all obligations of this section upon registration or 180 days after the effective date of this regulation, whichever is later.

§ 30.4 Affirmative action programs.

(a) *Definition and purpose.* As used in this part:

(1) An affirmative action program is designed to ensure equal opportunity and prevent discrimination in apprenticeship programs. An affirmative action program is more than mere passive nondiscrimination. Such a program requires the sponsor to take affirmative steps to encourage and promote equal opportunity, to create an environment free from discrimination, and to address any barriers to equal opportunity in apprenticeship. An affirmative action program is more than a paperwork exercise. It includes those policies, practices, and procedures, including self-analyses, that the sponsor implements to ensure that all qualified applicants and apprentices are receiving an equal opportunity for recruitment, selection, advancement, retention and every other term and privilege associated with apprenticeship. An affirmative action program should be a part of the way the sponsor regularly conducts its apprenticeship program.

(2) A central premise underlying affirmative action is that, absent discrimination, over time a sponsor's

apprenticeship program, generally, will reflect the sex, race, ethnicity, and disability profile of the labor pools from which the sponsor recruits and selects. Consistent with this premise, affirmative action programs contain a diagnostic component which includes quantitative analyses designed to evaluate the composition of the sponsor's apprenticeship program and compare it to the composition of the relevant labor pools. If women, individuals with disabilities, or individuals from a particular minority group, for example, are not being admitted into apprenticeship at a rate to be expected given their availability in the relevant labor pool, the sponsor's affirmative action program must include specific, practical steps designed to address any barriers to equal opportunity that may be contributing to this underutilization.

(3) Effective affirmative action programs include internal auditing and reporting systems as a means of measuring the sponsor's progress toward achieving an apprenticeship program that would be expected absent discrimination.

(4) An affirmative action program also ensures equal opportunity in apprenticeship by incorporating the sponsor's commitment to equality in every aspect of the apprenticeship program. Therefore, as part of its affirmative action program, a sponsor must monitor and examine its employment practices, policies and decisions and evaluate the impact such practices, policies and decisions have on the recruitment, selection and advancement of apprentices. It must evaluate the impact of its employment and personnel policies on minorities, women, and persons with disabilities, and revise such policies accordingly where such policies or practices are found to create a barrier to equal opportunity.

(5) The commitments contained in an affirmative action program are not intended and must not be used to discriminate against any qualified applicant or apprentice on the basis of race, color, religion, national origin, sex, sexual orientation, age (40 or older), genetic information, or disability.

(b) *Adoption of affirmative action programs.* Sponsors other than those identified in paragraph (d) of this section must develop and maintain an affirmative action program, setting forth that program in a written plan. The components of the written plan, as detailed in §§ 30.5 through 30.9, must be developed in accordance with the respective compliance dates and made

available to the Registration Agency any time thereafter upon request.

(c) *Contents of affirmative action programs.* An affirmative action program must include the following components in addition to those required of all sponsors by § 30.3(a):

(1) Utilization analysis for race, sex, and ethnicity, as described in § 30.5;

(2) Establishment of utilization goals for race, sex, and ethnicity, as described in § 30.6;

(3) Utilization goals for individuals with disabilities, as described in § 30.7;

(4) Targeted outreach, recruitment, and retention, as described in § 30.8;

(5) Review of personnel processes, as described in § 30.9; and

(6) Invitations to self-identify, as described in § 30.11

(d) *Exemptions—(1) Programs with fewer than five apprentices.* A sponsor is exempt from the requirements of paragraphs (b) and (c) of this section if the sponsor's apprenticeship program has fewer than five apprentices registered, unless such program was adopted to circumvent the requirements of this section.

(2) *Programs subject to approved equal employment opportunity programs.* A sponsor is exempt from the requirements of paragraphs (b) and (c) of this section if the sponsor both submits to the Registration Agency satisfactory evidence that it is in compliance with an equal employment opportunity program providing for affirmative action in apprenticeship, including the use of goals for any underrepresented group or groups of individuals, which has been approved as meeting the requirements of either title VII of the Civil Rights Act of 1964, as amended (42 U.S.C. 2000e *et seq.*) and agrees to extend such program to include individuals with disabilities, or if the sponsor submits to the Registration Agency satisfactory evidence that it is in compliance with an equal employment opportunity program providing for affirmative action in apprenticeship, including the use of goals for any underrepresented group or groups of individuals, which has been approved as meeting the requirements of both Executive Order 11246, as amended, and section 503 of the Rehabilitation Act, as amended (29 U.S.C. 793), and their implementing regulations at title 41 of the Code of Federal Regulations, Chapter 60: *Provided*, That programs approved, modified or renewed subsequent to the effective date of this amendment will qualify for this exception only if the goals for any underrepresented group for the selection of apprentices provided for in such programs are likely to be

equal to or greater than the goals required under this part.

(e) *Written affirmative action plans.* Sponsors required to undertake an affirmative action program must create and update a written document memorializing and discussing the contents of the program set forth in paragraph (c) of this section.

(1) *Compliance*—(i) *Apprenticeship programs existing as of January 18, 2017.* The initial written affirmative action plan for such programs must be completed within two years of January 18, 2017. The written affirmative action plan for such programs must be updated every time the sponsor completes workforce analyses required by §§ 30.5(b) and 30.7(d)(2).

(ii) *Apprenticeship programs registered after January 18, 2017.* The initial written affirmative action plan for such programs must be completed within two years of registration. The written affirmative action plan for such programs must be updated every time the sponsor completes workforce analyses required by §§ 30.5(b) and 30.7(d)(2).

§ 30.5 Utilization analysis for race, sex, and ethnicity.

(a) *Purpose.* The purpose of the utilization analysis is to provide sponsors with a method for assessing whether possible barriers to apprenticeship exist for particular groups of individuals by determining whether the race, sex, and ethnicity of apprentices in a sponsor's apprenticeship program is reflective of persons available for apprenticeship by race, sex, and ethnicity in the relevant recruitment area. Where significant disparity exists between availability and representation, the sponsor will be required to establish a utilization goal pursuant to § 30.6.

(b) *Analysis of apprenticeship program workforce*—(1) *Process.* Sponsors must analyze the race, sex, and ethnic composition of their apprentice workforce. This is a two-step process. First, each sponsor must group all apprentices in its registered apprenticeship program by occupational title. Next, for each occupation represented, the sponsor must identify the race, sex, and ethnicity of its apprentices within that occupation.

(2) *Schedule of analyses.* Each sponsor is required to conduct an apprenticeship program workforce analysis at each compliance review, and again if and when three years have passed without a compliance review. This updated workforce analysis should be compared to the utilization goal established at the sponsor's most recent

compliance review to determine if the sponsor is underutilized, according to the process in paragraph (d) of this section.

(3) *Compliance date.* (i) Sponsors registered with a Registration Agency as of January 18, 2017: A sponsor must conduct its first workforce analysis, pursuant to this section, no later than two years after January 18, 2017.

(ii) *New sponsors:* A sponsor registering with a Registration Agency after the effective date of the Final Rule must conduct its initial workforce analysis pursuant to this section no later than two years after the date of registration.

(c) *Availability analysis*—(1) The purpose of the availability analysis is to establish a benchmark against which the demographic composition of the sponsor's apprenticeship program can be compared in order to determine whether barriers to equal opportunity may exist with regard to the sponsor's apprenticeship program.

(2) Availability is an estimate of the number of qualified individuals available for apprenticeship by race, sex, and ethnicity expressed as a percentage of all qualified persons available for apprenticeship in the sponsor's relevant recruitment area.

(3) In determining availability, the following factors must be considered for each major occupation group represented in the sponsor's registered apprenticeship program standards:

(i) The percentage of individuals who are eligible for enrollment in the apprenticeship program, within the sponsor's relevant recruitment area broken down by race, sex, and ethnicity; and

(ii) The percentage of the sponsor's employees who are eligible for enrollment in the apprenticeship program broken down by race, sex, and ethnicity.

(4) In determining availability, the relevant recruitment area is defined as the geographical area from which the sponsor usually seeks or reasonably could seek apprentices. The sponsor must identify the relevant recruitment area in its written affirmative action plan. The sponsor may not draw its relevant recruitment area in such a way as to have the effect of excluding individuals based on race, sex, or ethnicity from consideration, and must develop a brief rationale for selection of that recruitment area.

(5) Availability will be derived from the most current and discrete statistical information available. Examples of such information include census data, data from local job service offices, and data

from colleges or other training institutions.

(6) Sponsors, working with the Registration Agency, will conduct availability analyses at each compliance review.

(d) *Rate of utilization.* To determine the rate of utilization, the sponsor, working with the Registration Agency, must group each occupational title in its apprenticeship workforce by major occupation group and compare the racial, sex, and ethnic representation within each major occupation group to the racial, sex, and ethnic representation available in the relevant recruitment area, as determined in paragraph (c) of this section. When the sponsor's utilization of women, Hispanics or Latinos, or a particular racial minority group is significantly less than would be reasonably expected given the availability of such individuals for apprenticeship, the sponsor must establish a utilization goal for the affected group in accordance with the procedures set forth in § 30.6. Sponsors are not required or expected to establish goals where no significant disparity in utilization rates has been found.

§ 30.6 Establishment of utilization goals for race, sex, and ethnicity.

(a) Where, pursuant to § 30.5, a sponsor is required to establish a utilization goal for a particular racial, sex, or ethnic group in a major occupation group in its apprenticeship program, the sponsor, working with the Registration Agency, must establish a percentage goal at least equal to the availability figure derived under § 30.5(c) for that major occupation group.

(b) A sponsor's determination under § 30.5 that a utilization goal is required constitutes neither a finding nor an admission of discrimination.

(c) Utilization goals serve as objectives or targets reasonably attainable by means of applying every good faith effort to make all aspects of the entire affirmative action program work. Utilization goals are used to measure the effectiveness of the sponsor's outreach, recruitment, and retention efforts.

(d) In establishing utilization goals, the following principles apply:

(1) Utilization goals may not be rigid and inflexible quotas, which must be met, nor are they to be considered either a ceiling or a floor for the selection of particular groups as apprentices. Quotas are expressly forbidden.

(2) Utilization goals may not provide a sponsor with a justification to extend a preference to any individual, select an individual, or adversely affect an

individual's status as an apprentice, on the basis of that person's race, sex, or ethnicity.

(3) Utilization goals do not create set-asides for specific groups, nor are they intended to achieve proportional representation or equal results.

(4) Utilization goals may not be used to supersede eligibility requirements for apprenticeship. Affirmative action programs prescribed by the regulations of this part do not require sponsors to select a person who lacks qualifications to participate in the apprenticeship program successfully, or select a less-qualified person in preference to a more qualified one.

§ 30.7 Utilization goals for individuals with disabilities.

(a) *Utilization goal.* The Administrator of OA has established a utilization goal of 7 percent for employment of qualified individuals with disabilities as apprentices for each major occupation group within which the sponsor has an apprenticeship program.

(b) *Purpose.* The purpose of the utilization goal established in paragraph (a) of this section is to establish a benchmark against which the sponsor must measure the representation of individuals with disabilities in the sponsor's apprentice workforce by major occupation group. The goal serves as an equal opportunity objective that should be attainable by complying with all of the affirmative action requirements of this part.

(c) *Periodic review of goal.* The Administrator of OA will periodically review and update, as appropriate, the utilization goal established in paragraph (a) of this section.

(d) *Utilization analysis*—(1) *Purpose.* The utilization analysis is designed to evaluate the representation of individuals with disabilities in the sponsor's apprentice workforce grouped by major occupation group. If individuals with disabilities are represented in the sponsor's apprentice workforce in any given major occupation group at a rate less than the utilization goal, the sponsor must take specific measures outlined in paragraphs (e) and (f) of this section.

(2) *Apprentice workforce analysis*—(i) *Process.* Sponsors are required to analyze the representation of individuals with disabilities within their apprentice workforce by occupation. This is a two-step process. First, as required in § 30.5, each sponsor must group all apprentices in its registered apprenticeship program according to the occupational titles represented in its registered apprenticeship program. Next, for each

occupation represented, the sponsor must identify the number of apprentices with disabilities.

(ii) *Schedule of evaluation.* The sponsor must conduct its apprentice workforce analysis at each compliance review, and again if and when three years have passed without a compliance review. This updated workforce analysis, grouped according to major occupation group, should then be compared to the utilization goal established under paragraph (a) of this section.

(iii) *Compliance date.* (A) Sponsors currently registered with a Registration Agency: A sponsor must conduct its first workforce analysis, pursuant to this section, no later than two years after January 18, 2017.

(B) New sponsors: A sponsor registering with a Registration Agency after January 18, 2017 must conduct its initial workforce analysis pursuant to this section no later than two years after the date of registration.

(e) *Identification of problem areas.* When the sponsor, working with the Registration Agency, determines that the percentage of individuals with disabilities in one or more major occupation groups within which a sponsor has apprentices is less than the utilization goal established in paragraph (a) of this section, the sponsor must take steps to determine whether and/or where impediments to equal opportunity exist. When making this determination, the sponsor must look at the results of its assessment of personnel processes required by § 30.9 and the effectiveness of its outreach and recruitment efforts required by § 30.8 of this part, if applicable.

(f) *Action-oriented programs.* The sponsor must undertake action-oriented programs, including targeted outreach, recruitment, and retention activities identified in § 30.8, designed to correct any problem areas that the sponsor identified pursuant to its review of personnel processes and outreach and recruitment efforts.

(g) *Utilization goal relation to discrimination.* A determination that the sponsor has not attained the utilization goal established in paragraph (a) of this section in one or more major occupation groups does not constitute either a finding or admission of discrimination in violation of this part.

(h) *Utilization goal not a quota or ceiling.* The utilization goal established in paragraph (a) of this section must not be used as a quota or ceiling that limits or restricts the employment of individuals with disabilities as apprentices.

§ 30.8 Targeted outreach, recruitment, and retention.

(a) *Minimum activities required.* Where a sponsor has found underutilization and established a utilization goal for a specific group or groups pursuant to § 30.6 and/or where a sponsor has determined pursuant to § 30.7(f) that there are problem areas resulting in impediments to equal employment opportunity, the sponsor must undertake targeted outreach, recruitment, and retention activities that are likely to generate an increase in applications for apprenticeship and improve retention of apprentices from the targeted group or groups and/or from individuals with disabilities, as appropriate. In furtherance of this requirement, the sponsor must:

(1) Set forth in its written affirmative action plan the specific targeted outreach, recruitment, and retention activities it plans to take for the upcoming program year. Such activities must include at a minimum:

(i) Dissemination of information to organizations serving the underutilized group regarding the nature of apprenticeship, requirements for selection for apprenticeship, availability of apprenticeship opportunities, and the equal opportunity pledge of the sponsor. These organizations may include: Community-based organizations; local high schools; local community colleges; local vocational, career and technical schools; and local workforce system partners including One Stop Career Centers;

(ii) Advertising openings for apprenticeship opportunities by publishing advertisements in appropriate media which have wide circulation in the relevant recruitment areas;

(iii) Cooperation with local school boards and vocational education systems to develop and/or establish relationships with pre-apprenticeship programs targeting students from the underutilized group to prepare them to meet the standards and criteria required to qualify for entry into apprenticeship programs; and

(iv) Establishment of linkage agreements or partnerships enlisting the assistance and support of pre-apprenticeship programs, community-based organizations, advocacy organizations, or other appropriate organizations, in recruiting qualified individuals for apprenticeship;

(2) Evaluate and document after every selection cycle for registering apprentices the overall effectiveness of such activities;

(3) Refine its targeted outreach, recruitment, and retention activities as needed; and

(4) Maintain records of its targeted outreach, recruitment, and retention activities and records related to its evaluation of these activities.

(b) *Other activities.* In addition to the activities set forth in paragraph (a) of this section, as a matter of best practice, sponsors are encouraged but not required to consider other outreach, recruitment, and retention activities that may assist sponsors in addressing any barriers to equal opportunity in apprenticeship. Such activities include but are not limited to:

(1) Enlisting the use of journeyworkers from the underutilized group or groups to assist in the implementation of the sponsor's affirmative action program;

(2) Enlisting the use of journeyworkers from the underutilized group or groups to mentor apprentices and to assist with the sponsor's targeted outreach and recruitment activities; and

(3) Conducting exit interviews of each apprentice who leaves the sponsor's apprenticeship program prior to receiving a certificate of completion to understand better why the apprentice is leaving the program and to help shape the sponsor's retention activities.

§ 30.9 Review of personnel processes.

(a) As part of its affirmative action program, the sponsor must, for each registered apprenticeship program, engage in an annual review of its personnel processes related to the administration of the apprenticeship program to ensure that the sponsor is operating an apprenticeship program free from discrimination based on race, color, religion, national origin, sex, sexual orientation, age (40 or older), genetic information, and disability. This annual review is required regardless of whether the sponsor is underutilized as described in § 30.5(d). The review must be a careful, thorough, and systematic one and include review of all aspects of the apprenticeship program at the program, industry and occupation level, including, but not limited to, the qualifications for apprenticeship, application and selection procedures, wages, outreach and recruitment activities, advancement opportunities, promotions, work assignments, job performance, rotations among all work processes of the occupation, disciplinary actions, handling of requests for reasonable accommodations, and the program's accessibility to individuals with disabilities (including to the use of information and communication

technology). The sponsor must make any necessary modifications to its program to ensure that its obligations under this part are met.

(1) *Compliance date.* (i) Current sponsors: A sponsor that has a registered apprenticeship program as of the effective date of this regulation must comply with the obligations of paragraph (a) of this section within two years of the effective date of this rule.

(ii) New sponsors: A sponsor registering with a Registration Agency after the effective date of this regulation shall comply with the obligations of paragraph (a) of this section within two years after the date of registration.

(2) *[Reserved]*

(b) The sponsor must include a description of its review in its written affirmative action plan and identify in the written plan any modifications made or to be made to the program as a result of its review.

§ 30.10 Selection of apprentices.

(a) A sponsor's procedures for selection of apprentices must be included in the written plan for Standards of Apprenticeship submitted to and approved by the Registration Agency, as required under § 29.5 of this title.

(b) Sponsors may utilize any method or combination of methods for selection of apprentices, provided that the selection method(s) used meets the following requirements:

(1) The use of the selection procedure(s) must comply with the Uniform Guidelines on Employee Selection Procedures (UGESP) (41 CFR part 60–3), including the requirements to evaluate the impact of the selection procedure on race, sex, and ethnic groups (Hispanic or Latino/non-Hispanic or Latino) and to demonstrate job-relatedness and business necessity for those procedures that result in adverse impact in accordance with the requirements of UGESP.

(2) The selection procedure(s) must be uniformly and consistently applied to all applicants and apprentices within each selection procedure utilized.

(3) The selection procedure(s) must comply with title I of the ADA and EEOC's implementing regulations at part 1630. This procedure(s) must not screen out or tend to screen out an individual with a disability or a class of individuals with disabilities, on the basis of disability, unless the standard, test or other selection criteria, as used by the program sponsor, is shown to be job-related for the position in question and is consistent with business necessity.

(4) The selection procedure(s) must be facially neutral in terms of race, color, religion, national origin, sex, sexual orientation, age (40 or older), genetic information, and disability.

§ 30.11 Invitation to self-identify as an individual with a disability.

(a) *Pre-offer.* (1) A sponsor adopting an affirmative action program pursuant to § 30.4 must invite applicants for apprenticeship to inform the sponsor whether the applicant believes that that he or she is an individual with a disability as defined in § 30.2. This invitation must be provided to each applicant when the applicant applies or is considered for apprenticeship. The invitation may be included with the application materials for apprenticeship, but must be separate from the application.

(2) The sponsor must invite an applicant to self-identify as required in paragraph (a) of this section using the language and manner prescribed by the Administrator and published on the OA Web site.

(b) *Post offer.* (1) At any time after acceptance into the apprenticeship program, but before the applicant begins his or her apprenticeship, the sponsor must invite the applicant to inform the sponsor whether the applicant believes that he or she is an individual with a disability as defined in § 30.2.

(2) The sponsor must invite an applicant to self-identify as required in paragraph (b) of this section using the language and manner prescribed by the Administrator and published on the OA Web site.

(c) *Apprentices.* (1) Within the timeframe specified in paragraph (h) below, the sponsor must make a one-time invitation to each current apprentice to inform the sponsor whether he or she is an individual with a disability as defined in § 30.2. The sponsor must make this invitation using the language and manner prescribed by the Administrator and published on the OA Web site.

(2) Thereafter, the sponsor must remind apprentices yearly that they may voluntarily update their disability status.

(d) *Voluntary self-identification for apprentices.* The sponsor may not compel or coerce an individual to self-identify as an individual with a disability.

(e) *Confidentiality.* The sponsor must keep all information on self-identification confidential, and must maintain it in a data analysis file (rather than the medical files of individual apprentices) as required under § 30.12(e). The sponsor must provide

self-identification information to the Registration Agency upon request. Self-identification information may be used only in accordance with this part.

(f) *Affirmative action obligations.* Nothing in this section may relieve the sponsor of its obligation to take affirmative action with respect to those applicants and apprentices of whose disability the sponsor has knowledge.

(g) *Nondiscrimination obligations.* Nothing in this section may relieve the sponsor from liability for discrimination in violation of this part.

(h) *Compliance dates.* (1) Sponsors currently registered with a Registration Agency: A sponsor must begin inviting applicants and apprentices to identify as individuals with disabilities, pursuant to this section, no later than two years after the January 18, 2017. A sponsor must also invite each of its current apprentices to voluntarily inform the sponsor whether the apprentice believes that he or she is an individual with a disability, as defined in § 30.2, no later than two years after January 18, 2017.

(2) New sponsors: A sponsor registering with a Registration Agency after the effective date of this Final Rule must begin inviting applicants and apprentices to identify as individuals with disabilities, pursuant to this section, no later than two years after the date of registration. A sponsor covered by this subparagraph must also invite each of its current apprentices to voluntarily inform the sponsor whether the apprentice believes that he or she is an individual with a disability, as defined in § 30.2, no later than two years after the date of registration.

§ 30.12 Recordkeeping.

(a) *General obligation.* Each sponsor must collect such data and maintain such records as the Registration Agency finds necessary to determine whether the sponsor has complied or is complying with the requirements of this part. Such records must include, but are not limited to records relating to:

(1) Selection for apprenticeship, including applications, tests and test results, interview notes, bases for selection or rejection, and any other records required to be maintained under UGESF;

(2) The invitation to self-identify as an individual with a disability;

(3) Information relative to the operation of the apprenticeship program, including but not limited to job assignments in all components of the occupation as required under § 29.5(b)(3) of this title, promotion, demotion, transfer, layoff, termination, rates of pay, other forms of compensation, conditions of work,

hours of work, hours of training provided, and any other personnel records relevant to EEO complaints filed with the Registration Agency under § 30.14 or with other enforcement agencies;

(4) Compliance with the requirements of § 30.3;

(5) Requests for reasonable accommodation; and

(6) Any other records pertinent to a determination of compliance with these regulations, as may be required by the Registration Agency.

(b) *Sponsor identification of record.* For any record the sponsor maintains pursuant to this part, the sponsor must be able to identify the race, sex, ethnicity (Hispanic or Latino/non-Hispanic or Latino), and when known, disability status of each apprentice, and where possible, the race, sex, ethnicity, and disability status of each applicant to apprenticeship and supply this information upon request to the Registration Agency.

(c) *Affirmative action programs.* Each sponsor required under § 30.4 to develop and maintain an affirmative action program must retain both the written affirmative action plan and documentation of its component elements set forth in §§ 30.5, 30.6, 30.7, 30.8, 30.9, and 30.11.

(d) *Maintenance of records.* The records required by this part and any other information relevant to compliance with these regulations must be maintained for 5 years from the date of the making of the record or the personnel action involved, whichever occurs later, and must be made available upon request to the Registration Agency or other authorized representative in such form as the Registration Agency may determine is necessary to enable it to ascertain whether the sponsor has complied or is complying with this part. Failure to preserve complete and accurate records as required by paragraphs (a), (b), and (c) of this section constitutes noncompliance with this part.

(e) *Confidentiality and use of medical information.* (1) Any information obtained pursuant to this part regarding the medical condition or history of an applicant or apprentice must be collected and maintained on separate forms and in separate medical files and treated as a confidential medical record, except that:

(i) Supervisors and managers may be informed regarding necessary restrictions on the work or duties of the applicant or apprentice and necessary accommodations;

(ii) First aid and safety personnel may be informed, when appropriate, if the

disability might require emergency treatment; and

(iii) Government officials engaged in enforcing this part, the laws administered by OFCCP, or the ADA, must be provided relevant information on request.

(2) Information obtained under this part regarding the medical condition or history of any applicant or apprentice may not be used for any purpose inconsistent with this part.

(f) *Access to records.* Each sponsor must permit access during normal business hours to its places of business for the purpose of conducting on-site EEO compliance reviews and complaint investigations and inspecting and copying such books, accounts, and records, including electronic records, and any other material the Registration Agency deems relevant to the matter under investigation and pertinent to compliance with this part. The sponsor must also provide the Registration Agency access to these materials, including electronic records, off-site for purposes of conducting EEO compliance reviews and complaint investigations. Upon request, the sponsor must provide the Registration Agency information about all format(s), including specific electronic formats, in which its records and other information are available. Information obtained in this manner will be used only in connection with the administration of this part or other applicable EEO laws.

§ 30.13 Equal employment opportunity compliance reviews.

(a) *Conduct of compliance reviews.* The Registration Agency will regularly conduct EEO compliance reviews to determine if the sponsor maintains compliance with this part, and will also conduct EEO compliance reviews when circumstances so warrant. An EEO compliance review may consist of, but is not limited to, comprehensive analyses and evaluations of each aspect of the apprenticeship program through off-site reviews, such as desk audits of records submitted to the Registration Agency, and on-site reviews conducted at the sponsor's establishment that may involve examination of records required under this part; inspection and copying of documents related to recordkeeping requirements of this part; and interviews with employees, apprentices, journeyworkers, supervisors, managers, and hiring officials.

(b) *Notification of compliance review findings.* Within 45 business days of completing an EEO compliance review, the Registration Agency must present a written Notice of Compliance Review Findings to the sponsor's contact person

through registered or certified mail, with return receipt requested. If the compliance review indicates a failure to comply with this part, the registration agency will so inform the sponsor in the Notice and will set forth in the Notice the following:

- (1) The deficiency(ies) identified;
- (2) How to remedy the deficiency(ies);
- (3) The timeframe within which the deficiency(ies) must be corrected; and
- (4) Enforcement actions may be undertaken if compliance is not achieved within the required timeframe.

(c) *Compliance.* (1) When a sponsor receives a Notice of Compliance Review Findings that indicates a failure to comply with this part, the sponsor must, within 30 business days of notification, either implement a compliance action plan and notify the Registration Agency of that plan or submit a written rebuttal to the Findings. Sponsors may also seek to extend this deadline one time by up to 30 days for good cause shown. If the Registration Agency upholds the Notice after receiving a written response, the sponsor must implement a compliance action plan within 30 days of receiving the notice from the Registration Agency upholding its Findings. The compliance action plan must include, but is not limited to, the following provisions:

- (i) A specific commitment, in writing, to correct or remediate identified deficiency(ies) and area(s) of noncompliance;
- (ii) The precise actions to be taken for each deficiency identified;
- (iii) The time period within which the cited deficiency(ies) will be remedied and any corrective program changes implemented; and
- (iv) The name of the individual(s) responsible for correcting each deficiency identified.

(2) Upon the Registration Agency's approval of the compliance action plan, the sponsor may be considered in compliance with this part provided that the compliance action plan is implemented.

(d) *Enforcement actions.* Any sponsor that fails to implement its compliance action plan within the specified timeframes may be subject to an enforcement action under § 30.15.

§ 30.14 Complaints.

(a) *Requirements for individuals filing complaints—(1) Who may file.* Any individual who believes that he or she has been or is being discriminated against on the basis of race, color, religion, national origin, sex, sexual orientation, age (40 or older), genetic information, or disability with regard to apprenticeship, or who believes he or she has been retaliated against as

described in § 30.17, may, personally or through an authorized representative, file a written complaint with the Registration Agency with whom the apprenticeship program is registered.

(2) *Time period for filing a complaint.* Generally, a complaint must be filed within 300 days of the alleged discrimination or specified failure to follow the equal opportunity standards. However, for good cause shown, the Registration Agency may extend the filing time. The time period for filing is for the administrative convenience of the Registration Agency and does not create a defense for the respondent.

(3) *Contents of the complaint.* Each complaint must be made in writing and must contain the following information:

- (i) The complainant's name, address and telephone number, or other means for contacting the complainant;
- (ii) The identity of the respondent (the individual or entity that the complainant alleges is responsible for the discrimination);
- (iii) A short description of the events that the complainant believes were discriminatory, including but not limited to when the events took place, what occurred, and why complainant believes the actions were discriminatory (for example, because of his or her race, color, religion, sex, sexual orientation, national origin, age (40 or older), genetic information, or disability).
- (iv) The complainant's signature or the signature of the complainant's authorized representative.

(b) *Requirements of sponsors.* Sponsors must provide written notice to all applicants for apprenticeship and all apprentices of their right to file a discrimination complaint and the procedures for doing so. The notice must include the address, phone number, and other contact information for the Registration Agency that will receive and investigate complaints filed under this part. The notice must be provided in the application for apprenticeship and must also be displayed in a prominent, publicly available location where all apprentices will see the notice. The notice must contain the following specific wording:

Your Right to Equal Opportunity

It is against the law for a sponsor of an apprenticeship program registered for Federal purposes to discriminate against an apprenticeship applicant or apprentice based on race, color, religion, national origin, sex, sexual orientation, age (40 years or older), genetic information, or disability. The sponsor must ensure equal opportunity with regard to all terms, conditions, and privileges associated with apprenticeship. If you think that you have been subjected to discrimination, you may file a complaint

within 300 days from the date of the alleged discrimination or failure to follow the equal opportunity standards with [INSERT NAME OF REGISTRATION AGENCY, ADDRESS, PHONE NUMBER, EMAIL ADDRESS, AND CONTACT NAME OF INDIVIDUAL AT THE REGISTRATION AGENCY WHO IS RESPONSIBLE FOR RECEIVING COMPLAINTS]. You may also be able to file complaints directly with the EEOC, or State fair employment practices agency. If those offices have jurisdiction over the sponsor/ employer, their contact information is listed below. [INSERT CONTACT INFORMATION FOR EEOC AS PROVIDED ON "EEO IS THE LAW POSTER," AND CONTACT INFORMATION FOR STATE FEPA AS PROVIDED ON STATE FEPA POSTER, AS APPLICABLE]

Each complaint filed must be made in writing and include the following information:

- 1. Complainant's name, address and telephone number, or other means for contacting the complainant;
- 2. The identity of the respondent (*i.e.* the name, address, and telephone number of the individual or entity that the complainant alleges is responsible for the discrimination);
- 3. A short description of the events that the complainant believes were discriminatory, including but not limited to when the events took place, what occurred, and why the complainant believes the actions were discriminatory (for example, because of his/ her race, color, religion, sex, sexual orientation, national origin, age (40 or older), genetic information, or disability);
- 4. The complainant's signature or the signature of the complainant's authorized representative.

(c) *Requirements of the Registration Agency—(1) Conduct investigations.*

The investigation of a complaint filed under this part will be undertaken by the Registration Agency, and will proceed as expeditiously as possible. In conducting complaint investigations, the Registration Agency must:

- (i) Provide written notice to the complainant acknowledging receipt of the complaint;
- (ii) Contact the complainant, if the complaint form is incomplete, to obtain full information necessary to initiate an investigation;
- (iii) Initiate an investigation upon receiving a complete complaint;
- (iv) Complete a thorough investigation of the allegations of the complaint and develop a complete case record that must contain, but is not limited to, the name, address, and telephone number of each person interviewed, the interview statements, copies, transcripts, or summaries (where appropriate) of pertinent documents, and a narrative report of the investigation with references to exhibits and other evidence which relate to the alleged violations; and

(v) Provide written notification of the Registration Agency's findings to both the respondent and the complainant.

(2) *Seek compliance.* Where a report of findings from a complaint investigation indicates a violation of the nondiscrimination requirements of this part, the Registration Agency should attempt to resolve the matter quickly at the Registration Agency level whenever appropriate. Where a complaint of discrimination cannot be resolved at the Registration Agency level to the satisfaction of the complainant, the Registration Agency must refer the complaint to other Federal, State or local EEO agencies, as appropriate.

(3) *Referrals to other EEO agencies.* The Registration Agency, at its discretion, may choose to refer a complaint immediately upon its receipt or any time thereafter to:

- (i) The EEOC;
- (ii) The United States Attorney General;
- (iii) The Department's OFCCP; or
- (iv) For an SAA, to its Fair Employment Practices Agency.

(4) *Alternative complaint procedures.* An SAA may adopt a complaint review procedure differing in detail from that given in this section provided it is submitted for review to and receives approval by the Administrator.

§ 30.15 Enforcement actions.

Where the Registration Agency, as a result of a compliance review, complaint investigation, or other reason, determines that the sponsor is not operating its apprenticeship program in accordance with this part, the Registration Agency must notify the sponsor in writing of the specific violation(s) identified and may:

- (a) Offer the sponsor technical assistance to promote compliance with this part.
- (b) Suspend the sponsor's right to register new apprentices if the sponsor fails to implement a compliance action plan to correct the specific violation(s) identified within 30 business days from the date the sponsor is so notified of the violation(s), or, if the sponsor submits a written response to the findings of noncompliance, fails to implement a compliance action plan within 30 days of receiving the Registration Agency's notice upholding its initial noncompliance findings. If the sponsor has not implemented a compliance action plan within 30 business days of notification of suspension, the Registration Agency may institute proceedings to deregister the program in accordance with the deregistration proceedings set forth in part 29 of this chapter, or if the Registration Agency

does not institute such proceedings within 45 days of the start of the suspension, the suspension is lifted.

(c) Take any other action authorized by law. These other actions may include, but are not limited to:

- (1) Referral to the EEOC;
- (2) Referral to an appropriate State fair employment practice agency; or
- (3) Referral to the Department's OFCCP.

§ 30.16 Reinstatement of program registration.

An apprenticeship program that has been deregistered pursuant to this part may be reinstated by the Registration Agency upon presentation of adequate evidence that the apprenticeship program is operating in accordance with this part.

§ 30.17 Intimidation and retaliation prohibited.

(a) A participant in an apprenticeship program may not be intimidated, threatened, coerced, retaliated against, or discriminated against because the individual has:

- (1) Filed a complaint alleging a violation of this part;
 - (2) Opposed a practice prohibited by the provisions of this part or any other Federal or State equal opportunity law;
 - (3) Furnished information to, or assisted or participated in any manner, in any investigation, compliance review, proceeding, or hearing under this part or any Federal or State equal opportunity law; or
 - (4) Otherwise exercised any rights and privileges under the provisions of this part.
- (b) Any sponsor that permits such intimidation or retaliation in its apprenticeship program, including by participating employers, and fails to take appropriate steps to prevent such activity will be subject to enforcement action under § 30.15.

§ 30.18 State apprenticeship agencies.

(a) *State plan.* (1) Within 1 year of January 18, 2017, unless an extension for good cause is sought and granted by the Administrator, an SAA that seeks to obtain or maintain recognition under § 29.13 of this title must submit to OA a State EEO plan that:

- (i) Includes, at a minimum, draft State apprenticeship authorizing language corresponding to the requirements of this part; and
- (ii) Requires all apprenticeship programs registered with the State for Federal purposes to comply with the requirements of the State's EEO plan within 180 days from the date that OA provides written approval of the State

EEO plan submitted under this paragraph (a)(1).

(2) Upon receipt of the State's EEO plan, OA will review the plan to determine if the plan conforms to this part. OA will:

- (i) Grant the SAA continued recognition during this review period;
- (ii) Provide technical assistance to facilitate conformity, and provide written notification of the areas of nonconformity, if any; and
- (iii) Upon successful completion of the review process, notify the SAA of OA's determination that the State's EEO plan conforms to this part.

(3) If the State does not submit a revised State EEO plan that addresses identified non-conformities within 90 days from the date that OA provides the SAA with written notification of the areas of nonconformity, OA will begin the process set forth in § 29.14 of this title to rescind recognition of the SAA.

(4) An SAA that seeks to obtain or maintain recognition must obtain the Administrator's written concurrence in any proposed State EEO plan, as well as any subsequent modification to that plan, as provided in § 29.13(b)(9) of this title.

(b) *Recordkeeping requirements.* A recognized SAA must keep all records pertaining to program compliance reviews, complaint investigations, and any other records pertinent to a determination of compliance with this part. These records must be maintained for five years from the date of their creation.

(c) *Retention of authority.* As provided in § 29.13 of this chapter, OA retains the full authority to:

- (1) Conduct compliance reviews of all registered apprenticeship programs;
- (2) Conduct complaint investigations of any program sponsor to determine whether an apprenticeship program registered for Federal purposes is operating in accordance with this part;
- (3) Deregister for Federal purposes an apprenticeship program registered with a recognized SAA as provided in §§ 29.8(b) and 29.10 of this chapter; and
- (4) Refer any matter pertaining to paragraph (c)(1) or (2) of this section to the following:

- (i) The EEOC or the U.S. Attorney General with a recommendation for the institution of an enforcement action under title VII of the Civil Rights Act of 1964, as amended; the ADEA; GINA, or title I of the ADA;
- (ii) The Department's OFCCP with a recommendation for the institution of agency action under Executive Order 11246; or section 503 of the Rehabilitation Act of 1973, as amended; or

(iii) The U.S. Attorney General for other action as authorized by law.

(d) *Derecognition*. A recognized SAA that fails to comply with the requirements of this section will be subject to derecognition proceedings, as provided in § 29.14 of this chapter.

§ 30.19 Exemptions.

Requests for exemption from these regulations, or any part thereof, must be made in writing to the Registration Agency and must contain a statement of reasons supporting the request. Exemptions may be granted for good

cause by the Registration Agency. State Apprenticeship Agencies must receive approval to grant an exemption from the Administrator, prior to granting an exemption from these regulations.

RIN 1004-AE24

Competitive Processes, Terms, and Conditions for Leasing Public Lands for Solar and Wind Energy Development and Technical Changes and Corrections**AGENCY:** Bureau of Land Management, Department of the Interior.**ACTION:** Final rule.

SUMMARY: Through this final rule the Bureau of Land Management (BLM) is amending its regulations governing rights-of-way issued under the Federal Land Policy and Management Act (FLPMA) and the Mineral Leasing Act (MLA). The principal purposes of these amendments are to facilitate responsible solar and wind energy development on BLM-managed public lands and to ensure that the American taxpayer receives fair market value for such development. This final rule includes provisions to promote the use of preferred areas for solar and wind energy development, called “designated leasing areas” (DLAs). It builds upon existing regulations and policies to expand BLM’s ability to utilize competitive processes to offer authorizations for development inside or outside of DLAs. It also addresses the appropriate terms and conditions (including payment and bonding requirements) for solar and wind energy development rights-of-way issued under the regulations. Finally, the rule makes technical changes, corrections, and clarifications to the existing rights-of-way regulations. Some of these changes affect all rights-of-way, while some provisions affect only specific rights-of-way, such as those for transmission lines with a capacity of 100 kilovolts (kV) or more.

DATES: *Effective Date:* This final rule is effective January 18, 2017.

FOR FURTHER INFORMATION CONTACT: John Kalish, Bureau of Land Management, at 202–912–7312, for information relating to the BLM’s solar and wind renewable energy programs, or the substance of the final rule. For information pertaining to the changes made for any transmission line with a capacity of 100 kV or more you may contact Stephen Fusilier at 202–912–7426. For information on procedural matters or the rulemaking process you may contact Charles Yudson at 202–912–7437. Persons who

use a telecommunications device for the deaf (TDD) may call the Federal Information Relay Service (FIRS) at 1–800–877–8339, to contact the above individuals.

SUPPLEMENTARY INFORMATION:

- I. Executive Summary
- II. Background
- III. Final Rule as Adopted and Responses to Comments
- IV. Section-by-Section Analysis for Part 2800
- V. Section-by-Section Analysis for Part 2880
- VI. Procedural Matters

I. Executive Summary

The BLM initiated this rulemaking in 2011 through publication of an Advance Notice of Proposed Rulemaking (ANPR) seeking public comment on a potential regulatory framework for competitive solar and wind energy rights-of-way. A proposed rule was published in the **Federal Register** on September 30, 2014, summarizing and discussing the comments that the BLM received on the ANPR. The proposed rule set forth a framework for the competitive leasing of solar and wind energy rights-of-way both inside and outside of designated leasing areas. It also proposed codifying existing solar and wind energy policies in 43 CFR part 2800, establishing a new acreage rent for wind energy projects, and updating the methods used to set acreage rents and megawatt (MW) capacity fees for existing and future solar and wind energy projects. In addition to the changes related to solar and wind energy development, the rule also proposed related updates to other provisions of the rights-of-way regulations, including those applicable to transmission lines with a capacity of 100 kV or more and pipelines 10 inches or more in diameter. Based on comments on the proposed rule and consideration of other factors, the BLM prepared this final rule.

Statutory and Regulatory Authority

Facilities for the generation, transmission, and distribution of electric energy are authorized under Title V of the FLPMA (43 U.S.C. 1761–1771) and its implementing regulations at 43 CFR part 2800. Section 504(g) requires that the BLM generally receive fair market value for a right-of-way. Under Title V, the BLM can issue easements, leases, licenses, and permits to occupy, use or traverse public lands for particular purposes. The BLM generally refers to all such rights-of-way as “grants.” The final rule continues to refer to solar and wind energy development rights-of-way issued noncompetitively or outside a DLA as “grants,” but designates solar and wind energy development rights-of-way

issued competitively and within a DLA under revised subpart 2809 as “leases,” to which specific requirements and benefits are attached, as explained below.

Rights-of-way for oil and gas pipelines are authorized under Section 28 of the MLA (30 U.S.C. 185), Sections 302, 303, and 310 of FLPMA (43 U.S.C. 1732, 1733, and 1740), and the applicable implementing regulations at 43 CFR part 2880. The BLM processes applications for these categories of rights-of-way in accordance with section 2884.11.

Policies

The BLM released a Draft Solar Energy Programmatic Environmental Impact Statement (EIS) on December 17, 2010 and released a Supplement to the Draft EIS on October 28, 2011. The Supplement to the Draft EIS contemplated a process to identify and offer public lands in solar energy zones (SEZs) through a competitive leasing process. The Supplement to the Draft EIS described how the BLM intended to pursue a rulemaking process to implement a competitive leasing program within SEZs. The BLM released the Final Solar EIS on July 27, 2012, and the Secretary of the Interior (Secretary) signed the Record of Decision (ROD) on October 12, 2012. The Solar Programmatic EIS ROD, or Western Solar Plan, likewise described the BLM’s intent to establish a competitive leasing program within the SEZs.

The Western Solar Plan provides the foundation for a Bureau-initiated competitive process for offering lands for solar energy development within the SEZs. Similar comprehensive or regional land use planning efforts could be initiated by the BLM in the future to designate additional renewable energy development areas, such as for wind development. For example, the recently completed Desert Renewable Energy Conservation Plan (DRECP) identified Development Focus Areas (DFAs) in Southern California that were designed to support wind, solar, and geothermal development. As explained elsewhere in this preamble, in the Western Solar Plan and in the DRECP Record of Decision (ROD), SEZs and DFAs, like all DLAs, represent areas that have been prescreened by the BLM and identified as having high energy generation potential, access to transmission (either existing or proposed), and low potential for conflicts with other resources. The rule supports the establishment of these areas through procedures to inform their identification and establishment.

Competitive Leasing Process

Existing regulations authorize the BLM to determine whether competition exists among right-of-way applications filed for the same facility or system; however, they do not allow the BLM to offer such lands competitively absent such a finding. The existing regulations allow the BLM to resolve any such competition using competitive bidding procedures. All such grants are issued subject to valid existing rights in accordance with 43 CFR 2805.14.

Building on recommendations and analysis in the Western Solar Plan, this final rule expands the existing regulations to allow the BLM to offer lands competitively on its own initiative, both inside and outside DLAs, even in the absence of identified competition. Within DLAs, the rule will require competitive leasing procedures except in certain circumstances, when applications could be considered outside the competitive process. Outside DLAs, the BLM will have discretion whether to utilize competitive leasing procedures. This rule identifies what constitutes a DLA, and outlines the competitive process for solar and wind energy leasing inside DLAs, including the nomination process for areas inside DLAs, the process for reviewing nominations, the competitive bidding procedures to be deployed, and the rules governing administration of solar or wind energy leases issued through the competitive process.

Incentives

This rule includes various provisions to incentivize development inside rather than outside of DLAs. For example, the rule establishes a new \$15 per acre application filing fee for right-of-way applications outside of DLAs to discourage speculative applications and encourage development in DLAs. In addition, a winning bidder outside a DLA will be deemed the “preferred applicant” and eligible to apply for a grant, while a winning bidder within a DLA will be offered a lease. A primary reason for this distinction is that the prescreening done by the BLM as part of the identification of DLAs enables it to issue a lease prior to the conclusion of the project-specific reviews (such project-specific reviews would, however, have to be completed prior to the commencement of construction).

Further, this final rule establishes a mechanism whereby bidders inside DLAs may qualify for variable offsets (a form of bidding credit) that will give them a financial advantage in the competitive bidding process. Specifically, a bidder that meets the

qualifications set forth in the Notice of Competitive Offer for a particular offset will have an opportunity to pre-qualify for a reduction to their bid amount, up to 20 percent of the bid. Suppose, for example, a bidder pre-qualified for a 20 percent offset and then won the auction with a high bid of \$100. The bidder would only be obligated to pay the BLM \$80 for the lease. These reductions would be sale-specific and would be based on factors identified in the initial sale notice. The final rule gives the BLM the flexibility to vary the factors that could enable a bidder to obtain a variable offset from one competitive offer to another, but possible factors include having an approved Power Purchase Agreement (PPA) or Interconnect Agreement, or employing a less water-intensive technology. Each of the factors will be identified in the Notice of Competitive Offer, which will also specify the pre-determined reduction (*e.g.*, 5 percent) associated with any individual factor. The total aggregate reduction across all factors cannot exceed 20 percent.

Additional provisions that incentivize development within DLAs include a reduced nomination fee of \$5 per acre, which is electively paid by a potential bidder, compared to \$15 per acre non-elective application filing fee for competitive parcels outside of DLAs; a 10-year phase-in of the MW capacity fee inside a DLA as opposed to a 3-year phase-in of the fee outside of a DLA; and more favorable bonding requirements inside DLAs. Specifically, outside DLAs, bonding must be determined based on reclamation cost estimates, whereas inside DLAs, the final rule requires a standard bond in the amount of \$10,000 per acre for solar energy development and either \$10,000 or \$20,000 per wind energy turbine for wind energy development, depending on the nameplate capacity of the turbine.

Finally, successful competitive processes within DLAs will result in the issuance of a 30-year fixed-term lease, whereas a successful competitive process outside of a DLA will result in a preferred applicant status for the winner. The 30-year fixed term lease issued to the high bidder for a parcel offered competitively within a DLA will increase the certainty for developers and, in turn, make it easier to secure financing or reach terms on other agreements. Specifically, the lease will provide developers with evidence of site control, and they will obtain it much earlier in the review process than they would under existing regulations (notably, before project-specific NEPA reviews have been concluded).

Rents and Fees

The rule updates the payments currently established by BLM policies to ensure that the BLM obtains fair market value for the use of the public lands. Specifically, it updates and codifies the acreage rent for both solar and wind energy authorizations. The acreage rent will be based on the acreage of the authorization, using a 10 percent encumbrance value for wind energy authorizations and a 100 percent encumbrance value for solar energy authorizations. This compares to the 50 percent encumbrance value that is used for determining rent for linear rights-of-way on the public lands.

The acreage rent for linear rights-of-way and solar and wind energy rights-of-way will vary by individual counties and is based on agricultural land values determined from data published by the National Agricultural Statistics Service (NASS). The BLM may also determine on a project-specific or regional basis that a different rate should be utilized. The “acreage rent” component captures the value of unimproved rural land encumbered by a project.

In addition to acreage rent, the rule also updates and codifies the MW capacity fee that the BLM already charges under existing policies. As under existing policy, that fee is designed to capture the difference between a particular project area's unimproved land value and the higher value associated with the area's solar or wind energy development potential. The BLM uses a MW capacity fee as a proxy for the area's electrical generation development potential. That fee is calculated using a formula that includes the nameplate capacity of the approved project, a capacity factor or efficiency factor that varies based on the average potential electric generation of different solar and wind technologies, the average wholesale prices of electricity, and a Federal rate of return based on a 20-year Treasury bond. In this final rule, the capacity factors used for calculating the MW capacity fee are 20 percent for solar photovoltaic (PV), 25 percent for concentrated solar power (CSP), 30 percent for CSP with storage capacity of 3 hours or more, and 35 percent for wind. Additionally, the final rule allows the BLM to determine, on a project-specific or regional basis, that a different net capacity factor is more appropriate, such as if a project takes advantage of a new technology (*e.g.*, energy storage) or project design considerations (*e.g.*, solar array layout).

The final rule increases the MW capacity fee currently established by BLM policy from \$4,155 per MW to

\$5,010 per MW for wind energy authorizations, and reduces the MW capacity fee from \$5,256 to \$2,863 per MW for PV solar, from \$6,570 to \$3,578 per MW for concentrated photovoltaic (CPV) or CSP solar, and from \$7,884 to \$4,294 per MW for CSP with storage capacity of 3 hours or more. The rule provides for a three-year phase-in of the MW capacity fee for right-of-way grants outside DLAs (25 percent in year one, 50 percent in year two, and 100 percent for subsequent years) and for a longer, ten-year phase-in for right-of-way leases inside DLAs (50 percent for the first 10 years and 100 percent for subsequent years).

As explained elsewhere in this preamble, both the acreage rent and MW capacity fees adjust periodically based on identified factors, including changes in NASS survey values and wholesale power prices. In addition, based on comments received on the proposed rule, this final rule includes provisions that allow grant or lease holders the option to select fixed, scheduled rate adjustments to the applicable per acre zone rate (or rent) and MW rate over the term of the right-of-way grant or lease. This scheduled rate adjustment method would be used in lieu of the rule's standard rate adjustment method, under which those rates could increase or decrease by irregular amounts depending on changes to NASS survey values or wholesale power prices.

The rule includes requirements to hold preliminary application review meetings after the submission of an application for a solar or wind energy project, including authorizing the BLM to collect cost recovery fees for those meetings. Through this final rule the BLM is also extending the preliminary application review meeting requirement to any transmission line having a capacity of 100 kV or more. This change is appropriate because both solar or wind energy projects and transmission lines with a capacity greater than 100 kV are generally large-scale facilities with greater potential for impacts and resource conflicts. Based on experience with existing solar and wind energy projects, the BLM has found that those preliminary application meetings provide both the applicant and the BLM with an opportunity to identify and discuss resource conflicts early on in the process. In addition, the rule provides for additional cost reimbursement measures, consistent with Sections 304(b) and 504(g) of FLPMA.

Changes to 43 CFR Part 2880

In addition to the changes to 43 CFR part 2800, this final rule also revises

several subparts of part 2880. These revisions are necessary to ensure consistency of policies, processes, and procedures, where possible, between rights-of-way applied for and administered under part 2800 and rights-of-way applied for and administered under part 2880. These changes are discussed in more detail in Section II of this preamble. However, a proposal to require preliminary application review meetings for right-of-way applications for pipelines exceeding 10 inches in diameter was dropped from this final rule in response to comments.

II. Background

A. Rule Overview

The BLM published the proposed rule in the **Federal Register** on September 30, 2014 (79 FR 59022) for a 60-day comment period ending on December 1, 2014. In response to public requests for extensions of the public comment period the BLM extended the period for an additional 15 days on November 29, 2014, through December 16, 2014. We received 36 comment letters on the proposed rule. We also received similar feedback through stakeholder engagement meetings held as part of BLM's regular course of business. This final rule addresses the comments received during the comment period and during stakeholder engagement meetings in the section-by-section discussion in section III. of this preamble.

As explained above, the primary purpose of this rule is to facilitate the responsible development of solar and wind energy development on the public lands, with a specific focus on incentivizing development on lands identified as DLAs. To that end, this rule, in an amendment of section 2801.5, defines the term "designated leasing area" as a parcel of land with specific boundaries identified by the BLM land use planning process as being a preferred location for solar or wind energy that can be leased competitively for energy development. In this rule, the BLM amends its regulations implementing FLPMA to provide for two competitive processes for solar and wind energy rights-of-way on public lands. One of the processes is for lands inside DLAs. The other process is for lands outside of DLAs.

For lands outside DLAs, the BLM amends section 2804.23 to provide for a competitive bidding process designed specifically for solar or wind energy development. Prior to this final rule, section 2804.23 authorized a competitive process to resolve

competing right-of-way applications for the same facility or system. Under amended section 2804.23, the BLM can now competitively offer lands on its own initiative. The competitive process for solar and wind energy development on lands outside of DLAs is outlined in new section 2804.30.

The competitive process for lands inside DLAs is outlined in revised 43 CFR subpart 2809, which provides for a parcel nomination and competitive offer, instead of an application process.

This rule includes not only these competitive processes, but also a number of amendments to other provisions of the right-of-way regulations found at 43 CFR parts 2800 and 2880. The BLM determined that it is necessary to first articulate the general requirements for rights-of-way in order to set the solar and wind requirements apart.

For example, the final rule has mandatory bonding requirements for solar and wind energy, including a minimum bond amount. The BLM determined that bonding is necessary for all solar and wind energy rights-of-way because of the intensity and duration of the impacts of such authorizations. For other right-of-way authorizations, the BLM will continue to require bonding at its discretion under this final rule.

Other amendments to the regulations include changes in right-of-way application submission and processing requirements, rents and fees, and alternative requirement requests. In addition, this final rule makes several technical corrections as explained in the section-by-section analysis below.

B. Statutory and Regulatory Background

FLPMA provides comprehensive authority for the administration and protection of the public lands and their resources and directs that the public lands be managed "on the basis of multiple use and sustained yield" (43 U.S.C. 1701(a)(7) and 1732(a)). As defined by FLPMA, the term "right-of-way" includes an easement, lease, permit, or license to occupy, use, or traverse public lands (43 U.S.C. 1702(f)). Title V of FLPMA (43 U.S.C. 1761–1771) authorizes the BLM to issue rights-of-way on the public lands for electric generation systems, including solar and wind energy generation systems. FLPMA also mandates that "the United States receive fair market value for the use of the public lands and their resources unless otherwise provided for by statute" (43 U.S.C. 1701(a)(9) and 1764(g)). Section 28 of the MLA (30 U.S.C. 185) and FLPMA provide similar authority for authorizing rights-of-way

for oil and gas pipelines. The BLM has authority to issue regulations under both FLPMA (43 U.S.C. 1732, 1733, and 1740) and the MLA (30 U.S.C. 185 and 189).

The Energy Policy Act of 2005 (codified at 42 U.S.C. 15801 *et seq.*) (EPAAct) includes provisions authorizing and encouraging the Federal Government to develop energy producing facilities. Title II of the EPAAct includes a provision encouraging the Secretary to approve non-hydropower renewable energy projects (solar, wind, and geothermal) on public lands with a total combined generation capacity of at least 10,000 MWs of electricity by 2015. See Section 211, Public Law 109–58, 119 Stat. 660 (2005).

Since passage of the EPAAct, the Secretary has issued several orders that emphasize the importance of renewable energy development on public lands and the Department of the Interior's (Department's) efforts to achieve the goal that Congress established in Section 211 of the EPAAct. Secretarial Order No. 3283, "Enhancing Renewable Energy Development on the Public Lands," signed by Secretary Kempthorne on January 16, 2009, facilitates the Department's efforts to achieve the goal established by Congress in Section 211 of the EPAAct. On March 11, 2009, Secretary Salazar signed Secretarial Order No. 3285, "Renewable Energy Development by the Department of the Interior," which describes the need for strategic planning and a balanced approach to domestic resource development. This order was amended by Secretarial Order 3285A1 in February 2010. Amended Order 3285A1 establishes the development of renewable energy on public lands as one of the Department's highest priorities.

While the BLM has already met the goal established by Congress by approving over 12,000 MWs of renewable energy by the end of 2012, the development of renewable energy resources on the public lands remains a national priority. To advance that goal, President Obama included in the administration's Climate Action Plan to reduce carbon pollution, released on June 25, 2013, a new goal for the Department to approve at least 20,000 MWs of new renewable energy capacity on federal lands by 2020. As of the end of fiscal year 2015, the BLM has reviewed and approved 60 projects capable of generating over 15,000 MWs of power.

The BLM has issued several instruction memoranda (IMs) that identify policies and procedures related to processing solar and wind energy right-of-way applications. The BLM is

incorporating some of these existing policies and procedures into its right-of-way regulations. The IMs can be found at: http://www.blm.gov/wo/st/en/prog/energy/renewable_energy.html.

Briefly, the IMs are as follows:

1. IM 2009–043, Wind Energy Development Policy. This IM provides guidance on processing right-of-way applications for wind energy projects on public lands;

2. IM 2011–003, Solar Energy Development Policy. This IM provides guidance on the processing of right-of-way applications and the administration of authorized solar energy projects on public lands;

3. IM 2011–059, National Environmental Policy Act (NEPA) Compliance for Utility-Scale Renewable Energy Right-of-Way Authorizations. This IM clarifies NEPA policy for evaluating solar and wind energy project right-of-way applications;

4. IM 2011–060, Solar and Wind Energy Applications—Due Diligence. This IM provides guidance on the due diligence requirements for solar and wind energy development right-of-way applications; and

5. IM 2011–061, Solar and Wind Energy Applications—Pre-Application and Screening. This IM provides guidance on the review of right-of-way applications for solar and wind energy development projects on public lands; and

6. IM 2016–122, *Policy Guidance for Federal Land Policy and Management Act Right-of-Way Rent Exemptions for Electric or Telephone Facilities Financed or Eligible for Financing under the Rural Electrification Act of 1936, as amended (IM 2016–122)*. This IM provides guidance for processing requests for FLPMA right-of-way rent exemptions for electric and telephone facilities financed or eligible for financing by the United States Department of Agriculture, Rural Utilities Service (RUS) under the Rural Electrification Act of 1936, as amended (Rural Electrification Act), 7 U.S.C. 901 *et seq.* In particular, this IM makes clear that wind and solar entities that qualify under the Rural Electrification Act pay the MW capacity fees but not acreage rent.

In addition, in 2005 and 2012 the BLM issued landscape-level land use plan amendment decisions supported by programmatic EISs to facilitate wind and solar energy development. These land use plan amendments guide future BLM management actions by identifying desired outcomes and allowable uses on public lands.

On June 24, 2005, the BLM published the Final Programmatic Environmental

Impact Statement on Wind Energy Development on BLM-Administered Lands in the Western United States (Wind Programmatic EIS) (70 FR 36651), which analyzed the environmental impact of the development of wind energy projects on public lands in the West and identified approximately 20.6 million acres of public lands with wind energy development potential (<http://windeis.anl.gov>). Following the publication of the Wind Programmatic EIS, the BLM issued the ROD for Implementation of a Wind Energy Development Program and Associated Land Use Plan Amendments (Wind Programmatic EIS ROD) (71 FR 1768), which amended 48 BLM land use plans. The Wind Programmatic EIS ROD did not identify specific wind energy development leasing areas, but rather identified areas that have potential for the development of wind energy production facilities, along with areas excluded from consideration for wind energy facility development because of other resource values that are incompatible with that use.

On July 27, 2012, the BLM and the Department of Energy published the Notice of Availability of the Final Programmatic Environmental Impact Statement for Solar Energy Development in Six Southwestern States (Solar Programmatic EIS) (77 FR 44267). The Solar Programmatic EIS assessed the environmental, social, and economic impacts associated with utility-scale solar energy development on public lands in Arizona, California, Colorado, Nevada, New Mexico, and Utah (<http://solareis.anl.gov>). On October 12, 2012, the Department and the BLM issued the Western Solar Plan, which amended 89 BLM land use plans to identify 17 solar energy zones (SEZs) and identify mandatory design features applicable to utility-scale solar development on BLM managed lands. The Western Solar Plan also described the BLM's intent to use a competitive offer process to facilitate solar energy development projects in SEZs. SEZs, including those identified in the Western Solar plan, will be considered DLAs under this final rule.

This final rule is one of the steps being taken by the Department and the BLM to promote renewable energy development on the public lands. It implements one of the Western Solar Plan's key recommendations, namely that the BLM institute a process whereby it can competitively offer lands within DLAs. In addition to addressing recommendations in the Western Solar Plan, the final rule also implements suggestions for improving the renewable energy program made by the Department of the Interior's Office of

Inspector General for the Department, initially in a draft report and carried over to the final report (Report No. CR–EV–BLM–0004–2010), and by the Government Accountability Office (GAO) (Audit No. 361373), both of which address the use of competitive leasing for solar and wind development authorizations. The Inspector General (OIG) reviewed the BLM's renewable energy activities to assess the effectiveness of the BLM's development and management of its renewable energy program. The IG also made recommendations on other aspects of the BLM's right-of-way program.

The OIG report discusses only wind energy projects, as the solar energy program was not at a stage where it had been fully implemented. However, based on experience gained from its authorization of solar projects, the BLM believes that recommendations made for the wind energy program would also benefit the solar energy program. Other OIG recommendations pertained to the amounts and collection procedures for bonds for wind energy projects. These recommendations included:

1. Requiring a bond for all wind energy projects and reassessing the minimum bond requirements;
2. Tracking and managing bond information;
3. Developing and implementing procedures to ensure that when a project is transferred from one entity to another, the BLM would return the first bond to the company that obtained it and request a new bond from the newly assigned company; and

4. Developing and implementing Bureau-wide guidance for using competitive bidding on wind and solar energy rights-of-way.

The BLM concurred with all of the OIG's recommendations. The last recommendation is one of the principal reasons for developing this rule. The other recommendations form the basis for other changes being made as part of the BLM's operating procedures that are also addressed through this rulemaking.

Through this rulemaking, the BLM amends regulations in 43 CFR parts 2800 and 2880, and in particular:

1. Section 2804.12, to establish preliminary application review requirements for solar and wind energy development, and for development of any transmission line with a capacity of 100 kV or more;
2. Section 2804.25, to establish application processing and evaluation requirements for solar and wind energy development;
3. Section 2804.30, to establish a competitive process for public lands outside of DLAs for solar and wind energy development;
4. Section 2804.31, to establish a two-step process for solar or wind energy testing and conversion of testing areas to DLAs;
5. Section 2804.35, to establish screening criteria to prioritize applications for solar or wind energy development;
6. Section 2804.40, to establish a requirement to propose alternative requirements with a showing of good cause;

7. Section 2805.11(b), to establish a term for granting rights-of-way for solar or wind energy development;

8. Section 2805.12(c), to establish terms and conditions for a solar or wind energy development grant or lease;

9. Section 2805.20, to provide more detail on bonding requirements;

10. Sections 2806.50, 2806.52, 2806.54, 2806.56, and 2806.58, to provide information on rents for solar energy development rights-of-way;

11. Sections 2806.60, 2806.62, 2806.64, 2806.66, and 2806.68, to provide information on rents for wind energy development rights-of-way;

12. Subpart 2809, to establish a competitive process for leasing public lands inside DLAs for solar and wind energy development; and

13. Provisions in 43 CFR part 2800 pertaining to transmission lines with a capacity of 100 kV or more.

In addition to these amendments, this rule also makes several technical changes, corrections, and clarifications to the regulations at 43 CFR parts 2800 and 2880. The following table provides a summary of the principal changes made in this final rulemaking. The table shows: A description and CFR reference to the existing rule, a description of the changes in the proposed rule, and a description of the changes made in this final rule. The BLM made minor revisions throughout the final rule to improve its readability, which are not noted in this table but are discussed in the section- by- section analysis of this preamble.

TABLE 1—ABBREVIATED DESCRIPTIONS OF THE MAJOR CHANGES MADE TO 43 CFR PARTS 2800 AND 2880 BY THIS RULE

43 CFR reference and description	Changes between proposed rule and existing regulations	Changes between final rule and proposed rule	Additional comments
2801.5(b)—Acronyms and terms.	Adds definitions for 10 items and revises definitions for 3 items, mostly pertaining to solar and wind energy development.	This final rule adopts the definitions in the proposed rule, except that under the final rule the definitions allow the BLM to determine a more appropriate Net Capacity Factor for rights-of-way with storage on a case-by-case basis. No other substantive changes were made from the proposed to the final rule.	Changes made in this section were based on comments received from the public to account for the application filing fee, energy storage, and MW rate.
2801.6—Scope	Clarifies that the regulations in this part apply to all systems and facilities identified under section 2801.9(a).	No changes were made from the proposed to the final rule for this section.	
2801.9—When do I need a grant?.	Revises language in paragraph (a)(7) to include solar and wind development facilities. Adds paragraph (d) that references solar and wind energy projects.	The testing provisions at new paragraphs (d)(1) and (2) are revised to include both solar and wind facilities, as opposed to just wind.	Changes made in this section were based on comments received from the public requesting that the testing provisions account for solar facilities as well as wind facilities.
2802.11—Designation of right-of-way corridors and leasing areas.	Adds a process for designating leasing areas for solar and wind energy projects.	No changes were made from the proposed to the final rule.	

TABLE 1—ABBREVIATED DESCRIPTIONS OF THE MAJOR CHANGES MADE TO 43 CFR PARTS 2800 AND 2880 BY THIS RULE—Continued

43 CFR reference and description	Changes between proposed rule and existing regulations	Changes between final rule and proposed rule	Additional comments
2804.10—Actions to be taken before filing a right-of-way application.	Discusses pre-application requirements and specifically addresses solar and wind filing requirements.	Removes all discussion or requirements for pre-application meetings. Now the only change from the existing regulation is to include designated leasing areas in paragraph (a)(2).	Requirements of this section are also applicable to transmission lines with a capacity of 100 kV or more. Based on comments received, the final rule removes the provision in the proposed rule that would have applied certain application requirements to pipelines greater than 10 inches in diameter.
2804.12—Right-of-way application requirements.	Discusses additional filing fees required for solar and wind energy applications.	This section has been retitled to improve clarity. This section also removes requirements for pre-application meetings and substitutes preliminary application review meetings that will occur after rather than before an application is filed. This section is also revised to clarify how the BLM will use the IPD–GDP to update fees.	Changes made in this section were based on comments received from the public. The paragraphs formerly located in section 2804.10(b) and (c) are now found in section 2804.12(b) and (c).
2804.14—Processing fees for grant applications.	Gives the BLM discretion to collect the estimated reasonable costs incurred by other Federal agencies.	No changes were made from the proposed to the final rule for this section.	
2804.18 and 2804.19—Master agreements and major projects.	Adds information on cost reimbursement requirements for work performed by other Federal agencies.	No changes were made from the proposed to the final rule.	
2804.20—Determining reasonable costs for work on major (Category 6) rights-of-ways.	Section title revised for clarity. Adds discussions on right-of-way work performed by other Federal agencies and pre-application requirements for major rights-of-way.	Any reference to “pre-application” requirements was removed to be consistent with other changes made to this final rule to reference preliminary application meetings.	Changes made in this section were based on comments received from the public in regards to collecting cost recovery with the submission of an application.
2804.23—Competitive process for applications.	Adds provisions for competition for solar and wind energy rights-of-way, both inside and outside of designated leasing areas.	Minor changes were made from the proposed to the final rule. The latter clarifies that the BLM will not competitively offer lands where a plan of development (POD) has been accepted and cost recovery established. The requirement to publish in a newspaper is now optional instead of required.	Changes made in this section were based on comments received from the public requesting that the BLM provide assurance that it will not competitively offer lands if a developer has committed considerable time and resources to a project, as evidenced by the existence of a complete POD and executed cost recovery agreement.
2804.24—Use of Standard Form 299 for submitting a right-of-way application.	Updates the circumstances when an application is not required to account for competitive offers under both section 2804.23(c) and subpart 2809.	No changes were made from the proposed to the final rule for this section.	
2804.25—BLM actions in processing a right-of-way application.	Describes POD requirements and adds additional other requirements for solar and wind energy applications. Covers instances where a right-of-way is authorized to resolve a trespass.	Changes were made from the proposed to the final rule to reflect the shift from “pre-application meetings” to “preliminary application review meetings” as described in section 2804.12. The requirement to publish in a newspaper is now optional instead of required.	Changes were made in the final rule for clarity, especially a description of what constitutes “unpaid debts.” Other changes were made to accommodate new requirements for solar and wind rights-of-way and to clarify when the time clock begins for a due diligence request.
2804.26—Circumstances when the BLM may deny your application.	Adds additional situations where the BLM may deny your application, including specific examples for solar and wind energy applications.	Adds language to correspond to the due diligence requirements found in sections 2804.12 and 2804.25. Additional language added to provide consideration when the BLM may deny an application when circumstances are outside of an applicant's control.	This change was made to be consistent with other changes in this final rule.
2804.27—What fees are owed if an application is not completed?.	Revises this section to include any pre-application costs that must be paid if an application is withdrawn or rejected.	Removes the term pre-application costs and substitutes preliminary application review costs.	This change was made to be consistent with other changes in this final rule with respect to the pre-application meeting identified in the proposed rule.

TABLE 1—ABBREVIATED DESCRIPTIONS OF THE MAJOR CHANGES MADE TO 43 CFR PARTS 2800 AND 2880 BY THIS RULE—Continued

43 CFR reference and description	Changes between proposed rule and existing regulations	Changes between final rule and proposed rule	Additional comments
2804.30—Description of the competitive process for solar or wind energy development.	Adds section 2804.30, which describes the competitive process for solar or wind energy development outside of DLAs.	Several minor changes were made from the proposed to the final rule, including removing a reference to mitigation costs, a statement that filing fees will be refunded to unsuccessful bidders, and that a successful bidder will have site control over applications from other developers (by virtue of being identified as the preferred applicant following completion of the sale process). Additionally, the requirement to publish in a newspaper is now optional instead of required.	The final rule changes were made principally for clarification. The change in notification requirements is consistent with other changes in this final rule.
2804.31—Site testing for solar and wind energy.	No section 2804.31 in proposed rule ...	Adds section 2804.31. This new section describes how the BLM will inform the public that site-testing applications will be accepted for lands within a DLA.	This new section is a result of public comments on the proposed rule requesting clarification on site testing procedures. This new section does not make any changes to existing policies or procedures.
2804.35—Prioritizing solar and wind energy applications.	Adds section 2804.35 which describes a process for prioritizing solar and wind energy applications.	The rule clarifies that the BLM will generally prioritize the processing of solar and wind energy leases issued under subpart 2809 over applications for solar and wind energy grants issued under subpart 2804. Other minor revisions were made in response to comments and discussed further in the section-by-section analysis.	The changes were made to clarify how the BLM will prioritize leases and applications.
2804.40—Alternative requirements.	No section 2804.40 in proposed rule ...	Adds a provision that allows an applicant to submit an alternate requirement if it is believed that the original requirements cannot be met.	This section was added in response to comments about the BLM need for a process for applicants to demonstrate, based on a showing of good cause, the reasons for its failure to meet the rule requirements and demonstrate why alternative requirements should be put in place in their stead.
2805.10—Approving or denying a grant.	Includes right-of-way leases in addition to grants, and adds specific items to be included within a solar or wind energy grant or lease.	No changes were made from the proposed to the final rule.	
2805.11—What does a grant contain?	Adds specific terms for solar and wind energy grants and leases.	Removed specific references to “wind” so that section would apply to project testing for either solar or wind.	This change was made to be consistent with other changes in this final rule.
2805.12—Terms and conditions in a right-of-way authorization.	Revises this section in its entirety and adds specific terms and conditions for solar and wind energy grants and leases.	Adds new section 2805.12(e) stating that good cause must be shown for extension of time requests. This section now includes solar in addition to wind energy development processes. Other revisions in this section are discussed in the section-by-section analysis.	Changes made in this section were based on comments received from the public, concerning a holder’s inability to meet BLM requirements in some circumstances.
2805.14—Rights conveyed by a right-of-way grant.	Adds section 2805.14(g) allowing for renewal applications for wind projects and section 2805.14(h) allowing renewal for site testing grants.	Removed specific references to “wind” so that section would apply to project testing for either solar or wind.	This change was made to be consistent with other changes in this final rule.
2805.15—Rights retained by the United States.	Adds a provision requiring common use of your right-of-way for compatible uses.	No changes were made from the proposed to the final rule.	
2805.16—Payment of monitoring fees.	Adds a provision to allow the BLM to collect monitoring fees for expenses incurred by other Federal agencies.	Adds the word “inspecting” in addition to the existing word “monitoring.”.	This change was made to be consistent with other changes in this final rule.

TABLE 1—ABBREVIATED DESCRIPTIONS OF THE MAJOR CHANGES MADE TO 43 CFR PARTS 2800 AND 2880 BY THIS RULE—Continued

43 CFR reference and description	Changes between proposed rule and existing regulations	Changes between final rule and proposed rule	Additional comments
2805.20—Bonding requirements.	Adds new section 2805.20 describing bonding requirements.	The final rule adds a requirement to have periodic reviews of project bonds for adequacy. Also, the bond amounts for wind turbines are changed to be based on the nameplate capacity. The final rule also explains that the BLM may consider factors in addition to the reclamation cost estimate (RCE), such as the salvage value of project components, when determining bond amounts.	Changes made in this section were based on comments received from the public.
2806.12—Payment of rents.	Adds provisions for the payment of rents for non-linear rights-of-way, including solar and wind grants and leases.	No changes were made from the proposed to the final rule for this section.	
2806.13—Late payment of rents.	Adds penalties for non-payment of rents and removes the \$500 limit for late payment fees.	No changes were made from the proposed to the final rule.	
2806.20—Rents for linear right-of-way grants.	Describes where you may obtain a copy of the current rent schedule.	No changes were made from the proposed to the final rule.	
2806.22—Changes in the Per Acre Rent Schedule.	Corrects a reference to the IPD—GDP	No changes were made from the proposed to the final rule.	
2806.24—Making payment for a linear grant.	Requires making a payment for the initial partial year, along with the first year's rent. Also, provides for multiple year payments.	No changes were made from the proposed to the final rule.	
2806.30—Communication site rents.	The communication site rent schedule is removed. Several other minor changes made for clarification.	No changes were made from the proposed to the final rule.	
2806.34—Calculation of rent for a multiple-use communication facility.	Corrects an existing citation to read section 2806.14(a)(4).	No changes were made from the proposed to the final rule.	
2806.43—Calculation of rents for passive reflectors and local exchange networks.	Changes a former reference to new section 2806.70.	No changes were made from the proposed to the final rule.	
2806.44—Calculation of rents for a facility owners that authorizes communication uses.	Changes a former reference to new section 2806.70.	No changes were made from the proposed to the final rule.	
2806.50—Rents and fees for solar energy rights-of-way.	Existing section 2806.50 (provisions for determining rents where the linear right-of-way schedule or the communication rent schedule do not apply) is redesignated as section 2806.70. New section 2806.50 introduces rents and fees for solar energy rights-of-way.	No substantive changes were made to the final rule.	
2806.51—Scheduled Rate Adjustment.	Not in the proposed rule; added to the final rule in response to comments received.	This section gives solar project proponents the option of selecting scheduled rate adjustments to the per acre zone rate and MW rate for an individual grant or lease, instead of following the process in the rule for periodic adjustments in response to changes in NASS values and wholesale market prices. Parallel revisions were made to section 2806.52 for grants and section 2806.54 for leases.	These changes were made in response to comments received from the public and were designed to provide project proponents with the option to choose greater payment certainty over the life of a right-of-way grant or lease.

TABLE 1—ABBREVIATED DESCRIPTIONS OF THE MAJOR CHANGES MADE TO 43 CFR PARTS 2800 AND 2880 BY THIS RULE—Continued

43 CFR reference and description	Changes between proposed rule and existing regulations	Changes between final rule and proposed rule	Additional comments
2806.52 through 2806.58 Provide data for rents and fees for solar energy projects.	Sections 2806.50, 2806.52, 2806.54, 2806.56, and 2806.58 describe rents and fees for solar energy authorizations.	The rule now allows for solar energy site testing. The calculation of the acreage rent has been expanded to explain the process more thoroughly. Acreage rent reductions are now adjusted to show greater rent reductions in certain States for solar energy rights-of-way.	The methodology of determining rents and fees for wind is the same as solar, except where noted in the preamble. Changes made in this section were based on comments received from the public and to be consistent with other changes in this final rule.
2806.60 through 2806.68 Provide data for rents and fees for wind energy projects.	Sections 2806.60, 2806.62, 2806.64, 2806.66 and 2806.68 describe rents and fees for wind energy authorizations.	The changes to these sections parallel the changes in sections 2806.50 through 2806.58.	Changes made in this section were made to be consistent with other changes in this final rule.
2806.61—Scheduled Rate Adjustment.	Not in the proposed rule; added to the final rule in response to comments received.	Similar to the provisions of section 2806.51. This section gives wind project proponents the option of selecting scheduled rate adjustments to the per acre zone rate and MW rate for an individual grant or lease, instead of following the process in the rule for periodic adjustments in response to changes in NASS values and wholesale market prices. Parallel revisions were made to section 2806.62 for grants and section 2806.64 for leases.	These changes were made in response to comments received from the public and were designed to provide project proponents with an option to choose greater payment certainty over the life of a right-of-way grant or lease.
2806.70—Rent determinations for other rights-of-way.	Adds redesignated section 2806.70, which contains the text formerly found at section 2806.50, with minor modifications.	No changes were made from the proposed to the final rule.	This section is applicable to all rights-of-way that are not subject to rent schedules.
2807.11—Contacting the BLM during operations.	Specifies requirements when a change in a right-of-way grant is warranted.	No changes were made from the proposed to the final rule.	
2807.17—Grant suspensions or terminations.	This provision contains the regulation formerly located at section 2809.10.	No changes were made from the proposed to the final rule.	
2807.21—Assigning a grant or lease.	Revises the title to include leases and clarifies when an assignment is or is not required.	Adds two events that may require an assignment. Clarifies that changing only a holder's name does not constitute an assignment and explains how the BLM will process a change only to a holder's name for a grant or lease. It also clarifies that ownership changes within the same corporate family do not constitute an assignment.	Changes made in this section were based on comments received from the public requesting clarity on assignments and name changes
2807.22—Renewing a grant.	Revises the title to include leases and clarifies that if you apply for a renewal before it expires, your grant will not expire until a decision has been made on your renewal request.	No changes were made from the proposed to the final rule.	
Subpart 2809—Grants for Federal agencies.	Existing language in this subpart redesignated as new paragraph (d) of section 2807.17. The title is changed to reflect that it now pertains to competitive leasing for solar or wind energy rights-of-way. This subpart is divided into several added sections as described below.	No changes were made from the proposed to the final rule.	
2809.10—Competitive process for leasing public lands for solar and wind energy projects.	Section 2809.10 provides for solar and wind energy leasing inside designated leasing areas.	Clarifies that leases under this section generally have processing priority over grant applications to the extent they require the same BLM resources. No other changes were made from the proposed to the final rule.	Changes made in this section were made to be consistent with other changes in this final rule.
2809.11—Solicitation of nominations.	Section 2809.11 describes how the BLM will solicit nominations for solar or wind energy development.	The requirement to publish in a newspaper is now optional instead of required.	This change is consistent with other notification requirements in the final rule.

TABLE 1—ABBREVIATED DESCRIPTIONS OF THE MAJOR CHANGES MADE TO 43 CFR PARTS 2800 AND 2880 BY THIS RULE—Continued

43 CFR reference and description	Changes between proposed rule and existing regulations	Changes between final rule and proposed rule	Additional comments
2809.12—Parcel selection.	Section 2809.12 describes how the BLM will select and prepare parcels.	No changes were made from the proposed to the final rule.	The reference to mitigation was added in response to comments received from the public. The notification change is consistent with other notification requirements in the final rule. Changes made in this section were made to be consistent with other changes in this final rule.
2809.13—Competitive offers for solar and wind energy development.	Section 2809.13 describes how the BLM will conduct a competitive offer for solar or wind energy development.	A reference to lease mitigation requirements is added. The requirement to publish in a newspaper is now optional instead of required.	
2809.14—Acceptable bids.	Section 2809.14 describes the types of bids that the BLM will accept.	The words “and mitigation costs” were removed to be consistent with section 2804.30.	
2809.15—How will BLM select the successful bidder?	Section 2809.15 describes how the BLM will select a successful bidder.	No changes were made from the proposed to the final rule.	Changes made in this section were based on comments received from the public on variable offset factors.
2809.16—Variable offsets.	Section 2809.16 identifies when variable offsets will be applied.	Added a new offset factor for preparing draft biological strategies and plans.	
2809.17—Rejection of bids.	Section 2809.17 describes conditions when the BLM may reject bids or re-conduct a competitive offer.	No changes were made from the proposed to the final rule.	
2809.18—Lease terms and conditions.	Section 2809.18 identifies terms and conditions that will apply to leases.	Paragraph (e)(2) of this section is changed so bond amounts for wind turbines reflect their nameplate capacity. Paragraph (e)(3) is added to this section to account for testing.	These changes are consistent with changes to section 2805.20.
2809.19—Applications made inside designated leasing areas.	Section 2809.19 describes situations when an application may be accepted inside a DLA.	This section is revised to clarify how the BLM will handle applications submitted inside DLAs.	The changes made in the final rule were made in response to comments and are intended to clarify the final rule.
2884.10—What needs to be done before filing an application for an oil or gas pipeline right-of-way?	Adds a provision to this section that describes several additional steps, including pre-application meetings, to be taken if an application is for a pipeline 10 inches or more in diameter.	The reference to pre-application meetings and additional requirements for pipelines greater than 10 inches were removed, resulting in no changes being made from the existing regulation.	See the discussion in section 2804.10 of this preamble for additional information on changes made in response to comment.
2884.11—Information submitted with application.	Adds provision to be consistent with POD template development schedule and other requirements.	No changes were made from the proposed to the final rule.	
2884.12—Processing fees for an application or permit.	Adds information on cost reimbursement requirements for work performed by other Federal agencies.	No changes were made from the proposed to the final rule.	
2884.16—Master Agreements.	Adds information on cost reimbursement requirements for work performed by other Federal agencies.	No changes were made from the proposed to the final rule.	This change is consistent with other notification requirements of this final rule.
2884.17—Processing Category 6 right-of-way applications.	Adds discussions on right-of-way costs for work performed by other Federal agencies to this section.	No changes were made from the proposed to the final rule.	
2884.18—Competing applications for the same pipeline.	Adds discussions on right-of-way costs for work performed by other Federal agencies to this section.	The requirement to publish in a newspaper is now optional instead of required.	
2884.20—Public notification requirements for an application.	Adds a provision to this section that we may put a notice on the Internet or use other forms of notification as deemed appropriate.	The requirements to publish in a newspaper are now optional instead of required.	This change is consistent with other notification requirements of this final rule.
2884.21—Application processing by the BLM.	The BLM will not process your application if you are in trespass. Several other minor changes were made to be consistent with other changes made in these regulations.	Changes are made to section 2884.21 consistent with those made to section 2807.21.	Changes made in this section were made to be consistent with other changes in this final rule.
2884.22—Additional information requirements.	No change was proposed for this section.	This section was revised by changing the reference found in paragraph (a) from section 2804.25(b) to section 2804.25(c).	This change was not proposed, but is made to be consistent with other changes in this final rule. No other changes were made to this section.

TABLE 1—ABBREVIATED DESCRIPTIONS OF THE MAJOR CHANGES MADE TO 43 CFR PARTS 2800 AND 2880 BY THIS RULE—Continued

43 CFR reference and description	Changes between proposed rule and existing regulations	Changes between final rule and proposed rule	Additional comments
2884.23—When can my application be denied?.	To be consistent with section 2804.27, section 2884.23 was changed to state that the BLM may deny an application if the required POD fails to meet the development schedule and other requirements for oil and gas pipelines.	No changes were made from the proposed to the final rule.	
2884.24—Fees owed if application is withdrawn or denied.	Changes made to be consistent with section 2804.27, would require an applicant to pay any pre-application costs submitted under section 2884.10(b)(4).	Since pre-application meetings are no longer required in this final rule and additional requirements for pipelines greater than 10 inches were removed, the final rule does not make any changes to this existing provision.	The revisions to this section suggested by the proposed rule are not included in the final rule based on comments received from the public on BLM's criteria for large-scale pipeline projects.
2884.30—Showing of good cause.	There was no section 2884.30 in proposed rule.	This section was added to be consistent with section 2804.40.	This section was added to be consistent with other changes in this final rule.
2885.11—Terms and conditions.	This section makes reference to section 2805.12(b) (bond requirements for FLPMA authorizations) and makes those bonding requirements applicable to MLA rights-of-way. Also, the regulation will be clarified by providing guidance on terms of MLA grants.	No changes were made from the proposed to the final rule.	
2885.15—Rental charges.	Clarifies that there is no reduction in rents for grants or TUPs, except as provided in section 2885.20(b).	No changes were made from the proposed to the final rule.	
2885.16—When is rent paid?.	Requires making a payment for the initial partial year, along with the first years rent. Also, provides for multiple year payments.	No changes were made from the proposed to the final rule.	
2885.17—Consequences for not paying or paying rent late.	New paragraph (e) explains the circumstances under which the BLM would retroactively collect rents or fees.	No changes were made from the proposed to the final rule.	
2885.19—Rents for linear right-of-way grants.	Provides information about where you may obtain a copy of the current rental schedule.	No changes were made from the proposed to the final rule.	
2885.20—Per Acre Rent Schedule calculations.	Would remove an obsolete provision (existing paragraph (b)(1)) that provided for a 25 percent reduction in rent for calendar year 2009.	No changes were made from the proposed to the final rule.	
2885.24—Monitoring fees.	Provides an updated table describing monitoring categories, but without the cost schedule. Paragraph (b) provides information about where to obtain a copy of the current monitoring cost schedule.	Minor revisions were made consistent with changes to section 2805.16.	Changes made in this section were made to be consistent with other changes in this final rule.
2886.12—When you must contact the BLM during operations.	Adds to this section, contact requirements for when there is a need for changes to a right-of-way grant and to correct discrepancies.	No changes were made from the proposed to the final rule.	
2887.11—Assigning a right-of-way grant or TUP.	Clarifies this section to show when an assignment is or is not required.	Adds two events that may require an assignment. Clarifies that a change in a holder's name only does not constitute an assignment.	These changes are made to be consistent with section 2807.21.
2887.12—Renewing a grant.	Clarifies that if you apply for a renewal before it expires, your grant will not expire until a decision has been made on your renewal request.	No changes were made from the proposed to the final rule.	

III. Final Rule as Adopted and Responses to Comments

General Comments by Topic

Competitive Process Comments

A number of comments agreed with the BLM's proposals to create a competitive process for solar and wind development.

One comment stated that the proposed rule, if made final, would be a positive first step in improving the existing processes for solar and wind energy development by incentivizing development in appropriate areas, helping developers estimate costs, and providing a fair return to the taxpayer for the use of public lands. The BLM did not make any changes in response to this comment.

Another comment, on the other hand, recommended that the BLM maintain its current pre-application and application processes rather than adding untested or unproven administrative processes to promote competition inside and outside of DLAs. The BLM notes that it has already successfully used competitive processes when authorizing renewable energy development and it continues to gain experience with competitive auctions. The BLM also intends to continue improving its solar and wind energy policies, including by building upon the provisions codified in this final rule, to reduce administrative timeframes and costs in order to support reasonable and responsible project development, such as those policies designed to further streamline application review and processing.

Several comments provided statements on the use of a competitive process for issuing grants.

One comment stated that we should clarify that the competitive bid process applies only to renewable energy authorizations. The BLM only agrees with this comment in part. In this final rule, the BLM has codified competitive processes inside of DLAs that relate only to solar and wind energy rights-of-way. However, the final rule modifies existing regulations so that those same competitive processes may also be used outside of DLAs and for other types of rights-of-way in the future, such as when they are necessary to resolve other situations where there are competing right-of-way and other land use authorization requests or when the BLM otherwise determines it is appropriate to initiate a competitive process for a particular use in a given area.

Specifically, the final rule expands the BLM's ability to initiate a competitive process for other rights-of-way relative to existing regulations. Should the BLM

hold a competitive offer for another type of right-of-way, it would be appropriate for the BLM to use processes similar to those developed for this rule because those policies were developed based on sound competitive principles. Therefore, utilizing them as a model in other areas would promote consistency across the agency.

One comment stated that competitive leasing would both lengthen and complicate project siting, using the recent Dry Lake competitive offering in Nevada as an example, noting that the preparations for competition took years. The BLM believes that much of the work required for competitive leasing has already been completed for solar energy in the SEZs identified in the Western Solar Plan and other DLAs established by other planning efforts. The upfront work done when identifying these areas provides a basis for them to be offered under the most favorable competitive process provisions of this rule. That analysis also increases the certainty that the BLM will approve a project in those areas, which ultimately reduces the overall project review timeframes. The work done in establishing a DLA through the land use planning process, including completion of a NEPA analysis, provides a framework from which future project-specific analyses can tier, which should save time and money for both the BLM and project developers. Additionally, by expanding the circumstances under which the BLM can utilize competitive procedures the final rules provides a more direct path than was available to the BLM when setting up the Dry Lake SEZ sale in Nevada.

To further support development in these areas, the BLM is also developing regional mitigation strategies for many of the identified SEZs. While the existence of a regional mitigation strategy is not a prerequisite for holding a competitive sale, the BLM believes that such strategies further clarify development requirements in a given area allowing auction participants to more carefully evaluate potential costs and requirements when formulating a project or a bid in advance of competitive sale.

Collectively, these efforts and the provisions of this rule are consistent with existing policies to encourage the timely and responsible development of renewable energy while protecting the public land and its resources.

One comment suggested that competition should be used only where there are multiple applications for use of the same land. While the BLM intends to use competition in those

circumstances, it does not believe that is the only circumstances where such processes are appropriate. The existence of competition is not only indicated by competing application; in some situations competition would be determined where other evidence of competitive interests becomes known through emails, letters, and other contact with the public. As a result, the BLM does not believe it is appropriate to limit the use of competitive leasing regulations to just instances of competing applications. Instead, the provisions of this rule have been designed to provide more flexibility. The BLM is able to hold competitive offers inside DLAs, outside DLA, in response to competing applications, and on its own initiative, in order to encourage development in areas where it determines those processes to be appropriate, such as when it determines that fewer resource conflicts are present. In total, the BLM believes that the competitive processes established by this final rule will enable the BLM to encourage solar and wind energy development on public lands, while also protecting the sensitive resources found on those lands.

Summary of Key Changes Between the Proposed and Final Rule

One comment suggested that we use a table to identify technical changes, corrections, and clarifications being made to the right-of-way regulations by this rule, similar to the table we included in the preamble of the proposed rule. We agree and have included a similar table in this preamble.

Pipeline and Transmission Line Comments

Some comments questioned the BLM's description of pipelines 10 inches or greater in diameter as a measure for large-scale pipeline projects and recommended the removal of additional processes such as mandatory pre-application meetings to facilitate Federal and State reviews of the project. Alternatives for the description of a large-scale project were suggested, such as using a total acreage of disturbance.

In light of these comments, the BLM has decided to remove the description of large-scale pipelines and additional processes required for such projects from the final rule. While some comments included recommendations for alternative ways of determining a threshold for large-scale pipelines, the BLM decided that it must further analyze how it will identify large-scale pipelines before including requirements for such projects in its regulations. If the

BLM were to take such action in the future it would coordinate with other Federal agencies, as appropriate, to identify an appropriate threshold for large-scale pipeline projects and establish consistent, non-duplicative requirements. The removal of the pipeline threshold from the final rule requires deletion of the requirements in the proposed rule that were specifically applicable to large-scale pipeline projects. A more detailed discussion of these revisions can be found in the relevant portions of the section-by-section analysis in this preamble (see sections 2804.10, 2884.10, and 2885.11 of this preamble).

Some comments also questioned the BLM's description of transmission lines with capacities of 100 kV or more as constituting large-scale transmission projects. Those commenters recommended the removal of that threshold and the associated requirements. Some comments suggested that there are no readily identifiable 100 kV transmission projects by which to determine if the proposed threshold is a fair representation of a large-scale project. The BLM does not agree with these comments and believes that the description is appropriate since there is a clear separation between lower voltage transmission lines, generally 69 kV or less, and high voltage transmission lines, beginning at 115 kV of capacity or more. For example, the North American Electric Reliability Corporation established the 100 kV threshold as a bright line criterion to determine which transmission lines are included in the Bulk Electric System, a system that is used by the Regional Reliability Organization for electric system reliability. The BLM is maintaining the description of transmission lines with capacity of 100 kV or the rule as a suitable description to determine large-scale transmission projects.

Megawatt Capacity Fee Comments

Some comments argued that the BLM lacks authority to collect a MW capacity fee because the Federal Government does not own the sunlight or the wind, which are inexhaustible resources. While the BLM agrees that sunlight and wind are renewable resources present on the public lands, it does not agree that it lacks the authority to collect a fee for the use of such resources.

Under FLPMA, the BLM is generally required to obtain fair market value for the use of the public lands and its resources, including for rights-of-way. In accordance with the BLM's FLPMA authority and existing policies, the BLM has determined that the most

appropriate way to obtain fair market value is through the collection of multi-component fee that comprises an acreage rent, a MW capacity fee, and, where applicable, a minimum and a bonus bid for lands offered competitively. The BLM determined that the collection of this multi-component fee will ensure that the BLM obtains fair market value for the BLM-authorized uses of the public lands, including for solar and wind energy generation.

The BLM notes that the MW capacity payments are best characterized as "fees" rather than "rent" because they reflect the commercial utilization value of the public's resource, above and beyond the rural or agricultural value of the land in its unimproved state. In the BLM's experience, and in accordance with generally accepted appraisal and valuation standards, the value of the public lands for solar or wind energy generation use depends on factors other than the acreage of the occupied land and that land's unimproved value. Other key elements that add value include the solar insolation level, wind speed and density, proximity to demand for electricity, proximity to transmission lines, and the relative degree of resource conflicts that could inhibit solar or wind energy development. To account for these elements of land use value that are not intrinsic to the rural value of the lands in their unimproved state, the solar and wind right-of-way payments in this final rule incorporate "MW capacity fees" in addition to "acreage rent."

The use of a multi-component fee that comprises both an acreage rent and a MW capacity fee, and in some cases also a minimum and a bonus bid, achieves four important BLM objectives. First, the approach allows BLM to ensure that it is capturing the full fair market value of the land being encumbered by these projects. Second, the approach is consistent with the approach employed by the BLM for other uses of the public land (*i.e.*, it ensures that our approach to acreage rent is consistent across various categories of public land uses, while mirroring the multi-component payments received from activities like oil and gas development where both rent and royalties are charged), ensuring consistency across users. Third, the approach encourages the efficient use of the public lands by reducing relative costs for comparable projects that take up less acreage. That is, for a project with a given MW capacity, the overall payments to the BLM will be lower if the project employs a more efficient technology that produces more MW per acre and thus encumbers fewer acres.

Fourth, the approach is consistent with existing policies governing the BLM's renewable energy program, which have been in place since 2008. As explained in the section-by-section analysis in Section IV of this preamble, this final rule refines the calculation of the fee components (*e.g.*, the MW capacity fee for solar is reduced relative to existing policies) but does not alter the basic multi-component fee structure for solar and wind projects on the public lands.

The BLM's multi-component fee structure also bears similarities to one of the more common structures for solar and wind energy development on private lands, where projects pay a rent for the use of an area of land at the outset and, and then a royalty on the power produced once generation commences. (The BLM recognizes that private-land projects use a variety of fee structures. For example, some projects rely solely on an acreage rent—but in those cases, the BLM believes that the increased value of the land due to project development is captured in other ways, such as by charging a higher base rent that reflects more than the land's unimproved value.)

The acreage rent charged by the BLM is analogous to the rent charged in most private land leases. With respect to the MW capacity fee, the BLM uses the approved electrical generation capacity as a component of the value of the use of the public lands for renewable energy development instead of relying on a royalty like private landowners do. On private lands, such royalties are typically assessed after-the-fact, as a percentage of the value of power actually produced, and the rate can range from 2 to 12 percent. The BLM has determined instead to charge a fee based on the installed nameplate MW capacity of an authorized wind or solar project. This approach is consistent with the BLM's legal authority, including the direction in FLPMA that right-of-way holders "pay in advance" the fair market value for the use of the lands. The BLM considered charging a royalty, assessed as a percentage of power generated, but the FLPMA directive that right-of-way holders must "pay in advance" would require the BLM to collect any such royalty payments in advance of the corresponding power generation and then "true up" at the end of each calendar year. The BLM determined that the MW capacity fee approach in the final rule presents fewer administrative burdens and costs for both the BLM and right-of-way holders than an approach based on in-advance royalty payments followed by annual "true-ups." The BLM worked with the Office of

Valuation Services to compare its combined acreage rent and MW capacity fee against the total stream of payments from a similarly situated private land project to ensure the total payments collected by the BLM are comparable to those collected on private land. Finally, the BLM notes that in retaining the multi-component payment structure for solar or wind developments as separate “rent” and “fee” components as established under existing policy, the BLM is retaining its existing interpretation of how that multi-component structure interfaces with the Rural Electrification Act (IM 2016–122). Under the final rule, consistent with existing policy, the acreage payment remains classified as “rent,” as it is directly tied to the area of public lands encumbered by the project and the constraints that the project imposes on other uses of the public lands. As noted, however, the MW capacity fee is more properly characterized as a “fee” because it reflects the commercial utilization value of the public’s resource, independent of the acreage encumbered. As specified under FLPMA, facilities that qualify for financing under the Rural Electrification Act may be exempt from paying “rental fees.” As explained in IM 2016–122, however, the BLM has determined that such facilities are *not* exempt from paying other components of the fair market value of the land, such as the MW capacity fee, minimum bid, bonus bid, or other administrative costs, as none of those costs are related to the rental value of the unimproved land.

Designated Leasing Areas Comments

Several comments requested clarification about the differences between the competitive processes for lands inside and outside of a DLA. Other comments expressed confusion over whether certain requirements of the proposed rule would apply to both “grants” (authorizations issued under subpart 2804 for solar and wind energy development) and “leases” (authorizations issued under subpart 2809). The BLM has expanded multiple provisions in the final rule to clarify the requirements for solar and wind energy development grants and leases, including those relating to competitive processes, rents and fees, bonding, and due diligence.

Comments Beyond the Scope of the Proposed Rule

In addition to the general comments discussed above and the more specific ones discussed in the section-by-section portion of this preamble below, the BLM received many other comments that

suggested revisions to the BLMs right-of-way regulations that were beyond the scope of the proposed rule and/or that are better suited for supplemental policy guidance of the type found in BLM manuals, handbooks, or IMs. The BLM did not make any changes to the proposed rule in light of these comments. However, they are discussed in the relevant portions of the section-by-section analysis of this preamble.

Additional Comments on the Rule

During the preparation of this final rule, the BLM received additional comments from various stakeholders and other interested parties following the close of the comment period and participated in additional stakeholder engagement meetings as part of the BLM’s regular course of business. During those meetings and in those comments, stakeholders provided additional information clarifying the concerns, comments, and questions they had previously raised through written comments on the proposed rule. The BLM considered this additional information during the drafting of this final rule. This additional information is addressed in the relevant section-by-section discussion of this preamble.

For example, industry stakeholders provided additional information that was previously unavailable regarding their uncertainty, under the proposed rule, about how both acreage rent and MW capacity fee payments would increase over the life of a lease or grant, and particularly their concern that such rents and fees could increase in an unpredictable manner. These comments and the BLM’s responses are discussed further in sections 2806.51 and 2806.61 of this preamble.

Industry stakeholders also raised concern over the factors that the BLM considers when determining a bond amount. This comment and the BLM’s response are discussed further under sections 2805.12(e)(1) and 2805.20(a)(3).

Environmental stakeholders also provided additional substantive discussion of their comments. Specifically, they requested additional detail in the final rule explaining the evaluation criteria that the BLM uses when establishing DLAs going forward. The environmental stakeholders’ comment and the BLM’s response are discussed further in section 2802.11 of this preamble.

IV. Section-by-Section Analysis for Part 2800

This rule makes the following changes in part 2800. The language found at section 2809.10 of the existing regulations is revised and redesignated

as section 2807.17(d), while revised subpart 2809 is now devoted to solar and wind energy development in DLAs. This rule also amends parts 2800 and 2880 to clarify the BLM’s administrative procedures used to process right-of-way grants and leases. These clarifications ensure uniform application of the BLM’s procedures and requirements. A more in-depth discussion of the comments and changes made is provided below.

Subpart 2801—General Information

Section 2801.5 What acronyms and terms are used in these regulations?

This section contains the acronyms and defines the terms that are used in these regulations. Several comments suggested changes to the proposed rule. These suggestions and comments are analyzed under the applicable definition contained in the final rule.

The following terms are added to the definitions in section 2801.5:

“Acreage rent” is a new term that means rent assessed for solar and wind energy development grants and leases that is determined by the number of acres authorized by the grant or lease. The acreage rent is calculated by multiplying the number of acres (rounded up to the nearest tenth of an acre) within the authorized area times the per acre zone rate in effect at the time the authorization is issued. Provisions addressing adjustments in the acreage rent are found in sections 2806.52, 2806.54, 2806.62, and 2806.64. An example of how to calculate acreage rent is discussed in this preamble in the section-by-section analysis of section 2806.52(a). No comments pertaining to this definition were received and no changes are made from the proposed to the final rule.

“Application filing fee” is a new term that means a filing fee specific to solar and wind energy right-of-way applications for the initial reasonable costs for processing, inspecting, and monitoring a right-of-way. The fee is \$15 per acre for solar and wind energy development applications and \$2 per acre for energy project-area testing applications. The BLM will adjust the application filing fee once every 10 years to account for inflation. Further discussion of application filing fees can be found in section 2804.12. This definition is revised for consistency with comments received on sections 2804.12 and 2804.30 on application filing fees. See those respective sections of this preamble for further discussion. No other comments were received and no other change is made from the proposed rule to the final rule concerning this definition.

“Assignment” means the transfer, in whole or in part, of any right or interest in a right-of-way grant or lease from the holder (assignor) to a subsequent party (assignee) with the BLM’s written approval. The rule adds this definition to section 2801.5 to help clarify regulations. A more detailed explanation of assignments and the changes made is found under section 2807.21. Although some comments were received pertaining to assignments, as discussed later in this preamble, none of them pertain to the definition. No change is made from the proposed to the final rule concerning this definition.

“Designated leasing area” (DLA) is a new term that means a parcel of land with specific boundaries identified by the BLM’s land use planning process as being a preferred location for the leasing of public lands for solar or wind energy development via a competitive offer. Examples of DLAs for solar energy include SEZs designated through the Western Solar Plan; Renewable Energy Development Areas (REDAs) designated through the BLM Arizona Restoration Design Energy Project (REDP) planning process; and Development Focus Areas (DFAs) designated through BLM’s California’s Desert Renewable Energy Conservation Plan (DRECP) planning process. The competitive offer process is discussed in subpart 2809 of this preamble. Further discussion of DLAs can be found under section 2802.11 of this preamble.

Comments: Some comments recommended that the definition of DLA should indicate criteria that must be met to designate a DLA, in particular, wind energy-specific DLAs. The comment also suggested the final rule include criteria to identify right-of-way exclusion and avoidance areas. Other comments stated a similar concern, and indicated that land use planning varies by BLM State or field office, so DLA standards should be developed.

Response: The BLM considered establishing standard criteria for DLAs as well as for exclusion and avoidance areas, but this approach is not carried forward in the final rule. Doing so could unintentionally limit the BLM’s management of such lands when considering the varied landscapes and resources that the BLM manages. However, the BLM intends to establish guidance, as part of the implementation of this rule, to assist the BLM in establishing DLAs, such as wind energy sites, through its land use planning processes. Further discussion on this issue is found under section 2804.31 of this preamble.

Comments: Some comments stated that identifying new DLAs through land

use planning was too time consuming, and therefore DLA designation should be a separate process.

Response: Many land use planning efforts take several years to complete and consider many resources and uses in addition to solar or wind energy development. These types of land use planning efforts would not consider a specific project, but instead the effect of such developments in the planning area, and inform the BLM if the lands should be an exclusion or avoidance area, or identified as a DLA for solar or wind energy development. Although the BLM’s land use planning process may be time consuming, it is necessary for the BLM in its orderly administration of the public lands to use this process to properly protect and manage the public lands. When amending a resource management plan, the BLM must be consistent with its planning regulations (see 43 CFR part 1600). Absent a larger planning effort underway for the same planning area, the BLM could use a targeted land use plan amendment to identify a designated leasing area. In such cases, the land use planning process may be less time consuming than suggested by commenters. For further discussion, please see section 2804.31 of this preamble. No specific changes were made in response to this comment.

In addition to the amendments to section 2804.31, the BLM has begun its Planning 2.0 initiative, which is aimed at improving the BLM’s planning process. This initiative includes targeted revisions to the planning regulations (see 43 CFR part 1600) and land use planning handbook, in order to improve the BLM’s use of Resource Management Plans, which guide the BLM’s administration of the public lands. The Planning 2.0 initiative will help the BLM to conduct effective planning across landscapes at multiple scales, create more dynamic and efficient planning processes that are responsive to change, and provide new and enhanced opportunities for collaboration with the public and partners. You can find further information on the BLM’s Planning 2.0 initiative at the following Web site http://www.blm.gov/wo/st/en/prog/planning/planning_overview/planning_2_0.html.

Comment: A comment recommended that the BLM use one consistent definition to ensure that DLAs represent areas of fewer resource conflicts for solar and wind energy development.

Response: Because of the many variables that the BLM must consider when designating a DLA, the definition provided is intentionally broad and

identifies a DLA as a preferred location for development that may be offered competitively. This definition allows the BLM to identify such areas in land use planning processes using plan-specific criteria to best identify the area. However, we are modifying the definition by removing the example of solar energy zones that was cited in the proposed rule in order to eliminate potential confusion about the future identification of additional DLAs, which may not be identified in the same manner as the solar energy zones. No other comments were received concerning this definition.

“Designated right-of-way corridor” is a term that is defined in existing regulations. The word “linear” has been added to this definition in the final rule to distinguish between these corridors and DLAs. No comments were received concerning this definition change and no changes are made from the proposed rule to the final rule.

“Management overhead costs” is defined in existing regulations as Federal expenditures associated with the BLM. This definition has been expanded in the final rule to include other Federal agencies. This revision is consistent with Secretarial Order 3327 and will help to promote effective cost reimbursement. Under Sections 304(b) and 504(g) of FLPMA, the Secretary may require payments intended to reimburse the United States for its reasonable costs with respect to applications and other documents relating to public lands. Secretarial Order 3327 delegated the Secretary’s authority under FLPMA to receive reimbursable payments to the bureaus and offices of the Department. No comments were received pertaining to this definition change, and no revisions were made from the proposed rule to the final rule.

“Megawatt capacity fee” is a new term meaning the fee paid in addition to the acreage rent for solar and wind development grants and leases based on the approved MW capacity of the solar or wind authorization. The MW capacity fee is calculated based on the MW capacity for an approved solar or wind energy project authorized by the BLM. Examples of how MW capacity fees are calculated may be found after the discussion of section 2806.56. While the acreage rent reflects the value of the land itself in its unimproved state, the MW capacity fee reflects the value of the industrial use of the property to generate electricity. Specifically, it captures the additional value of public land used for solar and wind energy generation that are not reflected in the NASS land values.

The BLM revised the definition of MW capacity fee from the proposed to final rule to clarify that the MW capacity fee is calculated for staged developments by multiplying the MW rate by the approved MW capacity for each stage of development. The proposed rule stated that the MW rate would be multiplied to the approved stage of development, but did not specify that it was the approved MW capacity for the stage of development. The BLM made this revision to help improve the public's understanding of the MW capacity fee calculation for staged developments.

Comment: One comment acknowledged that fair market value can be determined by using a competitive process and agreed with the proposed rule's approach of using a competitive process to authorize solar and wind energy development on public lands. The comment went on to express a preference for a system that includes the payment of a royalty fee for the use of commercial power facilities on public lands.

Response: As explained above, the BLM has established through existing policy, and now by this rule, a multi-component structure for obtaining fair market value from renewable energy development. Since FLPMA directs right-of-way holders "to pay *in advance* the fair market value" for the use of the public lands, subject to certain exceptions (43 U.S.C. 1764(g)), the BLM's existing regulations governing the use of public lands, under Title V of FLPMA, generally require the prepayment of annual rent and fees in amounts determined by the BLM. This requirement is carried forward in existing guidance governing acreage rent and MW capacity fees for wind and solar energy projects and was selected in lieu of other means of obtaining fair market value. Consistent with the BLM's authority under FLPMA, its existing policies, and the proposed rule, the BLM has determined that it will continue to charge in advance both an acreage rent and a MW capacity fee for solar and wind energy projects, as a means of obtaining fair market value for those projects. Given that FLPMA requires payment in advance, the BLM has determined it is appropriate to base that the MW capacity fee on rated MW capacity as opposed to actual generation. In instances where competitive processes are utilized, any minimum and bonus bids represent an additional component of fair market value on top of the annual acreage rent and MW capacity. No other comments were received on the proposed definition of MW capacity fee, and no

changes to the definition were made in this final rule.

"Megawatt rate" is a new term that means the price of each MW for various solar and wind energy technologies as determined by the MW rate schedule. The MW rate equals the (1) the net capacity factor multiplied by (2) the MW per hour (MWh) price multiplied by (3) the rate of return multiplied by (4) the total number of hours per year where:

1. The "net capacity factor" means the average operational time divided by the average potential operational time of a solar or wind energy development, multiplied by the current technology efficiency rates. This rule establishes net capacity factors for different technology types, but the BLM may determine a different net capacity factor to be more appropriate, on a case-by-case or regional basis, to reflect changes in technology, such as a solar or wind project that employs energy storage technologies, or if a grant or lease holder or applicant is able to demonstrate that a different net capacity factor is more appropriate for a particular project design, layout, or location.

The default net capacity factor for each technology type is:

- a. Photovoltaic (PV) = 20 percent;
- b. Concentrated photovoltaic (CVP) and concentrated solar power (CSP) = 25 percent;
- c. CSP with storage capacity of 3 hours or more = 30 percent; and
- d. Wind energy = 35 percent.

Comments: Several comments were received concerning the definition and description of net capacity factor. One comment stated that the net capacity factors should not be specified in the proposed rule for CSP projects, as they will undoubtedly increase over time with technology improvements and be updated on a regular basis, in a similar manner as rents. CSP can be designed to operate from a range of 10 to 50 percent efficiency depending on the intended use of the facility (e.g., base load or peaker plant). Another comment recommended using an estimate of the capacity factor identified in the POD and the plant's design as the basis for this calculation.

Response: The BLM recognizes that there may be technology improvements over time, and that there are variables which may affect a specific project's net capacity factor. For example, a CSP project may be designed to operate at lower or higher efficiency rate depending on its intended use. The BLM took this into account in determining the net capacity factor of the technologies for the final rule. Future rulemaking would be required to

change the established net capacity factors for each technology. The BLM will not incorporate the recommendation to use the project owner's estimate of the capacity factor in the POD to calculate its MW capacity fee. The estimated net capacity factor in a POD would be specific to a particular project, but would be a subjective value that could be inaccurate or misleading. Incorporating the methodology suggested by the comment could raise questions as to whether the BLM was truly collecting a reasonable return for use of the public lands.

However, the BLM has revised the final rule, consistent with this comment and those comments submitted regarding storage technologies, to allow the BLM to determine another net capacity factor to be more appropriate on a case-by-case basis. The BLM could determine another net capacity factor to be more appropriate when there is a change in technology, such as when a project employs energy storage technologies. Determining another net capacity factor may also be appropriate if a project uses a more current version of a technology.

Comment: Another comment agreed with the BLM's proposal to use an average net capacity factor for wind energy projects. However, the comment recommended using a net capacity factor of 26 percent as identified in the wind capacity factor for Western States (see the Department of Energy's 2013 Wind Technologies Report) instead of the national average wind capacity factor of 35 percent.

Response: While the BLM acknowledges that most solar and wind projects on public lands will be located in the western United States, it nevertheless elected to use the national averages in calculating the net capacity factors for both solar and wind projects, because the BLM believes those values are more representative of the technology that will be deployed on projects developed in the future. The net capacity factor for a given project is greatly influenced by project design, layout, and location. The national average reflects a larger set of projects than the regional average, and is therefore more representative of the full range of older and newer technologies currently sited on public lands.

With respect to the wind capacity factor in particular, the BLM reviewed data from the Department of Energy's 2014 and 2015 Wind Technology Reports (<https://emp.lbl.gov/sites/all/files/lbnl-188167.pdf> and <https://emp.lbl.gov/sites/all/files/2015-windtechreport.final.pdf>, respectively). Based on its review of that data, the

BLM determined that its selection of a 35 percent capacity factor for wind was appropriate for several reasons.

First, the geographic scope of the lands included in the “West Region” of the Department of Energy’s reports does not adequately capture the full extent of BLM lands. Using the geographic distribution classifications set by the Department of Energy, BLM lands are located in both the “West” and “Interior” regions, with 7 states in the West and 4 states in the Interior (Colorado, Montana, New Mexico, and Wyoming). It should also be noted that the four BLM states in the Interior region possess significant wind energy development potential. Accordingly, the BLM believes it is reasonable to select a wind capacity factor between the values for the West and Interior. In the Interior Region the Department of Energy reported capacity factors of 41.2 percent and 42.7 percent in 2014 and 2015, respectively. Data from the 2014 report shows that while the average capacity factor in the West was 27 percent, there was considerable spread in the factors by project, from just below 20 percent to over 37 percent. In the Interior, the spread in capacity factors was from 26 percent to 52 percent. Thirty-five percent represents a reasonable average of these very disparate, project-specific capacity factors.

In addition to looking at capacity factors regionally, the Department of Energy’s analysis also controlled for wind quality. Notably, the Department of Energy determined that even in low wind quality areas, which predominate in the West, new projects achieve 35 percent capacity factors. As explained in the reports, this analysis was based on wind turbine specific power, which is the ratio of a turbine’s nameplate capacity rating to its rotor-swept area. All else being equal, a decline in specific power leads to an increase in capacity factor according to the analysis presented in the report. In general, since the wind industry is shifting towards deploying lower specific power wind turbines at new wind energy projects across the United States, the BLM believes it is reasonable to select 35 percent as the default capacity factor for a wind project in the final rule.

It should also be noted that the BLM considered basing the net capacity factors for these technologies on an average of the annual capacity factors posted by the Energy Information Administration (EIA) on its Web site at: http://www.eia.gov/electricity/monthly/epm_table_grapher.cfm?t=epmt_6_07_b. However, the BLM is not carrying this approach forward in the final rule

because, as discussed earlier in the preamble regarding net capacity factors, we believe that the 35 percent capacity factor better represents the technologies that will be deployed on projects developed in the future. For this reason, the BLM determined that the EIA annual capacity factors are not appropriate for use in this rule.

Finally, the BLM notes that if an applicant or a grant or lease holder believes that the BLM’s net capacity factor is set too high for a particular project, the project proponent can request that the BLM use an alternative net capacity factor when setting the MW capacity rate for the project. Such a request would be made as described under section 2804.40 for applicants or section 2805.12(e) for grant or lease holders. See the section-by-section portion of this preamble for further discussion of requests for alternative requirements.

No other comments were received, and the definition of “net capacity factor” was not changed from the proposed to the final rule as result of this comment.

2. The “MWh price” equals the 5 calendar-year average of the annual weighted average wholesale price per MWh for the major trading hubs serving the 11 Western States of the continental United States (see sections 2806.52(b) and 2806.62(b)).

Comment: One comment believed that rent and fee calculations may be inaccurate based on inaccurate determinations of the capacity factor and the wholesale price of electricity used in the formula. In the proposed rule, the BLM specified the Intercontinental Exchange (ICE) as the source of data for the wholesale price data.

Response: As discussed under section 2806.52 for MW capacity fee, ICE was removed as the only vendor for the wholesale data. We revised this definition to account for appropriate wholesale data without limiting it by source. This will allow the BLM to use the best information available, should a company that tracks trading hubs fail to maintain accurate or reliable trade information. No other comments were received concerning this definition.

3. The “rate of return” is the relationship of income to the property owner (or, in this case, the United States) to the revenue generated from authorized solar and wind energy development facilities, based on the 10-year average of the 20-year U.S. Treasury bond yield, rounded to the nearest one-tenth percent.

Comment: One comment believed that the BLM should use a 5-year average,

not a 10-year average, eliminate the 4 percent minimum, and consider rounding down or not at all.

Response: The BLM disagrees with the suggestion to use a 5-year average. A 10-year average of the 20-year Treasury bond rate provides a more stable rate of return and will benefit the holder when interest rates rise. Under the same concept, this would benefit the BLM when interest rates decline, as is the case in the current cycle.

The BLM also disagrees that it should eliminate a 4 percent minimum rate of return, considering the risk of energy development projects and the fluctuation of energy commodity prices. It is not uncommon for private parties to insist on a minimum return. The 4 percent minimum rate of return recognizes a grant or lease holder’s risk of projects that have other financial safeguards in place, such as performance bonds. The minimum is at the lower end of similar rates in the private sector.

The 4 percent minimum rate of return is established for solar energy in section 2806.52(b)(3)(ii) and for wind energy in section 2806.62(b)(3)(ii). The minimum is not included in the definitions section of this final rule because setting the minimum is a substantive regulatory provision. This is not a change from the proposed rule. No changes are made in this final rule from the proposed rule regarding the rate of return in the definitions section (section 2801.5) or in the specific solar (section 2806.52(b)(3)(ii)) or wind (section 2806.62(b)(3)(ii)) provisions.

With respect to rounding, the BLM did agree that it should revisit the proposed rule’s approach. While it does not agree with the commenter’s suggestion that it should always round down, the BLM did determine upon further review that it should round bond yields to the nearest tenth of a percent to avoid a rounding-based surcharge.

4. The number of hours per year is a fixed number (*i.e.*, 8,760 hours, the total number of hours in a 365-day year). No comments were received on the definition of this term and no changes are made to this definition from the proposed rule to the final rule.

“Performance and reclamation bond” is a new term that means the document provided by the holder of a right-of-way grant or lease that provides the appropriate financial guarantees, including cash, to cover potential liabilities or specific requirements identified by the BLM. This term is defined here to clarify the expectations of what a bond accomplishes. The definition also explains which instruments are or are not acceptable.

Acceptable bond instruments include cash, cashier's or certified checks, certificate of deposit, negotiable U.S. Treasury securities, surety bonds from the approved list of sureties, and irrevocable letters of credit. The BLM will not accept a corporate guarantee. These provisions codify the BLM's existing procedures and practices.

Comment: A comment suggested adding the words "certificate of insurance or other acceptable security" to each of these paragraphs in appropriate places.

Response: The BLM believes that adding the comment's suggestion to the text of the rule is unnecessary, as the definition of acceptable bond instruments includes insurance policies and does not need to be expanded to include a specific form of insurance. Furthermore, the list of bond instruments that are acceptable is not an all-inclusive list. There may be other forms of bond instruments, but they are not specified in the rule as they are not as common a form of bond as those identified. If we had intended the bond list to be an all-inclusive list we may have unintentionally excluded an acceptable bond instrument. No other comments were received and no changes to this definition were made from the proposed rule to the final rule. "Reclamation cost estimate (RCE)" is a new term that means the report used by the BLM to estimate the costs to restore the intensive land uses on the right-of-way to a condition that would support pre-disturbance land uses.

The BLM revised this definition from the proposed to final rule to clarify that the reclamation work described must meet the BLM's requirements. This change is important because the BLM is required to protect the public lands and must determine if the reclamation work done by the holder is acceptable.

No comments were received on the definition of this term and no other changes are made from the proposed to the final rule.

"Right-of-way" is defined in existing regulations as the public lands the BLM authorizes a holder to use or occupy under a grant. The revised definition describes the authorizing instrument for use of the public lands as "a particular grant or lease." No comments were received on the definition of this term and no changes are made from the proposed to the final rule.

"Screening criteria for solar and wind energy development" is a term referring to the policies and procedures that the BLM uses to prioritize how it processes solar and wind energy development right-of-way applications outside of

DLAs. Some examples of screening criteria are:

1. Applications filed for areas specifically identified for solar or wind energy development, other than DLAs;
2. Previously disturbed areas or areas located adjacent to previously disturbed areas;
3. Lands currently designated as Visual Resource Management (VRM) Class IV; and
4. Lands identified for disposal in a BLM land use plan.

Screening criteria for solar and wind energy development were previously established by policy through IM 2011-61, and are further discussed in section 2804.25(d)(2) and section 2804.35 of this rule. The IM may be found at: http://www.blm.gov/wo/st/en/prog/energy/renewable_energy.html. No changes were made from the proposed rule to the final rule, nor were any comments received pertaining to this definition. However, there are several comments made on the specific screening criteria proposed that are addressed later in the section-by-section analysis of these criteria.

"Short term right-of-way grant" is a new term meaning any grant issued for a term of 3 years or less for such uses as storage sites, construction sites, and short-term site testing and monitoring activities. The holder may find the area unsuitable for development or the BLM may determine that a resource conflict exists in the area. No comments were received and no changes are made from the proposed rule to the final rule.

Section 2801.6 Scope

The scope in 43 CFR part 2800 clarifies that the regulations in this part apply to all systems and facilities identified under section 2801.9(a). No comments were received and no changes are made from the proposed rule to the final rule on this provision.

Section 2801.9 When do I need a grant?

Section 2801.9 explains when a grant or lease is required for systems or facilities located on public lands. In section 2801.9(a)(4), the term "systems for generation, transmission, and distribution of electricity" is expanded to include solar and wind energy development facilities and associated short-term authorizations. Language is also added to section 2801.9(a)(7) to allow any temporary or short-term surface-disturbing activities associated with any of the systems described in this section. A new paragraph (d) is added to specifically describe the types of authorizations required for various

components of solar and wind energy development projects. These are:

1. Short term authorizations (term to not exceed 3 years);
2. Long term right-of-way grants (up to 30 years); and
3. Solar and wind energy development leases (30 years).

This paragraph also identifies the type of authorizations issued for solar and wind projects depending on whether they are located inside or outside of DLAs. Authorizations for solar or wind energy development outside a DLA, or authorizations issued non-competitively within a DLA, will be issued under subpart 2804 as right-of-way grants for a term of up to 30 years. Authorizations within a DLA will be issued under subpart 2809 as right-of-way leases for a term of 30 years.

Comments: Some comments were received requesting that the site-specific and project-area testing authorizations be made available for solar energy. A comment further suggested that section 2801.9 be revised so that the authorization types would be listed in the order in which actions are taken to develop a project.

Response: The BLM revised this section, in response to the comment, by removing the specific references to "wind." As a result, the testing provisions apply to both solar and wind energy. The BLM also revised this section to reflect the order in which actions are taken to develop a project. The "other appropriate actions" listed under paragraph (d)(3) of this section in the proposed rule are moved to paragraph (d)(5) of this section in the final rule. Paragraphs (d)(4) and (5) of this section in the proposed rule are now paragraphs (d)(3) and (4) of this section, respectively.

Subpart 2802—Lands Available for FLPMA Grants

Section 2802.11 How does the BLM designate right-of-way corridors and designated leasing areas?

Section 2802.11, which explains how the BLM designates right-of-way corridors, is revised to include DLAs. Under this rule, the BLM will identify DLAs as preferred areas for solar or wind energy development, based on a high potential for energy development and lesser resource impacts. This section provides the factors the BLM considers when determining which lands may be suitable for right-of-way corridors or DLAs. These factors are unchanged from the existing regulations. This final rule amends paragraphs (a), (b) introductory text,

(b)(3), (4), (6), and (7) and (d) of section 2802.11 to include references to DLAs.

Comment: One recommendation was made suggesting that the BLM make it clear that we will not accept applications in areas that are closed to development by means of land use plans or other mechanisms.

Response: The comment's recommendation is addressed in the existing rule at section 2802.10(a). This section clarifies that some lands are not available for a right-of-way grant, which includes those lands that the BLM identifies through the land use planning process as inappropriate for rights-of-way, as well as public land orders, statutes, and regulations that exclude rights-of-way, and lands segregated from application.

Comment: One comment stated that DLAs are created through the BLM's resource management planning process, but that such plans are changed only every 15 to 20 years. Also, many plans are undergoing or have recently undergone such changes, especially in areas having sage-grouse habitat, but those plans do not designate any DLAs.

Response: Due to the timing of the comment submission and the BLM's response, the plans noted in this comment have been finalized and the BLM decisions are issued. The Greater Sage-Grouse Plan Amendments and Revisions did not designate any DLAs. These plans are focused on conservation of the Greater Sage-Grouse and its habitat. The decisions issued in these plans safeguard primary and general habitat from the impacts of development, including solar and wind energy.

However, the BLM may have an opportunity to designate some areas for wind energy development using recent analyses or information that identifies areas suitable for energy development on public lands. Examples of such areas may be those identified as not having significant resource and use siting concerns, as identified in the BLM's wind mapper. The wind mapper is a BLM web-based geographic data viewer, found at <http://wwwmp.anl.gov>, that has up-to-date geographic information representing the BLM's land use planning decisions for administering public lands and other pertinent regulatory information, specific to wind energy resources. Using information on the wind mapper, a targeted land use plan amendment may be completed more expeditiously than the 15 to 20 years discussed in this comment.

Comment: Another comment suggested that we consider developing a generic EIS process suitable to all prospective solar and wind leases,

coupled with a specific discussion of variations between areas. Also, the comment suggested that we should automate the EIS process to leverage existing GIS and satellite data whenever possible.

Response: Although worth considering, this concept is outside the scope of this rule, which is focused on the administrative process of solar and wind energy rights-of-way and competitive processes. However, the BLM plans to evaluate its NEPA process and promote automation of the process where possible. Until that time, the BLM will designate such areas through its existing land use planning process.

Comment: Another comment states that the designation of DLAs will waste taxpayers' money and impede development. The cost to the public for the BLM to designate a DLA will not be fully recaptured and the DLA will not provide any additional value to the public through the competitive process.

Response: Costs for the preparation of DLAs will be recaptured at the competitive bidding stage as the administrative costs will be paid by the successful bidder. As demonstrated by the BLM's recent competitive actions for solar energy, there is a monetary return to the public for auctions of parcels within renewable energy development areas.

Comment: During stakeholder engagement meetings, environmental stakeholders expanded on their comment on the definition of "designated leasing area." The stakeholders suggested that the BLM should not only revise the definition of DLA to include additional specific criteria, but also make changes to section 2802.11 to specify that the BLM consider those criteria when designating DLAs. The stakeholders also recommended that the BLM consider sensitive environmental resources when evaluating potential DLAs.

Response: The BLM considered adding additional criteria to section 2802.11 that would be considered when the BLM evaluates an area for inclusion in a DLA, but it ultimately made no changes in the final rule. The existing regulations in section 2802.11(b) already explain in great detail what the BLM considers when making a DLA designation. Adding an undefined term, "sensitive environmental resources," could unintentionally limit the BLM's management of public lands when considering the varied landscapes and resources that are found there. Furthermore, consideration of sensitive resources is already addressed in section 2802.11(b)(2), which requires the BLM to consider "environmental

impacts on cultural resources and natural resources, including air, water, soil, fish, wildlife, and vegetation."

While the BLM did not make any changes to the final rule in response to this comment, it should be noted that the BLM intends to establish guidance, as part of the implementation of this rule, to assist the BLM in establishing DLAs through its land use planning processes. The implementing guidance will allow the BLM to be more specific for these areas without unintentionally limiting itself, and maintain the BLM's flexibility to make any necessary adjustments to the process for evaluating potential DLAs across the varied landscapes that it manages.

Subpart 2804—Applying for FLPMA Grants

Section 2804.10 What should I do before I file my application?

Existing section 2804.10 encourages prospective applicants for a right-of-way grant to schedule and hold a pre-application meeting. Under this final rule, section 2804.10 continues to encourage such meetings regarding some right-of-way grants, and under paragraph (a)(2), would now identify DLAs along with right-of-way corridors as a point of discussion for these meetings if held.

Under existing section 2804.10(a)(2), the BLM determines if your application is on BLM land within a right-of-way corridor. This revised paragraph now includes "or a designated leasing area." The BLM generally will not accept applications for grants on lands inside DLAs. The BLM will offer lands inside DLAs competitively through the process described in subpart 2809, which does not involve submitting an application. The BLM will only accept applications on lands inside DLAs in limited circumstances (see section 2809.19(c) and (d)).

The BLM proposed amending paragraphs (a) introductory text and (a)(2) and (4), and also adding two new paragraphs that would apply to any solar or wind energy project, transmission line with a capacity of 100 kV or more, or pipeline 10 inches or more in diameter. For these types of projects, the BLM proposed mandatory pre-application meetings. Proposed amendments for paragraphs (a) introductory text and (a)(4) are not included in the final rule, since pre-application meetings will not be required and specific requirements associated with them are no longer necessary. Paragraph (b) of the existing regulations will not be redesignated and there will be no new paragraphs (b) and

(c) in this final rule. The only changes to section 2804.10 in the final rule are found in paragraph (a)(2).

Under this final rule, pre-application meetings will not be required for solar and wind energy developments, or any transmission line with a capacity of 100 kV or more. Instead, the BLM will require what we term “preliminary application review meetings” that will be held after an application for a right-of-way has been filed with the BLM. These meetings will fall under the BLM’s cost recovery authority for processing applications and are discussed in greater detail under section 2804.12. Based on comments received, no requirements for pipelines 10 inches or more in diameter are carried forward into the final rule.

Section 2804.12 What must I do when submitting my application?

In this final rule, section 2804.12 has been retitled from “What information must I submit in my application?” to “What must I do when submitting my application?”. Relocation of the early coordination meeting requirements to this section has resulted in revisions to this section that would make the previous title misleading. As revised, section 2804.12 requires that an applicant must provide specific information, and in the case of solar or wind energy development projects and transmission line projects with a capacity of 100 kV or more, must also complete certain actions when initially submitting an application.

The last sentence in section 2804.12(a) is revised to show that a completed application must include all of the items identified in section 2804.12(a)(1) through (8). The text of paragraphs (a)(1) through (7) are republished without amendment, and new paragraph (a)(8) is added.

Comments: Several comments were submitted regarding the BLM’s proposed pre-application requirements for solar and wind energy development and transmission lines with a capacity of 100 kV or more. Comments suggested that the BLM could not place requirements on a developer prior to an application being submitted to the BLM. This general comment was focused on two aspects of the BLM’s proposed requirement for pre-application meetings. The first aspect was that the BLM was requiring that two pre-application meetings be completed prior to a developer submitting an application for a solar or wind energy development project or transmission line with a capacity of 100 kV or more. The second aspect of concern was that the BLM would require the developer to pay cost

recovery for the required pre-application meetings. Under the proposed rule, the BLM would have required both of these prior to submission of an application for use of the public lands.

Response: The intent of the pre-meeting requirements is to ensure early coordination with the developer and other Federal, State, and tribal governments to gather information to better inform the developer of different considerations to be made if pursuing their project on BLM-administered lands. Considerations would include existing uses, environmental resources, and cultural or tribal values in the area of the proposed project. Pre-application meetings are currently required by the BLM’s policy. Discussing a proposed project with a developer early on has demonstrated an improvement in project siting and design, avoiding and minimizing impacts the project would have to the public land, and reducing the BLM’s processing timeframes. This final rule has been revised and now requires early coordination, not through pre-application meetings, but through preliminary application review meetings, which are to be held after an application is submitted to the BLM. These requirements for early coordination with developer and other Federal, State, and tribal governments are found under section 2804.12(b). Additional discussion of the preliminary application review meetings is found under section 2804.12(b) of this preamble.

Section 2804.12(a)(8) states that if the BLM requires you to submit a POD, you must include a schedule for its submittal in your application. This requirement was in the proposed rule’s section 2804.10(c)(4), but is now moved to section 2804.12(a)(8) in the final rule. This provision was proposed in section 2804.10 because the early coordination with BLM was done under pre-application meetings. It is moved to section 2804.12 of this final rule to coincide with the timing of the preliminary application review meetings.

Section 2804.12(b) explains requirements for submitting an application for solar or wind energy development (outside of DLAs), or any transmission line with a capacity of 100 kV or more. Requirements under section 2804.12(b) were found at section 2804.10(b) in the proposed rule, but have been moved to this section instead as application processing requirements. This includes the BLM’s requirement for preliminary application review meetings. This provision provides clear instructions to the public about what

they should expect when filing an application for such developments.

The BLM commonly refers to the first filing of an application as an “initial” application due to the BLM’s experience with such projects. In most cases, a project POD goes through several iterations during the BLM’s application review process and may require additional submissions or revisions of the application to accompany the revised plans. Additional applications are not always necessary when revising a project POD, but could be required.

Section 2804.12(b) also contains provisions from section 2804.10(b) and (c) of the proposed rule. These provisions are moved in the final rule in response to comments. An additional provision is added to paragraph (b) of this section to reiterate that the requirements for submitting a solar or wind application are in addition to those described in paragraph (a) of this section for all rights-of-way.

Comments: Several comments questioned the requirement to hold pre-application meetings, as well as the BLM’s authority to require conditions for project processing, prior to the submission of an application to the BLM and collecting cost recovery fees for that time period.

Response: The early coordination that resulted from the pre-application meetings required by existing BLM policy has been essential to the timely review and approval of solar and wind energy projects on the public lands. However, this final rule moves these meetings and requirements so that they occur after the submission of an application in response to comments received. The changes retain BLM’s intent to ensure earlier coordination on such applications with other Federal, State, local, and tribal governments. Under the final rule, such meetings would be subject to cost recovery requirements.

Section 2804.12(b) also states that your application for a solar or wind energy project, or a transmission line project with a capacity of 100 kV or more, must include a general description of the proposed project and a schedule for submittal of a POD, address all known resource conflicts, and initiate early discussions with any grazing permittees that may be affected by the proposed project. Further, section 2804.12(b) requires that you hold two preliminary application review meetings, within 6 months from the date on which the BLM receives the cost recovery fee payment required under section 2804.14.

Section 2804.12(b)(4), as previously described, is relocated from section

2804.10(c) of the proposed rule. Under this paragraph, the BLM will process an application only if the application addresses the following items: (1) Known potential resource conflicts with sensitive resources; (2) Values that are the basis for special designations or protections; and (3) Applicant-proposed measures to avoid, minimize, and compensate for such resource conflicts. For example, some applicant-proposed measures could utilize a landscape-level approach as conceptualized by Secretarial Order 3330 and subsequent reports, and be consistent with the BLM's IM 2013–142, interim policy guidance. Due to the intense use of the land from the projects covered in this section, the BLM will require applicants to identify potential conflicts and how they may be avoided, minimized, or mitigated. The BLM will work with applicants throughout the application process to ensure the most efficient use of public land and to minimize possible resource conflicts. This provision will require an applicant to consider these concerns before submitting an application and, therefore, provide the BLM with potential plans to minimize and mitigate conflicts.

Comments: Some comments stated that the BLM should ensure that meetings are structured so that participants are provided all the project information necessary so they can meaningfully assist the BLM to make an appropriate determination about the proposed project.

Response: The BLM agrees with these comments and has modified the regulation to have meetings occur after an application is filed, rather than hold the meetings beforehand. The intent of these meetings will be to bring all Federal, State, local, and tribal governments together and provide them with the best available information to have an informed discussion on the right-of-way application. Authorizations for solar and wind energy projects, and transmission lines with a capacity of 100 kV or more, are generally larger and more complex than the average right-of-way authorization, and this extra step will help protect the public lands and make application processing more efficient.

Furthermore, the BLM will not proceed with an application until all appropriate meetings are held and the BLM has notified appropriate grazing permittees (see 43 CFR 4110.4–2(b)). Applicants must pay reasonable or actual costs associated with the requirements identified in section 2804.12(b). Payment for reasonable costs associated with an application must be received by the BLM after the initial

filing of the application and prior to the first meeting, consistent with section 2804.14.

After enactment of the Energy Policy Act of 2005, the BLM received an influx of solar and wind energy development applications. Many of these applications were unlikely to be approved due to issues such as siting, environmental impacts, and lack of involvement with other interested parties. As the BLM gained more experience with these applications, it developed policies and procedures to process applications more efficiently. These policies and procedures required pre-application meetings and use of application screening criteria (see section 2804.35 of this preamble) in order to help BLM and the proponent address siting concerns early on in the process.

Pre-application meetings have helped both the BLM and prospective applicants to identify necessary resource studies, and other interests and concerns associated with a project. Further, the meetings have provided an opportunity to direct development away from lands with high conflict or sensitive resource values. As a result of these meetings, the applications submitted were more appropriately sited and had fewer resource issues than those submitted where no pre-application meetings were held. Holding these meetings early in the application process made the applications more likely to be approved by the BLM. This saved the applicant the time and money spent on doing resource studies and developing projects that may not have been accepted or approved by the BLM.

Some prospective applicants chose not to pursue development after these meetings, once they had a better understanding of the potential issues and resource conflicts with the project as proposed. The BLM found that applicants who participated in these meetings saved money that would have been spent planning a project that the BLM would not have approved. This also saved the BLM time by reducing the number of applications it would need to process and the time spent reviewing resource studies and project plans.

A January 2013 Government Accountability Office report (GAO–13–189) found that the average BLM permitting timeframes have decreased since implementation of BLM's solar and wind energy policies, which include the early inter-agency coordination meeting requirements in this rule. The GAO concluded that applications submitted in 2006 averaged about 4 years to process, while

applications submitted in 2009 and later averaged about 1.5 years to process. At the time of the GAO review, these meetings were pre-application meetings. In the final rule, the timing of these early meetings has been changed until after the submission of an application to the BLM. Based on its experience, the BLM believes that holding inter-agency and government coordination meetings early in the review of a proposed large-scale development will continue to save both the BLM and applicant time and money during the BLM's review and processing of the application.

Based on a review of its records, the BLM identified a range of costs and time estimated associated with the processing of each type of application for a use of the public lands. These cost and time estimates varied between the solar and wind energy and transmission line projects. For solar and wind energy rights-of-way a range of costs was identified between \$40,000 and \$4 million, including up to approximately 40,000 BLM staff labor hours and other non-labor costs per project. For transmission lines 100 kV or larger a range of costs was identified between \$260,000 and \$2.1 million, including up to approximately 21,000 BLM staff labor hours and other non-labor costs per project. Based on this review, the BLM observed that projects with early coordination generally had lower costs relative to similarly situated projects.

Based on the BLM's experience, two meetings are usually sufficient to address all known potential concerns with a project, which is why the final rule calls for two meetings. However, the BLM understands that additional meetings may be beneficial to a project before an application is submitted. The BLM does not want to limit its ability to hold additional meetings should a project be particularly complex and, therefore, the final rule allows for additional preliminary application review meetings to be held when mutually agreed upon. For example, a project that crosses State lines could require additional coordination with local governments and other interested parties.

Comments: Some comments noted concern over the BLM's existing and proposed pre-application process and its open-ended timeframe. Comments were concerned that this would be a deterrent for pursuing development on the public land, even if the project itself was well sited and designed. A developer would need assurances that a project would proceed expeditiously. Suggested timeframes included 30 days between meetings and application submittal.

Response: New paragraph (b)(4) specifies that within 6 months from the time the BLM receives the cost recovery fee, you must hold at least two preliminary application review meetings. The first meeting will be held with the BLM to discuss the proposal, the right-of-way application process, the status of BLM land use planning for the lands involved, potential siting and environmental issues, and alternative site locations. The second meeting will be held with appropriate Federal and State agencies and tribal and local governments to discuss concerns as identified above. If you do not believe you need to schedule the first or second meeting described above, you can ask the BLM for an exemption. The process of requesting an exemption is discussed further in section 2804.12(i), under the newly added paragraph labeled “Inter-agency Coordination.”

Section 2804.12(c) contains requirements for submitting an application for solar and wind energy development. These requirements, located in section 2804.10(a)(8) and (c)(2) in the proposed rule, have been relocated to section 2804.12(c)(1) and (2) in this final rule. Under section 2804.12(c)(1), the BLM specifies that an application for solar or wind energy development must be submitted for lands outside of DLAs, except as provided for by section 2809.19. Lands inside DLAs will be offered competitively under subpart 2809. See section 2809.19 of this preamble for further discussion. No comments were received and the only changes made to this paragraph are those identified for relocating the requirement to this section and putting it in the context of a requirement for submitting an application.

Section 2804.12(c)(2) requires that an applicant submit an application filing fee with any initial solar or wind energy right-of-way application. Section 304 of FLPMA authorizes the BLM to establish filing and service fees. A per acre application filing fee may discourage applicants from applying for more land than is necessary for a proposed project. Under this final rule, application filing fees will be retained by the BLM as a cost recovery fee, instead of being sent to the General Fund of the Treasury as collected revenue as proposed. A similarly structured nomination fee is established following the same criteria and is described in section 2809.11(b)(1).

Paragraph (c)(2) of this section is revised to replace “by the average annual change in the Implicit Price Deflator, Gross Domestic Product (IPD–GDP)” to read as “using the change in

the Implicit Price Deflator, Gross Domestic Product (IPD–GDP)”. As proposed, this provision may have been interpreted as limiting how the BLM would use the IPD–GDP when updating this fee. It is appropriate for adjustments that occur annually, such as acreage rent, to refer to the average annual change in the IPD–GDP. However, the application filing fee may be adjusted once every ten years and this adjustment would be based on the cumulative change to the IPD–GDP over the 10-year period.

The application filing fee is the initial fee paid to the BLM for the reasonable costs of processing, inspecting, and monitoring a right-of-way. The BLM will use these funds towards processing your application. The balance of these funds, if any, will be allocated towards a cost reimbursement agreement that is later established between the BLM and the applicant or refunded if the application is denied or otherwise terminated. A cost reimbursement agreement is established under the authority of FLPMA section 304(b) and 504(g). This change is made in conformance with those changes made under section 2804.30(e)(4) in response to comments.

The application filing fee is based on the appraisal consultation report performed by the Department’s Office of Valuation Services. The appraisal consultation report compared similar costs on private lands, and provided a range between \$10 and \$25 per acre per year. The nominal range or median was reported as between \$15 and \$17 per acre per year. The appraisal consultation report is available for review by contacting individuals listed under the **FOR FURTHER INFORMATION CONTACT** section of this preamble.

The BLM is adopting a single filing fee at the time of filing an application, as opposed to a yearly payment. Based on the appraisal consultation report, fees are \$15 per acre for solar and wind energy applications and \$2 per acre for wind energy project-area and site-specific testing applications.

Comments: Several comments were made concerning the fees identified in the description of requirements for section 2804.12(c)(2). One comment suggested that the \$15 per acre filing fee should be made a part of a cost recovery fee and used to reimburse the BLM for its expenses. In addition, the comment suggested that the fee should be refundable if the lands are later made subject to competition.

Response: The BLM has revised this rule, including this section, to make application filing fees part of cost reimbursement paid to the BLM.

Payment of cost reimbursement to the BLM is under Sections 304(b) and 504(g) of FLPMA. Application filing fees and other costs associated with the BLM’s processing of applications can be recovered because the BLM’s application review and other work facilitates, and will generally be essential for, the BLM’s processing, inspecting, and monitoring of a right-of-way. Consistent with FLPMA, application filing fees are retained by the BLM as cost reimbursement and will not be sent to the General Fund of the U.S. Treasury as originally proposed. If lands are later subject to a competitive offer for the use for which application filing fees were provided, (e.g., competition for a site development when development application filing fees are paid), then these fees would be refunded to the unsuccessful bidders who had already paid them, except for the reasonable costs incurred.

Comment: One comment opposes the proposed \$15 per acre filing fee for wind energy applications and \$2 per acre fee for wind energy site-specific testing applications as this would increase processing costs. The comment suggested that fees should be as low as possible to encourage wind energy development on public lands.

Response: The BLM has removed the application filing fee from site-specific testing applications to address concerns of increasing costs for development on the public lands. Site-specific testing generally takes up less than an acre, so it would not be necessary to encourage a smaller area of use. Project area testing and developments can each encompass thousands of acres and a per acre filing fee is appropriate. This final rule retains a \$2 per acre filing fee for project area testing applications and a \$15 per acre filing fee for development applications to encourage thoughtful development on public lands. Fees for solar and wind energy development applications will be adjusted for inflation once every 10 years, using the Implicit Price Deflator for Gross Domestic Product (IPD–GDP).

Section 2804.12(d) references an applicant’s option to request an alternative requirement if the applicant is unable to meet one of the requirements outlined for submitting an application. Requests for an alternative requirement are submitted under section 2804.40. This provision applies to all right-of-way applications submitted to the BLM and is added to the final rule in response to comments submitted on the proposed rule. Further discussion on requesting an alternative requirement is found under section 2804.40.

Comments: Some comments stated that the mandatory pre-application meetings included in the proposed rule would discourage a developer from pursuing public lands for development, since the process and costs associated with development on BLM lands are greater than those on private lands. These comments expressed concern that these requirements are overly burdensome and duplicative of the NEPA process.

Response: Although costs to develop a project may end up being higher on public lands, the BLM has a different scope of authority and responsibility than agencies and offices that administer developments that occur on private land. The BLM is charged with managing the public lands under principles of multiple use and sustained yield. The BLM must take into account resources and use of the public land, and balance those with each additional proposed use and its impacts to resources for current and future generations.

Based on the BLM's experience, these early coordination meetings help reduce the overall time and costs associated with the BLM's application process. The pre-application meetings described in the proposed rule, which are existing policy, are changed in this final rule to "preliminary application review meetings," which take place after an application is submitted. The BLM believes these meetings will facilitate a more efficient application process and will not discourage development on public lands.

The BLM is required, under NEPA, to consider the environmental impacts of a significant action on the public lands. These early coordination meetings help the BLM and proponent determine the best possible approach for developing a proposed project that would avoid, minimize, reduce or otherwise compensate for its environmental impacts. Based on the BLM's experience, these meetings have reduced the overall time of the NEPA analysis necessary for projects on the public lands. The GAO's report (GAO-13-189) found that the average BLM permitting timeframes have decreased since implementation of BLM's solar and wind energy policies, which include the early inter-agency coordination meeting requirements in this rule.

The BLM added section 2804.12(i), "Inter-agency Coordination," in response to these comments. This paragraph provides that an applicant may request an exemption from some of the requirements of this section, should they participate in an inter-agency

coordination process with another Federal, State, local, or tribal authority. This final rule allows a developer to formally request an exemption to the requirements under section 2804.12, pertaining to application filings and other requirements that may be duplicative of other activities that a developer is completing. In order for a developer to qualify for an exemption from these requirements, the other activities must meet the same criteria as required by the BLM. An example of such a situation would be if a developer had already met with the Department of Energy for purposes similar to what is required under the BLM's first preliminary application review meeting.

No other comments were received and no additional changes made to this section.

Sections 2804.12(e) through (h) are redesignated in the final rule from paragraphs (b) through (e) of the existing regulations and no other changes were made to these paragraphs.

Section 2804.14 What is the processing fee for a grant application?

Under section 2804.14, applicants must pay for reasonable costs for processing an application as defined by FLPMA. Under section 2804.14(a), the BLM may collect the estimated reasonable costs incurred by other Federal agencies. Applicants may pay those costs to other affected agencies directly instead of paying them to the BLM.

Section 2804.14(b) includes a table of the application processing categories. The specific outdated values for cost recovery categories 1 through 4 have been removed from this table, while the explanations of the categories and the methodology of calculating the costs remain. These numbers are available in writing upon request or may be found on the BLM's Web site at <http://www.blm.gov/>. These cost figures were removed from the regulations because they are outdated after the first year, since the BLM updates these costs annually and has done so since this section of the regulations was originally published. The revision allows the BLM to update these numbers without modifying the CFR and prevents confusion to potential applicants who would see incorrect information. The explanation of how these costs are calculated, formerly found in section 2804.14(c), is moved up to paragraph (b) to provide better context for the amended table. Redundant language is removed from the Category 1 processing fee.

Comments: Some comments were received stating that the BLM does not

have authority to collect cost recovery on behalf of other Federal, State, and non-regulatory offices, such as tribal governments and interested public stakeholders. These comments stated that the authority delegated by the Secretarial Order was by the Secretary, and, therefore, delegation of the authority could not apply to any agency or office outside of the Department.

Response: Secretarial Order 3327 delegating cost recovery authority applies only to agencies and offices of the Department of the Interior. Sections 304(b) and 504(g) of FLPMA, however, give the Secretary authority to collect payments intended to reimburse the United States, not just the Department of the Interior. Under Section 304(b) of FLPMA, the Secretary may charge for reasonable costs of the United States concerning "applications and other documents relating to [the public] lands." Section 504(g) of FLPMA provides that the Secretary may charge for "all reasonable administrative and other costs incurred in processing" a right-of-way application and costs associated with the inspection and monitoring of right-of-way facilities.

The revision under section 2804.14 and other cost recovery provisions of this rule clarify that the BLM's cost recovery authority is consistent with FLPMA, in that it seeks reimbursement to the United States—*i.e.*, it can seek reimbursement of its own costs as well as those of other Federal agencies. This does not include reimbursement of costs for State and non-regulatory offices. The BLM intends that collecting such reasonable costs for other Federal agencies would primarily arise in situations where the BLM's decision to approve or deny a right-of-way application depends on another Federal agency's issuance of a decision or other determination before or in conjunction with the BLM's right-of-way decision. An example of this can be seen in the BLM's May 2013 Memorandum of Understanding with the Fish and Wildlife Service (FWS), where the BLM and FWS have established a protocol for the BLM to collect and then provide cost recovery funds to the FWS for Endangered Species Act and other work that the BLM determines is necessary for it to process right-of-way applications. A copy of the Secretarial Order and Memorandum of Understanding can be found at the following Web site: http://www.blm.gov/wo/st/en/info/regulations/Instruction_Memos_and_Bulletins/national_information/2013/IB_2013-074.html. No other comments were received, and no changes were made to this section of the final rule.

Section 2804.18 What provisions do Master Agreements contain and what are their limitations?

As defined in section 2804.18, a Master Agreement is a written agreement covering processing and monitoring fees negotiated between the BLM and a right-of-way applicant that involves multiple BLM rights-of-way for projects within a defined geographic area. New section 2804.18(a)(6) requires that a Master Agreement also describe existing agreements between the BLM and other Federal agencies for cost reimbursement. With the recent authority delegated by Secretarial Order 3327 to collect costs for other Federal agencies, it is important for the applicant, the BLM, and other Federal agencies to coordinate and maintain consistency for cost reimbursement. No additional comments were received, except for those discussed under section 2804.14, and no changes were made to this section in the final rule.

Section 2804.19 How will BLM process my processing Category 6 application?

Under section 2804.19(a), an applicant for a Category 6 application must enter into a written agreement with the BLM identifying how such applications will be processed. Under this final rule, the final agreement includes a description of any existing agreements the applicant has with other Federal agencies for cost reimbursement associated with the application. No comments were received for this section, and no changes were made from the proposed rule to this section of the final rule.

Under section 2804.19(e), the BLM may collect reimbursement to the United States for its reasonable costs for processing applications and preparation of other documents under this part relating to the public lands. Adding this language to these regulations clarifies the BLM's authority when collecting for other agencies. No additional comments were received, except for those discussed under section 2804.14 and no changes were made to this section of the final rule.

Section 2804.20 How does BLM determine reasonable costs for processing Category 6 or monitoring Category 6 applications?

Section 2804.20 is revised to clarify the scope of the BLM's cost recovery and how the BLM will determine reasonable costs of the United States when processing and monitoring Category 6 applications. In paragraph (a)(1) of this section, "BLM" is changed

to "the Federal Government," to make it clear that the BLM may collect cost recovery for other Federal agencies as well. Processing costs include reasonable costs for processing a right-of-way application, while monitoring costs include reasonable costs for those actions the Federal Government performs to ensure compliance with the terms, conditions, and stipulations of the right-of-way grant. As pre-application requirements are not included in this final rule, section 2804.20(a)(7) was deleted. No additional comments were received, except for those discussed under section 2804.14, and no other changes were made to this section of the final rule.

Section 2804.23 When will the BLM use a competitive process?

Section 2804.23 was previously titled "What if there are two or more competing applications for the same facility or system?" but is revised to read, "When will the BLM use a competitive process?" This change is necessary because, under the final rule, the BLM may use a competitive process even when there are not two competing applications.

Paragraph (a)(1) of this section now requires applicants to reimburse the Federal Government, as opposed to just the BLM, for processing costs, consistent with the cost recovery authority in Sections 304(b) and 504(g) of FLPMA. This means that the BLM could require applicants to reimburse the BLM for the costs incurred by other agencies, such as the U.S. Fish and Wildlife Service, in processing the application.

A new sentence in section 2804.23(c) gives the BLM authority to offer lands through a competitive process on its own initiative. Under the existing regulations, the BLM can use a competitive process only when there were two or more competing applications for a single right-of-way system. This change gives the BLM more flexibility to offer lands competitively, and applies to all potential rights-of-way, not just solar and wind energy development projects.

Throughout the proposed rule, the BLM required publication of a notice in the **Federal Register** as well as in a newspaper in general circulation in the area affected by the potential right-of-way. Publication in a newspaper is included in the final rule as one of the "other methods" of public notification that the BLM may use, but is no longer a requirement. The potential area affected by a proposed BLM action may not be covered by a single newspaper. As the BLM considers issues at a

broader scale, such as multi-state transmission lines, several communities may be affected by a single BLM action. The **Federal Register** is a national publication that is available to all interested parties. In addition, the BLM will make available a copy of all **Federal Register** notices on its Web site at www.blm.gov. The BLM may use a newspaper to notify the public on a case-by-case basis, as appropriate. The public notification methods throughout this final rule are revised consistent with this section.

Comments: Some comments expressed concern that the BLM may determine to hold a competitive offer after an applicant has substantially progressed in the processing of their non-competitive application for a right-of-way grant. These comments argued that this possibility would discourage developers from submitting a solar or wind energy right-of-way application.

Response: Proposed paragraph (c) of this section has been revised to state that a competitive process will not be held for public lands where a right-of-way application for solar or wind development has been accepted, including the POD and cost recovery agreement. Adding this criterion provides assurances to prospective applicants that the BLM will not competitively offer lands after considerable time and resources have been committed to processing a particular application.

Under section 2804.23(d), lands outside of DLAs are made available for solar or wind energy applications through the competitive process outlined in section 2804.30. This provision directs the reader to new section 2804.30, which explains the competitive process for solar and wind energy development outside of DLAs. This paragraph is necessary to differentiate between development inside and development outside of a DLA. No comments were received on this paragraph, and no changes are made from the proposed rule to the final rule.

Under section 2804.23(e), lands inside a DLA will now be offered competitively through the process described in subpart 2809. This new paragraph directs the reader to revised subpart 2809, which explains the competitive process for solar and wind energy development inside of DLAs. This paragraph is necessary to differentiate between development inside and outside of a DLA. No additional comments were received for this section, except for those discussed under paragraph (c), and no other

changes were made from the proposed to the final rule.

Section 2804.24 Do I always have to submit an application for a grant using Standard Form 299?

Section 2804.24, which is unchanged from the proposed rule, explains when you do not have to use Standard Form 299 (SF-299) to apply for a right-of-way. Under the existing rule, you do not have to use SF-299 if the BLM determines competition exists under section 2804.23(c). The BLM only determines competition exists when there are two or more competing applications for the same right-of-way facility or system.

Due to the changes made to section 2804.23, section 2804.24 specifies when

an SF-299 is required. Under both the existing regulations and this final rule, the BLM will implement a competitive process if there are two or more competing applications. Under section 2804.24(a), you do not have to submit a SF-299 if the BLM offers lands competitively and you have already submitted an application for that facility or system.

Under paragraph (a) of this section, if you have not submitted an application for that facility or system, you must submit an SF-299, as specified by the BLM. Under the competitive process for solar or wind energy in section 2804.30, for example, the successful bidder becomes the preferred applicant, and may apply for a grant. The preferred

applicant will be required to submit an SF-299, but unsuccessful bidders will not.

Paragraph (b) explains that an applicant does not have to use an SF-299 when the BLM is offering lands competitively under subpart 2809. Under subpart 2809, the BLM will offer lands competitively for solar and wind energy development inside DLAs. The successful bidder will be offered a lease if the requirements described in section 2809.15(d) are met. The successful bidder will not have to submit an application using SF-299. The following chart explains when the filing of an SF-299 is or is not required under this final rule:

WHEN A SF-299 IS REQUIRED

Type of solar or wind right-of-way	Would have to submit a SF 299?
Have two or more competing applications for the same area, outside of DLAs	Yes.
Lands are offered competitively outside of a DLA and you have already submitted an application for the parcel before the Notice of Competitive Offer.	No.
Lands are being offered competitively outside of a DLA and you have not submitted an application	Yes.
You are the successful bidder in a competitive offer outside of a DLA and have been declared the preferred applicant and may apply for a grant.	Yes.
Lands are being offered competitively within a DLA under subpart 2809	No.

No comments were received and, no other changes are made to this section of the final rule.

Section 2804.25 How will BLM process my application?

This section of the final rule has been modified from the proposed rule to reflect the shift of early BLM coordination from pre-application meetings, under section 2804.10, to preliminary application review meetings, under section 2804.12. These preliminary application review meetings are now required after the initial filing of a right-of-way application for solar or wind projects, or for electric transmission lines with a capacity of 100 kV or more.

Section 2804.25(a) of this final rule has been modified from the proposed rule to include a provision from current section 2804.25(b) that states the BLM will inform you of any other grant applications that involve any of the lands for which you have applied. This new provision has been added as paragraph (a)(2). Paragraph (a) has been reformatted providing an introductory statement and putting the existing requirement for identifying the processing fee as paragraph (a)(1). This is an existing provision of the regulations and is only added to this paragraph as part of formatting revisions

that are made in response to comments submitted concerning confusion with existing requirements of section 2804.25(b).

Comments: Some comments were received noting confusion over the proposed section 2804.25(b) and its requirements.

Response: This paragraph has been reformatted into two new separate paragraphs, (b) and (c).

New section 2804.25(b) contains existing regulatory requirements that were part of proposed section 2804.25(b). This paragraph helps explain the existing requirements found in section 2808.12 of the regulations. In paragraph (b), the BLM will not process your application if you have any trespass action pending for any activity on BLM-administered lands or have any unpaid debts owed to the Federal Government. If you have an outstanding trespass action, the BLM will only process your application, under part 2800 or part 2920, if it will resolve the underlying trespass. Similarly, if you have any debts outstanding, the BLM will only process your application after those outstanding debts are paid. The requirement in section 2808.12 is often overlooked by potential right-of-way applicants and this addition to the regulations would insert the requirement into the application process

and improve applicant understanding of the BLM's process under subpart 2804.

Comments: Some comments expressed concern with the clarity of this proposed section and were also unsure whether using an application for a right-of-way to resolve trespass was appropriate. Further, concern was raised over what constituted an unpaid debt to the Federal Government.

Response: In response to the comment about clarity, the BLM revised the language in paragraph (b) of this section, by adding paragraphs (b)(1) and (2), discussing when the BLM will not process an application.

Section 2804.25(b)(1) clarifies that the BLM will not process your application if you have an outstanding debt to the Federal Government and then describes what constitutes an outstanding debt to the government. An additional sentence was added to paragraph (b)(1) of this section, explaining that unpaid debts are what are owed to the Federal Government after all administrative collection actions have occurred, including administrative appeal proceedings under applicable Federal regulations and review under the Administrative Procedure Act (APA). Adding this provision to the regulations makes it clear to right-of-way holders and trespassers that the BLM will evaluate applications in this manner.

Paragraph (b)(2) of this section clarifies that if you are in trespass, the BLM will only process an application that would resolve that particular trespass. Reformatting this paragraph in this manner separates the concepts of unpaid debts and existing trespass situations as they pertain to new applications. Under this final rule, the BLM will not always issue a right-of-way to resolve a trespass. The BLM will consider the situation on a case-by-case basis and will evaluate whether the trespass was knowing and willful. The BLM will also consider whether issuing a right-of-way to resolve the trespass is appropriate. If a right-of-way is not an appropriate way to resolve a trespass, the BLM will consider other options for resolving a trespass, such as requiring its removal from public lands.

Section 2804.25(c) contains the requirements from section 2804.25(b) of the existing regulations, under which the BLM may require the submittal of a POD. The POD or other plans must be submitted to the BLM within the period specified by the BLM.

Under paragraph (c)(1) of this section, the BLM requires an applicant to commence resource surveys or studies within 1 year of receiving a request from the BLM. This requirement was identified in the preamble of the proposed rule and carried forward in this final rule. The requirement to begin the surveys or studies within 1 year of the request establishes a default period, which will apply if the BLM does not specify a different time period within which the survey or study must begin. The BLM may identify a different time period through written correspondence with applicants, or by other means, as appropriate. Generally, these surveys or studies will not require a permit from the BLM or any other agency. Proponents need only coordinate the work with the applicable agencies as appropriate. However, for some surveys or studies, there may be a permit that is necessary, such as when performing pedestrian archaeological surveys. In those instances, the BLM will work with applicants to ensure that the applicable permitting requirements are understood by all parties.

Under paragraph (c)(2) of this section, an applicant could request an alternative requirement to one of the requirements of this section, such as the period of time described in paragraph (c)(1) of this section. However, the applicant must show good cause why it is unable to meet the requirement. This new paragraph directs the reader to new section 2804.40, consistent with revisions made from comments received as discussed under section 2804.40, if

the applicant is unable to meet the requirements of this section. Failure to meet the 1 year requirement for application due diligence may result in denial of the application, unless an alternative compliance period has been requested and agreed to by the BLM. Paragraph (c)(2) of this section gives applicants the ability to address circumstances outside of their control with respect to time periods.

Comments: Some comments were received regarding due diligence requirements for applicants to begin resource studies or provide other such survey work to the BLM. Comments recommended varying timeframes for application due diligence ranging from 1 to 3 years after the BLM's approval of survey protocols or other identified study requirements. Comments generally agreed with implementing such requirements for applications.

Response: In consideration of the comments received on application due diligence requirements, the BLM determined that a longer timeframe would not be appropriate. Under this final rule, an applicant would be required to begin surveys or inventories within a year of the BLM's request date, unless otherwise specified by the BLM. The BLM determined that a one year default timeframe was adequate to commence surveys and inventories. This rule does, however, leave the BLM with the discretion to establish a different timeframe where appropriate.

Section 2804.25(c) of the existing regulations is redesignated as paragraph (d) of this section. It remains unchanged and is relocated to make room for the reformatting of this section in response to comments submitted on the proposed rule.

The introductory text of section 2804.25(e), which is redesignated from existing paragraph (d), is revised by replacing the words "before issuing a grant" with "in processing an application." This change is made to account for the situation where the BLM would issue a grant without accepting applications. For example, lands leased inside DLAs will be offered through a competitive bidding process under subpart 2809 in situations where no applications for those lands are received. The provisions in section 2804.25 do not apply to the leases issued under subpart 2809. However, they will apply to all other rights-of-way, including solar and wind energy development grants outside of DLAs. The process for issuing leases inside DLAs is discussed in subpart 2809. This revision clarifies that the requirements of this section apply to applications.

Section 2804.25(e) is further revised to incorporate new provisions for all rights-of-way as well as specific provisions for solar and wind energy development. Existing section 2804.25(d)(5), which provides the requirement to hold a public meeting if there is sufficient public interest, is moved to section 2804.25(e)(1). Revisions are made in this final rule, consistent with those made in section 2804.23(c). Language is added specifying that a public notice may also be provided by other methods, such as publication in a newspaper in the area affected by the potential right-of-way or the Internet.

Section 2804.25(e)(2) contains three separate requirements for solar and wind energy development applications. Under section 2804.25(e)(2)(i), the BLM will hold a public meeting in the vicinity of the lands affected by the potential right-of-way for all solar or wind energy development applications. Based on the BLM's experience, most solar and wind energy development projects are large-scale projects that draw a high level of public interest. This requirement is added to provide an opportunity for public involvement early in the process. Under paragraph (e)(2)(ii), the BLM will apply screening criteria when processing an application outside of DLAs. These screening criteria are explained further in section 2804.35. The BLM removed the word "priority" from this requirement to improve reader understanding that the screening criteria are used to determine the priority of applications, not "resource priorities."

Under section 2804.25(e)(2)(iii), the BLM will evaluate an application, based on the input it has received from other government and tribal entities, as well as information received in the application, public meetings, and preliminary application review meetings. The BLM may consider information it has received outside of these meetings when evaluating an application. This paragraph is revised in the final rule to remove reference to pre-application meetings and add preliminary application review meeting requirements, consistent with other changes in this final rule. The BLM has also added more detail to this paragraph explaining why it may deny an application at this point in the process. For example, the BLM may deny an application if you fail to address known resource values raised during preliminary application review (see section 2804.12(c)(4)), or during public meetings (see section 2804.25(e)(2)(i)), or if you improperly site the project. The BLM made this revision to help

improve the public's understanding of this process.

Based on its evaluation of an application, the BLM will either deny or continue processing it. The BLM's denial of an application will be in writing and is an appealable decision under section 2801.10. The denial or approval of all grant applications is at the BLM's discretion.

As noted previously under section 2804.12, you must submit an application for a solar or wind energy development. Requirements for submitting this application are noted in section 2804.25(b) and (c), and these must be fulfilled before an application is ready to be evaluated by the BLM. Section 2804.25(e)(2)(iii) has been revised to explain what criteria must be met in order for the BLM to continue processing your application. These criteria are: Whether the development application is appropriately sited on the public lands (*e.g.* outside of DLAs—where leasing must proceed under Section 2809 rather than 2804—and outside of exclusion areas), and whether you address known resource values that were discussed in the preliminary application review meetings. Known resource values must also be addressed in general project descriptions and in further detail in a project's POD.

Under section 2804.25(e)(3), the BLM will determine whether the POD schedule submitted with an application meets the applicable development schedule and other requirements or whether an applicant must provide additional information. This is a necessary step that allows the BLM to evaluate the application requirements under section 2804.12. Those requirements can be found in section 2804.12(b) and (c). The BLM determines if the development schedule and other requirements of the POD templates have been met. The POD templates can be found at <http://www.blm.gov>.

Under the proposed rule, paragraph (e)(3) of this section applied to applications for solar and wind energy development, transmission lines with a capacity of 100 kV or more, and pipelines 10 inches or greater in diameter. Under this final rule, this paragraph would apply to all applications for which a POD is required. Although a POD is mandatory for some types of projects, the BLM may require an applicant to submit a POD with any type of right-of-way application under section 2804.25(c) of this final rule (section 2804.25(b) of the existing regulations). Should the BLM require an applicant to submit a POD, the application would be evaluated under this paragraph based on the POD

schedule submitted with the application.

Section 2804.25(e)(4) of this final rule is revised from the proposed rule to include a cross-reference to the Department's NEPA implementation regulations at 43 CFR part 46. The Departmental regulations reinforce the CEQ's regulations and the requirements to comply with NEPA. This cross-reference is made to increase the public's awareness of these requirements and where they may be found, but does not impose any additional requirements on the public.

Redesignated paragraphs (e)(5), (6), (7), and (8) of this section are existing provisions that were formerly found in paragraph (d) of this section. Former paragraph (e) is redesignated as new paragraph (f). No other comments were received or other changes made to the final rule, except that references to the "U.S." were changed to read "United States."

Section 2804.26 Under what circumstances may BLM deny my application?

Section 2804.26 explains the circumstances in which the BLM may deny an application. The BLM considers the criteria outlined in this section during its decision-making process, which for right-of-way authorizations ends with the issuance of a decision—either a ROD or a Decision Record (DR), or in the absence of a ROD or DR, the perfection of a right-of-way instrument or the issuance of a written decision denying the right-of-way application. Once the BLM issues a ROD or DR to approve a right-of-way, any subsequent BLM determination that is inconsistent with that ROD or DR, including any decision to suspend or terminate the right-of-way, is a separate action that requires the BLM to complete a separate decision-making process.

Section 2804.26(a)(5) explains one such circumstance. This provision of the existing regulations is revised to include "or operation of facilities" and now reads, "when an applicant does not have or cannot demonstrate the technical or financial capability to construct the project or operate facilities in the proposed right-of-way." The rule adds text to clarify this requirement, which applies to all rights-of-way. The added paragraphs explain how an applicant could provide evidence of the financial and technical capability to be able to construct, operate, maintain, and decommission a solar or wind energy development project. The applicant may provide documented evidence showing prior successful experience in developing similar projects, provide

information of sufficient capitalization to carry out development, or provide documentation of loan guarantees, a confirmed PPA, or contracts for the manufacture and/or supply of key components for solar or wind energy project facilities.

Paragraphs (a)(6), (7), and (8) are added to section 2804.26 to reiterate the new requirements of the final rule and explain that the BLM may deny an application should an applicant not comply with these provisions.

Under section 2804.26(a)(6), the BLM may deny your application if you do not meet the POD submittal requirements under section 2804.12(a)(8) and (c)(1) and 2804.25(e)(3). The final rule is updated to ensure that the citations match the reformatted rule, after changes were made based upon comments received.

Paragraph (a)(7) of section 2804.26 is a new paragraph added to the final rule that corresponds to the provisions by which the BLM will require surveys under section 2804.25(c). Under section 2804.26(a)(7), the BLM may deny your application if you fail to meet its requirements to commence surveys and studies, or provide plans for permit processing as required by section 2804.25(c). This paragraph is new in the final rule and is added to be consistent with the new requirements in section 2804.25(c), which are added based upon public comment.

Section 2804.26(a)(8) references the possible application denial based on the screening criteria established in section 2804.25(e)(2)(iii).

Comments: Some comments expressed concern regarding the BLM exercising its authority to deny an application without accounting for the fact that some circumstances may be outside an applicant's control.

Response: In response to this generalized concern, the BLM added section 2804.40 to this final rule. Under this new section, an applicant may request an alternative requirement in place of a requirement that they are unable to meet. References are made to this new section in specific parts of the application processing requirements found under subpart 2804.

No other changes were made to this section and no other comments were received.

Section 2804.27 What fees must I pay if BLM denies my application or if I withdraw my application?

The heading of section 2804.27, "What fees do I owe if BLM denies my application or if I withdraw my application?" is revised to read, "What fees must I pay if BLM denies my

application or if I withdraw my application?”. With the addition of application filing fees, the revised title more clearly describes the requirements of the final rule. A new provision in this paragraph provides that if the BLM denies your application, or if you withdraw it, you must still pay any application filing fees submitted or due under section 2804.12(c)(2), and the processing fee set forth at section 2804.14. Sections 304(b) and 504(g) of FLPMA provide for the deposit of payments to reimburse the United States for reasonable costs with respect to right-of-way applications and other documents relating to the public lands. In the case of preliminary application review meetings, the expense could be considerable, depending on the complexity of the project. The BLM will refund any part of the application filing fees received that is not used for processing the application. This paragraph is revised by removing references to pre-application meetings that were originally proposed for the rule, but not carried forward in the final rule. These revisions are consistent with other changes made in the final rule under section 2804.12 regarding the change from pre-application to preliminary application review meetings. No other comments were received on this section, and no other changes were made to the final rule.

Section 2804.30 What is the competitive process for solar or wind development for lands outside of designated leasing areas?

Section 2804.30 explains the process for the BLM to competitively offer lands outside of DLAs. This bidding process is similar to that established in subpart 2809 (competitive offers inside DLAs), except that the end result of the bidding is different. Under paragraph (f) of this section, the successful bidder will become the preferred right-of-way applicant. Under this section, the high bidder is not guaranteed a grant, but is identified as the “preferred applicant.” As explained under paragraph (g) of this section, the preferred applicant is the only party that may submit an application for the parcel identified by the BLM, but the BLM must still review and accept the application. This is different from subpart 2809, which provides that the successful bidder for a lease inside a DLA may be offered a lease upon successfully meeting all requirements of section 2809.15.

Comments: Three general comments were received on this section. The first comment requested that language be added to encourage additional consultation with members of the

public, such as developers, non-governmental organizations, and stakeholders, during the competitive process outside of DLAs.

Response: Many opportunities for public engagement are provided throughout the competitive process for right-of-way applications filed on public lands outside of DLAs. As part of the competitive processes outside of DLAs, the BLM may engage the public through a notice seeking competitive interest in a particular area, which would provide the public and interested stakeholders with an opportunity to comment on the potential development of a particular parcel. If the BLM decides to move forward with a competitive offer for a parcel, a Notice will be published in the **Federal Register** and may also be announced through other means. Upon the completion of the competitive process, the BLM will process an application for the solar or wind energy development, following the requirements of this final rule, which include a mandatory public meeting before the BLM determines whether to deny the application or continue processing it. If the BLM continues to review an application, there may be additional opportunities for public involvement through the NEPA process, including during the notice and comment period. As a result of these measures, the BLM believes that there is adequate opportunity for the public to be fully engaged throughout the competitive process, application review, and NEPA processes for projects outside of DLAs.

Comments: The second comment on this section stated that only developers are capable of making a determination of whether development in a particular area will be economically sound and, therefore, a worthwhile pursuit for public land use. The comment contended that developers will not expend the effort necessary to determine the economic suitability for projects before a competitive process is held (either inside or outside areas such as DLAs).

Response: While the BLM agrees that only a developer can determine whether a particular project in a particular area makes sense for them, that determination does not necessarily apply to all developers, nor is it the only consideration relevant to the BLM. Each developer may follow a different business model and may consider different funding, financing, and procurement opportunities when assessing a potential project site. In identifying DLAs, the BLM has to consider the environmental and other resource impacts of a potential

development, in addition to the known solar or wind potential for the area. For these reasons, the BLM does not make an economic evaluation when identifying an area for a competitive process. The BLM will rely on developer interest, among other indications of competitive interest in an area, to determine whether utilization of a competitive process is appropriate. Recognizing that determining economic viability for a particular area may involve site-specific testing information, the final rule contains provisions allowing for such activities. For wind or solar energy projects outside of a DLA, interested developers can apply for testing authorizations as described in section 2804.31 of this rule, or apply for a testing authorization inside DLAs prior to a competitive action as described in section 2809.19(d) of this rule.

Comments: The third comment on this section suggested that the leasing process should be restructured from a local “electric-centric” focus to a macro-level objective to provide the greatest benefit to “We the People.” This comment suggests that the BLM should explicitly recognize that the available solar and wind resources could be used to provide most of, and potentially all of, the United States’ fuel, electricity, transportation, and natural resource needs.

Response: FLPMA directs the BLM to generally receive fair market value for the use of public lands and to utilize and protect public land resources while balancing the use of the public lands for current and future generations. The BLM intends for this rule to promote the development of solar and wind energy on public lands, while also ensuring a fair return to the Federal Government.

Paragraph (a) of section 2804.30 identifies lands available for competitive lease; paragraph (b) of this section explains the variety of competitive procedure options available; and paragraph (c) explains how the BLM identifies parcels for competitive offers. Under this final rule, the BLM may identify a parcel for competitive offer if competition exists or the BLM elects to offer a parcel on its own initiative. The BLM may include lands in a competitive offer in response to interest from the public or industry, or to facilitate an individual State’s renewable energy goals. This is a change from existing regulations, which only allow the BLM to use a competitive process when there are two competing applications; however, the changes made to section 2804.23(c) in this rule give the BLM more flexibility.

Paragraph (d) of this section, "Notice of competitive offer," establishes the content of the materials of a notice of competitive offer that include the date, time, and location (if any) of the competitive offer, bidding procedures, qualifications of potential bidders, and the minimum bid required. The notice also explains that the successful bidder becomes the preferred applicant, which can then apply for a grant under this subpart. This is different from the competitive offers held under subpart 2809, where the successful bidder is offered a lease.

Paragraph (d)(4) of this section requires that the notice identify the minimum bid amount, explain how the authorized officer determined the minimum bid amount, and describe the administrative costs borne by the Federal agencies involved. As indicated in the general discussion section of this preamble, administrative costs are not a component of fair market value, but instead are a cost reimbursement paid to the Federal Government for its expenses. The BLM will publish a notice containing all of the identified elements in the **Federal Register**, and may also use other notification methods, including newspapers in the affected area or the internet. Consistent with sections 2804.23(c), this section's public notice requirements were revised, establishing notice through a newspaper or internet as an additional optional form of notice. This change in the final rule is discussed further in section 2804.23(c) of this preamble. No comments were received on section 2804.30(a) through (d). However, a cross-reference has been updated in section 2804.30(d)(6) to include section 2804.12, due to revisions made to that section based upon comments received.

Under paragraph (e) of this section, the BLM requires that bid submissions include both the minimum bid amount and at least 20 percent of the bonus bid. The minimum bid consists of administrative costs and an amount determined by the authorized officer. Included in the administrative costs are those expenses pertaining to the development of environmental analyses and those costs to the Federal Government associated with holding the competitive offer.

The authorized officer may specifically identify a second component for the minimum bid(s) submitted for each competitive offer. This amount will be based on the known or potential values of the offered parcel. The authorized officer may consider values that include, but are not limited to, the acreage rent, the MW capacity fee, or other known or potential

values of the parcel. For example, the BLM may use a percentage of the acreage rent value for the parcel competitively offered. An explanation of the minimum bid amount and how the BLM derived it will be provided in the notice of competitive offer.

Comments: Several comments were received pertaining to bidding under section 2804.30(e). One comment suggested that the BLM: (1) Establish global objectives to evaluate bids based on the constitutional greater good for the "People" to meet many objectives of the renewable energy bidding process; (2) Ensure that successful bidders use energy to meet public objectives; (3) Ensure that appropriate values are received for the right to develop energy; (4) Ensure that evaluations of electrical supply include the full costs and benefits to the public; (5) Ensure that effects from manmade impacts on global warming shall be based on transient climate sensitivity; and (6) Focus on "We the People" instead of creating processes that incur higher costs for developments.

Response: The comments submitted are suggesting revisions to the final rule that are outside of the BLM's authority to consider. FLPMA directs the BLM to generally receive fair market value for the use of public lands and to utilize and protect public land resources while balancing the use of the public lands for current and future generations. The provisions of this final rule will ensure that the BLM is receiving fair market value for the uses of the public lands that it authorizes.

The second comment suggested that the BLM direct where or how renewable energy that is generated on public lands is deployed. The BLM could place a requirement on the use of the electricity generated, through a term or condition of a right-of-way, but the BLM expects that it would do so only in limited circumstances, if at all, as it is a land management agency charged with managing the public lands under principles of multiple use and sustained yield.

The BLM evaluates proposed projects before issuing a decision to approve, approve with modifications, or deny a project. In general, the BLM will analyze a project using reasonable scientific or other methods, to understand the impacts to the public lands and other lands, uses, resources and other systems outside of its authority to control. These other lands, uses, resources, and other systems outside of the BLM's authority to control could include electrical transmission systems that may be owned or controlled by an Independent System Operator, or the energy needs of

a State or local community as identified by the State government offices, or lands administered by a Federal, State, or private entity. When evaluating prospective projects, the BLM considers their reasonably foreseeable direct, indirect, and cumulative impact on climate change on a local, regional, and national scale, as appropriate.

Comment: Another comment suggested that administrative costs discussed under section 2804.30(e)(2)(i) should not be included as part of the minimum bid. The initial costs of preparing for and holding a competitive offer are completed at the volition of the BLM, not an applicant. The comment suggested that including administrative costs as part of the minimum bid will discourage development inside and outside of DLAs. The comment suggested that a successful bidder should essentially pay for the same administrative and NEPA costs as noncompetitive applicants for right-of-ways outside of DLAs.

Response: Under the final rule, reimbursement for the reasonable administrative and other costs is generally required from any successful bidder. Consistent with Sections 304(b) and 504(g) of FLPMA, the BLM may recover reasonable administrative and other costs incurred in processing an application for a right-of-way. Administrative and other costs associated with the use of a competitive process to identify a preferred applicant can be recovered because this work facilitates, and will generally be essential to, the BLM's review of a right-of-way application. These costs would be paid only by the preferred applicant. Bidders will be given notice of the administrative costs portion of the minimum bid prior to their bidding at a competitive offer. The BLM believes that it is preferable for a prospective bidder to know these costs, which are required to prepare and hold a competitive auction, before submitting a bid in a competitive offer. Prospective applicants would not otherwise be able to submit an application to the BLM for development of that area without first being the successful bidder. The BLM considers the competitive process described in subpart 2809 for lands inside a DLA to be even more preferable to prospective developers, as a successful bidder would be issued a lease immediately upon paying the full amount of their winning bid.

Comments: Comments stated that the mitigation costs identified in section 2804.30(e)(2)(ii) should not be factored into the minimum bid because the successful bidder should have to pay separately for mitigation if and when

construction commences and not at the time of bidding. A successful bidder cannot pay twice for the same mitigation. Several other comments also addressed what should or should not be included as acceptable factors.

Response: The BLM has removed the reference to mitigation costs found in proposed section 2804.30(e)(2)(ii), as this may be misleading and open to interpretation. However, the BLM has maintained the acreage rent and the megawatt capacity fee as considerations when determining a minimum bid amount. These factors which are used only to determine the amount above the administrative costs where bidding will start (see section 2804.30(e)(2)(ii)). Their inclusion as a potential consideration in the development of the minimum bid does not count towards other obligations. For example, if the BLM arrives at a minimum bid amount using the annual acreage rent for a lease area, a successful bidder will still be required to pay the first year's acreage rent, as identified in this rule, before being awarded a grant or lease. No offset or discount toward future acreage rent will be provided.

Comments: A number of comments expressed concern that requiring unsuccessful bidders to pay application filing fees would discourage prospective developers. They suggested that application filing fees should be refundable if a bidder is not successful.

Response: New section 2804.30(e)(4) has been revised based on these comments to refund application filing fees for unsuccessful bidders, except for the reasonable costs incurred by the United States. This change is consistent with the revisions under section 2804.12(c)(2) and discussed further under that section of this preamble.

Under section 2804.30(f), the successful bidder is determined by their submission of the highest total bid for a parcel at a competitive offer. The successful bidder must fulfill the payment requirements of the successful bid in order to become the preferred right-of-way applicant. The preferred applicant must submit the balance of the bid to the BLM within 15 calendar days after the end of the competitive offer. No comments were received pertaining to section 2804.30(f), and no other changes are made from the proposed rule to the final rule.

Under section 2804.30(g), a preferred applicant is the only party who may submit an application for the parcel that is offered. Unlike the process under subpart 2809, the approval of a grant under this paragraph is not guaranteed to a successful bidder. Approval of a grant is solely at the BLM's discretion.

The preferred applicant may also apply for an energy project-area or site-specific testing grant.

Comments: A comment suggested adding a new provision to the rule stating that upon making a winning bid, the preferred applicant also secures site control. Adding such a condition would provide more certainty to the process for prospective developers, further incentivizing the competitive bidding.

Response: The BLM agrees with this comment and has revised paragraph (g) to make it clear that the BLM will not accept applications on lands where a preferred applicant has been identified, unless submitted or allowed by the preferred applicant in order to provide additional certainty with respect to site control. If ancillary facilities for projects or facilities on adjacent parcels, such as roads or transmission lines, need to be constructed on the parcel where a preferred applicant's project would be sited, the companies constructing the ancillary facilities would need to apply to the BLM for a right-of-way, and the BLM would consult with the preferred applicant before processing any such application. This is intended to provide certainty to the preferred applicant when applying for renewable energy developments on the public lands that applications from other entities will not be accepted for the competitively gained application area unless they are allowed by the preferred applicant.

Section 2804.30(h) describes how the BLM will address certain situations that could arise from a competitive offer. Under paragraph (h)(1) of this section, the BLM retains discretion to reject bids, regardless of the amount offered. For example, the BLM may reject a bid if there is evidence of conflicts of interest or collusion among bidders or if there is new information regarding potential environmental conflicts. The BLM will notify the bidder of the reason for the rejection and what refunds are available. If the BLM rejects a bid, the bidder may administratively appeal that decision (see 43 CFR part 4 for details). Under paragraph (h)(2) of this section, the BLM may make the next highest bidder the preferred applicant if the first successful bidder does not satisfy the requirements under section 2804.30(f). This allows the BLM to determine a preferred applicant without reoffering the land and could save time and money for the BLM and potential applicants.

The BLM may reoffer lands competitively under section 2804.30(h)(3) if the BLM cannot identify a successful bidder. If there is a tie, this re-offer could either be limited to tied bidders or include all bidders. This provides the BLM with flexibility to

resolve ties and other issues that could arise during a competitive offer process.

Under section 2804.30(h)(4), if the BLM receives no bids, the BLM may reoffer the lands through the competitive process provided for in section 2804.30. The BLM may also make the lands available through the non-competitive process described in subparts 2803, 2804, and 2805, if doing so is determined to be in the public interest. No other comments were received, and no additional changes were made to final paragraph (h) of this section, except those discussed above.

Section 2804.31 How will the BLM call for site testing for solar or wind energy applications?

This section, which was not in the proposed rule, is added to this final rule to describe how the BLM will call for site testing for solar and wind energy. This section also explains how the BLM may create a new DLA, through the land use planning process described in new section 2802.11, in response to public interest.

Under new paragraph (a) of this section, the BLM may call for site testing in a DLA by publishing a notice in the **Federal Register** and may also use other notification methods, such as a local newspaper or the Internet. Paragraph (a) also specifies what information will be included in any public notice issued under the section, including the following information: (1) The date, time, and location where site testing applications may be sent; (2) The date by which applicants will be notified of the BLM's decision on timely submitted site testing applications; (3) The legal land description of the area for which site testing applications are being requested; and (4) Qualification requirements for applicants. The BLM is limiting the testing authorizations that would be offered under a call for site testing applications under this section to site-specific grants identified under section 2801.9(d)(1). This limitation is established to reduce the potential for multiple interested parties having overlapping applications. The BLM does not intend to use a competitive process for the site testing. Rather, the BLM intends to determine whether there is competitive interest for solar and wind energy development for these public lands. Should there be overlapping testing applications, the BLM will notify those applicants of the overlap and may hold a competitive offer for that site testing location to determine a preferred applicant.

Paragraph (b) of this section explains that any interested parties may request that the BLM hold a call for site testing

for certain public lands. However, how the BLM responds to those requests is at its sole discretion. The “call for site testing” may be used as a step in the process for lands either inside or outside of DLAs. A subsequent step would be the competitive offer for an application for a development grant under section 2804.30, or for a development lease under subpart 2809, if the area is designated as a leasing area, as described in section 2804.31(c).

Under paragraph (c) of this section, the BLM may determine that areas receiving interest from the public may be appropriate to establish as a DLA. The BLM may turn an area surrounding the site testing into a DLA as described under section 2802.11. Following the designation of an area for competitive leasing, the rules described under subpart 2809 would be used for any subsequent competitive processes in the area. Establishing such an area would be performed by following the land use planning process described in the revised section 2802.11. This process would be completed during the time that testing is being undertaken, which is typically a 3 year process. Designating such an area would allow interested developers to benefit from the incentives provided by development in a DLA. This approach also provides a mechanism for public interest to drive the establishment of DLAs.

Comments: Some comments suggested that the BLM retain the discretion to structure the DLA leasing process for wind in accordance with a two-phased development approach. The first phase of this approach would be a competitive process for site testing. The winner of this offer would receive exclusive rights to the parcel offered. The BLM would then create a DLA in the area where this competitive offer was held. The second phase would be a competitive offer for a lease in this newly established DLA.

Response: The BLM recognizes that potential developers should have a clear avenue for helping the BLM identify new DLAs. The BLM added the new section 2804.31 to this final rule in direct response to these comments. This new section provides another way for developers to identify and benefit from the competitive process and DLA incentives established in subpart 2809 of this final rule. Providing a mechanism for site testing while DLA designation is ongoing will allow developers to benefit from the specific data they obtain during testing as they evaluate whether a competitive offer or further development of the lands is in their interest.

Section 2804.35 How will the BLM prioritize my solar or wind energy application?

Section 2804.35 explains how the BLM will prioritize review of an application for a solar or wind energy development right-of-way based on the screening criteria for projects outside of DLAs. The BLM will evaluate such applications based on the screening criteria in that section and categorize the application as high, medium, or low priority.

Through existing guidance, the BLM has established screening criteria (see Instruction Memorandum (IM) 2011–061), which identify and prioritize land use for solar and wind energy development rights-of-way. In order to facilitate environmentally responsible development the IM directs BLM to consider resource conflicts, applicable land use plans, and other statutory and regulatory criteria pertinent to the applications and the lands in question. Applications with lesser resource conflicts are anticipated to be less costly and time-consuming for the BLM to process, and the IM directs that these applications be prioritized over those with greater resource conflicts. IM 2011–061 may be found at http://www.blm.gov/wo/st/en/prog/energy/renewable_energy.html.

This rule includes criteria similar to those in the IM. The codification of these criteria gives certainty to applicants that such criteria will not change, and therefore provides more certainty as to how an application might be categorized. By specifying these criteria, applications could be tailored to fit them in order to streamline the processing of an application.

Comment: One comment indicated that the BLM should clarify the proposed rule’s application prioritization concept. This comment indicated that the proposed rule left several questions unanswered, including: (1) How the BLM’s staff time will be allocated within field staff among projects based on priority and time of submission; (2) Whether BLM staff working on a medium-conflict priority project will shift focus if a high-priority application is submitted; and (3) Whether BLM staff workload will be shifted across different field offices if certain field offices have a disproportionate number of high-priority applications as compared to others, which may have more medium- or low-priority applications.

Response: This final rule provides the criteria that the BLM will use to prioritize applications it receives. This allows potential applicants to

understand not only how these applications will be prioritized, but also how they can submit an application that is more likely to become a high priority for the BLM. The BLM’s internal management and workload processes are not addressed as that is not appropriate for a rulemaking. The criteria for determining how workload priorities are addressed are more appropriately handled by the policy guidance for implementing this final rule. Such guidance will elaborate on these points. It should be noted that the BLM will continue to process all applications received, but will prioritize staff workload based upon these priority categorizations.

Comments: Comments were received requesting clarity over whether leases awarded under subpart 2809 would be given priority over applications made outside of DLAs.

Response: New language has been added to the introductory paragraph of this section to clarify that the BLM generally prioritizes the processing of leases awarded under subpart 2809 over applications submitted under subpart 2804. There are some instances where the BLM may determine that it is in the public interest to prioritize the processing of an application over the processing of a lease. However, the BLM generally intends to prioritize the processing of leases first.

Comments: Comments were received requesting that the BLM expand on the criteria used in the rule and better define and describe the resource areas and potential conflicts. Some specific recommendations were made by the commenters. Each comment provided a greater level of specificity or detail than the proposed rule regarding how the BLM should prioritize resource conflicts.

Response: The descriptions of the resource conflicts in the final rule are mostly unchanged, except where noted in this section’s discussion. The BLM determined that the level of specificity and detail recommended by commenters is not appropriate for this final rule. Screening applications to prioritize them has only been done by the BLM recently. Based upon the BLM’s experience, it is better to establish broader criteria in this final rule that can then be further refined in its internal guidance. National priorities change and BLM continues to learn more about the resource conflicts associated with solar and wind energy projects. Therefore, the BLM believes that the specific internal guidance, rather than regulatory criteria, is more appropriate to provide a greater level of specificity and detail as recommended

by commenters. This approach gives the BLM flexibility to make changes as workload or conditions on the ground or in the wind and solar industry change. Guidance may need to be updated as national priorities change and the BLM better understands these resource conflicts with solar and wind energy projects. As part of the rule's implementation, the BLM will issue guidance aimed at better describing the BLM's considerations and prioritization of applications. This guidance is expected to be issued after this final rule is published.

Section 2804.35(a) identifies criteria for high-priority applications, which are given processing priority over medium- and low-priority applications. These criteria include:

1. Lands specifically identified as appropriate for solar or wind energy development outside DLAs;
2. Previously disturbed sites or areas adjacent to previously disturbed or developed sites;
3. Lands currently designated as Visual Resource Management (VRM) Class IV; and
4. Lands identified as suitable for disposal in the BLM's land use plans.

The BLM may have identified lands that are appropriate for solar or wind energy development, but are not inside DLAs. These lands may include areas approved for solar or wind area development for which a right-of-way was never issued or an existing right-of-way was relinquished.

The VRM inventory process is a means to determine visual resource values. The VRM inventory consists of a scenic quality evaluation, sensitivity level analysis, and a delineation of distance zones. Based on these three factors, BLM-administered lands are placed into one of four VRM classes, with Classes I and II being the most valued, Class III representing a moderate value, and Class IV being of least value. The BLM assigns VRM classes through the land use planning process, and these values can range from areas having few scenic qualities to areas with exceptional scenic quality.

Section 2804.35(b) identifies criteria for medium-priority applications, which will be considered before low-priority applications. These criteria include:

1. BLM special management areas that provide for limited development or where a project may adversely affect lands having value for conservation purposes, such as historical, cultural, or other similar values;
2. Areas where a project may adversely affect conservation lands to include lands with wilderness characteristics that have been identified

in an updated wilderness characteristics inventory;

3. Right-of-way avoidance areas;
4. Areas where a project may adversely affect resources listed nationally;
5. Sensitive plant or animal habitat areas;
6. Lands designated as VRM Class III;
7. Department of Defense (DOD) operating areas with land use or operational mission conflicts; and
8. Projects with proposed groundwater uses within groundwater basins that have been allocated by State water resource agencies.

Comment: One comment suggested for Criterion 5, that BLM's designated priority sage-grouse areas be a low priority and not a medium priority.

Response: The BLM removed the reference to sage-grouse habitat in this final rule. In September 2015, the BLM issued the Greater Sage-Grouse Plan Amendments and Revisions (80 FR 57633, 80 FR 57639). Those plans generally excluded priority habitat areas from major right-of-way developments, including wind energy. General sage-grouse habitat management areas generally fall into the medium-priority application category under Criterion 5.

With the removal of priority sage-grouse habitat from this final rule in criterion 5, the BLM also revised the specificity of "important eagle use areas" to read as "important species use areas." This revision makes the criterion more broad and applicable to all important species areas, and does not unintentionally exclude other identified important species areas that are not specifically identified for eagles.

Comments: Several comments were made concerning the above factors. For Criterion 2, a comment recommended revising the description of "conservation lands" and excluding Alaska from this requirement.

Response: The final rule does not revise the section 2804.35(b)(2) as recommended in the comment. This final rule does not define "conservation lands," which include areas of critical environmental concern and lands inventoried and managed for wilderness characteristics. These lands are often identified for their unique characteristics by the BLM to protect scenic, historic, cultural, and other natural values. The status of conservation lands is considered by the BLM when processing solar and wind energy applications. When the BLM considers such lands for wind or solar use, it evaluates the impacts and effects to the resources, including those resources for which conservation lands are designated. Depending on the

proposed development, the impacts to the resources for which the lands were designated for conservation purposes may be very small. Applications, such as those submitted for lands in Alaska, will be reviewed on a case-by-case basis.

Comment: Another comment suggested that Criterion 7 be moved to low priority and changed to read "Areas where the Department of Defense has testing, training, or operational mission impacts."

Response: The BLM considered the suggestion, but did not revise the rule as suggested. The BLM kept this requirement largely unchanged because the DOD has overlapping interest in some locations with the BLM lands—e.g., withdrawn lands that are transferred to the DOD or have an aerial easement—where solar and wind energy development does not pose significant adverse impacts to the DOD operations. However, we did revise criterion number 7 to read as follows

"Department of Defense operating areas with land use or operational mission conflicts." The BLM will coordinate with the DOD on solar and wind energy applications submitted to the BLM that may affect DOD operations.

Section 2804.35(c) identifies criteria for low priority applications, which may not be feasible to authorize due to a high potential for conflict. Examples of applications that may be assigned low priority would involve:

1. Lands near or adjacent to areas specifically designated by the Congress, the President, or the Secretary for the conservation of resource values;
2. Lands near or adjacent to wild, scenic, and recreational river and river segments determined as suitable for wild or scenic river status, if project development may have significant adverse effects on sensitive viewsheds, resources, and values;
3. Lands designated as critical habitat for federally designated threatened or endangered species under the ESA;
4. Lands currently designated as VRM Class I or II;
5. Right-of-way exclusion areas;
6. Lands currently designated as no surface occupancy areas; and

Comment: One comment recommended that applications within lands under Criterion 2 not be considered a low priority. This comment further suggested that an additional criterion be added that would read as "Nothing in this section creates a protective perimeter or buffer zone around the special status conservation lands specified in Sections 2804.35(c)(1) and 2804.35(c)(2). The fact that a proposed activity or use on BLM-administered lands outside such special

status conservation lands can be seen or heard within such special status conservation lands shall not accord an application low-priority status even if the use or activity is prohibited within the special status conservation lands.”

Response: Nothing in this criterion creates a protective perimeter or buffer zone around the areas described in this section and, therefore, precludes the BLM’s approval of an application that is near or adjacent to such areas. In the BLM’s experience, solar and wind energy development applications are complex and difficult to analyze. If a proposed right-of-way would affect such areas, the BLM will consider effects when processing the application. Potential impacts to these areas and their resources may prove unacceptable, even after mitigation.

The BLM also revised criterion 3 of this section from the proposed to final rule, from “is likely to” to “may” “. . . result in the destruction or adverse modification of that critical habitat.” This revision is necessary because it is difficult to determine based on an application what impacts are “likely.” However, it is the BLM’s responsibility to protect critical habitat. Therefore, any application that may destroy or adversely affect critical habitat will be a categorized as low priority under this final rule.

The low priority status of applications meeting these criteria relates only to the BLM’s management of its workload in processing applications; it is not a proxy for the BLM’s final decision. No other comments were received, nor were any changes made to section 2804.35.

Section 2804.40 Alternative Requirements

Section 2804.40 is added to this final rule in response to comments received on the proposed rule.

Comments: Several comments expressed concern that the BLM’s proposed requirements were too strict and would be difficult to meet, resulting in applications being denied or a holder’s authorization being terminated. They supported the BLM’s reference to a showing of good cause to support why a developer was unable to meet the BLM’s requirement.

Response: The BLM has added this section to the final rule due to the number of comments received discussing the BLM’s requirements that had no specific provision allowing a developer to show good cause why an alternative to a regulatory requirement should be approved.

Section 2804.40 expands on the BLM’s show of good cause provision that was in the proposed rule with

several different new requirements. This new provision replaces the specific provisions originally proposed and now applies to all rights-of-way and to all requirements the BLM has established under this subpart. An applicant may request an alternative requirement from the BLM by following the process outlined in this section. A similar provision is added in section 2805.12(e). That provision is discussed in that section’s preamble discussion.

Paragraph (a) of this section notes that the requester must show good cause for its inability to meet a particular requirement. An applicant may request an alternative requirement for any requirement in this subpart. Requirements include surveys or studies to be completed, timeframes in which to provide information, development and reclamation plans, fees, and other appropriate requirements.

Paragraph (b) of this section states that you must suggest an alternative requirement to the BLM and explain why the alternative requirement is appropriate. The BLM will not approve an alternative requirement without an explanation from the right-of-way holder as to why the current requirement is inappropriate. When implementing this final rule, the BLM intends to issue guidance on what constitutes an “appropriate” alternative requirement.

Paragraph (c) of this section states that a request for an alternative requirement must be in writing and be received by the BLM in a timely manner. In order for the request to be timely, the BLM must have received it prior to the deadline originally given for the relevant requirement. As explained in the final rule, any such request is not approved until you receive BLM approval in writing. The BLM may provide written approval through a letter, email or other written means.

Subpart 2805—Terms and Conditions of Grants

Section 2805.10 How will I know whether the BLM has approved or denied my application, or if my bid for a solar or wind energy development grant or lease is successful or unsuccessful?

The heading for section 2805.10 is revised to read as stated above. This section is updated to reflect the new competitive process for lands inside DLAs (see subpart 2809) by stating that a successful bidder for a solar or wind development lease on such lands will not have to submit a SF–299 application. Instead, in these circumstances, the successful bidder

will have the option to sign the lease offered by the BLM.

Paragraph (a) of this section contains the language from the existing regulations explaining how the BLM will notify you about your application. This paragraph is revised to add a new provision requiring that the BLM send the successful bidder a written response, including an unsigned lease for review and signature. The BLM will notify unsuccessful bidders, and any unused funds submitted with their bids will be returned. If an application is rejected, the applicant must pay any processing costs (see section 2804.14).

In paragraph (a) of this section of the final rule, the BLM changed “will send you an unsigned lease” to “may send you an unsigned lease,” for consistency with revisions to section 2809.15(a). See the preamble for that section for more discussion.

Paragraphs (b) introductory text and (b)(1) and (2) of this section parallel paragraphs (a)(1) and (2) of the existing regulations, and describe the unsigned grant or lease that the BLM will send to you for approval and signature.

Paragraph (b)(3) of this section specifies that in accordance with section 2805.15(e), the BLM may make changes to any grant or lease, including to leases issued under subpart 2809, as a result of the periodic review required by this section. This provision is necessary because it makes clear why the BLM would amend a lease issued under subpart 2809. The terms and conditions of a right-of-way grant or lease may be changed in accordance with section 2805.15(e) as a result of changes in legislation or regulation, or as otherwise necessary to protect public health or safety or the environment. Because any changes to the terms and conditions of a right-of-way grant or lease would occur after the completion of the agency action (the BLM’s decision to approve the right-of-way), the BLM generally anticipates making the change through a separate action, generally initiated at the BLM’s discretion and requiring its own decision-making process.

Sections 2805.10(c), (d) introductory text, and (d)(1) and (2) and 2805.20(d)(3) contain the language from existing sections 2805.10(b), (c) introductory text, and (c)(1) and (2) and 2805.20(c)(3). These provisions remain unchanged from existing regulations. No comments were received and no changes were made from the proposed rule to the final rule.

Section 2805.11 What does a grant contain?

Existing section 2805.11(b) explains how the duration of each potential right-

of-way is determined. This paragraph is revised to include specific terms for solar and wind energy authorizations, because they are unique and different from other right-of-way authorizations. Where the proposed rule discussed only wind energy testing in some portions, the final rule is changed to include both solar and wind for each type of authorization. This revision is made in connection with changes made under section 2801.9(d), where comments requested that site- and project-area testing authorizations include solar energy, and not be exclusive to wind.

Section 2805.11(b)(2)(i) limits the term for a site-specific grant for testing and monitoring of wind energy potential to 3 years. Under this rule, this type of grant will be issued only for a single meteorological tower or study facility and will include any access necessary to reach the site. This authorization cannot be renewed. If a holder of a grant wishes to keep its site for additional time, it must reapply. These authorizations are intended for testing, not energy generation, and are limited to an area large enough for only a single tower or study facility. If a developer wishes for a larger study area, it can apply for a project-area testing grant under paragraph (b)(2)(ii) of this section.

Section 2805.11(b)(2)(ii) provides for an initial term of 3 years for project-area energy testing. Such grants may include any number of meteorological towers or study facilities inside the right-of-way. Any renewal application must be submitted before the end of the third year if a proponent wishes to continue the grant. For the BLM to be able to renew such an authorization, the project-area testing grant holder must submit two applications, one for renewal of the project-area testing grant and one for a solar or wind energy development grant, plus a POD for the facility covered by the development application. Renewals for project-area testing grants may be authorized for one additional 3-year term.

Section 2805.11(b)(2)(iii) provides for a short-term grant for all other associated actions, such as geotechnical testing and other temporary land-disturbing activities, with a term of 3 years or less. A renewal of this grant may be issued for an additional 3-year term.

Section 2805.11(b)(2)(iv) provides for an initial grant term of up to 30 years for solar and wind energy grants outside of DLAs, with a possibility of renewal in accordance with section 2805.14(g). A holder must apply for renewal before the end of the authorization term.

Section 2805.11(b)(2)(v) provides for a 30-year term for solar and wind energy

development leases issued under subpart 2809. A holder may apply for renewal for this term and any subsequent terms of the lease before the end of the authorization.

Comment: A comment suggested that the standard term be 40 years for both solar and wind energy grants (outside of DLAs) and up to 100 years for leases (inside of DLAs), with a condition of the grant or lease providing for renegotiation every 10 years. Other comments suggested longer terms for grants and leases.

Response: The final rule remains as proposed. The comment did not provide any justification for adding the additional years to the term of the grant or lease or explain why the additional time is necessary. Generally, it takes 1 year to secure a PPA after a project is authorized and an additional 2 to 3 years to construct. Since the term of a PPA is generally 20 to 25 years, the BLM believes that a 30 year period is sufficient to cover the developer's needs for constructing and operating a facility, while protecting the public lands from unnecessary burdens. If a longer term is suitable or desired by a developer, an application to renew the grant or lease may be submitted to the BLM pursuant to the applicable requirements.

For all grants and leases under this section with terms greater than 3 years, the actual term will include the number of full years specified, plus the initial partial year, if any. This provision differs from the grant term for rights-of-way authorized under the MLA (see the discussion of section 2885.11 later in this preamble) as FLPMA rights-of-way may be issued for terms greater than 30 years, while an MLA right-of-way may be issued for a maximum term of 30 years and a partial year would count as the first year of a grant.

Section 2805.11(b)(3) contains the language from section 2805.11(b)(2) of the existing regulations, but further requires that grants and leases with terms greater than 3 years include the number of full years specified, plus the partial year, if any. A grant that is issued for a term of 3 years will expire on its anniversary date, 3 years after it was first issued. This change affects the duration of all FLPMA right-of-way grants that are issued or amended after the final rule becomes effective. This change provides specific direction for consistently calculating the term of a right-of-way grant or lease.

No other comments were received, nor were any changes made to this section.

Section 2805.12 What terms and conditions must I comply with?

Section 2805.12 lists terms and conditions with which all right-of-way holders must comply. This section is reorganized to better present a large amount of information. Paragraph (a) of this section carries forward, without adjustment, most of the requirements from the existing regulations found at section 2805.12. Paragraph (b) of this section refers the reader to new section 2805.20, which explains bonding requirements for right-of-way holders. Paragraph (c) of this section contains specific terms and conditions for solar or wind energy right-of-way authorizations. Paragraph (d) describes specific requirements for energy site or project testing grants. Paragraph (e) is a show of good cause condition that is added to the final rule consistent with the provisions added as new section 2804.40. All requirements of paragraph (a) are part of the existing regulations and are not discussed in this preamble unless we received a substantive comment.

Comments: Two general comments were received concerning this section. One comment stated that terms and conditions for leasing public lands for power generation should be the same regardless of the power source. The second comment suggested that the free market should drive success, not government policy on the terms and conditions of an authorization.

Response: The BLM processes each development proposal for use of public lands on a project-by-project basis. All of the terms and conditions in section 2805.12 would apply to power generation authorizations, regardless of the technology used. However, based on the BLM's experience with solar and wind energy developments, additional terms and conditions are required for such authorizations on public lands because the different types of technology may have varying impacts on the public lands and the resources they contain. For example, a string of wind turbines or an array of solar panels will have a different footprint, and accordingly will have a different impact on the lands and resources than other energy generation types.

Separately, the free market alone (a market without oversight), cannot determine the use of the public lands, as those lands are managed by the BLM on behalf of the American public. The terms and conditions of each BLM authorization address the protection of the public lands and resources, consistent with the BLM's responsibility to manage the public lands under

FLPMA's multiple use and sustained yield mandate. Without regulations that ensure the necessary terms and conditions are put in place, development of the public lands could result in the unacceptable loss of the public lands and the resources they contain.

The BLM regularly engages the public, including private businesses, to seek comments and input on the BLM's administration of the public lands. The BLM will continue to do so through this rulemaking and its other decision-making processes.

Section 2805.12(a)(5) contains language from existing section 2805.12(e) with two small changes. The word "phase" was changed to "stage" to prevent confusion with the use of "phase-in of the MW capacity fee" and similar phrases in this rule.

This paragraph also prohibits discrimination based on sexual orientation. Adding sexual orientation as a protected class in this regulation is consistent with the policy of the Department that no employee or applicant for employment be subjected to discrimination or harassment because of his or her sexual orientation. See 373 Departmental Manual 7 (June 5, 2013). Several comments were received either for or against modifying this paragraph.

Comments: One comment recommended that additional language be added to identify "pregnancy and gender relations" as protected classes, while another recommended deleting "sexual orientation" from the rule.

Response: We did not revise the rule as a result of these comments. This paragraph refers to existing Federal law prohibiting discrimination and does not add or expand upon requirements under existing law.

Comments: Some comments suggested that the BLM include greater connection between the rule and landscape-level mitigation as described in Secretarial Order 3330 and subsequent reports, and be consistent with the BLM's IM 2013–142, interim policy guidance for offsite mitigation.

Response: Developing landscape-level mitigation policy for use of the public lands is an ongoing BLM effort. Examples of landscape mitigation plans are the solar regional mitigation strategies. The BLM is currently developing regional mitigation strategies for many of the SEZs established as part of the Western Solar Plan. For an example of a complete mitigation plan, see the BLM's Dry Lake regional mitigation strategy known as Technical Note 444, which may be found on the BLM's Web site at: http://www.blm.gov/style/medialib/blm/wo/blm_library/

tech_notes.Par.29872.File.dat/TN_444.pdf. Since more detailed requirements and guidance will be addressed in the BLM's policies, handbooks, and other forms of guidance that are currently under development, the BLM did not make any changes in response to this comment.

Section 2805.12(a)(8)(iv) is added to the final rule based upon comments on the proposed rule to incorporate clear measures that are consistent with landscape-level mitigation and the BLM's IM 2013–142 for offsite mitigation. The added provision clarifies that the BLM can require offsite mitigation to address residual impacts associated with a right-of-way. Any compensatory mitigation requirements would be established through a land use planning decision or implementation decision, possibly relying on a previously developed strategy, such as a solar regional mitigation strategy.

Section 2805.12(a)(8)(vi) requires compliance with project-specific terms, conditions, and stipulations, including proper maintenance and repair of equipment during the operation of a grant. This is an existing policy requirement affecting all rights-of-way and in this rule is expanded to include leases offered under revised subpart 2809. In addition, this provision requires a holder to comply with the terms and conditions in the POD. This may include project-specific conditions to maintain the project in a manner that will not unnecessarily harm the public land by poor maintenance and operational practices. Any holder that does not comply with the POD approved by the BLM would be subject to remedial actions under section 2807.17, which may include the suspension or termination of the grant or lease.

Comment: Another comment suggested adding language that the BLM implement a condition to begin early coordination with State fish and wildlife offices.

Response: In the proposed rule, the BLM identified two pre-application meetings under section 2804.10. One meeting was focused on early coordination among the BLM, applicant, and other Federal, State, and tribal authorities. This early coordination requirement has been carried forward in the final rule under section 2804.12 as part of a preliminary application review meeting for proposed solar and wind energy projects and transmission lines with a capacity of 100 kV or more. No other change has been made in the final rule. Early coordination among Federal and State wildlife offices has been carried forward into the final rule.

Paragraph (a)(8)(vii) of this section discusses the use of State standards and requires the right-of-way holder to comply with such standards when they are more stringent than Federal standards.

Comment: A comment suggested that we add the word "environmental" so that the paragraph would now read, "When the State [environmental] standards are more stringent than Federal standards, comply with State standards for public health and safety, environmental protection, and siting, constructing, operating, and maintaining any facilities and improvements on the right-of-way."

Response: Under FLPMA, the BLM considers an array of State standards, including those relating to public health and safety. Under the existing regulations, the BLM may apply State standards when those standards do not conflict with Federal law or policy for the administration of the public lands. No revision was made to the text of this paragraph in response to this comment.

Paragraph (a)(8)(viii) of this section requires that a grantee or lessee grant the BLM an equivalent authorization for an access road across the applicant's land if the BLM determines that a reciprocal authorization is needed in the public interest and the authorization the BLM issues to you is also for road access.

Comment: One comment was concerned that the BLM was proposing to revise section 2804.25 rule to read, "If your application is for a road, BLM will determine if it is in the public interest to require you to grant the U.S. an equivalent authorization across land you own." The comment raised concern that section 2805.12(a)(8) appeared to be directed at landowners and not utility companies. The comment expressed concern about waiving rental payments and who would be responsible for maintenance and repair of damage caused to the road.

Response: The BLM did not propose to revise section 2804.25 to read as noted. The quoted text from the comment is from regulations that were formerly found at existing section 2804.25(d)(3) and are now identified as section 2804.25(e)(6) of this final rule. The paragraph was redesignated in this final rule after the rest of the section was revised. In section 2805.12, the requirement regarding reciprocal rights-of-way has also been redesignated as section 2805.12(a)(8)(viii).

This text in the final rule, which remains unchanged from the text in the existing regulation, is used by the BLM for administration of the public lands. Where there are inter-mixed or

adjoining private and public lands, the issuance of reciprocal right-of-way authorizations would allow the BLM to cross your land to inspect and administer the public lands as well as grant you access across the public lands for purposes of ingress and egress to your property. The reciprocal authorization may include use for the public to access your land, but does not require such an authorization as the intended use is for the BLM to utilize the right-of-way. A reciprocal right-of-way is not intended as a public use access, such as those issued by a State's Department of Transportation or the Federal Highway Administration. Each reciprocal authorization is evaluated on a case-by-case basis, and additional questions may be addressed at that time.

Comment: A comment raised further concerns about the proposed requirements of section 2805.12(a)(3), which read "Build and maintain suitable crossings for existing roads and significant trails that intersect the project," noting that this should only be applicable if the roads or trails are used by the grant holder. The comment also noted that the grant holder should not be responsible for repairing or maintaining these roads or trails if they have not caused or contributed to damages.

Response: The BLM did not propose to revise the terms and conditions found at section 2805.12 to read as noted in the comment. The quoted text is from section 2805.12(c) of the existing regulations, now identified as section 2805.12(a)(3) of this final rule. The paragraph is redesignated in the final rule for readability, and is not amended further.

This condition is retained from the existing regulations as the BLM must allow for multiple-use of the public lands. Should a right-of-way be granted, it does not displace other uses of the public land, including use of existing trails and other crossing that may intersect the project. The BLM will require that such trails and accesses are maintained by the right-of-way grant holder only to the extent that they have impacted it. If there is damage to the trail or access that is not the fault of the grant holder, then they will not be required to repair or fix it.

Comment: A comment raised concerns over the proposed requirements of section 2805.12(a)(4), "Do everything reasonable to prevent and suppress wildfires on or in the immediate vicinity of the right-of-way area." The comment noted that utilities frequently perform fire prevention activities as part of regular maintenance, which are frequently delayed by the

BLM. The comment further noted that the grant holder should not be responsible for performing activities outside of the right-of-way, and that the fighting of fires should be the responsibility of the BLM, not the grant holder.

Response: The BLM did not propose to revise the terms and conditions found at section 2805.12 to read as noted by the comment. The quoted text is from regulations that were formerly found at 2805.12(d) and are now identified as section 2805.12(a)(4) of this final rule. The paragraph is redesignated in the final rule for readability. This condition is retained from the existing regulations in this final rule without amendment. The condition requires the holder of an authorization to do everything that is reasonable to prevent or suppress wildfires. This condition is not intended to require a grant holder to perform actions outside of a right-of-way, unless the actions are related to the right-of-way, such as trimming trees as a component of BLM-authorized regular maintenance on an overhead transmission line. Other actions outside of the right-of-way, which are not related to the right-of-way, would not be the holder's responsibility.

Additionally, this condition does not delay actions that are already permitted in the right-of-way grant, which would be completed by a grant holder to prevent or suppress wildfires. However, actions proposed to be taken by a grant holder may be delayed if they are outside the permission granted by the BLM.

Comment: One comment raised concerns over the BLM proposing to revise the terms and conditions to read, "Assume full liability if third parties are injured or damages occur on or near the right-of-way." The comment raised concerns that this appeared to be an unreasonable requirement since a grant-holder does not generally have authority to enforce laws. The comment also said that grant holders could be responsible for damages related to faulty equipment, but should not be responsible for actions outside of lands they are authorized to use, and for actions that are not their own, such as those by vandals or even the BLM.

Response: The BLM did not propose to revise the terms and conditions found at section 2805.12 to read as noted. The quoted text is from regulations that were formerly found at section 2805.12(h) and are now identified as section 2804.12(a)(7) of this final rule. The paragraph is redesignated in the final rule for readability.

The condition is retained from existing regulations in this final rule

without amendment. The condition does not require that a holder should enforce the laws and regulations on public lands. However, the condition provides notice that, when agreeing to be a right-of-way holder on the public lands, the grant holder assumes responsibility for the permitted use. A holder assumes the responsibility for any injury or damages caused that are associated with their right-of-way. Injury or damages could be those that are directly caused by the grant holder, such as by electrocution or collision with a permitted use, or indirectly, such as those from flood events which can carry objects outside of the permitted right-of-way, but are still the responsibility of the grant holder.

Section 2805.12(a)(15) requires that a grant holder or lessee provide, or make available upon the BLM's direction, any pertinent environmental, technical, and financial records for inspection and review. Any confidential or proprietary information will be kept confidential to the extent allowed by law. Review of the requested records facilitates the BLM's monitoring and inspection activities related to the development it authorizes. The records will also be used to determine if the holder is complying with the requirements for holding a grant under section 2803.10(b).

Comments: Several comments stated that: (1) The BLM does not have authority to make such requirements; (2) In the case of a PPA or other similar type agreements, the BLM has no need to see such documents; and (3) These documents relate to private party transactions and are subject to confidentiality provisions.

Response: The BLM does not need all of the documents described in this paragraph for every right-of-way. However, in some circumstances the BLM might need these documents when processing an application or where the BLM may need verification that such an agreement has been put in place, such as if a variable offset is to be awarded under the competitive leasing process inside a DLA. Information that is proprietary or confidential that is submitted to the BLM will be treated as such to the extent allowed by law. The BLM will require information under this provision, including PPAs, only if it is necessary for the BLM's administration of an authorization.

Section 2805.12(b) requires that grant holders and lessees comply with the bonding requirements of added section 2805.20. The former bonding requirements were lacking in detail and this new section will help clarify the requirements of a grant or lease. This paragraph is revised in this final rule to

state that the BLM will not issue a Notice to Proceed or give written approval until the grant holder complies with the bonding requirements of section 2805.20. This revision clarifies that when required by the BLM, a bond must be obtained before beginning ground-disturbing activities. No comments were received and no other changes made from the proposed rule to the final rule.

Section 2805.12(c) identifies specific terms and conditions for grants and leases issued for solar or wind energy development, including those issued under subpart 2809. Several comments were received on this paragraph and these are discussed at the end of section 2805.12(c)(6). Minor revisions are made from the proposed to the final rule to improve readability, but any significant changes are discussed in detail in this preamble.

Section 2805.12(c)(1) prohibits ground-disturbing activities until either a notice to proceed is issued under section 2807.10 or the BLM states in writing that all requirements have been met to allow construction to begin. Requirements may include the payment of rents, fees, or monitoring costs, and securing a performance and reclamation bond. The BLM will generally apply this requirement to all solar and wind rights-of-way due to the large scale of most of these projects.

Section 2805.12(c)(2) requires that construction be completed within the timeframes provided in the approved POD. Construction must begin within 24 months of the effective date of the grant authorization or within 12 months, if approved as a staged development. This section is revised from the proposed to final rule to include a "or as otherwise authorized by the BLM." This revision is consistent with other sections of this final rule where the BLM retains discretion to approve or authorize different timeframes or requirements. The BLM may approve a request for an alternative requirement (see section 2805.12(e)), but the BLM may also authorize a different timeframe in the approved POD. The BLM made similar revisions to the requirements described in section 2805.12(c)(3)(ii) and (iii). Further discussion of a staged development is found under section 2806.50.

Section 2805.12(c)(3) describes the requirements for projects that include staged development in the POD, unless other agreements have been made between the developer and the BLM. Minor revisions are made from the proposed to the final rule to improve readability, but any significant changes are discussed in detail in this preamble.

Under paragraph (c)(3)(i) of this section, a developer must begin construction of the initial phase of development within 12 months after issuance of the Notice to Proceed, but no later than 24 months after the effective date of the right-of-way authorization.

Paragraph (c)(3)(ii) of this section requires that each stage of construction after the first begin within 3 years after construction began for the previous stage of development. Construction must be completed no later than 24 months after the start of construction for that stage of development, unless otherwise authorized by the BLM.

These time periods were selected after evaluating the timing of other completed energy development projects. These timeframes will help ensure that the public land is not unreasonably encumbered by these large authorizations, which are exclusive to other rights during the construction period of the project.

Section 2805.12(c)(3)(iii) limits the number of development stages to three, unless the BLM specifically approves additional stages. The BLM will generally approve up to three stages for solar and wind energy development. An applicant may request approval of additional stages with a showing of good cause under section 2804.40. This request must be accompanied by a supporting discussion showing good cause for your inability to meet the conditions of the right-of-way. A grant holder may request alternative stipulations, terms, or conditions under section 2805.12(e). The BLM revised paragraph (c)(3)(iii) of this section, from the proposed to final rule by removing "in advance" when referring to the BLM's approval. The requirement in this section is unchanged from the proposed rule but is rephrased for consistency with other sections of the final rule. The addition of 2805.12(e) provides additional information about the requests for alternative requirements.

Paragraphs (c)(4), (5), and (6) of this section contain specific requirements for diligent development and the potential consequences of not complying with these requirements.

Section 2805.12(c)(4) requires the holder to maintain all onsite electrical generation equipment and facilities in accordance with the design standards of the approved POD. This paragraph reiterates the requirement to comply with the POD that must be submitted as scheduled under section 2804.12(c)(1).

Section 2805.12(c)(5) provides requirements for repairing or removing damaged or abandoned equipment and

facilities within 30 days of receipt of a notice from the BLM. The BLM will issue a notice of noncompliance under this provision only after identifying damaged or abandoned facilities that present an unnecessary hazard to the public health or safety or the environment for a continuous period of 3 months. Upon receipt of a notice of noncompliance under this provision, an operator must take appropriate remedial action within 30 days, or show good cause for any delays. Failure to comply with these requirements may result in suspension or termination of a grant or lease.

Under section 2805.12(c)(6), the BLM may suspend or terminate a grant if the holder does not comply with the diligent development requirements of the authorization. The citation in this section is revised in the final rule from section 2807.17 to sections 2807.17 through 2807.19. Sections 2807.18 and 2807.19 are existing sections of the regulations, which are not a part of this final rule, that describe the BLM's processes for suspending or terminating rights-of-way. This revision does not represent a change in meaning, but provides more information for the reader.

Comments: Comments disagreed with the proposed rule and suggested that it would require arbitrary and disparate terms and conditions between rights-of-way issued under subpart 2804 and those issued under subpart 2809. The comments stated that the authority granted by FLPMA does not authorize the BLM to penalize developers who submit an application for and obtain BLM approval for rights-of-way on other BLM managed lands (*i.e.*, non-DLAs).

Response: The BLM disagrees. A focus of the proposed and final rule is to encourage solar and wind energy development inside DLAs. Encouraging DLA developments is meant to locate large scale developments in areas with lesser impacts to resources and uses of the public lands. Incentivizing the use of DLAs is achieved by increasing certainty, longevity, and reducing some costs in a DLA relative to other areas. The proposed rule does not increase costs and uncertainty outside of the DLAs. In areas outside of DLAs, the BLM is simply incorporating its processes established by policy for solar and wind energy. The BLM believes that the final rule will reduce costs and increase certainty inside of DLAs and maintain the streamlined application process for lands outside of DLAs.

Comments: Some comments stated that a CFR reference cited in 2805.12(c)(6)(iii) was incorrect.

Response: The comment is correct and this reference is revised to paragraph (c)(7) of this section. Furthermore, another citation was updated in this paragraph, referring to submitting a written request for an extension for a timeline in a POD. The updated reference now cites paragraph (e) of this section where a right-of-way holder may request an alternative requirement.

Comment: Some comments opposed the requirement in section 2805.12(c)(7) that a bond include Indian cultural resource identification, protection, and mitigation. The comments assert this is in error because there are no distinguishing factors that can justify requiring cultural resource bonding for non-DLA authorizations, but not for DLA authorizations.

Response: Paragraph (c) applies to all solar and wind energy rights-of-way, both leases issued under subpart 2809 and grants issued under subpart 2804. This requirement does not distinguish between requirements for grants and leases.

However, the BLM recognizes that these costs are difficult to determine and revised this section to specifically include “the estimated costs of cultural resource and Indian cultural resource identification, protection, and mitigation for project impacts.” This revision helps tie the required costs to the impacts of the project.

Comment: One comment suggested that bonding for cultural, scenic, and wildlife impacts adds unnecessary risk to a project. The comment stated that bonding for such impacts is unnecessary for solar activities, as the majority of mitigation expenses are incurred during construction, and operation expenses are minimal and easily covered by fixed PPA revenues in excess of low operational costs.

Response: The bond instrument required by the BLM is necessary to protect public lands and their resources. A minimum bond and standard bond amount are provided in sections 2805.20 and 2809.18 of this final rule. Including these amounts in the rule provide the opportunity for a developer to incorporate these costs in their project plan, reducing unexpected and unnecessary risk to a project that may keep it from proceeding.

The bonding requirement for cultural, scenic, and wildlife impacts protects the public land resources when developing the land for various uses. For example, possible damages to the public land that would need to be covered by a bond could include surface disturbing activities, recontouring of soils to alter the flow of water, and the removal of

vegetation. Other damages could be those to resources outside the right-of-way that are diminished, such as water supply or biological resources. No revision to this paragraph is made as a result of this comment.

Comment: One comment suggested that the BLM’s timeframes are too restrictive and would be a disincentive to the development of solar and wind energy on public lands.

Response: No changes were made to this provision; however, the addition of section 2805.12(e) allows adjustments of the timeframes, provided that a good cause rationale is submitted by the project proponent and the BLM approves the request. No other comments were received or changes made to the paragraphs under section 2805.12(c).

Section 2805.12(d) describes specific requirements for energy site or project testing grants. Because these are short term grants, for three years or less, the BLM believes it is appropriate to require facilities to be installed within 12 months of the effective date of the grant. All equipment must be maintained and failure to comply with any terms may result in termination of the authorization.

No comments were received on this paragraph. However, two revisions have been made as follows. The word “wind” has been removed from the text of the paragraph describing the energy site- and project-area testing grants, to make it clear that these grants are not limited to wind project proponents, but are also available to solar project proponents. This change is consistent with other parts of the final rule where commenters requested that the BLM make the site- and project-area testing grants available for both solar and wind energy. Additionally, the language from the proposed rule that required a showing of good cause for an extension of project timelines has been revised to direct the reader to paragraph (e) of this section in the final rule, which governs reporting requirements for instances of noncompliance and requests for alternative stipulations, terms, or conditions. No other comments were received and no additional changes were made to this section.

Section 2805.12(e) addresses reporting requirements for instances of noncompliance, and requests by project proponents for alternative stipulations, terms, or conditions of the approved right-of-way grant or lease. This provision was added to the final rule based on comments received. This section is similar to section 2804.40 of the final rule, but that section applies to subpart 2804 of the final rule and the

application process for a grant, whereas this section applies to grant and lease holders and applies to the terms, conditions, and stipulations of all approved authorizations. Under this section, a holder must notify the BLM of noncompliance, and may request an alternative requirement during project operation.

Paragraph (e)(1) of this section provides that a holder of a right-of-way must notify the BLM as soon as the holder either anticipates noncompliance or learns of its noncompliance with any stipulation, term, or condition of the approved right-of-way grant or lease. Notification to the BLM must be in writing and show good cause for the noncompliance, including an explanation of the reasons for failure.

Comments: As noted previously in the preamble of this final rule, the BLM participated in stakeholder engagement meetings as part of the BLM’s regular course of business. During some such meetings, stakeholders clarified the concerns they had previously raised through written comments on the proposed rule. Specifically, industry representatives expressed concern that the rule did not include provisions giving the BLM flexibility to respond to project-specific or regional circumstances by, for example, adjusting capacity factors based on technical considerations or adjusting county zone assignments using land value assessments, which could be more accurate than NASS land values in a given area.

Industry also provided additional information regarding its concern that the proposed rule’s bonding requirements were too rigorous. Commenters suggested that the BLM add provisions to the rule that authorize it to consider other factors when determining a bond amount, instead of only the reclamation cost estimate.

Response: The BLM agrees that it may be reasonable to set alternative terms, conditions, and stipulations, and to consider other factors in setting bond amounts on a project-specific or regional basis. After considering this comment, the BLM included a new provision in the final rule, section 2805.12(e)(2), under which a grant or lease holder may request an alternative to the terms, conditions, and stipulations of their authorization, including requesting an alternative bonding requirement. The requested alternative requirement could include those identified in a project’s POD, the right-of-way’s terms and conditions, or other such requirements, such as a request for an extension of time. A request for an alternative payment

requirement may include a request for an alternative net capacity factor or per acre zone rate consideration. Requests may be submitted after notification has been provided as required in paragraph (e)(1) of this section or at the holder's request. However, this section specifically notes that any request for an alternative must comply with applicable law in order to be considered.

The BLM recognizes that some requests, such as those related to acreage rent, may be appropriately considered on a larger, regional scale. Under the authority in section 2806.70 of this final rule, therefore, the BLM may adjust the acreage rent schedule or MW capacity fee applicable to a particular project or in a given area, so long as the BLM determines such changes are based on reasonable methods for determining appropriate values for the use of public land resources.

With respect to bonding requirements, the BLM recognizes it may be appropriate to consider other factors in addition to the reclamation cost estimate, such as the salvage value of project components. The BLM amended both sections 2805.12(e)(2) and 2805.20(a)(3) to accommodate that possibility, as discussed further in the section of this preamble that discusses section 2805.20(a)(3). Any proposed alternative to bonding must provide the United States with adequate financial security for the potential liabilities associated with any particular grant or lease. For example, a request for an alternative bonding requirement may include a holder's request for consideration of project salvage values, but must also include the cost for processing and handling salvage actions.

No alternative requirements request is approved unless and until you receive BLM approval in writing.

Comments: As discussed in section 2804.40, several comments on various rule provisions expressed concern that a developer may not be able to meet BLM requirements. Comments said that failure to meet such requirements may be due to delays or environmental changes outside a developer's control, statutory or policy changes, or other unanticipated situations.

Response: The BLM believes that new paragraph (e) of this section addresses these concerns. The BLM intends to issue policies to address how it will implement these provisions following the issuance of this final rule. Consistent use of the final rule's requirements and clear expectations will be outlined in these policies, to

include the provisions of this paragraph and those of section 2804.40.

Section 2805.14 What rights does a grant convey?

The BLM has added two new paragraphs to section 2805.14, both addressing applications for renewal of existing grants or leases. Paragraph (g) states that a holder of a solar or wind energy development grant or lease may apply for renewal under section 2807.22. Paragraph (h) of this section states that a holder of an energy project-area testing grant may apply for a renewal of such a grant for up to an additional 3 years, provided that the renewal application also includes an energy development application. Paragraph (g) is added to this rule to explain how one may apply for a solar or wind energy development grant or lease renewal. The BLM added paragraph (h) to recognize that project-area testing may be necessary for longer than an initial 3-year term, even after an applicant believes that energy development at a proposed project site is feasible. Revisions in this final rule were made consistent with those made in section 2801.9 for project-area grants.

The proposed rule stated that specific project-area grants were for only wind energy, but based upon comments received, project-area grants have been expanded to include project-area testing grants for solar energy as well. No other comments were received or additional changes made to this section.

Section 2805.15 What rights does the United States retain?

In section 2805.15, the word "facilities" and a reference to section 2805.14(b) are added to the first sentence of paragraph (b) to clarify that the BLM may require common use of right-of-way facilities. The sentence now makes clear that the BLM retains the right to "require common use of your right-of-way, including facilities (see section 2805.14(b)), subsurface, and air space, and authorize use of the right-of-way for compatible uses." The term "facility" is defined in the BLM's existing regulations at section 2801.5 and means an improvement or structure owned and controlled by the grant holder or lessee. Common use of a right-of-way occurs when more than one entity uses the same area for their authorization. This revision facilitates the cooperation and coordination between users of the public lands managed by the BLM so that resources are not unnecessarily impacted. An example of common use of a facility is authorization for a roadway and an adjacent transmission line. In this case,

maintenance of the transmission line would include use of the adjacent roadway. Under existing section 2805.14(b), the BLM may authorize or require common use of a facility as a term of the grant and a grant holder may charge for the use of its facility. Section 2805.15(b) is revised to include a reference to section 2805.14(b).

Comment: Two comments were received on this proposed change. One comment suggested clarifying that the change in section 2805.15(b) is intended to harmonize this paragraph with section 2805.14(b). The comment made special note that they do not protest this amendment to include "facilities," so long as this was the only intent of the requirement.

Response: The BLM agrees with the comment, and believes that the proposed adjustments to this rule would make the regulations consistent and not open to interpretation. The intent of this revision is not to go beyond what is discussed in the preamble for this paragraph. No changes to the proposed rule are necessary in response to this comment.

Comment: The second comment stated that the rule deletes language from the existing section that prohibits charges for the common use of rights-of-way. The comment recommended modifying the section, but not deleting it, suggesting that the modification should prohibit charges except for pro-rata, fair-share cost allocations for the shared construction and/or operation and maintenance of facilities authorized under a grant or lease. The comment expressed concern that if this section is not modified, the first holder could intentionally charge a prohibitively expensive fee for common use.

Response: The proposed rule did not delete this requirement from the existing regulations. Instead, it added the two words "including facilities." Requiring a pro-rata, fair-share cost allocation agreement between private parties is outside BLM's role of administering the public lands. The BLM believes that two private parties should reach an agreement without the BLM dictating its conditions. The BLM did not make any change in response to this comment since dictating third party contracts is beyond the scope of this rule.

No other comments were received, nor were any additional changes made to this section.

Section 2805.16 If I hold a grant, what monitoring fees must I pay?

The table of monitoring categories in section 2805.16 no longer has the outdated dollar amounts for the category

fees. Paragraph (b) explains that the current year's monitoring cost schedule is available from any BLM State, district, or field office, or by writing, and is adjusted annually for inflation using the same methodology as the table in section 2804.14(b). The table now includes only the definition of the monitoring categories in terms of hours worked, instead of providing specific dollar amounts. Also, the word

"application" found in each category is changed to "inspecting and monitoring" to clarify that the inspecting and monitoring does not apply to right-of-way applications. This change was made to avoid either adjusting the table each year through a rulemaking or relying on outdated material. The current monitoring fee schedule may be found at <http://www.blm.gov>.

This paragraph also provides that you may pay directly to another Federal agency their incurred costs in monitoring your grant instead of paying the fee to the BLM. As the regulations will no longer identify the costs by category, the current cost information is provided in the following table. The monitoring fees and work hours for FY 2015 are as follows:

MONITORING CATEGORIES AND FEES FOR FY 2016

Monitoring category	Federal work hours	Fees for FY 2016
(1) Inspecting and monitoring of new grants, renewals, and amendments to existing grants.	Estimated Federal Work are >1 ≤8	\$122.
(2) Inspecting and monitoring of new grants, renewals, and amendments to existing grants.	Estimated Federal Work are >>8 ≤24.	428.
(3) Inspecting and monitoring of new grants, renewals, and amendments to existing grants.	Estimated Federal Work are ><24 ≤36.	806.
(4) Monitoring of new grants, renewals, and amendments to existing grants.	Estimated Federal Work are >36 ≤50.	1,156.
(5) Master Agreements	Varies	As specified in the agreement.
(6) Inspecting and monitoring of new grants, renewals, and amendments to existing grants.	Estimated Federal Work are >50 ..	As specified in the agreement.

Consistent with revisions made under monitoring fees table in 2805.16(a), the BLM is adding the words "inspecting and" to section 2805.16(a). This additional language is not a change from current BLM practice or policy and will allow the BLM to inspect and monitor the right-of-way to ensure project compliance with the terms and conditions of an authorization. Under this provision, if a project is out of compliance, the BLM could inspect the project to ensure that the required actions are completed to the satisfaction of the BLM, such as continued maintenance of the required activity or efficacy of the requirement.

The BLM added a new sentence to paragraph (a) of this section that directs the reader to section 2805.17(c), which is an existing section of the regulations that describes category 6 monitoring fees. The two sentences preceding this revision describe when the other monitoring categories are updated, but there was no reference for category 6 monitoring fees. This revision is made for consistency with how the other monitoring categories are described in this section. No comments were received and no other changes are made from the proposed rule to the final rule.

Section 2805.20 Bonding Requirements

Section 2805.20 provides bonding requirements for all grant holders or lessees. These provisions are moved from existing section 2805.12. Under the existing regulations, bonds are required only at the BLM's discretion. This

expanded section explains the details of when a bond is required and what the bond must cover. This is not a change from existing practice and is intended to provide clarity to the public. Specific bonding requirements for solar and wind energy development are outlined in paragraphs (b) and (c) of this section. This final rule explains requirements for the performance of the terms and conditions of a grant or lease and reclamation of a right-of-way grant or lease area.

Comments: One comment indicated that solar facilities should not be subject to the same bonding framework as surface mining. The proposed bonding imposes unnecessary costs on the solar industry without providing any additional land protection. Surface mining operations may be abandoned and there is often significant surface disturbance, which is not the case with solar developments. Some comments said that acceptable bonding instruments should include corporate guarantees backed by financial tests. Bonding costs could be expensive, even doubling annual operating costs. The use of letters of credit could significantly reduce the bond amounts. Also, the BLM could have an initial lower bond amount until decommissioning is near and at that time the bond could be increased.

Response: The framework used by surface mining development was a starting point for the solar and wind energy development process on what to consider when completing a RCE and determining the bond amount. However,

this framework has been adapted to address circumstances specific to solar and wind energy development as well as all other right-of-way developments on the public lands. The bond amounts, as determined by an RCE or those using a standard bond, are necessary to ensure the protection of the public lands.

Corporate guarantees are not an acceptable form of bond for the BLM. They are too risky to accept, even when financial tests are used, because they require continual confirmation of the quality of the corporate guarantee. However, irrevocable letters of credit are accepted by the BLM. Furthermore, the BLM cannot accept a lesser bond amount until the decommissioning of a grant or lease, because the BLM cannot be responsible for the financial stability of any company, nor can it bear the risk that a company may default or go bankrupt during the term of a grant, before decommissioning. To secure an increased bond at that time would be difficult if not impossible and having such a regulatory provision would place the public lands at unnecessary risk from the impacts of unreclaimed developments.

Section 2805.20(a) provides that, if required by the BLM, you must obtain or certify that you have obtained a performance and reclamation bond or other acceptable bond instrument to cover any losses, damages, or injury to human health or damages to property or the environment in connection with your use of an authorized right-of-way. This paragraph also includes the language from existing section

2805.12(g), which details bonding requirements.

Consistent with other revisions made in the final rule for better understanding of the rule, section 2805.20(a) is revised to add “costs associated with” when discussing what a bond will cover when terminating a grant. This added language makes it clear that the bond covers costs associated with terminating a grant.

Comments: Some comments suggested expanding the language of this and subsequent bonding paragraphs to include “certificate of insurance or other acceptable security” in appropriate places.

Response: Adding the language “certificate of insurance or other acceptable security” is unnecessary in the text of the regulation as the definition of acceptable bond instruments includes insurance policies, and therefore a specific form of insurance does not need to be included in the text of the regulation. Furthermore, the list of bond instruments that are acceptable is not an all-inclusive list. There are other forms of bond instruments, but they are not specified in the text of the rule because they are not as common as the ones identified. If the bond instrument list were to be considered as “all inclusive” it could unintentionally exclude acceptable bond instruments. As a result, the recommended addition to the rule text is not incorporated in the final rule.

Section 2805.20(a)(1) requires that bonds list the BLM as an additionally covered party if a State regulatory authority requires a bond to cover some portion of environmental liabilities. If the BLM were not named as an additionally covered party for such bonds, the BLM would not be covered by the instrument. This provision allows the BLM to accept a State bond to satisfy a portion of the BLM’s bonding requirement, thus, limiting double bonding.

Comment: One comment was received pertaining to this paragraph. The comment stated that bond requirements are unnecessary for “regulated entities” and that additional bonding requirements are duplicative and pose additional costs on a public utility’s customers.

Response: The BLM disagrees, because regulated utilities present the same risks as unregulated utilities. Under section 2805.20(a), a bond is not required for all authorizations. Requirement of a bond for an authorization is at the discretion of the BLM and is dependent on the scale of the development and potential for risk

to the public lands. Also, the BLM may accept a bonding instrument submitted to the State if it meets the criteria identified in paragraphs (i) through (iii) of section 2805.20(a)(1). The intent of the bonding provisions in section 2805.20(a)(1)(iii) is to mitigate the potential for duplicative costs to right-of-way holders using the public lands.

An additional requirement is added to paragraph (a) in this final rule that requires periodic review of bonds for adequacy. This provision is added to ensure consistency with the provisions added in response to comments on section 2805.20(c). This additional requirement includes bonds held by a State and accepted by the BLM and applies to all bonds held by the BLM, regardless of the size or complexity of an authorized project. The frequency of the bond adequacy reviews will be described in greater detail within BLM guidance issued as part of implementation of this rule. Review frequency, as described in the recently issued instruction memorandum 2015–138, will be no less than once every 5 years, giving review priority to those that pose a greater risk to the public lands.

Under section 2805.20(a)(1)(i), a State bond must be redeemable by the BLM. If such instrument is provided to the BLM and it is not redeemable, the BLM would be unable to use the bond for its intended purpose(s).

Under section 2805.20(a)(1)(ii), a State bond must be held or approved by a State agency for the same reclamation requirements as the BLM requires.

Under section 2805.20(a)(1)(iii), a State bond must provide the same or greater financial guarantee than the BLM requires for the portion of environmental liabilities covered by the State’s bond.

Comment: One comment concerning this paragraph stated that section 2805.20(a)(3) makes clear that a bond will not be required for solar energy projects developed inside DLAs, and bonds will be required for solar projects outside DLAs.

Response: This comment is not correct. Section 2809.18(e) requires a specific performance bond for leases authorized under subpart 2809, identified as a standard bond. Standard bonds are not determined by a RCE, but rather are set as specified in the regulations.

Under section 2805.20(a)(2) a bond must be approved by the BLM’s authorized officer. This approval ensures that the bond meets the BLM’s standards. Under section 2805.20(a)(3), the bond amount is determined by the BLM based on a RCE, and must also

include the BLM’s costs for administering a reclamation contract. As defined in section 2801.5, a RCE identifies an appropriate amount for financial guarantees for uses of the public lands. An additional requirement is included in paragraph (a)(3) requiring periodic review of bonds for adequacy. This requirement was added to ensure consistency with the provisions added to section 2805.20(c). Both paragraphs (c)(3) and (4) of this section contain a stipulation that they do not apply to leases issued under subpart 2809. Bonds issued under subpart 2809 for leases inside DLAs have standard amounts. Bond acceptance and amounts for solar and wind energy facilities outside of DLAs are discussed in paragraphs (b) and (c) of this section.

Paragraph (a)(3) of this section is revised from the proposed to final rule to improve readability. Specifically, the BLM removed the second sentence of the paragraph that stated the BLM may require you to prepare an acceptable RCE. The first sentence of this paragraph is revised to include “, which the BLM may require you to prepare and submit.” This revision is intended to improve the reader’s understanding of the final rule and its requirements by streamlining the text of the rule.

In addition to the changes made for readability, this paragraph is revised by adding, “The BLM may also consider other factors, such as salvage values, when determining the bond amount.” This revision responds to concerns raised in stakeholder engagement meetings and is consistent with section 2805.12(e)(2) of this final rule, which specifies that a developer may request an alternative requirement for bonding.

A request for an alternative bonding requirement may include a holder’s request for consideration of project component salvage values. Such a request may reduce the BLM’s bond determination amount, even to an amount below the minimum or standard bond amount. However, the request must be fully supported by documentation from the requestor that includes the costs for processing and handling salvage materials, such as information about distribution centers for such materials and other reasonable considerations. Further, as noted under paragraph 2805.12(e)(2), requests for an alternative bonding requirement must comply with applicable law in order to be considered, and must provide the United States with adequate financial security for potential liabilities.

Regardless of the nature of the request, any such request is not approved until you receive BLM approval in writing.

Section 2805.20(a)(4) requires that a bond be submitted on or before the deadline provided by the BLM. Current regulations have no such provision, and this revision makes it clear what the BLM expects when it requires a bond instrument. The BLM believes this provision will improve the timely collection of bonds. The timely submittal of a bond promotes efficient stewardship of the public lands and ensures that the bond amount provided is acceptable to the BLM and available prior to beginning ground-disturbing activities.

Section 2805.20(a)(5) outlines the components to be addressed when determining a RCE. They include environmental liabilities, maintenance of equipment and facilities, and reclamation of the right-of-way. This paragraph consolidates and presents what liabilities the bond must cover.

Under section 2805.20(a)(6), a holder of a grant or lease may ask the BLM to accept a replacement bond. The BLM must review and approve the replacement bond before accepting it. If a replacement bond is accepted, the surety company for the old bond is not released from obligations that accrued while the old bond was in effect, unless the new bond covers such obligations to the BLM's satisfaction. This gives the grant holder flexibility to find a new bond, potentially reducing their costs, while ensuring that the right-of-way is adequately bonded.

Under section 2805.20(a)(7), a holder of a grant or lease is required to notify the BLM that reclamation has occurred. If the BLM determines reclamation is complete, the BLM may release all or part of the bond that covers these liabilities. However, section 2805.20(a)(8) reiterates that a grant holder is still liable in certain circumstances under section 2807.12. Despite the bonding requirements of this section, grant holders are still liable for damage done during the term of the grant or lease even if: The BLM releases all or part of your bond, the bond amount does not cover the cost of reclamation, or no bond remains in place.

Section 2805.20(b) and (c) identify specific bond requirements for solar and wind energy development respectively outside of DLAs. A holder of a solar or wind energy grant outside of a DLA will be required to submit a RCE to help the BLM determine the bond amount. For solar energy development grants outside of DLAs, the bond amount will be no less than \$10,000 per acre. For wind energy development grants outside of DLAs, the bond amount will be no less than \$10,000 per authorized turbine

with a nameplate generating capacity of less than one MW, and no less than \$20,000 per authorized turbine with a nameplate generating capacity of one MW or greater.

Section 2805.20(d) is new to the final rule. This paragraph separates site- and project-area testing authorization bond requirements from section 2805.20(c). This change is consistent with other provisions that have been modified to expand the wind energy site- and project-area testing authorizations in the proposed rule to include solar energy. With this adjustment, meteorological and other instrumentation facilities are required to be bonded at no less than \$2,000 per location. These bond amounts are the same as standard bond amounts for leases required under section 2809.18(e)(3).

The BLM recently completed a review of bonded solar and wind energy projects and based the bond amounts provided in this final rule on the information found during the review. When determining these bond amounts, the BLM considered potential liabilities associated with the lands affected by the rights-of-way, such as potential impacts to cultural values, wildlife habitat, and scenic values. The range of costs included in the review represented the cost differences in performing reclamation activities for solar and wind energy developments throughout the various geographic regions the BLM manages. The BLM used the review to determine an appropriate bond amount to cover potential liabilities associated with solar and wind energy projects.

Minimum bond amounts are set for solar development for each acre of authorization because solar energy development encumbers 100 percent of the lands and excludes them from other uses. The recent review of bonds showed a range of bond amounts for solar energy development of approximately \$10,000 to \$18,000 per acre of the rights-of-way on public lands. Minimum bond amounts for wind energy development are set for each wind turbine authorized on public land, rather than per acre, because the encumbrance is factored at 10 percent and is not exclusive to other uses. The review showed that the bond amounts for recently authorized wind energy development ranged between \$22,000 and \$60,000 per wind turbine. Recently bonded wind energy projects use wind turbines that are one MW or larger in nameplate capacity, whereas older projects generally use turbines that are less than one MW.

Comment: Some comments suggested that bonds should not be required for solar facilities on the public lands

because they pose low environmental risk and that some solar energy generation technologies have less potential impacts than others and, therefore, less risk.

Response: The BLM agrees that generally, solar facilities do not pose the same environmental hazards as other energy development facilities. However, the BLM's requirement for bonding is not only for the potential environmental risks that a development poses on the public lands. Rather, a bond is required to cover direct impacts to the resources and their reclamation to a condition as near as possible to what they were before development occurred.

This comment is specific to solar energy, but raises the question of lesser risk for certain developments, which is an issue that arises with respect to wind energy as well. In the BLM's review of recently bonded solar and wind energy projects, for example, the range of bond amounts identified was for newer wind energy turbines, with a nameplate capacity of one MW or greater. These wind energy turbines are larger, have a greater footprint, and require larger and more equipment and materials to install and remove than wind turbines that have a smaller nameplate capacity. In order to accommodate developments that employ smaller wind turbines that pose lesser risk to resources, the BLM is including in the final rule the existing policy requirement of a \$10,000 minimum bond amount for projects utilizing smaller turbines. Turbines with a nameplate capacity of one MW or greater will have a minimum bond amount of \$20,000, consistent with the proposed rule. A reclamation cost estimate will still be required for each project on lands outside of designated leasing areas, as described in section 2805.20(a)(3) of this rule. The BLM's bond amount determination for wind energy projects using turbines with lesser nameplate capacities could exceed the minimum bond amount based upon site-specific risks.

Subpart 2806—Annual Rents and Payments

Existing subpart 2806, has been retitled to more clearly and consistently identify the content of and revisions to this subpart of the final rule. The content and revisions to this subpart of the final rule include those requiring a payment of an acreage rent and MW capacity fee for rights-of-way. Retitling this subpart makes it clear that the BLM may require payments that are not specifically a rent.

Section 2806.12 When and where do I pay rents?

The heading of section 2806.12 is revised by adding the words “and where.” This revision is not a change in the BLM’s practice or policy, but is intended to help clarify where rental payments should be made.

Section 2806.12(a) describes the proration of rent for the first year of a grant. Specific dates are used for proration to prevent any confusion to grant holders and promote consistent implementation by the BLM. Rent is prorated for the first partial year of a grant, since the use of public lands in such situations is for only a partial year. Paragraph (a)(2) of this section explains that if you have a short-term grant, you may request that the BLM bill you for the entire duration of the grant in the first payment. Some short term grant holders may wish to pay this amount up front. Consistent with other sections of the final rule, a revision to paragraph (a)(2) has been made to delete the reference to wind energy in connection with site-specific testing.

Paragraph (b) of this section is revised by removing the word “other” from the first sentence. This revision is intended to clarify that all rental payments must be made in accordance with the payment plan described in section 2806.24. This revision is made to improve readability, but does not constitute a change from existing requirements.

Section 2806.12(d) directs right-of-way grant holders to make rental payments as instructed by the BLM or as otherwise provided for by Secretarial Order or legislative authority. This provision acknowledges that either the Secretary or Congress may take action that could affect rents and fees. The BLM will provide payment instructions for grant holders that will include where payments may be made. The word “must” is added into the first sentence of this paragraph to improve readability and for consistency with the phrasing of other requirements in this final rule. This revision does not constitute a change from existing requirements. No comments were received on this section, and no other changes were made from the proposed rule to the final rule.

Section 2806.13 What happens if I do not pay rents and fees or if I pay the rents and fees late?

Section 2806.13 is revised from “What happens if I pay the rent late?” to read “What happens if I do not pay rents and fees or if I pay the rents and fees late?” This change addresses the addition of paragraph (e) to this section,

which specifies that the BLM may retroactively bill for uncollected or under-collected rents and fees. The BLM will collect rent retroactively if: (1) A clerical error is identified; (2) A rental schedule adjustment is not applied; or (3) An omission or error in complying with the terms and conditions of the authorized right-of-way is identified.

Paragraph (a) of this section is amended by removing language from the existing rule that stated a fee for a late rental payment may not exceed \$500 per authorization. The BLM determined that the current \$500 limit is not a sufficient financial incentive to ensure the timely payment of rent. Therefore, under this final rule, late fees will now be proportional to late rental amounts, to provide more incentive for the timely payment of rents to the BLM. The BLM also added the term “fees” so the MW capacity fees for solar and wind energy development grants and leases may be collected consistently with any rent due.

New paragraph (g) of this section allows the BLM to condition any further activities associated with the right-of-way on the payment of outstanding payments. The BLM believes that this consequence imposed for outstanding payments is further incentive to timely pay rents and fees to the BLM.

Comment: A comment suggested that the BLM should be responsible for clerical and other possible errors, and that the holder should not be responsible for payment of rents, fees, or late payments if such an error occurs due to the BLM. Further, the comment suggested a 6 month time limit for enforcing such corrections that would be retroactive, and that a late payment fee would be no more than 5 percent of the total rents and fees.

Response: The BLM considered the 6-month and 5 percent limits suggested by the comment and decided to not include these limits in the final rule. When entering into a right-of-way agreement with the BLM, a holder agrees to the terms and conditions for the use of the public lands. Included as part of these terms and conditions is the requirement that a holder pay, in advance, the appropriate amount for the use of the public lands. Generally, the BLM sends a bill or other notice to a holder that is a notice of payment due to the BLM, as agreed to in the right-of-way grant. Even if the BLM were to make a clerical or administrative error when transmitting a notice of payment obligations, such an error in a notice would not permanently relieve a right-of-way grant holder from its independent requirement to pay the appropriate amount for the use of the public lands as specified in the grant.

No other comments were received for this section, and no changes were made to the final rule.

Section 2806.20 What is the rent for a linear right-of-way grant?

In section 2806.20, the address to obtain a current rent schedule for linear rights-of-way is updated. Also, district offices are added to State and field offices as a location where you may request a rent schedule. These minor corrections are made to provide current information to the public. No comments were received on this provision, and no changes are made from the proposed rule to it in the final rule.

Section 2806.22 When and how does the per acre rent change?

A technical change in section 2806.22 corrects the acronym IPD–GDP, referring to the Implicit Price Deflator for Gross Domestic Product. No comments were received and no changes are made from the proposed rule to the final rule.

Section 2806.23 How will the BLM calculate my rent for linear rights-of-way the Per Acre Rent Schedule covers?

In the existing regulations, paragraph (b) of this section provides for phasing in the initial implementation of the Per Acre Rent Schedule by allowing a one-time reduction of 25 percent of the 2009 acreage rent for grant holders. This paragraph was flagged for removal in the proposed rule and is being removed by this final rule because the phase-in for the updated rent schedule referenced in that provision ended in 2011 and thus is no longer applicable. No comments were received and no other changes are made from the proposed rule to the final rule.

Section 2806.24 How must I make payments for a linear grant?

Section 2806.24(c) explains how the BLM prorates the first year rental amount. The rule adds an option to pay rent for multiple year periods. The new language requires payment for the remaining partial year along with the first year, or multiples thereof, if proration applies. No comments were received and no other changes are made from the proposed rule to the final rule.

Section 2806.30 What are the rents for communication site rights-of-way?

Section 2806.30 is amended by removing paragraph (b), which contained the communications site rent schedule table. Paragraph (c) is redesignated as new paragraph (b). Section 2806.30(a) is revised to remove redundant language referring to the BLM communication site rights-of-way

rent schedule. Section 2806.30(a)(1) is revised to update the mailing address. Section 2806.30(a)(2) is revised by removing references to the table that has been removed. This paragraph still describes the methodology for updating the schedule, but directs the reader to the BLM's Web site or BLM offices instead. No comments were received, and no other changes are made inform the proposed rule to the final rule.

Section 2806.34 How will BLM calculate the rent for a grant or lease authorizing a multiple-use communication facility?

Section 2806.34(b)(4) is revised to fix a citation in the existing regulations that was incorrect. No comments were received, and no other changes are made from the proposed rule to the final rule.

Section 2806.43 How does BLM calculate rent for passive reflectors and local exchange networks? and **Section 2806.44** How will BLM calculate rent for a facility owner's or facility manager's grant or lease which authorizes communication uses?

Sections 2806.43(a) and 2806.44(a) are each revised by changing the cross-reference from section 2806.50 to section 2806.70. Section 2806.50 is redesignated as section 2806.70, and these citations are updated to reflect this change.

Section 2806.44 is retitled from "How will BLM calculate rent for a facility owner's or facility manager's grant or lease which authorizes communication uses subject to the communication use rent schedule and communication uses whose rent BLM determines by other means?" to read as above. This section has been retitled to more clearly identify the content and additions made. The addition is a new introductory paragraph describing that this section applies to grants or leases. Such authorizations may include a mixture of communication uses, some of which are subject to the BLM's communication rent schedule. Such rent determinations will be made under the provisions of this section. No comments were received, and no other changes are made from the proposed rule to the final rule.

Sections 2806.50 Through 2806.68 Rents and Fees for Solar Energy Rights-of-Way and Wind Energy Rights-of-Way

Sections 2806.50 through 2806.58 and sections 2806.60 through 2806.68 provide new rules for the rents and fees for solar and wind energy development, respectively. The rents and fees described in these sections, along with the bidding process, will help the BLM generally receive fair market value for

the use of public lands. There are similarities between the provisions governing solar and wind energy grants and leases. For example, each type of project and authorization instrument is subject to acreage rent and MW capacity fee obligations. However, there are differences in the final rule with respect to wind and solar projects (e.g., solar energy projects assume 100% encumbrance within the project footprint, whereas wind energy projects assume 10% encumbrance). There are also differences in the way acreage rent and MW capacity fees are applied to solar energy grants versus leases. These differences are discussed in sections 2806.52 and 2806.54; wind energy grants and leases are discussed in sections 2806.62 and 2806.64, respectively. Section 2806.50 is retitled "Rents and fees for solar energy rights-of-way." The former regulation at section 2806.50 has been redesignated as section 2806.70. Section 2806.51 is added to this final rule in response to comments received regarding potential payment uncertainty.

Revised section 2806.50 requires a holder of a solar energy right-of-way authorization to pay annual rents and fees for right-of-way authorizations issued under subparts 2804 and 2809. Those right-of-way holders with authorizations issued under subpart 2804 will pay rent for a grant and those right-of-way holders with authorizations issued under subpart 2809 will pay rent for a lease. Payment obligations for both types of right-of-way authorizations now consist of an acreage rent and MW capacity fee. The acreage rent must be paid in advance, prior to the issuance of an authorization, and the MW capacity fee will be phased-in after the start of energy generation. Both the acreage rent and MW capacity fee must be paid in advance annually during the term of the authorization. The initial acreage rent and MW capacity fee are calculated, charged, and prorated consistently with the requirements found in sections 2806.11 and 2806.12. Rent for solar authorizations vary depending on the number of acres, technology of the solar development, and whether the right-of-way authorization is a grant or lease.

The BLM received some comments that generally applied to its rental provisions of the final rule. The BLM also revised sections 2806.50 through 2806.68 to improve the readability of these sections.

Comment: One comment on the rental provisions stated that the proposed rule requires full payment immediately upon the award of an authorization. The comment suggested that payment should begin at the time infrastructure

is placed in service instead at the time of award.

Response: The BLM does not require full payment immediately upon award of an authorization. Both an acreage rent and MW capacity fee are charged for solar and wind energy authorizations, but only the acreage rent is paid at the time a right-of-way is authorized. Acreage rent is charged upon the authorization of such developments as the public lands are being encumbered. The MW capacity fee may be phased-in during the term of the right-of-way as approved in the POD. This meets the concerns of the comment because the rules do not require full payment of rents and fees immediately upon authorization of a right-of-way.

Comments: Some comments stated that the BLM does not have authority to levy a MW capacity fee. These comments argued that because the Federal Government lacks an ownership interest in sunlight or the wind, it cannot sell the rights to use them for profit (unlike the sale of Federal mineral interests at fair market value), charge a royalty against sale proceeds (unlike Federal oil and gas rights), or charge rent for the use of sunlight (unlike Federal land surface occupancy rights). Aside from the ownership issue, these commenters argued that the MW capacity fee is an inappropriate element of fair market value because it is based on the value of electricity generated and sold, rather than the value of the underlying land itself. For example, the comments pointed out, if two facilities occupy the same amount of land, but one has more efficient technology, the more efficient facility would pay more because of the additional electricity generated, not because of land rental values. The comments recommended that, for solar and wind energy generation rights-of-way, the BLM should exclusively charge rent, through a per acre rent schedule informed only by the NASS.

Response: FLPMA generally requires the BLM to obtain fair market value for the use of the public lands, including for rights-of-way. In accordance with the BLM's authority, and similar to valuation practices for solar and wind energy development on private lands, the BLM uses electrical generation capacity as a component of the value it assigns to the use of the lands by the projects. From information the BLM has been provided by industry or has otherwise collected, the BLM determined that private land owners customarily charge a "royalty," typically a percentage of the value of actual production, for the use of private land. As explained above, the BLM has

elected in this final rule to charge a fee based on installed MW capacity rather than a royalty. This fee, when added to the applicable acreage rent and any minimum and bonus bids received, ensures that the BLM will obtain an appropriate value for the use of the public lands by solar and wind energy projects.

The BLM classifies MW capacity payments as “fees” rather than “rent,” because they reflect the commercial utilization value of the public’s resource, above and beyond the rural or agricultural value of the land in its unimproved state. In the BLM’s experience and consistent with generally accepted valuation methods, the value of the public lands for solar or wind energy generation use depends on factors other than the acreage occupied and the underlying land’s unimproved value. Other key factors include the solar insolation value or wind speed and density, proximity to demand for electricity, proximity to transmission lines, and the relative absence of resource conflicts that tend to inhibit solar and wind energy development. To account for these elements of land use value that are not intrinsic to the rural value of the lands in their unimproved state, under this final rule, solar and wind right-of-way payments include “MW capacity fees” in addition to the “acreage rent” as a component of fair market value for these authorizations.

The acreage payment remains classified as “rent” under the final rule, as it is directly tied to the area of public lands encumbered by the project and the constraints the project imposes on other uses of the public lands. Electric or telephone facilities that qualify for financing under the Rural Electrification Act may be exempt from paying a “rental fee,” which includes the solar or wind energy acreage rents. However, as explained in IM 2016–122, and consistent with the BLM’s current practice, any such facilities must pay other costs associated with the fair market value of the land, such as the MW capacity fee, minimum bid, or bonus bid, because these other payments are independent of the land acreage and value of the unimproved land, and therefore are not appropriately termed “rental fees.”

The use of an acreage rent and MW capacity fee is also intended to encourage a developer to more efficiently use the public lands encumbered by a project. In the situation where two parcels with the same MW capacity for projects have differing technologies, the more efficient technology (and therefore the higher approved MW capacity) would be

paying more in fees, but less in acreage rent for the same generation capacity as the more efficient technology would allow a developer to pay less in acreage rent to achieve the same approved MW capacity.

The BLM intends to evaluate the adequacy and impact of the provisions of this final rule after it has had an opportunity to observe how the payment requirements and rate adjustment methods put in place affect the BLM’s ability to support renewable energy development and simultaneously collect fair market value from the projects it authorizes.

Section 2806.50 Rents and Fees for Solar Energy Rights-of-Way

The BLM revised section 2806.50 to include site- and project-area testing. In the proposed rule, rights-of-way for site-specific and project-area testing were allowed only for wind energy. The final rule deletes the word “wind”, to make the provision generally applicable to wind or solar energy testing. This change is made in response to a comment, which will be discussed under section 2806.58 of this preamble. No other comments were received, and no other changes made to the final rule.

Section 2806.51 Scheduled Rate Adjustment

Comments: After the comment period of the proposed rule closed, the BLM continued to hold general meetings with stakeholders about the BLM’s renewable energy program. In some of those meetings, stakeholders asked questions about the proposed rulemaking and clarified concerns they had raised through their written comments. Industry representatives shared additional information regarding their concerns with the proposed rule’s approach to calculating annual payment requirements, including uncertainty about potential future payment requirements over the life of the right-of-way authorization. Specifically, commenters expressed concerns about the potential for NASS values in certain areas to jump significantly between surveys, resulting in unexpected and unsustainable changes in the per acre zone rates for those lands.

The BLM understands that when financing a project, developers must predict project costs, including for the construction, operation, and maintenance phases of the project. Included with these costs are expenses for land use, such as annual payment requirements of a BLM grant or lease. The BLM also understands that in some areas there is the potential for NASS land values to change significantly from

one 5-year period to the next in a manner that is unpredictable, and that can result in significant acreage rent increases or decreases. For lands that experience those large changes in NASS land values, the standard rate adjustment method’s periodic update to rates may create financial uncertainty. This may, in turn, complicate project financing and require a developer to pay a higher cost of capital.

Response: The BLM agrees with these comments and recognizes that increasing payment certainty over the term of the grant or lease may help facilitate project financing and even reduce financing costs. To respond to these comments and concerns, the BLM added section 2806.51 to the final rule. This section allows a grant or lease holder to choose one of two rate adjustment methods, the “standard” rate adjustment method, or the scheduled rate adjustment method.

Under the standard rate adjustment method, which was described in the proposed rule and is now named in the final rule, the BLM will periodically reassess the rates it charges for use of the public lands and resources based on the latest NASS survey data and the applicable western hub energy prices, as well as other data discussed in greater detail in connection with section 2806.52 of this final rule.

By contrast, if the grant or lease holder chooses the scheduled rate adjustment method, the BLM will implement scheduled, predictable rate increases over the term of the grant. Under this approach, annual project costs are easily modeled, which increases the certainty as to future costs. By selecting the scheduled adjustment method a proponent would trade the potential upsides of rate adjustments pegged to a fluctuating national indicator (which may only increase slightly in a given period, or may even go down) for greater payment certainty.

Based on historical trends, the BLM expects that in some areas, the rates under the standard rate adjustment method will increase by more than they would under the scheduled rate adjustment method. However, the opposite is also true: in other areas, rates under the standard method may increase by very little, or even decrease, while rates under the scheduled rate adjustment method will increase by a fixed amount at fixed intervals. The BLM determined that it is appropriate to allow developers to choose between these rate adjustment methods, as some grant or lease holders may want to take advantage of the possibility that NASS values could stay nearly constant or

even go down, while other holders may want to increase payment certainty.

The adjustments contemplated under the scheduled rate increase are similar to the terms found in many power purchase agreements, which build in fixed annual increases. The BLM based the scheduled adjustment approach on an evaluation of market trends over the last 10 years. The trend over that period is consistent with a longer term trend showing power pricing has increased generally. The BLM believes that the scheduled rate adjustment method provides certainty for prospective developers while also ensuring that the BLM will obtain fair market value for the use of the public lands.

Paragraph (a) of this section provides that a holder may choose the standard rate adjustments for a right-of-way, which are detailed in section 2806.52(a)(5) and (b)(3) for grants, or section 2806.54(a)(4) and (c) for leases, or the scheduled rate adjustments for a right-of-way, which are detailed in section 2806.52(d) for grants, or section 2806.54(d) for leases. If a holder selects the standard adjustment method, the BLM will increase or decrease the per acre zone rate and MW rate for the authorization, as dictated by the specified calculation method, at fixed intervals over the term of a grant or lease. If a holder selects the scheduled rate adjustment method, the BLM will increase the per acre zone rate and MW rate by a fixed amount, described in section 2806.52(d) or 2806.54(d), respectively, at those same intervals. The BLM created the scheduled rate adjustment method using percentages and values that reflect current market conditions and trends; if, in the future, the BLM considers it necessary to revise the applicable rates in the scheduled rate adjustment provisions, it will do so via rulemaking.

Once a holder selects a rate adjustment method, the holder will not be able to change the rate adjustment method until the grant or lease is renewed. This rule clearly articulates the differences between these methods. As such, a holder will not be able to change its selection in the future, if one method proves more favorable than another during the term of the authorization. The rates paid by grant or lease holders that chose the standard adjustment approach may, in some cases, diverge from the rates paid by grant or lease holders that chose the scheduled adjustment approach. The BLM believes, however, that over the length of the grant or lease both methods will provide fair market value for the underlying authorization to use the public lands and resources.

Paragraph (b) of this section requires that a holder provide written notice to the BLM, before a grant or lease is issued, if the holder wishes to select the scheduled rate adjustment. In the absence of such a notice, the BLM will continue to use the standard rate adjustment method for the authorization.

The BLM will generally not consider a request for an alternative rate structure or terms from holders that select the scheduled rate adjustment method. The holder knows what their rates will be when selecting the scheduled rate adjustment method and is committing to those rates, understanding that they cannot change this selection. Paragraph (c) of this section explains how the final rule will affect existing grant holders. Like new grant holders, existing grant holders also have the option to choose between standard or scheduled rate adjustments. The holder of a solar or wind energy grant that is in effect prior to the effective date of this final rule may request that the BLM apply the scheduled rate adjustment to their grant, rather than the standard rate adjustment. Any such request must be received by the BLM in writing within 2 years of this rule's publication in the **Federal Register**. The BLM determined that 2 years was a reasonable amount of time for grant holders to consider the benefits of the different rate adjustment methods.

For existing grant holders that choose the scheduled rate adjustment method, the BLM will apply the scheduled rate adjustment in section 2806.52(d) to the rates in effect prior to the publication of this final rule.

For existing grant holders that choose the scheduled rate adjustment method, however, the BLM will first adjust the rates in existing grants and leases upward by 20%, to account for the fact that the BLM elected not to undertake the most recent adjustment under its existing guidance because of the pendency of this rulemaking process. The scheduled rate adjustment method will then apply, resulting in fixed rate increases at set intervals thereafter.

The BLM will continue to apply the standard rate adjustments to the rates for existing grant holders unless and until written notice is received requesting the scheduled rate adjustment method. As previously mentioned, the standard rate adjustment is BLM's default method and current practice, as outlined in existing policy.

Section 2806.52 Rents and Fees for Solar Energy Development Grants

Section 2806.52 requires a grant holder to make annual payments that

include the acreage rent and MW capacity fee.

Comments: Some comments expressed confusion over whether certain costs in the proposed rule were a "rent" or a "fee."

Response: The introductory paragraph for section 2806.52 in the final rule has been revised to clarify what is a "rent" and what is a "fee." "Rent" is now described as an "acreage rent," and "fee" has been clarified as a "MW capacity fee." Paragraph (a) of this section describes the acreage rent requirements and calculation methodology, and paragraph (b) of this section describes the MW capacity fee requirements and calculation methodology.

Section 2806.52(a), "Acreage rent," describes the acreage rent payment for solar energy grants. "Acreage rent," as defined in section 2801.5, means rents assessed for solar energy development grants and leases that are determined by the number of acres authorized for the grant or lease times the per acre zone rate. Under existing policy, entities that qualify for financing under the Rural Electrification Act may be exempted from paying solar acreage rent (IM 2016-122).

Comments: Several comments were concerned about using the values set for NASS and believed that they would not apply to vacant BLM land. Comments suggested that solar and wind energy development should be appraised or assessed differently than other authorization types, such as linear rights-of-way. To determine the acreage rent for such developments following the same criteria as linear facilities would make development cost prohibitive on the public lands due to unfairly applying a linear acreage rent.

Response: In response to these comments, both sections 2806.52 and 2806.62 are revised to incorporate State-specific reductions from the baseline NASS values in the calculation of acreage rents. The proposed rule used the linear rent schedule as the basis for determining acreage rent values by proposing solar and wind acreage rent as a percentage factor of the linear rent schedule. Using a percentage factor for acreage rent allows the BLM to adopt the linear rent calculation and effectively change the encumbrance factor to be specific for solar or wind energy.

For the final rule, the BLM has further modified the calculation used to determine acreage rent for solar and wind energy authorizations. The BLM recognizes that the NASS agricultural values may not always be a fair representation of public lands because

they include the agricultural improvements (e.g., buildings, ditches, irrigation) to the land. To account for this possibility, the final rule uses the NASS agricultural values as a baseline for the determination of acreage rent, then incorporates a 20 percent or greater State-specific reduction that accounts for the extent to which the NASS values reflect agricultural improvements to land in each State. By applying these State-specific reductions to the baseline NASS values when calculating acreage rent, the BLM more accurately identifies the value of unimproved land for a project site.

The proposed rule based the acreage rent calculation on the linear rent schedule, which uses a nationwide reduction of 20 percent. In the final rule, the State-specific factors will be no less than the 20 percent reduction initially proposed for the rule, but may be greater. A more detailed discussion on how these values are calculated and a table showing the specific values for each State is found under section 2806.52(a)(2) of this preamble.

Paragraph (a)(1) summarizes how the BLM identifies a per acre zone rate using the NASS land values. Paragraph (a)(2) describes how the BLM adjusts the per acre zone rate, by 20 percent or more, to account for agricultural improvements to the lands in each State. A State with a larger calculated reduction than the minimum 20 percent may lower a particular county's acreage rent. In the case of some States, such as Utah, the State-specific reduction that applies to unimproved agricultural land values is approximately 50 percent. This is discussed in greater detail under section 2806.52(a)(2).

Using this methodology, the BLM is able to establish a method for calculating acreage rents for solar and wind energy developments that are appropriate for the location of the

development. New section 2806.52(c) is added to this final rule providing the BLM's implementation of the acreage rent and MW capacity fee for solar energy developments.

Under section 2806.52(a)(1), the acreage rent for solar energy rights-of-way is calculated by multiplying the number of acres (rounded up to the nearest tenth of an acre) within the authorized area times the per acre zone rate in effect at the time the authorization is issued. Under section 2806.52(a)(1), the initial per acre zone rate for solar energy authorizations is now established by considering four factors; the per acre zone value multiplied by the encumbrance factor multiplied by the rate of return multiplied by the annual adjustment factor. This calculation is reflected in the following formula — $A \times B \times C \times D = E$, where:

“A” is the per acre zone value, as described in the linear rent schedule in section 2806.20(c);

“B” is the encumbrance, equaling 100 percent;

“C” is the rate of return, equaling 5.27 percent;

“D” is the annual adjustment factor, equaling the average annual change in the IPD–GDP for the 10-year period immediately preceding the year that the NASS census data becomes available; and

“E” is the annual per acre zone rate.

The BLM will adjust the per acre zone rates each year, based on the average annual change in the IPD–GDP, consistent with section 2806.22(a). Adjusted rates are effective each year on January first.

Under new section 2806.52(a)(2), counties (or other geographical areas) are assigned to a Per Acre Zone Value on the solar energy acreage rent schedule, based on the State-specific

percent of the average land and building value published in the NASS Census.

The BLM currently uses an acreage rent schedule for linear rights-of-way to determine annual payments. The rent schedule separates land values into 15 different zones and establishes values for each zone ranging from \$0 to \$1,000,000 per acre. These values are based on the published agricultural values of the land, as determined by the NASS. Solar and wind energy acreage rents will be determined using the same zone values as linear rights-of-way. However, the BLM will use a state specific reduction when assigning lands to a zone.

The Per Acre Zone Value is a component of calculating the Per Acre Zone Rate under paragraph (a)(1) of this section. The calculation in this paragraph establishes a State-specific percent factor that represents the difference between the improved agricultural land values provided by NASS and the unimproved rangeland values that represent BLM land. This calculation is reflected in the following formula— $(A/B) - (C/D) = E$, where:

“A” is the NASS Census statewide average per acre value of non-irrigated acres;

“B” is the NASS Census statewide average per acre land and building value;

“C” is the NASS Census total statewide acres in farmsteads, homes, buildings, livestock facilities, ponds, roads, wasteland, etc.;

“D” is the total statewide acres in farms; and

“E” is the State-specific percent factor or 20 percent, whichever is greater.

The county average per acre land and building values that exceed the 20 percent threshold for solar and wind energy development are as follows for BLM managed lands.

TABLE OF STATE-SPECIFIC FACTORS AND OTHER DATA FOR APPLICABLE STATES

State	Existing regulations and proposed rule: Nationwide 20 percent factor (%)	Final rule state-by-state calculated factor (%)	Final rule state-specific factor (%)
Alaska	20	12	20
Arizona	20	49	49
California	20	51	51
Colorado	20	24	24
Idaho	20	29	29
Montana	20	12	20
Nevada	20	16	20
New Mexico	20	24	24
North Dakota	20	5	20
South Dakota	20	5	20
Oregon	20	2	20
Texas	20	–1	20

TABLE OF STATE-SPECIFIC FACTORS AND OTHER DATA FOR APPLICABLE STATES—Continued

State	Existing regulations and proposed rule: Nationwide 20 percent factor (%)	Final rule state-by-state calculated factor (%)	Final rule state-specific factor (%)
Utah	20	54	54
Washington	20	21	21
Wyoming	20	16	20
Average	20	21	27

Assignment of counties example: This example uses the zone numbers and values of the acreage rent schedule to assign Clark County, Nevada, to the appropriate zone. Current NASS land values for Clark County are \$5,611 per acre. The state-specific factor for Nevada is 16 percent, which is less than the 20 percent minimum established in this rule. Therefore, the BLM applied a 20 percent reduction to the NASS land values, which results in a per acre value of \$4,489. Based on this, Clark County is assigned to zone 7 (counties with zone values between \$3,394.01 and \$4,746 per acre). For the purposes of calculating the acreage rent, the BLM will use the value for zone 7, which is \$4,746 per acre.

The following paragraph is an acreage rent example describing the acreage rent for solar energy development.

Acreage rent example: The 2016 acreage rent for a 4,000 acre solar energy development in Clark County, Nevada (zone 7) would be \$1,021,480 (4,000 acres $\times$ \$255.37 per acre). Please note that the acreage rent calculation rounds the per acre dollar amount for the county to the nearest cent. In this example (\$4,746/acre $\times$ 100% $\times$ 5.27% $\times$ 1.021%) is rounded to \$255.37 per acre.

As specified in new section 2806.52(a)(3), the initial assignment of counties to the zones on the solar energy acreage rent schedule is based upon the NASS Census data from 2012 and is established for year 2016 through 2020. Subsequent reassignments of counties will occur every 5 years following the publication of the NASS Census as is described in section 2806.21.

Comment: The BLM received comments expressing concern that the assignment of some counties or regions to zones on the solar acreage rent schedule may not accurately reflect the value of those lands.

Response: The BLM recognizes that it may be necessary to adjust the initial assignment of counties to zones on the solar energy acreage rent schedule. Section 2806.52(a)(3) of the final rule is revised to clarify that the BLM may, on

its own initiative or in response to requests, adjust initial NASS survey data-based county assignments on a regional basis if it determines that assignments based solely on NASS data do not accurately reflect the values of the BLM lands in question. A similar clarification was made to section 2806.62(a)(3).

Section 2806.52(a)(4) requires acreage rent payments each year, regardless of the stage of development or status of operations of a grant. Acreage rent must be paid for the public land acreage described in the right-of-way grant prior to issuance of the grant and prior to the start of each subsequent year of the authorized term. There is no phase-in period for acreage rent, which must be paid annually and in full upon issuance of the grant. In the event of undue hardship, a rent payment plan may be requested and approved by a BLM State director, consistent with section 2806.15(c), so long as such a plan is in the public interest.

Section 2806.52(a)(5) states that the BLM will adjust the per acre zone rates each year based on the average annual change in the IPD–GDP as determined under section 2806.22(a). The acreage rent also will adjust each year for solar energy development grants issued under subpart 2804. The BLM will use the most current per acre zone rates to calculate the acreage rent for each year of the grant term, unless the holder selects the scheduled rate adjustment method under section 2806.52(d). The acreage rent for a solar energy development lease is adjusted under section 2806.54(a)(4).

This paragraph is revised in the final rule by removing “for authorizations outside of designated leasing areas, the BLM . . .” from the first sentence and replacing it with “We.” This edit is consistent with the acreage rent adjustment provision for wind energy (see section 2806.62(b)(5)). It is necessary because the BLM may issue a grant inside a DLA in some situations (see section 2809.19) and the proposed section would have been inaccurate. This paragraph is also revised in the

final rule by including the reference to the scheduled rate adjustment option, as described in section 2806.51 of this preamble.

Section 2806.52(a)(6) explains where you may obtain a copy of the current per acre zone rates for solar energy development (solar energy acreage rent schedule) from any BLM State, district, or field office or by writing: U.S. Department of the Interior, Bureau of Land Management, 20 M St SE., Room 2134LM, Attention: Renewable Energy Coordination Office, Washington, DC 20003. This paragraph is added so the public is aware of where to obtain a copy of the solar energy acreage rent schedule described under this section. The BLM also posts the solar energy acreage rent schedule online at http://www.blm.gov/wo/st/en/prog/energy/renewable_energy.html.

Section 2806.52(b), “MW capacity fee,” describes the components used to calculate this fee. Paragraphs (b)(1), (2), (3), and (4) explain the MW rate, MW rate schedule, adjustments to the MW rate, and the phase-in of the MW rate. As explained in IM 2016–122, electric and telephone facilities that qualify for financing under the Rural Electrification Act must pay the MW capacity fee and other payments required under this rule, except the acreage rent.

Comments: Some comments noted uncertainty regarding the meaning or definition of words in the proposed rule, such as “MW capacity fee” and its component parts of the MW rate, MW hour price, net capacity factor, and rate of return.

Response: The BLM acknowledges that this rule introduces a number of new terms and concepts. The BLM attempted to clearly define these terms in section 2801.5(b). Some of the terminology is similar as some terms relate to the same general subject matter (e.g., MW capacity fee and MW rate). The BLM has revised the regulations and provided additional discussion in the preamble to help facilitate a better understanding of the rule and its requirements. For example, a more specific citation is provided in section

2806.52(b)(1) and other locations in the final rule to help readers better locate and understand the terms of the final rule. These revisions and terms are discussed in greater detail throughout the preamble for sections 2806.50 through 2806.68.

The MW capacity fee, as defined in section 2801.5(b), refers to payment, in addition to the acreage rent, for solar energy development grants and leases based on the approved MW capacity of the solar energy authorization. The MW capacity fee is the total authorized MW capacity approved by the BLM for a project, or an approved stage of development, multiplied by the appropriate MW rate. The MW capacity fee is prorated and must be paid for the first partial calendar year in which generation of electricity starts or when identified within an approved POD. This fee captures the increased value of the right-of-way for the particular solar- or wind-project use, above the limited rural or agricultural land value captured by the acreage rent. The MW capacity fee will vary, depending on the size and type of solar project and technology and whether the solar energy right-of-way authorization is a grant (issued under subpart 2804) or a lease (issued under subpart 2809). The MW capacity fee is paid annually either when electricity generation begins, or as otherwise stated in the approved POD, whichever comes first. If electricity generation does not begin on or before the time approved in the POD, the BLM will begin charging a MW capacity fee at the time identified in the POD.

The POD submitted to the BLM by the right-of-way applicant must identify the stages of development for the solar or wind energy project's energy generation, including the time by which energy generation is projected to begin. The BLM will generally allow up to three development stages for a solar energy project. As the facility becomes operational, the approved MW capacity will increase as described in the POD. These stages are part of the approved POD and allow the BLM to enforce the diligence requirements associated with the grant.

Comments: Other comments suggested that a bid could include an alternative payment structure to the BLM over the life of the project. This alternative payment structure would replace the acreage rent and MW capacity fee described in this final rule. The comments further suggested that the BLM reduce costs to developers by eliminating the MW capacity fee, conducting regional mitigation planning for DLAs, and performing a majority of the work necessary for the NEPA and

Section 7 (endangered species) reviews early in the process inside DLAs.

Response: As explained elsewhere in this preamble, the BLM has determined that the rule's multi-component payment structure, involving both an "acreage rent" and "MW capacity fee" constitute the full fair market value for the use of the public lands by a wind and solar energy project. An alternative payment structure may not provide a fair return for the use of the public lands, and therefore, would be inconsistent with the BLM's obligations under FLPMA. The rule's structure is consistent with existing policy. That said, the final rule does allow the BLM to establish alternate fiscal terms for an individual project or region upon sufficient showing by an applicant that such alternative terms are justified. These alternative terms, if approved by the BLM, would be used in lieu of the default terms established by the rule inside and outside of designated leasing areas.

Under the rule's multi-component structure, the "acreage rent" represents the value of the raw undeveloped land, while the MW capacity fee represents the value for this particular commercial use of the public lands above and beyond the rural or agricultural value of the land in its unimproved state. Both are necessary components of obtaining the fair market value for the use of the public lands for wind and solar energy development. As explained above, this multi-component structure bears similarities to private land leases, which typically involve a land rent and royalty rate.

As suggested by the comments, the BLM does perform a majority of the work up front for the NEPA and Section 7 compliance processes for right-of-way leases inside DLAs. Mitigation work and costs may be identified in some cases before a competitive process occurs, such as in Dry Lake Valley solar energy zone in Nevada. The BLM held a competitive process in 2014 and reached a decision within 10 months of the auction. This was less than half the time it generally takes to process the project applications.

The BLM had great success in the Dry Lake Valley solar auction, at least in part, because there was a regional mitigation strategy in place. However, there may be instances in the future where a mitigation strategy is not appropriate or necessary. The BLM will not include a requirement for mitigation strategies in this final rule, but will be consistent with its interim policy guidance for offsite mitigation (IM 2013–142).

Comments: Some comments argue that the value of land for purposes of renewable energy development should be determined exclusively by MW capacity fees or by fees based on the number of MWs actually produced and delivered, not by the right-of-way's acreage value.

Response: Under the final rule, the BLM does not calculate annual charges for solar and wind energy development by using only a MW capacity fee, as suggested by the comments. The BLM has determined that requiring an acreage rent and MW capacity fee is the best method, consistent with applicable legal authorities, for determining the appropriate value of a solar or wind energy development right-of-way. The BLM also notes that the MW capacity fee and acreage rent in the final rule have been discounted from comparable costs that are typically charged in the private sector to account for the cost to comply with the terms and conditions of the BLM's authorization (bonding, due diligence, etc.).

Comments: A comment suggested that the BLM treat solar and wind energy technologies the same when setting acreage rents and MW capacity fees. Another comment suggested that the BLM give additional consideration to the use of energy storage technologies when setting acreage rents and MW capacity fees.

Response: In the BLM's examination of the different energy generation technologies it was determined that some technologies, such as CSP, are generally more efficient (*i.e.*, generate more energy using the same amount of sunlight) than other technology types and often require that the site selected for development include certain specific characteristics, such as limited grade. This is evidenced by the average efficiencies of the various solar technologies as reflected in the capacity factors on the EIA's Web site. Since the efficiencies of PV and CSP technologies are inherent to the technologies and are, in part, related to the particular conditions of the land to be used, the BLM maintained this distinction in the final rule and did not implement the comment's suggestion on limiting the various solar technology MW capacity fees to a single non-distinct fee.

The BLM did reconsider how it considers storage when charging a MW capacity fee. The BLM will maintain the proposed net capacity factor for CSP with storage capacity of 3 hours or more. CSP is a technology which is generally engineered with storage, which increases the efficiency, but decreases overall net capacity. The BLM is confident, based on its experience,

that this is the appropriate net capacity factor for this technology based on the technology currently deployed and available information.

However, the BLM does recognize that storage could have implications for other technology types as well. Based upon the premise that storage increases the efficiency of a project, the BLM requested that the National Renewable Energy Laboratory (NREL) provide a report on the status of energy storage in the United States. The BLM hoped to use this report to establish in the regulations an appropriate methodology for determining the value of storage for solar and wind projects on public lands. However, NREL's report noted that energy storage is an emerging and rapidly growing market, so there is not enough empirical data and commercial experience on storage to support an accurate calculation for valuing storage. Therefore, the BLM determined that it would be premature to add energy storage values to the regulations at this time beyond the one provided for CSP with 3 hours of storage.

In this final rule, the BLM adds a new sentence under the definition of MW rate to explain that in the future, the BLM may establish a different net capacity factor on a case-by-case basis, such as when a project uses storage, and the BLM determines that the efficiency rating varies from the established net capacity factors in this final rule. For example, if a wind energy project includes storage in its design, the BLM may determine an appropriate net capacity factor for that project.

Section 2806.52(b)(1) identifies the "MW rate" as a formula that is the product of four components: The hours per year, multiplied by the net capacity factor, multiplied by the MWh price, multiplied by the rate of return. This can be represented by the following equation: $MW\ Rate = H\ (8,760\ hrs.) \times N\ (net\ capacity\ factor) \times MWh\ (Megawatt\ Hour\ price) \times R\ (rate\ of\ return)$. The components of this formula are discussed here at greater length.

Hours per year. This component of the MW rate formula is the fixed number of hours in a year (8,760). The BLM uses this number of hours per year for both standard and leap years.

Net capacity factor. The net capacity factor is the average operational time divided by the average potential operational time of a solar or wind energy development, multiplied by the current technology efficiency rates. A net capacity factor is used to identify the efficiency at which a project operates. The net capacity factor is influenced by several common factors such as geographic location and

topography and the technology employed. Other factors can influence a project's net capacity factor. For example, placement of a solar panel in the direction that captures the most sun may increase the efficiency at which a project operates. These other factors tend to be specifically related to a project and its design and layout. An increase in the net capacity factor is most readily seen when a developer sites a project geographically for the energy source they are seeking and utilizes the best technology for harnessing the power. An example of this is placing wind turbines in a steady wind speed location using a wind turbine designed for optimal performance at those wind speeds.

The efficiency rates may vary by location for each specific project, but the BLM will use the national average for each technology. Efficiency rates for solar and wind energy technology can be found in the market reports provided by the Department of Energy through its Lawrence Berkeley National Laboratory. For solar energy see "Utility-Scale Solar 2012" at http://emp.lbl.gov/sites/all/files/lbnl-6408e_0.pdf and for wind energy, please see "2012 Wind Technologies Market Report" at <http://emp.lbl.gov/sites/all/files/lbnl-6356e.pdf>. This rule establishes the net capacity factor for each technology as follows:

Technology type	Net capacity factor (%)
Photovoltaic (PV)	20
Concentrated Photovoltaic (CPV) or Concentrated Solar Power (CSP)	25
CSP w/Storage Capacity of 3 Hours or More	30
Wind Energy	35

As previously discussed in this preamble, the BLM has revised the proposed description of net capacity factor in this final rule. This final rule maintains the proposed net capacity factor for CSP with storage capacity of 3 hours or more at 30 percent. The BLM adds in this final rule a description of the net capacity factor in the definition recognizing that as technology evolves, the BLM may determine a net capacity factor for a specific project on a case-by-case basis in the future, as appropriate. This will better allow the BLM to receive fair market value payment for use of the public lands in the rapidly changing storage market.

The BLM intends to periodically review the efficiency factors for the various solar and wind technologies.

In the proposed rule, the BLM considered basing the net capacity factors for these technologies on an average of the annual capacity factors listed by the EIA. The EIA posts an average of the capacity factors on its Web site at http://www.eia.gov/electricity/monthly/epm_table_grapher.cfm?t=epmt_6_07_b. However, the BLM decided not to go forward with this provision and removed it from the final rule because those annual capacity factors are not reviewed or confirmed by technical experts, such as those at the National Laboratories, and therefore, they are not a sufficiently reliable source of information on which to base the net capacity factor. Further, EIA may not continue to maintain and update this information in the future, and therefore, it may not be a viable source of information in the future.

MWh price. This component of the MW rate formula is the full 5 calendar-year average of the annual weighted average wholesale prices of electricity per MWh for the major trading hubs serving the 11 Western States of the continental United States. This wholesale price of the trading hubs is the price paid for energy on the open market between power purchasers and is an indication of current pricing for the purchase of power. Several comments were submitted concerning the MWh price.

Comment: One comment suggested that this component not be rounded to the nearest half cent.

Response: The BLM proposed to round the MWh price to the nearest 5-dollar increment. In other portions of the regulations the BLM rounds to the nearest cent. The proposed rule was explicit that the MWh price would be rounded to the nearest 5-dollar increment, but the final rule has been adjusted to round the MWh price to the nearest dollar increment. Rounding to the nearest dollar increment is consistent with current BLM practices for calculating annual payments. The BLM declined, however, to adopt the commenter's suggestion and round to the nearest half cent, because the MWh price is an estimated 5-year average of wholesale prices. Providing a more specific calculated MWh price could give a false precision to the actual rates provided by the BLM.

Comment: Another comment stated that we should not rely on the ICE trading hub as our source for data. Relying on a single vendor for determining the MWh price may lead to inaccurate fees if the vendor's data is inaccurate. There are other vendors that have current data available for the major trading hubs in the West as well.

Response: The proposed rule identified the ICE as the source of data to be used in calculating the MWh price. However, the final rule is revised to remove ICE as the only source of the major trading hub data in section 2806.52(b)(3)(i). Removing the specific source of data from the final rule is consistent with the proposed rule, in that the BLM has indicated that other sources may be used in the future should ICE stop providing such data. Furthermore, since publication of the proposed rule, the BLM became aware that the ICE no longer provides such market data for free to the public, but now offers these data under a paid subscription. Future updates to the MWh price may use ICE or other similar purveyors of market data to determine the major trading hubs and the wholesale market prices of electricity. Under this final rule, the BLM is using market data from SNL Financial to calculate the 5-year average of the annual weighted average wholesale price per MWh.

Comments: Several comments requested an update of the MWh price and stated that any update being made should include language to identify the most recent full calendar year data and to remove the uncertainty of how the BLM will determine the most recent 5-year data with future updates. Commenters further indicated that the data used in calculating the MWh price were skewed to numbers higher than the

true recent market average since market pricing for the year 2008 were much higher than the years preceding or following it.

Response: The BLM understands the concern regarding the intent to establish the MWh price using current market data. In the proposed rule, market data from calendar years 2008 through 2012 were used to determine the MWh price. In the final rule section 2806.52(b)(3)(i), the BLM updated the MWh price to reflect the most recent full 5 calendar-year data (that is, data from 2010–2014) from the major trading hubs located in the West.

In addition, the BLM adjusted provisions governing revisions to the MWh price to account for the fact that under section 2806.50, the BLM bills customers in advance for the following year. Specifically, the BLM revised the final rule so that the next update to the MWh price will occur for 2021, not 2020. This will allow the BLM to set the new price during 2020 using the most current market data for the previous five full years (2015–2019) without using the 2014 data twice. Market data for 2019 are not expected to be available until early 2020. Once data are available, the BLM will calculate the new, 2021–2025 MW capacity fee using the full five calendar-year average of the market data for 2015–2019, and notify existing right-of-way holders of the new fee.

In addition to using years 2010 through 2014 in calculating the MWh price, and adjusting the provisions

governing revisions to that price, the BLM also revised the final rule to require that the MWh price be rounded to the nearest dollar increment, as opposed to the proposed rule's approach of rounding up to the nearest five-dollar increment. The BLM made this change to avoid imposing a surcharge due solely to rounding. The BLM found that at the current MWh price, rounding to the nearest five-dollar increment could impose a surcharge of up to 5 percent, or \$158 per MW of project capacity. Rounding to the nearest dollar increment will limit the surcharge without implying false precision.

Note that the current MW rate is \$38 per MWh as calculated using wholesale market data from SNL Financial for the major trading hubs in the west. The calculation for the MWh price is described in more detail in following paragraphs with a table provided showing the averages for the trading hubs used in the calculation.

When calculating the MWh price, the BLM used the yearly average value for each of the major trading hubs that cover the BLM public lands in the West. The BLM then calculated the overall annual average yearly hub value for each of the years 2010–2014, and then averaged these five annual values to establish the MWh price. The average of the five annual average values for 2010 through 2014 is \$38.07, so the BLM set the MWh price at \$38.00.

Year	Mid-Columbia Hub	Palo-Verde Hub	Four Corners Hub	Mead Hub	SP15-EZ CA Hub *	NP15 Hub	CA-OR Border Hub	West US	Avg.
2010	\$35.86	\$38.79	\$40.13	\$40.07	\$39.86	\$39.81	\$38.80	\$39.05	\$39.05
2011	29.48	36.43	36.66	37.02	36.78	36.00	32.93	35.04	35.04
2012	22.90	29.68	30.59	30.87	34.86	32.03	27.09	29.72	29.72
2013	37.59	37.66		39.84	48.34	43.97	40.19	41.27	41.27
2014	38.67	42.42		44.84	51.13	51.06	43.48	45.27	45.27
2010–2015 Avg.								38.07	

Rate of return. The rate of return component used in the MW rate schedule reflects the relationship of income (to the property owner) to revenue generated from authorized solar or wind energy development facilities on the encumbered property. A rate of return for the developed land can range from 2 to 12 percent, but is typically around 5 percent, as identified in the appraisal consultation report completed by the Office of Valuation Services. These rates take into account certain risk considerations, *i.e.*, the possibility of not receiving or losing future income benefits, and do not normally include an allowance for inflation.

An applicant seeking a right-of-way from the BLM must show that it is financially able to construct and operate the facility. In addition, the BLM may require surety or performance bonds from the holder to facilitate compliance with the terms and conditions of the authorization, including any payment obligations. This reduces the BLM's risk and should allow the BLM to use a "safe rate" of return, *i.e.*, the prevailing rate on guaranteed government securities that includes an allowance for inflation. The BLM has established a rate of return that adjusts every 5 years to reflect the preceding 10-year average of the 20-year U.S. Treasury bond yield, rounded to the nearest one-tenth percent, with a

minimum rate of 4 percent. Applying this criterion, the initial rate of return is 4 and 3 tenths percent (the 10-year average of the 20-year U.S. Treasury bond yield (4.32 percent), rounded to the nearest one-tenth percent).

This final rule is revised to round the rate of return to the nearest one-tenth percent to address a commenter's concern that BLM's usual rounding convention (rounding to the nearest one half percent) could result in rate jumps due only to rounding; rounding to the nearest one-tenth percent will limit the change in BLM's rates without giving a false impression of precision.

As provided under paragraph (b)(2) of this section, the MW rate schedule is

made available to the public in the MW rate schedule for Solar and Wind Energy Development. The current MW rate

schedule is available to the public at any BLM office, via mail by request, or

at http://www.blm.gov/wo/st/en/prog/energy/renewable_energy.html.

MW RATE SCHEDULE FOR SOLAR AND WIND ENERGY DEVELOPMENT [2016–2020]

Type of energy technology	Hours per year	Net capacity factor	MWh price	Rate of return	MW rate 2016–2020
Solar—Photovoltaic (PV)	8,760	0.20	\$38	0.043	\$2,863
Solar—Concentrated photovoltaic (CPV) and concentrated solar power (CSP)	8,760	0.25	38	0.043	3,578
CSP with storage capacity of 3 hours or more	8,760	0.30	38	0.043	4,294
Wind—All technologies	8,760	0.35	38	0.043	5,010

For lease holders that choose the standard rate adjustment method, the periodic adjustments in the MW rate are discussed in connection with section 2806.52(b)(3). Under that section, adjustments to the MW rate will occur every 5 years, beginning with the 2021 rate, by recalculating the MWh price and rate of return, as provided in section 2806.52(b)(3)(i) and (ii), respectively.

Section 2806.52(b)(3)(i) requires that the MW rate be adjusted using the full 5 calendar-year average of the annual weighted average wholesale price per MWh for the major trading hubs serving the 11 Western States of the continental United States. The next update for the MW rate will use years 2015 through 2019, rounded to the nearest dollar increment. Following this methodology, the resulting MWh price will be used to determine the MW rate for each subsequent 5-year interval. The availability of data to establish the MWh price is described in this preamble in the discussion of the definition of MWh price, a component of the MW rate in section 2801.5(b).

As noted above, section 2806.52(b)(3)(ii) provides that when adjusting the rate of return, the BLM will use the 10-year average of the 20-year U.S. Treasury bond yield for the full 10 calendar-year period preceding the rate of return adjustment. The rate of return is rounded to the nearest one-tenth percent, and must be no less than 4 percent. In the final rule, the rate of return was calculated using years 2003 through 2012 of the 20-year U.S. Treasury bond yield (4.32 percent), rounded to the nearest one-tenth percent (4.3 percent). The rate of 4.3 percent will be used for calendar years 2016 through 2020. The rate of return will be recalculated every 5 years beginning in 2020, by determining the 10-year average of the 20-year U.S. Treasury bond yield for the previous ten calendar years (2010 through 2019, for

2020) rounded to the nearest one-tenth percent. The resulting rate of return, if not less than 4 percent, will be used to determine the MW rate for calendar years 2020 through 2024, and so forth. The 20-year U.S. Treasury bond yields are tracked daily and are accessible at <http://www.treasury.gov/resource-center/data-chart-center/interest-rates/Pages/TextView.aspx?data=longtermrateAll>.

To allow for a reasonable and diligent testing and operational period, under section 2806.52(b)(4)(i), the BLM will provide for a 3-year phase-in of the MW capacity fee for solar energy development grants issued under subpart 2804 of 25 percent for the first year, 50 percent the second year, and 100 percent the third and subsequent years of operations. The first year is the first partial calendar year of operations and the second year is the first full year. For example, if a facility begins producing electricity in June 2016, 25 percent of the capacity fee would be assessed for July through December of 2016 and 50 percent of the capacity fee would be assessed for January through December of 2017. One hundred percent would be assessed thereafter.

This BLM will apply the phase-in after electricity generation begins, or is scheduled to begin in the approved POD, whichever comes first. The proposed rule stated that the BLM would apply the phase-in “. . . after the generation of electricity starts.” The BLM revised section 2806.52(b)(4)(i), from the proposed to final rule, for consistency with other sections, including section 2806.52(b). The BLM made a corresponding revision to section 2806.62(b)(4)(i).

Under section 2806.52(b)(4)(ii), this rule explains the staged development of a right-of-way. Such staged development, consistent with the rule in section 2805.12(c)(3)(iii), can have no more than three development stages, unless the BLM approves in advance

additional development stages. The 3-year phase-in of the MW rate applies individually to each stage of the solar development. The MW capacity fee is calculated using the authorized MW capacity approved for that stage multiplied by the MW rate for that year of the phase-in, plus any previously approved stages multiplied by the MW rate.

Section 2806.52(b)(5) is added to this final rule to explain that the general payment provisions of subpart 2806, except for section 2804.14(a)(4), apply to the MW capacity fee. For example, section 2806.12 explains when and where a grant holder must pay rent. These requirements would also apply to the MW capacity fee. Although the MW capacity fee is charged to reflect the commercial utilization value of the public's resource, it is an annual payment required to the BLM and these general payment provisions will apply.

The final rule specifies that section 2804.14(a)(4) does not apply to the MW capacity fee. As explained in IM 2016–122, the MW capacity fee is not a rental fee, and therefore must be paid by electric and telephone facilities that qualify for financing under the Rural Electrification Act. A new section (see section 2806.62(b)(4)) that parallels this requirement is added into the wind energy provisions for consistency.

Section 2806.52(c) is included in the final rule in support of revisions the BLM has made to charge fairly for the use of solar and wind energy authorizations. See the comment discussion under section 2806.52(a) for further information.

Section 2806.52(c) describes how the BLM will reduce the acreage rent and the MW capacity fee. The BLM will compare the total annual payment of the acreage rent and MW capacity fee for 2017 to the base rent and MW capacity fee currently established by policy for the 2016 billing year. Any net increase in costs to a right-of-way holder will be

reduced by 50 percent for the 2017 billing year. This one-year reduction is intended to ease the transition for grant holders from the current policies to this final rule. If 2017 is the first year for which you make an annual payment, the phase-in described under section 2806.52(b)(4) will apply without the BLM implementation reduction of 50 percent. The rates established by policy will remain in effect until 2017 for rights-of-way that are not issued under subpart 2809 of this final rule in order to provide notice of the adjusted rent and fees to existing holders.

Section 2806.52(d) is added to this final rule to establish the method by which the BLM will perform scheduled rate adjustments for solar and wind energy grants. In order for scheduled rate adjustments to be applied to a grant, a grant holder must have selected the scheduled rate adjustment method and notified the BLM, as provided in section 2806.51 of the final rule.

Paragraph 2806.52(d)(1) specifies which rates will be used initially for the scheduled rate adjustments. For new grants, the BLM will use the per acre zone rate (see section 2806.52(a)(1)) and MW rate (see section 2806.52(b)(1)) in place when your grant is issued. For existing grants that are in place prior to the publication of this final rule, the BLM will use the per acre zone rate and MW rate in place prior to this rule's publication, as adjusted in paragraph (d)(6) of this section and discussed further in corresponding section 2806.52(d)(6) of this preamble.

Section 2806.52(d)(2) specifies that the per acre zone rate will be adjusted in two ways: Annually, the rate will adjust upward by the current average change in the IPD-GDP, as described in section 2806.22(b); and every five years, the rate will adjust upward by an additional 20 percent. In other words, under the scheduled rate adjustment method, per acre zone rates will be adjusted in years 1 through 5 by the IPD-GDP; in year 6, the BLM will apply a 20 percent increase to the year-5 rate. The same two-part adjustment process will then repeat itself in years 6–10 (IPD-GDP) and year 11 (20%); years 11–15 (IPD-GDP) and year 16 (20%); years 16–20 (IPD-GDP) and year 21 (20%); years 21–25 (IPD-GDP) and year 26 (20%); and finally, years 26–30 (IPD-GDP). If the grant is renewed, the rates in place at the time of renewal, as identified in section 2806.52(d)(1), will be used to establish the initial rates for the term of the renewed right-of-way.

As explained previously in connection with section 2806.51, the BLM developed the scheduled rate adjustment method in response to

concerns that NASS values in certain areas have the potential to jump significantly. To address this concern while ensuring the BLM obtains fair market value for these uses of the public lands, the BLM reviewed changes in national per acre land values in NASS and determined that making fixed rate adjustments of 20 percent every 5 years would reflect historical trends.

The BLM reached this conclusion as follows. The NASS values are released every 5 years, reflecting the increases and decreases in land values. Over a period of 10 years, land values could change drastically in some counties, but the national and western state average changes in land values over the 10-year period from 2003 and ending 2012 were an 80 percent and a 65 percent increase, respectively. For the BLM lands in the west, the range in land value changes were increases of 33 to 253 percent. The BLM determined from these findings that the scheduled rate adjustment method, including both the annual IPD-GDP adjustment and the every-five-year scheduled adjustment, should target an upwards adjustment of about 60 percent for every 10 year period.

To achieve this outcome, over the term of a grant, the BLM will make five 20-percent adjustments to the per acre zone rates, in years 6, 11, 16, 21, and 26. Compounded, these five 20-percent adjustments will result in a 150 percent increase in the per acre zone rate over the 30-year life of the grant (on top of whatever increases are dictated by the annual change in IPD-GDP). This adjustment is within the identified historic range of changes in land values from NASS, which reflect a change between 99 and 759 percent over a 30-year period, and is also in line with industry's recommended rate increase of 4 percent per year (which amounts to 324 percent over a 30 year period, if compounded annually).

Section 2806.52(d)(3) specifies that the MW rate will also increase by 20 percent every 5 years. The BLM reviewed national changes in power pricing since 1960 and determined that adjusting the MW rate by 20 percent every 5 years is appropriate. Since 1960, power pricing has increased by over 450 percent, but over the last 30 years, it has increased approximately 90 percent. Pricing trends show that power pricing seldom drops on an annual basis. The BLM will make 5 20-percent adjustments to the MW rate, which amounts to a 150 percent increase when compounded over the 30-year life of the grant. This 150 percent adjustment is in line with the 4 percent annual rate increase indicated by industry

representatives. It is also in line with historical changes in power prices.

Section 2806.52(d)(4) makes it clear that the scheduled rate adjustment option will enter into effect in year 1 of the rule, for both the acreage rent and MW capacity fee. The phase-in (see section 2806.52(b)(4)) and initial implementation (see section 2806.52(c)) sections apply only for grants to which the standard rate adjustment applies. Grant holders that select the scheduled rate adjustment method choose a defined payment stream over the variable rates that may be applied with the standard rate adjustment method. As such, phase-ins are not included with the scheduled rate adjustment method.

Section 2806.52(d)(5) explains that if the approved POD provides for staged development of the project, the BLM will calculate the MW capacity fee in each year using the MW capacity approved for that stage.

Section 2806.52(d)(6) specifies that the existing rates for grant holders that select the scheduled rate adjustment method will be adjusted for year 1. The adjustment reflects the fact that, due to this rulemaking process, the BLM did not make the rate adjustments called for under existing policy in either 2008 (for wind energy) or 2010 (for solar energy). If the BLM does not update the rates for existing grant holders as specified in this section, it could be as long as 12 years between rate updates.

Accordingly, in year 1 of this rule, the BLM will increase the per acre zone rate for these grant holders by 20 percent plus the annual change in the IPD-GDP, as described in section 2806.22(b), and increase the MW rate by 20 percent. The scheduled rate adjustments will then be based off of these adjusted, year-1 rates.

No additional comments were received, nor were other changes made to this section of the final rule, except for minor changes to improve readability.

Section 2806.54 Rents and Fees for Solar Energy Development Leases

The title of this section is revised by removing "inside designated leasing areas." In conjunction with a previous comment, the BLM has made various edits to the final rule to improve readability. The difference between grants and leases is explained earlier in this preamble, so this language is unnecessary and potentially confusing.

The introductory paragraph to section 2806.54 requires a holder of a solar energy lease obtained through the competitive process under subpart 2809 to pay an annual acreage rent and MW capacity fee. The first-year of acreage rent must be paid in advance, prior to

BLM's issuance of a lease, and the MW capacity fee will be phased-in and calculated based on the total authorized MW capacity of the solar energy development. Rents or fees for solar authorizations will vary depending on the number of acres, technology employed by the solar development, and whether the right-of-way authorization is a grant or lease.

There are many similarities in the rent and MW capacity fee for leases and grants for solar development. This section references the rent and MW capacity fee of grants under subpart 2804, as appropriate, and provides further discussion on how the rent MW capacity fee for a lease differs from that of a grant. Unlike grants, leases issued under subpart 2809 will be charged the full amount of the acreage rent and MW capacity fee schedules once this final rule is effective as there are no existing solar energy development leases. Although the BLM held a competitive offer relating to solar energy development in the Dry Lake SEZ, the successful bidders submitted applications and received right-of-way grants.

Paragraph (a) of this section identifies the acreage rent for a solar lease, which will be calculated in the same way as acreage rent for solar grants outside a DLA (see section 2806.52(a)). The acreage rent for the first year of a lease must be calculated and paid prior to BLM's issuance of a lease. Zone rates and payment of the acreage rent are the same for leases as they are for grants. For the per acre zone rates, see section 2806.52(a)(1). For the assignment of counties, see section 2806.52(a)(2) and (3). For the acreage rent payment, see section 2806.52(a)(4).

Consistent with other revisions in this final rule, the BLM added "This acreage rent will be based on the following:" at the end of section 2806.54(a). This revision makes it clear that the following paragraphs will be the basis for BLM's acreage rent for leases in DLAs.

Section 2806.54(a)(4) describes the adjustments to the acreage rent that may be made for a lease. Once an acreage rent is determined for a lease under paragraph (a) of this section, any adjustments in the annual acreage rent will be made at 10-year intervals thereafter—the first adjustment would be made in year 11 of the lease term and the next in year 21. During the 10-year periods, the acreage rent for a lease will remain constant and not be adjusted.

The BLM will, however, adjust the per acre zone rates of the acreage rent schedule each year based on the average annual change in the IPD-GDP, as

described in section 2806.22(a). This annual adjustment will not be applied to the acreage rent payments for a lease until the next 10-year interval, where the payment will be recalculated using the current acreage rent schedule. The BLM will use the most current per acre zone rates to calculate the acreage rent when first determining a new lease's acreage rent or when recalculating the acreage rent for the next 10-year period of a lease, unless the holder selected the scheduled rate adjustment method under section 2806.54(d).

Section 2806.54(b) identifies the MW capacity fee for solar development leases, which will be calculated in the same way as the MW capacity fee for solar grants outside of a DLA. The phase-in of the MW capacity fee is different from grants. For an explanation of when the BLM requires payment of the MW capacity fee, see section 2806.52(b). For the MW rate, see section 2806.52(b)(1). For the MW rate schedule, see section 2806.52(b)(2). For periodic adjustments in the MW rate, see section 2806.52(b)(3).

Reference to section 2806.52(b) has been added to the final rule. In conjunction with a previous comment, the BLM has made various edits to the final rule to improve readability. The BLM has explained when and how it will require payment and adding this specific citation will make this section more understandable.

Section 2806.54(c) describes the MW rate phase-in for solar energy development leases. Unless the holder selected the scheduled rate adjustment method under section 2806.54(d), the MW rate in effect at the time the lease is issued will be used for the first 20 years of the lease. The MW rate in effect in year 21 of the lease will be used for years 21–30 of the lease.

In order to improve readability in this section, the BLM provided a more specific citation to section 2806.52(b)(2). This should help direct the reader to the appropriate section of this final rule.

Section 2806.54(c)(1) provides for a 10-year phase-in of the MW capacity fee, plus the initial partial year, if any. For the first ten years of a lease, the MW capacity fee is calculated by multiplying the authorized MW capacity by 50 percent of the MW rate for the applicable type of solar technology employed by the project. The MW rate schedule is provided for under section 2806.52(b)(2). The phase-in applies to the MW rate for either solar or wind energy leases (see section 2806.64(c)).

Section 2806.54(c)(2) applies to the MW rate phase-in for years 11 through 20 of a lease. The MW capacity fee for years 11 through 20 will be calculated

by multiplying the MW capacity by 100 percent of the MW rate.

Section 2806.54(c)(3) applies to the MW rate for years 21 through 30 of a lease. The MW capacity fee for years 21 through 30 will be calculated by multiplying the MW capacity by 100 percent of the MW rate. If the POD requires that electricity generation will begin after year 10 of the lease, the MW capacity fee will be calculated using section 2806.54(c)(2) or (3), as appropriate.

Comments: Some comments suggested establishing a low cost payment structure, which is different from that proposed. The suggested payment structure would include a phase-in during the first half of a project's life and then raise fees to regular (full) rates for all solar and wind leases. The payment structure could require an upfront cost payment, and then full costs only when financial costs are being incurred by the developer. An example would be to reduce payments to 10 percent of the gross lease rate for the first 15 years for a lease within a designated solar energy development leasing area.

Response: The BLM did not change the payment structure as suggested by the commenter. FLPMA requires that the BLM generally receive fair market value for the use of the public lands. The suggested low cost payment structure may not provide fair market value.

Comments: Some comments suggested removing the distinction between solar or wind technologies and their respective base rent or fees (*i.e.*, wind is 30 percent and solar is 25 percent without differentiation between technologies). The comment also suggested that the BLM incentivize storage for solar facilities, to promote grid stability, by offering a reduced rate.

Response: The BLM's methodology for collecting fair market value through rents and fees is similar to market comparable practices from non-Federal lands. Use of a technology-specific net capacity factor is appropriate for determining the MW rate for solar and wind energy development. Further, the BLM is not responsible for directing a technology's costs or its success in the energy market. Intentionally setting rates below market values or without market support, such as by establishing a net capacity factor, is not appropriate for this final rule. These suggestions have not been incorporated into the final rule, and the language in the proposed rule is carried forward to the final rule, with some revision as noted in the discussion of section 2806.52(b).

Comment: Another comment recommends that if a MW capacity fee is adopted in the final rule for leases (issued under subpart 2809), the MW rate should be phased-in at 50 percent for the life of the lease; for grants (issued under subpart 2804), the MW rate should be phased-in over a 5-year period. The comment also recommends using the MW rate in effect when the lease or grant is issued without adjustment. PPAs are generally fixed for a term, usually 20 years. A developer places a higher premium on certainty and stability of the MW capacity fee over the potential for reduced rates in the future in case of a long-term downward trend in prices.

Response: The BLM is aware that certainty and stability are factors to consider when developing and establishing its rules. However, based on the BLM's experience, most solar and wind energy developments break even with the costs of constructing and operating a facility within 15 to 20 years after the start of generation of electricity. The BLM has taken this into account as part of its formulation of the MW rate updates and phase-in.

The MW rate is set when a lease is issued, and not updated until year 21 of the lease. The MW rate is phased-in for the first 10 years at 50 percent of the full rate, after which the MW rate is no longer phased-in. Any updates to the MW rate schedule will not result in an adjustment to leases during the 10-year phase-in or the first 20 years of the lease. Only at year 21 and each following 10-year interval will the MW rate adjust, using the currently established MW rate schedule.

A grant's MW rate, however, is set each year, beginning when a project starts generating electricity. The MW rate is phased-in for the first 3 years at 25/50/100 percent of the MW rate, respectively. The BLM will recalculate the MW rate schedule once every 5 years, at which time the next year's payment by a developer will adjust consistent with the updated MW rate schedule.

Section 2806.54(c)(4) describes the MW capacity fee of the lease if it were to be renewed. The MW capacity fee is calculated using the then-current MW rates at the beginning of the new lease period and remain at that rate through the initial 10-year period of the renewal term. The MW capacity fee will be adjusted using the then-current MW rate at the beginning of each subsequent 10-year period of the renewed lease term.

Under section 2806.54(c)(5), the rule provides for the staged development of leases. Such staged development, consistent with section

2805.12(c)(3)(iii), will have no more than three development stages, unless the BLM approved more development stages in advance. The MW capacity fee is calculated using the authorized MW capacity approved for that stage multiplied by the MW rate for that year of the phase-in, plus any previously approved stages multiplied by the MW rate as described in section 2806.54(c).

Section 2806.54(d) is added to this final rule to establish the method by which the BLM will perform scheduled rate adjustments for leases, similar to the scheduled rate adjustments for grants in section 2806.52(d). In order for scheduled rate adjustments to be applied to a lease, a lease holder must have selected the scheduled rate adjustment method, as required in section 2806.51.

Section 2806.54(d)(1) specifies which rates will be used initially for the scheduled rate adjustments. The BLM will use the per acre zone rate (see section 2806.52(a)(1)) and MW rate (see § 2806.52(b)(1)) that are in place when your lease is issued.

Section 2806.54(d)(2) specifies that the per acre zone rate will be increased every 10 years by the change in the IPD-GDP for the preceding 10-year period. (In contrast, the per acre zone rate for grants is adjusted every 5 years.) The 10-year average IPD-GDP change used for this increase is the same that is used to adjust the per acre rent schedule annually for linear rights-of-way under section 2806.22(b), except that it will be adjusted once cumulatively every ten years, rather than annually. For example, the current annual change in IPD-GDP is 2.1 percent, which would result in a roughly 21 percent change in year ten. In addition to the IPD-GDP change, a 40 percent increase every 10 years will be applied as part of the scheduled rate adjustment (in contrast to a 20 percent increase every 5 years for grants). The BLM will continue to apply this adjustment every 10 years (that is, in years 11 and 21 for the 30-year lease).

Similar to the approach taken for grants, the BLM reviewed changes in national per acre land values in NASS when establishing the 40 percent adjustment. Over the term of a lease, the BLM would make two adjustments to the per acre zone rates. These two adjustments would compound on each other, for a cumulative increase of 96% over the 30-year life of the lease. This adjustment is within the identified change in land values from NASS and is also in line with industry's recommendation of an annual change in rates limited to no more than 4 percent. (A 4 percent annual increase, compounded annually over 30 years,

amounts to a 324 percent increase over the life of the lease.) For further discussion on this, see the preamble discussion of section 2806.52(d)(2).

Section 2806.52(d)(3) specifies that likewise, the MW rate will increase by 40 percent every 10 years. The BLM reviewed national changes in power pricing since 1960 and determined that 40 percent adjustments to the MW rate every 10 years are appropriate. Over the term of the lease, the BLM would make 2 adjustments to the MW rate (in years 11 and 21). These 2 adjustments would compound on each other for a cumulative increase of 96% over the 30-year life of the lease. This adjustment is within the identified range of power pricing changes and is also in line with industry's recommendation of an annual change in rates limited to no more than 4 percent. (A 4 percent annual increase, compounded annually over 30 years, amounts to a 324 percent increase over the life of the lease.) For further discussion on this, see the preamble discussion of section 2806.52(d)(3).

Section 2806.54(d)(4) specifies that the phase in of the MW rate for standard rate adjustments in section 2806.54(c) does not apply to authorizations that are using the scheduled rate adjustments. Instead, for years 1 through 5 of a lease, plus any initial partial year, the MW capacity fee is 50 percent of the otherwise applicable solar rate. This reduction is applied only to new leases and only during the initial term; the phase-in will not be applied to leases when renewed.

Like the phase-in period under the standard rate adjustment method, the initial MW capacity is also subject to a phase-in; however, it is shorter (a 5-year period instead of a 10-year period). Again, the purpose of the phase-in period is to provide a financial incentive to developers to use the public lands within their grant earlier (since the clock on the phase-in starts running at lease issuance, even though the obligation to pay the MW capacity fee does not attach until power generation commences). The BLM selected a 5-year phase-in under the scheduled rate adjustment method instead of the 10-year phase-in from section 2806.54(c) because of the difference in rate structures. Under the standard rate adjustment, the MW capacity fee will not adjust for the first 20 years of a lease term, and that initial rate is phased-in for the first half of that period (10 years). Under the scheduled rate adjustments, the rate adjusts every 10 years and the phase-in is provided for half of the initial rate period (5 years). Both the 10-year and 5-year phase-in are consistent with market practices.

Section 2806.54(d)(5) explains that if the approved POD provides for staged development of the project, the BLM will calculate the MW capacity fee using the MW capacity approved for that stage. Only development stages in operation during the first 5 years of a lease will be phased-in.

MW capacity fee-example 1: The MW capacity fee for a 400-MW photovoltaic solar energy right-of-way grant would be \$1,145,200 per year ($400 \text{ MWs} \times \$2,863 \text{ per MW}$), implemented over a 3-year period after the start of electricity generation. In the first partial year after start of generation in July for a solar energy right-of-way, the MW capacity fee would be \$143,150 ($400 \text{ MWs} \times \$2,863 \text{ per MW} \times 25 \text{ percent} \times 0.5 \text{ year}$); in the second year after the start of electricity generation, the MW capacity fee would be \$572,600 ($400 \text{ MWs} \times \$2,863 \text{ per MW} \times 50 \text{ percent} \times 1 \text{ year}$); and in the third year after the start of electricity generation, and each year thereafter, the MW capacity fee would be \$1,145,200 per year ($400 \text{ MWs} \times \$2,863 \text{ per MW} \times 1 \text{ year}$).

MW capacity fee-example 2: The MW capacity fee for a 400 MW concentrated PV or concentrated solar power right-of-way grant would be \$1,431,200 per year ($400 \text{ MWs} \times \$3,578 \text{ per MW}$), implemented over a 3-year period after the start of electricity generation. In the first partial year assuming the start of electricity generation in January for a solar energy right-of-way, the MW capacity fee would be \$357,800 ($400 \text{ MWs} \times \$3,578 \text{ per MW} \times 25 \text{ percent} \times 1 \text{ year}$); in the second year after the start of electricity generation, the MW capacity fee would be \$715,600 ($400 \text{ MWs} \times \$3,578 \text{ per MW} \times 50 \text{ percent} \times 1 \text{ year}$); and in the third year after start of generation and each year thereafter, the MW capacity fee would be \$1,431,200 per year ($400 \text{ MWs} \times \$3,578 \text{ per MW} \times 1 \text{ year}$).

MW capacity fee-example 3: The MW capacity fee for a 400 MW solar power right-of-way grant with a storage capacity of 3 hours or more would be \$1,717,600 per year ($400 \text{ MWs} \times \$4,294 \text{ per MW}$), implemented over a 3-year period after the start of electricity generation. Assuming generation began in January, in the first partial year after the start of electricity generation, the MW capacity fee would be \$429,400 for a solar energy right-of-way ($400 \text{ MWs} \times \$4,294 \text{ per MW} \times 25 \text{ percent} \times 1 \text{ year}$); in the second year after the start of electricity generation, the MW capacity fee would be \$858,800 ($400 \text{ MW} \times \$4,294 \text{ per MWs} \times 50 \text{ percent} \times 1 \text{ year}$); and in the third year after the start of electricity generation, and each year thereafter, the MW capacity fee would

be \$1,717,600 per year ($400 \text{ MW} \times \$4,294 \text{ per MWs} \times 1 \text{ year}$).

Acreage rent and MW capacity fee example for a solar energy development grant: The annual acreage rent and MW capacity fee for 2016 for a 400 MW photovoltaic solar energy development grant located on 4,000 acres in Clark County, NV after the phase-in period would be approximately \$2,231,480. (The acreage rent of \$1,021,480 ($4,000 \text{ acres} \times \$255.37 \text{ per acre}$) plus the MW capacity fee of \$1,261,600 ($400 \text{ MWs} \times \$3,154 \text{ per MW}$) equals \$2,283,080).

No comments were received and no changes are made from the proposed rule to the final rule.

Section 2806.56 Rent for Support Facilities Authorized Under Separate Grant(s)

Under this section, support facilities for solar development will be authorized under a grant. Support facilities may include administration buildings, groundwater wells, and construction laydown and staging areas. Rent for support facilities authorized under separate grants is determined using the Per Acre Rent Schedule for linear facilities under existing section 2806.20(c). No comments were received and no changes are made from the proposed rule to the final rule.

Section 2806.58 Rent for Energy Development Testing Grant(s)

Comments: Several comments suggested that site- and project-area testing should be allowed for both solar and wind energy.

Response: The final rule now includes site- and project-area testing authorizations for both solar energy and wind energy. New section 2806.58 has been added in this final rule to incorporate this change. Changes in this section are consistent with section 2806.68, which did not receive any comments, but was modified to remove the word “wind” from the naming of the type of grants to remain consistent with the types of authorizations that the BLM will issue.

Section 2806.58(a) describes the rent for any energy site-specific testing grant. A minimum rent is established as \$100 per year for each grant issued. Under this paragraph rent is set by incorporating into the final rule the site-specific rent amount found in the BLM’s IM No. 2009–043, as follows: Site-specific grants are authorized only for one site and do not allow multiple sites to be authorized under a single grant; however, a single entity may hold more than one site-area testing grant. If a BLM office has an approved small site rental schedule, that office may use the rents,

so long as the rent exceeds the \$100 minimum. Small site rental schedules are provided to the BLM from the Department’s Office of Valuation Services and reflect accurate determination of market value. In lieu of annual payments for a site-specific testing grant, a grant holder may pay for the entire 3-year term of the grant. See sections 2801.9(d)(1) and 2805.11(b)(2)(i) of this preamble for further discussion of site-specific energy testing grants.

Section 2806.58(b) describes the rent for any energy project-area testing grant. A per-year minimum rent is established at \$2,000 per authorization or \$2 per acre for the lands authorized by the grant, whichever is greater. The appraisal consultation report by the Office of Valuation Services supports the rent established in this final rule. Project-area grants may authorize multiple meteorological or instrumentation testing sites. There is no additional charge or rent for an increased number of sites authorized under such grants. See sections 2801.9(d)(2) and 2805.11(b)(2)(ii) of this preamble for further discussion of project-area energy testing grants.

Section 2806.60 Rents and Fees for Wind Energy Rights-of-Way

Section 2806.60 requires a holder of a wind energy right-of-way authorization to pay annual rent and MW capacity fees for right-of-way grants issued under subpart 2804 and leases issued under subpart 2809.

As noted earlier in this preamble, there are similarities between rents and MW capacity fees for solar and wind energy, as well as between rents and MW capacity fees for authorizations issued under subparts 2804 and 2809. The BLM intentionally designed the rents and fees for solar and wind energy development projects to match as closely as possible in order to reduce the potential for confusion and misunderstanding of the requirements. The methodology for calculating rents, fees, phase-ins, adjustments, and rate proration is the same for wind as for solar. Many of the terms and conditions of a lease issued under this subpart will also be the same. No comments were received on this section, and no changes were made between the proposed and final versions of this section, other than those discussed in connection with section 2806.50 of this preamble.

Section 2806.61 Scheduled Rate Adjustment

Section 2806.61 is added to the final rule, consistent with section 2806.51 of this final rule. This section parallels

2806.51 with no substantive differences, except that this section applies to wind energy grants and leases instead of solar energy grants and leases. See section 2806.51 of this preamble for further discussion. Parallel changes are also made in sections 2806.62(d) and 2806.64(d) of this preamble. See sections 2806.52(d) and 2806.54(d) of this preamble for further discussion of those sections.

Section 2806.62 Rents and Fees for Wind Energy Development Grants

Section 2806.62 parallels section 2806.52, which discusses rents and MW capacity fees for solar energy development grants. The discussion on all components of the wind energy development grants duplicates the provisions for solar rents and fees, except for paragraph (a)(1) of this section which discusses the per acre zone rates and paragraphs (a)(6) and (7) and (b)(4)(iii) of this section, which discuss the BLM implementation of the new acreage rent and MW capacity fee. Revisions have been made to the requirements of this section consistent with comments on the proposed rule. See comments discussed under section 2806.52 for further information and details regarding the revisions made to the final rule.

Section 2806.62(a) addresses the acreage rent for wind energy development. See section 2806.52(a) for a discussion of acreage rent. The acreage rent is calculated by multiplying the number of acres (rounded up to the nearest tenth of an acre) within the authorized area times the per acre zone rate in effect at the time the authorization is issued. The annual zone rate is derived from the wind energy acreage rent schedule in effect at the time the authorization is issued.

Section 2806.62(a)(1) addresses per acre zone rates for wind energy

development grants. The methodology for calculating the acreage rent is the same for wind as it is for solar, but wind and solar energy have different encumbrance factors. Solar energy projects encumber approximately 100 percent of the land, while wind energy projects encumber approximately 10 percent of the land. Therefore, for wind, the per acre zone rate is calculated using a 10 percent encumbrance factor instead of 100 percent encumbrance factor.

Under section 2806.62(a)(1), the initial per acre zone rate for wind energy projects is now established by considering four factors: the per acre zone value multiplied by the encumbrance factor multiplied by the rate of return multiplied by the annual adjustment factor. This calculation is reflected in the following formula – $A \times B \times C \times D = E$, where:

“A” is the per acre zone value are the same per acre zone values described in the linear rent schedule in section 2806.20(c);

“B” is the encumbrance equaling 10 percent;

“C” is the rate of return equaling 5.27 percent;

“D” is the annual adjustment factor equaling the average annual change in the IPD–GDP for the 10-year period immediately preceding the year that the NASS census data becomes available; and

“E” is the annual per acre zone rate. The BLM will adjust the per acre zone rates each year, based on the average annual change in the IPD–GDP, as described in section 2806.22(a). Adjusted rates are effective each year on January first.

Under section 2806.62(a)(2), counties (or other geographical areas) are assigned a Per Acre Zone Value on the wind energy acreage rent schedule, based on the State-specific percent of the average land and building value

published in the NASS Census. The Per Acre Zone Value is a component of calculating the Per Acre Zone Rate under paragraph (a)(1) of this section. As specified in new section 2806.62(a)(3), the initial assignment of counties to the zones on the wind energy acreage rent schedule will be based upon the NASS Census data from 2012 and be established for calendar years 2016 through 2020. Subsequent reassignments of counties will occur every 5 years following the publication of the NASS Census, as described in section 2806.21. State-specific percentage factors will be recalculated once every 10 years at the same time the linear rent schedule is updated, as described in section 2806.22(b).

Section 2806.62(a)(2) provides the calculation to establish a State-specific percent factor that represents the difference between the improved agricultural land values provided by NASS and the unimproved rangeland values that represent BLM land. The calculation for determining the State-specific percent factor is $(A/B) - (C/D) = E$, where:

“A” is the NASS Census statewide average per acre value of non-irrigated acres;

“B” is the NASS Census statewide average per acre land and building value;

“C” is the NASS Census total statewide acres in farmsteads, homes, buildings, livestock facilities, ponds, roads, wasteland, etc.;

“D” is the total statewide acres in farms; and

“E” is the State-specific percent factor or 20 percent, whichever is greater.

The county average per acre land and building values that exceed the 20 percent threshold for solar and wind energy development are as follows for the BLM managed lands:

TABLE OF STATE-SPECIFIC FACTORS AND OTHER DATA FOR APPLICABLE STATES

State	Existing regulations and proposed rule: nationwide 20 percent factors (%)	Final rule state-by-state calculated factors (%)	Final rule state-specific factors (%)
Alaska	20	12	20
Arizona	20	49	49
California	20	51	51

Washington	20	21	21
Wyoming	20	16	20
Average	20	21	27

The following table lists the paragraphs where the wind energy grant provision parallels the solar energy

provision for the same topic. The discussion for each relevant wind energy provision is found in this

preamble under the associated solar energy provision.

Topic	Wind	Solar
Acreage Rent	43 CFR 2806.62(a)	43 CFR 2806.52(a).
Per acre Zone Rate	43 CFR 2806.62(a)(1)	43 CFR 2806.52(a)(1).
Assignment of Counties	43 CFR 2806.62(a)(2)	43 CFR 2806.52(a)(2).
Initial Assignment of Counties	43 CFR 2806.62(a)(3)	43 CFR 2806.52(a)(3).
Acreage Rent Payment	43 CFR 2806.62(a)(4)	43 CFR 2806.52(a)(4).
Acreage Rent Adjustments	43 CFR 2806.62(a)(5)	43 CFR 2806.52(a)(5).
Obtain a Copy of Rent Schedule	43 CFR 2806.62(a)(7)	43 CFR 2806.52(a)(6).
MW Capacity Fee	43 CFR 2806.62(b)	43 CFR 2806.52(b).
MW Rate	43 CFR 2806.62(b)(1)	43 CFR 2806.52(b)(1).
MW Rate Schedule	43 CFR 2806.62(b)(2)	43 CFR 2806.52(b)(2).
MW Rate Adjustments	43 CFR 2806.62(b)(3)	43 CFR 2806.52(b)(3).
MW Rate Formula	43 CFR 2806.62(b)(3)(i)	43 CFR 2806.52(b)(3)(i).
Rate of Return	43 CFR 2806.62(b)(3)(ii)	43 CFR 2806.52(b)(3)(ii).
MW Rate Phase-in	43 CFR 2806.62(b)(4)	43 CFR 2806.52(b)(4).
Scheduled Rate Adjustment	43 CFR 2806.62(d)	43 CFR 2806.52(d).
Initial Rates Used	43 CFR 2806.62(d)(1)	43 CFR 2806.52(d)(1).
Acreage Rate Adjustment	43 CFR 2806.62(d)(2)	43 CFR 2806.52(d)(2).
MW Rate Adjustment	43 CFR 2806.62(d)(3)	43 CFR 2806.52(d)(3).
MW Rate Phase-in	43 CFR 2806.62(d)(4)	43 CFR 2806.52(d)(4).
Stage of Development	43 CFR 2806.62(d)(5)	43 CFR 2806.52(d)(5).
Existing Grants	43 CFR 2806.62(d)(6)	43 CFR 2806.52(d)(6).

Section 2806.62(a)(6) is added to this final rule to explain that holders of wind energy development grants must pay acreage rent as described in section 2806.62(a), except that for holders of wind energy development grants, the acreage rent will be phased in as described in section 2806.62(c).

Section 2806.62(b)(4)(i) addresses the term of the MW rate phase-in. Paragraphs (b)(4)(i)(A), (B), and (C) of this section address the percentages of the phase-in. See section 2806.52(b)(4)(i) for a discussion of the term of the MW rate phase-in and paragraphs (b)(4)(i)(A), (B), and (C) for the percentages of the phase-in. No change is made to the final rule, other than the change made for consistency with section 2806.52(b)(4)(i).

New section 2806.62(b)(4)(ii) addresses the MW rate phase-in for a staged development. Paragraph (b)(4)(ii)(A) of this section addresses the percentages of the phase-in and paragraph (b)(4)(ii)(B) addresses the calculation of the rent for the phase-in of a staged development. See section 2806.52(b)(4)(ii) for a discussion of the

MW rate phase-in for a staged development, paragraph (b)(4)(ii)(A) for the percentages of the phase-in, and paragraph (b)(4)(ii)(B) for the calculation of the rent for the phase-in of a staged development.

New section 2806.62(b)(4)(iii) states that the MW rate will be implemented as described in section 2806.62(c).

Comment: A comment noted that the BLM has not yet designated any wind energy zones or other preferred wind energy development areas that would become a DLA. Without any such areas designated for wind energy, the BLM's rule would put wind energy at a disadvantage in comparison to solar energy since wind energy would not be able to benefit from the incentives available for development in such areas.

Response: The BLM agrees that there are currently no wind energy development areas and that wind energy developers cannot yet benefit from the incentives provide for DLAs in subpart 2809 of this final rule. The BLM intends to establish wind energy DLAs in the future. However, this would be done through amending or revising a land use

plan, which can take several years. Therefore, the BLM has added section 2806.62(c) to this final rule to explain how the BLM will implement the acreage rent and MW capacity fee for wind energy grants.

Developers that submitted an application prior to the publication of the proposed rule would not have known the potential incentives for developing inside a DLA. This final rule provides a payment reduction to developers that had committed to a project on the public lands before this rule was proposed. However, developers that submitted applications after the publication of the proposed rule were aware of the BLM's proposed rule and incentives and knew that they did not qualify for these incentives.

Section 2806.62(c) implements this payment reduction. Specifically, section 2806.62(c) applies to all wind energy development grants that have made a payment for billing year 2016, or for which an application to the BLM was filed before September 30, 2014. This is explained in the following paragraphs.

Under paragraph 2806.62(c)(1) of this section, the BLM will reduce the acreage rent and the MW capacity fee. The BLM will compare the total annual payment of the acreage rent and MW capacity fee for 2017 to the total annual payment currently required by policy for the 2016 billing year. Any net increase in costs to a right-of-way holder will be reduced by 50 percent for 2017 billing year. This one-year reduction is intended to ease the transition for grant holders from the current policies to this final rule. If 2017 is the first year for which you make an annual payment, the phase-in described under section 2806.52(b)(4) will apply without an implementation reduction of 50 percent. The rates established by policy will remain in effect until 2017 for rights-of-way that are not issued under subpart 2809 of this final rule in order to provide notice to existing holders of the adjusted rent and fees.

Section 2806.62(c)(2) explains how the BLM will implement the acreage rent and MW capacity fee for wind energy grants for which an application to the BLM was filed before September 30, 2014. In addition to the timely filing requirement, a grant holder must also have an accepted POD and cost recovery agreement established before September 30, 2014.

The BLM intends for this section to apply to applications that were filed before the BLM issued the proposed rule on September 30, 2014. Anyone who submitted an application before this

date would not have known about the proposed requirements of the final rule, including updates to the payment requirements and the incentives for developing inside a DLA.

Under paragraph (c)(2)(i) of this section, the BLM will reduce the acreage rent of the grant for the first year by 50 percent. This reduction applies only to the first year's annual payment, even if it is for a partial year. If the BLM requires an upfront payment for the first partial year and next full calendar year, only the partial year will be reduced by 50 percent. The BLM may require such payment for the year in advance for rights-of-way authorized consistent with section 2806.12 of this final rule. No reduction will be applied to the acreage rent for the subsequent years of the grant.

Under paragraph (c)(2)(ii) of this section when the project has reached a point where the BLM requires a MW capacity fee payment, the MW capacity fee will be reduced by 75 percent for the first and second year and 50 percent for the third and fourth year of the grant. The first year is the initial partial year, if any, after electricity generation begins. The fifth and subsequent years will be charged at 100 percent of the MW capacity fee. This reduction applies to each approved stage of development.

No further comments were received and no other changes were made to this section, beyond those that were already discussed in this preamble in connection with section 2806.52.

Section 2806.64 Rents and Fees for Wind Energy Development Leases

The title of this section was revised by adding “and fees” and removing “inside designated leasing areas.” This was done to be consistent with the title of section 2806.54.

See section 2806.54 for a discussion of all components of rent for a wind energy development lease, except for section 2806.54(a)(1), which discusses the per acre zone rates. Section 2806.54(a)(1) does not apply to wind energy development grants and leases because solar and wind energy acreage rents are calculated using different encumbrance factors. Section 2806.64(a)(1) addresses the per acre zone rate for wind energy leases. See section 2806.54(a)(1) for a discussion of acreage rent.

Section 2806.64(a)(1) addresses per acre zone rates for wind energy leases. See section 2806.62(a)(1) for a discussion of acreage rent, which differs from solar energy development. The per acre rents are calculated using the methodology discussed in section 2806.62(a)(1), which reflects the 10 percent encumbrance factor for wind energy development.

The following chart lists the paragraphs where the wind energy lease provisions parallel the solar energy provisions for the same topic. The discussions for each relevant wind energy provision are found in the preamble under the associated solar energy provision.

Topic	Wind	Solar
Acreage Rent	43 CFR 2806.64(a)	43 CFR 2806.54(a)
Per acre Zone Rate	43 CFR 2806.64(a)(1)	43 CFR 2806.54(a)(1)
Assignment of Counties	43 CFR 2806.64(a)(2)	43 CFR 2806.54(a)(2)
Acreage Rent Payments	43 CFR 2806.64(a)(3)	43 CFR 2806.54(a)(3)
Acreage Rent Adjustments	43 CFR 2806.64(a)(4)	43 CFR 2806.54(a)(4)
MW Capacity Fee	43 CFR 2806.64(b)	43 CFR 2806.54(b)
MW Rate	43 CFR 2806.64(b)(1)	43 CFR 2806.54(b)(1)
MW Rate Schedule	43 CFR 2806.64(b)(2)	43 CFR 2806.54(b)(2)

Initial Rates Used	43 CFR 2806.64(d)(1)	43 CFR 2806.54(d)(1)
Acreage Rate Adjustment	43 CFR 2806.64(d)(2)	43 CFR 2806.54(d)(2)
MW Rate Adjustment	43 CFR 2806.64(d)(3)	43 CFR 2806.54(d)(3)
MW Rate Phase-in	43 CFR 2806.64(d)(4)	43 CFR 2806.54(d)(4)
Stage of Development	43 CFR 2806.64(d)(5)	43 CFR 2806.54(d)(5)
MW Capacity for a Staged Development	43 CFR 2806.64(c)(5)	43 CFR 2806.54(c)(5)
Rent for Support Facilities	43 CFR 2806.66	43 CFR 2806.56

No comments were received on this section, and no changes were made from the proposed to the final version of this section, beyond those discussed in connection with section 2806.54.

Section 2806.66 Rent for Support Facilities Authorized Under Separate Grants

This section states that if a wind energy development project includes separate right-of-way authorizations for support facilities such as wells, control structures, staging areas, or linear rights-of-way (e.g., roads, pipelines, transmission lines, etc.), then the rent schedule will be determined using the Per Acre Rent Schedule for linear facilities found at section 2806.20(c). No comments were received on this section, and no changes were made from the proposed to the final version of this section, beyond those discussed in connection with section 2806.56.

Section 2806.68 Rent for Energy Development Testing Grant(s)

Section 2806.68(a) describes the rent for any energy site-specific testing grant. A minimum rent is established as \$100 per year for each grant issued. Under this section, rent is set by incorporating in this final rule the site-specific rent amount from IM 2009–043, Wind Energy Development Policy. Site-specific grants are authorized only for one site and do not allow multiple sites to be authorized under a single grant; however, a single entity may hold more than one grant. If a BLM office has an approved small site rental schedule, that office may use the rent amount established in the small site rental schedule, so long as the rent schedule charges more than the \$100 minimum rent per year found in the regulations. Since small site rental schedules are provided to the BLM by the Department's Office of Valuation Services, they represent a third party determination of market value. In lieu of annual payments for a site-specific testing grant, a grant holder may pay for the entire 3-year term of the grant. See sections 2801.9(d)(1) and 2805.11(b)(2)(i) of this preamble for further discussion of site-specific energy testing grants.

Consistent with comments received and discussed under section 2801.9 of this preamble, the title of this section is changed from the proposed rule to read as shown above. A similar change was made for the title of paragraphs (a) and (b) of this section. These changes are made in order to ensure the headings of the rule are consistent with revisions to the final rule that will allow site-specific and project-area testing to be

available for both solar and wind energy testing.

Section 2806.68(b) describes the rent for a wind energy project-area testing grant. A per-year minimum rent is established at \$2,000 per authorization or \$2 per acre for the lands authorized by the grant, whichever is greater. The appraisal consultation report by the Office of Valuation Services supports the rent amounts established in this final rule. Project-area grants may authorize multiple meteorological or instrumentation testing sites. There is no additional charge or rent for an increased number of sites authorized under such grants. See sections 2801.9(d)(2) and 2805.11(b)(2)(ii) of this preamble for further discussion of project-area energy testing grants.

No further comments were received on this section and no additional changes were made in the final rule.

Section 2806.70 How will the BLM determine the payment for a grant or lease when the linear, communication use, solar energy, or wind energy payment schedules do not apply?

Section 2806.70 is redesignated from existing section 2806.50 and is retitled as shown above. This section provides guidance on how the BLM determines the payment for a grant or lease when the linear rent schedule, the communication use rent schedule, the solar acreage rent and MW capacity fee provisions, or the wind acreage rent and MW capacity fee provisions are not applicable.

The title of this section is amended by replacing “rent” with “payment” in two places. This final rule introduces the concept of MW capacity fees, which are a payment to the BLM for the commercial utilization value of the public lands, above the rural land values. The term “payment” includes both rents and fees, which is why it was selected. No other change is intended by this revision.

The only other change to this redesignated section is that solar and wind energy rights-of-way are now included in the listed rent schedules. No comments were received and no other changes are made from the proposed rule to the final rule.

Subpart 2807—Grant Administration and Operation

Section 2807.11 When must I contact BLM during operations?

This section is revised to make it clear that you must notify the BLM when your use requires a substantial deviation from the issued grant. Under the changes made to section 2807.11(b),

“substantial deviations” from the right-of-way grant now require an amendment to the grant. “Substantial deviations” include changing the boundaries of the right-of-way, major improvements not previously approved by the BLM, or a change in use for the right-of-way. Substantial deviations to a grant may require adjustment to a grant or lease rent and fees under subpart 2806, or bonding requirements under subparts 2805 and 2809.

Consistent with other revisions to the final rule intended to improve readability, the BLM revised paragraph (b) of this section to read as “the BLM’s” instead of “our.” This revision is intended to improve understanding of who the BLM is referring to in the final rule.

Comment: One comment asked the BLM to narrow the circumstances under which a right-of-way holder must notify the BLM, suggesting that these reporting requirements be limited to changes that necessitate an assignment under the standards identified in section 2807.21(h).

Response: The requirement to report changes in partners, financial conditions, or business or corporate status is a requirement of the existing regulations found under section 2807.11(c). Section 2807.11(c) was not proposed for revision and is not revised or redesignated by this final rule. In addition, the BLM must have accurate and up-to-date information about right-of-way holders in order to facilitate its management of the public lands.

Paragraph (d) of this section requires you to contact the BLM when site-specific circumstances or conditions result in the need for you to propose changes to an approved right-of-way grant, POD, site plan, or other procedures that are not substantial deviations in location or use. Examples of proposed “minor deviations” include changes in location of improvements in the POD or design of facilities that are all within the existing boundaries of an approved right-of-way. Other such proposed non-substantial deviations might include the modification of mitigation measures or project materials. For purposes of this provision, project materials include the POD, site plan, and other documents that are created or provided by a grant holder. These project materials are a basis for the BLM’s inspection and monitoring activities and are often appended to a right-of-way grant, which is why the BLM needs to understand any changes to those materials. The requested changes may be considered as grant or lease modification requests. Proposals for non-substantial deviations

will require review and approval by the authorized officer or other appropriate personnel. The preliminary application review meetings found under section 2804.12 and public meetings found under section 2804.25 are not required for an assignment.

Paragraph (e) requires that right-of-way holders contact the BLM to correct discrepancies or inconsistencies.

Section 2807.17 Under what conditions may the BLM suspend or terminate my grant?

Section 2807.17(d) contains the provisions formerly located at section 2809.10. This section was redesignated in order to make room for the renewable energy right-of-way leasing provisions. No comments were received and no changes are made from the proposed rule to the final rule.

Section 2807.21 May I assign or make other changes to my grant or lease?

Some revisions were made to this section in response to comments, which are discussed in the following paragraphs. A summary of other revisions to this section is included after these comments and responses.

Comments: Some comments noted confusion over the BLM's requirements for name changes and assignments, specifically, what constitutes a name change or assignment. Additionally, comments noted that mergers and acquisitions are not assignments and that a name change or assignment should not be the basis for or occasion on which the BLM redrafts the terms and conditions of right-of-way agreements.

Response: Section 2807.21 is revised to provide clarity on the BLM's requirements for assignments and name changes. Section 2807.21(b) and (c) of the proposed rule have been combined into section 2807.21(b) in this final rule. As a result of these changes, several paragraphs are also redesignated in the final rule. The BLM agrees with commenters that name changes should not necessitate the rewriting of the terms and conditions of a right-of-way agreement.

The BLM disagrees with the commenter equating mergers and acquisitions with name changes. A merger or acquisition is different in character as they can result in material changes to the corporate structure under which a right-of-way grantee or leaseholder operators. Such changes can affect financial positions or the technical capability of a parent company. As a result, the BLM determined that it was appropriate to expand the definition of assignment in

both the final and proposed rules to include changes in ownership and other related change in control transactions, including "mergers or acquisitions." However, recognizing that there are changes in corporate structure within the same corporate family that may technically constitute change in control transactions, but that do not implicate BLM's concern about technical and financial capability of a grant- or leaseholder's parent, the BLM has revised section 2807.21(a)(2) and (b)(2) to clarify that change in control transaction within the scope of that provision do not include transactions or restructurings within the same corporate family.

When a right or interest in a right-of-way grant or lease is assigned from one party to another, the involved parties are identified as the assignor and assignee. The BLM generally evaluates the assignee, the party that is intended to receive the right or interest, as if they were a new applicant. The BLM may determine that additional terms and conditions are required when assigning the right or interest and would include them as a term or condition of the grant at the time of assignment. New terms and conditions could include the requirement to bond the authorized facility, such as in the case when a potential assignee of a grant has a poor history of meeting the terms and conditions of a BLM grant, that may have not applied to the assignor. The evaluation and determination of whether new terms and conditions should be applied would occur when the BLM considers the proposed conveyance of a right-of-way.

Other revisions to the terms and conditions that may occur with assignments are those which the BLM retains authority to revise, such as rents, fees, bonding, and other revisions identified under section 2805.15(e). Section 2805.15(e) allows the BLM to amend the terms and conditions of a right-of-way grant or lease as a result of changes in legislation, regulation, or as otherwise necessary to protect public health or safety or the environment. Because any changes to the terms and conditions of a right-of-way grant or lease would occur after the completion of the agency action (the BLM's decision to approve the right-of-way), the BLM anticipates doing so through a separate action, generally initiated at the BLM's discretion and requiring its own decision-making process.

Updating corporate or individual filings within a State where only a name is changed, but the filing does not transfer a right or interest to another party, qualifies as a name change. Name

changes for a right-of-way grantee or lessee do not require a NEPA analysis and the right-of-way would not be subject to revision. When changing a name, the BLM does not issue a new right-of-way grant or lease, but would re-issue the same right-of-way grant or lease with the new name on it. This is because the BLM would be dealing with the same entity to which it had originally authorized the right-of-way. Name changes are an administrative action taken by the BLM to update its records showing the proper name of the entity it has authorized. In the case of a name change, there is no assignment, in whole or part, of any right or interest in a grant or lease.

A name change would occur if an entity had filed paperwork with a State for a name change. Re-issuing a grant or lease with the new name would only provide the BLM an opportunity to notify the right-of-way holder of updated rent, bonding, or other such revised provisions made under section 2805.15(e).

Section 2807.21 is amended by revising the section heading and existing paragraphs (a), (d), and (f); adding paragraphs (b), (g), and (h); and making other appropriate redesignations of the remaining paragraphs. We are further revising this section with a few changes made in the final rule in response to comments, which will be explained in greater detail in the discussion of each specific paragraph. The heading for this section is changed from "May I assign my grant?" to read as "May I assign or make other changes to my grant or lease?" The existing regulations do not cover all instances where an assignment is necessary and the section is revised to address situations where assignments may not be required. The changes are necessary to: (1) Add and describe additional changes to a grant other than assignments; (2) Clarify what changes require an assignment; and (3) Specify that right-of-way leases issued under part 2809 are subject to the regulations in this section.

Without the BLM's approval of a right-of-way assignment, a private party's business transaction would not be recognized by the BLM and this lack of recognition could hinder a new holder's management and administration of the right-of-way. This rule also clarifies the responsibilities of a grant holder should such private party transactions occur.

Paragraph (a) of this section is revised to describe two events that may necessitate an assignment: (1) A transfer by the holder of any right or interest in the right-of-way grant or lease to a third

party (e.g., a change in ownership); and (2) A change in control involving the right-of-way grant or lease holder such as a corporate merger or acquisition.

Paragraph (a)(1) in this final rule is revised by removing the word “voluntary” when describing a transfer. There are some situations, such as bankruptcy, when a transfer may be involuntary. The BLM did not intend to exclude those circumstances from this section.

Paragraph (a)(2) is revised to remove reference to changes in status as a “wholly owned subsidiary.” That provision created confusion and was removed. No additional comments were received and no further changes were made to this paragraph.

New paragraph (b) of this section is revised to clarify and remove ambiguities in this section of the rule that explains the circumstances that do not constitute an assignment, but may necessitate filing new or revised information. A change in the holder's name only does not require an assignment nor do changes in a holder's articles of incorporation. However, sometimes a change in a holder's name or articles of incorporation may indicate that an assignment occurred. The BLM will review the documentation filed with it in order to determine if a transfer in part or whole of the right-of-way has occurred or a change in control transaction of the grant-holder or lease holder has occurred.

This section is revised from the proposed to the final rule to help further explain these situations more clearly to the public. The introductory text of paragraph (b) of this section is revised to clarify that even though an assignment may not be necessary, some circumstances may necessitate filing new or revised information. Paragraphs (b)(1), (2) and (3) of this section provide examples for when this filing may be necessary. Paragraph (b)(1) of this section is added to this final rule to explain that transactions within the same corporate family do not constitute an assignment. Paragraphs (b)(2) and (3) of this section contain the provisions of proposed paragraphs (b) and (c) of this section with some minor revisions.

Existing paragraph (b) of this section is revised and redesignated as paragraph (c). As revised, this paragraph requires the payment of application filing fees in addition to processing fees. This revision promotes consistency between applications for assignments and other applications for rights-of-way. For example, the rule (at section 2804.12(c)(2)) now requires an application filing fee for solar and wind energy applications. As revised, new

paragraph (c) also provides that the BLM will not approve any assignment until the assignor makes any outstanding payments that are due. This paragraph is revised from the proposed to final rule by adding a provision stating that preliminary application review meetings are not required for an assignment.

Comments: Some comments stated that the pre-application requirements for would be burdensome for an assignments, name changes or even renewals and suggested excluding those requirements for assignments, name changes and renewals.

Response: Section 2807.21(c) and (h)(1) are revised to make clear that the pre-application (now known as preliminary application review) meetings are not required for assignments and name changes. No other revisions have been made to these paragraphs in response to this comment.

Existing paragraph (c) of this section is redesignated, unchanged, as paragraph (d) and is included in the final rule. Existing paragraph (d) of this section is revised and redesignated as paragraph (e). As revised, new paragraph (e) will except leases issued under revised 43 CFR subpart 2809 (i.e., right-of-way authorizations inside a DLA) from the BLM's authority to modify terms and conditions when it recognizes an assignment. This provision provides incentives for potential right-of-way lessee to develop lands inside DLAs.

The BLM revised the first sentence in paragraph (e) of this section from the proposed to final rule to clarify how an assignment is recognized. The BLM will approve an assignment in writing.

Comment: A comment requested clarification of the BLM's right to modify terms of a lease issued under subpart 2809. As written, the proposed rule would have prohibited the BLM from modifying a lease issued under subpart 2809 when approving an assignment. In addition, the comment requested clarification of the relationship between section 2805.15(e) and sections 2807.21 and 2887.11.

Response: The BLM agrees with this suggestion and in the final rule further clarification has been provided to show the relationship between section 2805.15(e) and this provision for leases issued under subpart 2809. Revised section 2807.21(e) now includes an additional statement to make clear that a lease will not be modified to include additional terms and conditions when approving an assignment, unless a modification is required under section 2805.15(e).

The BLM may, however, “require that you obtain, or certify that you have obtained, a performance and reclamation bond or other acceptable bond instrument” (see section 2805.20(a)) when approving an assignment. A bond is required for a right-of-way at the BLM's discretion and is always required for a solar or wind energy grant or lease. If a bond is required, the BLM must be certain that a bond is in place to ensure the protection of the public lands before approving an assignment.

In addition, section 2809.18(f) has been modified to be consistent with this provision. The statement that a lease will not be modified to include additional terms and conditions is specific to when the BLM completes an assignment. Under a separate action which may occur at the same time an assignment is completed, the terms and conditions may be modified if requested by a lessee pursuant to section 2805.12(e).

No revision has been made under section 2887.11 on this matter since leases issued under subpart 2809 cannot be assigned under section 2887.11.

Redesignated section 2807.21(f) provides that the BLM will process assignment applications according to the same time and conditions as in section 2804.25(d). This provision was formerly identified in the regulations as paragraph (e) of this same section. This provision applies the BLM's customer service standard to processing assignment applications. This paragraph has been revised to update the referenced citation, consistent with the revisions made to the final rule under section 2804.25.

Section 2807.21(g) explains that only interests in right-of-way grants or leases are assignable. A pending right-of-way application cannot be assigned. A revision is made to the second sentence of this paragraph, to be consistent with changes made under section 2804.30(g), that clarifies that competitively gained applications held by a preferred applicant do provide a right and interest in the public lands. This revision is made here to be consistent with similar changes made under section 2804.30(g).

Section 2807.21(h) addresses how a holder informs the BLM of a name change when the name change is not the result of an underlying change in control of a grant. These procedures are necessary to ensure that the BLM can send rent bills or other correspondence to the appropriate party. This new provision addresses several specific circumstances. For example, it requires any corporation requesting a name change to supply: (1) A copy of the

corporate resolution(s) proposing and approving the name change; (2) A copy of the acceptance of the change in name by the State or Territory in which it is incorporated; and (3) A copy of the appropriate resolution(s), order(s), or other documentation that shows the name change. Under this provision, the BLM could also modify a grant, or add bonding and other requirements, including additional terms and conditions when recognizing such changes. However, the only way that the BLM may modify a lease issued under subpart 2809 would be in accordance with section 2805.15(e), or as otherwise described in the regulations. Such modifications under section 2805.15(e) would be a result of changes in legislation, regulation, or to protect public health, safety, or the environment. Any such name change would be recognized in writing by the BLM.

Section 2807.21(h)(1) was modified from the proposed to final rule to improve readability. The first and second sentences were combined and “preliminary application review and public meetings” were added to the list of exempted requirements during a name change only. This change was made to remain consistent with revisions made under section 2807.21(b), which excludes applications for assignments from preliminary application review meetings and public meetings for solar or wind energy development projects and transmission lines with a capacity of 100 kV or more.

The BLM revised paragraph (h)(2) of this section from the proposed to final rule in order to clarify the differences in how a grant and lease may be modified during a name change. The BLM added new paragraphs (h)(2)(i) and (ii) in order to more clearly separate these situations. Paragraph (h)(2)(i) of this section explains that the BLM may modify a grant to add bonding and other requirements when processing a name change only. However, under paragraph (h)(2)(ii) of this section, the BLM may modify a lease issued under subpart 2809 in accordance with section 2805.15(e). This is not a change from the requirements proposed rule, but it may not have been clear from the way it was phrased. The final rule is intended to prevent any possible confusion.

Generally, the BLM intends to make changes to a grant or lease during a name change only to reflect relevant changes consistent with section 2805.15(e). This existing section explains the BLM’s right to “[c]hange the terms and conditions of your grant as a result of changes in legislation, regulation, or as otherwise necessary to protect public

health or safety or the environment.” The BLM will not make any other changes to lease issued under subpart 2809 as part of a name change only.

However, the BLM may take this opportunity to update other aspects of a grant, as appropriate. For example, under section 2805.20(a), the BLM will periodically review your bond for adequacy and may require a new bond, an increase or decrease in the value of an existing bond, or other acceptable security at any time during the term of the grant or lease. The BLM may determine that additional actions are necessary, such as updates to the bond (see section 2805.20(a)) or the 10-year updates to the payment provisions (see sections 2806.54 or 2806.64). If the BLM determines that these actions are necessary, they will be taken separate from the name change only as appropriate.

Paragraph (h)(3) of this section is revised in this final rule to read: “Your name change is not recognized until the BLM approves it in writing.” As proposed, the rule was not clear whether a name change would be recognized if submitted in writing to the BLM, or if approved in writing by the BLM. This revision makes it clear to readers of the final rule that it must be the BLM’s approval in writing to recognize a name change.

Comments: Some comments recommend that the financial information of the original owner or its subsidiary may be used to meet financial qualification requirements of the grantee when assigning or changing the name on a grant or lease.

Response: The BLM will only accept the financial or technical information of the holder of the authorization. The holder is the legally responsible party for the right-of-way and will be held as such under the regulations and any subsequent authorization. However, substitution of one entity’s financial and technical capabilities may be acceptable, provided that documentation showing the two entities are linked, such as in the case of a subsidiary company where the parent company asserts the technical or financial responsibilities of the subsidiary. No revision to the rule was made in response to this comment. No other comments were received or changes made to the final rule.

Section 2807.22 How do I renew my grant or lease?

The title for section 2807.22 is revised by adding “or lease” to the end of the sentence so that leases issued under subpart 2809 are covered by this section. Likewise, paragraphs (a), (b),

and (d) of this section are revised to include leases. Paragraphs (c) and (e) remain unchanged. A new paragraph (f) is also added to this section.

Paragraph (f) of this section explains how the BLM would ensure continued operations of a right-of-way during the renewal process. If a holder makes a timely and sufficient application for renewal, the grant or lease does not expire until the BLM acts upon the application for renewal.

The second part of this paragraph describes the circumstances in which the BLM would “reissue” a grant or lease instead of “renew” it. Most of the authorizations managed by the BLM are issued under FLPMA’s authority, but some remaining authorizations were issued before FLPMA was enacted. In this situation, the BLM would reissue the grant under FLPMA’s authority. Minor revisions are made to paragraph (f) to improve readability of this new paragraph.

This paragraph protects the interests of holders of rights-of-way who have timely and sufficiently made an application for the continued use of an authorization (see 5 U.S.C. 558(c)(1)), and is consistent with policy. In this situation, the authorized activity will not expire until the BLM evaluates the application and issues a decision. No comments were received and no other changes are made to the final rule.

Subpart 2809 Competitive Process for Leasing Public Lands for Solar and Wind Energy Development Inside Designated Leasing Areas

Existing subpart 2809, which formerly consisted of a single regulation (section 2809.10) pertaining to Federal agency right-of-way grants, is revised and redesignated as new paragraph (d) of section 2807.17. Existing section 2809.10(b) explains that Federal agencies are generally not required to pay rent for a grant. This paragraph is removed, not redesignated, since existing section 2806.14(a)(2) already addresses rental exemptions for Federal agencies and, therefore, section 2809.10(b) is no longer necessary.

Revised subpart 2809 is now dedicated to the competitive process for leasing public lands for solar and wind energy development.

Comment: Several comments raised concerns that the priority for handling solar or wind energy leases was unclear when compared to solar and wind grant applications under part 2804.

Response: Application prioritization is discussed under section 2804.35 of this rule, which specifically states that leases issued under this subpart having priority over grant applications. A new

section 2809.10(d) is added to the final rule, consistent with comments received and revisions made in section 2804.35, that clearly identifies the handling of leases issued under subpart 2809 have the highest priority with respect to solar and wind energy on the public lands.

Comment: Several comments suggest that regional mitigation strategies should be used for every designated leasing area and should be part of the land use planning process.

Response: BLM development of a regional mitigation strategy is not necessary prior to holding a competitive auction inside a DLA or otherwise authorizing solar or wind energy development. However, regional mitigation strategies further increase certainty to developers and stakeholders when considering a solar or wind energy development. The BLM believes that the regional mitigation strategies are a good tool to use when making decisions that would affect resources in certain areas, such as a DLA. Regional mitigations strategies provide a durable basis to evaluate mitigation for the impacted lands and the BLM may use such strategies when making land use planning decisions. The BLM is in the process of developing regional mitigation strategies for many SEZs, which qualify as DLAs under this final rule.

The BLM is currently in the process of establishing its mitigation policies and guidance, which include guidance for regional mitigation strategies. Consistent with this guidance, the BLM generally intends to prepare regional mitigation strategies, with opportunities for public review and engagement, before authorizing wind or solar energy development in DLAs, potentially including when the BLM designates DLAs in the future through land use planning.

Comment: One comment suggested that the BLM incorporate the FWS's Wind Energy Guidelines (WEG), which can be found on the Internet at http://www.fws.gov/ecological-services/es-library/pdfs/WEG_final.pdf, into the rule for pre-construction due diligence.

Response: The BLM did not revise the rule as a result of this comment. The BLM has a different scope of authority and responsibility in administering the public lands than the FWS and must take into account biological resources, cultural resources, and land uses consistent with FLPMA's mandate that public lands be used for multiple use and sustained yield for current and future generations. This is different than the FWS's authority and objectives which do not have a multiple use mandate and generally require limited

review for cultural resources. However, the BLM uses processes similar to the WEGs in the review and analysis of resources on the public lands. For wind energy site testing actions similar to steps 2 and 3 of the WEGs are completed prior to a BLM decision. Actions similar to steps 1 through 3 are incorporated into the BLM's processing of a development grant, as well as monitoring protocols that address similar issues as those in the steps of the WEGs.

Comments: Some comments suggest that all final granted right-of-way instrument terms and conditions, regardless of location, should be substantially the same, unless sufficiently justified.

Response: The BLM believes that it has adequate reason for differences in terms and conditions of the energy development projects issued as leases under subpart 2809, as compared to those issued as grants under subpart 2804. There are limited differences in leases and grants, which have been explained in great detail in this preamble. These differences are intended to incentivize development in DLAs, which the BLM has identified as preferred areas for solar or wind energy development, based on a high potential for energy development and lesser resource impacts. Consistent with SO 3285, which describes the need for strategic planning and a balanced approach to domestic resource development, the BLM believes that focusing solar and wind energy development in preferred areas would provide a benefit to the public by reducing potential resource conflicts.

The BLM identifies DLAs through its land use planning process, which requires the BLM to consider the effects of solar or wind energy developments in the area. Due to this prior planning process, the BLM is able to issue a lease almost immediately after holding an auction, because that type of use has already been approved for the area. Subsequent tiered NEPA analysis will generally be necessary for the BLM to evaluate the lease-holder's POD to ensure that it fits within the BLM's decisions before allowing development of the land.

Additionally, the rent and fee payment for leases issued under subpart 2809 are phased in over a longer period of time or updated less frequently than those issued under subpart 2804. The rent and fee payment structure is explained in more detail in sections 2806.50 through 2806.68 of this preamble. This difference in payment of the rent and fee allows the BLM to collect the determined fair market value

of the public lands while incentivizing solar and wind energy development in DLAs over other public lands.

No other comments were received or changes made to the final rule for this section.

Section 2809.10 General

Under section 2809.10, only lands inside DLAs will be available for solar and wind competitive leasing using the procedures under this subpart. Lands outside of DLAs may be offered competitively using the procedures under section 2804.35 of this rule. Under section 2809.10, the BLM may either include lands in a competitive offer on its own initiative or solicit nominations through a call for nominations (see section 2809.11).

A new paragraph (d) is added to this section in the final rule in response to comments on the proposed rule. Paragraph (d) states that the processing of leases awarded under this part will generally be prioritized ahead of grant applications, consistent with revisions made to section 2804.35, clarifying that leases generally have priority over grant applications. This revision is to show how the BLM will prioritize its handling of solar and wind energy development on the public lands. The BLM will generally prioritize leases because they are issued inside DLAs, which are the BLM's preferred areas for solar and wind energy development. The BLM recognizes that only a few wind energy DLAs have been identified to date, and therefore there are only limited opportunities for project proponents to obtain wind energy leases as opposed to grants. The BLM intends to consider this when prioritizing wind energy applications during this transition period, as the BLM develops additional wind energy DLAs. No other changes are made to the final rule for this section and no other comments were received.

Section 2809.11 How will BLM solicit nominations?

This section explains the process by which the BLM will request nominations for parcels of lands inside DLAs to be offered competitively for solar or wind energy development.

Under paragraph (a) of this section, "Call for nominations," the BLM requests expressions of interest and nominations for parcels of land located in a DLA. The BLM will publish a notice in the **Federal Register** for solar and wind energy development and may use other notification methods, such as a newspaper of general circulation in the area affected by a potential offer or the Internet. This final rule is revised to make notice in a newspaper an optional

form of public notice. This section's public notice requirements are consistent with revisions to other sections of this final rule and are described more fully in section 2804.23(c) of this preamble.

Paragraph (b) of this section, "Nomination submission," outlines the requirements for nominating a parcel of land for a competitive offer.

Paragraph (b)(1) of this section requires a payment of \$5 per acre for the parcel(s) nominated. This payment is nonrefundable, except when submitted by an individual or company that does not meet the qualifications identified in section 2809.11(d). The average area of solar and wind grant or lease ranges between 4,000 and 6,000 acres. The \$5 per acre fee is derived from an appraisal consultation report prepared by the Department's Office of Valuation Services and will be adjusted for inflation once every 10 years, using the change in the IPD-GDP for the preceding 10-year period. The appraisal consultation report provided a range of \$10-\$27 per acre per year with the nominal range being \$15-\$17 per acre as the fair market value for these uses of the public lands. The BLM is establishing the nomination fee below the indicated range in the analysis since the submission of a nomination does not ensure that the nominator would be the successful bidder.

The average annual change in the IPD-GDP from 2004-2013 is about 2.1 percent, which will be applied through 2025. The fee will be required only with a nomination and not on a yearly basis and this is noted under section 2809.11(b)(1). The nomination fee is lower than an application filing fee for grants issued under subpart 2804 in order to increase interest and encourage nominators to propose efficient use of the public lands inside DLAs. Payment of fair market value will be received through a combination of the bids (not including Federal administrative costs) received during a competitive process and the rents and MW capacity fees described in sections 2806.50 through 2806.68 of this final rule.

Nomination fees are collected under Sections 304(b) and 504(g) of FLPMA as cost recovery fees. The nomination fees will reimburse the BLM for the expense of preparing and holding the competitive process for lands inside a DLA. Furthermore, the nomination allows the BLM to see specifically what parcel of land is of interest to a developer and would inform the BLM of parcel configurations for a competitive process. A variable offset may be offered for qualified bidders who submitted

nominations. Variable offsets are discussed further in section 2809.16.

The BLM revised paragraph (b) of this section from the proposed to final rule to prevent confusion over how the BLM uses the IPD-GDP to adjust the nomination fees. This revision is consistent with the revision to section 2804.12(c)(2), which describes application filing fees. Both application filing fees and nomination fees may be adjusted once every 10 years. See the preamble discussion for section 2804.12(c)(2) for more information on this revision.

Paragraph (b)(2) of this section requires the nomination to include the nominator's name and address of record. This information is necessary for the BLM to communicate with the nominator about future leasing issues.

Paragraph (b)(3) of this section requires that a nomination be accompanied by a legal land description and map of the parcel of land in a DLA. This information will help the BLM in identifying parcels in the competitive offer.

Under paragraph (c) of this section, the BLM may consider informal expressions of interest. An expression of interest is an informal submission to the BLM, suggesting that a parcel inside a designated leasing area be considered for a competitive offer. An expression of interest only provides a tentative bidder's interest in a parcel(s) of land located inside a DLA. If the expression of interest identifies a specific parcel, it must be submitted in writing, include the legal land description of the parcel, and a rationale for its inclusion in a competitive offer. There is no fee required to make an expression of interest, but submission does not qualify a potential bidder for a variable offset, as would formal nominations.

Under paragraph (d) of this section, you must qualify to hold a grant or lease under section 2803.10 in order to submit a nomination.

Under paragraph (e) of this section, a nomination cannot be withdrawn, except by the BLM for cause, in which case nomination monies would be refunded. This clause parallels language in the BLM's other competitive process regulations and encourages serious nominations for parcels on public lands.

Comments: Some comments stated that nomination fees, as discussed under section 2809.11(b)(1), should reflect the cost for the BLM to plan and conduct a competitive lease process. In addition, one comment recommended that the nomination fee be set at \$5 per acre and be adjusted downward to a minimum of \$2 per acre for large parcels. In the event the entity that

nominates the parcel is not the successful bidder, then the nomination should be refunded to that party and assessed to the successful bidder.

Response: The BLM will maintain a flat rate fee for nominations. A tiered or sliding scale approach to such fees would create an unnecessarily complicated system. A flat fee ensures that such costs are consistent for each action and the expectation to meet the requirements are clear. In addition, nomination fees are kept as a non-refundable fee because they are a cost recovery payment to the BLM for expenses the agency incurs. These fees would be used by the BLM to prepare and hold a competitive offer. Submission of a nomination demonstrates a developer's seriousness for use of an area. No other comments were received and no changes are made from the proposed rule to the final rule.

Section 2809.12 How will BLM select and prepare parcels?

This section provides that the BLM will identify parcels suitable for leasing based on either nominations, expressions of interest, or its own initiative. Before offering the selected lands competitively, the BLM and as appropriate, other Federal or State entities, will conduct studies, comply with NEPA and other applicable laws, and complete other necessary site preparation work. This work is necessary to ensure that the parcels are ready for competitive leasing, to provide appropriate terms and conditions for any issued lease, to appropriately protect valuable resources, and to be consistent with the BLM's plan(s) for the area.

Paragraph (b) of this section is revised from the proposed to final rule by adding "as applicable" after "other Federal agencies." This revision clarifies that other Federal agencies will be involved, as applicable, but may not be involved on all projects. It may not always be necessary to include other Federal agencies and those agencies may not want to participate.

Comments: Some comments recommended that the BLM should include a procedural requirement in the regulation that a regional mitigation strategy must be completed before the initiation of a competitive leasing process. It is also suggested that this approach would benefit the project proponents with enhanced certainty regarding compensatory mitigation costs. One comment specifically recommended the addition of the following text, "b) work, including applicable environmental reviews and public meetings and publish the

availability of a final regional mitigation strategy, before”

Response: The BLM considered including a requirement to complete a regional mitigation strategy; however, the BLM did not revise the rule as a result of the comment because each competitive offer will vary based upon resource concerns, public, tribal, and developer issues, and government interests. The BLM is currently in the process of establishing its mitigation policies and guidance, which include guidance for regional mitigation strategies. Consistent with this guidance, the BLM intends to prepare regional mitigation strategies, with opportunities for public review and engagement, before authorizing wind or solar energy development in DLAs, potentially including when the BLM designates DLAs in the future through land use planning.

Section 2809.13 How will the BLM conduct competitive offers?

Under this section, the BLM may use any type of competitive process or procedure to conduct its competitive offer. Several options, such as oral auctions, sealed bidding, a combination of oral and sealed bidding, and others are identified in section 2809.13(a). Oral auctions are planned events where bidders are asked to orally bid for a lease at a predetermined time and location. Sealed bidding would occur when bidders are asked to submit bids in writing by a certain date and time. Combination bidding is when sealed bids are first opened and then afterward an oral auction would occur, with oral bids having to exceed the highest sealed bid.

Under paragraph (b) of this section, the BLM would publish a notice of competitive offer at least 30 days before bidding takes place in the **Federal Register** and through other notification methods, such as a newspaper of general circulation in the area affected by the potential right-of-way or the Internet. This section of the final rule is revised, consistent with revisions to other sections of this final rule, to make notice in a newspaper an optional method for public notice. See section 2804.23(c) of this preamble for further discussion of these revisions. Minor revisions are also made from the proposed to the final rule to paragraph (b)(5) of this section to improve readability. The word “factor” is added throughout paragraph (b)(6) of this section for the final rule. This is intended to help the reader understand that an offset factor is part of the variable offset that may be presented in

the notice of competitive offer. A notice of competitive offer must include:

1. The date, time, and location (if any) of the competitive offer;
2. The legal land description of the parcel to be offered;
3. The bidding methodology and procedures that will be used in conducting the competitive offer, including any of the applicable competitive procedures identified in section 2809.13(a);
4. The required minimum bid (see section 2809.14(a));
5. The qualification requirements for potential bidders (see section 2809.11(d));
6. If applicable, the variable offset (see section 2809.16), including:
 - i. The percent of each offset factor;
 - ii. How bidders may pre-qualify for each offset factor; and
 - iii. The documentation required to pre-qualify for each offset factor; and
7. The terms and conditions to be contained in the lease, including requirements for the successful bidder to submit a POD for the lands involved in the competitive offer (see section 2809.18) and the lease mitigation requirements.

Section 2809.13(b)(7) is revised in the final rule to include in the terms and conditions of a notice of competitive offer any mitigation requirements, including those for compensatory mitigation to address residual impacts associated with the right-of-way. This revision is made to clarify where the BLM will incorporate mitigation in its administrative processes. Including mitigation requirements in this final rule is discussed in greater detail in the general comment and responses portion of this preamble.

Under paragraph (c) of this section, the BLM will notify you of its decision to conduct a competitive offer at least 30 days in advance of the bidding if you nominated lands and paid the nomination fees required by section 2809.11(b)(1). No comments were received and no other changes are made from the proposed rule to the final rule.

Section 2809.14 What types of bids are acceptable?

Section 2809.14 explains the requirements for bids submitted under the competitive process outlined in this subpart.

Paragraph (a) of this section provides that your bid submission will be accepted by the BLM only if it included the minimum bid established in the competitive offer, plus at least 20 percent of your bonus bid, and you are able to demonstrate that you are qualified to hold a right-of-way by

meeting the requirements in section 2803.10. Consistent with comments received and revisions made to the final rule, the words, “or lease” are added to this paragraph of the final rule to help improve its clarity. As proposed, the rule only referenced a grant, which is defined in these regulations to include the term lease. For the final rule, language was added to make it clear that the qualifications to hold a lease are the same as to hold a grant.

Paragraph (b) of this section provides that a minimum bid will consist of three components. The first component is the amount required for reimbursement of administrative costs incurred by the BLM and other Federal agencies in preparing and conducting the competitive offer. Administrative costs include all costs required for the BLM to comply with NEPA plus any other associated costs, including costs identified by other Federal agencies. As mentioned in the general discussion section of this preamble, administrative costs are not a component of fair market value, but are used to reimburse the Federal Government for its work in processing a competitive offer and performing other necessary work.

The second component of the minimum bid is an amount determined by the authorized officer for each competitive offer. The BLM will consider known values of the parcel when determining this amount, which include, but are not limited to, the acreage rent and a megawatt capacity fee. The authorized officer will identify these factors and explain how they were used to determine this amount. The third component is a bonus bid submitted by the bidder as part of a bid package. This amount will be determined by the bidder.

Consistent with section 2804.30(e)(2)(ii) for notice of competitive offers outside of DLAs, the BLM has removed the reference to mitigation costs from section 2809.14(b)(2). Please see section 2804.30 of this preamble for further discussion on this topic.

In other BLM programs, the minimum bid is often a statutory requirement or is based on fair market value of the resource, but there are no statutory requirements for a minimum bid for the right-of-way renewable energy program. The acreage rent is based on the value of the land and the MW capacity fee is based on the value of the commercial use of the land. The BLM plans to base this minimum bid on factors such as these that are known values of the parcel. The minimum bid amount, how it was determined, and the factors used in this determination will be clearly

articulated in the notice of competitive offer for each parcel.

A minimum bid is not a determination of fair market value, but a point at which bidding may start. Fair market value will be received through a combination of rent, MW capacity fees, and competitive bidding and this process will determine what the market is willing and able to pay for the parcel. Payment of cost recovery fees is also required, but is not considered a part of the minimum bid. The minimum bid is paid only by the successful bidder and is not prorated among all of the bidders.

As described in paragraph (c) of this section, a bonus bid consists of any dollar amount that a bidder wishes to bid, beyond the minimum bid. The total bid equals the minimum bid plus any additional bonus bid amount offered. If you are not the successful bidder, as defined in section 2809.15(a), your bid will be refunded.

Comments: Two comments were received pertaining to this section. The first comment states that the proposed rule does not provide an effective mechanism for incentivizing solar development in SEZs by eliminating or significantly reducing developer costs associated with NEPA compliance.

Response: There are significant incentives to developers for leases issued under subpart 2809, including the up-front land use planning and other environmental work that the BLM will complete and the certainty that after winning a competitive auction inside a DLA, a successful bidder would be awarded a lease. In addition, the BLM offers variable offsets, longer phase-ins for MW capacity fees, and greater time between acreage rent and MW capacity fees rate updates for leases issued under subpart 2809 that are not available for grants issued under subpart 2804.

Comment: The second comment stated that the BLM should not include the potential for lands to be developed for solar energy generation when determining the minimum bid for a competitive offer.

Response: Section 2809.14(b)(2) describes how the BLM will consider known and potential land values. While other competitive processes, such as the BLM's coal program, include a statutory requirement for the minimum bid, the BLM has no such requirement for the solar or wind energy programs. Therefore, the BLM determined that it would be appropriate to tie the minimum bid to the known values of the parcel being auctioned. These known values, such as the acreage rent, would reflect the potential for lands to be developed for solar energy. This

minimum bid component will be explained in each notice of competitive offer.

Section 2809.15 How will the BLM select the successful bidder?

This section explains how the successful bidder is determined and what requirements they must meet in order to be offered a lease. The bidder with the highest total bid, prior to any variable offset, will be declared the successful bidder and may be offered a lease in accordance with section 2805.10. In paragraph (a) of this section, "will" is changed to "may." The BLM will not offer a lease if the successful bidder does not meet the requirements described in paragraph (d) of this section. As written, paragraphs (a) and (d) of this section were inconsistent with each other and this revision is intended to resolve this inconsistency.

The BLM will determine the appropriate variable offset percentage by applying the appropriate factors identified in section 2809.16, before issuing final payment terms. The specific factors will be identified in the competitive offer. If you are the successful bidder, your payment must be submitted to the BLM by the close of official business hours on the day of the offer or at such other time as the BLM may have specified in the offer notice. Your payment must be made by personal check, cashier's check, certified check, bank draft, or money order, or by any other means the BLM deemed acceptable. Your remittance must be payable to the "Department of the Interior—Bureau of Land Management." Your payment must include at least 20 percent of the bonus bid prior to application of the variable offset described in section 2809.16, and the total amount of the minimum bid specified in section 2809.14(b). Within 15 calendar days after the day of the offer, you must submit to the BLM the balance of the bonus bid less the variable offset (see section 2809.16) and the acreage rent for the first full year of the solar or wind energy lease as provided for in sections 2806.54(a) or 2806.64(a), respectively. Submit these payments to the BLM office conducting the offer or as otherwise directed by the BLM in the offer notice.

In section 2809.15(d) of this final rule, the BLM revised "will approve your right-of-way lease" to "will offer you a right-of-way lease." This change is for consistency in terminology with paragraphs (a) and (e) of this section, which refer to the offering of a lease and not its approval. Under paragraph (e) of this section, the BLM will not offer a lease if the requirements of section (d)

are not met. The BLM does not intend for this revision to change how it offers a lease to successful bidders.

Under section 2809.15(e), the BLM will not offer the successful bidder a lease, and will keep all money submitted, if the requirements of section 2809.15(d) are not met. In this circumstance, the BLM may offer the lease to the next highest bidder under section 2809.17(b) or re-offer the lands under section 2809.17(d). No comments were received and no changes are made from the proposed rule to the final rule.

Section 2809.16 When do variable offsets apply?

Section 2809.16 provides that a successful bidder inside a DLA may be eligible for a variable offset of the bonus bid (in essence, a bidding credit), based on the factors identified in the notice of competitive offer. Variable offsets are not available outside of DLAs.

In providing for these offsets, the BLM intends to promote thoughtful and reasonable development based upon known environmental factors and impacts of different technologies. The BLM believes providing these offsets will increase the likelihood that a project is developed, expedite the development of that project, and encourage development that will result in lesser resource impacts from the right-of-way. Overall, the BLM believes the structure of these offsets will help encourage the production of clean renewable energy on public lands, which is a benefit to the general public.

Pre-qualified bidders may be eligible for offsets limited to no more than 20 percent of the high bid. Factors for a bidder to pre-qualify may vary from one competitive lease offer to another and may include offsets for bidders with an approved PPA or Interconnect Agreement, among other factors.

For example, the BLM may apply a 5 percent offset factor to a bidder that has a PPA. This offset factor could encourage a bidder to secure an agreement before the offer, which could increase the likelihood of a project being developed and expedite the completion of such development. In the BLM's experience with solar and wind energy developments, a project is not always developed after a right-of-way is issued. Based on this experience, the BLM believes that it is appropriate to award an offset to a bidder with an agreement in place to sell power, because that bidder will be more likely to develop a project on the right-of-way. This could prevent the unnecessary encumbrance of a right-of-way being issued to a holder who never develops the intended project.

The BLM may also identify as an offset factor the submission of a plan showing a reasonable development scenario. For example, the BLM may apply a 5 percent offset factor to a bidder that would use a particular technology. The BLM may identify a preferred technology type that would reduce impacts to identified environmental or cultural resources on the proposed parcel.

The BLM anticipates selected factors for the offsets to be in increments of 5 percent. These will be reviewed at the BLM Washington Office for consistency and relevance prior to each competitive offer made in the first several years after publication of the final rule. The BLM intends to provide additional guidance on the use of these individual factors to ensure consistency between individual notices of competitive offer.

The BLM may offer a different percentage for each offset factor based on how qualified the bidder is for a specific offset factor. For example, the BLM may offer a 3 percent offset for an interim step in the PPA process or a 5 percent offset for a signed PPA. The BLM acknowledges that in some circumstances qualifying for these offsets may be difficult. For this reason, the BLM may offer incremental offset percentages to bidders that are working toward such qualifications. These offset factors (and their various increments) will be identified in the notice of competitive offer (see section 2809.13(b)(6)).

The notice of competitive offer will identify each factor for which BLM may grant a variable offset, and the corresponding maximum percentage offset that would be applied to a qualified bidder's bonus bid. The notice will also identify the documentation a bidder must submit to pre-qualify for the offset. The authorized officer will determine the total offset for each competitive offer, based on the parcel(s) to be offered and any associated environmental concerns or technological limitations.

As identified under paragraph (c) of this section, the factors for which the BLM may grant a variable offset in a particular lease sale include:

1. *Power purchase agreement.* This could be a signed agreement between the potential lessee and an entity that agrees to purchase the power generated from the solar or wind energy facility;

2. *Large generator interconnect agreement.* This would consist of a signed agreement from the holder of an electrical transmission facility and the potential lessee that power would be accepted on the grid controlled by the

holder to be transported to a power receiving source;

3. *Preferred solar or wind energy technologies.* This would be an incentive to use technologies for generating or storing solar or wind energy that would efficiently use public lands or reduce impacts to identified resources such as water;

4. *Prior site testing and monitoring inside the DLA.* This would consist of evidence that the potential lessee or others associated with the lessee had previously performed appropriate testing or monitoring to determine the suitability and capability of the site for establishment of a successful solar or wind energy generating facility;

5. *Pending applications inside the DLA.* This would be a situation where the potential lessee had previously filed for authorization to construct facilities inside the DLA;

6. *Submission of nomination fees.* These are required when submitting a formal nomination (see section 2809.11(b));

7. *Submission of biological opinions, strategies, or plans.* This could include biological opinions, bird and bat conservation strategies, and habitat conservation plans;

8. *Environmental benefits.* This factor would include any positive environmental considerations such as identifying and salvaging archaeological or historical artifacts, additional protection for protected plant or animal species, or similar factors;

9. *Holding a solar or wind energy grant or lease on adjacent or mixed land ownership.* This could show the bidder's vested interest in developing the right-of-way;

10. *Public benefits.* These could include documented commitments or agreements to provide jobs or other support for local communities or supporting local public purposes projects; or

11. *Other similar factors.* These could include support for other Federal Government programs or national security by providing power for defense purposes or meeting government purchase contracts.

The only changes made in the listed variable offset factors between the proposed and final rule is for Factor Number 7, and those made for clarity and consistency in the final rule, are described in greater detail in the response to comments.

Comment: One comment requested that the BLM not use the variable offset concept, as it is unworkable and would result in appeals by rejected bidders.

Response: Throughout the preambles to the proposed and final rules, the BLM

has explained DLAs and the various aspects of the competitive process for solar and wind energy in these areas. By creating incentives for prospective developers and encouraging various conditions that would lead to environmental and other public benefits, the use of a variable offset is an integral aspect of this process.

The BLM manages the public land under the principles of multiple use and sustained yield, but does not expect all interested stakeholders to agree with all of the BLM's decisions. This is, in part, the reason for the BLM's appeal process, allowing the public to seek an administrative remedy for the BLM's decisions by which they have been adversely affected. The BLM expects that there will be appeals or protests on decisions that are made regarding management of the public lands.

For each notice of competitive offer, the BLM will include the factor(s) of a variable offset, as well as the requirements a bidder must meet to qualify for each incremental percentage. Bidders, as well as the public, will have this information made available to them through the notice of competitive offer and be able to act according to their interests or concerns over the proposed actions. The variable offset is carried forward in the final rule.

Comment: A comment expressed confusion over how the BLM would implement the proposed factor Number 7 (*Timeliness of project development, financing and economic factors*), and if the potential for meeting project timelines was even possible as a variable offset factor since the reduction in bid money would precede the demonstration of meeting agreed-upon time frames. Acts of God and other such influences that are outside the bidder's control were noted as possible reasons a bidder that received such a factor offset may not be able to meet it.

Response: Proposed factor number 7 for timeliness is removed from the final rule. The BLM agrees with the comment that implementing a timeliness factor would be difficult. There are many reasons outside of a winning bidder's control that may cause a delay to the development of a project. The proposed criteria for timeliness offset factor is a desired objective for an incentive, but was determined too difficult to enforce.

Comment: Another comment stated that the BLM must not shortchange taxpayers or other landowners through a discount that unjustly encourages development of public lands rather than comparable private lands. The BLM must ensure fair market value for the use of public lands.

Response: The variable offset is not a discount to a developer for the use of public lands. It is an incentive provided to a developer of the public lands, that accounts for certain steps a developer has already taken in a particular designated leasing area. Factors of the variable offset may also address the reduction of resource impacts, such as when a less water intensive technology is used. The variable offsets recognize these early developer steps that could increase the certainty of the successful development of a lease area and assist the BLM in its management of the public lands under the multiple use and sustained yield principles. This increased certainty benefits the public by not having public lands unnecessarily encumbered by a lease that may not be developed and increases the likelihood that solar or wind power generation would occur on public lands.

Comment: A third comment believes that incentives for DLAs should be reached exclusively by reducing rents rather than a complicated structure of variable offsets, time limits, bonding provisions, authorization terms, and MW capacity fees, and that the BLM proposed incentives should be removed from the final rule. This comment specifically addressed some of the proposed factors as follows:

Comment (1): Factors 1 (Power purchase agreement) and 2 (Large generator interconnect agreement) cannot be attained without demonstrated site control.

Response (1): Although securing a PPA or large generator interconnect agreement (LGIA) may not be attainable without site control, the notice may identify interim steps toward meeting the requirements of the offset factor. The final rule allows for interim steps in each of these identified offset factors. The text of the rule cites that the "variable offset may be based on any of the following factors." The notice of competitive offer would include the specific criteria required to qualify for a factor of the variable offset under paragraphs (c)(1) and (2) of this section, including any interim steps toward those factors.

Comment (2): Factor 3 (Preferred solar or wind energy technologies) for preferred technologies should be removed as it could discriminate against certain technologies without having the expertise of an energy regulatory body (outside of the BLM's authority and expertise).

Response (2): The BLM has expertise in many areas, including the impacts that a certain technology type may have on the public lands and its resources. This may include

technologies with fewer impacts to wildlife or visual resources, or technologies that consume less water. The BLM may choose to provide a variable offset factor for a preferred technology that reduces impacts to the public lands and resources. However, in some cases, the BLM may choose to consult with one of the national laboratories or State authorities for their expertise for some technologies which may be outside of the BLM's expertise to determine as a preferred technology.

Comment (3): The comment asserts that under section 2809.19(a)(1), applications that are filed prior to the publication of the draft land use plan amendment that establishes a DLA should not make a bidder eligible for factors (4) (prior site testing in a DLA) and (5) (pending applications in a DLA). This would only encourage the strategic filing of speculative applications after publication of the draft land use plan amendment in order to qualify for factors (4) and (5).

Response (3): Applications that are filed on public lands before the publication of a notice of intent or other form of public notice by the BLM for a land use plan amendment that are later designated as a DLA will continue to be processed by the BLM and not subject to the competitive offer process of subpart 2809. The filing of speculative applications will not prevent the BLM from holding competitive offers in a particular area.

If the BLM elects to hold a competitive offer for the DLA, the applicant may qualify for offset factors (4) or (5) if they chose to participate. The BLM believes that submitting an application after a notice of intent or other public notice, paying the application filing fee, and waiting for the BLM to hold a competitive offer, should qualify an applicant for variable offset factor 4 or 5.

Comment (4): Factor 6 (submission of nomination fees) is not an incentive if a bidder can submit an expression of interest, which requires no fee, and increase their bonus bid by the amount of the nomination fee that they would have paid, thereby increasing their chances of being the winning bidder.

Response (4): Neither submitting an expression of interest nor submitting a nomination will guarantee that the BLM selects that parcel for a competitive offer. However, if a developer has a particular parcel in mind, the payment of a nomination fee may be preferable so that they may qualify for a variable offset factor. In addition, 5 percent of the bonus bid may result in greater savings to the bidder than the amount submitted for the nomination fees.

Comment (5): Factors 8 (environmental benefits) and 10 (public benefits) are open to distortion and variability across field offices.

Response (5): The BLM intends that in each notice of competitive offer it will identify each applicable variable offset factor offered and specify how a bidder may qualify for each factor. The criteria listed in the final rule are intended to be broad and varied so that they can be adapted for each competitive offer.

Factor 9 is revised from the proposed to the final rule to include grants. As proposed, the factor could appear to only apply for adjacent leases. In this final rule, the BLM may authorize a grant under subpart 2804 inside a DLA, which may be adjacent to a parcel which is bid on. The parcel may also be adjacent to a grant that is outside the DLA. This revision clarifies that the BLM would consider the site control of adjacent lands, regardless of the instrument.

Comment: One comment suggests the following variable offsets be added: (1) A bird and bat conservation strategy for the project site; (2) A commitment to a specific right-of-way lease condition to obtain a bald and golden eagle protection act permit; (3) A plan to employ best available operation minimization strategies; and (4) agreement to: (a) Conduct monitoring and research with land-based WEG and Eagle Conservation Plan Guidance; (b) Provide this monitoring data to the public to facilitate a greater understanding to the wildlife impacts; and (c) implement avoidance measures to avoid impacts.

Response: A variable offset factor has been added in the final rule to account for biological opinions, strategies and plans. This factor has been added in the place of offset factor 7 which, as noted in an earlier response to comment, has been removed from this rule. New variable offset factor 7 reads as "Submission of biological opinions, strategies, or plans." This will encourage the early and thoughtful development of the public lands. To have such a plan or opinion completed at this point could lead to fewer biological resource impacts and quicker NEPA review of the project POD. The BLM does not expect many projects to complete a biological opinion at this point in the process, but interim steps toward such a plan would demonstrate the developer's commitment to protecting resources on public lands. Such interim steps could qualify a developer for this factor of a variable offset, which would be described in the notice of competitive offer.

No other comments were received and no other changes are made to this section.

Section 2809.17 Will the BLM ever reject bids or re-conduct a competitive offer?

This section identifies situations where the BLM may reject a bid, offer a lease to another bidder, re-offer a parcel, and take other appropriate actions when no bids are received. Under section 2809.17(a), the BLM could reject bids regardless of the amount offered. Bid rejection could be for various reasons, such as discovery of resource values that cannot adequately be mitigated through stipulations (*e.g.*, the only known site of a rare or endangered plant or for security purposes). If this occurs, the bidder will be notified and the notice will explain the reason(s) for the rejection and whether you are entitled to any refunds. If the BLM rejects a bid, the bidder may appeal that decision under section 2801.10. Minor revisions are made from the proposed to the final rule to improve readability of this section's title by adding the word "the" before BLM.

The BLM could offer the lease to the next highest qualified bidder if the first successful bidder is later disqualified or does not sign and accept the offered lease (see section 2809.17(b)).

Under paragraph (c) of this section, the BLM could re-offer a parcel if it cannot determine a successful bidder. This may happen in the case of a tie or if a successful bidder is later determined to be unqualified to hold a lease.

Under paragraph (d) of this section, if public lands offered competitively under this subpart receive no bids, the BLM could either reoffer the parcels through the competitive process under section 2809.13 or make the lands available through the non-competitive process found in subparts 2803, 2804, and 2805. If the lands are offered on a noncompetitive basis, the successful applicant would receive a right-of-way grant issued under subpart 2804, rather than a lease issued under subpart 2809, and the offsets described in section 2809.16 would not apply.

Comment: A comment stated that the right to appeal a rejected bid must be qualified (*i.e.*, not be a spurious appeal). The comment goes on to say that this may be remedied by the BLM: (1) Prohibiting the issuance of a stay against a lease award while there is a pending appeal filed under section 2801.10; and (2) Specifying that a successful appeal would not rescind a lease award, but instead result in an automatic 20 percent offset for the next DLA

competitive process in which the successful appellant participates.

Response: The BLM agrees that appeals should not be spurious or intended to disrupt the BLM's administration of the public lands. However, the BLM does not agree that it should prohibit the issuance of a stay in its regulations. The right to appeal a BLM decision, including the issuance of a stay, is an important part of the BLM's orderly administration of the public lands.

Should an appeal be successful in the IBLA, the BLM would not award a 20 percent variable offset to the appellant. A successful appeal may be grounds for a re-offer of the parcels or other similar action that would be consistent with the administrative status of the BLM decision that was appealed. Also, should a variable offset be awarded to successful appellants, it would likely incite further appeals from other unsuccessful bidders in the hopes to secure such a future credit. Therefore, the BLM will not provide for such variable offset awards in the rule for successful appellants. No other comments were received or changes made to the final rule for this section.

Section 2809.18 What terms and conditions apply to leases?

Section 2809.18 lists the terms and conditions of solar and wind energy leases issued inside DLAs.

Under paragraph (a) of this section, the term of a lease issued under subpart 2809 will be 30 years and the lessee may apply for renewal under section 2805.14(g). While the BLM will issue grants under subpart 2804 for a term up to 30 years (see section 2805.11), leases issued under subpart 2809 are guaranteed a lease term of 30 years.

Under paragraph (b) of this section, a lessee must pay rent and MW capacity fees as specified in section 2806.54, if the lease is for solar energy development or as specified in section 2806.64, if the lease is for wind energy development. Rent and MW capacity fees are discussed in greater detail in sections 2806.50 through 2806.68 of the section-by-section analysis. Minor revisions are made from the proposed to the final rule to improve readability, but any significant changes are discussed in detail in this preamble.

Under paragraph (c) of this section, a lessee must submit, within 2 years of the lease issuance date, a POD that: (1) Is consistent with the development schedule and other requirements in the POD template posted on the BLM's Web site http://www.blm.gov/wo/st/en/prog/energy/renewable_energy.html; and (2) Addresses all pre-development and

development activities. A POD is often required for rights-of-way under section 2804.25(c) of this final rule and is currently required for all renewable energy projects through policy. Due to their complexity, solar and wind energy development projects will always require a POD. The POD must provide site-specific information that will be reviewed by the BLM and other Federal agencies in accordance with NEPA and other relevant laws.

Under paragraph (d) of this section, a lessee must pay the reasonable costs for the BLM or other Federal agencies to review and process the POD and to monitor the lease. The authority for collecting costs is derived from Sections 304(b) and 504(g) of FLPMA that authorize reimbursement to the United States of all reasonable and administrative costs associated with processing right-of-way applications and other documents relating to the public lands, and in the inspection and monitoring of construction, operation, and termination of right-of-way facilities. Such costs may be determined based on consideration of actual costs. A lessee may choose to pay full actual costs for the review of the POD and the monitoring activities of the lease. Through the BLM's experience, a lessee is more likely to choose payment of full actual costs as this expedites the BLM's review and monitoring actions by removing administrative steps in cost estimations and verifying estimated account balances.

Under paragraph (e) of this section, a lessee must provide a performance and reclamation bond for a solar or wind energy project. Bond amounts for leases issued under subpart 2809 will be set at a standard dollar amount (per acre for solar, or per turbine for wind) for either solar or wind energy development. See section 2805.20 of this preamble for additional information on the determination of these bond amounts. As explained in the general discussion section of this preamble, the BLM does not intend to change the amount of a standard bond after the lease is issued unless there is a change in use. As previously discussed, these bond amounts were determined based on a review of recently bonded solar and wind energy projects.

Comments: Several comments were received on paragraph (e) of this section. One comment suggested that the BLM should require bonds that are tied to the actual cost of reclamation and mitigation of the project, rather than an arbitrary per acre or per project figure.

Response: It is the intent that these standard bond amounts would incentivize solar and wind energy

development in DLAs. Reclamation of the lands in these DLAs is anticipated to be less than other locations outside of DLAs as the resource impacts are not expected to be as great, and the land could, in turn, be used for solar or wind development again if a developer failed to complete their lease obligation in developing the land. Additionally, consistent with its interim policy guidance for offsite mitigation (IM 2013–142) consistent with the recently issued mitigation manual and handbook guidance, the BLM intends to prepare regional mitigation strategies before authorizing wind or solar energy development in DLAs. These plans may identify additional costs for mitigating residual impacts of the right-of-way.

As noted in the preamble for section 2805.20, the minimum and standard bond amounts are the same. The BLM recently completed a review of existing bonded solar and wind energy projects and based the standard bond amounts provided in this final rule on the information found during this review. When determining these bond amounts, the BLM considered potential liabilities associated with the lands affected by the rights-of-way, such as cultural values, wildlife habitat, and scenic values, and the mitigation and reclamation of the project site. The BLM used this review to determine an appropriate standard bond amount to cover the potential liabilities associated with solar and wind energy projects.

Comment: Another comment stated that both DLA and non-DLA bonding requirements should be the same. The BLM should use differences in rent to encourage development of DLAs.

Response: Bonding requirements for both grants issued under subpart 2804 and leases issued under subpart 2809 are established to protect the public lands. The requirements for leases are established using the same methodology as those minimum amounts established outside of a DLA. However, the standard bond amount recognizes that the impacts to resources and uses are likely to be less inside of a DLA than outside of a DLA, due to the BLM's effort to establish DLAs in areas where resource conflicts are expected to be lower. Furthermore, standard bond amounts increase the certainty for developers of costs when planning for and developing their project.

Comment: A comment recommended that the BLM reevaluate the standard bond amounts and identify a range commensurate with actual costs of decommissioning. The comment noted that the preamble to the proposed rule stated the range of solar bonding costs of \$10,000 to \$20,000 and wind bonding

costs of \$22,000 to \$60,000. This comment asked if the minimum and standard bond amounts chosen at the bottom or below the stated ranges were adequate.

Response: The BLM has considered the recommendation to identify a range of standard bond amounts, but intends to keep these amounts as proposed. In order to accommodate the wind turbines that pose lesser risk to resources, and consistent with revisions made in section 2805.20, the BLM is including in the final rule a \$10,000 standard bond amount for projects utilizing smaller turbines. Turbines with a nameplate capacity of one MW or greater will have a standard bond amount of \$20,000, consistent with the proposed rule. This is because these amounts represent bond figures that are representative of the impacts to the resources of the public lands and the intended management decisions of DLAs for solar or wind energy development. Should a developer default or fail to fulfill the lease terms, the BLM may pursue a competitive offer to lease those lands again. The full amount of the bond may not be used in this situation. The balance will be returned to the previous leaseholder upon the completion of reclamation activities. See section 2805.20(d) comment responses of this preamble for further discussion on the added \$10,000 bond amount.

BLM has determined that establishing the proposed standard bond amounts as proposed is appropriate. Using the proposed bond amounts reduces the potential for the BLM to secure bonds in amounts beyond what is necessary for the project. If a higher bond amount were selected, the BLM might over-bond the project, especially considering that the BLM has already identified these areas as having lower potential for resource impacts. Grant holders are still liable for damage done during the term of the grant or lease even if the bond amount does not cover the cost of reclamation.

The bonds collected for a project issued under subpart 2809 consider hazardous material liabilities, reclamation, and project site restoration. In addition to the required bond, BLM may require a mitigation fee to address adverse impacts resulting from the right-of-way authorization. Between securing the bond and collection of mitigation fees, the BLM believes that the impacts to the public lands are adequately protected.

A new provision (section 2809.18(e)(3)) has been added to this final rule to explain that lease holders for the testing sites that will be authorized under a lease in a DLA will

provide a standard bond amount of \$2,000 per site. This addition to the final rule is to make this section consistent with revisions to section 2801.9(d), which open up the site-specific and project-area testing authorizations to solar and wind energy. The standard bond amount for a lease issued under subpart 2809 is the same as a minimum bond amount in the proposed rule. Grants issued in a DLA for testing purposes will have a minimum bond amount as determined under section 2805.20. Testing and monitoring facilities include meteorological towers and instrumentation facilities.

For a solar energy development project, a lessee must provide a bond in the amount of \$10,000 per acre at the time the BLM approves the POD. See the discussion at section 2805.20(b) for additional information. For a wind energy development project, a lessee must provide a bond in the amount of \$10,000 or \$20,000 per authorized turbine before the BLM issues a Notice to Proceed or otherwise gives permission to begin construction on of the development. See section 2805.20(c) and (d) of this preamble for additional information.

The BLM will adjust the solar or wind energy development bond amounts for inflation every 10 years by the average annual change in the IPD–GDP for the preceding 10-year period, and round the bond amount to the nearest \$100. This adjustment would be made at the same time that the Per Acre Rent Schedule for linear rights-of-way is adjusted under section 2806.22.

The BLM revised paragraph (e)(4) of this section from the proposed to final rule for consistency with other sections of this final rule where the BLM uses the IPD–GDP to adjust an amount every 10 years. See the preamble discussion of section 2804.12(c)(2) for further information about this revision.

Under paragraph (f) of this section, a lessee may assign a lease under section 2807.21, and if an assignment is approved, the BLM would not make any changes to the lease terms or conditions, as provided in section 2807.21(e). See section 2807.21(e) of this preamble for further discussion of this topic, in response to a comment asking that we clarify the BLM's right to modify the terms of a lease issued under subpart 2809. We added language in paragraph (e) of this section to be consistent with section 2807.21(e) to state that changes made to a lease issued under this subpart will be made only when there is a danger to the public health and safety, environment, or a change to the statutory authority and other

responsibilities of the BLM. These changes would only be made in coordination with the lessee.

Under paragraph (g) of this section, a lessee must start construction of a project within 5 years and begin generating electricity no later than 7 years from the date of lease issuance, as specified in the approved POD. The approved POD will outline the specific development requirements for the project, but all PODs require a lessee to start generating electricity within 7 years. The 5 years to start construction and 7 years to begin generating electricity contained in the rule should allow leaseholders time to construct and start generation of electricity and give a leaseholder time to address any concerns that are outside of the BLM's authority. Such concerns include PPAs or private land permitting or site control transactions. A request for an extension may be granted for up to 3 years with a show of good cause and BLM approval. If a leaseholder is unable to meet this timeframe, and does not obtain an extension, the BLM may terminate the lease. No other comments were received or changes made to the final rule for this section.

Section 2809.19 Applications in DLAs or on Lands That Later Become DLAs

Section 2809.19 explains how the BLM processes applications for lands located inside DLAs or on lands that later become DLAs. Under the rule, lands inside DLAs will be offered through the competitive bidding process described in this subpart, and applications may not be filed inside these areas after the lands have been offered for competitive bid.

Section 2809.19 is revised from proposed to the final rule by adding a paragraph (a)(3) and redesignating proposed paragraphs (b) and (c) as paragraphs (c) and (d), respectively. The BLM also moved some provisions of proposed paragraph (a)(2) to a new paragraph (b). These changes are made to clarify how the BLM handles applications in areas that later become designated leasing areas. There is no change from the proposed requirements in the final rule.

Paragraph (a) of this section explains how the BLM will process applications filed for solar or wind energy development on lands outside of DLAs that subsequently become DLAs.

Under paragraph (a)(1) of this section, if an application is filed before the BLM publishes a notice of intent or other public announcement of intent for a land use plan amendment that considers designating an area for solar or wind energy, the BLM would continue to

process the application, which would not be subject to the competitive leasing offer process found in this subpart. After publication of this notice, the public will have been notified of the BLM's intent to create a DLA.

Under paragraph (a)(2) of this section, if an application is filed after the notice of the proposed land use plan amendment, the application will remain in a pending status, unless it is withdrawn by the applicant or the BLM denies it or issues a grant. The BLM made a minor revision to this section from the proposed rule by adding "or issues a grant." This revision gives the BLM the option to approve a grant in pending status, if it chooses. This revision is made because the proposed rule inadvertently omitted the possibility that a pending application could be approved, instead of only being withdrawn or denied.

New paragraph (a)(3) of this section is added in this final rule to explain that applications may resume being processed by the BLM if lands in a DLA later become available for application. Under paragraph 2809.17(d)(2), the BLM may make the lands in a DLA available for application in some circumstances. For example, the BLM may hold a competitive offer and receive no bids. In this situation, the BLM may make these lands available for application and would resume processing any applications that are pending on these lands. This is consistent with the proposed rule but is added to the final rule to clarify how the BLM will handle such applications in these circumstances.

Some provisions of proposed paragraph (a)(2) of this section are moved into new paragraph (b) in this final rule. These provisions remain mostly unchanged and are discussed as follows.

Under new paragraph (b) of this section, if the subject lands become available for leasing under this subpart, an applicant could submit a bid for the lands. Under new paragraph (b)(1) of this section, any entity with an application pending on a parcel that submits a bid on such parcel may qualify for a variable offset as provided for under section 2809.16.

Under paragraph (b)(2) of this section, the applicant may receive a refund for any unused application fees or processing costs if the lands described in the application are later leased to another entity under section 2809.15. This provision is revised consistent with changes made for application filing fees in this final rule, which are now a cost recovery payment. The BLM may use some of these fees in processing an

application and will refund any unused fees to the applicant.

Proposed paragraph (b) of this section is redesignated as paragraph (c) in this final rule. Under paragraph (c) of this section, the BLM will not accept a new application for solar or wind energy development inside DLAs after the effective date of this rule (see sections 2804.12(b)(1) and 2804.23(e), except as provided for by section 2809.17(d)(2).

Proposed paragraph (c) of this section is redesignated as paragraph (d) in this final rule. Under paragraph (d) of this section, the BLM can authorize short term (3-year) grants for testing and monitoring purposes inside DLAs. These would be processed in accordance with sections 2805.11(b)(2)(i) or 2805.11(b)(2)(ii). These testing grants may qualify an entity for a variable offset under section 2809.16(b)(4).

Comment: One comment was received pertaining to paragraph (a)(1) of this section. The comment stated that the pending application exception in the paragraph requires clarification. A pending project exemption should be tied to a notice of intent rather than a notice of availability (NOA) to avoid a number of filings made immediately after publication of a notice of intent. Also, a pending project exemption should apply to the potential competitive leasing of non-DLA lands under section 2804.30. In addition, the BLM should clarify that the rule would not apply to applications accepted and serialized or a grant issued before the rule takes effect.

Response: The BLM agrees in part with these suggestions. In this final rule, this section has been modified so that a notice of intent or other public notice will be the point at which the BLM determines that your application qualifies as a pending application. The notice of intent is specific to land use plan amendments that use an EIS for the analysis. Because a plan amendment may also be using an environmental assessment, which does not require a notice of intent, the BLM added the language, "other public announcement" into this section. The BLM believes that it is appropriate to continue processing applications that were submitted before the BLM provided public notice (e.g., through a notice of intent).

The final rule will apply to applications that are accepted and serialized as well as grants that are issued before this rule is effective. There may be exceptions to whether the rule will fully apply to an application or right-of-way grant. For example, application filing fees and preliminary application review meetings may not be

required for some pending applications. Applications do not confer land use rights to an applicant, and other provisions of the rule such as rent and fees may be determined at the time a right-of-way is authorized, not at the time an application is submitted. Therefore, under the provisions of new sections 2804.40 and 2805.12(e), you may request alternative requirements, stipulations, terms, and conditions from the BLM with a showing of good cause, and an explanation or reason for an alternative requirements, stipulations, terms, and conditions.

V. Section-by-Section Analysis for Part 2880

In addition to the revisions to its regulations governing rights-of-way for solar and wind energy development, the BLM is also revising several subparts of part 2880. These revisions are necessary to make rights-of-way administered under part 2880 consistent, where possible, with the policies, processes, and procedures for those administered under part 2800. Specific areas where we are making consistency changes include: Bonding requirements; determination of initial rental payment periods; and when you must contact the BLM, including grant, lease, and temporary use permit (TUP) modification requests, assignments, and renewal requests. The BLM has removed the provision found in the proposed rule regarding pre application requirements and fees for any pipeline 10 inches or more in diameter from this final rule. This is because, based on further analysis and comments received, the use of a 10-inch diameter pipeline was found not to be an appropriate measure that could readily provide a basis for additional requirements.

This final rule adds Section 310 of FLPMA to the authority citation for this part to clarify that FLPMA authority may be used in processing a pipeline right-of-way. The MLA authorizes the Secretary to approve MLA pipeline rights-of-way that cross Federal lands when those pipeline rights-of-way are administered by the Secretary or by two or more Federal agencies. Where the Secretary authorizes a pipeline right-of-way across lands managed by the Secretary, including any bureaus or offices of the Department, other authorities applicable to the management of those lands would generally apply to the authorization. We have cited FLPMA specifically because that authority, governing the management of the public lands generally, is the authority most commonly relied upon in such authorizations.

Subpart 2884—Applying for MLA Grants or TUPs

Section 2884.10 What should I do before I file my application?

In the proposed rule, this section included requirements for pre-application meetings when applying for a right-of-way for an oil or gas pipeline having a diameter exceeding 10 inches. Many comments were received concerning this proposal, including many comments stating that it was not a reasonable criterion to use in determining the need for pre-application meetings. After considering these comments and upon further evaluation of the proposal the BLM decided to not require these pre-application meetings. As a result, the proposed changes were not made to the regulations in this section.

Section 2884.11 What information must I submit with my application?

Section 2884.11 includes requirements for submitting applications. This section has been retitled from “What information must I submit in my application?” to read as shown above. This revision is consistent with the title revision of section 2804.12. Proposed requirements for pipelines with a diameter of 10 inches or more have been removed from this section in the final rule.

Section 2884.11(c)(5) is amended by adding a second sentence that further explains that your POD must be consistent with the development schedule and other requirements that are noted on the POD template for oil or gas pipelines at <http://www.blm.gov>.

Comment: One comment suggested that paragraph (c)(5) of this section be revised to read as follows: “The estimated schedule for constructing, operating, maintaining, and terminating the project (a POD). Your POD must address the elements specified on the POD template for oil and gas pipelines at <http://www.blm.gov>.” This suggestion would remove the requirement for the POD to be consistent with the development schedule in the POD template.

Response: The BLM did not make the suggested changes. The suggested revision to the rule would require that the applicant address each element of a POD, but would not require consistency with the POD template. This could allow a developer to acknowledge the development timeline, but not provide it to the BLM. It is important that applicants provide the necessary information to the BLM for the orderly administration of public lands, including the development schedule for

the POD. No other comments were received and no changes are made from the proposed to the final rule.

Section 2884.12 What is the processing fee for a grant or TUP application?

Section 2884.12 explains the fees associated with an application, including those that involve Federal agencies other than the BLM. The applicant may either pay the BLM for work done by those Federal agencies or pay those Federal agencies directly for their work. This authority was recently delegated to the BLM by the Secretary by Secretarial Order 3327.

Paragraph (b) of this section revises the processing fee schedule to remove the 2005 category fees. Paragraph (c) of this section provides instructions on where you may obtain a copy of the current processing fee schedule. These changes parallel those made to section 2804.14, which describe processing fees for grant applications. A further analysis of these changes can be found in that part of the section-by-section analysis. No comments were received and no changes are made from the proposed rule to the final rule.

Section 2884.16 What provisions do Master Agreements contain and what are their limitations?

Section 2884.16 is revised to require that Master Agreements describe existing agreements with other Federal agencies for cost reimbursement associated with the application. This change parallels changes made in section 2804.18, which describes Master Agreements for all other rights-of-way. With the authority recently delegated by Secretarial Order 3327 to collect costs for other Federal agencies, it is important for the applicant, the BLM, and other Federal agencies to coordinate and be consistent regarding cost reimbursement. No comments were received and no changes are made from the proposed rule to the final rule.

Section 2884.17 How will BLM process my Processing Category 6 Application?

Section 2884.17 explains how the BLM processes Category 6 applications and these changes parallel changes in section 2804.19. Under paragraph (e) of this section, the BLM may collect reimbursement for the United States for actual costs with respect to right-of-way applications and other document processing relating to Federal lands. No comments were received and no changes are made from the proposed rule to the final rule.

Section 2884.18 What if there are two or more competing applications for the same pipeline?

Section 2884.18 parallels section 2804.23. Under paragraph (a)(1) of this section, the requirement to reimburse the BLM is expanded to allow for cost reimbursement from all Federal agencies for the processing of these right-of-way authorizations.

Under paragraph (c) of this section, the BLM may offer lands through a competitive process on its own initiative. Language is added to this paragraph to include “other notification methods, such as a newspaper of general circulation in the area affected by the potential right-of-way or the Internet.” This revision is consistent with other public notice sections of this rule. See section 2804.23(c) of this preamble for further discussion. No comments were received and no other changes are made from the proposed rule to the final rule.

Section 2884.20 What are the public notification requirements for my application?

Under section 2884.20, the phrase “and may use other notification methods, such as a newspaper of general circulation in the vicinity of the lands involved or the Internet” is added to paragraphs (a) and (d) to provide for additional methods to notify the public of a pending application or to announce any public hearings or meetings. This final rule is revised, consistent with changes made to other notification language throughout this rule, to make notice in a newspaper an optional method of notice. See section 2804.23(c) of this preamble for further discussion. No comments were received and no changes are made from the proposed rule to the final rule.

Section 2884.21 How will BLM process my application?

Under section 2884.21, the BLM will not process your application if you have any trespass action pending for any activity on BLM administered lands (see section 2888.11) or have any unpaid debts owed to the Federal Government. The only application the BLM will process to resolve the trespass is for a right-of-way as authorized in this part, or a lease or permit under the regulations found at 43 CFR part 2920, but only after all outstanding debts are paid. This provision is added to provide incentives for the applicant to resolve outstanding debts or other infractions involving the Federal Government and parallels section 2804.25.

New language is added to paragraph (b) of this section stating that

outstanding debts are those currently unpaid debts owed to the Federal Government after all administrative collection actions have occurred, including administrative appeal proceedings under applicable Federal regulations and review under the APA. This language is added to be consistent with section 2804.25(d). No comments were received for section 2884.21, but comments were received and addressed under section 2804.25. The notification language contained in paragraph (d)(4) of this section is amended by adding the phrase “and may use other notification methods, such as a newspaper of general circulation in the vicinity of the lands involved or the Internet.” This section is revised, consistent with changes made to other notification language throughout this rule, to make notice in a newspaper an optional method of notice. See section 2804.23(c) of this preamble for further discussion.

Section 2884.22 Can BLM ask me for additional information?

Section 2884.22 describes what information the BLM may require in processing an application. This section was revised by changing the reference found in paragraph (a) from section 2804.25(b) to section 2804.25(c). This change was not proposed, but is made to be consistent with other changes made in this final rule. No other changes were made to this section.

Section 2884.23 Under what circumstances may BLM deny my application?

Section 2884.23 describes the circumstances when the BLM may deny an application. In the proposed rule, section 2884.23(a)(6), stated that the BLM may deny an application if the required POD fails to meet the development schedule and other requirements for oil and gas pipelines.

Comment: Several comments suggested that the BLM remove the 10-inch pipeline threshold requirement in the proposed rule.

Response: As noted previously in the preamble, the BLM removed the proposed requirements for pipelines “10 inch or larger in diameter” from the final rule. This includes requirements such as the pre-application meetings, the POD timeline, and other such requirements that are specific to pipelines 10 inches in diameter or larger. The timeliness requirement, among others associated with the large-scale pipeline projects description has been removed from the final rule.

Comment: One comment stated that the BLM should account for instances when a developer does not meet the

timeframe due to reasons outside of their control.

Response: The final rule adds a new section 2884.30 that parallels section 2804.40, both of which address situations in which a developer misses a timeframe or is unable to meet a requirement because of circumstances beyond its control. The preamble for section 2804.40 explains in greater detail the circumstances when an applicant may be unable to meet a requirement.

No other comments were received and no other changes made from the proposed rule to the final rule.

Section 2884.24 What fees do I owe if BLM denies my application or if I withdraw my application?

In the proposed rule, this section was consistent with section 2804.27. The proposed section would have required an applicant to pay any pre-application costs submitted under section 2884.10(b)(4). The BLM removed the “10 inches or larger in diameter” criteria used for determining large-scale pipeline projects from the final rule and as a result, requirements that are specific to large-scale pipeline projects are not carried forward in the final rule. This includes requirements such as the pre-application meetings, application submission, POD and other such requirements.

Section 2884.30 Showing of Good Cause

This section was not in the proposed rule. It is added here to clarify that if you cannot meet one or more of the right-of-way process requirements for a MLA application, then you may: (a) Show good cause as to why you cannot meet a requirement; and (b) Suggest an alternative requirement and explain why that requirement is appropriate. This request must be in writing and received by the BLM before your deadline to meet a requirement(s) has passed. This section is added to respond to comments requesting a way to meet the intent of the regulation if an applicant believes that a requirement(s) cannot be met. Additional discussion can be found in section 2804.40 of this preamble.

Subpart 2885—Terms and Conditions of MLA Grants and TUPs

Section 2885.11 What terms and conditions must I comply with?

Section 2885.11 explains the terms and conditions of a grant. Paragraph (a) of this section is revised by adding the phrase “with the initial year of the grant considered to be the first year of the

term.” This revision clarifies what BLM considers to be the first year of a grant. For example, a 30-year grant issued on September 1, 2015, will expire on December 31, 2044, and have an effective term of 29 years and 4 months. This is consistent with law, policy, and procedures. For all grants issued under parts 2800 and 2880 with terms greater than 3 years, the actual term will include the number of full years, including any partial year. The term for a MLA grant differs from the term for rights-of-way authorized under FLPMA, as FLPMA rights-of-way may be issued for periods greater than 30 years, while a MLA right-of-way may be issued for a maximum period of 30 years. If a 30 year FLPMA grant is issued on a date other than the first of a calendar year, that partial year will count as additional time of the grant (see discussion of section 2805.11 earlier in this preamble section).

A new sentence is added to the end of section 2885.11(b)(7) referencing new section 2805.20 that explains the bonding requirements for all rights-of-way. The introduction of this paragraph is revised consistent with the introduction made to paragraph 2805.20(a) that has the similar provision by which the BLM may require a bond. The introduction of this paragraph now reads: “The BLM may require that you obtain,” instead of “If we require it. . . .” This revision is for consistency within the final rule and its regulations.

Comments: Several concerns were raised about bonding requirements. One comment suggested that bonding should focus only on large scale operations (e.g., use a 60 acre or greater criterion), that right-of-way holders should be able to use liability insurance to satisfy bonding requirements, and asked that the rule make it clear that the new requirements would not affect existing operations.

Response: This final rule does not require bonding for any rights-of-way, except for solar and wind energy developments. As previously noted, the BLM has removed the criteria for large scale projects from this final rule. The BLM will continue to determine whether a bond is necessary and what the bond amount will be on a case-by-case basis.

In this final rule, the BLM accepts many bond instruments, including insurance policies. Insurance policies would include those that are issued for general liabilities of a company, individual, or organization.

The bonding provisions in the final rule apply to the grants that were issued before the effective date of this rule. The existing regulations require that a holder

obtain or certify that they have obtained a bond or other acceptable security to cover any losses, damages, or injury to human health, the environment, and property incurred in connection with the use and occupancy of the right-of-way or TUP area. The current regulations allow the BLM to adjust the bond requirements for any right-of-way grant or lease when a situation warrants it. These requirements in the existing rule are incorporated in this final rule and will continue to apply to existing and future grant holders.

Comments: Another comment suggested copying the bonding requirements from part 2800 into part 2880, instead of referring to the relevant requirements.

Response: The BLM intends to maintain the continuity of the regulations, as they currently exist. Section 2885.11(b)(7) refers to the terms and conditions in section 2805.12. This creates a consistent use of the regulations for the public as well as the BLM in its administration of the public lands. It is not necessary to duplicate the subpart 2805 regulations in part 2880. No other comments were received and no other changes made from the proposed rule to the final rule.

Section 2885.15 How will BLM charge me rent?

Section 2885.15 discusses how the BLM will prorate and charge rent for rights-of-way. Revisions to section 2885.15 clarify that there are no reductions of rents for grants or TUPs, except as provided under section 2885.20(b). Section 2885.20(b) is an existing provision under which a grant holder can qualify for phased-in rent. This section is revised to clarify existing requirements and add a cross-reference to another section of these regulations. No comments were received and no changes are made from the proposed rule to the final rule.

Section 2885.16 When do I pay rent?

Revisions to section 2885.16 clarify that the BLM prorates the initial rental amount based on the number of full months left in the calendar year after the effective date of the grant or TUP. If your grant qualifies for annual payments, the initial rent bill consists of the beginning partial year plus the next full year. For example, the initial rent payment required for a 10-year grant issued on September 1 would be for 1 year and 3 months if the grant qualifies for annual billing. The initial rental bill for the same grant would be for 9 years and 3 months if the grant does not qualify for annual billing. This is a new provision that parallels section

2806.24(c) and creates consistency in how all rights-of-way are prorated. No comments were received and no changes are made from the proposed rule to the final rule.

Section 2885.17 What happens if I do not pay rents and fees or if I pay the rents or fees late?

Section 2885.17(e) parallels section 2806.13(e), which identifies when the BLM would retroactively bill for uncollected or under-collected rent, late payments, and administrative fees. The BLM will collect such rents if: (1) A clerical error is identified; (2) A rental schedule adjustment is not applied; or (3) An omission or error in complying with the terms and conditions of the authorized right-of-way is identified.

Comment: One comment pointed out that the titles of sections 2806.13(e) and 2885.17(e) were not consistent and also questioned the location of the new subject matter within these paragraphs.

Response: The BLM agrees with the comment that the titles of the two paragraphs identified are not consistent, therefore we revised the section heading to read as above. However, we did not revise the placement of the subject matter within the final regulations. After revisions to this section heading, the provisions for retroactive billing and unpaid or under collected rents are appropriately placed in this section. No other comments were received and no other changes made from the proposed rule to the final rule.

Section 2885.19 What is the rent for a linear right-of-way grant?

Section 2885.19 is revised by updating the addresses in paragraph (b). No comments were received and no changes are made from the proposed rule to the final rule.

Section 2885.20 How will the BLM calculate my rent for linear rights-of-way the Per Acre Rent Schedule covers?

Section 2885.20 is amended by removing paragraph (b)(1) that discussed the phase-in of the Per Acre Rent Schedule and the 2009 per acre rent, because this provision is no longer applicable. Paragraph (b) now consists of the language formerly found at paragraph (b)(2). No comments were received and no changes are made from the proposed rule to the final rule.

Section 2885.24 If I hold a grant or TUP what monitoring fees must I pay?

The changes in section 2885.24 parallel the changes made to other sections of this rule that contained tables with outdated numbers. Specific numbers are removed from the table.

However, the monitoring fee amounts are available to the public either from BLM offices or on the BLM Web site. The rule adds the methodology for adjusting these fees on an annual basis to paragraph (a) of this section. Since this methodology has been added to paragraph (a), a description of how the BLM updates the schedule has been removed from paragraph (b) of this section.

Consistent with revisions made under section 2805.16, the BLM is adding the words “inspecting and” to section 2885.24. This additional language codifies current practice or policy. It will allow the BLM to inspect and monitor the right-of-way to ensure a project’s compliance with the terms and conditions of an authorization. Under this provision, if a project is out of compliance, the BLM could inspect the project to ensure that the required actions are completed to the satisfaction of the BLM, such as continued maintenance of the required activity. No comments were received and no other changes are made from the proposed rule to the final rule.

Subpart 2886—Operations on MLA Grants and TUPs

Section 2886.12 When must I contact BLM during operations?

Section 2886.12 describes when a right-of-way grant holder must contact the BLM during operations. The changes in this section parallel the changes made to section 2807.11. A grant holder is required to contact the BLM when site-specific circumstances require changes to an approved right-of-way grant, POD, site plan, or other procedures, even when the changes are not substantial deviations in location or use. These types of changes are considered to be grant or TUP modification requests. Paragraph (e) is added to conform to similar provisions found at section 2807.11(e), which requires you to contact the BLM if your authorization requires submission of a certificate of construction. See section 2807.11 for further discussion of these topics.

Comment: One comment stated that requiring grant holders to contact the BLM prior to making non-substantial deviations in location or use, including operational changes, project materials, and mitigation measures, is overly burdensome.

Response: Unless a grant provides for non-substantial deviations, a grant holder must contact the BLM and request approval of non-substantial deviations for an authorization. Should a holder not receive approval from the

BLM, they could be found to be in noncompliance with the terms and conditions of the grant. The requirements of this section are required in order for the BLM to review and approve a non-substantial deviation and to ensure that the BLM is meeting its responsibilities under the MLA and any other applicable authorities, including FLPMA. It is the BLM’s responsibility to determine if a deviation is substantial, not a grant holder’s. No other comments were received and no changes are made from the proposed rule to the final rule.

Subpart 2887—Amending, Assigning, or Renewing MLA Grants and TUPs

Section 2887.11 May I assign or make other changes to my grant or TUP?

The final rule revises section 2887.11 to parallel the revisions made to section 2807.21, which describes assigning or making other changes to a FLPMA grant or lease. We received comments to sections 2807.21 and 2887.11 that apply to both sections. Sections 2807.21 and 2887.11 are consistent with each other in formatting and content, except where cross-references are made to their respective regulatory provisions.

The section heading for section 2887.11 is changed to be consistent with the section heading for section 2807.21 and the text in the final section. The existing regulations do not cover all instances when an assignment is necessary and also do not address situations when assignments are not required. The revisions to this section are necessary to: (1) Add and describe additional changes to a grant other than assignments; (2) Clarify what changes require an assignment; and (3) Make right-of-way grants or TUPs subject to the regulations in this section.

Paragraph (a) is revised to include two events that may require the filing of an assignment: (1) The transfer by the holder of any right or interest in the right-of-way grant to a third party, e.g., a change in ownership; and (2) A change in control transactions involving the right-of-way grantee. See section 2807.21 of this preamble for further discussion.

Revised paragraph (b) clarifies that a change in the holder’s name only does not require an assignment. It also clarifies that changes in a holder’s articles of incorporation do not trigger an assignment.

Revised paragraph (c) pertains to payments for assignments and adds a requirement to pay application fees in addition to processing fees. Also, the BLM may now condition a grant assignment on payment of outstanding cost recovery fees to the BLM.

Added paragraph (g) clarifies that only interests in right-of-way grants or TUPs are assignable. A pending right-of-way application is not a property right or other interest that can be assigned. No comments were received and no other changes made from the proposed rule to the final rule.

Section 2887.12 How do I renew my grant?

Section 2887.12 adds paragraph (d), to be consistent with the revisions made to section 2807.22, explaining that if a holder makes a timely and sufficient application for renewal, the existing grant or lease does not expire until BLM issues a decision on the application for renewal. This provision is derived from the APA (5 U.S.C. 558(c)(1)), and it protects the interests of existing right-of-way holders who have timely and sufficiently made an application for the continued use of an existing authorization. In this situation, the authorized activity does not expire until the application for continued use has been evaluated and a decision on the extension is made by the agency. This reiterates and clarifies existing policy and procedures.

Under section 2887.12(e), you may appeal the BLM’s decision to deny your application under section 2881.10. This paragraph parallels the language under proposed section 2807.22(f), which is redesignated as section 2807.22(g). No comments were received and no changes are made from the proposed rule to the final rule.

VI. Procedural Matters

Regulatory Planning and Review (Executive Orders 12866 and 13563)

Executive Order 12866 provides that the Office of Information and Regulatory Affairs (OIRA) will review all significant rules. OIRA has determined that this rule is significant because it could raise novel legal or policy issues.

Executive Order 13563 reaffirms the principles of Executive Order 12866 while calling for improvements in the nation’s regulatory system to promote predictability, to reduce uncertainty, and to use the best, most innovative, and least burdensome tools for achieving regulatory ends. This Executive Order directs agencies to consider regulatory approaches that reduce burdens and maintain flexibility and freedom of choice for the public where these approaches are relevant, feasible and consistent with regulatory objectives. Executive Order 13563 emphasizes further that regulations must be based on the best available science and that the rulemaking process

must allow for public participation and an open exchange of ideas. We have developed this rule in a manner consistent with these requirements.

This rule includes provisions intended to facilitate responsible solar and wind energy development and to receive fair market value for such development. These provisions are designed to:

1. Promote the use of preferred areas for solar and wind energy development (*i.e.*, DLAs); and
2. Establish competitive processes, terms, and conditions (including rental and bonding requirements) for solar and wind energy development rights-of-way both inside and outside of DLAs.

These provisions also will assist the BLM in: (a) Meeting goals established in Section 211 of the EPOA of 2005, Secretarial Order 3285A1, and the President's Climate Action Plan; and (b) Implementing recommendations from the GAO and OIG regarding renewable energy development.

In addition to provisions that would affect renewable energy specifically, this rule also includes some provisions that affect all rights-of-way, and some that affect only transmission lines with a capacity of 100 kV or more. These provisions clarify existing regulations and codify existing policies.

Economic Impacts

The rule does not have an annual effect on the economy of \$100 million or more or adversely affect in a material way the economy, a sector of the economy, productivity, competition, jobs, the environment, public health or safety, or State, local, or tribal governments or communities. The BLM anticipates this rule will reduce total costs to all applicants, lessees, and operators by up to approximately 17.9 million per year. The change in rents and fees from those currently set by policy primarily reflect changing market conditions. Increases in the minimum bond amounts also reflect increases in estimated reclamation costs. These impacts are discussed in detail in the Economic and Threshold Analysis for the rule.

Other Agencies

This rule does not create a serious inconsistency or otherwise interfere with another agency's actions or plans. The BLM is the only agency that may promulgate regulations for rights-of-way on public lands.

Budgetary Impacts

This rule does not materially alter the budgetary effects of entitlements, grants,

user fees, loan programs, or the rights or obligations of their recipients.

Novel Legal or Policy Issues

This rule may raise novel legal or policy issues. It codifies existing BLM policies and provides additional detail about submitting applications for solar or wind energy development grants, and for transmission lines with a capacity of 100 kV or more. In addition, the rule provides for a competitive process for those entities seeking solar and wind energy development leases inside of DLAs.

National Environmental Policy Act (NEPA)

These regulatory amendments are of an administrative or procedural nature and thus are eligible to be categorically excluded from the requirement to prepare an environmental assessment (EA) or EIS. See 43 CFR 46.205 and 46.210(i). They do not present any of the extraordinary circumstances listed at 43 CFR 46.215.

Nonetheless, the BLM prepared an EA and Finding of No Significant Impact (FONSI) analyzing the final rule to inform agency decision-makers and the public. The EA/FONSI incorporates by reference the Final Solar Energy Development Programmatic Environmental Impact Statement (July 2012) and the Final Programmatic Environmental Impact Statement on Wind Energy Development on BLM-Administered Lands in the Western United States (June 2005). The EA concludes that this rule does not constitute a major Federal action significantly affecting the quality of the human environment under Section 102(2)(C) of NEPA (42 U.S.C. 4332(2)(C)). A detailed statement under NEPA is not required. To obtain single copies of the Programmatic EISs or the EA/FONSI, you may contact the person listed under the section of this rule titled, **FOR FURTHER INFORMATION CONTACT**. You may also view the EA/FONSI and Programmatic Environmental Impact Statements at, respectively, <http://windeis.anl.gov/>, <http://solareis.anl.gov/>, and http://www.blm.gov/wo/st/en/prog/energy/renewable_energy.html.

Regulatory Flexibility Act

Congress enacted the Regulatory Flexibility Act of 1980 (RFA), as amended, 5 U.S.C. 601–612, to ensure that Government regulations do not unnecessarily or disproportionately burden small entities. The RFA requires a regulatory flexibility analysis if a rule would have a significant economic impact, either detrimental or beneficial,

on a substantial number of small entities. For the purposes of this analysis, the BLM assumes that all entities (all grant holders, lessees, and applicants for rights-of-way for solar or wind energy projects, pipelines, or transmission lines with a capacity of 100 kV or more) that may be affected by this rule are small entities, even though that is not actually the case.

This rule does not have a significant economic effect on a substantial number of small entities under the RFA.

The rule does affect new applicants or bidders for authorizations of solar or wind energy development and transmission lines with a capacity of 100 kV or more. The BLM reviewed current holders of such authorizations to determine whether they are small businesses as defined by the SBA. The BLM was unable to find financial reports or other information for all potentially affected entities, so this analysis assumes that the rule could potentially affect a substantial number of small entities.

To determine the extent to which this rule will impact these small entities, we took two approaches. First, we attempted to measure the direct costs of the rule as a portion of the net incomes of affected small entities. However, we were unable to obtain the financial records for a representative sample. Next, we estimated the direct costs of the rule as a portion of the total costs of a project.

The analysis showed that a range of potential impacts on the total cost of a project varied from a savings of 0.08 percent to a cost of 1.45 percent of the total project cost. The BLM determined that this was an insignificant impact in the context of developing a project and, therefore, not a significant economic impact on a substantial number of small businesses. For a more detailed discussion, please see the economic analysis.

Small Business Regulatory Enforcement Fairness Act

For the same reasons as discussed under the Executive Order 12866, Regulatory Planning and Review section of this preamble, this rule is not a “major rule” as defined at 5 U.S.C. 804(2). That is, it would not have an annual effect on the economy of \$100 million or more; it would not result in major cost or price increases for consumers, industries, government agencies, or regions; and it would not have significant adverse effects on competition, employment, investment, productivity, innovation, or the ability of U.S.-based enterprises to compete with foreign-based enterprises.

Unfunded Mandates Reform Act

This rule does not impose an unfunded mandate on State, local, or tribal governments, or on the private sector of \$100 million or more per year; nor would it have a significant or unique effect on State, local, or tribal governments. This rule amends portions of the regulations found at 43 CFR parts 2800 and 2880, redesignates existing 43 CFR part 2809 in its entirety to a new paragraph found at 2801.6(a)(2), adds new 43 CFR part 2809, and modifies the MLA pipeline regulations in 43 CFR part 2880, but does not result in any unfunded mandates. Therefore, the BLM does not need to prepare a statement containing the information required by Sections 202 or 205 of the Unfunded Mandates Reform Act (UMRA), 2 U.S.C. 1531 *et seq.* The rule is also not subject to the requirements of Section 203 of UMRA because it contains no regulatory requirements that might uniquely affect small governments, nor does it contain requirements that either apply to such governments or impose obligations upon them.

Executive Order 12630, Governmental Actions and Interference With Constitutionally Protected Property Rights (Takings)

This rule is not a government action that interferes with constitutionally protected property rights. This rule sets out competitive processes for solar and wind energy development and revises some requirements for pipelines and electric transmission facilities on BLM-managed public lands. It establishes rent and fee schedules for various components of the development of such facilities inside DLAs that are conducive to competitive right-of-way leasing and clarifies a process that would rely on the BLM's existing land use planning system to allow for these types of uses. Because any land use authorizations and resulting development of facilities under this rule are subject to valid existing rights, it does not interfere with constitutionally protected property rights. Therefore, the Department determined that this rule does not have significant takings implications and does not require further discussion of takings implications under this Executive Order.

Executive Order 13132, Federalism

The BLM determined that this rule does not have a substantial direct effect on the States, or the relationship between the national Government and the States, or on the distribution of power and responsibilities among the various levels of government. It does not

apply to State or local governments or State or local government entities. Therefore, in accordance with Executive Order 13132, the BLM determined that this rule does not have sufficient Federalism implications to warrant preparation of a Federalism Assessment.

Executive Order 12988, Civil Justice Reform

Under Executive Order 12988, the Department determined that this rule does not unduly burden the judicial system and that it meets the requirements of sections 3(a) and 3(b)(2) of the Order. The Department's Office of the Solicitor has reviewed this rule to eliminate drafting errors and ambiguity. It has been written to minimize litigation, provide clear legal standards for affected conduct rather than general standards, promote simplification, and avoid unnecessary burdens.

Executive Order 13175, Consultation and Coordination With Indian Tribal Governments

In accordance with Executive Order 13175, the BLM found that this rule does not have significant tribal implications. Additionally, because the rulemaking itself is administrative in nature and does not establish any DLAs or approve any specific projects, the BLM has determined that it does not require tribal consultation.

Moreover, in the future when additional DLAs are established or projects are approved, the rule calls for further tribal consultation by the BLM and right-of-way applicants. Specifically, DLAs will be identified through the BLM's land use planning process. Tribal consultation is an important component of that process and will be undertaken when DLAs are identified. In addition to the preliminary review covered in the planning process, existing BLM regulations require site-specific analysis for specific projects. As part of that site-specific analysis, right-of-way applicants must consult with affected tribes to discuss the proposed action and other aspects of the proposed project. For example, site-specific requirements for applications for a grant issued under subpart 2804 include application review, public meetings, and tribal consultation. The BLM would be able to deny an application after these meetings based on a variety of criteria, including tribal concerns.

Data Quality Act

In promulgating this rule, the BLM did not conduct or use a study, experiment, or survey requiring peer review under the Data Quality Act

(Section 515 of Public Law 106–554). In accordance with the Data Quality Act, the Department has issued guidance regarding the quality of information that it relies upon for regulatory decisions. This guidance is available at the Department's Web site at: <http://www.doi.gov/archive/ocio/iq.html>.

Executive Order 13211, Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use

Executive Order 13211 requires Federal agencies to prepare and submit to OMB a Statement of Energy Effects for any proposed significant energy action. A "significant energy action" is defined as any action by an agency that: (1) Is a significant regulatory action under Executive Order 12866, or any successor order; (2) Is likely to have a significant adverse effect on the supply, distribution, or use of energy; or (3) Is designated by the Administrator of OIRA as a significant energy action.

This rule could raise novel legal or policy issues within the meaning of Executive Order 12866 or any successor order. However, the BLM believes this rule is unlikely to have a significant adverse effect on the supply, distribution, or use of energy, and may in fact have a positive impact on energy supply, distribution, or use. In fact, its intent is to facilitate such development. The rule codifies BLM policies and provides additional detail about the process for submitting applications for solar or wind energy development grants issued under subpart 2804, or for solar or wind energy development leases issued under subpart 2809.

Executive Order 13352, Facilitation of Cooperative Conservation

In accordance with Executive Order 13352, the BLM determined that this rule will not impede the facilitation of cooperative conservation. The rule takes appropriate account of and respects the interests of persons with ownership or other legally recognized interests in land or other natural resources; properly accommodates local participation in the Federal decision-making process; and provides that the programs, projects, and activities are consistent with protecting public health and safety.

Paperwork Reduction Act

The Paperwork Reduction Act (PRA) (44 U.S.C. 3501–3521) provides that an agency may not conduct or sponsor, and a person is not required to respond to, a collection of information, unless it displays a currently valid OMB control number. Collections of information include requests and requirements that

an individual, partnership, or corporation obtain information, and report it to a Federal agency. See 44 U.S.C. 3502(3); 5 CFR 1320.3(c) and (k).

This rule contains information collection activities that require approval by the OMB under the Paperwork Reduction Act. The BLM included an information collection request in the proposed rule. OMB has approved the information collection for the final rule under control number 1004-0206.

Some of the information collection activities in the final rule require the use of Standard Form 299 (SF-299), Application for Transportation and Utility Systems and Facilities on Federal Lands. SF-299 is approved for use by the BLM and other Federal agencies under control number 0596-0082. The U.S. Forest Service administers control number 0596-0082. The OMB has approved the information collection activities in this final rule under control number 1004-0206.

The information collection activities in this rule are described below along with estimates of the annual burdens. Included in the burden estimates are the time for reviewing instruction, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing each component of the proposed information collection.

The following features of the final rule pertain to more than one information collection activity.

Designated leasing areas: As defined in an amendment to 43 CFR 2801.5, a designated leasing area is a parcel of land identified in a BLM land use plan as a preferred location for solar or wind energy development. Regulations at 43 CFR subpart 2809 provide for the issuance of solar or wind right-of-way development “leases” inside a designated leasing area. Regulations at subpart 2804 provide for right-of-way development “grants” for solar or wind energy projects outside of any designated leasing area. Regulations at subpart 2804 also provide for testing grants for solar or wind energy inside or outside designated leasing areas.

Competitive process for solar or wind energy outside any designated leasing area: Section 2804.30 provides that the BLM may invite bids for land outside any designated leasing area for solar or wind energy testing and development. Section 2804.30(g) allows only one applicant (*i.e.*, a “preferred applicant”) to apply for a right-of-way grant for solar or wind energy testing or development outside any designated leasing area. The preferred applicant is the successful

bidder in the competitive process outlined in subpart 2804.

Competitive process for solar or wind energy inside a designated leasing area: Subpart 2809 outlines a competitive process for land inside a designated leasing area, which provides for a parcel nomination and competitive offer instead of an application process.

Application filing fees: Section 2804.12(c)(2) requires an “application filing fee” as follows:

(1) \$15 per acre for applications for solar or wind energy development outside any designated leasing area; and

(2) \$2 per acre for applications for energy project-area testing inside or outside designated leasing areas.

As defined in an amendment to section 2801.5, an application filing fee is specific to solar and wind energy right-of-way applications. Section 2804.30(e)(4) provides that the BLM will refund the fee, except for the reasonable costs incurred on behalf of the applicant, if the applicant is not a successful bidder under subpart 2804 or subpart 2809. The proposed rule would have required an application filing fee for energy site-specific testing grants. On consideration of comments questioning whether site-specific testing should be subject to an application filing fee, the BLM has removed that requirement from the final rule. The \$2 per acre filing fee applies to applications for energy project-area testing, but not to energy site-specific testing.

Applications: Section 2804.12(b) refers to applications in the context of large-scale projects. In the BLM’s experience, most applications and plans of development for large-scale projects evolve from several iterations of the first application that is submitted. Some requirements in the final rule (for example, application filing fees) apply to the first time an application is submitted but not to subsequent submissions of an application for the same project.

The information collection activities in the final rule are discussed below.

Application for a Solar or Wind Energy Development Project Outside Any Designated Leasing Area (43 CFR 2804.12 and 2804.30(g)); and

Application for an Electric Transmission Line with a Capacity of 100 kV or More (43 CFR 2804.12)

New requirements at section 2804.12(b) apply to the following types of applications:

- Solar and wind energy development grants outside any designated leasing area; and

- Electric transmission lines with a capacity of 100 kV or more.

In addition to these categories of applications, the proposed rule would have made these new requirements applicable to applications for pipelines 10 inches or greater. The rationale was that these applications, as well as the other 2 types of applications, were for large-scale operations that warrant their own procedures. Some comments questioned the BLM’s description of pipelines 10 inches or greater in diameter as a measure for large-scale pipeline projects, and suggested that the scale of pipeline projects is better measured by acreage than pipeline diameter. The BLM agrees. Rights-of-way for pipelines 10 inches or greater in diameter are not subject to section 2804.12 of the final rule.

Section 2804.12(b) includes the following requirements for applications for a solar or wind energy development project outside a designated leasing area, and to applications for a transmission line project with a capacity of 100 kV or more:

- A discussion of all known potential resource conflicts with sensitive resources and values, including special designations or protections; and

- Applicant-proposed measures to avoid, minimize, and compensate for such resource conflicts, if any.

Section 2804.12(b) also requires applicants to initiate early discussions with any grazing permittees that may be affected by the proposed project. This requirement stems from FLPMA Section 402(g) (43 U.S.C. 1752(g)) and a BLM grazing regulation (43 CFR 4110.4-2(b)) that require 2 years’ prior notice to grazing permittees and lessees before cancellation of their grazing privileges.

In addition to the information listed at 43 CFR 2804.12(b), an application for a solar or wind project, or for a transmission line of at least 100 kV, must include the information listed at 43 CFR 2804.12(a)(1) through (7). These provisions are not amended in the final rule. The requirements at section 2804.12(e) (formerly section 2804.12(b)) apply to applicants that are business entities. These requirements are not amended substantively in the final rule. The burdens for all of these regulations are already included in the burdens associated with the BLM for SF-299 and control number 0596-0082, and therefore are not included in the burdens for the final rule.

Applications for solar or wind energy development outside any designated leasing area, but not applications for large-scale transmission lines, are subject to a requirement (at 43 CFR 2804.12(c)(2)) to submit an “application

filing fee” of \$15 per acre. As defined in an amendment to section 2801.5, an application filing fee is specific to solar and wind energy right-of-way applications. Section 2804.30(e)(4) provides that the BLM will refund the fee, except for the reasonable costs incurred on behalf of the applicant, if the applicant is not a successful bidder in the competitive process outlined in subpart 2804.

General Description of a Proposed Project and Schedule for Submittal of a POD (2804.12(b)(1) and (2))

Paragraph 2804.12(b)(1) and (2) require applicants for a solar or wind development project outside a designated leasing area to submit the following information, using Form SF-299:

- A general description of the proposed project and a schedule for the submission of a POD conforming to the POD template at <http://www.blm.gov>;
- A discussion of all known potential resource conflicts with sensitive resources and values, including special designations or protections; and
- Proposals to avoid, minimize, and compensate for such resource conflicts, if any.

Preliminary Application Review Meetings for a Large-Scale Right-of-Way (43 CFR 2804.12 (b)(4))

The proposed rule would have required pre-application meetings for each large-scale project (defined in the proposed rule as an application for a solar or wind energy development project outside a designated leasing area, a transmission line project with a capacity of 100 kV or more, or a pipeline 10 inches or more in diameter). Several comments suggested that the BLM lacks authority to impose requirements on a developer before submission of an application without an application being submitted to the BLM.

The BLM agrees with these comments and has revised the proposed rule. Instead of pre-application meetings, the final rule requires “preliminary application review meetings” that will be held after an application for a large-scale right-of-way has been filed with the BLM. As discussed above, the BLM also has decided to remove 10-inch pipelines from the final rule, in response to comments questioning the characterization of pipelines 10 inches or greater in diameter as large-scale projects.

Within 6 months from the time the BLM receives the cost recovery fee for an application for a large-scale project (*i.e.*, for solar or wind energy development outside a designated

leasing area or for a transmission line with a capacity of 100 kV or more), the applicant must schedule and hold at least two preliminary application review meetings.

In the first meeting, the BLM will collect information from the applicant to supplement the application on subjects such as the general project proposal. The BLM will also discuss with the applicant subjects such as the status of BLM land use planning for the lands involved, potential siting issues or concerns, potential environmental issues or concerns, potential alternative site locations, and the right-of-way application process.

In the second meeting, the applicant and the BLM will meet with appropriate Federal and State agencies and tribal and local governments to facilitate coordination of potential environmental and siting issues and concerns.

The applicant and the BLM may agree to hold additional preliminary application review meetings.

Application for an Energy Site-Specific Testing Grant (43 CFR 2804.30, 2805.11(b)(2)(i), and 2809.19(c));

Application for an Energy Project-Area Testing Grant (43 CFR 2804.30, 2805.11(b)(2)(ii), and 2809.19(c)); and

Application for a Short-Term Grant (43 CFR 2805.11(b)(2)(iii))

Section 2804.30(g) authorizes only one applicant (*i.e.*, a “preferred applicant”) to apply for an energy project-area testing grant or an energy site-specific testing grant for land outside any designated leasing area. Section 2809.19(c) authorizes only one applicant (*i.e.*, the successful bidder in the competitive process outlined at 43 CFR subpart 2809) to apply for an energy project-area testing grant or an energy site-specific testing grant for land inside a designated leasing area. Section 2805.11(b) authorizes applications for short-term grants for other purposes (such as geotechnical testing and temporary land-disturbing activities) either inside or outside a designated leasing area.

Each of these grants is for 3 years or less. All of these applications must be submitted on an SF-299. Applications for project-area grants (but not site-specific grants) are subject to a \$2 per-acre application filing fee in accordance with section 2804.12(c)(2). Applicants for short-term grants for other purposes (such as geotechnical testing and temporary land-disturbing activities) are subject to a processing fee in accordance with section 2804.14.

The proposed rule would have limited testing grants to wind energy.

Some comments suggested that these authorizations should be made available for solar energy. The BLM has adopted this suggestion in the final rule.

Showing of Good Cause (43 CFR 2805.12(c)(6))

Any authorization for a solar and wind energy right-of-way requires due diligence in development. In accordance with section 2805.12(c)(6), the BLM will notify the holder before suspending or terminating a right-of-way for lack of due diligence. This notice will provide the holder with a reasonable opportunity to correct any noncompliance or to start or resume use of the right-of-way. A showing of good cause will be required in response. That showing must include:

- Reasonable justification for any delays in construction (for example, delays in equipment delivery, legal challenges, and acts of God);
- The anticipated date for the completion of construction and evidence of progress toward the start or resumption of construction; and
- A request for extension of the timelines in the approved POD.

The BLM will use the information to determine whether or not to suspend or terminate the right-of-way for failure to comply with due diligence requirements.

Reclamation Cost Estimate for Lands Outside Any Designated Leasing Area (43 CFR 2805.20(a)(3) and (5))

New section 2805.20(a)(3) provides that the bond amount for projects other than a solar or wind energy lease under subpart 2809 (*i.e.*, inside a designated leasing area) will be determined based on the preparation of a reclamation cost estimate that includes the cost to the BLM to administer a reclamation contract and review it periodically for adequacy.

New section 2805.20(a)(5) provides that reclamation cost estimate must include at minimum:

- Remediation of environmental liabilities such as use of hazardous materials waste and hazardous substances, herbicide use, the use of petroleum-based fluids, and dust control or soil stabilization materials;
- The decommissioning, removal, and proper disposal, as appropriate, of any improvements and facilities; and
- Interim and final reclamation, revegetation, recontouring, and soil stabilization. This component must address the potential for flood events and downstream sedimentation from the site that may result in offsite impacts.

Request To Assign a Solar or Wind Energy Development Right-of-Way (43 CFR 2807.21)

Section 2807.21, as amended, provides for assignment, in whole or in part, of any right or interest in a grant or lease for a solar or wind development right-of-way. Actions that may require an assignment include the transfer by the holder (assignor) of any right or interest in the grant or lease to a third party (assignee) or any change in control transaction involving the grant holder or lease holder, including corporate mergers or acquisitions.

The proposed assignee must file an assignment application, using SF-299, and pay application and processing fees. No preliminary application review meetings and or public meetings are required.

The assignment application must include:

- Documentation that the assignor agrees to the assignment; and
- A signed statement that the proposed assignee agrees to comply with and be bound by the terms and conditions of the grant that is being assigned and all applicable laws and regulations.

Application for Renewal of an Energy Project-Area Testing Grant or Short-Term Grant (43 CFR 2805.11(b)(2), 2805.14(h), and 2807.22)

Section 2805.11(b)(2), as amended, provides that holders of some types of grants may seek renewal of those grants. For an energy site-specific testing grant, the term is 3 years or less, without the option of renewal. However, for an energy project-area testing grant, the initial term is 3 years or less, with the option to renew for one additional 3-year period when the renewal application is also accompanied by a solar or wind energy development application and a POD. For short-term grants, such as for geotechnical testing and temporary land-disturbing activities, the term is 3 years or less with an option for renewal.

Applications for renewal of testing grants (except site-specific testing grants) may be filed, using SF-299, under sections 2805.14(h) and 2807.22. Processing fees in accordance with section 2804.14, as amended, apply to these renewal applications.

Section 2807.22 provides that an application for renewal of any right-of-way grant or lease must be submitted at least 120 calendar days before the grant or lease expires. The application must show that the grantee or lessee is in compliance with the renewal terms and conditions (if any), with the other terms,

conditions, and stipulations of the grant or lease, and with other applicable laws and regulations. The application also must explain why a renewal of the grant or lease is necessary.

Environmental, Technical, and Financial Records, Reports, and Other Information (43 CFR 2805.12(a)(15))

Section 2805.12(a)(15) authorizes the BLM to require a holder of any type of right-of-way to provide, or give the BLM access to, any pertinent environmental, technical, and financial records, reports, and other information. The use of SF-299 is required. The BLM will use the information for monitoring and inspection activities.

Application for Renewal of a Solar or Wind Energy Development Grant or Lease (43 CFR 2805.14(g) and 2807.22)

Amendments to sections 2805.14 and 2807.22 authorize holders of leases and grants to apply for renewal of their rights-of-way. A renewal requires submission of the same information, on SF-299, that is necessary for a new application. Processing fees, in accordance with 43 CFR 2804.14, as amended, will apply to these renewal applications. The BLM will use the information submitted by the applicant to decide whether or not to renew the right-of-way.

Request for an Amendment or Name Change, Amendment, or Assignment (FLPMA) (43 CFR 2807.11(b) and (d)) and 2807.21)

New section 2807.11(b) requires a holder of any type of right-of-way grant to contact the BLM, seek an amendment to the grant under section 2807.20 (a regulation that is not amended in this final rule), and obtain the BLM's approval before beginning any activity that is a "substantial deviation" from what is authorized.

New section 2807.11(d) requires contact with the BLM, a request for an amendment to the pertinent right-of-way grant or lease, and prior approval whenever site-specific circumstances or conditions result in the need for changes to an approved right-of-way grant or lease, plan of development, site plan, mitigation measures, or construction, operation, or termination procedures that are not "substantial deviations."

New section 2807.21 authorizes assignment of a grant or leased with the BLM's approval. It also authorizes the BLM to require a grant or lease holder to file new or revised information in circumstances that include, but are not limited to:

- Transactions within the same corporate family;
- Changes in the holder's name only; and
- Changes in the holder's articles of incorporation.

A request for an amendment of a right-of-way, using SF-299, is required in cases of a substantial deviation (for example, a change in the boundaries of the right-of-way, major improvements not previously approved by the BLM, or a change in the use of the right-of-way). Other changes, such as changes in project materials, or changes in mitigation measures within the existing, approved right-of-way area, must be submitted to the BLM for review and approval. In order to assign a grant, the proposed assignee must file an assignment application and follow the same procedures and standards as for a new grant or lease, as well as pay application and processing fees. In order to request a name change, the holder will be required to file an application and follow the same procedures and standards as for a new grant or lease and pay processing fees, but no application fee is required. The following documents are also required in the case of a name change:

- A copy of the court order or legal document effectuating the name change of an individual; or
- If the name change is for a corporation, a copy of the corporate resolution proposing and approving the name change, a copy of a document showing acceptance of the name change by the State in which incorporated, and a copy of the appropriate resolution, order, or other document showing the name change.

In all these cases, the BLM will use the information to monitor and inspect rights-of-way, and to maintain current data.

Nomination of a Parcel of Land Inside a Designated Leasing Area (43 CFR 2809.10 and 2809.11)

Sections 2809.10 and 2809.11 authorize the BLM to offer land competitively inside a designated leasing area for solar or wind energy development on its own initiative. These regulations also authorize the BLM to solicit nominations for such development. In order to nominate a parcel under this process, the nominator must be qualified to hold a right-of-way under 43 CFR 2803.10. After publication of a notice by the BLM, anyone meeting the qualifications may submit a nomination for a specific parcel of land to be developed for solar or wind energy. There is a fee of \$5 per acre for

each nomination. The following information is required:

- The nominator's name and personal or business address;
- The legal land description; and
- A map of the nominated lands.

The BLM will use the information to communicate with the nominator and to determine whether or not to proceed with a competitive offer.

Expression of Interest in Parcel of Land Inside a Designated Leasing Area (43 CFR 2809.11(c))

Section 2809.11(c) authorizes the BLM to consider informal expressions of interest suggesting specific lands inside a designated leasing area to be included in a competitive offer. The expression of interest must include a description of the suggested lands and a rationale for their inclusion in a competitive offer. The information will assist the BLM in determining whether or not to proceed with a competitive offer.

Plan of Development for a Solar or Wind Energy Development Lease Inside a Designated Leasing Area (43 CFR 2809.18)

Section 2809.18(c) requires the holder of a solar or wind energy development lease for land inside a designated leasing area to submit a plan of development, using SF-299, within 2 years of the lease issuance date. The plan must address all pre-development and development activities. This collection activity is necessary to ensure diligent development.

This new provision will be a new use of Item #7 of SF-299, which calls for the following information:

Project description (describe in detail): (a) Type of system or facility (e.g., canal, pipeline, road); (b) related structures and facilities; (c) physical specifications (length, width, grading, etc.); (d) term of years needed; (e) time of year of use or operation; (f) volume or amount of product to be transported; (g) duration and timing of construction; and (h) temporary work areas needed for construction.

This collection has been justified and authorized under control number 0596-0082. In addition, section 2809.18(c) provides that the minimum requirements for either a "Wind Energy Plan of Development" or "Solar Energy Plan of Development" can be found at a link to a template at www.blm.gov. To some extent, that template duplicates the information required by Item #7 of SF-299. The following requirements do not duplicate the elements listed in SF-299:

- *Financial Operations and maintenance.* This information will

assist the BLM in verifying the right-of-way holder's compliance with terms and conditions regarding all aspects of operations and maintenance, including road maintenance and workplace safety;

- *Environmental considerations.* This information will assist the BLM in monitoring compliance with terms and conditions regarding mitigation measures and site-specific issues such as protection of sensitive species and avoidance of conflicts with recreation uses of nearby lands;

- *Maps and drawings.* This information will assist the BLM in monitoring compliance with all terms and conditions; and

- *Supplementary information.* This information, which will be required after submission of the holder's initial POD, will assist the BLM in reviewing possible alternative designs and mitigation measures for a final POD.

Section 2809.18(d) requires the holder of a solar or wind energy development lease for land inside a designated leasing area to pay reasonable costs for the BLM or other Federal agencies to review and approve the plan of development and to monitor the lease. To expedite review and monitoring, the holder may notify BLM in writing of an intention to pay the full actual costs incurred by the BLM.

Request for an Amendment, Assignment, or Name Change (MLA) (43 CFR 2886.12(b) and (d) and 2887.11)

Sections 2886.12 and 2887.11 pertain to holders of rights-of-way and temporary use permits authorized under the Mineral Leasing Act (MLA). A temporary use permit authorizes a holder of a MLA right-of-way to use land temporarily in order to construct, operate, maintain, or terminate a pipeline, or for purposes of environmental protection or public safety. See 43 CFR 2881.12. The regulations require these holders to contact the BLM:

- Before engaging in any activity that is a "substantial deviation" from what is authorized;
- Whenever site-specific circumstances or conditions arise that result in the need for changes that are not substantial deviations;
- When the holder submits a certification of construction;
- Before assigning, in whole or in part, any right or interest in a grant or lease;
- Before any change in control transaction involving the grant- or lease-holder; and
- Before changing the name of a holder (i.e., when the name change is

not the result of an underlying change in control of the right-of-way).

A request for an amendment of a right-of-way or temporary use permit is required in cases of a substantial deviation (e.g., a change in the boundaries of the right-of-way, major improvements not previously approved by the BLM, or a change in the use of the right-of-way). Other changes, such as changes in project materials, or changes in mitigation measures within the existing, approved right-of-way area, are required to be submitted to the BLM for review and approval. In order to assign a grant, the proposed assignee must file an assignment application and follow the same procedures and standards as for a new grant or lease, as well as pay processing fees. In order to request a name change, the holder will be required to file an application and follow the same procedures and standards as for a new grant or lease and pay processing fees, but no application fee is required. The following documents are also required in the case of a name change:

- A copy of the court order or legal document effectuating the name change of an individual; or
- If the name change is for a corporation, a copy of the corporate resolution proposing and approving the name change, a copy of a document showing acceptance of the name change by the State in which incorporated, and a copy of the appropriate resolution, order, or other document showing the name change.

The use of SF-299 is required. In all these cases, the BLM will use the information for monitoring and inspection purposes, and to maintain current data on rights-of-way.

Certification of Construction (43 CFR 2886.12(f))

A certification of construction is a document a holder of an MLA right-of-way must submit, using SF-299, to the BLM after finishing construction of a facility, but before operations begin. The BLM will use the information to verify that the holder has constructed and tested the facility to ensure that it complies with the terms of the right-of-way and is in accordance with applicable Federal and State laws and regulations.

Estimated Hour Burdens

The estimated hour burdens of the proposed supplemental collection requirements are shown in the following table.

INFORMATION COLLECTION REQUIREMENTS: ESTIMATED ANNUAL HOUR BURDENS

Type of response	Number of responses	Hours per response	Total hours (column B × column C)
A.	B.	C.	D.
Application for a Solar or Wind Energy Development Project Outside Any Designated Leasing Area			
43 CFR 2804.12 and 2804.30(g)			
Form SF-299	10	8	80
Application for an Electric Transmission Line with a Capacity of 100 kV or More			
43 CFR 2804.12			
Form SF-299	10	8	80
General Description of a Proposed Project and Schedule for Submittal of a Plan of Development			
43 CFR 2804.12(b)(1) and (2)			
Form SF-299	20	2	40
Preliminary Application Review Meetings for a Large-Scale Right-of-Way			
43 CFR 2804.12(b)(4)	20	2	40
Application for an Energy Site-Specific Testing Grant			
43 CFR 2804.30, 2805.11(b)(2)(i), and 2809.19(c)			
Form SF-299	20	8	160
Application for an Energy Project-Area Testing Grant			
43 CFR 2804.30, 2805.11(b)(2)(ii), and 2809.19(c)			
Form SF-299	20	8	160
Application for a Short-Term Grant			
43 CFR 2805.11(b)(2)(iii)			
Form SF-299	1	8	8
Showing of good cause			
43 CFR 2805.12(c)(6)	1	2	2
Reclamation Cost Estimate for Lands Outside Any Designated Leasing Area			
43 CFR 2805.20(a)(3) and (a)(5)	1	10	10
Request to Assign a Solar or Wind Energy Development Right-of-Way			
43 CFR 2807.21			
Form SF-299	11	8	88
Application for Renewal of an Energy Project-Area Testing Grant or Short-Term Grant			
43 CFR 2805.11(b)(2), 2805.14(h), and 2807.22			
Form SF-299	6	6	36
Environmental, Technical, and Financial Records, Reports, and Other Information			
43 CFR 2805.12(a)(15)			
Form SF-299	20	4	80
Application for Renewal of a Solar or Wind Energy Development Grant or Lease			
43 CFR 2805.14(g) and 2807.22			
Form SF-299	1	12	12
Request for an Amendment or Name Change (FLPMA)			
43 CFR 2807.11(b) and (d) and 2807.21			
Form SF-299	30	16	480
Nomination of a Parcel of Land Inside a Designated Leasing Area			
43 CFR 2809.10 and 2809.11	1	4	4
Expression of Interest in a Parcel of Land Inside a Designated Leasing Area			
43 CFR 2809.11(c)	1	4	4
Plan of Development for a Solar or Wind Energy Development Lease Inside a Designated Leasing Area			
43 CFR 2809.18(c)			
Form SF-299	2	8	16
Request for an Amendment, Assignment, or Name Change (MLA)			
43 CFR 2886.12(b) and (d) and 2887.11			
Form SF-299	2,862	16	45,792
Certification of Construction			
43 CFR 2886.12(f)			
Form SF-299	5	4	20
Totals	3,042	130	47,112

Estimated Non-Hour Burdens

The non-hour burdens of this final rule consist of fees authorized by Sections 304 and 504(g) of FLPMA (43 U.S.C. 1734 and 1764(g)). Section 1734 authorizes the Secretary of the Interior to establish reasonable filing and service

fees and reasonable charges with respect to applications and other documents relating to the public lands. Section 504(g) authorizes the Secretary to promulgate regulations that require, as a condition of a right-of-way, that an applicant for or holder of a right-of-way

reimburse the United States for all reasonable administrative and other costs incurred with respect to right-of-way applications and with respect to inspection and monitoring of construction, operation, and termination

of a facility pursuant to such right-of-way.

The fees (*i.e.*, non-hour burdens) are itemized in the following table.

INFORMATION COLLECTION REQUIREMENTS—ESTIMATED ANNUAL NON-HOUR BURDENS

Type of response	Regulatory authority for fee	Number of responses	Amount of fee per response	Total amount of fees (column C × column D)

List of Subjects

43 CFR Part 2800

Communications, Electric power, Highways and roads, Penalties, Public lands and rights-of-way, Reporting and recordkeeping requirements.

year 2016, at IM 2016–025 (Dec. 1, 2015) ("Rights-of-Way Management and Land Use Authorization Management").

43 CFR Part 2880

Administrative practice and procedures, Common carriers, Pipelines, Federal lands and rights-of-way, Reporting and recordkeeping requirements.

■ Accordingly, for the reasons stated in the preamble, the BLM amends 43 CFR parts 2800 and 2880 as set forth below:

PART 2800—RIGHTS-OF-WAY UNDER THE FEDERAL LAND POLICY AND MANAGEMENT ACT

■ 1. The authority citation for part 2800 continues to read as follows:

Authority: 43 U.S.C. 1733, 1740, 1763, and 1764.

■ 2. Revise the heading of part 2800 to read as set forth above.

Subpart 2801—General Information

■ 3. Amend § 2801.5(b) by:

- a. Adding, in alphabetical order, definitions of “Acreage rent,” “Application filing fee,” “Assignment,” “Designated leasing area,” “Megawatt (MW) capacity fee,” “Megawatt rate,” “Performance and reclamation bond,” “Reclamation cost estimate (RCE),” “Screening criteria for solar and wind energy development,” and “Short-term right-of-way grant;” and
- b. Revising the definitions of “Designated right-of-way corridor,” “Management overhead costs,” and “Right-of-way.”

The additions and revisions read as follows:

§ 2801.5 What acronyms and terms are used in the regulations in this part?

(b) * * *

Acreage rent means rent assessed for solar and wind energy development grants and leases that is determined by the number of acres authorized for the grant or lease.

* * * * *

Application filing fee means a filing fee specific to solar and wind energy applications. This fee is an initial payment for the reasonable costs for processing, inspecting, and monitoring a right-of-way.

Assignment means the transfer, in whole or in part, of any right or interest in a right-of-way grant or lease from the holder (assignor) to a subsequent party (assignee) with the BLM’s written approval. A change in ownership of the grant or lease, or other related change-in-control transaction involving the holder, including a merger or acquisition, also constitutes an assignment for purposes of these regulations requiring the BLM’s written approval, unless applicable statutory authority provides otherwise.

* * * * *

Designated leasing area means a parcel of land with specific boundaries identified by the BLM land use planning process as being a preferred location for solar or wind energy development that may be offered competitively.

Designated right-of-way corridor means a parcel of land with specific boundaries identified by law, Secretarial order, the land use planning process, or other management decision, as being a preferred location for existing and future linear rights-of-way and facilities. The corridor may be suitable to accommodate more than one right-of-way use or facility, provided that they are compatible with one another and the corridor designation.

* * * * *

Management overhead costs means Federal expenditures associated with a

particular Federal agency’s directorate. The BLM’s directorate includes all State Directors and the entire Washington Office staff, except where a State Director or Washington Office staff member is required to perform work on a specific right-of-way case.

Megawatt (MW) capacity fee means the fee paid in addition to the acreage rent for solar and wind energy development grants and leases. The MW capacity fee is the approved MW capacity of the solar or wind energy grant or lease multiplied by the appropriate MW rate. A grant or lease may provide for stages of development, and the grantee or lessee will be charged a fee for each stage by multiplying the MW rate by the approved MW capacity for the stage of the project.

Megawatt rate means the price of each MW of capacity for various solar and wind energy technologies as determined by the MW rate formula. Current MW rates are found on the BLM’s MW rate schedule, which can be obtained at any BLM office or at <http://www.blm.gov>. The MW rate is calculated by multiplying the total hours per year by the net capacity factor, by the MW hour (MWh) price, and by the rate of return, where:

(1) *Net capacity factor* means the average operational time divided by the average potential operational time of a solar or wind energy development, multiplied by the current technology efficiency rates. The BLM establishes net capacity factors for different technology types but may determine another net capacity factor to be more appropriate, on a case-by-case or regional basis, to reflect changes in technology, such as a solar or wind project that employs energy storage technologies, or if a grant or lease holder or applicant is able to demonstrate that another net capacity factor is appropriate for a particular project or region. The net capacity factor for each technology type is:

(i) Photovoltaic (PV)—20 percent;
(ii) Concentrated photovoltaic (CPV) and concentrated solar power (CSP)—25 percent;

(iii) CSP with storage capacity of 3 hours or more—30 percent; and
(iv) Wind energy—35 percent;

(2) *Megawatt hour (MWh) price* means the 5 calendar-year average of the annual weighted average wholesale prices per MWh for the major trading hubs serving the 11 western States of the continental United States (U.S.);

(3) *Rate of return* means the relationship of income (to the property owner) to revenue generated from authorized solar and wind energy development facilities based on the 10-

year average of the 20-year U.S. Treasury bond yield rounded to the nearest one-tenth percent; and

(4) *Hours per year* means the total number of hours in a year, which, for purposes of this part, means 8,760 hours.

* * * * *

Performance and reclamation bond means the document provided by the holder of a right-of-way grant or lease that provides the appropriate financial guarantees, including cash, to cover potential liabilities or specific requirements identified by the BLM for the construction, operation, decommissioning, and reclamation of an authorized right-of-way on public lands.

(1) *Acceptable bond instruments.* The BLM will accept cash, cashier’s or certified check, certificate or book entry deposits, negotiable U.S. Treasury securities, and surety bonds from the approved list of sureties (U.S. Treasury Circular 570) payable to the BLM. Irrevocable letters of credit payable to the BLM and issued by banks or financial institutions organized or authorized to transact business in the United States are also acceptable bond instruments. An insurance policy can also qualify as an acceptable bond instrument, provided that the BLM is a named beneficiary of the policy, and the BLM determines that the insurance policy will guarantee performance of financial obligations and was issued by an insurance carrier that has the authority to issue policies in the applicable jurisdiction and whose insurance operations are organized or authorized to transact business in the United States.

(2) *Unacceptable bond instruments.* The BLM will not accept a corporate guarantee as an acceptable form of bond instrument.

* * * * *

Reclamation cost estimate (RCE) means the estimate of costs to restore the land to a condition that will support pre-disturbance land uses. This includes the cost to remove all improvements made under the right-of-way authorization, return the land to approximate original contour, and establish a sustainable vegetative community, as required by the BLM. The RCE will be used to establish the appropriate amount for financial guarantees of land uses on the public lands, including those uses authorized by right-of-way grants or leases issued under this part.

* * * * *

Right-of-way means the public lands that the BLM authorizes a holder to use

or occupy under a particular grant or lease.

Screening criteria for solar and wind energy development refers to the policies and procedures that the BLM uses to prioritize how it processes solar and wind energy development right-of-way applications to facilitate the environmentally responsible development of such facilities through the consideration of resource conflicts, land use plans, and applicable statutory and regulatory requirements.

Applications for projects with lesser resource conflicts are anticipated to be less costly and time-consuming for the BLM to process and will be prioritized over those with greater resource conflicts.

Short-term right-of-way grant means any grant issued for a term of 3 years or less for such uses as storage sites, construction areas, and site testing and monitoring activities, including site characterization studies and environmental monitoring.

* * * * *

■ 4. In § 2801.6, revise paragraph (a)(2) to read as follows:

§ 2801.6 Scope.

(a) * * *

(2) Grants to Federal departments or agencies for all systems and facilities identified in § 2801.9(a), including grants for transporting by pipeline and related facilities, commodities such as oil, natural gas, synthetic liquid or gaseous fuels, and any refined products produced from them; and

* * * * *

■ 5. Amend § 2801.9 by revising paragraphs (a)(4) and (7) and adding paragraph (d) to read as follows:

§ 2801.9 When do I need a grant?

(a) * * *

(4) Systems for generating, transmitting, and distributing electricity, including solar and wind energy development facilities and associated short-term actions, such as site and geotechnical testing for solar and wind energy projects;

* * * * *

(7) Such other necessary transportation or other systems or facilities, including any temporary or short-term surface disturbing activities associated with approved systems or facilities, which are in the public interest and which require rights-of-way.

* * * * *

(d) All systems, facilities, and related activities for solar and wind energy projects are specifically authorized as follows:

(1) Energy site-specific testing activities, including those with individual meteorological towers and instrumentation facilities, are authorized with a short-term right-of-way grant issued for 3 years or less;

(2) Energy project-area testing activities are authorized with a short-term right-of-way grant for an initial term of 3 years or less with the option to renew for one additional 3-year period under § 2805.14(h) when the renewal application is accompanied by an energy development application;

(3) Solar and wind energy development facilities located outside designated leasing areas, and those facilities located inside designated leasing areas under § 2809.17(d)(2), are authorized with a right-of-way grant issued for up to 30 years (plus the initial partial year of issuance). An application for renewal of the grant may be submitted under § 2805.14(g);

(4) Solar and wind energy development facilities located inside designated leasing areas are authorized with a solar or wind energy development lease when issued competitively under subpart 2809. The term is fixed for 30 years (plus the initial partial year of issuance). An application for renewal of the lease may be submitted under § 2805.14(g); and

(5) Other associated actions not specifically included in § 2801.9(d)(1) through (4), such as geotechnical testing and other temporary land disturbing activities, are authorized with a short-term right-of-way grant issued for 3 years or less.

Subpart 2802—Lands Available for FLPMA Grants

■ 6. In § 2802.11, revise the section heading and paragraphs (a), (b) introductory text, (b)(3), (4), (6), and (7), and (d) to read as follows:

§ 2802.11 How does the BLM designate right-of-way corridors and designated leasing areas?

(a) The BLM may determine the locations and boundaries of right-of-way corridors or designated leasing areas during the land use planning process described in part 1600 of this chapter. During this process, the BLM coordinates with other Federal agencies, State, local, and tribal governments, and the public to identify resource-related issues, concerns, and needs. The process results in a resource management plan or plan amendment, which addresses the extent to which you may use public lands and resources for specific purposes.

(b) When determining which lands may be suitable for right-of-way

corridors or designated leasing areas, the factors the BLM considers include, but are not limited to, the following:

* * * * *

(3) Physical effects and constraints on corridor placement or leasing areas due to geology, hydrology, meteorology, soil, or land forms;

(4) Costs of construction, operation, and maintenance and costs of modifying or relocating existing facilities in a proposed right-of-way corridor or designated leasing area (*i.e.*, the economic efficiency of placing a right-of-way within a proposed corridor or providing a lease inside a designated leasing area);

* * * * *

(6) Potential health and safety hazards imposed on the public by facilities or activities located within the proposed right-of-way corridor or designated leasing area;

(7) Social and economic impacts of the right-of-way corridor or designated leasing area on public land users, adjacent landowners, and other groups or individuals;

* * * * *

(d) The resource management plan or plan amendment may also identify areas where the BLM will not allow right-of-way corridors or designated leasing areas for environmental, safety, or other reasons.

Subpart 2804—Applying for FLPMA Grants

■ 7. Amend § 2804.10 by revising paragraph (a)(2) to read as follows:

§ 2804.10 What should I do before I file my application?

(a) * * *

(2) Determine whether the lands are located inside a designated or existing right-of-way corridor or a designated leasing area;

* * * * *

■ 8. Revise § 2804.12 to read as follows:

§ 2804.12 What must I do when submitting my application?

(a) File your application on Standard Form 299, available from any BLM office or at <http://www.blm.gov>, and fill in the required information as completely as possible. Your completed application must include the following:

(1) A description of the project and the scope of the facilities;

(2) The estimated schedule for constructing, operating, maintaining, and terminating the project;

(3) The estimated life of the project and the proposed construction and reclamation techniques;

(4) A map of the project, showing its proposed location and existing facilities adjacent to the proposal;

(5) A statement of your financial and technical capability to construct, operate, maintain, and terminate the project;

(6) Any plans, contracts, agreements, or other information concerning your use of the right-of-way and its effect on competition;

(7) A statement certifying that you are of legal age and authorized to do business in the State(s) where the right-of-way would be located and that you have submitted correct information to the best of your knowledge; and

(8) A schedule for the submission of a plan of development (POD) conforming to the POD template at <http://www.blm.gov>, should the BLM require you to submit a POD under § 2804.25(c).

(b) When submitting an application for a solar or wind energy development project or for a transmission line project with a capacity of 100 kV or more, in addition to the information required in paragraph (a) of this section, you must:

(1) Include a general description of the proposed project and a schedule for the submission of a POD conforming to the POD template at <http://www.blm.gov>;

(2) Address all known potential resource conflicts with sensitive resources and values, including special designations or protections, and include applicant-proposed measures to avoid, minimize, and compensate for such resource conflicts, if any;

(3) Initiate early discussions with any grazing permittees that may be affected by the proposed project in accordance with 43 CFR 4110.4–2(b); and

(4) Within 6 months from the time the BLM receives the cost recovery fee under § 2804.14, schedule and hold two preliminary application review meetings as follows:

(i) The first meeting will be with the BLM to discuss the general project proposal, the status of BLM land use planning for the lands involved, potential siting issues or concerns, potential environmental issues or concerns, potential alternative site locations and the right-of-way application process;

(ii) The second meeting will be with appropriate Federal and State agencies and tribal and local governments to facilitate coordination of potential environmental and siting issues and concerns; and

(iii) You and the BLM may agree to hold additional preliminary application review meetings.

(c) When submitting an application for a solar or wind energy project under this subpart rather than subpart 2809, you must:

(1) Propose a project sited on lands outside a designated leasing area, except as provided for by § 2809.19; and

(2) Pay an application filing fee of \$15 per acre for solar or wind energy development applications and \$2 per acre for energy project-area testing applications. The BLM will refund your fee, except for the reasonable costs incurred on your behalf, if you are the unsuccessful bidder in a competitive offer held under § 2804.30 or subpart 2809. The BLM will adjust the application filing fee at least once every 10 years using the change in the Implicit Price Deflator, Gross Domestic Product (IPD–GDP) for the preceding 10-year period and round it to the nearest one-half dollar. This 10-year average will be adjusted at the same time as the Per Acre Rent Schedule for linear rights-of-way under § 2806.22.

(d) If you are unable to meet a requirement of the application outlined in this section, you may submit a request for an alternative requirement under § 2804.40.

(e) If you are a business entity, you must also submit the following information:

(1) Copies of the formal documents creating the entity, such as articles of incorporation, and including the corporate bylaws;

(2) Evidence that the party signing the application has the authority to bind the applicant;

(3) The name and address of each participant in the business;

(4) The name and address of each shareholder owning 3 percent or more of the shares and the number and percentage of any class of voting shares of the entity which such shareholder is authorized to vote;

(5) The name and address of each affiliate of the business;

(6) The number of shares and the percentage of any class of voting stock owned by the business, directly or indirectly, in any affiliate controlled by the business;

(7) The number of shares and the percentage of any class of voting stock owned by an affiliate, directly or indirectly, in the business controlled by the affiliate; and

(8) If you have already provided the information in paragraphs (b)(1) through (7) of this section to the BLM and the information remains accurate, you need only reference the BLM serial number under which you previously filed it.

(f) The BLM may require you to submit additional information at any

time while processing your application. See § 2884.11(c) of this chapter for the type of information we may require.

(g) If you are a Federal oil and gas lessee or operator and you need a right-of-way for access to your production facilities or oil and gas lease, you may include your right-of-way requirements with your Application for Permit to Drill or Sundry Notice required under parts 3160 through 3190 of this chapter.

(h) If you are filing with another Federal agency for a license, certificate of public convenience and necessity, or other authorization for a project involving a right-of-way on public lands, simultaneously file an application with the BLM for a grant. Include a copy of the materials, or reference all the information, you filed with the other Federal agency.

(i) *Inter-agency coordination.* You may request, in writing, an exemption from the requirements of this section if you can demonstrate to the BLM that you have satisfied similar requirements by participating in an inter-agency coordination process with another Federal, State, local, or Tribal authority. No exemption is approved until you receive BLM approval in writing.

■ 9. In § 2804.14, revise paragraphs (a), (b), and (c) to read as follows:

§ 2804.14 What is the processing fee for a grant application?

(a) Unless you are exempt under § 2804.16, you must pay a fee to the BLM for the reasonable costs of processing your application. Subject to applicable laws and regulations, if processing your application involves Federal agencies other than the BLM, your fee may also include the reasonable costs estimated to be incurred by those Federal agencies. Instead of paying the BLM a fee for the reasonable costs incurred by other Federal agencies in processing your application, you may pay other Federal agencies directly for such costs. Reasonable costs are those costs as defined in Section 304(b) of FLPMA (43 U.S.C. 1734(b)). The fees for Processing Categories 1 through 4 (see paragraph (b) of this section) are one-time fees and are not refundable. The fees are categorized based on an estimate of the amount of time that the Federal Government will expend to process your application and issue a decision granting or denying the application.

(b) There is no processing fee if the Federal Government's work is estimated to take 1 hour or less. Processing fees are based on categories. The BLM will update the processing fees for Categories 1 through 4 in the schedule each calendar year, based on the previous

year's change in the IPD–GDP, as measured second quarter to second quarter, rounded to the nearest dollar.

The BLM will update Category 5 processing fees as specified in the Master Agreement. These categories and

the estimated range of Federal work hours for each category are:

PROCESSING CATEGORIES

Processing category	Federal work hours involved
(1) Applications for new grants, assignments, renewals, and amendments to existing grants	Estimated Federal work hours are >1 ≤ 8
(2) Applications for new grants, assignments, renewals, and amendments to existing grants	Estimated Federal work hours are >8 ≤ 24
(3) Applications for new grants, assignments, renewals, and amendments to existing grants	Estimated Federal work hours are >24 ≤ 36
(4) Applications for new grants, assignments, renewals, and amendments to existing grants	Estimated Federal work hours are >36 ≤ 50
(5) Master agreements	Varies
(6) Applications for new grants, assignments, renewals, and amendments to existing grants	Estimated Federal work hours are >50

(c) You may obtain a copy of the current year's processing fee schedule from any BLM State, district, or field office or by writing: U.S. Department of the Interior, Bureau of Land Management, 20 M Street SE., Room 2134LM, Washington, DC 20003. The BLM also posts the current processing fee schedule at <http://www.blm.gov>.

■ 10. Amend § 2804.18 by redesignating paragraphs (a)(6) through (8) as paragraphs (a)(7) through (9) and adding new paragraph (a)(6) to read as follows:

§ 2804.18 What provisions do Master Agreements contain and what are their limitations?

(a) * * *

(6) Describes existing agreements between the BLM and other Federal agencies for cost reimbursement;

■ 11. Amend § 2804.19 by revising paragraph (a) and adding paragraph (e) to read as follows:

§ 2804.19 How will BLM process my Processing Category 6 application?

(a) For Processing Category 6 applications, you and the BLM must enter into a written agreement that describes how the BLM will process your application. The final agreement consists of a work plan, a financial plan, and a description of any existing agreements you have with other Federal agencies for cost reimbursement associated with your application.

(e) We may collect reimbursement for reasonable costs to the United States for processing applications and other documents under this part relating to the public lands.

■ 12. Amend § 2804.20 by revising paragraphs (a)(1) and (5), redesignating paragraph (a)(6) as paragraph (a)(7), and

adding new paragraph (a)(6) to read as follows:

§ 2804.20 How does BLM determine reasonable costs for Processing Category 6 or Monitoring Category 6 applications?

* * * * *

(a) * * *

(1) Actual costs to the Federal Government (exclusive of management overhead costs) of processing your application and of monitoring construction, operation, maintenance, and termination of a facility authorized by the right-of-way grant;

* * * * *

(5) Any tangible improvements, such as roads, trails, and recreation facilities, which provide significant public service and are expected in connection with constructing and operating the facility;

(6) Existing agreements between the BLM and other Federal agencies for cost reimbursement associated with such application; and

* * * * *

■ 13. Amend § 2804.23 by revising the section heading and paragraphs (a)(1) and (c) and adding paragraphs (d) and (e) to read as follows:

§ 2804.23 When will the BLM use a competitive process?

(a) * * *

(1) *Processing Category 1 through 4.* You must reimburse the Federal Government for processing costs as if the other application or applications had not been filed.

* * * * *

(c) If we determine that competition exists, we will describe the procedures for a competitive bid through a bid announcement in the **Federal Register**. We may also provide notice by other methods, such as a newspaper of general circulation in the area affected by the potential right-of-way, or the Internet. We may offer lands through a

competitive process on our own initiative. The BLM will not competitively offer lands for which the BLM has accepted an application and received a plan of development and cost recovery agreement.

(d) *Competitive process for solar and wind energy development outside designated leasing areas.* Lands outside designated leasing areas may be made available for solar and wind energy applications through a competitive application process established by the BLM under § 2804.30.

(e) *Competitive process for solar and wind energy development inside designated leasing areas.* Lands inside designated leasing areas may be offered competitively under subpart 2809.

■ 14. Amend § 2804.24 by revising paragraph (a), redesignating paragraph (b) as paragraph (c), and adding new paragraph (b) to read as follows:

§ 2804.24 Do I always have to submit an application for a grant using Standard Form 299?

* * * * *

(a) The BLM offers lands competitively under § 2804.23(c) and you have already submitted an application for the facility or system;

(b) The BLM offers lands for competitive lease under subpart 2809 of this part; or

* * * * *

■ 15. Revise § 2804.25 to read as follows:

§ 2804.25 How will BLM process my application?

(a) The BLM will notify you in writing when it receives your application. This notification will also:

(1) Identify your processing fee described at § 2804.14; and

(2) Inform you of any other grant applications which involve all or part of the lands for which you applied.

(b) The BLM will not process your application if you have any:

(1) Outstanding unpaid debts owed to the Federal Government. Outstanding debts are those currently unpaid debts owed to the Federal Government after all administrative collection actions have occurred, including any appeal proceedings under applicable Federal regulations and the Administrative Procedure Act; or

(2) Trespass action pending against you for any activity on BLM-administered lands (see § 2808.12), except those to resolve the trespass with a right-of-way as authorized in this part, or a lease or permit under the

regulations found at 43 CFR part 2920, but only after outstanding unpaid debts are paid.

(c) The BLM may require you to submit additional information necessary to process the application. This information may include a detailed construction, operation, rehabilitation, and environmental protection plan (*i.e.*, a POD), and any needed cultural resource surveys or inventories for threatened or endangered species. If the BLM needs more information, the BLM will identify this information in a written deficiency notice asking you to provide the additional information within a specified period of time.

(1) For solar or wind energy development projects, and transmission lines with a capacity of 100 kV or more, you must commence any required resource surveys or inventories within one year of the request date, unless otherwise specified by the BLM; or

(2) If you are unable to meet any of the requirements of this section, you must show good cause and submit a request for an alternative under § 2804.40.

(d) *Customer service standard.* The BLM will process your completed application as follows:

Processing category	Processing time	Conditions
1–4	60 calendar days	If processing your application will take longer than 60 calendar days, the BLM will notify you in writing of this fact prior to the 30th calendar day and inform you of when you can expect a final decision on your application.
5	As specified in the Master Agreement	The BLM will process applications as specified in the Agreement.
6	Over 60 calendar days	The BLM will notify you in writing within the initial 60-day processing period of the estimated processing time.

(e) In processing an application, the BLM will:

(1) Hold public meetings if sufficient public interest exists to warrant their time and expense. The BLM will publish a notice in the **Federal Register** and may use other notification methods, such as a newspaper of general circulation in the vicinity of the lands involved in the area affected by the potential right-of-way or the Internet, to announce in advance any public hearings or meetings;

(2) If your application is for solar or wind energy development:

(i) Hold a public meeting in the area affected by the potential right-of-way;

(ii) Apply screening criteria to prioritize processing applications with lesser resource conflicts over applications with greater resource conflicts and categorize screened applications according to the criteria listed in § 2804.35; and

(iii) Evaluate the application based on the information provided by the applicant and input from other parties, such as Federal, State, and local government agencies, and tribes, as well as comments received in preliminary application review meetings held under § 2804.12(b)(4) and the public meeting held under paragraph (e)(2)(i) of this section. The BLM will also evaluate your application based on whether you propose to site the development appropriately (*e.g.* outside of a designated leasing area or exclusion area) and whether you address known resource values discussed in the

preliminary application review meetings. Based on these evaluations, the BLM will either deny your application or continue processing it.

(3) Determine whether a POD schedule submitted with your application meets the development schedule or other requirements described by the BLM, such as in § 2804.12(b);

(4) Complete appropriate National Environmental Policy Act (NEPA) compliance for the application, as required by 43 CFR part 46 and 40 CFR parts 1500 through 1508;

(5) Determine whether your proposed use complies with applicable Federal and State laws;

(6) If your application is for a road, determine whether it is in the public interest to require you to grant the United States an equivalent authorization across lands that you own;

(7) Consult, as necessary, on a government-to-government basis with tribes and other governmental entities; and

(8) Take any other action necessary to fully evaluate and decide whether to approve or deny your application.

(f)(1) The BLM may segregate, if it finds it necessary for the orderly administration of the public lands, lands included in a right-of-way application under this subpart for the generation of electrical energy from wind or solar sources. In addition, the BLM may also segregate lands that it identifies for potential rights-of-way for electricity generation from wind or solar sources when initiating a competitive

process for solar or wind development on particular lands. Upon segregation, such lands would not be subject to appropriation under the public land laws, including location under the Mining Law of 1872 (30 U.S.C. 22 *et seq.*), but would remain open under the Mineral Leasing Act of 1920 (30 U.S.C. 181 *et seq.*) or the Materials Act of 1947 (30 U.S.C. 601 *et seq.*). The BLM would effect a segregation by publishing a **Federal Register** notice that includes a description of the lands being segregated. The BLM may effect segregation in this way for both pending and new right-of-way applications.

(2) The effective date of segregation is the date of publication of the notice in the **Federal Register**. Consistent with 43 CFR 2091–3.2, the segregation terminates and the lands automatically open on the date that is the earliest of the following:

(i) When the BLM issues a decision granting, granting with modifications, or denying the application for a right-of-way;

(ii) Automatically at the end of the segregation period stated in the **Federal Register** notice initiating the segregation; or

(iii) Upon publication of a **Federal Register** notice terminating the segregation and opening the lands.

(3) The segregation period may not exceed 2 years from the date of publication in the **Federal Register** of the notice initiating the segregation, unless the State Director determines and documents in writing, prior to the

expiration of the segregation period, that an extension is necessary for the orderly administration of the public lands. If the State Director determines an extension is necessary, the BLM will extend the segregation for up to 2 years by publishing a notice in the **Federal Register**, prior to the expiration of the initial segregation period. Segregations under this part may only be extended once and the total segregation period may not exceed 4 years.

■ 16. Amend § 2804.26 by revising paragraph (a)(5), redesignating paragraph (a)(6) as paragraph (a)(8), revising newly redesignated paragraph (a)(8), and adding new paragraphs (a)(6), (a)(7), and (c) to read as follows:

§ 2804.26 Under what circumstances may BLM deny my application?

(a) * * *

(5) You do not have or cannot demonstrate the technical or financial capability to construct the project or operate facilities within the right-of-way.

(i) Applicants must have or be able to demonstrate technical and financial capability to construct, operate, maintain, and terminate a project throughout the application process and authorization period. You can demonstrate your financial and technical capability to construct, operate, maintain, and terminate a project by:

(A) Documenting any previous successful experience in construction, operation, and maintenance of similar facilities on either public or non-public lands;

(B) Providing information on the availability of sufficient capitalization to carry out development, including the preliminary study stage of the project and the environmental review and clearance process; or

(C) Providing written copies of conditional commitments of Federal and other loan guarantees; confirmed power purchase agreements; engineering, procurement, and construction contracts; and supply contracts with credible third-party vendors for the manufacture or supply of key components for the project facilities.

(ii) Failure to demonstrate and sustain technical and financial capability is grounds for denying an application or terminating an authorization;

(6) The PODs required by §§ 2804.25(e)(3) and 2804.12(a)(8) and (c)(1) do not meet the development schedule or other requirements in the POD template and the applicant is unable to demonstrate why the POD should be approved;

(7) Failure to commence necessary surveys and studies, or plans for permit processing as required by § 2804.25(c); or

(8) The BLM's evaluation of your solar or wind application made under § 2804.25(e)(2)(iii) provides a basis for a denial.

* * * * *

(c) If you are unable to meet any of the requirements in this section you may request an alternative from the BLM (see § 2804.40).

■ 17. In § 2804.27, revise the section heading and introductory text to read as follows:

§ 2804.27 What fees must I pay if BLM denies my application or if I withdraw my application?

If the BLM denies your application or you withdraw it, you must still pay any application filing fees under § 2804.12(b)(2), and any processing fee set forth at § 2804.14, unless you have a Processing Category 5 or 6 application. Then, the following conditions apply:

* * * * *

■ 18. Add § 2804.30 to subpart 2804 to read as follows:

§ 2804.30 What is the competitive process for solar or wind energy development for lands outside of designated leasing areas?

(a) *Available land.* The BLM may offer through a competitive process any land not inside a designated leasing area and open to right-of-way applications under § 2802.10.

(b) *Variety of competitive procedures available.* The BLM may use any type of competitive process or procedure to conduct its competitive offer and any method, including the use of the Internet, to conduct the actual auction or competitive bid procedure. Possible bid procedures could include, but are not limited to: Sealed bidding, oral auctions, modified competitive bidding, electronic bidding, and any combination thereof.

(c) *Competitive offer.* The BLM may identify a parcel for competitive offer if competition exists or may include land in a competitive offer on its own initiative.

(d) *Notice of competitive offer.* The BLM will publish a notice in the **Federal Register** at least 30 days prior to the competitive offer and may use other notification methods, such as a newspaper of general circulation in the area affected by the potential right-of-way or the Internet. The notice would explain that the successful bidder would become the preferred applicant (see paragraph (g) of this section) and may then apply for a grant. The **Federal**

Register and other notices must also include:

(1) The date, time, and location, if any, of the competitive offer;

(2) The legal land description of the parcel to be offered;

(3) The bidding methodology and procedures to be used in conducting the competitive offer, which may include any of the competitive procedures identified in § 2804.30(b);

(4) The minimum bid required (see § 2804.30(e)(2));

(5) The qualification requirements for potential bidders (see § 2803.10); and

(6) The requirements for the successful bidder to submit a schedule for the submission of a POD for the lands involved in the competitive offer (see § 2804.12(c)(1)).

(e) *Bidding*—(1) *Bid submissions.* The BLM will accept your bid only if it includes payment for the minimum bid and at least 20 percent of the bonus bid.

(2) *Minimum bid.* The minimum bid is not prorated among all bidders, but paid entirely by the successful bidder. The minimum bid consists of:

(i) The administrative costs incurred by the BLM and other Federal agencies in preparing for and conducting the competitive offer, including required environmental reviews; and

(ii) An amount determined by the authorizing officer and disclosed in the notice of competitive offer. This amount will be based on known or potential values of the parcel. In setting this amount, the BLM will consider factors that include, but are not limited to, the acreage rent and megawatt capacity fee.

(3) *Bonus bid.* The bonus bid consists of any dollar amount that a bidder wishes to bid in addition to the minimum bid.

(4) If you are not the successful bidder, as defined in paragraph (f) of this section, the BLM will refund your bid and any application filing fees, less the reasonable costs incurred by the United States in connection with your application, under § 2804.12(c)(2).

(f) *Successful bidder.* The successful bidder is determined by the highest total bid. If you are the successful bidder, you become the preferred applicant only if, within 15 calendar days after the day of the offer, you submit the balance of the bonus bid to the BLM office conducting the competitive offer. You must make payments by personal check, cashier's check, certified check, bank draft, money order, or by other means deemed acceptable by the BLM, payable to the "Department of the Interior—Bureau of Land Management."

(g) *Preferred applicant.* The preferred applicant may apply for an energy project-area testing grant, an energy site-

specific testing grant, or a solar or wind energy development grant for the parcel identified in the offer. Grant approval is not guaranteed by winning the subject bid and is solely at the BLM's discretion. The BLM will not accept applications on lands where a preferred applicant has been identified, unless allowed by the preferred applicant.

(h) *Reservations.* (1) The BLM may reject bids regardless of the amount offered. If the BLM rejects your bid under this provision, you will be notified in writing and such notice will include the reasons for the rejection and any refunds to which you are entitled.

(2) The BLM may make the next highest bidder the preferred applicant if the first successful bidder fails to satisfy the requirements under paragraph (f) of this section.

(3) If the BLM is unable to determine the successful bidder, such as in the case of a tie, the BLM may re-offer the lands competitively to the tied bidders, or to all bidders.

(4) If lands offered under this section receive no bids the BLM may:

(i) Re-offer the lands through the competitive process under this section; or

(ii) Make the lands available through the non-competitive application process found in subparts 2803, 2804, and 2805 of this part, if the BLM determines that doing so is in the public interest.

■ 19. Add § 2804.31 to subpart 2804 to read as follows:

§ 2804.31 How will the BLM call for site testing for solar and wind energy?

(a) *Call for site testing.* The BLM may, at its own discretion, initiate a call for site testing. The BLM will publish this call for site testing in the **Federal Register** and may also use other notification methods, such as a newspaper of general circulation in the area affected by the potential right-of-way, or the Internet. The **Federal Register** and any other notices will include:

(1) The date, time, and location that site testing applications identified under § 2801.9(d)(1) of this part may be submitted;

(2) The date by which applicants will be notified of the BLM's decision on timely submitted site testing applications;

(3) The legal land description of the area for which site testing applications are being requested; and

(4) The qualification requirements for applicants (see § 2803.10).

(b) You may request that the BLM hold a call for site testing for certain public lands. The BLM may proceed with a call for site testing at its own discretion.

(c) The BLM may identify lands surrounding the site testing as designated leasing areas under § 2802.11. If a designated leasing area is established, a competitive offer for a development lease under subpart 2809 may be held at the discretion of the BLM.

■ 20. Add § 2804.35 to subpart 2804 to read as follows:

§ 2804.35 How will the BLM prioritize my solar or wind energy application?

The BLM will prioritize your application by placing it into one of three categories and may re-categorize your application based on new information received through surveys, public meetings, or other data collection, or after any changes to the application. The BLM will generally prioritize the processing of leases awarded under subpart 2809 before applications submitted under subpart 2804. For applications submitted under subpart 2804, the BLM will categorize your application based on the following screening criteria.

(a) High-priority applications are given processing priority over medium- and low-priority applications and may include lands that meet the following criteria:

(1) Lands specifically identified as appropriate for solar or wind energy development, other than designated leasing areas;

(2) Previously disturbed sites or areas adjacent to previously disturbed or developed sites;

(3) Lands currently designated as Visual Resource Management Class IV; or

(4) Lands identified as suitable for disposal in BLM land use plans.

(b) Medium-priority applications are given priority over low-priority applications and may include lands that meet the following criteria:

(1) BLM special management areas that provide for limited development, including recreation sites and facilities;

(2) Areas where a project may adversely affect conservation lands, including lands with wilderness characteristics that have been identified in an updated wilderness characteristics inventory;

(3) Right-of-way avoidance areas;

(4) Areas where project development may adversely affect resources and properties listed nationally such as the National Register of Historic Places, National Natural Landmarks, or National Historic Landmarks;

(5) Sensitive habitat areas, including important species use areas, riparian areas, or areas of importance for Federal or State sensitive species;

(6) Lands currently designated as Visual Resource Management Class III;

(7) Department of Defense operating areas with land use or operational mission conflicts; or

(8) Projects with proposed groundwater uses within groundwater basins that have been allocated by State water resource agencies.

(c) Low-priority applications may not be feasible to authorize. These applications may include lands that meet the following criteria:

(1) Lands near or adjacent to lands designated by Congress, the President, or the Secretary for the protection of sensitive viewsheds, resources, and values (e.g., units of the National Park System, Fish and Wildlife Service Refuge System, some National Forest System units, and the BLM National Landscape Conservation System), which may be adversely affected by development;

(2) Lands near or adjacent to Wild, Scenic, and Recreational Rivers and river segments determined suitable for Wild or Scenic River status, if project development may have significant adverse effects on sensitive viewsheds, resources, and values;

(3) Designated critical habitat for federally threatened or endangered species, if project development may result in the destruction or adverse modification of that critical habitat;

(4) Lands currently designated as Visual Resource Management Class I or Class II;

(5) Right-of-way exclusion areas; or

(6) Lands currently designated as no surface occupancy for oil and gas development in BLM land use plans.

■ 21. Add § 2804.40 to subpart 2804 to read as follows:

§ 2804.40 Alternative requirements.

If you are unable to meet any of the requirements in this subpart you may request approval for an alternative requirement from the BLM. Any such request is not approved until you receive BLM approval in writing. Your request to the BLM must:

(a) Show good cause for your inability to meet a requirement;

(b) Suggest an alternative requirement and explain why that requirement is appropriate; and

(c) Be received in writing by the BLM in a timely manner, before the deadline to meet a particular requirement has passed.

Subpart 2805—Terms and Conditions of Grants

■ 22. Amend § 2805.10 as follows:

■ a. Revise the section heading and paragraph (a);

- b. Redesignate paragraph (b) and (c) as paragraphs (c) and (d), respectively; and
- c. Add new paragraph (b).

The revisions and addition read as follows:

§ 2805.10 How will I know whether the BLM has approved or denied my application or if my bid for a solar or wind energy development grant or lease is successful or unsuccessful?

(a) The BLM will send you a written response when it has made a decision on your application or if you are the successful bidder for a solar or wind energy development grant or lease. If we approve your application, we will send you an unsigned grant for your review and signature. If you are the successful bidder for a solar or wind energy lease inside a designated leasing area under § 2809.15, we may send you an unsigned lease for your review and signature. If your bid is unsuccessful, it will be refunded under § 2804.30(e)(4) or § 2809.14(d) and you will receive written notice from us.

(b) Your unsigned grant or lease document:

(1) Will include any terms, conditions, and stipulations that we determine to be in the public interest, such as modifying your proposed use or changing the route or location of the facilities;

(2) May include terms that prevent your use of the right-of-way until you have an approved Plan of Development (POD) and BLM has issued a Notice to Proceed; and

(3) Will impose a specific term for the grant or lease. Each grant or lease that we issue for 20 or more years will contain a provision requiring periodic review at the end of the twentieth year and subsequently at 10-year intervals. We may change the terms and conditions of the grant or lease, including leases issued under subpart 2809, as a result of these reviews in accordance with § 2805.15(e).

* * * * *

■ 23. Amend § 2805.11 by redesignating paragraph (b)(2) as paragraph (b)(3), adding new paragraph (b)(2), and revising newly redesignated paragraph (b)(3) to read as follows:

§ 2805.11 What does a grant contain?

* * * * *

(b) * * *

(2) Specific terms for solar and wind energy grants and leases are as follows:

(i) For an energy site-specific testing grant, the term is 3 years or less, without the option of renewal;

(ii) For an energy project-area testing grant, the initial term is 3 years or less, with the option to renew for one

additional 3-year period when the renewal application is also accompanied by a solar or wind energy development application and a POD as required by § 2804.25(e)(3);

(iii) For a short-term grant for all other associated actions not specifically included in paragraphs (b)(2)(i) and (ii) of this section, such as geotechnical testing and other temporary land disturbing activities, the term is 3 years or less;

(iv) For solar and wind energy development grants, the term is up to 30 years (plus the initial partial year of issuance) with adjustable terms and conditions. The grantee may submit an application for renewal under § 2805.14(g); and

(v) For solar and wind energy development leases located inside designated leasing areas, the term is fixed for 30 years (plus the initial partial year of issuance). The lessee may submit an application for renewal under § 2805.14(g).

(3) All grants and leases, except those issued for a term of 3 years or less and those issued in perpetuity, will expire on December 31 of the final year of the grant or lease. For grants and leases with terms greater than 3 years, the actual term includes the number of full years specified, plus the initial partial year, if any.

* * * * *

■ 24. Revise § 2805.12 to read as follows:

§ 2805.12 What terms and conditions must I comply with?

(a) By accepting a grant or lease, you agree to comply with and be bound by the following terms and conditions. During construction, operation, maintenance, and termination of the project you must:

(1) To the extent practicable, comply with all existing and subsequently enacted, issued, or amended Federal laws and regulations and State laws and regulations applicable to the authorized use;

(2) Rebuild and repair roads, fences, and established trails destroyed or damaged by the project;

(3) Build and maintain suitable crossings for existing roads and significant trails that intersect the project;

(4) Do everything reasonable to prevent and suppress wildfires on or in the immediate vicinity of the right-of-way area;

(5) Not discriminate against any employee or applicant for employment during any stage of the project because of race, creed, color, sex, sexual orientation, or national origin. You must

also require subcontractors to not discriminate;

(6) Pay monitoring fees and rent described in § 2805.16 and subpart 2806;

(7) Assume full liability if third parties are injured or damages occur to property on or near the right-of-way (see § 2807.12);

(8) Comply with project-specific terms, conditions, and stipulations, including requirements to:

(i) Restore, revegetate, and curtail erosion or conduct any other rehabilitation measure the BLM determines necessary;

(ii) Ensure that activities in connection with the grant comply with air and water quality standards or related facility siting standards contained in applicable Federal or State law or regulations;

(iii) Control or prevent damage to:

(A) Scenic, aesthetic, cultural, and environmental values, including fish and wildlife habitat;

(B) Public and private property; and

(C) Public health and safety;

(iv) Provide for compensatory mitigation for residual impacts associated with the right-of-way;

(v) Protect the interests of individuals living in the general area who rely on the area for subsistence uses as that term is used in Title VIII of Alaska National Interest Lands Conservation Act (ANILCA) (16 U.S.C. 3111 *et seq.*);

(vi) Ensure that you construct, operate, maintain, and terminate the facilities on the lands in the right-of-way in a manner consistent with the grant or lease, including the approved POD, if one was required;

(vii) When the State standards are more stringent than Federal standards, comply with State standards for public health and safety, environmental protection, and siting, constructing, operating, and maintaining any facilities and improvements on the right-of-way; and

(viii) Grant the BLM an equivalent authorization for an access road across your land if the BLM determines that a reciprocal authorization is needed in the public interest and the authorization the BLM issues to you is also for road access;

(9) Immediately notify all Federal, State, tribal, and local agencies of any release or discharge of hazardous material reportable to such entity under applicable law. You must also notify the BLM at the same time and send the BLM a copy of any written notification you prepared;

(10) Not dispose of or store hazardous material on your right-of-way, except as provided by the terms, conditions, and stipulations of your grant;

(11) Certify your compliance with all requirements of the Emergency Planning and Community Right-to-Know Act of 1986, (42 U.S.C. 11001 *et seq.*), when you receive, assign, renew, amend, or terminate your grant;

(12) Control and remove any release or discharge of hazardous material on or near the right-of-way arising in connection with your use and occupancy of the right-of-way, whether or not the release or discharge is authorized under the grant. You must also remediate and restore lands and resources affected by the release or discharge to the BLM's satisfaction and to the satisfaction of any other Federal, State, tribal, or local agency having jurisdiction over the land, resource, or hazardous material;

(13) Comply with all liability and indemnification provisions and stipulations in the grant;

(14) As the BLM directs, provide diagrams or maps showing the location of any constructed facility;

(15) As the BLM directs, provide, or give access to, any pertinent environmental, technical, and financial records, reports, and other information, such as Power Purchase and Interconnection Agreements or the production and sale data for electricity generated from the approved facilities on public lands. Failure to comply with such requirements may, at the discretion of the BLM, result in suspension or termination of the right-of-way authorization. The BLM may use this and similar information for the purpose of monitoring your authorization and for periodic evaluation of financial obligations under the authorization, as appropriate. Any records the BLM obtains will be made available to the public subject to all applicable legal requirements and limitations for inspection and duplication under the Freedom of Information Act. Any information marked confidential or proprietary will be kept confidential to the extent allowed by law; and

(16) Comply with all other stipulations that the BLM may require.

(b) You must comply with the bonding requirements under § 2805.20. The BLM will not issue a Notice to Proceed or give written approval to proceed with ground disturbing activities until you comply with this requirement.

(c) By accepting a grant or lease for solar or wind energy development, you also agree to comply with and be bound by the following terms and conditions. You must:

(1) Not begin any ground disturbing activities until the BLM issues a Notice

to Proceed (see § 2807.10) or written approval to proceed with ground disturbing activities;

(2) Complete construction within the timeframes in the approved POD, but no later than 24 months after the start of construction, unless the project has been approved for staged development, or as otherwise authorized by the BLM;

(3) If an approved POD provides for staged development, unless otherwise approved by the BLM:

(i) Begin construction of the initial phase of development within 12 months after issuance of the Notice to Proceed, but no later than 24 months after the effective date of the right-of-way authorization;

(ii) Begin construction of each stage of development (following the first) within 3 years of the start of construction of the previous stage of development, and complete construction of that stage no later than 24 months after the start of construction of that stage, unless otherwise authorized by the BLM; and

(iii) Have no more than 3 development stages, unless otherwise authorized by the BLM;

(4) Maintain all onsite electrical generation equipment and facilities in accordance with the design standards in the approved POD;

(5) Repair and place into service, or remove from the site, damaged or abandoned facilities that have been inoperative for any continuous period of 3 months and that present an unnecessary hazard to the public lands. You must take appropriate remedial action within 30 days after receipt of a written noncompliance notice, unless you have been provided an extension of time by the BLM. Alternatively, you must show good cause for any delays in repairs, use, or removal; estimate when corrective action will be completed; provide evidence of diligent operation of the facilities; and submit a written request for an extension of the 30-day deadline. If you do not comply with this provision, the BLM may suspend or terminate the authorization under §§ 2807.17 through 2807.19; and

(6) Comply with the diligent development provisions of the authorization or the BLM may suspend or terminate your grant or lease under §§ 2807.17 through 2807.19. Before suspending or terminating the authorization, the BLM will send you a notice that gives you a reasonable opportunity to correct any noncompliance or to start or resume use of the right-of-way (see § 2807.18). In response to this notice, you must:

(i) Provide reasonable justification for any delays in construction (for example,

delays in equipment delivery, legal challenges, and acts of God);

(ii) Provide the anticipated date of completion of construction and evidence of progress toward the start or resumption of construction; and

(iii) Submit a written request under paragraph (e) of this section for extension of the timelines in the approved POD. If you do not comply with the requirements of paragraph (c)(7) of this section, the BLM may deny your request for an extension of the timelines in the approved POD.

(7) In addition to the RCE requirements of § 2805.20(a)(5) for a grant, the bond secured for a grant or lease must cover the estimated costs of cultural resource and Indian cultural resource identification, protection, and mitigation for project impacts.

(d) For energy site or project testing grants:

(1) You must install all monitoring facilities within 12 months after the effective date of the grant or other authorization. If monitoring facilities under a site testing and monitoring right-of-way authorization have not been installed within 12 months after the effective date of the authorization or consistent with the timeframe of the approved POD, you must request an extension pursuant to paragraph (e) of this section;

(2) You must maintain all onsite equipment and facilities in accordance with the approved design standards;

(3) You must repair and place into service, or remove from the site, damaged or abandoned facilities that have been inoperative for any continuous period of 3 months and that present an unnecessary hazard to the public lands; and

(4) If you do not comply with the diligent development provisions of either the site testing and monitoring authorization or the project testing and monitoring authorization, the BLM may terminate your authorization under § 2807.17.

(e) *Notification of noncompliance and request for alternative requirements.* (1) As soon as you anticipate that you will not meet any stipulation, term, or condition of the approved right-of-way grant or lease, or in the event of your noncompliance with any such stipulation, term, or condition, you must notify the BLM in writing and show good cause for the noncompliance, including an explanation of the reasons for the failure.

(2) You may also request that the BLM consider alternative stipulations, terms, or conditions. Any request for an alternative stipulation, term, or

condition must comply with applicable law in order to be considered. Any proposed alternative to applicable bonding requirements must provide the United States with adequate financial assurance for potential liabilities associated with your right-of-way grant or lease. Any such request is not approved until you receive BLM approval in writing.

■ 25. Amend § 2805.14 by removing “and” from the end of paragraph (e), removing the period from the end of paragraph (f) and adding “; and” in its place, and adding paragraphs (g) and (h) to read as follows:

§ 2805.14 What rights does a grant convey?

* * * * *

(g) Apply to renew your solar or wind energy development grant or lease, under § 2807.22; and

(h) Apply to renew your energy project-area testing grant for one

additional term of 3 years or less when the renewal application also includes an energy development application under § 2801.9(d)(2).

■ 26. In § 2805.15, revise the first sentence of paragraph (b) to read as follows:

§ 2805.15 What rights does the United States retain?

* * * * *

(b) Require common use of your right-of-way, including facilities (see § 2805.14(b)), subsurface, and air space, and authorize use of the right-of-way for compatible uses. * * *

* * * * *

■ 27. Revise § 2805.16 to read as follows:

§ 2805.16 If I hold a grant, what monitoring fees must I pay?

(a) You must pay a fee to the BLM for the reasonable costs the Federal Government incurs in inspecting and

monitoring the construction, operation, maintenance, and termination of the project and protection and rehabilitation of the public lands your grant covers. Instead of paying the BLM a fee for the reasonable costs incurred by other Federal agencies in monitoring your grant, you may pay the other Federal agencies directly for such costs. The BLM will annually adjust the Category 1 through 4 monitoring fees in the manner described at § 2804.14(b). The BLM will update Category 5 monitoring fees as specified in the Master Agreement. Category 6 monitoring fees are addressed at § 2805.17(c). The BLM categorizes the monitoring fees based on the estimated number of work hours necessary to monitor your grant. Category 1 through 4 monitoring fees are one-time fees and are not refundable. The monitoring categories and work hours are as follows:

MONITORING CATEGORIES

Monitoring category	Federal work hours involved
(1) Inspecting and monitoring of new grants, assignments, renewals, and amendments to existing grants	Estimated Federal work hours are >1 ≤8.
(2) Inspecting and monitoring of new grants, assignments, renewals, and amendments to existing grants	Estimated Federal work hours are >8 ≤24.
(3) Inspecting and monitoring of new grants, assignments, renewals, and amendments to existing grants	Estimated Federal work hours are >24 ≤36.
(4) Inspecting and monitoring of new grants, assignments, renewals, and amendments to existing grants	Estimated Federal work hours are >36 ≤50.
(5) Master Agreements	Varies.
(6) Inspecting and monitoring of new grants, assignments, renewals, and amendments to existing grants	Estimated Federal work hours are >50.

(b) The monitoring cost schedule is available from any BLM State, district, or field office or by writing: U.S. Department of the Interior, Bureau of Land Management, 20 M Street SE., Room 2134LM, Washington, DC 20003. The BLM also posts the current schedule at <http://www.blm.gov>.

■ 28. Add § 2805.20 to subpart 2805 to read as follows:

§ 2805.20 Bonding requirements.

If you hold a grant or lease under this part, you must comply with the following bonding requirements:

(a) The BLM may require that you obtain, or certify that you have obtained, a performance and reclamation bond or other acceptable bond instrument to cover any losses, damages, or injury to human health, the environment, or property in connection with your use and occupancy of the right-of-way, including costs associated with terminating the grant, and to secure all obligations imposed by the grant and applicable laws and regulations. If you

plan to use hazardous materials in the operation of your grant, you must provide a bond that covers liability for damages or injuries resulting from releases or discharges of hazardous materials. The BLM will periodically review your bond for adequacy and may require a new bond, an increase or decrease in the value of an existing bond, or other acceptable security at any time during the term of the grant or lease.

(1) The BLM must be listed as an additionally named insured on the bond instrument if a State regulatory authority requires a bond to cover some portion of environmental liabilities, such as hazardous material damages or releases, reclamation, or other requirements for the project. The bond must:

(i) Be redeemable by the BLM;

(ii) Be held or approved by a State agency for the same reclamation requirements as specified by our right-of-way authorization; and

(iii) Provide the same or greater financial guarantee that we require for the portion of environmental liabilities covered by the State's bond.

(2) *Bond acceptance.* The BLM authorized officer must review and approve all bonds, including any State bonds, prior to acceptance, and at the time of any right-of-way assignment, amendment, or renewal.

(3) *Bond amount.* Unless you hold a solar or wind energy lease under subpart 2809, the bond amount will be determined based on the preparation of a RCE, which the BLM may require you to prepare and submit. The estimate must include our cost to administer a reclamation contract and will be reviewed periodically for adequacy. The BLM may also consider other factors, such as salvage value, when determining the bond amount.

(4) You must post a bond on or before the deadline that we give you.

(5) Bond components that must be addressed when determining the RCE amount include, but are not limited to:

(i) Environmental liabilities such as use of hazardous materials waste and hazardous substances, herbicide use, the use of petroleum-based fluids, and dust control or soil stabilization materials;

(ii) The decommissioning, removal, and proper disposal, as appropriate, of any improvements and facilities; and

(iii) Interim and final reclamation, revegetation, recontouring, and soil stabilization. This component must address the potential for flood events and downstream sedimentation from the site that may result in offsite impacts.

(6) You may ask us to accept a replacement performance and reclamation bond at any time after the approval of the initial bond. We will review the replacement bond for adequacy. A surety company is not released from obligations that accrued while the surety bond was in effect unless the replacement bond covers those obligations to our satisfaction.

(7) You must notify us that reclamation has occurred and you may request that the BLM reevaluate your bond. If we determine that you have completed reclamation, we may release all or part of your bond.

(8) If you hold a grant, you are still liable under § 2807.12 if:

(i) We release all or part of your bond;

(ii) The bond amount does not cover the cost of reclamation; or

(iii) There is no bond in place;

(b) If you hold a grant for solar energy development outside of designated leasing areas, you must provide a performance and reclamation bond (see paragraph (a) of this section) prior to the BLM issuing a Notice to Proceed (see § 2805.12(c)(1)). We will determine the bond amount based on the RCE (see paragraph (a)(3) of this section) and it must be no less than \$10,000 per acre that will be disturbed;

(c) If you hold a grant for wind energy development outside of designated leasing areas, you must provide a performance and reclamation bond (see paragraph (a) of this section) prior to the BLM issuing a Notice to Proceed (see § 2805.12(c)(1)). We will determine the bond amount based on the RCE (see paragraph (a)(3) of this section) and it must be no less than \$10,000 per authorized turbine less than 1 MW in nameplate capacity or \$20,000 per authorized turbine equal to or greater than 1 MW in nameplate capacity; and

(d) For short-term right-of-way grants for energy site or project-area testing, the bond amount must be no less than \$2,000 per authorized meteorological tower or instrumentation facility

location and must be provided before the written approval to proceed with ground disturbing activities (see § 2805.12(c)(1)).

■ 29. Revise the heading for subpart 2806 to read as follows:

Subpart 2806—Annual Rents and Payments

■ 30. Amend § 2806.12 by revising the section heading and paragraphs (a) and (b) and adding paragraph (d) to read as follows:

§ 2806.12 When and where do I pay rent?

(a) You must pay rent for the initial rental period before the BLM issues you a grant or lease.

(1) If your non-linear grant or lease is effective on:

(i) January 1 through September 30 and qualifies for annual payments, your initial rent bill is pro-rated to include only the remaining full months in the initial year; or

(ii) October 1 through December 31 and qualifies for annual payments, your initial rent bill is pro-rated to include the remaining full months in the initial year plus the next full year.
