The FEDERAL REGISTER (ISSN 0097–6326) is published daily, Monday through Friday, except official holidays, by the Office of the Federal Register, National Archives and Records Administration, Washington, DC 20408, under the Federal Register Act (44 U.S.C. Ch. 15) and the regulations of the Administrative Committee of the Federal Register (1 CFR Ch. I). The Superintendent of Documents, U.S. Government Publishing Office, Washington, DC 20402 is the exclusive distributor of the official edition. Periodicals postage is paid at Washington, DC.

The FEDERAL REGISTER provides a uniform system for making available to the public regulations and legal notices issued by Federal agencies. These include Presidential proclamations and Executive Orders, Federal agency documents having general applicability and legal effect, documents required to be published by act of Congress, and other Federal agency documents of public interest.

Documents are on file for public inspection in the Office of the Federal Register the day before they are published, unless the issuing agency requests earlier filing. For a list of documents currently on file for public inspection, see www.ofr.gov.

The seal of the National Archives and Records Administration authenticates the Federal Register as the official serial publication established under the Federal Register Act. Under 44 U.S.C. 1507, the contents of the Federal Register shall be judicially noticed.

The Federal Register is published in paper and on 24x microfiche. It is also available online at no charge at www.fdsys.gov, a service of the U.S. Government Publishing Office.

The online edition of the Federal Register is issued under the authority of the Administrative Committee of the Federal Register as the official legal equivalent of the paper and microfiche editions (44 U.S.C. 4101 and 1 CFR 5.10). It is updated by 6:00 a.m. each day the Federal Register is published and includes both text and graphics from Volume 59, 1 (January 2, 1994) forward. For more information, contact the GPO Customer Contact Center, U.S. Government Publishing Office. Phone 202-512-1800 or 866-512-1800 (Toll-Free). E-mail, gpocusthelp.com.

The annual subscription price for the Federal Register paper edition is $749 plus postage, or $808, plus postage, for a combined Federal Register, Federal Register Index and List of CFR Sections Affected (LSA) subscription; the microfiche edition of the Federal Register including the Federal Register Index and LSA is $165, plus postage. Six month subscriptions are available for one-half the annual rate. The prevailing postal rates will be applied to orders according to the delivery method requested. The price of a single copy of the daily Federal Register, including postage, is based on the number of pages: $11 for an issue containing less than 200 pages; $22 for an issue containing 200 to 400 pages; and $33 for an issue containing more than 400 pages. Single issues of the microfiche edition may be purchased for $3 per copy, including postage. Remit check or money order, made payable to the Superintendent of Documents, or charge to your GPO Deposit Account, VISA, MasterCard, American Express, or Discover. Mail to: U.S. Government Publishing Office—New Orders, P.O. Box 979050, St. Louis, MO 63197-9000; or call toll free 1-866-512-1800, DC area 202-512-1800; or go to the U.S. Government Online Bookstore site, see bookstore.gpo.gov.

There are no restrictions on the republication of material appearing in the Federal Register.

How To Cite This Publication: Use the volume number and the page number. Example: 81 FR 12345.

Postmaster: Send address changes to the Superintendent of Documents, Federal Register, U.S. Government Publishing Office, Washington, DC 20402, along with the entire mailing label from the last issue received.

Title 3—
The President

Executive Order 13757 of December 28, 2016

Taking Additional Steps to Address the National Emergency With Respect to Significant Malicious Cyber-Enabled Activities

By the authority vested in me as President by the Constitution and the laws of the United States of America, including the International Emergency Economic Powers Act (50 U.S.C. 1701 et seq.) (IEEPA), the National Emergencies Act (50 U.S.C. 1601 et seq.) (NEA), and section 301 of title 3, United States Code,

I, BARACK OBAMA, President of the United States of America, in order to take additional steps to deal with the national emergency with respect to significant malicious cyber-enabled activities declared in Executive Order 13694 of April 1, 2015, and in view of the increasing use of such activities to undermine democratic processes or institutions, hereby order:

Section 1. Section 1(a) of Executive Order 13694 is hereby amended to read as follows:

“Section 1. (a) All property and interests in property that are in the United States, that hereafter come within the United States, or that are or hereafter come within the possession or control of any United States person of the following persons are blocked and may not be transferred, paid, exported, withdrawn, or otherwise dealt in:

(i) the persons listed in the Annex to this order;

(ii) any person determined by the Secretary of the Treasury, in consultation with the Attorney General and the Secretary of State, to be responsible for or complicit in, or to have engaged in, directly or indirectly, cyber-enabled activities originating from, or directed by persons located, in whole or in substantial part, outside the United States that are reasonably likely to result in, or have materially contributed to, a significant threat to the national security, foreign policy, or economic health or financial stability of the United States and that have the purpose or effect of:

(A) harming, or otherwise significantly compromising the provision of services by, a computer or network of computers that support one or more entities in a critical infrastructure sector;

(B) significantly compromising the provision of services by one or more entities in a critical infrastructure sector;

(C) causing a significant disruption to the availability of a computer or network of computers;

(D) causing a significant misappropriation of funds or economic resources, trade secrets, personal identifiers, or financial information for commercial or competitive advantage or private financial gain; or

(E) tampering with, altering, or causing a misappropriation of information with the purpose or effect of interfering with or undermining election processes or institutions; and

(iii) any person determined by the Secretary of the Treasury, in consultation with the Attorney General and the Secretary of State:

(A) to be responsible for or complicit in, or to have engaged in, the receipt or use for commercial or competitive advantage or private financial gain, or by a commercial entity, outside the United States of trade secrets
misappropriated through cyber-enabled means, knowing they have been misappropriated, where the misappropriation of such trade secrets is reasonably likely to result in, or has materially contributed to, a significant threat to the national security, foreign policy, or economy of the United States;

(B) to have materially assisted, sponsored, or provided financial, material, or technological support for, or goods or services to or in support of, any activity described in subsections (a)(ii) or (a)(iii)(A) of this section or any person whose property and interests in property are blocked pursuant to this order;

(C) to be owned or controlled by, or to have acted or purported to act for or on behalf of, directly or indirectly, any person whose property and interests in property are blocked pursuant to this order; or

(D) to have attempted to engage in any of the activities described in subsections (a)(ii) and (a)(iii)(A)–(C) of this section.’’

Sec. 2. Executive Order 13694 is further amended by adding as an Annex to Executive Order 13694 the Annex to this order.

Sec. 3. Executive Order 13694 is further amended by redesignating section 10 as section 11 and adding a new section 10 to read as follows:

“Sec. 10. The Secretary of the Treasury, in consultation with the Attorney General and the Secretary of State, is hereby authorized to determine that circumstances no longer warrant the blocking of the property and interests in property of a person listed in the Annex to this order, and to take necessary action to give effect to that determination.’’

Sec. 4. This order is not intended to, and does not, create any right or benefit, substantive or procedural, enforceable at law or in equity by any party against the United States, its departments, agencies, or entities, its officers, employees, or agents, or any other person.

Sec. 5. This order is effective at 12:01 a.m. eastern standard time on December 29, 2016.

THE WHITE HOUSE,

This section of the FEDERAL REGISTER contains regulatory documents having general applicability and legal effect, most of which are keyed to and codified in the Code of Federal Regulations, which is published under 50 titles pursuant to 44 U.S.C. 1510.

The Code of Federal Regulations is sold by the Superintendent of Documents. Prices of new books are listed in the first FEDERAL REGISTER issue of each week.

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 39

RIN 2120–AA64

Airworthiness Directives; The Boeing Company Airplanes

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: We are adopting a new airworthiness directive (AD) for certain The Boeing Company Model 767–200 and –300 series airplanes. This AD was prompted by an evaluation by the design approval holder (DAH) indicating that the aft pressure bulkhead is subject to widespread fatigue damage (WFD). This AD requires replacing the aft pressure bulkhead with a new, improved aft pressure bulkhead, and doing related investigative and corrective actions if necessary. We are issuing this AD to prevent the unsafe condition on these products.

DATES: This AD is effective February 7, 2017.

The Director of the Federal Register approved the incorporation by reference of a certain publication listed in this AD as of February 7, 2017.

ADDRESSES: For service information identified in this final rule, contact Boeing Commercial Airplanes, Attention: Contractual & Data Services (CkDS), 2600 Westminster Blvd., MC 110–SK57, Seal Beach, CA 90740; telephone 562–797–1717; Internet https://www.myboeingfleet.com. You may view this referenced service information at the FAA, Transport Airplane Directorate, 1601 Lind Avenue SW., Renton, WA. For information on the availability of this material at the FAA, call 425–227–1221. It is also available on the Internet at http://www.regulations.gov by searching for and locating Docket No. FAA–2016–3698.

Exchanging the AD Docket

You may examine the AD docket on the Internet at http://www.regulations.gov by searching for and locating Docket No. FAA–2016–3698; or in person at the Docket Management Facility between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The AD docket contains this AD, the regulatory evaluation, any comments received, and other information. The address for the Docket Office (phone: 800–647–5527) is Docket Management Facility, U.S. Department of Transportation, Docket Operations, M–30, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE., Washington, DC 20590.

SUPPLEMENTARY INFORMATION:

Discussion

We issued a notice of proposed rulemaking (NPRM) to amend 14 CFR part 39 by adding an AD that would apply to certain The Boeing Company Model 767–200 and –300 series airplanes. The NPRM published in the Federal Register on February 22, 2016 (81 FR 8668) (“the NPRM”). The NPRM was prompted by an evaluation by the DAH indicating that the aft pressure bulkhead at Station 1582 is subject to WFD. The NPRM proposed to require replacing the aft pressure bulkhead with a new, improved aft pressure bulkhead, and doing related investigative and corrective actions if necessary. We are issuing this AD to prevent fatigue cracking in the radial web lap splices of the aft pressure bulkhead. Such cracking could result in rapid decompression and consequent reduced structural integrity of the airplane.

Comments

We gave the public the opportunity to participate in developing this AD. We have considered the comments received. Boeing and United Airlines supported the NPRM.

Effect of Winglets on Accomplishment of the Proposed Actions

Aviation Partners Boeing stated that accomplishing the supplemental type certificate (STC) ST01920SE does not affect compliance with the actions specified in the NPRM.

We agree with the commenter. We have revised paragraph (c) of the proposed AD as (c)(1) and added paragraph (c)(2) to this AD to state that installation of STC ST01920SE does not affect the ability to accomplish the actions required by this final rule. Therefore, for airplanes on which STC ST01920SE is installed, a “change in product” alternative method of compliance (AMOC) approval request is not necessary to comply with the requirements of 14 CFR 39.17.

Changes To This AD

We have reviewed Boeing Alert Service Bulletin 767–53A0267, Revision 1, dated August 4, 2016, and there are no substantial changes. Therefore, we have included Boeing Alert Service Bulletin 767–53A0267, Revision 1, dated August 4, 2016, in paragraphs (c), (g), (h), and (i) of this AD. We have also provided credit in paragraph (j) of this AD for actions done prior to the effective date of this AD using Boeing Alert Service Bulletin 767–53A0267, dated August 13, 2015.

We have also revised paragraph (g) of this AD to clarify certain terminating actions.

Conclusion

We reviewed the relevant data, considered the comments received, and determined that air safety and the public interest require adopting this AD with the changes described previously and minor editorial changes. We have determined that these minor changes:

• Are consistent with the intent that was proposed in the NPRM for correcting the unsafe condition; and
• Do not add any additional burden upon the public than was already proposed in the NPRM.

We also determined that these changes will not increase the economic

Federal Register

Vol. 82, No. 1

Tuesday, January 3, 2017
burden on any operator or increase the scope of this AD.

Related Service Information Under 1 CFR part 51

We reviewed Boeing Alert Service Bulletin 767–53A0267, Revision 1, dated August 4, 2016. The service information describes procedures for replacing the aft pressure bulkhead at Station 1582 of Section 48 with a new, improved aft pressure bulkhead, including all applicable related investigative and corrective actions. This service information is reasonably available because the interested parties have access to it through their normal course of business or by the means identified in the ADDRESSES section.

Costs of Compliance

We estimate that this AD affects 86 airplanes of U.S. registry.

We estimate the following costs to comply with this AD:

<table>
<thead>
<tr>
<th>Action</th>
<th>Labor cost</th>
<th>Parts cost</th>
<th>Cost per product</th>
<th>Cost on U.S. operators</th>
</tr>
</thead>
<tbody>
<tr>
<td>Replacement</td>
<td>1,541 work-hours x $85 per hour = $130,985</td>
<td>$646,889</td>
<td>$777,874</td>
<td>$66,897,164</td>
</tr>
</tbody>
</table>

We have received no definitive data that enables us to provide cost estimates for the on-condition investigative and corrective actions specified in this AD.

Authority for This Rulemaking

Title 49 of the United States Code specifies the FAA’s authority to issue rules on aviation safety. Subtitle I, section 106, describes the authority of the FAA Administrator. Subtitle VII: Aviation Programs, describes in more detail the scope of the Agency’s authority.

We are issuing this rulemaking under the authority described in Subtitle VII, Part A, Subpart III, Section 44701: “General requirements.” Under that section, Congress charges the FAA with promoting safe flight of civil aircraft in air commerce by prescribing regulations for practices, methods, and procedures the Administrator finds necessary for safety in air commerce. This regulation is within the scope of that authority because it addresses an unsafe condition that is likely to exist or develop on products identified in this rulemaking action.

Regulatory Findings

This AD will not have federalism implications under Executive Order 13132. This AD will not have a substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government.

For the reasons discussed above, I certify that this AD:

1. Is not a “significant regulatory action” under Executive Order 12866.
3. Will not affect intrastate aviation in Alaska, and
4. Will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

Adoption of the Amendment

Accordingly, under the authority delegated to me by the Administrator, the FAA amends 14 CFR part 39 as follows:

PART 39—AIRWORTHINESS DIRECTIVES

§ 39.13 [Amended]

1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

2. The FAA amends § 39.13 by adding the following new airworthiness directive (AD):

(a) Effective Date

This AD is effective February 7, 2017.

(b) Affected ADs

This AD affects the ADs specified in paragraphs (b)(1), (b)(2), and (b)(3) of this AD.

(c) Applicability

This AD applies to The Boeing Company Model 767–200 and –300 series airplanes, certificated in any category, as identified in Boeing Alert Service Bulletin 767–53A0267, Revision 1, dated August 4, 2016.

(d) Subject

Air Transport Association (ATA) of America Code 53, Fuselage.

(e) Unsafe Condition

This AD was prompted by an evaluation by the design approval holder (DAH) indicating that the aft pressure bulkhead at Station 1582 is subject to widespread fatigue damage (WFD). We are issuing this AD to prevent fatigue cracking in the radial web lap splices of the aft pressure bulkhead. Such cracking could result in rapid decompression and consequent reduced structural integrity of the airplane.

(f) Compliance

Comply with this AD within the compliance times specified, unless already done.

(g) Replacement, Related Investigative and Corrective Actions, and Terminating Actions

Before the accumulation of 60,000 total flight cycles, or within 36 months after the effective date of this AD, whichever occurs later, but not earlier than 37,500 total accumulated flight cycles: Replace the aft pressure bulkhead at Station 1582 of Section 48 with a new, improved aft pressure bulkhead, and perform all applicable related investigative and corrective actions, in accordance with the Accomplishment Instructions of Boeing Alert Service Bulletin 767–53A0267; Revision 1, dated August 4, 2016; except as required by paragraph (b) of this AD. Do all applicable related investigative and corrective actions before further flight. Accomplishing the replacement in this paragraph terminates all requirements of the ADs identified in paragraphs (g)(1), (g)(2), and (g)(3) of this AD.

(b) Corrective Actions
If any defect (e.g., rifling, gouging, nicks, or burrs, or excessive surface roughness) is found in any fastener hole (other than normally produced during a typical reaming operation), during accomplishment of any inspection (related investigative actions) required by this AD, and Boeing Alert Service Bulletin 767–53A0267, Revision 1, dated August 4, 2016, specifies to contact Boeing for repair instructions: Before further flight, repair in accordance with the procedures specified in paragraph (k) of this AD.

(i) Exception to the Service Information
Where Boeing Alert Service Bulletin 767–53A0267, Revision 1, dated August 4, 2016, specifies a compliance time “after the original issue date of this service bulletin,” this AD requires compliance within the specified time after the effective date of this AD.

(j) Credit for Previous Actions
This paragraph provides credit for the actions required by paragraphs (g) and (h) of this AD, if those actions were performed before the effective date of this AD using Boeing Alert Service Bulletin 767–53A0267, dated August 13, 2015; which is not incorporated by reference in this AD.

(k) Alternative Methods of Compliance (AMOCs)
(1) The Manager, Seattle Aircraft Certification Office (ACO), FAA, has the authority to approve AMOCs for this AD, if requested using the procedures found in 14 CFR 39.19. In accordance with 14 CFR 39.19, send your request to your principal inspector or local Flight Standards District Office, as appropriate. If sending information directly to the manager of the ACO, send it to the attention of the person identified in paragraph (l) of this AD. Information may be emailed to: 9–ANM-Seattle-ACO-AMOC-Requests@faa.gov.

(2) Before using any approved AMOC, notify your appropriate principal inspector, or lacking a principal inspector, the manager of the local flight standards district office/ certificate holding district office.

(3) An AMOC that provides an acceptable level of safety may be used for any repair, modification, or alteration required by this AD if it is approved by the Boeing Commercial Airlines Organization Designation Authorization (ODA) that has been authorized by the Manager, Seattle ACO, to make those findings. To be approved, the repair method, modification deviation, or alteration deviation must meet the certification basis of the airplane, and the approval must specifically refer to this AD.

(4) Except as required by paragraph (h) of this AD: For service information that contains steps that are labeled as Required for Compliance (RC), the provisions of paragraphs (k)(4)(i) and (k)(4)(ii) apply.

(i) The steps labeled as RC, including substeps under an RC step and any figures identified in an RC step, must be done to comply with the AD. If a step or sub-step is labeled “RC Exempt,” then the RC requirement is removed from that step or sub-step. An AMOC is required for any deviations to RC steps, including substeps and identified figures.

(ii) Steps not labeled as RC may be deviated from using accepted methods in accordance with the operator’s maintenance or inspection program without obtaining approval of an AMOC, provided the RC steps, including substeps and identified figures, can still be done as specified, and the airplane can be put back in an airworthy condition.

(l) Related Information
For more information about this AD, contact Wayne Lockett, Aerospace Engineer, Airframe Branch, ANM–1205, FAA, Seattle ACO, 1601 Lind Avenue SW., Renton, WA 98057–3356; phone: 425–917–6447; fax: 425–917–6590; email: wayne.lockett@faa.gov.

(m) Material Incorporated by Reference
(1) The Director of the Federal Register approved the incorporation by reference (IBR) of the service information listed in this paragraph under 5 U.S.C. 552(a) and 1 CFR part 51.

(2) You must use this service information as applicable to do the actions required by this AD, unless the AD specifies otherwise.

(ii) Reserved.

(3) For service information identified in this AD, contact Boeing Commercial Airplanes, Attention: Contractual & Data Services (C&DS), 2600 Westminster Blvd., MC 110–SK57, Seal Beach, CA 90740; telephone 562–797–1717; Internet https://www.myboeingfleet.com.

(4) You may view this service information at the FAA, Transport Airplane Directorate, 1601 Lind Avenue SW., Renton, WA. For information on the availability of this material at the FAA, call 425–227–1221.

(5) You may view this service information that is incorporated by reference at the National Archives and Records Administration (NARA). For information on the availability of this material at NARA, call 202–741–6030, or go to: http://www.archives.gov/federal-register/cfr/ibr-locations.html.

Issued in Renton, Washington, on November 25, 2016.

John P. Piccola, Jr.,
Acting Manager, Transport Airplane Directorate, Aircraft Certification Service.

[FR Doc. 2016–29678 Filed 12–30–16; 8:45 am]
BILLING CODE 4910–13–P

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 39

RIN 2120–AA64

Airworthiness Directives; BAE Systems (Operations) Limited Airlines

AGENCY: Federal Aviation Administration (FAA), Department of Transportation (DOT).

ACTION: Final rule.

SUMMARY: We are superseding Airworthiness Directive (AD) 2012–11–15 for all BAE Systems (Operations) Limited Model 4101 airplanes. AD 2012–11–15 required a one-time detailed inspection for cracks, corrosion, and other defects of the rear face of the wing rear spar, and repair if necessary. This new AD requires repetitive detailed inspections, and repair if necessary. This AD was prompted by new reports of cracking found in the wing rear spar and technical analysis results, which confirmed that the crack initiation and propagation are due to fatigue, with no indication of any other crack initiation mechanism (e.g., stress corrosion). We are issuing this AD to address the unsafe condition on these products.

DATES: This AD is effective February 7, 2017.

The Director of the Federal Register approved the incorporation by reference of certain publications listed in this AD as of February 7, 2017.

ADDRESSES: For service information identified in this final rule, contact BAE Systems (Operations) Limited, Customer Information Department, Prestwick International Airport, Ayrshire, KA9 2RW, Scotland, United Kingdom; telephone +44 1292 675207; fax +44 1292 675704; email RApublications@baesystems.com; Internet http://www.baesystems.com/Businesses/RegionalAircraft/index.htm. You may view this referenced service information at the FAA, Transport Airplane Directorate, 1601 Lind Avenue SW., Renton, WA. For information on the availability of this material at the FAA, call 425–227–1221. It is also available on the Internet at http://www.regulations.gov by searching for and locating Docket No. FAA–2016–0457.
Examining the AD Docket
You may examine the AD docket on the Internet at http://www.regulations.gov by searching for and locating Docket No. FAA–2016–0457 or the Docket Management Facility between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The AD docket contains this AD, the regulatory evaluation, any comments received, and other information. The address for the Docket Office (telephone 800–647–5527) is Docket Management Facility, U.S. Department of Transportation, Docket Operations, M–30, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE., Washington, DC 20590.

FOR FURTHER INFORMATION CONTACT:

SUPPLEMENTARY INFORMATION:
Discussion
We issued a notice of proposed rulemaking (NPRM) to amend 14 CFR part 39 to supersede AD 2012–11–15, Amendment 39–17079 (77 FR 36127, June 18, 2012) (“AD 2012–11–15”). AD 2012–11–15 applied to all BAE Systems (Operations) Limited Model 4101 airplanes. The NPRM published in the Federal Register on January 21, 2016 (81 FR 3350) (“the NPRM”). The NPRM was prompted by new reports of cracking found in the wing rear spar and technical analysis results, which confirmed that the crack initiation and propagation are due to fatigue, with no indication of any other crack initiation mechanism (e.g., stress corrosion). The NPRM proposed to require a one-time detailed inspection for cracks, corrosion, and other defects of the rear face of the wing rear spar, and repair if necessary. The NPRM also proposed to require repetitive inspections, and repair if necessary. We are issuing this AD to detect and correct cracking in the wing rear spar, which could propagate to a critical length, possibly affecting the structural integrity of the area and resulting in a fuel tank rupture, with consequent damage to the airplane and possible injury to its occupants.

The European Aviation Safety Agency (EASA), which is the Technical Agent for the Member States of the European Union, has issued EASA Airworthiness Directive 2015–0100, dated June 3, 2015 (referred to as the MCAI), to correct an unsafe condition for all BAE Systems (Operations) Limited Model 4101 airplanes. The MCAI states:

During an investigation of a fuel leak on the rear spar of a Jetstream 4100 airplane at the Wings General, of the BAE Systems (Operations) Limited Model 4101 airplanes, 4 cracks were found between Ribs 6 and 7 (immediately inboard of the inboard engine rib). The cracks initiated at adjacent fastener bores in the rear spar upper boom, and progressed downwards, diagonally, into the rear spar web.

These cracks, if not detected and corrected, could propagate to a critical length, affecting the structural integrity of the area, possibly resulting in a fuel tank rupture with consequent damage to the airplane and injury to occupants.

Promoted by these findings, EASA issued AD 2011–0096 [which corresponds to FAA AD 2012–11–15, Amendment 39–17079 (77 FR 36127, June 18, 2012)] to require a one-time [detailed] inspection [for cracks, corrosion, and other defects] of the rear face of the wing rear spar and the accomplishment of applicable corrective actions [i.e., repair], depending on findings. Initial analysis of the event did not lead to the conclusion that the cracking was fatigue related, therefore [EASA] AD 2011–0096 did not require repetitive inspections.

Since that [EASA] AD [2011–0096] was issued, the results of the technical analysis confirmed that the cracks were due to fatigue, with no indication of any other crack initiation mechanism (e.g., stress corrosion). In addition, further similar in-service events have been reported. Further investigation of those events, further metallurgical analysis indicated that the crack initiation and propagation are indeed fatigue driven and occur at the same location.

To address this unsafe condition, a review of the inspection interval was undertaken based on the cracks from both airplanes and BAE Systems (Operations) Ltd issued Service Bulletin (SB) J41–A57–029 Revision 3 in order to reduce the inspection interval of the wing rear spar from 2 000 flight cycles (FC) to 1 000 FC.

For the reasons described above, this [EASA] AD supersedes [EASA] AD 2011–0096, without retaining its requirements, introduces repetitive inspections and, depending on findings, requires the accomplishments of applicable corrective action(s) [i.e., repair].

Comments
We gave the public the opportunity to participate in developing this AD. We received no comments on the NPRM or on the determination of the cost to the public.

Explanation of Change in This AD
The NPRM incorrectly referred to Subject 57–00–00, Wings General, of Chapter 57, Wings, of the BAE Systems (Operations) Limited Jetstream Series 4100 Structural Repair Manual (SRM), Volume 1, Revision 32, dated October 15, 2014, for damage criteria and repair instructions. We have revised this final rule to refer to Chapter 57 of the SRM instead of Subject 57–00–00.

Conclusion
We reviewed the available data and determined that air safety and the public interest require adopting this AD as proposed, except for minor editorial changes. We have determined that these minor changes:

• Are consistent with the intent that was proposed in the NPRM for correcting the unsafe condition; and
• Do not add any additional burden upon the public than was already proposed in the NPRM.

Related Service Information Under 1 CFR Part 51

BAE Systems (Operations) Limited also has issued Chapter 57, Wings, of the Jetstream Series 4100 SRM, Volume 1, Publication Ref. No. (Transmittal No.) SA 4–4100/SRM/400, Revision 32, dated October 15, 2014. Among other actions, Chapter 57 describes damage criteria and procedures for repairing the wing structure.

This service information is reasonably available because the interested parties have access to it through their normal course of business or by the means identified in the ADDRESSES section.

Costs of Compliance
We estimate that this AD affects 15 airplanes of U.S. registry.

We also estimate that it takes up to 25 work-hours per product to comply with the basic requirements of this AD. The average labor rate is $85 per work-hour. Based on these figures, we estimate the cost of this AD on U.S. operators to be up to $31,875, or up to $2,125 per product.

We have received no definitive data that enables us to provide a cost estimate for the on-condition actions (repairing cracks, corrosion, and defects) specified in this AD.

Authority for This Rulemaking
Title 49 of the United States Code specifies the FAA’s authority to issue rules on aviation safety. Subtitle I, section 106, describes the authority of the FAA Administrator. “Subtitle VII:
Aviation Programs,” describes in more detail the scope of the Agency’s authority.

We are issuing this rulemaking under the authority described in “Subtitle VII, Part A, Subpart III, Section 44701: General requirements.” Under that section, Congress charges the FAA with promoting safe flight of civil aircraft in air commerce by prescribing regulations for practices, methods, and procedures the Administrator finds necessary for safety in air commerce. This regulation is within the scope of that authority because it addresses an unsafe condition that is likely to exist or develop on products identified in this rulemaking action.

Regulatory Findings

We determined that this AD will not have federalism implications under Executive Order 13132. This AD will not have a substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government.

For the reasons discussed above, I certify that this AD:

1. Is not a “significant regulatory action” under Executive Order 12866;
2. Is not a “significant rule” under the DOT Regulatory Policies and Procedures (44 FR 11034, February 26, 1979);
3. Will not affect intrastate aviation in Alaska; and
4. Will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

Adoption of the Amendment

Accordingly, under the authority delegated to me by the Administrator, the FAA amends 14 CFR part 39 as follows:

PART 39—AIRWORTHINESS DIRECTIVES

§ 39.13 [Amended]

1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

2. The FAA amends § 39.13 by removing Airworthiness Directive (AD) 2012–11–15, Amendment 39–17079 (77 FR 36127, June 18, 2012), and adding the following new AD:

(a) Effective Date

This AD is effective February 7, 2017.

(b) Affected ADs

(c) Applicability

This AD applies to BAE (Operations) Limited Model 4101 airplanes, certificated in any category, all models and all serial numbers.

(d) Subject

Air Transport Association (ATA) of America Code 57, Wings.

(e) Reason

This AD was prompted by new reports of cracking found in the wing rear spar and technical analysis results, which confirmed that the cracks initiation and propagation are due to fatigue, with no indication of any other crack initiation mechanism (e.g., stress corrosion). We are issuing this AD to detect and correct cracking in the wing rear spar, which could propagate to a critical length, possibly affecting the structural integrity of the area and resulting in a fuel tank rupture, with consequent damage to the airplane and possible injury to its occupants.

(f) Compliance

Comply with this AD within the compliance times specified, unless already done.

(g) Repetitive Inspections and Repair

Within 30 days after the effective date of this AD, or within 1,600 flight cycles since the most recent detailed inspection was done as specified in BAE Systems Alert Service Bulletin J41–A57–029, whichever occurs later: Do a detailed inspection for cracks, corrosion, and other defects (defects include scratches, dents, holes, damage to fastener holes, or damage to surface protection and finish) of the rear face of the wing rear spars, in accordance with the Accomplishment Instructions of BAE Systems Alert Service Bulletin J41–A57–029, Revision 3, dated April 8, 2014. Repeat the inspection thereafter at intervals not to exceed 1,600 flight cycles.

(1) If any cracking, corrosion, or other defect is found within the criteria defined in Chapter 57, Wings, of the Jetstream Series 4100 Structural Repair Manual (SRM), Volume 1, Publication Ref. No. (Transmittal No.) SA 4–4100/SRM/400, Revision 32, dated October 15, 2014 (“Chapter 57 of the SRM”): Before further flight, repair the affected area, in accordance with the repair instructions of Chapter 57 of the SRM.

(2) If any cracking, corrosion, or other defect is found exceeding the criteria defined in Chapter 57 of the SRM: Before further flight, repair using a method approved by the Manager, International Branch, ANM–116, Transport Airplane Directorate, FAA; or the European Aviation Safety Agency (EASA); or BAE Systems (Operations) Limited’s EASA Design Organization Approval (DOA).

(b) Repair Does Not Constitute Terminating Action Except for Certain Repairs

Accomplishment of a repair as required by paragraphs (g)(1) and (g)(2) of this AD, does not constitute terminating action for the repetitive inspections required by paragraph (g) of this AD, unless the approved repair required by paragraph (g)(2) of this AD states otherwise (e.g., the approved repair states the repair terminates the inspections for the repaired area only).

(i) Other FAA AD Provisions

The following provisions also apply to this AD:

(1) Alternative Methods of Compliance (AMOCs): The Manager, International Branch, ANM–116, Transport Airplane Directorate, FAA, has the authority to approve AMOCs for this AD, if requested using the procedures found in 14 CFR 39.19. In accordance with 14 CFR 39.19, send your request to your principal inspector or local Flight Standards District Office, as appropriate. If sending information directly to the International Branch, send it to ATTN: Todd Thompson, Aerospace Engineer, International Branch, ANM–116, Transport Airplane Directorate, FAA, 1601 Lind Avenue SW., Renton, WA 98057–3356; telephone 425–227–1175; fax 425–227–1149. Information may be emailed to: 9-ANM-116-AMOC-REQUESTS@faa.gov. Before using any approved AMOC, notify your appropriate principal inspector, or lacking a principal inspector, the manager of the local flight standards district office/certificate holding district office. The AMOC approval letter must specifically reference this AD.

(2) Contacting the Manufacturer: As of the effective date of this AD, for any requirement in this AD to obtain corrective actions from a manufacturer, the action must be accomplished using a method approved by the Manager, International Branch, ANM–116, Transport Airplane Directorate, FAA; or the EASA; or BAE Systems (Operations) Limited’s EASA DOA. If approved by the DOA, the approval must include the DOA-authorized signature.

(j) Related Information

Refer to Mandatory Continuing Airworthiness Information (MCAI) EASA Airworthiness Directive 2015–0100, dated June 3, 2015, for related information. This MCAI may be found in the AD docket on the Internet at http://www.regulations.gov by searching for and locating Docket No. FAA–2016–0457.

(k) Material Incorporated by Reference

(1) The Director of the Federal Register approved the incorporation by reference (IBR) of the service information listed in this paragraph under 5 U.S.C. 552(a) and 1 CFR part 51.

(2) You must use this service information as applicable to do the actions required by this AD, unless this AD specifies otherwise.

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 39

RIN 2120–AA64

Airworthiness Directives; Bombardier, Inc. Airplanes

AGENCY: Federal Aviation Administration (FAA), Department of Transportation (DOT).

ACTION: Final rule.

SUMMARY: We are adopting a new airworthiness directive (AD) for certain Bombardier, Inc. Model CL–600–2C10 (Regional Jet Series 700, 701, & 702) airplanes, Model CL–600–2D15 (Regional Jet Series 700, 701, & 702) airplanes, Model CL–600–2D24 (Regional Jet Series 900) airplanes, and Model CL–600–2E25 (Regional Jet Series 1000) airplanes. This AD was prompted by a determination that the protective polyurethane tapes applied to the upper surfaces of the aluminum and titanium floor structural members may not be trimmed properly, and on some places may overhang the profiles of the structural parts. Subsequent tests revealed that the overhanging pieces of tapes that are not bonded to the structure do not meet the flammability requirements and may allow fire propagation below the floor structure. We are issuing this AD to detect and correct overhanging pieces of protective polyurethane tapes, which are not bonded to the structure and do not meet the flammability requirements; this condition may allow fire propagation below the floor structure.

Transport Canada Civil Aviation (TCCA), which is the aviation authority for Canada, has issued a Canadian AD CF–2016–14, dated May 18, 2016 (referred to after this as the Mandatory Continuing Airworthiness Information, or “the MCAI”), to correct an unsafe condition for certain Bombardier, Inc. Model CL–600–2C10 (Regional Jet Series 700, 701, & 702) airplanes, Model CL–600–2D15 (Regional Jet Series 705) airplanes, Model CL–600–2D24 (Regional Jet Series 900) airplanes, and Model CL–600–2E25 (Regional Jet Series 1000) airplanes. The MCAI states:

An inspection revealed that the protective polyurethane tapes applied to the upper surfaces of the aluminum and titanium floor structural members installed on CRJ 700/900/1000 aeroplanes may not be trimmed properly and on some places may overhang the profiles of the floor structural parts. Subsequent tests revealed that the overhanging pieces of tapes which are not bonded to the structure, do not meet the flammability requirements. If not corrected, this condition may allow fire propagation below the floor structure.

This [Canadian] AD was issued to mandate the [detailed] inspection and removal of any excessive pieces of overhanging tape [or replacing incorrectly installed tape] found on the floor structure.

You may examine the MCAI in the AD docket on the Internet at http://www.regulations.gov by searching for and locating Docket No. FAA–2016–8180.

SUPPLEMENTARY INFORMATION:

Discussion

We issued a notice of proposed rulemaking (NPRM) to amend 14 CFR part 39 by adding an AD that would apply to certain Bombardier, Inc. Model CL–600–2C10 (Regional Jet Series 700, 701, & 702) airplanes, Model CL–600–2D15 (Regional Jet Series 705) airplanes, Model CL–600–2D24 (Regional Jet Series 900) airplanes, and Model CL–600–2E25 (Regional Jet Series 1000) airplanes. The NPRM published in the Federal Register on July 28, 2016 (81 FR 49577) (“the NPRM”). The NPRM was prompted by a determination that the protective polyurethane tapes applied to the upper surfaces of the aluminum and titanium floor structural members may not be trimmed properly, and on some places may overhang the profiles of the floor structural parts. Subsequent tests revealed that the overhanging pieces of tapes that are not bonded to the structure do not meet the flammability requirements and may allow fire propagation below the floor structure. We issued this AD to detect and correct overhanging pieces of protective polyurethane tapes, which are not bonded to the structure and do not meet the flammability requirements; this condition may allow fire propagation below the floor structure.
Comments
We gave the public the opportunity to participate in developing this AD. The following presents the comment received on the NPRM and the FAA’s response.

Request To Revise Compliance Time
Endeavor Air requested that we revise the compliance time from 12,600 flight hours after the effective date of this AD to 16,000 flight hours after the effective date of this AD. Endeavor Air explained that it understands that the 12,600-flight-hour threshold was established to coincide with 12,000-flight-hour 2C check tasks, when removal of all the floor boards over the entire length of the airplane is scheduled, and not due to other calculations. Endeavor Air stated that Bombardier is in the process of escalating the intervals for a C-check (which includes removing the floor boards to expose the polyurethane tapes) from 12,000 flight hours to 16,000 flight hours. Endeavor Air explained that this increase will prevent an undue financial burden by allowing operators to accomplish this inspection during scheduled floor removal. Endeavor Air also stated that it has received written support from Bombardier for escalating this corrective action to 16,000 flight hours.

We do not agree with the commenter’s request to extend the compliance time. Escalation of the C-check interval has not been approved yet and is a separate issue from the safety concern being addressed in this AD. We have determined that the compliance time, as proposed, represents the maximum interval of time allowable for the affected airplanes to continue to safely operate before the inspection is done. However, according to the provisions of paragraph (i) of this AD, we might approve requests to adjust the compliance time if the request includes data that substantiates that the new compliance time would provide an acceptable level of safety. We have not changed this AD in this regard.

Conclusion
We reviewed the relevant data, considered the comment received, and determined that air safety and the public interest require adopting this AD as proposed except for minor editorial changes. We have determined that these minor changes:

- Are consistent with the intent that was proposed in the NPRM for correcting the unsafe condition; and
- Do not add any additional burden upon the public than was already proposed in the NPRM.

Related Service Information Under 1 CFR Part 51
Bombardier has issued Service Bulletin 670BA–53–055, dated December 3, 2015. The service information describes procedures for inspecting the polyurethane protective tapes for any excess tape or incorrect tape installation on the floor structure, and doing corrective actions, which include removing any excess tape and replacing any incorrectly installed tape. This service information is reasonably available because the interested parties have access to it through their normal course of business or by the means identified in the ADDRESSES section.

Costs of Compliance
We estimate that this AD affects 569 airplanes of U.S. registry.

We estimate the following costs to comply with this AD:

<table>
<thead>
<tr>
<th>Action</th>
<th>Labor cost</th>
<th>Parts cost</th>
<th>Cost per product</th>
<th>Cost on U.S. operators</th>
</tr>
</thead>
<tbody>
<tr>
<td>Inspection and repair</td>
<td>190 work-hours × $85 per hour = $16,150</td>
<td>$0</td>
<td>$16,150</td>
<td>$9,189,350</td>
</tr>
</tbody>
</table>

Bombardier provided a single cost only. It did not separate out costs for inspection and corrective actions. Therefore, we have not specified separate on-condition repair costs.

Authority for This Rulemaking
Title 49 of the United States Code specifies the FAA’s authority to issue rules on aviation safety. Subtitle I, section 106, describes the authority of the FAA Administrator. “Subtitle VII: Aviation Programs,” describes in more detail the scope of the Agency’s authority.

We are issuing this rulemaking under the authority described in “Subtitle VII, Part A, Subpart III, Section 44701: General requirements.” Under that section, Congress charges the FAA with promoting safe flight of civil aircraft in air commerce by prescribing regulations for practices, methods, and procedures the Administrator finds necessary for safety in air commerce. This regulation is within the scope of that authority because it addresses an unsafe condition that is likely to exist or develop on products identified in this rulemaking action.

Regulatory Findings
We determined that this AD will not have federalism implications under Executive Order 13132. This AD will not have a substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government.

For the reasons discussed above, I certify that this AD:

1. Is not a “significant regulatory action” under Executive Order 12866;
2. Is not a “significant rule” under the DOT Regulatory Policies and Procedures (44 FR 11034, February 26, 1979);
3. Will not affect intrastate aviation in Alaska; and
4. Will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 39
Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

Adoption of the Amendment
Accordingly, under the authority delegated to me by the Administrator, the FAA amends 14 CFR part 39 as follows:

PART 39—AIRWORTHINESS DIRECTIVES

§ 39.13 [Amended]

1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

2. The FAA amends § 39.13 by adding the following new airworthiness directive (AD):

(a) Effective Date
This AD is effective February 7, 2017.
(b) Affected ADs

None.

(c) Applicability

This AD applies to the Bombardier, Inc. airplanes identified in paragraphs (c)(1), (c)(2), and (c)(3) of this AD, certificated in any category.

(1) Model CL–600–2C10 (Regional Jet Series 700, 701, & 702) airplanes, serial numbers 10002 through 10342 inclusive.

(2) Model CL–600–2D15 (Regional Jet Series 705) airplanes and Model CL–600–2D24 (Regional Jet Series 900) airplanes, serial numbers 15001 through 15347 inclusive.

(3) Model CL–600–2E25 (Regional Jet Series 1000) airplanes, serial numbers 19001 through 19040 inclusive.

(d) Subject

Air Transport Association (ATA) of America Code 53, Fuselage.

(e) Reason

This AD was prompted by a determination that the protective polyurethane tapes applied to the upper surfaces of the aluminum and titanium floor structural members may not be trimmed properly, and on some places may overhang the profiles of the floor structural parts. Subsequent tests revealed that the overhanging pieces of tapes that are not bonded to the structure do not meet the flammability requirements and may allow fire propagation below the floor structure. We are issuing this AD to detect and correct overhanging pieces of protective polyurethane tapes, which are not bonded to the structure and do not meet the flammability requirements; this condition may allow fire propagation below the floor structure.

(f) Compliance

Comply with this AD within the compliance times specified, unless already done.

(g) Inspection and Corrective Actions

Within 12,600 flight hours after the effective date of this AD: Do a detailed inspection for excess tape or incorrect tape installation of the protective polyurethane tapes installed between floor panels and floor structure between fuselage station (FS) 280.00 and FS969.00; and do all applicable corrective actions; in accordance with the Accomplishment Instructions of Bombardier Service Bulletin 670BA–53–055, dated December 3, 2015, except as specified in paragraph (h) of this AD. Do all applicable corrective actions before further flight.

(h) Exception to Service Information

Where Bombardier Service Bulletin 670BA–53–055, dated December 3, 2015, specifies to contact Bombardier, Inc., to “get an approved disposition to complete this service bulletin,” before further flight, repair using a method approved by the Manager, New York Aircraft Certification Office (ACO), ANE–170, FAA; or Transport Canada Civil Aviation (TCCA); or Bombardier, Inc.’s TCCA Design Approval Organization (DAO).

(i) Other FAA AD Provisions

The following provisions also apply to this AD:

(1) Alternative Methods of Compliance (AMOCS): The Manager, New York ACO, ANE–170, FAA, has the authority to approve AMOCS for this AD, if requested using the procedures found in 14 CFR 39.19. In accordance with 14 CFR 39.19, send your request to your principal inspector or local Flight Standards District Office, as appropriate. If sending information directly to the ACO, send it to ATTN: Program Manager, Continuing Operational Safety, FAA, New York ACO, 1600 Stewart Avenue, Suite 410, Westbury, NY 11590; telephone: 516–228–7300; fax: 516–794–5531. Before using any approved AMOC, notify your appropriate principal inspector, or lacking a principal inspector, the manager of the local flight standards district office/certificate holding district office. The AMOC approval letter must specifically reference this AD.

(2) Contacting the Manufacturer: For any requirement in this AD to obtain corrective actions from a manufacturer, the action must be accomplished using a method approved by the Manager, New York ACO, ANE–170, FAA; or TCCA; or Bombardier, Inc.’s TCCA DAO. If approved by the DAO, the approval must include the DAO-authorized signature.

(j) Related Information

Refer to Mandatory Continuing Airworthiness Information (MCAI) Canadian AD CF–2016–14, dated May 18, 2016, for related information. This MCAI may be found in the AD docket on the Internet at http://www.regulations.gov by searching for and locating Docket No. FAA–2016–8180.

(k) Material Incorporated by Reference

(1) The Director of the Federal Register approved the incorporation by reference (IBR) of the service information listed in this paragraph under 5 U.S.C. 552(a) and 1 CFR part 51.

(2) You must use this service information as applicable to do the actions required by this AD, unless this AD specifies otherwise.

(ii) Reserved.

(3) For service information identified in this AD, contact Bombardier, Inc., 400 Côte-Vertu Road West, Dorval, Québec H4S 1Y9, Canada; Widebody Customer Response Center North America toll-free telephone 1–866–538–1247 or direct-dial telephone: 1–514–853–2999; fax: 514–853–7401; email: ac.vul@apo.bombardier.com; Internet: http://www.bombardier.com.

(4) You may view this service information at the FAA, Transport Airplane Directorate, 1601 Lind Avenue SW., Renton, WA. For information on the availability of this material at the FAA, call 425–227–1221.

(5) You may view this service information that is incorporated by reference at the National Archives and Records Administration (NARA). For information on the availability of this material at NARA, call 202–741–6036, or go to: http://www.archives.gov/federal-register/cfr/ibr-locations.html.

Issued in Renton, Washington, on December 9, 2016.

Dionne Palermo,

Acting Manager, Transport Airplane Directorate, Aircraft Certification Service.

[FR Doc. 2016–30418 Filed 12–30–16; 8:45 am]

BILLING CODE 4910–13–P

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 39

[3920–AA64]

Airworthiness Directives: Airbus Airplanes

AGENCY: Federal Aviation Administration (FAA), Department of Transportation (DOT).

ACTION: Final rule.

SUMMARY: We are adopting a new airworthiness directive (AD) for certain Airbus Model A330–200 and –300 series airplanes; Model A330–200 Freighter series airplanes; and Model A340–200, –300, –500, and –600 series airplanes. This AD was prompted by reports of chafed wiring at the upper left corner of the cockpit door frame. The affected wire bundle was not grounded on the cockpit door frame. This AD requires modifying the cockpit door frame structure, installing bonding-leads to the upper cockpit door frame, and modifying the upper cockpit door plate cover. We are issuing this AD to address the unsafe condition on these products.

DATES: This AD is effective February 7, 2017.

The Director of the Federal Register approved the incorporation by reference of certain publications listed in this AD as of February 7, 2017.

ADDRESSES: For service information identified in this final rule, contact Airbus SAS, Airworthiness Office—EAL, 1 Rond Point Maurice Bellonte, 31707 Blagnac Cedex, France; telephone: +33 5 61 93 36 96; fax: +33 5 61 93 45 80; email: airworthiness.A330–A340@airbus.com; Internet: http://www.airbus.com. You may view this referenced service information at the FAA, Transport Airplane Directorate, 1601 Lind Avenue SW., Renton, WA. For information on the availability of this material at the FAA, call 425–227–1221. It is also available on the Internet at http://www.regulations.gov by searching for and locating Docket No. FAA–2015–3631.

Federal Register / Vol. 82, No. 1 / Tuesday, January 3, 2017 / Rules and Regulations
Examining the AD Docket

You may examine the AD docket on the Internet at http://www.regulations.gov by searching for and locating Docket No. FAA–2015–3631; or in person at the Docket Management Facility between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The AD docket contains this AD, the regulatory evaluation, any comments received, and other information. The street address for the Docket Office (telephone: 800–647–5527) is Docket Management Facility, U.S. Department of Transportation, Docket Operations, M–30, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE., Washington, DC 20590.

SUPPLEMENTARY INFORMATION:

Discussion

We issued a supplemental notice of proposed rulemaking (SNPRM) to amend 14 CFR part 39 by adding an AD that would apply to certain Airbus Model A330–200 and –300 series airplanes; Model A330–200 Freighter series airplanes; and Model A340–200, –300, –500, and –600 series airplanes. The SNPRM published in the Federal Register on June 6, 2016 (81 FR 36211) (“the SNPRM”). We preceded the SNPRM with a notice of proposed rulemaking (NPRM) that was published in the Federal Register on September 18, 2015 (80 FR 56405) (“the NPRM”). The NPRM proposed to require modifying the cockpit door frame structure, installing bonding-leads to the upper cockpit door frame, and modifying the upper cockpit door plate cover. The NPRM was prompted by reports of chafed wiring at the upper left corner of the cockpit door. The SNPRM proposed to also require, for certain airplanes, installing a noise-reduced cockpit door locking system (CDLS). We are issuing this AD to prevent electrical shock injury to persons contacting the cockpit door.

The European Aviation Safety Agency (EASA), which is the Technical Agent for the Member States of the European Union, has issued EASA AD 2015–0037, dated March 2, 2015 (referred to after this as the Mandatory Continuing Airworthiness Information, or “the MCAI”), to correct an unsafe condition for certain Airbus Model A330–200 and –300 series airplanes; Model A330–200 Freighter series airplanes; and Model A330–200 and –300 series airplanes. The MCAI states:

An operator has reported chafed wiring at the upper left corner of the cockpit door. The investigation concluded that the affected wire bundle, which supplies a voltage of 115V [volt] AC [alternating current], was not grounded on the cockpit door frame as part of the design of the A330 and A340 aeroplanes. This condition, if not corrected, could result in injury (electrical shock), in case any person gets in contact with the door frame.

For the reasons described above, this [EASA] AD requires modification of the cockpit door frame structure, installation of bonding-leads to the upper cockpit door frame and modification of the upper cockpit door plate cover.

Comments

We gave the public the opportunity to participate in developing this AD. The following presents the comments received on the SNPRM and the FAA’s response to each comment.

Requests To Remove Requirement for Additional Concurrent Actions

Delta Airlines (DAL) requested that we remove the proposed requirement to install the CDLS as specified in Airbus Service Bulletin A330–25–3254, Revision 02, dated December 13, 2004. American Airlines (AAL) requested that we clarify the airplanes affected by that proposed requirement. Both commenters stated that Airbus has confirmed that installation of the noise-reduced CDLS specified in Airbus Service Bulletin A330–25–3254, Revision 02, dated December 13, 2004, is optional and applies only to certain Qantas Airways Limited airplanes. Airbus stated that modification of the airplane as specified in Airbus Service Bulletin A330–25–3213, Revision 02, dated August 12, 2016, has the same impact on the airplane as the modification specified in Airbus Service Bulletin A330–25–3254, Revision 02, dated December 13, 2004. Airbus explained that the airplanes affected by proposed requirement are defined as configuration 01 in Airbus Service Bulletin A330–25–3534, Revision 02, dated May 18, 2015, which will be corrected at its next revision to remove the reference to optional Airbus Service Bulletin A330–25–3254, Revision 02, dated December 13, 2004.

We agree with the commenters’ requests. We have confirmed that modification of the airplane as specified in Airbus Service Bulletin A330–25–3254, Revision 02, dated December 13, 2004, is optional and applies only to certain Qantas Airways Limited airplanes. We have removed paragraphs (i) and (j)(3) from the proposed AD (in the SNPRM) and redesignated subsequent paragraphs accordingly.

Changes to Final Rule

Airbus has released Service Bulletin A330–25–3213, Revision 02, dated August 12, 2016. This service information revision specifies minor additional work to replace the fasteners of the cover of the cockpit door frame. We have determined that this minor change will not increase the overall cost estimates specified in the SNPRM or otherwise impose an additional burden on any operator. We have revised paragraph (h) of this AD to specify A330–25–3213, Revision 02, dated August 12, 2016, as an appropriate source of service information for accomplishing the required actions. We have removed Airbus Service Bulletin A330–25–3213, dated October 12, 2004, from paragraph (j)(2)(i) of the proposed AD (in the SNPRM) and redesignated subsequent paragraphs accordingly.

Conclusion

We reviewed the relevant data, considered the comments received, and determined that air safety and the public interest require adopting this AD with the changes described previously and minor editorial changes. We have determined that these minor changes:

• Are consistent with the intent that was proposed in the SNPRM for correcting the unsafe condition; and
• Do not add any additional burden upon the public than was already proposed in the SNPRM.

We also determined that these changes will not increase the economic burden on any operator or increase the scope of this AD.

Related Service Information Under 1 CFR Part 51

Airbus has issued the following service information:

• Airbus Service Bulletin A330–25–3213, Revision 02, dated August 12, 2016. This service information describes procedures for modification of the upper cockpit door plate cover.
• Airbus Service Bulletin A340–25–3534, Revision 02, dated May 18, 2015. This service information describes procedures for modifying the cockpit
door frame structure and installing bonding-leads to the upper cockpit door frame.

- Airbus Service Bulletin A340–25–4217, Revision 01, dated April 25, 2005. This service information describes procedures for modifying the upper cockpit door plate cover.
- Airbus Service Bulletin A340–25–4349, Revision 02, dated September 4, 2015. This service information describes procedures for modifying the cockpit door frame structure and installing bonding-leads to the upper cockpit door frame.
- Airbus Service Bulletin A340–25–5212, Revision 01, dated October 27, 2014. This service information describes procedures for modifying the cockpit door frame structure and installing bonding-leads to the upper cockpit door frame.
- Airbus Service Bulletin A340–25–52869 or Modification 53292 has been embodied in production.

This service information is reasonably available because the interested parties have access to it through their normal course of business or by the means identified in the ADDRESSES section.

Costs of Compliance

We estimate that this AD affects 70 airplanes of U.S. registry.

We estimate that it would take about 53 work-hours per product to comply with the new basic requirements of this AD. The average labor rate is $85 per work-hour. Required parts would cost about $2,430 per product. Based on these figures, we estimate the cost of this AD on U.S. operators to be $485,450, or $6,935 per product.

According to the manufacturer, some of the costs of this AD may be covered under warranty, thereby reducing the cost impact on affected individuals. We do not control warranty coverage for affected individuals. As a result, we have included all costs in our cost estimate.

Authority for This Rulemaking

Title 49 of the United States Code specifies the FAA’s authority to issue rules on aviation safety. Subtitle I, section 106, describes the authority of the FAA Administrator. “Subtitle VII: Aviation Programs,” describes in more detail the scope of the Agency’s authority.

We are issuing this rulemaking under the authority described in “Subtitle VII, Part A, Subpart III, Section 44701: General requirements.” Under that section, Congress charges the FAA with promoting safe flight of civil aircraft in air commerce by prescribing regulations for practices, methods, and procedures the Administrator finds necessary for safety in air commerce. This regulation is within the scope of that authority because it addresses an unsafe condition that is likely to exist or develop on products identified in this rulemaking action.

Regulatory Findings

We determined that this AD will not have federalism implications under Executive Order 13132. This AD will not have a substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government.

For the reasons discussed above, I certify that this AD:

1. Is not a “significant regulatory action” under Executive Order 12866;
2. Is not a “significant rule” under the DOT Regulatory Policies and Procedures (49 FR 11034, February 26, 1979);
3. Will not affect intrastate aviation in Alaska; and
4. Will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

Adoption of the Amendment

Accordingly, under the authority delegated to me by the Administrator, the FAA amends 14 CFR part 39 as follows:

PART 39—AIRWORTHINESS DIRECTIVES

§ 39.13 [Amended]

The FAA amends § 39.13 by adding the following new airworthiness directive (AD):

(a) Effective Date

This AD is effective February 7, 2017.

(b) Affected ADs

None.

(c) Applicability

This AD applies to Airbus airplanes, certificated in any category, identified in paragraphs (c)(1), (c)(2), and (c)(3) of this AD, except airplanes on which Airbus Modification 203066, Modification 203074, or Modification 203372 has been embodied in production.

(d) Subject

Air Transport Association (ATA) of America Code 25, Equipment/furnishings.

(e) Reason

This AD was prompted by reports of chafed wiring at the upper left corner of the cockpit door. The affected wire bundle was not grounded on the cockpit door frame. We are issuing this AD to prevent electrical shock injury to persons contacting the cockpit door.

(f) Compliance

Comply with this AD within the compliance times specified, unless already done.

(g) Door Modification and Installation

Within 24 months after the effective date of this AD, modify the cockpit door frame structure and install bonding-leads to the upper cockpit door frame, in accordance with the Accomplishment Instructions of the applicable service information identified in paragraphs (g)(1), (g)(2), and (g)(3) of this AD.

(h) Cover Plate Modification of the Upper Flight Deck Door

Except for airplanes on which Airbus Modification 52809 or Modification 53292 has been embodied in production: Prior to or concurrently with accomplishing the actions required by paragraph (g) of this AD, modify the upper cockpit door plate cover, in accordance with the Accomplishment Instructions of the applicable service information identified in paragraphs (h)(1), (h)(2), and (h)(3) of this AD.

3. For airplanes identified in Airbus Service Bulletin A340–25–5212, Revision 01,
(i) Credit for Previous Actions

(1) This paragraph provides credit for the actions required by paragraph (g) of this AD, if those actions were performed before the effective date of this AD using Airbus Service Bulletin A330–25–3534, Revision 01, dated October 23, 2014; or Airbus Service Bulletin A340–25–4549, Revision 01, dated October 27, 2014, as applicable. These service bulletins are not incorporated by reference in this AD.

(2) This paragraph provides credit for the actions required by paragraph (h) of this AD, if those actions were performed before the effective date of this AD using the applicable service information specified in paragraphs (i)(2)(i), (i)(2)(ii), and (i)(2)(iii) of this AD. This service information is not incorporated by reference in this AD.

(j) Other FAA AD Provisions

The following provisions also apply to this AD:

(1) Alternative Methods of Compliance (AMOCs): The Manager, International Branch, ANM–116, Transport Airplane Directorate, FAA, has the authority to approve AMOCs for this AD, if requested using the procedures found in 14 CFR 39.19. In accordance with 14 CFR 39.19, send your request to your principal inspector or local Flight Standards District Office, as appropriate. If sending information directly to the International Branch, send it to ATTN: Vladimir Ulyanov, Aerospace Engineer, International Branch, ANM–116, Transport Airplane Directorate, FAA, 1601 Lind Avenue SW., Renton, WA 98057–3356; telephone: 425–227–1138; fax: 425–227–1149. Information may be emailed to: ANM–116-AMOC-REQUESTS@faa.gov. Before using any approved AMOC, notify your appropriate principal inspector, or lacking a principal inspector, the manager of the local flight standards district office/ certificate holding district office. The AMOC approval letter must specifically reference this AD.

(2) Contacting the Manufacturer: For any requirement in this AD to obtain corrective actions from a manufacturer, the action must be accomplished using a method approved by the Manager, International Branch, ANM–116, Transport Airplane Directorate, FAA; or the European Aviation Safety Agency (EASA); or Airbus’s EASA Design Organization Approval (DOA). If approved by the DOA, the approval must include the DOA-authorized signature.

(3) Required for Compliance (RC): If any service information contains procedures or tests that are identified as RC, those procedures and tests must be done to comply with this AD; any procedures or tests that are not identified as RC are recommended. Those procedures and tests that are not identified as RC may be deviated from using accepted methods in accordance with the operator’s maintenance or inspection program without obtaining approval of an AMOC, provided the procedures and tests identified as RC can be done and the airplane can be put back in an airworthy condition. Any substitutions or changes to procedures or tests identified as RC require approval of an AMOC.

(k) Related Information

(1) Refer to Mandatory Continuing Airworthiness Information (MCAI) EASA AD 2015–0037, dated March 2, 2015, for related information. This MCAI may be found in the AD docket on the Internet at http://www.regulations.gov by searching for and locating Docket No. FAA–2015–3631.

(2) Service information identified in this AD that is not incorporated by reference is available at the addresses specified in paragraphs (l)(3) and (l)(4) of this AD.

(l) Material Incorporated by Reference

(1) The Director of the Federal Register approved the incorporation by reference (IBR) of the service information listed in this paragraph under 5 U.S.C. 552(a) and 1 CFR part 51.

(2) You must use this service information as applicable to do the actions required by this AD, unless this AD specifies otherwise.

(3) For service information identified in this AD, contact Airbus SAS, Airworthiness Office—EAL, 1 Rond Point Maurice Bellonte, 31707 Blagnac Cedex, France; telephone: +33 5 61 93 36 96; fax: +33 5 61 93 45 80; email: airworthiness.A330-A340@airbus.com; Internet: http://www.airbus.com.

(4) You may view this service information at the FAA, Transport Airplane Directorate, 1601 Lind Avenue SW., Renton, WA. For information on the availability of this material at the FAA, call 425–227–1221.

(5) You may view this service information that is incorporated by reference at the National Archives and Records Administration (NARA). For information on the availability of this material at NARA, call 202–741–6030, or go to: http://www.archives.gov/federal-register/cfr/ibr-locations.html.

Issued in Renton, Washington, on December 6, 2016.

Dionne Palermo,
Acting Manager, Transport Airplane Directorate, Aircraft Certification Service.

[FR Doc. 2016–30280 Filed 12–30–16; 8:45 am]
BILLING CODE 4910–13–P
Sections 123.16—Exemptions of General Applicability

Sections 123.16(b)(4) and (5) are revised to clarify that certifications will be sent to CBP electronically and not via hard copy.

Section 123.17—Exports of Firearms, Ammunition, and Personal Protective Gear

All references to AES in §123.17 are struck and, in their place, instructions to electronically file with CBP are inserted. Additionally, §123.17(g)(2) and (b) are revised to update certain documentation procedures.

Section 123.22—Filing, Retention, and Return of Export Licenses and Filing of Export Information

Section 123.22 of the ITAR is revised by making certain grammatical changes and to clarify procedures for the electronic reporting of exports and temporary imports of defense articles, services, and technical data pursuant to a license or other approval. All references to AES in §123.22 are struck and, in their place, instructions to electronically file with CBP are inserted.

Section 123.22(a) is revised to clarify electronic reporting procedures for exports. Paragraphs (a)(1) and (a)(2) are also revised for clarification of certain procedures.

Section 123.22(b)(2) is revised to clarify that emergency shipment data shall no longer be required to be sent directly to DDTC, but rather be electronically declared to CBP, which will make the data available to DDTC via an electronic data exchange.

Section 123.22(b)(3)(iii) is revised to update electronic reporting procedures for technical data and defense service exemptions.

Section 123.22(c) is revised to strike a provision relating to the return of licenses and to reorder the subparagraphs.

Section 123.24—Shipments by U.S. Postal Service

Section 123.24 is revised to strike references to AES and insert, in their place, instructions to electronically file with CBP. The underlying content of this section is not affected by this change.

Section 126.4—Shipments by or for United States Government Agencies

Section 126.4(d) is amended by revising the first sentence to account for electronic reporting, and by striking the second sentence.

Section 126.6—Foreign-Owned Military Aircraft and Naval Vessels, and the Foreign Military Sales Program

Section 126.6(c) is revised to clarify certain procedures relating to the declaration of information to CBP, and to remove references to form DSP–94. Section 126.6(c)(5)(iii) is revised to require that the exporter provide CBP with a copy of the transportation plan under the Department of Defense National Industrial Security Program Operating Manual for shipments of classified defense articles exported pursuant to a Foreign Military Sales Letter of Offer and Acceptance. Section 126.6(c)(6)(ii) is revised to correct a punctuation error made in a previous rulemaking.

Section 126.16—Exemption Pursuant to the Defense Trade Cooperation Treaty Between the United States and Australia

Section 126.16(l) is revised to strike references to the Automated Export System and insert, in their place, instructions to electronically file with CBP. The underlying content of this section will not be affected by this change.

Section 126.17—Exemption Pursuant to the Defense Trade Cooperation Treaty Between the United States and the United Kingdom

Section 126.17(l) is revised to strike references to the Automated Export System and insert, in their place, instructions to electronically file with CBP. The underlying content of this section will not be affected by this change.

Regulatory Analysis

Administrative Procedure Act

The Department of State is of the opinion that controlling the import and export of defense articles and services is a foreign affairs function of the United States Government and that rules implementing this function are exempt from sections 553 (rulemaking) and 554 (adjudications) of the Administrative Procedure Act. As this rule serves to implement the requirements of the Security and Accountability for Every Port Act of 2006 (Pub. L. 109–347), the Department of State is publishing this final rule using the “good cause” exception to the Administrative Procedure Act, as this rule is being published to fulfill the requirements outlined in Executive Order 13659. The Department has determined that public comment on this rulemaking would be impractical, unnecessary, and contrary to the public interest.

Regulatory Flexibility Act

Because this rulemaking is exempt from Section 553 of the Administrative Procedures Act, a Regulatory Flexibility Analysis is not required and has not been prepared.

Unfunded Mandates Reform Act of 1995

This rule does not involve a mandate that will result in the expenditure by

paperwork and reporting burden currently experienced by importers and exporters. Beginning on December 31, 2016, traders will access the ITDS system via an integrated web portal hosted by CBP. Users may visit https://www.cbp.gov/trade/automated for more information on the single portal.

Through the CBP Partner Government Agency (PGA) program, DDTC promulgated a PGA Message Set that requires traders to enter data relevant to DDTC’s jurisdiction. Beginning December 31, 2016, when declaring permanent or temporary exports and/or temporary imports of defense articles controlled by the U.S. Munitions List (USML), traders will input data relevant to DDTC in CBP’s electronic system(s). CBP will transmit the relevant shipment details to DDTC via an electronic data exchange, eliminating the need for traders to notify DDTC separately.

This rule amends pertinent provisions throughout the ITAR to reflect this new submission mechanism and allow for successor systems to be put in place.

This rule will make the following changes to the ITAR (22 CFR parts 120–130):

Section 120.28—Listing of Forms Referred to in This Subchapter

Section 120.28 is revised to strike the reference to the Automated Export System and add, in its place, “U.S. Customs and Border Protection’s electronic system(s)”.

Section 120.30—The Automated Export System (AES)

Section 120.30 is removed and reserved.

Section 123.4—Temporary Import License Exemptions

Section 123.4(d)(2) is revised to strike the reference to the Automated Export System (AES) and add, in its place, instructions to electronically file information with CBP.

Section 123.5—Temporary Export Licenses

Section 123.5(b) is revised to update certain reporting procedures and to clarify that license information will be submitted to CBP electronically.

Section 123.16—Exemptions of General Applicability

Sections 123.16(b)(4) and (5) are revised to clarify that certifications will be sent to CBP electronically and not via hard copy.

This rule amends pertinent provisions throughout the ITAR to reflect this new submission mechanism and allow for successor systems to be put in place.

This rule will make the following changes to the ITAR (22 CFR parts 120–130):

Section 120.28—Listing of Forms Referred to in This Subchapter

Section 120.28 is revised to strike the reference to the Automated Export System and add, in its place, “U.S. Customs and Border Protection’s electronic system(s)”.

Section 120.30—The Automated Export System (AES)

Section 120.30 is removed and reserved.

Section 123.4—Temporary Import License Exemptions

Section 123.4(d)(2) is revised to strike the reference to the Automated Export System (AES) and add, in its place, instructions to electronically file information with CBP.

Section 123.5—Temporary Export Licenses

Section 123.5(b) is revised to update certain reporting procedures and to clarify that license information will be submitted to CBP electronically.

Section 123.16—Exemptions of General Applicability

Sections 123.16(b)(4) and (5) are revised to clarify that certifications will be sent to CBP electronically and not via hard copy.

Section 123.17—Exports of Firearms, Ammunition, and Personal Protective Gear

All references to AES in §123.17 are struck and, in their place, instructions to electronically file with CBP are inserted. Additionally, §123.17(g)(2) and (b) are revised to update certain documentation procedures.

Section 123.22—Filing, Retention, and Return of Export Licenses and Filing of Export Information

Section 123.22 of the ITAR is revised by making certain grammatical changes and to clarify procedures for the electronic reporting of exports and temporary imports of defense articles, services, and technical data pursuant to a license or other approval. All references to AES in §123.22 are struck and, in their place, instructions to electronically file with CBP are inserted.

Section 123.22(a) is revised to clarify electronic reporting procedures for exports. Paragraphs (a)(1) and (a)(2) are also revised for clarification of certain procedures.

Section 123.22(b)(2) is revised to clarify that emergency shipment data shall no longer be required to be sent directly to DDTC, but rather be electronically declared to CBP, which will make the data available to DDTC via an electronic data exchange.

Section 123.22(b)(3)(iii) is revised to update electronic reporting procedures for technical data and defense service exemptions.

Section 123.22(c) is revised to strike a provision relating to the return of licenses and to reorder the subparagraphs.

Section 123.24—Shipments by U.S. Postal Service

Section 123.24 is revised to strike references to AES and insert, in their place, instructions to electronically file with CBP. The underlying content of this section is not affected by this change.

Section 126.4—Shipments by or for United States Government Agencies

Section 126.4(d) is amended by revising the first sentence to account for electronic reporting, and by striking the second sentence.

Section 126.6—Foreign-Owned Military Aircraft and Naval Vessels, and the Foreign Military Sales Program

Section 126.6(c) is revised to clarify certain procedures relating to the declaration of information to CBP, and to remove references to form DSP–94. Section 126.6(c)(5)(iii) is revised to require that the exporter provide CBP with a copy of the transportation plan under the Department of Defense National Industrial Security Program Operating Manual for shipments of classified defense articles exported pursuant to a Foreign Military Sales Letter of Offer and Acceptance. Section 126.6(c)(6)(ii) is revised to correct a punctuation error made in a previous rulemaking.

Section 126.16—Exemption Pursuant to the Defense Trade Cooperation Treaty Between the United States and Australia

Section 126.16(l) is revised to strike references to the Automated Export System and insert, in their place, instructions to electronically file with CBP. The underlying content of this section will not be affected by this change.

Section 126.17—Exemption Pursuant to the Defense Trade Cooperation Treaty Between the United States and the United Kingdom

Section 126.17(l) is revised to strike references to the Automated Export System and insert, in their place, instructions to electronically file with CBP. The underlying content of this section will not be affected by this change.

Regulatory Analysis

Administrative Procedure Act

The Department of State is of the opinion that controlling the import and export of defense articles and services is a foreign affairs function of the United States Government and that rules implementing this function are exempt from sections 553 (rulemaking) and 554 (adjudications) of the Administrative Procedure Act. As this rule serves to implement the requirements of the Security and Accountability for Every Port Act of 2006 (Pub. L. 109–347), the Department of State is publishing this final rule using the “good cause” exception to the Administrative Procedure Act, as this rule is being published to fulfill the requirements outlined in Executive Order 13659. The Department has determined that public comment on this rulemaking would be impractical, unnecessary, and contrary to the public interest.

Regulatory Flexibility Act

Because this rulemaking is exempt from Section 553 of the Administrative Procedures Act, a Regulatory Flexibility Analysis is not required and has not been prepared.

Unfunded Mandates Reform Act of 1995

This rule does not involve a mandate that will result in the expenditure by
State, local, and tribal governments, in the aggregate, or by the private sector, of $100 million or more in any year and it will not significantly or uniquely affect small governments. Therefore, no actions were deemed necessary under the provisions of the Unfunded Mandates Reform Act of 1995.

Small Business Regulatory Enforcement Fairness Act of 1996

The Department does not believe this rulemaking is a major rule within the definition of 5 U.S.C. 804.

Executive Orders 12372 and 13132

This rulemaking will not have substantial direct effects on the States, on the relationship between the National Government and the States, or on the distribution of power and responsibilities among the various levels of government. Therefore, in accordance with Executive Order 13132, the Department has determined that this rulemaking does not have sufficient federalism implications to require consultations or warrant the preparation of a federalism summary impact statement. The regulations implementing Executive Order 12372 regarding intergovernmental consultation on Federal programs and activities do not apply to this rulemaking.

Executive Orders 12866 and 13563

Executive Orders 12866 and 13563 direct agencies to assess costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributed impacts, and equity). These executive orders stress the importance of quantifying both costs and benefits, of reducing costs, of harmonizing rules, and of promoting flexibility. The Department has determined that the benefits of this rulemaking outweigh any cost to the public, which the Department believes will be minimal. OMB has designated this rule non-significant.

Executive Order 12988

The Department of State has reviewed the proposed amendment in light of Executive Order 12988 to eliminate ambiguity, minimize litigation, establish clear legal standards, and reduce burden.

Executive Order 13175

The Department of State has determined that this rulemaking will not have tribal implications, will not impose substantial direct compliance costs on Indian tribal governments, and will not preempt tribal law. Accordingly, Executive Order 13175 does not apply to this rulemaking.

Paperwork Reduction Act

This rulemaking does not impose or revise any information collections subject to 44 U.S.C. Chapter 35.

List of Subjects

22 CFR Part 120

Approvals, Arms and munitions, Definitions, Forms.

22 CFR Part 123

Arms and munitions, Exemptions, Licenses, Reporting, Shipments.

22 CFR Part 126

Arms and munitions, General policies and provisions.

For the reasons set forth above, title 22, chapter I, subchapter M, parts 120, 123 and 126 are amended as follows:

PART 120—PURPOSE AND DEFINITIONS

1. The authority citation for part 120 continues to read as follows:

2. Amend §120.28 (b)(2) to read as follows:

§120.28 Listing of forms referred to in this subchapter.

(b) * * *

(2) Electronic Export Information submitted using U.S. Customs and Border Protection’s electronic system(s).

§120.30 [Removed and Reserved]

3. Remove and reserve §120.30.

PART 123—LICENSES FOR THE EXPORT AND TEMPORARY IMPORT OF DEFENSE ARTICLES

4. The authority citation for part 123 continues to read as follows:

5. Section 123.4 is amended by revising paragraph (d)(2) to read as follows:

§123.4 Temporary import license exemptions.

(d) * * *

(2) At the time of export, in accordance with the U.S. Customs and Border Protection (CBP) procedures, the Directorate of Defense Trade Controls (DDTC) registered and eligible exporter, or an agent acting on the filer’s behalf, must electronically file the export information with CBP, identify 22 CFR 123.4 as the authority for the export, and provide, as requested by CBP, the entry document number or a copy of the CBP document under which the article was imported.

6. Section 123.5 is amended by revising the last three sentences of paragraph (b) to read as follows:

§123.5 Temporary export licenses.

(b) * * * The license for temporary export must be electronically submitted to U.S. Customs and Border Protection, unless electronic reporting of such information is unavailable, in which case U.S. Customs and Border Protection will issue instructions. In the event a physical license is required by U.S. Customs and Border Protection, the license is to retain the duly endorsed license for temporary export in accordance with §123.22(b) of this subchapter. In the case of a military aircraft or vessel temporarily exported under its own power, evidence that the Department of State has duly authorized it to leave the United States must be readily available on board the aircraft or vessel.

§123.16 Exemptions of general applicability.

(b) * * *

(4) * * * U.S. persons who avail themselves of this exemption must electronically submit a certification to U.S. Customs and Border Protection that these conditions are met, unless directed by U.S. Customs and Border Protection to provide such a certification in another manner.

(5) * * * U.S. persons who avail themselves of this exemption must electronically submit a certification to U.S. Customs and Border Protection to provide such a certification in another manner.
§ 123.17 Exports of firearms, ammunition, and personal protective gear.

(a) * * *

(b) * * *

(iii) The exporter makes an electronic declaration to U.S. Customs and Border Protection pursuant to § 123.22(a), and the exporter is eligible to export under this exemption pursuant to § 120.1(c) of this subchapter, unless the electronic submission of such declaration is unavailable, in which case U.S. Customs and Border Protection will issue instructions.

(c) * * *

(1) The person declares the articles to a CBP officer upon each departure from the United States, presents the Internal Transaction Number from submission of the export information through CBP's electronic system(s) per § 123.22 (unless electronic reporting of such information is unavailable, in which case U.S. Customs and Border Protection will issue instructions), and the articles are presented to the CBP officer for inspection;

* * *

(f) * * *

(1) The person declares the articles to a CBP officer upon each departure from the United States, presents the Internal Transaction Number from submission of the export information through CBP's electronic system(s) per § 123.22 (unless electronic reporting of such information is unavailable, in which case U.S. Customs and Border Protection will issue instructions), and the articles are presented to the CBP officer for inspection;

* * *

(g) * * *

* * *

(2) * * * The person shall electronically submit documentation to this effect, along with the Internal Transaction Number from U.S. Customs and Border Protection's electronic system(s), unless electronic reporting of such information is unavailable, in which case U.S. Customs and Border Protection will issue instructions.

(h) * * * The person shall electronically submit documentation to this effect, along with the Internal Transaction Number using U.S. Customs and Border Protection's electronic system(s), unless electronic reporting of such information is unavailable, in which case U.S. Customs and Border Protection will issue instructions. * * *

§ 123.22 Filing, retention, and return of export licenses and filing of export information.

(a) Any export, as defined in this subchapter, of a defense article controlled by this subchapter, to include defense articles transiting the United States, requires the electronic reporting of export information. The reporting of the export information shall be to the U.S. Customs and Border Protection using its electronic system(s), or directly to the Directorate of Defense Trade Controls (DDTC), as appropriate. Before the export of any hardware, via a license or other authorization, the DDTC registered applicant/exporter, or an agent acting on the applicant's behalf, must electronically file the export information with U.S. Customs and Border Protection, unless electronic reporting is unavailable, in which case U.S. Customs and Border Protection will issue instructions (see paragraph (b) of this section). In addition to electronically providing the export information to U.S. Customs and Border Protection before export, all mandatory supporting documentation (e.g., attachments, certifications, proof of filing in U.S. Customs and Border Protection's system(s) such as the Internal Transaction Number (ITN)) must be submitted electronically, unless electronic reporting of such information is unavailable, in which case U.S. Customs and Border Protection will issue instructions.

(1) If necessary, an export may be made through a port other than the one designated on the license if the exporter complies with the procedures established by U.S. Customs and Border Protection.

(ii) On a valid license, and the ultimate recipient and ultimate end-user identified on the license is a foreign government.

(3) * * *

(iii) Technical data and defense service exemptions. In any instance when technical data is exported using an exemption in this subchapter (e.g., §§ 125.4(b)(2), 125.4(b)(4), 126.5) from a U.S. port, the exporter must provide the export data electronically to DDTC. A copy of the electronic notification to DDTC must accompany the technical data shipment and be made available to
the U.S. Customs and Border Protection upon request.

(c) Return of licenses. Licenses issued by the Directorate of Defense Trade Controls are subject to return requirements as follows:

(1) A license issued electronically by DDTC and decremented by U.S. Customs and Border Protection through its electronic system(s) is not required to be returned to DDTC. A copy of the license must be maintained by the applicant in accordance with § 122.5 of this subchapter.

(2) Licenses issued by DDTC but not decremented by U.S. Customs and Border Protection through its electronic system(s) (e.g. oral or visual technical data releases) must be returned by the applicant, or the government agency with which the license was filed, to DDTC upon expiration, to include when the total authorized value or quantity has been shipped. A copy of the license must be maintained by the applicant in accordance with § 122.5 of this subchapter.

(3) A license issued by DDTC but not used by the applicant does not need to be returned to DDTC, even when expired.

(4) A license revoked by DDTC is considered expired and must be handled in accordance with paragraphs (c)(1) and (c)(2) of this section.

10. Amend § 123.24 by revising paragraph (a) as follows:

§ 123.24 Shipment by U.S. Postal Service

(a) The export of any defense hardware using a license or exemption in this subchapter by the U.S. Postal Service must be filed with U.S. Customs and Border Protection using its electronic system(s) and the license must be filed with U.S. Customs and Border Protection before any hardware is actually sent abroad by mail. The exporter must certify the defense hardware being exported in accordance with this subchapter by clearly marking on the package:

“This export is subject to the controls of the ITAR, 22 CFR (identify section for an exemption) or (state license number) and the export has been electronically filed with U.S. Customs and Border Protection.”

PART 126—GENERAL POLICIES AND PROVISIONS

11. The authority citation for part 126 continues to read as follows:

12. Section 126.4 is amended by revising paragraph (d) as follows:

§ 126.4 Shipments by or for United States Government agencies.

(d) An Electronic Export Information (EEI) filing, and a statement by the exporter that these requirements have been met, must be submitted to U.S. Customs and Border Protection using its electronic system(s) at the time of export, unless electronic submission of such information is unavailable, in which case U.S. Customs and Border Protection or the Department of Defense transmittal authority will issue instructions.

13. Section 126.6 is amended by revising paragraphs (c)(5)(i), (c)(5)(iii), and (c)(6)(ii) as follows:

§ 126.6 Foreign-owned military aircraft and naval vessels, and the Foreign Military Sales program.

(c) * * * * *

(5) * * *

(ii) At the time of shipment, U.S. Customs and Border Protection is provided the Electronic Export Information, Internal Transaction Number and any other documents required by U.S. Customs and Border Protection in carrying out its responsibilities. The invoices for the shipment must be annotated: “This shipment is authorized for export pursuant to 22 CFR 126.6(c), under FMS Case [insert case identification]. The U.S. Government point of contact is , telephone number ,” and

(iii) Any classified hardware and related technical data involved in the transfer must have the requisite U.S. Government security clearance and a transportation plan, if required, must be submitted to U.S. Customs and Border Protection in accordance with the Department of Defense National Industrial Security Program Operating Manual. The exporter shall provide an electronic copy of the transportation plan via the U.S. Customs and Border Protection’s electronic system(s) in accordance with Department of Defense National Industrial Security Program Operating Manual.

14. Section 126.16 is amended by revising paragraphs (l)(1)(xv) and (l)(2) introductory text to read as follows:

§ 126.16 Exemption pursuant to the Defense Trade Cooperation Treaty between the United States and Australia.

(l) * * *

(1) * * *

(xv) The Internal Transaction Number for the Electronic Export Information filing using U.S. Customs and Border Protection’s electronic system(s);

* * * * *

15. Section 126.17 is amended by revising paragraphs (l)(1)(xv) and (l)(2) introductory text to read as follows:

§ 126.17 Exemption pursuant to the Defense Trade Cooperation Treaty between the United States and the United Kingdom.

(l) * * *

(1) * * *

(xv) The Internal Transaction Number for the Electronic Export Information filing using U.S. Customs and Border Protection’s electronic system(s);

* * * * *

16. Section 126.18 is amended by revising paragraphs (l)(1)(xv) and (l)(2) introductory text to read as follows:

§ 126.18 Exemption pursuant to the Defense Trade Cooperation Treaty between the United States and the United States.

(l) * * *

(1) * * *

(xv) The Internal Transaction Number for the Electronic Export Information filing using U.S. Customs and Border Protection’s electronic system(s);

* * * * *

Thomas Countryman,
Under Secretary (Acting), Arms Control and International Security, Department of State.

BILLING CODE 4710–25–P
DEPARTMENT OF HOMELAND SECURITY

Coast Guard

33 CFR Part 165
[Docket Number USCG–2016–1017]
RIN 1625–AA00

Safety Zone; Lower Mississippi River, Natchez, MS

AGENCY: Coast Guard, DHS.

ACTION: Temporary final rule.

SUMMARY: The Coast Guard is establishing a temporary safety zone for certain waters of the Lower Mississippi River. This action is necessary to provide for the safety of life on these navigable waters near the bluffs, Natchez, MS, during a fireworks display on December 31, 2016. The safety zone will cover all navigable waters between mile markers 363.4 and 364.4 in the Lower Mississippi River located near the bluffs in Natchez, MS. This rulemaking will prohibit persons and vessels from being in the safety zone unless authorized by the Captain of the Port Memphis (COTP) or a designated representative.

DATES: This rule is effective from 9:40 p.m. on December 31, 2016 until 10:40 p.m. on January 1, 2017.

ADDRESSES: To view documents mentioned in this preamble as being available in the docket, go to http://www.regulations.gov, type USCG–2016–1017 in the “SEARCH” box and click “SEARCH.” Click on Open Docket Folder on the line associated with this rule.

FOR FURTHER INFORMATION CONTACT: If you have questions about this rulemaking, call or email Petty Officer Todd Manow, Waterways Management, Sector Lower Mississippi River, U.S. Coast Guard; telephone 901–521–4813, email todd.m.manow@uscg.mil.

II. Background Information and Regulatory History

On August 12, 2016, Natchez Specialties notified the Coast Guard that it will be conducting a fireworks display from 10 to 10:15 p.m. on December 31, 2016, to celebrate New Year’s Eve. The fireworks are to be launched from a barge in the Lower Mississippi River at mile marker 363.9 approximately 200 yards northwest of the bluffs in Natchez, MS at approximate position 31°33.83’ N, 091°24.50’ W. Hazards from fireworks displays include accidental discharge of fireworks, dangerous projectiles, and falling hot embers or other debris. The Captain of the Port Memphis (COTP) has determined that potential hazards associated with the fireworks to be used in this display would be a safety concern for anyone within an area on the Lower Mississippi River from mile marker 363.4 to mile marker 364.4.

The Coast Guard is issuing this temporary rule without prior notice and opportunity to comment pursuant to authority under section 4(a) of the Administrative Procedure Act (APA) (5 U.S.C. 553(b)). This provision authorizes an agency to issue a rule without prior notice and opportunity to comment when the agency for good cause finds that those procedures are “impracticable, unnecessary, or contrary to the public interest.” Under 5 U.S.C. 553(b)(B), the Coast Guard finds that good cause exists for not publishing a notice of proposed rulemaking (NPRM) with respect to this rule because, although the event sponsor originally submitted notice to the Coast Guard on August 12, 2016, final details of the event, safety zone requirements, and regulatory patrol parameters were not finalized until November of 2016. It is impracticable to publish an NPRM because we must establish this safety zone by December 31, 2016.

Under 5 U.S.C. 553(d)(3), the Coast Guard finds that good cause exists for making this rule effective less than 30 days after publication in the Federal Register. For these same reasons, the Coast Guard finds good cause for implementing this rule less than thirty days before the effective date.

III. Legal Authority and Need for Rule

The Coast Guard is issuing this rule under authority in 33 U.S.C. 1231. The COTP has determined that potential hazards associated with this fireworks event would be a safety concern for anyone on the Lower Mississippi River from mile marker 363.4 to mile marker 364.4. Hazards from fireworks displays include accidental discharge of fireworks, dangerous projectiles, and falling hot embers or other debris. This rule is needed to ensure the safety of vessels and the navigable waters before, during, and after the scheduled event.

IV. Discussion of the Rule

This rule establishes a safety zone from 9:40 p.m. to 10:40 p.m. on December 31, 2016. In the case of inclement weather on December 31, 2016, this safety zone will be enforced from 9:40 p.m. until 10:40 p.m. on January 1, 2017. The safety zone will cover all navigable waters of the Lower Mississippi River from mile marker 363.4 to mile marker 364.4 in the vicinity of the bluffs in Natchez, MS at approximate position 31°33.83’ N, 091°24.50’ W. The duration of the zone is intended to ensure the safety of waterway users on these navigable waters before, during, and after the scheduled fireworks display. No vessel or person will be permitted to enter the safety zone without obtaining permission from the COTP or a designated representative. The regulatory text appears at the end of this document.

V. Regulatory Analyses

We developed this rule after considering numerous statutes and Executive orders related to rulemaking. Below we summarize our analyses based on a number of these statutes and Executive orders and we discuss First Amendment rights of protestors.

A. Regulatory Planning and Review

Executive Orders (E.O.) 12866 and 13563 direct agencies to assess the costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits. E.O. 13563 emphasizes the importance of quantifying both costs and benefits, of reducing costs, of harmonizing rules, and of promoting flexibility. This rule has not been designated a “significant regulatory action,” under E.O. 12866. Accordingly, it has not been reviewed by the Office of Management and Budget.

This regulatory action determination is based on the size, location, duration, and time-of-day of the safety zone. Vessel traffic will be restricted from entering this safety zone which will impact a small designated area of the Lower Mississippi River for one hour during the evening of New Year’s Eve. This safety zone may be extended if conditions allow. Moreover, the Coast Guard will issue a Broadcast Notice to Mariners via VHF–FM marine channel 16 about the zone, and the rule will allow vessels to seek permission to enter the zone.

B. Impact on Small Entities

The Regulatory Flexibility Act of 1980, 5 U.S.C. 601–612, as amended,
requires Federal agencies to consider the potential impact of regulations on small entities during rulemaking. The term “small entities” comprises small businesses, not-for-profit organizations that are independently owned and operated and are not dominant in their fields, and governmental jurisdictions with populations of less than 50,000. The Coast Guard certifies under 5 U.S.C. 605(b) that this rule will not have a significant economic impact on a substantial number of small entities.

While some owners or operators of vessels intending to transit the safety zone may be small entities, for the reasons stated in section V.A. above, this rule will not have a significant economic impact on any vessel owner or operator.

Under section 213(a) of the Small Business Regulatory Enforcement Fairness Act of 1996 (Pub. L. 104–121), we want to assist small entities in understanding this rule. If the rule would affect your small business, organization, or governmental jurisdiction and you have questions concerning its provisions or options for compliance, please contact the person listed in the FOR FURTHER INFORMATION CONTACT section.

Small businesses may send comments on the actions of Federal employees who enforce, or otherwise determine compliance with, Federal regulations to the Small Business and Agriculture Regulatory Enforcement Ombudsman and the Regional Small Business Regulatory Fairness Boards. The Ombudsman evaluates these actions annually and rates each agency’s responsiveness to small business. If you wish to comment on actions by employees of the Coast Guard, call 1–888–REG–FAIR (1–888–734–3247). The Coast Guard will not retaliate against small entities that question or complain about this rule or any policy or action of the Coast Guard.

C. Collection of Information

This rule will not call for a new collection of information under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3520).

D. Federalism and Indian Tribal Governments

A rule has implications for federalism under E.O. 13132, Federalism, if it has a substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government. We have analyzed this rule under that Order and have determined that it is consistent with the fundamental federalism principles and preemption requirements described in E.O. 13132.

Also, this rule does not have tribal implications under E.O. 13175, Consultation and Coordination with Indian Tribal Governments, because it will not have a substantial direct effect on one or more Indian tribes, on the relationship between the Federal Government and Indian tribes, or on the distribution of power and responsibilities between the Federal Government and Indian tribes. If you believe this rule has implications for federalism or Indian tribes, please contact the person listed in the FOR FURTHER INFORMATION CONTACT section.

E. Unfunded Mandates Reform Act

The Unfunded Mandates Reform Act of 1995 (2 U.S.C. 1531–1538) requires Federal agencies to assess the effects of their discretionary regulatory actions. In particular, the Act addresses actions that may result in the expenditure by a State, local, or tribal government, in the aggregate, or by the private sector of $100,000,000 (adjusted for inflation) or more in any one year. Though this rule will not result in such expenditure, we do discuss the effects of this rule elsewhere in this preamble.

F. Environment

We have analyzed this proposed rule under Department of Homeland Security Management Directive 023–01 and Commandant Instruction M16475.ID, which guide the Coast Guard in complying with the National Environmental Policy Act of 1969 (42 U.S.C. 4321–4370f), and have made a preliminary determination that this action is one of a category of actions that do not individually or cumulatively have a significant effect on the human environment. This rule involves a safety zone lasting one hour that would prohibit entry into a one mile stretch of the Lower Mississippi River, one half mile to either side of a fireworks barge. Normally such actions are categorically excluded from further review under paragraph 34(g) of Figure 2–1 of Commandant Instruction M16475.ID. A preliminary environmental analysis checklist and Categorical Exclusion Determination are available in the docket where indicated under ADDRESSES. We seek any comments or information that may lead to the discovery of a significant environmental impact from this proposed rule.

G. Protest Activities

The Coast Guard respects the First Amendment rights of protesters. Protesters are asked to contact the person listed in the FOR FURTHER INFORMATION CONTACT section to coordinate protest activities so that your message can be received without jeopardizing the safety or security of people, places, or vessels.

List of Subjects in 33 CFR Part 165

Harbors, Marine safety, Navigation (water), Reporting and recordkeeping requirements, Security measures, Waterways.

For the reasons discussed in the preamble, the Coast Guard proposes to amend 33 CFR part 165 as follows:

PART 165 REGULATED NAVIGATION AREAS AND LIMITED ACCESS AREAS.

1. The authority citation for part 165 continues to read as follows:

2. Add temporary § 165.T08–1017 to read as follows:

§ 165.T08–1017 Safety Zone; Mississippi River, Natchez, MS.

(a) Location. The following area is a safety zone: All waters of the Lower Mississippi River from mile marker 363.4 to mile marker 364.4 in the vicinity of the fireworks launch platform at approximate position 31°33′33.83″ N, 91°24′50.50″ W, 200 yards northwest of the Natchez bluffs.

(b) Effective dates and enforcement times. The safety zone will be in effect from 9:40 p.m. on December 31, 2016 until 10:40 p.m. on January 1, 2017. The safety zone will be enforced from 9:40 p.m. until 10:40 p.m. on December 31, 2016. In the case of inclement weather on December 31, 2016, this safety zone will be enforced from 9:40 p.m. until 10:40 p.m. on January 1, 2017.

(c) Regulations. (1) In accordance with the general regulations in § 165.23 of this part, entry into this zone is prohibited unless specifically authorized by the Captain of the Port Memphis (COTP) or a designated representative.

(2) Any vessel desiring to enter this safety zone must first obtain permission from the COTP or a designated representative, who may be contacted on VHF–FM Channel 16 or by telephone at 866–777–2784.

(d) Informational broadcasts. The COTP or a designated representative will inform the public through broadcast notices to mariners of the enforcement periods for the safety zone.
Dated: December 20, 2016.
T. J. Wendt,
Captain, U.S. Coast Guard, Captain of the Port, Memphs, Tennessee.

BILLING CODE 9110–04–P

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 52

Extension of Deadline for Action on the November 2016 Section 126 Petition From Maryland

AGENCY: Environmental Protection Agency (EPA).

ACTION: Final rule.

SUMMARY: In this action, the Environmental Protection Agency (EPA) is determining that 60 days is insufficient time to complete the technical and other analyses and public notice-and-comment process required for our review of a petition submitted by the state of Maryland pursuant to section 126 of the Clean Air Act (CAA).

The petition requests that the EPA make a finding that 36 electric generating units located in the states of Indiana, Kentucky, Ohio, Pennsylvania, and West Virginia emit air pollution that significantly contributes to nonattainment and interferes with maintenance of the 2008 and 2015 ozone national ambient air quality standards (NAAQS) in state of Maryland. Under section 307(d)(10) of CAA, the EPA is authorized to grant a time extension to responding to a petition if the EPA determines that the extension is necessary to afford the public, and the agency, adequate opportunity to carry out the purposes of CAA section 307(d) notice-and-comment rulemaking requirements. By this action, the EPA is making that determination. The EPA is therefore extending the deadline for acting on the petition to no later than July 15, 2017.

DATES: This final rule is effective on January 3, 2017.

ADDRESSES: The EPA has established a docket for this action under Docket ID No. EPA–HQ–OAR–2016–0690. All documents in the docket are listed on the http://www.regulations.gov Web site. Although listed in the index, some information is not publicly available, e.g., Confidential Business Information or other information whose disclosure is restricted by statute. Certain other material, such as copyrighted material, is not placed on the Internet and will be publicly available only in hard copy form. Publicly available docket materials are available electronically through http://www.regulations.gov.

FOR FURTHER INFORMATION CONTACT: Mr. Benjamin Gibson, Office of Air Quality Planning and Standards (C545–E), U.S. EPA, Research Triangle Park, North Carolina 27709, telephone number (919) 541–3277, email: gibson.benjamin@epa.gov.

SUPPLEMENTARY INFORMATION:

I. Background and Legal Requirements for Interstate Air Pollution

This is a procedural action to extend the deadline for the EPA to respond to a petition from the state of Maryland filed pursuant to CAA section 126(b). The EPA received the petition on November 16, 2016. The petition requests that the EPA make a finding under section 126(b) of the CAA that the 36 electric generating units located in the states of Indiana, Kentucky, Ohio, Pennsylvania, and West Virginia are operating in a manner that emits air pollutants in violation of the provisions of section 110(a)(2)(D)(i)(I) of the CAA with respect to the 2008 and 2015 ozone NAAQS.

Section 126(b) of the CAA authorizes states to petition the EPA to find that a major source or group of stationary sources in upwind states emits or would emit any air pollutant in violation of the prohibition of CAA section 110(a)(2)(D)(i) by contributing significantly to nonattainment or maintenance problems in downwind states. Section 110(a)(2)(D)(ii) of the CAA prohibits emissions of any air pollutant in amounts which will contribute significantly to nonattainment in, or interfere with maintenance by, any other state with respect to any NAAQS. The petition asserts that emissions from 36 electric generating units emit air pollutants in violation of CAA section 110(a)(2)(D)(i)(I) with respect to the 2008 8–hour ozone NAAQS, set at 0.075 parts per million (ppm), and the revised 2015 8–hour ozone NAAQS, set at 0.070 ppm.

Pursuant to CAA section 126(b), the EPA must make the finding requested in the petition, or must deny the petition within 60 days of its receipt. Under CAA section 126(c), any existing sources for which the EPA makes the requested finding must cease operations within 3 months of the finding, except that the source may continue to operate if it complies with emission limitations and compliance schedules (containing increments of progress) that the EPA may provide to bring about compliance with the applicable requirements as expeditiously as practical but no later than 3 years from the date of the finding.

CAA section 126(b) further provides that the EPA must hold a public hearing on the petition. The EPA’s action under section 126 is also subject to the procedural requirements of CAA section 307(d). See CAA section 307(d)(1)(N). One of these requirements is notice-and-comment rulemaking, under section 307(d)(3)–(6).

In addition, CAA section 307(d)(10) provides for a time extension, under certain circumstances, for a rulemaking subject to CAA section 307(d).

Specifically, CAA section 307(d)(10) provides:
Each statutory deadline for promulgation of rules to which this subsection applies which requires promulgation less than 6 months after date of proposal may be extended to not more than 6 months after date of proposal by the Administrator upon a determination that such extension is necessary to afford the public, and the agency, adequate opportunity to carry out the purposes of the subsection.

CAA section 307(d)(10) may be applied to section 126 rulemakings because the 60–day time limit under CAA section 126(b) necessarily limits the period for promulgation of a final rule after proposal to less than 6 months.

II. Final Rule

A. Rule

In accordance with CAA section 307(d)(10), the EPA is determining that the 60–day period afforded by CAA section 126(b) for responding to the petition from the state of Maryland is not adequate for the public and the agency to complete the necessary technical review, develop an adequate proposal, and allow time for notice and comment, including an opportunity for public hearing, on a proposed finding regarding whether the 36 electric generating units identified in
the CAA section 126 petition contribute significantly to nonattainment or interferes with maintenance of the 2008 ozone NAAQS or the 2015 ozone NAAQS in Maryland. Moreover, the 60-day period is insufficient for the EPA to review and develop response to any public comments on a proposed finding, or testimony supplied at a public hearing, and to develop and promulgate a final finding in response to the petition. The EPA is in the process of determining an appropriate schedule for action on the CAA section 126 petition. This schedule must afford the EPA adequate time to prepare a proposal that clearly elucidates the issues to facilitate public comment, and must provide adequate time for the public to comment and for the EPA to review and develop responses to those comments prior to issuing the final rule. As a result of this extension, the deadline for the EPA to act on the petition is July 15, 2017.

B. Notice and Comment Under the Administrative Procedure Act (APA)

This document is a final agency action, but may not be subject to the notice-and-comment requirements of the APA, 5 U.S.C. 553(b). The EPA believes that, because of the limited time provided to make a determination, the deadline for action on the CAA section 126 petition should be extended. Congress may not have intended such a determination to be subject to notice-and-comment rulemaking. However, to the extent that this determination otherwise would require notice and opportunity for public comment, there is good cause within the meaning of 5 U.S.C. 553(b)(3)(B) not to apply those requirements here. Providing for notice and comment would be impracticable because of the limited time provided for making this determination, and would be contrary to the public interest because it would divert agency resources from the substantive review of the CAA section 126 petition.

C. Effective Date Under the APA

This action is effective on January 3, 2017. Under the APA, 5 U.S.C. 553(d)(3), agency rulemaking may take effect before 30 days after the date of publication in the Federal Register if the agency has good cause to mandate an earlier effective date. This action—a deadline extension—must take effect immediately because its purpose is to extend by 6 months the deadline for action on the petition. As discussed earlier, the EPA intends to use the 6-month extension period to develop a proposal on the petition and provide time for public comment before issuing the final rule. It would not be possible for the EPA to complete the required notice and comment and public hearing process within the original 60-day period noted in the statute. These reasons support an immediate effective date.

III. Statutory and Executive Order Reviews

A. Executive Orders 12866: Regulatory Planning and Review and Executive Order 13563: Improving Regulation and Regulatory

This action is exempt from review by the Office of Management and Budget because it simply extends the date for the EPA to take action on a petition.

B. Paperwork Reduction Act (PRA)

This action does not impose any information collection burden under the PRA. This good cause final action simply extends the date for the EPA to take action on a petition and does not impose any new obligations or enforceable duties on any state, local or tribal governments or the private sector. It does not contain any recordkeeping or reporting requirements.

C. Regulatory Flexibility Act (RFA)

This action is not subject to the RFA. The RFA applies only to rules subject to notice-and-comment rulemaking requirements under the APA, 5 U.S.C. 553, or any other statute. This rule is not subject to notice-and-comment requirements because the agency has invoked the APA “good cause” exemption under 5 U.S.C. 553(b).

D. Unfunded Mandates Reform Act (UMRA)

This action does not contain any unfunded mandate of $100 million or more as described in UMRA, 2 U.S.C. 1531–1538, and does not significantly or uniquely affect small governments. The action imposes no enforceable duty on any state, local or tribal governments or the private sector.

E. Executive Order 13132: Federalism

This action does not have federalism implications. It will not have substantial direct effects on the states, on the relationship between the national government and the states, or on the distribution of power and responsibilities among the various levels of government.

F. Executive Order 13175: Consultation and Coordination With Indian Tribal Governments

This action does not have tribal implications, as specified in Executive Order 13175. This good cause final action simply extends the date for the EPA to take action on a petition. Thus, Executive Order 13175 does not apply to this rule.

G. Executive Order 13045: Protection of Children From Environmental Health and Safety Risks

The EPA interprets Executive Order 13045 as applying only to those regulatory actions that concern environmental health or safety risks that the EPA has reason to believe may disproportionately affect children, per the definition of “covered regulatory action” in section 2–202 of the Executive Order. This action is not subject to Executive Order 13045 because it does not concern an environmental health risk or safety risk.

H. Executive Order 13211: Actions That Significantly Affect Energy Supply, Distribution or Use

This action is not subject to Executive Order 13211, because it is not a significant regulatory action under Executive Order 12866.

I. National Technology Transfer and Advancement Act (NTTAA)

This rulemaking does not involve technical standards.

J. Executive Order 12898: Federal Actions To Address Environmental Justice in Minority Populations and Low-Income Populations

The EPA believes that this action is not subject to Executive Order 12898 (59 FR 7629, February 16, 1994) because it does not establish an environmental health or safety standard. This good cause final action simply extends the date for the EPA to take action on a petition and does not have any impact on human health or the environment.

K. Congressional Review Act (CRA)

This action is subject to the CRA, and the EPA will submit a rule report to each House of the Congress and to the Comptroller General of the United States. The CRA allows the issuing agency to make a rule effective sooner than otherwise provided by the CRA if the agency makes a good cause finding that notice-and-comment rulemaking procedures are impracticable, unnecessary or contrary to the public interest (5 U.S.C. 808(2)). The EPA has made a good cause finding for this rule as discussed in Section II.B of this document, including the basis for that finding.

IV. Statutory Authority

The statutory authority for this action is provided by sections 110, 126 and
307 of the CAA as amended (42 U.S.C. 7410, 7426 and 7607).

V. Judicial Review

Under section 307(b)(1) of the CAA, judicial review of this final rule is available only by the filing of a petition for review in the U.S. Court of Appeals for the appropriate circuit by March 6, 2017. Under section 307(b)(2) of the CAA, the requirements that are the subject of this final rule may not be challenged later in civil or criminal proceedings brought by us to enforce these requirements.

List of Subjects in 40 CFR Part 52

Environmental protection, Administrative practices and procedures, Air pollution control, Electric utilities, Incorporation by reference, Intergovernmental relations, Nitrogen oxides, Ozone.

Gina McCarthy,
Administrator.

Medicare Program: Hospital Outpatient Prospective Payment and Ambulatory Surgical Center Payment Systems and Quality Reporting Programs; Organ Procurement Organization Reporting and Communication; Transplant Outcome Measures and Documentation Requirements; Electronic Health Record (EHR) Incentive Programs; Payment to Nonexcepted Off-Campus Provider-Based Department of a Hospital; Hospital Value-Based Purchasing (VBP) Program; Establishment of Payment Rates under the Medicare Physician Fee Schedule for Nonexcepted Items and Services Furnished by an Off-Campus Provider-Based Department of a Hospital; Correction and Extension of Comment Period

AGENCY: Centers for Medicare & Medicaid Services (CMS), HHS.

ACTION: Correction and extension of comment period for final rule and interim final rule.

SUMMARY: This document corrects technical errors that appeared in the final rule with comment period and interim final rule with comment period published in the Federal Register on November 14, 2016, entitled “Hospital Outpatient Prospective Payment and Ambulatory Surgical Center Payment Systems and Quality Reporting Programs; Organ Procurement Organization Reporting and Communication; Transplant Outcome Measures and Documentation Requirements; Electronic Health Record (EHR) Incentive Programs; Payment to Nonexcepted Off-Campus Provider-Based Department of a Hospital; Hospital Value-Based Purchasing (VBP) Program; Establishment of Payment Rates under the Medicare Physician Fee Schedule for Nonexcepted Items and Services Furnished by an Off-Campus Provider-Based Department of a Hospital.” This document extends the comment period to January 3, 2017 for both the final rule with comment period and the interim final rule with comment period.

DATES: Effective date: This correction is effective January 1, 2017.

Comment period: The comment period for the final rule and interim final rule, published November 14, 2016 (81 FR 79562), is extended to 5 p.m. E.S.T. on January 3, 2017.

SUPPLEMENTARY INFORMATION:

I. Background

In FR Doc. 2016–26515 of November 14, 2016 (81 FR 79562), titled “Medicare Program: Hospital Outpatient Prospective Payment and Ambulatory Surgical Center Payment Systems and Quality Reporting Programs; Organ Procurement Organization Reporting and Communication; Transplant Outcome Measures and Documentation Requirements; Electronic Health Record (EHR) Incentive Programs; Payment to Certain Off-Campus Outpatient Departments of a Provider; Hospital Value-Based Purchasing (VBP) Program; Establishment of Payment Rates Under the Medicare Physician Fee Schedule for Nonexcepted Items and Services Furnished by an Off-Campus Provider-Based Department of a Hospital” (hereinafter referred to as the CY 2017 OPPS/ASC final rule), there were a number of technical errors that are identified and corrected in the Correction of Errors section below. The provisions in this correction document are effective as if they had been included in the document published November 14, 2016. Accordingly, the corrections are effective January 1, 2017.

II. Extension of Comment Period

We are extending the comment period. We inadvertently scheduled the comment period to end on December 31, 2016, a Saturday. We ordinarily do not end the comment period on a weekend or federal holiday. Therefore, we are extending the comment period for the final rule and interim final rule to end on the next business day, January 3, 2017.

III. Summary of Errors

A. Errors in the Preamble

1. Hospital Outpatient Prospective Payment System (OPPS) Corrections

On page 79566, in the Table of Contents, we inadvertently included a title that referred to the CY 2017 OPPS/ASC proposed rule instead of the final rule with comment period. We are correcting the title in this correcting document. On the same page, in the table of contents, we made a typographical error in the title of the sixth item, which we are correcting to match the title in the preamble of the document.

On page 79569, we incorrectly stated estimated total payments to OPPS providers as $773 million. We have corrected this figure to be $64 billion.

On page 79582, we incorrectly stated that status indicator “J1” procedure claims with modifier “50” were included in the C–APC claims accounting and the complexity adjustment evaluations as of January 1, 2015.” Instead, these claims were included in the C–APC complexity adjustment evaluations presented in the CY 2017 OPPS/ASC final rule with comment period. The results of these evaluations were included in the C–APC complexity adjustment evaluations tab of Addendum J to the CY 2017 OPPS/ASC final rule with comment period.

On pages 79584, we inadvertently omitted discussion of one of the recommendations from the August 2016 meeting of the Advisory Panel on
Hospital Outpatient Payment (HOPP Panel). The HOPP Panel recommended that, “CMS provide further information and data for stakeholders to review on how comprehensive APCs are created and their effects; and CMS provide more time for the public to review the information and make proposals to the Panel.” In this correcting document, we address this recommendation.

On page 79587, due to the change in OPPS payment rates as a result of the updated OPPS weight scaler, we are also updating the payment rate listed for C–APC 5244 (Level 4 Blood Product Exchange and Related Services).

On page 79595, we made technical errors by inadvertently excluding the wage index data for 6 providers in Alaska, Virginia, Ohio, Mississippi, and Puerto Rico when calculating the weight scaler for budget neutrality. We have corrected the weight scaler for budget neutrality to include the wage index data for those 6 providers, which results in a change of the weight scaler from 1.4203 to 1.4287. This revised weight scaler affects all payments that are scaled for budget neutrality. As a result we are also providing corrected addenda as described in the “Summary of Errors and Corrections to the OPPS and ASC Addenda Posted on the CMS Web site” section below.

On pages 79607 through 79608, we use the payment rates available in Addenda A and B to display calculation of adjusted payment and copayment. Due to the change in OPPS payment rates as a result of the updated OPPS weight scaler, we are also updating the payment and copayment numbers used in the example to reflect the corrections.

On page 79621, due to the change in OPPS payment rates as a result of the updated OPPS weight scaler, we are also updating the payment rates in Table 13—Final CY 2017 Status Indicator (SI), APC Assignments, and Payment Rates for the Auditory Osseointegrated Procedures (81 FR 79621) for CPT codes 69714, 69715, 69717, and 69718.

On page 79622, due to the change in OPPS payment rates as a result of the updated OPPS weight scaler, we are also updating the payment rates in Table 14—Final CY 2017 Status Indicator (SI), APC Assignments, and Payment Rates for CPT Codes 28297 and 28740.

On page 79624, due to the change in OPPS payment rates as a result of the updated OPPS weight scaler, we are also updating the payment rates in Table 16—Final CY 2017 Status Indicator (SI), APC Assignments, and Payment Rates for the Percutaneous Vertebroplasty Augmentation/Kyphoplasty Procedures.

On page 79627, due to the change in OPPS payment rates as a result of the updated OPPS weight scaler, we are also updating the payment rates in Table 18—Final CY 2017 Status Indicator (SI), APC Assignments, and Payment Rates for the Transcranial Magnetic Stimulation (TMS) Therapy Codes.

On page 79629, due to the change in OPPS payment rates as a result of the updated OPPS weight scaler, we are also updating the payment rates for CPT code 75571 to $59.86, for CPT code 77080 to $112.73, and for APC 5822 (Level 2 Health and Behavior Services) to $70.26 for CY 2017.

On pages 79636 through 79637, due to the change in OPPS payment rates as a result of the updated OPPS weight scaler, we are also updating the payment rates in Table 23—Final CY 2017 Status Indicator (SI), APC Assignments, and Payment Rates for the Transprostatic Urethral Implant Procedures.

On pages 79638 through 79639, due to the change in OPPS payment rates as a result of the updated OPPS weight scaler, we are also updating the payment rates in Table 25—Final CY 2017 Status Indicator (SI), APC Assignments, and Payment Rates Certain Cryoablation Procedures.

On page 79641, due to the change in OPPS payment rates as a result of the updated OPPS weight scaler, we are also updating the payment rate for CPT code 77371 to $7,455.99 as well as the payment rates in Table 28—Final CY 2017 Status Indicator (SI), APC Assignments, and Payment Rates for the Dialysis Circuit Procedures.

On page 79643, due to the change in OPPS payment rates as a result of the updated OPPS weight scaler, we are also updating the payment rates in Table 29—Final CY 2017 Status Indicator (SI), APC Assignments, and Payment Rates for the Magnetic Resonance Image Guided High Intensity Focused Ultrasound (MRgFUS) Procedures.

On page 79645, due to the change in OPPS payment rates as a result of the updated OPPS weight scaler, we are also updating the payment rates in Table 32—Final CY 2017 Status Indicator (SI), APC Assignments, and Payment Rates for the Smoking and Tobacco Use Cessation Counseling Services.

On page 79647, we used imprecise language in describing HCPCS codes G0237, G0238, and G0239. Specifically, we stated that “we believe that we should reassign HCPCS codes G0237, G0238, and G0239 to status indicator “S” because these codes also describe pulmonary rehabilitation services.” We are clarifying that these codes describe Pulmonary Rehabilitation Services.

We acknowledge that the original language could be interpreted to mean that these codes describe pulmonary rehabilitation services, which was not our intent.

On page 79648, due to the change in OPPS payment rates as a result of the updated OPPS weight scaler, we are also updating the payment rates in Table 34—Final CY 2017 Status Indicator (SI), APC Assignments, and Payment Rates for the Pulmonary Rehabilitation Services.

On page 79662, we incorrectly made certain Status Indicator (SI) and APC assignments in Table 35—Drugs and Biologicals For Which Pass-Through Payment Status Expires December 31, 2016. Specifically, we incorrectly assigned a SI of “N” (Items and Services Packaged into APC Rates) to a number of drugs that should have been assigned a SI of “K” (Nonpass-Through Drugs and Nonimplantable Biologicals, Including Therapeutic Radiopharmaceuticals). These drugs have also been assigned to APCs for CY 2017. Additionally, on page 79662, we incorrectly described the Long Descriptors (HCPCS codes J7181 and 7201) that were displayed in Table 35. These Long Descriptors have been revised for CY 2017.

On page 79664, we incorrectly described two Long Descriptors (for HCPCS codes A9587 and A9588) that were displayed in Table 36—Drugs and Biologicals With Pass-Through Payment Status in CY 2017. These Long Descriptors have been revised for CY 2017.

On page 79671, we made technical errors to the description of certain Healthcare Common Procedure Coding System (HCPCS) codes that appeared in Table 37—Skin Substitute Assignments to High Cost and Low Cost Groups for CY 2017. Specifically, we are removing HCPCS codes Q4119, Q4120, and Q4129 to accurately show that these codes were deleted on December 31, 2016, and should not have appeared in Table 37. These codes were correctly assigned to OPPS SI “D” in the OPPS Addendum B that was released with the CY 2017 OPPS/ASC final rule.

On page 79708, we used imprecise language in the summary of final policy on how we would apply the “billing . . . prior to November 2, 2015,” statutory language in determining whether an off-campus PBD is excepted or not. Specifically, we stated in the preamble that “off campus PBDs would be eligible to receive OPPS payment as excepted off-campus PBDs for services that were furnished prior to November 2, 2015, and billed under the OPPS in accordance with timely filing limits.” We are clarifying that the policy is not specific to services, but rather so long as an off-campus PBD furnished a covered...
OPD service prior to November 2, 2015 and billed the OPPS within timely filing limits for that service that the off-campus PBD would be excepted from payment adjustment under the final section 603 payment policy for the items and services the off-campus PBD furnishes on or after January 1, 2017. As noted in the sentence prior (81 FR 79708), we agreed with the commenters that an interpretation of the “billing under this subsection with respect to covered OPD services furnished prior to [November 2, 2015]” was incorrect and would be corrected. The code was deleted effective April 13, 2016.

On page 79719, we described the changes to regulation and incorrectly stated the effective date to implement section 603 of Public Law 114–74 is effective January 1, 2017, for cost reporting periods beginning January 1, 2017. The effective date is for items and services furnished on or after January 1, 2017, regardless of when the cost reporting period begins. We have corrected this language to delete the reference to cost reporting periods.

On pages 79869 through 79870, we described and provided Table 52—Estimated Impact of the CY 2017 Changes for the Hospital Outpatient Prospective Payment System, based on rates which applied the incorrect scaler. We have updated the impact table and the description of the table to reflect these corrections.

On Page 79877, we incorrectly described implementation of Section 603 of the Bipartisan Budget Act of 2015 as reducing OPPS payments by $500 million in 2017. We have corrected this estimate to be a reduction of total Part B payments by $50 million in 2017.

2. Ambulatory Surgical Center (ASC) Payment System Corrections

On pages 79741 through 79742, in the discussion of additions to the list of ASC covered surgical procedures, we incorrectly stated that CPT code 22851 (Application of intervertebral biomechanical device(s) (e.g., synthetic cage(s), methylmethacrylate) to vertebral defect or interspace (List separately in addition to code for primary procedure)) was deleted effective April 13, 2016. This code was deleted effective December 31, 2016.

On page 79743 in Table 51—Additions to the List of ASC Covered Surgical Procedures for CY 2017 (81 FR 79741), we inadvertently excluded CPT code 22585 (Arthrodesis, anterior interbody technique, including minimal discectomy to prepare interspace (other than for decompression); each additional interspace (List separately in addition to code for primary procedure)). This code has a CY 2017 ASC payment indicator of N1.

On pages 79752 through 79753, we inadvertently published an incorrect ASC conversion factor of $45.030 for ASCs that meet the quality reporting requirements. Also, on pages 79752 through 79753, we inadvertently published an incorrect ASC wage index budget neutrality adjustment of 0.9996 that is being corrected to 0.9997. For ASCs that do not meet the quality reporting requirements, we finalized an ASC conversion factor of $44.330. The ASC conversion factor for ASCs that meet the quality reporting requirements is the product of the CY 2016 conversion factor multiplied by the wage index budget neutrality adjustment of 0.9997 and the MFP-adjusted CPI-U payment update (81 FR 79752 to 79753). We have since determined that the 2016 conversion factor of $44.190 used to calculate the CY 2017 conversion factor is incorrect. The corrected 2016 ASC conversion factor for ASCs that meet the quality reporting requirements is $44.177, as finalized in the CY 2016 final rule with comment period (80 FR 70501). Using the correct 2016 ASC conversion factor of $44.177, we have recalculated the 2017 ASC conversion factor to be $45.003 for ASCs that meet quality reporting requirements and a conversion factor of $44.120 for ASCs that do not meet quality reporting requirements. The correction factor will slightly change payment for some ASC services; therefore we have revised payment rates in ASC addendum AA and addendum BB.

3. Interim Final Rule with Comment Period Corrections

On page 79725, we referenced table X.B.2, but did not include the table in the interim final rule with comment period. This table, Payment for Nonexempted Items and Services by OPPS Status Indicator, has been posted to the CMS Web site at https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/HospitalOutpatientPPS/downloads/CMS-1656-FC-2017-OPPS-Status-Indicator.zip.

4. Hospital Outpatient Quality Reporting Program Correction

On page 79784, there was a typographical error in the table entitled “Previously Finalized and Newly Finalized Hospital OQR Program Measure Set for the CY 2020 Payment Determination and Subsequent Years”. As listed in the table, the measure OP–30: Colonoscopy Interval for Patients with a History of Adenomatous Polyps—Avoidance of Inappropriate Use incorrectly included three asterisks after the name Three asterisks indicates that a measure is voluntary. This measure should have had only two asterisks to indicate that the measure name was updated to reflect the National Quality Forum title, not three, as it is not a voluntary measure. Accordingly, we are correcting the table and updating the number of asterisks next to OP–30 from three to two asterisks.

B. Regulation Text Corrections

1. OPPS Corrections

To implement the provisions of section 1833(0) of the Act, as amended by section 603 of Public Law 114–74, in the CY 2017 OPPS/ASC final rule with comment period, we amended the Medicare regulations by (1) adding a new paragraph (v) to § 419.22 to specify that, effective January 1, 2017, for cost reporting periods beginning January 1, 2017, excluded from payment under the OPPS are items and services that are furnished by an off-campus provider-based department that do not meet the definition of excepted items and services; and (2) adding a new § 419.48 that sets forth the definition of excepted items and services, and also the definition of “excepted off-campus provider-based department”. On page 79879, we incorrectly stated that the effective date was based on cost reporting periods and are striking that language. Also, on page 79880, we incorrectly implied that on-campus provider-based departments that furnish services after November 2, 2015, could no longer bill under the OPPS in the regulation text at 419.48(b). In addition, on page 79880, in the regulation text at 419.48(b), the definition of an “excepted off-campus provider-based department” does not accurately state that the Department of a provider must also have billed within timely filing limits. The revised regulation text corrects these technical errors.

2. Electronic Health Record (EHR) Incentive Programs Corrections

In the CY 2017 OPPS/ASC final rule, we inadvertently omitted amendments to § 495.4 to § 495.40 that were included in an earlier-published final rule with comment period titled “Medicare Program; Merit-Based Incentive Payment System (MIPS) and Alternative Payment Model (APM) Incentive Under the Physician Fee Schedule, and Criteria
for Physician-Focused Payment Models” (referred to as the Quality Payment Program (QPP) final rule) (81 FR 77008, 77556–77557, November 4, 2016). We are making the corrections to § 495.40 described below in order to preserve the earlier amendments to that section as finalized in the QPP final rule.

On page 79892, in § 495.40, “Demonstration of meaningful use criteria,” paragraph (a), “Demonstration by EPs,” we inadvertently omitted a reference to § 495.22 in the introductory text. We are correcting the introductory text to state that an EP must demonstrate that he or she satisfies each of the applicable objectives and associated measures under § 495.20, § 495.22, or § 495.24. Additionally, we are correcting the introductory text to include the phrase “supports information exchange and the prevention of health information blocking, and engages in activities related to supporting providers with the performance of CEHRT:” as finalized in the QPP final rule (81 FR 77556), which updates requirements for demonstration of meaningful use to include activities related to health information technology.

On page 79892, in § 495.40, “Demonstration of meaningful use criteria,” paragraph (a)(2)(i)(H) and (I) as finalized in the QPP final rule (81 FR 77556), which revise attestation requirements and require EPs to attest their cooperation with certain authorized health IT surveillance and direct review activities as part of demonstrating meaningful use under the Medicare and Medicaid EHR Incentive Programs.

C. Summary of Errors and Corrections to the OPPS and ASC Addenda Posted on the CMS Web site

In Addendum J, on the Complexity Adjustment tab, CPT code 36908—Transcatheter placement of an intravascular stent(s), central dialysis segment, performed through dialysis circuit, including all imaging radiological supervision and interpretation required to perform the stenting, and all angioplasty in the central dialysis segment (List separately in addition to code for primary procedure) was incorrectly written as 368x8. Also, CPT code 24200 (Removal of foreign body, upper arm or elbow, subcutaneous) was incorrectly excluded from Addendum J. The revised version of Addendum J is available via the Internet on the CMS Web site.

The payment and copayment rates in Addendum A (Final OPPS APCs for CY 2017), Addendum B (Final OPPS Payment by HCPCS Code for CY 2017), Addendum C (Final HCPCS Codes Payable Under the 2017 OPPS by APC), ASC Addendum AA (Final ASC Covered Surgical Procedures for CY 2016 (Including Surgical Procedures for Which Payment is Packaged)), ASC Addendum BB (Final ASC Covered Ancillary Services Integral to Covered Surgical Procedures for CY 2016 (Including Ancillary Services for Which Payment is Packaged)) and the payment rates in the 2017 Drug, Blood, Brachytherapy Costs Statistics file that were published on the CMS Web site in conjunction with the CY 2017 OPPS/ASC Final Rule with comment period have been updated to reflect corrections to the weight scaler. The payment rates included in the corrected versions of the Addenda have also been corrected within the text of the CY 2017 OPPS/ASC Final Rule with comment period, as well as under the columns titled “Final CY 2017 OPPS Payment Rate” in Tables 13, 14, 16, 18, 23, 25, 28, 30, 32, and 34. IV. Waiver of Proposed Rulemaking and Delay in Effective Date

Under § 5 U.S.C. 553(d)(3) of the Administrative Procedure Act (APA), the agency is required to publish a notice of the proposed rule in the Federal Register before the provisions of a rule take effect. Similarly, section 1871(b)(1) of the Act requires the Secretary to provide for notice of the proposed rule in the Federal Register and provide a period of not less than 60 days for public comment. In addition, section 533(d)(3) of the APA provide for exceptions from the notice and comment delay in effective date requirements of the Act as well. Section 533(d)(3) of the APA and section 1871(b)(2)(A)(3) mandate a 30-day delay in effective date after issuance or publication of a rule. Sections 533(d)(3) of the APA and section 1871(e)(1) require the agency to seek public comment for proposed rulemaking in the Federal Register and to publish a notice of the proposed rule in the Federal Register.

We believe that this correcting document does not constitute a rulemaking that would be subject to these requirements. This correcting document corrects technical and typographic errors in the preamble, addenda, payment rates, tables, and appendices included or referenced in the CY 2017 OPPS/ASC final rule with comment period that were adopted in the final rule with comment period and interim final rule with comment period but does not make substantive changes to the policies or payment methodologies that were adopted in the final rule with comment period and interim final rule with comment period. As a result, the corrections made through this correcting document are intended to ensure that the information in the CY 2017 OPPS/ASC final rule with comment period accurately reflects the policies and payment methodologies that were adopted in those rules.

In addition, even if this were a rulemaking to which the notice and comment procedures and delayed effective date requirements applied, we
find that there is good cause to waive such requirements. Undertaking further notice and comment procedures to incorporate the corrections in this document into the final rule with comment period and interim final rule with comment period or delaying the effective date would be contrary to the public interest because it is in the public’s interest for providers to receive appropriate payments in as timely a manner as possible, and to ensure that the CY 2017 OPPS/ASC final rule with comment period and interim final rule with comment period accurately reflect our policies as of the date they take effect and are applicable.

Furthermore, such procedures would be unnecessary, as we are not altering our payment methodologies or policies, but rather, we are simply correctly implementing the policies that we previously proposed, received comment on, and subsequently finalized. This correcting document is intended solely to ensure that the CY 2017 OPPS/ASC final rule with comment period and interim final rule with comment period accurately reflects these payment methodologies and policies. For these reasons, we believe we have good cause to waive the notice and comment and effective date requirements.

V. Correction of Errors

In FR Doc. 2016–26515 of November 14, 2016 (81 FR 79562), make the following corrections:

Preamble Corrections

1. On page 79566, third column, a. In line 44, Table of Contents, the title “5. Summary of Proposals” is corrected to read “5. Summary of Final Policies”.

b. In line 45, Table of Contents, the title “6. Final Changes to Regulations” is corrected to read “6. Changes to Regulations”.

2. On page 79569, second column, second full paragraph, under the bulleted item, “OPPS Update,” in line 20, replace “$773 million” with “$64 billion.”

3. On page 79582, third column, second full paragraph, under a response to public comment, in lines 29 through 34, the last sentence of the paragraph is corrected to read “Status indicator “[J1]” procedure claims with modifier “50” will be included in the complexity adjustment evaluation for CY 2017. This evaluation can be found in Addendum J to the CY 2017 OPPS/ASC final rule with comment period.”

4. On page 79584, first column, first partial paragraph, in line 21, the following language is inserted after “. . . analyses of the C–APC payment policy.” and before “Regarding the comment about creating . . .”:

We are accepting the recommendation that the HOP Panel made at the August 22, 2016 meeting to “provide further information and data for stakeholders to review on how comprehensive APCs are created and their effects and to provide more time for the public to review the information and make proposals to the Panel.” We plan to provide the results of an analysis of our comprehensive packaging policies in CY 2017. In addition, we will consider scheduling future HOP Panel meetings on a date that allows stakeholders as much time as is practicable subsequent to display of the proposed rule to analyze and review our proposed policies and other data prior to the meeting.

5. On page 79587, third column, first full paragraph, in line 16, replace “$27,752” with “$27,764.”

6. On page 79595, third column, third paragraph, replace “1.4208” with “1.4214.”

7. On page 79607, a. First column, bottom half of the page, last full paragraph—

(1) In line 17, replace “$338.88” with “$339.11.”

(2) In line 21, replace “$528.10” with “$528.33.”

b. In the second column, first partial paragraph,

(1) In lines 1 and 2, replace “$418.26 (.60 * $538.88 * 1.2936),” with “$418.44 (.60 * $539.11 * 1.2936),”

(2) In line 5, replace “$409.89 (.60 * $528.10 * 1.2936),” with “$410.07 (.60 * $528.33 * 1.2936),”

(3) In line 8, replace “$215.55 (.40 * $538.88),” with “$215.64 (.40 * $539.11),”

(4) In line, replace “$211.24 (.40 * $528.10),” with “$211.33 (.40 * $528.33),”

(5) In lines 15 and 16, replace “$633.81 ($418.26 + $215.55),” with “$634.08 ($418.44 + $215.64),”

(6) In lines 18 and 19, replace “$621.13 ($409.89 + $211.24),” with “$621.40 ($410.07 + $211.33),”

8. On page 79608, second column, third full paragraph, under “Step 1,” in lines 5 and 8, replace “$107.78” with “$107.83” and “$538.88” with “$539.11.”

9. On page 79621, Table 13—Final CY 2017 Status Indicator (SI), APC, and Payment Rates for the Auditory Osseointegrated Procedures, is corrected to read as follows:

23. On page 79671, in Table 37—Assignments to High Cost and Low Cost Groups for CY 2017, remove HCPCS codes Q4119, Q4120, and Q4129.

24. On page 79708, third column, in lines 28 through 31, the words “for services that were furnished prior to November 2, 2015, and billed under the OPPS in accordance with timely filing limits. This is required to read “if the PBD furnished a covered OPD service prior to November 2, 2015 and billed the OPPS within timely filing limits for that service.”

25. On page 79719, third column, first partial paragraph, in lines 6 and 7, remove the words “for cost reporting periods beginning January 1, 2017.”
26. On page 79741, third column, fourth full paragraph, in lines 10 and 11, the words “was deleted by the AMA Editorial Panel in April 2016.” are corrected to read “will be deleted effective December 31, 2016.”

27. On page 79742, first column, first full paragraph, in lines 2 and 3, the words “was deleted effective April 13, 2016.” are corrected to read “will be deleted effective December 31, 2016.”

28. On page 79743, Table 51—Additions To The List of ASC Covered Surgical Procedures For CY 2017, CPT code 22585 is added in numerical order to read as follows:

<table>
<thead>
<tr>
<th>CY 2017 CPT code</th>
<th>CY 2017 long descriptor</th>
<th>CY 2017 ASC payment indicator</th>
</tr>
</thead>
<tbody>
<tr>
<td>22585</td>
<td>Arthrodesis, anterior interbody technique, including minimal discectomy to prepare interspace (other than for decompression); each additional interspace</td>
<td>N1</td>
</tr>
</tbody>
</table>

29. On page 79752, third column, bottom half of the page, first full paragraph, a. In line 11, replace “0.9996” with “0.9997.”
   b. In line 27, replace “$45.030” with “$45.003.”
   c. In line 31, replace “1.6” with “1.7.”
   d. In line 33, replace “1.7” with “1.8.”

30. On page 79753, a. First column, first partial paragraph, (1) In line 9, replace “$43.330” with “$43.120.”
    (2) In line 12, replace “$44.190” with “$44.170.”
    (3) In line 13, replace “0.9996” with “0.9997.”
   b. Second column, second full paragraph, in line 7, replace “$45.030” with “$45.003.”

31. On page 79784, the un-numbered table—PREVIOUSLY FINALIZED AND NEWLY FINALIZED HOSPITAL OQR PROGRAM MEASURE SET FOR THE CY 2020 PAYMENT DETERMINATION AND SUBSEQUENT YEARS, is corrected by removing the three asterisks, “***” after the OP–30 measure name and adding in its place two asterisks, “**” to read as follows:

<table>
<thead>
<tr>
<th>Measure Name</th>
<th>CY 2020 Indicator</th>
</tr>

### Notes:

- 35. On page 79871, third column, first partial paragraph, in the last line, replace “$45.016” with “$45.003.”
- 36. On page 79877, third column, last paragraph, in lines 2 and 3, the phrase “OPPS payments by $500 million” is corrected to read “Part B payments by $50 million.”

Regulations Text Corrections

§ 419.22 [Corrected]

- 37. On page 79879, second column, in § 419.22, “Hospital services excluded...”
from payment under the hospital outpatient prospective payment system,” the words “for cost reporting periods beginning on or after January 1, 2017,” are removed.

38. On page 79880, first column, in § 419.48, paragraph (b) is corrected to read as follows:

§ 419.48. ‘‘Definition of excepted items and services’’

(b) For the purpose of this section, ‘‘excepted off-campus provider-based department’’ means a ‘‘department of a provider’’ (as defined at § 413.65(a)(2) of this chapter) that is located on the campus (as defined in § 413.65(a)(2) of this chapter) or within the distance described in such definition from a ‘‘remote location of a hospital’’ (as defined in § 413.65(a)(2) of this chapter) that meets the requirements for provider-based status under § 413.65 of this chapter. This definition also includes an off-campus department of a provider that was furnishing services prior to November 2, 2015 that were billed under the OPPS in accordance with timely filing limits.

39. Section 495.40 is corrected as follows:

(a) Demonstration by EPs. An EP must demonstrate that he or she satisfies each of the applicable objectives and associated measures under § 495.20, § 495.22 or § 495.24, supports information exchange and the prevention of health information blocking, and engages in activities related to supporting providers with the performance of CEHRT:

(1) * * * * * * *

(H) Supporting providers with the performance of CEHRT (SPPC). To engage in activities related to supporting providers with the performance of CEHRT, the EP—

(i) Must attest that he or she:

(ii) Acknowledges the requirement to cooperate in good faith with ONC direct review of his or her health information technology certified under the ONC Health IT Certification Program if a request to assist in ONC direct review is received; and

(iii) Implemented in a manner that allowed for timely access by patients to their electronic health information; and

(iv) Implemented in a manner that allowed for the timely, secure, and trusted bidirectional exchange of structured electronic health information with other health care providers (as defined by 42 U.S.C. 300jj(3)), including unaffiliated providers, and with disparate Certified EHR technology and vendors.

(3) Responded in good faith and in a timely manner to requests to retrieve or exchange electronic health information, including from patients, health care providers (as defined by 42 U.S.C. 300jj(3)), and other persons, regardless of the requestor’s affiliation or technology vendor.”

(b) Demonstration by eligible hospitals and CAHs. An eligible hospital or CAH must demonstrate that it satisfies each of the applicable objectives and associated measures under § 495.20, § 495.22, or § 495.24, supports information exchange and the prevention of health information blocking, and engages in activities related to supporting providers with the performance of CEHRT:

(1) * * * * * * *

(H) Supporting providers with the performance of CEHRT (SPPC). To engage in activities related to supporting providers with the performance of CEHRT, the eligible hospital or CAH—

(i) Must attest that it:

(ii) Acknowledges the requirement to cooperate in good faith with ONC direct review of his or her health information technology certified under the ONC Health IT Certification Program if a request to assist in ONC direct review is received; and

(iii) Implemented in a manner that allowed for timely access by patients to their electronic health information; and

(iv) Implemented in a manner that allowed for the timely, secure, and trusted bidirectional exchange of structured electronic health information with other health care providers (as defined by 42 U.S.C. 300jj(3)), including unaffiliated providers, and with disparate Certified EHR technology and vendors.

(3) Responded in good faith and in a timely manner to requests to retrieve or exchange electronic health information, including from patients, health care providers (as defined by 42 U.S.C. 300jj(3)), and other persons, regardless of the requestor’s affiliation or technology vendor.”

36 Federal Register / Vol. 82, No. 1 / Tuesday, January 3, 2017 / Rules and Regulations
(2) Optionally, may attest that it:
(i) Acknowledges the option to cooperate in good faith with ONC–ACB surveillance of his or her health information technology certified under the ONC Health IT Certification Program if a request to assist in ONC–ACB surveillance is received; and
(ii) If requested, cooperate in good faith with ONC–ACB surveillance of his or her health information technology certified under the ONC Health IT Certification Program as authorized by 45 CFR part 170, subpart E, to the extent that such technology meets (or can be used to meet) the definition of CEHRT, including by permitting timely access to such technology and demonstrating its capabilities as implemented and used by the eligible hospital or CAH in the field.

(i) Support for health information exchange and the prevention of information blocking. For an EHR reporting period in CY 2017 and subsequent years, the eligible hospital or CAH must attest that it—
(1) Did not knowingly and willfully take action (such as to disable functionality) to limit or restrict the compatibility or interoperability of certified EHR technology.
(2) Implemented technologies, standards, policies, practices, and agreements reasonably calculated to ensure, to the greatest extent practicable and permitted by law, that the certified EHR technology was, at all relevant times—
(i) Connected in accordance with applicable law;
(ii) Compliant with all standards applicable to the exchange of information, including the standards, implementation specifications, and certification criteria adopted at 45 CFR part 170;
(iii) Implemented in a manner that allowed for timely access by patients to their electronic health information; and
(iv) Implemented in a manner that allowed for the timely, secure, and trusted bidirectional exchange of structured electronic health information with other health care providers (as defined by 42 U.S.C. 300jj(3)), including unaffiliated providers, and with disparate certified EHR technology and vendors.
(3) Responded in good faith and in a timely manner to requests to retrieve or exchange electronic health information, including from patients, health care providers (as defined by 42 U.S.C. 300jj(3)), and other persons, regardless of the requestor’s affiliation or technology vendor.”.

Medicaid and Children’s Health Insurance Program (CHIP) Programs; Medicaid Managed Care, CHIP Delivered in Managed Care, and Revisions Related to Third Party Liability; Corrections

AGENCY: Centers for Medicare & Medicaid Services (CMS), HHS.

ACTION: Final rule; correcting amendment.

SUMMARY: This document corrects technical errors that appeared in the final rule published in the May 6, 2016 Federal Register (81 FR 27498 through 27901) entitled, “Medicaid and Children’s Health Insurance Program (CHIP) Programs; Medicaid Managed Care, CHIP Delivered in Managed Care, and Revisions Related to Third Party Liability.” The effective date for the rule was July 5, 2016.

DATES: Effective Date: This correcting document is effective December 30, 2016.

Applicability Date: The corrections indicated in this document are applicable beginning immediately.

FOR FURTHER INFORMATION CONTACT:

John Giles, (410) 786–1255, Medicaid Managed Care Operations.
Heather Hostetter, (410) 786–4515, Medicaid Managed Care Quality.
Melissa Williams, (410) 786–4435, CHIP.
Nancy Dieter, (410) 786–7219, Third Party Liability.

SUPPLEMENTAL INFORMATION:

I. Background

In FR Doc. 2016–09581 (81 FR 27498 through 27901), the final rule entitled, “Medicaid and Children’s Health Insurance Program (CHIP) Programs; Medicaid Managed Care, CHIP Delivered in Managed Care, and Revisions Related to Third Party Liability” there were technical errors that are identified and corrected in this correcting document. These corrections are applicable immediately.

II. Summary of Errors

A. Summary of Errors in the Preamble

On page 27560 we made a technical error in the response to comments of § 438.6(e). In this response, we inadvertently identified the effective date and the date by which we would enforce compliance for the regulation, which is correctly identified in the Compliance section on page 27499.

On page 27679 we made a technical error in the preamble text of § 438.330 (Quality Assessment and Performance Improvement Program) in a response to comment. We stated, “Note that standards for risk adjustment are provided in §§438.35(g) and 438.3(b)(5).” We inadvertently omitted the word “for” for “payment purposes” after “risk adjustment” in this sentence to clarify that these cross-referenced sections are related to risk adjustment for payment purposes.

On page 27708 we made a technical error in the preamble text of § 438.358 (Activities Related to External Quality Review) in a response to comment about § 438.358(b)(iv) (Validation of MCO, PIHP, or PAHP validation of network adequacy). We inadvertently included PIHPs and PAHPs in a statement about the match rate for this EQR-related activity for MCOs. We stated, “. . .the validation of MCOs, PIHPs, and PAHPs would be eligible for the 75 percent match rate under § 438.370(a).” This was in error, as it conflicts with § 438.370 of the final rule and the preamble discussion of that section on pages 27715 through 27717.

On page 27712 we made a technical error in the preamble text of § 438.360 (Nonduplication of mandatory activities with Medicare or accreditation review) in a response to comment about updating the EQR protocols to incorporate data from a Medicare or private accrediting entity review. We referenced three of the mandatory EQR-related activities using the citation from the proposed rule (§ 438.358(b)(1) to (b)(3)), rather than the citation from the final rule (§ 438.358(b)(1)(i) to (b)(1)(iii)).

On page 27738 we made a technical error in the response to comments of § 438.242(b)(2). In this response, we inadvertently mistyped “T–MSIS.”

On page 27766 we made a technical error in the preamble text of § 457.1233. We inadvertently did not note that CHIP is also adopting the changes discussed in the Medicaid preamble to include PCCM entities as subject to § 438.230 in
response to public comments and consideration of a managed care plan’s subcontracted or delegated obligations, services, or activities.

B. Summary of Errors in Regulation Text

On page 27860 we made a technical error in the regulation text of § 438.6(c)(2)(i). In this paragraph, we inadvertently omitted “actuarial” before “principles and practices.”

On page 27862 we made a technical error in the regulation text of § 438.8(e)(1). In this paragraph, we inadvertently referenced fraud reduction activities instead of fraud prevention activities.

On page 27863 we made a technical error in the regulation text of § 438.8(f)(2)(i). In this paragraph, we inadvertently included an extra word “to.”

On page 27867 we made a technical error in the regulation text of § 438.10(g)(2)(xiii). In this paragraph, we inadvertently included an extra word “in.”

On page 27879 we made a technical error in the regulation text of § 438.210(a)(2). In this paragraph, we inadvertently referenced part 440 instead of part 441.

On page 27884 we made a technical error in the regulation text of § 438.350(d). We incorrectly cross-referenced § 438.364(a)(1)(i) through (iv) instead of § 438.364(a)(2)(i) through (iv).

On page 27885 we made a technical error in the regulation text of § 438.358(a)(2) (Activities related to external quality review). We incorrectly cross-referenced § 438.364(a)(i) through (iv) instead of § 438.364(a)(2)(i) through (iv).

On page 27886 we made a technical error in the regulation text of § 438.358(c)(3) (Activities related to external quality review). We incorrectly cross-referenced § 438.358(b)(2) instead of § 438.358(b)(1)(i).

On page 27885 we made a technical error in the regulation text of § 438.358(c)(4) (Activities related to external quality review). We incorrectly cross-referenced § 438.358(b)(1) instead of § 438.358(b)(1)(i).

On page 27901 we made a technical error in the regulation text of § 438.604(a)(2). In this paragraph, we inadvertently referenced § 438.3 instead of § 438.4.

On page 27908 we made a technical error in the regulation text of § 457.1201(l). In this paragraph, we inadvertently cross-referenced the Medicaid requirements related to CHIP MHPAEA requirements at § 457.496. Both the Medicaid and CHIP MHPAEA provisions were issued on March 30, 2016, at 81 FR 18390, 18436 and 18442. They are parallel provisions and the change in the cross-reference will not result in any substantive change in the applicable requirements.

On page 27909 we made a technical error in the regulation text of § 457.1201(n)(2). In this paragraph, we inadvertently omitted a cross-reference to § 438.330(b)(2) as we discussed in the preamble on page 27757.

On page 27909 we made a technical error in the regulation text of § 457.1203(a). In this paragraph, we inadvertently included a parenthesis before the word “implementing.”

On page 27909 we made a technical error in the regulation text of § 457.1205(e). In this paragraph, we inadvertently did not include a comma after the word “MCOs” and we inadvertently included the word “to” after the word “under.”

On page 27909 we made a technical error in the regulation text of § 457.1210(c)(2) and § 457.1210(c)(4). In this paragraph, we incorrectly used the word “Explain” instead of the word “Explain.”

On page 27909 we made a technical error in the regulation text of § 457.1214. In this section, we referenced § 438.38, the conflict of interest safeguards required for Medicaid managed care plans. However, we inadvertently did not specify that references to § 438.54(b) (relating to the Medicaid managed care enrollment processes) in § 438.38 should refer to the enrollment processes for CHIP described in § 457.1210(a).

On page 27909 we made a technical error in the regulation text of § 457.1228. We inadvertently omitted the words “and poststabilization care” before the word “services.” Additionally, we are replacing the cross-reference to § 457.10 with a cross-reference to § 438.114 to reflect the intended alignment with Medicaid definitions that was clearly expressed in the preamble on page 27764.

In that preamble discussion, we expressly indicated that we would be adopting the definitions at § 438.114.

On page 27909 we made a technical error in the regulation text of § 457.1230(c). We inadvertently did not provide that the applicability date for the Medicaid requirements in § 438.208(d) does not apply to CHIP.

On page 27909 we made a technical error in the regulation text of § 457.1230(d). We inadvertently did not provide that the applicability date for the Medicaid requirements in § 438.210(f) does not apply to CHIP.

On page 27909 we made a technical error in the regulation text of § 457.1233(b). As indicated in the preamble on page 27766, we intended to align the structure and operation standards for CHIP managed care entities with parallel Medicaid standards, but we inadvertently omitted PCCM entities from the list of managed care entities that the state must ensure are in compliance with § 438.230.

On page 27909 we made technical errors in the regulation text of § 457.1240(e). We inadvertently left in an obsolete cross reference from the proposed rule to § 438.340(e).

On page 27909 we made technical errors in the regulation text of § 457.1240(f). In this paragraph, we incorrectly spelled “PCCM entities” as “PPCM entities.”

On page 27909 we made technical errors in the regulation text of § 457.1260. We inadvertently did not include an exception to the Medicaid applicability date as described in § 438.400(c).

III. Waiver of Proposed Rulemaking and Delay in Effective Date

Under 5 U.S.C. 553(b)(b) of the Administrative Procedure Act (APA), the agency is required to publish a notice of the proposed rule in the Federal Register before the provisions of a rule take effect. In addition, section 553(d) of the APA mandates a 30-day delay in effective date after issuance or publication of a rule. Sections 553(b)(B) and 553(d)(3) of the APA provide for exceptions from the APA notice and comment, and delay in effective date requirements. Section 553(b)(B) of the APA authorizes an agency to dispense with normal notice and comment rulemaking procedures for good cause if the agency makes a finding that the notice and comment process is impracticable, unnecessary, or contrary to the public interest; and includes a statement of the finding and the reasons for it in the notice.

In our view, this correcting document does not constitute a rulemaking that would be subject to these requirements. This document merely corrects text that while Medicaid and Children’s Health Insurance Program (CHIP) Programs; Medicaid Managed
Care, CHIP Delivered in Managed Care, and Revisions Related to Third Party Liability final rule. The corrections contained in this document are consistent with, and do not make substantive changes to, the policies and payment methodologies that were adopted subject to notice and comment procedures in the Medicaid and Children’s Health Insurance Program (CHIP) Programs; Medicaid Managed Care, CHIP Delivered in Managed Care, and Revisions Related to Third Party Liability final rule. As a result, the corrections made through this correcting document are intended to ensure that the Medicaid and Children’s Health Insurance Program (CHIP) Programs; Medicaid Managed Care, CHIP Delivered in Managed Care, and Revisions Related to Third Party Liability final rule accurately reflects the policies adopted in that rule.

Even if this were a rulemaking to which the notice and comment and delayed effective date requirements applied, we find that there is good cause to waive such requirements. Undertaking further notice and comment procedures to incorporate the corrections in this document into the Medicaid and Children’s Health Insurance Program (CHIP) Programs; Medicaid Managed Care, CHIP Delivered in Managed Care, and Revisions Related to Third Party Liability final rule accurately reflects the policies adopted in that rule.

Corrections of Errors

In FR Doc. 2016–09581 of May 6, 2016 (81 FR 27498), make the following corrections:

1. On page 27560, in the first column; in the second full paragraph, line 13, the phrase “for contracts starting on or after July 1, 2017” is corrected to read “no later than the effective date of this rule”.

2. On page 27679, in the third column; in the first full paragraph, line eight, the phrase “Note that standards for risk adjustment . . . .” is corrected to read “Note that standards for risk adjustment for payment purposes . . . .”.

3. On page 27708, in the second column; in the first full paragraph, beginning at line seven, the phrase “validation of MCOs, PIHPs, and PAHPs” is corrected to read “validation of MCOs”.

4. On page 27712, in the second column; in the fourth full paragraph, line 20, the phrase “§ 438.358(b)(1) to (b)(3)” is corrected to read “§ 438.358(b)(1)(i) to (b)(1)(iii)”.

5. On page 27738, in the third column; in the fifth full paragraph, line 11, the term “TSIS” is corrected to read “T–MSIS”.

6. On page 27766, in the second column; in the second full paragraph, beginning with line one, the sentence “After consideration of the public comments, we are adding a cross reference to § 457.1110 in a new paragraph (e), and otherwise finalizing § 457.1233 as proposed.” is corrected to read “After consideration of the public comments, we are adding a cross reference to § 457.1110 in a new paragraph (e) and adopting the changes to § 438.230 to include PCCM entities as discussed in the Medicaid preamble. The remaining provisions of § 457.1233 are finalized as proposed.”.

List of Subjects

42 CFR Part 438
Grant programs-health, Medicaid, Reporting and recordkeeping requirements.

42 CFR Part 457
Administrative practice and procedure, Grant programs-health, Health insurance, Reporting and recordkeeping requirements.

Accordingly, 42 CFR chapter IV is corrected by making the following correcting amendments to parts 438 and 457:

PART 438—MANAGED CARE

1. The authority citation for part 438 continues to read as follows:

Authority: Sec. 1102 of the Social Security Act (42 U.S.C. 1302).

PART 457—ALLOTMENTS AND GRANTS TO STATES

11. The authority citation for part 457 continues to read as follows:

Authority: Sec. 1102 of the Social Security Act (42 U.S.C. 1302).
§ 457.1201 [Amended]

12. In § 457.1201—
   a. Amend paragraph (l) by removing the reference "§ 438.3(n)." and adding in its place the reference "§ 457.496."
   b. Amend paragraph (n)(2) by removing the phrase "(cross-referencing § 438.330(b)(3), (c)."
   c. And adding in its place the phrase "(cross-referencing § 438.330(b)(2), (b)(3), (c)."

§ 457.1203 [Amended]

13. In § 457.1203—
   a. Amend paragraph (a) by removing the open parenthesis "(" before the word "implementing."
   b. Amend paragraph (e) by adding a comma "," after the term "MCOs" and by removing the word "to" after the word "under."

§ 457.1210 [Amended]

14. In § 457.1210—
   a. Amend paragraph (c)(2) by removing the word "Explains" and adding in its place the word "Explain."
   b. Amend paragraph (c)(4) by removing the word "Explains" and adding in its place the word "Explain."

15. Section 457.1214 is revised to read as follows:

§ 457.1214 Conflict of interest safeguards.

   The State must have in effect safeguards against conflict of interest in accordance with the terms of § 438.58 of this chapter, except that references to § 438.54(b) should be read to refer to the enrollment processes described in § 457.1210(a).

16. Section 457.1228 is revised to read as follows:

§ 457.1228 Emergency and poststabilization services.

   The State must ensure that emergency and poststabilization care services are available and accessible to enrollees in accordance with the terms of § 438.114 of this chapter.

17. Section 457.1230 is amended by revising paragraphs (c) and (d) to read as follows:

§ 457.1230 Access Standards

   * * * * *

   (c) Coordination and continuity of care. The State must ensure, through its contracts, that each MCO, PHIP and PAHP complies with the coordination and continuity of care requirements in accordance with the terms of § 438.208 of this chapter, except that the applicability date in § 438.208(d) does not apply.

   (d) Coverage and authorization of services. The State must ensure, through its contracts, that each MCO, PHIP or PAHP complies with the coverage and authorization of services requirements in accordance with the terms of § 438.210 of this chapter, except that the following do not apply: § 438.210(a)(5) of this chapter (related to medical necessity standard); § 438.210(b)(2)(ii) of this chapter (related to authorizing LTSS); and § 438.210(f) (relating to the applicability date).

§ 457.1233 [Amended]

18. In § 457.1233 amend paragraph (b) by removing the phrase "and PAHP" and adding in its place the term "PAHP, and PCCM."

19. Section 457.1240 is amended by revising paragraph (e) and correcting the heading for paragraph (f) to read as follows:

§ 457.1240 Quality measurement and improvement.

   * * * * *

   (e) Managed care quality strategy. The State must draft and implement a written quality strategy for assessing and improving the quality of health care and services furnished CHIP enrollees as described in § 438.340 of this chapter.

   (f) Applicability to PCCM entities.

   * * *

20. Section 457.1250 is amended by revising paragraph (a) to read as follows:

§ 457.1250 External quality review.

   (a) Each State that contracts with MCOs, PHIPs, or PAHPs must follow all applicable external quality review requirements as set forth in §§ 438.350 (except for references to §§ 438.362), 438.352, 438.354, 438.356, 438.358, 438.360 (only with respect to nonduplication of EQR activities with private accreditation) and § 438.364 of this chapter. In the case of a contract with a PCCM entity described in § 457.1240(f), § 438.350 (except for references to § 438.362) of this chapter applies.

   * * * * *

21. Section 457.1260 is revised by adding a sentence at the end of the section to read as follows:

§ 457.1260 Grievance system.

   * * * The applicability date in § 438.400(c) does not apply to CHIP.

   Dated: December 21, 2016.

   Wilma M. Robinson,
   Deputy Executive Secretary to the Department. Department of Health and Human Services.

BILLING CODE 4120–01–P

DEPARTMENT OF HOMELAND SECURITY

Federal Emergency Management Agency

44 CFR Parts 204, 206, and 207

[Docket ID: FEMA–2016–0034]

RIN 1660–AA89

Update of FEMA’s Public Assistance and Fire Management Assistance Grant Regulations To Reflect the Terminology of Uniform Administrative Requirements, Cost Principles, and Audit Requirements

AGENCY: Federal Emergency Management Agency, DHS.

ACTION: Final rule.

SUMMARY: The Federal Emergency Management Agency (FEMA) is amending its Public Assistance and Fire Management Assistance Grant regulations to update the terms it uses to describe grantees and subgrantees, to reflect the terminology used in the Office of Management and Budget (OMB) Uniform Guidance on Administrative Requirements, Cost Principles, and Audit Requirements for Federal Awards.

SUPPLEMENTARY INFORMATION:

I. Background

The Robert T. Stafford Disaster Relief and Emergency Assistance Act, as amended (Stafford Act), Title 42 of the United States Code (U.S.C.) 5121 et seq., authorizes the President to provide Federal assistance when the magnitude of an incident or threatened incident exceeds the affected State, Territorial, Indian Tribal, and local government capabilities to respond or recover. FEMA provides assistance to State, Territorial, Indian Tribal, and local governments and certain types of private nonprofit (PNP) organizations via its Public Assistance program. Through the Public Assistance program, FEMA provides supplemental Federal disaster grant assistance for debris removal, emergency protective measures, and the restoration of disaster-damaged, publicly owned facilities and the facilities of certain PNP organizations. The Public Assistance program also encourages protection of these damaged facilities from future events by providing...
assistance for hazard mitigation measures. FEMA regulations for the Public Assistance program are found at 44 CFR part 206. The regulations at 44 CFR part 207, “Management Costs,” also apply to Public Assistance awards. Fire Management Assistance is available to States, local and tribal governments, for the mitigation, management, and control of fires on publicly or privately owned forests or grasslands, which threaten such destruction as would constitute a major disaster. FEMA Regional Administrators (RAs) have the authority to issue Fire Management Assistance Grant (FMAG) declarations for wildfires that threaten such destruction that would constitute a major disaster. The regulations governing the FMAG program are found at 44 CFR part 204.

The Office of Management and Budget (OMB) establishes Uniform Administrative Requirements, Cost Principles, and Audit Requirements for Federal Awards, found at 2 CFR part 200. These regulations apply to awards under OMB’s Public Assistance and FMAG programs.

II. The Adoption of Uniform Administrative Requirements, Cost Principles, and Audit Requirements for Federal Awards

In the interim final rule, FEMA amended 44 CFR via a technical amendment that removed part 13 (FEMA’s grant administration regulations) and replaced all references to part 13 with references to 2 CFR parts 200 and 3002. FEMA replaced general references to part 13 with the general citations to 2 CFR parts 200 and 3002. To the extent applicable, FEMA also replaced references to specific portions of part 13 with the corresponding pinpoint citations to 2 CFR parts 200 and 3002.

FEMA adopted the interim final rule as final, with one change, on October 2, 2015. 80 FR 59549. The change was a reinsertion of a provision that was inadvertently removed by the interim final rule.

III. Revisions to 44 CFR Parts 204 and 206

In this final rule, FEMA is updating its Public Assistance and FMAG program regulations to reflect two terms used in 2 CFR part 200. The Uniform Guidance uses the terms “recipient” and “subrecipient” when referring to entities that receive Federal awards; whereas FEMA’s regulations use the terms “grantee” and “subgrantee” when referring to entities that receive Federal awards under FEMA Public Assistance and FMAG grant programs. To improve consistency with the Uniform Guidance, FEMA is replacing the term “grantee” with “recipient” and the term “subgrantee” with “subrecipient” throughout 44 CFR part 204 and 44 CFR part 206, subparts G, H, and I. Although grantees and subgrantees, as defined in 44 CFR parts 204 and 206, are considered to be recipients and subrecipients under 2 CFR part 200, FEMA intends to use comparable terms to avoid confusion and provide consistency between applicable regulations and Public Assistance policy.1

FEMA is not making substantive revisions to the current definitions for the terms “grantee” and “subgrantee.” The Uniform Guidance provides that “[d]ifferent definitions [of the terms “recipient” and “subrecipient,” among other terms] may be found in Federal statutes or regulations that apply more specifically to particular programs or activities.” 2 CFR 200.1. As such, although FEMA is replacing the terms “grantee” and “subgrantee” with the terms “recipient” and “subrecipient,” respectively, FEMA is continuing to use the definitions for these terms at 44 CFR part 204 and 44 CFR part 206, subpart G, which apply more specifically to the Public Assistance and FMAG programs.2

FEMA is also replacing remaining references to 44 CFR part 13 with references to 2 CFR part 200. This is a technical change to correct citations that were not updated by the December 19, 2014 joint interim final rule. Finally, FEMA is correcting two typographical errors to citations in 44 CFR part 206. In § 206.222(b), the reference to § 205.221(e) will be corrected to § 206.221(e). In § 206.226(f)(2), the reference to paragraph (d)(1) will be corrected to paragraph (f)(1).

IV. Revisions to 44 CFR Part 207

The regulations at 44 CFR part 207, “Management Costs,” apply to Public Assistance and Hazard Mitigation Grant Program (HMGP) awards. To ensure consistency with the terminology used in both Public Assistance and HMGP regulations, FEMA is revising the definitions of “Grantee” and “Subgrantee” in 44 CFR part 207 to make clear that in part 207 as well, the terms “Grantee” and “Recipient” are interchangeable, as are the terms “Subgrantee” and “Subrecipient.” This is a non-substantive change to make it clear that the terms are interchangeable and that 44 CFR part 207 applies to Public Assistance and HMGP awards regardless of the terminology used in the program regulations.

This rule makes technical and nomenclature changes intended to reduce confusion and encourage the use of consistent terminology in the administration of Public Assistance and FMAG awards.

V. Regulatory Analyses

A. Administrative Procedure Act

FEMA did not undertake notice and comment for this regulation because it is making purely technical and non-substantive terminology changes. The Administrative Procedure Act (APA) provides that an agency may dispense with notice and comment rulemaking procedures when an agency, for good cause, finds those procedures are impracticable, unnecessary, or contrary to the public interest. 5 U.S.C. 553(b). FEMA finds that such procedures are unnecessary for this rule because this rule makes technical updates and non-substantive terminology changes to improve consistency with 2 CFR part 200, and does not change any regulatory requirements. For instance, this rule will not change the requirements to request assistance, the eligibility requirements to receive assistance, the amount of assistance available, or the appeals process under the FMAG or Public Assistance programs. The changes made by this rule do not change or confer any substantive rights, benefits or obligations. For the same reasons, under 5 U.S.C. 553(d)(3), FEMA finds that it has good cause to make this final rule effective immediately.

2 Because FEMA is replacing the terms in existing definitions, we are redesignating the paragraphs in § 206.201 to maintain alphabetical order.
Executive Orders 13563 and 12866 direct agencies to assess the costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity). Executive Order 13563 emphasizes the importance of quantifying both costs and benefits of reducing costs, of harmonizing rules, and of promoting flexibility. This rule has not been designated a “significant regulatory action,” under section 3(f) of Executive Order 12866. Accordingly, the rule has not been reviewed by the Office of Management and Budget. As this rule involves non-substantive changes that will not change FEMA’s administration of the subject regulations, FEMA expects that the rule will not impose any costs on the public.

C. Regulatory Flexibility Act

Under the Regulatory Flexibility Act, as amended, (5 U.S.C. 601–612), agencies must consider the impact of their rulemakings on “small entities” (small businesses, small organizations and local governments) when issuing a notice of proposed rulemaking. As FEMA is not issuing a proposed rule for this action, the Regulatory Flexibility Act does not apply.

List of Subjects

44 CFR Part 204
Administrative practice and procedure, Fire prevention, Grant programs, and Reporting and recordkeeping requirements.

44 CFR Part 206
Administrative practice and procedure, Coastal zone, Community facilities, Disaster assistance, Fire prevention, Grant programs-housing and community development, Housing, Insurance, Intergovernmental relations, Loan programs-housing and community development, Natural resources, Penalties, and Reporting and recordkeeping requirements.

44 CFR Part 207
Administrative practice and procedure, Disaster assistance, Grant programs, and Reporting and recordkeeping requirements.

For the reasons discussed in the preamble, and under the authorities listed below, the Federal Emergency Management Agency amends 44 CFR Chapter I as follows:

PART 204—FIRE MANAGEMENT ASSISTANCE GRANT PROGRAM

§ 204.3 [Amended]
1. In § 204.3—
   a. Revise the defined term “Grantee” to read “Recipient” and place the definition in appropriate alphabetical order;
   b. Revise the defined term “Subgrantee” to read “Subrecipient” and place the definition in appropriate alphabetical order;
   c. Remove the word “Grantee” wherever it appears and add in its place the word “recipient”;
   d. Remove the word “Grantee” wherever it appears and add in its place the word “recipient”;
   e. Remove the word “Subgrantee” wherever it appears and add in its place the word “recipient”.

§ 204.25 [Amended]
3. In § 204.25(a), remove the word “Grantee” and add in its place the word “recipient”.

§ 204.41 [Amended]
4. In § 204.41(a) introductory text, remove the word “Grantee” and add in its place the word “recipient”.

§ 204.22 [Amended]
5. In § 204.22(a)(3), remove the word “Grantees” and add in its place the word “Recipients” and remove the word “Subgrantees” and add in its place the word “Subrecipients”.

§ 204.43 [Amended]
6. In § 204.43(c), remove the word “subgrantees’s” and add in its place the word “subrecipients’”.

§ 204.51 [Amended]
7. In § 204.51, remove the word “Grantee” wherever it appears and add in its place the word “recipient”.

§ 204.52 [Amended]
8. In § 204.52, remove the word “Grantee” wherever it appears and add in its place the word “recipient”.

§ 204.53 [Amended]
9. In § 204.53(a), remove the word “Grantee” and add in its place the word “recipient”.

§ 204.54 [Amended]
10. In § 204.54—
   a. In the introductory text, remove the word “subgrantee” and add in its place the word “subrecipient” and remove the word “grantee” and add in its place the word “recipient”;
   b. In paragraph (a), remove the words “grantee-related” and add in their place the words “recipient-related”, remove the word “grantee” wherever it appears and add in its place the word “recipient”, and remove the word “subgrantee” wherever it appears and add in its place the word “subrecipient”;
   c. In paragraph (c)(2), remove the word “subgrantee” and add in its place the word “subrecipient” and in paragraph (c)(3), remove the word “grantee” wherever it appears and add in its place the word “recipient”; and
   d. In paragraph (d), remove the word “grantee” and add in its place the word “recipient”.

§ 204.62 [Amended]
11. In § 204.62(c), remove the word “Grantee” and add in its place the word “recipient” and remove the word “subgrantee” and add in its place the word “subrecipient”.

§ 204.63 [Amended]
12. In § 204.63(b), remove the word “Grantees’s” and add in its place the word “recipient’s”.

§ 204.64 [Amended]
13. In § 204.64(b)(1), remove the word “Grantee” and add in its place the word “recipient” and remove the word “subgrantees” and add in its place the word “subrecipients”.

PART 206—FEDERAL DISASTER ASSISTANCE

14. The authority citation for part 206 continues to read as follows:

and remove the word “subgrantees” wherever it appears and add in its place the word “subrecipients”.

17. In § 206.201—
   a. In paragraph (a), remove the word “Grantee” and add in its place the word “recipient”;
   b. Remove paragraph (e);
   c. Redesignate paragraph (e) as paragraph (m); and redesignate paragraphs (f) through (m) as paragraphs (e) through (l);
   d. In newly redesignated paragraph (l), remove the word “Grantee” and add in its place the word “recipient”;
   e. Add new paragraph (m);
   f. In paragraph (n), remove the word “Grantee” and add in its place the word “recipient” and remove the word “Grantee’s”; and
   g. Revise the paragraph (o) heading to read “Recipient 1” and in paragraph (o), remove the word “Grantee” and add in its place the word “recipient”.

The addition reads as follows:

§ 206.201 Definitions used in this part.

* * * * *

(m) Recipient. Recipient means the government to which a grant is awarded, and which is accountable for the use of the funds provided. The recipient is the entire legal entity even if only a particular component of the entity is designated in the grant award document. Generally, except as provided in § 206.202(f), the State for which the emergency or major disaster is declared is the recipient. However, an Indian Tribal government may choose to be a recipient, or it may act as a subrecipient under the State. If an Indian Tribal government is the recipient, it will assume the responsibilities of the “recipient” or “State” as described in this part with respect to administration of the Public Assistance program.

* * * * *

§ 206.202 [Amended]

18. In § 206.202—
   a. In paragraph (a), remove the word “Grantee” wherever it appears and add in its place the word “recipient”;
   b. In the paragraph (b) heading, remove the word “Grantee” and add in its place the word “Recipient”;
   c. In paragraph (b)(1), remove the word “subgrantees” and add in its place the word “subrecipients”;
   d. In paragraphs (c) and (e), remove the word “Grantee” wherever it appears and add in its place the word “recipient”;
   e. In paragraph (f)(1)(i), remove the word “Grantee” and add in its place the word “recipient” and remove the word “Grantee’s” and add in its place the word “recipient’s”.

§ 206.203 [Amended]

19. In § 206.203—
   a. In paragraph (c)(1), remove the word “Grantee” and add in its place the word “recipient”;
   b. In paragraph (d)(1), remove the word “subgrantee” and add in its place the word “subrecipient”; and
   c. In paragraph (d)(2) introductory text, remove the word “subgrantee” and add in its place the word “subrecipient” and remove the word “Grantee’s” and add in its place the word “recipient’s”; and
   d. In paragraph (d)(2)(v), remove the word “Grantee” wherever it appears and add in its place the word “recipient”.

§ 206.204 [Amended]

20. In § 206.204—
   a. In paragraph (c)(2), remove the word “Grantee” wherever it appears and add in its place the word “recipient” and in paragraph (c)(2)(i), remove the word “subgrantee” and add in its place the word “subrecipient”;
   b. In paragraph (d) introductory text, remove the word “Grantee” and add in its place the word “recipient” and remove the word “Grantee’s” and add in its place the word “recipient’s”;
   c. In paragraph (d)(2), remove the word “Grantee” and add in its place the word “recipient’s” and remove the word “Grantee” and add in its place the word “recipient”;
   d. In paragraph (e), remove the word “subgrantee” wherever it appears and add in its place the word “subrecipient”;
   e. In paragraph (e)(2), remove the word “Grantee” wherever it appears and add in its place the word “recipient”;
   f. In paragraph (f)(2), remove the word “Grantee” and add in its place the word “recipient”, remove the word “grantee’s” and add in its place the word “recipient’s”, and remove the word “subgrantee’s” and add in its place the word “subrecipient’s”.

§ 206.205 [Amended]

21. In § 206.205(a) and (b), remove the word “Grantee” wherever it appears and add in its place the word “recipient”; and
   e. In paragraph (f)(1)(i), remove the word “Grantee” and add in its place the word “recipient”;
   f. In paragraph (f), remove the word “Grantee” wherever it appears and add in its place the word “recipient”; and
   f. In paragraph (f)(i), remove the word “Grantee” wherever it appears and add in its place the word “recipient”.

§ 206.206 [Amended]

22. In § 206.206—
   a. In the introductory text and paragraphs (a), (c), and (d), remove the word “Grantee” wherever it appears, and add in its place the word “recipient”; and remove the word “subgrantee” wherever it appears and add in its place the word “subrecipient”; and
   b. In paragraph (a), remove the words “grantee-related” and add in their place the words “recipient-related”.

§ 206.207 [Amended]

23. In § 206.207—
   a. In paragraph (b)(1)(iii)(D), remove the word “subgrantees” and add in its place the word “subrecipients’”;
   b. In paragraph (b)(1)(iii)(F), remove the word “Grantee” and add in its place the word “recipient”;
   c. In paragraph (b)(1)(iii)(K), remove the word “Grantee” and add in its place the word “recipient” and remove the word “Grantee’s” and add in its place the word “recipient’s”.

§ 206.208 [Amended]

24. In § 206.208, in paragraphs (a), (b) introductory text, and (e)(1) and (2), remove the word “Grantee” wherever it appears and add in its place the word “recipient”.

§ 206.209 [Amended]

25. In § 206.209—
   a. In paragraph (b) introductory text, remove the word “subgrantee” and add in its place the word “subrecipient”;
   b. In paragraphs (e), (f), and (i)(2), remove the word “Grantee” wherever it appears and add in its place the word “recipient”;
   c. In paragraph (e)(3), remove the word “Grantee’s” and add in its place the word “recipient’s”.

§ 206.210 [Amended]

26. In § 206.210—
   a. In paragraph (a), remove the word “subgrantee” and add in its place the word “subrecipient”; and
   b. In paragraph (b), remove the definition of “Grantee” add a definition for “Recipient” and add in alphabetical order;
c. In paragraph (b), remove the word “grantee” wherever it appears and add in its place the word “recipient”; 

■ d. In paragraphs (f), (g), (h)(1)(i) and (ii), (h)(2)(iii), and (h)(3), remove the word “grantee” wherever it appears and add in its place the word “recipient”; 

■ e. In the paragraph (h)(1) heading, remove the word “Grantee” and add in its place the word “Recipient”; and 

■ f. In paragraph (h)(2), remove the word “grantee’s” and add in its place the word “recipient’s”.

The addition reads as follows:

§ 206.210 Dispute Resolution Pilot Program.

* * * * *

(b) * * *

Recipient is used throughout this regulation text and it refers to the definition in FEMA’s regulations at 44 CFR 206.201(m).

* * * * *

§ 206.222 [Amended]

■ 27. In § 206.222(b), remove the reference “§ 205.221(e)” and add in their place the reference “§ 206.221(e)’’.

§ 206.226 [Amended]

■ 28. In § 206.226—

a. In paragraph (a)(2), remove the word “grantees” and add in its place the word “recipients”;

b. In paragraph (b), remove the word “grantee” and add in its place the word “recipient”; and

c. In paragraph (f)(1), remove the words “paragraph (d)(1)” and add, in their place, the words “paragraph (f)(1).”

§ 206.228 [Amended]

■ 29. In § 206.228—

a. In the introductory text, remove the words “44 CFR 13.22” and add in their place the words “2 CFR 200, subpart E” and remove the words “44 CFR 13.4 and 13.6” and add in their place the words “2 CFR 200, subpart E and 2 CFR 200.102”; and

b. In paragraphs (a)(2) introductory text and (a)(2)(iii), remove the word “grantee’s” wherever it appears and add in its place the word “recipient’s” and remove the word “subgrantee’s” wherever it appears and add in its place the word “subrecipient’s.”

§ 206.250 [Amended]

■ 30. In § 206.250(b), remove the word “Grantee” and add in its place the word “recipient”.

§ 206.252 [Amended]

■ 31. In § 206.252—

a. In paragraph (c), remove the word “Grantee” and add in its place the word “recipient” and remove the word “grantee” and add in its place the word “recipient”; and

b. In paragraph (d), remove the word “grantee” and add in its place the word “recipient” and remove the word “subgrantee” and add in its place the word “subrecipient”.

§ 206.253 [Amended]

■ 32. In § 206.253—

a. In paragraphs (a), (c), and (e), remove the word “Grantee” wherever it appears and add in its place the word “recipient”; and

b. In paragraphs (b)(1) and (c), remove the word “grantee” wherever it appears and add in its place the word “recipient”.

PART 207—MANAGEMENT COSTS

■ 33. The authority citation for part 207 continues to read as follows:

§ 207.2 [Amended]

■ 34. In § 207.2—

a. Revise the defined term “Grantee” to read “Grantee (alternatively, Recipient)”; and 

b. Revise the defined term “Subgrantee” to read “Subgrantee (alternatively, Subrecipient)”.

Dated: December 21, 2016.

BILLING CODE 9111–66–P

NATIONAL FOUNDATION ON THE ARTS AND THE HUMANITIES

National Endowment for the Humanities

45 CFR Part 1171

RIN 3136–AA37

Regulations Implementing the FOIA Improvement Act of 2016

AGENCY: National Endowment for the Humanities, National Foundation On the Arts and the Humanities.

ACTION: Final rule.

SUMMARY: On June 30, 2016, President Obama signed the Freedom of Information Act (‘‘FOIA’’) Improvement Act of 2016 (the ‘‘FOIA Improvement Act’’). Section 3 of the FOIA Improvement Act requires, that not later than 180 days after the date of its enactment, the head of each agency review and revise the agency’s regulations to implement the FOIA Improvement Act’s amendments. The FOIA Improvement Act specifically requires that the regulations of each agency include procedures for engaging in dispute resolution through the FOIA Public Liaison and the Office of Government Information Services. After undertaking a review of its FOIA regulations in accordance with Section 3 of the FOIA Improvement Act, NEH is revising its FOIA regulations to incorporate the statutory mandates.

DATES: This rule is effective February 2, 2017.

FOR FURTHER INFORMATION CONTACT: Adam Kress, Attorney-Advisor, Office of the General Counsel, National Endowment for the Humanities, 400 7th Street SW., Room 4060, Washington, DC 20506, (202) 606–8322, akress@neh.gov.

SUPPLEMENTARY INFORMATION: NEH is amending its FOIA regulations published at 45 CFR part 1171 to incorporate changes required by the FOIA Improvement Act.

Background

Section 10 of the National Foundation on the Arts and the Humanities Act of 1965 (20 U.S.C. 959) authorizes the Chairperson of NEH to prescribe such regulations as he or she deems necessary governing the manner in which the Chairperson’s functions shall be carried out.

This rulemaking amends NEH’s existing regulations providing Public Access to NEH Records Under the Freedom of Information Act (45 CFR part 1171) by incorporating changes to the FOIA by the FOIA Improvement Act. Among other things, the FOIA Improvement Act requires that agencies (i) make records that have been both released previously and requested three or more times available to the public in electronic format, (ii) establish a minimum of ninety days for requesters to appeal an adverse determination, and (iii) provide, or direct requesters to, dispute resolution services at various times throughout the FOIA process. The FOIA Improvement Act also updates how agencies may charge search, duplication and review fees.

NEH amends 45 CFR part 1171 as follows:

• By amending 45 CFR 1171.4 to “make available for public inspection in an electronic format” records that have
been previously released and either (i) are likely to be subject to subsequent requests for substantially the same records, or (ii) “that have been requested three or more times.”

- By amending 45 CFR 1171.7 & 1171.8 to indicate that the requester may seek assistance from NEH’s Public Liaison and/or the Office of Government Information Services at various times throughout the FOIA process.
- By amending 45 CFR 1171.10 to change the appeals deadline from thirty days to ninety days.
- By amending 45 CFR 1171.11 to provide additional limitations on the fees charged by NEH.

**Good Cause for Final Adoption**

NEH ordinarily promulgates amendments to the Code of Federal Regulations in accordance with the notice-and-comment rulemaking procedure in Section 553 of the Administrative Procedure Act (APA) (5 U.S.C. 553). That provision requires that agencies publish notice of a proposed rule or amended rule in the Federal Register, and that such agencies solicit and consider public comment on the proposed rule or amendment, and publish any final rule at least thirty days prior to its effective date.

Section 553 of the APA, however, allows agencies to dispense with the above notice and comment procedures when the agency has “good cause” for concluding that such procedures are “impracticable, unnecessary, or contrary to the public interest.” Under the APA, an agency may issue a final rule without seeking comment prior to the rulemaking, for good cause.

NEH’s proposed amendments to its FOIA regulations are required by the FOIA Improvement Act, do not reflect or empower agency discretion, and provide additional protection to the public. For these reasons, NEH finds good cause to conclude that it is not necessary for the public to have notice and an opportunity to comment on the amendments described below.

**Regulatory Analysis of the Proposed Amendments**

These amendments do not constitute a “significant regulatory action” under Executive Order 12866 (58 FR 51735, Oct. 4, 1993) and therefore are not subject to Office of Management and Budget (OMB) review.

The Regulatory Flexibility Act (5 U.S.C. 601, et seq.) is inapplicable to this rulemaking because it is not one for which a notice of proposed rulemaking is required under 5 U.S.C. 553(b) or any other statute.

For purposes of the Unfunded Mandates Reform Act of 1995, Public Law 104–4 (2 U.S.C. 1531–1538), these amendments will not result in the expenditure by State, local, and Tribal governments, in the aggregate, or by the private sector, of $100,000,000 or more in any one year, nor will they significantly or uniquely affect small governments.

These amendments are not “major rules” as defined by section 251 of the Small Business Regulatory Enforcement Fairness Act of 1996 (5 U.S.C. 801, et seq.). Moreover, they are exempt from the reporting requirements of that Act because they are rules of agency procedure and practice that do not substantially affect the rights or obligations of non-agency parties.

The Paperwork Reduction Act (44 U.S.C. 3501, et seq.), does not apply to these amendments because they do not contain any new information collection requirements that need OMB approval.

**List of Subjects in 45 CFR Part 1171**

Administrative practice and procedure, Fees, Freedom of Information.

For the reasons discussed in the preamble, NEH amends 45 CFR part 1171 as follows:

**PART 1171—PUBLIC ACCESS TO NEH RECORDS UNDER THE FREEDOM OF INFORMATION ACT**

1. The authority citation for part 1171 is revised to read as follows:

2. Amend §1171.4 by revising paragraphs (a) and (b) to read as follows:

   **§1171.4 Public availability of records.**

   (a) In accordance with 5 U.S.C. 552(a)(2), the NEH will make the following records available for public inspection in an electronic format (unless they are published and copies are offered for sale) without a FOIA request:

   - Final opinions, including concurring and dissenting opinions, as well as orders made in the adjudication of cases,
   - Statements of policy and interpretations which have been adopted by the agency and are not published in the Federal Register,
   - Administrative staff manuals and instructions to staff that affect a member of the public,
   - Copies of all records, regardless of format, which have been released to any person under 5 U.S.C. 552(a)(3) and which because of their subject matter, the NEH determines have become or are likely to become subject to subsequent requests for substantially the same records, or have been requested three (3) or more times; and
   - A general index of the records referred to in paragraph (b) of this section.

   (b) The NEH will also maintain and make available for public inspection in an electronic format current indexes as required by 5 U.S.C. 552(a)(2) of the FOIA. However, since the NEH has determined that publication and distribution of these indexes is unnecessary and impracticable, the NEH will provide these indexes upon request at a cost not to exceed the direct cost of the duplication.

3. Amend §1171.7 by revising paragraph (d)(1)(ii) to read as follows:

   **§1171.7 Timing of responses to requests.**

   (d) * * * * *

   (1) * * *

   (ii) If the extension will be for more than ten (10) working days, the NEH will provide the requester with an opportunity either to modify the request so that it may be processed within the time limit or to arrange an alternative time period to process the request or a modified request. To aid the requester, NEH shall make available its FOIA Public Liaison, who shall assist in the resolution of any disputes between the requester and the agency, and shall notify the requester of his or her right to seek dispute resolution services from the Office of Government Information Services.

4. Amend §1171.8 by revising paragraphs (b) and (c) to read as follows:

   **§1171.8 Responses to requests.**

   (b) Grants of requests. If the NEH makes a determination to grant a request in whole or in part, it will notify the requester in writing of such determination and the reasons therefore, and the requester’s right to seek assistance from NEH’s FOIA Public Liaison. The NEH will inform the requester of any applicable fees and will disclose records to the requester promptly on payment of any applicable fees. The NEH will mark or annotate records disclosed in part to show the amount of information deleted pursuant to a FOIA exemption, unless doing so would harm an interest protected by an applicable FOIA exemption. If technically feasible, the NEH will also indicate, on the agency record(s) it
provides, the location of the information deleted.

(c) Denials of requests. If the NEH makes a determination to deny a request in any respect, the NEH will also notify the requester in writing of:

(1) The name and title or position of the person responsible for the denial;
(2) A brief statement of the reason(s) for the denial, including any FOIA exemption applied by the NEH in denying the request;
(3) An estimate of the volume of records or information withheld, if applicable, although such an estimate is not required if the volume is otherwise indicated through deletion on the records disclosed in part, or if providing such an estimate would harm an interest protected by an applicable exemption;
(4) The requester’s right to seek dispute resolution services from NEH’s FOIA Public Liaison or the Office of Government Information Services; and
(5) A statement that the requester may appeal the denial under § 1171.10 and a description of the requirements to appeal.

5. Amend § 1171.10 by revising paragraph (a) to read as follows:

§ 1171.10 Administrative appeals.

(a) You may appeal a denial of your request for NEH records (except NEH OIG records) and/or FCAH records to The Deputy Chairman, National Endowment for the Humanities, 400 7th Street SW., Room 4053, Washington, DC 20506. You may also send your appeal to the NEH General Counsel by facsimile at 202–606–8600, by email at gcncounsel@neh.gov, or through the NEH’s electronic FOIA request system, which is available on the NEH Web site at www.nev.gov. For a denial of your request for OIG records, you may appeal by facsimile at 202–606–8329, by email at oig@neh.gov or by mail to The Inspector General, National Endowment for the Humanities, 400 7th Street SW., Room 2200, Washington, DC 20506. Your appeal must be in writing and received by NEH within ninety (90) days of the date of the letter denying your request in whole or in part. Your appeal letter must clearly identify the NEH decision that you are appealing and contain the tracking number, if assigned. You should clearly mark your appeal letter and envelope “Freedom of Information Act Appeal.”

6. Amend § 1171.11 by revising paragraph (d) to read as follows:

§ 1171.11 Fees.

(d) * * * * *
Executive, in coordination with the head of contracting activities, established internal procedures to monitor contractual actions entered into FPDS by the GSA acquisition workforce. The internal GSA procedures were incorrectly published in the GSAR. Therefore the GSA is amending the GSAR to remove section 504.604 regarding the internal processes for reporting and reviewing the accuracy of contract actions reported.

The internal GSA procedures will be established as a nonregulatory section in the GSAM and communicated to the GSA acquisition workforce through a GSA internal policy letter (i.e., GSA Order). Even though the GSAM guidance is not included with the regulatory changes of this rule, it will be publicly available on https://www.acquisition.gov/?q=browsegsam.

II. Public Comments Not Required

41 U.S.C. 1707, Publication of proposed regulations, applies to the publication of the General Services Administration Acquisition Regulation. Paragraph (a)(1) of the statute requires that a procurement policy, regulation, procedure or form (including amendment or modification thereof) must be published for public comment if it has either a significant effect beyond the internal operating procedures of the agency issuing the policy, regulation, procedure, or form or has a significant cost or administrative impact on contractor or offerors. This final rule is not required to be published for public comment, because there is no affect beyond internal operating procedures, nor does the rule impact contractors or offerors.

III. Executive Order 12866 and 13563

Executive Orders (E.O.s) 12866 and 13563 direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity). E.O. 13563 emphasizes the importance of quantifying both costs and benefits, of reducing costs, of harmonizing rules, and of promoting flexibility. This is not a significant regulatory action and, therefore, was not subject to review under section 6(b) of Executive Order 12866, Regulatory Planning and Review, dated September 30, 1993. This rule is not a major rule under 5 U.S.C. 804.

IV. Regulatory Flexibility Act

The Regulatory Flexibility Analysis does not apply to this rule because this final rule does not constitute a significant GSAR revision and 41 U.S.C. 1707 does not require publication for public comment.

V. Paperwork Reduction Act

This final rule does not contain any information collection that requires additional approval of the Office of Management and Budget under the Paperwork Reduction Act (44 U.S.C. Chapter 35).

List of Subjects in 48 CFR Part 504

Government procurement.

Nicholas West,
Acting Senior Procurement Executive, Acting Director, Office of Acquisition Policy, Office of Governmentwide Policy.

Therefore, GSA is amending 48 CFR part 504 as set forth below:

PART 504—ADMINISTRATIVE MATTERS

1. The authority citation for 48 CFR part 504 continues to read as follows:

Authority: 40 U.S.C. 121(c).

504.604 [Removed]

2. Remove section 504.604.

[FR Doc. 2016–31529 Filed 12–30–16; 8:45 am]
This section of the FEDERAL REGISTER contains notices to the public of the proposed issuance of rules and regulations. The purpose of these notices is to give interested persons an opportunity to participate in the rule making prior to the adoption of the final rules.

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 39

RIN 2120–AA64

Airworthiness Directives; Piper Aircraft, Inc. Airplanes

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of proposed rulemaking (NPRM).

SUMMARY: We propose to adopt a new airworthiness directive (AD) for certain Piper Aircraft, Inc. Models PA–31, PA–31–300, PA–31–325, and PA–31–350 airplanes. This proposed AD was prompted by fatigue cracking in the fuselage station (FS) 332.00 bulkhead common to the horizontal stabilizer front spar attachment. This proposed AD would require repetitive inspections to detect cracks in the bulkhead and any necessary repairs. This proposed AD also provides an optional modification if no cracks are found that will greatly reduce the likelihood of the specified cracks. We are issuing this proposed AD to correct the unsafe condition on these products.

DATES: We must receive comments on this proposed AD by February 17, 2017.

ADDRESSES: You may send comments, using the procedures found in 14 CFR 11.43 and 11.45, by any of the following methods:

• Federal eRulemaking Portal: Go to http://www.regulations.gov. Follow the instructions for submitting comments.
• Fax: 202–493–2251.
• Hand Delivery: Deliver to Mail address above between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

For service information identified in this NPRM, contact Piper Aircraft, Inc., Customer Service, 2926 Piper Drive, Vero Beach, Florida 32960; telephone: (877) 879–0275; fax: none; email: customer.service@piper.com; Internet: www.piper.com. You may view this referenced service information at the FAA, Small Airplane Directorate, 901 Locust, Kansas City, Missouri 64106. For information on the availability of this material at the FAA, call (816) 329–4148.

Examining the AD Docket

You may examine the AD docket on the Internet at http://www.regulations.gov by searching for and locating Docket No. FAA–2016–9550; or in person at the Docket Management Facility between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The AD docket contains this proposed AD, the regulatory evaluation, any comments received, and other information. The street address for the Docket Office (phone: 800–647–5527) is in the ADDRESSES section. Comments will be available in the AD docket shortly after receipt.

FOR FURTHER INFORMATION CONTACT:

Gregory "Keith" Noles, Aerospace Engineer, FAA, Atlanta Aircraft Certification Office, 1701 Columbia Avenue, College Park, Georgia 30337; phone: (404) 474–5527; email: gregory.noles@faa.gov.

SUPPLEMENTARY INFORMATION:

Comments Invited

We invite you to send any written relevant data, views, or arguments about this proposal. Send your comments to an address listed under the ADDRESSES section. Include “Docket No. FAA–2016–9550; Directorate Identifier 2016–CE–026–AD at the beginning of your comments. We specifically invite comments on the overall regulatory, economic, environmental, and energy aspects of this proposed AD. We will consider all comments received by the closing date and may amend this proposed AD because of those comments.

We will post all comments we receive, without change, to http://www.regulations.gov, including any personal information you provide. We will also post a report summarizing each substantive verbal contact we receive about this proposed AD.

Discussion

We reviewed reports of fatigue cracking in the FS 332.00 bulkhead common to the horizontal stabilizer front spar attachment on Piper Aircraft, Inc. PA–31 airplanes. Cracks in the bulkhead could compromise the structural component’s capability to carry flight loads, increasing the potential to overload and fail adjacent structure. This proposed AD also provides an optional modification if no cracks are found that will greatly reduce the likelihood of the specified cracks. We are proposing this AD to detect and repair cracks in the bulkhead that could lead to structural failure and result in loss of control.

Related Service Information Under 1 CFR Part 51

We reviewed Piper Aircraft, Inc. Service Bulletin No. 1289A, dated October 26, 2016. The service information describes procedures for the repetitive inspections, necessary repairs, and the optional modification of the bulkhead. This service information is reasonably available because the interested parties have access to it through their normal course of business or by the means identified in the ADDRESSES section.

FAA’s Determination

We are proposing this AD because we evaluated all the relevant information and determined the unsafe condition described previously is likely to exist or develop in other products of these same type designs.

Proposed AD Requirements

This proposed AD would require repetitive inspections to detect cracks in the bulkhead and any necessary repairs. This proposed AD also provides an optional modification if no cracks are found that will greatly reduce the likelihood of the specified cracks. We are proposing this AD to detect and repair cracks in the bulkhead, that could lead to structural failure and result in loss of control.

Costs of Compliance

We estimate that this proposed AD affects 955 airplanes of U.S. registry. We estimate the following costs to comply with this proposed AD:

Federal Register Vol. 82, No. 1

Tuesday, January 3, 2017
Authority for This Rulemaking

Title 49 of the United States Code specifies the FAA’s authority to issue rules on aviation safety. Subtitle I, section 106, describes the authority of the FAA Administrator. Subtitle VII: Aviation Programs, describes in more detail the scope of the Agency’s authority.

We are issuing this rulemaking under the authority described in Subtitle VII, Part A, Subpart III, Section 44701: “General requirements.” Under that section, Congress charges the FAA with promoting safe flight of civil aircraft in air commerce by prescribing regulations for practices, methods, and procedures the Administrator finds necessary for safety in air commerce. This regulation is within the scope of that authority because it addresses an unsafe condition that is likely to exist or develop on aircraft that might need these repairs/replacements.

Regulatory Findings

We determined that this proposed AD would not have federalism implications under Executive Order 13132. This proposed AD would not have a substantial direct effect on the States, on the relationship between the national Government and the States, or on the distribution of power and responsibilities among the various levels of government.

For the reasons discussed above, I certify this proposed regulation:

(1) Is not a “significant regulatory action” under Executive Order 12866,
(2) Is not a “significant rule” under the DOT Regulatory Policies and Procedures (44 FR 11034, February 26, 1979),
(3) Will not affect intrastate aviation in Alaska, and
(4) Will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

The Proposed Amendment

Accordingly, under the authority delegated to me by the Administrator, the FAA proposes to amend 14 CFR part 39 as follows:

PART 39—AIRWORTHINESS DIRECTIVES

§ 39.13 [Amended]

1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

2. The FAA amends § 39.13 by adding the following new airworthiness directive (AD):

(a) Comments Due Date

We must receive comments by February 17, 2017.

(b) Affected ADs

None.

(c) Applicability

Note 1 to paragraph (c) of this AD: The Model PA–31 may also be identified as a PA–31–310 even though the PA–31–310 is not a model recognized by the Federal Aviation Administration (FAA) on the type certificate data sheet.

(d) Subject

Joint Aircraft System Component (JASC)/Air Transport Association (ATA) of America Code 5312: Fuselage—Main Bulkhead.

(e) Unsafe Condition

This AD was prompted by fatigue cracking in the fuselage station (FS) 332.00 bulkhead common to the horizontal stabilizer front spar attachment. We are proposing repetitive inspections to detect cracks in the bulkhead and any necessary repairs. This proposed AD also provides an optional modification if no cracks are found that will greatly reduce the likelihood of the specified cracks. Cracks in the bulkhead could compromise the structural components capability to carry flight loads, increasing the potential to overload and fail adjacent structure and lead to loss of control.

(f) Compliance

Comply with paragraphs (g)(1) through (3) of this AD within the compliance times specified, unless already done.

(g) Actions

(1) For airplanes with 3,000 hours time-in-service (TIS) or less as of the effective date of this AD: Initially within 500 hours TIS after reaching 3,000 hours TIS and repetitively thereafter every 200 hours TIS, inspect the fuselage station (FS) 332.00 bulkhead assembly for cracks following the instructions in Part I of Piper Aircraft, Inc., Service Bulletin (SB) No. 1289A, dated October 26, 2016.

(2) For airplanes with over 3,000 hours TIS as of the effective date of this AD: Initially within the next 500 hours TIS after the effective date of this AD and repetitively thereafter every 200 hours TIS, inspect the FS 332.00 bulkhead assembly for cracks following the instructions in Part I of Piper Aircraft, Inc., SB No. 1289A, dated October 26, 2016.

(3) If cracks are found during any of the inspections required in paragraphs (g)(1) or (2) of this AD, before further flight, repair the cracks following the modification instructions in Part II of Piper Aircraft, Inc., SB No. 1289A, dated October 26, 2016, and one of the following as applicable:

(i) If the crack does not extend beyond the inspection/template area of Figure 2 of Piper
Aircraft, Inc. SB No. 1289A, dated October 26, 2016, and meets the minimum acceptable distance in Figure 3 and Table 2 of Part II of Piper Aircraft, Inc. SB No. 1289A, dated October 26, 2016, then the installation of Piper Kit 88578–001 Revision B, dated June 23, 2016, is acceptable as a repair and is considered terminating action for the repetitive inspection requirement in paragraphs (g)(1) and (2) of this AD.

(ii) If the crack extends beyond the inspection/templet area of Figure 2 of Piper Aircraft, Inc. SB No. 1289A, dated October 26, 2016, or does not meet the minimum acceptable distance in Figure 3 and Table 2 of Part II of Piper Aircraft, Inc. SB No. 1289A, dated October 26, 2016, then the installation of Piper Kit 88578–001 Revision B, dated June 23, 2016, is not an acceptable repair. You must obtain an alternative method of compliance (AMOC) for any repair or modification in this area. You may contact Piper Aircraft, Inc. for repair instruction development specific to this condition. For contact information refer to paragraph (j) of this AD.

(4) If no cracks are found, you may install Piper Kit 88578–001 Revision B, dated June 23, 2016, on an uncracked bulkhead following the Modification instructions in Part II of Piper Aircraft, Inc. SB No. 1289A, dated October 26, 2016. Installation of Piper Kit 88578–001 Revision B, dated June 23, 2016, on an uncracked bulkhead is considered terminating action for the repetitive inspection requirement in paragraphs (g)(1) and (2) of this AD.

(h) Special Flight Permit

A special flight permit is allowed for this AD per 14 CFR 39.23 with limitations. Permits are not allowed if cracks are discovered during any inspection following Part I of Piper Aircraft, Inc. SB No. 1289A, dated October 26, 2016. Any cracks found during any inspection must be repaired before further flight.

(i) Alternative Methods of Compliance (AMOCs)

(1) The Manager, Atlanta Aircraft Certification Office, FAA, has the authority to approve AMOCs for this AD, if requested using the procedures found in 14 CFR 39.19. In accordance with 14 CFR 39.19, send your request to your principal inspector or local Flight Standards District Office, as appropriate. If sending information directly to the manager of the ACO, send it to the attention of the person identified in paragraph (k) of this AD.

(2) Before using any approved AMOC, notify your appropriate principal inspector, or lacking a principal inspector, the manager of the local Flight Standards District Office certificate holding district office.

(j) Related Information

(1) For more information about this AD, contact Gregory "Keith" Noles, Aerospace Engineer, FAA, Atlanta Aircraft Certification Office, 1701 Columbia Avenue, College Park, Georgia 30337; phone: (404) 474–5551; fax: (404) 474–5606; email: gregory.noles@faa.gov.

(2) For service information identified in this AD, contact Piper Aircraft, Inc., Customer Service, 2926 Piper Drive, Vero Beach, Florida 32960; telephone: (877) 879–0275; fax: none; email: customer.service@piper.com; Internet: www.piper.com. You may review the referenced service information at the FAA, Small Airplane Directorate, 901 Locust Avenue, Des Moines, Missouri 50309-6640. For information on the availability of this material at the FAA, call (816) 329–4148.

Issued in Kansas City, Missouri, on December 13, 2016.

Robert P. Busto,
Acting Manager, Small Airplane Directorate, Aircraft Certification Service.

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 39

RIN 2120–AA64

Airworthiness Directives; Airbus Airplanes

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of proposed rulemaking (NPRM).

SUMMARY: We propose to adopt a new airworthiness directive (AD) for certain Airbus Model A318, A319, A320, and A321 series airplanes. This proposed AD was prompted by in-service experience and further analysis, which showed that the galley 5 without kick-load retainers, was unable to withstand the expected loading during several flight phases or in case of emergency landing. This proposed AD would require modification of galley 5 by adding kick-load retainers. We are proposing this AD to address the unsafe condition on these products.

DATES: We must receive comments on this proposed AD by February 17, 2017.

ADDRESSES: You may send comments, using the procedures found in 14 CFR 11.43 and 11.45, by any of the following methods:

• Federal eRulemaking Portal: Go to http://www.regulations.gov. Follow the instructions for submitting comments.
• Fax: 202–493–2251.
• Hand Delivery: Deliver to Mail address above between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. See DATES section.

Comments Invited

We invite you to send any written relevant data, views, or arguments about this proposed AD. Send your comments to an address listed under the ADDRESSES section. Include “Docket No. FAA–2016–9519; Directorate Identifier 2016–NM–099–AD” at the beginning of your comments. We specifically invite comments on the overall regulatory, economic, environmental, and energy aspects of this proposed AD. We will consider all comments received by the closing date and may amend this proposed AD based on those comments.

We will post all comments we receive, without change, to http://www.regulations.gov, including any personal information you provide. We will also post a report summarizing each substantive verbal contact we receive about this proposed AD.

Discussion

The European Aviation Safety Agency (EASA), which is the Technical Agent for Airbus, Airworthiness Office–EIAS, 1 Rond Point Maurice Bellonte, 31707 Blagnac Cedex, France; telephone +33 5 61 93 36 96; fax +33 5 61 93 44 51; email account.airworth-eas@airbus.com; Internet http://www.airbus.com. You may view this referenced service information at the FAA, Transport Airplane Directorate, 1601 Lind Avenue SW., Renton, WA. For information on the availability of this material at the FAA, call 425 227–1221.

Examining the AD Docket

You may examine the AD docket on the Internet at http://www.regulations.gov by searching for and locating Docket No. FAA–2016–9519; or in person at the Docket Management Facility between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The AD docket contains this proposed AD, the regulatory evaluation, any comments received, and other information. The street address for the Docket Operations office (telephone 800–647–5527) is in the ADDRESSES section. Comments will be available in the AD docket shortly after receipt.

FOR FURTHER INFORMATION CONTACT:

SUPPLEMENTARY INFORMATION:

You
for the Member States of the European Union, has issued EASA Airworthiness Directive, 2016–0040, dated March 2, 2016, (referred to after this as the Mandatory Continuing Airworthiness Information, or “the MCAI”), to correct an unsafe condition for certain Airbus Model A318, A319, A320, and A321 series airplanes. The MCAI states:

Following in-service experience and further analyses, it was ascertained that the galley 5 without kick-load retainers on external position could withstand the expected loading during several flight phases or in case of emergency landing.

This condition, if not corrected, could lead to galley/trolley detachment and collapse into an adjacent cabin aisle or cabin zone, possibly spreading loose galley equipment items, compartment doors or leaking fluids, blocking an evacuation route, and consequently resulting in injury to crew or passengers.

To address this potential unsafe condition, Airbus issued 6 Service Bulletins (SB) to provide modification instructions for the affected aeroplanes.

For the reasons discussed above, this [EASA] AD requires modification of galley 5 trolley compartments to install kick-load retainers.

Related Service Information Under 1 CFR Part 51

We reviewed the following Airbus service information: Airbus Service Bulletin A320–25–1B29, dated June 19, 2014, and Airbus Service Bulletin A320–25–1B30, dated June 19, 2014. The service information describes procedures for installing kick-load retainers on certain galley 5 trolley compartments. These documents are distinct since they apply to different airplane configurations. This service information is reasonably available because the interested parties have access to it through their normal course of business or by the means identified in the ADDRESSES section.

FAA’s Determination and Requirements of This Proposed AD

This product has been approved by the aviation authority of another country, and is approved for operation in the United States. Pursuant to our bilateral agreement with the State of Design Authority, we have been notified of the unsafe condition described in the MCAI and service information referenced above. We are proposing this AD because we evaluated all pertinent information and determined an unsafe condition exists and is likely to exist or develop on other products of these same type designs.

Costs of Compliance

We estimate that this proposed AD affects 19 airplanes of U.S. registry.

We estimate the following costs to comply with this proposed AD:

![ESTIMATED COSTS]

<table>
<thead>
<tr>
<th>Action</th>
<th>Labor cost</th>
<th>Parts cost</th>
<th>Cost per product</th>
<th>Cost on U.S. operators</th>
</tr>
</thead>
<tbody>
<tr>
<td>Modification</td>
<td>$170</td>
<td>$0</td>
<td>$170</td>
<td>$3,230</td>
</tr>
</tbody>
</table>

Authority for This Rulemaking

Title 49 of the United States Code specifies the FAA’s authority to issue rules on aviation safety. Subtitle I, section 106, describes the authority of the FAA Administrator. “Subtitle VII: Aviation Programs,” describes in more detail the scope of the Agency’s authority.

We are issuing this rulemaking under the authority described in “Subtitle VII, Part A, Subpart III, Section 44701: General requirements.” Under that section, Congress charges the FAA with promoting safe flight of civil aircraft in air commerce by prescribing regulations for practices, methods, and procedures the Administrator finds necessary for safety in air commerce. This regulation is within the scope of that authority because it addresses an unsafe condition that is likely to exist or develop on products identified in this rulemaking action.

Regulatory Findings

We determined that this proposed AD would not have federalism implications under Executive Order 13132. This proposed AD would not have a substantial direct effect on the States, on the relationship between the national Government and the States, or on the distribution of power and responsibilities among the various levels of government.

For the reasons discussed above, I certify this proposed regulation:
1. Is not a “significant regulatory action” under Executive Order 12866;
2. Is not a “significant rule” under the DOT Regulatory Policies and Procedures (44 FR 11034, February 26, 1979);
3. Will not affect intrastate aviation in Alaska; and
4. Will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

The Proposed Amendment

Accordingly, under the authority delegated to me by the Administrator, the FAA proposes to amend 14 CFR part 39 as follows:

PART 39—AIRWORTHINESS DIRECTIVES

§ 39.13 [Amended]

2. The FAA amends § 39.13 by adding the following new airworthiness directive (AD):

Airbus: Docket No. FAA–2016–9519;
Directorate Identifier 2016–NM–099–AD.

(a) Comments Due Date

We must receive comments by February 17, 2017.

(b) Affected ADs

None.

(c) Applicability

This AD applies to Airbus Model A318–112, A319–115, A320–214, A320–232, and A321–111 airplanes, certificated in any category, with manufacturer’s serial numbers 1479, 3096, 3091, 3713, 3791, 3994, 3902, 3907, 3931, 3949, 3969, 4030, 4045, 4049, 4059, 4066, 4077, 4083, 4124, 4146, 4158, 4188, 4198, 4206, 4209, 4218, 4235, 4255, 4264, 4304, 4321, 4331, 4371, 4374, 4395, 4411, 4417, 4431, 4485, 4492, 4502, 4528, 4541, 4548, 4552, 4595, 4638, 4651, 4669, 4703, 4724, 4737, 4746, 4770, 4780, 4783, 4826, 4827, 4860, 4863, 4865, 4902, 4934, 4945, 4951, 4952, 4971, 4996, 5023, 5029, 5042, 5088, 5095, 5132, 5159, 5164, 5171, 5175, 5192, 5210, 5227, 5241, 5247, 5251, 5275, 5277, 5297, 5306, 5346, 5348, 5350, 5356, 5366, 5370, 5385, 5387, 5392, 5396, 5400, 5407, 5418, 5427, 5438, 5456, 5458, 5469, 5495, 5517, 5555, 5564, 5624, 5674, 5678, 5698, 5699, 5704, 5709, 5714, 5741, 5745, 5753, 5761, 5781, 5786, 5788, 5789, 5798, 5894, 5910, 5921, 5927, 5942, 5874, 5882.
5889, 5903, 5907, 5916, 5924, 5958, 5984, 5994, 6000, 6004, 6054, 6080, 6107, 6166, 6176, 6234, 6266, 6293, 6335, 6344, 6365, 6430, and 6444.

(d) Subject
Air Transport Association (ATA) of America Code 25, Equipment/furnishings.

(e) Reason
This AD was prompted by in-service experience and further analysis, which showed that the galley 5 without kick-load retainers was unable to withstand the expected loading during several flight phases or in case of emergency landing. We are issuing this AD to prevent galley/trolley detachment and collapse into an adjacent cabin aisle or cabin zone, possibly spreading loose galley equipment items or compartment doors, or leaking fluids. These hazards could block an evacuation route and result in injury to crew or passengers.

(f) Compliance
Comply with this AD within the compliance times specified, unless already done.

(g) Install Kick-Load Retainers
Within 12 months after the effective date of this AD, install kick-load retainers on the galley 5 trolley compartments as specified in paragraph (g)(1), (g)(2), or (g)(3) of this AD, as applicable.

(1) For Airbus Model A319 airplanes, manufacturer’s serial numbers 5673, 5696, 5704, 5745, 5755, 5761, 5781, 5786, 5788, 5789, 5798, 5810, 5827, and 5842, do the installation in accordance with the Accomplishment Instructions of Airbus Service Bulletin A320–25–1B29, dated June 19, 2014.

(2) For Airbus Model A320 airplanes, manufacturer’s serial numbers 5458, 5517, 5624, 5672, and 5804, do the installation in accordance with the Accomplishment Instructions of Airbus Service Bulletin A320–25–1830, dated June 19, 2014.

(3) For airplanes not identified in paragraph (g)(1) or (g)(2) of this AD, use a method approved by the Manager, International Branch, ANM–116, Transport Airplane Directorate, FAA; or the European Aviation Safety Agency (EASA); or Airbus’s EASA Design Organization Approval (DOA). If approved by the DOA, the approval must include the DOA-authorized signature.

(i) Related Information
(1) Refer to Mandatory Continuing Airworthiness Information (MCAI) EASA Airworthiness Directive 2016–0040, dated March 2, 2016, for related information. This MCAI may be found in the AD docket on the Internet at http://www.regulations.gov by searching for and locating Docket No. FAA–2016–9519.

(2) For service information identified in this AD, contact Airbus SAS, Airworthiness Office—EAL, 1 Rond Point Maurice Bellonte, 31707 Blagnac Cedex, France; telephone +33 5 61 93 36 96; fax +33 5 61 93 45 80; email airworthiness.A330–A340@airbus.com; Internet http://www.airbus.com.

Issued in Renton, Washington, on December 15, 2016.

Victor Wicklund,
Acting Manager, Transport Airplane Directorate, Aircraft Certification Service.

RIN 2120–AA64

Airworthiness Directives; CFE Company Turbofan Engines

AGENCY: Federal Aviation Administration, DOT.

ACTION: Notice of proposed rulemaking (NPRM).

SUMMARY: We propose to adopt a new airworthiness directive (AD) for certain CFE Company (CFE) turbofan engines. This proposed AD was prompted by a quality escape for high-pressure compressor (HPC) impellers made from forgings with nonconforming material grain size. This proposed AD would require removal of the HPC impellers.

We are proposing this AD to correct the unsafe condition on these products.

DATES: We must receive comments on this proposed AD by February 17, 2017.

ADDRESSES: You may send comments, using the procedures found in 14 CFR 11.43 and 11.45, by any of the following methods:

• Federal eRulemaking Portal: Go to http://www.regulations.gov. Follow the instructions for submitting comments.
• Fax: 202–493–2251.
• Hand Delivery: Deliver to Mail address above between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

Examining the AD Docket
You may examine the AD docket on the Internet at http://www.regulations.gov by searching for and locating Docket No. FAA–2016–9380; or in person at the Docket Management Facility between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The AD docket contains this proposed AD, the regulatory evaluation, any comments received, and other information. The street address for the Docket Office (phone: 800–647–5527) is in the ADDRESSES section. Comments will be available in the AD docket shortly after receipt.

SUPPLEMENTARY INFORMATION:

Comments Invited

We invite you to send any written relevant data, views, or arguments about this proposal. Send your comments to an address listed under the ADDRESSES section. Include “Docket No. FAA–2016–9380; Directorate Identifier 2016–NE–21–AD” at the beginning of your comments. We specifically invite comments on the overall regulatory, economic, environmental, and energy aspects of this proposed AD. We will consider all comments received by the closing date and may amend this proposed AD because of those comments.

We will post all comments we receive, without change, to http://www.regulations.gov, including any personal information you provide. We will also post a report summarizing each substantive verbal contact we receive about this proposed AD.
Discussion

We propose to adopt an AD for certain CFE CFE738–1–1B model turbosfan engines with HPC impeller, part number (P/N) 6079T77P07 or P/N 6079T77P09 installed. This proposed AD was prompted by a quality escape for HPC impellers made from forgings with nonconforming material grain size. This condition, if not corrected, could result in failure of the HPC impeller, damage to the engine, and damage to the airplane.

Related Service Information Under 1 CFR Part 51

We reviewed CFE Service Bulletin (SB) CFE738–72–8080, Revision 0, dated August 18, 2016. The SB describes procedures for replacing specific serial numbered HPC impellers, P/N 6079T77P07 or P/N 6079T77P09. This service information is reasonably available because the interested parties have access to it through their normal course of business or by the means identified in the ADDRESSES section.

FAA’s Determination

We are proposing this AD because we evaluated all the relevant information and determined the unsafe condition described previously is likely to exist or develop in other products of the same type design.

Proposed AD Requirements

This proposed AD would require removal of affected HPC impellers from service and replacement with a part eligible for installation.

Costs of Compliance

We estimate that this proposed AD affects 176 engines installed on airplanes of U.S. registry.

We estimate the following costs to comply with this proposed AD:

<table>
<thead>
<tr>
<th>Action</th>
<th>Labor cost</th>
<th>Parts cost</th>
<th>Cost per product</th>
<th>Cost on U.S. operators</th>
</tr>
</thead>
<tbody>
<tr>
<td>Pro-rated HPC impeller</td>
<td>$0.00</td>
<td>$42,240</td>
<td>$42,240</td>
<td>$7,434,240</td>
</tr>
</tbody>
</table>

Authority for This Rulemaking

Title 49 of the United States Code specifies the FAA’s authority to issue rules on aviation safety. Subtitle I, section 106, describes the authority of the FAA Administrator. Subtitle VII: Aviation Programs, describes in more detail the scope of the Agency’s authority.

We are issuing this rulemaking under the authority described in Subtitle VII, Part A, Subpart III, Section 44701: “General requirements.” Under that section, Congress charges the FAA with promoting safe flight of civil aircraft in air commerce by prescribing regulations for practices, methods, and procedures the Administrator finds necessary for safety in air commerce. This regulation is within the scope of that authority because it addresses an unsafe condition that is likely to exist or develop on products identified in this rulemaking action.

Regulatory Findings

We determined that this proposed AD would not have federalism implications under Executive Order 13132. This proposed AD would not have a substantial direct effect on the States, on the relationship between the national Government and the States, or on the distribution of power and responsibilities among the various levels of government.

For the reasons discussed above, I certify this proposed regulation:

(1) Is not a “significant regulatory action” under Executive Order 12866,
(2) Is not a “significant rule” under the DOT Regulatory Policies and Procedures (44 FR 11034, February 26, 1979),
(3) Will not affect intrastate aviation in Alaska, and
(4) Will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

The Proposed Amendment

Accordingly, under the authority delegated to me by the Administrator, the FAA proposes to amend 14 CFR part 39 as follows:

PART 39—AIRWORTHINESS DIRECTIVES

1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

2. The FAA amends § 39.13 by adding the following new airworthiness directive (AD):

(a) Comments Due Date

We must receive comments by February 17, 2017.

(b) Affected ADs

None.

(c) Applicability

This AD applies to CFE Company (CFE) CFE738–1–1B model turbosfan engines with a high-pressure compressor (HPC) impeller, part number (P/N) 6079T77P07 or P/N 6079T77P09, with a serial number listed in CFE Service Bulletin (SB) CFE738–72–8080, Revision 0, dated August 18, 2016, installed.

(d) Subject

Joint Aircraft System Component (JASC) of America Code 7230, Turbine Engine Compressor Section.

(e) Unsafe Condition

This AD was prompted by a quality escape for HPC impellers made from forgings with nonconforming material grain size. We are issuing this AD to prevent uncontained failure of the HPC impeller, damage to the engine, and damage to the airplane.

(f) Compliance

Comply with this AD within the compliance times specified, unless already done.

(g) Required Action

Remove all affected HPC impellers from service at the next piece-part exposure and replace with a part eligible for installation.

(h) Definition

For the purposes of this AD, “piece-part exposure” is defined as separation of the impeller from the compressor rotor assembly.

(i) Alternative Methods of Compliance (AMOCs)

(1) The Manager, Engine Certification Office, FAA, may approve AMOCs for this AD. Use the procedures found in 14 CFR 39.19 to make your request. You may email your request to: ANE-AD-AMOC@faa.gov.

(2) Before using any approved AMOC, notify your appropriate principal inspector, or lacking a principal inspector, the manager of the local flight standards district office/certificate holding district office.
(j) Related Information

(1) For more information about this AD, contact Martin Adler, Aerospace Engineer, Engine Certification Office, FAA, 1200 District Avenue, Burlington, MA 01803; phone: 781–238–7157; fax: 781–238–7199; email: martin.adler@faa.gov.

(2) For service information identified in this proposed AD, contact CFE Company, 111 S. 34th Street, Phoenix, Arizona 85034–2802; phone: 800–601–3099; Internet: https://www.myaerospace.com.

(3) You may view this service information at FAA, Engine & Propeller Directorate, 1200 District Avenue, Burlington, MA. For information on the availability of this material at the FAA, call 781–238–7125.

Issued in Burlington, Massachusetts, on December 15, 2016.

Colleen M. D’Alessandro,
Manager, Engine & Propeller Directorate, Aircraft Certification Service.

BILLING CODE 4910–13–P

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 39

RIN 2120–AA64

Airworthiness Directives; The Boeing Company Airplanes

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of proposed rulemaking (NPRM).

SUMMARY: We propose to adopt a new airworthiness directive (AD) for all The Boeing Company Model 777 airplanes. This proposed AD was prompted by reports of cracks on the underwing longerons. This proposed AD would require repetitive inspections of the left and right side underwing longerons for any crack, and related investigative and corrective actions if necessary. We are proposing this AD to address the unsafe condition on these products.

DATES: We must receive comments on this proposed AD by February 17, 2017.

ADDRESSES: You may send comments, using the procedures found in 14 CFR 11.43 and 11.45, by any of the following methods:

• Federal eRulemaking Portal: Go to http://www.regulations.gov. Follow the instructions for submitting comments.
• Fax: 202–493–2251.

Hand Delivery: Deliver to Mail address above between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

Examining the AD Docket

You may examine the AD docket on the Internet at http://www.regulations.gov by searching for and locating Docket No. FAA–2016–9520; or in person at the Docket Management Facility between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The AD docket contains this proposed AD, the regulatory evaluation, any comments received, and other information. The street address for the Docket Office (phone: 800–647–5527) is in the ADDRESSES section. Comments will be available in the AD docket shortly after receipt.

SUPPLEMENTARY INFORMATION:

Comments Invited

We invite you to send any written relevant data, views, or arguments about this proposal. Send your comments to an address listed under the ADDRESSES section. Include “Docket No. FAA–2016–9520; Directorate Identifier 2016–NM–163–AD” at the beginning of your comments. We specifically invite comments on the overall regulatory, economic, environmental, and energy aspects of this proposed AD. We will consider all comments received by the closing date and may amend this proposed AD because of those comments. We will post all comments we receive, without change, to http://www.regulations.gov, including any personal information you provide. We will also post a report summarizing each substantive verbal contact we receive about this proposed AD.

Discussion

We have received a report indicating that cracks have been found which led to an underlying longeron becoming severed. The first underlying longeron crack was discovered in service. An operator had reports of a fuel smell in the forward cargo area. During a subsequent investigation, a crack was found in the center wing tank of an aircraft that was attributed to the longeron crack. All models except some Model 777–200 airplanes without a center wing tank are affected by the potential for a fuel leak into the forward cargo area.

Subsequently, three more operators have reported cracks on the left underwing longeron. The cracks have been reported in Model 777–300ER and 777–200 airplanes. The cracks have been reported as early as 3,784 flight cycles and 31,240 flight hours. As the cracks grow in the longeron, further cracking has been reported and three operators noted the lower front spar chord had cracked. This condition, if not corrected, could result in fuel leakage into the forward cargo area and consequent increased risk of a fire or, in a more severe case, could adversely affect the structural integrity of the airplane.

Related Service Information Under 1 CFR Part 51

We reviewed Boeing Alert Service Bulletin 777–53A0081, dated September 8, 2016 (“ASB 777–53A0081, Revision 0”). The service information describes procedures for repetitive detailed inspections, ultrasonic inspections, and high frequency eddy current (HFEC) inspections of the left and right side longerons, and related investigative and corrective actions if necessary. This service information is reasonably available because the interested parties have access to it through their normal course of business or by the means identified in the ADDRESSES section.

FAA’s Determination

We are proposing this AD because we evaluated all the relevant information and determined the unsafe condition described previously is likely to exist or develop in other products of the same type design.

Proposed AD Requirements

This proposed AD would require accomplishing the actions specified in the service information described previously, except as discussed under...
“Differences Between this Proposed AD and the Service Information.” For information on the procedures and compliance times, see this service information at http://www.regulations.gov by searching for and locating Docket No. FAA–2016–9520.

The phrase “related investigative actions” is used in this proposed AD. Related investigative actions are follow-on actions that (1) are related to the primary action, and (2) further investigate the nature of any condition found. Related investigative actions in an AD could include, for example, inspections.

The phrase “corrective actions” is used in this proposed AD. Corrective actions correct or address any condition found. Corrective actions in an AD could include, for example, repairs.

**Differences Between This Proposed AD and the Service Information**

ASB 777–53A0081, Revision 0, specifies to contact the manufacturer for certain instructions, but this proposed AD would require using repair methods, modification deviations, and alteration deviations in one of the following ways:

- In accordance with a method that we approve; or
- Using data that meet the certification basis of the airplane, and that have been approved by the Boeing Commercial Airplanes Organization Designation Authorization (ODA) whom we have authorized to make those findings.

**Costs of Compliance**

We estimate that this proposed AD affects 201 airplanes of U.S. registry. We estimate the following costs to comply with this proposed AD:

<table>
<thead>
<tr>
<th>Action</th>
<th>Labor cost</th>
<th>Parts cost</th>
<th>Cost per product</th>
<th>Cost on U.S. operators</th>
</tr>
</thead>
<tbody>
<tr>
<td>Option 1: Detailed Inspection</td>
<td>4 work-hours × $85 per hour = $340 per inspection cycle</td>
<td>$0</td>
<td>$340 per inspection cycle</td>
<td>$68,340 per inspection cycle.</td>
</tr>
<tr>
<td>Option 2: Detailed and HFEC or Ultrasonic Inspection.</td>
<td>12 work-hours × $85 per hour = $1,020 per inspection cycle</td>
<td>$0</td>
<td>$1,020 per inspection cycle</td>
<td>$205,020 per inspection cycle.</td>
</tr>
</tbody>
</table>

We estimate the following costs to do any necessary replacements that would be required based on the results of the proposed inspection. We have no way of determining the number of aircraft that might need these replacements:

<table>
<thead>
<tr>
<th>Action</th>
<th>Labor cost</th>
<th>Parts cost</th>
<th>Cost per product</th>
</tr>
</thead>
<tbody>
<tr>
<td>Left side or right side longeron replacement ....</td>
<td>102 work-hours × $85 per hour = $8,670 per side.</td>
<td>$31,000 per side</td>
<td>$39,670 per side.</td>
</tr>
</tbody>
</table>

We have received no definitive data that would enable us to provide cost estimates for the on-condition actions, other than the replacement, specified in this proposed AD.

According to the manufacturer, some of the costs of this proposed AD may be covered under warranty, thereby reducing the cost impact on affected individuals. We do not control warranty coverage for affected individuals. As a result, we have included all costs in our cost estimate.

**Authority for This Rulemaking**

Title 49 of the United States Code specifies the FAA’s authority to issue rules on aviation safety. Subtitle I, section 106, describes the authority of the FAA Administrator. Subtitle VII: Aviation Programs, describes in more detail the scope of the Agency’s authority.

We are issuing this rulemaking under the authority described in Subtitle VII, Part A, Subpart III, Section 44701: “General requirements.” Under that section, Congress charges the FAA with promoting safe flight of civil aircraft in air commerce by prescribing regulations for practices, methods, and procedures to ensure the safety of air commerce. This regulation is within the scope of that authority because it addresses an unsafe condition that is likely to exist or develop on products identified in this rulemaking action.

**Regulatory Findings**

We determined that this proposed AD would not have federalism implications under Executive Order 13132. This proposed AD would not have a substantial direct effect on the States, on the relationship between the national Government and the States, on the distribution of power and responsibilities among the various levels of government.

For the reasons discussed above, I certify this proposed regulation:

1. Is not a “significant regulatory action” under Executive Order 12866,
2. Is not a “significant rule” under the DOT Regulatory Policies and Procedures (44 FR 11034, February 26, 1979),
3. Will not affect intrastate aviation in Alaska, and
4. Will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

**List of Subjects in 14 CFR Part 39**

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

**The Proposed Amendment**

Accordingly, under the authority delegated to me by the Administrator, the FAA proposes to amend 14 CFR part 39 as follows:

**PART 39—AIRWORTHINESS DIRECTIVES**

1. The authority citation for part 39 continues to read as follows:
   Authority: 49 U.S.C. 106(g), 40113, 44701.

2. The FAA amends § 39.13 by adding the following new airworthiness directive (AD):
(a) Comments Due Date
We must receive comments by February 17, 2017.

(b) Affected ADs
None.

(c) Applicability
This AD applies to all The Boeing Company Model 777–200, –200LR, –300, –300ER, and 777F series airplanes, certificated in any category.

(d) Subject
Air Transport Association (ATA) of America Code 53, Fuselage and 57, Wings.

(e) Unsafe Condition
This AD was prompted by reports of cracks on the underwing longoners. We are issuing this AD to detect and correct cracks in the underwing longoners, which could result in fuel leakage into the forward cargo area and consequent increased risk of a fire or, in a more severe case, could adversely affect the structural integrity of the airplane.

(f) Compliance
Comply with this AD within the compliance times specified, unless already done.

(g) Inspections
Except as specified in paragraph (i)(1) of this AD, at the applicable times specified in tables 1 through 6 of paragraph 1.E., “Compliance,” of Boeing Alert Service Bulletin 777–53A0081, dated September 8, 2016 (“ASB 777–53A0081, Revision 0”): Do detailed inspections for any crack of the left and right side underwing longoners; or do detailed inspections, and high frequency eddy current (HFEC) or ultrasonic inspections, as applicable, for any crack of the left and right side underwing longoners; and do all applicable related investigative and corrective actions, in accordance with the Accomplishment Instructions of ASB 777–53A0081, Revision 0, except as required by paragraph (i)(2) of this AD. Do all applicable related investigative and corrective actions before further flight.
Repeat the inspections thereafter at the times specified in tables 1 through 6 of paragraph 1.E., “Compliance,” of ASB 777–53A0081, Revision 0, as applicable. Replacing an underwing longoner, including doing all applicable related investigative and corrective actions, in accordance with the Accomplishment Instructions of ASB 777–53A0081, Revision 0, except as required by paragraph (i)(2) of this AD, terminates the repetitive inspections required by this paragraph for that longoner only.

(h) Repetitive Post-Replacement Inspections and Corrective Actions
For airplanes on which any longoner replacement has been done as specified in ASB 777–53A0081, Revision 0: At the applicable times specified in tables 7 through 14 of paragraph 1.E., “Compliance,” of ASB 777–53A0081, Revision 0, do detailed inspections of all replaced longoners for any crack, or do detailed inspections and ultrasonic inspections of all replaced longoners for any crack, and do all applicable corrective actions; in accordance with the Accomplishment Instructions of ASB 777–53A0081, Revision 0, except as required by paragraph (i)(2) of this AD. Do all applicable corrective actions before further flight.
Repeat the inspections thereafter at intervals not to exceed the applicable time specified in tables 7 through 14 of paragraph 1.E., “Compliance,” of ASB 777–53A0081, Revision 0.

(i) Service Information Exceptions
(1) Where ASB 777–53A0081, Revision 0, specifies a compliance time “after the issue date of this service bulletin,” this AD requires compliance within the specified compliance time after the effective date of this AD.
(2) Where ASB 777–53A0081, Revision 0, specifies to contact Boeing for appropriate action: Before further flight, repair using a method approved in accordance with the procedures specified in paragraph (j) of this AD.

(j) Alternative Methods of Compliance (AMOCs)
(1) The Manager, Seattle Aircraft Certification Office (ACO), FAA, has the authority to approve AMOCs for this AD, if requested using the procedures found in 14 CFR 39.19. In accordance with 14 CFR 39.19, send your request to your principal inspector or local Flight Standards District Office, as appropriate. If sending information directly to the manager of the ACO, send it to the attention of the person identified in paragraph (k)(1) of this AD. Information may be emailed to: 9-AMN-Seattle-ACO-AMOC-Requests@faa.gov.
(2) Before using any approved AMOC, notify your appropriate principal inspector, or lacking a principal inspector, the manager of the local flight standards district office/ certificate holding district office.
(3) An AMOC that provides an acceptable level of safety may be used for any repair, modification, or alteration required by this AD if it is approved by the Boeing Commercial Airplanes Organization Designation Authorization (ODA) that has been authorized by the Manager, Seattle ACO, to make those findings. To be approved, the repair method, modification, deviation or alteration must meet the certification basis of the airplane, and the approval must specifically refer to this AD.
(4) Except as required by paragraph (i)(2) of this AD: For service information that contains steps that are labeled as Required Compliance (RC), the provisions of paragraphs (j)(4)(i) and (j)(4)(ii) of this AD apply.
(i) The steps labeled as RC, including substeps under an RC step and any figures identified in an RC step, must be done to comply with the AD. If a step or sub-step is labeled “RC Exempt,” then the RC requirement is removed from that step or sub-step. An AMOC is required for any deviations to RC steps, including substeps and identified figures.
(ii) Steps not labeled as RC may be deviated from using accepted methods in accordance with the operator’s maintenance or inspection program without obtaining approval of an AMOC, provided the RC steps, including substeps and identified figures, can still be done as specified, and the airplane can be put back in an airworthy condition.

(k) Related Information
(1) For more information about this AD, contact Eric Lin, Aerospace Engineer, Airframe Branch, ANM–120S, FAA, Seattle Aircraft Certification Office (ACO), 1601 Lind Avenue SW., Renton, WA 98057–3356; phone: 425–917–0412; fax: 425–917–6590; email: eric.lin@faa.gov.
(2) For service information identified in this AD, contact Boeing Commercial Airplanes, Attention: Contractual & Data Services (C&Ds), 2600 Westminster Blvd., MC 110–SK57, Seal Beach, CA 90740–5600; telephone: 562–797–1717; Internet: https://www.myboeingfleet.com. You may view this referenced service information at the FAA, Transport Airplane Directorate, 1601 Lind Avenue SW., Renton, WA. For information on the availability of this material at the FAA, call 425–227–1221.

Issued in Renton, Washington, on December 15, 2016.
Victor Wicklund,
Acting Manager, Transport Airplane Directorate, Aircraft Certification Service.

BILLING CODE 4910–13–P

DEPARTMENT OF COMMERCE
Office of the Secretary
15 CFR Part 4
[Docket No. 161103999–6999–01]
RIN 0605–AA46
Public Information, Freedom of Information Act and Privacy Act Regulations
AGENCY: Department of Commerce.
ACTION: Notice of proposed rulemaking.
SUMMARY: This rule proposes revisions to the Department of Commerce’s (Department) regulations under the Privacy Act. The Department has issued a notice of its intent to establish a new system of records entitled “COMMERCE/DEPARTMENT–27, Investigation and Threat Management Records,” which includes system exemptions from certain provisions of the Privacy Act. The Privacy Act regulations are being updated to make technical changes to the applicable exemptions as a result of the new system of records, COMMERCE/DEPARTMENT–27. The Privacy Act regulations are also being updated to reflect organization changes affecting the Department’s officials authorized to deny requests for records under the Freedom of Information Act, and
requests for records and for correction or amendment under the Privacy Act.

DATES: To be considered, written comments must be submitted on or before February 2, 2017. If no comments are received, the rule will become effective as proposed on the date of publication of a subsequent notice in the Federal Register.

ADDRESSES: You may submit comments, identified by Regulatory Information Number (RIN) 0605–AA46, by any of the following methods:

- Fax: (202) 482–0827. Include the RIN 0605–AA46 in the subject line.
- Mail: Dr. Michael J. Toland, Deputy Chief Freedom of Information Act Officer and Department Privacy Act Officer, Office of Privacy and Open Government, 1401 Constitution Ave. NW., Room 52010, Washington, DC 20230.

Instructions: All submissions received must include the agency name and docket number or RIN for this rulemaking. All comments received will be posted without change to regulations.gov, including any personal information provided. For detailed instructions on submitting comments and additional information on the rulemaking process, see the “Public Participation” heading of the SUPPLEMENTARY INFORMATION section of this document.

FOR FURTHER INFORMATION CONTACT: Dr. Michael J. Toland, Deputy Chief Freedom of Information Act Officer and Department Privacy Act Officer, Office of Privacy and Open Government, 1401 Constitution Ave. NW., Room 52010, Washington, DC 20230.

SUPPLEMENTARY INFORMATION: This rule proposes revisions to the Department’s regulations under the Privacy Act. In particular, the action will amend the Department’s Privacy Act regulations regarding applicable exemptions to reflect a new Department wide systems of records notice published since the last time the regulations were updated. The Department has issued a notice of its intent to establish a new system of records entitled “COMMERCE/DEPARTMENT–27, Investigation and Threat Management Records,” which includes system exemptions from certain provisions of the Privacy Act. The revisions of the Privacy Act regulations in subpart B of part 4 incorporate changes to the language of the regulations in the following provisions: § 4.33 (General exemptions); and § 4.34 (Specific exemptions). Specifically, pursuant to 5 U.S.C. 552a(j)(2), all information about an individual in the record which meets the criteria stated in 5 U.S.C. 552a(j)(2) are exempted from the notice, access and contest requirements of the agency regulations and from all parts of 5 U.S.C. 552a except subsections (b), (c)(1) and (2), (d)(4)(A) through (F), (e)(6), (7), (9), (10), and (11), and (i). Pursuant to 5 U.S.C. 552a(k)(1), (k)(2) and (k)(5) on condition that the 5 U.S.C. 552a(j)(2) exemption is held to be invalid, all investigatory material in the record which meets the criteria stated in 5 U.S.C. 552a(k)(1), (k)(2) and (k)(5) are exempted from the notice, access, and contest requirements (under 5 U.S.C. 552a(c)(3), (d), (e)(1), (e)(4)(c), (H), and (I), and (f)) of the agency regulations because of the necessity to exempt this information and material in order to accomplish the law enforcement function of the agency, to prevent disclosure of classified information as required by Executive Order 13526, to assure the protection of the President, to prevent subjects of investigation from frustrating the investigatory process, to prevent the disclosure of investigative techniques, to fulfill commitments made to protect the confidentiality of information, and to avoid endangering these sources and law enforcement personnel.

Additionally, the revisions of the Privacy Act regulations in subpart B of part 4 incorporate changes to the language of the regulations in Appendix B (Officials Authorized To Deny Requests for Records Under the Freedom of Information Act, and Requests for Records and Requests for Correction or Amendment Under the Privacy Act). Specifically, this proposed action removes the reference to the “Office of Administrative Services: Director,” and replaces it with the “Office of Facilities and Environmental Quality: Director; Deputy Director,” under the Assistant Secretary for Administration (ASA). The Department’s ASA realigned the functions formerly under the “Office of Administrative Services” to existing administrative functions and aligned facility-related programs and operations under the “Office of Facilities and Environmental Quality.” The proposed actions better allocated responsibilities, aligned similar functions, improved internal controls and streamline reporting relationships. This proposed amendment updates the rules to implement that change. See Department Administrative Order 20–1, sections 1 and 4. This proposed action adds a deposing official the Deputy Chief FOIA Officer under the Office of Privacy and Open Government (OPOG). Previously, the Director of OPOG served as the Deputy Chief FOIA Officer, but now this position serves as the Department’s Chief FOIA Officer. This action also removes the reference to the “Bureau of Economic Analysis: Director,” and replaces it with the “Bureau of Economic Analysis: Freedom of Information Act Officer” under the Economics and Statistics Administration (ESA). Previously, the ESA FOIA Officer administered the FOIA program for the Bureau of Economic Analysis (BEA). This proposed action merely separates the administration of the BEA FOIA program from the ESA program, as well as designates a BEA FOIA Officer and aligns the BEA FOIA program with other FOIA programs in the Department.

Public Participation: Comments sent by any other method, to any other address or individual, or received after the end of the comment period, may not be considered by the Department. If you want to submit personal identifying information (such as your name, address, etc.) as part of your comment, but do not want it to be posted online, you must include the phrase “PERSONAL IDENTIFYING INFORMATION” in the first paragraph of your comment. You must also locate all the personal identifying information you do not want posted online in the first paragraph of your comment and identify what information you want redacted. If you want to submit confidential business information as part of your comment but do not want it to be posted online, you must include the phrase “CONFIDENTIAL BUSINESS INFORMATION” in the first paragraph of your comment. You must also prominently identify confidential business information to be redacted within the comment. If a comment has so much confidential business information that it cannot be effectively redacted, all or part of the comment may not be posted on http://www.regulations.gov. Personal identifying information and confidential business information identified and located as set forth above will be placed in the agency’s public docket file, but not posted online. If you wish to inspect the agency’s public docket file in person by appointment, please see the FOR FURTHER INFORMATION CONTACT paragraph.

Classification

Regulatory Flexibility Act

The Chief Counsel for Regulation for the Department of Commerce has certified to the Chief Counsel for
Advocacy of the Small Business Administration that this rule will not have a significant economic impact on a substantial number of small entities. This final rule amends the Department’s Privacy Act regulations regarding applicable exemptions to reflect new Department wide systems of records notices published since the last time the regulations were updated. These amendments are administrative in nature and will not impose a financial or regulatory impact on anyone, including small entities. The applicable exemptions apply to information collected to establish identity, accountability, and audit control of electronic or other digital certificates of assigned personnel who require access to Department of Commerce electronic and physical assets. The information collected is provided on a voluntary basis, with no cost incurred by individuals.

Executive Order 12866

It has been determined that this notice is not significant for purposes of E.O. 12866.

Paperwork Reduction Act

This regulation does not contain a “collection of information” as defined by the Paperwork Reduction Act, 44 U.S.C. 3501 et seq.

List of Subjects in 15 CFR Part 4

Freedom of information, Privacy.

Michael J. Toland,
Department of Commerce, Deputy Chief FOIA Officer, Department Privacy Act Officer.

For the reasons stated in the preamble, the Department of Commerce proposes to amend 15 CFR part 4 as follows:

PART 4—DISCLOSURE OF GOVERNMENT INFORMATION

1. The authority citation for part 4 continues to read as follows:

2. Amend § 4.33 by adding paragraph (b)(5) to read as follows:

§ 4.33 General exemptions.

(5) Investigation and Threat Management Records—COMMERC/DEPT–27. Pursuant to 5 U.S.C. 552(a)(2), these records are hereby determined to be exempt from all provisions of the Act, except 5 U.S.C. 552(a)(b), (c)(1) and (2), (e)(4)(A) through (F), (e)(6), (7), (9), (10), and (11), and (l). These exemptions are necessary to ensure the proper functioning of the law enforcement activity of the agency, to prevent disclosure of classified information as required by Executive Order 13526, to assure the protection of the President, to prevent subjects of investigation from frustrating the investigatory process, to prevent the disclosure of investigative techniques, to fulfill commitments made to protect the confidentiality of information, and to avoid endangering these sources and law enforcement personnel.

3. Amend § 4.34 by revising paragraph (a)(1), (b)(1), and (b)(4)(i); and by adding (b)(2)(i)(G) to read as follows:

§ 4.34 Specific exemptions.

(a)(1) Certain systems of records under the Act that are maintained by the Department may occasionally contain material subject to 5 U.S.C. 552a(k)(1), relating to national defense and foreign policy materials. The systems of records published in the Federal Register by the Department that are within this exemption are: COMMERC/BIS–1, COMMERC/ITA–2, COMMERC/ITA–3, COMMERC/NOAA–11, COMMERC/PAT–TM–4, COMMERC/DEPT–12, COMMERC/DEPT–13, COMMERC/DEPT–14, COMMERC/DEPT–25, and COMMERC/DEPT–27.

(b)(1) Exempt under 5 U.S.C. 552a(k)(1). The systems of records exempt hereunder appear in paragraph (a) of this section. The claims for exemption of COMMERC/DEPT–12, COMMERC/BIS–1, COMMERC/NOAA–5, COMMERC/DEPT–25, and COMMERC/DEPT–27 under this paragraph are subject to the condition that the general exemption claimed in § 4.33(b) is held to be invalid.

(b)(4)(i) Exempt under 5 U.S.C. 552a(k)(5). The systems of records exempt hereunder appear in paragraph (a) of this section. The claims for exemption of COMMERC/DEPT–12, COMMERC/BIS–1, COMMERC/NOAA–5, COMMERC/DEPT–25, and COMMERC/DEPT–27 under this paragraph are subject to the condition that the general exemption claimed in § 4.33(b)(4) is held to be invalid.

4. Amend Appendix B to Part 4 by revising the entries for “ASSISTANT SECRETARY FOR ADMINISTRATION” and “ECONOMICS AND STATISTICS ADMINISTRATION” to read as follows:

Appendix B to Part 4—Officials Authorized To Deny Requests for Records Under the Freedom of Information Act, and Requests for Records and Requests for Correction or Amendment Under the Privacy Act

Assistant Secretary for Administration

Office of Civil Rights: Director
Office of Budget: Director
Office of Privacy and Open Government: Director; Deputy Chief FOIA Officer; Departmental Freedom of Information Officer
Office of Program Evaluation and Risk Management: Director
Office of Financial Management: Director
Office of Human Resources Management: Director; Deputy Director
Office of Facilities and Environmental Quality: Director; Deputy Director
Office of Security: Director
Office of Acquisition Management: Director
Office of Acquisition Services: Director
Office of Small and Disadvantaged Business Utilization: Director

Economics and Statistics Administration

Office of Administration: Director
Bureau of Economic Analysis: Freedom of Information Act Officer
CONSUMER PRODUCT SAFETY COMMISSION

16 CFR Part 1015

Procedures for Disclosure or Production of Information Under the Freedom of Information Act; Amendments

AGENCY: Consumer Product Safety Commission.

ACTION: Notice of proposed rulemaking.

SUMMARY: The Consumer Product Safety Commission (Commission, CPSC, or we) is issuing this notice of proposed rulemaking (NPR) to update its Freedom of Information Act (FOIA) rule. We are proposing to revise the rule to conform to the amendments of the FOIA Improvement Act of 2016 (the 2016 FOIA) to the FOIA. The Commission also proposes to update the rule to reflect changes in Commission procedures, update Commission contact information, including current methods of submitting requests for records to the Commission, revise employee titles, and make various technical changes and corrections. This NPR seeks comments on the proposed changes to the rule.

DATES: Submit comments by March 20, 2017.

ADDRESSES: You may submit comments, identified by Docket No. CPSC–2016–0030, by any of the following methods:

Electronic Submissions: Submit electronic comments to the Federal eRulemaking Portal at https://www.regulations.gov/. Follow the instructions for submitting comments. The Commission does not accept comments submitted by electronic mail (email), except through: https://www.regulations.gov/. The Commission encourages you to submit electronic comments by using the Federal eRulemaking Portal, as described above.

Written Submissions: Submit written comments by mail/hand delivery/ courier to: Office of the Secretariat, Consumer Product Safety Commission, Room 820, 4330 East West Highway, Bethesda, MD 20814; telephone (301) 504–7923.

Instructions: All submissions received must include the agency name and docket number for this proposed rulemaking. All comments received may be posted without change, including any personal identifiers, contact information, or other personal information provided, to: https://www.regulations.gov/. Do not submit confidential business information, trade secret information, or other sensitive or protected information that you do not want to be available to the public. If furnished at all, such information should be submitted by mail/hand delivery/courier.

Docket: For access to the docket to read background documents or comments received, go to: https://www.regulations.gov/, and insert the docket number, CPSC–2016–0030, into the “Search” box, and follow the prompts.

FOR FURTHER INFORMATION CONTACT:

SUPPLEMENTARY INFORMATION: The Commission is proposing to amend the agency’s procedures for disclosure or production of information under the Freedom of Information Act. 16 CFR part 1015.

I. Background Information

On June 30, 2016, the President signed into law the 2016 FOIA, Public Law 114–185 (2016). The 2016 FOIA amends the Freedom of Information Act, 5 U.S.C. 552, requiring an agency to review its FOIA regulations and issue regulations on procedures for the disclosure of records under the new amendments. Specifically, the 2016 FOIA requires: Certain records be available for public inspection in an electronic format; agencies to make available for public inspection in an electronic format records that have been requested three or more times; that an agency not withhold information under FOIA unless the agency reasonably foresees that disclosure will harm an interest protected by a FOIA Exemption or disclosure is prohibited by law; extending the number of days for an administrative appeal of an adverse determination from 30 to 90 days; limiting the FOIA Exemption for records created 25 years or more before the date on which the records were requested; the assessment of fees be limited in certain circumstances; and requesters be notified of available dispute resolution services from the FOIA Public Liaison of the agency or the Office of Government Information Services.

The Commission proposes amendments to its regulations implementing the 2016 FOIA, 16 CFR part 1015, to incorporate these new statutory requirements. The proposed amendments would revise the Commission’s FOIA regulations to comply with the FOIA, as amended by the 2016 FOIA, and would update Commission procedures, contact information, and methods of submitting requests for records to the Commission, in addition to other conforming and technical revisions. Updating Commission procedures and Commission contact information would provide clarity for requesters seeking records from the Commission.

II. Section-by-Section Analysis of the Proposed Revision of the Procedures for Disclosure or Production of Information Under the Freedom of Information Act Subpart A—Production or Disclosure Under 5 U.S.C. 552(a)

Proposed Changes to § 1015.1 (Purpose and Scope)

Initially, we would update § 1015.1(a) to add the Children’s Gasoline Burn Prevention Act, the Virginia Graeme Baker Pool and Spa Safety Act, and the Child Nicotine Poisoning Prevention Act to the scope of statutes for which records must be maintained in connection with the Commission’s responsibilities and functions under those acts because they were enacted after the last revision to the regulation in 1997.

The proposal also would revise § 1015.1(b) to reflect new FOIA 5 U.S.C. 552(a)(8)(A), requiring agencies to analyze under a foreseeable harm standard the withholding of information permitted by the exemptions set forth in 5 U.S.C. 552(b). The proposal would allow information to be withheld pursuant to the exemptions, only if the Commission reasonably foresees that disclosure would harm an interest protected by a specific FOIA exemption, or if disclosure is otherwise prohibited by law. This proposal, consistent with the 2016 FOIA, would not require disclosure of information otherwise prohibited from disclosure by law, or otherwise exempted from disclosure.
under 5 U.S.C. 552(b)(3) (FOIA Exemption 3), which prohibits the disclosure of matters specifically exempted from disclosure by another statute. The proposal would specify that the Commission will consider the record’s age, content, and character in assessing whether it reasonably foresees that disclosure of the document would harm an interest protected by an exemption. Additionally, consistent with the FOIA as amended by the 2016 FOIA, we also propose a revision that would require that we consider partial disclosure when full disclosure of a record is not possible and that we take reasonable steps to segregate and release nonexempt information.

Under the proposed revision, for example, Commission records that currently fall within the parameters of 5 U.S.C. 552(b)(5) (FOIA Exemption 5) would be subject to the foreseeable harm standard. FOIA Exemption 5 incorporates, among other privileges, the deliberative process privilege, which is considered a discretionary exemption, meaning that withholding of records resides within the discretion of the agency, rather than mandated by law. As the Senate report on the FOIA amendment explains: “[t]he foreseeable harm standard applies only to those FOIA Exemptions under which discretionary disclosures can be made. Several FOIA Exemptions, by their own existing terms, cover information that is prohibited from disclosure or exempt from disclosure under a law outside the four corners of the FOIA. Such information is not subject to discretionary disclosure and is therefore not subject to the foreseeable harm standard.” Senate Report No. 114–4, p 8 (February 23, 2015). Under this analysis and Department of Justice guidance, records protected by the deliberative process privilege under FOIA Exemption 5 shall be considered for release under the foreseeable harm standard, even if the records may otherwise be properly withheld under this exemption. In deciding whether to make a discretionary release of records protected by the deliberative process privilege, the Commission may consider, in addition to the record’s age, content, and character, the nature of the decision at issue, the status of that decision, and the personnel involved.

The foreseeable harm standard, however, would not be applied to disclosures prohibited by law or covered by FOIA Exemption 3, which pertains to matters specifically exempted from disclosure by another statute. Exemption 3 would include disclosures prohibited under section 6 of the Consumer Product Safety Act (CPSA), 15 U.S.C. 2055(a)(2), and thus, the proposal to apply the foreseeable harm standard would not alter, or otherwise limit, the information disclosure restrictions set forth in section 6. Current § 1015.1(b) already references disclosures prohibited by law under Section 6(a)(2) of the CPSA. The proposal, as revised, would preserve that prohibition, consistent with the statutory direction, and it would clarify that information covered by FOIA Exemption 3 is prohibited from disclosure and not subject to analysis under the foreseeable harm standard. Specifically, the proposed revision would state that Commission records subject to Section 6 and 25(c) of the CPSA, 15 U.S.C. 2055 and 2074(c), fall within the scope of FOIA Exemption 3.

The proposal also would revise § 1015.1(c) to remove the existing statement that the Attorney General’s Memorandum on the 1974 Amendments to the FOIA may be consulted in considering questions arising under the FOIA. That memorandum is outdated and should not be consulted in considering questions arising under the FOIA because the FOIA has been statutorily amended multiple times since 1974.

In place of the current § 1015.1(c), we propose a new § 1015.1(c) to reflect that the Commission Secretariat serves as the agency’s Chief FOIA Officer. The 2016 FOIA amends the FOIA at 5 U.S.C. 552(j) to require each agency to designate a Chief FOIA Officer, who shall be a senior official of the agency, and shall have, subject to the authority of the head of the agency, among other responsibilities, responsibility for compliance and implementation of section (j) of the FOIA. The revised § 1015.1(c) would state that the Commission’s Chief Freedom of Information Officer, a senior official at the Commission, would be the Secretariat. Therefore, for clarity and consistency with the provisions of § 1015.4, which vests ultimate authority for responding to FOIA requests in the Commission’s Secretariat, and in conformance with amendments made to the FOIA, we propose new language explaining that the Secretariat of the Commission is the Chief Freedom of Information Officer, who, subject to the authority of the Chairman, is responsible for compliance with, and implementation of, 5 U.S.C. 552(j).

We additionally propose minor and non-substantive changes in grammar.

Proposed Changes to § 1015.2 (Public Reference Facilities)

To reflect amendments in the 2016 FOIA that focus on public inspection in an electronic format, we are proposing to revise the title of this section to “Public inspection.” Additionally, we propose removing “and copying” from § 1015.2(a) and (b), and replacing that phrase with “in an electronic format,” to conform to the amendments to the FOIA at 5 U.S.C. 552(a).

We also propose removing the statements in § 1015.2(b) regarding additional Commission public reference facilities. With changes in technology, public inspection at the Commission headquarters is rare, and we do not anticipate a need for additional public reference facilities. To provide additional information to the public about the Commission’s electronic reading room, we propose adding the Commission’s Web site address to § 1015.2(c) and a statement indicating that records that the Commission must make available for public inspection in an electronic format may be accessed through the e-FOIA Public Access Link at the Commission’s Web site address. Additionally, with the amendments to the FOIA at 5 U.S.C. 552(a)(2)(D), we are proposing a new § 1015.2(d), which requires the agency, subject to any restrictions imposed by section 6 of the CPSA, to make available for public inspection in an electronic format, copies of certain records, regardless of form. Specifically, the Commission shall make available for public inspection, records that have been released under FOIA, records that, because of the nature of the subject matter, the agency determines are likely to become the subject of subsequent requests for substantially the same records, and records that have been requested three or more times.

We additionally propose correcting “Secretary” to the current title of “Secretariat” throughout this paragraph and updating the room number of the Office of the Secretariat.

Proposed Changes to § 1015.3 (Requests for Records and Copies)

We propose a revision to the title of this section by removing “and copying” to reflect amendments to the FOIA at 5 U.S.C. 552(a).

To reflect current practice, we also propose updating § 1015.3(a) on the ways requesters may submit requests for records to the Commission, to include electronic methods. In addition to submitting requests by mail, requesters would be able to submit a request through the Commission’s e-FOIA Public Access Link, email, or facsimile. We also propose a technical correction to reflect the Commission’s address. To promote good FOIA customer service, we also propose to revise § 1015.3(b) to reflect the current Commission’s address. To promote good FOIA customer service, we also propose to revise § 1015.3(b) to
state that, before submitting requests, requesters may contact the Commission’s FOIA contact or FOIA Public Liaison to discuss the records the submitter seeks and to receive assistance in describing the records. Additionally, throughout this section we propose changing “Secretary” to “Secretariat” to update the position to its current title.

Proposed Changes to § 1015.4 (Responses To Requests for Records; Responsibility)

We propose changing “Secretary” to “Secretariat” throughout this section to reflect the name of the position to its current title.

Proposed Changes to Rule § 1015.5 (Time Limitations on Responses to Requests for Expedited Processing)

We propose updating § 1015.5(a) to incorporate new procedural requirements and to reflect current Commission practices and advances in technology. We propose clarifying that time limitations on responses to requests submitted by postal mail would begin to run at the time the request is received and date-stamped by the Office of the Secretary (which we propose revising to the Office of the Secretariat). We would also update the regulation to reflect the current practice that the Office of the Secretariat will date-stamp requests the same day that it receives the requests. We also propose that time limitations on responses to requests submitted electronically would begin to run at the time the request is electronically received, if the request is submitted during “working hours,” which we define as 8 a.m. to 4:30 p.m. EST. For responses submitted electronically during non-working hours, the proposed change would require that time limitations begin to run the next working day after the request is submitted.

If the Commission is unable to respond to a request within this time frame, the current § 1015.5(b) allows the Secretariat, at the initial stage, or the General Counsel, at the appellate stage, to extend the time for responding to requests up to 10 additional working days, if a request satisfies the criteria for “unusual circumstances.” Moreover, as explained in current § 1015.5(d), if the Secretariat or General Counsel determines that an extension of more than 10 days is required, the Secretariat or General Counsel must give the requester an opportunity to limit the scope of the request or arrange for an alternative timeframe to process the request. Under the new FOIA amendments, in those circumstances, agencies are required to make available its FOIA Public Liaison to assist in the resolution of any disputes between the requester and the agency. The 2016 FOIA additionally requires agencies to notify requesters of the right to seek dispute resolution services from the Office of Government Information Services. Therefore, we propose adopting language stating that if an extension of time greater than 10 working days is necessary, the Commission will make available its FOIA Public Liaison for purposes of dispute resolution. Additionally, we propose providing information about where on the Commission’s Web site, the Commission’s designated FOIA Liaison(s) is listed and also stating that the Commission will notify requesters in writing of the availability of the Office of Government Information Services to provide dispute resolution services, as required by the 2016 FOIA. We propose inserting this language into a new § 1015.5(e), and we propose redesignating the succeeding paragraphs in § 1015.5 to conform to this change.

We also propose adding a statement to the current § 1015.5(f)(2), clarifying that requests for expedited processing may be submitted through any of the methods described in the proposed § 1015.3(a), in which we propose updating the regulation to reflect new electronic methods of submission.

We additionally propose revising “Secretary” to “Secretariat” throughout, to change the name of the position to its current title.

Proposed Changes to § 1015.6 (Form and Content)

To reflect the current organizational structure of the agency and to align with the 2016 FOIA amendments to the FOIA, indicating that documents for public inspection will be made available in electronic format, we propose revising § 1015.6(a) to state that when a requested record has been identified, requesters shall be supplied with a copy or notified of where and when the document will be made available for public inspection in an electronic format. We also propose removing the reference to making records available at a requested regional office. This option is outdated and no longer applicable because the Commission does not have regional offices that the public can visit.

We additionally propose amending § 1015.6(a) to conform with the 2016 FOIA amendments to 5 U.S.C. 552(a)(6)(A)(i)(III)(bb), which require the Commission, when responding to a records request, to notify requesters of their right to seek assistance from the Commission’s FOIA Public Liaison.

In the case of a denial, we propose revisions to conform with the 2016 FOIA amendments to 5 U.S.C. 552(a)(6)(A)(i)(III)(bb), which requires that agencies notify requesters when there is an adverse determination that requesters have the right to appeal within a period determined by the head of the agency that is not less than 90 days after the date of such determination. Accordingly, we propose revising § 1015.6(b)(4) to change “90 calendar days” to “90 calendar days.” We also propose adding a new § 1015.6(b)(5), which would require the Commission, in the case of a denial, to notify requesters of their right to seek dispute resolution services from the Office of Government Information Services.

We additionally propose revising “Secretary” to “Secretariat” throughout the section, to revise the title of the position to its current title.

Proposed Changes to § 1015.7 (Appeals From Initial Denials; Reconsideration by the Secretary)

We propose revising the deadline for appealing a denial of a records request from 30 days to 90 calendar days in § 1015.7(a) to conform with the 2016 FOIA amendments described above regarding proposed changes to § 1015.6.

We additionally propose updating the regulation at § 1015.7(a) to list the ways, including electronic methods, that a requester may appeal a denial to the General Counsel of the Commission.

To reflect changes in Commission procedures due to advances in information technology, we propose updating § 1015.7(b) to specify that time limitations on appeals submitted by postal mail would begin to run when the appeal is received and date-stamped by the Office of the Secretary (proposed to be changed to the Office of the Secretariat). We would also update the regulation to reflect the current practice that the Office of the Secretariat will date-stamp requests the same day that it receives the requests. We also propose that time limitations on appeals submitted electronically would begin to run at the time the appeal is electronically received, if the request is submitted during “working hours,” which we define as 8 a.m. to 4:30 p.m. EST. For responses submitted electronically during non-working hours, the proposed change would require that time limitations begin to run the next working day after the request is submitted.
agencies to provide notification in an adverse determination of the right to seek dispute resolution services from the FOIA Public Liaison of the agency or the Office of Government Information Services, we propose including a statement in §1015.7(e) stating that the Commission will provide such a notification.

We additionally propose revising “Secretary” to “Secretariat” throughout the section, including in the title, to correct the name of this position.

Proposed Changes to §1015.9 (Fees for Production of Records)

We propose to make technical changes throughout this section, including a revision to §1015.9(b) to reflect updated ways to effectuate fee payment. We also propose to account for efforts expended to locate and retrieve electronic information by revising the term “search” in §1015.9(c)(2) and the definition of “duplication” in §1015.9(c)(3) and to account for new technology changes that are not reflected in the regulation. The proposal would also account for the efforts to scan documents through a revision of §1015.9(o)(1), which would require a requester to pay the direct costs associated with scanning documents.

We also propose to revise §1015.9(f)(6) to conform to the 2016 FOIA amendments to 5 U.S.C. 552(a)(4)(A)(viii)(II). The changes would require the Commission to waive fees where the agency fails to comply with a time limit that it has extended because the agency has determined that unusual circumstances apply. However, if the extension for unusual circumstances involves more than 5,000 responsive pages, the Commission may continue to charge fees, provided it has given timely notice to the requester and has discussed with the requester how to effectively limit the scope of the request. Thus, the regulation would be revised to prevent the Commission from assessing search fees for any requester or duplication fees for an educational institution, non-commercial scientific institution, or a representative of the news media, requester, if the Commission fails to comply with an extended time limit, unless 5,000 pages are responsive to the request, and the Commission has made three good faith attempts to discuss with the FOIA requester limiting the scope of the request.

We additionally propose revising “Secretary” to “Secretariat” throughout the section, including in the title, to correct the name of this position.

Proposed Changes to §1015.10 (Commission Report of Actions to Congress)

We propose revisions to this section to conform to the 2016 FOIA amendments to 5 U.S.C. 552(c)(1). Specifically, we propose adding a statement that the Commission must submit the report to the Director of the Office of Government Information Services in addition to its current requirement to submit the report to the Attorney General of the United States. We also propose adding, in conformance with the statute, new §1015.10(h), stating that the report shall include the number of times the Commission denied a request for records under 5 U.S.C. 552(c) and new §1015.10(l), stating that the report shall include the number of records that were made available for public inspection in an electronic format under 5 U.S.C. 552(a)(2).

Proposed Changes to Rule §1015.11 (Disclosure of Trade Secrets to Consultants and Contractors; Nondisclosure to Advisory Committees and Other Government Agencies)

We propose to add language to §1015.11 to clarify that the reference in §1015.11(a) and (b) to 5 U.S.C. 552(b)(4) includes not only trade secrets, but also includes commercial or financial information.

We also propose revising §1015.11(b) to incorporate an amendment to the CPSA, 15 U.S.C. 2078(f), by the Consumer Product Safety Improvement Act of 2008, Public Law 110–314 (2008), which permits the Commission to share information with federal, state, and local agencies, if certain requirements are satisfied.

Subpart B—Exemptions From Production and Disclosure Under 5 U.S.C. 552(b)

Proposed Changes to §1015.15 (Purpose and Scope)

We propose removing language in §1015.15(a) that references the internal Commission procedure for withholding exempt records because, as explained below in Proposed Changes to Rule §1015.17 (Internal Commission procedure for withholding exempt records). we propose removing §1015.17 entirely.

We also propose revisions to §1015.15(b) to conform to the 2016 FOIA amendment to 5 U.S.C. 552(a)(b)(A), which provides that agencies shall withhold information under 5 U.S.C. 552(a)(b)(1) only if the agency reasonably foresees that disclosure would harm an interest protected by an exemption described in 5 U.S.C. 552(b), or disclosure is otherwise prohibited by law. Currently, the rule states that the Commission will make available, to the extent permitted by law, records authorized to be withheld under 5 U.S.C. 552(b), unless the Commission determines that disclosure is contrary to the public interest. To align with the 2016 FOIA amendments, we propose revising this section to state that the Commission will make available records authorized to be withheld under one of the FOIA exemptions, “unless the Commission reasonably foresees that disclosure would harm an interest protected by the exemption or disclosure is prohibited by law or otherwise exempted from disclosure under 5 U.S.C. 552(b)(3).”

Additionally, we propose updating §1015.15(c) to reflect the focus of the 2016 FOIA on public inspection of documents in an electronic format, which is consistent with current practice. The proposal would require that briefing packages, or portions thereof, which the Secretary (which we propose revising to Secretariat), upon the advice of the Office of the General Counsel, has determined would be released, upon request, would be made available for public inspection in an electronic format through the Commission’s Web site. Specifically, we propose removing the language stating that such briefing packages would be publicly available in the public reference facility established under §1015.2, and replacing it with proposed language indicating that the information will be available electronically on the Commission’s Web site.

We also propose revising “Secretary” to “Secretariat” in §1015.15(c), to correct the name of this position and propose a non-substantive grammatical revision in the first sentence of §1015.15(b).

Proposed Changes to §1015.16 (Exemptions (5 U.S.C. 552(b)(b)))

The 2016 FOIA amends 5 U.S.C. 552(b)(b)(5) to include a sunset provision on the deliberative process privilege so that it does not apply to records created 25 years or more before the date on which the records were requested. We propose amending §1015.16(e) to add language reflecting this change.

We also propose non-substantive technical corrections to §§1015.16(e) and (f) to track the statutory language.

Proposed Changes to §1015.17 (Internal Commission Procedure for Withholding Exempt Records)

We propose removing all of §1015.17 and reserving this section. Section
1015.17 describes an internal Commission procedure that allows a Commission bureau or office director who believes that it is against the public interest to disclose a Commission record prepared by his/her office that may be exempt from disclosure under the inter-intra-agency memorandum exemption at 5 U.S.C. 552(b)(5) or the investigatory file exemption at 5 U.S.C. 552(b)(7) to request that the Secretary withhold the document, and, if necessary, appeal that decision to the Commission. The current § 1015.17(a)(1) states that if the Secretary agrees to withhold the document, the requester shall be notified in writing of the denial and of his/her right to appeal. Section 1015.17 is not necessary and should be removed because procedures for Commission responses to requests based on an analysis of harm to the public interest would now be described in detail in proposed § 1015.1(b) and § 1015.6 and include additional updated requirements not in § 1015.17.

Accordingly, we propose removing § 1015.17 because it does not reflect current internal Commission procedures. Moreover, even if the provisions were not outdated, we would propose removing this provision because it describes an internal procedure that is more appropriate for including in a Commission Directive on staff procedure than in a regulatory scheme.

Subpart C—Disclosure of Commission Accident or Investigation Reports Under 15 U.S.C. 2074(c)

Proposed Changes to § 1015.20 (Public Availability of Accident or Investigation Reports)

We propose updating § 1015.20(a) to reflect current Commission procedure. The rule currently states that accident or investigation reports are available to the public under the procedures set forth in subpart A and that no portion of such reports are subject to the investigatory file exemption. Current Commission procedure allows for the withholding of accident or investigation reports, if the requirements of the investigatory file exemption are met. Therefore, we propose revising this section to state that accident or investigation reports are available to the public under the procedures set forth in subpart A, unless such reports are subject to the investigatory file exemption.

III. Environmental Considerations

The Commission’s regulations address whether the Commission is required to prepare an environmental assessment or an environmental impact statement. 16 CFR part 1021. These regulations provide a categorical exclusion for certain CPSC actions that normally have “little or no potential for affecting the human environment.” 16 CFR 1021.5(c)(1). This proposed rule falls within the categorical exclusion.

IV. Regulatory Flexibility Analysis

Under section 603 of the Regulatory Flexibility Act (RFA), when the Administrative Procedure Act (APA) or another law requires an agency to publish a general notice of proposed rulemaking, the agency must prepare an initial regulatory flexibility analysis (IRFA), assessing the economic impact of the proposed rule on small entities or certify that the rule will not have a significant economic impact on a substantial number of small entities. 5 U.S.C. 603(a), 605. The Commission chooses to provide notice and comment for this rulemaking. However, because this is a “rule of agency organization, procedure, or practice,” the APA does not require a notice of proposed rulemaking. 5 U.S.C. 553. Additionally, we note that the rule would merely set out in a regulation the procedural requirements stated in the FOIA of 2016, update Commission procedures, and make other technical changes and corrections. We expect that the proposed rule will not have a significant economic impact on a substantial number of small entities.

V. Paperwork Reduction Act

The Paperwork Reduction Act (PRA) establishes certain requirements when an agency conducts or sponsors a “collection of information.” 44 U.S.C. 3501–3520. The proposed rule would amend the Commission’s rule to conform to the 2016 FOIA and to update Commission procedures and make other technical changes and corrections. The proposed rule would not impose any information collection requirements. The existing rule and the proposed revisions do not require or request information from firms, but rather explain the Commission’s FOIA procedures. Thus, the PRA is not implicated in this proposed rulemaking.

VI. Executive Order 12988 (Preemption)

According to Executive Order 12988 (February 5, 1996), agencies must state in clear language the preemptive effect, if any, of new regulations. Section 26 of the CPSA explains the preemptive effect of consumer product safety standards issued under the CPSA. 15 U.S.C. 2073. The proposed rule is not a consumer product safety standard, but rather would revise a rule of agency procedure and policy by implementing the FOIA of 2016 and making technical revisions or corrections. Therefore, section 26 of the CPSA would not apply to this rulemaking.

VII. Effective Date

In accordance with the APA’s general requirement that the effective date of a rule be at least 30 days after publication of the final rule, the Commission proposes that the effective date be 30 days after the date of publication of a final rule in the Federal Register. 5 U.S.C. 553(d).

VIII. Request for Comments

The Commission requests comments on all aspects of the proposed rule. Comments should be submitted in accordance with the instructions in the ADDRESSES section at the beginning of this document. Written comments must be received by March 20, 2017.

List of Subjects in 16 CFR 1015

Administrative practice and procedure; Consumer protection; Disclosure of information; Freedom of information.

For the reasons set forth in the preamble, the Commission proposes to amend 16 CFR part 1015 to read, as follows:

PART 1015—PROCEDURES FOR DISCLOSURE OR PRODUCTION OF INFORMATION UNDER THE FREEDOM OF INFORMATION ACT

1. The authority citation for part 1015 is revised to read, as follows:

2. Amend § 1015.1 by revising the third sentence in paragraph (a) and revising paragraphs (b) and (c) to read, as follows:

§ 1015.1 Purpose and scope.

(a) * * * These records include those maintained in connection with the Commission’s responsibilities and functions under the Consumer Product Safety Act, as well as those responsibilities and functions transferred to the Commission under the Federal Hazardous Substances Act, the Poison Prevention Packaging Act of 1970, the Refrigerator Safety Act, the Flammable Fabrics Act, the Children’s Gasoline Burn Prevention Act, the Virginia Graeme Baker Pool and Spa Safety Act, and the Child Nicotine Poisoning Prevention Act, and those maintained under any other authorized activity. * * *
(b) The Commission’s policy with respect to requests for records is that disclosure is the rule and withholding is the exception. All records or portions of records not exempt from disclosure will be made available. Records which may be exempted from disclosure will be made available unless: (1) Disclosure is prohibited by law; (2) the Commission reasonably foresees that disclosure would harm an interest protected by an exemption described in 5 U.S.C. 552(b); or (3) disclosure is exempted under 5 U.S.C. 552(b)(3). See § 1015.15(b).

Section 6(a)(2) of the Consumer Product Safety Act, 15 U.S.C. 2055(a)(2), prohibits the disclosure of trade secrets or other matters referred to in 18 U.S.C. 1905; Section 6(b) and Section 25(c) of the CPSA. The Commission will consider the record’s age, content, and character in assessing whether it reasonably foresees that disclosure of the document would harm an interest protected by an exemption.

Additionally, the Commission will consider whether partial disclosure of information is possible whenever the Commission determines that a full disclosure of a requested record is not possible and will take reasonable steps necessary to segregate and release nonexempt information.

(c) The Secretariat of the Commission is the designated Chief Freedom of Information Officer who, subject to the authority of the Chairman, is responsible for compliance with and implementation of 5 U.S.C. 552(j).

3. Amend § 1015.2 by:
   a. Revising the section heading;
   b. Revising paragraphs (a), (b), and (c); and
   c. Adding paragraph (d).

The revisions read, as follows:

§ 1015.2 Public inspection.

(a) The Consumer Product Safety Commission will maintain in a public reference room or area the materials relating to the Consumer Product Safety Commission that are required by 5 U.S.C. 552(a)(2) and 552(a)(5) to be made available for public inspection in an electronic format. The principal location will be in the Office of the Secretariat of the Commission. The address of this office is: Office of the Secretariat, Consumer Product Safety Commission, Room 820, 4330 East West Highway, Bethesda, MD 20814.

(b) This public reference facility will maintain and make available for public inspection in an electronic format a current index of the materials available at that facility which are required to be indexed by 5 U.S.C. 552(a)(2).

(c) The Consumer Product Safety Commission will maintain an "electronic reading room" on the World-Wide Web at https://www.cpsc.gov for those records that are required by 5 U.S.C. 552(a)(2) to be available by “computer telecommunications.” Records that the FOIA requires the Commission to make available for public inspection in an electronic format may be accessed through the e-FOIA Public Access Link at https://www.cpsc.gov.

(d) Subject to the requirements of Section 6 of the CPSA, the Commission will make available for public inspection in an electronic format copies of all records, regardless of form or format, that (1) have been released to any person under 5 U.S.C. 552(a)(3) and (2) that because of the nature of their subject matter, the Commission determines have become or are likely to become the subject of subsequent requests for substantially the same records or that have been requested three or more times.

4. Amend § 1015.3 by:
   a. Revising the section heading;
   b. Revising the first sentence of paragraph (a);
   c. Adding a sentence at the end of paragraph (b); and
   d. Removing the word “Secretary” from paragraphs (d) and (e), wherever it appears, and adding, in its place, the word “Secretariat”.

The revisions read, as follows:

§ 1015.3 Requests for records.

(a) A request for access to records of the Commission shall be in writing addressed to the Secretariat and shall be submitted through any of the following methods: The e-FOIA Public Access Link at https://www.cpsc.gov; email to cpsc-foia@cpsc.gov; mail to Consumer Product Safety Commission, 4330 East West Highway, Room 820, Bethesda, MD 20814; or facsimile to 301–504–0127. * * * * * * * * (b) * * * * Before submitting their requests, requesters may contact the Commission’s FOIA contact or FOIA Public Liaison to discuss the records they seek and to receive assistance in describing the records.

* * * * * * * * (d) If a requested record cannot be located from the information supplied, or is known to have been destroyed or otherwise disposed of, the requester shall be so notified by the Secretariat or delegate of the Secretariat.

(e) The Consumer Product Safety Commission uses a multitrack system to process requests under the Freedom of Information Act that is based on the amount of work and/or time involved in processing requests. Requests for records are processed in the order they are received within each track. Upon receipt of a request for records, the Secretariat or delegate of the Secretariat will determine which track is appropriate for the request. The Secretariat or delegate of the Secretariat may contact requesters whose requests do not appear to qualify for the fastest tracks and provide such requesters the opportunity to limit their requests so as to qualify for a faster track. Requesters who believe that their requests qualify for the fastest tracks and who wish to be notified if the Secretariat or delegate of the Secretariat disagrees may so indicate in the request and, where appropriate and feasible, will also be given an opportunity to limit their requests.

§ 1015.4 [Amended]

5. Amend § 1015.4 by removing the word “Secretary” wherever it appears, and adding, in its place, the word “Secretariat”.

6. Amend § 1015.5 by:
   a. Revising paragraph (a)
   b. Removing the word “Secretary” in paragraphs (b), (b)(1), (d), and (d)(2) wherever it appears adding, in its place, the word “Secretariat”;
   c. Redesignating paragraphs (e) through (g), as paragraphs (f) through (h), respectively;
   d. Add new paragraph (e);
   e. Removing the word “Secretary” in redesignated paragraphs (f), (g), (g)(3), (g)(5), and (h) wherever it appears, and adding, in its place, the word “Secretariat”;

(f) Revising redesignated paragraph (g)(2).

The revisions read, as follows:

§ 1015.5 Time limitation on responses to requests for records and requests for expedited processing.

(a) The Secretariat or delegate of the Secretariat shall respond to all written requests for records within twenty (20) working days (excluding Saturdays, Sundays, and legal public holidays). The time limitations on responses to requests for records submitted by mail shall begin to run at the time a request for records is received and date stamped by the Office of the Secretary. The Office of the Secretariat shall date stamp the request the same day that it receives the request. The time limitations on responses to requests for records submitted electronically during working hours (8 a.m. to 4:30 p.m. EST) shall begin to run at the time the request was electronically received and the time limitations on responses submitted electronically during non-working hours will begin to run the next working day.

(b) The time for responding to requests for records may be extended by
the Secretariat at the initial stage or by the General Counsel of the Commission at the appellate stage up to an additional ten (10) working days under the following unusual circumstances:

(1) The need to search for and collect the requested records from field facilities or other establishments that are separate from the Office of the Secretariat.

(d) If the Secretariat at the initial stage or the General Counsel at the appellate stage determines that an extension of time greater than ten (10) working days is necessary to respond to a request satisfying the “unusual circumstances” specified in paragraph (b) of this section, the Secretariat or the General Counsel shall so notify the requester and give the requester the opportunity to:

(1) * * *

(2) Arrange with the Secretariat or the General Counsel an alternative time frame for processing the request or a modified request.

(e) If an extension of time greater than ten (10) working days is necessary, the Commission shall make available its FOIA Public Liaison for this purpose. A list of the Commission FOIA Public Liaisons is available at https://www.cpsc.gov/Newsroom/FOIA. The Commission will also notify requesters in writing to the availability of the Office of Government Information Services of the National Archives and Records Administration to provide dispute resolution services.

(f) The Secretariat or delegate of the Secretariat may aggregate and process as a single request requests by the same requester, or a group of requesters acting in concert, if the Secretariat or delegate reasonably believes that the requests actually constitute a single request which would otherwise satisfy the unusual circumstances specified in paragraph (b) of this section, and the requests involve clearly related matters.

(g) The Secretariat or delegate of the Secretariat will provide expedited processing of requests in cases where the requester demonstrates a compelling need for such processing.

(1) * * *

(2) Requesters for expedited processing must include in their requests, which may be submitted through any of the methods described in §1015.5(a) of this part, a statement setting forth the basis for the claim that a “compelling need” exists for the requested information, certified by the requester to be true and correct to the best of his or her knowledge and belief.

(3) The Secretariat or delegate of the Secretariat will determine whether to grant a request for expedited processing and will notify the requester of such determination within ten (10) days of receipt of the request.

(4) * * *

(5) The Secretariat or delegate of the Secretariat will process any request, including a request for which expedited processing is granted.

(h) The Secretariat may be unable to comply with the time limits set forth in this §1015.5 when disclosure of documents responsive to a request under this part is subject to the requirements of section 6(b) of the Consumer Product Safety Act, 15 U.S.C. 2055(b), and the regulations implementing that section, 16 CFR part 1101. The Secretariat or delegate of the Secretariat will notify requesters whose requests will be delayed for this reason.

7. Revise §1015.6 by:

■ a. Revising paragraph (a);
■ b. Removing the word “Secretary” from paragraphs (b), (c) and (d) wherever it appears, and adding, in its place, the word “Secretariat”;
■ c. Removing the number “30” in paragraph (b)(4), and adding, in its place, the number “90”; and
■ d. Adding paragraph (b)(5).

The revisions read, as follows:

§1015.6 Responses: Form and content.

(a) When a requested record has been identified and is available for disclosure, the requester shall be supplied with a copy or notified as to where and when the record will be made available for public inspection in an electronic format. If the payment of fees is required the requester shall be advised by the Secretariat in writing of any applicable fees under §1015.9 hereof. The requester will be notified of the right to seek assistance from the Commission’s FOIA Public Liaison.

(b) A response denying a written request for a record shall be in writing signed by the Secretariat or delegate of the Secretariat and shall include:

* * *

(4) A statement that the denial may be appealed to the Commissioners of the Consumer Product Safety Commission. Any such appeal must be made within 90 calendar days of receipt of the denial by the requester.

(5) A statement that the requester has the right to seek dispute resolution services from the Commission’s FOIA Public Liaison or the Office of Government Information Services.

(c) If no response is made within twenty (20) working days or any extension thereof, the requester can consider his or her administrative remedies exhausted and seek judicial relief in a United States District Court as specified in 5 U.S.C. 552(a)(4)(B). When it appears that no response can be made to the requester within the applicable time limit, the Secretariat or delegate of the Secretariat may ask the requester to forgo judicial relief until a response can be made. The Secretariat or delegate of the Secretariat shall inform the requester of the reason for the delay, of the date on which a response may be expected and of his/her right to seek judicial review as specified in 5 U.S.C. 552(a)(4)(B).

8. Amend §1015.7 by:

■ a. Revising the section heading;
■ b. Revising paragraphs (a) and (b);
■ c. Removing the word “Secretary” in paragraphs (c) and (g) wherever it appears, and adding, in its place, the word “Secretariat”;
■ d. Revising paragraph (e).

The revisions read, as follows:

§1015.7 Appeals from initial denials; reconsideration by the Secretariat.

(a) When the Secretariat or delegate of the Secretariat has denied a request for records in whole or in part, the requester may, within 90 calendar days of its receipt, appeal the denial to the General Counsel of the Consumer Product Safety Commission, attention of the Secretariat. Appeals may be submitted through any of the following methods: The e-FOIA Public Access Link at https://www.cpsc.gov; email to cpsc-foia@cpsc.gov; mail to 4330 East West Highway, Room 820, Bethesda, MD 20814; or facsimile to 301–504–0127.

(b) The General Counsel, or the Secretariat upon reconsideration, will act upon an appeal within 20 working days of its receipt. The time limitations on an appeal submitted by mail shall begin to run at the time an appeal is received and date stamped by the Office of the Secretariat. The Office of the Secretariat will date stamp the request the same day that it receives the request. The time limitations on an appeal submitted electronically during working hours (8 a.m. to 4:30 p.m. EST) shall begin to run at the time the appeal was electronically received and the time limitations on responses electronically submitted during non-working hours will begin to run the next working day.

(c) After reviewing the appeal, the Secretariat will reconsider his/her initial denial. If the Secretariat upon reconsideration decides to release any or all of the information requested on appeal, an appeal as to the information released will be considered moot; and the Secretariat will notify the requester and submitter of the information in accordance with
§§ 1015.6(a) and 1015.18(b). If the Secretariat decides to affirm the initial denial, in whole or in part, the General Counsel will decide the appeal within the 20-day time limit or any extension thereof in accordance with § 1015.5.

(e) The General Counsel’s action on appeal shall be in writing, shall be signed by the General Counsel, and shall constitute final agency action. A denial in whole or in part of a request on appeal shall set forth the exemption relied upon; a brief explanation, consistent with the purpose of the exemption, of how the exemption applies to the records withheld; and the reasons for asserting it. The decision will inform the requester of the right to seek dispute resolution services from the Commission’s FOIA Liaison or the Office of Government Information Services. A denial in whole or in part shall also inform the requester of his/her right to seek judicial review of the Commission’s final determination in a United States district court, as specified in 5 U.S.C. 552(a)(4)(B).

(g) Copies of all appeals and copies of all actions on appeal shall be furnished to and maintained in a public file by the Secretariat.

9. Amend § 1015.9 by:
   a. Removing the word “Secretary” in paragraphs (a), (e)(9), (f)(4), (5) and (7), and adding, in its place, the word “Secretariat”;
   b. Revising paragraph (b), (c)(2) and (3);
   c. Adding a sentence at the end of paragraph (e)(1);
   d. Adding paragraph (f)(6);
   e. Designating paragraph (f)(6) as paragraph (f)(7).

The revisions read, as follows:

§ 1015.9 Fees for production of records.
(a) The Commission will provide, at no charge, certain routine information. For other Commission responses to information requests, the Secretariat shall determine and levy fees for duplication, search, review, and other services, in accordance with this section.
(b) Fees shall be paid to the Treasury of the United States according to the directions provided by the Commission.
(c)(2) Search includes all time spent looking for material that is responsive to a request, including page-by-page or line-by-line identification of material within documents and the reasonable efforts expended to locate and retrieve information from electronic records.

§ 1015.10 Commission report of actions to Congress.
On or before February 1 of each year, the Commission shall submit a report of its activities with regard to freedom of information requests during the preceding fiscal year to the Attorney General of the United States and to the Director of the Office of Government Information Services. This report shall include:

(h) The number of times the Commission denied a request for records under 5 U.S.C. 552(c).
(i) The number of records that were made available for public inspection in an electronic format under 5 U.S.C. 552(a)(2).

11. Amend § 1015.11 by revising paragraphs (a) and (b) to read, as follows:

§ 1015.11 Disclosure of trade secrets to consultants and contractors; nondisclosure to advisory committees and other government agencies.
(a) In accordance with section 6(a)(2) of the CPSA, the Commission may disclose information which it has determined to be a trade secret or other matter referred to under 5 U.S.C. 552(b)(4) to Commission consultants and contractors for use only in their work for the Commission. Such persons are subject to the same restrictions with respect to disclosure of such information as any Commission employee.
(b) In accordance with section 6(a)(2) of the CPSA, the Commission is prohibited from disclosing information which it has determined to be a trade secret or other matter referred to under 5 U.S.C. 552(b)(4) to advisory committees, except when required in the official conduct of their business, or to other Federal agencies and state and local governments except when permitted by the provisions of section 29(f) of the CPSA.

12. Amend § 1015.15 by:
   a. Removing the words “and the internal Commission procedure for withholding exempt records” from paragraph (a); and
   b. Revising paragraph (b) and (c).

The revisions read, as follows:

§ 1015.15 Purpose and scope.
(a) The regulations of this subpart provide information concerning the types of records which may be withheld from production and disclosure by the Consumer Product Safety Commission. These regulations also provide information on the method whereby persons submitting information to the Commission may request that the information be considered exempt from disclosure, and information concerning the Commission’s treatment of documents submitted with a request that they be treated as exempt from disclosure.

§ 1015.17 Advertising.
(a) The Secretariat, at its discretion, may advertise for records kept in the public files of the Commission.

§ 1015.19 Treasury fees.
(a) A request for fees under this section shall include a statement that the requester is not financially able to pay for the fee.

§ 1015.20 Minimum fee requirements.
(a) The minimum fee is $0.25 per page in the case of a request for which fees are required.

§ 1015.21 Expedited service.
(a) The Secretariat shall provide expedited service to a requester if the Secretariat determines that time is of the essence to the requester.

§ 1015.22 Fee waivers.
(a) The Secretariat shall grant a fee waiver if the request is for solely for research or other non-commercial purposes.

§ 1015.23 Determination of fees.
(a) The Secretariat shall determine the fees associated with a request.

§ 1015.24 Appeals.
(a) The Secretariat shall provide a written decision, including a statement of the reasons for the denial, in response to an appeal.

§ 1015.25 Legal action.
(a) A determination of final agency action by the Secretariat is appealable to the United States district court, as specified in 5 U.S.C. 552(a)(4)(B).

§ 1015.26 Freedom of Information Act (FOIA) amendments.
(a) The amendments to section 552(b)(4) of the United States FOIA, as amended, which are made by section 29(f) of the Consumer Product Safety Commission Act (49 U.S.C. 20130), are effective with respect to the Consumer Product Safety Commission, and do not apply to other Federal agencies.

§ 1015.27 Declaration of rights.
(a) The Secretariat shall provide a written declaration of rights to a requester.

§ 1015.28 Training.
(a) The Secretariat shall provide training for its employees in the proper handling of requests for information.

§ 1015.29 Records management.
(a) The Secretariat shall manage records in accordance with the provisions of the Federal Records Act.

§ 1015.30 Access to records.
(a) The Secretariat shall provide access to records in accordance with 5 U.S.C. 552(a)(1) and the regulations of this subpart.

§ 1015.31 Preservation.
(a) The Secretariat shall preserve records in accordance with the provisions of the Federal Records Act.

§ 1015.32 Exemptions.
(a) The Secretariat shall consider exemptions in accordance with the provisions of section 552(b) of the United States FOIA, as amended.

§ 1015.33 Definitions.
(a) The terms defined in this section shall have the meanings set forth in section 552 of the United States FOIA, as amended.

§ 1015.34 Records of state and local governments.
(a) The Secretariat shall provide information concerning records of state and local governments.

§ 1015.35 Records of other Federal agencies.
(a) The Secretariat shall provide information concerning records of other Federal agencies.

§ 1015.36 Records of other Federal agencies.
(a) The Secretariat shall provide information concerning records of other Federal agencies.

§ 1015.37 Records of other Federal agencies.
(a) The Secretariat shall provide information concerning records of other Federal agencies.
(b) No identifiable record requested in accordance with the procedures contained in this part shall be withheld from disclosure unless it falls within one of the classes of records exempt under 5 U.S.C. 552(b). The Commission will make available, to the extent permitted by law, records authorized to be withheld under 5 U.S.C. 552(b) unless the Commission reasonably foresees that disclosure would harm an interest protected by the exemption or disclosure is prohibited by law or otherwise exempted from disclosure under 5 U.S.C. 552(b)(o). In this regard the Commission will not ordinarily release documents that provide legal advice to the Commission concerning pending or prospective litigation where the release of such documents would significantly interfere with the Commission’s regulatory or enforcement proceedings.

(c) Draft documents that are agency records are subject to release upon request in accordance with this regulation. However, in order to avoid any misreading of the preliminary nature of a draft document, each draft document released will be marked to indicate its tentative nature. Similarly, staff briefing packages, which have been completed but not yet transmitted to the Commission by the Office of the Secretariat are subject to release upon request in accordance with this regulation. Each briefing package or portion thereof released will be marked to indicate that it has not been transmitted to or acted upon by the Commission. In addition, briefing packages, or portions thereof, which the Secretariat upon the advice of the Office of the General Counsel has determined would be released upon request in accordance with this regulation, will be made available for public inspection in an electronic format through the Commission’s Web site at https://www.cpsc.gov promptly after the briefing package has been transmitted to the Commissioners by the Office of the Secretariat. Such packages will be marked to indicate that they have not been acted upon by the Commission.

13. Amend §1015.16 by:

(a) Revising paragraph (e); and

(b) Removing from paragraph (f) the misspelled word “constitute” and adding, in its place, the word “constitute”.

The revisions read, as follows:

§1015.16 Exemptions (5 U.S.C. 552(b)).

(e) Inter-agency or intra-agency memoranda or letters that would not be available by law to a party other than an agency in litigation with the agency provided that the deliberative process privilege shall not apply to records created 25 years or more before the date on which the records were requested.

(f) Personnel and medical files and similar files the disclosure of which would constitute a clearly unwarranted invasion of personal privacy.

§1015.17 [Reserved]

§1015.20 Public availability of accident or investigation reports.

15. Amend §1015.20, by removing the period and the words “No portion of” from the first and second sentence of paragraph (a), and adding, in its place, “unless” and “s” to the word “report” to read as follows:

(a) Accident or investigation reports made by an officer, employee, or agent of the Commission are available to the public under the procedures set forth in part 1015 unless such reports are subject to the investigatory file exemption contained in the Freedom of Information Act (as restated in §1015.16) except that portions identifying any injured person or any person treating such injured person will be deleted in accordance with section 25(c)(1) of the CPSA.

Dated: December 21, 2016.

Todd A. Stevenson,

Secretary, Consumer Product Safety Commission.

[FR Doc. 2016–31131 Filed 12–30–16; 8:45 am]

BILLING CODE 6355–01–P

DEPARTMENT OF THE TREASURY

31 CFR Part 40

RIN 1505–AC54

Nondiscrimination on the Basis of Disability in Programs or Activities Receiving Federal Financial Assistance From the Department of the Treasury

AGENCY: Department of the Treasury.

ACTION: Notice of proposed rulemaking.

SUMMARY: This proposed rule would set out the Department of the Treasury (Treasury) rules for implementing section 504 of the Rehabilitation Act of 1973, as amended (section 504), for Treasury’s programs offering Federal financial assistance. Section 504 prohibits discrimination on the basis of disability in programs or activities receiving Federal financial assistance. Section 504 and the section 504 coordination regulation (coordination regulation) require that all agencies that extend Federal financial assistance issue agency-specific regulations implementing section 504. Treasury recipients have been subject to section 504 since its effective date in 1973. Accordingly, today’s proposed rule would not substantially change the existing duty of recipients of financial assistance from Treasury to refrain from discrimination on the basis of disability. This proposed rule fulfills the obligation of Treasury to issue agency-specific rules under the law, clarifies the responsibilities of recipients of financial assistance from Treasury under section 504, and describes the Treasury investigation and enforcement procedures to ensure compliance. The proposed regulation is consistent with the ADA Amendments Act of 2008 (ADA Amendments Act), which amended section 504.

DATES: Comments must be received on or before March 6, 2017.

ADDRESSES: Members of the public are invited to submit comments on all aspects of this proposed rule. Comments on this proposed rule should be sent to Mariam G. Harvey, Director, Office of Civil Rights and Diversity (OCRD), Department of Treasury, 1500 Pennsylvania Avenue NW., Washington, DC 20220. Comments may be submitted through www.regulations.gov. The Department encourages electronic submission of comments via www.regulations.gov. Brief comments (maximum five pages) may be submitted by facsimile machine (FAX) to (202) 622–0367. Receipt of submissions, whether online, by mail or FAX transmittal, will not be acknowledged; however, the sender may request confirmation that a submission has been received by telephoning OCRD at (202) 622–1160 (VOICE) or (202) 622–7104 (TTY/TDD).

In general, comments received will be posted to Regulations.gov without change, including any business or personal information provided. Please submit only information appropriate for public disclosure. Copies of this proposed rule in the alternative formats of large print and electronic file on computer disk are available upon request. To obtain the proposed rule in an alternative format, contact OCRD at the telephone and address listed above.

FOR FURTHER INFORMATION CONTACT: Lydia E. Aponte, Civil Rights Program Manager, OCRD, (202) 622–8335 (VOICE) or (202) 622–7104 (TTY/TDD).

SUPPLEMENTARY INFORMATION:
I. Background

This proposed rule implements section 504 of the Rehabilitation Act of 1973 (29 U.S.C. 794), as amended, which provides that no otherwise qualified individual with a disability in the United States shall, “solely by reason of his or her disability, be excluded from the participation in, be denied the benefits of, or be subjected to discrimination under any program or activity receiving Federal financial assistance or under any program or activity conducted by any Executive agency . . . .” Here, the Department of the Treasury will be issuing section 504 federal financial assistance regulations for the first time. This proposed rule has been reviewed by DOJ in the exercise of its section 504 coordination authority under Executive Order 12250.

II. Overview of Proposed Rule

This proposed rule is designed to fulfill Treasury’s statutory and regulatory obligations to issue regulations implementing the federal financial assistance requirements of section 504 that conform to and are consistent with the coordination regulation found at 28 CFR part 41. Treasury, as described below, is proposing language to set forth the 504 requirements for recipients of federal financial assistance that include addressing circumstances unique to Treasury or current applicable statutory requirements. The proposed rule sets forth section 504’s prohibitions on discrimination based on disability in programs or activities receiving financial assistance from Treasury. It also elaborates on investigation, conciliation, and enforcement procedures. It clarifies that Treasury enforcement would be conducted by the Office of Civil Rights and Diversity (OCRD), part of the Office of the Assistant Secretary for Management. OCRD enforces all civil rights laws applicable to entities receiving financial assistance from Treasury. Treasury invites public comment on all aspects of this proposed rule and will take those comments into account before publishing a final rule.

Summary of Key Provisions

Subpart A—General

Subpart A provides the proposed rule’s purpose, application, definitions, and enforcement mechanisms. The purpose of the proposed rule is to effectuate section 504 of the Rehabilitation Act of 1973 to prohibit discrimination on the basis of disability in programs or activities that receive financial assistance from the Department of the Treasury. These regulations will apply to all programs or activities that receive financial assistance from Treasury, such as awardees and grantees under various Community Development Financial Institution Fund programs and recipients of Treasury’s Volunteer Income Tax Assistance Program.

Subpart A also includes a provision, at § 40.4(j), requiring recipients to provide reasonable accommodations by making changes to policies, practices or procedures when necessary to avoid discrimination on the basis of disability, unless the covered entity can show that the accommodations would result in a fundamental alteration in the nature of its service, program, or activity or impose undue financial and administrative burdens. The obligation to modify policies, practices or procedures was first enunciated by the Supreme Court in Southeastern Community College v. Davis, 442 U.S. 397 (1979), which held that while section 504 prohibits the exclusion of an otherwise qualified individual with a disability from participation in a federally funded program solely by reason of the individual’s disability, that person is not protected by section 504 if, in order to meet reasonable eligibility standards, the person needs program or policy modifications that would fundamentally alter the nature of the provider’s program. Because the Davis Court analyzed the case in terms of the proper interpretation of the statutory term “otherwise qualified,” agency section 504 regulations promulgated immediately after Davis addressed the obligation to provide reasonable accommodations outside of the employment arena by defining “qualified handicapped person,” as one who meets the essential eligibility requirements of the program and who can achieve the purpose of the program or activity without modifications in the program or activity the agency can demonstrate would result in a fundamental alteration in its nature. See, e.g., 28 CFR 39.103 (the Department of Justice’s section 504 federally conducted regulation).

Subsequently, in Alexander v. Choate, 469 U.S. 287 (1985), which addressed a section 504 challenge to a state policy reducing the annual number of days of inpatient hospital care covered by the state’s Medicaid program, the Supreme Court implicitly acknowledged that the obligation to provide reasonable accommodations could be considered as an affirmative obligation, noting, “the question of who is ‘otherwise qualified’ and what actions constitute ‘discrimination’ under the section would seem to be two sides of a single coin; the ultimate question is the extent to which a grantee is required to make reasonable modifications [accommodations] in its programs for the needs of the handicapped.” Alexander, 469 U.S. at 300 n.19. Alexander also introduced the concept of undue financial and
accommodations that are required under such a regime would be well beyond the "\[i\]t should be obvious that the durational limitation on inpatient petitioners' contention that the reasonable accommodation administrative burden as a limitation on by this regulation and to promote the evaluation process to obtain meaningful Treasury recognizes the value of a self-
section 504 within one year of the disabilities, of their compliance with recipients to conduct self-evaluations, § 40.8 of this proposed rule requires § 40.5; that recipients with more than 50 employees designate at least one person to coordinate compliance with these regulations at § 40.6; and that recipients with more than 50 employees take appropriate initial and continuing steps to notify participants, beneficiaries, applicants and employees that they do not discriminate on the basis of disability in violation of section 504 and these regulations at § 40.7. Consistent with the requirements in the section 504 coordination regulation, § 40.8 of this proposed rule requires recipients to conduct self-evaluations, with the assistance of interested persons, including individuals with disabilities, of their compliance with section 504 within one year of the effective date of this regulation. Treasury recognizes the value of a self-evaluation process to obtain meaningful feedback from the community affected by this regulation and to promote effective and efficient implementation of section 504. Subpart B—Employment Practices Subpart B applies section 504’s prohibition of discrimination on the basis of disability as it relates to the employment practices of recipients of Treasury financial assistance and recipient relationships with third parties. In particular, this regulation conforms to the Rehabilitation Act Amendments of 1992 (Pub. L. 102–569, sec. 506), which amended the Rehabilitation Act to make the same employment standards set forth in title I of the ADA apply to employment discrimination under section 504. The proposed rule references the standards applied under title I of the ADA of 1990 (42 U.S.C. 12111 et seq.), and the Equal Employment Opportunity Commission’s ADA title I regulation at 29 CFR 1630, as amended.

Subpart C—Program Accessibility Subpart C applies section 504’s prohibition of discrimination on the basis of disability as it relates to both existing facilities and newly-constructed facilities of recipients of financial assistance from Treasury. Recipients of financial assistance from Treasury must operate each service, program or activity so that the service, program, or activity, when viewed in its entirety, is readily accessible to and usable by individuals with disabilities. The Department has included a safe harbor for recipients who have not altered existing facilities on or after the effective date of this rule and that comply with the corresponding technical and scoping specifications for those elements in the Uniform Federal Accessibility Standards (UFAS), Appendix A to 41 CFR part 101–19.6, 49 FR 31528, app. A (Aug. 7, 1984). These facilities are not required to be modified to be brought into compliance with the requirements set forth in the 2010 ADA Standards for Accessible Design (the 2004 ADAAg (the requirements set forth in appendices B and D to 36 CFR part 1191 (2009)), and the requirements contained in 28 CFR 35.151). This will likely apply to recipients who previously complied with UFAS on their own or because of other regulatory requirements, such as titles II or III of the ADA.

If construction of a recipient’s facility commences after the effective date of this regulation, the facility must be designed and constructed so that it is readily accessible to and usable by persons with disabilities. Generally, new construction and alterations by recipients that are public entities in which the last application for a building permit or permit extension is certified to be complete one year after publication of this rule as final in the Federal Register or if no permit is required, if the start of physical construction is one year from the publication of the final rule, must comply with the 2010 Standards as defined in this rule. New construction and alterations by recipients that are public entities that commence one year after the publication of this rule as final in the Federal Register must comply with the 2010 Standards.

Subparts D and E—Compliance, Investigations and Procedure for Effecting Compliance; and Hearings and Decisions

Executive Order 12067

The Equal Employment Opportunity Commission has reviewed this proposed rule pursuant to Executive Order 12067.

Executive Order 12866

This regulatory action is not a “significant regulatory action” under Executive Order 12866, “Regulatory Planning and Review,” 58 FR 51735 (October 4, 1993). Accordingly, this rule is not subject to review under the Executive Order by the Office of Information and Regulatory Affairs within the Office of Management and Budget.

Executive Order 13175

In accordance with Executive Order 13175, we have evaluated the potential effects of this rule on federally-recognized Indian tribes and have determined that the rule does not have substantial direct effects on one or more Indian tribes, on the relationship between the federal government and Indian tribes, or on the distribution of power and responsibilities between the Federal government and Indian tribes.

Unfunded Mandates Reform Act of 1995

The Department certifies that no actions were deemed necessary under the Unfunded Mandates Reform Act of 1995. Furthermore, these regulations will not result in the expenditure by state, local, and tribal governments, in the aggregate, or by the private sector, of $100,000,000 or more in any one year, and they will not significantly or uniquely affect small governments.
The Regulatory Flexibility Act

The Department, in accordance with the Regulatory Flexibility Act, 5 U.S.C. 601 et seq., has reviewed these regulations and certifies that these regulations will not have a significant economic impact on a substantial number of small entities. This certification is based on the fact that recipients of federal financial assistance have been subject to section 504 and the coordination regulation since their effective date in 1973. Accordingly, this proposed rule would not substantially change the existing duty of recipients of financial assistance from Treasury to refrain from discrimination on the basis of disability. This proposed rule would merely fulfill the obligation of the Department to issue agency-specific rules under the rule clarifies the responsibilities of recipients of financial assistance from Treasury under section 504 and describes the Department’s investigation and enforcement procedures to ensure compliance. In particular, this rule codifies requirements for a transition plan and self-evaluation as outlined in the coordination regulation (28 CFR part 41). The transition plan and self-evaluation demonstrate an entity’s compliance with section 504 and are anticipated to have minimal economic burden. Further, the rule likely would apply only to entities receiving federal financial assistance from the Department, which would likely only include a small number of entities in each industry and therefore would not be expected to have an impact on a substantial number of small entities in any industry.

Notwithstanding this certification, the Department welcomes comments on the impacts of this rule on small entities.

Executive Order 13132

These regulations will not have substantial direct effects on the states, on the relationship between the national government and the states, or on the distribution of power and responsibilities among the various levels of government. Therefore, in accordance with section 6 of Executive Order 13132, the Department has determined that this rule does not have sufficient federalism implications to warrant the preparation of a federalism summary impact statement.

Paperwork Reduction Act

Under the Paperwork Reduction Act (44 U.S.C. chapter 35), an agency may not conduct or sponsor and a person is not required to respond to a collection of information unless it displays a valid control number issued by the Office of Management and Budget (OMB). The information collections contained in this proposed rule will be submitted and approved by OMB in connection with information collections for the applicable programs listed below.

The OMB control numbers that will be revised include the following:

<table>
<thead>
<tr>
<th>Bureau/Office</th>
<th>Program or activity</th>
<th>OMB control numbers</th>
</tr>
</thead>
<tbody>
<tr>
<td>Internal Revenue Service</td>
<td>State Small Business Credit Initiative</td>

Comments on the collection of information should be submitted no later than March 6, 2017. Comments are specifically requested concerning:

1. Whether the proposed information collection is necessary for the proper performance of agency functions, including whether the information will have practical utility;
2. The accuracy of the estimated burden associated with the proposed collection of information, including the validity of the methodology and assumptions used (see below);
3. How to enhance the quality, utility, and clarity of the information required to be maintained; and
4. How to minimize the burden of complying with the proposed information collection, including the application of automated collection techniques or other forms of information technology.
List of Subjects in 31 CFR Part 40

Civil rights.

For the reasons stated in the preamble, the Department of the Treasury proposes to add part 40 to Title 31 of the Code of Federal Regulations to read as follows:

PART 40—NONDISCRIMINATION ON THE BASIS OF DISABILITY IN PROGRAMS OR ACTIVITIES RECEIVING FEDERAL FINANCIAL ASSISTANCE FROM THE DEPARTMENT OF THE TREASURY

Subpart A—General Provisions

Sec.
40.1 Purpose, broad coverage and effective date.
40.2 Applicability.
40.3 Definitions.
40.4 Discrimination prohibited.
40.5 Assurances required.
40.6 Designation of responsible employee and adoption of grievance procedures.
40.7 Notice of nondiscrimination and accessible services.
40.8 Remedial action, voluntary action, and self-evaluation.
40.9 Effect of state or local law or other requirements.
40.10 Effect of compliance with regulations of other Federal agencies.

Subpart B—Employment Practices

40.101 Applicability.
40.102 Discrimination prohibited.

Subpart C—Program Accessibility

40.201 Applicability.
40.202 Discrimination prohibited.
40.203 Existing facilities.
40.204 New construction and alterations.

Subpart D—Compliance Investigations and Procedure for Effecting Compliance

40.300 Compliance information.
40.301 Conduct of investigations.
40.302 Procedure for effecting compliance.

Subpart E—Hearings and Decisions and Notices

40.400 Hearings.
40.401 Decisions and notices.

Subpart A—General Provisions

§ 40.1 Purpose, broad coverage, and effective date.

(a) Purpose. The purpose of this part is to implement section 504 of the Rehabilitation Act of 1973, as amended, which provides that no otherwise qualified individual with a disability in the United States shall solely by reason of his or her disability be excluded from the participation in, or be denied the benefits of, or be subjected to discrimination under any program or activity receiving Federal financial assistance from the Department of the Treasury.

(b) Broad Coverage. Consistent with the purpose of the ADA Amendments Act of 2008 of reinstating a broad scope of protection under the Americans with Disabilities Act and section 504, the definition of “disability” applicable to this part shall be construed broadly in favor of expansive coverage. The primary object of attention in cases brought under this part should be whether entities covered under section 504 have complied with their obligations and whether discrimination has occurred, not whether the individual meets the definition of disability. The question of whether an individual meets the definition of disability should not demand extensive analysis.

(c) Effective date. This part is effective on [30 days after publication of the final rule].

§ 40.2 Applicability.

This part applies to all programs or activities that receive Federal financial assistance provided by the Department of the Treasury after the effective date of this part, whether or not the assistance was approved before the effective date and whether or not a recipient’s grant or award documents reference the obligation to comply with section 504.

§ 40.3 Definitions.

2010 Standards means the 2010 ADA Standards for Accessible Design, which consist of the 2004 ADAAG and the requirements contained in 28 CFR 35.151.

Applicant means one who submits an application, request, or plan required to be approved by the designated Department official or by a primary recipient as a condition to becoming a recipient.

Auxiliary aids and services means services or devices that enable persons with sensory, manual, or speech disabilities to have an equal opportunity to participate in, and enjoy the benefits of, the recipient’s programs or activities. Auxiliary aids and services include:

(1) Qualified interpreters on-site or through video remote interpreting (VRI) services; note takers; real-time computer-aided transcription services; written materials; exchange of written notes; telephone handset amplifiers; assistive listening devices; assistive listening systems; telephones compatible with hearing aids; closed caption decoders; open and closed captioning, including real-time captioning; voice, text, and video-based telecommunications products and systems, including text telephones (TTYS), videophones, and captioned telephones, or equally effective telecommunications devices; videotext displays; accessible electronic and information technology; or other effective methods of making aurally delivered information available to individuals who are deaf or hard of hearing;

(2) Qualified readers; taped texts; audio recordings; Brailled materials and displays; screen reader software; magnification software; optical readers; secondary auditory programs (SAP); large print materials; accessible electronic and information technology; or other effective methods of making visually delivered materials available to individuals who are blind or have low vision;

(3) Acquisition or modification of equipment or devices; and

(4) Other similar services and actions. Current illegal use of drugs means illegal use of drugs that occurred recently enough to justify a reasonable belief that a person’s drug use is current or that continuing use is a real and ongoing problem.

Department means the Department of the Treasury and includes each of its operating bureaus and other organizational units.

Direct threat means a significant risk to the health or safety of others that cannot be eliminated by a change to policies, practices or procedures, or by the provision of auxiliary aids or services, as provided in § 40.4(l) of this part.

Disability has the same meaning as that given in 28 CFR part 35.

Drug means a controlled substance as defined in schedules I through V of section 202 of the Controlled Substances Act (21 U.S.C. 812).

Facility means all or any portion of buildings, structures, sites, complexes, equipment, roads, walks, passageways, parking lots, rolling stock or other conveyances, including the site where the building, property, structure, or equipment is located, or other real or personal property or interest in such property.

Federal financial assistance means any grant, contract (other than a direct Federal procurement contract or a contract of insurance or guaranty), subgrant, contract under a grant, cooperative agreement, formula
assistance, in the case of assistance to a state or local government; or
(b)(1) A college, university, or other postsecondary institution, or a public system of higher education; or
(2) A local educational agency (as defined in 20 U.S.C. 7801), system of vocational education, or other school system; or
(c)(1) An entire corporation, partnership, or other private organization, or an entire sole proprietorship; or
(ii) Assistance is extended to such corporation, partnership, private organization, or sole proprietorship as a whole; or
(iii) The corporation, partnership, private organization, or sole proprietorship is principally engaged in the business of providing education, health care, housing, social services, or parks and recreation; or
(2) The entire plant or other comparable, geographically separate physical facility to which Federal financial assistance is extended, in the case of any other corporation, partnership, private organization, or sole proprietorship that is the recipient of Federal financial assistance; or
(d) Any other entity which is established by two or more of the entities described in paragraphs (a), (b), or (c) of this paragraph.
Qualified individual with a disability means:
(a) With respect to any aid, benefit, or service, provided under a program or activity subject to this part, an individual with a disability who, with or without reasonable accommodations in rules, policies, or procedures, the removal of architectural, communication, or transportation barriers, or the provision of auxiliary aids or services, meets the essential eligibility requirements for participation in, or receipt from, that aid, benefit, or service; and
(b) With respect to employment, the definition given that term in the Equal Employment Opportunity Commission’s regulation at 29 CFR part 1630, implementing title I of the Americans with Disabilities Act of 1990, which regulation is made applicable to this part by § 40.101 and § 40.102.
Qualified interpreter means an interpreter who, via a video remote interpreting (VRI) service or an on-site appearance, is able to interpret effectively, accurately, and impartially, both receptively and expressively, using any necessary specialized vocabulary. Qualified interpreters include, for example, facility interpreters, oral transliterators, and cued-language transliterators.

Qualified reader means a person who is able to read effectively, accurately, and impartially using any necessary specialized vocabulary.

Recipient means any state or its political subdivision, any instrumentality of a state or its political subdivision, any public or private agency, institution, organization, or other entity, or any person to which Federal financial assistance is extended directly or through another recipient, including any successor, assignee, or transferee of a recipient, but excluding the ultimate beneficiary of the assistance.

Secretary means the Secretary of the Treasury or any officer, employee of the Department to whom the Secretary has delegated or may delegate the authority to act under the regulations of this part.

Sub-recipient means an entity to which a primary recipient extends Federal financial assistance.

Ultimate beneficiary is one among a class of persons who are entitled to benefit from, or otherwise participate in, a program or activity receiving Federal financial assistance and to whom the protections of this part extend. The ultimate beneficiary class may be the general public or some narrower group of persons.

Video remote interpreting (VRI) service means an interpreting service that uses video conference technology over dedicated lines or wireless technology offering high-speed, wide-bandwidth video connection that delivers high-quality video images as provided in § 40.4(f)(4).

§ 40.4 Discrimination prohibited.
(a) General. No qualified individual shall, solely on the basis of disability, be excluded from participation in, be denied the benefits of, or otherwise be subjected to discrimination under any program or activity receiving assistance subject to this part.
(b) Discriminatory actions prohibited.
(1) A recipient may not, in providing any program or activity subject to this part, discriminate on the basis of disability, directly or through contractual, licensing, or other arrangements, on the basis of disability:
(i) Deny a qualified individual with a disability the opportunity accorded others to participate in or benefit from the aid, benefit, or service;
(ii) Afford a qualified individual with a disability an opportunity to participate in or benefit from the aid, benefit or
service that is not equal to that afforded to others;

(iii) Provide a qualified individual with a disability with an aid, benefit, or service that is not as effective in affording equal opportunity to obtain the same result, to gain the same benefit, or to reach the same level of achievement as that provided to others;

(iv) Deny a qualified individual with a disability an equal opportunity to participate in the program or activity by providing services to the program;

(v) Provide different or separate aids, benefits, or services to qualified individuals with disabilities or classes of qualified individuals with disabilities than is provided to others unless such action is necessary to provide qualified individuals with disabilities or classes of qualified individuals with disabilities with aids, benefits, or services that are as effective as that provided to others;

(vi) Deny a qualified individual with a disability an opportunity to participate as a member of a planning or advisory board;

(vii) Aid or perpetuate discrimination against a qualified individual with a disability by providing assistance to an agency, organization, or person that discriminates on the basis of disability in providing any aid, benefit, or service to beneficiaries of the recipient’s program;

(viii) Permit the participation in the program or activity of agencies, organizations or persons which discriminate against individuals with disabilities who are beneficiaries in the recipient’s program;

(ix) Intimidate or retaliate against any individual, with or without a disability, for the purpose of interfering with any right secured by section 504 or this part;

(x) Otherwise limit a qualified individual with a disability in the enjoyment of any right, privilege, advantage, or opportunity enjoyed by others receiving the aid, benefit, or service;

(2) A recipient may not deny a qualified individual with a disability the opportunity to participate in any programs or activities that are not separate or different, despite the existence of permissibly separate or different programs or activities.

(3) A recipient may not, directly or through contractual, licensing, or other arrangements, utilize criteria or methods of administration that:

(i) Have the effect of subjecting qualified individuals with disabilities to discrimination on the basis of disability;

(ii) Have the purpose or effect of defeating or substantially impairing accomplishment of the objectives of the recipient’s program or activity with respect to individuals with disabilities;

or:

(iii) Perpetuate the discrimination of another recipient if both recipients are subject to common administrative control or are agencies of the same State.

(4) A recipient may not, in determining the site or a location of a facility, make selections—

(i) That have the purpose or effect of excluding individuals with disabilities from, denying them the benefits of, or otherwise subjecting them to discrimination on the basis of disability; or

(ii) That have the purpose or effect of defeating or substantially impairing the accomplishment of the objectives of the program or activity with respect to individuals with disabilities.

(5) A recipient is prohibited from discriminating on the basis of disability in aid, benefits, or services in programs or activities operating without Federal financial assistance where such action would discriminate against individuals with disabilities who are beneficiaries or participants in any program or activity of the recipient receiving Federal financial assistance from this Department.

(6) An entity not otherwise receiving Federal financial assistance but using a facility provided with the aid of Federal financial assistance from this Department after the effective date of this part is prohibited from discriminating on the basis of disability.

(7) A recipient, in the selection of procurement contractors, may not use criteria that subject qualified individuals with disabilities to discrimination on the basis of disability.

(8) A recipient may not administer a licensing or certification program in a manner that subjects qualified individuals with disabilities to discrimination on the basis of disability, nor may a recipient establish requirements for the programs or activities of licensees or certified entities that subject qualified individuals with disabilities to discrimination on the basis of disability.

(9) A recipient may not administer a drug testing program, designed to ensure that an individual is free of illegal drugs, that excludes qualified individuals with disabilities from an activity of the recipient receiving Federal financial assistance where such action would discriminate against individuals with disabilities who are beneficiaries in the recipient’s program or activity with respect to individuals with disabilities.

(d) Nothing in this part prohibits a recipient from providing aid, benefits, or services to individuals with disabilities or to a particular class of individuals with disabilities beyond those required by this part.

(e) Integrated Setting. Recipients shall administer programs or activities in the most integrated setting appropriate to the needs of qualified individuals with disabilities.

(f) Nothing in this part shall be construed to require an individual with a disability to accept an accommodation, aid, service, opportunity, or benefit provided under section 504 or this part which such individual chooses not to accept.

(g) A recipient may not place a surcharge on a particular individual with a disability or any group of individuals with disabilities to cover the costs of measures, such as the provision of auxiliary aids, reasonable accommodations, or program accessibility, that are required to provide that individual or group with the nondiscriminatory treatment required by the Act or this part.

(h) Illegal Use of Drugs.

(1) General. Except as provided in subparagraph (3) of this section, this part does not prohibit discrimination against an individual based on that individual’s current use of illegal drugs.

(2) A recipient shall not discriminate on the basis of illegal use of drugs against an individual who is not engaging in current illegal use of drugs and who—

(i) Has successfully completed a supervised drug rehabilitation program or has otherwise been rehabilitated successfully;

(ii) Is participating in a supervised rehabilitation program; or

(iii) Is erroneously regarded as engaging in such use.

(3) Health and drug rehabilitation services.

(i) A recipient shall not deny health services, or services provided in connection with drug rehabilitation, to an individual on the basis of that individual’s current illegal use of drugs, if the individual is otherwise entitled to such services.

(ii) A drug rehabilitation or treatment program may deny participation to individuals who engage in illegal use of drugs while they are in the program.

(4) Drug testing.

(i) This part does not prohibit a recipient from adopting or administering reasonable policies or procedures, including but not limited to drug testing, designed to ensure that an individual who formerly engaged in the
sradovich on DSK3GMQ082PROD with PROPOSALS

74

Federal Register / Vol. 82, No. 1 / Tuesday, January 3, 2017 / Proposed Rules

illegal use of drugs is not now engaging
in current illegal use of drugs.
(ii) Nothing in paragraph (4) of this
section shall be construed to encourage,
prohibit, restrict, or authorize the
conducting of testing for the illegal use
of drugs.
(i) Communications.
(1)(i) A recipient shall take
appropriate steps to ensure that
communications with applicants,
participants, beneficiaries, members of
the public, and companions with
disabilities are as effective as
communications with others.
(ii) For purposes of this section,
‘‘companion’’ means a family member,
friend, or associate of an individual
seeking access to a program or activity
of a recipient, who, along with such
individual, is an appropriate person
with whom the recipient should
communicate.
(2)(i) A recipient shall furnish
appropriate auxiliary aids and services
where necessary to afford qualified
individuals with disabilities, an equal
opportunity to participate in, and enjoy
the benefits of, a service, program, or
activity of a recipient.
(ii) The type of auxiliary aid or service
necessary to ensure effective
communication will vary in accordance
with the method of communication
used by the individual; the nature,
length, and complexity of the
communication involved; and the
context in which the communication is
taking place. In determining what types
of auxiliary aids and services are
necessary, a recipient entity shall give
primary consideration to the requests of
individuals with disabilities. In order to
be effective, auxiliary aids and services
must be provided in accessible formats,
in a timely manner, and in such a way
as to protect the privacy and
independence of the individual with a
disability.
(3)(i) A recipient shall not require an
individual with a disability to bring
another individual to interpret for him
or her.
(ii) A recipient shall not rely on an
adult accompanying an individual with
a disability to interpret or facilitate
communication except—
(A) In an emergency involving an
imminent threat to the safety or welfare
of an individual or the public where
there is no interpreter available; or
(B) Where the individual with a
disability specifically requests that the
accompanying adult interpret or
facilitate communication, the
accompanying adult agrees to provide
such assistance, and reliance on that
adult for such assistance is appropriate
under the circumstances.

VerDate Sep<11>2014

Jkt 241001

(iii) A recipient shall not rely on a
minor child to interpret or facilitate
communication, except in an emergency
involving an imminent threat to the
safety or welfare of an individual or the
public where there is no interpreter
available.
(4) Video remote interpreting (VRI)
services. A recipient that chooses to
provide qualified interpreters via VRI
services shall ensure that it provides—
(i) Real-time, full-motion video and
audio over a dedicated high-speed,
wide-bandwidth video connection or
wireless connection that delivers highquality video images that do not
produce lags, choppy, blurry, or grainy
images, or irregular pauses in
communication;
(ii) A sharply delineated image that is
large enough to display the interpreter’s
face, arms, hands, and fingers, and the
participating individual’s face, arms,
hands, and fingers, and can be seen by
the participating individual regardless
of the individuals’ body position.
(iii) A clear, audible transmission of
voices; and
(iv) Adequate training to users of the
technology and other involved
individuals so that they may quickly
and efficiently set up and operate the
VRI.
(5) Where a recipient communicates
by telephone with applicants,
participants, beneficiaries and members
of the public, text telephones (TTYs) or
equally effective telecommunications
systems shall be used to communicate
with individuals who are deaf or hard
of hearing or have speech impairments.
(6) When a recipient uses an
automated-attendant system, including,
but not limited to, voice mail and
messaging, or an interactive voice
response system, for receiving and
directing incoming telephone calls, that
system must provide effective real-time
communication with individuals using
auxiliary aids and services, including
TTYs and all forms of FCC-approved
telecommunications relay system,
including Internet-based relay systems.
(7) A recipient shall respond to
telephone calls from a
telecommunications relay service
established under title IV of the ADA in
the same manner that it responds to
other telephone calls.
(8) This section does not require the
recipient to take any action that it can
demonstrate would result in a
fundamental alteration in the nature of
a program or activity or in undue
financial and administrative burdens. In
those circumstances where the recipient
believes that the proposed action would
fundamentally alter the program or
activity or would result in undue

PO 00000

Frm 00027

Fmt 4702

Sfmt 4702

financial and administrative burdens,
the recipient has the burden of proving
that compliance with § 40.4(i) would
result in such alteration or burdens. The
decision that compliance would result
in such alteration or burdens must be
made by the head of the recipient
agency or the agency head’s designee
after considering all of the recipient’s
resources available for use in the
funding and operation of the conducted
program or activity and must be
accompanied by a written statement of
the reasons for reaching that conclusion.
If an action required to comply with this
section would result in such an
alteration or such burdens, the recipient
shall take any other action that would
not result in such an alteration or such
burdens but would nevertheless ensure
that, to the maximum extent possible,
individuals with disabilities receive the
benefits and services of the program or
activity.
(j) Reasonable accommodations. (1) A
recipient shall make reasonable
accommodations in policies, practices,
or procedures when such
accommodations are necessary to avoid
discrimination on the basis of disability,
unless the recipient can demonstrate
that making the accommodations would
fundamentally alter the nature of the
service, program, or activity or result in
an undue financial and administrative
burden. For purposes of this section, the
term reasonable accommodation shall
be interpreted in a manner consistent
with the term ‘‘reasonable
modifications’’ as set forth in the
Americans with Disabilities Act Title II
regulation at 28 CFR 35.130(b)(7), and
not as it is defined or interpreted for the
purposes of employment discrimination
under Title I of the ADA (42 U.S.C.
12111–12112) and its implementing
regulation at 29 CFR part 1630.
(2) A recipient is not required to
provide a reasonable accommodation to
an individual who meets the definition
of disability solely under the ‘‘regarded
as’’ prong of the definition of disability
at § 40.3, definition of disability,
(k) Prohibition on associational
discrimination. A recipient shall not
exclude or otherwise deny aids,
benefits, or services of its programs or
activities to an individual because of
that individual’s relationship or
association with an individual with a
known disability.
(l) Direct Threat. (1) This part does
not require a recipient to permit an
individual to participate in or benefit
from the services, programs, or activities
of that recipient when that individual
poses a direct threat to the health or
safety of others.

E:\FR\FM\03JAP1.SGM

03JAP1


(2) In determining whether an individual poses a direct threat to the health or safety of others, a recipient must make an individualized assessment, based on reasonable judgment that relies on current medical knowledge or on the best available objective evidence, to ascertain: The nature, duration, and severity of the risk; the probability that the potential injury will actually occur; and whether reasonable accommodations in policies, practices, or procedures or the provision of auxiliary aids or services will mitigate the risk.

(m) Claims of no disability. Nothing in this subpart shall provide the basis for a claim that an individual without a disability was subject to discrimination because of a lack of disability, including a claim that an individual with a disability was granted a reasonable accommodation that was denied to an individual without a disability.

§ 40.5 Assurances required.

(a) Assurances. Either at the application stage or the award stage, an applicant for federal financial assistance to which this part applies shall submit an assurance that the program or activity will be operated in compliance with this part.

(b) Duration of obligation. (1) In the case where the Federal financial assistance is to provide or is in the form of personal property, real property or an interest therein or structures thereon, the assurance shall obligate the recipient, or, in the case of a subsequent transfer, the transferee, for the period during which the property is used for a purpose for which the Federal financial assistance is extended or for another purpose involving the provision of similar services or benefits, or for as long as the recipient retains ownership or possession of the property, whichever is longer. In all other cases the assurance shall obligate the recipient for the period during which federal financial assistance is extended to the program.

(2) In the case where Federal financial assistance is provided in the form of a transfer of real property, structures, or improvements thereon, or interest therein, from the Federal government, the instrument effecting or recording the transfer shall contain a covenant running with the land assuring nondiscrimination for the period during which the real property is used for a purpose for which the Federal financial assistance is extended or for another purpose involving the provision of similar services or benefits. Where no transfer of property or interest therein from the Federal government is involved, but property is acquired or improved with Federal financial assistance, the recipient shall agree to include such covenant in any subsequent transfer of such property. When the property is obtained from the Federal government, such covenant may also include a condition coupled with a right to be reserved by the Department to revert title to the property in the event of a breach of the covenant where, in the discretion of the designated agency official, such a condition and right of reverter is appropriate to the statute under which the real property is obtained and to the nature of the grant and the grantees. In such event if a transferee of real property proposes to mortgage or otherwise encumber the real property as security for financing construction of new, or improvement of existing, facilities on such property for the purposes for which the property was transferred, the designated agency official may agree, upon request of the transferee and if necessary to accomplish such financing, and upon such conditions as the designated agency official deems appropriate, to subordinate such right of reversion to the lien of such mortgage or other encumbrance.

(c) Continuing Federal financial assistance. Every application by a state or a state agency for continuing Federal financial assistance to which this part applies shall as a condition to its approval and the extension of any Federal financial assistance pursuant to the application:

(1) Cannot be accompanied by, or be covered by a statement that the program is (or, in the case of a new program, will be) conducted in compliance with all requirements imposed by or pursuant to this part; and

(2) Provide, be accompanied by, or be covered by provision for such methods of administration for the program as are found by the designated agency official to give reasonable guarantee that the applicant and all recipients of Federal financial assistance under such program will comply with all requirements imposed by or pursuant to this part.

(d) Assurance from institutions. (1) In the case of any application for Federal financial assistance to an institution of higher education (including assistance for construction, for research, for special training projects, for student loans or for any other purpose), the assurance required by this section shall extend to admission practices and to all other practices relating to the treatment of students.

(2) The assurance required with respect to an institution of higher education, hospital, or any other institution, insofar as the assurance relates to the institution’s practices with respect to admission or other treatment of individuals as students, patients, or clients of the institution or to the opportunity to participate in the provision of services or other benefits to such individuals, shall be applicable to the entire institution.

(e) Form. (1) The assurances required by paragraph (a) of this section, which may be included as part of a document that addresses other assurances or obligations, shall include that the applicant or recipient will comply with all applicable Federal statutes relating to nondiscrimination. This includes but is not limited to: Section 504 of the Rehabilitation Act of 1973, as amended.

(2) The designated agency official will specify the extent to which such assurances will be required of the applicant’s or recipient’s subgrantees, contractors, subcontractors, transferees, or successors in interest. Any such assurance shall include provisions which give the United States a right to seek its judicial enforcement.

§ 40.6 Designation of responsible employee and adoption of grievance procedures.

(a) Designation of responsible employee. A recipient that employs fifty or more persons shall designate at least one person to coordinate compliance with this part.

(b) Adoption of grievance procedures. A recipient that employs fifty or more persons shall adopt grievance procedures that incorporate appropriate due process standards (e.g. adequate notice, fair hearing) and provide for the prompt and equitable resolution of complaints alleging any action prohibited by this part except that such procedures need not be established with respect to complaints from applicants for employment. Any individual may file a complaint with the Department without having first used the recipient’s grievance procedures.

(c) The Secretary may require any recipient with fewer than fifty employees to designate a responsible employee, comply with the requirements for providing notice of nondiscrimination, and adopt grievance procedures when the Secretary finds a violation of this part or finds that complying with these administrative requirements will not significantly impair the ability of the recipient to provide benefits or services.

§ 40.7 Notice of nondiscrimination and accessible services.

(a) A recipient employing fifty or more persons shall take appropriate
initial and continuing steps to notify participants, beneficiaries, applicants, and employees, including those who are blind or have low vision or deaf or hard of hearing, and unions or professional organizations holding collective bargaining or professional agreements with the recipient that it does not discriminate on the basis of disability in violation of section 504 and this part. The notification shall state, where appropriate, that the recipient does not discriminate in admission or access to, or participation in, or employment in, its programs or activities. The recipient shall also identify the responsible employee designated pursuant to §40.6(a), where to file section 504 complaints with the Department, and where applicable, with the recipient, and identify the existence and location of accessible services, activities, and facilities. A recipient shall make the initial notification required by this paragraph within 90 days of the effective date of this part. Methods of initial and continuing notification may include but are not limited to the posting of notices, placement of notices in the recipient’s publications, publication of notices on the recipient’s Web site, publication in newspapers or magazines, radio announcements, and the use of other visual and aural media.

(b) If a recipient publishes or uses recruitment materials or publications containing general information that it makes available to participants, beneficiaries, applicants or employees, it shall include in those materials or publications a statement of the policy described in paragraph (a) of this section. A recipient may meet the requirement of this paragraph either by including appropriate inserts in existing materials and publications or by revising and reprinting the materials and publications.

§40.8 Remedial action, voluntary action, and self-evaluation.

(a) Remedial action. (1) If the Secretary finds that a recipient has discriminated against individuals on the basis of disability in violation of section 504 or this part, the recipient shall take such remedial action as the Secretary deems necessary to overcome the effects of the discrimination.

(2) Where a recipient is found to have discriminated against individuals on the basis of disability in violation of section 504 or this part and where another recipient exercises control over the recipient that has discriminated, the Secretary, or as appropriate, may require either or both recipients to take remedial action.

(3) The Secretary may, where necessary to overcome the effects of discrimination in violation of section 504 or this part, require a recipient to take remedial action:

(i) With respect to individuals with disabilities who are no longer participants in the recipient’s program or activity but who were participants in the program when such discrimination occurred;

(ii) With respect to individuals with disabilities who would have been participants in the program or activity had the discrimination not occurred, or;

(iii) With respect to individuals with disabilities presently in the program or activity, but not receiving full benefits or equal and integrated treatment within the program.

(b) Voluntary action. A recipient may take steps, in addition to any action that is required by this part, to increase the participation of qualified individuals with disabilities in the recipient’s program or activity.

(c) Self-evaluation. (1) A recipient shall, within one year of the effective date of this part:

(i) Evaluate, with the assistance of interested persons, including individuals with disabilities or organizations representing individuals with disabilities, its current policies and practices and the effects thereof that do not or may not meet the requirements of this part.

(ii) Modify, after consultation with interested persons, including individuals with disabilities or organizations representing individuals with disabilities, any policies and practices that do not meet the requirements of this part; and

(iii) Take, after consultation with interested persons, including individuals with disabilities or organizations representing individuals with disabilities, appropriate remedial steps to eliminate the effects of any discrimination that resulted in adherence to these policies and practices.

(2) A recipient employing fifty or more persons shall, for at least three years following completion of the evaluation required under paragraph (c)(1) of this section, maintain on file, make available for public inspection, and provide to the Secretary upon request:

(i) A list of the interested persons consulted,

(ii) A description of areas examined and any problems identified, and

(iii) A description of any modifications made and of any remedial steps taken.

§40.9 Effect of state or local law or other requirements.

The obligation to comply with this part is not obviated or alleviated by the existence of any state or local law or other requirement that, on the basis of disability, imposes prohibitions or limits upon the eligibility of qualified individuals with disabilities to receive services or to participate in any program or activity.

§40.10 Effect of compliance with regulations of other Federal agencies.

A recipient that has designated a responsible official and established a grievance procedure, provided notice, completed a self-evaluation, or prepared a transition plan in the course of complying with regulations issued by other Federal agencies under section 504 or title II of the Americans with Disabilities Act will be in compliance with §§40.6, 40.7, 40.8(c), or 40.203(f), respectively, if all requirements of those sections have been met in regard to programs or activities assisted by this Department.

Subpart B—Employment Practices

§40.101 Applicability.

This part applies to all programs or activities that receive Federal financial assistance provided by the Department.

§40.102 Discrimination prohibited.

(a) General. No qualified individual with a disability shall, on the basis of disability, be subjected to discrimination in employment under any program or activity to which this part applies.

(b) Employment discrimination standards. The standards used to determine whether paragraph (a) of this section has been violated shall be the standards applied under Title I of the Americans with Disabilities Act of 1990 (42 U.S.C. 12111 et seq.) and, as such sections relate to employment, the provisions of sections 501 through 504 and 510 of the Americans with Disabilities Act of 1990 (42 U.S.C. 12201–12204 and 12210), as amended by the ADA Amendments Act of 2008 (Pub. L. 110–325), as such standards are implemented in the Equal Employment Opportunity Commission’s regulation at 29 CFR pt. 1630, as amended. The procedures to be used to determine whether paragraph (a) of this section has been violated shall be the procedures set forth in Subpart D of this part.

Subpart C—Program Accessibility

§40.201 Applicability.

This subpart applies to all programs or activities that receive Federal
financial assistance provided by the Department after the effective date of this part.

§40.202 Discrimination prohibited.

Recipients shall ensure that no qualified individuals with disabilities are denied the benefits of, excluded from participation in, or otherwise subjected to discrimination under any program or activity receiving assistance from this Department because a recipient’s facilities are inaccessible to or unusable by individuals with disabilities.

§40.203 Existing facilities.

(a) Accessibility. A recipient shall operate each service, program or activity so that the service, program, or activity, when viewed in its entirety, is readily accessible to and usable by individuals with disabilities. This paragraph does not—

(1) Necessarily require a recipient to make each of its existing facilities or every part of an existing facility accessible to and usable by qualified individuals with disabilities;

(2) Require a recipient to take any action that would threaten or destroy the historically significant features of an historic property; or

(3) Require a recipient to take any action that it can demonstrate would result in a fundamental alteration in the nature of a service, program, or activity or in undue financial and administrative burdens. In those circumstances where personnel of the recipient believe that the proposed action would fundamentally alter the service, program, or activity or would result in undue financial and administrative burdens, a recipient has the burden of proving that compliance with §40.203(a) of this part would result in such alteration or burdens. The decision that compliance would result in such alteration or burdens must be made by the director of the recipient entity or his or her designee after considering all resources available for use in the funding and operation of the service, program, or activity, and must be accompanied by a written statement of the reasons for reaching that conclusion. If an action would result in such an alteration or such burdens, a recipient shall take any other action that would not result in such an alteration or such burdens but would nevertheless ensure that individuals with disabilities receive the benefits or services provided by the recipient.

(b) Methods.

(1) A recipient may comply with the requirements of paragraph (a) of this section through such means as redesign of equipment, reassignment of classes or other services to accessible buildings, assignment of aides to beneficiaries, home visits, delivery of services at alternate accessible sites, alteration of existing facilities and construction of new facilities in conformance with the requirements of §40.204, use of accessible rolling stock or other conveyances, or any other methods that result in making its services, programs or activities readily accessible to and usable by qualified individuals with disabilities. A recipient is not required to make structural changes in existing facilities where other methods are effective in achieving compliance with paragraph (a) of this section. A recipient, in making alterations to existing buildings, shall meet the accessibility requirements of §40.204. In choosing among available methods for meeting the requirements of paragraph (a) of this section, a recipient shall give priority to those methods that offer services, programs, and activities to qualified individuals with disabilities in the most integrated setting appropriate.

(2) Safe harbor. For the purposes of complying with this section, elements that have not been altered in existing facilities are in conformance with §40.204 if they comply with the 2010 Standards. If an action would result in making its services, programs, or activities readily accessible to and usable by qualified individuals with disabilities, a recipient is not required to comply with the requirements of this section.

(3) Require a recipient to take any action that would threaten or destroy the historically significant features of an historic property; or

(4) Require a recipient to take any action that it can demonstrate would result in a fundamental alteration in the nature of a service, program, or activity or in undue financial and administrative burdens. In those circumstances where personnel of the recipient believe that the proposed action would fundamentally alter the service, program, or activity or would result in undue financial and administrative burdens, a recipient has the burden of proving that compliance with §40.203(a) of this part would result in such alteration or burdens. The decision that compliance would result in such alteration or burdens must be made by the director of the recipient entity or his or her designee after considering all resources available for use in the funding and operation of the service, program, or activity, and must be accompanied by a written statement of the reasons for reaching that conclusion. If an action would result in such an alteration or such burdens, a recipient shall take any other action that would not result in such an alteration or such burdens but would nevertheless ensure that individuals with disabilities receive the benefits or services provided by the recipient.

(c) Small providers. If a recipient with fewer than fifteen employees finds, after consultation with an individual with a disability seeking its services, that there is no method of complying with paragraph (a) of this section other than by making a significant alteration in its existing facilities, the recipient may, as an alternative, refer the individual with a disability to other providers of those services that are accessible at an equivalent cost to the beneficiary.

(d) Historic preservation programs. In meeting the requirements of §40.203(a) in historic preservation programs, a recipient shall give priority to methods that provide physical access to individuals with disabilities. In cases where a physical alteration to a historic property is not required because of paragraph (a)(2) or (a)(3) of this section, alternative methods of achieving program accessibility include—

(1) Using audio-visual materials and devices to depict those portions of a historic property that cannot otherwise be made accessible;

(2) Assigning persons to guide individuals with disabilities to or through portions of historic properties that cannot otherwise be made accessible; or

(3) Adopting other innovative methods.

(e) Time period. A recipient shall comply with the requirements of paragraph (a) of this section within ninety days of the effective date of this part except that, where structural changes in facilities are necessary, such changes shall be made as expeditiously as possible and no later than within three years of the effective date of this part.

(f) Transition plan. In the event that structural changes to facilities are necessary to meet the requirements of paragraph (a) of this section, a recipient shall develop, within six months of the effective date of this part, a transition plan setting forth the steps necessary to complete such changes. The plan shall be developed with the assistance of interested persons, including individuals with disabilities or organizations representing individuals with disabilities. A copy of the transition plan shall be made available for public inspection. The plan shall, at a minimum:

(1) Identify physical obstacles in the recipient’s facilities that limit the accessibility of its program or activity to individuals with disabilities;

(2) Describe in detail the methods that will be used to make the facilities accessible;

(3) Specify the schedule for taking the steps necessary to achieve full accessibility under paragraph (a) of this section and if the time period of the transition plan is longer than one year, identify steps that will be taken during each year of the transition period; and

(4) Identify the person responsible for implementation of the plan.

(g) Notice of location of accessible facilities.

(1) General. The recipient shall adopt and implement procedures to ensure that interested persons with disabilities, including persons with an intellectual disability, a learning disability, a vision or hearing disability or other disabilities, can obtain information as to the existence and location of services, activities, and facilities that are accessible to and usable by individuals with disabilities.

(2) Signs at primary entrances. The recipient shall provide signs at a primary entrance to each of its inaccessible facilities, directing users to an accessible facility or a location at
which they can obtain information about accessible facilities. The international symbol for accessibility shall be used at each accessible entrance of a facility.

§ 40.204 New construction and alterations.
(a) Design and construction. Each new facility or part of a facility constructed by, on behalf of, or for the use of a recipient shall be designed and constructed in such manner that the facility or part of the facility is readily accessible to and usable by individuals with disabilities, if the construction is commenced after the effective date of this part.

(b) Alteration. Each facility or part of a facility which is altered by, on behalf of, or for the use of a recipient after the effective date of this part in a manner that affects or could affect the usability of the facility or part of the facility shall to the maximum extent feasible be altered in such manner that the altered portion of the facility is readily accessible to and usable by individuals with disabilities.

(c) Accessibility standards and compliance dates.
(1) Applicable Accessibility Standard.
(i) New construction and alterations on or after the compliance dates specified in paragraph (2) must comply with the 2010 Standards.

(ii) New construction and alterations of buildings or facilities undertaken in compliance with the 2010 Standards shall comply with the scoped and technical requirements for a “public building or facility” in the 2010 Standards regardless of whether the recipient is a public or private entity.

(iii) Departures from particular requirements of the Standards by the use of other methods shall be permitted when it is clearly evident that equivalent access to the facility or part of the facility is thereby provided.

(2) Compliance Dates.
(i) New construction and alterations by recipients that are private entities. New construction and alterations in which the last application for a building permit or permit extension for such construction or alterations is certified to be complete by a state, county, or local government (or, in those jurisdictions where the government does not certify completion of applications, if the date when the last application for a building permit or permit extension is received by the state, county, or local government) is on or after [DATE ONE YEAR AFTER PUBLICATION OF THE FINAL RULE IN THE Federal Register], or if no permit is required, if the start of physical construction or alterations occurs on or after [DATE ONE YEAR AFTER PUBLICATION OF THE FINAL RULE IN THE Federal Register], then such new construction and alterations shall comply with the 2010 Standards as defined in paragraph (1) of this section.

(ii) New construction and alterations by recipients that are public entities. If physical construction or alterations commence on or after [DATE ONE YEAR AFTER PUBLICATION OF THE FINAL RULE IN THE Federal Register], then such new construction and alterations shall comply with the 2010 Standards.

(3) For the purposes of this section, ceremonial groundbreaking or razing of structures prior to site preparation will not be considered to commence or start physical construction or alterations.

(d) Compliance with the Architectural Barriers Act of 1968. Nothing in this section or § 40.203 relieves recipients whose facilities are covered by the Architectural Barriers Act of 1968, as amended (42 U.S.C. 4151–4157), from their responsibility of complying with the requirements of that Act and any implementing regulations.

(4) Compliance with the Architectural Barriers Act of 1968. Nothing in this section or § 40.203 relieves recipients whose facilities are covered by the Architectural Barriers Act of 1968, as amended (42 U.S.C. 4151–4157), from their responsibility of complying with the requirements of that Act and any implementing regulations.

Subpart D—Compliance, Investigations and Procedure for Effecting Compliance

§ 40.300 Compliance information.
(a) Cooperation and assistance. The Secretary shall to the fullest extent practicable seek the cooperation of recipients in obtaining compliance with this part and shall provide assistance and guidance to recipients to help them comply voluntarily with this part.

(b) Compliance reports. Each recipient shall keep such records and submit to the Secretary timely, complete, and accurate compliance reports at such times, and in such form and containing such information, as the Secretary may determine to be necessary to enable the Secretary to ascertain whether the recipient has complied or is complying with this part. In the case in which a primary recipient extends Federal financial assistance to any other recipient, such other recipient shall also submit such compliance reports to the primary recipient as may be necessary to enable the primary recipient to carry out its obligations under this part.

(c) Investigations. The Secretary will make a prompt investigation whenever a compliance review, report, complaint, or any other information indicates a possible failure to comply with this part. The investigation will include, where appropriate, a review of the pertinent practices and policies of the recipient, the circumstances under which the possible noncompliance with this part occurred, and other factors relevant to a determination as to whether the recipient has failed to comply with this part.

(d) Resolution of matters.
(1) If an investigation pursuant to paragraph (c) of this section indicates a failure to comply with this part, the Secretary will inform the recipient...
and the matter will be resolved by informal means whenever possible. If it has been determined that the matter cannot be resolved by informal means, action will be taken as provided for in §40.302.

(2) If an investigation does not warrant action pursuant to paragraph (d)(1) of this section, the Secretary will so inform the recipient and the complainant, if any, in writing.

(e) Intimidatory or retaliatory acts prohibited. No recipient or other person shall intimidate, threaten, coerce, or discriminate against any individual for the purpose of interfering with any right or privilege secured by section 504 or this part, or because the individual has made a complaint, testified, assisted, or participated in any manner in an investigation, proceeding, or hearing under this part. The identity of complainants shall be kept confidential except to the extent necessary to carry out the purposes of this part, including the conduct of any investigation, hearing, or judicial proceeding arising hereunder.

§40.302 Procedure for effecting compliance.

(a) General. If there appears to be a failure or threatened failure to comply with this part, and if the noncompliance or threatened noncompliance cannot be corrected by informal means, compliance with this part may be effected by the suspension or termination of or refusal to grant or to continue Federal financial assistance or by any other means authorized by law. Such other means may include, but are not limited to: (1) A referral to the Department of Justice with a recommendation that appropriate proceedings be brought to enforce any rights of the United States under any law of the United States, or any assurance or other contractual undertaking, and (2) Any applicable proceeding under state or local law.

(b) Noncompliance with §40.5. If an applicant fails or refuses to furnish an assurance required under §40.5 or otherwise fails or refuses to comply with a requirement imposed by or pursuant to that section, Federal financial assistance may be refused in accordance with the procedures of paragraph (c) of this section. The Department shall not be required to provide assistance in such a case during the pendency of the administrative proceedings under such paragraph. However, the Department shall continue assistance during the pendency of such proceedings where such assistance is due and payable pursuant to an application approved prior to the effective date of this part.

(c) Termination of or refusal to grant or to continue Federal financial assistance.

(1) No order suspending, terminating, or refusing to grant or continue Federal financial assistance shall become effective until:

(i) The Secretary has advised the applicant or recipient of the applicant’s or recipient’s failure to comply and has determined that compliance cannot be secured by voluntary means;

(ii) There has been an express finding on the record, after opportunity for hearing, of a failure by the applicant or recipient to comply with a requirement imposed by or pursuant to this part; and

(iii) The action has been approved by the Secretary pursuant to §40.401(e); and

(iv) The expiration of 30 days after the Secretary has filed with the committee of the House and the committee of the Senate having legislative jurisdiction over the program involved, a full written report of the circumstances and the grounds for such action.

(2) Any action to suspend or terminate or to refuse to grant or to continue Federal financial assistance shall be limited to the particular political entity, or part thereof, or other applicant or recipient to whom such a finding has been made and shall be limited in its effect to the particular program, or part thereof, in which such noncompliance has been so found.

(d) Other means authorized by law. No action to effect compliance with section 504 by any other means authorized by law shall be taken by the Department until:

(1) The Secretary has determined that compliance cannot be secured by voluntary means;

(2) The recipient or other person has been notified of its failure to comply and of the action to be taken to effect compliance; and

(3) The expiration of at least 10 days from the mailing of such notice to the recipient or other person. During this period of at least 10 days, additional efforts shall be made to persuade the recipient or other person to comply with the regulation and to take such corrective action as may be appropriate.

Subpart E—Hearings and Decisions and Notices

§40.400 Hearings.

(a) Opportunity for hearing. Whenever an opportunity for a hearing is required by §40.302(c), reasonable notice shall be given by registered or certified mail, return receipt requested, to the affected applicant or recipient. This notice shall advise the applicant or recipient of the action proposed to be taken, the specific provision under which the proposed action against it is to be taken, and the matters of fact or law asserted as the basis for this action, and either:

(1) Fix a date not less than 20 days after the date of such notice within which the applicant or recipient may request of the Secretary that the matter be scheduled for hearing; or

(2) Advise the applicant or recipient that the matter in question has been set down for hearing at a stated place and time. The time and place so fixed shall be reasonable and shall be subject to change for cause. The complainant, if any, shall be advised of the time and place of the hearing. An applicant or recipient may waive a hearing and submit written information and argument for the record. The failure of an applicant or recipient to request a hearing under this paragraph or to appear at a hearing for which a date has been set shall be deemed to be a waiver of the right to a hearing under §40.301(c) and consent to the making of a decision on the basis of such information as is available.

(b) Time and place of hearing.

Hearings shall be held at the offices of the Department component administering the program, at a time fixed by the Secretary, unless he or she determines that the convenience of the applicant or recipient or of the Department requires that another place be selected. Hearings shall be held before the Secretary, or at the Secretary’s discretion, before a hearing examiner appointed in accordance with section 3105 of title 5, United States Code, or detailed under section 3344 of title 5, United States Code.

(c) Right to counsel. In all proceedings under this section, the applicant or recipient and the Department shall have the right to be represented by counsel.

(d) Procedures, evidence, and record.

(1) The hearing, decision, and any administrative review thereof shall be conducted in conformity with sections 554 through 557 of title 5, United States Code, and in accordance with such rules of procedure as are proper (and not inconsistent with this section) relating to the conduct of the hearing, giving of notices subsequent to those provided for in paragraph (a) of this section, taking of testimony, exhibits, arguments and briefs, requests for findings, and other related matters. Both the Secretary and the applicant or recipient shall be entitled to introduce all relevant evidence on the issues as stated in the notice for hearing or as determined by
the officer conducting the hearing at the outset of or during the hearing. 

(2) Technical rules of evidence do not apply to hearings conducted pursuant to this part, but rules or principles designed to assure production of the most credible evidence available and to subject testimony to test by cross-examination shall be applied where determined reasonably necessary by the officer conducting the hearing. The hearing officer may exclude irrelevant, immaterial, or unduly repetitious evidence. All documents and other evidence offered or taken for the record shall be open to examination by the parties and opportunity shall be given to refute facts and arguments advanced on either side of the issues. A transcript shall be made of the oral evidence except to the extent the substance thereof is stipulated for the record. All decisions shall be based upon the hearing record and written findings shall be made.

(e) Consolidated or joint hearings. In cases in which the same or related facts are asserted to constitute noncompliance with this part with respect to two or more Federal statutes, authorities, or other means by which Federal financial assistance is extended and to which this part applies, or noncompliance with this part and the regulations of one or more other Federal departments or agencies issued under section 504, the Secretary may, by agreement with such other departments or agencies, where applicable, provide for the conduct of consolidated or joint hearings, and for the application to such hearings of rules or procedures not inconsistent with this part. Final decisions in such cases, insofar as this regulation concerns, shall be made in accordance with § 40.401.

§ 40.401 Decisions and notices.

(a) Procedure on decisions by hearing examiner. If the hearing is held by a hearing examiner, the hearing examiner shall either make an initial decision, if so authorized, or certify the entire record including his recommended findings and proposed decision to the Secretary for a final decision, and a copy of such initial decision or certification shall be mailed to the applicant or recipient. Where the initial decision is made by the hearing examiner the applicant or recipient may, within 30 days after the mailing of such notice of initial decision, file with the Secretary the applicant’s or recipient’s exceptions to the initial decision, with the reasons therefore. In the absence of exceptions, the Secretary may, on his or her own motion, within 45 days after the initial decision, serve on the applicant or recipient a notice that he or she will review the decision. Upon the filing of such exceptions or of a notice of review, the Secretary shall review the initial decision and issue his or her own decision thereon including the reasons therefore. In the absence of either exceptions or a notice of review, the initial decision shall, subject to paragraph (e) of this section, constitute the final decision of the Secretary.

(b) Decisions on record or review by the Secretary. Whenever a record is certified to the Secretary for decision or he or she reviews the decision of a hearing examiner pursuant to paragraph (a) of this section, or whenever the Secretary conducts the hearing, the applicant or recipient shall be given reasonable opportunity to file with the Secretary briefs or other written statements of its contentions, and a written copy of the final decision of the Secretary shall be sent to the applicant or recipient and to the complainant, if any.

(c) Decisions on record where a hearing is waived. Whenever a hearing is waived pursuant to § 40.400, a decision shall be made by the Secretary on the record and a written copy of such decision shall be sent to the applicant or recipient, and to the complainant, if any.

(d) Rulings required. Each decision of a hearing examiner or the Secretary shall set forth his or her ruling on each finding, conclusion, or exception presented, and shall identify the requirement or requirements imposed by or pursuant to this part with which it is found that the applicant or recipient has failed to comply.

(e) Approval by the Secretary. Any final decision by an official of the Department, other than the Secretary personally, which provides for the suspension or termination of, or the refusal to grant or continue Federal financial assistance, or the imposition of any other sanction available under this part or section 504, shall promptly be transmitted to the Secretary personally, who may approve such decision, may vacate it, or remit or mitigate any sanction imposed.

(f) Content of orders. The final decision may provide for suspension or termination of, or refusal to grant or continue Federal financial assistance, in whole or in part, to which this regulation applies, and may contain such terms, conditions, and other provisions as are consistent with and will effectuate the purposes of section 504 and this part, including provisions designed to assure that no Federal financial assistance to which this regulation applies will thereafter be extended to the applicant or recipient determined by such decision to be in default in its performance of an assurance given by it pursuant to this part, or to have otherwise failed to comply with this part, unless and until it corrects its noncompliance and satisfies the Secretary that it will fully comply with this part.

(g) Post termination proceedings. (1) An applicant or recipient adversely affected by an order issued under paragraph (f) of this section shall be restored to full eligibility to receive Federal financial assistance if it satisfies the terms and conditions of that order for such eligibility or if it brings itself into compliance with this part and provides reasonable assurance that it will fully comply with this part.

(2) Any applicant or recipient adversely affected by an order entered pursuant to paragraph (f) of this section may at any time request the Secretary to restore fully its eligibility to receive Federal financial assistance. Any such request shall be supported by information showing that the applicant or recipient has met the requirements of paragraph (g)(1) of this section. If the Secretary determines that those requirements have been satisfied, he or she shall restore such eligibility.

(3) If the Secretary denies any such request, the applicant or recipient may submit a request for a hearing in writing, specifying why it believes such official to have been in error. It shall thereafter be given an expeditious hearing, with a decision on the record in accordance with rules or procedures issued by the Secretary. The applicant or recipient will be restored to such eligibility if it proves at such a hearing that it satisfied the requirements of paragraph (g)(1) of this section. While proceedings under this paragraph are pending, the sanctions imposed by the order issued under paragraph (f) of this section shall remain in effect.

Kody Kinsley, Assistant Secretary for Management.

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 721

Significant New Use Rule on Certain Chemical Substances; Reopening of Comment Period

AGENCY: Environmental Protection Agency (EPA).
ACTION: Proposed rule; reopening of comment period.

SUMMARY: EPA issued a proposed rule in the Federal Register of October 27, 2016 proposing significant new use rules (SNURs) under the Toxic Substances Control Act (TSCA) for three chemical substances which were the subject of premanufacture notices (PMNs). This document reopens the comment period for 60 days. A commenter requested additional time to submit written comments for the proposed rule. EPA believes that the request is reasonable and is therefore reopening the comment period in order to give all interested persons the opportunity to comment fully.

DATES: Comments on the proposed rule published in the Federal Register of October 27, 2016 (81 FR 74755), identified by docket identification (ID) number EPA–HQ–OPPT–2015–0810, must be received on or before March 6, 2017.

ADDRESSES: Submit your comments, identified by docket identification (ID) number EPA–HQ–OPPT–2015–0810, by one of the following methods:

- Federal eRulemaking Portal: http://www.regulations.gov. Follow the online instructions for submitting comments. Do not submit electronically any information you consider to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute.
- Hand Delivery: To make special arrangements for hand delivery or delivery of boxed information, please follow the instructions at http://www.epa.gov/dockets/contacts.html.

Additional instructions on commenting or visiting the docket, along with more information about docket generally, is available at http://www.epa.gov/dockets.

FOR FURTHER INFORMATION CONTACT:

For technical information contact: Kenneth Moss, Chemical Control Division (7405M), Office of Pollution Prevention and Toxics, Environmental Protection Agency, 1200 Pennsylvania Ave. NW., Washington, DC 20460–0001; telephone number: (202) 564–9232; email address: moss.kenneth@epa.gov.

For general information contact: The TSCA-Hotline, ABVI-Goodwill, 422 South Clinton Ave., Rochester, NY 14620; telephone number: (202) 554–1404; email address: TSCA-Hotline@epa.gov.

SUPPLEMENTARY INFORMATION: This document reopens the public comment period established in the Federal Register document of October 27, 2016. In that document, EPA proposed SNURs under the TSCA for three chemical substances which were the subject of PMNs. EPA is hereby reopening the comment period for 60 days.

To submit comments, or access the docket, please follow the detailed instructions provided under ADDRESSES. If you have questions, consult the technical person listed under FOR FURTHER INFORMATION CONTACT.

Dated: December 5, 2016.
Maria J. Doa,
Director, Chemical Control Division, Office of Pollution Prevention and Toxics.

[FR Doc. 2016–29755 Filed 12–30–16; 8:45 am]
This section of the FEDERAL REGISTER contains documents other than rules or proposed rules that are applicable to the public. Notices of hearings and investigations, committee meetings, agency decisions and rulings, delegations of authority, filing of petitions and applications and agency statements of organization and functions are examples of documents appearing in this section.

DEPARTMENT OF COMMERCE
International Trade Administration
[A–570–831]

AGENCY: Enforcement and Compliance, International Trade Administration, Department of Commerce.

SUMMARY: The Department of Commerce (the Department) is initiating a new shipper review (NSR) with respect to Zhengzhou Yudi Shengjin Agricultural Trade Co. Ltd. (“Zhengzhou Yudi”) in the context of the antidumping duty order on Fresh Garlic from the People’s Republic of China (PRC). The period of review (POR) is November 1, 2015, through October 31, 2016.

SUPPLEMENTARY INFORMATION:

Background

The Department published the antidumping duty order on fresh garlic from the PRC in the Federal Register on November 16, 1994.1 On November 15, 2016, the Department received a timely request for a NSR from Zhengzhou Yudi.2 Zhengzhou Yudi certified that it is the exporter and producer of the fresh garlic upon which the request for a NSR is based.3 Pursuant to section 751(a)(2)(B)(i)(I) of the Act and 19 CFR 351.214(b)(2)(i), Zhengzhou Yudi certified that it did not export fresh garlic for sale to the United States during the period of investigation (POI).4 Moreover, pursuant to section 751(a)(2)(B)(ii)(A) of the Act and 19 CFR 351.214(b)(2)(ii)(A), Zhengzhou Yudi certified that, since the investigation was initiated, it never has been affiliated with any exporter or producer who exported the subject merchandise to the United States during the POI, including those not individually examined during the investigation.5 Further, as required by 19 CFR 351.214(b)(2)(ii)(B), it certified that its export activities are not controlled by the central government of the PRC.6 Zhengzhou Yudi also certified it had no shipments of subject merchandise subsequent to the POR.7

In addition to the certifications described above, pursuant to 19 CFR 351.214(b)(2)(iv), Zhengzhou Yudi submitted documentation establishing the following: (1) The date of its first sale to an unaffiliated customer in the United States; (2) the date on which the fresh garlic was first entered; and (3) the volume of that shipment.8

The Department queried the database of U.S. Customs and Border Protection (CBP) in an attempt to confirm that the shipment reported by Zhengzhou Yudi had entered the United States for consumption and that liquidation had been properly suspended for antidumping duties. The information which the Department examined was consistent with that provided by Zhengzhou Yudi in its request.9

Period of Review

Pursuant to 19 CFR 351.214(c), an exporter or producer may request a NSR within one year of the date on which its subject merchandise was first entered. Moreover, 19 CFR 351.214(d)(1) states that if the request for the review is made during the twelve-month period ending with the end of the anniversary month, the Secretary will initiate a NSR in the calendar month immediately following the anniversary month. Further, 19 CFR 351.214(g)(1)(i)(A) states that if the NSR was initiated in the month immediately following the anniversary month, the POR will be twelve-month period immediately preceding the anniversary month. Zhengzhou Yudi made the request for a NSR, that included all documents and information required by the statute and regulations, within one year of the date on which its fresh garlic first entered. Its request was filed in November, which is the anniversary month of the order. Therefore, the POR is November 1, 2015, through October 31, 2016.10

Initiation of New Shipper Review

Pursuant to section 751(a)(2)(B) of the Act and 19 CFR 351.214(b), and the information on the record, the Department finds that Zhengzhou Yudi’s request meets the threshold requirements for initiation of a NSR for shipments of fresh garlic from the PRC produced and exported by Zhengzhou Yudi, and, therefore, is initiating a NSR of Zhengzhou Yudi. Absent a determination that the new shipper review is extraordinarily complicated, the Department intends to issue the preliminary results within 180 days after the date on which this review is initiated and the final results within 90 days after the date on which we issue the preliminary results.11 If the information supplied by Zhengzhou Yudi is found to be incorrect or insufficient during the course of this proceeding, the Department may rescind the review for Zhengzhou Yudi or apply facts available pursuant to section 776 of the Act, depending on the facts on the record.

It is the Department’s usual practice in cases involving non-market economies to require that a company seeking to establish eligibility for an antidumping duty rate separate from the country-wide rate (i.e., a separate rate) provide evidence of de jure and de facto absence of government control over the company’s export activities.12 Accordingly, the Department will issue questionnaires to Zhengzhou Yudi, which will include a section requesting

1 See Antidumping Duty Order: Fresh Garlic from the People’s Republic of China, 59 FR 59209 (November 16, 1994).
2 See Zhengzhou Yudi’s request for a NSR dated November 15, 2016.
3 Id. at 1 and at Exhibit 1.
4 Id. at Exhibit 1.
5 Id.
6 Id. at page 3–4.
7 Id. at Exhibit 2.
10 See 19 CFR 351.214(g)(1)(i)(A).
information with regard to its export activities for the purpose of establishing its eligibility for a separate rate. The review will proceed if the responses provide sufficient indication that Zhengzhou Yudi is not subject to either de jure or de facto government control with respect to its exports of fresh garlic from the PRC.

On February 24, 2016, the President signed into law the “Trade Facilitation and Trade Enforcement Act of 2015,” H.R. 644, which made several amendments to section 751(a)(2)(B) of the Act. We will conduct this new shipper review in accordance with section 751(a)(2)(B) of the Act, as amended by the Trade Facilitation and Trade Enforcement Act of 2015.13 Interested parties requiring access to proprietary information in this proceeding should submit applications for disclosure under administrative protective order in accordance with 19 CFR 351.305 and 351.306. This initiation and notice are in accordance with section 751(a)(2)(B) of the Act and 19 CFR 351.214 and 351.221(c)(1)(i).

Dated: December 27, 2016.

Christian Marsh,
Deputy Assistant Secretary for Antidumping and Countervailing Duty Operations.

BILLING CODE 3510–DS–P

DEPARTMENT OF COMMERCE

International Trade Administration
[C–570–009]

Calcium Hypochlorite From the People’s Republic of China: Preliminary Intent to Rescind the New Shipper Review of Haixing Jingmei Chemical Products Sales Co., Ltd.

AGENCY: Enforcement and Compliance, International Trade Administration, Department of Commerce.

SUMMARY: In response to a November 20, 2015, request from Haixing Jingmei Chemical Products Sales Co., Ltd. (“Jingmei”), and the producer of its merchandise, Haixing Eno Chemical Co., Ltd. (“Eno”), the Department of Commerce (“Department”) is conducting a new shipper review of Jingmei, regarding the countervailing duty order on calcium hypochlorite from the People’s Republic of China (‘’PRC’’). The period of review (‘’POR’’) is May 27, 2014, through December 31, 2015. The Department preliminarily determines to rescind this review because we requested but were not provided sufficient information to determine whether, and conclude that, Jingmei’s sale of subject merchandise to the United States was bona fide. Interested parties are invited to comment on this preliminary intent to rescind.

SUPPLEMENTAL INFORMATION:

Background

On March 4, 2016, the Department published notice of initiation of a new shipper review of calcium hypochlorite from the PRC for the period May 27, 2014, through December 31, 2015.1 On July 12, 2016, the Department extended the deadline for the preliminary results to December 27, 2016.2

Scope of the Order

The merchandise covered by the Order is calcium hypochlorite, regardless of form (e.g., powder, tablet (compressed), crystalline (granular), or in liquid solution), whether or not blended with other materials, containing at least 10% available chlorine measured by actual weight. Calcium hypochlorite is currently classifiable under the subheading 2828.10.0000 of the Harmonized Tariff Schedule of the United States.3

Methodology

The Department is conducting this review in accordance with section 751(a)(2)(B) of the Tariff Act of 1930, as amended (“the Act”) and 19 CFR 351.214. For a full description of the methodology underlying our conclusions, see the Preliminary Decision Memorandum.

The Preliminary Decision Memorandum is a public document and is on file electronically via Enforcement and Compliance’s Antidumping and Countervailing Duty Centralized Electronic Service System (“ACCESS”). ACCESS is available to registered users at http://access.trade.gov and in the Department’s Central Records Unit, Room B8024 of the main Department of Commerce building. In addition, a complete version of the Preliminary Decision Memorandum can be accessed directly on the Internet at http://enforcement.trade.gov/frn/. The signed Preliminary Decision Memorandum and the electronic versions of the Preliminary Decision Memorandum are identical in content.

Preliminary Intent To Rescind Jingmei New Shipper Review

Section 751(a)(2)(B)(iv) of the Act requires that a countervailing duty rate determined in a new shipper review be determined based solely on bona fide sales. For the reasons detailed in the Preliminary Decision Memorandum and the Bona Fide Sales Analysis Memorandum,4 the Department preliminarily finds that, as a result of Jingmei’s customers’ failure to provide necessary information, we cannot determine whether, and conclude that, Jingmei’s sale under review is bona fide. As a result, the Department preliminarily intends to rescind the new shipper review of Jingmei.

Public Comment

Interested parties may submit written comments by no later than 30 days after the date of publication of these preliminary results of review,5 Rebutilts, limited to issues raised in the written comments, may be filed by no...
later than five days after the written comments are filed.\(^6\)

Any interested party may request a hearing within 30 days of publication of this notice.\(^7\) Hearing requests should contain the following information: (1) The party’s name, address, and telephone number; (2) the number of participants; and (3) a list of the issues to be discussed. Oral presentations will be limited to issues raised in the briefs. If a request for a hearing is made, parties will be notified of the time and date for the hearing to be held at the U.S. Department of Commerce, 1401 Constitution Avenue NW., Washington, DC 20230.\(^8\)

The Department intends to issue the final results of this new shipper review, which will include the results of its analysis of issues raised in any such comments, not later than 90 days after the date these preliminary results of new shipper review are issued, pursuant to section 751(a)(2)(B)(iii) of the Act.

**Assessment Rates**

Upon completion of the final results, pursuant to 19 CFR 351.212(b), the Department will determine, and the U.S. Customs and Border Protection (“CBP”) shall assess, countervailing duties on all appropriate entries. If we proceed to a final rescission of the new shipper review, the cash deposit rate will continue to be the all-others rate. If we issue final results of the new shipper review for Jingmei, we will instruct CBP to collect cash deposits, effective upon publication of the final results, at the rates established therein.

The Department is issuing and publishing these results in accordance with sections 751(a)(2)(B) and 777(i)(I) of the Act, and 19 CFR 351.214 and 19 CFR 351.221(b)(4).

Dated: December 27, 2016.

Paul Piquado,

Assistant Secretary for Enforcement and Compliance.

**DEPARTMENT OF COMMERCE**

**International Trade Administration**

**Initiation of Five-Year (“Sunset”) Reviews**

**AGENCY:** Enforcement and Compliance, International Trade Administration, Commerce.

**SUMMARY:** In accordance with section 751(c) of the Tariff Act of 1930, as amended (“the Act”), the Department of Commerce (“the Department”) is automatically initiating the five-year reviews (‘Sunset Reviews’) of the antidumping and countervailing duty (“AD/CVD”) order(s) listed below. The International Trade Commission (‘the Commission’) is publishing concurrently with this notice its notice of Institution of Five-Year Review which covers the same order(s).

**DATES:** Effective January 1, 2017.

**FOR FURTHER INFORMATION CONTACT:** The Department official identified in the *Initiation of Review* section below at AD/CVD Operations, Enforcement and Compliance, International Trade Administration, U.S. Department of Commerce, 14th Street and Constitution Avenue NW., Washington, DC 20230.

**SUPPLEMENTARY INFORMATION:**

**Background**

The Department’s procedures for the conduct of Sunset Reviews are set forth in its *Procedures for Conducting Five-Year (‘Sunset’) Reviews of Antidumping and Countervailing Duty Orders*, 63 FR 13516 (March 20, 1998) and 70 FR 62061 (October 28, 2005).

Guidance on methodological or analytical issues relevant to the Department’s conduct of Sunset Reviews is set forth in *Antidumping Proceedings: Calculation of the Weighted-Average Dumping Margin and Assessment Rate in Certain Antidumping Duty Proceedings; Final Modification*, 77 FR 8101 (February 14, 2012).

**Initiation of Review**

In accordance with 19 CFR 351.218(c), we are initiating Sunset Reviews of the following antidumping and countervailing duty order(s):

<table>
<thead>
<tr>
<th>DOC Case No.</th>
<th>ITC Case No.</th>
<th>Country</th>

</tr>
</tbody>
</table>

\(^6\) See 19 CFR 351.309(d).

\(^7\) See 19 CFR 351.310(c).

\(^8\) See 19 CFR 351.310(d).

\(^9\) See 19 CFR 351.106(c)(2).
Filing Information

As a courtesy, we are making information related to sunset proceedings, including copies of the pertinent statute and Department’s regulations, the Department’s schedule for Sunset Reviews, a listing of past revocations and continuations, and current service lists, available to the public on the Department’s Web site at the following address: “http://enforcement.trade.gov/sunset/.” All submissions in these Sunset Reviews must be filed in accordance with the Department’s regulations regarding format, translation, and service of documents. These rules, including electronic filing requirements via Enforcement and Compliance’s Antidumping and Countervailing Duty Centralized Electronic Service System (“ACCESS”), can be found at 19 CFR 351.301.1

This notice serves as a reminder that any party submitting factual information in an AD/CVD proceeding must certify to the accuracy and completeness of that information.2 Parties are hereby reminded that revised certification requirements are in effect for company/government officials as well as their representatives in these segments.3 The formats for the revised certifications are provided at the end of the Final Rule. The Department intends to reject factual submissions if the submitting party does not comply with the revised certification requirements.

On April 10, 2013, the Department modified two regulations related to AD/CVD proceedings: The definition of factual information (19 CFR 351.102(b)(21)), and the time limits for the submission of factual information (19 CFR 351.301).4 Parties are advised to review the final rule, available at http://enforcement.trade.gov/fnr/2013/1304fnr/2013-08227.txt, prior to submitting factual information in these segments. To the extent that other regulations govern the submission of factual information in a segment (such as 19 CFR 351.218), these time limits will continue to be applied. Parties are also advised to review the final rule concerning the extension of time limits for submissions in AD/CVD proceedings, available at http://enforcement.trade.gov/frn/2013/1309fnr/2013-22853.txt, prior to submitting factual information in these segments.5

Letters of Appearance and Administrative Protective Orders

Pursuant to 19 CFR 351.103(d), the Department will maintain and make available a public service list for these proceedings. Parties wishing to participate in any of these five-year reviews must file letters of appearance as discussed at 19 CFR 351.103(d). To facilitate the timely preparation of the public service list, it is requested that those seeking recognition as interested parties to a proceeding submit an entry of appearance within 10 days of the publication of the Notice of Initiation.

Because deadlines in Sunset Reviews can be very short, we urge interested parties who want access to proprietary information under administrative protective order (“APO”) to file an APO application immediately following publication in the Federal Register of this notice of initiation. The Department’s regulations on submission of proprietary information and eligibility to receive access to business proprietary information under APO can be found at 19 CFR 351.304–306.

Information Required from Interested Parties

Domestic interested parties, as defined in section 771(9)(C), (D), (E), (F), and (G) of the Act and 19 CFR 351.102(b), wishing to participate in a Sunset Review must respond not later than 15 days after the date of publication in the Federal Register of this notice of initiation by filing a notice of intent to participate. The required contents of the notice of intent to participate are set forth at 19 CFR 351.218(d)(1)(ii). In accordance with the Department’s regulations, if we do not receive a notice of intent to participate from at least one domestic interested party by the 15-day deadline, the Department will automatically revoke the order without further review.6

If we receive an order-specific notice of intent to participate from a domestic interested party, the Department’s regulations provide that all parties wishing to participate in a Sunset Review must file complete substantive responses not later than 30 days after the date of publication in the Federal Register of this notice of initiation. The required contents of a substantive response, on an order-specific basis, are set forth at 19 CFR 351.218(d)(3). Note that certain information requirements differ for respondent and domestic parties. Also, note that the Department’s information requirements are distinct from the Commission’s information requirements. Consult the Department’s regulations for information regarding the Department’s conduct of Sunset Reviews. Consult the Department’s regulations at 19 CFR part 351 for definitions of terms and for other general information concerning antidumping and countervailing duty proceedings at the Department. This notice of initiation is being published in accordance with section 751(c) of the Act and 19 CFR 351.218(c).

Dated: December 27, 2016.

Christian Marsh,
Deputy Assistant Secretary for Antidumping and Countervailing Duty Operations.

DEPARTMENT OF COMMERCE

National Institute of Standards and Technology

Request for Nominations for Members To Serve on National Institute of Standards and Technology Federal Advisory Committees

AGENCY: National Institute of Standards and Technology, Department of Commerce.

ACTION: Notice.

SUMMARY: The National Institute of Standards and Technology (NIST) invites and requests nomination of individuals for appointment to nine existing Federal Advisory Committees: Board of Overseers of the Malcolm Baldrige National Quality Award, Judges Panel of the Malcolm Baldrige National Quality Award, Information Security and Privacy Advisory Board, Manufacturing Extension Partnership Advisory Board, National Construction Safety Team Advisory Committee, Advisory Committee on Earthquake Hazards Reduction, National Advisory Committee on Windstorm Impact Reduction, NIST Smart Grid Advisory Committee, and Visiting Committee on Advanced Technology. NIST will consider nominations received in response to this notice for appointment to the Committees, in addition to nominations already received. Registered Federal lobbyists may not serve on NIST Federal Advisory Committees.
DATES: Nominations for all committees will be accepted on an ongoing basis and will be considered as and when vacancies arise.

ADDRESSES: Please submit nominations to Robert Fangmeyer, Director, Baldrige Performance Excellence Program, NIST, 100 Bureau Drive, Mail Stop 1020, Gaithersburg, MD 20899–1020. Nominations may also be submitted via fax to 301–975–4967. Additional information regarding the Committee, including its charter, current membership list, and executive summary, may be found at http://www.nist.gov/baldrige/community/overseers.cfm.

FOR FURTHER INFORMATION CONTACT: Robert Fangmeyer, Director, Baldrige Performance Excellence Program and Designated Federal Officer, NIST, 100 Bureau Drive, Mail Stop 1020, Gaithersburg, MD 20899–1020; telephone 301–975–4781; fax 301–975–4967; or via email at robert.fangmeyer@nist.gov.

SUPPLEMENTARY INFORMATION:

Board of Overseers of the Malcolm Baldrige National Quality Award

Committee Information

The Board of Overseers of the Malcolm Baldrige National Quality Award (Board) was established in accordance with 15 U.S.C. 3711a(d)(2)(B), pursuant to the Federal Advisory Committee Act, as amended, 5 U.S.C. App.

Objectives and Duties

1. The Board shall review the work of the private sector contractor(s), which assists the Director of NIST in administering the Malcolm Baldrige National Quality Award (Award). The Board will make such suggestions for the improvement of the Award process as it deems necessary.

2. The Board shall make an annual report on the results of Award activities to the Director of NIST, along with its recommendations for the improvement of the Award process.

3. The Board will function solely as an advisory committee under the Federal Advisory Committee Act, as amended, 5 U.S.C. App.

4. The Board will report to the Director of NIST.

Membership

1. The Board will consist of approximately 12 members selected on a clear, standardized basis, in accordance with applicable Department of Commerce guidance, and for their preeminence in the field of organizational performance excellence. There will be a balanced representation from U.S. service, manufacturing, nonprofit, education, and health care industries. The Board will include members familiar with the quality improvement operations and competitiveness issues of manufacturing companies, service companies, small businesses, health care providers, and educational institutions. Members will also be chosen who have broad experience in for-profit and nonprofit areas.

2. Board members will be appointed by the Secretary of Commerce for three-year terms and will serve at the discretion of the Secretary. All terms will commence on March 1 and end on February 28 of the appropriate years.

Miscellaneous

1. Members of the Board shall serve without compensation, but may, upon request, be reimbursed travel expenses, including per diem, as authorized by 5 U.S.C. 5701 et seq.

2. The Board will meet annually, except that additional meetings may be called as deemed necessary by the NIST Director or by the Chairperson. Meetings are usually one day in duration. Historically, the Board has met twice per year.

3. Board meetings are open to the public. Board members do not have access to classified or proprietary information in connection with their Board duties.

Nomination Information

1. Nominations are sought from the private and public sector as described above.

2. Nominees should have established records of distinguished service and shall be familiar with the quality improvement operations and competitiveness issues of manufacturing companies, service companies, small businesses, educational institutions, health care providers, and nonprofit organizations. The category (field of eminence) for which the candidate is qualified should be specified in the nomination letter. Nominations for a particular category should come from organizations or individuals within that category. A summary of the candidate’s qualifications should be included with the nomination, including (where applicable) current or former service on Federal advisory boards and Federal employment. In addition, each nomination letter should state that the person agrees to the nomination, acknowledges the responsibilities of serving on the Board, and will actively participate in good faith in the tasks of the Board. Besides participation at meetings, it is desired that members be able to devote the equivalent of seven days between meetings to either developing or researching topics of potential interest, and so forth, in furtherance of their Board duties.

3. The Department of Commerce is committed to equal opportunity in the workplace and seeks a broad-based and diverse Board membership.

Judges Panel of the Malcolm Baldrige National Quality Award

ADDRESSES: Please submit nominations to Robert Fangmeyer, Director, Baldrige Performance Excellence Program, NIST, 100 Bureau Drive Mail Stop 1020, Gaithersburg, MD 20899–1020. Nominations may also be submitted via fax to 301–975–4967. Additional information regarding the Committee, including its charter, current membership list, and executive summary, may be found at http://patapasco.nist.gov/BoardofExam/Examiners_Judge2.cfm.

FOR FURTHER INFORMATION CONTACT: Robert Fangmeyer, Director, Baldrige Performance Excellence Program and Designated Federal Officer, NIST, 100 Bureau Drive, Mail Stop 1020, Gaithersburg, MD 20899–1020; telephone 301–975–4781; fax 301–975–4967; or via email at robert.fangmeyer@nist.gov.

Committee Information

The Judges Panel of the Malcolm Baldrige National Quality Award (Panel) was established in accordance with 15 U.S.C. 3711a(d)(1) and the Federal Advisory Committee Act, as amended, 5 U.S.C. App.

Objectives and Duties

1. The Panel will ensure the integrity of the Malcolm Baldrige National Quality Award (Award) selection process. Based on a review of results of examiners’ scoring of written applications, Panel members will vote on which applicants merit site visits by examiners to verify the accuracy of quality improvements claimed by applicants. The Panel will also review recommendations from site visits, and recommend Award recipients.

2. The Panel will ensure that individual judges will not participate in the review of applicants as to which they have any potential conflict of interest.

3. The Panel will function solely as an advisory body, and will comply with the provisions of the Federal Advisory Committee Act, as amended, 5 U.S.C. App.
4. The Panel will report to the Director of NIST.

Membership

1. The Panel will consist of approximately 9 and not more than 12, members selected on a clear, standardized basis, in accordance with applicable Department of Commerce guidance. There will be a balanced representation from U.S. service, manufacturing, nonprofit, education, and health care industries. The Panel will include members familiar with the quality improvement operations and competitiveness issues of manufacturing companies, service companies, small businesses, health care providers, and educational institutions. Members will also be chosen who have broad experience in for-profit and nonprofit areas.

2. Panel members will be appointed by the Secretary of Commerce for three-year terms and will serve at the discretion of the Secretary. All terms will commence on March 1 and end on February 28 of the appropriate year.

Miscellaneous

1. Members of the Panel shall serve without compensation, but may, upon request, be reimbursed travel expenses, including per diem, as authorized by 5 U.S.C. 5701 et seq.

2. The Panel will meet three times per year. Additional meetings may be called as deemed necessary by the NIST Director or by the Chairperson. Meetings are usually one to four days in duration. In addition, each judge must attend an annual three-day Examiner training course.

3. When approved by the Department of Commerce Chief Financial Officer and Assistant Secretary for Administration, Panel meetings are closed or partially closed to the public.

Nomination Information

1. Nominations are sought from all U.S. service and manufacturing industries, education, health care, and nonprofits as described above.

2. Nominees should have established records of distinguished service and shall be familiar with the quality improvement operations and competitiveness issues of manufacturing companies, service companies, small businesses, health care providers, educational institutions, and nonprofit organizations. The category (field of eminence) for which the candidate is qualified should be specified in the nomination letter. Nominations for a particular category should come from organizations or individuals within that category. A summary of the candidate’s qualifications should be included with the nomination, including (where applicable) current or former service on federal advisory boards and federal employment. In addition, each nomination letter should state that the person agrees to the nomination, acknowledges the responsibilities of serving on the Panel, and will actively participate in good faith in the tasks of the Panel. Besides participation at meetings, it is desired that members be either developing or researching topics of potential interest, reading Baldrige applications, and so forth, in furtherance of their Panel duties.

3. The Department of Commerce is committed to equal opportunity in the workplace and seeks a broad-based and diverse Panel membership.

Information Security and Privacy Advisory Board (ISPAB)

ADDRESS: Please submit nominations to Matt Scholl, NIST, 100 Bureau Drive, Mail Stop 8930, Gaithersburg, MD 20899–8930. Nominations may also be submitted via fax to 301–975–8670, Attn: ISPAB Nominations. Additional information regarding the ISPAB, including its charter and current membership list, may be found on its electronic home page at http://csrc.nist.gov/groups/SMA/ispab/index.html.

FOR FURTHER INFORMATION CONTACT: Matt Scholl, ISPAB Designated Federal Officer (DFO), NIST, 100 Bureau Drive, Mail Stop 8930, Gaithersburg, MD 20899–8930; telephone 301–975–2941; fax: 301–975–8670; or via email at matthew.scholl@nist.gov.

Committee Information

The ISPAB (Committee or Board) was originally chartered as the Computer System Security and Privacy Advisory Board by the Department of Commerce pursuant to the Computer Security Act of 1987 (Pub. L. 100–235). The E-Government Act of 2002 (Pub. L. 107–347, Title III), amended Section 21 of the National Institute of Standards and Technology Act (15 U.S.C. 278g–4), including changing the Committee’s name, and the charter was amended accordingly.

Objectives and Duties

1. The Board will identify emerging managerial, technical, administrative, and physical safeguard issues relative to information security and privacy.

2. The Board will advise NIST, the Secretary of Homeland Security, and the Director of the Office of Management and Budget (OMB) on information security and privacy issues pertaining to Federal Government information systems, including thorough review of proposed standards and guidelines developed by NIST.

3. The Board shall report to the Director of NIST.

4. The Board reports annually to the Secretary of Commerce, the Secretary of Homeland Security, the Director of OMB, the Director of the National Security Agency, and the appropriate committees of the Congress.

5. The Board will function solely as an advisory body, in accordance with the provisions of the Federal Advisory Committee Act, as amended, 5 U.S.C. App.

Membership

1. The Director of NIST will appoint the Chairperson and the members of the ISPAB, and members serve at the discretion of the NIST Director. Members will be selected on a clear, standardized basis, in accordance with applicable Department of Commerce guidance.

2. The ISPAB will consist of a total of 12 members and a Chairperson.

- The Board will include four members from outside the Federal Government who are eminent in the information technology industry, at least one of whom is representative of small or medium sized companies in such industries.

- The Board will include four members from outside the Federal Government who are eminent in the fields of information technology, or related disciplines, but who are not employed by or representative of a producer of information technology.

- The Board will include four members from the Federal Government who have information system management experience, including experience in information security and privacy, at least one of whom shall be from the National Security Agency.

Miscellaneous

1. Members of the Board, other than full-time employees of the Federal government, will not be compensated for their services, but will, upon request, be allowed travel expenses pursuant to 5 U.S.C. 5701 et seq., while otherwise performing duties at the request of the Board Chairperson, while away from their homes or a regular place of business.

2. Meetings of the ISPAB are usually two to three days in duration and are usually held quarterly. ISPAB meetings are open to the public, including the press. Members do not have access to classified or proprietary information in connection with their ISPAB duties.
Nomination Information

1. Nominations are being accepted in all three categories described above.
2. Nominees should have specific experience related to information security or privacy issues, particularly as they pertain to Federal Information technology. Letters of nomination should include the category of membership for which the candidate is applying and a summary of the candidate’s qualifications for that specific category. Also include (where applicable) current or former service on Federal advisory boards and any Federal employment. Each nomination letter should state that the person agrees to the nomination, acknowledges the responsibilities of serving on the ISPAB, and that they will actively participate in good faith in the tasks of the ISPAB.

Nominations that are received and meet the requirements will be kept on file to be reviewed as ISPAB vacancies occur.

5. The Department of Commerce is committed to equal opportunity in the workplace and seeks a broad-based and diverse ISPAB membership.

Manufacturing Extension Partnership (MEP) Advisory Board

ADDRESSES: Please submit nominations to Ms. Cheryl Gendron, NIST, 100 Bureau Drive, Mail Stop 4800, Gaithersburg, MD 20899–4800. Nominations may also be submitted via fax to 301–963–6556, or via email at Cheryl.Gendron@nist.gov. Additional information regarding MEP, including its charter may be found on its electronic home page at http://www.nist.gov/mep/advisory-board.cfm.

FOR FURTHER INFORMATION CONTACT: Ms. Cheryl Gendron, NIST, 100 Bureau Drive, Mail Stop 4800, Gaithersburg, MD 20899–4800; telephone 301–975–4919, fax 301–963–6556; or via email at Cheryl.Gendron@nist.gov.

Committee Information

The MEP Advisory Board (Board) is authorized under Section 3003(d) of the America COMPETES Act (P.L. 110–69); codified at 15 U.S.C. 278k(e), as amended, in accordance with the provisions of the Federal Advisory Committee Act, as amended, 5 U.S.C. App.

Objectives and Duties

1. The Board will provide advice on MEP programs, plans, and policies.
2. The Board will assess the soundness of MEP plans and strategies.
3. The Board will assess current performance against MEP program plans.
4. The Board will function solely in an advisory capacity, and in accordance with the provisions of the Federal Advisory Committee Act, as amended, 5 U.S.C. App.

5. The Board shall transmit through the Director of NIST an annual report to the Secretary of the Department of Commerce for transmittal to Congress within 30 days after the submission to Congress of the President’s annual budget request each year. The report shall address the status of the MEP program and comment on the relevant sections of the programmatic planning document and updates thereto transmitted to Congress by the Director under 15 U.S.C. 278i(c) and (d).

Membership

1. The Board shall consist of 10 members, broadly representative of stakeholders, appointed by the Director of NIST. At least 2 members shall be employed by or on an advisory board for the MEP Centers, and at least 5 other members shall be from U.S. small businesses in the manufacturing sector. No member shall be an employee of the Federal Government.

2. The Director of NIST shall appoint the members of the Board. Members shall be selected on a clear, standardized basis, in accordance with applicable Department of Commerce guidance. Board members serve at the discretion of the Director of NIST.

3. The term of office of each member of the Board shall be three years, except that vacancy appointments shall be for the remainder of the unexpired term of the vacancy. Any person who has completed two consecutive full terms of service on the Board shall thereafter be ineligible for appointment during the one-year period following the expiration of the second term.

Miscellaneous

1. Members of the Board will not be compensated for their services but will, upon request, be allowed travel and per diem expenses as authorized by 5 U.S.C. 5701 et seq., while attending meetings of the Board or subcommittees thereof, or while otherwise performing duties at the request of the Chair, while away from their homes or regular places of business.

2. The Board will meet at least three times a year. Additional meetings may be called by the Director of NIST or the Designated Federal Officer (DFO) or his or her designee.

3. Committee meetings are open to the public.

Nomination Information

1. Nominations are being accepted in all categories described above.
2. Nominees should have specific experience related to manufacturing and industrial extension services. Letters of nomination should include the category of membership for which the candidate is applying and a summary of the candidate’s qualifications for that specific category. Each nomination letter should state that the person agrees to the nomination and acknowledges the responsibilities of serving on the MEP Advisory Board.

3. Selection of MEP Advisory Board members will not be limited to individuals who are nominated. Nominations that are received and meet the requirements will be kept on file to be reviewed as Board vacancies occur.

4. The Department of Commerce is committed to equal opportunity in the workplace and seeks a broad-based and diverse MEP Advisory Board membership.

National Construction Safety Team (NCST) Advisory Committee

ADDRESSES: Please submit nominations to Benjamin Davis, NIST, 100 Bureau Drive, Mail Stop 8613, Gaithersburg, MD 20899–8604. Additional information regarding the NCST, including its charter may be found on its electronic home page at https://www.nist.gov/el/disaster-resilience/disaster-and-failure-studies/national-construction-safety-team-ncst/advisory.

FOR FURTHER INFORMATION CONTACT: Judith Mitriani-Reiser, Director, Disaster and Failure Studies Program, NIST, 100 Bureau Drive, Mail Stop 8615, Gaithersburg, MD 20899–8604, telephone 301–975–0684; or via email at judith.mitriani-reiser@nist.gov.

Committee Information

The NCST Advisory Committee (Committee) was established in accordance with the National Construction Safety Team Act, Pub. L. 107–231 and the Federal Advisory Committee Act, as amended, 5 U.S.C. App.

Objectives and Duties

1. The Committee shall advise the Director of NIST on carrying out the National Construction Safety Team Act (Act), review the procedures developed under section 2(c)(1) of the Act, and
review the reports issued under section 8 of the Act.
2. The Committee functions solely as an advisory body, in accordance with the provisions of the Federal Advisory Committee Act.
3. The Committee shall report to the Director of NIST.
4. On January 1 of each year, the Committee shall transmit to the Committee on Science, Space, and Technology of the House of Representatives and to the Committee on Commerce, Science, and Transportation of the Senate a report that includes: (1) An evaluation of National Construction Safety Team (Team) activities, along with recommendations to improve the operation and effectiveness of Teams, and (2) an assessment of the recommendations of Teams and of the Committee.

Membership
1. The Committee shall consist of no less than 4 nor more than 12 members. Members shall reflect the wide diversity of technical disciplines and competencies involved in the National Construction Safety Teams investigations. Members shall be selected on the basis of established records of distinguished service in their professional community and their knowledge of issues affecting the National Construction Safety Teams.
2. The Director of the NIST shall appoint the members of the Committee, and they will be selected on a clear, standardized basis, in accordance with applicable Department of Commerce guidance.

Miscellaneous
1. Members of the Committee shall not be compensated for their services but may, upon request, be allowed travel and per diem expenses in accordance with 5 U.S.C. 5703.
2. Members of the Committee shall serve as Special Government Employees (SGEs), will be subject to the ethics standards applicable to SGEs, and are required to file an annual Executive Branch Confidential Financial Disclosure Report.
3. The Committee shall meet at least once per year. Additional meetings may be called whenever requested by the NIST Director or the Designated Federal Officer (DFO); such meetings may be in the form of telephone conference calls and/or videoconferences.

Nomination Information
1. Nominations are sought from industry and other communities having an interest in the National Construction Safety Teams investigations.
2. Nominees should have established records of distinguished service. The field of expertise that the candidate represents should be specified in the nomination letter. Nominations for a particular field should come from organizations or individuals within that field. A summary of the candidate’s qualifications should be included with the nomination, including (where applicable) current or former service on federal advisory boards and federal employment. In addition, each nomination letter should state that the nominee agrees to the nomination, acknowledges the responsibilities of serving on the Committee, and will actively participate in good faith in the tasks of the Committee.
3. The Department of Commerce is committed to equal opportunity in the workplace and seeks a broad-based and diverse Committee membership.

Advisory Committee on Earthquake Hazards Reduction (ACEHR)

Addresses: Please submit nominations to Tina Faecke, Management and Program Analyst, National Earthquake Hazards Reduction Program, NIST, 100 Bureau Drive, Mail Stop 8604, Gaithersburg, MD 20899–8604. Nominations may also be submitted via fax to 301–975–4032 or email at tina.faecke@nist.gov.

Additional information regarding the ACEHR, including its charter and executive summary may be found on its electronic home page at http://www.nehrp.gov.

For further information contact:
Steven McCabe, Acting Director, National Earthquake Hazards Reduction Program, NIST, 100 Bureau Drive, Mail Stop 8604, Gaithersburg, MD 20899–8604, telephone 301–975–8549, fax 301–975–4032; or via email at steven.mccabe@nist.gov.

Committee Information
The Advisory Committee on Earthquake Hazards Reduction (Committee) was established in accordance with the National Earthquake Hazards Reduction Program Reauthorization Act of 2004, Pub. L. 108–360 and the Federal Advisory Committee Act, as amended, 5 U.S.C. App.

Objectives and Duties
1. The Committee will act in the public interest to assess trends and developments in the science and engineering of earthquake hazards reduction, effectiveness of the National Earthquake Hazards Reduction Program (Program) in carrying out the activities under section (a)(2) of the Earthquake Hazards Reduction Act of 1977, as amended (42 U.S.C. 7704(a)(2)), the need to revise the Program, the management, coordination, implementation, and activities of the Program.
2. The Committee will function solely as an advisory body, in accordance with the provisions of the Federal Advisory Committee Act.
3. The Committee shall report to the Director of NIST.
4. The Committee shall report to the Director of NIST at least once every two years on its findings of the assessments and its recommendations for ways to improve the Program. In developing recommendations, the Committee shall consider the recommendations of the United States Geological Survey (USGS) Scientific Earthquake Studies Advisory Committee (SESAC).

Membership
1. The Committee shall consist of not fewer than 11, nor more than 17 members. Members shall reflect the wide diversity of technical disciplines, competencies, and communities involved in earthquake hazards reduction. Members shall be selected on the basis of established records of distinguished service in their professional community and their knowledge of issues affecting the National Earthquake Hazards Reduction Program.
2. The Director of NIST shall appoint the members of the Committee. Members shall be selected on a clear, standardized basis, in accordance with applicable Department of Commerce guidance.
3. The term of office of each member of the Committee shall be three years, except that vacancy appointments shall be for the remainder of the unexpired term of the vacancy and that members shall have staggered terms such that the Committee will have approximately one-third new or reappointed members each year.

Miscellaneous
1. Members of the Committee shall not be compensated for their services, but may, upon request, be allowed travel and per diem expenses in accordance with 5 U.S.C. 5701 et seq., while attending meetings of the Committee or subcommittees thereof, or while otherwise performing duties at the request of the Chair, while away from their homes or regular places of business.
2. Members of the Committee shall serve as Special Government Employees
NACWIR, including its charter may be found on its electronic home page at https://www.nist.gov/el/mssd/nwirp/national-advisory-committee-windstorm-impact-reduction-project.

FOR FURTHER INFORMATION CONTACT: Marc Levitan, Director, National Windstorm Impact Reduction Program, NIST, 100 Bureau Drive, Mail Stop 8611, Gaithersburg, MD 20899–8611, telephone 301–975–5340; or via email at marc.levitan@nist.gov.

Committee Information

Objectives and Duties

1. The Committee shall offer assessments and recommendations on the trends and developments in the natural, engineering, and social sciences and practices of windstorm impact mitigation; the priorities of the Strategic Plan for the National Windstorm Impact Reduction Program (Program); the coordination of the Program; the effectiveness of the Program in meeting its purposes under section 204 (42 U.S.C. 15707) of the National Windstorm Impact Reduction Act of 2004, as amended; and any revisions to the Program which may be necessary.

2. The Committee functions solely as an advisory body, in accordance with the provisions of the Federal Advisory Committee Act.

3. The Committee shall report to the Director of NIST.

4. The Committee will develop and submit reports on the assessments for ways to improve the Program at least once every two years.

Membership

1. The Committee shall consist of not fewer than 7 nor more than 15 members. The term of office of each member of the Committee shall terminate on September 30, 2017.

2. Members shall reflect the wide diversity of technical disciplines, competencies, and communities involved in windstorm impact reduction.

3. Members shall be selected on the basis of established records of distinguished service in their professional community and their knowledge of issues affecting the Program.

4. The Director of the NIST shall appoint the members of the Committee, and they will be selected on a clear, standardized basis, in accordance with applicable Department of Commerce guidance.

Miscellaneous

1. Members of the Committee shall not be compensated for their services but may, upon request, be allowed travel and per diem expenses in accordance with 5 U.S.C. 5701 et seq., while attending meetings of the Committee or subcommittees thereof, or while otherwise performing duties at the request of the Chair, while away from their homes or regular places of business.

2. Members of the Committee shall serve as Special Government Employees (SGEs), will be subject to the ethics standards applicable to SGEs, and are required to file an annual Executive Branch Confidential Financial Disclosure Report. No member shall be an employee of the Federal Government.

3. The Committee shall meet in at least one face-to-face meeting per year. Additional meetings may be called whenever requested by the NIST Director or the Chair; such meetings may be in the form of telephone conference calls and/or videoconferences.

Nomination Information

1. Nominations are sought from research and academic institutions, industry and other communities who are qualified to provide advise on windstorm impact hazards reduction and represent related scientific, architectural, and engineering disciplines.

2. Nominees should have established records of distinguished service. The field of expertise that the candidate represents should be specified in the nomination letter. Nominations for a particular field should come from organizations or individuals within that field. A summary of the candidate’s qualifications should be included with the nomination, including (where applicable) current or former service on federal advisory boards and federal employment. In addition, each nomination letter should state that the nominee agrees to the nomination, acknowledges the responsibilities of serving on the Committee, and will actively participate in good faith in the tasks of the Committee.

4. The Department of Commerce is committed to equal opportunity in the workplace and seeks a broad based and diverse Committee membership.

National Advisory Committee on Windstorm Impact Reduction (NACWIR)

ADDRESSES: Please submit nominations to Stephen Potts, NIST, 100 Bureau Drive, Mail Stop 8611, Gaithersburg, MD 20899–8611. Additional information regarding the
workplace and seeks a broad-based and diverse Committee membership.  

NIST Smart Grid Advisory Committee  

**ADDITIONAL INFORMATION**: Please submit nominations to Mr. Cuong Nguyen, Smart Grid and Cyber-Physical Systems Program Office, NIST, 100 Bureau Drive, Mail Stop 8200, Gaithersburg, MD 20899–8200. Nominations may also be submitted via email to cuong.nguyen@nist.gov. Information about the NIST Smart Grid Advisory Committee may be found at http://www.nist.gov/smartgrid/committee.cfm.  

**FOR FURTHER INFORMATION CONTACT**: Mr. Cuong Nguyen, Smart Grid and Cyber-Physical Systems Program Office, NIST, 100 Bureau Drive, Mail Stop 8200, Gaithersburg, MD 20899–8200; telephone 301–975–2254, fax 301–948–5668; or via email at cuong.nguyen@nist.gov.  

**Committee Information**  

The NIST Smart Grid Advisory Committee (Committee) was established in accordance with the Federal Advisory Committee Act, as amended, 5 U.S.C. App and with the concurrence of the General Services Administration.  

Objectives and Duties  

2. The Committee duties are solely advisory in nature in accordance with the provisions of the Federal Advisory Committee Act, as amended, 5 U.S.C. App.  

3. The Committee shall report to the Director of NIST.  

4. The Committee shall provide input to NIST on the Smart Grid Standards, Priorities, and Gaps, on the overall direction, status and health of the Smart Grid implementation by the Smart Grid industry including identification of issues and needs, on Smart Grid Interoperability Panel activities and on the direction of research and standards activities.  

5. Upon request of the Director of NIST, the Committee will prepare reports on issues affecting Smart Grid activities.  

Membership  

1. The Committee shall consist of no less than 9 and no more than 15 members. Members shall be selected on the basis of established records of distinguished service in their professional community and their knowledge of issues affecting Smart Grid deployment and operations. Members shall reflect the wide diversity of technical disciplines and competencies involved in the Smart Grid deployment and operations and will come from a cross section of organizations.  

2. The Director of NIST shall appoint the members of the Committee, and they will be selected on a clear, standardized basis, in accordance with applicable Department of Commerce guidance.  

Miscellaneous  

1. Members of the Committee shall be ex-officio members of the Interoperability Panel activities and on issues and needs, on Smart Grid industry including identification of issues and needs in other relevant NIST programs and on Smart Grid Interoperability Panel activities and on the direction of research and standards activities.  

2. The Committee shall meet approximately two times per year at the call of the Designated Federal Officer (DFO). Additional meetings may be called by the DFO whenever one-third or more of the members so request it in writing or whenever the Director of NIST requests a meeting.  

Nomination Information  

1. Nominations are sought from all fields involved in issues affecting the Smart Grid.  

2. Nominees should have established records of distinguished service. The field of expertise that the candidate represents should be specified in the nomination letter. Nominations for a particular field should come from organizations or individuals within that field. A summary of the candidate’s qualifications should be included with the nomination, including (where applicable) current or former service on Federal advisory boards and Federal employment. In addition, each nomination letter should state that the person agrees to the nomination, acknowledges the responsibilities of serving on the Committee, and will actively participate in good faith in the tasks of the Committee. The Department of Commerce is committed to equal opportunity in the workplace and seeks a broad-based and diverse Committee membership.  

Visiting Committee on Advanced Technology (VCAT)  

**ADDITIONAL INFORMATION**: Please submit nominations to Stephanie Shaw, Designated Federal Officer, VCAT, NIST, 100 Bureau Drive, Mail Stop 1060, Gaithersburg, MD 20899–1060. Nominations may also be submitted via fax to 301–216–0529 or via email at stephanie.shaw@nist.gov. Additional information regarding the VCAT, including its charter, current membership list, and past reports may be found on its electronic homepage at http://www.nist.gov/director/vcat/.  

**FOR FURTHER INFORMATION CONTACT**: Stephanie Shaw, Designated Federal Officer, VCAT, NIST, 100 Bureau Drive, Mail Stop 1060, Gaithersburg, MD 20899–1060, telephone 301–975–2667, fax 301–216–0529; or via email at stephanie.shaw@nist.gov.  

**Committee Information**  

The VCAT (Committee) was established in accordance with 15 U.S.C. 278 and the Federal Advisory Committee Act, as amended, 5 U.S.C. App.  

Objectives and Duties  

1. The Committee shall review and make recommendations regarding general policy for NIST, its organization, its budget, and its programs, within the framework of applicable national policies as set forth by the President and the Congress.  

2. The Committee will function solely as an advisory body, in accordance with the provisions of the Federal Advisory Committee Act, as amended, 5 U.S.C. App.  

3. The Committee shall report to the Director of NIST.  

4. The Committee shall provide an annual report, through the Director of NIST, to the Secretary of Commerce for submission to the Congress not later than 30 days after the submittal to Congress of the President’s annual budget request in each year. Such report shall deal essentially, though not necessarily exclusively, with policy issues or matters which affect NIST, or with which the Committee in its official role as the private sector policy adviser of NIST is concerned. Each such report shall identify areas of research and research techniques of NIST of potential importance to the long-term competitiveness of United States industry, in which NIST possesses special competence, which could be used to assist United States enterprises and United States industrial joint research and development ventures. Such report also shall comment on the programmatic planning document and updates thereto submitted to Congress by the Director under subsections (c) and (d) of section 278i of the NIST Act. The Committee shall submit to the Secretary and the Congress such additional reports on specific policy matters as it deems appropriate.
Membership

1. The Committee shall consist of 15 members appointed by the Director of NIST, at least ten of whom shall be from United States industry. Members shall be selected solely on the basis of established records of distinguished service; shall provide representation of a cross-section of traditional and emerging United States industries; and shall be eminent in fields such as business, research, new product development, engineering, labor, education, management consulting, environment, and international relations. No employee of the Federal Government shall serve as a member of the Committee.

2. The Director of NIST shall appoint the members of the Committee. Members shall be selected on a clear, standardized basis, in accordance with applicable Department of Commerce guidance.

3. The term of office of each member of the Committee shall be three years, except that vacancy appointments shall be for the remainder of the unexpired term of the vacancy.

Miscellaneous

1. Members of the Committee will not be compensated for their services, but will, upon request, be allowed travel expenses in accordance with 5 U.S.C. 5701 et seq., while attending meetings of the Committee or of its subcommittees, or while otherwise performing duties at the request of the chairperson, while away from their homes or a regular place of business.

2. Members of the Committee shall serve as Special Government Employees (SGEs) and will be subject to the ethics standards applicable to SGEs. As SGEs, the members are required to file an annual Executive Branch Confidential Financial Disclosure Report.

3. Meetings of the VCAT usually take place at the NIST headquarters in Gaithersburg, Maryland. Meetings are usually two days in duration and are held at least twice each year.

4. Generally, Committee meetings are open to the public.

Nomination Information

1. Nominations are sought from all fields described above.

2. Nominees should have established records of distinguished service and shall be eminent in fields such as business, research, new product development, engineering, labor, education, management consulting, environment, and international relations. The category (field of eminence) for which the candidate is qualified should be specified in the nomination letter. Nominations for a particular category should come from organizations or individuals within that category. A summary of the candidate’s qualifications should be included with the nomination, including (where applicable) current or former service on Federal advisory boards and Federal employment. In addition, each nomination letter should state that the candidate agrees to the nomination, acknowledges the responsibilities of serving on the VCAT, and will actively participate in good faith in the tasks of the VCAT.

3. The Department of Commerce is committed to equal opportunity in the workplace and seeks a broad-based and diverse VCAT membership.

Kevin Kimball,
NIST Chief of Staff.

SUPPLEMENTARY INFORMATION:

DEPARTMENT OF COMMERCE
National Institute of Standards and Technology
Visiting Committee on Advanced Technology

AGENCY: National Institute of Standards and Technology, Department of Commerce.

ACTION: Notice of public meeting.

SUMMARY: The Visiting Committee on Advanced Technology (VCAT or Committee), National Institute of Standards and Technology (NIST), will meet in an open session on Wednesday, February 8, 2017 from 8:30 a.m. to 5:30 p.m. Eastern Time and Thursday, February 9, 2017 from 8:30 a.m. to 12:00 p.m. Eastern Time. The VCAT is composed of fifteen members appointed by the NIST Director who are eminent in such fields as business, research, new product development, engineering, labor, education, management consulting, environment, and international relations.

DATES: The VCAT will meet on Wednesday, February 8, 2017, from 8:30 a.m. to 5:30 p.m. Eastern Time and Thursday, February 9, 2017, from 8:30 a.m. to 12:00 p.m. Eastern Time.

ADDRESSES: The meeting will be held in the Portrait Room, Administration Building, at NIST, 100 Bureau Drive, Gaithersburg, Maryland, 20899. Please note admittance instructions under the SUPPLEMENTARY INFORMATION section of this notice.

FOR FURTHER INFORMATION CONTACT: Stephanie Shaw, VCAT, NIST, 100 Bureau Drive, Mail Stop 1060, Gaithersburg, Maryland 20899–1060, telephone number 301–975–2667. Ms. Shaw’s email address is stephanie.shaw@nist.gov.

SUPPLEMENTARY INFORMATION:

The purpose of this meeting is for the VCAT to review and make recommendations regarding general policy for NIST, its organization, its budget, and its programs within the framework of applicable national policies as set forth by the President and the Congress. The agenda will include a discussion on NIST’s values and how those values are critical to NIST’s mission delivery. NIST’s major scientific accomplishments, impacts on industry, and likely upcoming challenges will also be discussed. The Committee also will present its initial observations, findings, and recommendations for the 2016 VCAT Annual Report. The agenda may change to accommodate Committee business. The final agenda will be posted on the NIST Web site at http://www.nist.gov/director/vcat/agenda.cfm.

Individuals and representatives of organizations who would like to offer comments and suggestions related to the Committee’s affairs are invited to request a place on the agenda. Approximately one-half hour will be reserved for public comments and speaking times will be assigned on a first-come, first-serve basis. The amount of time per speaker will be determined by the number of requests received, but is likely to be about 3 minutes each. The exact time for public comments will be included in the final agenda that will be posted on the NIST Web site at http://www.nist.gov/director/vcat/agenda.cfm. Questions from the public will not be considered during this period. Speakers who wish to expand upon their oral statements, those who had wished to speak but could not be accommodated on the agenda, and those who were unable to attend in person are invited to submit written statements to VCAT, NIST, 100 Bureau Drive, MS 1060, Gaithersburg, Maryland, 20899, via fax at 301–216–0529 or electronically by email to stephanie.shaw@nist.gov.

All visitors to the NIST site are required to pre-register to be admitted. Please submit your name, time of arrival, email address and phone number to Serena Martinez by 5:00 p.m. Eastern Time, Monday, January 30, 2017. Non-U.S. citizens must submit additional information; please contact Mrs. Martinez. Mrs. Martinez’s email...
I. Abstract

This request is for an extension of a current information collection West Coast Region U.S.—Canada Albacore Treaty Reporting System.

The National Marine Fisheries Service (NMFS), West Coast Region, manages the United States (U.S.)—Canada Albacore Tuna Treaty of 1981 (Treaty). Owners of vessels that fish from U.S. West Coast ports for albacore tuna (Thunnus alalunga) are required to notify the NMFS West Coast Region of their desire to be on the list of vessels provided to Canada each year indicating vessels eligible to fish for albacore tuna in waters under the jurisdiction of Canada. Additionally, vessel operators are required to report in advance their intention to fish in Canadian waters prior to crossing the maritime border, as well as to mark their fishing vessels to facilitate enforcement of the effort limits under the Treaty. Vessel operators are also required to maintain and submit a logbook of all catch and fishing effort. The regulations implementing the reporting and vessel marking requirements under the Treaty are at 50 CFR part 300.172–300.176.

The estimated burden below includes hours to complete the logbook requirement, although it is assumed that most if not all of the respondents already complete the required logbook under the mandatory West Coast Highly Migratory Species Fishery Management Plan (HMS FMP), OMB Control No. 0648–0223. Duplicate reporting under the Treaty and HMS FMP is not required. Most years, there will be much less fishing (and thus less reporting) under the Treaty than the level on which the estimate is based.

II. Method of Collection

Requests to be placed on the vessel eligibility list may be made in writing via mail, fax, email, telephone, or through online registration if available. Communications to comply with ‘hail in’ and ‘hail out’ requirements are made via ship to shore radio or via telephone and are compiled in an electronic database by Fisheries and Oceans Canada. Summaries of hail reports are provided to NMFS on a periodic basis. Vessel marking requirements entail painting the letter ‘U’ immediately after the U.S. Coast Guard documentation identification number or state registration number already on the vessel. Logbooks are maintained in pre-printed paper format and submitted via mail.

III. Data

OMB Control Number: 0648–0492. Form Number(s): None. Type of Review: Regular submission (extension of a current information collection). Affected Public: Business or other for-profit organizations. Estimated Number of Respondents: 120. Estimated Time Per Response: 5 minutes for the request to be placed on the eligible list per year; 5 minutes for required vessel markings; 15 minutes for logbook entries; 10 minutes for each set of two hail reports for border crossings per year. Estimated Total Annual Burden Hours: 240. Estimated Total Annual Cost to Public: $1881.

IV. Request for Comments

Comments are invited on: (a) Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency’s estimate of the burden (including hours and cost) of the proposed collection of information; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology.

Requests submitted in response to this notice will be summarized and/or included in the request for OMB approval of this information collection; they also will become a matter of public record.

Dated: December 27, 2016.
Sarah Brabson, NOAA PRA Clearance Officer.

DEPARTMENT OF COMMERCE National Oceanic and Atmospheric Administration Proposed Information Collection; Comment Request; West Coast Region U.S.—Canada Albacore Treaty Reporting System.

AGENCY: National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice.

SUMMARY: The Department of Commerce, as part of its continuing effort to reduce paperwork and respondent burden, invites the general public and other Federal agencies to take this opportunity to comment on proposed and/or continuing information collections, as required by the Paperwork Reduction Act of 1995.

DATES: Written comments must be submitted on or before March 6, 2017.

ADDRESSES: Direct all written comments to Jennifer Jessup, Departmental Paperwork Clearance Officer, Department of Commerce, Room 6616, 14th and Constitution Avenue NW, Washington, DC 20230 (or via the Internet at JJessup@doc.gov).

FOR FURTHER INFORMATION CONTACT: Requests for additional information or copies of the information collection instrument and instructions should be directed to Shannon Penna, National Marine Fisheries Service (NMFS), West Coast Region (WCR) Long Beach Office, 501 West Ocean Blvd., Suite 4200, Long Beach, CA 90802, (562) 980–4238 or shannon.penna@noaa.gov.

SUPPLEMENTARY INFORMATION:
SUPPLEMENTARY INFORMATION:

FOR FURTHER INFORMATION CONTACT:

ADDRESSES: The application and related documents are available for review by selecting “Records Open for Public Comment” from the “Features” box on the Applications and Permits for Protected Species (APPS) home page, https://apps.nmfs.noaa.gov, and then selecting File No. 20666 from the list of available applications.

These documents are also available upon written request or by appointment in the Permits and Conservation Division, Office of Protected Resources, NMFS, 1315 East-West Highway, Room 13705, Silver Spring, MD 20910; phone (301) 427–8401; fax (301) 713–0376.

Written comments on this application should be submitted to the Chief, Permits and Conservation Division, at the address listed above. Comments may also be submitted by facsimile to (301) 713–0376, or by email to NMFS.Pr1Comments@noaa.gov. Please include the File No. 20666 in the subject line of the email comment.

Those individuals requesting a public hearing should submit a written request to the Chief, Permits and Conservation Division at the address listed above. The request should set forth the specific reasons why a hearing on this application would be appropriate.

FOR FURTHER INFORMATION CONTACT: Jennifer Skidmore or Sara Young, (301) 427–8401.

SUPPLEMENTARY INFORMATION: The subject permit is requested under the authority of the Marine Mammal Protection Act of 1972, as amended (MMPA; 16 U.S.C. 1361 et seq.), the regulations governing the taking and importing of marine mammals (50 CFR part 216).

The applicant proposes to conduct physiology research on up to 5 harbor seals (Phoca vitulina) over the life of the project at the Texas A&M Institute of Preclinical Studies in College Station, TX. Animals will be transported from the Moody Gardens Aquarium in Galveston, TX, or other cooperating public display facilities to be determined. The object is to simultaneous measure heart rate and complete regional blood flow to tissues and organs during rest, and voluntary dives with and without exercise. Blood flow will be measured using stable isotopes and heart rate will be measured with an ECG recorder. One mortality over the life of the project is requested. The requested duration of the permit is 5 years.

In compliance with the National Environmental Policy Act of 1969 (42 U.S.C. 4321 et seq.), an initial determination has been made that the activity proposed is categorically excluded from the requirement to prepare an environmental assessment or environmental impact statement.

Concurrent with the publication of this notice in the Federal Register, NMFS is forwarding copies of the application to the Marine Mammal Commission and its Committee of Scientific Advisors.

Dated: December 27, 2016.

Julia Harrison,
Chief, Permits and Conservation Division, Office of Protected Resources, National Marine Fisheries Service.

DEPARTMENT OF COMMERCE
National Oceanic and Atmospheric Administration

RIN 0648–XF124
Mid-Atlantic Fishery Management Council (MAFMC); Public Meeting

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice; public meeting.

SUMMARY: The Scientific and Statistical Committee (SSC) of the Mid-Atlantic Fishery Management Council (Council) will hold a meeting.

DATES: The meeting will be held on Wednesday, January 25, beginning at 9 a.m. and conclude by 4 p.m. For agenda details, see SUPPLEMENTARY INFORMATION.

DIRECTIONS: The meeting will be held at the Royal Sonesta Harbor Court, 550 Light Street, Baltimore, MD 21202; telephone: (410) 234–0550. Council address: Mid-Atlantic Fishery Management Council, 800 N. State Street, Suite 201, Dover, DE 19901; telephone: (302) 674–2331 or on their Web site at www.mafmc.org.

FOR FURTHER INFORMATION CONTACT: Christopher M. Moore, Ph.D., Executive Director, Mid-Atlantic Fishery Management Council, telephone: (302) 526–5255.

SUPPLEMENTARY INFORMATION: The purpose of the meeting is to receive a report of the results of a stock assessment recently completed for black sea bass and to make ABC recommendations to the Council for the species for the period 2017–19. In addition, the Council may request re-specification of the ABC recommendations for the previous years which were made based on ad hoc data poor methods, to evaluate fishery performance relative to catch limits developed using those methods. If time permits, the report of the CV Subcommittee of the SSC will be discussed.

Jeffrey N. Lonergan,
Acting Deputy Director, Office of Sustainable Fisheries, National Marine Fisheries Service.

National Oceanic and Atmospheric Administration

RIN 0648–XF127
North Pacific Fishery Management Council; Public Meeting

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice of public meeting.

SUMMARY: The North Pacific Fishery Management Council (Council) Bering Sea Fishery Ecosystem Plan Team (BS FEP) will meet January 19–20, 2017, in Seattle, WA.

DATES: The meeting will be held on Thursday, January 19, 2017 through Friday, January 20, 2017, from 9 a.m. to 5 p.m.

DIRECTIONS: The meeting will be held at the Alaska Fisheries Science Center NMML Room 2011, 7600 Sand Point Way NE, Building 4, Seattle, WA 98115.

FOR FURTHER INFORMATION CONTACT: Diana Evans, Council staff; telephone: (907) 271–2809.

SUPPLEMENTARY INFORMATION: Agenda

Thursday, January 19, 2017 through Friday, January 20, 2017

The BS FEP agenda will include: (a) FEP tasks, (b) discuss FEP objectives and work products, (c) outreach plan, and (d) potential action modules. The Agenda is subject to change, and the latest version will be posted at http://www.npfmc.org/.
Special Accommodations
These meetings are physically accessible to people with disabilities. Requests for sign language interpretation or other auxiliary aids should be directed to Shannon Gleason at (907) 271–2809 at least 7 working days prior to the meeting date.

Jeffrey N. Lonergan,
Acting Deputy Director, Office of Sustainable Fisheries, National Marine Fisheries Service.

DEPARTMENT OF COMMERCE
National Oceanic and Atmospheric Administration
RIN 0648–XF123
New England Fishery Management Council; Public Meeting
AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.
ACTION: Notice; public meeting.
SUMMARY: The New England Fishery Management Council (Council) is scheduling a public meeting of its Ecosystem-Based Fishery Management (EBFM) Committee to consider actions affecting New England fisheries in the exclusive economic zone (EEZ).
Recommendations from this group will be brought to the full Council for formal consideration and action, if appropriate.
DATES: This meeting will be held on Monday, January 23, 2017, at 10 a.m.
ADDRESS: The meeting will be held at the Sheraton Harborside Hotel, 250 Market Street, Portsmouth, NH 03801; telephone: (603) 431–2300.
Council address: New England Fishery Management Council, 50 Water Street, Mill 2, Newburyport, MA 01950.
FOR FURTHER INFORMATION CONTACT: Thomas A. Nies, Executive Director, New England Fishery Management Council; telephone: (978) 465–0492.
SUPPLEMENTARY INFORMATION:
Agenda
The Committee will receive a report on the application of Georges Bank Operating Models, i.e. examples and description of how they could be used to support a Management Strategy Evaluation, from the Ecosystem-Based Fishery Management Plan Development Team. The committee will also discuss progress toward development of an example Fishery Ecosystem Plan for Georges Bank. Other business will be discussed if time permits.

Special Accommodations
This meeting is physically accessible to people with disabilities. Requests for sign language interpretation or other auxiliary aids should be directed to Thomas A. Nies, Executive Director, at (978) 465–0492, at least 5 days prior to the meeting date.

Authority: 16 U.S.C. 1801 et seq.
Jeffrey N. Lonergan,
Acting Deputy Director, Office of Sustainable Fisheries, National Marine Fisheries Service.

DEPARTMENT OF EDUCATION
Applications for New Awards; Personnel Development To Improve Services and Results for Children With Disabilities—Interdisciplinary Preparation in Special Education, Early Intervention, and Related Services for Personnel Serving Children With Disabilities Who Have High-Intensity Needs
AGENCY: Office of Special Education and Rehabilitative Services, Department of Education.
ACTION: Notice.
Overview Information
Personnel Development To Improve Services and Results for Children With Disabilities—Interdisciplinary Preparation in Special Education, Early Intervention, and Related Services for Personnel Serving Children With Disabilities Who Have High-Intensity Needs.
Notice inviting applications for a new award for fiscal year (FY) 2017.
Catalog of Federal Domestic Assistance (CFDA) Number: 84.325K.
DATES:
Deadline for Transmittal of Applications: March 6, 2017.
Full Text of Announcement
I. Funding Opportunity Description
Purpose of Program: The purposes of this program are to (1) help address State-identified needs for personnel preparation in special education, early
intervention, related services, and regular education to work with children, including infants and toddlers, with disabilities; and (2) ensure that those personnel have the necessary skills and knowledge, derived from practices that have been determined through scientifically based research and experience, to be successful in serving those children.

Priority: In accordance with 34 CFR 75.105(b)(2)(v), this priority is from allowable activities specified in the statute (see sections 662 and 681 of the Individuals with Disabilities Education Act (IDEA)).

Absolute Priority: For FY 2017 and any subsequent year in which we make awards from the list of unfunded applications from this competition, this priority is an absolute priority. Under 34 CFR 75.105(c)(3), we consider only applications that meet this priority.

This priority is: Interdisciplinary Preparation in Special Education, Early Intervention, and Related Services for Personnel Serving Children With Disabilities Who Have High-Intensity Needs.

Background: The purpose of this priority is to increase the number and improve the quality of personnel who are fully credentialed to serve children, including infants and toddlers, with disabilities who have high-intensity needs, especially in areas of chronic personnel shortage. The priority will fund high-quality interdisciplinary projects that prepare special education, early intervention, and related services personnel at the master’s, specialist, or clinical doctoral levels for professional practice in classrooms and school settings.

State demand for fully credentialed special education, early intervention, and related services personnel to serve infants, toddlers, children, and youth with disabilities exceeds the available supply, particularly in high-need needs, especially in areas of chronic personnel shortage. The priority will fund high-quality interdisciplinary projects that prepare special education, early intervention, and related services personnel at the master’s, specialist, or clinical doctoral levels for professional practice in classrooms and school settings.

An applicant must propose an interdisciplinary project in special education, early intervention, or related services. An interdisciplinary project is a project that delivers core content through shared coursework, group assignments, and coordinated clinical experiences as part of master’s, specialist, or clinical doctoral degree programs for scholars across two or more disciplines and that leads to licensure, endorsement, or certification. Not all degree-program requirements (e.g., courses, seminars, and clinical experiences) must be shared across disciplines, but the project must: (a) Identify the competencies needed to address the individualized needs of children with disabilities who have high-intensity needs using an interdisciplinary approach to service delivery; and (b) outline how the project will build capacity in those areas through shared coursework, group assignments, and coordinated clinical experiences for scholars supported by the proposed project. Projects may include individuals who are in degree programs (e.g., general education) that are cooperating with, but not funded by, the applicant’s proposed project in the interdisciplinary coursework, group assignments, and coordinated clinical experiences for scholars supported by the proposed project.

Note: Personnel preparation programs that prepare individuals to be educational interpreters for the deaf at the bachelor’s degree level can qualify under this priority without an interdisciplinary partner.

Note: The first year of the project period and up to $100,000 of Federal funds may be used for program planning. Planning activities during the first year could include outlining shared coursework, group assignments, or coordinated clinical experiences for scholars supported by the proposed project.

Note: For the purposes of this priority, the term “scholar” means an individual who is pursuing a degree, license, endorsement, or certification related to special education, related services, or early intervention services and who receives scholarship assistance under section 662 of IDEA (see 34 CFR 304.3(g)). Individuals pursuing degrees in general education do not qualify as “scholars” eligible for scholarship assistance.

1 For the purposes of this priority, “high-intensity needs” refers to a complex array of disabilities (e.g., multiple disabilities, significant cognitive disabilities, significant physical disabilities, significant sensory disabilities, significant autism, significant emotional disabilities, significant learning disabilities, including dyslexia) or needs of children with these disabilities requiring intensive, individualized intervention(s) (i.e., that are specifically designed to address persistent learning or behavior difficulties, implemented with greater frequency and for an extended duration than is commonly available in a typical classroom or early intervention setting, or which requires personnel to have knowledge and skills in identifying and implementing multiple interventions supported by evidence).

2 For the purposes of this priority, “interdisciplinary” refers to preparing two or more disciplines together through shared coursework, group assignments, and coordinated field experiences.
experiences designed to: (a) Build the knowledge, skills, and competencies that personnel from each discipline participating in the project will need to work collaboratively with other general and special education teachers, early intervention, and related services providers to design and deliver the focused instruction and intensive individualized intervention(s) needed to address the individualized needs of children with disabilities who have high-intensity needs and (b) enhance the competency of beginning practitioners with master’s, specialist, or clinical doctoral degrees in special education, early intervention, or related services to collaborate on interdisciplinary teams.

To be considered for funding under this absolute priority, all program applicants must meet the application requirements contained in the priority. All projects funded under this absolute priority also must meet the programmatic and administrative requirements specified in the priority.

The requirements of this priority are as follows:

(a) Demonstrate, in the narrative section of the application under “Significance of the Project,” how—

(1) The project addresses national, State, regional, or district shortages of personnel who are fully qualified to serve children with disabilities, ages birth through 21, who have high-intensity needs. To address this requirement, the applicant must—

(i) Present data on the effectiveness of each special education, early intervention, or related services personnel preparation program participating in the project and in areas such as: The average amount of time it takes for scholars to complete the program; the percentage of program graduates who receive a license, endorsement, or certification related to special education, related services, or early intervention services; the percentage of program graduates finding employment related to their preparation after graduation; the effectiveness of program graduates in providing special education, early intervention, or related services, which could include data on the learning and developmental outcomes of children with disabilities they serve; the percentage of program graduates who maintain employment for two or more years in the area for which they were prepared and who are fully qualified under IDEA; and the percentage of graduates and their employers who report that program graduates received adequate preparation to provide high quality special education, early intervention, or related services; and

(ii) If available, present data on the effectiveness of interdisciplinary approaches to the preparation of special education, early intervention, or related services personnel that involve the programs participating in the proposed project.

Note: Data on the effectiveness of a personnel preparation program should be no older than five years prior to the start date of the project proposed in the application. When reporting percentages, the denominator (i.e., total number of scholars or program graduates) must be provided.

(2) The project will increase the number of personnel who demonstrate the competencies needed to provide (a) focused instruction, and (b) intense individualized intervention(s) in an interdisciplinary team-based approach to address the individualized needs of children with disabilities who have high-intensity needs, ages birth through 21, that result in improvements in learning or developmental outcomes (e.g., academic, social, emotional, behavioral), or successful transition to postsecondary education and the workforce. To address this requirement, the applicant must—

(i) Identify the competencies that special education, early intervention, or related services personnel need in order to ensure delivery of (a) focused instruction, and (b) intense individualized intervention(s) in an interdisciplinary team-based approach that will: Lead to improved learning and developmental outcomes; ensure access to and progress in academic achievement standards or alternate academic achievements standards, as appropriate; lead to successful transition to college and career for children with disabilities, including children with disabilities who have high-intensity needs; and maximize the use of effective technology to deliver instruction, interventions, and services;

(ii) Identify the competencies needed by members of interdisciplinary teams that will result in improved outcomes for children with disabilities who have high-intensity needs;

(iii) Identify the competencies that personnel need to support inclusion of children with disabilities in the least restrictive and natural environments to the maximum extent appropriate by intentionally promoting participation in learning and social activities to foster development, learning, academic achievement, friendships with peers, and sense of belonging; and

(iv) Provide a conceptual framework for the proposed interdisciplinary personnel preparation program, including any empirical support that will promote the acquisition of the identified competencies (see paragraph (a)(2)(i) of the requirements for this priority) needed by special education, early intervention, or related services personnel, and how these competencies relate to the proposed project.

(b) Demonstrate, in the narrative section of the application under “Quality of Project Services,” how—

(1) The project will conduct its planning activities, if the first year of the project period is used for planning.

(2) The project will recruit and retain high-quality scholars into the bachelor’s (if training educational interpreters for the deaf), master’s, specialist, or clinical doctoral degree programs participating in the project and ensure equal access and treatment for eligible project participants who are members of groups that have traditionally been underrepresented based on race, color, national origin, gender, age, or disability. To meet this requirement, the applicant must—

(i) Describe criteria the applicant will use to identify high-quality applicants for admission into the degree programs participating in the project;

(ii) Describe the recruitment strategies the applicant will use to attract high-quality applicants and any specific recruitment strategies targeting high-quality applicants from traditionally underrepresented groups, including individuals with disabilities; and

(iii) Describe the approach, including mentoring, monitoring, and accommodations, the applicant will use to support scholars to complete their respective degree programs.

(3) The project reflects current practices supported by evidence and is designed to prepare scholars in the identified competencies. To address this requirement, the applicant must—

(i) Describe how the project will incorporate current practices supported by evidence (including relevant research citations) that improve outcomes for children with disabilities who have high-intensity needs into (a) the required coursework and clinical experiences for each personnel preparation program participating in the project; and (b) by the required to design coursework, group assignments, and coordinated clinical experiences required for the
interdisciplinary portions of the project; and
(ii) Describe how the project will use professional development practices supported by evidence for adult learners to instruct scholars.
(4) The project is of sufficient quality, intensity, and duration to prepare scholars in the identified competencies. To address this requirement, the applicant must describe how—
(i) The components of (a) each personnel preparation program participating in the project; and (b) the shared coursework, group assignments, and coordinated clinical experiences required for the interdisciplinary portions of the proposed project will support scholars’ acquisition and enhancement of the identified competencies;
(ii) The components of (a) each personnel preparation program participating in the project and (b) the shared coursework, group assignments, and coordinated clinical experiences required for the interdisciplinary portions of the proposed project will be integrated to allow scholars to use their knowledge and skills in designing implementing, and evaluating practices supported by evidence to address the learning and developmental needs of children with disabilities who have high-intensity needs in collaboration with other team members;
(iii) Scholars will be provided with ongoing guidance and feedback during training; and
(iv) The proposed project will provide ongoing induction opportunities and mentoring support to graduates of each personnel preparation program participating in the project.
(5) The project will collaborate with appropriate partners, including—
(i) High-needs schools, which are high-poverty schools, low-performing schools, or publicly funded preschool programs, including Head Start programs and programs serving children eligible for services under IDEA Part C and Part B, section 619, that are located within the geographic boundaries of a high-need LEA. The purpose of these partnerships is to provide clinical practice for scholars aimed at developing the identified competencies as members of interdisciplinary teams; and

Note: A State that received ESEA flexibility was not required to identify schools in corrective action or restructuring under section 1116 of the ESEA; rather, the State identified priority and focus schools. Moreover, with the enactment of the Every Student Succeeds Act (ESSA), no State, beginning in the 2017–2018 school year, will identify schools in corrective action or restructuring under section 1116 of the ESEA or identify schools as priority and focus schools under ESEA flexibility. Therefore, consistent with section 5(e)(2) of the ESSA, the U.S. Department of Education (Department) will allow applicants to consider the following schools as low-performing schools: (1) Elementary and secondary schools identified, at the time of submission of an application under this competition, as in need of corrective action or restructuring under the ESEA, as amended by NCLB; (2) elementary and secondary schools identified, at the time of submission of an application under this competition, as a priority or focus school by a State under ESEA flexibility; and (3) secondary schools (both middle and high schools) in a State that are, at the time of submission of an application under this competition, equally as low-achieving as the Title I schools above and are eligible for, but do not receive, Title I funds.

(ii) Other programs on campus or at partnering universities for the purpose of sharing resources, supporting program development and delivery, and addressing personnel shortages.
(6) The project will use technology, as appropriate, to promote scholar learning and professional practice, enhance the efficiency of the project, collaborate with partners, and facilitate ongoing mentoring and support for scholars.
(7) The project will ensure that scholars understand how to use technology to support student learning; and
(8) The project will align with and use resources, as appropriate, available through technical assistance centers, which may include centers funded by the Department.

Note: Use our “Find a Center” at www.osepideasthatwork.org for information about the Office of Special Education Programs (OSEP) funded national centers.

(c) Demonstrate, in the narrative section of the application under “Quality of Project Evaluation,” how—
(1) The applicant will use comprehensive and appropriate methodologies to evaluate how well the goals or objectives of the proposed project have been met, including the project processes and outcomes.
(2) The applicant will collect, analyze, and use data related to specific and measurable goals, objectives, and outcomes of the project. To address this requirement, the applicant must describe—
(i) How scholar competencies and other project processes and outcomes will be measured for formative evaluation purposes, including proposed instruments, data collection methods, and possible analyses; and
(ii) How data on the quality of services provided by proposed project graduates, including data on the learning and developmental outcomes (e.g., academic, social, emotional, behavioral, meeting college- and career-ready standards) and on growth toward these outcomes of the children with disabilities who have high-intensity needs that the project graduates serve, will be collected and analyzed.

Note: Following the completion of the project period, grantees are encouraged to engage in ongoing data collection activities.

(3) The methods of evaluation will produce quantitative and qualitative data for objective performance measures that are related to the outcomes of the proposed project.

(4) The methods of evaluation will provide performance feedback and allow for periodic assessment of progress towards meeting the project outcomes. To address this requirement, the applicant must describe how—
(i) Results of the evaluation will be used as a basis for improving the proposed project to prepare special education, early intervention, or related services personnel to provide (a) focused instruction, and (b) intense individualized intervention(s) in an interdisciplinary team-based approach to improve outcomes of children with disabilities who have high-intensity needs; and
(ii) The grantee will report the evaluation results to OSEP in its annual and final performance reports.

(d) Demonstrate, in the narrative section under “Project Assurances,” how appendices, as applicable, that the following program requirements are met. The applicant must—
(1) Include, in the application as Appendix B, brief syllabi for required courses, seminars, and field experiences of the degree programs participating in the project, such as—

6 For the purposes of this priority, the term “high-poverty school” means a school that is in the highest two quartiles of schools served by a local educational agency, based on the percentage of enrolled students from low-income families as defined in section 1112(a)(5) of the Elementary and Secondary Education Act of 1965, as amended (ESEA).
7 For the purpose of this priority, the term “low-performing school” means a school receiving assistance through Title I of the ESEA that, at the time of submission of an application under this competition, is (1) identified as a school in need of corrective action or restructuring under section 1116 of the ESEA as amended by the No Child Left Behind Act of 2001 (NCLB); or (2) identified as a priority or focus school in a State that implemented ESEA flexibility. The inclusion of these schools as “low-performing schools” reflects the fact that the 2016–2017 school year is a year of transition between requirements of the ESEA as amended by NCLB and the ESEA as amended by the Every Student Succeeds Act.
(i) Syllabi for shared courses, seminars, and coordinated clinical experiences; and
(ii) Proposed syllabi for new courses.
(2) Ensure that a comprehensive set of completed syllabi, including syllabi created or revised as part of a project planning year, are submitted to OSEP by the end of Year 1 of the grant.
(3) Ensure scholars will not be selected based on race, ethnicity, or national origin. Per the Supreme Court’s decision in Adarand Constructors, Inc. v. Pena, 515 U.S. 200 (1995), the Department does not allow the selection of individuals on the basis of race, ethnicity, or national origin. For this reason, grantees must ensure that any discussion of the recruitment of scholars based on race, ethnicity, or national origin distinguishes between increasing the pool of applicants and actually selecting scholars.
(4) Ensure that the project will meet all requirements for grantees in disbursing scholarships as outlined in 34 CFR 304.22. Failure by a grantee to properly meet these requirements would be a violation of the grant award that could result in sanctions, including the grantee being liable for returning any misused funds to the Department. Specifically, before disbursement of scholarship assistance to an individual, a grantee must—
(a) Ensure that the scholar—
(1) Is a citizen or national of the United States;
(2) Is a permanent resident of—
(i) Puerto Rico, the United States Virgin Islands, American Samoa, or the Commonwealth of the Northern Mariana Islands;
(ii) The Republic of the Marshall Islands, the Federated States of Micronesia, or the Republic of Palau during the period in which these entities are eligible to receive an award under the Personnel Development to Improve Services and Results for Children with Disabilities program; or
(iii) The State in which the scholar is a lawful permanent resident of the United States; or
(iv) The United States for other than a temporary purpose with the intention of becoming a citizen or permanent resident;
(b) Limit the cost of attendance portion of the scholarship assistance (as discussed in 34 CFR 304.21(a)) to the amount by which the individual’s cost of attendance at the institution exceeds the amount of grant assistance the scholar is to receive for the same academic year under title IV of the HEA; and
(c) Obtain a Certification of Eligibility for Federal Assistance from each scholar, as prescribed in 34 CFR 75.60, 75.61, and 75.62.
(5) Ensure that the project will meet all requirements in 34 CFR 304.23, particularly those related to informing all scholarship recipients of their service obligation commitment. Failure by a grantee to properly meet these requirements would be a violation of the grant award that could result in sanctions, including the grantee being liable for returning any misused funds to the Department. Specifically, the grantee must prepare, and ensure that each scholarship recipient signs, the following two documents:
(i) A Pre-Scholarship Agreement prior to the scholar receiving a scholarship for an eligible program (Office of Management and Budget (OMB) Control Number 1820–0686); and
(ii) An Exit Certification immediately upon the scholar leaving, completing, or otherwise exiting that program (OMB Control Number 1820–0686).
(6) Ensure that prior approval from the OSEP project officer will be obtained before admitting additional scholars beyond the number of scholars proposed in the application and before transferring a scholar to another OSEP-funded grant.
(7) Ensure that the project will meet the statutory requirements in section 662(e) through 662(h) of IDEA.
(8) Ensure that at least 65 percent of the total requested budget over the five years will be used for scholar support. Applicants proposing to use Year 1 for program development may budget for less than 65 percent of the total requested budget over the five years for scholar support; instead 65 percent of the total award minus funds allocated for program development will be used to calculate the value of required scholar support.
(9) Ensure that the institution of higher education (IHE) will not require scholars enrolled in the program to work (e.g., as graduate assistants) as a condition of receiving support (e.g., tuition, stipends) from the proposed project, unless the work is specifically related to the acquisition of scholars’ competencies and the requirements for completion of their personnel preparation program. This prohibition on work as a condition of receiving support does not apply to the service obligation requirements in section 662(h) of IDEA.
(10) Ensure that the budget includes attendance of the project director at a three-day project directors’ meeting in Washington, DC, during each year of the project.
(11) Ensure that the project director, key personnel, and scholars will actively participate in the cross-project collaboration, advanced trainings, and cross-site learning opportunities (e.g., webinars, briefings) organized by OSEP. This partnership will be used to build capacity of participants, increase the impact of funding, and innovative and interdisciplinary service delivery models across projects.
(12) Ensure that if the project maintains a Web site, relevant information and documents are in a format that meets government or industry-recognized standards for accessibility.
(13) Ensure that annual data will be submitted on each scholar who receives grant support (OMB Control Number 1820–0686). The primary purposes of the data collection are to track the service obligation fulfillment of scholars who receive funds from OSEP grants and to collect data for program performance measure reporting under the Government Performance and Results Act of 1993 (GPRA). Applicants are encouraged to visit the Personnel Development Program Data Collection System (DCS) Web site at https://pdp.ed.gov/osep for further information about this data collection requirement. Typically, data collection begins in January of each year, and grantees are notified by email about the data collection period for their grant, although grantees may submit data as needed, year round. This data collection must be submitted electronically by the grantee and does not supplant the annual grant performance report required of each grantee for continuation funding (see 34 CFR 75.590). Data collection includes the submission of a signed, completed Pre-Scholarship Agreement and Exit Certification for each scholar funded under an OSEP grant (see paragraph (4) of this section, subparagraphs (i) and (ii)).
Focus Areas: Within this absolute priority, the Secretary intends to support interdisciplinary projects under the following two focus areas: (A) Preparing Personnel to Serve Infants, Toddlers, and Preschool-Age Children with Disabilities who Have High-Intensity Needs; and (B) Preparing Personnel to Serve School-Age Children with Disabilities who Have High-Intensity Needs.
Note: Interdisciplinary projects are encouraged for personnel preparation programs serving educational interpreters, but are not required.
Note: Applicants must identify the specific focus area (i.e., A or B) under which they are
applying as part of the competition title on the application cover sheet (SF Form 424, line 4). Applicants may not submit the same proposal under more than one focus area.

Focus Area A: Preparing Personnel To Serve Infants, Toddlers, and Preschool-Age Children With Disabilities Who Have High-Intensity Needs. OSEP intends to fund nine awards under this focus area. For the purpose of Focus Area A, early intervention personnel are those who are prepared to provide services to infants and toddlers with disabilities ages birth to three, and early childhood personnel are those who are prepared to provide services to children with disabilities ages three through five (and in States where the age range is other than ages three through five, we will defer to the State’s certification for early childhood). In States where certification in early intervention is combined with certification in early childhood, applicants may propose a combined early intervention and early childhood personnel preparation project under this focus area. For purposes of this focus area, interdisciplinary projects are projects that deliver core content through shared coursework, group assignments, and coordinated clinical experiences shared across disciplines for: (a) Early intervention providers or early childhood special educators and related services personnel who serve infants, toddlers, and preschool-age children with disabilities who have high-intensity needs; or (b) projects preparing only related services personnel to serve children with disabilities who have high-intensity needs.

Note: In Focus Area A, OSEP intends to fund in FY 2017 at least eight high-quality applications from Minority-Serving IHEs including a minimum of two HBCUs and, as a result, may fund applications out of rank order.

Focus Area B: Preparing Personnel To Serve School-Age Children With Disabilities Who Have High-Intensity Needs. OSEP intends to fund 27 awards under this focus area. For the purpose of Focus Area B, personnel who serve school-age children with disabilities who have high-intensity needs are special education teachers or related services providers prepared to serve school-age children with disabilities who have high-intensity needs. For purposes of this focus area, interdisciplinary projects are: (a) Projects that deliver core content through shared coursework, group assignments, and coordinated clinical experiences shared across disciplines for special education teachers and related services personnel who serve school-age children with disabilities who have high-intensity needs; or (b) projects preparing only related services personnel to serve school-age children with disabilities who have high-intensity needs.

Note: In Focus Area B, OSEP intends to fund in FY 2017 at least eight high-quality applications from Minority-Serving IHEs including a minimum of two HBCUs and, as a result, may fund applications out of rank order.

Note: A project funded under Focus Area A or B may budget for less than the 65 percent required for scholar support in Year 1 if the first year of the proposed project will be used for planning new or improved coursework, group assignments, or coordinated clinical experience needed to support interdisciplinary preparation for special education personnel (e.g., related services personnel serving children with disabilities who have high-intensity needs, and the applicant can provide sufficient justification for a designation less than this required percentage. Sufficient justification for proposing less than 65 percent of the budget for scholar support in Year 1 would include support for activities, such as—

(1) Program improvement to develop and deliver shared coursework, group assignments, and coordinated clinical experience needed to support interdisciplinary preparation for personnel across two or more master’s, specialist or clinical doctorate degree programs (e.g., hiring of a new faculty member or consultant to assist in course development, providing professional development and training for faculty and clinical supervisors, negotiating agreements with schools to serve as sites for coordinated clinical experience). In the initial project year, scholar support would not be required. The project must demonstrate that the newly established coursework and coordinated clinical experience is approved and ready for implementation in order to receive continuation funds in Year 2.

(2) Building capacity (e.g., hiring of a clinical practice supervisor, providing professional development and training for faculty) or purchasing needed resources (e.g., additional teaching supplies or specialized equipment to enhance instruction).

Note: Applicants proposing projects to develop, expand, or add a new area of emphasis to special education, early intervention, or related services programs must provide, in their applications, information on these new areas will be sustained once Federal funding ends.

References

Waiver of Proposed Rulemaking: Under the Administrative Procedure Act (APA) (5 U.S.C. 553) the Department generally offers interested parties the opportunity to comment on proposed priorities. Section 681(d) of IDEA however, makes the public comment requirements of the APA inapplicable to the priority in this notice.

Applicable Regulations: (a) The Education Department General Administrative Regulations (EDGAR) in 34 CFR parts 75, 77, 79, 81, 82, 84, 86, 97, 98, and 99. (b) The Office of Management and Budget Guidelines to Agencies on Governmentwide Debarment and Suspension (Nonprocurement) in 2 CFR part 180, as adopted and amended as regulations of the Department in 2 CFR part 3485. (c) The Uniform Administrative Requirements, Cost Principles, and Audit Requirements for Federal Awards in 2 CFR part 200, as adopted and amended as regulations of the Department in 2 CFR part 3474. (d) The regulations for this program in 34 CFR part 304.

Note: The regulations in 34 CFR part 79 apply to all applicants except federally recognized Indian tribes.

Note: Minority-Serving Institutions” refers to IHEs with minority enrollment of 50 percent or more, which may include Historically Black Colleges and Universities, Tribal Colleges, and Predominantly Hispanic Serving Colleges and Universities.
Note: The regulations in 34 CFR part 86 apply to IHEs only.

II. Award Information

Type of Award: Discretionary grants.
Estimated Available Funds: The Administration has requested $83,700,000 for the Personnel Development to Improve Services and Results for Children with Disabilities program for FY 2017, of which we intend to use an estimated $9,000,000 for this competition. The actual level of funding, if any, depends on final congressional action. However, we are inviting applications to allow enough time to complete the grant process if Congress appropriates funds for this program.

Contingent upon the availability of funds and the quality of applications, we may make additional awards in FY 2018 from the list of unfunded applicants from this competition.

Estimated Range of Awards: See chart.

Estimated Average Size of Awards: See chart.

Maximum Award: See chart.

Estimated Number of Awards: See chart.

Project Period: See chart.

* We will reject any application that proposes a budget exceeding the maximum award for a single budget period of 12 months.

Note: The Department is not bound by any estimates in this notice.

Evaluation Period: In August 2013, the Department amended the EDGAR to authorize the award of an evaluation period after the end of the approved project period. 34 CFR 75.250 allows for an evaluation period for the sole purpose of data collection, analysis, and reporting. The full text of this regulation is included in the application package.

Under 34 CFR 75.250(b) the Secretary has the authority to make data collection/analysis awards. By the terms of that section, the awards can only go to current grantees, may only be used for data collection, analysis and reporting and do not have to go through a formal competitive process.

III. Eligibility Information

1. Eligible Applicants: IHEs, private nonprofit organizations.
2. Cost Sharing or Matching: This program does not require cost sharing or matching.
3. Eligible Subgrantees: (a) Under 34 CFR 75.708(b) and (c) a grantee may award subgrants—to directly carry out project activities described in its application—to the following types of entities: IHEs and private nonprofit organizations suitable to carry out the activities proposed in the application.
(b) The grantee may award subgrants to entities it has identified in an approved application.
4. Other General Requirements:

(a) Recipients of funding under this competition must make positive efforts to employ and advance in employment qualified individuals with disabilities (see section 606 of IDEA).
(b) Each applicant for, and recipient of, funding must, with respect to the aspects of their proposed project, involve individuals with disabilities, or parents of individuals with disabilities ages birth through 26, in planning, implementing, and evaluating the project (see section 682(a)(1)(A) of IDEA).

IV. Application and Submission Information

1. Address to Request Application Package: You can obtain an application
package via the Internet or from the Education Publications Center (ED Pubs). To obtain a copy via the Internet, use the following address: www.ed.gov/ fund/grant/apply/grantapps/index.html. To obtain a copy from ED Pubs, write, fax, or call the following: ED Pubs, U.S. Department of Education, P.O. Box 22207, Alexandria, VA 22304. Telephone, toll free: 1–877–433–7827. Fax: (703) 605–6794. If you use a telecommunications device for the deaf (TDD) or a text telephone (TTY), call, toll free: 1–877–576–7734.

You can contact ED Pubs at its Web site, also: www.EPDubs.gov or at its email address: edpubs@inet.ed.gov. If you request an application from ED Pubs, be sure to identify this competition as follows: CFDA number 84.325K.

Individuals with disabilities can obtain a copy of the application package in an accessible format (e.g., braille, large print, audiotape, or compact disc) by contacting the person or team listed under Accessible Format in section VIII of this notice.

2. Content and Form of Application Submission: Requirements concerning the content and form of an application, together with the forms you must submit, are in the application package for this competition.

Page Limit: The application narrative (Part III of the application) is where you, the applicant, address the selection criteria that reviewers use to evaluate your application. You must limit Part III to no more than 50 pages, using the following standards:
- A “page” is 8.5” x 11”, on one side only, with 1” margins at the top, bottom, and both sides.
- Double-space (no more than three lines per vertical inch) all text in the application narrative, including titles, headings, footnotes, quotations, reference citations, and captions, as well as all text in charts, tables, figures, graphs, and screen shots.
- Use a font that is 12 point or larger.
- Use one of the following fonts: Times New Roman, Courier, Courier New, or Arial. An application submitted in any other font (including Times Roman or Arial Narrow) will not be accepted.

The page limit and double-spacing requirements do not apply to Part I, the cover sheet; Part II, the budget section, including the narrative budget justification; Part IV, the assurances and certifications; or the abstract (follow the guidance provided in the application package for completing the abstract); the table of contents; the list of priority requirements, the resumes, the reference list, the letters of support, or the appendices. However, the page limit and double-spacing requirements do apply to all of Part III, the application narrative, including all text in charts, tables, figures, graphs, and screen shots.

We will reject your application if you exceed the page limit in the application narrative section, or if you apply standards other than those specified in this notice and the application package.

Deadline for Transmittal of Applications: March 6, 2017.

Applications for grants under this competition must be submitted electronically using the Grants.gov Apply site (Grants.gov). For information (including dates and times) about how to submit your application electronically, or in paper format by mail or hand delivery if you qualify for an exception to the electronic submission requirement, please refer to Other Submission Requirements in section IV of this notice.

We do not consider an application that does not comply with the deadline requirements.

Individuals with disabilities who need an accommodation or auxiliary aid in connection with the application process should contact the person listed under FOR FURTHER INFORMATION CONTACT in section VII of this notice. If the Department provides an accommodation or auxiliary aid to an individual with a disability in connection with the application process, the individual’s application remains subject to all other requirements and limitations in this notice.

4. Intergovernmental Review: This competition is subject to Executive Order 12372 and the regulations in 34 CFR part 79. Information about Intergovernmental Review of Federal Programs under Executive Order 12372 is in the application package for this competition.

5. Funding Restrictions: We reference regulations outlining funding restrictions in the Applicable Regulations section of this notice.

6. Data Universal Numbering System Number, Taxpayer Identification Number, and System for Award Management: To do business with the Department of Education, you must—
   a. Have a Data Universal Numbering System (DUNS) number and a Taxpayer Identification Number (TIN);
   b. Register both your DUNS number and TIN with the System for Award Management (SAM), the Government’s primary registrant database;
   c. Provide your DUNS number and TIN on your application; and
   d. Maintain an active SAM registration with current information while your application is under review by the Department and, if you are awarded a grant, during the project period.

You can obtain a DUNS number from Dun and Bradstreet at the following Web site: http://fedgov.dnb.com/webform. A DUNS number can be created within one to two business days.

If you are a corporation entity, agency, institution, or organization, you can obtain a TIN from the Internal Revenue Service. If you are an individual, you can obtain a TIN from the Internal Revenue Service or the Social Security Administration. If you need a new TIN, please allow two to five weeks for your TIN to become active.

The SAM registration process can take approximately seven business days, but may take upwards of several weeks, depending on the completeness and accuracy of the data you enter into the SAM database. Thus, if you think you might want to apply for Federal financial assistance under a program administered by the Department, please allow sufficient time to obtain and register your DUNS number and TIN. We strongly recommend that you register early.

Note: Once your SAM registration is active, it may be 24 to 48 hours before you can access the information in, and submit an application through, Grants.gov.

If you are currently registered with SAM, you may not need to make any changes. However, please make certain that the TIN associated with your DUNS number is correct. Also note that you will need to update your registration annually. This may take three or more business days.

Information about SAM is available at www.SAM.gov. To further assist you with obtaining and registering your DUNS number and TIN in SAM or updating your existing SAM account, we have prepared a SAM.gov Tip Sheet, which you can find at: www2.ed.gov/fund/grant/apply/sam-faqs.html.

In addition, if you are submitting your application via Grants.gov, you must (1) be designated by your organization as an Authorized Organization Representative (AOR); and (2) register yourself with Grants.gov as an AOR. Details on these steps are outlined at the following Grants.gov Web page: www.grants.gov/web/grants/register.html.

7. Other Submission Requirements: Applications for grants under this
competition must be submitted electronically unless you qualify for an exception to this requirement in accordance with the instructions in this section.

a. Electronic Submission of Applications.

Applications for grants under the Interdisciplinary Preparation in Special Education, Early Intervention, and Related Services for Personnel Serving Children with Disabilities who have High-Intensity Needs competition, CFDA number 84.325K, must be submitted electronically using the Governmentwide Grants.gov Apply site at www.Grants.gov. Through this site, you will be able to download a copy of the application package, complete it offline, and then upload and submit your application. You may not email an electronic copy of a grant application to us.

We will reject your application if you submit it in paper format unless, as described elsewhere in this section, you qualify for one of the exceptions to the electronic submission requirement and submit, no later than two weeks before the application deadline date, a written statement to the Department that you qualify for one of these exceptions. Further information regarding calculation of the date that is two weeks before the application deadline date is provided later in this section under Exception to Electronic Submission Requirement.

You may access the electronic grant application for the Interdisciplinary Preparation in Special Education, Early Intervention, and Related Services for Personnel Serving Children with Disabilities who have High-Intensity Needs competition at www.Grants.gov. You must search for the downloadable application package for this competition by the CFDA number. Do not include the CFDA number’s alpha suffix in your search (e.g., search for 84.325, not 84.325K).

Please note the following:

• When you enter the Grants.gov site, you will find information about submitting an application electronically through the site, as well as the hours of operation.

• Applications received by Grants.gov are date and time stamped. Your application must be fully uploaded and submitted and must be date and time stamped by the Grants.gov system no later than 4:30:00 p.m., Washington, DC time, on the application deadline date. Except as otherwise noted in this section, we will not accept your application if it is received—that is, date and time stamped by the Grants.gov system—after 4:30:00 p.m., Washington, DC time, on the application deadline date. We do not consider an application that does not comply with the deadline requirements. When we retrieve your application from Grants.gov, we will notify you if we are rejecting your application because it was date and time stamped after the Grants.gov system after 4:30:00 p.m., Washington, DC time, on the application deadline date.

• The amount of time it can take to upload an application will vary depending on a variety of factors, including the size of the application and the speed of your Internet connection. Therefore, we strongly recommend that you do not wait until the application deadline date to begin the submission process through Grants.gov.

• You should review and follow the Education Submission Procedures for submitting an application through Grants.gov that are included in the application package for this competition to ensure that you submit your application in a manner to the Grants.gov system. You can also find the Education Submission Procedures pertaining to Grants.gov under News and Events on the Department’s G5 system home page at www.G5.gov. In addition, for specific guidance and procedures for submitting an application through Grants.gov, please refer to the Grants.gov Web site at: www.grants.gov/web/grants/applicants/apply-for-grants.html.

• You will not receive additional point value because you submit your application in electronic format, nor will we penalize you if you qualify for an exception to the electronic submission requirement, as described elsewhere in this section, and submit your application in paper format.

• You must submit all documents electronically, including all information you typically provide on the following forms: The Application for Federal Assistance (SF 424), the Department of Education Supplemental Information for SF 424, Budget Information—Non-Construction Programs (ED 524), and all necessary assurances and certifications.

• You must upload any narrative sections and all other attachments to your application as files in a read-only, non-modifiable Portable Document Format (PDF). Do not upload an interactive or fillable PDF file. If you upload a file type other than a read-only, non-modifiable PDF (e.g., Word, Excel, WordPerfect, etc.) or submit a password-protected file, we will not review that material. Please note that this could disqualify your application not being considered for funding because the material in question—for example, the application narrative—is critical to a meaningful review of your proposal. For that reason it is important to allow yourself adequate time to upload all material as PDF files. The Department will not convert material from other formats to PDF. Additional, detailed information on how to attach files is in the application instructions.

• Your electronic application must comply with any page-limit requirements described in this notice.

• After you electronically submit your application, you will receive from Grants.gov an automatic notification of receipt that contains a Grants.gov tracking number. This notification indicates receipt by Grants.gov only, not receipt by the Department. Grants.gov will also notify you automatically by email if your application met all the Grants.gov validation requirements or if there were any errors (such as submission of your application by someone other than a registered Authorized Organization Representative, or inclusion of an attachment with a file name that contains special characters). You will be given an opportunity to correct any errors and resubmit, but you must still meet the deadline for submission of applications.

Once your application is successfully validated by Grants.gov, the Department will retrieve your application from Grants.gov and send you an email with a unique PR/Award number for your application.

These emails do not mean that your application is without any disqualifying errors. While your application may have been successfully validated by Grants.gov, it must also meet the Department’s application requirements as specified in this notice and in the application instructions. Disqualifying errors could include, for instance, failure to upload attachments in a read-only, non-modifiable PDF; failure to submit a required part of the application; or failure to meet applicant eligibility requirements. It is your responsibility to ensure that your submitted application has met all of the Department’s requirements.

• We may request that you provide us original signatures on forms at a later date.

Application Deadline Date Extension in Case of Technical Issues With the Grants.gov System: If you are experiencing problems submitting your application through Grants.gov, please contact the Grants.gov Support Desk, toll free, at 1-800-518-4728. You must obtain a Grants.gov Support Desk Case Number and must keep a record of it.
If you are prevented from electronically submitting your application on the application deadline date because of technical problems with the Grants.gov system, we will grant you an extension until 4:30:00 p.m., Washington, DC time, the following business day to enable you to transmit your application electronically or by hand delivery. You also may mail your application by following the mailing instructions described elsewhere in this notice.

If you submit an application after 4:30:00 p.m., Washington, DC time, on the application deadline date, please contact the person listed under FOR FURTHER INFORMATION CONTACT in section VII of this notice and provide an explanation of the technical problem you experienced with Grants.gov, along with the Grants.gov Support Desk Case Number. We will accept your application if we can confirm that a technical problem occurred with the Grants.gov system and that the problem affected your ability to submit your application by 4:30:00 p.m., Washington, DC time, on the application deadline date. We will contact you after we determine whether your application will be accepted.

Note: The extensions to which we refer in this section apply only to the unavailability of, or technical problems with, the Grants.gov system. We will not grant you an extension if you failed to fully register to submit your application electronically or by hand delivery. You also may mail your application by following the mailing instructions described elsewhere in this notice.

Exception to Electronic Submission Requirement: You qualify for an exception to the electronic submission requirement, and may submit your application in paper format, if you are unable to submit an application through the Grants.gov system because—

- You do not have access to the Internet; or
- You do not have the capacity to upload large documents to the Grants.gov system; and
- No later than two weeks before the application deadline date (14 calendar days or, if the fourteenth calendar day before the application deadline date falls on a Federal holiday, the next business day following the Federal holiday), you mail or fax your written statement to the Department, explaining which of the two grounds for an exception prevents you from using the Internet to submit your application.

If you mail your written statement to the Department, it must be postmarked no later than two weeks before the application deadline date. If you fax your written statement to the Department, we must receive the faxed statement no later than two weeks before the application deadline date.

Address and mail or fax your statement to: Maryann McDermott, U.S. Department of Education, 400 Maryland Avenue SW., Room 5144, Potomac Center Plaza, Washington, DC 20202–5108. FAX: (202) 245–7439.

Your paper application must be submitted in accordance with the mail or hand-delivery instructions described in this notice.

Submission of Paper Applications by Mail

If you qualify for an exception to the electronic submission requirement, you may mail (through the U.S. Postal Service or a commercial carrier) your application to the Department. You must mail the original and two copies of your application, on or before the application deadline date, to the Department at the following address: U.S. Department of Education, Application Control Center, Attention: (CFDA Number 84.325K), LBJ Basement Level 1, 400 Maryland Avenue SW., Washington, DC 20202–4260.

You must show proof of mailing consisting of one of the following:

1. A legibly dated U.S. Postal Service postmark.
2. A legible mail receipt with the date of mailing stamped by the U.S. Postal Service.
3. A dated shipping label, invoice, or receipt from a commercial carrier.
4. Any other proof of mailing acceptable to the Secretary of the U.S. Department of Education.

If you mail your application through the U.S. Postal Service, we do not accept either of the following as proof of mailing:

1. A private metered postmark.
2. A mail receipt that is not dated by the U.S. Postal Service.

Note: The U.S. Postal Service does not uniformly provide a dated postmark. Before relying on this method, you should check with your local post office. We will not consider applications postmarked after the application deadline date.

Submission of Paper Applications by Hand Delivery

If you qualify for an exception to the electronic submission requirement, you (or a courier service) may deliver your paper application to the Department by hand. You must deliver the original and two copies of your application by hand, on or before the application deadline date, to the Department at the following address: U.S. Department of Education, Application Control Center, Attention: (CFDA Number 84.325K), 550 12th Street SW., Room 7039, Potomac Center Plaza, Washington, DC 20202–4260.

The Application Control Center accepts hand deliveries daily between 8:00 a.m. and 4:30:00 p.m., Washington, DC time, except Saturdays, Sundays, and Federal holidays.

Note for Mail or Hand Delivery of Paper Applications: If you mail or hand deliver your application to the Department—

1. You must indicate on the envelope and—if not provided by the Department—in Item 11 of the SF 424 the CFDA number, including suffix letter, if any, of the competition under which you are submitting your application; and
2. The Application Control Center will not notify you of receipt of your grant application. If you do not receive this notification within 15 business days from the application deadline date, you should call the U.S. Department of Education Application Control Center at (202) 245–6288.

V. Application Review Information

1. Selection Criteria: The selection criteria for this competition are from 34 CFR 75.210 and are listed in the application package.

2. Review and Selection Process: We remind potential applicants that in reviewing applications in any discretionary grant competition, the Secretary may consider, under 34 CFR 75.217(d)(3), the past performance of the applicant in carrying out a previous award, such as the applicant’s use of funds, achievement of project objectives, and compliance with grant conditions. The Secretary may also consider whether the applicant failed to submit a timely performance report or submitted a report of unacceptable quality.

In addition, in making a competitive grant award, the Secretary requires various assurances, including those applicable to Federal civil rights laws that prohibit discrimination in programs or activities receiving Federal financial assistance from the Department of Education (34 CFR 100.4, 104.5, 106.4, 108.8, and 110.23).

3. Additional Review and Selection Process Factors: In the past, the Department has had difficulty finding peer reviewers for certain competitions because so many individuals who are eligible to serve as peer reviewers have conflicts of interest. The standing panel requirements under section 682(b) of IDEA also have placed additional constraints on the availability of reviewers. Therefore, the Department has determined that for some discretionary grant competitions, applications may be separated into two or more groups and ranked and selected...
for funding within specific groups. This procedure will make it easier for the Department to find peer reviewers by ensuring that greater numbers of individuals who are eligible to serve as reviewers for any particular group of applicants will not have conflicts of interest. It also will increase the quality, independence, and fairness of the review process, while permitting panel members to review applications under discretionary grant competitions for which they also have submitted applications.

4. Risk Assessment and Special Conditions: Consistent with 2 CFR 200.205, before awarding grants under this competition the Department conducts a review of the risks posed by applicants. Under 2 CFR 3474.10, the Secretary may impose special conditions and, in appropriate circumstances, high risk conditions on a grant if the applicant or grantee is not financially stable; has a history of unsatisfactory performance; has a financial or other management system that does not meet the standards in 2 CFR part 200, subpart D; has not fulfilled the conditions of a prior grant; or is otherwise not responsible.

5. Integrity and Performance System: If you are selected under this competition to receive an award that over the course of the project period may exceed the simplified acquisition threshold (currently $150,000), under 2 CFR 200.205(a)(2), we must make a judgment about your integrity, business ethics, and record of performance under Federal awards—that is, the risk posed by you as an applicant—before we make an award. In doing so, we must consider any information about you that is in the integrity and performance system (currently referred to as the Federal Awardee Performance and Integrity Information System (FAPIIS)), accessible through SAM. You may review and comment on any information about yourself that a Federal agency previously entered and that is currently in FAPIIS.

Please note that, if the total value of your Federal or grant-related cooperative agreements, and procurement contracts from the Federal government exceeds $10,000,000, the reporting requirements in 2 CFR part 200, Appendix XII, require you to report certain integrity information to FAPIIS semiannually. Please review the requirements in 2 CFR part 200, Appendix XII, if this grant plus all the other Federal funds you receive exceed $10,000,000.

VI. Award Administration Information

1. Award Notices: If your application is successful, we notify your U.S.

Representative and U.S. Senators and send you a Grant Award Notification (GAN); or we may send you an email containing a link to access an electronic version of your GAN. We may notify you informally, also.

If your application is not evaluated or not selected for funding, we notify you.

2. Administrative and National Policy Requirements: We identify administrative and national policy requirements in the application package and reference these and other requirements in the Applicable Regulations section of this notice.

We reference the regulations outlining the terms and conditions of an award in the Applicable Regulations section of this notice and include these and other specific conditions in the GAN. The GAN also incorporates your approved application as part of your binding commitments under the grant.

3. Reporting: (a) If you apply for a grant under this competition, you must ensure that you have in place the necessary processes and systems to comply with the reporting requirements in 2 CFR part 170 should you receive funding under the competition. This does not apply if you have an exception under 2 CFR 170.110(b).

(b) At the end of your project period, you must submit a final performance report, including financial information, as directed by the Secretary. If you receive a multiyear award, you must submit an annual performance report that provides the most current performance and financial expenditure information as directed by the Secretary under 34 CFR 75.118. The Secretary may also require more frequent performance reports under 34 CFR 75.720(c). For specific requirements on reporting, please go to www.ed.gov/fund/grant/apply/appforms/appforms.html.

4. Performance Measures: Under GPRA, the Department has established a set of performance measures, including long-term measures, that are designed to yield information on various aspects of the effectiveness and quality of the Personnel Development to Improve Services and Results for Children with Disabilities program. These measures include: (1) The percentage of preparation programs that incorporate scientifically or evidence-based practices into their curricula; (2) the percentage of scholars completing preparation programs who are knowledgeable and skilled in evidence-based practices for children with disabilities; (3) the percentage of scholars who exit preparation programs prior to completion due to poor academic performance; (4) the percentage of scholars completing preparation programs who are working in the area(s) in which they were prepared upon program completion; and (5) the Federal cost per scholar who completed the preparation program.

In addition, the Department will gather information on the following outcome measures: (1) The percentage of scholars who completed the preparation program and are employed in high-need districts; (2) the percentage of scholars who completed the preparation program and are employed in the field of special education for at least two years; and (3) the percentage of scholars who completed the preparation program and who are rated effective by their employers.

Grantees may be asked to participate in assessing and providing information on these aspects of program quality.

5. Continuation Awards: In making a continuation award under 34 CFR 75.253, the Secretary considers, among other things: Whether a grantee has made substantial progress in implementing the goals and objectives of the project; whether the grantee has expended funds in a manner that is consistent with its approved application and budget; and, if the Secretary has established performance measurement requirements, the performance targets in the grantee’s approved application.

In making a continuation award, the Secretary also considers whether the grantee is operating in compliance with the assurances in its approved application, including those applicable to Federal civil rights laws that prohibit discrimination in programs or activities receiving Federal financial assistance from the Department (34 CFR 100.4, 104.5, 106.4, 108.8, and 110.23).

DEPARTMENT OF EDUCATION

[Docket No.: ED–2016–ICCD–0115]

Agency Information Collection Activities; Submission to the Office of Management and Budget for Review and Approval; Comment Request; Lender’s Request for Payment of Interest and Special Allowance—LaRS

AGENCY: Federal Student Aid (FSA), Department of Education (ED).

ACTION: Notice.

SUMMARY: In accordance with the Paperwork Reduction Act of 1995, ED is proposing an extension of an existing information collection.

DATES: Interested persons are invited to submit comments on or before February 2, 2017.

ADDRESSES: To access and review all the documents related to the information collection listed in this notice, please use http://www.regulations.gov by searching the Docket ID number ED–2016–ICCD–0115. Comments submitted in response to this notice should be submitted electronically through the Federal eRulemaking Portal at http://www.regulations.gov by selecting the Docket ID number or via postal mail, commercial delivery, or hand delivery. Please note that comments submitted by fax or email and those submitted after the comment period will not be accepted. Written requests for information or comments submitted by postal mail or delivery should be addressed to the Director of the Information Collection Clearance Division, U.S. Department of Education, 400 Maryland Avenue SW., LBJ, Room 224–84, Washington, DC 20202–4537.

FOR FURTHER INFORMATION CONTACT: For specific questions related to collection activities, please contact Beth Grebeldinger, 202–377–4018.

SUPPLEMENTARY INFORMATION: The Department of Education (ED), in accordance with the Paperwork Reduction Act of 1995 (PRA) (44 U.S.C. 3506(c)(2)(A)), provides the general public and Federal agencies with an opportunity to comment on proposed, revised, and continuing collections of information. This helps the Department assess the impact of its information collection requirements and minimize the public’s reporting burden. It also helps the public understand the Department’s information collection requirements and provide the requested data in the desired format. ED is soliciting comments on the proposed information collection request (ICR) that is described below. The Department of Education is especially interested in public comment addressing the following issues: (1) Is this collection necessary to the proper functions of the Department; (2) will this information be processed and used in a timely manner; (3) is the estimate of burden accurate; (4) how might the Department enhance the quality, utility, and clarity of the information to be collected; and (5) how might the Department minimize the burden of this collection on the respondents, including through the use of information technology. Please note that written comments received in response to this notice will be considered public records.

Title of Collection: Lender’s Request for Payment of Interest and Special Allowance–LaRS

OMB Control Number: 1845–0013.

Type of Review: An extension of an existing information collection.

Respondents/Affected Public: Private Sector.

Total Estimated Number of Annual Responses: 7,350.

Total Estimated Number of Annual Burden Hours: 14,333.

Abstract: The Department of Education (the Department) is submitting the Lender’s Interest and Special Allowance Request & Report, ED Form 799, for approval. The information collected on the ED Form 799 is needed to pay interest and special allowance to holders of Federal Family Education Loans, for internal financial reporting, budgetary projections, and for audit and lender reviews by the Department, Servicers, External Auditors and General Accounting Office (GAO).

The legal authority for collecting this information is Title IV, Part B of the Higher Education Act of 1965, as amended by the Higher Education Reconciliation Act of 2005 (“the HERA”), (Pub. L. 109–171). The Department is requesting the continual approval for regulatory sections 682.304 and 682.414.

Kate Mullan,

Acting Director, Information Collection Clearance Division, Office of the Chief Privacy Officer, Office of Management.

BILLING CODE 4000–01–P

DEPARTMENT OF EDUCATION

National Advisory Committee on Institutional Quality and Integrity

AGENCY: National Advisory Committee on Institutional Quality and Integrity, U.S. Department of Education.

ACTION: Notice of membership.

SUMMARY: This notice lists the members of the National Advisory Committee on Institutional Quality and Integrity (NACIQI). This notice is required under Section 114(e)(1) of the Higher Education Act of 1965, as amended (HEA).

SUPPLEMENTARY INFORMATION: NACIQI’s Statutory Authority and Functions

NACIQI is established under Section 114 of the HEA, and is composed of 18 members appointed—

(A) On the basis of the individuals’ experience, integrity, impartiality, and good judgment;

(B) From among individuals who are representatives of, or knowledgeable concerning, education and training beyond secondary education, representing all sectors and types of institutions of higher education; and,

(C) On the basis of the individuals’ technical qualifications, professional standing, and demonstrated knowledge in the fields of accreditation and administration of higher education.

NACIQI meets at least twice a year and advises the Secretary of Education with respect to:

• The establishment and enforcement of the standards of accrediting agencies or associations under subpart 2 of part G of Title IV of the HEA;
• The recognition of specific accrediting agencies or associations;
• The preparation and publication of the list of nationally recognized accrediting agencies and associations;
• The eligibility and certification process for institutions of higher education under Title IV of the HEA and part C of subchapter I of chapter 34 of Title 42, together with recommendations for improvements in such process;
• The relationship between (1) accreditation of institutions of higher education and the certification and eligibility of such institutions, and (2) State licensing responsibilities with respect to such institutions; and
• Any other advisory functions relating to accreditation and institutional eligibility that the Secretary of Education may prescribe by regulation.

What are the terms of office for the committee members?

The term of office of each member is six years. Any member appointed to fill a vacancy occurring prior to the expiration of the term for which the member’s predecessor was appointed shall be appointed for the remainder of such term.

Who are the current members of the committee?

The current members of the NACIQI are:

Members Appointed by the Secretary of Education With Terms Expiring September 30, 2019

• Simon J. Boehme (Student Member), Independent Consultant, San Francisco, California.
• Roberta L. Derlin, Ph.D., Associate Provost Emeritus, New Mexico State University, Albuquerque, New Mexico.
• John Etchemendy, Ph.D., Provost, Stanford University, Stanford, California.
• Susan D. Phillips, Ph.D., Former Provost and Vice President for Academic Affairs and Former Vice President for Strategic Partnerships, University at Albany/SUNY, Albany, New York.
• Frank H. Wu, J.D., Distinguished Professor, University of California Hastings College of Law, San Francisco, California.
• Federico Zaragoza, Ph.D., Vice Chancellor for Economic and Workforce Development, Alamo Colleges, San Antonio, Texas.

Members Appointed by the Speaker of the House of Representatives With Terms Expiring September 30, 2020

• George T. French, Jr., Ph.D., President, Miles College, Fairffield, Alabama.
• Arthur E. Keiser, Ph.D., Chancellor and C.E.O., Keiser University, Fort Lauderdale, Florida.
• Arthur J. Rothkopf, J.D., President Emeritus, Lafayette College, Washington, DC.
• Ralph Wolff, J.D., Independent Policy Consultant, Oakland, California.
• Vacant.

Members Appointed by the President Pro Tempore of the Senate With Terms Expiring September 30, 2022

• Jill Derby, Ph.D., Senior Consultant, Association of Governing Boards of Universities and Colleges, Garlandville, Nevada.
• Paul J. LeBlanc, Ph.D., President, Southern New Hampshire University, Manchester, New Hampshire.
• Anne D. Neal, J.D., Senior Fellow, American Council of Trustees and Alumni, Washington, DC.
• Richard F. O’Donnell, Founder and CEO, Skills Fund, Austin, Texas.
• Steven Van Ausdle, Ph.D., President Emeritus, Walla Walla Community College, Walla Walla, Washington.
• Vacant.

BILLING CODE P

DEPARTMENT OF EDUCATION

[Docket No.: ED–2016–ICCD–0116]

Agency Information Collection Activities; Submission to the Office of Management and Budget for Review and Approval; Comment Request; Student Assistance General Provisions—Satisfactory Academic Progress Policy

AGENCY: Federal Student Aid (FSA), Department of Education (ED).

ACTION: Notice.

SUMMARY: In accordance with the Paperwork Reduction Act of 1995 (44 U.S.C. chapter 3501 et seq.), ED is proposing a revision of an existing information collection.

DATES: Interested persons are invited to submit comments on or before February 2, 2017.

ADDRESSES: To access and review all the documents related to the information collection listed in this notice, please use http://www.regulations.gov by searching the Docket ID number ED–2016–ICCD–0116. Comments submitted in response to this notice should be submitted electronically through the Federal eRulemaking Portal at http://www.regulations.gov by selecting the Docket ID number or via postal mail, commercial delivery, or hand delivery. Please note that comments submitted by fax or email and those submitted after the comment period will not be accepted. Written requests for information or comments submitted by postal mail or delivery should be addressed to the Director of the Information Collection Clearance Division, U.S. Department of Education, 400 Maryland Avenue SW., LBJ, Room 224–24, Washington, DC 20202–4537.

FOR FURTHER INFORMATION CONTACT: For specific questions related to collection activities, please contact Beth Grebeldinger, 202–377–4018.

SUPPLEMENTARY INFORMATION: The Department of Education (ED), in accordance with the Paperwork Reduction Act of 1995 (PRA) (44 U.S.C. 3506(c)(2)(A)), provides the general public and Federal agencies with an
opportunity to comment on proposed, revised, and continuing collections of information. This helps the Department assess the impact of its information collection requirements and minimize the public’s reporting burden. It also helps the public understand the Department’s information collection requirements and provide the requested data in the desired format. ED is soliciting comments on the proposed information collection request (ICR) that is described below. The Department of Education is especially interested in public comment addressing the following issues: (1) Is this collection necessary to the proper functions of the Department; (2) will this information be processed and used in a timely manner; (3) is the estimate of burden accurate; (4) how might the Department enhance the quality, utility, and clarity of the information to be collected; and (5) how might the Department minimize the burden of this collection on the respondents, including through the use of information technology. Please note that written comments received in response to this notice will be considered public records.

Title of Collection: Student Assistance General Provisions—Satisfactory Academic Progress Policy.

OMB Control Number: 1845–0108.

Type of Review: A revision of an existing information collection.

Respondents/Affected Public: State, Local, and Tribal Governments; Individuals and Households; Private Sector.

Total Estimated Number of Annual Responses: 33,543,341.

Total Estimated Number of Annual Burden Hours: 1,470,256.

Abstract: The Department of Education (the Department) is making this request for an extension of the current approval of the policies and procedures for determining satisfactory academic progress (SAP) as required in Section 484 of the Higher Education Act of 1965, as amended (HEA). These regulations identify the policies and procedures to ensure that students are making satisfactory academic progress in their program at a pace and a level to receive or continue to receive Title IV, HEA program funds. If there is lapse in progress, the policy must identify how the student will be notified and what steps are available to a student not making satisfactory academic progress toward the completion of their program, and under what conditions a student who is not making satisfactory academic progress may continue to receive Title IV, HEA program funds.

Kate Mullan,

Acting Director, Information Collection Clearance Division, Office of the Chief Privacy Officer, Office of Management.

DEPARTMENT OF ENERGY

Fusion Energy Sciences Advisory Committee (FESAC)

AGENCY: Office of Science, Department of Energy.

ACTION: Notice of open meeting.

SUMMARY: This notice announces a meeting of the Fusion Energy Sciences Advisory Committee. The Federal Advisory Committee Act requires that public notice of these meetings be announced in the Federal Register.

DATES: February 1, 2017 8:30 a.m. to 5:00 p.m., February 2, 2017 8:30 a.m. to 12:00 noon.

ADDRESSES: Gaithersburg Marriott Washingtonian Center, 9751 Washingtonian Boulevard, Gaithersburg, MD 20878.

SUPPLEMENTARY INFORMATION:

Purpose of the Committee: To provide advice on a continuing basis to the Director, Office of Science of the Department of Energy, on the many complex scientific and technical issues that arise in the development and implementation of the fusion energy sciences program.

Tentative Agenda Items
• DOE/SC Perspective
• FES Perspective
• Update on the ITER Project
• Status of the NSTX–U Project
• Update on the Wendelstein 7–X Project
• Public Comment
• Adjourn

Note: Remote attendance of the FESAC meeting will be possible via Zoom. Instructions will be posted on the FESAC Web site (http://science.energy.gov/fes/fesac/meetings/) prior to the meeting and can also be obtained by contacting Dr. Samuel J. Barish by email sam.barish@science.doe.gov or by phone (301) 903–2917.

Public Participation: The meeting is open to the public. If you would like to file a written statement with the Committee, you may do so either before or after the meeting. If you would like to make an oral statement regarding any of the items on the agenda, you should contact Dr. Samuel J. Barish by fax at (301) 903–1233 or email at sam.barish@science.doe.gov. Reasonable provision will be made to include the scheduled oral statements during the Public Comments time on the agenda. The Chairperson of the Committee will conduct the meeting to facilitate the orderly conduct of business. Public comment will follow the 10-minute rule.

Minutes: The minutes of the meeting will be available for public review and copying within 30 days on the Fusion Energy Sciences Advisory Committee Web site at http://science.energy.gov/fes/fesac/.

Issued at Washington, DC, on December 23, 2016.

LaTanya R. Butler,

Deputy Committee Management Officer.

ENVIRONMENTAL PROTECTION AGENCY

Pesticide Product Registrations; Receipt of Applications for New Active Ingredients

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: EPA has received applications to register pesticide products containing active ingredients not included in any currently registered pesticide products. Pursuant to the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA), EPA is hereby providing notice of receipt and opportunity to comment on these applications.

DATES: Comments must be received on or before February 2, 2017.

ADDRESSES: Submit your comments, identified by the Docket Identification (ID) Number and the File Symbol of interest as shown in the body of this document, by one of the following methods:

• Federal eRulemaking Portal: http://www.regulations.gov. Follow the online instructions for submitting comments. Do not submit electronically any information you consider to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute.

• Mail: OPP Docket, Environmental Protection Agency Docket Center (EPA/DC), (28221T), 1200 Pennsylvania Ave. NW., Washington, DC 20460–0001.

• Hand Delivery: To make special arrangements for hand delivery or delivery of boxed information, please follow the instructions at http://www.epa.gov/dockets/contacts.html. Additional instructions on commenting or visiting the docket, along with more information about dockets generally, is available at http://www.epa.gov/dockets/dockets.

FOR FURTHER INFORMATION CONTACT: Robert McNally, Biopesticides and Pollution Prevention Division (7511P), Office of Pesticide Programs, Environmental Protection Agency, 1200 Pennsylvania Ave. NW., Washington, DC 20460–0001; main telephone number: (703) 305–7000; email address: BPDPFRNotices@epa.gov.

SUPPLEMENTARY INFORMATION:

I. General Information

A. Does this action apply to me?

You may be potentially affected by this action if you are an agricultural producer, food manufacturer, or pesticide manufacturer. The following list of North American Industrial Classification System (NAICS) codes is not intended to be exhaustive, but rather provides a guide to help readers determine whether this document applies to them. Potentially affected entities may include:

• Crop production (NAICS code 111).

• Animal production (NAICS code 112).

• Food manufacturing (NAICS code 311).

• Pesticide manufacturing (NAICS code 32532).

If you have any questions regarding the applicability of this action to a particular entity, consult the person listed under FOR FURTHER INFORMATION CONTACT.

B. What should I consider as I prepare my comments for EPA?

1. Submitting CBI. Do not submit this information to EPA through regulations.gov or email. Clearly mark the part or all of the information that you claim to be CBI. For CBI information in a disk or CD–ROM that you mail to EPA, mark the outside of the disk or CD–ROM as CBI and then identify electronically within the disk or CD–ROM the specific information that is claimed as CBI. In addition to one complete version of the comment that includes information claimed as CBI, a copy of the comment that does not contain the information claimed as CBI must be submitted for inclusion in the public docket. Information so marked will not be disclosed except in accordance with procedures set forth in 40 CFR part 2.

2. Tips for preparing your comments. When preparing and submitting your comments, see the commenting tips at http://www.epa.gov/dockets/comments.html.

3. Environmental justice. EPA seeks to achieve environmental justice, the fair treatment and meaningful involvement of any group, including minority and/or low-income populations, in the development, implementation, and enforcement of environmental laws, regulations, and policies. To help address potential environmental justice issues, EPA seeks information on any groups or segments of the population who, as a result of their location, cultural practices, or other factors, may have atypical or disproportionately high and adverse human health impacts or environmental effects from exposure to the pesticides discussed in this document, compared to the general population.

II. Registration Applications

EPA has received applications to register pesticide products containing active ingredients not included in any currently registered pesticide products. Pursuant to the provisions of FIFRA section 3(c)(4) (7 U.S.C. 136a(c)(4)), EPA is hereby providing notice of receipt and opportunity to comment on these applications. Notice of receipt of these applications does not imply a decision by EPA on these applications. For actions being evaluated under EPA’s public participation process for registration actions, there will be an additional opportunity for public comment on the proposed decisions. Please see EPA’s public participation Web site for additional information on this process (http://www2.epa.gov/pesticide-registration/public-participation-process-registration-actions). EPA received the following applications to register pesticide products containing active ingredients not included in any currently registered pesticide products:

   Applicant: BASF Corporation, 26 Davis Dr., P.O. Box 13528, Research Triangle Park, NC 27709. Product Name: Velondis Plus. Active Ingredients: Fungicide—Bacillus subtilis strain BU1814 at 1.706% and Bacillus amyloliquefaciens strain MBI 600 at 3.132%. Proposed Use: Seed treatment.

   Applicant: BASF Corporation, 26 Davis Dr., P.O. Box 13528, Research Triangle Park, NC 27709. Product Name: Velondis Flex. Active Ingredient: Fungicide—Bacillus subtilis strain BU1814 at 100%. Proposed Use: Manufacturing use.

   Applicant: BASF Corporation, 26 Davis Dr., P.O. Box 13528, Research Triangle Park, NC 27709. Product Name: Velondis Extra. Active Ingredients: Fungicide—Bacillus subtilis strain BU1814 at 0.213% and Bacillus amyloliquefaciens strain MBI 600 at 3.915%. Proposed Use: Seed treatment.

Authority: 7 U.S.C. 136 et seq.
environmental effects from exposure to the pesticides discussed in this document, compared to the general population.

II. Registration Applications

EPA has received applications to register new uses for pesticide products containing currently registered active ingredients. Pursuant to the provisions of FIFRA section 3(c)(4) (7 U.S.C. 136(a)(4)), EPA is hereby providing notice of receipt and opportunity for comment on these applications. Notice of receipt of these applications does not imply a decision by EPA on these applications. For actions being evaluated under EPA’s public participation process for registration actions, there will be an additional opportunity for public comment on the proposed decisions. Please see EPA’s public participation Web site for additional information on this process (http://www2.epa.gov/pesticide-registration/public-participation-process-registration-actions). EPA received the following applications to register new uses for pesticide products containing currently registered active ingredients:

1. EPA Registration Numbers: 100–739, 100–1262, 100–1312, 100–1313, 100–1317, and 100–1554. Docket ID Number: EPA–HQ–OPP–2016–0254. Applicant: Syngenta Crop Protection, LLC, P.O. Box 18300, Greensboro, NC 27419. Active Ingredient: Dinofenoconazole. Product Type: Fungicide. Proposed Use: Cranberry; Fruit, small, vine climbing, except fuzzy kiwifruit, subgroup 13–07F; Guava; Kohlrabi; Papaya; Crop group conversion from Brassica, leafy greens, subgroup 5B to Brassica, leafy greens, subgroup 4–16B; and Crop group conversion from Brassica, head and stem, subgroup 5A to Vegetable, fruiting, crop group 8–10; and Crop group expansion from Grape to Fruit, small, vine climbing, except fuzzy kiwifruit, subgroup 13–07F.

3. EPA Registration Numbers: 59639–139, 59639–140, and 59639–141. Docket ID Number: EPA–HQ–OPP–2016–0257. Applicant: Valent USA Corporation, P.O. Box 8025, Walnut Creek, CA 94596. Active Ingredient: Fluopicolide. Product Type: Fungicide. Proposed Use: Basil; Beans, succulent; Fruit, citrus, crop group 10–10; Hop, dried cones; Crop group conversion from Vegetable, fruiting, crop group 8 to Vegetable, fruiting, crop group 8–10; and Crop group expansion from Grape to Fruit, small, vine climbing, except fuzzy kiwifruit, subgroup 13–07F.

Authority: 7 U.S.C. 136 et seq.

Dated: December 20, 2016.

Robert McNally,
Director, Biopesticides and Pollution Prevention Division, Office of Pesticide Programs.

BILLING CODE 4560–50–P

ENVIRONMENTAL PROTECTION AGENCY

Agency Information Collection Activities; Proposed Renewal of an Existing Collection (EPA ICR No. 1246.13); Comment Request

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: In compliance with the Paperwork Reduction Act (PRA), this document announces that EPA is planning to submit an Information Collection Request (ICR) to the Office of Management and Budget (OMB). The ICR, entitled: “Reporting and Recordkeeping for Asbestos Abatement Worker Protection” and identified by EPA ICR No. 1246.13 and OMB Control No. 2070–0072, represents the renewal of an existing ICR that is scheduled to expire on August 31, 2017. Before submitting the ICR to OMB for review and approval, EPA is soliciting comments on specific aspects of the proposed information collection that is summarized in this document. The ICR and accompanying material are available in the docket for public review and comment.

DATES: Comments must be received on or before March 6, 2017.

ADDRESSES: Submit your comments, identified by docket identification (ID) number EPA–HQ–OPPT–2016–0264, by one of the following methods:

• Federal eRulemaking Portal: http://www.regulations.gov. Follow the online instructions for submitting comments. Do not submit electronically any information you consider to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute.

• Hand Delivery: To make special arrangements for hand delivery or delivery of boxed information, please follow the instructions at http://www.epa.gov/dockets/contacts.html.

Additional instructions on commenting or visiting the docket, along with more information about dockets generally, is available at http://www.epa.gov/dockets.

FOR FURTHER INFORMATION CONTACT: For technical information contact: Lea Carmichael, National Program Chemicals Division (7404T), Office of Pollution Prevention and Toxics, Environmental Protection Agency, 1200 Pennsylvania Ave. NW., Washington, DC 20460–0001; telephone number: (202) 564–4689; email address: carmichael.lee@epa.gov.

For general information contact: The TSCA-Hotline, ABVI-Goodwill, 422 South Clinton Ave., Rochester, NY 14620; telephone number: (202) 554–1404; email address: TSCA-Hotline@epa.gov.

SUPPLEMENTARY INFORMATION:

I. What information is EPA particularly interested in?

Pursuant to PRA section 3506(c)(2)(A) (44 U.S.C. 3506(c)(2)(A)), EPA specifically solicits comments and information to enable it to:

1. Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the Agency, including whether the information will have practical utility.

2. Evaluate the accuracy of the Agency’s estimates of the burden of the proposed collection of information, including the validity of the methodology and assumptions used.

3. Enhance the quality, utility, and clarity of the information to be collected.

4. Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated electronic, mechanical, or other technological collection techniques or other forms of information technology, e.g., permitting electronic submission of responses. In particular, EPA is requesting comments from very small businesses (those that employ less than 25) on examples of specific additional efforts that EPA could make to reduce the paperwork burden for very small businesses affected by this collection.
II. What information collection activity or ICR does this action apply to?

Title: Reporting and Recordkeeping for Asbestos Abatement Worker Protection.

ICR number: EPA ICR No. 1246.13.
OMB control number: OMB Control No. 2070–0072.

ICR status: This ICR is currently scheduled to expire on August 31, 2017. An Agency may not conduct or sponsor, and a person is not required to respond to, a collection of information, unless it displays a currently valid OMB control number. The OMB control numbers for EPA’s regulations in title 40 of the Code of Federal Regulations (CFR), after appearing in the Federal Register when approved, are listed in 40 CFR part 9, are displayed either by publication in the Federal Register or by other appropriate means, such as on the related collection instrument or form, if applicable. The display of OMB control numbers for certain EPA regulations is consolidated in 40 CFR part 9.

Abstract: EPA’s asbestos worker protection rule is designed to provide occupational exposure protection to state and local government employees who are engaged in asbestos abatement activities in states that do not have state plans approved by the Occupational Safety and Health Administration (OSHA). The rule provides protection for public employees not covered by the OSHA standard from the adverse health effects associated with occupational exposure to asbestos. Specifically, the rule requires state and local governments to monitor employee exposure to asbestos, take action to reduce exposure to asbestos, monitor employee health and train employees about asbestos hazards.

The rule includes a number of information reporting and recordkeeping requirements. State and local government agencies are required to provide employees with information about exposures to asbestos and the associated health effects. The rule also requires state and local governments to notify EPA before commencing any asbestos abatement project. State and local governments must maintain medical surveillance and monitoring records and training records on their employees, must establish a set of written procedures for respirator programs and must maintain procedures and records of respirator fit tests. EPA will use the information to monitor compliance with the asbestos worker protection rule. This request addresses these reporting and recordkeeping requirements.

Responses to the collection of information are mandatory (see 40 CFR 763 Subpart G). EPA will disclose information that is covered by a claim of confidentiality only to the extent permitted by, and in accordance with, the procedures in the Toxic Substances Control Act (TSCA) and 40 CFR part 2. Burden statement: The annual public reporting and recordkeeping burden for this collection of information is estimated to average 0.32 hours per response. Burden is defined in 5 CFR 1320.3(b).

The ICR, which is available in the docket along with other related materials, provides a detailed explanation of the collection activities and the burden estimate that is only briefly summarized here:

Respondents/Affected Entities: Entities potentially affected by this ICR are state and local government employers in 24 states, the District of Columbia, and certain U.S. Territories that have employees engaged in asbestos-related construction, custodial and brake and clutch repair activities without OSHA-approved state plans.

Estimated total number of potential respondents: 23,437.

Frequency of response: On occasion. Estimated total average number of responses for each respondent: 49.9.

Estimated total annual burden hours: 372,969 hours.

Estimated total annual costs: $15,763,007. This includes an estimated burden cost of $15,763,007 and an estimated cost of $0 for capital investment or maintenance and operational costs.

III. Are there changes in the estimates from the last approval?

There is an overall increase of 9,452 hours in the total estimated respondent burden compared with that identified in the ICR currently approved by OMB. This change reflects an increase of 24,371 hours to account for updates made from previous ICRs to standardize methodology and a decrease of 14,919 hours due to Maine’s new status of having an OSHA-approved state plan whereby its entities are no longer covered under this ICR. This change is an adjustment.

IV. What is the next step in the process for this ICR?

EPA will consider the comments received and amend the ICR as appropriate. The final ICR package will then be submitted to OMB for review and approval pursuant to 5 CFR 1320.12. EPA will issue another Federal Register document pursuant to 5 CFR 1320.5(a)(1)(iv) to announce the submission of the ICR to OMB and the opportunity to submit additional comments to OMB. If you have any questions about this ICR or the approval process, please contact the technical person listed under FOR FURTHER INFORMATION CONTACT.

Authority: 44 U.S.C. 3501 et seq.

James Jones,
Assistant Administrator, Office of Chemical Safety and Pollution Prevention.

ENVIRONMENTAL PROTECTION AGENCY

BILLING CODE 6560–50–P

PROPOSED CONSENT DECREE

[EPAG–OOGC–2016–0776; FRL 9957–83–OGC]

Proposed Consent Decree, Clean Air Act Citizen Suit

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice of Proposed Consent Decree; Request for Public Comment.

SUMMARY: In accordance with section 113(g) of the Clean Air Act, as amended (“CAA” or the “Act”), notice is hereby given of a proposed consent decree to address a lawsuit filed by Citizens for Clean Air and Sierrra Club (“Plaintiffs”) in the United States District Court for the Western District of Washington: Citizens for Clean Air, et al. v. McCarthy, et al. No. 2:16–cv–01594–RAJ (W.D. W.A.). On October 11, 2016, Plaintiffs filed a lawsuit alleging that Gina McCarthy, in her official capacity as Administrator of the United States Environmental Protection Agency and Dennis McLerran, in his official capacity as Regional Administrator of the United States Environmental Protection Agency, Region 10 (collectively, “EPA”), failed to perform a duty mandated by CAA to make a determination as to whether the Fairbanks North Star Borough nonattainment area in Alaska attained the 2006 24-hour PM2.5 NAAQS by December 31, 2015, and to publish a notice of that determination within six months of that date. If EPA determines that the area did not attain the 2006 24-hour PM2.5 NAAQS by December 31, 2015, then the nonattainment area will be reclassified from “moderate” to a “serious” for these NAAQS. The proposed consent decree would establish deadlines for EPA to take certain specified actions.

DATES: Written comments on the proposed consent decree must be received by February 2, 2017.
ADDRESSES: Submit your comments, identified by Docket ID number EPA–HQ–OGC–2016–0776, online at www.regulations.gov. For comments submitted at www.regulations.gov, follow the online instructions for submitting comments. Once submitted, comments cannot be edited or removed from www.regulations.gov. The EPA may publish any comment received to its public docket. Do not submit electronically any information you consider to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Multimedia submissions (audio, video, etc.) must be accompanied by a written comment. The written comment is considered the official comment and should include discussion of all points you wish to make. The EPA generally will not consider comments or comment contents located outside of the primary submission (i.e. on the web, cloud, or other file sharing system). For additional submission methods, please contact the person identified in the FOR FURTHER INFORMATION CONTACT section.

For the full EPA public comment policy, information about CBI or multimedia submissions, and general guidance on making effective comments, please visit http://www2.epa.gov/dockets/commenting-epa-dockets.

FOR FURTHER INFORMATION CONTACT:
Geoffrey L. Wilcox, Air and Radiation Law Office (2344A), Office of General Counsel, U.S. Environmental Protection Agency, 1200 Pennsylvania Ave. NW., Washington, DC 20460; telephone: (202) 564–5601; fax number: (202) 564–5603; email address: wilcox.geoffrey@epa.gov.

SUPPLEMENTARY INFORMATION:

I. Additional Information About the Proposed Consent Decree

The proposed consent decree would resolve a lawsuit filed by the Plaintiffs seeking to compel EPA to make a determination required under CAA section 188(b)(2), as to whether the Fairbanks North Star Borough nonattainment area in Alaska attained the 2006 24-hour PM\textsubscript{2.5} NAAQS by December 31, 2015. Under the terms of the proposed consent decree, no later than April 28, 2017, EPA will be required to sign a notice of final rulemaking determining whether the Fairbanks North Star Borough area attained the 2006 24-hour PM\textsubscript{2.5} NAAQS pursuant to CAA section 188(b)(2). By statute, reclassification from “moderate” to “serious” is required by operation of law for an area that fails to attain the NAAQS by the outermost permissible attainment date for moderate nonattainment areas. This reclassification would obligate the State of Alaska to submit an attainment plan for the area that meets statutory and regulatory requirements applicable to a serious nonattainment area for these NAAQS. Under the proposed consent decree, EPA will also be required to deliver the signed final notice to the Office of Federal Register for review and publication within 15 business days after signature. See the proposed consent decree for the specific details.

For a period of thirty (30) days following the date of publication of this notice, the Agency will accept written comments relating to the proposed consent decree from persons who are not named as parties or intervenors to the litigation in question. EPA or the Department of Justice may withdraw or withhold consent to the proposed consent decree if the comments disclose facts or considerations that indicate that such consent is inappropriate, improper, inadequate, or inconsistent with the requirements of the Act. Unless EPA or the Department of Justice determines that consent to this proposed consent decree should be withdrawn, the terms of the consent decree will be affirmed.

II. Additional Information About Commenting on the Proposed Consent Decree

A. How can I get a copy of the proposed consent decree?

The official public docket for this action (identified by EPA–HQ–OGC–2016–0776) contains a copy of the proposed consent decree. The official public docket is available for public viewing at the Office of Environmental Information (OEI) Docket in the EPA Docket Center, EPA West, Room 3334, 1301 Constitution Ave. NW., Washington, DC. The EPA Docket Center Public Reading Room is open from 8:30 a.m. to 4:30 p.m., Monday through Friday, excluding legal holidays. The telephone number for the Public Reading Room is (202) 566–1744, and the telephone number for the OEI Docket is (202) 566–1752.

An electronic version of the public docket is available through www.regulations.gov. You may use www.regulations.gov to submit or view public comments, access the index listing of the contents of the official public docket and access those documents in the public docket that are available electronically. Once in the system, key in the appropriate docket identification number then select “search”.

It is important to note that EPA’s policy is that public comments, whether submitted electronically or in paper, will be made available for public viewing online at www.regulations.gov without change, unless the comment contains copyrighted material, CBI, or other information whose disclosure is restricted by statute. Information claimed as CBI and other information whose disclosure is restricted by statute is not included in the official public docket or in the electronic public docket. EPA’s policy is that copyrighted material, including copyrighted material contained in a public comment, will not be placed in EPA’s electronic public docket but will be available only in printed, paper form in the official public docket. Although not all docket materials may be available electronically, you may still access any of the publicly available docket materials through the EPA Docket Center.

B. How and to whom do I submit comments?

You may submit comments as provided in the ADDRESSES section. Please ensure that your comments are submitted within the specified comment period. Comments received after the close of the comment period will be marked “late.” EPA is not required to consider these late comments.

If you submit an electronic comment, EPA recommends that you include your name, mailing address, and an email address or other contact information in the body of your comment and with any disk or CD–ROM you submit. This ensures that you can be identified as the submitter of the comment and allows EPA to contact you in case EPA cannot read your comment due to technical difficulties or needs further information on the substance of your comment. Any identifying or contact information provided in the body of a comment will be included as part of the comment that is placed in the official public docket, and made available in EPA’s electronic public docket. If EPA cannot read your comment due to technical difficulties and cannot contact you for clarification, EPA may not be able to consider your comment.

Use of the www.regulations.gov Web site to submit comments to EPA electronically is EPA’s preferred method for receiving comments. The electronic public docket system is an “anonymous” system, which means EPA will not know your identity, email address, or other contact information unless you...
provide it in the body of your comment. In contrast to EPA’s electronic public docket, EPA’s electronic mail (email) system is not an “anonymous access” system. If you send an email comment directly to the Docket without going through www.regulations.gov, your email address is automatically captured and included as part of the comment that is placed in the official public docket, and made available in EPA’s electronic public docket.

Gautam Srinivasan,
Acting Associate General Counsel.

For general information on the registration review program, contact: Richard Dumas, Pesticide Re-Evaluation Division (7508P), Office of Pesticide Programs, Environmental Protection Agency, 1200 Pennsylvania Ave. NW., Washington, DC 20460–0001; telephone number: (703) 308–8015; email address: dumas.richard@epa.gov.

SUPPLEMENTARY INFORMATION:
I. General Information
A. Does this action apply to me?
This action is directed to the public in general, and may be of interest to a wide range of stakeholders including environmental, human health, farm worker, and agricultural advocates; the chemical industry; pesticide users; and members of the public interested in the sale, distribution, or use of pesticides. Since others also may be interested, the Agency has not attempted to describe all the specific entities that may be affected by this action. If you have any questions regarding the applicability of this action to a particular entity, consult the pesticide specific contact person listed under FOR FURTHER INFORMATION CONTACT.
B. How can I get copies of this document and other related information?
The docket for this action, identified by docket identification (ID) number EPA–HQ–OPP–2011–0855, is available at http://www.regulations.gov or at the Office of Pesticide Programs Regulatory Public Docket (OPP Docket) in the Environmental Protection Agency Docket Center (EPA/DC), West William Jefferson Clinton Bldg., Rm. 3334, 1301 Constitution Ave. NW., Washington, DC 20460–0001. The Public Reading Room is open from 8:30 a.m. to 4:30 p.m., Monday through Friday, excluding legal holidays. The telephone number for the Public Reading Room is (202) 566–1744, and the telephone number for the OPP Docket is (703) 305–5805. Please review the visitor instructions and additional information about the docket available at http://www.epa.gov/dockets.

II. What action is the agency taking?
Pursuant to 40 CFR 155.58(c), this notice announces the availability of EPA’s human health mitigation decision for paraquat dichloride, case 0262. Paraquat is a widely used broad spectrum herbicide for the control of weeds in many agricultural and non-agricultural settings. It is also used as a desiccant on crops, prior to harvest. It is classified as restricted use due to high toxicity. An estimated 1.5 teaspoons (tsp) can be lethal if ingested and there is no known antidote. Paraquat dichloride is associated with a disproportionately high number of incidents including accidental ingestions typically leading to fatalities as well as occupational spills, splashes, and leaks resulting in severe and often damaging dermal or ocular contact. Paraquat is known to be corrosive to skin and eyes. EPA recently reviewed all available incident information and determined that mitigation measures to address these human health risk concerns are necessary.

In addition to the human health mitigation decision document, the registration review docket for paraquat dichloride also includes other relevant documents related to the registration review of this case. The proposed human health mitigation decision was posted to the docket in March 2016, and the public was invited to submit any comments or new information.

During the 60-day comment period, comments were received that resulted in changes to the Agency’s human health mitigation decision, including that backpack and hand-held application methods will remain, but will require the development of special containers as part of a ‘closed system’ that prevents spills, mixing, pouring or other actions that could lead to paraquat exposure.
Pursuant to 40 CFR 155.58(c), the registration review case docket for paraquat dichloride will remain open until registration review has been completed.

Background on the registration review program is provided at: http://www2.epa.gov/pesticide-reevaluation. Links to earlier documents related to the registration review of pesticide are provided at: http://www.epa.gov/ingredients-used-pesticide-products/paraquat.

Authority: 7 U.S.C. 136 et seq.
Dated: December 7, 2016.

ENVIRONMENTAL PROTECTION AGENCY

Board of Scientific Counselors Executive Committee; Notification of Public Meeting and Public Comment

AGENCY: Environmental Protection Agency.
SUPPLEMENTARY INFORMATION:

DATES: Pursuant to the Federal Advisory Committee Act, the U.S. Environmental Protection Agency hereby provides notice that the Board of Scientific Counselors (BOSC) Executive Committee (EC) will host a public meeting at the EPA’s Main Campus Facility, 109 T.W. Alexander Drive, Research Triangle Park, North Carolina 27711. The meeting will be held on Wednesday, January 11, 2017 from 9:00 a.m. till 6:00 p.m., Thursday, January 12, 2017 from 8:30 a.m. till 5:00 p.m. and Friday, January 13, 2017 from 8:30 a.m. till 11:00 a.m. All times noted are Eastern Time and are approximate. The primary discussions will focus on the draft reports from the BOSC subcommittees: Air, Climate and Energy, Chemical Safety for Sustainability, Safe and Sustainable Water Resources, and Sustainable and Healthy Communities. The EC will also deliberate on the four ORD Cross-Cutting Research Roadmap Annual Reports: Environmental Justice, Climate Change, Children’s Environmental Health, and Nitrogen and Co-pollutant.

There will be a public comment period from 10:05 a.m. to 10:20 a.m. on Wednesday, January 11, 2017. For information on registering to attend the meeting or to provide public comment, please see the SUPPLEMENTARY INFORMATION section.

DATES: The BOSC EC meeting will be held on Wednesday, January 11, 2017 from 9:00 a.m. till 6:00 p.m., Thursday, January 12, 2017 from 8:30 a.m. till 5:00 p.m. and Friday, January 13, 2017 from 8:30 a.m. till 11:00 a.m. All times noted are Eastern Time and are approximate.

FOR FURTHER INFORMATION CONTACT: Questions or correspondence concerning the meeting should be directed to Tom Tracy, Designated Federal Officer, Environmental Protection Agency, by mail at 1200 Pennsylvania Avenue NW., (MC 8104 R), Washington, DC 20460; by telephone at 202–564–6518; or via email at tracy.tom@epa.gov. The meeting will be open to the public. Individuals with disabilities who require special accessibility features and/or auxiliary aids, such as sign language interpreters, must inform the Commission in advance of those needs. Subject to 29 CFR 2706.150(a)(3) and § 2706.160(d).

Written Statements: Written comments for the public meeting must be received by Monday, January 9, 2017, and will be included in the materials distributed to the BOSC EC prior to the meeting. Written comments should be sent to Tom Tracy, Environmental Protection Agency, via email at tracy.tom@epa.gov or by mail to 1200 Pennsylvania Avenue NW., (MC 8104 R), Washington, DC 20460, or submitted through regulations.gov, Docket ID No. EPA–HQ–ORD–2015–0765. Members of the public should be aware that their personal contact information, if included in any written comments, may be posted online at regulations.gov.

Information about Services for Individuals with Disabilities: For information about access or services for individuals with disabilities, please contact Tom Tracy, at 202–564–6518 or via email at tracy.tom@epa.gov. To request special accommodations, please contact Tom Tracy no later than August 19, 2016, to give the Environmental Protection Agency sufficient time to process your request. All requests should be sent to the address, email, or phone number listed in the FOR FURTHER INFORMATION section above.

Dated: December 16, 2016.

Fred S. Hauchman
Director, Office of Science Policy.

SUPPLEMENTARY INFORMATION: The Charter of the BOSC states that the advisory committee shall provide independent advice to the Administrator on technical and management aspects of the ORD’s research program. Additional information about the BOSC is available at: http://www2.epa.gov/bosc.

Registration: In order to attend the meeting, you must register at the following site: https://www.eventbrite.com/e/us-epa-2017-bosc-executive-committee-public-meeting-registration-30037268278. Once you have completed the online registration, you will be contacted and provided with the meeting information. In-person participant registration will close on January 3, 2017. Virtual participant registration will close on January 9, 2017.

Oral Statements: Members of the public who wish to provide oral comment during the meeting must preregister. Individuals or groups making remarks during the public comment period will be limited to five (5) minutes. To accommodate the number of people who want to address the BOSC EC, only one representative of a particular community, organization, or group will be allowed to speak.

Written Statements: Written comments for the public meeting must be received by Monday, January 9, 2017, and will be included in the materials distributed to the BOSC EC prior to the meeting. Written comments should be sent to Tom Tracy, Environmental Protection Agency, via email at tracy.tom@epa.gov or by mail to 1200 Pennsylvania Avenue NW., (MC 8104 R), Washington, DC 20460, or submitted through regulations.gov, Docket ID No. EPA–HQ–ORD–2015–0765. Members of the public should be aware that their personal contact information, if included in any written comments, may be posted online at regulations.gov.

Information about Services for Individuals with Disabilities: For information about access or services for individuals with disabilities, please contact Tom Tracy, at 202–564–6518 or via email at tracy.tom@epa.gov. To request special accommodations, please contact Tom Tracy no later than August 19, 2016, to give the Environmental Protection Agency sufficient time to process your request. All requests should be sent to the address, email, or phone number listed in the FOR FURTHER INFORMATION section above.

Dated: December 16, 2016.

Fred S. Hauchman
Director, Office of Science Policy.

BILLING CODE: 6560–50–P

FEDERAL MINE SAFETY AND HEALTH REVIEW COMMISSION

[BAC 6735–01]

Sunshine Act Meeting

December 29, 2016.

TIME AND DATE: 10:00 a.m., Thursday, February 2, 2017.

STATUS: Open.

MATTERS TO BE CONSIDERED: The Commission will hear oral argument in the matter Secretary of Labor on behalf of Greathouse, et al. v. Monongalia County Coal Company, et al., Docket Nos. WEVA 2015–904–D, et al. (Issues include whether the Judge erred in ruling that certain bonus plans instituted by the operators interfered with miners’ rights under the Mine Act.)

Any person attending this oral argument who requires special accessibility features and/or auxiliary aids, such as sign language interpreters, must inform the Commission in advance of those needs. Subject to 29 CFR 2706.150(a)(3) and § 2706.160(d).

PHONE NUMBER FOR LISTENING TO ARGUMENT: 1 (866) 867–4769; Passcode: 129–339.

Sarah L. Stewart, Deputy General Counsel.

FEDERAL TRADE COMMISSION
[File No. 161 0126]

Abbott Laboratories and St. Jude Medical, Inc.; Analysis to Aid Public Comment

AGENCY: Federal Trade Commission.

ACTION: Proposed Consent Agreement.

SUMMARY: The consent agreement in this matter settles alleged violations of federal law prohibiting unfair methods of competition. The attached Analysis to Aid Public Comment describes both the allegations in the complaint and the terms of the consent orders—embodied in the consent agreement—that would settle these allegations.

DATES: Comments must be received on or before January 26, 2017.

ADDRESSES: Interested parties may file a comment at https://ftcpublic.commentworks.com/ftc/abbottjudeconsent online or on paper, by following the instructions in the Request for Comment part of the SUPPLEMENTARY INFORMATION section below. Write “In the Matter of St. Jude Medical, Inc./Abbott Laboratories, File No. 161 0126—Consent Agreement” on your comment and file your comment online at https://ftcpublic.commentworks.com/ftc/abbottjudeconsent by following the instructions on the web-based form. If you prefer to file your comment on paper, write “In the Matter of St. Jude Medical, Inc./Abbott Laboratories, File No. 161 0126—Consent Agreement” on your comment and file your comment at the following address: Federal Trade Commission, Office of the Secretary, Constitution Center, 400 7th Street, SW., 5th Floor, Suite 5610 (Annex D), Washington, DC 20024.

FOR FURTHER INFORMATION CONTACT: Jordan Andrew (202–326–3678), Bureau of Competition, 600 Pennsylvania Avenue NW., Washington, DC 20580.

SUPPLEMENTARY INFORMATION: Pursuant to Section 6(f) of the Federal Trade Commission Act, 15 U.S.C. 46(f), and FTC Rule 2.34, 16 CFR 2.34, notice is hereby given that the above-captioned consent agreement containing consent orders to cease and desist, having been filed with and accepted, subject to final approval, by the Commission, has been placed on the public record for a period of thirty (30) days. The following Analysis to Aid Public Comment describes the terms of the consent agreement, and the allegations in the complaint. An electronic copy of the full text of the consent agreement package can be obtained from the FTC Home Page (for December 27, 2016), on the World Wide Web, at http://www.ftc.gov/.

You can file a comment online or on paper. For the Commission to consider your comment, we must receive it on or before January 26, 2017. Write “In the Matter of St. Jude Medical, Inc./Abbott Laboratories, File No. 161 0126—Consent Agreement” on your comment. Your comment—including your name and your state—will be placed on the public record of this proceeding, including, to the extent practicable, on the public Commission Web site, at http://www.ftc.gov/os/publiccomments.shtm. As a matter of discretion, the Commission tries to remove individuals’ home contact information from comments before placing them on the Commission Web site.

Because your comment will be made public, you are solely responsible for making sure that your comment does not include any sensitive personal information, like anyone’s Social Security number, date of birth, driver’s license number or other state identification number or foreign country equivalent, passport number, financial account number, or credit or debit card number. You are also solely responsible for making sure that your comment does not include any sensitive health information, like medical records or other individually identifiable health information. In addition, do not include any “[t]rade secret or any commercial or financial information which . . . is privileged or confidential,” as discussed in Section 6(f) of the FTC Act, 15 U.S.C. 46(f), and FTC Rule 4.10(a)(2), 16 CFR 4.10(a)(2). In particular, do not include competitively sensitive information such as costs, sales statistics, inventories, formulas, patterns, devices, manufacturing processes, or customer names.

If you want the Commission to give your comment confidential treatment, you must file it in paper format with a request for confidential treatment, and you have to follow the procedure explained in FTC Rule 4.9(c), 16 CFR 4.9(c). Your comment will be kept confidential only if the FTC General Counsel, in his or her sole discretion, grants your request in accordance with the law and the public interest.

Postal mail addressed to the Commission is subject to delay due to heightened security screening. As a result, we encourage you to submit your comments online. To make sure that the Commission considers your online comment, you must file it at https://ftcpublic.commentworks.com/ftc/abbottjudeconsent by following the instructions on the web-based form. If this Notice appears at http://www.regulations.gov/#/home, you also may file a comment through that Web site.

If you file your comment on paper, write “In the Matter of St. Jude Medical, Inc./Abbott Laboratories, File No. 161 0126- Consent Agreement” on your comment and on the envelope, and mail your comment to the following address: Federal Trade Commission, Office of the Secretary, 600 Pennsylvania Avenue NW., Suite CC–5610 (Annex D), Washington, DC 20580, or deliver your comment to the following address: Federal Trade Commission, Office of the Secretary, Constitution Center, 400 7th Street SW., 5th Floor, Suite 5610 (Annex D), Washington, DC. If possible, submit your paper comment to the Commission by courier or overnight service.

Visit the Commission Web site at http://www.ftc.gov to read this Notice and the news release describing it. The FTC Act and other laws that the Commission administers permit the collection of public comments to consider and use in this proceeding as appropriate. The Commission will consider all timely and responsive public comments that it receives on or before January 26, 2017. You can find more information, including routine uses permitted by the Privacy Act, in the Commission’s privacy policy, at http://www.ftc.gov/ftc/privacy.htm.

1 In particular, the written request for confidential treatment that accompanies the comment must include the factual and legal basis for the request, and must identify the specific portions of the comment to be withheld from the public record. See FTC Rule 4.9(c), 16 CFR 4.9(c).

Visit the Commission Web site at http://www.ftc.gov to read this Notice and the news release describing it. The FTC Act and other laws that the Commission administers permit the collection of public comments to consider and use in this proceeding as appropriate. The Commission will consider all timely and responsive public comments that it receives on or before January 26, 2017. You can find more information, including routine uses permitted by the Privacy Act, in the Commission’s privacy policy, at http://www.ftc.gov/ftc/privacy.htm.
Analysis of Agreement Containing Consent Orders To Aid Public Comment

Introduction

The Federal Trade Commission ("Commission") has accepted, subject to final approval, an Agreement Containing Consent Orders ("Consent Agreement") from Abbott Laboratories ("Abbott") and St. Jude Medical, Inc. ("St. Jude") that is designed to remedy the anticompetitive effects that otherwise would have resulted from Abbott’s proposed acquisition of St. Jude. Under the terms of the proposed Consent Agreement, the parties are required to divest St. Jude’s vascular closure device business and Abbott’s steerable sheath business to Terumo Corporation ("Terumo"). Abbott is also required to provide notice if it intends to acquire the assets of Advanced Cardiac Therapeutics, Inc. ("ACT").

The Consent Agreement has been placed on the public record for thirty days to solicit comments from interested persons. Comments received during this period will become part of the public record. After thirty days, the Commission will again review the Consent Agreement, along with the comments received, and decide whether it should withdraw from the Consent Agreement, modify it, or make final the Decision and Order ("Order").

Pursuant to an Agreement and Plan of Merger dated April 27, 2016, Abbott proposes to acquire St. Jude in exchange for cash and stock valued at approximately $25 billion (the "Proposed Acquisition"). The Commission’s Complaint alleges that the Proposed Acquisition, if consummated, would violate Section 7 of the Clayton Act, as amended, 15 U.S.C. 18, and Section 5 of the Federal Trade Commission Act, as amended, 15 U.S.C. 45, by lessening competition in the U.S. markets for vascular closure devices, steerable sheaths, and lesion-assessing ablation catheters. The Proposed Consent Agreement will remedy the alleged violations by preserving the competition that would otherwise be eliminated by the Proposed Acquisition.

The Parties

Headquartered in Abbott Park, Illinois, Abbott is a global health care company that offers a large portfolio of vascular products, including coronary, endovascular, vascular closure, electrophysiology, and structural heart devices.

St. Jude, headquartered in St. Paul, Minnesota, is a leading manufacturer of vascular products and medical devices. St. Jude’s vascular products include vascular closure devices, pressure measurement guidewires, percutaneous catheter introducers, heart failure monitoring devices, cardiac mapping and navigation systems, diagnostic catheters, ablation catheters, and introducer sheaths.

The Relevant Products and Structure of the Markets

Vascular closure devices are used to close arterial holes resulting from vascular catheterization procedures. Physicians perform these catheterization procedures to diagnose or treat a cardiovascular condition. Typically, physicians access the femoral artery and direct a specialized catheter to the heart or peripheral arteries to deploy a balloon, diagnose an arrhythmia, or insert a stent or other device. The procedures leave a hole in the artery that must be closed quickly after the catheter is removed. Vascular closure devices provide a fast and effective way for physicians to close these holes while minimizing complications and the time patients must spend recovering from the procedure. Abbott and St. Jude are the two largest suppliers of vascular closure devices in the United States, with a combined market share of over 70%. The only other firms that supply vascular closure devices in the U.S. market are Cardinal Health, Inc. and Cardiva Medical, Inc.

Steerable sheaths are used in electrophysiology procedures to treat complex heart arrhythmias, such as atrial fibrillation. Unlike a fixed sheath, the tip of a steerable sheath is deflectable, which provides better maneuverability and stability for an ablation catheter. Steerable sheaths allow physicians to more easily puncture the transseptal wall of the heart and guide the sheath and catheter into the left atrium or ventricle of the heart. St. Jude is, by far, the largest supplier of steerable sheaths in the U.S. market. Abbott recently entered this market through its acquisition of Kalila Medical, Inc. ("Kalila") in early 2016. Other suppliers in this market, though not recent entrants, have low single-digit market shares.

Lesion-assessing ablation catheters are used during ablation procedures to treat heart arrhythmias. They also provide feedback to physicians regarding the force being applied by the catheter or the temperature of the ablation target. These products are becoming more important, and more frequently used, as physicians treat more cases of complex atrial fibrillation. Currently, only St. Jude and Biosense Webster Inc. ("Biosense") provide lesion-assessing ablation catheters in the United States. Abbott and ACT entered into a strategic partnership to develop lesion-assessing ablation catheters.

The United States is the relevant geographic market in which to assess the competitive effects of the Proposed Acquisition. Vascular closure devices, steerable sheaths, and lesion-assessing ablation catheters are all medical devices that are regulated by the FDA. Products that are sold outside the United States, but not approved for sale in the United States, are not alternatives for U.S. consumers.

Effects of the Acquisition

The Proposed Acquisition would cause significant competitive harm in the U.S. markets for vascular closure devices, steerable sheaths, and lesion-assessing ablation catheters. For vascular closure devices, the merger would combine the largest and second-largest suppliers in the United States. The merger would eliminate the substantial price competition that currently exists between these competitors.

In the market for steerable sheaths, St. Jude is currently the largest supplier in the United States and has held a near-monopoly position in this market for over a decade. Abbott entered this market recently and its product is well positioned to compete head-to-head with St. Jude. The Proposed Acquisition would eliminate the competition that would have occurred between Abbott and St. Jude in this market.

Finally, if Abbott acquires ACT’s lesion-assessing ablation catheter assets, it could eliminate potential competition in the U.S. market for lesion-assessing ablation catheters. ACT’s lesion-assessing ablation catheter currently in development would compete directly with offerings from St. Jude and Biosense. It would thus be the third competitor in the highly-concentrated U.S. market for lesion-assessing ablation catheters. Abbott’s acquisition of the ACT assets would reduce the additional competition that would have resulted from an additional U.S. supplier of lesion-assessing ablation catheters.

Entry

Entry into the U.S. markets for vascular closure devices, steerable sheaths, and lesion-assessing ablation catheters would not be timely, likely, or sufficient in magnitude, character, and scope to deter or counteract the anticompetitive effects of the Proposed Acquisition. The development process for each of these devices is difficult, time-consuming, and expensive. It can take tens of millions of dollars of research and development, significant
further funding for clinical trials, and an extensive amount of time to even reach the stage of applying to the FDA for approval. The regulatory approval process itself can also be time-consuming as the FDA reviews the volume of material and data a company submits in support of its application.

The Consent Agreement

The Consent Agreement remedies the competitive concerns raised by Abbott’s proposed acquisition of St. Jude by requiring that the parties divest to Terumo all of the assets and resources needed for it to become an independent, viable, and effective competitor in the U.S. markets for vascular closure devices and steerable sheaths. It also requires Abbott to provide notice if it intends to acquire ACT’s lesion-assessing ablation catheter assets.

Terumo possesses the industry experience and reputation necessary to replace competition that would be lost in the U.S. markets for vascular closure devices and steerable sheaths. Terumo is headquartered in Tokyo, Japan. It has been active in the U.S. medical device market for over thirty years and has a U.S. subsidiary based in Somerset, New Jersey. Terumo offers a portfolio of products that are highly complementary to the vascular closure and steerable sheath products being acquired but does not sell any competing products. Through its Interventional Systems business unit, Terumo manufactures and sells guidewires, catheters, and sheaths, as well as other vascular access devices. As a result, it currently sells its products to many of the same customers as Abbott and St. Jude. Terumo is thus well positioned to restore the benefits of competition that would be lost through the Proposed Acquisition.

Pursuant to the Order, Terumo will receive all rights and assets related to St. Jude’s vascular closure device business and Abbott’s steerable sheath business, including all of the intellectual property used in those businesses. In addition, Terumo will take over part of the facility in Caguas, Puerto Rico where St. Jude currently manufactures most of its vascular closure device products. In order to ensure continuity of supply for certain vascular closure devices and components that are not currently manufactured in the Puerto Rico facility, the Order requires that St. Jude supply Terumo with finished vascular closure devices and components for up to two years while Terumo transitions to independent manufacturing.

To ensure that the divestiture is successful, the Order requires the parties to enter into a transitional services agreement with Terumo to assist the company in establishing its manufacturing capabilities. Further, the Order requires that the parties transfer all confidential business information to Terumo, as well as provide access to employees who possess or are able to identify such information. Terumo also will have the right to interview and offer employment to employees associated with St. Jude’s vascular closure device business and Abbott’s steerable sheath business.

The parties must accomplish the divestiture no later than forty-five days after the consummation of the Proposed Acquisition. If the Commission determines that Terumo is not an acceptable acquirer, or that the manner of the divestiture is not acceptable, the Order requires the parties to unwind the sale and accomplish the divestiture within 180 days of the date the Order becomes final to another Commission-approved acquirer.

To ensure compliance with the Order, the Commission has agreed to appoint an Interim Monitor to ensure that Abbott and St. Jude comply with all of their obligations pursuant to the Consent Agreement and to keep the Commission informed about the status of the transfer of the rights and assets to Terumo. Further, the Order allows the Commission to appoint a Divestiture Trustee to accomplish the divestiture should the parties fail to comply with their divestiture obligations. Lastly, the Order terminates after ten years.

The purpose of this analysis is to facilitate public comment on the proposed Consent Agreement, and it is not intended to constitute an official interpretation of the proposed Order or to modify its terms in any way.

By direction of the Commission.

April J. Tabor,
Acting Secretary.

GENERAL SERVICES ADMINISTRATION

Federal Management Regulations; Transportation Prepayment Audit Requirements

AGENCY: Office of Government-wide Policy, General Services Administration (GSA).

ACTION: Notice of a bulletin.

SUMMARY: GSA has issued a guidance for agencies and wholly-owned Government corporations, which provides a deadline to comply with recent regulatory changes that prohibit agencies from using prepayment auditors that have any affiliation with, or financial interest, in the transportation company (providing the transportation services) for which a prepayment audit is being conducted.

FOR FURTHER INFORMATION CONTACT: Mr. Ron Siegel, Program Analyst, Office of Government-wide Policy (MAF), Office of Asset and Transportation Management, General Services Administration at 202–357–9540, or via email at ron.siegel@gsa.gov. Please cite FMR Bulletin D–03.

SUPPLEMENTARY INFORMATION: FMR Bulletin D–03 provides guidance to all agencies (including the Department of Defense) and wholly-owned Government corporations as defined in 31 United States Code (U.S.C.) 101, et seq. and 31 U.S.C. 9101(3). This bulletin provides agencies notice of a governmentwide policy revision for mandatory transportation prepayment audit plans, and provides a deadline for compliance with regulatory changes provided in FMR 102–118, Transportation Payment and Audit. FMR Bulletin D–03 and all other FMR bulletins are located at http://www.gsa.gov/fmrbulletins.

Kevin Kampeschroer,
Associate Administrator (Acting), Office of Government-wide Policy, General Services Administration.

BILLING CODE 6750–14–P

OFFICE OF GOVERNMENT ETHICS

Request for Public Input on the Application of the Criminal Conflict of Interest Prohibition to Certain Beneficial Interests in Discretionary Trusts.

AGENCY: Office of Government Ethics (OGE).

ACTION: Notice of request for public comments.

SUMMARY: This notice and request seeks input from members of the public with expertise in trust law concerning the following question: Are there any circumstances under which an eligible income beneficiary of a discretionary trust might, in the absence of a vested remainder interest, be able to compel the trust to make a distribution or payment? OGE will take into consideration all relevant input submitted by the public within 60 days of the date of this notice. To be
considered, any submission exceeding five (5) pages in length must include a one-page summary of key points and conclusions. Commenters are requested to state briefly the nature of their expertise in trust law.

DATES: To be assured consideration, comments must be received at the address provided below, by no later than 5:00 p.m. on March 6, 2017.

ADDRESSES: You may submit comments, in writing, to OGE regarding this notice and request by any of the following methods:

E-Mail: usoage@oge.gov. Include the reference “Request for Input on Discretionary Trusts” in the subject line of the message.

Fax: (202) 482–9237.

Instructions: All submissions must include OGE’s agency name and the words “Discretionary Trusts.” All comments, including attachments and other supporting materials, will become part of the public record and subject to public disclosure. Comments may be posted on OGE’s Web site, www.oge.gov. Sensitive personal information, such as account numbers or Social Security numbers, should not be included. Comments generally will not be edited to remove any identifying or contact information.

SUPPLEMENTARY INFORMATION: During the administration of President George W. Bush, a former Director of the U.S. Office of Government Ethics (OGE), Hon. Robert I. Cusick, issued a guidance memorandum addressing a novel legal issue concerning the application of the primary criminal conflict of interest statute to the interests of eligible income beneficiaries of discretionary trusts who lack vested remainder interests.

Discretionary Trusts, § 155 (2008). That conflict of interest statute, 18 U.S.C. 208, prohibits an executive branch employee from participating personally and substantially in any particular matter that directly and predictably affects a “financial interest” of either the employee or a person whose interests are imputed to the employee (e.g., the employee’s spouse or minor child). See 5 CFR part 2640, subpart A. The 2008 memorandum articulated OGE’s conclusion that, for purposes of the conflict of interest statute, an eligible income beneficiary of a discretionary trust would not be considered to have a financial interest in the holdings of the trust, provided that the beneficiary was not the grantor and did not have a vested remainder interest. Discretionary Trusts, DO–08–024 (2008). The premise underlying OGE’s conclusion was that such a beneficiary could never have an “enforceable right to payment.” Id. at 1. For this premise OGE relied upon the American Law Institute’s Second Restatement of the Law of Trusts. Id. (citing Restatement of the Law (Second) Trusts, § 155).

In 2013, OGE issued a second guidance memorandum on the topic of reporting requirements applicable to a beneficiary who could meet the requirements articulated in its 2008 memorandum. The 2013 memorandum clarified that such a beneficiary would not have to report the holdings of the discretionary trust in an executive branch financial disclosure report filed under the Ethics in Government Act, 5 U.S.C. app. 101, et seq., in the event that the beneficiary were to receive income from the trust during the reporting period, though the beneficiary would have to report the income itself. Reporting Requirements for Discretionary Trusts, LA–13–04 (April 9, 2013). The 2013 memorandum did not otherwise modify the 2008 memorandum or revisit its underlying premise.

The 2008 memorandum, which OGE has continued to apply, is based wholly on the premise that there are no circumstances under which such a beneficiary could ever compel a distribution or payment from a discretionary trust. This month, however, OGE learned that the American Law Institute’s Third Restatement of the Law of Trusts may suggest a contrary analysis as to the financial interests of eligible income beneficiaries of discretionary trusts, at least in some jurisdictions. See Restatement of the Law (Third) Trusts, § 60, cmt. e (Am. Law Inst. 2003) (“A transferee or creditor of a trust beneficiary cannot compel the trustee to make discretionary distributions if the beneficiary personally could not do so. It is rare, however, that the beneficiary’s circumstances, the terms of the discretionary power, and the purposes of the trust leave the beneficiary without powerless. The exercise or nonexercise of fiduciary discretion is always subject to judicial review to prevent abuse.”). This discovery drew OGE’s attention to an article in the Quinnipiac Probate Law Journal by Alan Newman, Professor of Law for the University of Akron School of Law. See Newman, Alan, Trust Law in the Twenty-First Century: Challenges to Fiduciary Accountability, 29 Quinnipiac Prob. L.J. 261 (2016). Professor Newman writes,

“If, in fact, the beneficiary of a discretionary trust had only an expectancy with respect to the trust, arguably the beneficiary would be unable to hold the trustee accountable to enforce the trust. However, as noted elsewhere, ‘the difficulty with this theory is that it is not true.’ Although there is a longstanding debate whether a beneficiary of a trust has a property interest in the trust assets, merely a claim against the trustee, or both, it is well-established that: (i) the beneficiary’s interest in the trust itself is property, regardless of whether the trust terms provide that distributions to the beneficiary are at the trustee’s discretion; and (ii) the beneficiary may enforce them.

Id. at 282 (quoting Jesse Dukeminier & Robert H. Sitkoff, Wills, Trusts, and Estates 689 (9th ed. 2013)).

Professor Newman further explains that cases denying the claims of a beneficiary’s creditors against the trust reflect only a “policy-oriented” approach to addressing the claims of creditors and do not necessarily stand as evidence that the beneficiary lacks “an enforceable property interest with respect to the trust.” Id. at 283. At the time of its 2008 memorandum, OGE’s research focused on cases addressing the rights of creditors or the eligibility of beneficiaries for public assistance, but Professor Newman’s article raises a question as to whether OGE should have focused instead on cases addressing the rights of beneficiaries as to trustees of discretionary trusts. See, e.g., id at 284 (“[R]ecently enacted statutes stating that beneficiaries of discretionary trusts do not have property interests with respect to those trusts are part of the enacting jurisdictions’ trust codes addressing the rights of beneficiaries’ creditors, not the relationship between the trustee and beneficiaries, and appear intended to apply only in the creditors’ rights context.”).

OGE reviewed one of the cases cited in Professor Newman’s article. In that case, the Seventh Circuit wrote,

We see no reason why a beneficiary, simply by virtue of being the beneficiary of a discretionary trust, should be denied the ordinary equitable rights that flow from the fiduciary duty that runs from a trustee to a beneficiary. Included in those rights is the right to bring an action for breach of trust.

Scanlan v. Eisenberg, 669 F.3d 838, 844 (7th Cir. Ill. 2012). The plaintiff in
that case, a beneficiary of several trusts, sued for malpractice and breach of fiduciary duty after the trusts invested millions of dollars in a real estate investment trust that later went bankrupt. The Seventh Circuit found that an eligible beneficiary possessed the required stake to establish standing as a result of her interest in the trust. Id. at 846. To the extent that the plaintiff had standing by virtue of being affected by the trust’s potential for gain or loss, that “stake” would appear to meet OGE’s definition of a disqualifying financial interest for purposes of the conflict of interest prohibition. See 5 CFR 2640.103(b) (“the term financial interest means the potential for gain or loss”).

Other cases also seem to lead to this conclusion. For example, a New York court similarly provided the following guidance, under the trust law of that state, as to the rights of the beneficiary of a discretionary trust:

In the present case, the trustees’ discretion is absolute and not limited by any standard. However, even in such a case, the trustees may be compelled to distribute funds to the beneficiary if they abuse their discretion in refusing to make distribution.

Estate of Gilbert, 156 Misc. 2d 379, 383 (N.Y. Sur. Ct. 1992). Likewise, a California court held that, under that state’s trust law, a trustee who has discretion to make or withhold a payment, may not withhold a payment with the intent of avoiding child support. Ventura County Dept. of Child Support Services v. Brown, 117 Cal. App. 4th 144, 150 (Cal. App. 2d Dist. 2004) (quoting Prof. Russell Niles, consultant to Cal. Law Revision Com., Memo Re Spendthrift and Related Trusts (Nov. 6, 1984)). In the California case, the outcome may well have been determined in part by language in the trust instrument requiring that the trust be administered for the benefit of the beneficiary’s children in the event of the beneficiary’s death, see id. at 148; however, this contributing factor would serve only to complicate the issue for OGE by leaving open the possibility that subtle variations in trust language may be relevant in determining the existence of a financial interest for purposes of the conflict of interest law.

Because it is not clear to OGE whether these materials represent the rule, an exception, or differing approaches to trust law in various jurisdictions, OGE would benefit from the input of members of the public who have expertise in trust law. Specifically, OGE seeks expert input concerning the following question: Are there any circumstances under which an eligible beneficiary of a discretionary trust might, in the absence of a vested remainder interest, be able to compel the trust to make a distribution or payment? Should this question be appropriately answered in the affirmative, OGE may need to revisit the premise underlying its 2008 guidance memorandum on discretionary trusts—i.e., that such a beneficiary could never have enforceable right to a distribution or payment from the trust. OGE will take into consideration all relevant expert input submitted by the public within 60 days of the date of this notice in response to the question posed before evaluating the continuing validity of OGE’s guidance memorandum, Discretionary Trusts, DO–08–024 (2008). To be considered, any submission exceeding five (5) pages in length must include a one-page summary of key points and conclusions. Commenters are requested to state briefly the nature of their expertise in trust law.

Approved: December 23, 2016.

Walter M. Shaub, Jr.
Director, U.S. Office of Government Ethics.

DEPARTMENT OF HEALTH AND HUMAN SERVICES
Agency for Toxic Substances and Disease Registry
Supplementary Information: Under the Paperwork Reduction Act of 1995 (PRA) (44 U.S.C. 3501–3520), Federal agencies must obtain approval from the Office of Management and Budget (OMB) for each collection of information they conduct or sponsor. In addition, the PRA also requires Federal agencies to provide a 60-day notice in the Federal Register concerning each proposed collection of information, including each new proposed collection, each proposed extension of existing collection of information, and each reinstatement of previously approved information collection before submitting the collection to OMB for approval. To comply with this requirement, we are publishing this notice of a proposed data collection as described below.

Comments are invited on: (a) Whether the proposed collection of information is necessary for the performance of the functions of the agency, including whether the information shall have particular...
practical utility; (b) the accuracy of the agency’s estimate of the burden of the proposed collection of information; (c) ways to enhance the quality, utility, and clarity of the information to be collected; (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology; and (e) estimates of capital or start-up costs and costs of operation, maintenance, and purchase of services to provide information. Burden means the total time, effort, or financial resources expended by persons to generate, maintain, retain, disclose or provide information to or for a Federal agency. This includes the time needed to review instructions; to develop, acquire, install and utilize technology and systems for the purpose of collecting, validating and verifying information, processing and maintaining information, and disclosing and providing information; to train personnel and to be able to respond to a collection of information, to search data sources, to complete and review the collection of information; and to transmit or otherwise disclose the information.

Proposed Project

Background and Brief Description

The Agency for Toxic Substances and Disease Registry (ATSDR) is requesting a three-year Paperwork Reduction Act (PRA) clearance for a new information collection request (ICR) titled “Biomonitoring of Great Lakes Populations Program III.” ATSDR awarded funds to the Wisconsin Department of Health Services (WIDHS) to conduct this information collection under cooperative agreement #NU61TS000269—01—00. The purpose of the current program is to evaluate body burden levels of legacy and emerging contaminants in susceptible Great Lakes populations in the Milwaukee Estuary Area of Concern (AOC) in Wisconsin, an area that has not been previously covered by other Great Lakes initiatives. The Great Lakes Basin has suffered decades of pollution and ecosystem damage. Many chemicals persist in Great Lakes waters and sediments, as well as in wildlife. These chemicals can build up in the aquatic food chain, and eating contaminated fish is a known route of human exposure.

In 2009, the Great Lakes Restoration Initiative (GLRI) was enacted by Public Law 111–88 to make restoration and protection of the Great Lakes a national priority. The GLRI is led by the U.S. Environmental Protection Agency (US EPA). Under a 2015 interagency agreement with the US EPA, ATSDR initiated the Biomonitoring of Great Lakes Populations Program III program. This project will provide additional public health information to supplement the previous cooperative agreement programs CDC–RFA–TS10–0025 and CDC–RFA–TS13–0129 “Biomonitoring of Great Lakes Populations-II” (hereafter referred to as “Program I,” OMB Control Number 0923–0044) and CDC–RFA–TS13–1302 “Biomonitoring of Great Lakes Populations-II” (hereafter referred to as “Program II,” OMB Control Number 0923–0052) initiated in FY2010 and FY2013, respectively.

WIDHS received funding for the current program. WIDHS will recruit and enroll two subpopulations of adults in the Milwaukee Bay Estuary Area of Concern (AOC) who are known to eat fish from the Milwaukee River Basin and Lake Michigan. This study will not include pregnant women.

The target populations are: (1) Licensed anglers living in proximity to the Milwaukee Estuary AOC and (2) Burmese refugees who are known to eat a substantial amount of fish from this area. WIDHS study staff will work closely with local refugee and citizen support organizations on participant recruitment.

The aims of the information collection in this surveillance project are: 1. Assess levels of contaminants (metals, polychlorinated biphenyls, chlorinated pesticides, perfluorinated compounds, and polycyclic aromatic hydrocarbons) in blood and urine of residents who consume fish from contaminated areas that had not been studied in previous Programs I and II; 2. Use the project findings to inform public health officials and offer guidance on public health actions to reduce exposure to Great Lakes contaminants.

This applied public health program aims to measure contaminants in biological samples (blood, urine and hair) from people who may be at high risk of chemical exposure in the Great Lakes area. These measurements will provide a baseline for current and future restoration activities. The results will be compared to available national estimates, such as those reported by the National Health and Nutrition Examination Survey (NHANES).

Respondents will be screened for eligibility and consent will be obtained. Participants who consent will respond to a questionnaire and participate in clinic visits for body measurements and biological specimen collection (blood, urine, and hair). Their blood will be tested for polychlorinated biphenyls, metals, perfluorinated compounds, persistent pesticides, and lipids. Urine will be tested for polycyclic aromatic hydrocarbons and creatinine. The hair samples (optional) will be saved for a later analysis.

Respondents will also be interviewed. They will be asked about demographic and lifestyle factors, hobbies, health conditions that may affect fish consumption and fishing habits, and types of jobs which can contribute to chemical exposure. Some dietary questions will be asked with a focus on consumption of Great Lakes fish.

Participation in the study is voluntary and there is no cost to respondents other than their time. The estimated annualized burden for the program averaged over the three-year study period is 231 hours among 166 respondents. There is no cost to respondents other than their time spent in the study.

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Agency for Toxic Substances and Disease Registry

[60Day-17–17IV; Docket No. ATSDR–2016–0008]

Proposed Data Collection Submitted for Public Comment and Recommendations

AGENCY: Agency for Toxic Substances and Disease Registry (ATSDR), Department of Health and Human Services (HHS).

ACTION: Notice with comment period.

SUMMARY: The Agency for Toxic Substances and Disease Registry (ATSDR), as part of its continuing efforts to reduce public burden and maximize the utility of government information, invites the general public and other Federal agencies to take this opportunity to comment on proposed and/or continuing information collections, as required by the Paperwork Reduction Act of 1995. This notice invites comment on the information collection request titled “APPLETREE Performance Measures.” Under the APPLETREE cooperative agreement program (Funding Opportunity Announcement No. CDC–RFA–TS17–1701), awardees will be required to submit an Annual Plan of Work (APOW), several standardized outcome and performance measures, and an Annual Performance Report (APR).

DATES: Written comments must be received on or before March 6, 2017.

ADDRESSES: You may submit comments, identified by Docket No. ATSDR–2016–0008 by any of the following methods:
• Federal eRulemaking Portal: Regulations.gov. Follow the instructions for submitting comments.
• Mail: Leroy A. Richardson, Information Collection Review Office, Centers for Disease Control and Prevention, 1600 Clifton Road NE., MS–D74, Atlanta, Georgia 30329.

Instructions: All submissions received must include the agency name and Docket Number. All relevant comments received will be posted without change to Regulations.gov, including any personal information provided. For access to the docket to read background documents or comments received, go to Regulations.gov.

Please note: All public comment should be submitted through the Federal eRulemaking portal (Regulations.gov) or by U.S. mail to the address listed above.

FOR FURTHER INFORMATION CONTACT: To request more information on the proposed project or to obtain a copy of the information collection plan and instruments, contact the Information Collection Review Office, Centers for Disease Control and Prevention, 1600 Clifton Road NE., MS–D74, Atlanta, Georgia 30329; phone: 404–639–7570; Email: omb@cdc.gov.

SUPPLEMENTARY INFORMATION: Under the Paperwork Reduction Act of 1995 (PRA) (44 U.S.C. 3501–3520), Federal agencies must obtain approval from the Office of Management and Budget (OMB) for each collection of information they conduct or sponsor. In addition, the PRA also requires Federal agencies to provide a 60-day notice in the Federal Register concerning each proposed collection of information, including each new proposed collection, each proposed extension of existing collection of information, and each reinstatement of previously approved information collection before submitting the collection to OMB for approval. To comply with this requirement, we are publishing this notice of a proposed data collection as described below.

Comments are invited on: (a) Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency’s estimate of the burden of the proposed collection of information; (c) ways to enhance the quality, utility, and clarity of the information to be collected; (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology; and (e) estimates of capital or start-up costs and costs of operation, maintenance, and purchase of services to provide information. Burden means the total time, effort, or financial resources expended by persons to generate, maintain, retain, disclose or provide information to or for a Federal agency. This includes the time needed to review instructions; to develop, acquire, install and utilize technology and systems for the purpose of collecting, validating and verifying information, processing and maintaining information, and disclosing and providing information; to train personnel and to be able to respond to a collection of information, to search data sources, to complete and review the collection of information; and to transmit or otherwise disclose the information.

Proposed Project

Background and Brief Description

The Agency for Toxic Substances and Disease Registry (ATSDR) serves the public through responsive public health actions to promote healthy and safe environments and to prevent harmful exposures in communities across the nation. ATSDR’s Partnership to Promote Local Efforts to Reduce Environmental Exposure (APPLETREE) Program is critical to ATSDR’s success in this mission. The purpose of the program is to: (1) Identify pathways of exposure to hazardous substances at hazardous waste sites and releases; (2) identify, implement, and coordinate public health interventions to reduce exposures to hazardous substances which occur at levels of health concern; and (3) provide training at the state level to promote and achieve the safe siting of child care facilities in the United States. The APPLETREE Program is also a mechanism which enhances ATSDR’s communication with state, local, and federal health and environmental agencies. This program is authorized under Sections 104(i)(15) of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) of 1980, as amended by the Superfund Amendments and Reauthorization Act (SARA) of 1986 [42 U.S.C. 9604(i)(15)].

Under the new three-year APPLETREE cooperative agreement (Funding Opportunity Announcement No. CDC–RFA–TS17–1701), eligible applicants include federally recognized American Indian/Alaska Native tribal governments; American Indian/Alaska native tribally designated organizations; political subdivisions of states (in consultation with states); and state and local governments or their bona fide agents. ATSDR technical project officers (TPOs) will assist approximately 25 APPLETREE awardees to address site-specific issues involving human exposure to hazardous substances. Key capacities include identification of human exposure pathways at ATSDR sites, education of affected communities and local health professionals about site contamination and potential health effects; making appropriate recommendations to prevent exposure; reviewing health outcome data to evaluate potential links between site contaminants and community health; and documenting the effects of environmental remediation on health.

ATSDR will collect information related to awardee activities, and the process and outcome performance measures outlined by the cooperative agreement program. Information will be used to monitor progress toward program goals and objectives, and for quality improvement.

Annual Plan of Work (APOW): Each budget year, awardees shall deliver an APOW. The APOW will include awardee workplans for site-specific activities, environmental health assessment outputs, and overarching milestones for child care safe siting activities. The estimated annual time burden to prepare and report the APOW is eight hours per awardee.

ATSDR Health Education Activity Tracking (HEAT) Form.

For each environmental health assessment and health education activity conducted at ATSDR sites, APPLETREE awardees shall quantitatively assess and report efforts to educate community members about site recommendations and health risks using indicators to assess community understanding of site findings about health risks and community understanding of agency recommendations to reduce health risks. This information will be entered into the ATSDR HEAT system for each activity at ATSDR sites. Based on past experience, ATSDR assumes a maximum of 925 activities will be entered into the HEAT database each year; therefore, each of the 25 awardees will enter an average of 37 activities into the HEAT database.

ATSUR Site Impact Assessment (SIA) Form.

Performance Measure: For each environmental health assessment and health education activity conducted at ATSDR sites, awardees shall estimate and report the number of people protected from exposure to toxic substances at each site where implementation of agency recommendations has taken place and at each child care center where safe siting guidelines have been implemented. To the extent possible, awardees shall estimate the disease burden prevented due to the implementation of site recommendations and safe siting guidelines. This information will be entered into the ATSDR SIA database by the awardee. ATSDR assumes a maximum of 150 ATSDR sites will undergo an environmental assessment, or an average of 6 sites per awardee, per year.

APPLETREE Annual Performance Report (APR): Awardees must provide an APR at the end of each budget year. The report must include a minimum of three site activity success stories; a synopsis of the number of people involved in environmental health assessments at sites; the number of public health recommendations accepted, the number of health education activities conducted at sites; and the outcomes achieved during the budget year. The APR must also demonstrate annual progress in implementing child care safe siting policies in their jurisdictions over the three-year program period. ATSDR assumes that ASARs will take 15 burden hours for each awardee to prepare.

ATSDR seeks to request a three-year clearance from OMB to collect the necessary information for this project.

The awardee reporting is a requirement of the APPLETREE cooperative agreement. The total annual time burden requested is 635 hours.

Food and Drug Administration

[Docket No. FDA–2016–D–4436]

Premarket Notification (510(k)) Submissions for Bone Anchors; Draft Guidance for Industry and Food and Drug Administration Staff; Availability

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice of availability.

SUMMARY: The Food and Drug Administration (FDA or Agency) is announcing the availability of the draft guidance entitled “Premarket Notification (510(k)) Submissions for Bone Anchors.” The guidance provides recommendations for the information and testing that should be included in premarket submissions for bone anchor (suture anchor) devices used in the appendicular skeleton for attachment of soft tissue to bone. This draft guidance is not final nor is it in effect at this time.

DATES: Although you can comment on any guidance at any time (see 21 CFR 10.115(g)(5)), to ensure that the Agency considers your comment of this draft guidance before it begins work on the final version of the guidance, submit either electronic or written comments on the draft guidance by 11:59 p.m. EDT, March 6, 2017.

ADDRESSES: You may submit comments as follows:

Electronic Submissions

Submit electronic comments in the following way:

• Federal eRulemaking Portal: https://www.regulations.gov. Follow the instructions for submitting comments. Comments submitted electronically, including attachments, to https://www.regulations.gov will be posted to the docket unchanged. Because your comment will be made public, you are solely responsible for ensuring that your comment does not include any confidential information that you or a third party may not wish to be posted, such as medical information, your or anyone else’s Social Security number, or confidential business information, such as a manufacturing process. Please note that if you include your name, contact information, or other information that identifies you in the body of your comments, that information will be posted on https://www.regulations.gov.

• If you want to submit a comment with confidential information that you do not wish to be made available to the public, submit the comment as a written/paper submission and in the manner detailed (see “Written/Paper Submissions” and “Instructions”).

Written/Paper Submissions

Submit written/paper submissions as follows:

• Mail/Hand delivery/Courier (for written/paper submissions): Division of Dockets Management (HFA–305), Food and Drug Administration, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.

• For written/paper comments submitted to the Division of Dockets Management, FDA will post your comment, as well as any attachments, except for information submitted, marked and identified, as confidential, if submitted as detailed in “Instructions.”

Instructions: All submissions received must include the Docket No. FDA–2016–D–4436 for “Premarket Notification (510(k)) Submissions for Bone Anchors.” Received comments will be placed in the docket and, except for those submitted as “Confidential Submissions,” publicly viewable at https://www.regulations.gov or at the Division of Dockets Management between 9 a.m. and 4 p.m., Monday through Friday.

Confidential Submissions—To submit a comment with confidential information that you do not wish to be made publicly available, submit your comments only as a written/paper submission. You should submit two copies total. One copy will include the information you claim to be confidential with a heading or cover note that states “THIS DOCUMENT CONTAINS CONFIDENTIAL INFORMATION.” The Agency will review this copy, including the claimed confidential information, in its consideration of comments. The second copy, which will have the claimed confidential information redacted/blacked out, will be available for public viewing and posted on https://www.regulations.gov. Submit both copies to the Division of Dockets Management. If you do not wish your name and contact information to be made publicly available, you can provide this information on the cover sheet and not in the body of your comments and you must identify this information as “confidential.” Any information marked as “confidential” will not be disclosed except in accordance with 21 CFR 10.20 and other applicable disclosure law. For more information about FDA’s posting of comments to public docket, see 80 FR 56469, September 18, 2015, or access the information at: http://www.fda.gov/regulatoryinformation/dockets/default.htm.

Docket: For access to the docket to read background documents or the electronic and written/paper comments received, go to https://www.regulations.gov and insert the docket number, found in brackets in the heading of this document, into the “Search” box and follow the prompts and/or go to the Division of Dockets Management, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.

An electronic copy of the guidance document is available for download from the Internet. See the SUPPLEMENTARY INFORMATION section for information on electronic access to the guidance. Submit written requests for a single hard copy of the draft guidance document entitled “Premarket Notification (510(k)) Submissions for Bone Anchors” to the Office of the Center Director, Guidance and Policy Development, Center for Devices and Radiological Health, Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 66, Rm. 5431, Silver Spring, MD 20993–0002. Send one self-addressed adhesive label to assist that office in processing your request.

FOR FURTHER INFORMATION CONTACT:

Daniel Ramsey, Center for Devices and Radiological Health, Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 66, Rm. 1451, Silver Spring, MD 20993–0002, 301–796–6451.

SUPPLEMENTARY INFORMATION:

I. Background

FDA is announcing the availability of a draft guidance for industry and FDA staff entitled “Premarket Notification (510(k)) Submissions for Bone Anchors.” FDA has developed this guidance document for members of industry who submit and FDA staff who review premarket submissions regarding bone anchor (suture anchor) devices used in the appendicular skeleton for attachment of soft tissue to bone. When finalized, this guidance is intended to provide recommendations for information to include in premarket notifications (510(k)) for bone anchor (suture anchor) devices (e.g., descriptive characteristics, labeling, biocompatibility, sterility, and bench testing). This guidance is a reissuance of the April 20, 1996 “Guidance Document for Testing Bone Anchor Devices” with updated content.
II. Significance of Guidance

This draft guidance is being issued consistent with FDA’s good guidance practices regulation (21 CFR 10.115). The draft guidance, when finalized, will represent the current thinking of FDA on Premarket Notification (510(k)) Submissions for Bone Anchors. It does not establish any rights for any person and is not binding on FDA or the public. You can use an alternative approach if it satisfies the requirements of the applicable statutes and regulations.

III. Electronic Access

Persons interested in obtaining a copy of the draft guidance may do so by downloading an electronic copy from the Internet. A search capability for all Center for Devices and Radiological Health guidance documents is available at http://www.fda.gov/MedicalDevices/DeviceRegulationandGuidance/GuidanceDocuments/default.htm. Guidance documents are also available at https://www.regulations.gov. Persons unable to download an electronic copy of “Premarket Notification (510(k)) Submissions for Bone Anchors” may send an email request to CDRH-Guidance@fda.hhs.gov to receive an electronic copy of the document. Please use the document number 1400005 to identify the guidance you are requesting.

IV. Paperwork Reduction Act of 1995

This draft guidance refers to previously approved collections of information found in FDA regulations. These collections of information are subject to review by the Office of Management and Budget (OMB) under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3520). The collections of information in 21 CFR part 807, subpart E have been approved under OMB control number 0910–0120; the collections of information in 21 CFR part 820 have been approved under OMB control number 0910–0073; the collections of information in 21 CFR part 812 have been approved under OMB control number 0910–0078; and the collections of information in 21 CFR part 801 have been approved under OMB control number 0910–0485.

Dated: December 27, 2016.

Leslie Kux,
Associate Commissioner for Policy.

Food and Drug Administration

[Docket No. FDA–2013–N–1428]

Electronic Drug Product Reporting for Human Drug Compounding Outsourcing Facilities Under Section 503B of the Federal Food, Drug, and Cosmetic Act; Guidance for Industry; Availability

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice of availability.

SUMMARY: The Food and Drug Administration (FDA or the Agency) is announcing the availability of a guidance for industry entitled “Electronic Drug Product Reporting for Human Drug Compounding Outsourcing Facilities Under Section 503B of the Federal Food, Drug, and Cosmetic Act.” The final guidance addresses new provisions in the Federal Food, Drug, and Cosmetic Act (the FD&C Act) added by the Drug Quality and Security Act (DQSA) and updates reporting instructions for drug compounders that choose to register as outsourcing facilities. Such compounders must report information on the drugs they compounded in Structured Product Labeling (SPL) format using FDA’s electronic submissions system unless FDA grants a request for a waiver of such requirement because use of electronic means is not reasonable for the person requesting the waiver. This guidance supersedes the revised draft guidance entitled “Electronic Drug Product Reporting for Human Drug Compounding Outsourcing Facilities Under Section 503B of the Federal Food, Drug, and Cosmetic Act.”

DATES: Submit either electronic or written comments on Agency guidances at any time.

ADDRESSES: You may submit comments as follows:

Electronic Submissions

Submit electronic comments in the following way:

• Federal eRulemaking Portal: https://www.regulations.gov. Follow the instructions for submitting comments. Comments submitted electronically, including attachments, to https://www.regulations.gov will be posted to the docket unchanged. Because your comment will be made public, you are solely responsible for ensuring that your comment does not include any confidential information that you or a third party may not wish to be posted, such as medical information, or any else’s Social Security number, or confidential business information, such as a manufacturing process. Please note that if you include your name, contact information, or other information that identifies you in the body of your comments, that information will be posted on https://www.regulations.gov.

• If you want to submit a comment with confidential information that you do not wish to be made available to the public, submit the comment as a written/paper submission and in the manner detailed (see “Written/Paper Submissions” and “Instructions”).

Written/Paper Submissions

Submit written/paper submissions as follows:

• Mail/Hand delivery/Courier (for written/paper submissions): Division of Dockets Management (HFA–305), Food and Drug Administration, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.

• For written/paper comments submitted to the Division of Dockets Management, FDA will post your comment, as well as any attachments, except for information submitted, marked and identified, as confidential, if submitted as detailed in “Instructions.”

Instructions: All submissions received must include the Docket No. FDA–2013–N–1428 for “Electronic Drug Product Reporting for Human Drug Compounding Outsourcing Facilities Under Section 503B of the Federal Food, Drug, and Cosmetic Act.” Received comments will be placed in the docket and, except for those submitted as “Confidential Submissions,” publicly viewable at https://www.regulations.gov or at the Division of Dockets Management between 9 a.m. and 4 p.m., Monday through Friday.

• Confidential Submissions—To submit a comment with confidential information that you do not wish to be made publicly available, submit your comments only as a written/paper submission. You should submit two copies total. One copy will include the information you claim to be confidential with a heading or cover note that states “THIS DOCUMENT CONTAINS CONFIDENTIAL INFORMATION.” The Agency will review this copy, including the claimed confidential information, in its consideration of comments. The second copy, which will have the claimed confidential information redacted/blacked out, will be available for public viewing and posted on http://www.regulations.gov. Submit both copies to the Division of Dockets Management. If you do not wish your name and contact information to be...
made publicly available, you can provide this information on the cover sheet and not in the body of your comments and you must identify this information as “confidential.” Any information marked as “confidential” will not be disclosed except in accordance with 21 CFR 10.20 and other applicable disclosure law. For more information about FDA’s posting of comments to public dockets, see 80 FR 56469, September 18, 2015, or access the information at: http://www.fda.gov/regulatoryinformation/dockets/default.htm.

Docket: For access to the docket to read background documents or the electronic and written/paper comments received, go to https://www.regulations.gov and insert the docket number, found in brackets in the heading of this document, into the “Search” box and follow the prompts and/or go to the Division of Dockets Management, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.

Submit written requests for single copies of this guidance to the Division of Drug Information, Center for Drug Evaluation and Research, Food and Drug Administration, 10001 New Hampshire Ave., Hillandale Building, 4th Floor, Silver Spring, MD 20993–0002. Send one self-addressed adhesive label to assist that office in processing your requests. See the SUPPLEMENTARY INFORMATION section for electronic access to the guidance document.

FOR FURTHER INFORMATION CONTACT:
Lysette Deshields, Center for Drug Evaluation and Research Food and Drug Administration, 10903 New Hampshire Ave., Hillandale Building, 4th Floor, Silver Spring, MD 20993–301–796–3100.

SUPPLEMENTARY INFORMATION:
I. Background
FDA is announcing the availability of a guidance for industry entitled “Electronic Drug Product Reporting for Human Drug Compounding Outsourcing Facilities Under Section 503B of the Federal Food, Drug, and Cosmetic Act.”

Under section 503B, an outsourcing facility must, at the time of initial registration and twice each year, in June and December, submit to FDA a report identifying the drugs compounded by the facility during the previous 6-month period. For each identified drug, the outsourcing facility must report the following information to FDA for each product that it compounds:
• The active ingredient and strength of active ingredient per unit;
• the source of the active ingredient (bulk or finished drug);
• the National Drug Code (NDC) number of the source drug or bulk active ingredient, if available;
• the dosage form and route of administration;
• the package description;
• the number of individual units produced; and
• the NDC number of the final product, if assigned.1

This final guidance explains that registered outsourcing facilities must provide reports to FDA on compounded drugs in SPL format using FDA’s electronic submissions system unless FDA grants a request for a waiver of such requirement because use of electronic means is not reasonable for the person requesting the waiver. It supersedes the revised draft guidance entitled “Electronic Drug Product Reporting for Human Drug Compounding Outsourcing Facilities Under Section 503B of the Federal Food, Drug, and Cosmetic Act.”

The comment period for the revised draft guidance ended on January 23, 2015. FDA received three comments on the draft. In response to received comments or on its own initiative, FDA made the following changes and updates in the final guidance: (1) Clarified FDA’s definition of the source of the active ingredient used to compound the final product and the

II. Paperwork Reduction Act of 1995
This guidance contains collections of information that are subject to review by the Office of Management and Budget (OMB) under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3520). The collections of information have been approved under OMB control number 0910–0827.

III. Electronic Access
Persons with access to the Internet may obtain the document at either http://www.fda.gov/Drugs/GuidanceComplianceRegulatoryInformation/Guidances/default.htm or https://www.regulations.gov.

Leslie Kux,
Associate Commissioner for Policy.

DEPARTMENT OF HEALTH AND HUMAN SERVICES
Food and Drug Administration
[Docket No. FDA–2016–D–4308]
Labeling of Red Blood Cell Units With Historical Antigen Typing Results; Draft Guidance for Industry; Availability
AGENCY: Food and Drug Administration, HHS.
ACTION: Notice of availability.
SUMMARY: The Food and Drug Administration (FDA or Agency) is announcing the availability of a draft document entitled “Labeling of Red
Blood Cell Units with Historical Antigen Typing Results; Draft Guidance for Industry. The draft guidance document provides establishments that collect blood and blood components for transfusion with recommendations for labeling Red Blood Cell (RBC) units with non-ABO/Rh(D) antigen typing results obtained from previous donations (historical antigen typing results). The draft guidance provides recommendations to transfusion services for managing RBC units labeled with historical antigen typing results. The guidance also provides licensed blood collection establishments that choose to implement labeling of RBC units with historical antigen typing results instructions regarding how to report the manufacturing and labeling results instructions regarding how to report the manufacturing and labeling changes under the biologics regulations. The guidance does not apply to test results for ABO and Rh(D) antigens.

I. Background

FOR FURTHER INFORMATION CONTACT: Melissa Segal, Center for Biologics Evaluation and Research, Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 71, Rm. 3126, Silver Spring, MD 20993–0002, 240–402–0002. Send one self-addressed adhesive label to assist the office in processing your requests. The draft guidance may also be obtained by mail by calling CBER at 1–800–835–4709 or 240–402–8010. See the SUPPLEMENTARY INFORMATION section for electronic access to the draft guidance document.

DOCKET: For access to the docket to read background documents or the electronic and written/paper comments received, go to http://www.regulations.gov and insert the docket number, found in brackets in the heading of this document, into the “Search” box and follow the prompts and/or go to the Division of Dockets Management, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.

Submit comments on information collection issues to the Office of Management and Budget in the following ways:
• Fax to the Office of Information and Regulatory Affairs, OMB, Attn: FDA Desk Officer, FAX: 202–395–7285, or email to oira_submission@omb.eop.gov. All comments should be identified with the title, Labeling of Red Blood Cell Units with Historical Antigen Typing Results; Draft Guidance for Industry.

Submit written requests for single copies of the draft guidance to the Office of Communication, Outreach and Development, Center for Biologics Evaluation and Research (CBER), Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 71, Rm. 3126, Silver Spring, MD 20993–0002. Send copies of the draft guidance to the Office of Regulatory Affairs, OMB, Attn: FDA Desk Officer, FAX: 202–395–7285, or email to oira_submission@omb.eop.gov.
manufacturing and labeling changes under 21 CFR 601.12. The guidance does not apply to test results for ABO and Rh(D) antigens. For ABO and Rh(D) antigens, establishments must follow FDA requirements in 21 CFR 640.5(b), 640.5(c), and 606.121(c)(9) and (13), as well as all other applicable requirements.

At the AABB–FDA Liaison Meeting held on April 12, 2012, AABB stated that it is the practice of some blood collection establishments to provide historical RBC antigen typing results to transfusion services using a tie-tag attached to the RBC unit. AABB asked for recommendations from FDA regarding labeling of RBC units with historical RBC antigen typing results. FDA’s Blood Products Advisory Committee discussed this topic on December 4, 2012, and supported the concept of using historical RBC antigen typing results.

AABB has revised its standards to include accommodations for labeling RBC units with historical RBC typing results. According to the 30th edition of the AABB Standards for Blood Banks and Transfusion Services, RBC units may be labeled as RBC antigen negative without testing the current donation if two previous separate donations were tested by the collection facility and results of RBC typing were found to be concordant. The standards indicate that facilities have the option to put the non-ABO/Rh(D) historical antigen typing results on a tie-tag or directly on the container label.

The draft guidance is being issued consistent with FDA’s good guidance practices regulation (21 CFR 10.115). The draft guidance, when finalized, will represent the current thinking of FDA on labeling of red blood cell units with historical antigen typing results. It does not establish any rights for any person and is not binding on FDA or the public.

II. Paperwork Reduction Act of 1995

The draft guidance document contains information collection provisions that are subject to review by the Office of Management and Budget (OMB) under the Paperwork Reduction Act of 1995 (the PRA) (44 U.S.C. 3501–3520). Under the PRA, Federal Agencies must obtain approval from OMB for each collection of information they conduct or sponsor. “Collection of information” is defined in 44 U.S.C. 3502(3) and 5 CFR 1320.3(c) and includes agency requests or requirements that members of the public submit reports, keep records, or provide information to a third party. Section 3506(c)(2)(A) of the PRA (44 U.S.C. 3506(c)(2)(A)) requires Federal Agencies to provide a 60-day notice in the Federal Register concerning each proposed collection of information before submitting the collection to OMB for approval. To comply with this requirement, FDA is publishing notice of the proposed collection of information set forth in this document. With respect to the following collection of information, FDA invites comments on these topics: (1) Whether the proposed collection of information is necessary for the proper performance of FDA’s functions, including whether the information will have practical utility; (2) the accuracy of FDA’s estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used; (3) ways to enhance the quality, utility, and clarity of the information to be collected; and (4) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques, when appropriate, and other forms of information technology.

Labeling of Red Blood Cell Units with Historical Antigen Typing Results: Draft Guidance for Industry; OMB Control No. 0910–NEW

The draft guidance document provides establishments that collect blood and blood components for transfusion with recommendations for labeling RBC units with non-ABO/Rh(D) antigen typing results obtained from previous donations (historical antigen typing results). The draft guidance provides recommendations to transfusion services for managing RBC units labeled with historical antigen typing results. The guidance also provides licensed blood collection establishments that choose to implement labeling of RBC units with historical antigen typing results instructions regarding how to report the manufacturing and labeling changes under 21 CFR 601.12.

Description of Respondents:

Establishments that collect blood and blood components for transfusion, transfusion services, and licensed blood collection establishments. Burden Estimate: We believe that the information collection provisions in the draft guidance do not create a new burden for respondents and are part of usual and customary business practices. According to the 30th edition of the AABB Standards for Blood Banks and Transfusion Services, RBC units may be labeled as RBC antigen negative without testing the current donation if two previous separate donations were tested by the collection facility and results of RBC typing were found to be concordant. The standards indicate that facilities have the option to put the non-ABO/Rh(D) historical antigen typing results on a tie-tag or directly on the container label.

We believe that facilities have already developed standard operating procedures for putting the non-ABO/Rh(D) historical antigen typing results on a tie-tag or directly on the container label.

The draft guidance also refers to previously approved collections of information found in FDA regulations. The collections of information in 21 CFR 601.12 have been approved under OMB control number 0910–0338; and the collections of information in 21 CFR 606.100, 606.121, 606.160, 606.171 have been approved under OMB control number 0910–116, 0910–0795 and 0910–0458.

III. Electronic Access

Persons with access to the Internet may obtain the draft guidance at either http://www.fda.gov/BiologicsBloodVaccines/GuidanceComplianceRegulatoryInformation/Guidances/default.htm or http://www.regulations.gov.

Dated: December 27, 2016.

Leslie Kux,
Associate Commissioner for Policy.

BILLING CODE 4164–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

National Institutes of Health

Prospective Grant of Exclusive License: Development, Manufacture and Commercialization of Gene Therapy Products for Human Gene Therapy Use To Treat and/or Prevent Methylmalonic Acidemia (MMA)

AGENCY: National Institutes of Health (NIH).

ACTION: Notice.

SUMMARY: The National Human Genome Research Institute (NHGRI), an institute of the National Institutes of Health, Department of Health and Human Services, is contemplating the grant of an exclusive commercialization patent license to practice the inventions embodied in the Patent Applications listed in the Supplementary Information section of this notice License to Selecta Biosciences (“Selecta”) located in Watertown, Massachusetts.
DATES: Only written comments and/or applications for a license which are received by the NCI Technology Transfer Center on or before January 18, 2017 will be considered.

ADDRESSES: Requests for copies of the patent application, inquiries, comments, and other materials relating to the contemplated exclusive license should be directed to: Eggerton Campbell Ph.D., Licensing and Patenting Manager, Technology Transfer Office (TTO), National Human Genome Research Institute, National Institutes of Health, 5635 Fishers Lane, Suite 3058, MSC 9307, Bethesda, MD 20892–9307. Telephone: 301–402–1648. Fax: 301–402–9722. email: eggerton.campbell@nih.gov.

SUPPLEMENTARY INFORMATION:

Intellectual Property

1. US Provisional Patent Application No.: 61/792,081
   HHS Ref. No.: E–243–2012/0–US–01
2. PCT Patent Application No.: PCT/2014/028045
   HHS Ref. No.: E–243–2012/0–PCT–01
3. EP Patent Application No.: 14729502.6
4. US Patent Application No.: 14/773,885
   HHS Ref. No.: E–243–2012/0–US–01
5. US Patent Application No.: 15/070,787

All patent applications and foreign counterparts. The patent rights in these inventions have been assigned to the Government of the United States of America.

The prospective exclusive license territory may be worldwide and the field of use may be limited to the use of Licensed Patent Rights for the following:

Development, manufacture and commercialization of gene therapy products for human gene therapy use to treat and/or prevent Methylmalonic Acidemia (MMA) comprised of the following: all of or fragments of the synthetic methylmalonyl-CoA mutase (MUT) human polynucleotide (synMUT) and/or recombinant synMUT constructs, in combination with the following:

- the Anc80 vector or vectors derived from the Anc80 vectors, wherein the derived Anc80 vectors have capsid sequences possessing 90% or greater sequence identity to the Anc80 capsid sequences.

For purposes of clarity, the above gene therapy products may be combined with Selecta’s synthetic vaccine particles (SVP™) technology encapsulating an immunomodulator.

The subject technology discloses a synthetic codon-optimized human methylmalonyl-CoA mutase (MUT) cDNA gene (co-MUT) encoding human MUT protein, co-MUT constructs and uses thereof for treatment of MMA disorders. Such uses, may include the administration of immunomodulator(s) in order to maximize the advantage of the gene therapy, with fewer side effects. MMA is an autosomal recessive disorder caused by defects in the mitochondria-localized enzyme methylmalonyl-CoA mutase (MUT). MUT deficiency, the most common cause of MMA, is characterized by the accumulation of methylmalonic acid. MMA can lead to metabolic instability, seizures, strokes, and kidney failure, and can be lethal even when patients are being properly managed. If successfully developed, this invention would be a first of its kind therapy for MMA, by administer the disclosed nucleic acid, vector, or recombinant virus to a subject, optionally with an immunomodulator.

This notice is made in accordance with 35 U.S.C. 209 and 37 CFR part 404. The prospective Exclusive Patent License will be royalty bearing and may be granted unless within fifteen (15) days from the date of this published notice, the National Human Genome Research Institute receives written evidence and argument that establishes that the grant of the license would not be consistent with the requirements of 35 U.S.C. 209 and 37 CFR part 404.

Complete applications for a license in the prospective field of use that are timely filed in response to this notice will be treated as objections to the grant of the contemplated Exclusive Patent License. Comments and objections submitted to this notice will not be made available for public inspection, and, to the extent permitted by law, will not be released under the Freedom of Information Act, 5 U.S.C. 552.

Dated: December 27, 2016.

Claire T. Driscoll,
Director, NHGRI Technology Transfer Office.

BILLING CODE 4140–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Substance Abuse and Mental Health Services Administration

Current List of HHS-Certified Laboratories and Instrumented Initial Testing Facilities Which Meet Minimum Standards To Engage in Urine Drug Testing for Federal Agencies

AGENCY: Substance Abuse and Mental Health Services Administration, HHS

ACTION: Notice

SUMMARY: The Department of Health and Human Services (HHS) notifies federal agencies of the laboratories and

Instrumented Initial Testing Facilities (IITF) currently certified to meet the standards of the Mandatory Guidelines for Federal Workplace Drug Testing Programs (Mandatory Guidelines). The Mandatory Guidelines were first published in the Federal Register on April 11, 1988 (53 FR 11970), and subsequently revised in the Federal Register on June 9, 1994 (59 FR 29908); September 30, 1997 (62 FR 51118); April 13, 2004 (69 FR 19644); November 25, 2008 (73 FR 71858); December 10, 2008 (73 FR 75122); and on April 30, 2010 (75 FR 22809).

A notice listing all currently HHS-certified laboratories and IITFs is published in the Federal Register during the first week of each month. If any laboratory or IITF certification is suspended or revoked, the laboratory or IITF will be omitted from subsequent lists until such time as it is restored to full certification under the Mandatory Guidelines.

If any laboratory or IITF has withdrawn from the HHS National Laboratory Certification Program (NLCP) during the past month, it will be listed at the end and will be omitted from the monthly listing thereafter.

This notice is also available on the Internet at http://www.samhsa.gov/workplace.

FOR FURTHER INFORMATION CONTACT: Giselle Hersh, Division of Workplace Programs, SAMHSA/CSAP, 5600 Fishers Lane, Room 16N03A, Rockville, Maryland 20857; 240–276–2600 (voice).

SUPPLEMENTAL INFORMATION: The Mandatory Guidelines were initially developed in accordance with Executive Order 12564 and section 503 of Public Law 100–71. The “Mandatory Guidelines for Federal Workplace Drug Testing Programs,” as amended in the revisions listed above, requires strict standards that laboratories and IITFs must meet in order to conduct drug and specimen validity tests on urine specimens for federal agencies.

To become certified, an applicant laboratory or IITF must undergo three rounds of performance testing plus an on-site inspection. To maintain that certification, a laboratory or IITF must participate in a quarterly performance testing program plus undergo periodic, on-site inspections.

Laboratories and IITFs in the applicant stage of certification are not to be considered as meeting the minimum requirements described in the HHS Mandatory Guidelines. A HHS-certified laboratory or IITF must have its letter of certification from HHS/SAMHSA (formerly: HHS/NIDA), which attests that it has met minimum standards.

In accordance with the Mandatory Guidelines dated November 25, 2008 (73 FR 71858), the following HHS-certified laboratories and IITFs meet the minimum standards to conduct drug and specimen validity tests on urine specimens:

DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT

[Docket No. FR–5909–N–98]

30-Day Notice of Proposed Information Collection: Public Housing Capital Fund Program

AGENCY: Office of the Chief Information Officer, HUD.

ACTION: Notice.

SUMMARY: HUD has submitted the proposed information collection requirement described below to the Office of Management and Budget (OMB) for review, in accordance with the Paperwork Reduction Act. The purpose of this notice is to allow for an additional 30 days of public comment.

DATES: Comments Due Date: February 2, 2017.

ADDRESSES: Interested persons are invited to submit comments regarding this proposal. Comments should refer to the proposal by name and/or OMB Control Number and should be sent to: HUD Desk Officer, Office of Management and Budget, New Executive Office Building, Washington, DC 20503; fax: 202–395–5806. Email: OIRA Submission@omb.eop.gov

FOR FURTHER INFORMATION CONTACT:
Colette Pollard, Reports Management Officer, QMAC, Department of Housing and Urban Development, 451 7th Street SW., Washington, DC 20410; email Colette Pollard at Colette.Pollard@hud.gov or telephone 202–402–3400. This is not a toll-free number. Persons with hearing or speech impairments may access this number through TTY by calling the toll-free Federal Relay Service at (800) 877–8339.

Copies of available documents submitted to OMB may be obtained from Ms. Pollard.

SUPPLEMENTARY INFORMATION: This notice informs the public that HUD is seeking approval from OMB for the information collection described in Section A.

The Federal Register notice that solicited public comment on the information collection for a period of 60 days was published on September 14, 2016 at FR 81 63199.

A. Overview of Information Collection

Title of Information Collection: Public Housing Capital Fund Program

OMB Approval Number: 2577–0157.

Type of Request: Extension of currently approved collection.

management improvements. The funds are allocated based on a complex formula. The forms in this collection are used to appropriately disburse and utilize the funds provided to PHAs. Additionally, these forms provide the information necessary to approve a financing transaction in addition to any Capital Fund Financing transactions. Respondents include the approximately 3,100 PHA receiving Capital Funds and any other PHAs wishing to pursue financing.

Respondents (i.e. affected public): Public Housing Authorities.

### B. Solicitation of Public Comment

This notice is soliciting comments from members of the public and affected parties concerning the collection of information described in Section A on the following:

1. Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;
2. The accuracy of the agency’s estimate of the burden of the proposed collection of information;
3. Ways to enhance the quality, utility, and clarity of the information to be collected; and
4. Ways to minimize the burden of the collection of information on those who are to respond; including through the use of appropriate automated collection techniques or other forms of information technology, e.g., permitting electronic submission of responses.

HUD encourages interested parties to submit comment in response to these questions.

### C. Authority

Dated: December 21, 2016.

Colette Pollard,
Department Reports Management Officer, Office of the Chief Information Officer.

DEPARTMENT OF THE INTERIOR

Bureau of Reclamation

[RR01041000, 17XRO680G3, RX.16786921.2000100]

Notice To Extend the Public Comment Period for the Notice of Intent To Prepare the Columbia River System Operations Environmental Impact Statement

AGENCY: Bureau of Reclamation, Interior.

ACTION: Notice of extension.

SUMMARY: The U.S. Army Corps of Engineers, Bonneville Power Administration, and Bureau of Reclamation (Action Agencies) are extending the public comment period for the Notice of Intent (NOI) to Prepare the Columbia River System Operations Environmental Impact Statement (EIS) to Tuesday February 7, 2017. The NOI and Notice of Public Meetings was published in the Federal Register on Friday, September 30, 2016. The public comment period for the NOI was originally scheduled to end on Tuesday, January 17, 2017.

DATES: Comments on the NOI will be accepted until close of business on Tuesday February 7, 2017.

ADDRESSES: Written comments, requests to be placed on the project mailing list, and requests for information may be mailed by letter to U.S. Army Corps of Engineers Northwestern Division Att: CRSO EIS, P.O. Box 2870, Portland, OR 97208–2870; or online at comment@crso.info. All comment letters will be available via the project Web site at www.crso.info. All personally identifiable information (for example, name, address, etc.) voluntarily submitted by the commenter may be publicly accessible. Do not submit confidential business information or otherwise sensitive or protected information.

FOR FURTHER INFORMATION CONTACT: Call the toll-free telephone 1–800–290–5033, or email info@crso.info. Additional information can be found at the project Web site: www.crso.info.

SUPPLEMENTARY INFORMATION: In response to requests for an extension, the Action Agencies are extending the close of the public comment period for the NOI to Prepare the Columbia River System Operations Environmental Impact Statement to Tuesday February 7, 2017.

Public Disclosure

Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you can ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

Dated: December 6, 2016.

Lorri J. Lee, Regional Director—Pacific Northwest Region, Bureau of Reclamation.

BILLING CODE 4332–90–P

INTERNATIONAL TRADE COMMISSION

[Investigation No. 731–TA–410 (Fourth Review)]

Light-Walled Rectangular Pipe and Tube From Taiwan Institution of a Five-Year Review

ACTION: Notice.

SUMMARY: The Commission hereby gives notice that it has instituted a review pursuant to the Tariff Act of 1930 (“the Act”), as amended, to determine whether revocation of the antidumping duty order on light-walled rectangular carbon steel tubing from Taiwan would be likely to lead to continuation or recurrence of material injury within a reasonably foreseeable time. Provisions concerning the conduct of this review may be found in the Commission’s Rules of Practice and Procedure at 19 CFR parts 201, subparts A and B and 19 CFR part 207, subparts A and F. The Commission will assess the adequacy of interested party responses to this notice of institution to determine whether to conduct a full review or an expedited review. The Commission’s determination in any expedited review will be based on the facts available, which may include information provided in response to this notice.

Definitions — The following definitions apply to this review:

(1) **Subject Merchandise** is the class or kind of merchandise that is within the scope of the five-year review, as defined by the Department of Commerce.

(2) The **Subject Country** in this review is Taiwan.

(3) The **Domestic Like Product** is the domestically produced product or products which are like, or in the kind of merchandise that is within the scope of the five-year review, as defined by the Department of Commerce.

(4) The **Domestic Like Product** is the domestically produced product or products which are like, or in the absence of like, most similar in characteristics and uses with the **Subject Merchandise**. In its original investigation of light-walled rectangular carbon steel tubing from Taiwan (71 FR 45521), the Commission issued a continuation of the antidumping duty order on imports of light-walled rectangular pipe and tube from Taiwan (65 FR 50955). Following second five-year reviews by Commerce and the Commission, effective August 9, 2006, Commerce issued a continuation of the antidumping duty order on imports of light-walled welded rectangular carbon steel tubing from Taiwan (71 FR 45521). Following the third five-year reviews by Commerce and the Commission, effective February 2, 2012, Commerce issued a continuation of the antidumping duty order on imports of light-walled welded rectangular carbon steel tubing from Taiwan (77 FR 5240). The Commission is now conducting a fourth review pursuant to section 751(c) of the Act, as amended (19 U.S.C. 1675(c)), to determine whether revocation of the order would be likely to lead to continuation or recurrence of material injury to the domestic industry within a reasonably foreseeable time. Provisions concerning the conduct of this proceeding may be found in the Commission’s Rules of Practice and Procedure at 19 CFR parts 201, subparts A and B and 19 CFR part 207, subparts A and F. The Commission will assess the adequacy of interested party responses to this notice of institution to determine whether to conduct a full review or an expedited review. The Commission’s determination in any expedited review will be based on the facts available, which may include information provided in response to this notice.

Dated: December 6, 2016.

General information concerning the Commission may also be obtained by accessing its internet server (https://www.usitc.gov). The public record for this proceeding may be viewed on the Commission’s electronic docket (EDIS) at https://edis.usitc.gov.
five-year review determination, the Commission defined a single Domestic Like Product as light-walled rectangular pipe and tube coextensive with Commerce’s scope definition.

(4) The Domestic Industry is the U.S. producers as a whole of the Domestic Like Product, or those producers whose collective output of the Domestic Like Product constitutes a major proportion of the total domestic production of the product. In its original investigation determination, its full first and second five-year review determinations, and its expedited third five-year review determination, the Commission defined the Domestic Industry as the U.S. producers of light-walled rectangular pipe and tube.

(5) An Importer is any person or firm engaged, either directly or through a parent company or subsidiary, in importing the Subject Merchandise into the United States from a foreign manufacturer or through its selling agent.

Participation in the proceeding and public service list.—Persons, including industrial users of the Subject Merchandise and, if the merchandise is sold at the retail level, representative consumer organizations, wishing to participate in the proceeding as parties must file an entry of appearance with the Secretary to the Commission, as provided in section 201.11(b)(4) of the Commission’s rules, no later than 21 days after publication of this notice in the Federal Register. The Secretary will maintain a public service list containing the names and addresses of all persons, or their representatives, who are parties to the proceeding.

Former Commission employees who are seeking to appear in Commission five-year reviews are advised that they may appear in a review even if they participated personally and substantially in the corresponding underlying original investigation or an earlier review of the same underlying investigation. The Commission’s designated agency ethics official has advised that a five-year review is not the same particular matter as the underlying original investigation, and a five-year review is not the same particular matter as an earlier review of the same underlying investigation for purposes of 18 U.S.C. 1677 (the post employment statute for Federal employees, and Commission rule 201.15(b) (19 CFR 201.15(b)), 79 FR 3246 (Jan. 17, 2014), 73 FR 24609 (May 5, 2008).

Consequently, former employees are not required to seek Commission approval to appear under Commission rule 19 CFR 201.15, even if the corresponding underlying original investigation or an earlier review of the same underlying investigation was pending when they were Commission employees. For further ethics advice on this matter, contact Carol McCue Verrutti, Deputy Agency Ethics Officer, at 202–205–3088.

Limited disclosure of business proprietary information (BPI) under an administrative protective order (APO) and APO service list.—Pursuant to section 207.7(a) of the Commission’s rules, the Secretary will make BPI submitted in this proceeding available to authorized applicants under the APO issued in the proceeding, provided that the application is made no later than 21 days after publication of this notice in the Federal Register. Authorized applicants must represent interested parties, as defined in 19 U.S.C. 1677(9), who are parties to the proceeding. A separate service list will be maintained by the Secretary for those parties authorized to receive BPI under the APO.

Certification.—Pursuant to section 207.3 of the Commission’s rules, any person submitting information to the Commission in connection with this proceeding must certify that the information is accurate and complete to the best of the submitter’s knowledge. In making the certification, the submitter will acknowledge that information submitted in response to this request for information and throughout this proceeding or other proceeding may be disclosed to and used: (i) by the Commission, its employees and Offices, and contract personnel (a) for developing or maintaining the records of this or a related proceeding, or (b) in internal investigations, audits, reviews, and evaluations relating to the programs, personnel, and operations of the Commission including under 5 U.S.C. Appendix 3; or (ii) by U.S. government employees and contract personnel, solely for cybersecurity purposes. All contract personnel will sign appropriate nondisclosure agreements.

Written submissions.—Pursuant to section 207.61 of the Commission’s rules, each interested party response to this notice must provide the information specified below. The deadline for filing such responses is February 2, 2017. Pursuant to section 207.62(b) of the Commission’s rules, eligible parties (as specified in Commission rule 207.62(b)(1)) may also file comments concerning the adequacy of responses to the notice of institution and whether the Commission should conduct an expedited review. The deadline for filing such comments is March 17, 2017. All written submissions must conform with the provisions of section 201.8 of the Commission’s rules; any submissions that contain BPI must also conform with the requirements of sections 201.6, 207.3, and 207.7 of the Commission’s rules. The Commission’s Handbook on E-Filing, available on the Commission’s Web site at https://edis.usitc.gov, elaborates upon the Commission’s rules with respect to electronic filing. Also, in accordance with sections 201.16(c) and 207.3 of the Commission’s rules, each document filed by a party to the proceeding must be served on all other parties to the proceeding (as identified by either the public or APO service list as appropriate), and a certificate of service must accompany the document (if you are not a party to the proceeding you do not need to serve your response).

No response to this request for information is required if a currently valid Office of Management and Budget (OMB) number is not displayed; the OMB number is 3117 0016/USITC No. 16–5–377, expiration date June 30, 2017. Public reporting burden for the request is estimated to average 15 hours per response. Please send comments regarding the accuracy of this burden estimate to the Office of Investigations, U.S. International Trade Commission, 500 E Street SW., Washington, DC 20436.

Inability to provide requested information.—Pursuant to section 207.61(c) of the Commission’s rules, any interested party that cannot furnish the information requested by this notice in the requested form and manner shall notify the Commission at the earliest possible time, provide a full explanation of why it cannot provide the requested information, and indicate alternative forms in which it can provide equivalent information. If an interested party does not provide this notification (or the Commission finds the explanation provided in the notification inadequate) and fails to provide a complete response to this notice, the Commission may take an adverse inference against the party pursuant to section 776(b) of the Act (19 U.S.C. 1677(b)) in making its determination in the review.

INFORMATION TO BE PROVIDED IN RESPONSE TO THIS NOTICE OF INSTITUTION: As used below, the term “firm” includes any related firms.

(1) The name and address of your firm or entity (including World Wide Web address) and name, telephone number, fax number, and Email address of the certifying official.

(2) A statement indicating whether your firm/entity is an interested party under 19 U.S.C. 1677(9) and if so, how,
including whether your firm/entity is a U.S. producer of the Domestic Like Product, a U.S. union or worker group, a U.S. importer of the Subject Merchandise, a foreign producer or exporter of the Subject Merchandise, a U.S. or foreign trade or business association (a majority of whose members are interested parties under the statute), or another interested party (including an explanation). If you are a union/worker group or trade/business association, identify the firms in which your workers are employed or which are members of your association.

(3) A statement indicating whether your firm/entity is willing to participate in this proceeding by providing information requested by the Commission.

(4) A statement of the likely effects of the revocation of the antidumping duty order on the Domestic Industry in general and/or your firm/entity specifically. In your response, please discuss the various factors specified in section 756(a) of the Act (19 U.S.C. 1675a(a)) indicating the likely volume of subject imports, likely price effects of subject imports, and likely impact of imports of Subject Merchandise on the Domestic Industry.

(5) A list of all known and currently operating U.S. producers of the Domestic Like Product. Identify any known related parties and the nature of the relationship as defined in section 771(7) of the Act (19 U.S.C. 1677(4)(B)).

(6) A list of all known and currently operating U.S. importers of the Subject Merchandise and producers of the Subject Merchandise in the Subject Country that currently export or have exported Subject Merchandise to the United States or other countries after 2010.

(7) A list of 3–5 leading purchasers in the U.S. market for the Domestic Like Product and the Subject Merchandise (including street address, World Wide Web address, and the name, telephone number, fax number, and Email address of a responsible official at each firm).

(8) A list of known sources of information on national or regional prices for the Domestic Like Product or the Subject Merchandise in the U.S. or other markets.

(9) If you are a U.S. producer of the Domestic Like Product, provide the following information on your firm’s operations on that product during calendar year 2016, except as noted (report quantity data in short tons and value data in U.S. dollars, f.o.b. plant).

(10) If you are a U.S. importer or a trade/business association of U.S. importers of the Subject Merchandise from the Subject Country, provide the following information on your firm’s (s’) operations on that product during calendar year 2016 (report quantity data in short tons and value data in U.S. dollars, landed and duty-paid at the U.S. port but not including antidumping duties). If you are a trade/business association, provide the information, on an aggregate basis, for the firms which are members of your association.

(a) Production (quantity) and, if known, an estimate of the percentage of total U.S. production of the Domestic Like Product accounted for by your firm’s (s’) production;

(b) Capacity (quantity) of your firm to produce the Domestic Like Product (that is, the level of production that your establishment(s) could reasonably have expected to attain during the year, assuming normal operating conditions (using equipment and machinery in place and ready to operate), normal operating levels (hours per week/weeks per year), time for downtime, maintenance, repair, and cleanup, and a typical or representative product mix);

(c) the quantity and value of U.S. commercial shipments of the Domestic Like Product produced in your U.S. plant(s);

(d) the quantity and value of U.S. internal consumption/company transfers of the Domestic Like Product produced in your U.S. plant(s); and

(e) the value of (i) net sales, (ii) cost of goods sold (COGS), (iii) gross profit, (iv) selling, general and administrative (SG&A) expenses, and (v) operating income of the Domestic Like Product produced in your U.S. plant(s) for your most recently completed fiscal year (identify the date on which your fiscal year ends).

(11) If you are a producer, an exporter, or a trade/business association of producers or exporters of the Subject Merchandise in the Subject Country, provide the following information on your firm’s (s’) operations on that product during calendar year 2016 (report quantity data in short tons and value data in U.S. dollars, landed and duty-paid at the U.S. port but not including antidumping duties). If you are a trade/business association, provide the information, on an aggregate basis, for the firms which are members of your association.

(a) Production (quantity) and, if known, an estimate of the percentage of total production of Subject Merchandise in the Subject Country accounted for by your firm’s (s’) production;

(b) Capacity (quantity) of your firm(s) to produce the Subject Merchandise in the Subject Country (that is, the level of production that your establishment(s) could reasonably have expected to attain during the year, assuming normal operating conditions (using equipment and machinery in place and ready to operate), normal operating levels (hours per week/weeks per year), time for downtime, maintenance, repair, and cleanup, and a typical or representative product mix); and

(c) the quantity and value of your firm’s (s’) exports to the United States of Subject Merchandise and, if known, an estimate of the percentage of total exports to the United States of Subject Merchandise from the Subject Country accounted for by your firm’s (s’) exports.

(12) Identify significant changes, if any, in the supply and demand conditions or business cycle for the Domestic Like Product that have occurred in the United States or in the market for the Subject Merchandise in the Subject Country after 2010, and significant changes, if any, that are likely to occur within a reasonably foreseeable time. Supply conditions to consider include technology; production methods; development efforts; ability to increase production (including the shift of production facilities used for other products and the use, cost, or availability of major inputs into production); and factors related to the ability to shift supply among different national markets (including barriers to importation in foreign markets or changes in market demand abroad). Demand conditions to consider include end uses and applications; the existence and availability of substitute products; and the level of competition among the Domestic Like Product produced in the United States, Subject Merchandise produced in the Subject
Country, and such merchandise from other countries.

(13) (OPTIONAL) A statement of whether you agree with the above definitions of the Domestic Like Product and Domestic Industry; if you disagree with either or both of these definitions, please explain why and provide alternative definitions.

Authority: This proceeding is being conducted under authority of title VII of the Tariff Act of 1930; this notice is published pursuant to section 207.61 of the Commission’s rules.

By order of the Commission.

Lisa K. Barton,
Secretary to the Commission.

[FR Doc. 2016–31465 Filed 12–30–16; 8:45 am]
BILLING CODE 7020–02–P

INTERNATIONAL TRADE COMMISSION

[Investigation Nos. 701–TA–379 and 731–TA–788, 792, and 793 (Third Review)]

Stainless Steel Plate From Belgium, South Africa, and Taiwan; Determinations

On the basis of the record developed in the subject five-year reviews, the United States International Trade Commission (“Commission”) determines, pursuant to the Tariff Act of 1930 (“the Act”), that revocation of the antidumping duty order on stainless steel plate from Belgium, South Africa, and Taiwan revocation of the countervailing duty order on stainless steel plate from South Africa would be likely to lead to continuation or recurrence of material injury to an industry in the United States within a reasonably foreseeable time.

Background

The Commission, pursuant to section 751(c) of the Act (19 U.S.C. 1675(c)), instituted these reviews on July 1, 2016 (81 FR 43245) and determined on October 4, 2016 that it would conduct expedited reviews (81 FR 73421, October 25, 2016).

The Commission made these determinations pursuant to section 751(c) of the Act (19 U.S.C. 1675(c)). It completed and filed its determinations in these reviews on December 22, 2016. The views of the Commission are contained in USITC Publication 4658 (December 2016), entitled Stainless Steel Plate From Belgium, South Africa, and Taiwan: Investigation Nos. 701–TA–379 and 731–TA–788, 792, and 793 (Third Review).

By order of the Commission.

Issued: December 28, 2016.

Katherine M. Hiner,
Acting Supervisory Attorney.

[FR Doc. 2016–31837 Filed 12–30–16; 8:45 am]
BILLING CODE 7020–02–P

STAINLESS STEEL PLATE FROM BELGIUM, SOUTH AFRICA, AND TAIWAN;

[Investigation Nos. 701–TA–379 and 731–TA–788, 792, and 793 (Third Review)]

Stainless Steel Plate From Belgium, South Africa, and Taiwan; Determinations

On the basis of the record developed in the subject five-year review, the United States International Trade Commission (“Commission”) determines, pursuant to the Tariff Act of 1930 (“the Act”), that revocation of the antidumping duty order on stainless steel plate from China would be likely to lead to continuation or recurrence of material injury. Pursuant to the Act, interested parties are requested to respond to this notice by submitting the information specified below to the Commission.

DATES: Effective January 3, 2017. To be assured of consideration, the deadline for responses is February 2, 2017. Comments on the adequacy of responses may be filed with the Commission by March 17, 2017.

General information concerning the Commission may also be obtained by accessing its internet server (https://www.usitc.gov). The public record for this proceeding may be viewed on the Commission’s electronic docket (EDIS) at https://edis.usitc.gov.

SUPPLEMENTARY INFORMATION: Background.—On June 21, 1995, the Department of Commerce (“Commerce”) issued an antidumping duty order on imports of furfuryl alcohol from China (60 FR 32302). Following first five-year reviews by Commerce and the Commission, effective May 4, 2001, Commerce issued a continuation of the antidumping duty order on imports of furfuryl alcohol from China (66 FR 22519). Following second five-year reviews by Commerce and the Commission, effective October 6, 2006, Commerce issued a continuation of the antidumping duty order on imports of furfuryl alcohol from China (71 FR 59072). Following the third five-year reviews by Commerce and the Commission, effective February 16, 2012, Commerce issued a continuation of the antidumping duty order on imports of furfuryl alcohol from China (77 FR 9203). The Commission is now conducting a fourth review pursuant to section 751(c) of the Act, as amended (19 U.S.C. 1675(c)), to determine whether revocation of the order would be likely to lead to continuation or recurrence of material injury to the domestic industry within a reasonably foreseeable time. Provisions concerning the conduct of this proceeding may be found in the Commission’s Rules of Practice and Procedure at 19 CFR parts 201, subparts A and B and 19 CFR part 207, subparts A and F. The Commission will assess the adequacy of interested party responses to this notice of institution to determine whether to conduct a full review or an expedited review. The Commission’s determination in any expedited review will be based on the facts available, which may include information provided in response to this notice.

Definitions.—The following definitions apply to this review:

(1) Subject Merchandise is the class or kind of merchandise that is within the scope of the five-year review, as defined by the Department of Commerce.

(2) Subject Country is China.

(3) Domestic Like Product is the domestically produced product or products which are like, or in the absence of like, most similar in characteristics and uses with, the Subject Merchandise. In its original determination, its full first five-year review determination, and its expedited second and third five-year review determinations, the Commission defined the Domestic Like Product as furfuryl alcohol, coextensive with Commerce’s scope.

(4) Domestic Industry is the U.S. producers as a whole of the Domestic Like Product, or those producers whose collective output of the Domestic Like Product constitutes a major proportion of the total domestic production of the product. In its original determination, the Commission defined the Domestic Industry as QO Chemicals, generally known as Great Lakes, an integrated
producer of furfuryl alcohol. In its full first five-year review determination, the Commission defined the Domestic Industry as all producers of furfuryl alcohol, namely, Penn Chemicals, Ferro Industries, and Great Lakes. In its expedited second and third review determinations, the Commission defined a single Domestic Industry consisting of the sole domestic producer of furfuryl alcohol, Penn Chemicals (including its successor firm, Penn A Kem LLC).

(5) An Importer is any person or firm engaged, either directly or through a parent company or subsidiary, in importing the Subject Merchandise into the United States from a foreign manufacturer or through its selling agent.

Participation in the proceeding and public service list.—Persons, including industrial users of the Subject Merchandise and, if the merchandise is sold at the retail level, representative consumer organizations, wishing to participate in the proceeding as parties must file an entry of appearance with the Secretary to the Commission, as provided in section 201.11(b)(4) of the Commission’s rules, no later than 21 days after publication of this notice in the Federal Register. The Secretary will maintain a public service list containing the names and addresses of all persons, or their representatives, who are parties to the proceeding.

Former Commission employees who are seeking to appear in Commission five-year reviews are advised that they may appear in a review even if they participated personally and substantially in the corresponding underlying original investigation or an earlier review of the same underlying investigation. The Commission’s designated agency ethics official has advised that a five-year review is not the same particular matter as the underlying original investigation, and a five-year review is not the same particular matter as an earlier review of the same underlying investigation for purposes of 18 U.S.C. 207, the post employment statute for Federal employees, and Commission rule 201.15(b) (19 CFR 201.15(b)), 79 FR 3246 (Jan. 17, 2014), 73 FR 24609 (May 5, 2008).

Consequently, former employees are not required to seek Commission approval to appear in a review under Commission rule 19 CFR 201.15, even if the corresponding underlying original investigation or an earlier review of the same underlying investigation was pending when they were Commission employees. For further ethics advice on this matter, contact Carol McCue Verratti, Deputy Agency Ethics Official, at 202–205–3088.

Limited disclosure of business proprietary information (BPI) under an administrative protective order (APO) and APO service list.—Pursuant to section 207.7(a) of the Commission’s rules, the Secretary will make BPI submitted in this proceeding available to authorized applicants under the APO issued in the proceeding, provided that the application is made no later than 21 days after publication of this notice in the Federal Register. Authorized applicants must represent interested parties, as defined in 19 U.S.C. 1677(9), who are parties to the proceeding. A separate service list will be maintained by the Secretary for those parties authorized to receive BPI under the APO.

Certification.—Pursuant to section 207.3 of the Commission’s rules, any person submitting information to the Commission in connection with this proceeding must certify that the information is accurate and complete to the best of the submitter’s knowledge. In making the certification, the submitter will acknowledge that information submitted in response to this request for information and throughout this proceeding or other proceeding may be disclosed to and used: (i) by the Commission, its employees and Offices, and contract personnel (a) for developing or maintaining the records of this or a related proceeding, or (b) in internal investigations, audits, reviews, and evaluations relating to the programs, personnel, and operations of the Commission including under 5 U.S.C. Appendix 3; or (ii) by U.S. government employees and contract personnel, solely for cybersecurity purposes. All contract personnel will sign appropriate nondisclosure agreements.

Written submissions.—Pursuant to section 207.61 of the Commission’s rules, each interested party response to this notice must provide the information specified below. The deadline for filing such responses is February 2, 2017. Pursuant to section 207.62(b) of the Commission’s rules, eligible parties (as specified in Commission rule 207.62(b)(1)) may also file comments concerning the adequacy of responses to the notice of institution and whether the Commission should conduct an expedited or full review. The deadline for filing such comments is March 17, 2017. All written submissions must conform with the provisions of section 201.8 of the Commission’s rules; any submission must also conform with the requirements of sections 201.6, 207.3, and 207.7 of the Commission’s rules. The Commission’s Handbook on E-Filing, available on the Commission’s Web site at https://edis.usitc.gov, elaborates upon the Commission’s rules with respect to electronic filing. Also, in accordance with sections 201.16(c) and 207.3 of the Commission’s rules, each document filed by a party to the proceeding must be served on all other parties to the proceeding (as identified by either the public or APO service list as appropriate), and a certificate of service must accompany the document (if you are not a party to the proceeding you do not need to serve your response).

No response to this request for information is required if a currently valid Office of Management and Budget (OMB) number is not displayed; the OMB number is 3117 0016/USITC No. 16–5–376, expiration date June 30, 2017. Public reporting burden for the request is estimated to average 15 hours per response. Please send comments regarding the accuracy of this burden to the Office of Investigations, U.S. International Trade Commission, 500 E Street SW., Washington, DC 20436.

Inability to provide requested information.—Pursuant to section 207.61(c) of the Commission’s rules, any interested party that cannot furnish the information requested by this notice in the requested form and manner shall notify the Commission at the earliest possible time, provide a full explanation of why it cannot provide the requested information, and indicate alternative forms in which it can provide equivalent information. If an interested party does not provide this notification (or the Commission finds the explanation provided in the notification inadequate) and fails to provide a complete response to this notice, the Commission may take an adverse inference against the party pursuant to section 776(b) of the Act (19 U.S.C. 1677e(b)) in making its determination in the review.

INFORMATION TO BE PROVIDED IN RESPONSE TO THIS NOTICE OF INSTITUTION: As used below, the term “firm” includes any related firms.

(1) The name and address of your firm or entity (including World Wide Web address) and name, telephone number, fax number, and Email address of the certifying official.

(2) A statement indicating whether your firm/entity is an interested party under 19 U.S.C. 1677(9) and if so, how, including whether your firm/entity is a U.S. producer of the Domestic Like Product, a U.S. importer of a subject group, a U.S. importer of the Subject Merchandise, a foreign producer or
exporter of the \textit{Subject Merchandise}, a U.S. or foreign trade or business association (a majority of whose members are interested parties under the statute), or another interested party (including an explanation). If you are a union/worker group or trade/business association, identify the firms in which your workers are employed or which are members of your association.

(3) A statement indicating whether your firm/entity is willing to participate in this proceeding by providing information requested by the Commission.

(4) A statement of the likely effects of the revocation of the antidumping duty order on the \textit{Domestic Industry} in general and/or your firm/entity specifically. In your response, please discuss the various factors specified in section 752(a) of the Act (19 U.S.C. 1675a(a)) including the likely volume of subject imports, likely price effects of subject imports, and likely impact of imports of \textit{Subject Merchandise} on the \textit{Domestic Industry}.

(5) A list of all known and currently operating U.S. producers of the \textit{Domestic Like Product}. Identify any known related parties and the nature of the relationship as defined in section 771(4)(B) of the Act (19 U.S.C. 1677(4)(B)).

(6) A list of all known and currently operating U.S. importers of the \textit{Subject Merchandise} and producers of the \textit{Subject Merchandise} in the \textit{Subject Country} that currently export or have exported \textit{Subject Merchandise} to the United States or other countries after 2010.

(7) A list of 3–5 leading purchasers in the U.S. market for the \textit{Domestic Like Product} and the \textit{Subject Merchandise} (including street address, World Wide Web address, and the name, telephone number, fax number, and Email address of a responsible official at each firm).

(8) A list of known sources of information on national or regional prices for the \textit{Domestic Like Product} or the \textit{Subject Merchandise} in the U.S. or other markets.

(9) If you are a U.S. producer of the \textit{Domestic Like Product}, provide the following information on your firm’s operations on that product during calendar year 2016, except as noted (report quantity data in pounds and value data in U.S. dollars, f.o.b. plant). If you are a union/worker group or trade/business association, provide the information, on an aggregate basis, for the firms in which your workers are employed/which are members of your association.

(a) Production (quantity) and, if known, an estimate of the percentage of total U.S. production of the \textit{Domestic Like Product} accounted for by your firm’s(s’) production;

(b) Capacity (quantity) of your firm to produce the \textit{Domestic Like Product} (that is, the level of production that your establishment(s) could reasonably have expected to attain during the year, assuming normal operating conditions (using equipment and machinery in place and ready to operate), normal operating levels (hours per week/weeks per year), time for downtime, maintenance, repair, and cleanup, and a typical or representative product mix);

(c) the quantity and value of U.S. commercial shipments of the \textit{Domestic Like Product} produced in your U.S. plant(s);

(d) the quantity and value of U.S. internal consumption/company transfers of the \textit{Domestic Like Product} produced in your U.S. plant(s); and

(e) the value of (i) net sales, (ii) cost of goods sold (COGS), (iii) gross profit, (iv) selling, general and administrative (SG&A) expenses, and (v) operating income of the \textit{Domestic Like Product} produced in your U.S. plant(s) (include both U.S. and export commercial sales, internal consumption, and company transfers) for your most recently completed fiscal year (identify the date on which your fiscal year ends).

(10) If you are a U.S. importer or a trade/business association of U.S. importers of the \textit{Subject Merchandise} from the \textit{Subject Country}, provide the following information on your firm’s(s’) operations on that product during calendar year 2016 (report quantity data in pounds and value data in U.S. dollars). If you are a trade/business association, provide the information, on an aggregate basis, for the firms which are members of your association.

(a) The quantity and value (landed, duty-paid but not including antidumping duties) of U.S. imports and, if known, an estimate of the percentage of total U.S. imports of \textit{Subject Merchandise} from the \textit{Subject Country} accounted for by your firm’s(s’) imports;

(b) the quantity and value (f.o.b. U.S. port, including antidumping duties) of U.S. commercial shipments of \textit{Subject Merchandise} imported from the \textit{Subject Country}; and

(c) the quantity and value (f.o.b. U.S. port, including antidumping duties) of U.S. internal consumption/company transfers of \textit{Subject Merchandise} imported from the \textit{Subject Country}.

(11) If you are a producer, an exporter, or a trade/business association of producers or exporters of the \textit{Subject Merchandise} in the \textit{Subject Country}, provide the following information on your firm’s(s’) operations on that product during calendar year 2016 (report quantity data in pounds and value data in U.S. dollars, landed and duty-paid at the U.S. port but not including antidumping duties). If you are a trade/business association, provide the information, on an aggregate basis, for the firms which are members of your association.

(a) Production (quantity) and, if known, an estimate of the percentage of total production of \textit{Subject Merchandise} in the \textit{Subject Country} accounted for by your firm’s(s’) production;

(b) Capacity (quantity) of your firm to produce the \textit{Subject Merchandise} in the \textit{Subject Country} (that is, the level of production that your establishment(s) could reasonably have expected to attain during the year, assuming normal operating conditions (using equipment and machinery in place and ready to operate), normal operating levels (hours per week/weeks per year), time for downtime, maintenance, repair, and cleanup, and a typical or representative product mix); and

(c) the quantity and value of your firm’s(s’) exports to the United States of \textit{Subject Merchandise} and, if known, an estimate of the percentage of total exports to the United States of \textit{Subject Merchandise} from the \textit{Subject Country} accounted for by your firm’s(s’) exports.

(12) Identify significant changes, if any, in the supply and demand conditions or business cycle for the \textit{Domestic Like Product} that have occurred in the United States or in the market for the \textit{Subject Merchandise} in the \textit{Subject Country} after 2010, and significant changes, if any, that are likely to occur within a reasonably foreseeable time. Supply conditions to consider include technology: production methods; development efforts; ability to increase production (including the shift of production facilities used for other products and the use, cost, or availability of major inputs into production); and factors related to the ability to shift supply among different national markets (including barriers to importation in foreign markets or changes in market demand abroad). Demand conditions to consider include end uses and applications; the existence and availability of substitute products; and the level of competition among the \textit{Domestic Like Product} produced in the United States, \textit{Subject Merchandise} produced in the \textit{Subject Country}, and such merchandise from other countries.

(13) (OPTIONAL) A statement of whether you agree with the above definitions of the \textit{Domestic Like Product} and \textit{Domestic Industry}; if you disagree...
JUDICIAL CONFERENCE OF THE UNITED STATES

Hearings of the Judicial Conference Advisory Committee on the Federal Rules of Bankruptcy Procedure

ACTION: Notice of cancellation of public hearing.

SUMMARY: The following public hearing on proposed amendments to the Federal Rules of Bankruptcy Procedure has been canceled: Bankruptcy Rules Hearing on January 24, 2017, in Pasadena, California. Announcement for this meeting was previously published in 81 FR 52713.

FOR FURTHER INFORMATION CONTACT: Rebecca A. Womeldorf, Rules Committee Secretary, Rules Committee Support Office, Administrative Office of the United States Courts, Washington, DC 20544, telephone (202) 502–1820.

DATED: December 28, 2016.

Rebecca A. Womeldorf, Rules Committee Secretary.

LIBRARY OF CONGRESS

Copyright Royalty Board

[Docket No. 17–CRB–0001–BER (2019–2023)]

Determination of Royalty Rates and Terms for Making Ephemeral Copies of Sound Recordings for Transmission to Business Establishments (Business Establishments III)

AGENCY: Copyright Royalty Board, Library of Congress.

ACTION: Notice announcing commencement of proceeding with request for Petitions to Participate.

SUMMARY: The Copyright Royalty Judges (Judges) announce commencement of a proceeding 1 to determine reasonable royalty rates and terms for the recording of ephemeral copies of sound recordings pursuant to 17 U.S.C. 112(e)(1) to facilitate digital audio transmissions of those sound recordings to business establishments pursuant to the limitation on exclusive rights specified by 17 U.S.C. 114(d)(1)(C)(iv). The royalty rates and terms the Judges determine in this proceeding will apply during the period beginning January 1, 2019, and ending December 31, 2023. The Judges also announce the date by which a party wishing to participate in the rate determination proceeding must file its Petition to Participate and pay the accompanying $150 filing fee.

DATES: Petitions to Participate and the filing fee are due no later than February 2, 2017.

ADDRESSES: This notice and request is also posted on the agency’s Web site (www.loc.gov/crb). Parties who plan to participate should see How to Submit Petitions to Participate in the Supplementary Information section below for addresses and further instructions.

FOR FURTHER INFORMATION CONTACT: Anita Blaine, CRB Program Specialist, by telephone at (202) 707–7658 or email at crb@loc.gov.

SUPPLEMENTARY INFORMATION: The Copyright Act provides that the Copyright Royalty Judges (Judges) commence a proceeding every fifth year 2 to determine royalty rates and terms for the recording of ephemeral copies of sound recordings pursuant to the statutory license in 17 U.S.C. 112(e)(1) to facilitate digital audio transmissions of those sound recordings to business establishments pursuant to the limitation on exclusive rights specified by 17 U.S.C. 114(d)(1)(C)(iv). See sec. 804(b)(2). This notice commences the rate determination proceeding for the license period 2019–2023, inclusive. Section 803(b)(1)(A)(i)(II) directs the Judges to publish in the Federal Register a notice commencing this proceeding by no later than January 5, 2017.

Petitions to Participate

Parties with a significant interest in the outcome of the “business establishments” royalty rate proceeding must file Petitions to Participate in accordance with §351.1(b) of the Judges’ regulations. See 37 CFR 351.1(b). Parties must send the $150 filing fee with each Petition to Participate. Parties must pay the filing fee with a check or money order made payable to the “Copyright Royalty Board.” The Copyright Royalty Board will not accept payment by cash. If a check received in payment of the filing fee is returned for lack of sufficient funds, the Judges will dismiss the corresponding Petition to Participate.

Only attorneys admitted to the bar in one or more states or the District of Columbia and who are in good standing with the bar will be allowed to represent parties before the Judges. Only an individual may represent herself or himself and appear without legal counsel. 37 CFR 350.2.

How To Submit Petitions to Participate

Any party wishing to participate in the proceeding to determine the “business establishments” royalty rates for 2019 through 2023 must submit to the Copyright Royalty Board the filing fee (U.S. $150), an original (paper) Petition to Participate, five paper copies, and an electronic copy on a CD or other portable memory device in Portable Document Format (PDF) that contains searchable, accessible text (not a scanned image of text). Participants should conform all electronic documents to the Judges’ Guidelines for Electronic Documents posted on the Copyright Royalty Board Web site at http://www.loc.gov/crb/docs/ Guidelines_for_Electronic_Documents.pdf.

Participants shall deliver Petitions to Participate to only one of the following addresses. U.S. mail: Copyright Royalty Board, P.O. Box 70977, Washington, DC 20024–0977; or

Overnight service (only USPS Express Mail is acceptable): Copyright Royalty Board, P.O. Box 70977, Washington, DC 20024–0977; or

Commercial courier: Address package to: Copyright Royalty Board, Library of Congress, James Madison Memorial Building, LM–403, 101 Independence Avenue SE, Washington, DC 20559–6000. Deliver between 8 a.m. and 4:00 p.m. to: Congressional Courier Acceptance Site, 2nd Street NE and D Street NE, Washington, DC; or

Hand delivery: Deliver between 8:30 a.m. and 5:00 p.m. to: The Library of Congress, James Madison Memorial Building, LM–401, 101 Independence Avenue SE, Washington, DC 20559–6000.
NUCLEAR REGULATORY COMMISSION

[Docket Nos. 52–018 and 52–019; NRC–2008–0170]

Duke Energy Carolinas, LLC; William States Lee III Nuclear Station Units 1 and 2

AGENCY: Nuclear Regulatory Commission.

ACTION: Combined licenses and record of decision; issuance.

SUMMARY: The U.S. Nuclear Regulatory Commission (NRC) has issued combined licenses (Nos. NPF–101 and NPF–102) to Duke Energy Carolinas, LLC (DEC) William States Lee III Nuclear Station Units 1 and 2. In addition, the NRC has prepared a Summary Record of Decision (ROD) that supports the NRC’s decision to issue the above-named combined licenses.

ADDRESSES: Please refer to Docket ID NRC–2008–0170 when contacting the NRC about the availability of information regarding this document. You may obtain publicly-available information related to this document using any of the following methods:

- Federal Rulemaking Web site: Go to http://www.regulations.gov and search for Docket ID NRC–2008–0170. Address questions about NRC dockets to Carol Gallagher; telephone: 301–415–3463; email: Carol.Gallagher@nrc.gov. For technical questions, contact the individuals listed in the FOR FURTHER INFORMATION CONTACT section of this document.

- NRC’s Agencywide Documents Access and Management System (ADAMS): You may obtain publicly available documents online in the ADAMS Public Documents collection at http://www.nrc.gov/reading-rm/adams.html. To begin the search, select “ADAMS Public Documents” and then select “Begin Web-based ADAMS Search.” For problems with ADAMS, please contact the NRC’s Public Document Room (PDR) reference staff at 1–800–397–4209, 301–415–4737, or by email to pdr.resource@nrc.gov. The ADAMS accession numbers for each document referenced (if it is available in ADAMS) is provided first that a document is referenced. For the convenience of the reader, the ADAMS accession numbers are provided in a table in the “Availability of Documents” section of this document.

- NRC’s PDR: You may examine and purchase copies of public documents at the NRC’s PDR, Room O1–F21, One White Flint North, 11555 Rockville Pike, Rockville, Maryland 20852.

SUPPLEMENTARY INFORMATION:

I. Introduction

Under section 2.106 of title 10 of the Code of Federal Regulations (10 CFR), the NRC is providing notice of the issuance of combined licenses NPF–101 and NPF–102 to DEC, and under 10 CFR 50.102(c), the NRC is providing notice of the Commission’s Memorandum and Order documenting its final decision on the uncontested hearing held on October 5, 2016, which serves as the ROD in this proceeding. The NRC also prepared a document summarizing the ROD to accompany its actions on the combined license application; this “Summary ROD” incorporates by reference materials contained in the FEIS. The FSER, FEIS, Summary ROD, and accompanying documentation included in the combined license package, as well as the Commission’s hearing decision and ROD, are available online in the ADAMS Public Document collection at http://www.nrc.gov/reading-rm/adams.html. From this site, persons can access the NRC’s ADAMS, which provides text and image files of NRC’s public documents.

The ADAMS accession numbers for the documents related to this notice are listed below.

III. Availability of Documents

The documents identified in the following table are available to interested persons through the ADAMS Public Documents collection. A copy of the combined license application is also available for public inspection at the NRC’s PDR and at http://www.nrc.gov/reactors/new-reactors/col.html.

For the Nuclear Regulatory Commission.

Francis M. Akstulewicz,
Director, Division of New Reactor Licensing,
Office of New Reactors.

[FR Doc. 2016–31814 Filed 12–30–16; 8:45 am]
BILLING CODE 7590–01–P

NUCLEAR REGULATORY COMMISSION

[NRC–2016–0258]

Applications and Amendments to
Facility Operating Licenses and
Combined Licenses Involving
Proposed No Significant Hazards
Considerations and Containing
Sensitive Unclassified Non-Safeguards
Information and Safeguards
Information and Order Imposing
Procedures for Access to Sensitive
Unclassified Non-Safeguards
Information and Safeguards
Information

AGENCY: Nuclear Regulatory
Comission.

ACTION: License amendment request;
notice of opportunity to comment,
request a hearing, and petition for leave
to intervene; order imposing
procedures.

SUMMARY: The U.S. Nuclear Regulatory
Commission (NRC) received and is
considering approval of one amendment
request. The amendment request is for
Kewaunee Power Station. For this
amendment request, the NRC proposes
to determine that it involves no
significant hazards consideration.
Because the amendment request
contains sensitive unclassified non-
safeguards information (SUNSI) and
safeguards information (SGI), an order
imposes procedures to obtain access to
SUNSI and SGI for contention
preparation.

DATES: Comments must be filed by
February 2, 2017. A request for a
hearing must be filed by March 6, 2017.
Any potential party as defined in § 2.4
of title 10 of the Code of Federal
Regulations (10 CFR), who believes
access to SUNSI and/or SGI is necessary
to respond to this notice must request

ADDRESSES: You may submit comments
by any of the following methods

- Federal Rulemaking Web site: Go to
http://www.regulations.gov and search
for Docket ID NRC–2016–0258. Address
questions about NRC dockets to Carol
Gallagher; telephone: 301–415–3463;
email: Carol.Gallagher@nrc.gov. For
technical questions, contact the
individual listed in the FOR FURTHER
INFORMATION CONTACT section of this
document.

- Mail comments to: Cindy Bladey,
Office of Administration, Mail Stop:
OWFN–12–H08, U.S. Nuclear
Regulatory Commission, Washington,
DC 20555–0001.

For additional direction on obtaining
information and submitting comments,
see “Obtaining Information and
Sub Submitting Comments” in the
SUPPLEMENTARY INFORMATION section of
this document.

FOR FURTHER INFORMATION CONTACT:
Shirley Rohrer, Licensing Assistant,
U.S. Nuclear Regulatory Commission,
Washington DC 20555–0001; telephone:
301–415–5411, email:
Shirley.Rohrer@nrc.gov.

SUPPLEMENTARY INFORMATION:
I. Obtaining Information and
Submitting Comments

A. Obtaining Information

Please refer to Docket ID NRC–2016–
0258, facility name, unit number(s),
plant docket number, application date,
and subject when contacting the NRC
about the availability of information for
this action. You may obtain publicly-
available information related to this
action by any of the following methods:

- Federal rulemaking Web site: Go to
http://www.regulations.gov and search

- NRC’s Agencywide Documents
Access and Management System
(ADAMS): You may obtain publicly-
available documents online in the
ADAMS Public Documents collection at
http://www.nrc.gov/reading-rm/
adams.html. To begin the search, select
“ADAMS Public Documents” and then
select “Begin Web-based ADAMS
Search.” For problems with ADAMS,
please contact the NRC’s Public
Document Room (PDR) reference staff at
1–800–397–4209, 301–415–4737, or by
e-mail to pdr.resource@nrc.gov. The
ADAMS accession number for each
document referenced (if it is available in
ADAMS) is provided the first time that
it is mentioned in this document.

- NRC’s PDR: You may examine and
purchase copies of public documents at
the NRC’s PDR, Room O1–F21, One
White Flint North, 11555 Rockville
Pike, Rockville, Maryland 20852.

B. Submitting Comments

Please include Docket ID NRC–2016–
0258, facility name, unit number(s),
plant docket number, application date,
and subject in your comment
submission.

The NRC cautions you not to include
identifying or contact information that
you do not want to be publicly
disclosed in your comment submission.
The NRC will post all comment
submissions at http://
www.regulations.gov as well as enter the
comment submissions into ADAMS.
The NRC does not routinely edit
comment submissions to remove
identifying or contact information.

If you are requesting or aggregating
comments from other persons for
submission to the NRC, then you should
inform those persons not to include
identifying or contact information that
they do not want to be publicly
disclosed in their comment submission.
Your request should state that the NRC
does not routinely edit comment
submissions to remove such information
before making the comment
submissions available to the public or
entering the comment into ADAMS.

II. Background

Pursuant to Section 189a.(2) of the
Atomic Energy Act of 1954, as amended
(the Act), the NRC is publishing this
notice. The Act requires the
Commission to publish notice of any
amendments issued, or proposed to be
issued and grants the Commission the
authority to issue and make
immediately effective any amendment
to an operating license or combined
license, as applicable, upon a
determination by the Commission that
such amendment involves no significant
hazards consideration, notwithstanding
the pendency before the Commission of
a request for a hearing from any person.

This notice includes notice of an
amendment containing SUNSI and SGI.
III. Notice of Consideration of Issuance of Amendments to Facility Operating Licenses and Combined Licenses, Proposed No Significant Hazards Consideration Determination, and Opportunity for a Hearing

The Commission has made a proposed determination that the following amendment request involves no significant hazards consideration. Under the Commission’s regulations in 10 CFR 50.92, this means that operation of the facility in accordance with the proposed amendment would not (1) involve a significant increase in the probability or consequences of an accident previously evaluated, or (2) create the possibility of a new or different kind of accident from any accident previously evaluated, or (3) involve a significant reduction in a margin of safety. The basis for this proposed determination for the amendment request is shown below.

The Commission is seeking public comments on this proposed determination. Any comments received within 30 days after the date of publication of this notice will be considered in making any final determination.

Normally, the Commission will not issue the amendment until the expiration of 60 days after the date of publication of this notice. The Commission may issue the license amendment before expiration of the 60-day period provided that its final determination is that the amendment involves no significant hazards consideration. In addition, the Commission may issue the amendment prior to the expiration of the 30-day comment period if circumstances change during the 30-day comment period such that failure to act in a timely way would result, for example, in derating or shutdown of the facility. If the Commission takes action prior to the expiration of either the comment period or the notice period, it will publish a notice of issuance in the Federal Register. If the Commission makes a final no significant hazards consideration determination, any hearing will take place after issuance. The Commission expects that the need to take this action will occur very infrequently.

A. Opportunity To Request a Hearing and Petition for Leave To Intervene

Within 60 days after the date of publication of this notice, any persons (petitioner) whose interest may be affected by this action may file a request for a hearing and petition for leave to intervene (petition) with respect to the action. Petitions shall be filed in accordance with the Commission’s “Agency Rules of Practice and Procedure” in 10 CFR part 2. Interested persons should consult a current copy of 10 CFR 2.309. The NRC’s regulations are accessible electronically from the NRC Library on the NRC’s Web site at http://www.nrc.gov/reading-rm/doc-collections/efiling/. Alternatively, a copy of the regulations is available at the NRC’s Public Document Room, located at One White Flint North, Room O1–F21, 11555 Rockville Pike (first floor), Rockville, Maryland 20852. If a petition is filed, the Commission or a presiding officer will rule on the petition and, if appropriate, a notice of a hearing will be issued.

As required by 10 CFR 2.309(d), the petition should specifically explain the reasons why intervention should be permitted with particular reference to the following general requirements for standing: (1) The name, address, and telephone number of the petitioner; (2) the nature of the petitioner’s right under the Act to be made a party to the proceeding; (3) the nature and extent of the petitioner’s property, financial, or other interest in the proceeding; and (4) the possible effect of any decision or order which may be entered in the proceeding on the petitioner’s interest.

In accordance with 10 CFR 2.309(f), the petition must also set forth the specific contentions which the petitioner seeks to have litigated in the proceeding. Each contention must consist of a specific statement of the issue of law or fact to be raised or controverted. In addition, the petitioner must provide a brief explanation of the bases for the contention and a concise statement of the alleged facts or expert opinion which support the contention on which the petitioner intends to rely in proving the contention at the hearing. The petitioner must also provide references to the specific sources and documents on which the petitioner intends to rely to support its position on the issue. The petition must include sufficient information to show that a genuine dispute exists with the applicant or licensee on a material issue of law or fact. Contentions must be limited to matters within the scope of the proceeding. The contention must be one which, if proven, would entitle the petitioner to relief. A petitioner who fails to satisfy the requirements at 10 CFR 2.309(f) with respect to at least one contention will not be permitted to participate as a party.

Those permitted to intervene become parties to the rulemaking subject to any limitations in the order granting leave to intervene. Parties have the opportunity to participate fully in the conduct of the hearing with respect to resolution of that party’s admitted contentions, including the opportunity to present evidence, consistent with the NRC’s regulations, policies, and procedures. Petitions must be filed no later than 60 days from the date of publication of this notice. Petitions and motions for leave to file new or amended contentions that are filed after the deadline will not be entertained absent a determination by the presiding officer that the filing demonstrates good cause by satisfying the three factors in 10 CFR 2.309(c)(1)(i) through (iii). The petition must be filed in accordance with the filing instructions in the “Electronic Submissions (E-Filing)” section of this document.

If a hearing is requested, and the Commission has not made a final determination on the issue of no significant hazards consideration, the Commission will make a final determination on the issue of no significant hazards consideration. The final determination will serve to establish when the hearing is held. If the final determination is that the amendment request involves no significant hazards consideration, the Commission may issue the amendment and make it immediately effective, notwithstanding the request for a hearing. Any hearing would take place after issuance of the amendment. If the final determination is that the amendment request involves a significant hazards consideration, then any hearing held would take place before the issuance of the amendment unless the Commission finds an imminent danger to the health or safety of the public, in which case it will issue an appropriate order or rule under 10 CFR part 2.

A State, local governmental body, Federally-recognized Indian Tribe, or agency thereof, may submit a petition to the Commission to participate as a party under 10 CFR 2.309(h)(1). The petition should state the nature and extent of the petitioner’s interest in the proceeding. The petition should be submitted to the Commission by March 6, 2017. The petition must be filed in accordance with the filing instructions in the “Electronic Submissions (E-Filing)” section of this document, and should meet the requirements for petitions set forth in this section, except that under 10 CFR 2.309(h)(2) a State, local governmental body, or Federally-recognized Indian Tribe, or agency thereof does not need to address the standing requirements in 10 CFR 2.309(d) if the facility is located within its boundaries. Alternatively, a State,
local governmental body, Federally-recognized Indian Tribe, or agency thereof may participate as a non-party under 10 CFR 2.315(c).

If a hearing is granted, any person who is not a party to the proceeding and is not affiliated with or represented by a party may, at the discretion of the presiding officer, be permitted to make a limited appearance pursuant to the provisions of 10 CFR 2.315(a). A person making a limited appearance may make an oral or written statement of his or her position on the issues but may not otherwise participate in the proceeding. A limited appearance may be made at any session of the hearing or at any prehearing conference, subject to the limits and conditions as may be imposed by the presiding officer. Details regarding the opportunity to make a limited appearance will be provided by the presiding officer if such sessions are scheduled.

B. Electronic Submissions (E-Filing)

All documents filed in NRC adjudicatory proceedings, including a request for hearing and petition for leave to intervene (petition), any motion or other document filed in the proceeding prior to the submission of a request for hearing or petition to intervene, and documents filed by interested governmental entities that request to participate under 10 CFR 2.315(c), must be filed in accordance with the NRC’s E-Filing rule (72 FR 49139; August 28, 2007, as amended at 77 FR 46562, August 3, 2012). The E-Filing process requires participants to submit and serve all adjudicatory documents over the internet, or in some cases to mail copies on electronic storage media. Detailed guidance on making electronic submissions may be found in the Guidance for Electronic Submissions to the NRC and on the NRC Web site at http://www.nrc.gov/site-help/e-submittals.html. Participants may not submit paper copies of their filings unless they seek an exemption in accordance with the procedures described below.

To comply with the procedural requirements of E-Filing, at least 10 days prior to the filing deadline, the participant should contact the Office of the Secretary by email at hearing.docket@nrc.gov, or by telephone at 301–415–1677, to (1) request a digital identification (ID) certificate, which allows the participant (or its counsel or representative) to digitally sign submissions and access the E-Filing system for any proceeding in which it is participating; and (2) advise the Secretary that the participant will be submitting a petition or other adjudicatory document (even in instances in which the participant, or its counsel or representative, already holds an NRC-issued digital ID certificate). Based upon this information, the Secretary will establish an electronic docket for the hearing in this proceeding if the Secretary has not already established an electronic docket.

Information about applying for a digital ID certificate is available on the NRC’s public Web site at http://www.nrc.gov/site-help/e-submittals/getting-started.html. Once a participant has obtained a digital ID certificate and a docket has been created, the participant can then submit adjudicatory documents. Submissions should be in Portable Document Format (PDF). Additional guidance on PDF submissions is available on the NRC’s public Web site at http://www.nrc.gov/site-help/electronic-sub-ref-mat.html. A filing is considered complete at the time the document is submitted through the NRC’s E-Filing system. To be timely, an electronic filing must be submitted to the E-Filing system no later than 11:59 p.m. Eastern Time on the due date. Upon receipt of a transmission, the E-Filing system time-stamps the document and sends the submitter an email notice confirming receipt of the document.

The E-Filing system also distributes an email notice that provides access to the document to the NRC’s Office of the General Counsel and any others who have advised the Office of the Secretary that they wish to participate in the proceeding, so that thefiler need not serve the document on those participants separately. Therefore, applicants and other participants (or their counsel or representative) must apply for and receive a digital ID certificate before adjudicatory documents are filed so that they can obtain access to the documents via the E-Filing system.

A person filing electronically using the NRC’s adjudicatory E-Filing system may seek assistance by contacting the NRC’s Electronic Filing Help Desk through the “Contact Us” link located on the NRC’s public Web site at http://www.nrc.gov/site-help/e-submittals.html, by email to MSHD.Resource@nrc.gov, or by a toll-free call at 1–866–672–7640. The NRC Electronic Filing Help Desk is available between 9 a.m. and 6 p.m., Eastern Time, Monday through Friday, excluding government holidays. Participants who believe that they have a good cause for not submitting documents electronically must file an exemption request in accordance with 10 CFR 2.302(g), with their initial paper filing stating why there is good cause for not filing electronically and requesting authorization to continue to submit documents in paper format. Such filings must be submitted by: (1) First class mail addressed to the Office of the Secretary of the Commission, U.S. Nuclear Regulatory Commission, Washington, DC 20555–0001, Attention: Rulemaking and Adjudications Staff; or (2) courier, express mail, or expedited delivery service to the Office of the Secretary, 11555 Rockville Pike, Rockville, Maryland 20852, Attention: Rulemaking and Adjudications Staff. Participants filing adjudicatory documents in this manner are responsible for serving the document on all other participants. Filing is considered complete by first-class mail as of the time of deposit in the mail, or by courier, express mail, or expedited delivery service upon depositing the document with the provider of the service. A presiding officer, having granted an exemption request from using E-Filing, may require a participant or party to use E-Filing if the presiding officer subsequently determines that the reason for granting the exemption from use of E-Filing no longer exists.

Documents submitted in adjudicatory proceedings will appear in the NRC’s electronic hearing docket which is available to the public at http://ehd1.nrc.gov/ehd/, unless excluded pursuant to an order of the Commission or the presiding officer. Participants are requested not to include personal privacy information, such as social security numbers, home addresses, or personal phone numbers in their filings, unless an NRC regulation or other law requires submission of such information. For example, in some instances, individuals provide home addresses in order to demonstrate proximity to a facility or site. With respect to copyrighted works, except for limited excerpts that serve the purpose of the adjudicatory filings and would constitute a Fair Use application, participants are requested not to include copyrighted materials in their submission.

Dominion Energy Kewaunee, Inc., Docket No. 50–305, Kewaunee Power Station (KPS), Carlton, Wisconsin

Date of amendment request: October 15, 2015, as supplemented by letters dated October 27, 2015, and November 16, 2016. Publicly-available versions are in ADAMS under Accession Nos. ML15294A072, ML15302A402, and ML16323A193, respectively.

Description of amendment request: This amendment request contains sensitive unclassified non-safeguards information (SUNSI) and safeguards.
information (SGI). This amendment requests NRC approval of the Kewaunee Power Station Security Plan, Training and Qualification Plan, and Safeguards Contingency Plan (the Plan) and removal of the Cyber Security requirements from the Operating License. The Plan will supersede the current Security Plan, Training and Qualification Plan, and Safeguards Contingency Plan at KPS.

The Plan will be used at KPS after all spent fuel has been transferred to the KPS Independent Spent Fuel Storage Installation (ISFSI).

Basis for proposed no significant hazards consideration determination: As required by 10 CFR 50.91(a), in its supplemental letter dated November 16, 2016, the licensee has provided its analysis of the issue of no significant hazards consideration, which is presented below:

1. Does the proposed amendment involve a significant increase in the probability or consequences of an accident previously evaluated?

No.

The irradiated fuel at KPS is currently stored in the spent fuel pool (SFP) and at the ISFSI. In this condition, the number of credible accidents/transients is significantly smaller than for a plant authorized to operate the reactor or emplace or retain fuel in the reactor vessel. Accidents/transients that are no longer applicable in a permanently defueled condition have been deleted from the KPS Updated Safety Analysis Report (USAR) Chapter 14. The remaining USAR Chapter 14 accident is the Fuel Handling Accident (FHA). The Plan reflects the future site configuration where all the remaining spent fuel in the SFP has been moved to the ISFSI and there are no requirements to return spent fuel to the SFP. The FHA will no longer be credible after all fuel has been removed from the spent fuel pool.

The proposed amendment has no effect on plant systems, structures, and components (SSCs) and no effect on the capability of any plant SSC to perform its design function. The proposed amendment would not increase the likelihood of the malfunction of any plant SSC.

Therefore, the proposed amendment does not involve a significant increase in the probability or consequences of a previously evaluated accident.

2. Does the proposed change create the possibility of a new or different kind of accident from any accident previously evaluated?

No.

The proposed amendment does not involve significant physical alteration of the plant. Minor modifications associated with this proposed amendment (e.g., wiring changes in security equipment, the addition of telecommunications equipment, and software changes to the security computer system.) The proposed license amendment would not physically change any SSCs involved in the mitigation of any postulated accident. Thus, no new initiators or precursors of a new or different kind of accident are created. Furthermore, the proposed amendment does not create the possibility of a new failure mode associated with any equipment or personnel failures. The credible events for the ISFSI remain unchanged.

Therefore, the proposed changes do not create the possibility of a new or different kind of accident from any previously evaluated.

3. Does the proposed amendment involve a significant reduction in a margin of safety?

No.

Because the 10 CFR part 50 license for KPS no longer authorizes operation of the reactor or emplacement or retention of fuel into the reactor vessel, as specified in 10 CFR 50.82(a)(2), the occurrence of postulated accidents associated with reactor operation is no longer credible. With all spent fuel transferred from the SFP to the ISFSI, a fuel handling accident is no longer credible. The proposed amendment does not involve a change in the plant’s design, configuration, or operation. The modifications associated with this proposed amendment (e.g., wiring changes in security equipment, the addition of telecommunications equipment, and software changes to the security computer system) would not affect either the way in which the plant SSCs perform their safety functions or their design margins.

Therefore, the proposed amendment does not involve a significant reduction in a margin of safety.

The NRC staff has reviewed the licensee’s analysis and, based on this review, it appears that the three standards of 10 CFR 50.92(c) are satisfied. Therefore, the NRC staff proposes to determine that the amendment request involves no significant hazards consideration.

Attorney for licensee: Lillian M. Cuoco, Senior Counsel, Dominion Resource Services, Inc., 120 Tredegar Street, RS–2, Richmond, VA 23219

NRC Branch Chief: Bruce A. Watson, CHP.

Order Imposing Procedures for Access to Sensitive Unclassified Non-Safeguards Information and Safeguards Information for Contention Preparation

Dominion Energy Kewaunee, Inc., Docket No. 50–305, Kewaunee Power Station, Carlton, Wisconsin

A. This Order contains instructions regarding how potential parties to this proceeding may request access to documents containing sensitive unclassified information (including Sensitive Unclassified Non-Safeguards Information (SUNSI) and Safeguards Information (SGI)). Requirements for access to SGIs are primarily set forth in 10 CFR parts 2 and 73. Nothing in this Order is intended to conflict with the SGI regulations.

B. Within 10 days after publication of this notice of hearing and opportunity to petition for leave to intervene, any potential party who believes access to SUNSI or SGI is necessary to respond to this notice may request access to SUNSI or SGI. A “potential party” is any person who intends to participate as a party by demonstrating standing and filing an admissible contentment under 10 CFR 2.309. Requests for access to SUNSI or SGI submitted later than 10 days after publication will not be considered absent a showing of good cause for the late filing, addressing why the request could not have been filed earlier.

C. The requestor shall submit a letter requesting permission to access SUNSI, SGI, or both to the Office of the Secretary, U.S. Nuclear Regulatory Commission, Washington, DC 20555–0001, Attention: Rulemakings and Adjudications Staff, and provide a copy to the Associate General Counsel for Hearings, Enforcement and Administration, Office of the General Counsel, U.S. Nuclear Regulatory Commission, Washington, DC 20555–0001. The expedited delivery or courier mail address for both offices is: U.S. Nuclear Regulatory Commission, 11555 Rockville Pike, Rockville, Maryland 20852. The email address for the Office of the Secretary and the Office of the General Counsel are Hearing.DOcket@nrc.gov and OCGeneralCounsel@nrc.gov, respectively.

The request must include the following information:

1. A description of the licensing action with a citation to this Federal Register notice;

2. The name and address of the potential party and a description of the potential party’s particularized interest that could be harmed by the action identified in C.1;

3. (If the request is for SUNSI, the identity of the individual or entity requesting access to SUNSI and the requestor’s basis for the need for the information in order to meaningfully participate in this adjudicatory proceeding. In particular, the request must explain why publicly available versions of the information requested would not be sufficient to provide the basis and specificity for a proffered contention; and

4. If the request is for SGI, the identity of each individual who would have access to SGI if the request is granted, including the identity of any expert, consultant, or assistant who will aid the requestor in evaluating the SGI.

1 While a request for hearing or petition to intervene in this proceeding must comply with the filing requirements of the NRC’s “E-Filing Rule,” the initial request to access SUNSI and/or SGI under these procedures should be submitted as described in this paragraph.
In addition, the request must contain the following information:

(a) A statement that explains each individual’s “need to know” the SGI, as required by 10 CFR 73.2 and 10 CFR 73.22(b)(1). Consistent with the definition of “need to know” as stated in 10 CFR 73.2, the statement must explain:

(i) Specifically why the requester believes that the information is necessary to enable the requestor to proffer and/or adjudicate a specific contention in this proceeding;2 and

(ii) The technical competence (demonstrable knowledge, skill, training or education) of the requestor to effectively utilize the requested SGI to provide the basis and specificity for a proffered contention. The technical competence of a potential party or its counsel may be shown by reliance on a qualified expert, consultant, or assistant who satisfies these criteria.

(b) A completed Form SF–85, “Questionnaire for Non-Sensitive Positions,” for each individual who would have access to SGI. The completed Form SF–85 will be used by the Office of Administration to conduct the background check required for access to SGI, as required by 10 CFR part 2, subpart C, and 10 CFR 73.22(b)[2], to determine the requestor’s trustworthiness and reliability. For security reasons, Form SF–85 can only be submitted electronically through the electronic questionnaire for investigations processing (e-QIP) Web site, a secure Web site that is owned and operated by the Office of Personnel Management. To obtain online access to the form, the requestor should contact the NRC’s Office of Administration at 301–415–3710.3

(c) A completed Form FD–258 (fingerprint card), signed in original ink, and submitted in accordance with 10 CFR 73.57(d). Copies of Form FD–258 may be obtained by writing the Office of Administrative Services, Mail Services Center, Mail Stop P1–37, U.S. Nuclear Regulatory Commission, Washington, DC 20555–0001, or by email to MAILSVC.Resource@nrc.gov. The fingerprint card will be used to satisfy the requirements of 10 CFR part 2, subpart C, 10 CFR 73.22(b)(1), and Section 149 of the Atomic Energy Act of 1954, as amended, which mandates that all persons with access to SGI must be fingerprinted for an FBI identification and criminal history records check.4

(d) A check or money order payable in the amount of $324.00 to the U.S. Nuclear Regulatory Commission for each individual for whom the request for access has been submitted.

(e) If the requestor or any individual(s) who will have access to SGI believes they belong to one or more of the categories of individuals that are exempt from the criminal history records check and background check requirements in 10 CFR 73.59, the requestor should also provide a statement identifying which exemption applies. While processing the request, the Office of Administration, Personnel Security Branch, will make a final determination whether the claimed exemption applies. Alternatively, the requestor may contact the Office of Administration for an evaluation of their exemption status prior to submitting their request. Persons who are exempt from the background check are not required to complete the SF–85 or Form FD–258; however, all other requirements for access to SGI, including the need to know, are still applicable.

Note: Copies of documents and materials required by paragraphs C.4(b), (c), and (d) of this Order must be sent to the following address: U.S. Nuclear Regulatory Commission, ATTN: Personnel Security Branch, Mail Stop TWPN–03–B46M, 11555 Rockville Pike, Rockville, MD 20852.

These documents and materials should not be included with the request letter to the Office of the Secretary, but the request letter should state that the forms and fees have been submitted as required.

4 This fee is subject to change pursuant to the Office of Personnel Management’s adjustable billing rates.

D. To avoid delays in processing requests for access to SGI, the requestor should review all submitted materials for completeness and accuracy (including legibility) before submitting them to the NRC. The NRC will return incomplete packages to the sender without processing.

E. Based on an evaluation of the information submitted under paragraphs C.(3) or C.(4) above, as applicable, the NRC staff will determine within 10 days of receipt of the request whether:

(1) There is a reasonable basis to believe the petitioner is likely to establish standing to participate in this NRC proceeding; and

(2) The requestor has established a legitimate need for access to SUNSI or need to know the SGI requested.

F. For requests for access to SUNSI, if the NRC staff determines that the requestor satisfies both E.(1) and E.(2) above, the NRC staff will notify the requestor in writing that access to SUNSI has been granted. The written notification will contain instructions on how the requestor may obtain copies of the requested documents, and any other conditions that may apply to access to those documents. These conditions may include, but are not limited to, the signing of a Non-Disclosure Agreement or Affidavit, or Protective Order setting forth terms and conditions to prevent the unauthorized or inadvertent disclosure of SUNSI by each individual who will be granted access to SUNSI.5

G. For requests for access to SGI, if the NRC staff determines that the requestor has satisfied both E.(1) and E.(2) above, the Office of Administration will then determine, based upon completion of the background check, whether the proposed recipient is trustworthy and reliable, as required for access to SGI by 10 CFR 73.22(b). If the Office of Administration determines that the individual or individuals are trustworthy and reliable, the NRC will promptly notify the requestor in writing. The notification will provide the names of approved individuals as well as the conditions under which the SGI will be provided. Those conditions may include, but are not limited to, the signing of a Non-Disclosure Agreement or Affidavit, or Protective Order6 by each individual who will be granted access to SGI.

H. Release and Storage of SGI. Prior to providing SGI to the requestor, the NRC staff will conduct (as necessary) an inspection to confirm that the recipient’s information protection system is sufficient to satisfy the requirements of 10 CFR 73.22. Alternatively, recipients may opt to view SGI at an approved SGI storage location rather than establish their own

5 Any motion for Protective Order or draft Non-Disclosure Affidavit or Agreement for SUNSI must be filed with the presiding officer or the Chief Administrative Judge if the presiding officer has not yet been designated, within 30 days of the deadline for the receipt of the written access request.

6 Any motion for Protective Order or draft Non-Disclosure Agreement or Affidavit for SGI must be filed with the presiding officer or the Chief Administrative Judge if the presiding officer has not yet been designated, within 180 days of the deadline for the receipt of the written access request.
SGI protection program to meet SGI protection requirements.

I. Filing of Contentions. Any contentions in these proceedings that are based upon the information received as a result of the request made for SUNSI or SGI must be filed by the requestor no later than 25 days after receipt of (or access to) that information. However, if more than 25 days remain between the petitioner’s receipt of (or access to) the information and the deadline for filing all other contentions (as established in the notice of hearing or opportunity for hearing), the petitioner may file its SUNSI or SGI contentions by that later deadline.

1. If the request for access to SUNSI or SGI is denied by the NRC staff either after a determination on standing and requisite need, or after a determination on trustworthiness and reliability, the NRC staff shall immediately notify the requestor in writing, briefly stating the reason or reasons for the denial.

2. Before the Office of Administration makes a final adverse determination regarding the trustworthiness and reliability of the proposed recipient(s) for access to SGI, the Office of Administration, in accordance with 10 CFR 2.336(f)(1)(iii), must provide the proposed recipient(s) any records that were considered in the trustworthiness and reliability determination, including those required to be provided under 10 CFR 73.57(e)(1), so that the proposed recipient(s) have an opportunity to correct or explain the record.

3. The requestor may challenge the NRC staff’s adverse determination with respect to access to SUNSI or with respect to standing or need to know for SGI by filing a challenge within 5 days of receipt of that determination with: (a) the presiding officer designated in this proceeding; (b) if no presiding officer has been appointed, the Chief Administrative Judge, or if he or she is unavailable, another administrative judge, or an Administrative Law Judge with jurisdiction pursuant to 10 CFR 2.318(a); or (c) if another officer has been designated to rule on information access issues, with that officer.

4. The requestor may challenge the Office of Administration’s final adverse determination with respect to trustworthiness and reliability for access to SGI by filing a request for review in accordance with 10 CFR 2.336(f)(1)(iv).

5. Further appeals of decisions under this paragraph must be made pursuant to 10 CFR 2.311.

K. Review of Grants of Access. A party other than the requestor may challenge an NRC staff determination granting access to SUNSI whose release would harm that party’s interest independent of the proceeding. Such a challenge must be filed within 5 days of the notification by the NRC staff of its grant of access and must be filed with: (a) the presiding officer designated in this proceeding; (b) if no presiding officer has been appointed, the Chief Administrative Judge, or if he or she is unavailable, another administrative judge, or an Administrative Law Judge with jurisdiction pursuant to 10 CFR 2.318(a); or (c) if another officer has been designated to rule on information access issues, with that officer.

L. The Commission expects that the NRC staff and presiding officers (and any other reviewing officers) will consider and resolve requests for access to SUNSI or SGI, and motions for protective orders, in a timely fashion in order to minimize any unnecessary delays in identifying those petitioners who have standing and who have propounded contentions meeting the specificity and basis requirements in 10 CFR part 2. The attachment to this Order summarizes the general target schedule for processing and resolving requests under these procedures.

Annette L. Vietti-Cook, Secretary of the Commission.

ATTACHMENT 1—GENERAL TARGET SCHEDULE FOR PROCESSING AND RESOLVING REQUESTS FOR ACCESS TO SENSITIVE UNCLASSIFIED NON-SAFEGUARDS INFORMATION AND SAFEGUARDS INFORMATION IN THIS PROCEEDING

<table>
<thead>
<tr>
<th>Day</th>
<th>Event/activity</th>
</tr>
</thead>
<tbody>
<tr>
<td>0</td>
<td>Publication of Federal Register notice of hearing and opportunity to petition for leave to intervene, including order with instructions for access requests.</td>
</tr>
<tr>
<td>10</td>
<td>Deadline for submitting requests for access to Sensitive Unclassified Non Safeguards Information (SUNSI) and/or Safeguards Information (SGI) with information: Supporting the standing of a potential party identified by name and address; describing the need for the information in order for the potential party to participate meaningfully in an adjudicatory proceeding; demonstrating that access should be granted (e.g., showing technical competence for access to SGI); and, for SGI, including application fee for fingerprint/background check.</td>
</tr>
<tr>
<td>60</td>
<td>Deadline for submitting petition for intervention containing: (i) Demonstration of standing; (ii) all contentions whose formulation does not require access to SUNSI and/or SGI (+25 Answers to petition for intervention; +7 requestor/petitioner reply).</td>
</tr>
<tr>
<td>20</td>
<td>U.S. Nuclear Regulatory Commission (NRC) staff informs the requestor of the staff’s determination whether the request for access provides a reasonable basis to believe standing can be established and shows (1) need for SUNSI or (2) need to know for SGI. (For SUNSI, NRC staff also informs any party to the proceeding whose interest independent of the proceeding would be harmed by the release of the information.) If NRC staff makes the finding of need for SUNSI and likelihood of standing, NRC staff begins document processing (preparation of redactions or review of redacted documents). If NRC staff makes the finding of need to know for SGI and likelihood of standing, NRC staff begins background check (including fingerprinting for a criminal history records check), information processing (preparation of redactions or review of redacted documents), and readiness inspections.</td>
</tr>
<tr>
<td>25</td>
<td>If NRC staff finds no “need,” no “need to know,” or no likelihood of standing, the deadline for requestor/petitioner to file a motion seeking a ruling to reverse the NRC staff’s denial of access; NRC staff files copy of access determination with the presiding officer (or Chief Administrative Judge or other designated officer, as applicable). If NRC staff finds “need” for SUNSI, the deadline for any party to the proceeding whose interest independent of the proceeding would be harmed by the release of the information to file a motion seeking a ruling to reverse the NRC staff’s grant of access.</td>
</tr>
</tbody>
</table>

7 Requestors should note that the filing requirements of the NRC’s E-Filing Rule (72 FR 49139; August 28, 2007, as amended at 77 FR 46562; August 3, 2012) apply to appeals of NRC staff determinations (because they must be served on a presiding officer or the Commission, as applicable), but not to the initial SUNSI/SGI request submitted to the NRC staff under these procedures.

**NUCLEAR REGULATORY COMMISSION**

[Docket No. 50–166; NRC–2010–0250]

University of Maryland; Maryland University Training Reactor

**AGENCY:** Nuclear Regulatory Commission.

**ACTION:** License renewal; issuance.

**SUMMARY:** The U.S. Nuclear Regulatory Commission (NRC) issued a renewal of Facility Operating License No. R–70, held by the University of Maryland (UMD or the licensee) for the continued operation of its Maryland University Training Reactor (MUTR or the facility) Training, Research, Isotope Production, General Atomics (TRIGA) reactor for an additional 20 years.

**DATES:** The operating license renewal No. R–70 is effective on December 22, 2016.

**ADDRESSES:** Please refer to Docket ID NRC–2010–0250 when contacting the NRC about the availability of information regarding this document. You may obtain publicly-available information related to this document using any of the following methods:

- Address questions about NRC dockets to Carol Gallagher; telephone: 301–415–3463; email: Carol.Gallagher@nrc.gov.
- To begin the search, select "ADAMS Public Documents" collection at ADAMS: You may examine and search available documents online in the ADAMS Public Documents collection at http://www.nrc.gov/reading-rm/adams.html. To begin the search, select "ADAMS Public Documents" and then select "Begin Web-based ADAMS Search." For problems with ADAMS, please contact the NRC’s Public Document Room (PDR) reference staff at 1–800–397–4209, 301–415–4737, or by email to pdr.resource@nrc.gov. The ADAMS accession number for each document referenced (if it available in ADAMS) is provided the first time that a document is referenced. For the convenience of the reader, the ADAMS accession numbers are provided in a table in the “Availability of Documents” section of this document.

**SUPPLEMENTARY INFORMATION:**

---

**I. Discussion**

The NRC has issued renewed Facility Operating License No. R–70, held by the licensee, which authorizes continued operation of the MUTR, located in College Park, Maryland. The MUTR is a heterogeneous pool-type, natural convection, light-water cooled, and shielded TRIGA reactor. The MUTR is licensed to operate at a steady-state power level of 250 kilowatts thermal. The renewed Facility Operating License No. R–70 will expire 20 years from its date of issuance.

The renewed facility operating license complies with the standards and requirements of the Atomic Energy Act of 1954, as amended (the Act), and the Commission’s rules and regulations. The Commission has made appropriate findings as required by the Act and the Commission’s regulations in chapter I of title 10 of the Code of Federal Regulations (10 CFR), and sets forth those findings in the renewed facility operating license. The agency afforded an opportunity for hearing in the Notice of Opportunity for Hearing published in the Federal Register on July 26, 2010 (75 FR 43566). The NRC received no request for a hearing or petition for leave to intervene following the notice.

The NRC staff prepared a safety evaluation report for the renewal of Facility Operating License No. R–70 and concluded, based on that evaluation, that the licensee can continue to operate the facility without endangering the health and safety of the public. The NRC staff also prepared an Environmental Assessment and Finding of No
Significant Impact for the renewal of the facility operating license, noticed in the Federal Register on December 22, 2016 (81 FR 93969), and concluded that renewal of the facility operating license will not have a significant impact on the quality of the human environment.

Dated at Rockville, Maryland, this 22nd day of December 2016.

For the Nuclear Regulatory Commission.

Michael Balazik,
Branch Chief (Acting), Research and Test Reactors Licensing Branch, Division of Policy and Rulemaking, Office of Nuclear Reactor Regulation.

[FR Doc. 2016–31815 Filed 12–30–16; 8:45 am]
BILLING CODE 7590–01–P

NUCLEAR REGULATORY COMMISSION

[NRC–2016–0016]

AGENCY: Nuclear Regulatory Commission.

ACTION: Notice of submission to the Office of Management and Budget; request for comment; extension of comment period and correction.

SUMMARY: The U.S. Nuclear Regulatory Commission (NRC) is correcting a notice that was published in the Federal Register (FR) on November 30, 2016, regarding Notice of submission to the Office of Management and Budget; request for comment. This action is necessary to amend the annual responses and burden hours to include the burden and responses associated cyber security events.

DATES: The correction is effective January 3, 2017.

ADDRESS: Submit comments directly to the OMB reviewer at: Vlad Dorjets, Desk Officer, Office of Information and Regulatory Affairs (3150–0104), NCEO–10202, Office of Management and Budget, Washington, DC 20503; telephone: 202–395–7315, email: oira_submission@omb.eop.gov.

SUPPLEMENTARY INFORMATION: In the FR on November 30, 2016, in FR Doc. 2016–0016, on page 86344, in the first column, the second sentence in the response to question 5 is changed from “The total number of reports is estimated to be 350 per year” to “The total number of reports is estimated to be 350 per year”. In the first column, the response to question 9 is changed from “The total estimated burden from completing Licensee Event Reports is 28,000 hours (based on 80 hours for each of 350 reports)” to “The total estimated burden from completing Licensee Event Reports is 35,360 hours (28,288 hours reporting plus 7,072 hours recordkeeping)”.

Dated at Rockville, Maryland, this 23rd day of December, 2016.

For the Nuclear Regulatory Commission.

David Cullison,
NRC Clearance Officer, FOIA, Privacy and Information Collections Branch, Customer Services Division, Office of the Chief Information Officer.

BILLING CODE 7590–01–P
NUCLEAR REGULATORY COMMISSION

[Docket Nos. 52–018 and 52–019; NRC–2008–0170]

Duke Energy Carolinas, LLC; William States Lee III Nuclear Station Units 1 and 2

AGENCY: Nuclear Regulatory Commission.

ACTION: Notice of intent to enter into a modified indemnity agreement.

SUMMARY: The U.S. Nuclear Regulatory Commission (NRC) is issuing a notice of intent to enter into a modified indemnity agreement with Duke Energy Carolinas, LLC, (DEC) to operate William States Lee III Nuclear Station (WLS) Units 1 and 2. The NRC is required to publish notice of its intent to enter into an indemnity agreement which contains provisions different from the general form found in the NRC's regulations. A modification to the general form is necessary to accommodate the unique timing provisions of a combined license (COL).

DATES: On December 15, 2016, the Commission authorized issuance of COLs to DEC for WLS Units 1 and 2. These COLs would include a license pursuant to part 70 of title 10 of the Code of Federal Regulations (10 CFR), “Domestic Licensing of Special Nuclear Material.” Pursuant to 10 CFR 140.20(a)(1)(iii), the NRC will execute the indemnity agreement in 10 CFR 140.92, “Appendix B—Form of Indemnity Agreement with licensees furnishing insurance policies as proof of financial protection.”

II. Request/Action

Pursuant to 10 CFR 140.9, the NRC is publishing notice of its intent to enter into an indemnity agreement that contains provisions different from the general form found in 10 CFR 140.92. Modifications to the general indemnity agreement are addressed in the following discussion.

III. Discussion

The provisions of the general form of indemnity agreement in 10 CFR 140.92 address insurance and indemnity for a licensee that is authorized to operate as soon as an operating license (OL) is issued pursuant to 10 CFR part 50. “Domestic licensing of production and utilization facilities.” The OL, which authorizes operation of the facility as soon as the license is issued, makes a finding pursuant to 10 CFR 52.103(g) that the acceptance criteria in the COL are met (also called a “§ 52.103(g) finding”). The COL holders are not required to maintain financial protection in the amount specified in 10 CFR 140.11(a)(4) before the § 52.103(g) finding is made, but must maintain financial protection in the amount specified by 10 CFR 140.13 upon receipt of a COL because the COL includes a license issued pursuant to 10 CFR part 70. Therefore, the provisions in the general form of indemnity agreement must be modified to address the timing differences applicable to COLs.

Modifications to the general form of indemnity agreement will reflect the timing distinctions applicable to COLs. In addition, other modifications and their intent are described below:

(1) References to Mutual Atomic Energy Liability Underwriters have been removed because this entity no longer exists.

(2) Monetary amounts have been updated to reflect changes that have been made to Section 170. “Indemnification and Limitation of Liability” of the Atomic Energy Act of 1954, as amended (42 U.S.C. 2210).

IV. Conclusions

Accordingly, for the reasons discussed in this notice and in accordance with 10 CFR 140.9, the NRC hereby provides notice of its intent to enter into an agreement of indemnity with DEC for WLS Units 1 and 2 with the described modifications to the general form of indemnity.

Dated at Rockville, Maryland, this 22nd day of December 2016.

For the Nuclear Regulatory Commission.

Anna Bradford,
Deputy Director, Division of New Reactor Licensing, Office of New Reactors.

[FRL Doc. 2016–31812 Filed 12–30–16; 8:45 am]

BILLING CODE 7590–01–P

NUCLEAR REGULATORY COMMISSION

[NUREG–2016–0273]

Biweekly Notice; Applications and Amendments to Facility Operating Licenses and Combined Licenses Involving No Significant Hazards Considerations

AGENCY: Nuclear Regulatory Commission.

ACTION: Biweekly notice.

SUMMARY: Pursuant to Section 189a.(2) of the Atomic Energy Act of 1954, as amended (the Act), the U.S. Nuclear Regulatory Commission (NRC) is publishing this regular biweekly notice. The Act requires the Commission to
publish notice of any amendments issued, or proposed to be issued, and grants the Commission the authority to issue and make immediately effective any amendment to an operating license or combined license, as applicable, upon a determination by the Commission that such amendment involves no significant hazards consideration, notwithstanding the pendency before the Commission of a request for a hearing from any person. This biweekly notice includes all notices of amendments issued, or proposed to be issued, from December 6 to December 19, 2016. The last biweekly notice was published on December 20, 2016.

DATES: Comments must be filed by February 2, 2017. A request for a hearing must be filed by March 6, 2017.

ADDRESSES: You may submit comments by any of the following methods:

• Federal Rulemaking Web site: Go to http://www.regulations.gov and search for Docket ID NRC–2016–0273. Address questions about NRC docket to Carol Gallagher; telephone: 301–415–3463; email: Carol.Gallagher@nrc.gov. For technical questions, contact the individual listed in the FOR FURTHER INFORMATION CONTACT section of this document.

• Mail comments to: Cindy Bladey, Office of Administration, Mail Stop: OWFN–12–H08, U.S. Nuclear Regulatory Commission, Washington, DC 20555–0001.

For additional direction on obtaining information and submitting comments, see “Obtaining Information and Submitting Comments” in the SUPPLEMENTARY INFORMATION section of this document.

SUPPLEMENTARY INFORMATION:

I. Obtaining Information and Submitting Comments

A. Obtaining Information

Please refer to Docket ID NRC–2016–0273, facility name, unit number(s), plant docket number, application date, and subject when contacting the NRC about the availability of information for this action. You may obtain publicly-available information related to this action by any of the following methods:

• NRC’s Agencywide Documents Access and Management System (ADAMS): You may obtain publicly-available documents online in the ADAMS Public Documents collection at http://www.nrc.gov/reading-rm/adams.html. To begin the search, select “ADAMS Public Documents” and then select “Begin Web-based ADAMS Search.” For problems with ADAMS, please contact the NRC’s Public Document Room (PDR) reference staff at 1–800–397–4209, 301–415–4737, or by email to pdr.resource@nrc.gov. The ADAMS accession number for each document referenced (if it is available in ADAMS) is provided the first time that it is mentioned in this document.

• NRC’s PDR: You may examine and purchase copies of public documents at the NRC’s PDR, Room O1–F21, One White Flint North, 11555 Rockville Pike, Rockville, Maryland 20852.

B. Submitting Comments

Please include Docket ID NRC–2016–0273, facility name, unit number(s), plant docket number, application date, and subject in your comment submission.

The NRC cautions you not to include identifying or contact information that you do not want to be publicly disclosed in your comment submission. The NRC will post all comment submissions at http://www.regulations.gov as well as enter the comment submissions into ADAMS. The NRC does not routinely edit comment submissions to remove identifying or contact information.

If you are requesting or aggregating comments from other persons for submission to the NRC, then you should inform those persons not to include identifying or contact information that they do not want to be publicly disclosed in their comment submission. Your request should state that the NRC does not routinely edit comment submissions to remove such information before making the comment submissions available to the public or entering the comment into ADAMS.

II. Notice of Consideration of Issuance of Amendments to Facility Operating Licenses and Combined Licenses and Proposed No Significant Hazards Consideration Determination

The Commission has made a proposed determination that the following amendment requests involve no significant hazards consideration. Under the Commission’s regulations in §50.92 of title 10 of the Code of Federal Regulations (10 CFR), this means that operation of the facility in accordance with the proposed amendment would not (1) involve a significant increase in the probability or consequences of an accident previously evaluated, or (2) create the possibility of a new or different kind of accident from any accident previously evaluated; or (3) involve a significant reduction in a margin of safety. The basis for this proposed determination for each amendment request is shown below.

The Commission is seeking public comments on this proposed determination. Any comments received within 30 days after the date of publication of this notice will be considered in making any final determination.

Normally, the Commission will not issue the amendment until the expiration of 60 days after the date of publication of this notice. The Commission may issue the license amendment before expiration of the 60-day period provided that its final determination is that the amendment involves no significant hazards consideration. In addition, the Commission may issue the amendment prior to the expiration of the 30-day comment period if circumstances change during the 30-day comment period such that failure to act in a timely way would result, for example in derating or shutdown of the facility. If the Commission takes action prior to the expiration of either the comment period or the notice period, it will publish in the Federal Register a notice of issuance. If the Commission makes a final no significant hazards consideration determination, any hearing will take place after issuance. The Commission expects that the need to take this action will occur very infrequently.

A. Opportunity To Request a Hearing and Petition for Leave To Intervene

Within 60 days after the date of publication of this notice, any persons (petitioner) whose interest may be affected by this action may file a request for a hearing and petition for leave to intervene (petition) with respect to the action. Petitions shall be filed in accordance with the Commission’s “Agency Rules of Practice and Procedure” in 10 CFR part 2. Interested persons should consult a current copy of 10 CFR 2.309. The NRC’s regulations are accessible electronically from the NRC Library on the NRC’s Web site at http://www.nrc.gov/reading-rm/doc-collections/cfr/. Alternatively, a copy of the regulations is available at the NRC’s Public Document Room, located at One White Flint North, Room O1–F21, 11555 Rockville Pike (first floor), Rockville, Maryland 20852. If a petition is filed, the Commission or a presiding officer will rule on the petition and, if
appropriate, a notice of a hearing will be issued.

As required by 10 CFR 2.309(d) the petition should specifically explain the reasons why intervention should be permitted with particular reference to the following general requirements for standing: (1) The name, address, and telephone number of the petitioner; (2) the nature of the petitioner’s right under the Act to be made a party to the proceeding; (3) the nature and extent of the petitioner’s property, financial, or other interest in the proceeding; and (4) the possible effect of any decision or order which may be entered in the proceeding on the petitioner’s interest.

In accordance with 10 CFR 2.309(f), the petition must also set forth the specific contentions which the petitioner seeks to have litigated in the proceeding. Each contention must consist of a specific statement of the issue of law or fact to be raised or controverted. In addition, the petitioner must provide a brief explanation of the basis for his or her contention and a concise statement of the alleged facts or expert opinion which support the contention and on which the petitioner intends to rely in proving the contention at the hearing. The petitioner must also provide references to the specific sources and documents on which the petitioner intends to rely to support its position on the issue. The petition must include sufficient information to show that a genuine dispute exists with the applicant or licensee on a material issue of law or fact. Contentions must be limited matters within the scope of the proceeding. The contention must be one which, if proven, would entitle the petitioner to relief. A petitioner who fails to satisfy the requirements at 10 CFR 2.309(f) with respect to at least one contention will not be permitted to participate as a party.

Those permitted to intervene become parties to the proceeding, subject to any limitations in the order granting leave to intervene. Parties have the opportunity to participate fully in the conduct of the hearing with respect to resolution of that party’s admitted contentions, including the opportunity to present evidence, consistent with the NRC’s regulations, policies, and procedures.

Petitions must be filed no later than 60 days from the date of publication of this notice. Petitions and motions for leave to file new or amended contentions that are filed after the deadline will not be entertained absent a determination by the presiding officer that the filing demonstrates good cause by satisfaction of three factors in 10 CFR 2.309(c)(1)(i) through (iii). The petition must be filed in accordance with the filing instructions in the “Electronic Submissions (E-Filing)” section of this document.

If a hearing is requested, and the Commission has not made a final determination on the issue of no significant hazards consideration, the Commission will make a final determination on the issue of no significant hazards consideration. The final determination will serve to establish when the hearing is held. If the final determination is that the amendment request involves no significant hazards consideration, the Commission may issue the amendment and make it immediately effective, notwithstanding the request for a hearing. Any hearing would take place after issuance of the amendment. If the final determination is that the amendment request involves a significant hazards consideration, then any hearing held would take place before the issuance of the amendment unless the Commission finds an imminent danger to the health or safety of the public, in which case, it will issue an appropriate order or rule under 10 CFR part 2.

A State, local governmental body, Federally-recognized Indian Tribe, or agency thereof, may submit a petition to the Commission to participate as a party under 10 CFR 2.309(b)(1). The petition should state the nature and extent of the petitioner’s interest in the proceeding. The petition should be submitted to the Commission by March 6, 2017. The petition must be filed in accordance with the filing instructions in the “Electronic Submissions (E-Filing)” section of this document, and should meet the requirements for petitions set forth in this section, except that under 10 CFR 2.309(b)(2) a State, local governmental body, or federally recognized Indian Tribe, or agency thereof does not need to address the standing requirements in 10 CFR 2.309(d) if the facility is located within its boundaries. Alternatively, a State, local governmental body, Federally-recognized Indian Tribe, or agency thereof may participate as a non-party under 10 CFR 2.315(c).

If a hearing is granted, any person who is not a party to the proceeding and is not affiliated with or represented by a party may, at the discretion of the presiding officer, be permitted to make a limited appearance pursuant to the provisions of 10 CFR 2.315(a). A person making a limited appearance may make an oral or written statement of his or her position on the issues but may not otherwise participate in the proceeding. A limited appearance may be made at any session of the hearing or at any prehearing conference, subject to the limits and conditions as may be imposed by the presiding officer. Details regarding the opportunity to make a limited appearance will be provided by the presiding officer if such sessions are scheduled.

B. Electronic Submissions (E-Filing)

All documents filed in NRC adjudicatory proceedings, including a request for hearing and petition for leave to intervene (petition), any motion or other document filed in the proceeding prior to the submission of a request for hearing or petition to intervene, and documents filed by interested governmental entities that request to participate under 10 CFR 2.315(c), must be filed in accordance with the NRC’s E-Filing rule (72 FR 49139; August 28, 2007, as amended at 77 FR 46562, August 3, 2012). The E-Filing process requires participants to submit and serve all adjudicatory documents over the internet, or in some cases to mail copies on electronic storage media. Detailed guidance on making electronic submissions may be found in the Guidance for Electronic Submissions to the NRC and on the NRC Web site at http://www.nrc.gov/site-help/e-submittals.html. Participants may not submit paper copies of their filings unless they seek an exemption in accordance with the procedures described below.

To comply with the procedural requirements of E-Filing, at least 10 days prior to the filing deadline, the participant should contact the Office of the Secretary by email at hearing.docket@nrc.gov, or by telephone at 301–415–1677, to (1) request a digital identification (ID) certificate, which allows the participant (or its counsel or representative) to digitally sign submissions and access the E-Filing system for any proceeding in which it is participating; and (2) advise the Secretary that the participant will be submitting a petition or other adjudicatory document (even in instances in which the participant, or its counsel or representative, already holds an NRC-issued digital ID certificate). Based upon this information, the Secretary will establish an electronic docket for the hearing in this proceeding if the Secretary has not already established an electronic docket.

Information about applying for a digital ID certificate is available on the NRC’s public Web site at http://www.nrc.gov/site-help/e-submittals/getting-started.html. Once a participant has been provided a digital certificate and a docket has been created, the participant can then submit...
The proposed amendment would exclude CEA 39 from SR 4.1.3.1.2 for the remainder of MPS2 Cycle 24 operation. The function of CEA 39 is to provide negative reactivity addition into the core upon receipt of a signal from the Reactor Protection System (RPS). CEA 39 was demonstrated to be moveable and trippable during the last performance of SR 4.1.3.1.2. Since the functionality of CEA 39 has not been affected, the assumptions and conclusions of the Final Safety Analysis Report (FSAR) Chapter 14, Safety Analysis, are not affected by this license amendment request.

The misoperation of a CEA, which includes a CEA drop event, has been evaluated in the MPS2 FSAR and found acceptable. The proposed change would minimize the potential for inadvertent insertion of CEA 39 into the core by eliminating the requirement to place the CEA on the UGC to perform freedom of movement testing. The proposed change does not significantly increase the probability of a failure of a CEA to insert into the core on a reactor trip or the probability of an inadvertent CEA drop into the core at power.

No modifications are proposed to the RPS or associated Control Element Drive Mechanism (CEDM) system logic.

Based on the above, the proposed amendment does not involve a significant increase in the probability or consequences of an accident previously evaluated.

2. Does the proposed amendment create the possibility of a new or different kind of accident from any accident previously evaluated?

Response: No.

The proposed amendment would exclude CEA 39 from SR 4.1.3.1.2 for the remainder of MPS2 Cycle 24 operation. CEA 39 was demonstrated to be moveable and trippable during the last performance of SR 4.1.3.1.2; therefore, the functionality of CEA 39 has not been affected. The proposed change will not introduce any new design changes or systems that can prevent the CEA from performing its specified safety function to insert on a reactor trip. The current MPS2 FSAR safety analysis considers the drop of a CEA into the core as an initiating event. This change does not alter assumptions made in the FSAR Chapter 14 safety analysis.

Based on the above, the proposed amendment does not create the possibility of a new or different kind of accident from any accident previously evaluated.

3. Does the proposed amendment involve a significant reduction in the margin of safety?

Response: No.

The proposed amendment would exclude CEA 39 from SR 4.1.3.1.2 for the remainder of MPS2 Cycle 24 operation. SR 4.1.3.1.2 is intended to verify freedom of movement of CEAs (i.e., trippable). CEA 39 was demonstrated to be moveable and trippable during the last performance of SR 4.1.3.1.2.

Federal Register / Vol. 82, No. 1 / Tuesday, January 3, 2017 / Notices 157
The physical and electrical design of the CEAs, and past operating experience, provides high confidence that CEAs remain tripippable whether or not exercised during each SR interval. Eliminating further exercise of CEAs 39 for the remainder of MPS2 Cycle 24 operation does not directly relate to the potential for CEA binding to occur. The current MPS2 FSAR safety analysis is unaffected by this license amendment request and there is no reduction in the margin of safety.

There is no known failure mechanism (e.g., crud deposition) that would preclude the CEA from inserting into core on a valid trip signal or loss of power.

Based on the above, the proposed amendment does not involve a significant reduction in the margin of safety.

The NRC staff has reviewed the licensee’s analysis and, based on this review, it appears that the three standards of 10 CFR 50.92(c) are satisfied. Therefore, the NRC staff proposes to determine that the amendment request involves no significant hazards consideration.

**Attorney for licensee:** Lillian M. Cuoco, Senior Counsel, Dominion Resources Services, Inc., 120 Tredexgar Street, RS–2, Richmond, VA 23219.

**NRC Acting Branch Chief:** Stephen S. Koenick.

Duke Energy Carolinas, LLC, Docket Nos. 50–369 and 50–370, McGuire Nuclear Station, Units 1 and 2, Mecklenburg County, North Carolina.

**Date of amendment request:** June 30, 2016. A publicly-available version is in ADAMS under Accession No. ML16193A656.

**Description of amendment request:**

The amendments would modify Technical Specification 3.6.14, “Divider Barrier Integrity,” to revise Conditions A and D to allow one steam generator (SG) enclosure hatch or one pressurizer enclosure hatch to be open for up to 48 hours to facilitate potential inspections and maintenance and to enhance personnel and radiation safety.

**Basis for proposed no significant hazards consideration determination:**

As required by 10 CFR 50.91(a), the licensee has provided its analysis of the issue of no significant hazards consideration, which is presented below:

1. Does the proposed amendment involve a significant increase in the probability or consequences of an accident previously evaluated?

   **Response:** No.

   Implementation of this amendment will not involve a significant increase in the probability or consequences of an accident previously evaluated. Removal of the SG enclosure hatch or the pressurizer enclosure hatch will not cause an increase in the probability of an accident that has been previously evaluated because the hatches are not accident initiators.

   The consequences of an accident, which have been previously evaluated, will not be significantly increased by removal of the pressurizer enclosure or SG enclosure hatch. As discussed in the technical justification supporting this amendment request, the new containment compression peak pressure will remain well below the acceptance criteria. Additionally, the long term containment peak pressure will not be adversely affected due to the delay time in melting of the ice. The removal of the pressurizer enclosure hatch itself has been previously evaluated in Modes 1 through 4 in accordance with the analytical method described in NUREG–0612 and the NRC’s December 22, 1980, letter regarding the control of heavy loads at nuclear power plants ([ADAMS Accession Nos. ML070250180 and ML071080219, respectively]). Because the SG enclosure hatch weighs less than 300 pounds, it would not be considered a heavy load as defined by NUREG–0612. As such, it is not subject to heavy lift considerations. Regardless, there is no safety-related equipment directly under these hatch covers, so in the unlikely event that one fell, no damage is expected to be caused. The changes proposed in this [license amendment request (LAR)] have no adverse effect on the procedures used for the handling of heavy loads at McGuire.

   In summary, the proposed changes will not involve any increase in the probability or consequences of an accident previously evaluated.

2. Does the proposed amendment create the possibility of a new or different kind of accident from any accident previously evaluated?

   **Response:** No.

   Operation in accordance with the proposed amendment does not create a new plant configuration and does not adversely affect how the plant is operated, so implementation of this amendment would not create the possibility of a new or different kind of accident from any accident previously evaluated. No new accident causal mechanisms are created as a result of the NRC approval of this amendment request. As discussed above, extending the time that the pressurizer enclosure hatch or SG enclosure hatch is allowed to be open or inoperable does not create any new or different accidents from those previously evaluated. Removal of the pressurizer enclosure hatch to perform inspections or maintenance has been previously evaluated and determined to be acceptable. The analysis contained in the technical justification for this license amendment request provides results concluding that the containment compression peak pressure and the long term containment peak pressure are acceptable with either a pressurizer enclosure hatch or an SG enclosure hatch open. This proposed amendment does not impact any plant systems that are accident initiators; therefore, no new accident types are being created.

3. Does the proposed amendment involve a significant reduction in the margin of safety?

   **Response:** No.

   Implementation of this amendment would not involve a significant reduction in a margin of safety. Margin of safety is related to the confidence in the ability of the fission product barriers to perform their design functions during and following an accident situation. These barriers include the fuel cladding, the reactor coolant system, and the containment system. The pressurizer enclosure hatch and the SG enclosure hatch, as well as their performances, have a direct impact on the containment boundary since peak containment pressure due to an accident could be affected. However, the analysis supporting this amendment request concludes that the containment compression peak pressure and the long term containment peak pressure continue to be acceptable with the increased time a single hatch is open.

   Therefore, the performance of the fission product barriers will not be significantly impacted by implementation of this amendment, and no safety margins will be significantly impacted.

The NRC staff has reviewed the licensee’s analysis and, based on this review, it appears that the three standards of 10 CFR 50.92(c) are satisfied. Therefore, the NRC staff proposes to determine that the amendment request involves no significant hazards consideration.

**Attorney for licensee:** Kate Nolan, Deputy General Counsel, Duke Energy Corporation, 526 South Church Street—DECA5A, Charlotte, NC 28202.

**NRC Acting Branch Chief:** Michael T. Markley.

Duke Energy Progress, LLC, Docket Nos. 50–325 and 50–324, Brunswick Steam Electric Plant, Units 1 and 2 (BSEP), Brunswick County, North Carolina.

**Date of amendment request:** September 6, 2016, as supplemented by letter dated November 9, 2016. Publicly-available versions are in ADAMS under Accession Nos. ML16257A410 and ML16330A504, respectively.

**Description of amendment request:**

The amendment would revise the Technical Specifications to support an expansion of the core power-flow operating range (i.e., Maximum Extended Load Line Limit Analysis Plus (MELLLA+)).

**Basis for proposed no significant hazards consideration determination:**

As required by 10 CFR 50.91(a), the licensee has provided its analysis of the issue of no significant hazards consideration, which is presented below:

1. Does the proposed amendment involve a significant increase in the probability or consequences of an accident previously evaluated?

   **Response:** No.

   The proposed operation in the MELLLA+ operating domain does not significantly increase the probability or consequences of an accident previously evaluated. The probability (i.e., frequency of occurrence) of
Design Basis Accidents (DBAs) occurring is not affected by the MELLLA+ operating domain because BSEP continues to comply with the regulatory and design basis criteria established for plant equipment. Furthermore, a probabilistic risk assessment demonstrates that the calculated core damage frequencies do not significantly change due to the MELLLA+.

There is no change in consequences of postulated accidents when operating in the MELLLA+ operating domain compared to the operating domain previously evaluated. The results of accident evaluations remain within the NRC approved acceptance limits.

The spectrum of postulated transients has been investigated and is shown to meet the plant’s currently licensed regulatory criteria. Continued compliance with the Safety Limit Minimum Critical Power Ratio (SLMCPR) will be confirmed on a cycle-specific basis consistent with the criteria accepted by the NRC.

Challenges to the reactor coolant pressure boundary were reviewed for the MELLLA+ operating domain conditions (i.e., pressure, temperature, flow, and radiation) and were found to meet their respective acceptance criteria for allowable stresses and overpressure margin.

Challenges to the containment were evaluated and the containment and its associated cooling systems continue to meet the current licensing basis. The calculated post-Loss of Coolant Accident (LOCA) suppression pool temperature remains acceptable.

The proposed changes to the sodium pentaborate (SPB) enrichment and volume requirements maintain the capability of the Standby Liquid Control (SLC) system to perform this reactivity control function and ensure continued compliance with the requirements of 10 CFR 50.62. The SLC system is not considered to be an initiator of any event. The use of the proposed SPB solution with a higher boron-10 (B–10) isotope enrichment does not alter the design, function, or operation of the SLC system or increasing the likelihood of malfunction that could increase the consequences of an accident.

Therefore, the proposed change does not involve a significant increase in the probability or consequences of an accident previously evaluated.

2. Does the proposed amendment create the possibility of a new or different kind of accident from any accident previously evaluated?

Response: No.

The proposed operation in the MELLLA+ domain does not involve a significant reduction in the margin of safety.

The MELLLA+ operating domain can only affect design and operational margins. Challenges to the fuel, reactor coolant pressure boundary, and containment were evaluated for the MELLLA+ operating domain conditions. Fuel integrity is maintained by meeting existing design and regulatory limits. The calculated loads on affected structures, systems, and components, including the reactor coolant pressure boundary, will remain within their design allowances for design basis event categories. No NRC acceptance criterion is exceeded. The BSEP configuration and responses to postulated accidents do not result in exceeding the presently approved NRC acceptance limits, thereby preserving safety margins.

The proposed changes to the SPB enrichment and volume requirements ensure SLC system shutdown margins and post-accident pH control margins are maintained while maintaining compliance with the requirements of 10 CFR 50.62.

Therefore, the proposed amendments do not result in a significant reduction in the margin of safety.

The NRC staff has reviewed the licensee’s analysis and, based on this review, it appears that the three standards of 10 CFR 50.92(c) are satisfied. Therefore, the NRC staff proposes to determine that the amendment request involves no significant hazards consideration.

Attorney for licensee: Kathryn B. Nolan, Deputy General Counsel, 550 South Tryon St., M/C DEC45A, Charlotte, NC 28202.

NRC Acting Branch Chief: Jeanne D. Johnston.

Exelon Generation Company, LLC, and PSEG Nuclear LLC, Docket Nos. 50–277 and 50–278, Peach Bottom Atomic Power Station, Units 2 and 3 (PBAPS), York and Lancaster Counties, Pennsylvania.

Date of amendment request: November 4, 2016, as supplemented by letter dated December 7, 2016. Publicly-available versions are in ADAMS under Accession Nos. ML16309A298 and ML16342C455, respectively.

Description of amendment request: The amendments would revise the Allowable Value (AV) for the Turbine Condenser—Low Vacuum scram function specified in Technical Specification Table 3.3.1.1–1, “Reactor Protection System Instrumentation.”

The licensee stated that the purpose of the proposed change is to minimize the potential for inadvertent scrams due to low condenser vacuum.

Basis for proposed no significant hazards consideration determination: As required by 10 CFR 50.91(a), the licensee has provided its analysis of the issue of no significant hazards consideration, which is presented below, with NRC edits shown in square brackets:

1. Does the proposed change involve a significant increase in the probability or consequences of an accident previously evaluated?

Response: No.

The proposed change to the PBAPS Turbine Condenser—Low Vacuum scram AV does not require modifying any system interface or affect the probability of any event initiators at the facility. Overall RPS (Reactor Protection System) performance will remain within the bounds of the previously performed accident analyses, since [the Turbine-Condenser—Low Vacuum scram is not specifically credited in any accident analysis.]

There will be no degradation in the performance of, or an increase in the number of challenges imposed on safety-related equipment that are assumed to function during an accident situation. The proposed change will not alter any assumptions or change any mitigation actions in the radiological consequence evaluations in the UFSAR [Updated Final Safety Analysis Report]. The proposed change is consistent with safety analysis assumptions and resultant consequences.

Therefore, the proposed change does not involve a significant increase in the probability or consequences of an accident previously evaluated.

2. Does the proposed change create the possibility of a new or different kind of accident from any accident previously evaluated?

Response: No.

The proposed change to the PBAPS Turbine Condenser—Low Vacuum scram AV does not affect the design, functional performance, or operation of the facility. Similarly, the proposed change does not affect the design or operation of any SSCs [structures, systems, or components] involved in the mitigation of any accidents, nor does it affect the design or operation of any component in the facility such that new equipment failure modes are created.
No new accident scenarios, transient precursors, failure mechanisms, or limiting single failures are introduced as a result of this change. There will be no adverse effect or challenges imposed on any safety-related system as a result of this change.

The proposed change does not create the possibility of a new or different kind of accident from any accident previously evaluated.

3. Does the proposed change involve a significant reduction in a margin of safety?
Response: No.

The proposed change does not affect the acceptance criteria for any analyzed event, nor is there a change to any Safety Analysis Limit. There will be no effect on the manner in which safety limits, limiting safety system settings, or limiting conditions for operation are determined nor will there be any effect on those plant systems necessary to assure the accomplishment of protection functions.

The purpose of the condenser low vacuum turbine trip is to protect the main condenser against overpressure on loss of condenser vacuum. A condenser low vacuum condition provides a signal to trip the main turbine by providing automatic closure to the turbine stop valves, to anticipate the transient and scram which results from the closure of the turbine stop valves, a condenser low vacuum condition initiates a reactor scram. The condenser low vacuum scram trip setting is selected to initiate a reactor scram prior to initiation of closure of the [t]urbo [s]top [v]alves.

The proposed LAR [license amendment request] does not change the sequential relationship of the condenser low vacuum scram and turbine trip. The Automatic Scram signal (Actual Trip Setpoint greater than or equal to 21.95 inches [mercury (Hg)] vacuum) will still occur prior to the Turbine Trip Signal (Actual Trip Setpoint 20.0 inches Hg vacuum). This aligns with UPSAR Section 7.2 in that the condenser low vacuum scram is an anticipatory trip prior to the scram that would result from the closure of the main turbine stop valves.

The condenser low vacuum scram is not specifically credited in any accident analysis. The integrity of the condenser is not compromised by the proposed change because the reactor will be shut down using both diverse and redundant tripping to ensure fission products are not released.

Therefore, the proposed change does not involve a significant reduction in a margin of safety.

The NRC staff has reviewed the licensee’s analysis. Based on this review, and the NRC edits shown in square brackets, it appears that the three standards of 10 CFR 50.92(c) are satisfied. Therefore, the NRC staff proposes to determine that the amendment request involves no significant hazards consideration.

Attorney for licensee: Tamra Doneyer, Associate General Counsel, Exelon Generation Company, LLC, 4300 Winfield Rd., Warrenville, IL 60555.
NRC Acting Branch Chief: Stephen S. Koenick.

Southern Nuclear Operating Company, Inc. (SNC), Docket Nos. 50–348 and 50–364, Joseph M. Farley Nuclear Plant, Units 1 and 2, Houston County, Alabama.

Date of amendment request: November 22, 2016. A publicly-available version is in ADAMS under Accession No. ML16336A024.

Description of amendment request: SNC requested to revise the licensing basis that support a selected scope application of an Alternative Source Term (AST) methodology and incorporate Technical Specification Task Force (TSTF) Traveler, TSTF–448–A, Revision 3, “Control Room Habitability,” and TSTF–312–A, “Administrative Control of Containment Penetrations.”

Basis for proposed no significant hazards consideration determination: As required by 10 CFR 50.91(a), the licensee has provided its analysis of the issue of no significant hazards consideration. The NRC staff has reviewed the licensee’s analysis against the standards of 10 CFR 50.92(c). The licensee’s analysis is presented below, with NRC staff edits in square brackets:

1. Does the proposed amendment involve a significant increase in the probability or consequences of an accident previously evaluated?
Response: No.

There are no physical changes to the plant being introduced by the proposed changes to the accident source term. Implementation of Alternative Source Term (AST) and the new atmospheric dispersion factors have no impact on the probability for initiation of any Design Basis Accidents (DBAs). Once the occurrence of an accident has been postulated, the new accident source term and atmospheric dispersion factors are an input to analyses to compute the radiological consequences. The proposed changes do not involve a revision to the design or manner in which the facility is operated that could increase the probability of an accident previously evaluated in Chapter 15 of the Final Safety Analysis Report (FSAR).

Based on the AST analyses, there are no proposed changes to performance requirements and no proposed revision to the parameters or conditions that could contribute to the consequences of an accident previously discussed in Chapter 15 of the FSAR. Plant-specific radiological analyses have been performed using the AST methodology and new atmospheric dispersion factors (X/Qs) have been established. Based on the results of these analyses, it has been demonstrated that the Control Room is not a dose consequences of the limiting events considered in the analyses meet the regulatory guidance provided for use with the AST, and the doses are within the limits established by 10 CFR 50.67.

Regarding TSTF–312–A, the proposed change would allow containment penetrations to be unisolated under administrative controls during core alterations or movement of irradiated fuel assemblies within containment. The status of containment penetration flow paths (i.e., open or closed) is not an initiator for any design basis accident or event, and therefore the proposed change does not increase the probability of any accident previously evaluated. The proposed change does not affect the design of the primary containment, or alter plant operating practices such that the probability of an accident previously evaluated would be significantly increased. The proposed change does not significantly change how the plant would mitigate an accident previously evaluated, and is bounded by the fuel handling accident (FHA) analysis.

Therefore, it is concluded that the proposed amendment does not involve a significant increase in the probability or the consequences of an accident previously evaluated.

2. Does the proposed change create the possibility of a new or different kind of accident from any accident previously evaluated?
Response: No.

No new modes of operation are introduced by the proposed changes. The proposed changes will not create any failure mode not bounded by previously evaluated accidents. Implementation of AST and the associated proposed Technical Specification changes and new X/Qs have no impact to the initiation of any DBAs. These changes do not affect the design function or modes of operation of structures, systems and components in the facility prior to a postulated accident. Since structures, systems and components are operated no differently after the AST implementation, no new failure modes are created by this proposed change. The AST change itself does not have the capability to initiate accidents. Regarding TSTF–312–A, allowing penetration flow paths to be open is not an initiator for any accident. The proposed change to allow open penetration flow paths will not affect plant safety functions or plant operating practices such that a new or different accident could be created. There are no design changes associated with the proposed changes, and the change does not involve a physical alteration of the plant (i.e., no new or different type of equipment will be installed). The change does not alter assumptions made in the safety analysis, and is consistent with the safety analysis assumptions and current plant operating practice.

Therefore, the proposed change does not create the possibility of a new or different kind of accident from any accident previously evaluated.

Consequently, the proposed changes do not create the possibility of a new or different kind of accident from any accident previously evaluated.

3. Does the proposed amendment involve a significant reduction in a margin of safety?
Response: No.

The AST analyses have been performed using approved methodologies to ensure that analyzed events are bounding and safety
The dose consequences of these limiting events are within the acceptance criteria presented in 10 CFR 50.67. Thus, by meeting the applicable regulatory limits for AST, there is no significant reduction in a margin of safety.

Regarding TSTF–912–A, TS 3.9.3 provides measures to ensure that the dose consequences of a postulated FHA inside containment are minimized. The proposed change to LCO 3.9.3 will allow penetration flow path(s) to be open during refueling operations under administrative control. These administrative controls will provide assurance that prompt closure of open penetration flow paths can and will be achieved in the event of an FHA inside containment, and will minimize dose consequences. The proposed change does not affect the safety analysis acceptance criteria for any analyzed event, nor is there a change to any safety analysis limit. The proposed change does not alter the manner in which safety limits, limiting safety system settings or limiting conditions for operation are determined, not [not] is [there] any adverse plant system impacts necessary to assure the accomplishment of protective functions. The proposed change will not result in plant operation in a configuration outside the design basis.

Therefore, because the proposed changes continue to result in dose consequences within the applicable regulatory limits, the proposed amendment does not involve a significant reduction in margin of safety.

The NRC staff has reviewed the licensee’s analysis and, based on this review, it appears that the three standards of 10 CFR 50.92(c) are satisfied. Therefore, the NRC staff proposes to determine that the amendment request involves no significant hazards consideration.

**Attorney for licensees:** Jennifer M. Buettner, Associate General Counsel, Southern Nuclear Operating Company, 40 Inverness Center Parkway, Birmingham, AL 35201.

**NRC Branch Chief:** Michael T. Markley.

**Southern Nuclear Operating Company Inc. Docket Nos. 50–348 and 50–364, Joseph M. Farley Nuclear Plant, Units 1 and 2, Houston County, Alabama.**

**Date of amendment request:** November 15, 2016. A publicly-available version is in ADAMS under Accession No. ML16320A540.

**Description of amendment request:**

The proposed changes would revise Technical Specification 5.5.17, “Containment Leakage Rate Testing Program.” The revision would increase the existing Type A integrated leakage rate test program test interval from 10 years to 15 years; adopt an extension of the containment isolation valve leakage testing (Type C) frequency from 60 months to 75 months; adopt the use of American National Standards Institute/ American Nuclear Society (ANSI/ANS) 56.8–2002, “Containment System Leakage Testing Requirements”; and adopt a grace interval of 9 months for Type A, Type B, and Type C leakage tests, in accordance with Nuclear Energy Institute (NEI) 94–01, Revision 3–A.

**Basis for proposed no significant hazards consideration determination:**

As required by 10 CFR 50.91(a), the licensee has provided its analysis of the issue of no significant hazards consideration, which is presented below:

1. Does the proposed amendment involve a significant increase in the probability or consequences of an accident previously evaluated?

   **Response:** No. The proposed activity involves the revision of Joseph M. Farley Nuclear Plant (FNP), Units 1 and 2, Technical Specification (TS) 5.5.17, “Primary Containment Leakage Rate Testing Program,” to allow the extension of the Type A integrated leakage rate test (ILRT) containment test interval to 15 years, and the extension of the Type C local leakage rate test (LLRT) interval to 75 months. The current Type A test interval of 120 months (10 years) would be extended on a permanent basis to no longer than 15 years from the last Type A test. The current Type C test interval of 60 months for selected components would be extended on a permanent basis to no longer than 75 months. Extensions of up to nine months (total maximum interval of 84 months for Type C tests) are permissible only for non-routine emergent conditions.

   The proposed extensions do not involve either a physical change to the plant or a change in the manner in which the plant is operated or controlled. The containment is designed to provide an essentially leak tight barrier against the uncontrolled release of radioactivity to the environment for postulated accidents. As such, the containment and the testing requirements invoked to periodically demonstrate the integrity of the containment exist to ensure the plant’s ability to mitigate the consequences of an accident, and do not involve the prevention or identification of any precursors of an accident.

The change in Type A test frequency to once-per-fifteen years, measured as an increase to the total integrated plant risk for those accident sequences influenced by Type A testing, based on the internal events probabilistic risk analysis (PRA) is 1.08E–02 person-rem/year or ≤ 1.0% of the total population dose, whichever is less restrictive for the risk impact assessment of the extended ILRT intervals. This is consistent with the Nuclear Regulatory Commission (NRC) Final Safety Evaluation for Nuclear Energy Institute (NEI) 94–01 and EPRI Report No. 1009325. Moreover, the risk impact when compared to other severe accident risks is negligible.

Therefore, this proposed extension does not involve a significant increase in the probability of an accident previously evaluated.

In addition, as documented in NUREG–1493, “Performance-Based Containment Leak-Test Program,” dated January 1995, Types B and C tests have identified a very large percentage of containment leakage paths, and the percentage of containment leakage paths that are detected only by Type A testing is very small. The FNP Type A test history supports this conclusion.

The integrity of the containment is subject to two types of failure mechanisms that can be categorized as: (1) Activity based, and (2) time based. Activity-based failure mechanisms are defined as degradation due to system and/or component modifications or maintenance. The LLRT requirements and administrative controls such as configuration management and procedural requirements for system restoration ensure that containment integrity is not degraded by plant modifications or maintenance activities. The design and construction requirements of the containment combined with the containment inspections performed in accordance with American Society of Mechanical Engineers (ASME) Section XI, and TS requirements serve to provide a high degree of assurance that the containment would not degrade in a manner that is detectable only by a Type A test. Based on the above, the proposed test interval extensions do not significantly increase the consequences of an accident previously evaluated.

The proposed amendment also deletes exceptions previously granted under TS Amendments 150 (FNP Unit 1) and 150 (FNP Unit 2) to allow one-time extensions of the ILRT test frequency for FNP. These exceptions were for activities that would have already taken place by the time this amendment is approved; therefore, their deletion is solely an administrative action that has no effect on any component and no impact on how the unit is operated.

Therefore, the proposed change does not result in a significant increase in the probability or consequences of an accident previously evaluated.

2. Does the proposed change create the possibility of a new or different kind of accident from any accident previously evaluated?

   **Response:** No. The proposed amendment to the TS 5.5.17, “Containment Leakage Rate Testing Program,” involves the extension of the FNP Type A containment test interval to 15 years and the extension of the Type C test interval to 75 months. The containment and the testing requirements to periodically demonstrate the integrity of the containment exist to ensure the plant’s ability to mitigate the consequences of an accident. The change in Type A test frequency to once-per-fifteen years, measured as an increase to the total integrated plant risk for those accident sequences influenced by Type A testing, based on the internal events probabilistic risk analysis (PRA) is 1.08E–02 person-rem/year or ≤ 1.0% of the total population dose, whichever is less restrictive for the risk impact assessment of the extended ILRT intervals. This is consistent with the Nuclear Regulatory Commission (NRC) Final Safety Evaluation for Nuclear Energy Institute (NEI) 94–01 and EPRI Report No. 1009325. Moreover, the risk impact when compared to other severe accident risks is negligible.

Therefore, this proposed extension does not involve a significant increase in the probability of an accident previously evaluated.

In addition, as documented in NUREG–1493, “Performance-Based Containment Leak-Test Program,” dated January 1995, Types B and C tests have identified a very large percentage of containment leakage paths, and the percentage of containment leakage paths that are detected only by Type A testing is very small. The FNP Type A test history supports this conclusion.

The integrity of the containment is subject to two types of failure mechanisms that can be categorized as: (1) Activity based, and (2) time based. Activity-based failure mechanisms are defined as degradation due to system and/or component modifications or maintenance. The LLRT requirements and administrative controls such as configuration management and procedural requirements for system restoration ensure that containment integrity is not degraded by plant modifications or maintenance activities. The design and construction requirements of the containment combined with the containment inspections performed in accordance with American Society of Mechanical Engineers (ASME) Section XI, and TS requirements serve to provide a high degree of assurance that the containment would not degrade in a manner that is detectable only by a Type A test. Based on the above, the proposed test interval extensions do not significantly increase the consequences of an accident previously evaluated.

The proposed amendment also deletes exceptions previously granted under TS Amendments 150 (FNP Unit 1) and 150 (FNP Unit 2) to allow one-time extensions of the ILRT test frequency for FNP. These exceptions were for activities that would have already taken place by the time this amendment is approved; therefore, their deletion is solely an administrative action that has no effect on any component and no impact on how the unit is operated.

Therefore, the proposed change does not result in a significant increase in the probability or consequences of an accident previously evaluated.

The proposed amendment also deletes exceptions previously granted under TS Amendments 150 (FNP Unit 1) and 150 (FNP Unit 2) to allow one-time extensions of the ILRT test frequency for FNP. These exceptions were for activities that would have already taken place by the time this amendment is approved; therefore, their deletion is solely an administrative action that has no effect on any component and no impact on how the unit is operated.

Therefore, the proposed change does not result in a significant increase in the probability or consequences of an accident previously evaluated.
Amendments 159 (FNP Unit 1) and 150 (FNP Unit 2) to allow one-time extensions of the ILRT test frequency for FNP. These exceptions were for activities that would have already taken place by the time this amendment is approved; therefore, their deletion is solely an administrative action that does not result in any change in how the unit is operated.

Therefore, the proposed change does not create the possibility of a new or different kind of accident from any previously evaluated methodology.

3. Does the proposed change involve a significant reduction in a margin of safety?
Response: No.

The proposed amendment to TS 5.5.17 involves the extension of the FNP Type A containment test interval to 15 years and the extension of the Type C test interval to 75 months for selected components. This amendment does not alter the manner in which safety limits, limiting safety system setpoints, or limiting conditions for operation are determined. The specific requirements and conditions of the TS Containment Leak Rate Testing Program exist to ensure that the degree of containment structural integrity and leak-tightness that is considered in the plant safety analysis is maintained. The overall containment leak rate limit specified by TS is maintained.

The proposed change involves only the extension of the interval between Type A containment leak rate tests and Type C tests for FNP. The proposed surveillance interval extension is bounded by the 15-year ILRT intervals and the 75-month Type C test interval currently authorized within NEI 94–01, Revision 3–A. Industry experience supports the conclusions that Type B and C testing detects a large percentage of containment leakage paths and that the percentage of containment leakage paths that are detected only by Type A testing is small. The containment inspections performed in accordance with ASME Section XI and Technical Specifications serve to provide a high degree of assurance that the containment would not degrade in a manner that is detectable only by Type A testing. The combination of these factors ensures that the margin of safety in the plant safety analysis is maintained. The design, operation, testing methods and acceptance criteria for Types A, B, and C containment leakage tests specified in applicable codes and standards would continue to be met, with the acceptance of this proposed change, since these are not affected by changes to the Type A and Type C test intervals.

The proposed amendment also deletes an exception previously granted under TS Amendments 159 (FNP Unit 1) and 150 (FNP Unit 2) to allow one-time extensions of the ILRT test frequency for FNP. This exception was for an activity that would have already taken place by the time this amendment is approved. Therefore, the deletion is solely an administrative action and does not change how the unit is operated and maintained.

Therefore, there is no reduction in any margin of safety.

Therefore, the proposed change does not involve a significant reduction in a margin of safety.

The NRC staff has reviewed the licensee’s analysis and, based on this review, it appears that the three standards of 10 CFR 50.92(c) are satisfied. Therefore, the NRC staff proposes to determine that the amendment request involves no significant hazards consideration.

Attorney for licensee: Jennifer M. Buettner, Associate General Counsel, Southern Nuclear Operating Company, Inc., 40 Inverness Center Parkway, Birmingham, AL 35242.

NRC Branch Chief: Michael T. Markley.

Union Electric Company, Docket No. 50–483, Callaway Plant, Unit 1, Callaway County, Missouri.

Date of amendment request: October 11, 2016. A publicly-available version is in ADAMS under Accession No. ML16290A533.

Description of amendment request:

Basis for proposed no significant hazards consideration determination:

As required by 10 CFR 50.91(a), the licensee has provided its analysis of the issue of no significant hazards consideration, which is presented below:

1. Does the proposed change involve a significant increase in the probability or consequences of an accident previously evaluated?
Response: No.

The proposed license amendment would revise TS 5.6.5.b to add additional TR references for NRC-approved methodologies used in core reload designs and the determination of core operating limits, thereby specifically approving the use of these methodologies for the Callaway Plant. The additional analytical methodologies are improvements over the current methodologies in use at Callaway Plant. The NRC staff reviewed and approved these methodologies and concluded that these analytical methods are acceptable as a replacement for the current analytical method.

This proposed license amendment does not involve any physical changes to the Callaway Plant. Additionally, the core operating limits determined using the proposed analytical methods will continue to assure that the reactor operates safely. On that basis, the proposed changes do not involve an increase in the probability of an accident.

The proposed changes will not alter or prevent the ability of structures, systems, and components (SSCs) from performing their intended functions to mitigate the consequences of an initiating event within the assumed acceptance limits and therefore, does not increase the likelihood of any failure mechanisms or precursors to transients or accidents postulated and analyzed in the Callaway Plant FSAR [Final Safety Analysis Report]. Operation of the reactor with core operating limits determined by use of the proposed analytical methods does not increase the reactor power level, does not increase the core fission product inventory, and does not change any radiological release assumptions. The proposed changes will not alter any accident analysis assumptions discussed in the FSAR, nor do they involve any changes to the requirement for Callaway Plant to operate within the power distribution limits and shutdown margins required by the TS and within the assumptions of the safety analyses described in the FSAR. Therefore the proposed methodology and TS changes do not involve a significant increase in the consequences of an accident.

Therefore, it is concluded that this change does not involve a significant increase in the probability or consequences of an accident previously evaluated.

2. Does the proposed change create the possibility of a new or different kind of accident from any accident previously evaluated?
Response: No.

The proposed change provides revised analytical methods for determining core operating limits, and does not change any system functions or requirements. Acceptance criteria required to be met for analyzed core performance under normal, transient and accident conditions are not being changed, as the core operating limits will continue to be established in accordance with the NRC-approved methodologies. The change does not involve physical alteration of the plant, as no new or different type of equipment will be installed. The change does not alter assumptions made in the safety analyses, but ensures that the core will operate within safe limits. Consequently, this change does not create new failure modes or mechanisms, and no new accident precursors are generated.

Therefore, it is concluded that this change does not create the possibility of a new or different kind of accident from any accident previously evaluated.

3. Does the proposed change involve a significant reduction in a margin of safety?
Response: No.

The margin of safety is established through equipment design, operating parameters, and the setpoints at which automatic actions are initiated. The proposed changes do not physically alter safety-related systems, nor do they affect the way in which safety related systems perform their functions. The setpoints at which protective actions are initiated are not altered by the proposed changes. The availability of equipment...
required to be available to actuate upon demand for mitigating an analyzed event is unchanged by the proposed amendment. The proposed analytical methodologies are an improvement that allows more accurate modeling of core performance. The NRC has reviewed and approved the additional methodologies for use in lieu of the current methodology; thus, the margin of safety is not reduced due to this change.

Therefore, it is concluded that the proposed change does not involve a significant reduction in a margin of safety.

The NRC staff has reviewed the licensee’s analysis and, based on this review, it appears that the three standards of 10 CFR 50.92(c) are satisfied. Therefore, the NRC staff proposes to determine that the amendment request involves no significant hazards consideration.

NRC Branch Chief: Robert J. Pascarelli.

III. Notice of Issuance of Amendments to Facility Operating Licenses and Combined Licenses

During the period since publication of the last biweekly notice, the Commission has issued the following amendments. The Commission has determined for each of these amendments that the application complies with the standards and requirements of the Atomic Energy Act of 1954, as amended (the Act), and the Commission’s rules and regulations. The Commission has made appropriate findings as required by the Act and the Commission’s rules and regulations in 10 CFR Chapter I, which are set forth in the license amendment.

A notice of consideration of issuance of amendment to facility operating license or combined license, as applicable, proposed no significant hazards consideration determination, and opportunity for a hearing in connection with these actions, was published in the Federal Register as indicated.

Unless otherwise indicated, the Commission has determined that these amendments satisfy the criteria for categorical exclusion in accordance with 10 CFR 51.22. Therefore, pursuant to 10 CFR 51.22(b), no environmental impact statement or environmental assessment need be prepared for these amendments. If the Commission has prepared an environmental assessment under the special circumstances provisions in 10 CFR 51.22(b) and has made a determination based on that assessment, it is so indicated.

For further details with respect to the action see (1) the applications for amendment, (2) the amendment, and (3) the Commission’s related letter, Safety Evaluation and/or Environmental Assessment as indicated. All of these items can be accessed as described in the “Obtaining Information and Submitting Comments” section of this document.

Duke Energy Carolinas, LLC, Docket Nos. 50–369 and 50–370, McGuire Nuclear Station, Units 1 and 2, Mecklenburg County, North Carolina.

Date of amendment request: September 26, 2013, as supplemented by letters dated January 8, 2014; October 13, 2014; November 12, 2014; December 12, 2014; January 26, 2015; February 27, 2015; March 13, 2015; July 15, 2015; August 20, 2015; September 9, 2015; October 1, 2015; January 14, 2016; April 26, 2016; September 29, 2016; and November 21, 2016.

Brief description of amendments: The amendments revised the condition for the fire protection program (FPP) in Facility Operating Licenses such that the FPP is now based on the requirements of 10 CFR 50.48(c), “National Fire Protection Association Standard NFPA 805.”

Date of issuance: December 6, 2016.

Effective date: As of the date of issuance and shall be implemented as stated in the revised License Condition 2.C.(4).

Amendment Nos.: 291 and 270. A publicly-available version is in ADAMS under Accession No. ML16077A135; documents related to these amendments are listed in the Safety Evaluation enclosed with the amendments.

Renewed Facility Operating License Nos. NPF–9 and NPF–17: Amendments revised the Renewed Facility Operating Licenses.

Date of initial notice in Federal Register: February 19, 2014 (79 FR 9492). The supplemental letters dated January 8, 2014; October 13, 2014; November 12, 2014; December 12, 2014; January 26, 2015; February 27, 2015; March 13, 2015; July 15, 2015; August 20, 2015; September 9, 2015; October 1, 2015; January 14, 2016; April 26, 2016; September 29, 2016; and November 21, 2016, provided additional information that clarified the application, did not expand the scope of the application as originally noticed, and did not change the staff’s original proposal no significant hazards consideration determination as published in the Federal Register.

The Commission’s related evaluation of the amendments is contained in a Safety Evaluation dated December 6, 2016.

No significant hazards consideration comments received: No.

Date of application for amendment: July 28, 2015.

Brief description of amendment: The amendment incorporates into the license the transfer of ownership, held by Seminole Electric Cooperative, Inc. (SEC), in CR–3 to DEF. The transfer of ownership will take place pursuant to the Settlement, Release and Acquisition Agreement, dated April 30, 2015, wherein DEF will purchase the 1.6994 percent ownership share in CR–3 held by SEC, leaving DEF as the sole remaining licensee for CR–3.

Date of issuance: November 30, 2016.

Effective date: As of the date of issuance and shall be implemented within 60 days.

Amendment No.: 251. A publicly-available version is in ADAMS under Accession No. ML16293A200; documents related to this amendment are listed in the Safety Evaluation enclosed with the letter dated August 10, 2016 (ADAMS Accession No. ML16173A022).

Facility Operating License No. DPR–72: This amendment revised the Facility Operating License.

Date of initial notice in Federal Register: September 29, 2015 (80 FR 56513), and January 4, 2016 (81 FR 98).

The Commission’s related evaluation of the amendment is contained in a Safety Evaluation dated August 10, 2016.

No significant hazards consideration comments received: No.

Date of application for amendment: August 27, 2015, as supplemented by letters dated March 2, 2016, and July 14, 2016.

Date of issuance: December 5, 2016.

Effective date: As of the date of issuance and shall be implemented within 60 days.

Amendment No.: 252. A publicly-available version is in ADAMS under Accession No. ML16244A099; documents related to this amendment are listed in the Safety Evaluation enclosed with the amendment.
Facility Operating License No. DPR–72: This amendment revised the License.

Date of initial notice in Federal Register: November 10, 2015 (80 FR 69711).

The Commission’s related evaluation of the amendment is contained in a Safety Evaluation dated December 5, 2016.

No significant hazards consideration comments received: No.

Date of amendment request: March 3, 2016, as supplemented by letter dated June 7, 2016.

Brief description of amendment: The amendment clarifies the application, did not change the staff’s original proposed no significant hazards consideration determination as published in the Federal Register.

The Commission’s related evaluation of the amendment is contained in a Safety Evaluation dated December 12, 2016.

No significant hazards consideration comments received: No.

Dated at Rockville, Maryland, this 21st day of December 2016.

For the Nuclear Regulatory Commission.

George A. Wilson,
Deputy Director, Division of Operating Reactor Licensing, Office of Nuclear Reactor Regulation.

BILLING CODE 7590–01–P

POSTAL REGULATORY COMMISSION

[Docket No. R2017–2; Order No. 3707]

Type 2 Rate Adjustment

AGENCY: Postal Regulatory Commission.

ACTION: Notice.

SUMMARY: The Commission is noticing a recently filed Postal Service notice announcing a Type 2 rate adjustment to improve default rates established under the Universal Postal Union Acts. The adjustment and other changes are scheduled to take effect February 1, 2017. This notice informs the public of the filing, invites public comment, and takes other administrative steps.

DATES: Comments are due: January 5, 2017.

ADDRESSES: Submit comments electronically via the Commission’s Filing Online system at http://www.prc.gov. Those who cannot submit comments electronically should contact the person identified in the FOR FURTHER INFORMATION CONTACT section by telephone for advice on filing alternatives.

FOR FURTHER INFORMATION CONTACT:
David A. Trissell, General Counsel, at 202–789–6820.

SUPPLEMENTARY INFORMATION:

Table of Contents
I. Introduction
II. Contents of Filing
III. Commission Action
IV. Ordering Paragraphs

I. Introduction

On December 22, 2016, the Postal Service filed a notice, pursuant to 39 CFR 3010.40 et seq., announcing a Type
to report information on the Agreement through the Annual Compliance Report. \textit{Id.} at 7. The Postal Service also invokes, with respect to service performance measurement reporting under 39 CFR 3055.3(a)(3), the standing exception the Commission allowed in Order No. 996 for all agreements filed in the Inbound Market Dominant Multi-Service Agreements with Foreign Postal Operators 1 product grouping.\(^4\)

\textit{Consistency with applicable statutory criteria.} The Postal Service observes that Commission review of a negotiated service agreement addresses three statutory criteria under 39 U.S.C. 3622(c)(10), as identified in 39 CFR 3010.40, \textit{i.e.}, whether the agreement: (1) Improves the Postal Service’s net financial position or enhances the performance of operational functions; (2) will not cause unreasonable harm to the marketplace; and (3) will be available on public and reasonable terms to similarly situated mailers. \textit{Id.}\(^5\) The Postal Service asserts that it addresses the first two criteria in its Notice and that the third is inapplicable, as there are no entities similarly situated to Australia Post in terms of its ability to tender small packet with delivery scanning flows from Australia or serve as the designated operator for letter post originating in Australia. \textit{Id.} at 7–8. \textit{Functional equivalence.} The Postal Service addresses reasons why it considers the Agreement functionally equivalent to the China Post 2010 Agreement filed in Docket No. R2010–6.\(^6\) The Postal Service identifies differences between the Agreement and the baseline agreement but asserts that these differences do not detract from the conclusion that the Agreement is functionally equivalent to the baseline agreement. Notice at 9–11.

\section*{III. Commission Action}

The Commission appoints Katalin K. Clendenin to represent the interests of the general public (Public Representative) in this docket.

\section*{IV. Ordering Paragraphs}

It is ordered:

2. Pursuant to 39 U.S.C. 505, Katalin K. Clendenin is appointed to serve as an officer of the Commission (Public Representative) to represent the interests of the general public in this proceeding.

3. Comments by interested persons in this proceeding are due no later than January 5, 2017.

4. The Secretary shall arrange for publication of this order in the \textit{Federal Register}.

By the Commission.

Ruth Ann Abrams,

Acting Secretary.

SUPPLEMENTARY INFORMATION:

Table of Contents

I. Introduction
II. Docketed Proceeding(s)

I. Introduction

The Commission gives notice that the Postal Service filed request(s) for the Commission to consider matters related to negotiated service agreement(s). The request(s) may propose the addition or removal of a negotiated service agreement from the market dominant or the competitive product list, or the modification of an existing product currently appearing on the market dominant or the competitive product list.

Section II identifies the docket number(s) associated with each Postal Service request, the title of each Postal Service request, the request’s acceptance date, and the authority cited by the Postal Service for each request. For each request, the Commission appoints an officer of the Commission to represent the interests of the general public in the proceeding, pursuant to 39 U.S.C. 505 (Public Representative). Section II also establishes comment deadline(s) pertaining to each request.

The public portions of the Postal Service’s request(s) can be accessed via the Commission’s Web site (http://www.prc.gov). Non-public portions of the Postal Service’s request(s), if any, can be accessed through compliance with the requirements of 39 CFR 3007.40.

The Commission invites comments on whether the Postal Service’s request(s) in the captioned docket(s) are consistent with the policies of title 39. For request(s) that the Postal Service states concern market dominant product(s), applicable statutory and regulatory requirements include 39 U.S.C. 3622, 39 U.S.C. 3642, 39 CFR part 3010, and 39 CFR part 3020, subpart B. For request(s) that the Postal Service states concern competitive product(s), applicable statutory and regulatory requirements include 39 U.S.C. 3632, 39 U.S.C. 3633, 39 U.S.C. 3642, 39 CFR part 3015, and 39 CFR part 3020, subpart B. Comment deadline(s) for each request appear in section II.

II. Docketed Proceeding(s)

1. Docket No(s): CP2016–25; Filing Title: Notice of United States Postal Service of Amendment to Priority Mail Contract 155, with Portions Filed Under Seal; Filing Acceptance Date: December 22, 2016; Filing Authority: 39 CFR 3015.5; Public Representative: Max E. Schnidman; Comments Due: January 6, 2017.

2. Docket No(s): CP2016–89; Filing Title: Notice of the United States Postal Service of Filing Modification One to Global Reseller Expedited Package Contracts 2 Negotiated Service Agreement; Filing Acceptance Date: December 23, 2016; Filing Authority: 39 CFR 3015.5; Public Representative: Christopher C. Mohr; Comments Due: January 5, 2017.

3. Docket No(s): CP2016–218; Filing Title: Notice of United States Postal Service of Amendment to First-Class Package Service Contract 57, with Portions Filed Under Seal; Filing Acceptance Date: December 22, 2016; Filing Authority: 39 CFR 3015.5; Public Representative: Christopher C. Mohr; Comments Due: January 5, 2017.

8. Docket No(s): MC2017–71 and R2017–3; Filing Title: Request of United States Postal Service to Add Inbound Market Dominant Prime Tracked Service Agreement to the Market Dominant Product List, Notice of Type 2 Rate Adjustment, and Application for Non-Public Treatment; Filing Acceptance Date: December 23, 2016; Filing Authority: 39 U.S.C. 3622(c)(10) and 3642; 39 CFR 3010.40 and 3020.30 et seq.; Public Representative: Katalin K. Clendenin; Comments Due: January 6, 2017.

This notice will be published in the Federal Register.

Ruth Ann Abrams, Acting Secretary.

BILLING CODE 7710–12–P
SECURITIES AND EXCHANGE COMMISSION

Self-Regulatory Organizations: Chicago Board Options Exchange, Incorporated; Notice of Filing of a Proposed Rule Change Related to the Nullification and Adjustment of Options Transactions

December 27, 2016.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (the “Act”),1 and Rule 19b–4 thereunder,2 notice is hereby given that, on December 14, 2016, Chicago Board Options Exchange, Incorporated (the “Exchange” or “CBOE”) filed with the Securities and Exchange Commission (the “Commission”) a proposed rule change as described in Items I, II, and III below, which Items have been prepared by the Exchange. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization’s Statement of the Terms of Substance of the Proposed Rule Change

The Exchange seeks to amend Rule 6.25. The text of the proposed rule change is available on the Exchange’s Web site (http://www.cboe.com/AboutCBOE/CBOELegalRegulatoryHome.aspx), at the Exchange’s Office of the Secretary, and at the Commission’s Public Reference Room.

II. Self-Regulatory Organization’s Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization’s Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

Last year, the Exchange and other options exchanges adopted a new, harmonized rule related to the adjustment and nullification of erroneous options transactions, including a specific provision related to coordination in connection with large-scale events involving erroneous options transactions.3 The Exchange believes that the changes the options exchanges implemented with the new, harmonized rule have led to increased transparency and finality with respect to the adjustment and nullification of erroneous options transactions. However, as part of the initial initiative, the Exchange and other options exchanges deferred a few specific matters for further discussion. Specifically, the options exchanges have been working together to identify ways to improve the process related to the adjustment and nullification of erroneous options transactions as it relates to complex orders and stock-option orders. The goal of the process that the options exchanges have undertaken is to further harmonize rules related to the adjustment and nullification of erroneous options transactions. As described below, the Exchange believes that the changes the options exchanges and the Exchange have agreed to propose will provide transparency and finality with respect to the adjustment and nullification of erroneous complex order and stock-option order transactions. Particularly, the proposed changes seek to achieve consistent results for participants across U.S. options exchanges while maintaining a fair and orderly market, protecting investors and protecting the public interest.

The Proposed Rule is the culmination of this coordinated effort and reflects discussions by the options exchanges whereby the exchanges that offer complex orders and/or stock-option orders will universally adopt new provisions that the options exchanges collectively believe will improve the handling of erroneous options transactions that result from the execution of complex orders and stock-option orders.5

The Exchange believes that the Proposed Rule supports an approach consistent with long-standing principles in the options industry under which the general policy is to adjust rather than nullify transactions. The Exchange acknowledges that adjustment of transactions is contrary to the operation of analogous rules applicable to the equities markets, where erroneous transactions are typically nullified rather than adjusted and where there is no distinction between the types of market participants involved in a transaction. For the reasons set forth below, the Exchange believes that the distinctions in market structure between equities and options markets continue to support these distinctions between the rules for handling obvious errors in the equities and options markets.

Various general structural differences between the options and equities markets point toward the need for a different balancing of risks for options market participants and are reflected in this proposal. Option pricing is formulaic and is tied to the price of the underlying stock, the volatility of the underlying security and other factors. Because options market participants can generally create new open interest in response to trading demand, as new open interest is created, trades in the underlying or related series are generally also executed to hedge a market participant’s risk. This pairing of open interest with hedging interest differentiates the options market specifically (and the derivatives markets broadly) from the cash equities markets. In turn, the Exchange believes that the hedging transactions engaged in by market participants necessitates protection of transactions through adjustments rather than nullifications when possible and otherwise appropriate.

The options markets are also quote driven markets dependent on liquidity providers to an even greater extent than equities markets. In contrast to the approximately 7,000 different securities traded in the U.S. equities markets each day, there are more than 500,000 unique, regularly quoted option series. Given this breadth in options series the options markets are more dependent on liquidity providers than equities markets; such liquidity is provided most commonly by registered market makers but also by other professional traders. With the number of instruments in which registered market makers must quote and the risk attendant with quoting so many products simultaneously, the Exchange believes that those liquidity providers should be afforded a greater level of protection. In particular, the Exchange believes that liquidity providers should be allowed protection of their trades given the fact that they typically engage in hedging activity to protect them from significant financial risk to encourage continued

---

4 See Rule 6.53(a)(defining complex orders and stock-option orders).
5 An exchange that does not offer complex orders and/or stock-option orders will not adopt these new provisions until such time as the exchange offers complex orders and/or stock-option orders.
liquidity provision and maintenance of the quote-driven options markets.

In addition to the factors described above, there are other fundamental differences between options and equities markets which lend themselves to different treatment of different classes of participants that are reflected in this proposal. For example, there is no trade reporting facility in the options markets. Thus, all transactions must occur on an options exchange. This leads to significantly greater retail customer participation directly on exchanges than in the equities markets, where a significant amount of retail customer participation never reaches the exchange but is instead executed in off-exchange venues such as alternative trading systems, broker-dealer market making desks and internalizers. In turn, because of such direct retail customer participation, the exchanges have taken steps to afford those retail customers—generally Priority Customers—more favorable treatment in some circumstances.

Complex Orders and Stock-Option Orders

As more fully described below, the Proposed Rule applies much of the Current Rule to complex orders and stock-option orders.8 The Proposed Rule deviates from the Current Rule only to account for the unique qualities of complex orders and stock-option orders. The Proposed Rule reflects the fact that complex orders can execute against other complex orders or can execute against individual simple orders in the leg markets. When a complex order executes against the leg markets there may be different counterparties on each leg of the complex order, and not every leg will necessarily be executed at an erroneous price. With regards to stock-option orders, the Proposed Rule reflects the fact that stock-option orders contain a stock component that is executed on a stock trading venue, and the Exchange may not be able to ensure that the stock trading venue will adjust or nullify the stock execution in the event of an obvious or catastrophic error. In order to apply the Current Rule and account for the unique characteristics of complex orders and stock-option orders, proposed Interpretation and Policy .07 is split into three parts—paragraphs (a), (b), and (c). First, proposed Interpretation and Policy .07(a) governs the review of complex orders that are executed against individual legs (as opposed to a complex order that executes against another complex order).7 Proposed Rule 6.25.07(a) provides:

If a complex order executes against individual legs and at least one of the legs qualifies as an Obvious or Catastrophic Error under this Rule 6.25, then the leg(s) that is an Obvious or Catastrophic Error will be adjusted in accordance with paragraphs (c)[4](A) or (d)[3], respectively, regardless of whether one of the parties is a Customer. However, any Customer order subject to this paragraph (a) will be nullified if the adjustment would result in an execution price higher (for buy transactions) or lower (for sell transactions) than the Customer’s limit price on the complex order or individual leg(s). If any leg of a complex order is nullified, the entire transaction is nullified.

As previously noted, at least one of the legs of the complex order must qualify as an obvious or catastrophic error under the Current Rule in order for the complex order to receive obvious or catastrophic error relief. Thus, when the Exchange is notified (within the timeframes set forth in paragraph (c)[2] or (d)[2]) of a complex order that is a possible obvious error or catastrophic error, the Exchange will first review the individual legs of the complex order to determine if one or more legs qualify as an obvious or catastrophic error.8 If no leg qualifies as an obvious or catastrophic error, the transaction stands—no adjustment and no nullification.

Reviewing the legs to determine whether one or more legs qualify as an obvious or catastrophic error requires the Exchange to follow the Current Rule. In accordance with paragraphs (c)[1] and (d)[1] of the Current Rule, the Exchange compares the execution price of each individual leg to the Theoretical Price of each leg (as determined by paragraph (b) of the Current Rule). If the execution price of an individual leg is higher or lower than the Theoretical Price for the series by an amount equal to at least the amount shown in the obvious error table in paragraph (c)[1] of the Current rule or the catastrophic error table in paragraph (d)[1] of the Current Rule, the individual leg qualifies as an obvious or catastrophic error, and the Exchange will take steps to adjust or nullify the transaction.9

To illustrate, consider a Customer submits a complex order to the Exchange consisting of leg 1 and leg 2—Leg 1 is to buy 100 ABC calls and leg 2 is to sell 100 ABC puts. Also, consider that Market-Maker 1 is quoting the ABC calls $1.00–1.20 and Market-Maker 2 is quoting the ABC puts $2.00–2.20. If the complex order executes against the quotes of Market-Makers 1 and 2, the Customer buys the ABC calls for $1.20 and sells the ABC puts for $2.00. As with the obvious/catastrophic error reviews for simple orders, the execution price of leg 1 is compared to the Theoretical Price of Leg 1 in order to determine if Leg 1 is an obvious error under paragraph (c)[1] of the Current Rule or a catastrophic error under paragraph (d)[1] of the Current Rule. The same goes for Leg 2. The execution price of Leg 2 is compared to the Theoretical Price of Leg 2. If it is determined that one or both of the legs are an obvious or catastrophic error, then the leg (or legs) that is an obvious or catastrophic error will be adjusted in accordance with paragraphs (c)[4](A) or (d)[3] of the Current Rule, regardless of whether one of the parties is a Customer.11 Although a single-legged execution that is deemed to be an obvious error under the Current Rule is nullified whenever a Customer is involved in the transaction, the Exchange believes adjusting execution prices is generally better for the marketplace than nullifying executions because liquidity providers often execute hedging transactions to offset options positions. When an options transaction is nullified the hedging position can adversely affect the liquidity provider. With regards to complex orders that execute against individual legs, the additional rationale for adjusting erroneous execution prices when possible is the fact that the counterparty on a leg that is not executed at an obvious or catastrophic error price cannot look at the execution price to determine whether the

---

7 The leg market consists of quotes and/or orders in single options series. A complex order may be received by the Exchange electronically, and the legs of the complex order may have different counterparties. For example, Market-Maker 1 may be quoting in ABC puts and Market-Maker 2 may be quoting in ABC calls. A complex order to buy the ABC calls and puts may execute against the quote of Market-Maker 2.

8 In order for a complex order or stock-option order to qualify as an obvious or catastrophic error at least one of the legs must itself qualify as an obvious or catastrophic error under the Current Rule. See Proposed Rule .07(a)(c).

9 Only the execution price on the leg (or legs) that qualifies as an obvious or catastrophic error pursuant to any portion of Proposed Rule 6.25.07 will be adjusted. The execution price of a leg (or legs) that does not qualify as an obvious or catastrophic error will not be adjusted.

10 See Rule 6.25(b) (defining the manner in which Theoretical Price is determined).

11 See Rule 6.25(a)(1) (defining Customer for purposes of Rule 6.25 as not including a broker-dealer, Professional Customer, or Voluntary Professional Customer).
execution may later be nullified (as opposed to the counterparty on single-legged order that is executed at an obviously or catastrophic error price).

Paragraph (c)(4)(A) of the Current Rule mandates that if it is determined that an obvious error has occurred, the execution price of the transaction will be adjusted pursuant to the table set forth in (c)(4)(A). Although for simple orders paragraph (c)(4)(A) is only applicable when no party to the transaction is a Customer, for the purposes of complex orders paragraph (a) of Interpretation and Policy .07 will supersede that limitation; therefore, if it is determined that a leg (or legs) of a complex order is an obvious error, the leg (or legs) will be adjusted pursuant to (c)(4)(A), regardless of whether a party to the transaction is a Customer. The Size Adjustment Modifier defined in subparagraph (a)(4) will similarly apply (regardless of whether a Customer is on the transaction) by virtue of the application of paragraph (c)(4)(A).12 The Exchange notes that adjusting all market participants is not unique or novel. When the Exchange determines that a simple order execution is a Catastrophic Error pursuant to the Current Rule, paragraph (d)(3) already provides for adjusting the execution price for all market participants, including Customers.

Furthermore, as with the Current Rule, Proposed Rule 6.25.07(a) provides protection for Customer orders, stating that where at least one party to a complex order transaction is a Customer, the transaction will be nullified if adjustment would result in an execution price higher (for buy transactions) or lower (for sell transactions) than the Customer’s limit price on the complex order or individual leg(s). For example, assume Customer enters a complex order to buy leg 1 and leg 2.

- Assume the NBBO for leg 1 is $0.20–1.00 and the NBBO for leg 2 is $0.50–1.00 and that these have been the NBBOs since the market opened.
- A split-second prior to the execution of the complex order a Customer enters a simple order to sell the leg 1 options series at $1.30, and the simple order enters the Exchange’s book so that the BBO is $2.00–$1.30. The limit price on the simple order is $1.30.

- The complex order executes leg 1 against the Exchange’s best offer of $1.30 and leg 2 at $1.00 for a net execution price of $2.30.
- However, leg 1 executed on a wide quote (the NBBO for leg 1 was $0.20–1.00 at the time of execution, which is wider than $0.75).13 Leg 2 was not executed on a wide quote (the market for leg 2 was $0.50–1.00); thus, leg 2 execution price stands.
- The Exchange determines that the Theoretical Price for leg 1 is $1.00, which was the best offer prior to the execution. Leg 1 qualifies as an obvious error because the difference between the Theoretical Price ($1.00) and the execution price ($1.30) is larger than $0.25.14
- According to Proposed Rule 6.25.07(a) Customers will also be adjusted in accordance with Rule 6.25(c)(4)(A), which for a buy transaction under $3.00 calls for the Theoretical Price to be adjusted by adding $0.1515 to the Theoretical Price of $1.00. Thus, adjust execution price for leg 1 would be $1.15.
- However, adjusting the execution price of leg 1 to $1.15 violates the limit price of the Customer’s sell order on the simple order book for leg 1, which was $1.30.
- Thus, the entire complex order transaction will be nullified16 because the limit price of a Customer’s sell order would be violated by the adjustment.17

As the above example demonstrates, incoming complex orders may execute against resting simple orders in the leg market. If a complex order leg is deemed to be an obvious error, adjusting the execution price of the leg may violate the limit price of the resting order, which will result in nullification if the resting order is for a Customer. In contrast, Interpretation and Policy .02 to Rule 6.25 provides that if an adjustment would result in an execution price that is higher than an erroneous buy transaction or lower than an erroneous sell transaction the execution will not be adjusted or nullified.18 If the adjustment of a complex order would violate the complex order Customer’s limit price, the transaction will be nullified.

As previously noted, paragraph (d)(3) of the Current Rule already mandates

12 See Rule 6.25(c)(4)(A) (stating that any non-Customer Obvious Error exceeding 50 contracts will be subject to the Size Adjustment Modifier defined in sub-paragraph (a)(4)). The Size Adjustment Modifier may also apply to the option leg of a stock-option order that is adjusted pursuant to Proposed Rule 6.25.07(c).
13 See Rule 6.25(b)(3).
14 See Rule (c)(1).
15 See Rule 6.25(c)(4)(A).
16 If any leg of a complex order is nullified, the entire transaction is nullified. See Proposed Rule 6.25.07(a).
17 The simple order in this example is not an erroneous sell transaction because the execution price was not erroneously low. See Rule 6.25(a)(2).
18 See Rule 6.25.02.
Second, proposed Interpretation and Policy .07(b) governs the review of complex orders that are executed against other complex orders. Proposed Rule 6.25.07(b) provides:

If a complex order executes against another complex order and at least one of the legs qualifies as an Obvious Error under paragraph (c)(1) or a Catastrophic Error under paragraph (d)(1), then the leg(s) that is an Obvious or Catastrophic Error will be adjusted or busted in accordance with paragraph (c)(4) or (d)(3), respectively, so long as either: (i) the width of the National Spread Market for the complex order strategy just prior to the erroneous transaction was equal to or greater than the amount set forth in the wide quote table of paragraph (b)(3) of the Current Rule or (ii) the net execution price of the complex order is higher (lower) than the offer (bid) of the National Spread Market for the complex order strategy just prior to the erroneous transaction by an amount equal to at least the amount shown in the table in paragraph (c)(1). If any leg of a complex order is nullified, the entire transaction is nullified. For purposes of Rule 6.25, the National Spread Market for a complex order strategy is determined by the National Best Bid/Offer of the individual legs of the strategy.

As described above in relation to Proposed Rule 6.25.07(a), the first step is for the Exchange to review (upon receipt of a timely notification in accordance with paragraphs (c)(2) or (d)(2) of the Current Rule) the individual legs to determine whether a leg or legs qualifies as an obvious or catastrophic error. If no leg qualifies as an obvious or catastrophic error, the transaction stands—no adjustment and no nullification.

Unlike Proposed Rule 6.25.07(a), the Exchange is also proposing to compare the net execution price of the entire complex order package to the National Spread Market (“NSM”) for the complex order strategy. Complex orders are exempt from the order protection rules of the options exchanges. Thus, depending on the manner in which the systems of an options exchange are calibrated, a complex order can execute without regard to the prices offered in the complex order books or the leg markets of other options exchanges. In certain situations, reviewing the execution prices of the legs in a vacuum would make the leg appear to be an obvious or catastrophic error, even though the net execution price on the complex order is not an erroneous price.

For example, assume the Exchange receives a complex order to buy ABC calls and sell ABC puts:

- If the BBO for the ABC calls is $5.50–7.50 and the BBO for ABC puts is $3.00–4.50, then the Exchange’s spread market is $1.00–4.50.
- If the NBBO for the ABC calls is $6.00–6.50 and the NBBO for the ABC puts is $3.50–4.00, then the NSM is $2.00–3.00.
- If the Customer buys the calls at $7.50 and sells the puts at $4.00, the complex order Customer receives a net execution price of $3.00 (debit), which is the expected net execution price as indicated by the NSM offer of $3.00. If the exchange were to solely focus on the $7.50 execution price of the ABC calls or the $4.00 execution price of the ABC puts, the execution would qualify as an obvious or catastrophic error because the execution price on the legs was outside the NBBO, even though the net execution price is accurate. Thus, the additional rule of the NSM to determine if the complex order was executed at a truly erroneous price is necessary. The same concern is not present when a complex order executes against the leg market under Rule 6.25.07(a) because the Exchange is modifying its system in order to ensure the leg will execute at or within the NBBO of the leg markets.

In order to incorporate NSM, Rule 6.25.07(b) provides that if the Exchange determines that a leg or legs does qualify as on obvious or catastrophic error, the leg or legs will be adjusted or busted in accordance with paragraph (c)(4) or (d)(3) of the Current Rule, so long as either: (i) the width of the NSM for the complex order strategy just prior to the erroneous transaction was equal to or greater than the amount set forth in the wide quote table of paragraph (b)(3) of the Current Rule or (ii) the net execution price of the complex order is higher (lower) than the offer (bid) of the NSM for the complex order strategy just prior to the erroneous transaction.

For example, assume an individual leg or legs qualifies as an obvious or catastrophic error as described above. If the NSM is $6.00–7.00 (not a wide quote pursuant to the wide quote table in paragraph (b)(3) of the Current Rule) but the execution price of the entire complex order package (i.e., the net execution price) is higher (lower) than the offer (bid) of the NSM for the complex order strategy just prior to the erroneous transaction by an amount equal to at least the amount in the table in paragraph (c)(1) when the price is above $5.00 but less than $10.01) from the NSM offer of $7.00. Focusing on the NSM in this manner will ensure that the obvious/catastrophic error review process focuses on the net execution price instead of the execution prices of the individual legs, which may have execution prices outside of the NBBO of the leg markets.

Again, assume an individual leg or legs qualifies as an obvious or catastrophic error. For example, assume an individual leg or legs qualifies as an obvious or catastrophic error and the width of the NSM of the complex order strategy just prior to the erroneous transaction is $6.00–9.00. The complex order will qualify to be adjusted or busted in accordance with paragraph (c)(4) of the Current Rule because the wide quote table of paragraph (b)(3) of the Current Rule indicates that the minimum amount is $1.50 for a bid price between $5.50 to $10.00. If the NSM were instead $6.00–7.00 the complex order strategy would not qualify to be adjusted or busted pursuant to .07(b)(i) because the width of the NSM is $1.00, which is less than the required $1.50. However, the execution may still qualify to be adjusted or busted in accordance with paragraph (c)(4) or (d)(3) of the Current Rule pursuant to .07(b)(ii). Focusing on the NSM in this manner will ensure that the obvious/catastrophic error review process focuses on the net execution price instead of the execution prices of the individual legs, which may have execution prices outside of the NBBO of the leg markets.

22 The proposed rule change to modify Exchange systems to ensure the legs of a complex order will execute against legs in the simple order market within the NBBO of the simple order market will be in a separate filing.
nullifying executions because liquidity providers often execute hedging transactions to offset options positions, the Exchange recognizes that complex orders executing against other complex orders is similar to simple orders executing against other simple orders because both parties are able to review the execution price to determine whether the transaction may have been executed at an erroneous price. Thus, for purposes of complex orders that meet the requirements of Rule 6.25.07(b), the Exchange proposes to apply the Current Rule and adjust or bust obvious errors in accordance with paragraph (c)(4) (as opposed to applying paragraph (c)(4)(A) as is the case under .07(a)) and catastrophic errors in accordance with (d)(3).

Therefore, for purposes of complex orders under Proposed Rule 6.25.07(b), if one of the legs is determined to be an obvious error under paragraph (c)(1), all Customer transactions will be nullified, unless a Trading Permit Holder (“TPH”) submits 200 or more Customer transactions for review in accordance with (c)(4)(C).24 For purposes of complex orders under Proposed Rule 6.25.07(b), if one of the legs is determined to be a catastrophic error under paragraph (d)(3) and all of the other requirements of Rule 6.25.07(b) are met, all market participants will be adjusted in accordance with the table set forth in (d)(3). Again, however, pursuant to paragraph (d)(3) where at least one party to a complex order transaction is a Customer, the transaction will be nullified if adjustment would result in an execution price higher (for buy transactions) or lower (for sell transactions) than the Customer’s limit price on the stock-option order, and the Exchange will attempt to nullify the stock leg. Whenever a stock trading venue nullifies the stock leg of a stock-option order or whenever the stock leg cannot be executed, the Exchange will nullify the option leg upon request of one of the parties to the transaction or in accordance with paragraph (c)(3).

Similar to proposed Interpretation and Policy .07(a), an options leg (or legs) of a stock-option order must qualify as an obvious or catastrophic error under the Current Rule in order for the stock-option order to qualify as an obvious or catastrophic error. Also similar to Proposed Rule 6.25.07(a), if an options leg (or legs) does qualify as an obvious or catastrophic error, the option leg (or legs) will be adjusted in accordance with paragraph (c)(4)(A) or (d)(3), respectively, regardless of whether one of the parties is a Customer. Again, as with Proposed Rule 6.25.07(a), where at least one party to a complex order transaction is a Customer, the Exchange will nullify the option leg and attempt to nullify the stock leg if adjustment would result in an execution price higher (for buy transactions) or lower (for sell transactions) than the Customer’s limit price on the complex order or individual leg(s).

The stock leg of a stock-option order is not executed on the Exchange; rather, the stock leg is sent to a stock trading venue for execution. The Exchange is unaware of a mechanism by which the Exchange can guarantee that the stock leg will be nullified by the stock trading venue in the event of an obvious or catastrophic error on the Exchange. Thus, in the event of the nullification of the option leg pursuant to Proposed Rule 6.25.07(c), the Exchange will attempt to have the stock leg nullified by the stock trading venue by either contacting the stock trading venue or notifying the parties to the transaction that the option leg is being nullified. The party or parties to the transaction may ultimately need to contact the stock trading venue to have the stock portion nullified.

Finally, the Exchange proposes to provide guidance that whenever the stock trading venue nullifies the stock leg of a stock-option order, the option will be nullified upon request of one of the parties to the transaction or by an Official acting on their own motion in accordance with paragraph (c)(3). There are situations in which buyer and seller agree to trade a stock-option order, but the stock leg cannot be executed. The Exchange proposes to provide guidance that whenever the stock portion of a stock-option order cannot be executed, the Exchange will nullify the option leg upon request of one of the parties to the transaction or on an Official’s own motion.

2. Statutory Basis

The Exchange believes that its proposal is consistent with the requirements of the Act and the rules and regulations thereunder that are applicable to a national securities exchange, and, in particular, with the requirements of Section 6(b) of the Act. Specifically, the proposal is consistent with Section 6(b)(5) of the Act because it would promote just and equitable principles of trade, remove impediments to, and perfect the mechanism of, a free and open market and a national market system, and, in general, protect investors and the public interest.

As described above, the Exchange and other options exchanges are seeking to adopt harmonized rules related to the adjustment and nullification of erroneous options transactions. The Exchange believes that the Proposed Rule will provide greater transparency and clarity with respect to the adjustment and nullification of erroneous options transactions. Particularly, the proposed changes seek to achieve consistent results for participants across U.S. options exchanges while maintaining a fair and orderly market, protecting investors and protecting the public interest. Based on the foregoing, the Exchange believes that the proposal is consistent with Section 6(b)(5) of the Act27 in that the Proposed Rule will foster cooperation and coordination with persons engaged in regulating and facilitating transactions.

The Exchange believes the various provisions allowing or dictating adjustment rather than nullification of a trade are necessary given the benefits of adjusting a trade price rather than nullifying the trade completely. Because options trades are used to hedge, or are hedged by, transactions in other markets, including securities and futures, many TPHs, and their customers, would rather adjust prices of executions rather than nullify the transactions and, thus, lose a hedge altogether. As such, the Exchange believes it is in the best interest of investors to allow for price adjustments as well as nullifications.

The Exchange does not believe that the proposal is unfairly discriminatory, even though it differentiates in many places between Customers and non-
Customers. As with the Current Rule, Customers are treated differently, often affording them preferential treatment. This treatment is appropriate in light of the fact that Customers are not necessarily immersed in the day-to-day trading of the markets, are less likely to be watching trading activity in a particular option throughout the day, and may have limited funds in their trading accounts. At the same time, the Exchange reiterates that in the U.S. options markets generally there is significant retail customer participation that occurs directly on (and only on) options exchanges such as the Exchange. Accordingly, differentiating among market participants with respect to the adjustment and nullification of erroneous options transactions is not unfairly discriminatory because it is reasonable and fair to provide Customers with additional protections as compared to non-Customers.

The Exchange believes that its proposal to adopt the ability to adjust a Customer’s execution price when a complex order is deemed to be an Obvious or Catastrophic Error is consistent with the Act. A complex order that executes against individual leg markets may receive an execution price on an individual leg that is not an Obvious or Catastrophic error but another leg of the transaction is an Obvious or Catastrophic Error. In such situations where the complex order is executing against at least one individual or firm that is not aware of the fact that they have executed against a complex order that the complex order has been executed at a erroneous price, the Exchange believes it is more appropriate to adjust execution prices if possible because the derivative transactions are often hedged with other securities. Allowing adjustments instead of nullifying transactions in these limited situations will help to ensure that market participants are not left with a hedge that has no position to hedge against.

The Exchange also believes its proposal related to stock-option orders is consistent with the Act. Stock-option orders consist of an option component and a stock component. Due to the fact that the Exchange has no control over the venues on which the stock is executed the proposal focuses on the option component of the stock-option order by adjusting or nullifying the option in accordance with paragraph (c)(4)(A) or (d)(3). Also, nullifying the option component if the stock component cannot be executed ensures that market participants receive the execution for which they bargained.

Stock-option orders are negotiated and agreed to as a package; thus, if for any reason the stock portion of a stock-option order cannot ultimately be executed, the parties should not be saddled with an options position sans stock.

### B. Self-Regulatory Organization’s Statement on Burden on Competition

CBOE does not believe that the proposed rule change will impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act. Importantly, the Exchange believes the proposal will not impose a burden on intermarket competition but will rather alleviate any burden on competition because it is the result of a collaborative effort by all options exchanges to harmonize and improve the process related to the adjustment and nullification of erroneous options transactions. The Exchange does not believe that the rules applicable to such process is an area where options exchanges should compete, but rather, that all options exchanges should have consistent rules to the extent possible. Particularly where a market participant trades on several different exchanges and an erroneous trade may occur on multiple markets nearly simultaneously, the Exchange believes that a participant should have a consistent experience with respect to the nullification or adjustment of transactions. The Exchange understands that all other options exchanges that trade complex orders and/or stock-option orders intend to file proposals that are substantially similar to this proposal.

The Exchange does not believe that the proposed rule change imposes a burden on intramarket competition because the provisions apply to all market participants equally within each participant category (i.e., Customers and non-Customers). With respect to competition between Customer and non-Customer market participants, the Exchange believes that the Proposed Rule acknowledges competing concerns and tries to strike the appropriate balance between such concerns. For instance, the Exchange believes that protection of Customers is important due to their direct participation in the options markets as well as the fact that they are not, by definition, market professionals. At the same time, the Exchange believes due to the quote-driven nature of the options markets, the importance of liquidity provision in such markets and the risk that liquidity providers bear when quoting a large breadth of products that are derivative of underlying securities, that the protection of liquidity providers and the practice of adjusting transactions rather than nullifying them is of critical importance. As described above, the Exchange will apply specific and objective criteria to determine whether an erroneous transaction has occurred and, if so, how to adjust or nullify a transaction.

### C. Self-Regulatory Organization’s Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

The Exchange neither solicited nor received comments on the proposed rule change.

### III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

Within 45 days of the date of publication of this notice in the Federal Register or within such longer period up to 90 days (i) as the Commission may designate if it finds such longer period to be appropriate and publishes its reasons for so finding or (ii) as to which the Exchange consents, the Commission will:

- A. by order approve or disapprove such proposed rule change, or
- B. institute proceedings to determine whether the proposed rule change should be disapproved.

### IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

**Electronic Comments**

- Use the Commission’s Internet comment form (http://www.sec.gov/rules/sro.shtml); or
- Send an email to rule-comments@sec.gov. Please include File Number SR-CBOE–2016–088 on the subject line.

**Paper Comments**

- Send paper comments in triplicate to Brent J. Fields, Secretary, Securities and Exchange Commission, 100 F Street NE., Washington, DC 20549–1090.

All submissions should refer to File Number SR–CBOE–2016–088. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission’s Internet Web site (http://www.sec.gov/rules/sro.shtml). Copies of the submission, all subsequent amendments, all written statements
with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for Web site viewing and printing in the Commission’s Public Reference Room, 100 F Street NE., Washington, DC 20549 on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of such filing also will be available for inspection and copying at the principal office of the Exchange. All comments received will be posted without change; the Commission does not edit personal identifying information from submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR–CBOE–2016–088, and should be submitted on or before January 24, 2017.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.

Eduardo A. Aleman,
Assistant Secretary.

BILLING CODE 8011–01–P

SECURITIES AND EXCHANGE COMMISSION

Self-Regulatory Organizations; Chicago Board Options Exchange, Incorporated; Notice of Filing and Immediate Effectiveness of a Proposed Rule Change To Amend Rule 6.54

December 27, 2016.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (the “Act”), 1 and Rule 19b–4 thereunder, 2 notice is hereby given that on December 20, 2016, Chicago Board Options Exchange, Incorporated (the “Exchange” or “CBOE”) filed with the Securities and Exchange Commission (the “Commission”) the proposed rule change as described in Items I and II below, which Items have been prepared by the Exchange. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization’s Statement of the Terms of Substance of the Proposed Rule Change

The Exchange proposes to extend its program that allows transactions to take place at a price that is below $1 per option contract through March 5, 2018. The text of the proposed rule change is available on the Exchange’s Web site (http://www.cboe.com/AboutCBOE/CBOELegalRegulatoryHome.aspx), at the Exchange’s Office of the Secretary, and at the Commission’s Public Reference Room.

II. Self-Regulatory Organization’s Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization’s Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

An “accommodation” or “cabinet” trade refers to trades in listed options on the Exchange that are worthless or not actively traded. Cabinet trading is generally conducted in accordance with the Exchange Rules, except as provided in Exchange Rule 6.54, Accommodation Liquidations (Cabinet Trades), which sets forth specific procedures for engaging in cabinet trades. Rule 6.54 currently provides for cabinet transactions to occur via open outcry at a cabinet price of $1 per option contract with a 100 share multiplier, the exchange that are worthless or not actively traded, in order to limit use of the procedure to liquidations of existing positions, and of the most significant aspects of such statements.

The Exchange believes that trading below $1 is appropriate due to market conditions which may result in a significant number of series being out-of-the-money.

3 Currently the $1 cabinet trading procedures are limited to options classes traded in $0.05 or $0.10 standard increment. The $1 cabinet trading procedures are not available in Penny Pilot Program classes because in those classes option series can trade in a standard increment as low as $0.01 per share (or $1.00 per option contract with a 100 share multiplier). Because the temporary procedures allow trading below $0.01 per share (or $1.00 per option contract with a 100 share multiplier), the procedures are available for all classes, including those classes participating in the Penny Pilot Program.
money. For example, a market participant might have a long position in a call series with a strike price of $100 and the underlying stock might now be trading at $30. In such an instance, there might not otherwise be a market for that person to close-out the position even at the $1 cabinet price (e.g., the series might be quoted no bid).\(^5\)

The purpose of the instant rule change is to extend the operation of these temporary procedures through March 5, 2018, so that the procedures can continue without interruption while CBOE considers whether to seek permanent approval of the temporary procedures.

2. Statutory Basis

The Exchange believes the proposed rule change is consistent with the Act and the rules and regulations thereunder applicable to the Exchange and, in particular, the requirements of Section 6(b) of the Act.\(^6\) Specifically, the Exchange believes the proposed rule change is consistent with the Section 6(b)(5)\(^7\) requirements that the rules of an exchange be designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, to foster cooperation and coordination with persons engaged in regulating, clearing, settling, processing information with respect to, and facilitating transactions in securities, to remove impediments to and perfect the mechanism of a free and open market and a national market system, and, in general, to protect investors and the public interest.

Additionally, the Exchange believes the proposed rule change is consistent with the Section 6(b)(5)\(^8\) requirement that the rules of an exchange not be designed to permit unfair discrimination between customers, issuers, brokers, or dealers.

In particular, the Exchange believes that allowing for liquidations at a price less than $1 per option contract better facilitates the closing of options positions that are worthless or not actively trading. Further, the Exchange believes the proposal is consistent with the Act because the proposed extension is of appropriate length to allow the Exchange and the Commission to continue to assess the impact of the Exchange’s authority to allow transactions to take place in open outcry at a price of at least $0 but less than $1 per option in accordance with its attendant obligations and conditions, including the process for submitting such transactions to OCC for clearing.

B. Self-Regulatory Organization’s Statement on Burden on Competition

CBOE does not believe that the proposed rule change will impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act. The Exchange believes that allowing for liquidations at a price less than $1 per option contract better facilitates the closing of options positions that are worthless or not actively trading. The Exchange believes this promotes fair and orderly markets, as well as assists the Exchange in its ability to effectively attract order flow and liquidity to its market, and ultimately benefit all CBOE Trading Permit Holders (“TPHs”) and all investors.

The Exchange does not believe that the proposed rule change will impose any burden on intramarket competition that is not necessary or appropriate in furtherance of the purposes of the Act because the proposed rule change does not make any changes to Exchange rules, but simply extends an existing temporary program. Further, the program is available to all market participants through CBOE TPHs. The Exchange does not believe that the proposed rule change will impose any burden on intermarket competition that is not necessary or appropriate in furtherance of the purposes of the Act because, again, the proposed rule change does not make any changes to Exchange rules.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

Because the foregoing proposed rule change does not (i) significantly affect the protection of investors or the public interest; (ii) impose any significant burden on competition; and (iii) become operative for 30 days from the date on which it was filed, or such shorter time as the Commission may designate, failure to CBOE has become effective pursuant to Section 19(b)(3)(A) of the Act \(^9\) and Rule 19b–4(f)(6) thereunder.\(^10\)

A proposed rule change filed under Rule 19b–4(f)(6) normally does not become operative for 30 days after the date of filing. However, Rule 19b–4(f)(6)(ii)\(^11\) permits the Commission to designate a shorter time if such action is consistent with the protection of investors and the public interest. In its filing with the Commission, the Exchange requests that the Commission waive the 30-day operative delay so that the pilot may continue without interruption. The Commission believes that waiver of the 30-day operative delay is consistent with the protection of investors and the public interest because it will allow the pilot to continue uninterrupted, avoiding any potential investor confusion that could result from a temporary interruption in the pilot and allowing members to continue to benefit from the program. Therefore, the Commission designates the proposed rule change operative upon filing.\(^12\)

At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act. If the

\(^5\) As with other accommodation liquidations under Rule 6.54, transactions occur for less than $1 are not be disseminated to the public on the consolidated tape. In addition, as with other accommodation liquidations under Rule 6.54, the transactions are exempt from the Consolidated Options Audit Trail (“COATS”) requirements of Exchange Rule 6.24, Required Order Information. However, the Exchange maintains quotation, order and transaction information for the transactions in the same format as the COATS data is maintained. In this regard, all transactions for less than $1 must be reported to the Exchange following the close of each business day. The rule also provides that transactions for less than $1 will be reported for clearing utilizing forms, formats and procedures established by the Exchange from time to time. In this regard, the Exchange initially intends to have clearing firms directly report the transactions to The Options Clearing Corporation (“OCC”) using OCC’s position adjustment/transfer procedures. This manner of reporting transactions for clearing is similar to the procedure that CBOE currently employs for on-floor position transfer packages executed pursuant to Exchange Rule 6.49A, Transfer of Positions.

\(^7\) 15 U.S.C. 78f(b)(5).

\(^8\) Id.

\(^10\) 17 CFR 240.19b–4(f)(6). In addition, Rule 19b–4(f)(6)(ii) requires a self-regulatory organization to give the Commission written notice of its intent to file the proposed rule change at least five business days prior to the date of filing of the proposed rule change, or such shorter time as designated by the Commission. The Exchange has satisfied this requirement.

\(^12\) For purposes only of waiving the operative delay, the Commission has considered the proposed rule’s impact on efficiency, competition, and capital formation. See 15 U.S.C. 78s(f).
Commission takes such action, the Commission will institute proceedings to determine whether the proposed rule change should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

• Use the Commission’s Internet comment form [http://www.sec.gov/rules/sro.shtml]; or

• Send an email to rule-comments@sec.gov. Please include File Number SR–CBOE–2016–093 on the subject line.

Paper Comments

• Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE., Washington, DC 20549–1090. All submissions should refer to File Number SR–CBOE–2016–093. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission’s Internet Web site [http://www.sec.gov/rules/sro.shtml]. Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for Web site viewing and copying at the principal office of the Commission. All comments received will be posted without change; personal information provided.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.13

Eduardo A. Aleman,
Assistant Secretary.

DEPARTMENT OF STATE

[Public Notice: 9833]

In the Matter of the Amendment of the Designation of Lashkar-e-Tayyiba and Other Aliases as a Specially Designated Global Terrorist Entity Pursuant to Executive Order 13224

Based upon a review of the administrative record assembled in this matter, and in consultation with the Attorney General and the Secretary of the Treasury, I have concluded that there is a sufficient factual basis to find that Lashkar-e-Tayyiba uses the additional aliases Al-Muhammadia Students, AMS, and Al-Muhammadia Students Pakistan. Therefore, pursuant to Section 1(b) of Executive Order 13224, I hereby amend the designation of Lashkar-e-Tayyiba as a Specially Designated Global Terrorist to include Al-Muhammadia Students, AMS, and Al-Muhammadia Students Pakistan as aliases.

This determination shall be published in the Federal Register.

Dated: November 28, 2016.

John F. Kerry,
Secretary of State.

BILLING CODE 4710–10–P

DEPARTMENT OF TRANSPORTATION

National Highway Traffic Safety Administration

Reports, Forms, and Record Keeping Requirements

ACTION: Request for public comment on proposed collection of information.

SUMMARY: Before a Federal agency can collect certain information from the public, it must receive approval from the Office of Management and Budget (OMB). Under procedures established by the Paperwork Reduction Act of 1995, before seeking OMB approval, Federal agencies must solicit public comment on proposed collections of information, including extensions and reinstatement of previously approved collections. This document describes one collection of information for which NHTSA intends to seek OMB approval.

DATES: Comments must be received on or before March 6, 2017.

ADDRESSES: You may submit comments, identified by the docket number in the heading of this document, by any of the following methods:

• Federal eRulemaking Portal: Go to http://www.regulations.gov. Follow the instructions for submitting comments on the electronic docket site by clicking on “Help” or “FAQ.”

• Hand Delivery: 1200 New Jersey Avenue SE., West Building Ground Floor, Room W12–140, between 9 a.m. and 5 p.m. Eastern Time, Monday through Friday, except Federal holidays.

• Fax: 202–493–2251.

Regardless of how you submit comments, you should mention the docket number of this document. You may call the Docket Management Facility at 202–366–9826.

Instructions: For detailed instructions on submitting comments and additional information on the rulemaking process, see the Public Participation heading of the SUPPLEMENTARY INFORMATION section of this document. Note that all comments received will be posted without change to http://www.regulations.gov, including any personal information provided.

Privacy Act: Anyone is able to search the electronic form of all comments received into any of our docket by the name of the individual submitting the comment (or signing the comment, if submitted on behalf of an association, business, labor union, etc.). You may review DOT’s complete Privacy Act Statement in the Federal Register published on April 11, 2000 (65 FR 19477–78) or you may visit https://www.transportation.gov/privacy.

Docket: For access to the docket to read background documents or comments received, go to http://www.regulations.gov, or the street address listed above. Follow the online instructions for accessing the dockets.

FOR FURTHER INFORMATION CONTACT: Mike Joyce, Marketing Specialist, Office of Communications and Consumer Information (NCO–0200), National Highway Traffic Safety Administration, 1200 New Jersey Ave. SE., W52–238, Washington, DC, 20590. Mike Joyce’s phone number is 202–366–5600 and his email address is Mike.joyce@dot.gov.

SUPPLEMENTARY INFORMATION: Under the Paperwork Reduction Act of 1995, before an agency submits a proposed

collection of information to OMB for approval, it must first publish a document in the Federal Register providing a 60-day comment period and otherwise consult with members of the public and affected agencies concerning each proposed collection of information. The OMB has promulgated regulations describing what must be included in such a document. Under OMB’s regulation (at 5 CFR 1320.8(d)), an agency must ask for public comment on the following:

(i) Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;

(ii) The accuracy of the agency’s estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;

(iii) How to enhance the quality, utility, and clarity of the information to be collected;

(iv) How to minimize the burden of the collection of information on those who are to respond, including the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, e.g., permitting electronic submission of responses.

In compliance with these requirements, NHTSA asks for public comments on the following proposed collection of information for which the agency is seeking approval from OMB:

Title: Safety Ratings and Advanced Crash Avoidance Technologies Consumer Research

Requested Expiration Date of Approval: Three years from approval date.

Abstract: The National Highway Traffic Safety Administration (NHTSA) was established by the Highway Safety Act of 1970 (23 U.S.C. 101) to carry out a Congressional mandate to reduce the mounting number of deaths, injuries, and economic losses resulting from motor vehicle crashes on the Nation’s highways. In support of this mission, NHTSA previously conducted two comprehensive consumer research studies in 2012 and 2014 to better understand (1) the type of information consumers seek during their vehicle purchase decisions, (2) consumer comprehension of vehicle safety ratings, and (3) consumer knowledge and interest in advanced crash avoidance technologies in order to guide NHTSA communications. Building on that research, NHTSA proposes to conduct a quantitative survey that draws from findings in the previous qualitative research studies to further explore consumer perception, interest and understanding of the 5-star safety ratings (including response to half stars), overall vehicle scores, and advanced crash avoidance technologies information to support the development of consumer communications.

Summary of the Collection of Information: In this collection of information, NHTSA is seeking approval to conduct an online survey with 1,500 consumer respondents. The survey will be used to further support findings from previous qualitative research studies and will achieve the following objectives:

(1) Confirm qualitative research findings with regard to vehicle purchase decision-making criteria;

(2) Identify and evaluate sources of vehicle safety information to help inform the development of a consumer education program;

(3) Understand consumer knowledge and interest in communications around safety ratings;

(4) Explore consumer knowledge, interest and engagement with advanced crash avoidance technologies;

(5) Assess consumer response to overall vehicle score; and,

(6) Evaluate consumer perception of the 5-Star safety ratings and its components (including incorporation of ½ star ratings).

Description of the Need for the Information and the Proposed Use of the Information: NHTSA will obtain critical information that will fulfill a congressional mandate to improve highway traffic safety. Specifically, the data from this collection will be used to enhance consumer understanding of NHTSA’s safety ratings and advanced crash avoidance technologies and guide the development of communication materials that will help consumers as they factor this information into their vehicle purchase decisions. In addition, this data will be used to substantiate the effectiveness of communications approaches.

Affected Public: For this collection, NHTSA plans to conduct an online survey with 1,500 panel member respondents that will take approximately 20 minutes to complete. In order to identify 1,500 qualified respondents, approximately 20,000 respondents will be needed to complete a 1.5-minute screener. NHTSA plans to administer this study one time, amounting to 963 burden hours.

Prior to administering the online survey, NHTSA will administer a cognitive test of the survey instrument. For the cognitive test, a total of eight to 12 potential participants will be recruited via dialed telephone screening calls, which are estimated to take 10 minutes per response. The recruitment calls will utilize the screening section of the survey document to determine qualified respondents. NHTSA anticipates needing 45 minutes to allow respondents to navigate the survey while also discussing their feedback on survey questions. The Agency will conduct interviews with one respondent at a time.

Based on experience, it is prudent to recruit up to 12 people in order to help achieve at least eight participants showing up for the cognitive tests. Approximately 600 potential participants will complete a 1.5-minute pre-screen in order to identify a pool of potentially qualified respondents. Among the 12 selected qualified recruits, the total burden per participant is estimated to be 55 minutes (10 minutes for the screening/recruiting telephone call, plus 45 minutes for the interview).

Therefore, the total annual estimated burden imposed by this collection of information is approximately 989 hours.

Estimated Total Annual Burden: 989 hours.

Number of Respondents: 1,512.

The results of this research will be used to inform communications for the New Car Assessment Program’s Government 5-Star Safety Ratings program.

Comments are invited on: Whether the proposed collection of information is necessary for the proper performance of the functions of the Department, including whether the information will have practical utility; the accuracy of the Department’s estimate of the burden of the proposed information collection; ways to enhance the quality, utility and clarity of the information to be collected; and ways to minimize the burden of the collection of information on respondents, including the use of automated collection techniques or other forms of information technology.

Issued on: December 27, 2016.

Susan Gorcowski,

DEPARTMENT OF THE TREASURY
Office of Foreign Assets Control
Sanctions Actions Pursuant to Executive Order 13224

AGENCY: Office of Foreign Assets Control, Treasury.

ACTION: Notice.
SUMMARY: The Department of the Treasury’s Office of Foreign Assets Control (OFAC) is publishing the names of two individuals whose property and interests in property are blocked pursuant to Executive Order 13224 of September 23, 2001, “Blocking Property and Prohibiting Transactions With Persons Who Commit, Threaten To Commit, or Support Terrorism.”

DATES: OFAC’s actions described in this notice were effective on December 28, 2016.

SUPPLEMENTARY INFORMATION:

Electronic Availability

The SDN List and additional information concerning OFAC sanctions programs are available from OFAC’s Web site (www.treas.gov/ofac).

Notice of OFAC Actions

On December 28, 2016, OFAC blocked the property and interests in property of the following two individuals pursuant to E.O. 13224, “Blocking Property and Prohibiting Transactions With Persons Who Commit, Threaten To Commit, or Support Terrorism”:

Individuals

1. MAHMOOD, Shahid (a.k.a. AHMED, Shahid Mehmood Manzoor; a.k.a. MEHMOOD, Shaheed; a.k.a. MEHMOUD, Shahid; a.k.a. REHMATULLAH, Shahid Mahmood), Karachi, Pakistan; DOB 10 Apr 1980; POB Pakistan; nationality Pakistan; Gender Male (individual) [SDGT] (Linked To: LASHKAR E–TAYYIBA).
2. SARWAR, Muhammad (a.k.a. ABU ALI HASHIM; a.k.a. ABU HAMIM; a.k.a. ABU UI–HASHIM; a.k.a. HASHIM, Abdul; a.k.a. HASHIM, Abul; a.k.a. RABBANI, Abul Hashim), Lahore, Pakistan; DOB 01 Jan 1966 to 31 Dec 1968; POB Sheikhupura, Pakistan; nationality Pakistan; Gender Male; Passport AKS90521 (Pakistan) issued 24 Mar 2007 expires 22 Mar 2012 (individual) [SDGT] (Linked To: LASHKAR E–TAYYIBA).

John E. Smith,
Acting Director, Office of Foreign Assets Control.

DEPARTMENT OF THE TREASURY

Proposed Collection; Comment Request

December 28, 2016.

AGENCY: Departmental Offices, Treasury.

ACTION: Notice and request for comment.

SUMMARY: The U.S. Department of the Treasury, as part of its continuing effort to reduce paperwork and respondent burden, invites the general public and other federal agencies to take this opportunity to comment on this continuing information collection, as required by the Paperwork Reduction Act of 1995, 44 U.S.C. 3506(c)(2)(A).

The information collection under review is 1505–0230, Garnishment of Accounts Containing Federal Benefit Payments.

DATES: Written comments must be received on or before March 6, 2017.

ADDRESSES: Submit your comments via email to PRACollection1505-0230@treasury.gov.

FOR FURTHER INFORMATION CONTACT: Barbara Wiss, Office of the Fiscal Assistant Secretary, Department of the Treasury, 1500 Pennsylvania Avenue NW., Washington, DC 20220 or by telephone on 202–622–0886 or by email at PRACollection1505-0230@treasury.gov.

SUPPLEMENTARY INFORMATION:

OMB Number: 1505–0230.

Type of Review: Extension without change of an existing information collection.

Title: Garnishment of Accounts Containing Federal Benefit Payments.

Abstract: The regulations at 31 CFR part 212 establish procedures that financial institutions must follow when a garnishment order is received for an account into which federal benefit payments have been directly deposited. Financial institutions that comply with the required procedures are given a safe harbor under the rule. The regulations require a financial institution to review the account, to determine if any exempt benefit payments have been directly deposited within the 60 calendar days prior to the receipt of the garnishment order, and, if so, requires the financial institution to ensure that the account holder has access to a protected amount of funds in the account. Once the account review is completed the financial institution must notify the account holder of the receipt of the garnishment order and provide certain additional information. In addition, a financial institution must maintain certain records of account activity and actions taken in response to garnishment orders sufficient to demonstrate compliance with the regulations.

Affected Public: Businesses or other for-profit institutions.

Estimated Total Annual Burden Hours: 24,167.

Request for Comments: Comments submitted in response to this notice will be summarized and included in the request for Office of Management and Budget approval. All comments will become a matter of public record. Comments are invited on: (a) Whether the collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency’s estimate of the burden of the collection of information; (c) ways to enhance the quality, utility, and clarity of the information to be collected; (d) ways to minimize the burden of the collection of information on respondents, including through the use of technology; and (e) estimates of capital or start-up costs and costs of operation, maintenance, and purchase of services required to provide information.

Bob Faber,
Treasury PRA Clearance Officer.

I. Executive Summary

A. Purpose
   The purpose of this final rule—Advancing Care Coordination through Episode Payment Models is to implement the creation and testing of three new episode payment models (EPMs) and a Cardiac Rehabilitation (CR) incentive payment model under the authority of the Center for Medicare and Medicaid Innovation (“the Innovation Center”), as well as to implement several modifications to the Comprehensive Care for Joint Replacement model. Section 1115A of the Social Security Act (“the Act”) authorizes the Innovation Center to test innovative payment and service-delivery models to reduce Medicare, Medicaid, and Children’s Health Insurance Program (CHIP) expenditures while preserving or enhancing the quality of care furnished to such programs’ beneficiaries. Under the fee-for-service (FFS) program, Medicare makes separate payments to providers and suppliers for the items and services furnished to a beneficiary over the course of treatment (an episode of care). With the amount of payments dependent on the volume of services delivered, providers may not have incentives to invest in quality-improvement and care-coordination activities. As a result, care may be fragmented, unnecessary, or duplicative. The goal for the EPMs is to improve the quality of care provided to beneficiaries in an applicable episode while reducing episode spending through financial accountability. The EPMs include models for episodes of care surrounding an acute myocardial infarction (AMI), coronary artery bypass graft (CABG), and surgical hip/femur fracture treatment excluding lower extremity joint replacement (SHFFT). Under this final rule, the Centers for Medicare & Medicaid Services (CMS) will test whether an EPM for AMI, CABG, and SHFFT episodes of care will reduce Medicare expenditures while preserving or enhancing the quality of care for Medicare beneficiaries. We anticipate that the finalized models will benefit Medicare beneficiaries by improving the coordination and transition of care, improving the coordination of items and services paid for through FFS Medicare, encouraging more provider investment in infrastructure and redesigned care processes for higher-quality and more efficient service delivery, and incentivizing higher-value care across the inpatient and post-acute care spectrum. We proposed on August 2, 2016 to test the proposed EPMs for 5 performance years, beginning July 1, 2017, and ending December 31, 2021 (81 FR 50799) and we are finalizing those dates as proposed in this final rule. Within this final rule, we discuss three distinct EPMs focused on episodes of care for AMI, CABG, and SHFFT episodes. We chose these episodes for the models because, as discussed in depth in section III.A of this final rule and as stated in the proposed rule, we believe hospitals would have a significant opportunity to redesign care and to improve the quality of care furnished during the applicable episode. The EPMs will enable hospitals to consider the most appropriate strategies for care redesign, including: (1) Increasing post-hospitalization follow-up and medical management for patients; (2) coordinating across the inpatient and post-acute care spectrum; (3) conducting appropriate discharge planning; (4) improving adherence to treatment or drug regimens; (5) reducing readmissions and complications during the post-discharge period; (6) managing chronic diseases and conditions that may be related to the EPMs’ episodes; (7) choosing the most appropriate post-acute care setting; and (8) coordinating between providers and suppliers such as hospitals, physicians, and post-acute care providers. The EPMs would offer hospitals the opportunity to examine and better understand their own care processes and patterns with regard to patients in AMI, CABG, and SHFFT episodes, as well as the processes of post-acute care providers and physicians.

We previously have used our statutory authority under section 1115A of the Act to test other episode payment models such as the Bundled Payments for Care Improvement (BPCI) initiative and Comprehensive Care for Joint Replacement (CJR) model. Bundled payments for multiple services in an episode of care hold participating organizations financially accountable for that episode of care. Such models also allow participants to receive payments based in part on the reduction in Medicare expenditures that arise.
from such participants’ care redesign efforts. This payment can be used for investments in care redesign strategies and infrastructure, as well as to incentivize collaboration with other providers and suppliers furnishing services to beneficiaries included in the models.

We believe the EPMs will further the Innovation Center’s mission and the Administration’s goal of increasingly paying for value and outcomes, rather than for volume alone, by promoting the alignment of financial and other incentives for all health care providers caring for beneficiaries during SHFFT, CABG, or AMI episodes. The acute care hospital where an eligible beneficiary has a hospitalization for one of the procedures or clinical conditions included in these EPMs will be held accountable for spending during the episode of care. EPM participants could earn reconciliation payments by appropriately reducing expenditures and meeting certain quality metrics. EPM participants will also gain access to data and educational resources to better understand care patterns during the inpatient hospitalization and post-acute periods, as well as associated spending. Payment approaches that reward providers for assuming financial and performance accountability for a particular episode of care create incentives for the implementation and coordination of care redesign between participants and other providers and suppliers such as physicians and post-acute care providers.

The AMI, CABG, and SHFFT models will require the participation of hospitals in multiple geographic areas that might not otherwise participate in testing episode payment for the episodes of care. CMS is testing other episode payment models with the BPCI initiative and the CJR model. The BPCI initiative is voluntary; providers applied to participate and chose from 48 clinical episodes. BPCI participants entered the at-risk phase between 2013 and 2015 and have the option to continue participating in the initiative through FY 2018. In the CJR model, acute care hospitals in selected geographic areas are required to participate in the CJR model for all eligible lower-extremity joint replacement (LEJR) episodes that initiate at a CJR participant hospital. The CJR model began its first of 5 performance years on April 1, 2016. Realizing the full potential of new EPMs will require the engagement of an even broader set of providers than have participated to date in our episode payment models such as the BPCI initiative and the CJR model. As such, we are interested in testing and evaluating the impact of episode payment for the three EPMs in a variety of circumstances, including those hospitals that may not otherwise participate in such a test.

While we note that testing of the CJR model that began in April 2016 will allow CMS to gain experience with requiring hospitals to participate in an episode payment model, the clinical circumstances of the episodes we proposed (AMI, CABG, and SHFFT) differ in important ways from the LEJR episodes included in the CJR model. LEJR procedures are common among the Medicare population, and the majority of such procedures are elective. In contrast, under the three EPMs, CMS will test episode payment for certain cardiac conditions and procedures, as well as SHFFT. We expect the patient population included in these episodes will be substantially different from the patient population in CJR episodes, due to the clinical nature of the cardiac and SHFFT episodes. Beneficiaries in these episodes commonly have chronic conditions that contribute to the initiation of the episodes, and need both planned and unplanned care throughout the EPM episode following discharge from the hospitalization that begins the episode. Both AMI and CABG model episodes primarily include beneficiaries with cardiovascular disease, a chronic condition which likely contributed to the acute events or procedures that initiate the episodes. About half the average AMI model historical episode spending was for the hospitalization, with the majority of spending following discharge from the hospitalization due to hospital readmissions, while there was relatively less spending on SNF services. Part B professional services, and hospital outpatient services. In CABG model historical episodes, about three-quarters of episode spending was for the hospitalization, with the remaining episode spending relatively evenly divided between Part B professional services and hospital readmissions, and a lesser percentage on SNF services. Similar to AMI episodes, post-acute care provider use was relatively uncommon in CABG model historical episodes, while hospital readmissions during CABG model historical episodes were relatively common. SHFFT model historical episodes also were accompanied by substantial spending for hospital readmissions, and post-acute care provider use in these episodes also was high. The number of affected beneficiaries and potential impact of the models on quality and Medicare spending present an important opportunity to further the Administration’s goal of shifting health care payments to support the quality of care over the quantity of services by promoting better coordination among health care providers and suppliers and greater efficiency in the care of beneficiaries in these models, while reducing Medicare expenditures. Pay-for-performance episode payment models such as the three EPMs in this rule financially incentivize improved quality of care and reduced cost by aligning the financial incentives of all providers and suppliers caring for model beneficiaries with these goals. This alignment leads to a heightened focus on care coordination and management throughout the episode that prioritizes the provision of those items and services which improve beneficiary outcomes and experience at the lowest cost. A more detailed discussion of the evidence supporting the episode selection for these models can be found in section III.A.1. of this final rule.

These models will also allow CMS to gain additional experience with episode-payment based approaches for hospitals with variance in (1) historic care and utilization patterns; (2) patient populations and care patterns; (3) roles within their local markets; (4) volumes of services; (5) levels of access to financial, community, or other resources; and (6) levels of population and health-care-provider density, including local variations in the availability and use of different categories of post-acute care providers. We believe that participation in the EPMs by a large number of hospitals with diverse characteristics will result in a robust data set for evaluating this payment approach and will stimulate the rapid development of new evidence-based knowledge. Testing the EPMs in this manner will also allow us to learn more about patterns of inefficient utilization of health care services and how to incentivize quality improvement for beneficiaries receiving services in AMI, CABG, and SHFFT episodes. This knowledge could potentially inform future Medicare payment policies.

We proposed the CR incentive payment model to test the effects on
quality of care and Medicare expenditures of providing financial incentives to hospitals for beneficiaries hospitalized for treatment of AMI or CABG to encourage care coordination and greater utilization of medically necessary CR and intensive cardiac rehabilitation (ICR) services for 90 days post-hospital discharge where the beneficiary’s overall care is paid under either an EPM or the Medicare FFS program. Despite the evidence from multiple studies that CR services improve health outcomes, the literature also indicates that these services are underutilized, estimating that only about 35 percent of AMI patients older than 50 receive this indicated treatment.\textsuperscript{5,6} Recent analysis confirms a similar pattern of underutilization for Medicare beneficiaries who are eligible for and could benefit from CR.

Considering the evidence demonstrating that CR/ICR services improve long-term patient outcomes, the room for improvement in CR/ICR service utilization for beneficiaries eligible for this benefit, and the need for ongoing, chronic treatment for underlying coronary artery disease (CAD) among beneficiaries that have had an AMI or a CABG, we believe that there is a need for improved long-term care management and care coordination for beneficiaries that have had an AMI or a CABG and that incentivizing the use of CR/ICR services is an important component of meeting this need. We want to reduce barriers to high-value care by testing a financial incentive for hospitals that encourages the management of beneficiaries that have had an AMI or a CABG in ways that may contribute to long-term improvements in quality and reductions in Medicare spending.

We sought public comment on the proposals contained in the proposed rule (81 FR 50794) published on August 2, 2016, and also on any alternatives considered. Public comment and our responses to those comments follow under the applicable sections. The applicable sections contain our proposed policies, commenters’ reactions, and our responses.

We received approximately 175 timely pieces of correspondence containing multiple comments on the EPM proposed rule. We note that some of these public comments were outside of the scope of the proposed rule. These out-of-scope public comments are mentioned in this section but are not addressed with the policy responses in this final rule. The following is a summary of the comments received on the proposed model as a whole, including the authority for the model and general comments on CMS’ implementation of the EPM model at this time and our responses.

\textbf{Comment:} Some commenters expressed support for the proposed EPMs and for requiring participation from specific hospitals in the selected geographic regions. Other commenters requested whether CMS has the authority under section 1115A of the Social Security Act (the Act) to implement the EPMs as proposed, while others stated specifically that they believe CMS cannot compel provider participation and further stated that they did not believe Congress intended to delegate its authority to make permanent changes to the Medicare program to the Secretary through the Innovation Center.

\textbf{Response:} While we appreciate the support expressed by some commenters, we disagree with the contention that the Innovation Center lacks the authority to test models under section 1115A of the Act in which participation is required. Section 1115A of the Act authorizes the Secretary to test innovative payment and service delivery models to reduce program expenditures while preserving or enhancing the quality of care furnished to Medicare, Medicaid, and Children’s Health Insurance Program (CHIP) beneficiaries, and section 1115A of the Act does not specify that participation in models must be voluntary. As discussed in section IV. of this final rule, one of the reasons that we have determined it is necessary to test the EPM models by requiring the participation of certain hospitals is to obtain more generalizable evaluation results.

Moreover, the Secretary has authority to establish regulations to carry out the administration of Medicare. Specifically, the Secretary has authority under both sections 1102 and 1871 of the Act to establish regulations as necessary to administer Medicare, including testing these Medicare payment and service delivery models. We note that the EPMs will test different methods for delivering and paying for services covered under the Medicare program, which the Secretary has clear legal authority to regulate.

To be clear, we did not propose, and are not finalizing, permanent changes to Medicare, but rather are testing payment and service delivery models under section 1115A(b) of the Act. While the EPMs require the participation of certain participant hospitals, the EPMs are not permanent changes to the Medicare program. We acknowledge the importance of examining the impact of the EPMs as this test will implement models at the geographic regional level. The EPMs are thus intended to enable CMS to test and evaluate the effects of episode payment approaches on a broader range of Medicare providers and suppliers than would choose to participate in an alternative payment model. More specifically, the evaluation is to conduct a multifaceted and multi-pronged examination of issues of quality, access, and consequences. Randomized evaluation designs of this kind helps to reduce the systematic differences among hospitals that are and are not participating in the EPMs, which helps to ensure that, on average, differences in outcomes between participating and non-participating hospitals reflect the impact of the model. Testing these models in this manner also allows us to learn more about patterns of inefficient utilization of health care services and how to incentivize the improvement in quality for AMI, CABG, and SHFHT/procedure/ diagnosis episodes. This learning can potentially inform future Medicare payment policy.

We do not believe the EPMs will harm the continuation of a permanent Medicare program such as the Shared Savings Program, We continue to believe that while we test the EPMs, ACOs will still work towards the goals of the Shared Savings Program. These goals have been previously described (76 FR 67801) and include ensuring the coordination of care for beneficiaries, regardless of the time or place of that care, being innovative in service delivery by drawing upon the best, most advanced models of care, and using modern technologies, including telehealth and electronic health records, and other tools to continually reinvent care in the modern age.

We refer to our discussion about ACO overlap with the proposed EPMs that was included in the proposed rule (81 FR 50797) and acknowledge the concerns expressed by some ACOs that the current CJR and BPCI ACO overlap...
policies deprive them of a key source of savings. Because ACOs in certain types of two-sided risk arrangements have stronger incentives than those in one-sided risk arrangements to reduce total cost of care, especially given the possibility of paying CMS shared losses, we believe that ACOs in such two-sided risk arrangements may be best positioned to assume the risk associated with EPM episodes, while ACOs in one-sided risk arrangements may be less well-positioned to do so. Furthermore, it is more operationally feasible to identify and exclude beneficiaries who are prospectively aligned to ACOs.

Comment: One commenter believed that the EPMs did not satisfy the requirement that the model address “a defined population for which there are deficits in care leading to poor clinical outcomes or potentially avoidable costs” as is required by section 1115A(b)(2)(A) of the Act.

Response: Models tested under section 1115A of the Act must address a defined population for which there are either deficits in care leading to poor clinical outcomes or potentially avoidable expenditures. As discussed in section III.C. of the proposed rule (81 FR 50829–50843) and section III.C. of this final rule, these models satisfy the requirements of section 1115A(b) of the Act, as the EPMs address defined populations (FFS Medicare beneficiaries experiencing acute myocardial infarctions, coronary artery bypass grafting procedures and/or surgical hip/femur fracture treatment) for which there are potentially avoidable expenditure because there are no strong incentives for coordinated care, which can lead to suboptimal care. As discussed in section IV. of this final rule, one of the reasons that we have determined it is necessary to require the participation of hospitals in multiple geographic areas that might not otherwise participate in testing episode payment for the episodes of care is to provide more generalizable evaluation results of the impact of these models.

Comment: A few commenters asserted that the SHFFT model is equivalent to an expansion of the CJR model under section 1115A(c) of the Act. The same commenters stated that the SHFFT EPM model test should not be finalized in this rule as the CJR model has not yet satisfied the requirements of section 1115A(c) of the Act. One commenter stated that before implementing the SHFFT EPM, CMS must first complete the evaluation of the CJR model required under section 1115A(b)(4) of the Act, make the determinations required under section 1115A(c)(1) and (3) of the Act; and receive the certification from the Chief Actuary required under section 1115A(c)(2) of the Act.

Response: Regarding the commenters’ assertion that the proposed SHFFT model expands the CJR model prior to the CJR evaluation, we note that this is not the case. We agree that section 1115A of the Act establishes the necessary criteria for the Secretary to expand payment and service delivery models. However, the SHFFT model we are finalizing in this rule is not an expansion of the CJR model under section 1115A(c) of the Act. Rather, the SHFFT EPM model is a new model test under section 1115A(b) of the Act. The CJR model is still at the initial model test stage, and we will not make any determinations about continuing the CJR model test through expansion under section 1115A(c) of the Act until there is sufficient information from evaluation(s) to assess its potential for expansion. While the SHFFT EPM model test complements the CJR model test, it is a separate and distinct model test. Specifically, the SHFFT model differs from the CJR model in that the CJR model is largely for planned admissions for hip and knee replacements and the episode of care begins with an admission to a participant hospital of a beneficiary who is ultimately discharged under MS–DRG 469 (Major joint replacement or reattachment of lower extremity with major complications or comorbidities) or 470 (Major joint replacement or reattachment of lower extremity without major complications or comorbidities). In contrast, the SHFFT model tests a hospital payment for hip fixation and the episode of care eventually results from a discharge paid under MS–DRG 480 (Hip and femur procedures except major joint with major complication or comorbidity—CC), MS–DRG 481 (Hip and femur procedures except major joint with complication or comorbidity—MCC), or MS–DRG 482 (Hip and femur procedures except major joint without CC or MCC). Therefore, the interventions under each model test would not overlap. Further, the SHFFT model test would give hospitals already participating in the CJR model different experience in managing care for hip and femur fracture cases that typically present emergently, rather than the planned, elective surgery that is most common for lower extremity joint replacement. Despite this geographic overlap, beneficiaries who initiate an episode in either the SHFFT or CJR model remain in that initial model and are precluded from initiating a simultaneous episode in the CJR or SHFFT models respectively. As a result, the evaluations of the CJR model and the SHFFT model will assess the effect of discrete episodes.

Comment: Some commenters expressed support for the intended goals of the EPMs, and stated they want to contribute to moving our health care system to a value-based system. However, many commenters disagreed with the process used by CMS to achieve this goal. Specifically, commenters stated that CMS moved too fast and too soon in implementing these models. Furthermore, commenters believe that the breadth and speed of the CMS models expanded exponentially. Commenters stated that in situations when multiple initiatives are being implemented simultaneously, for example Meaningful Use, new conditions of participation for emergency preparedness, multiple clinical and payment changes to the existing fee-for-service payment systems, performance requirements of payment reforms such as the MACRA, and state regulatory changes to health care, commenters stated that hospitals may have little time or resources available for thoughtful care redesigns to be applied to the proposed model. A few commenters noted that the insurance marketplace in general remains volatile, adding further complication to the health care landscape, while others believe generally that CMS is putting the existing initiatives’ success at risk as a result of the proposed pace of implementation of new programs and models.

Commenters raised concerns that they were unable to submit informed comments on the proposed rule because they did not have sufficient data on the CJR model, making it difficult to assess even early experience with the process of implementation of models that require participation. Other commenters submitted statements of experience related to implementation of the CJR model, specifically that implementation was administratively challenging due to the need to first develop a process of care redesign and then implement operational changes related to efficiency as well as specific provisions of the model, including but not limited to collaboration agreements, provisions for beneficiary notifications, and data analysis. As a result of this experience, commenters requested that CMS delay the implementation time line of the EPMs. The alternative time lines proposed by commenters varied. A few commenters stated that it would be unreasonable to implement a new episode payment model before
evaluation of the outcomes and processes of existing bundled payment models. Other commenters suggested that CMS generally delay implementation until the agency can address concerns related to risk adjustment, minimum volume thresholds, comprehensiveness of payment, and episode definitions. Commenters believed that launching the proposed models simultaneously will require an incredible administrative effort, which may hinder the ability to effectively direct clinical resources towards best practices for success. To this end, commenters also suggested alternative proposals, including not limited to reconsideration of implementing cardiac EPMs delay, pilot, or narrow the scope of the proposed SHFFT model; delay the start date of the proposed EPMs until no earlier than January 1, 2018; provide hospitals with at least 12 months of preparation time from the date the final rule is finalized. Other commenters believed hospitals should not be subject to downside risk for at least 12 months from the implementation date of the final rule, and other commenters suggested that CMS delay the onset of downside risk beyond the first quarter of performance year 2. Commenters suggested CMS delay implementation to allow both CMS and EPM participants to prepare to be successful during testing of the model. Specifically, commenters stated that CMS should use the delay to establish a dialogue with hospitals to improve the existing bundled payment experience, perform outcomes studies on existing models and programs, analyze the existing CJR model to determine the model’s impact to beneficiaries’ outcomes and longer term well-being, and create infrastructure to more easily attribute patients to the EPMs. Commenters also stated that such a delay would allow time for EPM participants to better understand the clinical and financial risk of their patient populations, to establish collaborator relationships and to create the internal organization structure to manage payment bundles. A few commenters specifically suggested changes in payment once the risk-bearing phase begins, to allow a prospective payment to the EPM participants upon determination of an eligible diagnosis, as this change could permit all collaborating providers to share in both the upside and downside financial risk, and not be constrained by what Medicare pays for services during the episode. Of most commenters requested that CMS generally apply a more strategic process to achieve the intended goals by building on the experience to date to set the health care system on a pathway to success rather than rolling out new models before anything concrete is gleaned from existing models.

Response: We appreciate the comments we received in support of our proposed performance period and start date. We also appreciate comments expressing concerns around the timing of this model. Although we believe that it is important to initiate these EPMs now since they are different than CJR and BPCI and will provide essential information about the potential for episode payment to improve care and lower spending, we are sensitive to commenters’ concerns that our proposed date to implement downside risk may not provide sufficient time for participants to implement the kinds of changes needed to successfully participate in the model, particularly given the availability of baseline data. Accordingly, this final rule will increase available preparation time by not implementing downside risk for all participants in the EPMs until October 1, 2018. Downside risk for EPM episodes will be applied to episodes ending on or after January 1, 2019. As discussed in detail in section III.D of this final rule, participants who are interested in taking on downside risk earlier can choose to begin downside risk for episodes ending on or after January 1, 2018. Additionally, specific amendments to the regulations regarding the CJR model access to records and records retention policy, compliance enforcement policy, and waiver of the SNF 3 day rule will take effect July 1, 2017. We refer readers to sections V.H, V.I, and V.L of the final rule for discussions of our final decisions. We believe that these changes will both facilitate participants’ abilities to be successful under these models and allow for a more gradual transition to full financial responsibility under the models. CMS will also continue to work internally to determine the extent to which the suggestions submitted by commenters, including performing education and outreach activities or outcomes studies on existing models, will impact the implementation of the EPMs. The EPMs will only include a limited number of episode types, and as such we believe it is reasonable for hospitals to begin to analyze data and identify care patterns, opportunities for care redesign for these episodes, prior to assuming financial responsibility for spending for an episode beginning after October 1, 2018. We also note that due to the gradual implementation of financial responsibility that was proposed and that will still be incorporated in the models even given the start of the phased-in downside risk that we are finalizing in this rule, we expect that hospitals will spend the first performance year of the model analyzing data, identifying care pathways, forming clinical and financial relationships with other providers and suppliers, and assessing opportunities for savings under the model, utilizing in part the claims data we provide to them. As a result of these changes, we do not believe that further changes are needed to the start date of implementation. We also do not agree with commenters that implementation of the model is premature or that it should not be implemented until results for CJR or other episode-based payment models are available. While we anticipate that these models will offer valuable information that should assist CMS in developing future episode payment models, the EPMs will offer additional insights that are not available under the CJR model; in particular, insights with respect to episode payment models on a distinct set of episodes for participants that would not otherwise participate under a model such as BPCI. Likewise, we do not agree that the models should be implemented after certain other actions have occurred or because of the multiple competing mandates faced by hospitals and other providers. Since the Medicare program’s inception, providers have and will continue to contend with constantly evolving statutory and administrative requirements that often require them to make concurrent changes in their practices and procedures. We do not believe the EPMs are dissimilar to those requirements.

Also as discussed earlier in this section, some commenters pointed to the potential for unintended consequences that could result from our proposed start date, including impediments to beneficiary access and reduced quality of care. As discussed in section III.E of this final rule, we are including quality measures for purposes of evaluating hospitals’ performance both individually and in aggregate across the models. Also, as discussed in section III.F. of this final rule, we are making final policies and actions to monitor both care access and quality. We believe these features will help ensure that beneficiary access to high quality care is not compromised under the EPMs.

Comment: Commenters raised specific concerns that the proposed EPMs’ emphasis on cost-savings could incentivize hospitals to use the least
costly post-acute alternative rather than the option that is most appropriate for the beneficiary. Furthermore, commenters stated that under an episode payment structure, EPM participants that admit healthier patients would have better financial results. Some commenters believe this design will consequently impact Medicare beneficiaries and the Medicare Trust Fund by increasing the frequency of Medicare payments from participants initiating a higher volume of episodes in a healthier population of beneficiaries. Other commenters believed that the proposed regulation would have serious negative impacts on Medicare beneficiaries by encouraging unnecessary impacts on health care stakeholders by discouraging innovation. One commenter encouraged us to create a patient advisory panel so that beneficiary viewpoints could be incorporated into model planning for the EPMs and any other Innovation Center bundled payment models.

Response: We appreciate the commenters’ concerns regarding the quality of care for Medicare beneficiaries. Improving the quality of care is a central goal of the Innovation Center’s work to test new payment and service delivery models. We disagree with commenters that the models will negatively impact the quality of care for beneficiaries in these models and we refer readers to the monitoring and beneficiary protections discussion in section III.G. of this final rule which we believe will address the commenters’ concerns about care stinting. We emphasize that care stinting or denying the provision of medically necessary care is not permitted under the EPMs. Medicare beneficiaries in the EPMs will retain the right to obtain health services from any individual or organization qualified to participate in the Medicare program, and EPM participants are required to supply beneficiaries with written information regarding the design and implications of these models as well as the beneficiaries’ rights under Medicare, including their right to use their providers of choice. We disagree with commenters that the EPMs will stifle innovation for care furnished during an EPM episode. We proposed, and are finalizing in this final rule, a payment methodology that will account for changes in care patterns and utilization trends for EPM episodes as described in section III.D. of this final rule and will have a monitoring contractor actively reviewing claims and monitoring behavior of participant providers to ensure beneficiary choice and care are not compromised by the EPMs. The Federal Government has long recognized the important role of the public in developing effective policies. Advisory committees are a way of ensuring public and expert involvement and advice in federal decision-making. In compliance with the Federal Advisory Committee Act (FACA) the number of advisory committees is carefully managed and committee memberships reflect a balance of viewpoints, education, and experience. Although the establishment of a Patient Advisory Committee for all Innovation Center models is beyond the scope of this rule, we believe that stakeholder engagement is essential to the success of these models and our learning and monitoring contractors as well as our evaluation contractor will be soliciting beneficiary feedback on their experiences with the EPMs.

Comment: While some commenters appreciated the approach of CMS to implement episode-based payment models for a select group of clinical scenarios, others suggested that participation be voluntary, in order to allow hospitals and providers implementing other payment reforms like the MACRA a more gradual adoption process of EPMs. An additional voluntary component to the proposed EPMs, commenters stated, would also permit additional participants who are interested in the models but not located in the MSAs in which the models will be tested to volunteer for participation. Still, other commenters stated that single-episode initiatives fail to encourage systemic change within organizations, and may hinder competition if implemented. Commenters stated that as a result of mandated participation, many surgeons who and facilities which lack familiarity, experience, or proper infrastructure to support care redesign efforts will hamper provider participation, bias model performance evaluation, and negatively affect patient care. One commenter suggested that the nature of the models will provide information about how many organizations and which organizations, fail. Other commenters commended CMS for the episode payment models. The commenters believed that this overall strategy will motivate hospitals to work more closely with other members of the patient’s care team, which could reduce avoidable complications after surgery and decrease the risk of additional hospitalizations.

Response: We thank the commenters for their feedback, but disagree with the suggestion to finalize the proposed EPMs as a voluntary initiative. The EPMs will give CMS the ability to test how an episode payment model might function among participants that would otherwise not participate in such a model. As such, we expect the results from these models will produce data that are more broadly representative than what might be achieved under a voluntary model. Also, these models test a regional target pricing approach to consider a participant hospital’s performance relative to its regional peers. As part of this test, we will learn whether our alternative pricing approach in these models will better incentivize participants who are already delivering high quality and efficient care while still incentivizing historically less efficient providers to improve. We would not be able to test such a regional pricing approach under a purely voluntary model, nor could the appropriate evaluation approach be implemented if participants could volunteer, because it is likely that only the already high quality and efficient providers would sign up.

Response: We appreciate the commenters’ support for the use of notice and comment rulemaking for the EPMs and encouraged us to continue to use the notice and comment rulemaking process to facilitate a robust public dialogue on important issues related to the EPMs and the CR incentive payment model. These commenters generally agreed with the proposed EPM episodes. A few commenters were concerned that we would avoid notice and comment rulemaking requirements.

Response: We appreciate the commenters’ support for the use of notice and comment rule-making for the EPM models. The EPMs are intended to enable CMS to better understand the effects of payment models on a broader range of Medicare providers than what is currently being tested under the BPCI initiative. To this end, testing the EPMs in the proposed manner will also allow us to learn more about patterns of inefficient utilization of health care services and how to incentivize improvement in quality for common AMI episodes.

We respectfully disagree that we are avoiding notice and comment rulemaking. We note that the proposed rule (81 FR 50794), promulgated in accordance with the requirements of 5 U.S.C. 553, went into great detail about the provisions of the proposed EPMs, enabling the public to fully understand and comment on how the proposed models were designed and could apply to those affected providers and beneficiaries. In this final rule, which is also being promulgated in accordance with the requirements of 5 U.S.C. 553,
we respond to the public comments received on our proposals, and after considering them, we are finalizing our proposals with some modifications.

Comment: Commenters questioned the extent to which EPM participants would have the knowledge, skills, and experience to successfully drive improvements in care delivery and health outcomes. Many commenters asserted they do not have enough experience to even know where the efficiencies in care delivery are available to take advantage of them, which limits the ability of the EPMs’ potential success. Another commenter recommended CMS inform the participants that will be in these episode payment models as early as possible. To this end, many commenters recommended that CMS implement a broad-based education campaign regarding the new EPMs that uses all of CMS’ communication channels to reach hospitals, post-acute care providers, physicians, and community-based providers of long term services and supports.

There were many unique suggestions by commenters to appropriately communicate the proposed EPMs to affected stakeholders. A few commenters were generally uncertain where CMS could articulate its vision for innovative payment models. A few other commenters believed CMS should explain in detail the applicable EPMs, provide contact information and a publicly accessible list of all the providers that are part of the model in each region. Other commenters requested more opportunity to analyze the lessons learned from Health Care Payment Learning and Action Network (HCP–LAN), Clinical Episode Payment (CEP) work group, and BPCI so they can be broadly applied to care redesigns as part of the proposed EPMs. To support learning efforts, some commenters recommended CMS to include in final regulations a requirement that participating hospitals must develop, have approved by CMS, and implement a comprehensive, effective clinical care model and leadership structure for coordinating care and managing implementation of the EPMs. A few suggested that CMS assign a Medicare Project Officer to assist CJR and EPM participants. One commenter suggested that CMS provide advanced education and clinical-financial tools attainable through a blend of registries, databases and CMS claims data. Other commenters supported the intention of CMS to establish a learning and diffusion program.

Response: We agree with commenters regarding the need to continually improve stakeholder outreach for models to succeed and we intend to do as much as we can to work to design and deploy a helpful learning and diffusion program. CMS is committed to continuing to facilitate performance improvement by identifying areas of excellence for the purposes of extrapolating best practices. CMS encourages collaboration amongst organizations and can provide guidance on the development and implementation of specific learning systems. We currently deploy the expertise and experience of The Innovation Center’s Learning and Diffusion Group to facilitate learning within models by disseminating the lessons learned across models so that participants can benefit from the experiences of other models, and are always looking for better ways to educate and assist participants in knowledge sharing. For example, BPCI includes a shared learning network that brings experienced stakeholders together for knowledge sharing, collaboration, and peer-to-peer learning. We continue to believe that these efforts contribute to reducing the administrative burden on the health care delivery system and will be responsive to commenters’ concerns.

Comment: One commenter stated that they believe CMS should engage in models which enhance sharing of best practices rather than financial incentives.

Response: We appreciate the commenter’s submission and agree with the sentiment that providers of care in the EPMs should ensure quality of care is maintained or improved. The design of the episode-based payments directly corresponds with CMS’ stated goal of decreasing costs while maintaining or improving quality. Within this framework, we anticipate best practices naturally evolving as participants explore care redesign to achieve efficiencies in the episode.

Comment: Many commenters applauded many of the design features in the new proposed models suggesting that the proposed rule outlined the framework for models that could become very successful at reducing Medicare spending and improving patient care. One commenter suggested that CMS develop accreditation standards for participation and only select accredited EPM participants. Another commenter suggested considering Quality Improvement Organizations (QIOs) as participants, or that QIOs be more centrally involved in such models to continue to recognize the importance of care transitions.

Response: We thank commenters for their support of the proposed design features in the new proposed models. The QIO Care Transitions Project previously tested the extent to which QIOs lead improvements in care transitions. Research found reduced rates of 30-day re-hospitalization and all-cause hospitalization per 1,000, however the reduced rate of all-cause 30-day re-hospitalization as a percentage of hospital discharges was not statistically significant. We will continue to work internally to evaluate the extent to which QIOs complement the operations of the EPMs. We disagree with the suggestion to develop accreditation standards, as such actions are distinct from testing of EPMs, and the proposal to define EPM episode initiators as only those accredited EPM participants. The definition of the episode initiator is discussed further in section III.B of this final rule.

As discussed in more detail in section V. of this final rule, we proposed numerous modifications to the CJR model, which began on April 1, 2016. Section V. of this final rule contains our proposed policy changes, commenters’ reactions, and our responses. We discuss here comments we received on the CJR model as a whole, including several comments pertaining to model policies for which we did not propose any changes, as well as our responses.

Comment: In general, commenters expressed support for the CJR model. One commenter suggested that CMS extend the model on a voluntary basis after the conclusion of the model’s 5 performance years, to allow for successful participants to continue under CJR. The commenter also suggested that in such a scenario, CMS allow for convening organizations to participate (as is the case currently under the BPCI initiative) and modify the model design to include features such as financial risk for the post-acute care period only. The commenter noted that such flexibility would encourage participation in alternative payment models.

Another commenter expressed support for the CJR model but noted the significant time and effort required for hospitals to implement the model. Commenters also requested several policy changes out of scope for this rulemaking, including: Additional relaxation of regulatory barriers to integration between hospitals and other stakeholders, removal of fractures in

their entirety from this episode payment model, additional waivers of Medicare program rules, additional quality measures, policies that would encourage use of specific medical devices associated with lower revision rates, and modifications to the pricing methodology that would include comprehensive risk adjustment. Finally, one commenter requested that data be provided on a more frequent basis.

Response: We thank the commenters for their support of the CJR model. With regard to the CJR model policies for which we did not propose any changes, we will continue to consider the issues commenters brought forward and if warranted, address any changes through future rulemaking as necessary. In addition, we note that while currently we provide CJR hospitals with episode data on a quarterly basis, we may begin to consider providing such data on a monthly basis when practicable.

Comment: A few commenters supported CMS’s pursuit of opportunities to spread value-based payment to more providers through additional episode payment models beyond lower extremity joint replacement.

Response: We acknowledge and appreciate the commenters’ remarks.

Comment: A few commenters addressed issues on the following subject-matter areas: Alternative administration of medications, non-medically directed anesthesia delivery, remote patient monitoring, data collection for global surgical services, and the long term care hospital certification program.

Response: These comments pertain to issues for which we did not include any proposals in the proposed rule. Therefore, we believe these comments are outside the scope of the proposed rule, and we are not addressing them in this final rule. After carefully considering all of the comments we received on the proposed model, including those discussed previously and within the following pages, for the reasons described elsewhere in this rule, we have concluded that we can successfully test the Episode Payment Models with several modifications and timing changes. The final model design we are implementing includes additional lead time for participants prior to the onset of downside risk to ensure that the models have time to incorporate risk adjustment into pricing, a commitment to conduct public listening sessions on risk adjustment during the 2017 calendar year and rulemaking during the 2018 calendar year on risk adjustment methods, an exemption for the Medicare Shared Savings Program Track 3 ACOs from participation in the EPMs and adjustments to the AMI transfer policy and the CABG quality measures. All of these changes are discussed in detail in this final rule.

B. Summary of the Major Provisions

1. Model Overview—EPM Episodes of Care

The EPMs, as described further in section III.B.2. of this final rule, are an AMI, CABG, or SHFFT model episode that will begin with an inpatient admission to an anchor hospital assigned to one of the following MS–DRGs upon beneficiary discharge. Acute care hospital services furnished to beneficiaries in AMI, CABG, and SHFFT episodes currently are paid under the Inpatient Prospective Payment System (IPPS) through several Medicare Severity-Diagnosis Related Groups (MS–DRGs): For AMI episodes, AMI MS–DRGs (280–282) and those Percutaneous Coronary Intervention (PCI) MS–DRGs (246–251) representing IPPS admissions for AMI that are treated with PCIs; CABG MS–DRGs (231–236); and SHFFT MS–DRGs (480–482). Episodes will end 90 days after the date of discharge from the anchor hospital, as defined under § 512.2. Defining EPMs’ episodes of care in such a manner offers operational simplicity for both providers and CMS. The EPMs’ episodes will include the inpatient stays and all related care covered under Medicare Parts A and B within the 90 days after discharge, including hospital care, post-acute care, and physician services.

2. Model Scope

Consistent with the CJR model, we proposed that acute care hospitals would be the episode initiators and bear financial risk under the proposed AMI, CABG and SHFFT models. In comparison to other health care facilities, hospitals are more likely to have resources that would allow them to appropriately coordinate and manage care throughout an episode, and hospital staff members already are involved in hospital-discharge planning and post-acute care recommendations for recovery, key dimensions of high-quality and efficient care. We proposed to require all hospitals to participate that are paid under the IPPS, have a CMS Certification Number (CCN), and have an address located in selected geographic areas to participate in the EPMs, with limited exceptions. An eligible beneficiary who receives care at such a hospital will automatically be included in the applicable EPM. We proposed to select geographic areas through a random sampling methodology.

For the CR incentive payment model, we proposed to provide a CR incentive payment specifically to selected hospitals with financial responsibility for AMI or CABG model episodes (hereinafter EPM–CR participants) because they are already engaged in managing the AMI or CABG model beneficiary’s overall care for a period of time following hospital discharge. Similarly, we believe there are opportunities to test the same financial incentives for hospitals where the beneficiary’s overall care is paid under the Medicare FFS program. Thus, we also proposed to provide a CR incentive payment specifically to selected hospitals that are not AMI or CABG model participants (hereinafter FFS–CR participants).

Our geographic-area selection process is detailed further in section III.B.4. of this final rule.

3. Payment

We will test the AMI, CABG, and SHFFT EPMs for 5 performance years. The first performance year would begin July 1, 2017. During these performance years we will continue paying hospitals and other providers and suppliers according to the appropriate Medicare FFS payment systems. However, after the completion of a performance year, the Medicare claims payments for services furnished to an eligible beneficiary during an episode, based on claims data, will be combined to calculate an actual episode payment. The actual episode payment will then be reconciled against an established EPM quality adjusted target price. The amount of this calculation, if positive, will be paid to the EPM participant as a reconciliation payment provided they had achieved a quality category of “acceptable” or higher. If the amount of this calculation is negative, we will require a “Medicare repayment” from the participant hospital beginning with episodes ending in performance year 3 of the EPMs. We had proposed to phase in the requirement that participants whose actual episode payments exceeded the quality adjusted target price pay the difference back to Medicare beginning in the second quarter of performance year 2, and under this proposal, CMS would not require a Medicare repayment from hospitals for actual episode payments that exceed their target price in performance year 1 and the first quarter of performance year 2. Our final rule implements the requirement for Medicare repayments during performance year 3 and includes
an applicable discount factor that would be used for calculating repayment amounts for performance years 3 and 4. Also, participants may elect to assume downside risk for performance year 2, which would also include an applicable discount factor for calculating repayment amounts.

In contrast to the CJR model, due to the clinical characteristics and common patterns of care in AMI episodes, we proposed payment adjustments in the cases of certain transfers and readmissions of beneficiaries to inpatient hospitals for these episodes. These payment adjustments are discussed in detail in sections III.D.4.b.(1) through III.D.4.b.(2).(a). of the proposed and this final rule. We did not finalize one of these proposals—a payment adjustment for AMI episodes involving an inpatient-to-inpatient transfer or what we referred to as a chained anchor hospitalization. We also proposed payment adjustments for CABG model episodes, which are being finalized in this rule. We proposed and are making final with modification limits on how much a hospital can gain or lose based on its actual episode payments relative to quality adjusted target prices, including policies to further limit the risk of high payment cases for special categories of participants as described in sections III.D.7.a. through III.D.7.d. of this final rule. In response to comments, we are finalizing a policy to extend separate financial loss protections to participants with a low volume of episodes under a model, with the volume referred to as EPM volume protection hospitals.

In addition to the EPMs, we proposed to test a CR incentive payment model (81 FR 50800) to encourage the utilization of CR/ICR services for beneficiaries hospitalized for treatment of AMI or CABG. To determine the CR incentive payment, we proposed to count the number of CR/ICR services for the relevant time periods under the Outpatient Prospective Payment System (OPPS) and the Inpatient Prospective Payment System (IPPS) on the basis of the presence of paid claims in the HPCPCS codes that report CR/ICR services and the units of service billed. The initial level of the per service CR incentive amount would be $25 per CR/ICR service for each of the first 11 CR/ICR services paid for by Medicare during an AMI or CABG model episode or AMI or CABG care period. After 11 CR/ICR services are paid for by Medicare for a beneficiary, the level of the per service CR incentive amount will increase to $175 per CR/ICR service for each additional CR/ICR service paid for by Medicare during the AMI or CABG model episode or AMI care period or CABG care period. A more detailed discussion of the CR incentive payment is located in section VII.E.1 of this final rule. The CR performance years would be the same as the performance years for the EPMs in section III.D.2.a. of this final rule. Further details about the payment structure and design of the CR incentive payment model can be found in section VI. of this final rule.

4. Similar, Previous, and Concurrent Models
The EPMs are informed by other models and demonstrations currently and previously conducted by CMS, and will explore additional ways to use episode payment to enhance coordination of care and improve the quality of care.

We recently announced practices that will participate in the Oncology Care Model (OCM), an episode payment model for physician practices administering chemotherapy. Under OCM, practices into payment arrangements that include both financial and performance accountability for episodes of care surrounding chemotherapy administration to cancer patients. We will coordinate with other payers to align with OCM in order to facilitate enhanced services and care at participating practices.

The Innovation Center previously tested innovative episode payment approaches in the Medicare Acute Care Episode (ACE) demonstration, and, as described in this final rule, currently is testing additional approaches under the BPCI initiative and the CJR model. The ACE demonstration tested an alternative payment approach for cardiac and orthopedic inpatient surgical services and procedures. All Medicare Part A and Part B services pertaining to the inpatient stay were included in the ACE demonstration episodes of care. Evaluations of the ACE demonstration found that while there was not strong quantitative evidence indicating improvements in quality, there was qualitative evidence that hospitals worked to improve processes and outcomes as a result of their participation in the demonstration.

Currently, we are testing the BPCI initiative, which is composed of related payment models that link payments for multiple services that a Medicare beneficiary receives during an episode of care into a bundled payment. Under the initiative, entities enter into payment arrangements with CMS that include financial and performance accountability for episodes of care. Episodes of care under the BPCI initiative begin with either: (1) An inpatient hospital stay or (2) post-acute care services following a qualifying inpatient hospital stay. The BPCI initiative is evaluating the effects of episode-based payment approaches on patient experience of care, outcomes, and cost of care for Medicare FFS beneficiaries. Participating organizations chose from 48 clinical episodes, including hip and femur procedures except major joint, acute myocardial infarction, percutaneous coronary intervention, and coronary artery bypass graft surgery. BPCI Model 2 is an episode payment model in which a qualifying acute care hospitalization initiates a 30-, 60-, or 90-day episode of care. The episode includes the inpatient stay in an acute care hospital and all related services covered under Medicare Parts A and B during the episode, including post-acute care services. 10

improve quality for beneficiaries in these episodes of care.

Our design and implementation of the CJR model, which is an episode payment model for LEJRR episodes, also informed the design of the AMI, CABG, and SHFFT EPMs. After releasing a proposed rule in July 2015 and receiving nearly 400 comments from the public, in November 2015 we released final regulations implementing the CJR model. Approximately 800 acute care hospitals (approximately 23 percent of all IPPS hospitals) now participate in the CJR model. The first CJR performance year began on April 1, 2016. The CJR model will continue for 5 performance years, ending on December 31, 2020. The AMI, CABG, and SHFFT models build upon our experience designing and implementing the CJR model, including feedback from providers and other public stakeholders during the CJR model’s rulemaking and implementation processes.

Further information on why specific elements of the models and initiatives were incorporated into the EPMs’ designs is discussed later in this final rule.

5. Overlap With Ongoing CMS Efforts

We proposed to exclude from participation in the AMI, CABG, and SHFFT models certain acute care hospitals participating in BPCI Models 2 and 4 for the hip and femur procedures except major joint or for all three of the BPCI cardiac episodes (AMI, PCI, and CABG). We proposed to exclude from EPMs beneficiaries prospectively assigned to the Next Generation ACO and the Comprehensive ESRD Care models which also share in downside risk with CMS, but also those beneficiaries prospectively assigned to Track 3 Shared Savings Program ACOs. More detail on our policies for accounting for provider- and beneficiary-level overlap is discussed in section III.D.6. of this final rule.

The amendments made by the Medicare Access and CHIP Reauthorization Act of 2015 (MACRA) (Pub. L. 114–10, April 16, 2015) created two paths for eligible clinicians to link quality to payments: The Merit-Based Incentive Payment System (MIPS) and Advanced Alternative Payment Models (APMs). These two paths create a flexible payment system called the Quality Payment Program as finalized by CMS in the Quality Payment Program final rule with comment period ending on December 31, 2020. The AMI, CABG, and SHFFT models build upon our experience designing and implementing the CJR model, including feedback from providers and other public stakeholders during the CJR model’s rulemaking and implementation processes.

We proposed to exclude from EPMs beneficiaries prospectively assigned to Track 3 Shared Savings Program ACOs. More detail on our policies for accounting for provider- and beneficiary-level overlap is discussed in section III.D.6. of this final rule.

The amendments made by the Medicare Access and CHIP Reauthorization Act of 2015 (MACRA) (Pub. L. 114–10, April 16, 2015) created two paths for eligible clinicians to link quality to payments: The Merit-Based Incentive Payment System (MIPS) and Advanced Alternative Payment Models (APMs). These two paths create a flexible payment system called the Quality Payment Program as finalized by CMS in the Quality Payment Program final rule with comment period ending on December 31, 2020. We proposed to exclude from EPMs beneficiaries prospectively assigned to Track 3 Shared Savings Program ACOs. More detail on our policies for accounting for provider- and beneficiary-level overlap is discussed in section III.D.6. of this final rule.
EPMs’ success in achieving its goals under section 1115A of the Act and to monitor for beneficiary safety. For the SHFFT model, we proposed applying the same quality measures selected for the CJR model.

The quality measures for SHFFT episodes are as follows:
- THA/TKA Complications: Hospital-Level Risk-Standardized Complication Rate (RSOCR) Following Elective Primary Total Hip Arthroplasty (THA) and/or Total Knee Arthroplasty (TKA) (National Quality Forum [NQF] #1550).
- Successful Voluntary Reporting of Patient-Reported Outcomes.

The measures for the AMI model are as follows:
- AMI Excess Days: Excess Days in Acute Care after Hospitalization for Acute Myocardial Infarction (acute care days include emergency department, observation, and inpatient readmission days).
- HCAPHS Survey (NQF #0166), linear mean roll-up (HLMR) scores like CJR.

The measures for the CABG model are as follows:
- MORT–30–CABG: Hospital 30-Day, All-Cause, Risk-Standardized Mortality Rate (RSMR) Following Coronary Artery Bypass Graft Surgery (NQF #2558).
- HCAPHS Survey (NQF #0166), HLMR scores like CJR.

We proposed and requested public feedback on options for including successful implementation testing of the Hybrid AMI measure as a quality measure for the AMI episode. The Hybrid AMI measure will assess a hospital’s 30-day risk-standardized acute myocardial infarction mortality rate and will incorporate a combination of claims data and EHR data submitted by hospitals. Public comment and our responses to those comments follow under the applicable sections in section III. of this final rule.

We are finalizing as proposed the following quality measures for SHFFT episodes:
- THA/TKA Complications: Hospital-Level Risk-Standardized Complication Rate (RSOCR) Following Elective Primary Total Hip Arthroplasty (THA) and/or Total Knee Arthroplasty (TKA) (National Quality Forum [NQF] #1550).
- Successful Voluntary Reporting of Patient-Reported Outcomes.

We are finalizing as proposed the following measures for the AMI model:
- AMI Excess Days: Excess Days in Acute Care after Hospitalization for Acute Myocardial Infarction (acute care days include emergency department, observation, and inpatient readmission days).
- HCAPHS Survey (NQF #0166), linear mean roll-up (HLMR) scores like CJR.

We are finalizing as proposed the following measures for the CABG model:
- MORT–30–CABG: Hospital 30-Day, All-Cause, Risk-Standardized Mortality Rate (RSMR) Following Coronary Artery Bypass Graft Surgery (NQF #2558).
- HCAPHS Survey (NQF #0166), HLMR scores like CJR.

In addition, after consideration of comments received, we are finalizing an additional measure for the CABG model. Successful voluntary reporting of the Society of Thoracic Surgeons (STS) CABG composite score (NQF #0696) is a comprehensive NQF-endorsed composite measure and will be weighted at 10 percent of the composite quality score for those hospitals that report this voluntary measure.

Additionally, similar to the CJR model, we proposed to adopt a pay-for-performance methodology for EPMs that relies upon a composite quality score to assign respective EPM participants to four quality categories. These quality categories will determine an EPM participant’s eligibility for a reconciliation payment should such EPM participant achieve spending below the quality-adjusted target price, as well as the effective discount percentage at reconciliation. Points for quality performance and improvement (as applicable) will be awarded for each episode measure and then summed to develop a composite quality score that will determine the EPM participant’s quality category for the episode. Quality performance will make up the majority of available points in the composite quality score, with improvement points available as “bonus” points for the measure. This approach resembles the CJR model methodology.

7. Beneficiary Protections

As with the CJR model, Medicare beneficiaries in the EPM models will retain the right to obtain health services from any individual or organization qualified to participate in the Medicare program. Eligible beneficiaries who receive services from EPM participants would not have the option to opt out of inclusion in the applicable model. We proposed to require EPM participants to supply beneficiaries with written information regarding the design and implications of these models as well as the beneficiaries’ rights under Medicare, including their right to use their providers of choice. We will make a robust effort to reach out to beneficiaries and their advocates to help them understand the models. We also proposed to use our existing authority, if necessary, to audit participant hospitals if claims analysis indicates an inappropriate change in furnished services. Beneficiary protections are discussed in greater depth in section III.G. of this final rule.

8. Financial Arrangements

We proposed a regulatory structure for financial relationships under the EPM to advance the goals of improving the quality and efficiency of model episodes, which also included program integrity safeguards to protect against abuse under the financial relationships permitted for the EPM. Our EPM proposals reflected changes from the current CJR model regulations that generally fell into the following four categories: (1) Removing duplication of requirements in similar provisions; (2) streamlining and reorganizing the provisions for clarity and consistency; (3) providing additional flexibility in response to feedback from CJR participant hospitals and other stakeholders; and (4) expanding the scope of financial arrangements under the EPM. In addition to the collaborators permitted under the CJR model, we proposed to add hospitals and critical access hospitals (CAHs) to the list of providers and suppliers eligible for gainsharing as EPM collaborators due to the expected participation of multiple hospitals in the episode care for some beneficiaries in AMI and CABG episodes. We specifically proposed that ACOs be eligible for gainsharing as EPM collaborators due to the interest of ACOs in gainsharing during the CJR model rulemaking and the ongoing challenges of addressing overlap between episode payment models and ACOs. We made additional proposals that would allow ACOs to enter into financial arrangements under the EPM with ACO participants and ACO providers/suppliers and to allow physicians group practices (PGPs) that are ACO participants in an ACO that is an EPM collaborator to enter into financial...
arrangements under the EPM with PGP members. As discussed in section III.I. of this final rule, after consideration of the public comments received we are finalizing the proposed structure for financial arrangements under the EPM, including that EPM participants may enter into sharing arrangements with EPM collaborators, EPM collaborators may enter into distribution arrangements with collaboration agents, and collaboration agents may enter into downstream distribution arrangements with downstream collaboration agents, subject to the requirements specific to each type of arrangement. Our final policies also include modifications to specify individually based on their enrollment in Medicare the specific providers and suppliers of outpatient therapy services that may be EPM collaborators. We also make modifications to clarify that groups of nonphysician practitioners and groups of therapists (physical therapy, occupational therapy, and speech-language pathology) enrolled in Medicare may be EPM collaborators and may enter into distribution arrangements or downstream distribution arrangements under the EPM that are similar to those we are finalizing for PGP’s and their members.

9. Data Sharing

Based on our experience with various Medicare programs and models, including the BPCI initiative, the CJR model, the Shared Savings Program, and the Pioneer ACO model, we believe that providing certain beneficiary claims data to model participants will be essential to their success. We proposed to share data with participants upon request throughout the performance period of the models to the extent permitted by the Health Insurance Portability and Accountability Act of 1996 (HIPAA) Privacy Rule and other applicable law. We proposed to share upon request both raw claims-level data and claims summary data with participants. This approach would allow participants without prior experience analyzing claims to use summary data for analysis of care and spending patterns, while allowing those participants who prefer raw claims-level data the opportunity to analyze claims. We proposed to provide participants with up to 3 years of retrospective claims data upon request that will be used to develop their quality-adjusted target price. In accordance with the HIPAA Privacy Rule, we will limit the contents, the minimum data necessary for the participant to conduct quality assessment and improvement activities and effectively coordinate care.

10. Program Waivers

Section 1115A of the Act authorizes the Secretary to waive Medicare program requirements as necessary to implement provisions for testing models. Under the CJR model, CMS waived certain program rules regarding the direct supervision requirement for certain post-discharge home visits, telehealth services, and the skilled nursing facility (SNF) 3-day rule. CMS finalized these waivers to offer providers and suppliers more flexibility so that they may increase coordination of care and management of beneficiaries in model episodes. Adopting the CJR waivers for the proposed EPMs required further examination to determine if such adoption would increase financial vulnerability to the Medicare program or would create inappropriate incentives to reduce the quality of beneficiary care. As discussed in section III.I. of this final rule, we will do the following:

- Adopt waivers of the telehealth originating site and geographic site requirement and to allow in-home telehealth visits for all three proposed EPMs, as well as the general waiver to allow post-discharge nursing visits in the home;
- Provide model-specific limits to the number of post-discharge nursing visits and make model-specific decisions about offering the SNF 3-day stay waiver; and
- Adopt a waiver for furnishing cardiac and intensive cardiac rehabilitation services to allow a Nurse Practitioner, Clinical Nurse Specialist, or Physician Assistant, in addition to a physician, to perform specific physician functions.

C. Summary of Economic Effects

As shown in our impact analysis, we expect the EPMs to result in savings to Medicare of $159 million over the 5 performance years of the models. We note that a composite quality score will be calculated for each hospital in order to determine eligibility for a reconciliation payment and whether the hospital qualifies for quality incentive payments that will reduce the effective discount percentage experience by the hospital at reconciliation for a given performance year. More specifically, in performance year 1 of the models, we estimate a Medicare cost of approximately $10 million, as hospitals will not be subject to downside risk in the first performance year of the models. In performance year 2 of the models, we estimate a Medicare cost of approximately $25 million, as some hospitals will voluntarily assume downside risk in the second performance year of the models and some hospitals will receive payments made by CMS. As we introduce downside risk beginning in performance year 3 of the models, we estimate Medicare savings of approximately $34 million. In performance years 4 and 5 of the models, we will move from target episode pricing that is based on a hospital’s experience to target pricing based on regional experience, and we estimate Medicare savings of $49 million and $112 million, respectively.

As a result, we estimate the net savings to Medicare to be $159 million over the 5 performance years of the models. We anticipate there will be a broader focus on care coordination and quality improvement for EPMs among hospitals and other providers and suppliers within the Medicare program that will lead to both increased efficiency in the provision of care and improved quality of the care provided to beneficiaries.

Additionally, the CR incentive model estimates that the impact on the Medicare program may range from up to $29 million of additional spending to $32 million of savings between 2017 and 2024, depending on the change in utilization of CR/ICK services based on the proposed incentive structure.

Finally, the change in the estimated net financial impact to the Medicare program from the CJR model modifications in this final rule is $22 million in spending, and the updated assumptions regarding the number of hospitals that will report quality data result in an increase of $4 million in spending. The total estimated net financial impact to the Medicare program from both the modifications in the final rule and revised assumptions are $26 million in spending. We note that under section 1115A(b)(3)(B) of the Act, the Secretary is required to terminate or modify a model unless certain findings can be made with respect to savings and quality after the model has begun. If during the course of testing a model it is determined that termination or modification is necessary, such actions will be undertaken through rulemaking.

II. Background

This final rule finalizes the implementation of three new EPMs and a CR incentive payment model under the authority of section 1115A of the Act. Under the AMI, CABG, and SHFFT EPMs, acute care hospitals in certain selected geographic areas will be financially accountable for quality
performance and spending for applicable episodes of care. We proposed to retrospectively apply through a reconciliation process the episode payment methodology: hospitals and other providers and suppliers would continue to submit claims and receive payment via the usual Medicare FFS payment systems throughout the proposed EPMs’ performance years. Critical Access Hospitals (CAHs) acting as EPM collaborators would continue to receive payment via the usual cost-based reimbursement system. Hospitals participating in the proposed EPMs would receive target prices, which reflect expected spending for care during an episode as well as a discount to reflect savings to Medicare, on a prospective basis, prior to the beginning of a performance year. All related care covered under Medicare Parts A and B and furnished within 90 days after the date of hospital discharge from the anchor hospitalization which initiated the applicable EPM episode would be included in the episode of care. We proposed the CR incentive payment model to test the effects on quality of care and Medicare expenditures of providing explicit financial incentives to a subset of EPM participants and selected hospitals that are not AMI or CABG model participants for beneficiaries hospitalized for treatment of AMI or CABG to encourage care coordination and greater utilization of medically necessary CR/ICR services for 90 days post-hospital discharge where the beneficiary’s overall care is paid under either an EPM or the Medicare FFS program. We believe the models will further our goals of improving the efficiency and quality of care for Medicare beneficiaries for these medical conditions and procedures.

III. Episode Payment Models

A. Selection of Episodes, Advanced Alternative Payment Model Considerations, and Future Directions

1. Selection of Episodes for Episode Payment Models in This Rulemaking

a. Overview

We have been engaged since 2013 in testing various approaches to episode payment for Medicare FFS beneficiaries for 48 clinical episodes in the BPCI initiative. As of October 1, 2016, the BPCI initiative has 1,403 participants in the risk-bearing phase, comprised of 297 Awarded and 1,107 Episode Initiators. The breakdown of BPCI participants by provider type is as follows: Acute care hospitals (354); skilled nursing facilities (642); physician group practices (257); home health agencies (81); and inpatient rehabilitation facilities (9). In BPCI Models 2 and 3, there is participation across all 48 clinical episodes, and in Model 4 there is participation in 19 clinical episodes.

The 10 clinical episodes with the most participation are: Major joint replacement of the lower extremity; simple pneumonia and respiratory infections; congestive heart failure; chronic obstructive pulmonary disease; bronchitis; asthma; hip and femur procedures except major joint; sepsis; urinary tract infection; acute myocardial infarction (medical management only); medical non-infectious orthopedic; and other respiratory.

In November 2015, CMS released the Final Rule for the Comprehensive Care for Joint Replacement (CJR) model (80 FR 73274 through 73554), the first test of episode-based payment model for Medicare FFS beneficiaries in which providers are required to participate. The CJR model, which began on April 1, 2016, focuses on the episode-of-care for lower-extremity joint replacement (LEJR) procedures. As discussed in the CJR Final Rule (80 FR 73277), LEJR episodes were chosen for the CJR model because they represent one of the most common high-expenditure, high-utilization procedures for Medicare beneficiaries and have significant variation in episode spending. We believe this high-volume, coupled with substantial variation in utilization and spending across individual providers and geographic regions, created a significant opportunity to test whether an episode payment model focused on a defined set of procedures could improve the quality and coordination of care, as well as result in savings to Medicare. Notably, both the BPCI initiative and the CJR model are focused on care that is related to an inpatient hospitalization, with CJR model and BPCI Model 2 episodes beginning with an inpatient hospitalization (anchor hospitalization) and extending up to 90 days post-hospital discharge.

In the proposed rule (81 FR 50805), we proposed three new EPMs that, like the CJR model, would require provider participation in selected geographic areas. Episodes in the new EPMs would begin with admissions to Medicare FFS Parts A and B claims, as proposed in the proposed rule that began in CY 2012–2014, the average annual number of episodes that began with IPPS hospitalizations and extended 90 days post-hospital discharge, and therefore would have been included in the proposed models, is approximately 168,000 for AMI; 48,000 for CABG; and 109,000 for SHFFT. The total annual Medicare spending for these historical episodes was approximately $4.1 billion, $2.3 billion, and $4.7 billion, respectively. Each of the episodes provides different opportunities in an EPM to improve the coordination and quality of care, as well as efficiency of care during the episode, based on varying current patterns of utilization and Medicare spending.

However, in contrast to LEJR episodes in the CJR model, which are predominantly elective and during which hospital readmissions are rare

12 Episodes for AMI, CABG, and SHFFT beneficiaries initiated by all U.S. IPPS hospitals not in Maryland and constructed using standardized Medicare FFS Parts A and B claims, as proposed in the proposed rule that began in CY 2012–2014.

13 Episodes for AMI, CABG, and SHFFT excluding lower extremity joint replacement. The proposed AMI model included beneficiaries discharged under AMI MS–DRGs (280–282), representing IPPS admissions for AMI that are treated with medical management. The proposed AMI model also included beneficiaries discharged under PCI MS–DRGs (246–251) with AMI International Classification of Disease, Tenth Edition, Clinical Modification (ICD–10–CM) diagnosis codes for initial AMI diagnoses in the principal or secondary diagnosis code positions, representing IPPS admissions for AMI that are treated with PCI. The proposed CABG model included beneficiaries discharged under CABG MS–DRGs (231–236), representing IPPS admissions for this coronary revascularization procedure irrespective of AMI diagnosis. The proposed SHFFT model included beneficiaries discharged under hip and femur procedures except major joint replacement MS–DRGs (480–482), representing IPPS admissions for hip-fracture procedures in the setting of hip fractures.

Similar to the selection of LEJR episodes for the CJR model (80 FR 73277), we selected the AMI, CABG, and SHFFT episodes because they represent high-expenditure, high-volume episodes-of-care experienced by Medicare beneficiaries. Based on analysis of historical episodes beginning in CY 2012–2014, the average annual number of episodes that began with IPPS hospitalizations and extended 90 days post-hospital discharge, and therefore would have been included in the proposed models, is approximately 168,000 for AMI; 48,000 for CABG; and 109,000 for SHFFT. The total annual Medicare spending for these historical episodes was approximately $4.1 billion, $2.3 billion, and $4.7 billion, respectively. Each of the episodes provides different opportunities in an EPM to improve the coordination and quality of care, as well as efficiency of care during the episode, based on varying current patterns of utilization and Medicare spending.

However, in contrast to LEJR episodes in the CJR model, which are predominantly elective and during which hospital readmissions are rare
and substantial post-acute care provider utilization is common, the proposed AMI, CABG, and SHFFT episodes have very different current patterns of care. Beneficiaries in these episodes commonly have chronic conditions that contribute to the initiation of the episodes and need both planned and unplanned care throughout the EPM episode following discharge from the initial hospitalization that begins the episode. Both AMI and CABG episodes primarily include beneficiaries with cardiovascular disease, a chronic condition which likely contributed to the acute events or procedures that initiate the episodes. About half the average AMI model historical episode spending was for the initial hospitalization, with the majority of spending following discharge from the initial hospitalization due to hospital readmissions, while there was relatively less spending on SNF services, Part B professional services, and hospital outpatient services. In CABG model historical episodes, about three-quarters of episode spending was for the initial hospitalization, with the remaining episode spending relatively evenly divided between Part B professional services and hospital readmissions, and a lesser percentage on SNF services. Similar to AMI episodes, post-acute care provider use was relatively uncommon in CABG model historical episodes, while hospital readmissions during CABG model historical episodes were relatively common. SHFFT model historical episodes also were accompanied by substantial spending for hip fracture, and post-acute care provider use in these episodes also was high. The number of affected beneficiaries and potential impact of the models on quality and Medicare spending present an important opportunity to further the Administration’s goal of shifting health care payments to support the quality of care over the quantity of services by promoting better coordination among health care providers and suppliers and greater efficiency in the care of beneficiaries in these models, while reducing Medicare expenditures. Pay-for-performance episode payment models, such as the three EPMs proposed in the proposed rulemaking, financially incentivize improved quality of care and reduced cost by aligning the financial incentives of all providers and suppliers caring for model beneficiaries with these goals. This alignment leads to a heightened focus on care coordination and management throughout the episode that prioritizes the provision of those items and services which improve beneficiary outcomes and experience at the lowest cost.

We selected all of the proposed EPM episodes based on their clinical homogeneity, site-of-service, and MS–DRG assignment considerations. We anticipated these proposed new EPMs, like the CJR model, would benefit Medicare beneficiaries by improving the coordination and transition of care among various care settings to facilitate beneficiaries’ return to their communities as their recoveries progress, improving the coordination of items and services paid through Medicare FFS, encouraging provider investment in infrastructure and redesigned care processes for higher quality and more efficient service delivery, and incentivizing higher value care across the inpatient and post-acute care spectrum spanning the episode-of-care (80 FR 73276). However, improving value in the EPMs through these means requires a cohort of beneficiaries with similar clinical features such that coordination and care redesign efforts can be targeted. Therefore, we proposed EPM episodes built on common pathologic and treatment processes; that is, beneficiaries included in both the AMI and CABG models have cardiovascular pathologies that drive their clinical courses during the episodes, and SHFFT model beneficiaries all share similar diagnoses of hip fracture and treatment with hip fixation that drive their clinical courses during their respective episodes.

The following is a summary of the comments received on our overall proposal of three new EPMs in which participation would be required and our responses.

Comment: Many commenters commended CMS for its continued commitment to testing episode-based payments demonstrated through the proposal to implement three new EPMs. MedPAC identified conditions with high post-acute care use as an appropriate setting to test bundled payments that would offer ample opportunities to improve care and lower spending. MedPAC also suggested that another consideration for bundled payments is whether the condition has a relatively uniform clinical pathway that simplifies the rules defining and pricing the bundle. In addition, MedPAC emphasized that conditions that lend themselves to patient selection should be avoided in bundled payment models, at least in the near term, to limit the undesirable provider responses to financial incentives that may occur. Other commenters expressed appreciation for the opportunity to test innovative care models under the Innovation Center authority. They stated that EPMs could hold significant promise for furthering the Triple Aim goals of providing high quality care at lower cost to produce better outcomes and advance population health.

However, some commenters expressed concern about the pace of changes proposed by CMS through its models and the associated expectation and burden that rapid changes in the delivery system and related payment structure place on hospitals and providers. Some commenters noted that CMS has been swift in releasing rules aimed at improving the quality of care delivered, reducing the cost of care, and coordinating patient care across multiple settings. The commenters pointed out the large volume of significant requirements announced by CMS over the last 2 years, including MACRA, the CJR model, and the proposed Part B drug payment model, as well as alternative payment models and programs, including the Shared Savings Program, Next Generation ACOs, BPCI initiative, and OCM, coupled with state level initiatives. The commenters believe the breadth and amount of new activities make it difficult to understand how the various models and program will interact with each other and impact individual delivery systems. While directed toward laudable goals, the commenters encouraged CMS to be vigilant in its review and analysis of these models and programs and to consider the impact and burden on hospitals as it continues to release models and programs impacting the hospital community. The commenters believe it is in everyone’s best interest that these models are successful, yet the pace and complexity of implementation likely will be a critical factor in the achievement of these goals. Therefore, they encouraged CMS to slow the pace of EPM implementation to establish “proof of concept” through the CJR model and BPCI Model 2 results before implementing new EPMs where participation is required. Without adequate time to understand the appropriate role these payment innovations play in providing care delivery and build upon lessons learned and best practices, the commenters

---

15 Episodes for AMI, CABG, and SHFFT beneficiaries initiated by all U.S. IPPS hospitals not in Maryland and constructed using standardized Medicare FFS Parts A and B claims, as proposed in the proposed rule that end in CY 2014.
concluded that both CMS and the provider community would miss an important opportunity to create programs that will advance patient care and successfully transform systems of care.

The commenters recommended that CMS establish a solid framework upon which to build payment initiatives and transform care. Before finalizing any more bundled payment initiatives, some commenters believe that CMS should articulate its vision and set a clear path for innovative payment models, establishing a consistent, predictable and transparent framework, giving providers the necessary tools to succeed in creating a higher-quality, more efficient health care system. The commenters suggested that the framework should include tools such as incorporating a predictable pricing trend factor so that participants can make decisions about investing in care design in the context of stable future prices; providing necessary risk adjustment methodologies; releasing consistent quality measures and reporting requirements and reliable target pricing; and holding fast to the principle of attributing no more than one patient to one bundled payment initiative at a time.

A few commenters expressed concerns about CMS' proposed model to test three new bundled payment models. The commenters contended that the proposed EPMs would make treatment more difficult to access for high-need patients; discourage truly innovative approaches to managing underlying health problems; encourage unnecessary surgeries; encourage further consolidation in the health care industry; provide fewer choices for consumers; and result in higher prices for private payers. One commenter requested that CMS present a much more comprehensive analytic work to understand the prevalence and needs of the beneficiaries who have serious illness or disabilities prior to and during the episode and who therefore require substantial attention to the elements of comprehensive care and quality measurement that are tailored for these beneficiaries prior to implementing the EPMs. Several commenters recommended CMS not to limit alternative payment models to episode payment approaches because for many types of patients, the biggest opportunity for improving quality and achieving savings is avoiding unnecessary episodes and events, and not simply paying differently for episodes and events when they occur. Some commenters strongly cautioned against EPMs that may sub-ordinate future provider-led models. Other commenters recommended CMS to develop and implement payment reform models that incorporate population-based models, rather than look exclusively at episode payment models which can hamper growth of population-based models by limiting their financial opportunity.

Response: We appreciate the support of many commenters for CMS' continued development of new episode payment models and agree with these commenters that episode payment models provide substantial opportunity to improve the quality and efficiency of care for specific clinical conditions. We also agree that bundled payment models are just one strategy to incentivize the health care system moving toward the provision of more accountable, coordinated, high-value care, while provider-led and population-based models, as well as other types of payment reform models, play complementary roles. The Innovation Center is continuing to develop, implement, and evaluate a variety of different types of models that test different approaches to achieving better care, lower costs, and improved health.

The three EPMs are part of that portfolio of models. Issues of concern raised by some of the commenters about the proposed EPMs, including the implementation timeline, are discussed in the specific sections of this final rule that address the relevant policies.

b. SHFFT Model

The SHFFT model was selected to complement the CJR model. We proposed to test the SHFFT model in most of the same hospitals participating in the CJR model as discussed in section III.B.4. of the proposed rule (81 FR 50794), so that all surgical treatment options for Medicare beneficiaries with hip fracture (hip arthroplasty and fixation) would be included in episode payment models. Hip fracture is a serious and sometimes catastrophic event for Medicare beneficiaries. In 2010, 258,000 people aged 65 and older were admitted to the hospital for hip fracture, with an estimated $20 billion in lifetime cost for all hip fractures in the United States in a single year. In 2013, 17 3 percent of Medicare beneficiaries, constituting 2.7 percent of discharges. Mortality associated with hip fracture is 5–10 percent after 1 month and approximately 33 percent at 1 year. Hip arthroplasty and hip fixation, or "hip pinning," represent the two broad surgical options for treating hip fractures. The CJR episodes begin with admission to acute care hospitals for LEJR procedures assigned to MS–DRG 469 (Major joint replacement or reattachment of lower extremity with major complications or comorbidities) or MS–DRG 470 (Major joint replacement or reattachment of lower extremity without major complications or comorbidities) upon beneficiary discharge and paid under the IFFPs, including total and partial hip replacement in the setting of hip fracture (80 FR 73280). Therefore, the SHFFT model, which would test an additional episode payment for hip fixation, provides an opportunity to complete the transition to episode payment for the surgical treatment and recovery of the significant clinical condition of hip fracture.

The following is a summary of the comments received and our responses.

Comment: Some commenters expressed support for the SHFFT model, which CMS proposed to implement in the same MSAs as the CJR model, which was implemented beginning in April 2016, and in particular expressed appreciation for the design consistency proposed for the SHFFT model with the CJR model and the two proposed cardiae EPMs. Analysis by MedPAC found that most SHFFT episodes include at least some post-acute care services use and that the spending on post-acute care services comprises a sizable share of total episode spending, about one-third. MedPAC concluded that SHFFT was a good candidate for bundled payment. MedPAC also reasoned that the SHFFT episode would give hospitals already participating in the CJR model the experience of managing care for hip and femur fracture cases that typically present emergently, rather than as the planned, elective surgery that is most common for lower extremity joint replacement. MedPAC, which recommended proceeding only with the SHFFT model in the context of CMS' proposal for three new EPMs, maintained that this

\footnote{19 Parker et al. Hip Fracture. BMJ. 2006 Jul 1;333(7557):27–30.}

would simplify the set of models that providers are adapting to and simplify the administrative requirements for CMS because CMS would not need to select new markets for testing the cardiac EPMs. Other commenters found it positive that CMS noted that there are differences between CJR and SHFFT beneficiaries, notably the latter being more likely to have multiple chronic conditions and frailty.

However, many commenters opposed CMS’ proposal for the SHFFT model, encouraging CMS either to abandon the model altogether or to substantially delay implementation pending additional CJR model experience and evaluation results from BPCI Model 2 regarding SHFFT episodes. These commenters recommended that CMS proceed at a more deliberate pace and simplify the proposed rule for the three different EPMs by eliminating the SHFFT model because CMS is already testing an episode payment model that requires participation through the CJR model. Therefore, they believe that CMS should test only a cardiac bundled payment model in a different clinical area as a next step in required bundled payment models. The commenters stated that the SHFFT model would be overly burdensome to providers who just began participating in the CJR model in April 2016 and had insufficient financial safeguards for hospitals and quality safeguards for beneficiaries, including no quality measures specific to SHFFT model beneficiaries, to substantially improve beneficiaries’ care experience through successful surgery and recovery. Several commenters stated that the proposed SHFFT model was not a true value-based payment model because the clinical outcome quality measures that were proposed did not capture hip fracture patients. Given CMS’ proposal to implement the SHFFT model in the same MSAs as the CJR model, the commenters stated that due to limited implementation time of the CJR model, it would be inappropriate to add the very sick and frail SHFFT cohort to the relatively stable CJR model cohort without substantial investigation as to how to proceed with adequate monitoring against harm. They also recommended not proceeding without risk adjustment to account for variable costs experienced by hospitals treating different populations of SHFFT model beneficiaries. Several commenters claimed that because SHFFT beneficiaries would receive emergency care, more would be less predictable and no planning would be possible prior to hospital admission, so the burden on potential family caregivers would be escalated in comparison to the CJR model if there was only a short hospital and/or SNF stay. The commenters stated that in comparison with beneficiaries undergoing elective LEJR, those with hip fracture require more time and resources from providers to optimize planning and rehabilitation and, therefore, limited efficiencies would be possible for SHFFT model beneficiaries without significant risk to the quality of care.

Response: We appreciate the perspective of some commenters that the opportunities for care redesign to improve quality and reduce spending are substantial for Medicare beneficiaries undergoing SHFFT procedures. We agree with those commenters about the potential value of the SHFFT model for beneficiaries, providers, and CMS to complement the CJR model by testing bundled payment for beneficiaries requiring emergency lower extremity joint surgery compared to testing episode payment for lower extremity surgeries that are mainly elective. We also acknowledge the concerns of the commenters around various proposed design elements of the SHFFT model, specifically the lack of risk adjustment to protect SHFFT model participants from undue financial risk for complex beneficiaries and the lack of quality measures that are specific to SHFFT beneficiaries in the pay-for-performance methodology to reward SHFFT model participants that improve quality for these beneficiaries and protect SHFFT beneficiaries from harm due to the model. We refer to sections III.D.4.b.(2) and III.E.2.d. of this final rule for further discussion of the comments on these issues and our responses.

We also appreciate the concerns of commenters regarding the proposed implementation time of the SHFFT model in the same MSAs as CJR participant hospitals, and the additional responsibilities this model would place on participants early in their CJR model implementation experience. However, we continue to believe that there are efficiencies in care redesign that can be achieved by testing the models concurrently at the same hospitals. We note that those commenters opposing CMS’ proposal to implement the SHFFT model did not dispute the care redesign opportunities identified by CMS for such a model. We refer to section III.D.2.a. of this final rule for a discussion on the proposed implementation timeline for the SHFFT model and our responses.

Final Decision: After consideration of the public comments received, we are finalizing the proposal to implement the SHFFT model, with modifications to specific policies as described throughout this final rule. We refer to section III.D.2.a. of this final rule for the implementation timeline that applies to the SHFFT model.

c. AMI and CABG Models

The AMI and CABG models, which we proposed to be tested at a single set of hospitals as discussed in section III.B.5. of the proposed rule (81 FR 50794), were selected to include all beneficiaries who have an AMI treated medically or with revascularization with PCI, as well as all beneficiaries who undergo CABG (whether performed during the care of an AMI or performed electively for stable ischemic heart disease or other indication). Both cardiac models represent clinical conditions that result in a significant burden of morbidity and expenditures in the Medicare population. CABG typically is the preferred revascularization modality for patients with ST (the part of an electrocardiogram between the QRS complex and the T wave) elevation AMI where the coronary anatomy is not amenable to PCI or there is a mechanical complication (for example, ventricular septal defect, rupture of the free wall of the ventricle, or papillary-muscle rupture with severe mitral regurgitation); for patients with CAD other than ST elevation AMI where there is left main coronary artery disease or multivessel disease with complex lesions; and for patients with clinically significant CAD in at least one vessel and refractory symptoms despite medical therapy and PCI.21 Despite the greater acute morbidity related to major cardiothoracic surgery, CABG is associated with lower longer-term rates of major adverse cardiac and cerebrovascular events in comparison to PCI for certain groups of patients.22 Moreover, a recent study found that in a group of patients with ischemic cardiomyopathy, the rates of death from any cause, death from cardiovascular causes, and death from any cause or hospitalization for cardiovascular causes were significantly lower over 10 years among patients who underwent CABG in addition to receiving medical

therapy than among those who received medical therapy alone.\textsuperscript{23} While about 30 percent of CABGs are performed during the care of AMIs, we proposed to include these particular AMI beneficiaries generally in the same episode as CABG for other indications, rather than in the AMI episode, since we anticipate hospitals will seek to improve the quality and efficiency of care for that surgical intervention, regardless of indication.\textsuperscript{24}

We proposed AMI as the episode for an EPM because we recognized it as a significant clinical condition for which evidence-based clinical guidelines are available for the most common AMI scenarios that begin with a beneficiary’s presentation for urgent care, most commonly to a hospital emergency department. The hospital phase involves medical management for all patients, as well as potential revascularization, most commonly with PCI. Secondary prevention and plans for long-term management begin early during the hospitalization, extend following hospital discharge, and are addressed in clinical guidelines.\textsuperscript{25,26} The AMI model is the first Innovation Center episode payment model that includes substantially different clinical care pathways (medical management and PCI) for a single clinical condition in one episode of care model and, as such, represents an important next step in testing episode payment models for clinical conditions which involve a variety of different approaches to treatment and management.

The American Heart Association estimates that every 42 seconds, someone in the United States has a myocardial infarction.\textsuperscript{27} AMI remains one of the most common diagnoses among Medicare FFS beneficiaries, and almost 20 percent of beneficiaries discharged for AMI are readmitted within 30 days of hospital discharge.\textsuperscript{28,29} In 2013, AMI was the sixth most common principal discharge diagnosis for hospitalized Medicare FFS beneficiaries, constituting 2.9 percent of discharges.\textsuperscript{30} Of the approximately 395,000 Medicare FFS beneficiaries with short-term acute care hospital discharges (excluding Maryland) for AMI in FY 2014, 60 percent were discharged under MS–DRGs proposed to be included in the AMI model, specifically 33 percent under AMI MS–DRGs and 25 percent under PCI MS–DRGs.\textsuperscript{31} An additional 3 percent of beneficiaries were in MS–DRGs for death from AMI in the hospital. Although 5 percent of beneficiaries with hospital discharges for AMI were discharged under CABG MS–DRGs, we note that because both PCI and fibrinolysis can restore blood flow in an acutely occluded coronary artery more quickly than CABG, these interventions are currently preferred to CABG in most cases of AMI. Furthermore, over recent years cardiovascular clinical practice patterns have gradually shifted away from surgical treatment of coronary artery occlusion toward percutaneous, catheter-based interventions.\textsuperscript{32} The remaining 34 percent of beneficiaries with AMI diagnoses were distributed across a heterogeneous group of over 300 other MS–DRGs, such as septicemia, respiratory system diagnosis with ventilator support, and major cardiovascular procedures. For this latter group of beneficiaries, the AMI diagnosis appeared in a secondary position on the hospital claim in more than 90 percent of the cases, therefore most likely representing circumstances where the beneficiary while hospitalized for another clinical condition experienced an AMI during the hospital stay. By focusing the AMI model on AMIs treated medically or with revascularization with PCI, we proposed to test a condition-specific EPM that was discretely defined and includes a significant majority of beneficiaries with AMI in the AMI model. In CYs 2012–2014, the average Medicare spending for an AMI episode that extends 90 days post-hospital discharge was approximately $24,200.\textsuperscript{33} From the AMI model, we expect to better understand the impact that such an EPM can have on efficiency and quality of care for beneficiaries across the entire spectrum of AMI care, including diagnosis, treatment, and recovery, as well as short-term secondary prevention.

Beneficiaries in the AMI and CABG models will all have CAD. In 2010 in the U.S., the prevalence of CAD in the population 65 years and older was about 20 percent.\textsuperscript{34} Patients with CAD also often experience other significant health conditions, including diabetes. To improve care for patients with CAD, most approaches in the private and public sectors focus on improving the efficiency and quality of care around procedures such as PCI and CABG. The BPCI models are an example of such an approach. As discussed previously in this section, our proposal for the AMI model extends beyond a procedure-based EPM to include beneficiaries hospitalized for medical management or PCI for AMI in a single EPM, and we proposed to test the CABG model, which also would include beneficiaries with AMI, at the same participant hospitals. We believe that hospitalization for AMI, whether accompanied solely by medical management or including revascularization during the initial hospitalization or in a planned CABG

\textsuperscript{23} Episodes for CABG beneficiaries initiated by all U.S. IPPS hospitals not in Maryland and constructed using standardized Medicare FFS Parts A and B claims, as proposed in the proposed rule that ended in CY 2014.

\textsuperscript{28} 29

\textsuperscript{30} Epstein et al. JAMA. 2011 May 4; 305(17):1769–76.

\textsuperscript{34} National Center for Chronic Disease Prevention and Health Promotion, Division for Heart Disease and Stroke Prevention, August 10, 2015.
readmission, is a sentinel event indicating the need for an increased focus on condition-specific management, as well as on care coordination and active management to prevent future acute events, both during the AMI and CABG episodes and beyond. We also believe that improving the quality and efficiency of CAD care over a long period of time is important given the chronic nature of this condition that has serious implications for beneficiary health.

The AMI and CABG models provide an opportunity for us to incentivize CAD-specific care management and care coordination for AMI and CABG model beneficiaries that lays the groundwork for longer-term improvements in quality and efficiency of care for beneficiaries with CAD. We note that the quality measures proposed for use in the pay-for-performance methodologies of the AMI and CABG models do not currently include longer-term outcomes or patient experience outside of the AMI or CABG episode itself, as discussed in sections III.E.2.b. and c. of the proposed rule (81 FR 50794), although we were interested in comments about potential future measures that could incorporate longer-term outcomes. Moreover, as discussed in section VI of the proposed rule (81 FR 50794), we also proposed to test a cardiac rehabilitation (CR)/intensive cardiac rehabilitation (ICR) incentive payment, hereinafter CR incentive payment, in AMI and CABG model participants located in some of the MSAs selected for AMI and CABG model participation, as well as in hospitals located in some of the MSAs that are not selected for AMI or CABG model participation. We proposed to evaluate the effects of the CR incentive payment in the context of an episode payment model and Medicare FFS on utilization of CR/ICR, as well as short-term (within the period of time extending 90 days following hospital discharge from an AMI or CABG hospitalization) and longer-term outcomes. We believe this test may result in valuable findings about effective strategies to increase utilization of CR/ICR services that have a strong evidence-base for their effectiveness but a long history of underutilization.

The following is a summary of the comments received and our responses. Comment: A number of commenters expressed support for the proposed AMI and CABG models, characterizing the proposals as a good first step toward achieving greater focus not only on cardiac care quality improvement but also care coordination for the anchor admission through post-acute care management of patients and families. Several commenters believe that CMS’ proposal to implement separate models for beneficiaries undergoing treatment for AMI versus CABG surgery was sensible given the typical recovery pathways experienced by beneficiaries. One commenter noted that while the majority of beneficiaries with AMI or CABG have CAD, not all will have this condition as CMS stated in the proposed rule (81 FR 50807).

Several commenters commended CMS for developing a clinically appropriate definition for AMI because AMI is a condition that can require a range of treatments, including both medical treatments and PCI. The commenters observed that the combination of AMI medical management and PCI into a single AMI episode is likely to present AMI model participants with greater opportunity than if the hospital managed just one of the MS–DRG groupings. They stated that the proposal to include both medical and PCI MS–DRG groupings in the AMI model would increase each hospital’s AMI episode volume relative to a single MS–DRG grouping, and further noted that sufficient volume in any bundled payment model is key to ensuring that financial results are not primarily driven by random variation.

Several commenters observed that the proposed AMI model would be the first Innovation Center bundled payment model to combine medical and procedural care in a single episode and that the majority of beneficiaries in the AMI model would be experiencing a life-threatening emergency. These commenters believe the proposed AMI model has the potential for patient harm and serious unintended consequences and recommended CMS to maintain a dialogue with practicing clinicians from medical specialty and subspecialty societies so that unintended consequences are caught early. One commenter recommended that CMS reframe the proposed AMI model to be treatment-based, separating beneficiaries with AMI into two different treatment-based EPMs based on medical management or PCI. The commenter contended that this approach would be more straightforward for model participants and allow CMS to conduct longer-term analyses of BPCI-like models in a more representative cross-section of hospitals.

Other commenters recommended that CMS pursue only the CABG model, arguing that the proposed AMI model, with complex, care pathway-dependent prices and transfer pathways, would influence attribution and result in serious uncertainties for AMI model participants. One commenter reasoned that isolated CABG procedures are particularly well-positioned for a bundled payment model that requires participation because, despite the availability of robust clinical guidelines, variability in the costs and outcomes of CABG persist. The commenter noted that other entities, such as Arkansas and Tennessee Medicaid, Washington State’s Bree Collaborative, and commercial payers, have seen the potential to improve the cost and quality of CABG through the implementation of bundled payments. Several commenters stated that initial implementation of the CABG model alone would allow CABG model participants to focus efforts on a specific population that includes the opportunity to excel in the care of CAD and gain some experience in the care of emergent patients. This limited implementation strategy would allow model participants to start to develop systems and models of care that address the unique needs of these populations in a value-driven equation. The commenters added that as hospitals work through implementation and gain experience with the CABG model, CMS could then phase in the inclusion of the much more complicated AMI model, which would introduce a myriad of factors that would add to the complexity of EPMs in which the hospital was a participant.

Another commenter who did not favor implementation of the proposed AMI model reasoned that, in addition to the built-in incentives of MS–DRGs that currently reward hospitals and physicians for complications that occur during the beneficiary’s hospitalization by providing a higher IPPS payment for beneficiaries with complications, the proposed AMI model lacked incentives to manage beneficiaries to reduce CAD complications such as AMI. Instead, the commenter stated that the proposed AMI model would incentivize admitting patients who are marginally symptomatic for AMI that is a complication of CAD, contrary to the overall goals of EPMs to lower the incidence of complications. The commenter cited a body of research that has shown that optimal management of CAD can significantly lower the incidence of AMI. The commenter recommended CMS to move toward condition-specific episode payment defined by diagnosis codes, and to halt implementation of an event-based EPM for AMI that is, in itself, a complication from the lack of optimal management of CAD. The commenter also stated that CMS should implement site-agnostic
PCI episodes so the incentives under the model would be to provide care in the place of service best suited for the patient. Another commenter expressed concerns about bundling AMI care, as it encompasses a broad spectrum of many different complex illnesses. Several commenters observed that while some AMI patients require less complex care, other patients are admitted with multiple comorbidities and require a higher intensity of care, which may involve multiple organs and a variety of care resources. Other commenters believe that CMS should provide the AMI model as proposed, more beneficiaries would move into the CABG model because of the AMI model financial incentives, which would not be in the best interests of beneficiaries.

While some commenters recommended a short implementation delay for the AMI and/or CABG models, several other commenters recommended that CMS delay the AMI and CABG models, with recommendations ranging from 6 to 36 months. These commenters believe that CMS should provide sufficient time for CMS to incorporate known best practices from the Healthcare Payment Learning and Action Network (LAN) Clinical Episode Payment (CEP) Work Group and lessons learned from both the BPCI and CJR models into the design of the cardiac EPMs. Otherwise, the commenters were concerned that the cardiac EPMs would both put beneficiaries at risk and disadvantage providers, as the episodes would be built using designs that were not supported by CMS’ own panel of industry experts.

Some commenters expressed concern about expanding EPMs to complex conditions such as AMI and CABG, where treatment can follow multiple evidence-based care pathways. One commenter pointed out that the proposed AMI and CABG models would generally include beneficiaries receiving unplanned care due to an acute event, making the population’s care difficult to manage. The commenter requested that CMS not implement the proposed cardiac EPMs. Several commenters stated that the complexity of the proposed cardiac EPMs was so great that CMS had essentially proposed a completely different payment system for cardiac care and would provide EPM participants with little time to prepare and plan for implementation. The commenters believe that decisions about appropriate care should be made by physicians and their patients and should be based on each patient’s medical necessity and care preferences. They stated that bundling clinically complex episodes with multiple care pathways may lead to factors other than medical necessity and care preferences influencing the decisions that providers make, and that such decisions could have a long-term impact on a patient’s health and well-being and may increase costs in the long run while achieving the short-term goal of reducing episodic costs. The commenters believe that this potentially serious issue warranted immediate attention by CMS, given the lack of evidence on the impact of the EPMs on key patient-centered outcomes, and concluded that the proposed EPMs require further consideration and study before additional bundling initiatives are implemented.

MedPAC stated that the proposed AMI episodes did not appear to be a promising place to further test bundled payment because AMI episodes have relatively low post-acute care use and the associated post-acute care spending makes up a small share of total episode spending. They concluded that savings opportunities for participating providers would be smaller compared with other conditions. Consistent with the observations of a few other commenters, MedPAC stated that complex medical conditions such as AMI do not involve a single clinical pathway but rather can involve patient transfers to hospitals with more intensive cardiac capabilities and subsequent readmissions for CABG. While MedPAC acknowledged that CMS’ proposed rule addressed these issues, they noted that if the benchmark prices are not accurate, the prices could inadvertently shape clinical practice or encourage selective admissions. Instead of an EPM, MedPAC suggested that CMS consider allowing hospitals to share savings with physicians as a way to focus physicians on reducing the cost of the inpatient stay for AMI care.

MedPAC further concluded that CABG was also not an ideal condition for testing bundled payment models because, although the majority of beneficiaries undergoing CABG go on to use post-acute care services, the spending on post-acute care services is relatively low compared to other clinical conditions. They noted that with the inpatient stay comprising the vast majority of total episode spending, the opportunities to realize savings by changing clinical practice would be small. MedPAC presented an additional concern regarding the potential for undesirable provider responses to financial incentives, including patient selection, in the proposed CABG model. They claimed that providers of cardiac care have been shown to engage in patient selection and expressed concern that, with larger savings at stake, these behaviors could increase. They recommended that CMS delay testing the CABG model until the benefits of episode efficiency outweigh the concerns about patient selection.

Response: We appreciate the support of some of the commenters for our proposal to implement the AMI and CABG models. The proposed cardiac models represent clinical conditions that result in a significant burden of morbidity and expenditures in the Medicare population. However, we acknowledge the great diversity of views about the AMI and CABG models reflected in the comments. We proposed AMI as the episode for an EPM because we recognized it as a significant clinical condition for which evidence-based clinical guidelines are available for the most common AMI scenarios that begin with a beneficiary’s presentation for urgent care, most commonly to a hospital emergency department. The hospital phase involves medical management for all patients, as well as potential revascularization, most commonly with PCI. As commenters observed, the AMI model is the first Innovation Center episode payment model that includes substantially different clinical care pathways (medical management and PCI) for a single clinical condition in one episode in a model. In this sense the AMI model is a condition-specific EPM, although it is not focused on the underlying CAD condition that puts some beneficiaries at risk for the AMI but rather on the AMI itself. While we recognize that AMI may be a complication of care from inadequately managed CAD, we continue to believe that there is an important role for the AMI model in testing bundled payment for beneficiaries with AMI who follow a variety of clinical pathways because AMI is a sentinel event indicating the need for an increased focus on condition-specific management. The proposed 90 day post-discharge episode duration would provide a springboard to heighten the focus on CAD-specific management. While future models may focus on CAD management itself, including reducing the risk of AMI, in addition to the current Million Hearts® Cardiovascular Disease Risk Reduction Model, we believe that the proposed AMI model also plays an important role in testing an EPM for this clinical condition which is not always avoidable even in the context of the best practices to manage CAD on an ongoing basis.

We believe that it is important to test EPMs like the AMI model where
beneficiaries can follow multiple clinical pathways, including transfers among hospitals with different cardiac care capacity because, more commonly than not, beneficiaries who are hospitalized for an emergent clinical condition do not constitute as homogeneous a group as those who choose to undergo elective surgery. However, there likely are significant opportunities to improve the quality and efficiency of episode care through care redesign that improves care coordination and management for beneficiaries unexpectedly hospitalized for treatment following a cardiac event. We disagree with the commenter who recommended that we create two treatment-based EPMs, AMI medical management and PCI, because, in the context of our proposed pricing methodology that sets MS–DRG-specific EPM–episode benchmark prices and quality-adjusted target prices as discussed in section III.D.4.b.(1). of this final rule, we believe we can appropriately include beneficiaries following the two different treatment approaches in the same EPM without concern that the financial incentives of the EPM are influencing the treatment choice for beneficiaries.

We appreciate the support of many commenters for the proposed CABG model. We believe that CABG may play a role for some beneficiaries with symptomatic CAD, either with or without AMI, because CABG is associated with lower longer-term rates of major adverse cardiac and cerebral vascular events in comparison to PCI for certain groups of patients. As a number of commenters pointed out, multiple other entities, including states, are testing CABG bundled payment models due to the variability in costs and outcomes despite robust clinical guidelines.

In response to those commenters who recommended that the AMI and CABG models be delayed in order to incorporate known best practices from the LAN CEP Work Group, we note that the LAN is a public-private partnership established by the U.S. Department of Health and Human Services (HHS) to increase the adoption of APMs that promote better care, smarter spending, and healthier people. The LAN has a voluntary collaborative structure and its consensus recommendations do not necessarily reflect the views of its individual participants. Representatives from CMS, along with representatives from states, purchasers, providers, commercial payers, and consumers, were active participants in the CEP Work Group and developed, with input from the broader LAN network, a set of recommendations that reflect a consensus view, balancing innovation with current practice to move the health care delivery system forward. The CEP Work Group full recommendations have not yet been tested in the market. The LAN CEP Work Group recommendations and the proposed CMS CABG and AMI EPMs, although incorporating different design features, both support the implementation of episode-based payment models for cardiac care. We anticipate that both the LAN recommendations and the CMS AMI and CABG models will expand provider experience and expertise regarding the necessary resources and most effective strategies for providing high quality, efficient care through episode-based payment models and will help prepare the market for further adoption of innovative payment models in the future. Therefore, we believe that best practices for episode payment models are continuously being identified and refined based on providers’ actual implementation experiences with episode payment models of various designs. Rather than redesigning the proposed cardiac care models to conform to the LAN CEP Work Group recommendations, we look forward to testing the AMI and CABG models based on the policies included in this final rule and sharing our evaluation findings with stakeholders to inform other episode payment models for cardiac care.

We do not agree with MedPAC’s conclusion that the proposed AMI and CABG models may be too broad because of limited post-acute care spending in AMI episodes and the high percentage of CABG episode spending due to the anchor hospitalization in CABG episodes coupled with the risk of patient selection due to the financial incentives of the CABG model. While care redesign to improve the efficiency of post-acute care use may be an obvious strategy to address variation in episode spending for those episodes, such as SHF and LEJR episodes with high utilization of post-acute care services, AMI and CABG beneficiaries have substantial episode spending during 90 days post-discharge from the anchor hospitalization as a result of complications, further treatment, and ongoing care management of their underlying chronic conditions. We believe that increased efficiencies in the post-discharge care and improved care coordination represent a significant opportunity to improve the quality and reduce the cost of AMI and CABG episodes.

As commenters pointed out, the cardiac EPMs create some risks of harm to beneficiaries from patient selection and different treatment choices EPM participants could adopt based on the financial incentives under the EPMs, although we believe these concerns are generally present for every episode payment model that sets a price that Medicare pays for an episode-of-care. As discussed further in sections III.G.4. through 6. of this final rule, we will take steps to prevent potential harm by monitoring for access to care, quality of care, and delayed care under the EPMs and may take remedial action against EPM participants if we find evidence that supports concerns in these areas. In addition, the evaluation as discussed in section IV. of this final rule will analyze beneficiary outcomes and their relationship to clinical pathways under the EPMs.

We refer to section III.D.2.a. of this final rule for a discussion of the comments on the proposed implementation timeline for the AMI and CABG models and our responses. Final Decision: After consideration of the public comments received, we are finalizing the proposal to implement the AMI and CABG models, with modifications to specific policies as described throughout this final rule. We refer to section III.D.2.a. of this final rule for the implementation timeline that applies to the AMI and CABG models.

2. Advanced Alternative Payment Model Considerations

For ease of reading the subsequent sections regarding our proposals and our final policies around the EPMs as Advanced APMs, we first present the proposals outlined in the Quality Payment Program proposed rule (81 FR 28161) followed by the policies outlined in the Quality Payment Program final rule with comment period (81 FR 77008).

a. Overview for the EPMs

The MACRA created two paths for eligible clinicians to link quality to payments: The MIPS and Advanced APMs. These two paths create a flexible payment system called the Quality Payment Program as proposed by CMS in the Quality Payment Program proposed rule (81 FR 28161 through 28586).

As proposed in the Quality Payment Program proposed rule, an APM must meet three criteria to be considered an Advanced APM (81 FR 28298). First, the APM must provide for payment for covered professional services based on quality measures comparable to measures described under the performance category described in section 1848(g)(2)(B)(i) of the Act,
which is the MIPS quality performance category. We interpret this criterion to require the APM to incorporate quality measure results as a factor when determining payment to participants under the terms of the APM. Under the Quality Payment Program proposed rule, we proposed that the quality measures on which the Advanced APM bases payment for covered professional services (as that term is defined in section 1848(k)(3)(A) of the Act) must include at least one of the following types of measures, provided that they have an evidence-based focus and are reliable and valid (81 FR 28302):

- Any of the quality measures included on the proposed annual list of MIPS quality measures.
- Quality measures that are endorsed by a consensus-based entity.
- Quality measures developed under section 1848(s) of the Act.
- Quality measures submitted in response to the MIPS Call for Quality Measures under section 1848(q)(2)(D)(ii) of the Act.
- Any other quality measures that CMS determines to have an evidence-based focus and be reliable and valid.

As we discussed in the Quality Payment Program proposed rule, because the statute identifies outcome measures as a priority measure type and we wanted to encourage the use of outcome measures for quality performance assessment in APMs, we further proposed in that rule that, in addition to the general quality measure requirements, an Advanced APM must include at least one outcome measure if an appropriate measure is available on the MIPS list of measures for that specific QP Performance Period, determined at the time when the APM is first established (81 FR 28302 through 28303).

Second, the APM must either require that participating APM Entities bear risk for monetary losses of a more than nominal amount under the APM or be a Medical Home Model expanded under section 1115A(c) of the Act. Except for Medical Home Models, we proposed in the Quality Payment Program proposed rule that, for an APM to meet the nominal amount standard, the specific level of marginal risk must be at least 30 percent of losses in excess of expected expenditures; a minimum loss rate, to the extent applicable, must be no greater than 4 percent of expected expenditures; and total potential risk must be at least 4 percent of expected expenditures (81 FR 28306).

Third, the APM must require participants to use CEHRT (as defined in section 1848(o)(4) of the Act), as specified in section 1833(e)(3)(D)(i)(I) of the Act, to document and communicate clinical care with patients and other health care professionals. Specifically, where the APM participants are hospitals, the APM must require each hospital to use CEHRT (81 FR 28298 through 28299).

In the proposed rule (81 FR 50794), we proposed to adopt two different tracks for the EPMs—Track 1 in which EPMs and EPM participants would meet the criteria for Advanced APMs as proposed in the Quality Payment Program proposed rule, and Track 2 in which the EPMs and EPM participants would not meet those proposed criteria. For the proposed AMI, CABG, and SHFFT models, we proposed pay-for-performance methodologies that use quality measures that we believe would meet the proposed Advanced APM quality measure requirements in the Quality Payment Program proposed rule. As discussed in sections III.E.2. and 3. of the proposed rule (81 FR 50794), all but one of the AMI, CABG, and SHFFT model measures used in the EPM pay-for-performance methodologies are NQF-endorsed and have an evidence-based focus and are reliable and valid. Therefore, we believe they would meet the proposed Advanced APM general quality measure requirements. The Excess Days in Acute Care after Hospitalization for AMI (AMI Excess Days) measure, which was proposed for the AMI model, is not currently NQF-endorsed, but was reviewed, recommended for endorsement, and is expected to be formally endorsed within the first quarter of 2017. We believe it meets the measure requirements by having an evidence-based focus and being reliable and valid because this measure has been proposed and adopted through rulemaking for use in the Hospital Inpatient Quality Reporting (HQQR) Program.

Each of the proposed EPM pay-for-performance methodologies included one outcome measure that is NQF-endorsed, has an evidence-based focus, and is reliably tracked. The EPM quality measures were measured in detail in section III.E. of the proposed rule (81 FR 50794), where we assigned the quality measures to quality domains. For the AMI model, we proposed to use the Hospital 30-Day, All-Cause, Risk-Standardized Mortality Rate (RSMR) Following Acute Myocardial Infarction (NQF #0230) (MORT–30–AMI) outcome measure. For the CABG model, we proposed to use the Hospital 30-Day, All-Cause, Risk-Standardized Mortality Rate (RSMR) Following Coronary Artery Bypass Graft (CABG) Surgery (NQF# 2558) (MORT–30–CABG) outcome measure. Finally, for the SHFFT model, we proposed to use the Hospital-level RSCR following elective primary THA and/or TKA (NQF #1550) (Hip/Knee Complications) outcome measure. Thus, based on the proposed use of these three outcomes measures in the EPMs, we believed the proposed AMI, CABG, and SHFFT models would meet the requirement proposed for Advanced APMs in the Quality Payment Program proposed rule for use of an outcome measure that also meets the general quality measure requirements.

In terms of the proposed nominal risk criteria for Advanced APMs, beginning in performance year 2 for episodes ending between April 1, 2018 and December 31, 2018, we proposed that EPM participants would begin to bear downside risk for excess actual EPM-episode spending above the quality-adjusted target price as discussed in section III.D.2.c. of the proposed rule (81 FR 50794). The marginal risk for excess actual EPM-episode spending above the quality-adjusted target price would be 10 percent over the range of spending up to the stop-loss limit, which would exceed 30 percent marginal risk, and there would be no minimum loss rate. As a result, we believed the EPMs would meet the marginal risk and minimum loss rate elements of the nominal risk criteria for Advanced APMs proposed in the Quality Payment Program proposed rule. We proposed that total potential risk for most EPM participants would be 5 percent of expected expenditures beginning in the second quarter of performance year 2, and increasing in subsequent performance years as discussed in section III.D.7.b. of the proposed rule (81 FR 50794). Therefore, in the proposed rule, we stated our belief that the total proposed potential risk applicable to most EPM participants, with the lowest total potential risk being 5 percent for EPM episodes ending on or after April 1, 2018 in performance year 2, would meet the total potential risk element of the nominal risk amount standard for Advanced APMs proposed in the Quality Payment Program proposed rule because it was greater than the value of at least 4 percent of expected expenditures.

We note that we proposed that EPM participants that are rural hospitals, sole community hospitals (SCHs), Medicare Dependent Hospitals (MDHs) and Rural Referral Centers (RRCs) would have a stop-loss limit of 3 percent beginning in the second quarter of performance year 2 as discussed in section III.D.7.c. of the proposed rule (81 FR 50794). Because 3 percent was less than the proposed...
threshold of at least 4 percent of expected expenditures for total potential risk proposed for Advanced APMs in the Quality Payment Program proposed rule, those rural hospitals, SCHs, MDHs, and RRCs that are EPM participants subject to special protections would be in Track 2 EPMs that would not meet the proposed nominal risk standard for Advanced APMs for performance year 2. We recognized that this proposal might initially limit the ability of rural hospitals, SCHs, MDHs, and RRCs to be in Track 1 EPMs that are Advanced APMs. In the proposed rule, we explained our belief that this potential limitation on rural hospitals, SCHs, MDHs, and RRCs is appropriate for the following reasons: (1) Greater risk protections for these hospitals proposed for the EPMs beginning in the second quarter of performance year 2 and subsequent performance years compared to other EPM participants are necessary, regardless of their implications regarding Advanced APMs based on the nominal risk standard proposed in the Quality Payment Program proposed rule, because these hospitals have unique challenges that do not exist for most other hospitals, such as being the only source of health care services for beneficiaries or certain beneficiaries living in rural areas or being located in areas with fewer providers, including fewer physicians and post-acute care facilities; and (2) under the risk arrangements proposed for the EPMs, these hospitals would not bear an amount of risk in performance year 2 that we determined to be more than nominal in the Quality Payment Program proposed rule. However, we sought comment on whether we should allow EPM participants that are rural hospitals, SCHs, MDHs, or RRCs to elect a higher stop-loss limit for the part of performance year 2 where downside risk applies in order to permit these hospitals to be in Track 1 EPMs for that part of performance year 2. We noted that by performance year 3, the stop-loss limit for these hospitals with special protections under the EPMs would increase to 5 percent under our proposal, so these hospitals could be in Track 1 EPMs based on the nominal risk standard proposed in the Quality Payment Program proposed rule.

As addressed in the Quality Payment Program proposed rule, it would be necessary for an APM to require the use of CEHRT in order to meet the criteria to be Advanced APMs, we proposed to require EPM participants to use CEHRT (as defined in section 1848(o)(4) of the Act) to participate in Track 1 of the EPMs. We proposed that Track 1 EPM participants must use certified health IT functions, in accordance with the definition of CEHRT under our regulation at § 414.1305 (81 FR 77537), to document and communicate clinical care with patients and other health care professionals as proposed in the Quality Payment Program proposed rule (81 FR 28299). We believed this proposal would allow Track 1 EPMs to be able to meet the proposed criteria to be Advanced APMs.

Without the collection of identifying information on eligible clinicians (physicians, non-physician practitioners, physical and occupational therapists, and qualified speech-language pathologists) who would be considered Affiliated Practitioners as proposed in the Quality Payment Program proposed rule under the EPMs, CMS would not be able to consider participation in the EPMs in making determinations as to whom could be considered a QP (81 FR 28320). As detailed in the Quality Payment Proposed rule, these determinations are based on whether the eligible clinician meets the QP threshold under either the Medicare Option starting in payment year 2019 or the All-Payer Combination Option, which is available starting in payment year 2021 (81 FR 28165). Thus, we made proposals in the following sections to specifically address these issues that might otherwise preclude the EPMs from being considered Advanced APMs, or prevent us from operationalizing them as Advanced APMs. Based on the proposals for Advanced APM criteria in the Quality Payment Program proposed rule, we sought to align the design of the proposed EPMs with the proposed Advanced APM criteria and enable CMS to have met or exceeded the requisite QP determinations.

For ease of reading the subsequent sections regarding our proposals and final policies for the EPMs as Advanced APMs, we present the following definitions from § 414.1305 that have now been finalized in the Quality Payment Program final rule with comment period (81 FR 77008).

Alternative Payment Model (APM) means any of the following: (1) A model under section 1115A of the Act (other than a health care innovation award); (2) a shared savings program under section 1899 of the Act; or (3) A demonstration under section 1866C of the Act. (4) A demonstration required by federal law.

Episode payment model means an APM or other payer arrangement designed to improve the efficiency and quality of care for an episode of care by bundling payment for services furnished to an individual over a defined period of time for a specific clinical condition or conditions.

APM Entity means an entity that participates in an APM or payment arrangement with a non-Medicare payer through a direct agreement or through Federal or State law or regulation.

Advanced Alternative Payment Model (Advanced APM) means an APM that CMS determines meets the criteria set forth in § 414.1415.

Advanced APM Entity means an APM Entity that participates in an Advanced APM or Other Payer Advanced APM.

Participation List means the list of participants in an APM Entity that is compiled from a CMS-maintained list.

Eligible Clinician means "eligible professional" as defined in section 1848(k)(3) of the Act, as identified by a unique TIN and NPI combination and, includes any of the following: (1) A physician; (2) A practitioner described in section 1842(b)(18)(C) of the Act; (3) A physical or occupational therapist or a qualified speech language pathologist; or (4) A qualified audiologist (as defined in section 1861(ll)(3)(B) of the Act).

Affiliated Practitioner means an eligible clinician identified by a unique APM participant identifier on a CMS-maintained list who has a contractual relationship with the Advanced APM Entity for the purposes of supporting the Advanced APM Entity’s quality or cost goals under the Advanced APM.

Affiliated Practitioner List means the list of Affiliated Practitioners of an APM Entity that is compiled from a CMS-maintained list.

Qualifying APM Participant (QP) means an eligible clinician determined by CMS to have met or exceeded the relevant QP payment amount or QP patient count threshold under § 414.1435(a)(1), (a)(3), (b)(1), or (b)(3) for a year based on participation in an Advanced APM Entity.

QP Patient Count Threshold means the minimum threshold score specified in § 414.1430(a)(3) and (b)(3) that an eligible clinician must attain through a patient count methodology described in §§ 414.1435(b) and 414.1440(c) to become a QP for a year.

QP Payment Amount Threshold means the minimum threshold score specified in § 414.1430(a)(1) and (b)(1) that an eligible clinician means "must attain through the payment amount methodology described in
§§ 414.1435(a) and 414.1440(b) to become a QP for a year.

Threshold Score means the percentage value that CMS determines for an eligible clinician based on the calculations described in § 414.1435 or § 414.1440.

Merit-based Incentive Payment System (MIPS) means the program required by section 1848(q) of the Act.

MIPS APM means an APM that meets the criteria specified under § 414.1370(b).

Improvement Activities means an activity that relevant MIPS eligible clinicians, organizations and other relevant stakeholders identify as improving clinical practice or care delivery and that the Secretary determines, when effectively executed, is likely to result in improved outcomes.

Based on the proposals for Advanced APM criteria in the Quality Payment Program proposed rule (81 FR 28161), we sought to align the design of the proposed EPM Advanced APM track with the proposed Advanced APM criteria and enable CMS to have the necessary information on Eligible Clinicians to make the requisite QP determinations. As detailed in the Quality Payment Program final rule with comment period, QP determinations are based on whether the Eligible Clinician meets the QP threshold under either the Medicare Option starting in payment year 2019 or the All-Payer Combination Option, which is available starting in payment year 2021 (81 FR 77013). Eligible clinicians seeking QP determinations as early as performance year 2 would need to meet the QP threshold under the Medicare Option. The three criteria for an Advanced APM were finalized in the Quality Payment Program final rule with comment period (81 FR 77008), and we continue to align the design of the finalized EPMs with the finalized Advanced APM criteria so that EPM participants who choose to use and attest to use of CEHRT may participate in an EPM that meets the criteria of an Advanced APM. To be determined to be an advanced APM, an APM must meet three Advanced APM criteria identified in § 414.1415 and discussed specifically later in this section.

First, the APM must require participants to use CEHRT (as defined in section 1848(o)(4) of the Act), as specified in section 1833(z)(3)(D)(i)(I) of the Act, to document and communicate clinical care with patients and other health care professionals (81 FR 77406). Specifically, where the APM participants are rural hospitals, SCHs, MDHs, RRCs, the APM must require each hospital to use CEHRT. As addressed in the Quality Payment Program final rule with comment period, it is necessary for an APM to require the use of CEHRT in order to meet the criteria to be considered to be an Advanced APM. Therefore, according to the requirements now finalized in the Quality Payment Program final rule with comment period, so that the EPMs may meet the finalized criteria to be Advanced APMs, we proposed that those EPM participants who choose to participate in Track 1 of the EPMs must use certified health IT functions, in accordance with the definition of CEHRT under our regulation at 42 CFR 414.1305, to document and communicate clinical care with patients and other health care professionals. We believe that this proposal set forth in the EPM proposed rule would allow EPM participants who use and attest to use of CEHRT to be in an EPM that meets the first finalized Advanced APM criterion.

Second, the APM must provide for payment to participants based on performance on quality measures comparable to measures described under the performance category described in section 1848(q)(2)(B)(i)(I) of the Act, which is the MIPS quality performance category. We interpret this criterion to require the APM to incorporate quality measure results as a factor when determining payment to participants under the terms of the APM as described in the Quality Payment Program final rule with comment period (81 FR 77414). In order to align the EPMs with the Quality Payment Program final rule with comment period, the quality measures on which the Advanced APM bases payment to participants must include at least one of the following types of measures, provided that they have an evidence-based focus and are reliable and valid (81 FR 77418):

- Any of the quality measures included on the proposed annual list of MIPS quality measures.
- Quality measures that are endorsed by a consensus-based entity.
- Quality measures developed under section 1848(q)(4) of the Act.
- Quality measures submitted in response to the MIPS Call for Quality Measures under section 1848(q)(2)(D)(ii) of the Act.

Any other quality measures that CMS determines to have an evidence-based focus and be reliable and valid. As discussed in the Quality Payment Program final rule with comment period, because the statute identifies outcome measures as a priority measure type and we want to encourage the use of outcome measures for quality performance assessment in APMs, we further finalized in that rule that, in addition to the general quality measure requirements, an Advanced APM must include at least one outcome measure if an appropriate measure is available on the MIPS list of measures for that specific QP Performance Period, determined at the time when the APM is first established (81 FR 77418).

Therefore, according to the requirements finalized in the Quality Payment Program final rule with comment period and the quality measures finalized in section III.E of this final rule that are the proposed EPM quality measures with an additional voluntary measure for the CABG model, the EPMs will meet the second finalized criterion of the Advanced APM criteria.

Third, the Quality Payment Program final rule with comment period requires that for an APM to meet the Advanced APM criteria, the APM must either require that participating APM Entities bear risk for monetary losses of a more than nominal amount under the APM or be a Medical Home Model expanded under section 1115A(c) of the Act. For the purposes of the EPM, the generally applicable nominal amount standard for an Advanced APM in the Quality Payment Program final rule with comment period (81 FR 77425) means the total amount an APM Entity potentially owes CMS or foregoes under an APM must be at least equal to 3 percent of the expected expenditures for which an APM Entity is responsible under the APM. The generally applicable financial risk standard (81 FR 77422) means when an APM Entity’s actual expenditures for which the APM Entity is responsible under the APM exceed expected expenditures during a specified QP Performance Period, the APM Entity is required to owe payment(s) to CMS. We refer to the Quality Payment Program final rule with comment period for a discussion regarding why we did not finalize the specific level of marginal risk or minimum loss rate (81 FR 77426). However, consistent with the commitments we made to adhere to the proposed marginal risk and minimum loss rate requirements in the Quality Payment Program proposed rule, we note that the financial risk in this final rule when the EPMs involve downside risk exceeds the proposed marginal risk and minimum loss rate requirements proposed for the Quality Payment Program. As discussed in sections III.D.7.b. and c. and displayed in Table 12 of this final rule, the final total initial risk of expected expenditures for EPM participants of 5 percent, and 3 percent for rural hospitals, SCHs, MDHs, RRCs,
and EPM volume protection hospitals subject to separate stop-loss protections, beginning in performance year 3 when downside risk for all participants first applies, would meet the total potential risk element of the nominal risk amount standard for Advanced APMs finalized in the Quality Payment Program final rule with comment period (81 FR 77427) because they are greater than or equal to the value of at least 3 percent of expected expenditures. Those EPM participants who elect voluntary downside risk beginning in performance year 2 will be subject to the same total risk of expected expenditures in performance year 2 and, therefore, will be in an EPM that meets the total potential risk element of the nominal risk amount standard for Advanced APMs beginning in performance year 2. Therefore, according to the requirements finalized in the Quality Payment Program final rule with comment period and the payment methodology for EPM participants finalized in section III.D of this final rule, those EPM participants who voluntarily elect downside risk for EPM episodes ending on or after January 1, 2018 will be in an EPM that meets the third finalized criterion of the Advanced APM criteria in performance year 2. All other EPM participants will be in an EPM that meets the third finalized criterion of the Advanced APM criteria in performance year 3.

Finally, we finalized in the Quality Payment Program final rule with comment period (81 FR 77442) that for Advanced APMs, such as episode payment models, in which there are some Advanced APM Entities that include Eligible Clinicians on a Participation List and other Advanced APM Entities that identify Eligible Clinicians only on an Affiliated Practitioner List, we will identify Eligible Clinicians for QP determination based on the composition of the Advanced APM Entity. In the scenario that applies to the EPM which includes only hospitals as Advanced APM Entities on the Participation List, for those Advanced APM Entities where there is an Affiliated Practitioner List that identifies Eligible Clinicians, that Affiliated Practitioner List will be used to identify the Eligible Clinicians for purposes of QP determinations, and those Eligible Clinicians will be assessed individually. Thus, to operationalize the EPM as an Advanced APM, our proposal for the EPM to identify Eligible Clinicians on a clinician financial arrangements list to construct the Affiliated Practitioner list would identify those Eligible Clinicians for purposes of QP determination, consistent with the policies finalized in the Quality Payment Program final rule with comment period.

We received a number of public comments on our proposals for the EPMs as Advanced APMs. A few commenters requested changes to the policies proposed by CMS in the Quality Payment Program proposed rule and not to specific proposals for the EPMs set forth in the EPM proposed rule. These comments are out of scope for this rulemaking and no responses are provided in this final rule. Nevertheless, we have summarized this feedback related to the Quality Payment Program proposed rule, as CMS will continue work to improve the Quality Payment Program in part through future notice and comment rulemaking.

One commenter requested change to the definition of Affiliated Practitioner to include rehabilitation therapists. Many commenters requested changes to the definitions of Affiliated Practitioner List and/or Participation List to identify Eligible Clinicians for purposes of Advanced APMs, MIPS APMs, and the assignment by CMS of an Improvement Activities score, which fulfills one of four categories for MIPS assessment of cost and quality. Another commenter requested changes to the performance period or the December 31 date by which an Eligible Clinician could qualify for automatic credit for incentive payment and/or clinical Improvement Activities performance. This commenter reasoned that such changes would permit more Eligible Clinicians to receive a QP determination, which may qualify them for an APM incentive payment under MACRA. One commenter expressed uncertainty regarding the process by which Eligible Clinicians could receive a QP determination for the efforts of the EPM participant, and requested that CMS clarify on the pathway for participating physicians to be in an Advanced APM generally. Another commenter stated CMS should replace the QP determination with the proposal that, for EPM providers who meet the CEHRT use requirement and have 50 or more Medicare beneficiaries attributed to these EPMs, the threshold for Advanced APMs would be met automatically. A few commenters wanted CMS to use the Meaningful Use program to gather attestation to CEHRT use from hospitals. A few commenters strongly recommended CMS lower the patient count and payment revenue thresholds used in the calculation of the Threshold Score to meet QP Threshold Status as specified in the Quality Payment Program proposed rule. Many commenters urged CMS to work closely with the affected professional organizations and/or physician specialty societies to design QP thresholds. One commenter requested changes to the EPM Entity such that the APM Entity lose the right to all or part of otherwise guaranteed payment or payments as one of the options if the APM Entity’s actual aggregate expenditures exceed expected aggregate expenditures. A few commenters requested changes to the categorical exclusion that Medicare Advantage (MA) and other private plans paid to act as insurers on the Medicare program’s behalf are not Advanced APMs, in light of the amount of risk taken by physicians in MA. Finally, one commenter requested changes to the allow Independence at Home participants who use CEHRT to qualify for Advanced APM incentive payments.

The following is a summary of the comments received on our proposals and our responses.

Comment: MedPAC commented that the EPM and CJR models should not be considered Advanced APMs for the purposes of MACRA. MedPAC stated they believe the following six principles should apply to Advanced APMs: the Advanced APM entity should assume the financial risk and enroll clinicians; be at financial risk for total Part A and Part B spending; be responsible for a beneficiary population sufficiently large to detect changes in spending and quality; have the ability to share savings with beneficiaries; be provided certain regulatory relief by CMS; and the enrolled clinicians should receive an incentive payment only if the Advanced APM entity in which they participate is successful in controlling cost, improving quality, or both. Under the proposed EPMs, MedPAC believes the proposed rule contemplates large, loosely connected groups of clinicians who may have very little involvement with the beneficiaries in EPMs and hence have little reason to change their practice patterns or reduce inappropriate episodes. If CMS intends for clinicians to bear risk, MedPAC made the alternative proposal that they could do so directly without having the hospital as the intermediary.

Response: While we appreciate the principles for Advanced APMs offered by MedPAC, we note that according to the Advanced APM definition in the Quality Payment Program final rule with comment period (81 FR 77008), the Track 1 EPMs that we proposed qualify as Advanced EPMs as discussed previously in this section.

While we recognize EPM participants are the participating APM Entities for...
the purposes of the Quality Payment Program, CMS will consider participation of Eligible Clinicians in the Track 1 EPMs through collection of identifying information from Track 1 EPM participants on clinician financial arrangements lists as discussed in section III.A.2.c. of this final rule who would then be included on the Affiliated Practitioner List as defined in the Quality Payment Program final rule with comment period at § 414.1305 (81 FR 77537), in order to determine who could be considered a QP. The requirements for Eligible Clinicians to be reported on the clinician financial arrangements lists help ensure that these clinicians have specific involvement in caring for EPM beneficiaries and advancing the goals of the EPMs to improve the quality and reduce the cost of care. Finally, Eligible Clinicians can only be considered Qualifying Professionals or Partial Qualifying Professionals and, therefore, potentially be exempt from MIPS, if the Eligible Clinician meets the QP threshold or partial QP threshold as described in the Quality Payment Program final rule with comment period (81 FR 77433). Additionally, while we recognize the concerns with EPM participants or CJR participant hospitals intermediating the APM incentive payments, we believe that the QP threshold incentivizes Eligible Clinicians to work with such participants to improve health care delivery for Medicare beneficiaries.

The qualification of the CJR model as an Advanced APM is discussed in section V.O. of this final rule.

Comment: Many commenters expressed support for all organizations to have the opportunities to participate as Advanced APMs and noted that as proposed, rural hospitals, SCHs, MDHs, and RRCs that are EPM participants would not potentially qualify for participation in an Advanced APM until performance year 3 due to the proposed lower stop-loss limits for these hospitals under the EPMs. Additionally, one commenter recommended that a distinct CEHRT program be developed and funding be allocated for non-physician and non-prescribing professionals as soon as possible, as the cost of acquisition, implementation, and maintenance of an EHR is a significant barrier to adoption, particularly for small practices. One commenter observed this proposal as an important illustration of why CMS must be flexible in its definition of nominal risk, and how nominal will not mean the same thing for every provider. As such, commenters supported retention of the proposed stop-loss limits under the EPMs as the default rule for these hospitals, thus enabling them to meet the nominal financial risk standard for Track 1 EPMs (Advanced APMs) in performance year 3 rather than performance year 2 when other EPM participants would be eligible for Track 1 EPMs. However, commenters also believe CMS should also explore options to allow these hospitals with additional stop-loss protection under the EPMs to voluntarily elect a higher stop-loss limit in order to participate in Track 1 EPMs in performance year 2.

Response: The Quality Payment Program final rule with comment period (81 FR 77427) finalized the policy that an APM would meet the nominal amount standard for an Advanced APM if, under the terms of the APM, the total annual amount that an APM Entity potentially owes us or foregoes is equal to at least 3 percent of the expected expenditures for which an APM Entity is responsible under the APM. Therefore, rural hospitals, SCHs, MDHs, RRCs, as well as EPM volume protection agreements as discussed in section III.D.7.c. of this final rule, that are EPM participants with special stop-loss limits could potentially qualify as being in an Advanced APM as participants in a Track 1 EPM in performance year 3, along the same timeframe as all other EPM participants when downside risk for all participants is implemented, or in performance year 2 when voluntary downside risk may be elected by EPM participants (section III.D.2.c. of this final rule), based on the stop-loss limits finalized in this rule for these hospitals as discussed in section III.D.7.c. of this final rule.

Comment: Commenters proposed alternative processes by which a QP determination could be made, including collective assessment of QP status across both the AMI and CABG models, so as not to create siloed EPMs. In cases where there is an overlap of beneficiaries in more than one CMS model or program, other commenters proposed that beneficiaries should be counted toward a physician’s QP Threshold Score (a part of a QP determination) if a beneficiary would have been assigned to a particular model if it were not for the fact that a different model that has required participation overlapped.

Response: The QP determination discussed in the Quality Payment Program final rule with comment period depends on the level of payments or patients furnished services through an Advanced APM based on the calculations described on § 414.1435 and § 414.1440, as applicable. Under certain Advanced APMs such as a Track 1 EPM, the responsibility of cost and quality measurement and reporting is with EPM participants that are hospitals rather than Eligible Clinicians. However, we have specified that Eligible Clinicians who are on Affiliated Practitioner Lists may also be assessed for a QP determination based on their Affiliated Practitioner status if there are no eligible clinicians on an Advanced APM’s Participation List. As such, finalized in the Quality Payment Program final rule with comment period (81 FR 77443), if an Eligible Clinician participates in multiple Advanced APM Entities during a QP Performance Period, and is not determined to be a QP based on participation in any of those Advanced APM Entities, then we will assess the Eligible Clinician individually using combined information for services associated with that individual’s NPI and furnished through all the Eligible Clinician’s Advanced APM Entities during the QP Performance Period. This includes all Advanced APM Entities for which the Eligible Clinician is represented on either a Participation List or Affiliated Practitioner List that CMS uses for QP determinations. We will make adjustments to ensure that payments and payments for services that may be counted in the QP calculations for multiple Advanced APM Entities (for example, payments for services furnished to a beneficiary attributed to an ACO that are also part of an episode in an episode payment model) are not double-counted for the individual. We believe that this policy maintains the general principles behind Advanced APM Entity-level QP determinations, while acknowledging the broader commitment of individual Eligible Clinicians who are participating in multiple Advanced APMs. We believe considering these Eligible Clinicians individually is the most reasonable approach to capturing the multiple potential permutations of participation in Advanced APMs and providing Eligible Clinicians an equitable opportunity to become a QP.

Thus, with respect to the commenters’ concerns that CMS would only make a model-specific QP determination for the Track 1 AMI model and Track 1 CABG model and not a collective determination across the two models, for Advanced APMs for which there is a Participation List that identifies eligible clinicians and there is an Affiliated Practitioner List that identifies eligible clinicians, the Quality Payment Program final rule with comment period (81 FR 77442) notes that Affiliated Practitioner List will be
used to identify the eligible clinicians for purposes of QP determinations. Eligible clinicians on an Affiliated Practitioner List will be assessed individually, unlike eligible clinicians on a Participation List who are assessed as a group. Thus, we could make a determination across the two models if an Eligible Clinician was not determined to be a QP based on participation in any one of the Track 1 EPMs. Finally, as specified in the Quality Payment Program final rule with comment period (81 FR 77737), QPs are Eligible Clinicians in an Advanced APM who have a certain percentage of their patients or payments through an Advanced APM. Thus, we will only count beneficiaries attributed to an Advanced APM Entity toward a clinician’s QP Threshold Score and will not count those beneficiaries who would have been attributed to an Advanced APM Entity if it were not for the fact that a different model overlapped. Beneficiary attribution is further discussed in the Quality Payment Program final rule with comment period (81 FR 77456).

b. EPM Participant Tracks

To be considered an Advanced APM, the APM must require participants to use CEHRT (as defined in section 1848(o)(4) of the Act), as specified in section 1833(i)(3)(D)(i)(II) of the Act. We proposed that all EPM participants must choose whether to meet the CEHRT use requirement. EPM participants that do not choose to meet and attest to the CEHRT use requirement would be in Track 2 of the EPMs. EPM participants selecting to meet the CEHRT use requirement would be in Track 1 of the EPMs and would be required to attest in a form and manner specified by CMS to their use of CEHRT that meets the definition in our regulation at § 414.1305 (81 FR 77537) to document and communicate clinical care with patients and other health professionals, consistent with the proposal in the Quality Payment Program proposed rule for the CEHRT requirement for Advanced APMs (81 FR 28299). EPM participants choosing not to meet and attest to the CEHRT use requirement would not be required to submit an attestation.

We believe that the voluntary selection by EPM participants to elect downside risk for EPM episodes ending on or after January 1, 2018, and to meet and attest to the CEHRT use requirement would create no significant additional administrative burden on EPM participants. Moreover, the choice of whether to meet and attest to the CEHRT use requirement would not otherwise change any EPM participant’s requirements or opportunity under the EPM. However, to the extent that eligible clinicians who enter into financial arrangements related to EPM participants in the Track 1 EPM are considered to furnish services through an Advanced APM, those services could be considered for purposes of determining whether the eligible clinicians are QPs.

The proposals for CEHRT use and attestation for EPM participants were included in proposed § 512.120(a). We sought comment on our proposals for EPM participant CEHRT use requirements.

The following is a summary of the comments received and our responses.

Comment: Commenters expressed appreciation for CMS’ efforts to expand the Advanced APM participation opportunities as they commented that the 5 percent Advanced APM incentive payment is time-limited under current law. They applauded the proposal to expand the list of eligible Advanced APMs through Track 1 EPMs as it provides an incentive for physicians to collaborate with hospital participants in the EPM and could provide specialists, who otherwise may have limited avenues, to participate in an Advanced APM. Other commenters requested specifically that CMS clarify the steps necessary when a provider group wishes to change from Track 2 to Track 1 in the EPMs.

Response: We appreciate the commenters’ support for our proposal of the Track 1 EPMs as Advanced APMs and agree that providing greater opportunities for physician participation in Advanced APMs is an important goal that can be advanced through our proposal. We remind commenters that only the EPM participant can choose to participate in a Track 1 EPM by using and attesting to use of CEHRT. If Eligible Clinicians enter into a financial arrangement associated with a Track 1 EPM participant, then the EPM participant must submit a clinician financial arrangements list that determines the Eligible Clinicians to be included on the Affiliated Practitioner List for the purposes of the Track 1 EPM that is an Advanced APM. Therefore, a provider group interested in their members becoming Affiliated Practitioners with an Advanced EPM Entity in an Advanced APM could work with a Track 1 EPM participant to enter into a financial arrangement with that EPM participant so that the members of the provider group could be included in the clinician financial arrangements list submitted by the Track 1 EPM participant to CMS.

Comment: While commenters appreciated the proposal to include two tracks for EPM participants and CJR participant hospitals, other commenters made additional proposals to CMS to help operationalize these tracks. A few commenters urged CMS to go further to align the EPMs and the CJR model with the proposed Quality Payment Program and configure Track 2 (the Non-Advanced APM) so that it could qualify as a MIPS APM. In addition to the request that CMS reconfigure Track 2, commenters also proposed that Track 2 EPM participants must also submit a clinician financial arrangements list, so that Eligible Clinicians could receive credit for Improvement Activities under MIPS and/or satisfy criteria to be considered participants in MIPS APMs, for which the Quality Payment Program applies unique scoring rules. One commenter believes that the multiple options due to the proposed tracks increases the level of complexity and administrative burden on the hospitals for activities such as record keeping.

Response: We disagree that the presence of two EPM tracks increases administrative burden as we continue to believe that the proposed tracks allow flexibility for EPM participants to choose to participate in an Advanced APM. While a Track 1 EPM participant needs to attest to CEHRT and submit a clinician financial arrangements list to meet the requirements for participation in an Advanced APM and allow us to operationalize the Track 1 EPM as an Advanced APM, we do not believe that these additional requirements create significantly increased administrative burden on the Track 1 EPM participant versus a Track 2 EPM participant in view of the documentation and record access and retention requirements for all EPM participants, which require EPM participants to maintain a subset of that list that constitutes the Eligible Clinicians, or that the requirements to identify and maintain related lists regarding collaboration agents and downstream collaboration agents is a substantial burden. Beyond these additional activities for Track 1 EPM participants, the policies of the EPMs are the same for Track 1 and Track 2 EPM participants.

In addition, we disagree with the suggestion by commenters that we add the requirement for Track 2 EPM participants to submit to CMS clinician financial arrangements lists, information that we did not propose to require Track 2 EPM participants to submit to us. Submission of clinician financial arrangements lists is not necessary for
implementation of the Track 2 EPMs, and Track 2 EPM participants do not meet the definition of Advanced APM Entities in the Quality Payment Program final rule with comment period at § 414.1305 (81 FR 77537). To require Track 2 EPM participants to submit such a list would create unnecessary additional administrative burden on these participants. Furthermore, a Track 2 EPM does not meet the criteria of a MIPS APM in § 414.1370(b) of the Quality Payment Program final rule with comment period. Specifically, the MIPS APM criteria requires at least one Eligible Clinician on a Participation List for the APM, while currently all EPM and CJR participants are hospitals. Thus, the EPM and CJR Participation Lists do not include Eligible Clinicians and, therefore, a Track 2 EPM and the Track 2 CJR model are not MIPS APMs. As a result, EPM or CJR collaborators, collaboration agents, and downstream collaboration agents are not engaged with Track 2 EPM participants or Track 2 CJR participant hospitals in a MIPS APM. Therefore, we will not adopt a requirement in regulation for Track 2 EPM participants or Track 2 CJR participant hospitals to submit clinician financial arrangements lists at this time.

We agree with commenters that we should continue to consider whether there are opportunities for additional APMs, including episode payment models, to become MIPS APMs. We will continue to consider the balance in models between the most appropriate, streamlined model design for the intended model participants to advance the goals of the model and the requirements for models to be MIPS APMs or Advanced APMs as we strive to create more opportunities for Eligible Clinicians to participate in MIPS APMs and Advanced APMs.

**Comment:** Commenters urged CMS to consider reversing the proposed Track 1 and Track 2 designations to represent an APM and Advanced APM, respectively, or identifying an alternative naming convention as the term “tracks” are already used in the Shared Savings Program.

**Response:** We appreciate the perspective of the commenters but believe that our proposed designations of a Track 1 EPM as an Advanced APM and a Track 2 EPM as a Non-Advanced APM under the EPMs are straightforward and appropriate for the distinctions we make between Advanced and Non-Advanced EPMs. The track designations for the EPMs are relevant to the EPM participants in the specific track of the EPM and the individuals and entities that have financial arrangements under the EPMs.

We never intend to refer solely to the term Track 1 or Track 2 in the context of the EPMs but always in combination with the term EPM as a Track 1 EPM or Track 2 EPM. Therefore, we do not believe that Track 1 EPMs or Track 2 EPMs will be confused with tracks in the Shared Savings Program. We will be working closely with EPM participants and other stakeholders during EPM implementation to explain the various requirements of the EPMs in general and the tracks of the EPMs in particular.

**Comment:** Additional proposals were submitted by commenters that encouraged CMS to work further by creating additional tracks, including a MIPS APM track and accommodating those that may wish to accept financial risk sooner in order to qualify as an Advanced APM. Commenters believe CMS should continue to develop pathways and provide assistance to organizations who wish to develop or become participants in Advanced APMs; and to expand beyond the current inpatient-based episode payment model tracks to include not only a physician-focus but also a focus that meaningfully incorporates additional roles and activities, for example, specialty service providers, rehabilitation therapy providers, BPCI early adopters, home health care, and transitional care.

**Response:** We appreciate the suggestions of commenters. We respond earlier in this section on requests for additional MIPS APMs and for voluntary election of early increased downside risk to allow rural hospitals, SCHs, MDMs, and RRCs with special stop-loss limits under the EPMs to be in a Track 1 EPM at the same time as other EPM participants without special stop-loss limits under the EPM. We will continue our efforts to develop pathways and provide assistance to organizations who wish to develop or become participants in Advanced APMs. We refer the commenters to section III.A.3 of this final rule for additional considerations for future EPMs.

**Comment:** Commenters expressed appreciation for the proposed alignment resulting from use of the same definition of CEHRT across the EPM and Quality Payment Program, and acknowledged that CMS’ proposal to permit those EPM participants who do not use CEHRT to be in a different track of the EPM offers appropriate flexibility. A few commenters requested that CMS consider using a process through the Medicare EHR Incentive Program to gather the attestations from the hospitals.

**Response:** We appreciate the recognition from commenters of CMS’ efforts to utilize the flexibilities of the Quality Payment Program for Eligible Clinicians to link quality to payments through meaningful participation in an Advanced APM.

We also appreciate the suggestions by the commenters about existing processes and information CMS might use to streamline CEHRT use attestation for EPM participants in Track 1 EPMs. We reiterate that EPM participants choose to attest to CEHRT use and submit a clinician financial arrangements list beginning in performance year 3 and, therefore, be a Track 1 EPM participant (or elect voluntary downside risk in performance year 2, attest to CEHRT use, and submit a clinician financial arrangements list, and therefore, be a Track 1 EPM participant beginning in performance year 2), or choose not to attest to CEHRT use and be a Track 2 EPM participant. We will consider the feedback from commenters on CEHRT attestation methodologies as we develop the operational information for EPM participants about EPM processes and procedures. We further note that CMS and ONC also offer continued support and guidance through educational resources to support participating in and reporting CEHRT use to CMS models and programs, such as the EHR Incentive Program. We will communicate closely with EPM participants about the form and manner of attestation to CEHRT use for Track 1 EPMs early in the process of EPM implementation.

**Comment:** Many commenters urged CMS to consider the significant upfront investments in health IT infrastructure that providers must make to participate and be successful in the Quality Payment Program and EPMs or CJR model, given that, as one commenter stated, this investment exists even in upside-only models. As a result, these commenters recommended that CMS consider permitting EPM participants to be Advanced APM Entities in performance year 1 and/or that entry into Track 1 for EPM participants and CJR participant hospitals begin as soon as possible. Other commenters pointed out the lack of resources/support for Eligible Clinicians, such as therapists, to adopt EHRs. The commenters believe that Eligible Clinicians participating in an Advanced APM where the Advanced APM Entity is a hospital must also use and attest to use of CEHRT, and further stated that such a requirement would put these professionals at a significant disadvantage. To this end, a few commenters requested that CMS clarify whether the CEHRT requirement only applies to the hospitals that are EPM...
Clinicians who have entered into financial arrangements list in a form and manner specified by CMS on a more than quarterly basis. The list must include the following information for the period of the EPM performance year specified by CMS:

- For each EPM collaborator who is a physician, nonphysician practitioner, or provider of outpatient patient services during the period of the EPM performance year specified by CMS:
  - The name, tax identification number (TIN), and national provider identifier (NPI) of the EPM collaborator.
  - The start date and, if applicable, end date, for the financial arrangement between the EPM participant and the EPM collaborator.
- For each collaboration agent who is a physician or nonphysician practitioner of a PGP that is an EPM collaborator during the period of the EPM performance year specified by CMS:
  - The TIN of the PGP that is the EPM collaborator, and the name and NPI of the physician or nonphysician practitioner.
  - The start date and, if applicable, end date, for the financial arrangement between the EPM collaborator that is a PGP and the physician or nonphysician practitioner who is a PGP member.
- For each downstream collaboration agent who is a physician or nonphysician practitioner member of a PGP that is also an ACO participant in an ACO that is an EPM collaborator during the period of the EPM performance year specified by CMS:
  - The TIN of the PGP that is the ACO participant, and the name and NPI of the physician or nonphysician practitioner.
  - The start date and, if applicable, end date, for the financial arrangement between the downstream collaboration agents and the ACO participant who is an EPM collaborator.
- If there are no individuals that meet the requirements to be reported as EPM collaborators, collaboration agents, or downstream collaboration agents, the EPM participant must attest in a form and manner required by CMS that there are no such individuals.
are no individuals to report on the clinician financial arrangements list.

As discussed in the Quality Payment program proposed rule, those physicians or nonphysician practitioners who are included on the Affiliated Practitioner List as of December 31 of a performance period would be assessed to determine whether they qualify for APM Incentive Payments (81 FR 28320). The Quality Payment Program final rule with comment period (81 FR 77444) modified this process to identify eligible clinicians on the Affiliated Practitioner List for Medicare payments determinations at any one of three snapshots. The first snapshot will be on March 31 of the QP Performance Period, the second snapshot will be on June 30 of the QP Performance Period, and the third snapshot will be on August 31, which will be the last day of the QP Performance Period.

We noted that while the required submission of this information might create some additional administrative requirements for certain EPM participants, we expected that EPM participants in a Track 1 EPM could modify their contractual relationships with their EPM collaborators and, correspondingly, require those EPM collaborators to include similar requirements in their contracts with collaboration agents and in the contracts of collaboration agents with downstream collaboration agents.

The proposal for the submission of a clinician financial arrangements list by EPM participants that meet and attest to the CEHRT use requirement for the EPM was included in § 512.120(b). We sought comments on the proposal for submission of this information. We were especially interested in comments about approaches to information submission, including the periodicity and method of submission to CMS that would minimize the reporting burden on EPM participants while providing CMS with sufficient information about eligible clinicians in order to facilitate QP determinations to the extent EPMs are considered Advanced APMs.

The following is a summary of the comments received and our responses.

Comment: While some commenters supported CMS’ plans to recognize Eligible Clinicians who participate in APMs as Affiliated Practitioner List, others raised concerns about the means to identify Eligible Clinicians as Affiliated Practitioners of Advanced APMs. A few commenters disagreed with the development of an Affiliated Practitioner List from a clinician financial arrangements list. Some commenters believe that to assume risk-taking threatens the financial viability of most physician-led entities. Other commenters expressed concern that the definition of such an agreement suggests that risk must be shifted to the clinicians to achieve QP status. These commenters agree that the clinicians must support the cost or quality goals of the Advanced APM, but do not believe that to be included on the Affiliated Practitioner List the clinician must take risk. Other commenters assumed that Eligible Clinicians must assume risk under the EPM to qualify for QP incentive payment under the Quality Payment Program, and suggested that CMS base the risk requirements on physician practice or APM organization revenues. One commenter noted that not all physicians bound contractually to the requirements of the EPMs would be captured on clinician financial arrangements list, as hospitals may have agreements with their employed physicians that cascade the programmatic requirements of the EPMs, but do not necessarily alter their underlying compensation or include gainsharing/risk-sharing/internal cost savings parameters. Instead, commenters offered alternatives to the submission of clinician financial arrangements list, including such proposals as modeling the EPM along the lines of the Medical Home Model standard and using claims data to identify and attribute Eligible Clinicians to populate the EPM Affiliated Practitioner List for the purposes of the Quality Payment Program.

Response: Under Track 1 EPMs, the Advanced APM Entity is always a hospital, and no physicians are EPM participants. As we discussed in the Quality Payment Program final rule with comment period (81 FR 77442), for Advanced APMs, such as episode payment models, in which there are some Advanced APM Entities that include Eligible Clinicians on a Participation List and other Advanced APM Entities that identify Eligible Clinicians only on an Affiliated Practitioner List, we will identify Eligible Clinicians for QP determination based on the composition of the Advanced APM Entity: (1) For Advanced APM Entities that include and identify Eligible Clinicians on a Participation List, that Participation List will be used to define the Advanced APM Entity group, regardless of whether or not there is also an Affiliated Practitioner List or other list of Eligible Clinicians, and those Eligible Clinicians will be assessed as a group; (2) for Advanced APM Entities that do not include and identify Eligible Clinicians on a Participation List and there is an Affiliated Practitioner List that identifies Eligible Clinicians, that Affiliated Practitioner List will be used to identify the Eligible Clinicians for purposes of QP determinations, and those Eligible Clinicians will be assessed individually. Track 1 EPMs fall into the second category because the EPMs do not include and identify Eligible Clinicians on a Participation List so, therefore, we will use an Affiliated Practitioner List for Track 1 EPMs to identify Eligible Clinicians for purposes of QP determinations.

In the Quality Payment Program final rule with comment period in § 414.1305 (81 FR 77537), an Affiliated Practitioner is defined as an Eligible Clinician identified by a unique APM participant identifier on a CMS-maintained list who has a contractual relationship with the Advanced APM Entity for the purposes of supporting the Advanced APM Entity’s quality or cost goals under the Advanced APM. Furthermore, in the Quality Payment Program final rule with comment period (81 FR 77440), we provided the example that an Affiliated Practitioner List comprised of gainsharers under an APM might include Eligible Clinicians whereas a Participation List may only include hospitals. We believe this example applies to the Track 1 EPMs.

We believe that constructing the Affiliated Practitioner List from the list of clinicians with financial arrangements submitted by each EPM participant that chooses to use and attest to use of CEHRT allows us to appropriately identify clinicians for the Affiliated Practitioner List under the EPMs. All of these clinicians have contractual relationships under the EPMs, and because the determination of the amount of gainsharing payment, distribution payment, or downstream distribution payment under their arrangement is required to be substantially based on quality of care and the provision of EPM activities (activities related to promoting accountability for the quality, cost, and overall care for EPM beneficiaries, including managing and coordinating care; encouraging investment in infrastructure, enabling technologies, and redesigned care processes for high quality and efficient service delivery; the provision of items and services during an EPM episode in a manner that reduces costs and improves quality; or carrying out any other obligation or duty under the EPM), we believe that their contractual relationship supports the cost and quality goals of the Track 1 EPM participant and, therefore, that they meet the definition of Affiliated Practitioner.
Regarding those commenters who were concerned that constructing the Affiliated Practitioner List in this way would shift the financial risk of the APM Entity (Track 1 EPM participant) to the clinician in order for the clinician to be eligible for a QP determination, we want to emphasize that distribution arrangements and downstream distribution arrangements allow only distribution of payments that may be comprised of hospital internal cost savings and/or reconciliation payments for savings beyond the quality-adjusted target price under the EMFs, without allowing the collaboration agent or downstream collaboration agents to assume any downside risk. Sharing arrangements may include the sharing of upside and downside risk with EPM collaborators, but we note that in our experience with other bundled payment models, sharing with individual physicians has generally been upside risk only. We understand that the Quality Payment Program final rule with comment period does not require that an Affiliated Practitioner take on upside or downside risk to be eligible for a QP determination, while our proposed methodology to identify Eligible Clinicians for the EPM Affiliated Practitioner List requires those clinicians to have a financial arrangement under the EPM. However, we base our proposal on the most streamlined approach to identifying Eligible Clinicians under the Track 1 EPM who meet the definition of Affiliated Practitioner to build off policies that apply across the EPMs in general, in order to limit any additional administrative burden on EPM participants for Track 1 participation. Under the EPMs, the only contractual relationships for which we specify requirements as part of the model design for all participants and which ensure the Eligible Clinicians meet the Affiliated Practitioner definition are financial arrangements. Therefore, under our proposal for identifying Eligible Clinicians for each EPM participant that chooses to use and attest to use of CEHRT we would use the clinician financial arrangements list submitted to us to construct the EPM Affiliated Practitioner List.

In terms of constructing the Affiliated Practitioner List from claims data based on those clinicians furnishing services to EPM beneficiaries, we would not be able to know if such physicians, nonphysician practitioners, or therapists had a contractual relationship with the EPM participant to support the EPM participant’s cost or quality goals under the Track 1 EPM (the requirement for Affiliated Practitioners), so we are unable to adopt this suggestion by the commenters. Moreover, we believe we can only know the information about contractual relationships between an EPM participant and an Eligible Clinician if the EPM participant reports this to us as we do not otherwise require such reporting under the EPMs.

We understand that there are circumstances where an EPM participant might want to enter into a contract with a clinician to support the cost or quality goals of the EPM. At this point, EPM participants that choose to use and attest to use of CEHRT may not report these clinicians to us through the clinician financial arrangements list for inclusion on the Affiliated Practitioner List because we made no specific proposals about what such contractual relationships would entail. As discussed previously in this section, MedPAC expressed concern that the EPMs contemplate large, loosely connected groups of clinicians who may have very little involvement with the beneficiaries in EPMs and hence have little reason to change their practice patterns or reduce inappropriate episodes. Thus, in order to identify the circumstances in which Eligible Clinicians without financial arrangements under a Track 1 EPM participant could meet the definition of Affiliated Practitioner, we will further consider the scenarios raised by the commenters and intend to propose an additional methodology for EPM participants to identify other Eligible Clinicians who may be included on the Affiliated Practitioner List in future rulemaking. This additional methodology would be targeted for implementation in performance year 3 when downside risk for all participants under the EPMs applies.

We are finalizing our proposal to construct the EPM’s Affiliated Practitioner List from the clinician financial arrangements lists submitted by those EPM participants that attest to CEHRT use. Comment: Several commenters urged CMS to identify Eligible Clinicians through a streamlined reporting process, and ensure that a minimum burden is applied to EPM participants when providing lists. To this end, the commenters proposed alterations to the proposed contents of the clinician financial arrangements list, including the recommendation that CMS require EPM participants or CJR participant hospitals to submit an electronic form listing all collaborators, collaboration agents, and downstream collaboration agents and their tax identification numbers (TIN) on a yearly basis.

Finally, some commenters requested that CMS enable more frequent updates to the list. Response: We appreciate the interest of the commenters in creating the minimal necessary reporting burden on EPM participants and CJR participant hospitals. For those EPM participants that choose to use and attest to use of CEHRT and are required to submit a clinician financial arrangements list, we agree with the commenters that the most streamlined process that provides us with the timely, necessary information is desirable. We proposed that the submission must occur on a no more than quarterly basis and we continue to believe that this timing is the most appropriate. It establishes the maximum required submission burden on EPM participants of quarterly in view of the three planned “snapshots” of the Affiliated Practitioner List each year (81 FR 77444) to capture timely new Affiliated Practitioners that were not previously identified for the EPM participant, while allowing us the flexibility to determine a lower reporting periodicity for EPM participants whose list does not change during the EPM performance year. We also note that while under our proposal we could not require submission of the list more than quarterly, the submission timing requirement does not preclude us from accepting more frequent than quarterly voluntary updates to the list if EPM participants have more frequent changes to their list of clinicians with financial arrangements under the EPM. We proposed that Eligible Clinicians on the clinician financial arrangements list that we would use to construct an Affiliated Practitioner List would be EPM collaborators who are physicians, nonphysician practitioners, and providers of outpatient therapy services engaged in sharing arrangements with an EPM participant; PGP members who are physicians and nonphysician practitioners who are collaboration agents engaged in distribution arrangements with a PGP that is an EPM collaborator; and PGP members who are physicians and nonphysician practitioners who are downstream collaboration agents engaged in downstream distribution arrangements with a PGP that is also an ACO participant in an ACO that is an EPM collaborator. To reflect our final policies for financial arrangements discussed in section III.I. of this final rule, and taking into consideration the issues discussed later in this section, we are revising the categories of individuals who qualify as Eligible Clinicians and clarifying the information to be reported on the clinician financial arrangements list in this final rule. It was our intention in
the proposed rule and our policy in this final rule that the full complement of physicians, nonphysician practitioners, and therapists who have financial arrangements under the EPMs be reported on the EPM participant’s clinician financial arrangements list. We see no reason to treat physicians, nonphysician practitioners, or therapists differently for purposes of being considered Eligible Clinicians based on their specific type of financial arrangement under the EPM as the requirements for each type of contractual relationship are aligned with the cost and quality goals of the EPM.

We proposed that providers of outpatient therapy services that are EPM collaborators be reported on the clinician financial arrangements list, although the term provider of outpatient therapy services also encompassed entities that were not individual therapists and that, therefore, could not be Eligible Clinicians. However, as discussed in section III.F.3. of this final rule we are adopting the specific term therapist in private practice for those individual therapists who are EPM collaborators. Thus, we are refining the reporting of EPM collaborators on the clinician financial arrangements list to include physicians, nonphysician practitioners, and therapists in private practice to focus on individual therapists in private practice, who may be Eligible Clinicians under the provisions of the Quality Payment Program final rule with comment period of the providers of outpatient therapy services.

In addition, our proposal did not identify as Eligible Clinicians therapists who are collaboration agents and downstream collaboration agents as members of PGP’s or ACO providers/suppliers who are physicians, nonphysician practitioners, or therapists who are collaboration agents. While we did not propose that therapists who are collaboration agents or downstream collaboration agents as members of PGP’s be reported on the clinician financial arrangements list, we did propose that a therapist could be a PGP member and we note that therapists can also be Eligible Clinicians under the provisions of the Quality Payment Program final rule with comment period. We also did not identify in our proposal that physicians, nonphysician practitioners, and therapists who are collaboration agents and ACO providers/suppliers in an ACO that is an EPM collaborator would be Eligible Clinicians on the clinician financial arrangements list. This was an oversight as we intended to include all collaboration agents who are physicians, nonphysician practitioners, and therapists on the clinician financial arrangements list, regardless of the entity that is their associated EPM collaborator. Moreover, our proposal did not take into account the provisions of this final rule that allow NPPGPs and TGP’s to be EPM collaborators or collaboration agents and, therefore, we did not propose that the nonphysician practitioners and therapists who have financial arrangements with these entities would also be Eligible Clinicians on the clinician financial arrangements list. Therefore, in this final rule we are clarifying that all physicians, nonphysician practitioners, and therapists who are collaboration agents or downstream collaboration agents are reported on the clinician financial arrangements list, without regard to the type of entity that is the associated party with which the collaboration agent or downstream collaboration agent has his or her distribution arrangement or downstream distribution arrangement. We note that we proposed to require that physicians and nonphysician practitioners who are members of a PGP that is an EPM collaborator or members of a PGP that is also an ACO participant in an ACO that is an EPM collaborator and that have a distribution arrangement or downstream distribution arrangement, respectively, with the PGP be reported on the list. Therefore, we believe there is only a small additional burden on EPM participants to report on the list all collaboration agents or downstream collaboration agents that are physicians, nonphysician practitioners, or therapists with distribution arrangements or downstream distribution arrangements, in order to ensure that the clinician financial arrangements list reports all Eligible Clinicians with financial arrangements under the EPM.

We proposed that the information to be reported on the clinician financial arrangements list would include the name and NPI and, in some cases the TIN, of the Eligible Clinician with the financial arrangement under the EPM. We also proposed to collect the TIN of the PGP that is an EPM collaborator or collaboration agent and with which the physician or nonphysician practitioner reported on the list has a financial relationship, which would have provided us with information for purposes of monitoring and compliance on some of the entities related to the contracts of those physicians or nonphysician practitioners under the EPM. While we did not propose to similarly require information be submitted on the ACO that would be an EPM collaborator for those Eligible Clinicians that are collaboration agents or downstream collaboration agents, in this final rule, we are clarifying that the name and NPI of the entity (that is, the PGP, NPPGP, TGP, or ACO) that is an EPM collaborator and the entity (that is, the PGP, NPPGP, or TGP) that is a collaboration agent, if applicable, must also be reported on the clinician financial arrangements list for each Eligible Clinician who is a collaboration agent or downstream collaboration agent. Thus, the final requirements provide us with sufficient information to monitor the full series of related financial relationships under the EPM that result in the reporting of an Eligible Clinician on the clinician financial arrangements list. Because we do not expect that EPM participants will enter into sharing arrangements with many ACOs, due to the limited number of ACOs to which beneficiaries are typically assigned in a given geographic area, we do not believe that requiring the reporting of the name and TIN of the ACO that is an EPM collaborator is a significant additional burden on the EPM participant submitting the list to CMS.

In summary, based on the previous discussion, for purposes of clarity and consistency we are streamlining the requirements for reporting information on the clinician financial arrangements list. For each physician, nonphysician practitioner, or therapist that is an EPM collaborator, collaboration agent, or downstream collaboration agent, we require the name, TIN, and NPI to be reported, in addition to the start date and, if applicable, end date, for the individual’s sharing arrangement, distribution arrangement, or downstream distribution arrangement. We further require for a collaboration agent that the name and TIN of the EPM collaborator be reported and that for a downstream collaboration agent the name and TIN of the EPM collaborator and the name and TIN of the collaboration agent be reported.

We will be working closely with EPM participants on the format and process for submission of clinician financial arrangements lists, including the potential for electronic submission of the required information, during the early phases of EPM implementation, seeking to ensure that the format and process is as streamlined as possible for EPM participants that choose to use and attest to use of CEHRT, while meeting CMS’ need to maintain an EPM Affiliated Practitioner List that can be used to identify Eligible Clinicians for a QP determination.
Final Decision: After consideration of the public comments received, we are finalizing the proposal in §512.120(b) for EPM participants that use and attest to use of CEHRT to submit to CMS a clinician financial arrangements list on a no more than quarterly basis, with modification to include on that list information on all physicians, nonphysician practitioners, and therapists with financial arrangements under the EPM and, if applicable, identifying information for the related parties with sharing arrangements, distribution arrangements, and downstream distribution arrangements under the EPM as finalized in section III.I. of this final rule.

Each EPM participant that chooses CEHRT use must submit to CMS a clinician financial arrangements list in a form and manner specified by CMS on a no more than quarterly basis. The list must include the following information on individuals and entities for the period of the EPM performance year specified by CMS:

- EPM collaborators. For each physician, nonphysician practitioner, or therapist who is a collaboration agent during the period of the EPM performance year specified by CMS:
  - The name, TIN, and NPI of the EPM collaborator.
  - The start date and, if applicable, end date, for the sharing arrangement between the EPM participant and the EPM collaborator.

- Collaboration agents. For each physician, nonphysician practitioner, or therapist who is a collaboration agent during the period of the EPM performance year specified by CMS:
  - The name and TIN of the EPM collaborator and the name, TIN, and NPI of the collaboration agent.
  - The start date and, if applicable, end date, for the distribution arrangement between the EPM collaborator and the collaboration agent.

- Downstream collaboration agents. For each physician, nonphysician practitioner, or therapist who is a downstream collaboration agent during the period of the EPM performance year specified by CMS:
  - The name and TIN of the EPM collaborator, the name and TIN of the collaboration agent and the name, TIN, and NPI of the downstream collaboration agent.
  - The start date and, if applicable, end date, for the downstream distribution arrangement between the collaboration agent and the downstream collaboration agent.

- Attestation to no individuals. If there are no individuals that meet the requirements to be reported, as specified in paragraphs (b)(1) through (3) of this section, the EPM participant must attest in a form and manner required by CMS that there are no individuals to report on the clinician financial arrangements list.

d. Documentation Requirements

For each EPM participant that chooses to meet and attest to CEHRT use, we proposed that the EPM participant must maintain documentation of their attestation to CEHRT use and clinician financial arrangements lists submitted to CMS. These documents would be necessary to assess the completeness and accuracy of materials submitted by an EPM participant in the Track 1 EPM and to facilitate monitoring and audits. For the same reason, we further proposed that the EPM participant must retain and provide access to the required documentation in accordance with §512.110.

The proposal for documentation of attestation to CEHRT use and clinician financial arrangements lists submitted to CMS was included in §512.120(c). We sought comment on this proposal for required documentation.

Final Decision: We did not receive comments pertaining to §512.120(c). Therefore, we are finalizing the proposal, without modification, for EPM participant documentation of attestation to CEHRT use and clinician financial arrangements lists submitted to CMS.

The following documentation requirements apply to EPM participants choosing to use and attest to use of CEHRT:

- Each EPM participant that chooses CEHRT use must maintain documentation of their attestation to CEHRT use and clinician financial arrangements lists.
  - The EPM participant must retain and provide access to the required documentation in accordance with §512.110.

3. Future Directions for Episode Payment Models

a. Refinements to the BPCI Initiative Models

The BPCI initiative Models 2, 3, and 4 would not currently qualify as Advanced APMs based on two of the Advanced APM criteria in the Quality Payment Program (QPP) final rule with comment period (81 FR 77008), payment based on quality measures and CEHRT use. Specifically, BPCI participants are not currently required to use CEHRT, and although CMS examines the quality of episode care in the BPCI evaluation, BPCI episode payments are not specifically tied to quality performance. Instead, BPCI episode payments are based solely on episode spending performance, although we expect that reductions in spending would generally be linked to improved quality through reductions in hospital readmissions and complications. However, building on the BPCI initiative, the Innovation Center intends to implement new bundled payment model for CY 2018 where the model(s) would be designed to meet the criteria to be an Advanced APM.

The following is a summary of the comments received and our responses.

Comment: A number of commenters expressed support for a new voluntary bundled payment model in CY 2018. Specifically, commenters expected any new design to include the ability of the BPCI Initiative to qualify as meeting the requirements for an advanced APM under the QPP. Commenters also requested that data be provided by CMS on a monthly basis with quarterly reconciliation reports to allow participants to meaningfully engage in reforms to the delivery of health care. Consistent with the existing BPCI model, CMS was encouraged by commenters to continue assigning precedence to self-selected model participants over participants in assigned models. Additional recommended features included financial stop-gain and stop-loss limits and the incorporation of composite quality score similar to that used in the CJR model. Other specific features included recommendations for additional post-acute care bundles and the exclusion of ACOs.

More broadly, CMS received several recommendations calling for increased stakeholder input in the design, implementation, and evaluation of new voluntary bundled payment models. Commenters requested that hospitals currently participating in BPCI should be allowed to test additional episodes, and new hospitals should be allowed to enter the program. While ranging in degree, most commenters highlighted a need for input from external clinical experts in addition to consumers, patients, and purchasers as well as institutional stakeholders such as QIOs. To better align with other available EHR incentive payments, several commenters stated a need for future bundled payment models to include CEHRT measures.

Response: We appreciate these considerations as we design a new voluntary bundled payment model.
providers are the predominant care provider for LEJR patients, post-acute care should play a more prominent role in the BPCI initiative. 

**Response:** CMS thanks the commenters for this suggestion.

**Comment:** One commenter recommended CMS use a consistent policy to address overlap of all Medicare bundled payment initiatives and population-based payment models. The commenter raised concerns with respect to overlap of beneficiaries in the EPMs, CJR model, and BPCI initiative, and suggested that, in a future BPCI initiative, beneficiaries should be excluded from bundled payments unless a collaborative agreement exists between an ACO and a hospital that is not a participant in that ACO. The commenter also had concerns for the extent to which Medicare beneficiaries benefit from allowing private for-profit awardee conveners to absorb the risk for providers. Therefore, the commenter recommended also that CMS exclude for-profit awardee conveners which do not provide patient care.

**Response:** We acknowledge and appreciate all comments, and specifically recognize the shared interest in improving Medicare for its beneficiaries.

**Comment:** A few commenters requested that CMS take into consideration several additional pricing flexibilities and regulatory waivers for a new voluntary bundled payment model. Specifically, commenters believed that reducing costs and increasing shared savings could be difficult, therefore, participants should have the flexibility in a new voluntary bundled payment model to modify practice or utilization patterns by reducing length of stay or intensity of services. Commenters stated that the next iteration of BPCI should feature program elements such as caps on total losses that gradually increase over time, variable discounts based on quality scoring, and elimination of financial responsibility for payments above a threshold. Other commenters proposed that CMS adopt a method of population risk stratification, as this could provide incentive to providers by reimbursing more for greater comorbidities. Finally, in setting the bundled payment amounts, commenters recommended that CMS incorporate clinical practice guidelines and appropriate use criteria to ensure that patients are not receiving inadequate care. One commenter suggested that CMS provide patient navigators to Medicare beneficiaries receiving items or services paid under an EPM.

Additionally, the regulatory waivers requested included the home health homebound requirement, the IRF 60 percent rule, the IRF 3-hour therapy intensity rule, and the LTCH 25 day average length of stay restriction. One commenter suggested that occupational therapy be recognized as a “qualifying service” under the Medicare home health care benefit and occupational therapists could, in future APMs be permitted to open ‘therapy only’ cases if occupational therapy is in the physician’s order.

**Response:** We recognize commenters’ requests for consideration of additional flexibilities in care redesign efforts as part of a new voluntary bundled payment model.

**Final Decision:** As we did not propose changes to the BPCI initiative in the proposed rule, we do not have any changes to finalize in this final rule.

**b. Potential Future Condition-Specific Episode Payment Models**

In the context of our proposal for the AMI and CABG models that include beneficiaries with CAD who experience an acute event or a major surgical procedure, we sought comment on model design features for potential future condition-specific episode payment models that could focus on an acute event or procedure or longer-term care management, including other models for beneficiaries with CAD that may differ from the design of the EPMs proposed in the proposed rule (81 FR 50794). We believe such future models may have the potential to be Advanced APMs that emphasize outpatient care and, like the proposed AMI and CABG models, could incentivize the alignment of physicians and other eligible professionals participating in the Advanced APM through accountability for the costs and quality of care. Such condition-specific episode payment models may provide for a transition from hospital-led EPMs to physician-led accountability for episode quality and costs, especially given the importance of care management over long periods of time for beneficiaries with many chronic conditions.

We requested that commenters provide specific information regarding all relevant issues for potential future condition-specific episode payment models, including identifying beneficiaries for the model; including services in the episode definition; beginning and ending episodes; pricing episodes, including risk-adjustment; designating the accountable entity for the quality and cost of the episode, including the role of physician-led payment and population risk stratification, as this could provide incentive to providers by reimbursing more for greater comorbidities. Finally, in setting the bundled payment amounts, commenters recommended that CMS incorporate clinical practice guidelines and appropriate use criteria to ensure that patients are not receiving inadequate care. One commenter suggested that CMS provide patient navigators to Medicare beneficiaries receiving items or services paid under an EPM.

Additionally, the regulatory waivers requested included the home health homebound requirement, the IRF 60 percent rule, the IRF 3-hour therapy intensity rule, and the LTCH 25 day average length of stay restriction. One commenter suggested that occupational therapy be recognized as a “qualifying service” under the Medicare home health care benefit and occupational therapists could, in future APMs be permitted to open ‘therapy only’ cases if occupational therapy is in the physician’s order.

**Response:** We recognize commenters’ requests for consideration of additional flexibilities in care redesign efforts as part of a new voluntary bundled payment model.

**Final Decision:** As we did not propose changes to the BPCI initiative in the proposed rule, we do not have any changes to finalize in this final rule.

**b. Potential Future Condition-Specific Episode Payment Models**

In the context of our proposal for the AMI and CABG models that include beneficiaries with CAD who experience an acute event or a major surgical procedure, we sought comment on model design features for potential future condition-specific episode payment models that could focus on an acute event or procedure or longer-term care management, including other models for beneficiaries with CAD that may differ from the design of the EPMs proposed in the proposed rule (81 FR 50794). We believe such future models may have the potential to be Advanced APMs that emphasize outpatient care and, like the proposed AMI and CABG models, could incentivize the alignment of physicians and other eligible professionals participating in the Advanced APM through accountability for the costs and quality of care. Such condition-specific episode payment models may provide for a transition from hospital-led EPMs to physician-led accountability for episode quality and costs, especially given the importance of care management over long periods of time for beneficiaries with many chronic conditions.

We requested that commenters provide specific information regarding all relevant issues for potential future condition-specific episode payment models, including identifying beneficiaries for the model; including services in the episode definition; beginning and ending episodes; pricing episodes, including risk-adjustment; designating the accountable entity for the quality and cost of the episode, including the role of physician-led payment and population risk stratification, as this could provide incentive to providers by reimbursing more for greater comorbidities. Finally, in setting the bundled payment amounts, commenters recommended that CMS incorporate clinical practice guidelines and appropriate use criteria to ensure that patients are not receiving inadequate care. One commenter suggested that CMS provide patient navigators to Medicare beneficiaries receiving items or services paid under an EPM.

Additionally, the regulatory waivers requested included the home health...
obesity. Another commenter disagreed, stating it is inappropriate to expand the current EPM approach to future treatment of chronic conditions because, the commenter suggested, a bigger opportunity for improving quality and achieving savings is avoiding unnecessary episodes and events. In turn, the costs of treatment episodes could be packaged into the costs of managing underlying condition episodes. Commenters stated further that the EGM should also examine utilization patterns, perform comparative analyses for similar conditions, and identify care improvement opportunities. As such, commenters suggested that the EGM would be better suited to pricing and resource allocation while identifying chronic conditions.

Response: We thank the commenters for their suggestion.

Comment: Another commenter, referencing the Program of All-Inclusive Care for the Elderly (PACE), recommended CMS consider a comprehensive episode payment model for services for medical care that could be tied with private payment, enrollment in available community services, or an arrangement with Medicaid. Beneficiaries requiring daily help or supervision would serve as a qualifying condition, which could extend for varying durations.

Response: We appreciate the commenter’s support for PACE and will work internally to incorporate lessons learned from existing programs in the proposal of future condition-specific EPMs.

Comment: Highlighting the efforts of national medical specialty societies, several commenters provided several condition-specific EPMs which may be successful in reducing emergency department visits, hospital admissions, and excessive testing. Specifically, several commenters gave such examples as coronary artery disease, headache, epilepsy, asthma, opioid use disorder, diabetes, and specialty medical home. Of note, commenters stated that CMS should give additional consideration to defined episode triggers. For example, some commenters suggested that each new episode should be accompanied by time criteria and have a unique but expected time course. These efforts, commenters suggested, might further result in disease prevention, reduced exacerbations, and improved care.

Response: We appreciate commenters’ eagerness to participate in this dialogue and to be a part of transforming care.

Commenters believed that CMS should view organized provider models as qualifying for condition-specific EPMs. Other commenters suggested that CMS simply include more types of participants, including examples such as ACOs and PCMHs. Still, others commented that participation in future condition-specific EPMs be limited to those organizations that are fully committed to coordinated care planning, shared decision-making, comparative quality information, chronic disease management, transparent payments and care transition support. As an alternative approach to considering future condition-specific EPMs, MedPAC suggested that CMS consider allowing hospitals to share savings with physicians as a way to focus doctors on reducing the cost of the inpatient stay.

Response: We acknowledge and appreciate the suggestion to incorporate more participant types in future condition-specific EPMs.

Comment: Additionally, MedPAC recommended that for conditions that are not promising for bundled reimbursement models, CMS consider using an array of other strategies to support providers in lowering costs while improving patient outcomes. For example, the Medicare spending per beneficiary (MSBP) measure in the hospital value-based purchasing (VBP) program encourages lower spending and improved care coordination. Alteration of the “weight” of the MSBP could be increased to further incentivize hospitals to reduce spending. Furthermore, MedPAC noted that the hospital readmission policy already encourages hospitals to avoid readmissions for AMIs and CABGs. To increase the pressure to reduce readmissions, it was suggested that CMS move forward with readmission policies in all sectors to increase the penalties for providers with high risk-adjusted potentially avoidable readmission rates.

Response: We appreciate any recommendations MedPAC can provide and will continue to collaborate with stakeholders to develop additional means to improve patient outcome measurements. Furthermore, we will work internally to find additional alignment between Innovation Center programs and Medicare payment policies.

Comment: One commenter recommended consideration of an episode that should address behavioral health integration with primary care. The commenter suggested that guidelines which embed behavioral health measurements into any care setting would equip providers with quantification necessary to impact both physical and mental health of patients.

Response: We appreciate the commenter’s proposal. We appreciate the many comments received regarding the request for comment and while we did not propose any changes to this section of the final rule, we intend to continually seek to connect those interested to further information on consideration of future condition-specific EPMs that would result in improvement in care for Medicare beneficiaries.

c. Potential Future Event-Based Episode Payment Models for Procedures and Medical Conditions

Given the proposed EPM methodology discussed in section III.C.4.a. of this final rule for the three models that would begin the episodes with initial hospitalizations, the proposed AMI, CABG, and SHFFT episodes are similar to the LEJR episodes in the CJR model because they reflect clinical conditions for which care is almost always begun during an inpatient hospitalization, either on an emergency or elective basis. In addition, the clinical conditions represented by these EPM episodes generally result in straightforward assignment to MS–DRGs at discharge that are specific to clinical conditions included in the episodes. This contrasts with procedure-related clinical conditions for which the site-of-service can be inpatient or outpatient (for example, elective PCI for non-AMI beneficiaries) or hospitalization for medical conditions for which the ultimate MS–DRG assigned is less clear at the beginning of an episode (for example, hospitalization for respiratory symptoms which may lead to discharge from heart failure, pneumonia, or other MS–DRGs based on reporting of ICD–CM diagnosis codes on hospital claims).

To address the issues related to the development of future episode payment models for a broader range of clinical conditions, we sought comment on model design features that would be important for episode payment models targeting procedures that may be performed in both the inpatient and outpatient setting, as well as models focused on hospitalization for acute medical conditions which may overlap or interact (for example, sepsis related to pneumonia or acute kidney injury related to congestive heart failure exacerbation). In particular, episode payment models must clearly define the beginning of the episode as well as set an episode price that is appropriate for beneficiaries included in the episode, which has commonly been based on historical spending for such beneficiaries in both existing CMS models and the three proposed EPMs. These parameters pose specific challenges as the variety of clinical
conditions targeted for episode payments expands beyond lower extremity orthopedic procedures and acute cardiac conditions, and we expect that such potential future models would need to be designed differently than the CJR model or the EPMs in this rulemaking.

For example, because procedures such as PCI for non-AMI beneficiaries or cardioverter defibrillator implantations can occur in the inpatient or outpatient setting, an episode payment model would need to include beneficiaries receiving such procedures at all sites-of-service so as to not influence decisions on where procedures are performed based on payment-related rather than clinical considerations. Episode payment models that begin with the same procedure performed in the inpatient or outpatient setting would require methodological development beyond the approaches that have been used thus far in CMS’ other EPMs that rely upon the MS–DRG for a hospitalization to begin an episode and identify historical episodes for setting episode prices. Such models that involve episode payment for procedures furnished in the inpatient or outpatient setting may allow for significant physician-led opportunities that would allow the models to be identified as Advanced APMs. We sought comment on how these types of procedures could be included in future episode payment models, including identifying the accountable entity, and the role of physician-led opportunities; defining the episode beginning and end; setting episode prices; applying risk-adjustment to account for differences in expected episode spending for a heterogeneous population of beneficiaries; and any other issues of importance for the design of such an episode payment model.

We also sought comment on potential future episode payment models that would include care for medical conditions that result in the serious health event of an inpatient hospitalization, which often represents, regardless of the specific reason for the hospitalization, a common pathway that includes failure of outpatient care management and care coordination for beneficiaries with chronic conditions. While we include beneficiaries who solely receive medical treatment in the proposed AMI model, we note that beneficiaries with AMI are almost always hospitalized and their MS–DRGs at discharge are generally predictable and consistent based on their AMI diagnoses. This is not the case for a number of medical conditions for which grouping by MS–DRGs is more complicated or less consistent. Many non-procedural hospitalizations of Medicare beneficiaries are ultimately categorized based on the principal ICD–CM diagnosis code reported on a claim, which in turn is mapped to a Major Diagnostic Category (MDC) based on the involved organ system, which then leads to the assignment of any of various specific MS–DRGs based on the medical groups in the MDC. For example, the medical groups for the Respiratory System MDC are pulmonary embolism, infections, neoplasms, chest trauma, pleural effusion, pulmonary edema and respiratory failure, chronic obstructive pulmonary disease, simple pneumonia, RSV pneumonia and whooping cough, interstitial lung disease, pneumothorax, bronchitis and asthma, respiratory symptoms and other respiratory diagnoses.36 Unlike a beneficiary who undergoes a surgical procedure or who is hospitalized for a specific medical condition such as AMI, the ultimate MS–DRG at discharge assigned to a beneficiary hospitalized for diagnosis and management of respiratory symptoms may not be clear during the hospitalization itself, or even afterward, until the inpatient claim is submitted and paid by Medicare. This makes it challenging for providers to engage in care delivery redesign targeted to a specific patient population identified by MS–DRG. Additionally, it is possible that beneficiaries hospitalized for certain medical conditions also may follow common clinical pathways before and after discharge for which similar care redesign strategies could be developed and used despite those beneficiaries’ assignments to different MS–DRGs for their anchor hospitalizations. Thus, we believe that hospitalization for most medical conditions would require special consideration in the development of potential future episode payment models that goes beyond CMS’s current approach of relying upon the MS–DRG for the anchor hospitalization to begin an episode and identify historical episodes for setting episode prices. We sought comment on design features needed to address these considerations, including defining the beginning and end of episodes; setting episode prices, including risk-adjustment, that would support the provision of appropriate and coordinated care for beneficiaries following hospital discharge for a period of time during the episode; and any other issues of importance for the design of such an episode payment model.

The following is a summary of the comments received and our responses.

Comment: Many commenters expressed support for the continued commitment of the Agency to testing episode-based payment models under a range of settings. One commenter suggested that CMS generally consider both clinical and economic expertise as well as include large databases as part of the development of future event-based EPM. While recommendations included both specific surgical procedures, such as PCI or spine surgery, chronic conditions, such as diabetes, and discrete events including colonoscopy and an arm arthroplasty, several commenters submitted more general suggestions that CMS take an expansive approach in general for the consideration of future models and not limit alternative payment models to episode payment approaches. When considering future models to qualify as Advanced APMs, one commenter suggested that CMS count capitated MA relationships in MACRA’s APM threshold calculation.

Some commenters preferred an emphasis on future EPMs that consider the role of preventative efforts. For example, one commenter suggested that conditions such as osteoporosis could include efforts to improve bone health and functional level to achieve meaningful reduction in falls and subsequent fracture. The commenter followed that concerns such as fracture prevention be included in future models. To this end, one commenter stated that CMS should take a “bottom-up approach” that encourages providers to develop alternative payment models.

Response: We thank the commenters for their remarks, and will continue to apply the bottom-up approach to improving the coordination among providers in future EPMs.

Comment: Some commenters expressed concern about the limitation of hospital-based models and recommended that future expansions should include more types of participants, including physicians, and participation should be voluntary. Physicians, one commenter suggested, are best suited to ensure efficient utilization of resources while preserving patient quality by virtue of their direct relationship with the patient during an acute episode. One commenter suggested expansion of physician-focused payment models beyond the Focused Payment Model Technical Advisory Committee (PTAC). In a parallel thought process, many other commenters expressed the need for CMS to consider post-acute care bundles, ACO based models, and shared
accountability payment models for Inpatient Rehabilitation Facilities (IRFs). One commenter strongly recommended CMS to allow manufacturers to enter into voluntary agreements with CMS to link payment to outcomes. One such outcome proposed by the commenter was the long-term revision rates for total joint arthroplasty (TJA). Any shared savings relative to the average rate of revision among Medicare patients, the commenter suggested, could be shared between implanting surgeons, hospitals and medical device manufacturers.

Commenters stated that these additional types of participants could provide a means to ensure efficient utilization within a particular market. In addition, another commenter noted that procedures performed in ambulatory surgical centers may be better situated to serve as the financially accountable entity in order to optimize care coordination to better achieve the goals envisioned by episode-based payment models.

Response: We thank the commenters for their commitment to working with CMS in developing future episode payment models.

Comment: Commenters commonly recommended that future bundles be sensitive to considering risk adjustment, appropriate use criteria, patient expectations, stage of disease progression, treatment options, and appropriate quality measures regardless of setting. Commenters also recommended that future measures in future condition-specific payment models should be more directly related to the condition of the beneficiaries within the EPM. To this end, one commenter recommended that CMS include measures of patient engagement and shared care planning. Another commenter suggested that those who participate in geriatric fracture programs and/or obtain CORE Certification, be incentivized to continue such progress. Even as CMS proposed to exclude IPPS transition pass-through payments for medical technologies from EPM episodes, one commenter requested that future EPM episodes include additional innovative technologies to qualify for a payment adjustment similar to the Medicare New-Technology add-on payment.

Many commenters stressed the importance of shared decision-making in the development of future models. One commenter, for example noted the Clinical Practice Improvement Activities category of the MIPS could be an important first step to greater shared decision-making across healthcare delivery and recommended CMS look to research conducted by PCORI and others for future direction. Specifically, one commenter also noted that shared decision-making and patient engagement tools could be especially informative in situations not triggered by an acute care hospitalization. Several other commenters further strongly encouraged the participation of hospitals, physicians, patients, and other stakeholders in the development, implementation, and testing of future models. Additionally, in future EPM models, a few commenters directed CMS to consider directly extending the risk to the other providers, including clinicians as physicians shape the spending during the hospital stay and the selection of the initial post-acute care provider but are not required to be at risk for the 90-day episode spending. Similarly, some commenters noted that post-acute care providers can influence how much spending for post-acute care services is used and the rate of hospital readmissions but are not directly at risk for the 90-day episode spending. Therefore, these commenters suggested such changes to future EPMs would ensure that the financial incentives of the key actors shaping care are aligned.

In addition to model design, one commenter recommended that QIOs serve in a technical assistance role for model participants to include data analyses, convening providers in the area, structuring implementation of improvement activities, and monitoring tests of improvement.

Response: We thank the commenters for these suggestions and will consider the recommendations as we consider future event-based procedures and medical conditions to include in future rulemaking.

Comment: One commenter pointed to the Continuing Care Hospital model, and suggested CMS pilot future event-based episode payment models for procedures and medical conditions. The commenter stated that the CCH would allow predictable and reduced costs to the Medicare program.

Response: We thank the commenter for the reference.

Comment: One commenter suggested the implementation of an evaluation EPM, whereby the episode initiates when a beneficiary enters an inpatient setting with a set of symptoms that may be difficult to attribute to one or more MS-DRGs. Such an evaluation EPM, stated the commenter, would need to be limited to a specific set of symptoms, such as the example CMS provided regarding respiratory symptoms.

Response: We thank the commenter for this specific suggestion.

Comment: One commenter recommended CMS to exclude other potentially high cost drivers, such as psychiatric readmissions and high-cost IV therapy, from future EPM bundles.

Response: We acknowledge this suggestion and will consider if it is applicable to specific future EPMs.

Comment: One commenter noted other considerations specific to identifying future models, specifically that CMS update the claims adjudication system and develop contracting tools. The commenter suggested that such changes would encourage participant providers to improve their care pathways and care coordination.

Response: We acknowledge these additional considerations and re-affirm our commitment to continuously engage stakeholders as we establish and operationalize future policies.

Comment: A few commenters requested a meeting with CMS to discuss the specifics of a future innovation model.

Response: We appreciate the interest in meeting with CMS to discuss future models. Commenters should note that ideas can also be submitted through https://innovation.cms.gov/Share-Your-Ideas/Submit/index.html.

Final Decision: After seeking comments on future directions for episode payment models, we thank the public for these comments and will evaluate the suggestions for future consideration.

d. Health Information Technology

Readiness for Potential Future Episode Payment Models

We are particularly interested in issues related to readiness of providers and suppliers that are not hospitals to take on financial responsibility for episode cost and quality in potential future episode payment models. We have some experience in BPCI Models 2 and 3 with non-hospital providers and suppliers, specifically post-acute care providers and physician group practices (PCPs), who assume financial responsibility for the cost of episode care. In BPCI Model 2, PGPs may directly bear financial responsibility for episode cost for up to 48 clinical conditions for the anchor inpatient admission and up to 90 days post-hospital discharge. In BPCI Model 3, PGPs and post-acute care providers, including skilled nursing facilities, home health agencies, inpatient rehabilitation facilities, and long-term care hospitals, may directly bear financial responsibility for episode cost for up to 48 clinical conditions for a duration that extends up to 90 days.
following initiation of post-acute care following discharge from an inpatient hospitalization.

Under these circumstances, PCPs and post-acute care providers typically need to use health IT to assist them in effectively coordinating the care of BPCI beneficiaries across settings throughout the episodes. The risk-bearing entities participating in BPCI have expressed readiness to take on financial responsibility for episode cost, and they commonly rely upon health IT for assistance in managing the care for BPCI beneficiaries across settings for episodes that extend for a substantial period of time. However, a recent national survey of IT in nursing homes showed common use of IT for administrative activities but less use for clinical care.\(^37\)

Anecdotally, stakeholders have told us that accountable non-hospital providers and suppliers, especially those that are not integrated with health systems, may have less well-developed tools for following patients throughout episodes, potentially resulting in greater challenges in reducing the cost and improving the quality of episode care under the BPCI models. Therefore, we understand that limitations in the availability of health IT that can be used in beneficiary management across care settings may pose a significant barrier to the readiness of non-hospital providers and suppliers to assume financial responsibility for episodes in potential future episode payment models.

In the CJR model, acute care hospitals are financially responsible for cost and quality during LEJR episodes-of-care. CJR model participant hospitals may form partnerships with post-acute care providers such as skilled nursing facilities and home health agencies, as well as physicians and PCPs, to share financial risk and collaborate on care redesign strategies, as in BPCI. Although hospitals are the financially responsible entities under the CJR model, we recognize that partnerships with post-acute care providers could be a crucial driver of episode spending and quality, given that many beneficiaries in the CJR model receive post-acute care services after discharge from the hospital. We also recognize that tools such as health IT may be critical for certain care management and quality strategies targeted toward the goal of lower cost and higher quality episode care.

Limitations in the availability of health IT may pose a barrier to effective post-acute care provider collaboration and sharing of financial risk in episode payment models even when hospitals are the financially responsible entities under such models, such as the CJR model and the three new EPMs in this rule.

We recognize that there is wide variation in the readiness of other providers and suppliers to bear financial responsibility for episodes, either directly or indirectly through sharing arrangements with the directly responsible entities where those arrangements may include upside and downside risk. For instance, adoption of health IT among providers in the post-acute care market, such as skilled nursing facilities, continues to lag behind hospitals and providers of ambulatory care services. In addition to facing significant resource constraints, post-acute care providers were not included as an eligible provider type under the Medicare and Medicaid Electronic Health Record (EHR) Incentive Programs. The recent extension of Medicaid 90/10 Medicaid funding offers new opportunities for states to include post-acute care providers in projects focused on infrastructure development, but will not address the cost of health IT adoption among post-acute care providers.\(^38\)

To ensure that post-acute care providers and other types of providers and suppliers can succeed under future episode payment models, either as the directly financially responsible entity or as collaborators with other directly financially responsible entities, we are interested in opportunities to increase provider readiness as part of the design of potential future episode payment models and the potential refinement of current episode payment models. Specifically, we would like to explore: Incentives to encourage post-acute care providers, as well as other providers and suppliers that furnish services to episode payment model beneficiaries, to make necessary investments in health IT infrastructure; payment mechanisms that could leverage savings achieved under episode payment models to contribute to these investments; and any other strategies to enhance the adoption, implementation, and upgrading of certified health IT. We sought comment on these ideas, as well as the following questions:

- What would be a sufficient financial incentive or bonus to enhance the adoption, implementation, and upgrading of certified health IT in post-acute care settings?
- How else can episode payment models encourage the use of certified health IT and information sharing among providers and suppliers caring for episode payment model beneficiaries to improve care coordination and patient outcomes?
- Within the existing CJR model, are there additional opportunities to encourage investment in adoption, implementation, and upgrading of certified health IT among post-acute care providers to support improvements in care coordination and patient outcomes? What CJR model refinements could enable direct investments to support these improvements, particularly among post-acute care providers who are unaffiliated with CJR model participant hospitals but who provide services to CJR model beneficiaries, including post-acute care providers who may enter into financial arrangements with CJR model participant hospitals as CJR collaborators?

The following is a summary of the comments received and our responses. Comment: Commenters recognized the importance that health IT plays in the modern health care landscape, and overall supported the implementation of a more robust health IT system, as such a system may improve the ability to convey quick, accurate information from acute care hospitals related to the discharge MS–DRG and identification of patients who are under a bundled payment program. Many commenters expressed a need for future episode payment models to align with EHR incentive payments, and several commenters expressed concern that post-acute care providers were largely disadvantaged for health IT readiness relative to their inpatient counterparts. For example, commenters stated that post-acute care providers and nonphysician clinicians were marginalized by the Medicare and Medicaid EHR Incentive Programs. Some commenters believe this population represents a significant portion of the health care provider community without the technical and financial support necessary to adopt and implement EHRs in a meaningful way. As many of the measures used under meaningful use, such as e-prescribing, are not applicable to nonphysician practitioners, commenters suggested these and other clinicians have not had the benefit of experience with EHRs at the same rate as their peers who work

---

in hospitals. As a result, one commenter noted that small practices who may face financial responsibility, such as physical therapists, would face considerable challenges implementing health IT systems in their practices.

Several commenters recommended that CMS to consider all possible approaches to address this specific concern. One commenter, for example, recommended an approach similar to the ACO Investment Model program whereby participants could receive supplemental payments to offset their upfront investment. Other commenters preferred not to provide specific approaches as the sufficiency of financial incentives or bonus payments may differ for example among Skilled Nursing Facilities (SNFs), Home Health Agencies (HHAs), and institutional or hospital-based post-acute care providers, but highlighted the need for CMS to otherwise incentivize health IT adoption among providers. To effectively implement any such expansion, one commenter further stressed the need for health IT interoperability to be considered, while another commenter stressed instead that CMS should specifically cite the availability of the safe harbors of the Stark and Physician Self-Referral rules, through which health care organizations could choose to assist post-acute, or other providers, in making available EHRs meeting certain requirements in any potential approach. One commenter recommended that CMS continue to engage the long-term and post-acute care community to explore in more detail potential strategies to help overcome challenges providers face, such as the high costs of participating in health information exchange or the operational investment of an EHR system. Other comments on ways to incentivize health IT investment by post-acute care providers included: quicker or premium reimbursement for health IT adoption or upgrade, returning savings to post-acute care providers to offset health IT costs and incentive grants for training staff in health IT.

Response: We will consider these and other possible approaches to address the concerns and challenges associated with implementing health IT systems.

Final Decision: After consideration of the public comments received, we believe we have a better understanding of the issues related to readiness of providers and suppliers that are not hospitals to take advantage of interoperability through CEHRT in potential future episode payment models.

B. Definition of the Episode Initiator and Selected Geographic Areas

1. Background

The new EPMs will complement the current CJR model and continue efforts to move Medicare towards paying providers based on quality and value. As discussed during rulemaking for the CJR model and in the EPMs proposed rule, CMS is interested in testing and evaluating the impact of an episode payment approach on a broad range of episodes in a variety of other circumstances. In addition to including hospitals that have not chosen to voluntarily participate in earlier models, we also are interested in expanding the range of episodes included beyond elective surgical procedures such that the impact on a broader range of beneficiaries, hospitals, and circumstances may be tested. We also are interested in evaluating the impact on hospitals when an increasing percentage of care to Medicare beneficiaries is paid for through alternative payment models.

As with CJR, we proposed in §512.105(c) that the hospital be the accountable financial entity and that these episode payment models be implemented in all IPPS hospitals in the geographic areas selected, subject to exclusions as specified in §§512.230 and 512.240 of the proposed rule. While these are considered new episode payment models and do not reflect an expansion or extension of any previous models, they do intentionally build significantly upon the work of BPCI and, most significantly, the framework established for CJR under 42 CFR part 510 published on November 24, 2015 (80 FR 73274). Given the extensive consideration given to many of these issues during the CJR model planning and rulemaking periods, we believe this is important as we seek to build a model that is scalable across all providers and episode types. We also seek to limit the burden for hospitals and other providers that may be participating across multiple episode types. Therefore, to the extent applicable and appropriate, we have sought consistency with rules established for the CJR model. We sought comment on those areas where alternative options were proposed or should be considered that would not add additional operational burden or complexity. A summary of comments received and CMS’ response to those comments are included in the following sections.

2. Definition of Episode Initiator

Under the proposed EPMs, consistent with our episode initiator definition under the CJR model, we proposed that episodes would begin with the admission to an IPPS acute-care hospital that triggers an AMI, CABG or SHFFT episode as specified in section III.C.4.a. of the proposed rule (81 FR 50834). As with the CJR model, we proposed that hospitals would be the only episode initiators in these episode payment models. For purposes of these episode payment models. The term “hospital” means a hospital as defined in section 1886(d)(1)(B) of the Act. This statutory definition of hospital includes only acute care hospitals paid under the IPPS. Under this proposal, all acute care hospitals in Maryland would be excluded and payments to Maryland hospitals would be excluded in the regional pricing calculations as described in section III.D.4. of the proposed rule (81 FR 50847). This is the same policy that is being followed with the CJR model. In addition, we also proposed to exclude all-payer state models which may be implemented in the future. We welcomed comments on this proposal and sought comment on potential approaches for including Maryland acute-care hospitals or, potentially, other hospitals in future all-payer state models in these episode payment models.

As implemented with the CJR model, we proposed to designate IPPS hospitals as the episode initiators to ensure that all services covered under FFS Medicare and furnished by EPM participant hospitals in selected geographic areas to beneficiaries who do not meet the exclusion criteria specified in section III.C.4. of the proposed rule (81 FR 50834) are included. In addition, the episodes must not be BPCI episodes that are proposing to exclude as outlined in this section and in section III.C.4. of the proposed rule. We believe that utilizing the hospital admission as the episode initiator is a straightforward approach for these models because patients covered under these DRGs and diagnoses require hospital admission for these services, whether provided on an emergent or planned basis. Under these new models covering medical admissions and services that are not necessarily elective, as stated in the proposed rule, we will be able to expand our testing of a more generalized bundled payment model. Finally, as described in section III.B.4. of the proposed rule (81 FR 50815) our proposed geographic area selection approach relied upon our definition of hospitals as the entities that initiate episodes.
The following is a summary of the comments received on our proposed episode definition and our responses.

**Comment:** We received many comments supporting our proposal to initiate these EPM episodes of care with the inpatient hospital admission. However, we also received multiple comments noting the important role that physicians play in managing patient care throughout the episode period including after discharge from the hospital. These same commenters expressed support for more physician based payment models so that physicians can have a more substantial role in managing episodes.

**Response:** We appreciate the support commenters expressed for initiating the EPM episodes with the inpatient hospital admission. While we acknowledge and understand that inpatient initiated episodes represent only one of many potential models for improving the quality of care while restraining the growth in costs, we continue to believe that the appropriate initiating point for the episodes in these EPMs is the inpatient admission. Hospitals play a central role in coordinating episode-related care and ensuring smooth transitions for beneficiaries undergoing services related to these episodes and a large portion of a beneficiary’s recovery trajectory from an AMI or CABG or SHFTT begins during the hospital stay which is why we are finalizing the inpatient admission as the initiating event in the episode definition. We also note that CMS has supported and is supporting other voluntary demonstrations and models that focus on providing financial support for care coordination services as recommended by these commenters. In addition, in recent years, the range of services eligible for payment under the Medicare physician fee schedule has expanded to include care transition and chronic care management codes. For further discussion of future models, we refer the reader to section III.A.3. of this final rule, “Future Directions for Episode Payment Models.”

We did not receive any comments related to our exclusion of Maryland nor on the potential inclusion or exclusion of future all-payer state models. Therefore we are finalizing our proposal to exclude Maryland providers from this model.

Subsequent to the publication of this final rule CMS announced on October 26, 2016 the implementation of the Vermont All Payer ACO Model which will begin on January 1, 2017. Since this new Vermont model is an all payer model and since we proposed to exclude all of the all payer state models from the EPM we are also finalizing the exclusion of Vermont providers from selection for participation in the EPMs. We note that currently none of the MSAs in Vermont are participating in the CJR model and would, therefore, not have been selected to participate in the SHFTT EPM.

**Final Decision:** After consideration of the public comments received, we are finalizing the proposed episode definition, without modification, such that these EPM episodes will be initiated with the admission to an IPPS acute-care hospital that triggers an AMI, CABG or SHFTT episode as specified in section III.C.4.a. of this final rule. We are also finalizing the exclusion of hospitals in Maryland and Vermont from participation in the EPMs.

3. Financial Responsibility for the Episode of Care

As with the CJR model, and as discussed in the proposed rule, we continue to believe it is most appropriate to identify a single type of provider to bear financial responsibility for making repayment, if any, to CMS under the model. Therefore, we proposed to make hospitals, as the episode initiators, financially responsible for the episode of care for the following several reasons:

- Hospitals play a central role in coordinating episode-related care and ensuring smooth transitions for beneficiaries undergoing services related to SHFTT, AMI and CABG episodes. A large portion of a beneficiary’s recovery trajectory from an AMI, CABG, or SHFTT begins during the hospital stay.
- Most hospitals already have some infrastructure related to health IT, patient and family education, and care management and discharge planning. This includes post-acute care coordination infrastructure and resources such as case managers, which hospitals can build upon to achieve efficiencies under these EPMs.
- By definition, these episodes always begin with an acute care hospital stay. While often preceded by an emergency room visit and possible transfer from another hospital’s emergency room, or followed by post-acute care, these parties are not necessarily always present and would not be appropriate to target as the financially responsible party for this purpose.

EPM episodes may be associated with multiple hospitalizations through transfers. These hospitalizations occur, we proposed that the financial responsibility be given to the hospital to which the episode is attributed, as described in section III.C.4 of the proposed rule. We recognize that, particularly where the admission may be preceded by an emergency room visit and subsequent transfer to a tertiary or other regional hospital facility, patients often wish to return home to their local area for post-acute care. Many hospitals have recently heightened their focus on aligning their efforts with those of community providers, both those in the immediate area as well as more outlying areas from which they receive transfers and referrals, to provide an improved continuum of care. In many cases, this is due to the incentives under other CMS models and programs, including ACO initiatives such as the Shared Savings Program, the Hospital Readmissions Reduction Program (HRRP), and the CJR model. By focusing on the hospital as the accountable or financially responsible entity, we hope to continue encouraging this coordination across providers and sought comment on ways we can best encourage these relationships within the scope of these EPMs.

In support of our proposal that hospitals be the episode initiators under these EPMs, we believe that hospitals are more likely than other providers to have an adequate number of episode cases to justify an investment in episode management for these EPMs. We also believe that hospitals are most likely to have access to resources that would allow them to appropriately manage and coordinate care throughout these episodes. Finally, the hospital staff is already involved in discharge planning and placement recommendations for Medicare beneficiaries, and more efficient post-acute care service delivery provides substantial opportunities for improving quality and reducing costs under EPMs. For those hospitals that are already participating in CJR, we believe the efforts that have been put in place to support patients receiving LEJR will be supportive of the new EPMs proposed under this rule, particularly for SHFTT episodes which we proposed to implement in the same geographic areas as the CJR model.

Finally, as noted when planning for the CJR model, although the BPCI initiative includes the possibility of a physician group practice as a type of episode initiating participant, the physician groups electing to participate in BPCI have done so because their practice structure supports care redesign and other infrastructure necessary to bear financial responsibility for episodes. These physician groups are not necessarily representative of the typical group practice. As with the CJR
model, the infrastructure necessary to accept financial responsibility for episodes is not present across all physician group practices, and thus, as we stated in the proposed rule, we do not believe it would be appropriate to designate physician group practices to bear the financial responsibility for making repayments to CMS under the proposed EPMs. We sought comment on our proposal to establish financial responsibility and accountability under the AMI, CABG, and SHFFT EPMs consistent with our implementation of the CJR model.

Currently, there are SHFFT, AMI, and CABG episodes being tested in BPCI Models 2, 3 or 4. The last remaining BPCI Model 1 hospital will end December 31, 2016 and will, therefore, not overlap with EPM. In addition, under BPCI, there are episodes for PCI, which, if an AMI were also involved, would fall under the AMI model proposed. We proposed that IPPS hospitals located in an area selected for any one of the episode payment models proposed in the proposed rule (81 FR 50834) that also are episode initiators for episodes in the risk-bearing phase of BPCI Models 2 or 4 be excluded from participating in the AMI, CABG, or SHFFT EPMs for episodes not otherwise covered under BPCI. The exclusion would be in effect only during the time that the relevant qualifying episodes are included in one of the BPCI models. Likewise, we proposed that if the EPM participant is not an episode initiator for overlapping episodes under BPCI Models 2 or 4, but these same episodes are initiated during the anchor hospitalization by a physician group practice (PGP) under BPCI Model 2 (where the services are provided at the episode initiating hospital) then the episode also shall be covered under BPCI and be excluded from the EPM payment models proposed under the proposed rule (81 FR 50834). Otherwise qualifying EPM episodes (that is, those that are not part of an overlapping BPCI AMI, CAGB, PCI or SHFFT episode) at the participant hospital would be included in these new EPMs. However, because BPCI participation is voluntary and participating providers may select which episodes to participate in, we proposed that a BPCI participating provider will participate in any of the proposed AMI, CAGB, or SHFFT EPMs for any episodes not otherwise preempted under their BPCI participation. For example, a BPCI Model 2 participant in an AMI episode geographic area participating in BPCI only for CAGBs will be an EPM participant in the AMI model. Similarly, an acute care hospital participating in BPCI for LEJR but not SHFFT episodes would be exempt from participation in the CJR model in a CJR model geographic area but would participate in the SHFFT model for SHFFT episodes. In addition, providers participating in BPCI may also collaborate with an EPM participant for episodes not covered under BPCI. It should be noted that due to differences in how the AMI episode is defined under the AMI model versus BPCI and the inclusion of PCI MS–DRGs under the latter, a patient with the same discharge MS–DRG and diagnoses may qualify for a PCI episode under BPCI and an AMI episode under the AMI model. As stated in the proposed rule, our intent is to give precedence to BPCI regardless of which episode a patient qualifies for if the patient would be covered under BPCI.

In section III.D.6. of the proposed rule we discussed in more detail how we proposed to handle situations when a beneficiary receives services that would qualify for inclusion in more than one CMS payment model during the same or overlapping periods of time. We welcomed input on how these overlaps should be handled to best encourage ongoing care coordination while minimizing the impact on other models and limiting confusion and operational burden for providers. While we proposed that the EPM participant be financially responsible for the episode of care under these EPMs, we also stated that we believe that effective care redesign requires meaningful collaboration among acute care hospitals, post-acute care providers, physicians, and other providers and suppliers within communities to achieve the highest value care for Medicare beneficiaries. We continue to believe it is essential for key providers to be aligned and engaged, financially and otherwise, with the EPM participants, with the potential to share financial responsibility with EPM participants. We noted that all relationships among providers and suppliers must comply with all relevant laws and regulations, including the fraud and abuse laws and all Medicare payment and coverage requirements unless otherwise specified further in this section and in sections III.I. and III.J. of the proposed rule. Depending on a hospital’s current degree of clinical integration, new and different contractual relationships among hospitals and other health care providers may be important, although not necessarily required for EPM success in a community. We acknowledge that financial incentives for other providers may be important aspects of the model in order for EPM participants to partner with these providers and incentivize certain strategies to improve episode efficiency.

While we acknowledged the important role of conveners in the BPCI model, and that AMI, CAGB, and SHFFT model participants may wish to enter into relationships with EPM collaborators and other entities in order to manage the episode of care or distribute risk, we proposed that the ultimate financial responsibility of the episode would remain with the EPM participant. Exceptions to this general rule for beneficiaries covered under certain risk bearing ACO arrangements are outlined in section III.D.6. of this final rule. As with the CJR model, we did not intend to restrict the ability of EPM participants to enter into administrative or risk sharing arrangements related to these EPMs, except to the extent that such arrangements are already restricted or prohibited by existing law. We referred readers to section III.I. of the final rule for further discussion of model design elements that may outline financial arrangements between EPM participants and other providers and suppliers.

The following is a summary of the comments received and our responses. Comment: We received numerous comments related to our proposal to have the hospital be the single accountable entity for the EPM episodes. Many commenters were supportive of this policy and, while not ignoring the importance of other providers, agreed that hospitals were best positioned to assume risk for these episodes. Other commenters were less supportive of this proposal, noting that hospitals could be disadvantaged if physicians and post-acute care providers were not also at risk or if conflicting interests hindered their willingness to collaborate. A few commenters expressed concern that while hospitals would bear the risk, hospitals might be limited in their ability to control that same risk. For example, one commenter referenced the penalty that hospitals already face for readmissions which may not be correlated to inpatient care. One commenter stated that post-acute care providers would be more motivated if they were required to share in even a small percentage of the incentives or risk directly. Another commenter noted that the current per-diem payment system for SNFs put SNF providers at particular risk. Although SNFs will invest resources to shorten SNF stays, which can create significant savings for the EPM participant, the
commenter stated SNF providers will be disadvantaged/harmed as the proposed regulations do not require proportional sharing of reconciliation payments by the EPM participant with post-acute care providers and requested that we amend the language to more clearly outline how reconciliation payments should be shared proportionally among all EPM collaborators, noting that this change would also likely require these same providers to share in downside risk as well. Other commenters objected to the hospital holding sole financial accountability for the models as they believe that physicians, including hospitalists, surgeons, and internal medicine subspecialists are best positioned to impact the process of care. These commenters stated that CMS should be giving priority to physician-centered alternative payment models. One commenter believes that having the hospital in charge of the bundle could give the hospital inappropriate leverage over other participants and or lead to the exclusion of providers if they failed to agree to the hospital’s terms. Other commenters wanted the flexibility for convener to assume risk and organize groups of providers, as is allowed under BPCI.

One commenter specifically stated that determination of the accountable entity should be based not only on the ability to accept risk but also the ability to change care delivery patterns. While one commenter explicitly stated that “only physicians can make the determination as to what types of care could effectively address patients’ needs,” that commenter also wanted payment to physicians to be predictable and physician financial accountability limited to “costs that are within their control.” The perspective that physicians were best positioned to manage the episode of care and desire for them to have the opportunity to bear risk, particularly as it might pertain to eligibility for advanced alternative payment model status, was expressed by a number of commenters although the focus in such comments was on voluntary models.

Response: We appreciate the support expressed by certain commenters for our proposed policy to hold the initiating hospital as the financially accountable entity for the EPM episodes. While we acknowledge the critical importance of physicians and other providers, in particular those providing post-acute care, in managing episodes which extend 90 days beyond discharge from the acute hospitalization, we continue to believe the hospital should be the financially accountable entity for these models. For hospitals to be successful in managing EPMs, we firmly believe that they will need to actively solicit the support of physicians, post-acute care providers, and other clinical care providers in order to provide the best quality of care in a cost effective manner. In many, if not most situations, this may involve establishing collaborative agreements with a risk sharing arrangement. We support other types of providers assuming risk where they are financially able to do so and agree that providers that have a share in the risk, both positive and negative, may be more motivated to establish collaborative agreements. However, we do not believe that in a model with required participation, any other provider group is consistently as financially positioned to assume risk as is the hospital to which the episode is attributed. We also do not want to mandate a specific division of risk between providers or to direct the specific terms of any collaborator agreements that may be established. We disagree that the current proposal to make hospitals the financially accountable entity undermines the role of the physician, and in providing for a range of collaborator agreements, we hope that EPM participants will actively engage in gainsharing with others. We refer readers to section III.I of this final rule for a fuller discussion of allowable collaborator relationships. We believe that in order to be most successful, hospitals will reach out to other providers to establish agreements with collaborators, although we acknowledge that it may take time to negotiate and establish such arrangements. While some physician groups and post-acute care providers are in a position to take on risk, we continue to believe that many, particularly those in smaller groups and those in more rural areas, are not and, in fact, no commenter suggested that this was the case. Even where the focus of a comment was on providing more opportunities for physicians to assume risk, it was in the context of voluntary models such as BPCI. We appreciate those comments and, in fact, will give precedence to BPCI participants where there is such overlap. Readers are referred to section III.D.6. of this final rule, “Adjustments for Overlaps with Other Innovation Center Models and CMS Programs,” which addresses in more detail how situations where there is an overlap between EPMs and other episode based models will be handled. We address in some more detail in this final rule, how patients attributed to other physician-centric episode models will be attributed. We also note in section III.A.3 of this final rule opportunities for future alternative payment models which may be more physician-centric.

Comment: We received a few comments that not only advocated for more flexibility in which entity would be allowed to assume risk for the episode but also suggested that CMS more actively encourage collaboration by providing more specific operational guidance regarding how risk should be shared among different providers. A few commenters noted that financial agreements may not always be feasible. One commenter noted that in markets where physicians, hospitals and post-acute care providers already work well together, the foundation for effective gainsharing arrangements are more likely to be in place. Others noted that some organizations may be willing to share in any savings but not be willing to accept downside risk.

One commenter recommended that CMS require that EPM participants execute gainsharing arrangements with providers to establish a third party entity to receive and distribute reconciliation payments in accordance with the terms of such sharing agreements.

Response: We acknowledge the challenges that some EPM participants may have in establishing effective collaborative agreements. Similarly, we acknowledge the potential challenges that non-hospital providers such as physicians and post-acute care providers may have in getting EPM participants to share risk in a manner that is believed to be equitable to all. However, we do not believe it is appropriate for CMS to either require or establish specific criteria for the terms of such agreements nor to specify how they should be operationalized. We continue to believe, however, that the most successful EPMs will be motivated to engage other providers so that interests and incentives are aligned. We refer readers to section III.I of this final rule, “Financial Arrangements under EPM,” for a full discussion of EPM financial arrangements.

Final Decision: After consideration of the public comments received, we are finalizing the proposal, without modification, to make hospitals the episode initiators and financially responsible for the episode of care.
4. Geographic Unit of Selection and Exclusion of Selected Hospitals

In order to determine the geographic unit of selection for these episode payment models, we conducted an analysis similar to that used for the CJR model. For the CJR model, we considered using a stratified random sampling methodology to select: (1) certain counties based on their Core-Based Statistical Area (CBSA) status; (2) certain zip codes based on their Hospital Referral Regions (HRR) status or (3) certain states. We concluded that selection based on MSAs provided the best balance between choosing smaller geographic units while still capturing the impact of market patterns reflecting the mobility of patients and providers and limiting the potential risk for patient shifting and steerage between MSAs. HRRs are based on where patients receive selected tertiary care services, which do not include orthopedic services. Therefore, HRRs may not be representative of where patients receive specialty orthopedic care or more routine orthopedic services such as hip and knee arthroplasty.

Selection of states rather than MSAs would have greatly reduced the number of independent geographic areas subject to selection and, therefore, the statistical power of the evaluation. For similar reasons and to maintain consistency with the CJR model, we proposed implementation at the MSA level.

We also similarly considered whether these new models should be limited to hospitals where a high volume of these episodes occur, which would result in a more narrow test on the effects of an episode-based payment, or whether to include all hospitals in particular geographic areas, which would result in testing the effects of an episode-based payment approach more broadly across an accountable care community seeking to coordinate care longitudinally across settings. However, as with the CJR model, if we were to limit participation based on volume, there would be more potential for behavioral changes that could include patient shifting and steering between hospitals in a given geographic area that could impact the test. Additionally, this approach would provide less information on testing payments for these episodes across a wide variety of hospitals with different characteristics. Selecting geographic areas and including all IPPS hospitals in those areas not otherwise excluded due to BPCI overlap as previously described and in section III.D.6. of the proposed rule as model participants would help to minimize the risk of participant hospitals shifting higher cost cases out of the EPM.

In determining where to implement these EPMs, we also considered whether implementation of the CJR model in the same geographic area should be a factor. We realize that there is likely to be considerable overlap in the selection criteria between MSAs where the SHFFT EPM might be appropriate and those MSAs where the CJR model is now being implemented. While limiting burden on hospitals is an important consideration, we also believe that the infrastructure being put in place as a result of the CJR model presents significant advantages for implementation of the SHFFT model. For similar reasons, and in order to minimize participant steering and/or transfer for reasons due solely to the implementation of these new payment models, we believe that it is appropriate to implement the AMI model and CABG model together in the same geographic areas, albeit not necessarily in the same areas as the CJR and SHFFT models.

We also proposed that the AMI and CABG models be implemented in MSAs selected independently based on the criteria discussed in the proposed rule (81 FR 50815). This would result in four separate categories of MSAs: (1) MSAs where only the CJR and SHFFT model episodes are being implemented; (2) MSAs where only the CABG model and AMI model episodes are being implemented; (3) MSAs where the CJR as well as the AMI, CABG, and SHFFT models are being implemented; and (4) MSAs where neither CJR nor any of the new episode payment models are being implemented. We believe this will provide an opportunity to test the impact of implementing EPMs across not only a greater diversity of episodes but also as an increasing percentage of hospital discharges. We sought comment on our proposal to implement the SHFFT model in the same geographic region as the CJR model and to implement both the AMI model and the CABG model in the same MSAs, some of which may overlap with MSAs where the CJR and SHFFT models also are being implemented.

The following is a summary of the comments received and our responses.

Response: With regard to MSAs as the geographic unit of selection, we continue to believe, consistent with CJR, that MSAs allow us to observe the impact of the model in a variety of circumstances and provide the best balance between choosing smaller geographic units while still capturing the mobility of patients and providers. We also believe that MSAs limit the potential risk for patient shifting and steerage. As such, we see no reason to change the unit of selection or to be inconsistent with what has already been implemented with CJR. For an in depth discussion of this, we refer the reader to the final CJR rule (42 CFR part 510, 80 FR 73288). We concur that it is important that all participants clearly understand which hospitals will be impacted. Prior to implementation and in conjunction with the publication of this final rule, CMS will publish a list of hospitals that, based on the geographic location associated with the hospital’s CMS Certification Number (CCN), we believe are located in the selected MSAs and will be subject to participation in these EPMs. Hospitals identified using this method will have the opportunity to correct any information CMS has on file that may impact whether they are or are not in a selected MSA by contacting epm@cms.hhs.gov within 45 days after the publication of the Final Rule. Finally, we concur that beneficiaries continue to have the freedom to choose where they will receive services, regardless of the payment model in place in a particular geographic area. We refer readers to
section III.G. of this final rule, “Monitoring and Beneficiary Protection,” for a discussion of these issues.

Comment: A number of commenters expressed concern about implementing the SHFFT EPMs in those MSAs where the CJR model is being implemented. Some commenters expressed concern that we were adding the SHFFT model to the existing CJR model. Other commenters expressed concern that sufficient time had not elapsed to allow hospitals or CMS to learn from their experience. Many believe they needed more time to be able to analyze the results from at least the first year of CJR as well as incorporating findings from the BPCI experience before adding the additional burden of implementing a new model with required participation. While both CJR and SHFFT involve some of the same providers and specialties, some commenters noted that the SHFFT patient population was distinctly different requiring different care pathways and resources. Because of the concern about additional burden on those MSAs where the CJR model has been implemented, some commenters believe that those same MSAs should, therefore, be exempt from implementing the additional cardiac EPMs.

Response: To clarify for commenters, the SHFFT model is separate and distinct from the CJR model although it is designed to run in the same MSAs in which the CJR model is currently operational. We acknowledge the challenges that hospitals implementing CJR may have in order to implement the SHFFT EPM. While recognizing that the patients covered under the SHFFT EPM may be frailer and potentially require different and/or a more intensive level of care, we also continue to believe that SHFFT is similar to CJR in that it involves many of the same specialties and provider types. While there may be different care pathways, we hope that much of the infrastructure and collaborator agreements put in place will provide a solid base upon which to build for SHFFT. As CMS seeks to move away from fee for service payment systems to more value based purchasing, we believe that SHFFT represents a reasonable next step in this transition.

We also acknowledge that in those MSAs where the cardiac EPMs will be alongside CJR and now SHFFT, EPM participants will face additional burdens and challenges. However, we do not believe that it is appropriate to exclude those MSAs where CJR and SHFFT will be implemented from eligibility for selection for the cardiac EPMs. Exclusion of these MSAs would result in a comparative over representation in the cardiac EPMs of lower cost and lower population MSAs due to the manner in which the CJR MSAs were selected. For a full discussion of the criteria for selecting cardiac EPMs, we refer readers to section III.B.5. of this final rule, “Overview and Options for Geographic Area Selection for AMI and CABG Episodes”. As we move towards more inpatient care being covered under these types of models, we will monitor and evaluate the impact on different types of hospitals implementing multiple EPMs so as to minimize operational burden and improve outcomes.

Comment: Several commenters did not disagree with the use of MSAs specifically, but did note the potential for negative impact on certain hospitals in a model where all hospitals in the MSA providing the covered services are required to participate. This included concern for both high performing regional and national referral centers which may already be providing high quality care at a lower cost as well as hospitals with more limited numbers of eligible discharges and/or those serving at risk populations which often have lower operating margins and thus may be at greater financial risk. These commenters suggested that demographic factors such as age, race, and poverty levels could be used to limit which MSAs were selected.

Response: We acknowledge that some hospitals may face particular challenges in implementing EPMs whether it be due to demographic factors related to their patient base, a lower number of potential EPMs each year, or other factors. A key reason for doing a model with required participation is, in fact, to examine and better understand the impact of a model on a broader range of facility types and communities than are usually included in a voluntary model. Although we do not believe that using specific demographic factors in MSA selection is appropriate, in response to comments on other sections of this rule around risk-adjustment, we are finalizing a timeframe for the implementation of downside risk that allows us time to look carefully at different approaches for recognizing and adjusting for risk in these models which we will discuss via notice and comment rulemaking for FY 2019 and we believe that these actions will help to resolve concerns expressed regarding greater financial risk for high performing regional and national referral centers.

A key rationale for conducting a model with required participation is the ability to examine variations in the impact of the model on a broad range of hospitals in a variety of different market conditions in order to better understand how the model operates in a variety of circumstances. Although demographic factors are not proposed to be part of the selection process for MSAs, we do consider, as noted in the proposed and this final rule, these factors to be important to the proper understanding of the impact of the models and where is more or less successful. The evaluation will consider the suggested demographic domains and other measures in determining which MSAs are appropriate comparison markets as well as for possible subgroup analyses.

Comment: A few commenters suggested eliminating those MSAs that had a higher penetration of Medicare Advantage plans or suggested that we select MSAs that will minimize overlap with BPCI and ACO participating hospitals.

Response: We note in this rule the reasons for aligning the MSAs where the SHFFT EPM will be implemented with those MSAs where the CJR model has already been implemented. In doing so, we accept the exclusion of those MSAs that were excluded from the CJR model due to the limited volume of LEJR procedures performed there.

In the proposed rule we similarly proposed elimination of some MSAs from selection for the cardiac EPMs due to having lower numbers of episodes and having a higher number of episodes covered under the BPCI models. We refer readers to section III.B.5. of this final rule for a full discussion of the selection criteria for MSAs where the cardiac episodes will be implemented.

Final Decision: After consideration of the public comments received, we are finalizing the proposal, without modification, to implement the SHFFT EPM in those MSAs where the CJR model is being implemented. Further, we are finalizing the proposal to implement the cardiac EPMs in randomly selected MSAs from among all those in the country meeting the criteria specified in section III.B.5. of this final rule.

5. Overview and Options for Geographic Area Selection for AMI and CABG Episodes

We proposed that the AMI and CABG EPMs be implemented together in the same MSAs. These AMI/CABG-participating MSAs may or may not also be CJR/SHFFT–EPM participating MSAs. The selection of MSAs for AMI/ CABG EPMs would occur through a random selection of eligible MSAs.

We proposed to require participation in the AMI and CABG models of all hospitals, with limited exceptions as
previously discussed in section III.B.4. of the proposed rule, paid under the IPPS that are physically located in a county in an MSA selected through the methodology outlined in section III.B.5.b. of the proposed rule (81 FR 50815), to test and evaluate the effects of an episode-based payment approach for the proposed EPMs. We proposed to determine that a hospital is located in an area selected if the hospital is physically located within the boundary of any of the counties in that MSA as of the date the selection is made. Although MSAs are revised periodically, with counties added or removed from certain MSAs, we proposed to maintain the same cohort of selected hospitals throughout the 5-year performance periods of the EPMs with limited exceptions as described later in this section. Thus, we proposed neither to add hospitals to an EPM if after the start of such EPM new counties are added to one of the selected MSAs nor to remove hospitals from an EPM if counties are removed from one of the selected MSAs. We believe that this approach will best maintain the consistency of the participants in the EPMs, which is crucial for our ability to evaluate their respective results. However, we retain the possibility of adding a hospital that is opened or incorporated within one of the selected counties after the selection is made and during the period of performance. (See section III.D. of this final rule for discussion of how target prices will be determined for such hospitals.)

The manner in which CMS tracks and identifies hospitals is through the CMS Certification Number (CCN). In keeping with this approach, these EPMs will administer model-related activities at the CCN level including the determination of physical location. The physical location associated with the CCN at the time of an EPM’s start will be used to determine whether that CCN is located in a selected MSA. For hospitals that share a CCN across various locations, all hospitals under that CCN would be required to participate in the applicable EPM if the physical address associated with the CCN is in the MSA selected, unless otherwise excluded. Similarly, all hospitals under the same CCN, even if some are physically located in the MSA selected for participation, would not participate in the applicable EPM if the physical address associated with the CCN is not in the MSA.

We considered including hospitals in a given MSA based on whether the hospitals were classified into the MSA for IPPS wage index purposes. However, such a process would be more complicated, and we could not find any compelling reasons favoring such an approach. For example, we could assign hospitals to metro divisions of MSAs when those divisions exist. In addition, there is the IPPS process of geographic reclassification by which a hospital’s payments can be based on a geographic area other than the one where the hospital is physically located. For the purpose of the EPMs, it is simpler and more straightforward to use a hospital’s physical location as the basis of its assignment to a geographic unit. This decision would have no impact on a hospital’s payment under the IPPS. We sought comment on our proposal to include a hospital as an EPM participant based on the physical location associated with the CCN of the hospital in one of the counties included in a selected MSA.

The following is a summary of the comments received and our responses.

Comment: One commenter expressed concern that the final rule included hospitals that share a CCN across geographic areas would overburden participant hospitals. They stated that the two cardiac conditions are characterized by clinically different populations and require distinct care teams and the opportunities for common care redesign approaches are limited.

Response: We understand the amount of effort required to redesign care processes and that often these are specific to a condition and not always immediately transferrable between conditions. In regards to implementing two cardiac episodes there is an expectation that some economies of scale will present themselves with the cardiac episode-based approaches even though the care teams and patient populations are distinct.

As discussed in section III.C. of this final rule, the AMI and CABG model episodes primarily include beneficiaries with cardiovascular disease, a chronic condition which likely contributed to the acute events or procedures that initiate the episodes. Beneficiaries experiencing an AMI can be treated by different clinical modalities including medical management and surgical intervention such as PCI and CABG. The decision as to which treatment is medically appropriate for a given beneficiary is both complex and subject to evolving medical knowledge and practice norms. Furthermore, approximately 30 percent of CABGs are performed during the care of AMIs. Because of the close connection between these models, CMS believes that testing the AMI and the CABG EPMs in the same markets decreases the probability that clinical decision making regarding the course of treatments would be unduly influenced by inclusion or exclusion in one of the two cardiac EPMs. If the two cardiac EPMs were in different areas, the AMI EPM would be structured in such a way as to include AMIs treated with CABG. Thus, the separation of the two cardiac EPMs into different MSAs would not reduce the burdens associated with hospitals who are simultaneously needing to manage patients treated under a variety of modalities. It would, on the other hand, conceivably increase the complexity of management for participants who would be faced with the situation of having only the 30 percent of CABGs done in conjunction with an AMI included in a model.

Comment: One commenter requested that if a health system had member hospitals within MSAs selected for inclusion in a cardiac EPM that they be allowed to have their member hospitals in non-selected areas also be included in the model. They stated that the ability to have all of their member hospitals in one model would allow for care to be provided under a unified system and would result in increased coordination.

Response: The cardiac EPMs are structured as required models. As such, they will require hospitals within selected geographic areas to participate (unless otherwise excluded as set forth in this final rule). Hospitals who are not in a selected MSA but are part of a health system that includes selected included hospitals will not subject to the EPM rules and incentives structures. However, if a health system wishes to implement certain care coordination activities across their entire spectrum of hospitals they would not be precluded from doing so as long as they comply with current regulations and law. The inclusion of additional hospitals outside of these selected areas would constitute a major change to the model that was not considered in the proposed rule. CMS previously offered solicited participation in the BPCI initiative, a bundled payment model. Please refer to section III.A.3. of this final rule for a discussion of the possibility of future bundled payment models.

Final Decision: After consideration of the public comments received, we are finalizing the proposal, without modification, to implement the CABG and the AMI EPMs in the same areas, and to administer model-related activities at the CCN level including the determination of physical location. The physical location associated with the CCN at the time of an EPM’s start will
be used to determine whether that CCN is located in a selected MSA.

a. Exclusion of Certain MSAs

We considered whether certain MSAs should be exempt from the possibility of selection for the AMI/CABG EPMs’ implementation. We considered exclusions based on the anticipated number of AMI episodes and CABG episodes in the MSA. We also considered exclusions based on the degree to which such EPMs’ episodes would be impacted by overlaps with other payment initiatives, including BPCI and ACOs.

First, we considered the advisability of MSA exclusions based on the number of episodes in a year. We identified qualifying AMI and CABG episodes that initiated between January 1, 2014, and December 31, 2014. AMI and CABG episodes were attributed to an MSA based on the location of the CCN associated with the initiating hospital using the Provider of Service file. Due to the smaller number of relevant AMI and CABG episodes occurring in some MSAs, an exclusion rule that required a large number of episodes in each MSA would result in fewer MSAs eligible for selection than was necessary given the desired number of MSAs and the requirement to have 50 percent or more of MSAs remain in a pool of possible comparison MSAs. From the perspective of evaluating changes to utilization and spending under EPMs, there is no analytic need to eliminate MSAs with small numbers. In fact, including smaller MSAs has the analytic advantage of giving CMS more experience operating EPMs in the smaller-MSA contexts that will help us generalize our EPM-evaluation findings.

We have a strong interest in being able to observe how well EPMs operate in areas with a lower volume of episodes, and, in particular, the consequences of the models for AMI episodes where CABG is not commonly performed or where standard practice is to refer all CABGs outside of the MSA. Given our desire to assess the operation of the AMI EPM in areas with little or no CABG episodes and the desire to have the two cardiac EPMs be administered together in the same MSAs, we proposed that the MSA exclusion rules be based on the number of AMI episodes only. This will allow for the inclusion of MSAs with no CABGs.

There is no analytic requirement for a minimum number of cases and there are advantages to including smaller cities. At the same time, we acknowledge that areas with few AMI cases may believe that they will face challenges under the EPMs. Therefore, we proposed an exclusion rule that MSAs with fewer than 75 AMI episodes (determined as discussed in section III.C. of this final rule) will be removed from the possibility of selection. Cases in hospitals paid under either the CAH methodology or the Maryland All-Payer Model are not included in the count of eligible episodes. We examined a number of different minimum-episode-number cutoffs. The use of the 75 AMIs in a year was a designed to balance limiting the impact of outlier cases on the MSA average episode spending and the desire to retain a non-negligible representation of MSAs in the under 100,000 population and the 100,000 to 200,000 population ranges in our selection pool. The application of Exclusion Rule 1: “Less than 75 qualifying AMI episodes in the reference year” resulted in the removal of 49 MSAs from possible selection.

Second, we assessed exclusion rules based on overlap with BPCI. We proposed Exclusion Rule 2 such that MSAs are removed from possible selection if there were fewer than 75 non-BPCI AMI episodes in the MSA in the reference year. For the purposes of this exclusion, the number of non-BPCI episodes was estimated by subtracting BPCI cases from the total number of cases used in Exclusion Rule 1. BPCI cases for this purpose are ones during the reference year associated with a hospital or a PGP BPCI Model 2 or 4 episode initiator participating in an AMI, PCI, or CABG episode as of January 1, 2016. Such criterion removed an additional 26 MSAs from potential selection.

Third, we proposed to exclude MSAs from possible selection based on whether the number of non-BPCI AMI episodes calculated under Exclusion Rule 2 is less than 50 percent of the total number of AMI episodes calculated under Exclusion Rule 1. We anticipate that some degree of overlap in the BPCI and other EPMs will be mutually helpful. However, we acknowledge that some providers may have concerns that a BPCI Model 2 AMI and PCI participation rate of more than 50 percent may impair the ability of participants in either the EPMs or the BPCI models to succeed in the objectives of their respective initiatives. As a result of this third criterion, 13 additional MSAs were removed from possible selection.

We considered whether there should be an exclusion rule based on the anticipated degree of overlap between the AMI and CABG EPMs and patients who are aligned prospectively to ACOs that are taking two-sided risk, such as ACOs participating in the Next Generation ACO model or Track 3 of the Shared Savings Program. We examined numbers associated with ACOs meeting this status as of May 1, 2016, and this examination did not result in any additional MSAs falling below the threshold of 75 AMI episodes. Consequently, we did not propose any MSA exclusion rule based on the presence of ACOs.

Please refer to Table 1 for the status of each MSA based on these exclusion criteria, available at http://innovation.cms.gov/initiatives/epm. After applying these three exclusions, 294 MSAs out of 384 total MSAs are eligible for selection using our proposed selection methodology.

The following is a summary of the comments received and our responses.

**Comment:** The issue of MSA exclusions was a subject raised by a variety of commenters. Commenters expressed concerns with the possibility of the same MSAs being selected for inclusion in both the cardiac EPMs and in the CJR model. Commenters stated that the introduction of 3 new required models simultaneously in MSAs where CJR is still in the early stages of implementation would divert participants’ focus from being able to successfully implement CJR and would pose resource allocation challenges. Commenters stated that hospitals have a limited capacity to successfully take on new models and that hospitals could best achieve success when they are allowed to focus on specific projects. Commenters stated that adding too many required models will result in dilution of resources given to each model and increased administrative costs to the hospital. One commenter expressed concern that implementing too many models can compromise both the success of the models and patient care. Commenters requested that CMS add an exclusion rule that removes the CJR MSAs from the possibility of selection as a cardiac EPM area.

**Response:** We acknowledge the concern of CJR participant hospitals with respect to having the capacity and ability to take on the new cardiac and SHFFT episodes in addition to their current model participation. While recognizing the logistical and resource challenges of implementing multiple models simultaneously, CMS believes that there are commonalities between the models that would result in some efficiencies. For example, experiences in CJR with creating gainsharing approaches, analyzing claims feeds, and understanding reconciliation methodologies will be directly transferrable to managing the cardiac episodes.

CMS considered the exclusion of CJR MSAs from the possibility of selection as a cardiac EPM. The effect of removing the CJR MSAs was considered relative to the impact of this removal on the remaining MSAs and whether it would create a biased pool due to the disproportionate removal of areas with high episode payments as well as areas with a larger population.

In determining which areas were eligible for selection for CJR, MSAs were required to have at least 400 LEIRs in the reference year. In contrast, the equivalent exclusion rule for the cardiac EPMs requires at least 75 AMI episodes.

</table>
cases. The resulting random selection in this pool would similarly be over-weighted to select smaller areas with lower numbers of episodes.

MSAs were selected for inclusion in CJR by dividing MSAs into quartiles based on the MSA average LEJR episode spending. The likelihood of being selected as a CJR area differed between the quartiles such that MSAs in the least expensive quartile had a 30% chance of selection and MSAs in the most expensive quartile had a 45% chance of selection. Thus, the removal of the CJR MSAs from the cardiac EPM selection pool would disproportionately leave relatively more efficient MSAs eligible for selection and remove relatively inefficient areas. In order to quantify the extent of this potential bias, the impact of removing the CJR areas was examined relative to the average MSA spending for AMI episodes. CJR MSAs represented just 12% of MSAs in the least expensive quartile (9 of 74) but represented 26% of the MSAs in the most expensive quartile (19 of 74). In sum, the CJR MSAs were proportionately underweighted for more efficient MSAs, and over weighted for more expensive MSAs with higher LEJR episode payments, their removal resulted in introducing bias which would result in the selection of more small cities as well as more efficient cities. This bias to disproportionally select relatively more efficient MSAs is counter to the overall orientation that these models are most likely to result in cost savings in inefficient areas. Furthermore, CMS anticipates that the selection of MSAs believed to be fully invested in care design efforts would make it challenging to evaluate whether improvements in efficiency were related to the EPMs or associated with these other efforts. The commenter stated that restricting to MSAs with minimal involvement with other APM would ease both administrative burden and allow for better results and more accurate reconciliation.

Response: While including MSAs with experience in APMs may pose challenges to the evaluation in its effort to assess causation, CMS believes that the exclusion of MSAs who may be relatively more experienced in care redesign and thus more likely to be able to achieve success in the models would be undesirable. It would be considered a positive if participant hospitals are able to leverage the knowledge and experience of experts in their areas in order to successfully reduce episode spending in eligible patients. Experience with care management under managed care or within APMs might be one source of expertise from which participant hospitals may wish to draw. The evaluation of EPMs will include an examination of market characteristics and model activity, so as to explore how the overlapping nature of these two factors impacts performance.

Comment: One commenter expressed concern that low-volume hospitals are included in the models and requested that thresholds be added to remove low-volume providers from the model. Commenters stated that lower volume providers are subject to issues of random variation and that the cost and quality experiences observed in these hospitals may not be due to efficiencies and care coordination. They stated that smaller hospitals will be at a disadvantage due to the inability to achieve stability or predictability due to this variation.

Finally, a commenter noted that they believed that minimum number of applicable cases is necessary for a hospitals to perform internal analyses to determine the appropriate strategies to use to successfully re-engineer care. They stated that having a minimum number of cases is a key factor in whether or not a facility can be ready for undertaking bundled payments. Minimal numbers are necessary for generating adequate levels of involvement in potential partners such as physicians and post-acute care providers. The commenter proposed that the definitions of minimal volume used in the payment methodology be used instead as minimal requirements for hospitals to be required to participate in the cardiac EPMs.

Response: We acknowledge the fact that hospitals, particularly low-volume hospitals, may have resources to fully engage in care re-design efforts and, due to the low volume, they are
much more susceptible to wider episode cost fluctuations. We refer readers to the following sections of this final rule III.D.4.b.(9). of this final rule for a discussion of how target prices for hospitals with low volume are determined and to III.D.7.c.(1). of this final rule for a discussion of low volume hospital protections under the cardiac EPMs.

The inclusion of low-volume hospitals in the EPMs is consistent with the goal of evaluating the impact of bundled payment and care redesign across a broad spectrum of hospitals with varying levels of infrastructure, care redesign experience, market position, and other considerations, and circumstances. We are interested in evaluating the experience of these hospitals in the models as part of our overall desire to see the impact of an episode payment model in providers who would not otherwise choose to participate in a model. We would be concerned that setting a threshold for low volume could result in hospital gaming in order to be below that threshold and thus be excluded from the models.

Similar to the CJR model, the design of the EPMs and the inclusion of low-volume providers within the models reflects our interest in testing and evaluating the impact of a bundled payment approach for these procedures in a variety of circumstances, especially among those hospitals that may not otherwise participate in such a test. The inclusion of these providers allows CMS to better appreciate and understand how the models operate as a general payment approach and its impact across a wide range of hospitals. The impact of EPMs on low-volume hospitals is of great interest to the evaluation of these models.

We acknowledge that providers with low volumes of AMI, CABG, or CJR cases may not find it advantageous to engage in an active way with the EPMs. We expect that low volume providers may decide that their resources are better targeted to other efforts because they do not find the financial incentive present in the EPMs sufficiently strong to cause them to shift their practice patterns. We believe this choice is similar in nature to that made as hospitals decide their overall business strategies and where to focus their attentions.

**Final Decision:** After consideration of the public comments received, we are finalizing the proposal, without modification, to exclude MSAs that fail one or more of the following rules: **Exclusion Rule 1:** Exclude MSAs with fewer than 75 AMI episodes (determined as discussed in section III.C. of this final rule). **Exclusion Rule 2:** Exclude MSAs with fewer than 75 non-BPCI AMI episodes in the MSA in the reference year. **Exclusion Rule 3:** Exclude MSAs if the number of non-BPCI AMI episodes calculated under Exclusion Rule 2 is less than 50 percent of the total number of AMI episodes calculated under Exclusion Rule 1.

As discussed in section III.B.2. of this final rule, the Burlington Vermont MSA was found to no longer be eligible for possible selection because of the Vermont All-Payer ACO Model. Thus, 293 MSAs out of 384 total MSAs are eligible for the possibility of selection as a cardiac EPM area.

### b. Selection Approach

We proposed the selection of 98 MSAs for the cardiac EPMs through the use of simple random selection from the 294 (now 293) eligible MSAs. Simple random selection is often considered to be an appropriate default approach to experimental design unless there is a compelling reason to depart from it. One common alternative approach is to perform random selection separately within subgroups. Selection within subgroups can be a useful approach to limiting differences between intervention and control groups to improve statistical power or for facilitating over or under sampling to allow the evaluation to examine effects of the intervention on particular types of MSAs or because those types of MSAs are of particular interest for policy reasons.

In CJR, we used a stratified random assignment approach in which we organized MSAs into strata based on MSA population size and historic LEJR episode payments. Under the CJR model, we believed a stratified approach was appropriate due to wide regional variation in prices, primarily associated with the use of post-acute services. The stratified approach served as a means to oversample in higher-expense MSAs as these areas have both the most need for and the most opportunity under the CJR model.

In assessing whether stratification would be proposed for the EPMs, we assessed a variety of factors described later in this section. Absent stratification, the rate at which a particular type of MSA will appear in the sample will be proportional to how often it appears among eligible MSAs. If a particular type of MSA is relatively common, it is likely to occur often enough to allow us to deliberately over-sample for it. In the end, our analyses did not provide sufficient evidence that it is necessary to create selection subgroups of MSAs to guide the selection approach. As a result, we are proposing to use simple random selection from the entire pool of eligible MSAs.

(1) Factors Considered but Not Used

We considered a variety of possible MSA characteristics for possible use in classifying sub-groups. Though we did consider many of these variables important, we believe that a simple random selection, where warranted, is preferable.

Some of the factors we considered that we are not proposing to use in the selection methodology include the following:

- Measures associated with AMI-episode and CABG episode wage-adjusted spending, respectively. In considering how to operationalize such measures, we considered a number of alternatives including average total episode spending payments in an MSA, average episode spending associated with the initial hospital stay(s) and average episode spending occurring in the period after discharge from the initial hospital.
- Measures associated with variation in practice patterns associated with AMI and CABG episodes. In considering how to operationalize this measure, we considered a number of alternatives including the extent to which both an AMI and a CABG episode are associated with having a transfer hospital stay at the beginning of the episode, and the extent to which CABG hospitalizations occur following a hospital transfer from either within or from outside the same MSA.
- Measures associated with relative market share of providers with respect to AMI and/or CABG episodes, including the presence or absence of regional referral centers and the number of providers with the capacity to perform CABGs or otherwise treat complex cardiac patients.
- Health care supply measures of providers in the MSA including acute or post-acute bed counts, and number of relevant physician specialties such as cardiologists and cardiothoracic surgeons.
- MSA-level demographic measures such as: (1) Average income; (2) distributions of population by age, gender or race; (3) percent dually eligible; and (4) percent with specific health conditions or other demographic composition measures.
- Measures associated with the degree to which a market might be more capable or ready to implement care-redesign activities. Examples of market-
level characteristics that might be associated with anticipated ease of implementation include the MSA-level EHR meaningful-use levels, managed-care penetration, ACO penetration, and experience with other bundling efforts. Though these measures were not proposed to be part of the selection process, we acknowledge that these and other market-level factors may be important to the proper understanding of the evaluation of the impact of EPMs. We intend to consider these and other measures in determining which MSAs are appropriate comparison markets for the evaluation and for possible subgroup analysis or risk-adjustment purposes. The evaluations will include beneficiary-, provider-, and market-level characteristics in how they will examine the performance of the proposed EPMs.

The following is a summary of the comments received and our responses.

Comment: A few commenters expressed general support for the selection approach. Several commenters identified considerations that they believed would increase the likelihood of success in these models and believed that those factors should influence the likelihood of selection. One commenter believed that the selection methodology used should instead select MSAs where there is an unwanted clinical or fiscal variation in care. They stated that the implementation of the cardiac EPMs in these MSAs would be most likely to target patients who would benefit from novel care delivery initiatives. In contrast, another commenter noted that the implementation of the cardiac EPMs in a variety of markets, including those who are relatively more efficient, could help with improving care management/coordination overall.

One commenter mentioned that CMS did not incorporate any MSA-level demographic measures in its selection process, such as distributions of population by age, gender, or race; percent of population dually eligible for Medicare and Medicaid; percent of population with specific health conditions; and other demographic composition measures. They believed these factors vary not only between MSAs, but also by hospitals within an MSA, and could affect a hospital's chances of success in the proposed EPMs.

Response: We appreciate the suggestions of alternative MSA selection criteria and note that we considered whether to disproportionately select higher cost areas. As discussed above, the range of episode costs between MSAs was relatively narrow and even relatively efficient MSAs would have opportunity for care redesign and increased efficiency under these models. The examination of the distribution of expenses did not seem to indicate that there are substantial pattern of care differences between MSAs that needed to be recognized in the selection methodology.

We acknowledge that demographic factors may indeed influence the ability of hospitals to succeed under the models. However, in creating the EPMs, we are seeking to understand how the models impact costs and quality under a variety of circumstances. We seek to understand if the models work in both more and less challenging circumstances in order to be able to gain an understanding of successes and failures of the episodic payment approach in all types of initiating participants. We did not choose to incorporate MSA level demographics in our selection methodology but instead we are relying on random selection to include MSAs with a variety of circumstances. We did not believe it was necessary to preemptively oversample areas with a larger percent of vulnerable patients.

Final Decision: After consideration of the public comments received, we are finalizing the proposal, without modification, to select MSAs for inclusion in the cardiac EPMs by simple random selection.

(2) Sample-Size Calculations and the Number of Selected MSAs

Our analyses of the necessary sample size led us to propose the selection of 98 MSAs, to participate in both the AMI and CABG EPMs. At the time of the proposed rule 294 MSAs were eligible for selection out of a total of 384 MSAs. In this section, we discuss the assumptions and modeling that went into our proposal to test these EPMs in 98 MSAs. The discussion of the method of selection of these 98 MSAs is addressed in the following section. In coming to the decision to target 98 MSAs, we are proposing an approach that limits the size of the intervention to the greatest degree possible, while still ensuring that we have sufficient statistical power to reliably evaluate the effects of the EPMs. Going below this threshold would jeopardize our ability to be confident in our results and to be able to generalize from the EPMs to the larger national context.

In calculating the necessary size of the AMI and CABG EPMs, a key consideration was to have sufficient power to be able to detect the desired size impact. The larger the anticipated size of the impact, the fewer MSAs we would have to sample in order to observe it. However, a model sized to be able to only detect large impacts runs the risk of not being able to draw conclusions if the size of the change is less than anticipated. The measure of interest used in estimating sample size requirements for the both the AMI and the CABG EPMs was wage-adjusted total episode spending. The data used for the wage-adjusted total episode spending is the 3-year data pull previously described that covers AMI and CABG episodes with admission dates from July 1, 2012, through December 31, 2014. For the purposes of the sample-size calculation, we aim to be able to reliably identify between a 2-percent and 3-percent reduction in wage-adjusted episode spending after 1 year of experience. We chose this range because those numbers represent the anticipated amount of the discount proposed to apply under various conditions of the AMI and CABG EPMs' implementation.

The next consideration in calculating the necessary sample size is the degree of certainty we will need for the statistical tests that will be performed. In selecting the right sample size, there are two types of errors that need to be considered: “false positives” and “false negatives.” A false positive occurs if a statistical test concludes that a model was successful (that is, saved money) when in fact it was not. A false negative occurs if a statistical test fails to find statistically-significant evidence that the model was successful, when in fact it was successful. In considering the minimum sample size needs of the AMI and CABG EPMs, a standard guideline in the statistical literature suggests calibrating statistical tests to generate no more than a 5-percent chance of a false positive and selecting the sample size to ensure no more than a 20-percent chance of a false negative. In contrast, the proposed sample size for this project was based on a 10-percent chance of a false positive and no more than a 30-percent chance of a false negative in order to minimize reduce sample size requirements to the greatest degree possible.

A third consideration in the sample-size calculation was the appropriate unit of selection and whether it is necessary to base the calculation on the number of MSAs, the number of hospitals, or the number of episodes. We proposed to base the sample size calculation at the MSA level. The proposed EPMs are an example of what is known as a “nested comparative study.” Under a nested comparative study, assignment to an intervention or comparison arms of the study is based on membership in a pre-existing, identifiable group where the groups are...
not formed at random, but rather through some physical, social, geographic, or other connection among their members. Because these groups are not formed at random, individual members of each group are likely to share important commonalities. In the context of the proposed EPMs, spending and outcomes for patients cared for within a given MSA are relatively similar to one another due to such factors as the existence of common practice or referral patterns, the underlying health in the population, and the availability of providers in an area.

In statistical terms, these commonalities create a positive correlation (called an intra-class correlation) among hospitals or beneficiaries in the same MSA. Due to that intra-class correlation, the variability of any aggregate statistic—such as the estimated difference in outcomes between the intervention and comparison arms of the study—has two components—(1) variability attributable to variation among hospitals or beneficiaries in a given MSA; and (2) variability attributable to differences between MSAs. An accurate power analysis must account for both components of variability.

In determining the necessary sample size, we take into consideration the degree to which commonalities within MSAs exist and the number of independent beneficiaries and hospitals expected to be included in the EPMs within each MSA. As part of this process, we empirically examined the number of beneficiaries, the number of hospitals, and the number of MSAs, as well as the level of correlation in episode payments between each level. Based on this empirical examination, we determined that the correlation was high enough that the degree of variability would be primarily driven by the number of MSAs in the model, indicating that the MSA is the appropriate unit of analysis for the power calculations.

Using the previously mentioned assumptions, a power calculation for AMI was run which indicated that at 98 MSAs we would be able to reliably detect a 3-percent reduction in wage-adjusted episode spending after 1 year with a false-positive rate of 10 percent and a false-negative rate of between 20 percent and 40 percent. We are targeting a false-negative rate of 30 percent. The extent to which this rate can be lowered will depend on the ability of evaluation models to substantially reduce variation through risk adjustment and modeling. We believe it is prudent to choose a sample size where the targeted amount is in the middle of this expected band.

We separately assessed the sample-size needs associated with CABG episodes. At 98 MSAs, we anticipate being able to detect a 2.25-percent reduction in wage-adjusted episode expenditures after 1 year with a false-positive rate of 10 percent and a false-negative rate of between 20–40 percent. The effective number of MSAs where the CABG EPM will be tested will be reduced because approximately 6 percent of eligible MSAs had no CABG episodes in the reference year. However, our power calculations do not lead us to believe we need to increase the sample size based on this fact. The number of CABG MSAs can experience this reduction and maintain equivalent levels of power to the AMI episodes.

The following is a summary of the comments received and our responses.

Comment: One commenter expressed the opinion that the models should be tested in 5 to 10 MSAs rather than be done as a large scale test.

Response: As stated in the proposed rule, we believe that the evidence base related to episode payments is sufficient enough to justify a large scale test and we believe that it is appropriate to size the models so as to be able to generate statistically reliable estimates of the impact as well as to be able to understand how well the models operate in a variety of circumstances.

Final Decision: After consideration of the public comments received, we are finalizing the proposal, without modification, to select 98 MSAs to participate in the cardiac EPMs.

(3) Method of Selecting MSAs

As previously discussed, we are sought to choose 98 MSAs from our pool of eligible MSAs through simple random selection. We proposed to make the selection in the proposed rule using SAS Enterprise Guide 7.1 software to run a computer algorithm SAS Enterprise Guide 7.1 and the computer algorithm used to conduct selection represents an industry-standard for generating advanced analytics and provides a standardized tool by which to satisfy the requirements of randomized selection. The key SAS commands employed include a “PROC SURVEYSELECT” statement coupled with the “METHOD=SRS” option used to specify simple random sampling as the sample selection method. A random number seed will be generated using the birthdate of the person executing the program.39

We sought comment on our proposal to implement the AMI and CABG models in the selected MSAs, some of which may overlap with MSAs where the CJR and SHFFT models also are being implemented.

The following is a summary of the comments received and our responses.

Comment: Comments were received from multiple sources that expressed that the list of selected MSAs be published as soon as possible to allow for better preparation for the start of the models.

Response: One commenter requested that the list of hospitals in the selected areas also be published and that hospitals be given 60 days to comment on its accuracy. Commenters expressed a preference that, in future rule making of a similar nature, the list of selected MSAs be displayed in the proposed rule rather than the final rule to allow for comment by the impacted MSAs and additional preparation time.

Response: We appreciate the suggestion that MSAs and affected providers be published at the time of rulemaking, and will take it under advisement in any future rule. One of the reasons for not selecting MSAs at the time of the proposed rule was to encourage all potentially impacted providers to comment. In addition, we wished to be able to maintain flexibility that would allow for the creation of new exclusion rules to be suggested in the comment period without necessitating the need to re-select MSAs between the proposed and final rules. In order to accommodate the later announcement of impacted MSAs, we proposed a July 1, 2017 model start. This represents a similar amount of time between the CJR MSA announcement and the start of that model as for the announcement of the cardiac EPM MSAs and the finalization of the SHFFT MSAs and the start of those models.

The list of MSAs selected for the cardiac EPM is included in TABLE 2. The list of hospitals identified as in the MSAs selected for the cardiac EPMs can be found at https://innovation.cms.gov/initiatives/epm/. Hospitals believing that they have erroneously been identified as being in a selected area should send an email to epm@cms.hhs.gov within 45 days of the publication of the final rule. Hospitals should include identifying information including the hospital GCN. CMS will periodically review and revise the list of hospitals that meet the requirements for participation in the cardiac EPMs and

39 For more information on this procedure and the underlying statistical methodology, please reference

Final Decision: After consideration of the public comments received, we are finalizing the proposal, without modification. We selected the participating MSAs for the CABG and AMI EPMS through simple random selection. SAS for Windows Version 9.4 software was used to run a computer algorithm designed to randomly select MSAs. SAS for Windows Version 9.4 and the computer algorithm used to conduct selection represents an industry standard for generating advanced analytics and provides a rigorous, standardized tool by which to satisfy the requirements of randomized selection.

The key SAS commands employed include a “PROC SURVEYSELECT” statement coupled with the “METHOD=SRS” option used to specify simple random sampling as the sample selection method. The random number seed utilized was 19730609.

The MSAs selected for inclusion are shown in TABLE 2.

C. Episode Definition for the EPMs

1. Background

Episode payment models incentivize improvement in the coordination and quality of care experienced by a Medicare beneficiary, as well as episode efficiency, by bundling payment for services furnished to the beneficiary for specific clinical conditions over a defined period of time. A key model design feature is the definition of the episodes included in the model. The definition of episodes has two significant dimensions—(1) a clinical dimension that describes which clinical conditions and associated services are included in the episode; and (2) a time dimension that describes the beginning, middle, and end of the episode.

2. Overview of Three Episode Payment Models

We proposed three new EPMs—AMI, CABG, and SHFFT—that each begin with a hospitalization and extend 90 days after hospital discharge. The proposed AMI model includes beneficiaries discharged under an AMI MS–DRG (280–282), representing admission to an IPPS hospital for AMI that is treated with medical management, or an IPPS admission for a PCI MS–DRG (246–251) with an International Classification of Diseases (ICD)—Clinical Modification (CM) AMI diagnosis code describing an initial AMI diagnosis in the principal or a secondary diagnosis code position.

The proposed CABG model includes beneficiaries discharged under a CABG MS–DRG (231–236), representing an IPPS admission for this coronary revascularization procedure irrespective of AMI diagnosis.

The proposed SHFFT model includes beneficiaries discharged under hip and femur procedures except major joint MS–DRG (480–482), representing an IPPS admission for a hip fixation procedure in the setting of a hip fracture.

One reason these particular episodes were chosen for the proposed EPMs is that the initiation of treatment for each of the three clinical conditions included in an episode occurs almost exclusively during a hospitalization, which we believe would minimize the possibility of shifting beneficiaries in or out of the EPM based on the site-of-service where treatment is initiated. The majority of evaluation and treatment for AMI is performed in the inpatient hospital setting, commonly beginning when beneficiaries present with symptoms to the emergency department of a hospital. Patients experiencing an AMI are almost uniformly admitted to the hospital for further evaluation and management.\[^{40}\] Although PCI can be performed and

may be paid by Medicare in the hospital outpatient setting in addition to being performed during a hospitalization, the majority of patients experiencing an AMI who are candidates for procedural revascularization receive PCI procedures during the initial hospitalization for AMI where evaluation also occurs. CABG procedures are furnished exclusively in the inpatient hospital setting. We note that all of the Current Procedural Terminology (CPT) codes that physicians report for CABG are listed on the hospital outpatient prospective payment system (OPPS) inpatient-only list in Addendum E of the 2017 OPPS final rule with comment period that is posted on the CMS Web site. The hip fixation procedures performed in the ShHFT model also are predominantly furnished in the inpatient hospital setting, and we further note that almost all of the CPT codes that describe these procedures also are on the OPPS inpatient-only list.

Hospitals’ ability to identify EPM beneficiaries during the hospitalization that begins the episode (hereinafter the anchor hospitalization) also is an important consideration in developing episode payment models that, like the CJR model, rely upon MS–DRG assignment for IPPS claims following their submission in order to identify beneficiaries for model inclusion. This is especially important for medical management of conditions for which the predictability of the ultimate MS–DRG for the hospitalization is less certain than for surgical or procedural MS–DRGs. AMI represents a relative exception among medical conditions as it is associated with specific clinical and laboratory features that enable hospitals to identify beneficiaries with AMI during the anchor hospitalization whom would likely be included in an AMI episode through their ultimate discharge under an AMI MS–DRG. We note that ICD–CM coding rules allow AMI diagnosis codes in both the primary and secondary position to map to AMI MS–DRGs. In the case of procedural episodes such as CABG, SHHFT, and AMI episodes for beneficiaries treated with PCI, the MS–DRG for the procedure performed would determine the ultimate MS–DRG assignment for the hospitalization unless additional surgeries higher in the MS–DRG hierarchy also are reported. Therefore, we proposed these three EPMs for clinical conditions where MS–DRG assignment is likely to be certain and known during the anchor hospitalization, even though treatment for AMI may involve only medical management. We believe hospitals participating in the proposed EPMs would be able to identify beneficiaries in EPM episodes through their AMI, CABG, and ShHFT episode MS–DRGs during the anchor hospitalization, allowing active coordination of EPM beneficiary care during and after hospitalization.

3. Clinical Dimensions of AMI, CABG, and SHHFT Episodes

As we stated in the CJR Final Rule, we believe that a straightforward approach for hospitals and other providers to identify Medicare beneficiaries in these episode payment models would be important for the care redesign that is required for EPM success, as well as for operationalization of the proposed payment and other EPM policies (80 FR 73299). Therefore, as in the CJR model, we proposed that an EPM episode would be initiated by an admission to an acute care hospital for an anchor hospitalization paid under EPM-specific MS–DRGs under the IPPS (80 FR 73300).

The following is a summary of the comments received and our responses:

Comment: Many commenters expressed support for CMS’ proposal to use many of the BPCI Model 2 and CJR episode parameters to define EPM episodes because of the provider experience to date with these design features and their applicability to the clinical conditions that are the basis of the EPMs. Several commenters specifically recommended that CMS begin EPM episodes with emergency department stays, because including beneficiaries with emergency department care and observation status would include all beneficiaries with the clinical conditions that were included in the proposed EPMs. While the commenters acknowledged that many beneficiaries with the clinical conditions in the EPMs would be admitted to the hospital, they believe there is a subset of beneficiaries for whom care could solely be furnished through emergency department and observation care. Other commenters requested clarification on how a beneficiary treated in observation status and then transferred to another hospital would be handled under the EPMs because the beneficiary would never be assigned to an MS–DRG at the initial treating hospital. The commenters believe that a hospital could use this strategy to avoid including high-cost beneficiaries in the EPMs. The commenters stated that patient stabilization is critical and the resources needed to care for the beneficiary should not dictate observation status versus inpatient status due to a hospital participation in an EPM. Several commenters encouraged CMS to provide additional guidance on instances when the beneficiary is never admitted at the initial hospital, but rather transferred from the emergency department or observation status to another hospital for AMI or CABG.

One commenter recommended that CMS modify the episode grouper for Medicare (EGM) which, to date, has only been considered for resource-use measurement, to implement advanced APMs designed around EPMs to correct problems the commenter believes would be present in the proposed EPMs that would rely on MS–DRGs, including limited severity adjustment, the limits on who can bear risk, and the inadequate incentives against complications. The commenter claimed that an acute care bundle in the hospital setting is important, but so is managing chronic conditions in an outpatient setting (which often lead to acute inpatient episodes). While contracting for condition episodes and procedure episodes separately is feasible and creates a different level of accountability, the commenter stated that it is even more desirable to consider contracting for the whole patient; that is, procedure episodes should be considered downstream even deeply tied to the effective management of condition episodes. The commenter stated that the nested construction logic of the EGM was designed with this in mind.

A commenter contended that the proposed structure for the new EPM episodes would continue to reward providers for complications. Payments would be based on the beneficiary’s assigned MS–DRG, so a complication of care could move a low risk patient from a lower paying MS–DRG to a higher paying MS–DRG that could result in a
significant increase in revenue. The commenter believes the problem is further compounded because it penalizes providers who invest in quality improvement. Providers that invest time and resources into care redesign that successfully reduces complications that influence MS–DRG assignment do not share in the savings that they generate through their efforts. The commenter stated that the MS–DRG payment categorization creates a substantial financial incentive to avoid quality improvement in favor of focusing on improving the management of adverse events after they occur. The commenters stated that the benefit of using MS–DRG assignment in the EPMs could be preserved without the perverse incentive if the payment group for the episode was assigned based on an MS–DRG assignment that depended only on diagnosis codes that were present on admission.

Another commenter claimed that MS–DRGs do not map well to care delivered in post-acute care settings, especially for chronically ill beneficiaries. MS–DRGs, in identifying diagnoses and procedures delivered in the acute care hospital setting, often do not relate to the skilled nursing needs, functional limitations, or therapy/rehabilitation focused on in post-acute care settings after hospital discharge. Additionally, the commenter pointed out that MS–DRGs do not take into account a patient’s functional status, which is an important indicator for determining a patient’s post-acute care needs. The commenter recommends CMS to develop a more robust risk adjustment methodology under the EPMs, because MS–DRGs alone are not sufficient for medically complex patients. For those providers caring for the sickest beneficiaries, the commenter recommended that CMS create separate bundled payments for seriously ill beneficiaries, as defined by something other than MS–DRG.

Response: We appreciate the support that many commenters expressed for our proposal to identify Medicare beneficiaries included in the proposed EPMs by their admission to an acute care hospital for a hospitalization paid under EPM-specific MS–DRGs under the IPPS. We and many stakeholders have gained substantial experience with bundled payment models of a similar design under BPCI Model 2 and the CJR model. We agree with the many commenters who stressed the importance of EPM participants being able to identify EPM beneficiaries on a timely basis as early as possible during the episodes in order to maximize the opportunities for care redesign to improve EPM episode quality and reduce costs. As we discussed in the proposed rule (81 FR 50813), we believe that a straightforward approach to EPM model design that would allow hospitals and other providers to identify Medicare beneficiaries in these episode payment models would be important for the care redesign that is required for EPM success, as well as for operationalization of the proposed payment and other EPM policies, and agree with many commenters that our proposed design of the EPMs meets these objectives.

While we acknowledge the perspective of some commenters that a small number of beneficiaries with clinical conditions that are the focus of the EPMs, especially AMI, may be appropriately treated in the emergency department with observation status without hospital admission, we believe it is infeasible to include these beneficiaries in the EPMs due to complex operational challenges for CMS and EPM participants and model design parameters, such as appropriate pricing in the context of varied hospital cardiac care capabilities. We refer to section III.C.4.a.(1) of this final rule for further discussion of comments on outpatient treatment scenarios and our responses. We refer to section III.C.4.a.(5) of this final rule for discussion of outpatient-to-inpatient (o–i) transfer scenarios for beneficiaries with AMI, including when AMI episodes would begin and to which hospital the episode would be attributed. We agree with the commenters that patient stabilization of serious conditions such as AMI in the emergency department of a hospital is critical and the resources needed to care for the beneficiary should not dictate observation status versus inpatient status due to a hospital participation in an EPM. We believe our final EPM policies, including our AMI model transfer policies, reflect our commitment to ensuring that the initial care of beneficiaries with urgent conditions such as those targeted by the EPMs is not influenced by hospital participation in an EPM. We also refer to sections III.C.4.g. through 6. of this final rule for discussion of our monitoring plans to detect changing patterns of care under the EPMs, including practices that could indicate that medically complex beneficiaries who otherwise would be expected to be in high-cost EPM episodes do not initiate EPM episodes.

While we have an interest in future condition-specific episode payment models and sought public comment on this topic in the proposed rule (81 FR 50810 through 50811), we have not identified long-term management of beneficiaries with chronic disease as the focus of these EPMs, which are proposed to extend 90 days post-hospital discharge from an anchor hospitalization for beneficiaries who have cardiac or orthopedic surgery or a cardiac event.

As one commenter pointed out, MS–DRGs currently provide higher payments for beneficiaries who experience complications during the inpatient hospitalization and we appreciate the interest of the commenter in EPMs that encourage improvement in quality of care during the anchor hospitalization for which hospitals would be rewarded. However, given the operational challenges that EPMs that require participation present for EPM participants and CMS, it would be infeasible in models like the EPMs to reorganize beneficiaries to different MS–DRGs for setting EPM episode prices based only on their diagnoses that were present on admission to address underlying payment incentives under the IPPS. Instead, the EPMs focus EPM participants on care redesign to improve the quality of care for EPM beneficiaries that may achieve internal hospital cost savings for the anchor hospitalization and/or savings to Medicare in the post-hospital discharge period. We expect that some of those care redesign strategies that improve care coordination for EPM beneficiaries may have spill-over effects that result in reduced in-hospital complications as well.

Finally, we refer to section III.D.4.b.(2) of this final rule for a discussion of risk adjustment under the EPMs. Because all EPM participants care for some seriously ill beneficiaries, some hospitals may disproportionately care for such beneficiaries due to their service area, referral patterns, and/or specialized hospital capacity. We believe appropriate risk adjustment of EPM episode prices, particularly by performance year 3 when the pricing blend shifts to reflect predominantly regional pricing, addresses the commenter’s concern that led them to recommend that CMS create separate bundled payments for seriously ill beneficiaries as defined by something other than MS–DRG for those providers caring for the sickest patients. While we agree with the commenter that MS–DRGs only reflect the resources for the anchor hospitalization and, therefore, do not necessarily reflect the post-acute care resources required by a beneficiary, we note that the IPPS payment for the anchor hospitalization is included in the EPM episode and constitutes, on average, a significant percentage of the EPM episode spending, specifically 33
percent of AMI episode spending for episodes anchored by AMI MS–DRGs; 58 percent of AMI episode spending for episodes anchored by PCI MS–DRGs; 63 percent of CABG episode spending; and 27 percent of SHFFT episode spending. Thus, we do not believe it is necessary or appropriate to create separate bundled payments for seriously ill beneficiaries defined by a grouping other than MS–DRG, because the specific MS–DRG of the anchor hospitalization determines a significant percentage of spending for the episode for EPM beneficiaries, including seriously ill beneficiaries.

Comment: Several commenters expressed concern about EPM participants’ ability to identify EPM beneficiaries on a timely basis. The commenters explained that the final MS–DRGs assigned to the beneficiary’s hospitalization is not generated until several days post-discharge, thus impacting the EPM participant’s ability to predict whether a beneficiary is in or out of an EPM episode at the time the beneficiary is in the hospital. One commenter added that because the MS–DRG is assigned to a patient’s case upon discharge, it may not be predictable during a patient’s treatment prior to discharge, making it difficult for providers to implement care redesign targeted to a patient population identified by MS–DRGs. This commenter believes that the MS–DRGs assigned to a patient’s stay are often inaccurate or otherwise inappropriate for the patient’s diagnosis, making the classification an inappropriate basis for episode triggers, budgets, quality measurement and adjusting for underlying patient illnesses. Another commenter reported on their BPCI Model 2 experience where 70 percent of model beneficiaries were elective admissions, and 30 percent presented to the hospital through the emergency department. Given that the proposed EPMs would be more similar to the commenter’s experience with emergency department admissions, the commenter expressed concern that the EPMs would limit an EPM participant’s ability to intervene with the beneficiary prior to admission and skepticism that the participant could even identify the beneficiary as being eligible for the EPM prior to hospital discharge. The commenter added that with very sick patients, hospitals often must wait for the appropriate coding to confirm which MS–DRG the patient ultimately is assigned to prior to billing.

Several commenters further stated that precedence rules among different models and programs can touch the same beneficiary, and stated that hospital case managers, nurses, and administrators cannot know at admission or even before discharge which model the beneficiary may already be enrolled in or attributed to based on prior utilization. Response: We appreciate the interest of the commenters in the timely identification of EPM beneficiaries that would allow EPM participants the most significant opportunity to influence the care of these beneficiaries to improve the quality and reduce the cost of EPM episodes. While we appreciate that many EPM beneficiaries would be admitted to the hospital on an emergency basis for treatment of hip fracture, AMI, or CABG surgery under circumstances that would not allow EPM participants to engage these beneficiaries during admission, we believe that our proposals for the clinical conditions in the EPMs make identification of most EPM beneficiaries unambiguous while they are still in the hospital, without a need for hospitals to wait for coding following discharge to confirm which MS–DRG the patient ultimately is assigned to for the hospitalization. As we stated in the proposed rule (81 FR 50829), we agree with the commenters that hospitals’ ability to identify EPM beneficiaries during the anchor hospitalization is an important consideration in developing episode payment models that rely upon MS–DRG assignment for IPPS claims following their submission in order to identify beneficiaries for model inclusion. We believe the identification of SHFFT and CABG model beneficiaries should be straightforward for EPM participants because the relevant MS–DRG assignments directly result from the surgical procedure performed during the hospitalization and would, therefore, be accurate. However, identification of beneficiaries for a model focused on medical management of conditions may be more challenging because the predictability of the ultimate MS–DRG for the hospitalization is less certain than for surgical or procedural MS–DRGs. We believe that AMI represents a relative exception among medical conditions as it is associated with specific clinical and laboratory features that should enable hospitals to identify beneficiaries with AMI during the anchor hospitalization, who are treated medically or with PCI and who would likely be included in an AMI episode through their ultimate discharge under an AMI MS–DRG. Therefore, we proposed these three EPMs for clinical conditions where MS–DRG assignment is likely to be certain and known during the anchor hospitalization, even though treatment for AMI may involve only medical management. We believe hospitals participating in the proposed EPMs would generally be able to identify beneficiaries in EPM episodes through their AMI, CABG, and SHFFT model MS–DRGs during the anchor hospitalization, allowing active coordination of EPM beneficiary care during and after hospitalization.

We refer to section III.D.6.c. of this final rule for discussion of issues related to beneficiaries whose care could be included in the EPMs as well as other CMS models and programs.

Comment: One commenter expressed appreciation for CMS’ intent not to have overlap between the same care for a beneficiary in episodes under more than one EPM. The commenter requested clarification about how CMS would attribute episodes that originate with one EPM and then cross over into another EPM. The commenter provided an example of a beneficiary with a surgical hip fracture who has an AMI during the hospitalization that is coded in a secondary position, yet the precipitating event for the hip fracture was through syncope and a fall.

Response: When an IPPS claim is submitted to Medicare for payment of a beneficiary’s hospitalization, the claim is grouped to an MS–DRG using the MS–DRG grouper, a software that uses ICD–10–CM diagnosis and procedures codes submitted on the hospital claim to assign an acute hospital stay to a particular MS–DRG. Claims are assigned to an MS–DRG using the grouper effective for the discharge date of the claim. Under the EPMs, regardless of the chronology and causality of events that led to the diagnoses and treatment during the hospitalization, we would rely upon the MS–DRG (and the presence of an ICD–10–CM AMI diagnosis code on the claim in the case of a PCI MS–DRG) assigned to the claim following hospital discharge to initiate an EPM episode and define the EPM to which the beneficiary’s care would be attributed. In the commenter’s example in which a patient is admitted to a hospital for surgical hip fracture fixation and has an AMI during the hospitalization, the MS–DRG grouper would assign a SHFFT MS–DRG to that hospitalization. Therefore, the beneficiary would not be attributed a SHFFT episode if the hospital is a SHFFT model participant. Regardless of

---

45 Episodes for AML, CABG, and SHFFT beneficiaries initiated by all U.S. IPPS hospitals not in Maryland and constructed using standardized Medicare FFS Parts A and B claims, as proposed in the proposed rule that began in CYs 2012–2014.
whether or not the hospital is an AMI model participant, no AMI episode would be initiated.

Final Decision: After consideration of the public comments received, we are finalizing the proposal to initiate EPM episodes by an admission to an acute care hospital for an anchor hospitalization paid under EPM-specific MS–DRGs under the IPPS, without modification. We refer to section III.D.4.a.(5) of this final rule for a discussion of outpatient-to-inpatient and inpatient-to-inpatient transfers between hospitals under the AMI model. We refer to section III.D.6.c of this final rule for further discussion of issues related to overlap of beneficiaries in other Innovation Center models and CMS programs.

a. Definition of the Clinical Conditions Included in AMI, CABG, and SHFFT Episodes

(1) AMI (Medical Management and PCI) Model

We proposed the AMI model to incentivize improvements in the coordination and quality of care, as well as episode efficiency, for beneficiaries treated for AMI with either medical management or coronary artery revascularization with PCI. We proposed to define beneficiary inclusion in the AMI model by discharge under an AMI MS–DRG (280–282), representing those individuals admitted with AMI who receive medical therapy but no revascularization, and discharge under a PCI MS–DRG (246–251) with an ICD–10–CM diagnosis code of AMI on the IPPS claim for the anchor hospitalization in the principal or secondary diagnosis code position. We note that we would use AMI International Classification of Diseases, 9th revision clinical modification (ICD–9–CM) diagnosis codes to identify historical episodes for setting AMI model-episode benchmark prices in the early performance years of the AMI model. The Uniform Hospital Discharge Data Set (UHDDS) defines the principal diagnosis for hospitalization as “that condition established after study to be chiefly responsible for occasioning the admission of the patient to the hospital for care” and other (secondary) diagnoses as “all conditions that coexist at the time of admission, that develop subsequently, or that affect the treatment received and/or the length of stay. Diagnoses that relate to an earlier episode which have no bearing on the current hospital stay are to be excluded.”

We proposed to include those beneficiaries discharged under PCI MS–DRGs with an AMI ICD–10–CM diagnosis code in the principal or secondary diagnosis code position to ensure that beneficiaries with an AMI that is not chiefly responsible for occasioning the hospitalization are included in the AMI model because the AMI itself is likely to substantially influence the hospitalization and post-discharge recovery (and be responsible for leading to the PCI) even if an AMI ICD–10–CM diagnosis code is reported in a secondary diagnosis code position. For example, a beneficiary receiving a PCI with an ICD–10–CM diagnosis code of pneumonia in the principal position and an AMI ICD–10–CM diagnosis code in a secondary position would be included in the AMI model, which would be appropriate because the course of the beneficiary’s recovery and management during the AMI episode would be primarily associated with the AMI and PCI. While pneumonia is typically an acute illness that may sometimes result in hospitalization, underlying chronic conditions may increase the likelihood that a beneficiary would be hospitalized for pneumonia, a condition that is more commonly treated on an outpatient basis. AMI in association with a hospitalization for pneumonia would represent a sentinel event for the beneficiary resulting from underlying CAD that signals a need for a heightened focus on medical management of CAD and other beneficiary risk factors for future cardiac events that may themselves have increased the beneficiary’s risk for pneumonia. Thus, care coordination and management in the 90 days post-hospital discharge for these beneficiaries would be focused on managing CAD and the beneficiary’s cardiac function after the AMI.

In the proposed rule (81 FR 50830), we acknowledged that this proposal to identify beneficiaries included in the AMI model through a combination of MS–DRGs and AMI ICD–CM diagnosis codes represented a modification of the CJR episode definition methodology. The CJR model defined episodes based on MS–DRGs alone, specifically MS–DRG 469 (Major joint replacement or reattachment of lower extremity with Major Complications or Comorbidities (MCCI) and MS–DRG 470 (Major joint replacement or reattachment of lower extremity without MCCI), because the anchor hospitalization for the CJR model was defined by admission for a surgical procedure alone (80 FR 73280). However, the proposed AMI episodes would be defined by admission for a medical condition that includes a range of treatment options, including medical treatment and PCI. Therefore, to identify beneficiaries admitted for AMI and treated with PCI requires ICD–CM diagnosis codes paired with MS–DRGs to identify the subset of PCI MS–DRG cases associated with AMI that would otherwise be excluded from an AMI model based solely on AMI MS–DRGs.

For the purposes of defining historical AMI episodes, we proposed to exclude beneficiaries discharged under PCI MS–DRGs with an AMI ICD–9–CM diagnosis code in the principal or secondary position if there was an intracardiac ICD–9–CM procedure code in any procedure code field. Intracardiac procedure codes do not represent PCI procedures indicated for the treatment of the coronary artery obstruction that results in AMI, but instead represent a group of procedures indicated for treating congenital cardiac malformations, cardiac valve disease, and cardiac arrhythmias. These procedures are performed within the heart chambers rather than PCI procedures for AMI that are performed within the coronary blood vessels. To reflect this clinical distinction, the FY 2016 IPPS update removed intracardiac procedures from MS–DRGs 246–251 and assigned them to new MS–DRGs 273 and 274 (80 FR 49367). Therefore, to be consistent with our proposed definition of AMI episodes that initiate with PCI MS–DRGs 246–251 (not with MS–DRGs 273 and 274) and an AMI ICD–9–CM diagnosis code in the principal or secondary position, we proposed to define historical AMI episodes for beneficiaries discharged under PCI MS–DRGs 246–251 as those that do not include the ICD–9–CM procedure codes in Table 3. These codes were also posted on the CMS Web site at https://innovation.cms.gov/initiatives/epm.
In FY 2014, there were approximately 395,000 beneficiaries discharged from a short-term acute care hospitalization (excluding Maryland) with an AMI ICD–9–CM diagnosis code in the principal or secondary position on the IPPS claim. Of these beneficiaries, 38 percent were discharged under MS–DRGs that would initiate an AMI episode, specifically an AMI MS–DRG (33 percent) and PCI MS–DRG (25 percent). Five percent of beneficiaries were discharged from CABG MS–DRGs and 3 percent were discharged from AMI MS–DRGs representing death during the hospitalization. The remaining 34 percent of beneficiaries with an AMI ICD–CM diagnosis code in the principal or secondary position were distributed across over approximately 300 other MS–DRGs, with the septicemia MS–DRGs accounting for 8 percent and the remainder accounting for 3 percent or less of beneficiaries with an AMI ICD–CM diagnosis code on the IPPS claim.47 We note that the AMI ICD–9–CM diagnosis code was most commonly in a secondary position for discharges from these other MS–DRGs, likely representing beneficiaries hospitalized for another condition who experienced an AMI during that hospitalization. We further note that CMS’ AMI quality measures used in the Hospital Inpatient Quality Reporting (HQR) Program are based on all beneficiaries discharged under any MS–DRG who have an AMI ICD–CM diagnosis code only in the principal position, reflecting the measures’ focus on the most homogeneous beneficiary population with AMI as the condition responsible for occasioning the hospital admission. This is in contrast with our proposed use of an AMI ICD–10–CM diagnosis code in the principal or a secondary position for the AMI model in order to identify those beneficiaries receiving a PCI whose hospitalization and post-discharge recovery and management would primarily be associated with the PCI and AMI.

The proposed specifications for AMI episodes, including ICD–9–CM AMI diagnosis codes for historical episodes used to set the initial AMI model-episode benchmark prices and ICD–10–CM AMI diagnosis codes for the performance years of the model, are displayed in Table 5. The proposed ICD–9–CM intracardiac procedure codes used to exclude inpatient claims with PCI MS–DRGs 246–251 from anchoring AMI model historical episodes used to set initial AMI model-episode benchmark prices are displayed in Table 3.

Based on Medicare claims data for historical AMI episodes ending in CYs 2012–2014, the annual number of potentially eligible beneficiary discharges for the AMI model nationally was approximately 168,000.48 This number was less than the approximately 229,000 discharges for beneficiaries with AMI discharged from AMI MS–DRGs 280–282 and PCI MS–DRGs 246–251 that could be expected to be included in the AMI model for several reasons. Discharges did not result in historical episodes when a beneficiary did not meet the beneficiary care inclusion criteria discussed in section III.C.4.a.(1) of the proposed rule (81 FR 50834); was not discharged alive from PCI MS–DRGs 246–251; was discharged from a transfer hospital during a chained anchor hospitalization; or was discharged from a readmission during an AMI episode that did not initiate new model episodes.

The list of ICD–9–CM and ICD–10–CM AMI diagnosis codes used to identify beneficiaries discharged under a PCI MS–DRG (MS–DRGs 246–251) in historical episodes and during the performance years of the model that would be included in the AMI episodes were discussed in section III.C.4.a.(2) of the proposed rule (81 FR 50834 through 50835). To make changes to this list as necessary based on annual ICD–10–CM coding changes or to address issues raised by the public throughout the EPM performance years, we proposed implementing the following sub-regulatory process, which mirrors the sub-regulatory process as described in the CJR Final Rule for updating hip fracture ICD–9–CM and ICD–10–CM diagnosis codes (80 FR 73340) and for updating the exclusion list (80 FR 73305 and 73315). We proposed to use this process on an annual, or more frequent, basis to update the AMI ICD–10–CM diagnosis code list and to address issues raised by the public. As part of this process, we proposed the following standard when revising the list of ICD–10–CM diagnosis codes representing AMI: The ICD–10–CM diagnosis code is sufficiently specific that it represents an AMI. We proposed to then post a list of potential AMI ICD–10–CM diagnosis codes to the CMS Web site at: https://innovation.cms.gov/initiatives/epm to allow for public input on our planned application of these standards, and then adopt the AMI ICD–10–CM diagnosis code list with posting to the CMS Web site of the final AMI ICD–CM diagnosis code list after our consideration of the public input. We would provide sufficient time for public input based on the complexity of potential revisions under consideration, typically at least 30 days, and, while we would not respond to individual comments as would be required in a regulatory process, we could discuss the reasons for our decisions about changes in response to public input with interested stakeholders.

The proposals for identifying the beneficiaries included in the AMI model and the sub-regulatory process for updating the AMI ICD–10–CM diagnosis code list were included in proposed § 512.100(c)(1) and (d), respectively. We sought comment on our proposals to identify beneficiaries included in the AMI model and the sub-regulatory process for updating the AMI ICD–10–

48 Episodes for AMI beneficiaries initiated by all U.S. IPPS hospitals not in Maryland and constructed using standardized Medicare FFS Parts A and B claims, as proposed in the proposed rule that began in CYs 2012–2014.
the impact of the AMI model on patient CMS the opportunity to clearly evaluate comparisons and ultimately provide in order to allow for meaningful clinically similar subset of beneficiaries to the most much as possible.

We received no comments on the proposed sub-regulatory process for updating the AMI ICD–10–CM diagnosis code list. The following is a summary of the comments received on the other AMI model proposals to define the included clinical conditions and our responses.

Comment: Several commenters expressed concern that the AMI model would be so heavily reliant upon coding that creates an artificial clinical population which is so heterogeneous as to make clinical care redesign efforts nonspecific and likely ineffective. They contended that while EPMs based on surgical MS–DRGs streamline patient identification and inclusion, the AMI model would depend on multiple levels of coding, both ICD–10–CM and MS–DRGs. One commenter explained that an important distinction between medical diagnosis and procedural-based episode-of-care models is that medical diagnosis models tend to involve a patient population of greater complexity, often with life-threatening conditions. The commenter believes that, where appropriate, this awareness should be reflected in the design of the EPMs. The commenters were concerned that the proposed AMI model would put a greater emphasis on coding methodologies and increase the chance of disparities between cases identified by each responsible hospital for inclusion in the AMI model versus cases identified by CMS from historical claims data upon which quality-adjusted target prices would be based. The commenters stressed the need for CMS to establish clinical homogeneity in the AMI model, limiting ambiguity as much as possible.

Several commenters recommended CMS to use ICD–10–CM coding strategies to limit inclusion of AMI model beneficiaries to the most clinically similar subset of beneficiaries in order to allow for meaningful comparisons and ultimately provide CMS the opportunity to clearly evaluate the impact of the AMI model on patient care and outcomes. The commenters stated that with the move from ICD–9–CM to ICD–10–CM, the coding stages associated with AMI have changed, warranting additional considerations. Specifically, a number of commenters recommended that CMS limit the AMI model to beneficiaries with ST-elevation myocardial infarction (STEMI) discharged under AMI MS–DRGs and PCI MS–DRGs with an AMI ICD–10–CM code only in the principal diagnosis code position on the inpatient claim. The commenters claimed that while STEMIs occur due to an acute coronary artery occlusion, many non-ST-elevation (NSTEMI) beneficiaries with AMI experience open coronary arteries but there is an imbalance between the oxygen demands of the heart and the coronary arteries’ ability to meet them. The commenters added that due to these substantial differences in the underlying pathophysiology of STEMI and NSTEMI AMI patients that lead to more variation in clinical presentation in NSTEMI patients, in addition to the different approaches to their evaluation and management, the AMI model should only include STEMI beneficiaries which, when risk adjustment is applied, represent a more homogenous population compared to NSTEMI patients.

These commenters presented the most current consensus driven definition of AMI, the third universal definition, as: “Evidence of myocardial necrosis consistent with acute myocardial ischemia. Under these conditions, any of the following criteria meets the diagnosis for MI: • Detection of a rise and/or fall of cardiac biomarker values, preferably cardiac troponin with at least one value above the 99th percentile upper reference limit; and at least one of the following: • Symptoms of new ischemia; • New or presumed new significant ST-segment-T wave (ST–T) changes or new left bundle branch block (LBBB); • Development of pathological Q waves in the ECG; • Imaging evidence of new loss of viable myocardium or new regional wall motion abnormality; and • Identification of an intracoronary thrombus by angiography or autopsy.”49

The commenters recommended CMS to clearly define AMI for the EPM because they claimed that currently what is coded as AMI often only meets this definition in part and may be limited to abnormal biomarkers that can be detected without an acute occlusion of a coronary artery. Aligning coding with clinical reality is necessary for establishing clinical homogeneity in the AMI model. The commenters believe that including in the AMI model beneficiaries not only with a principal but a secondary diagnosis of AMI would make it difficult to establish a clearly defined clinically homogeneous population for the following reasons:
• Critically ill patients often receive a secondary diagnosis of AMI for what is more correctly characterized as supply-demand ischemia due to the routine and inaccurate coding of any troponin leak or elevation as an AMI, despite the absence of a clinical event suggestive of infarction. The commenters provided examples such as a beneficiary with metastatic breast cancer and internal bleeding who exhibits a slight cardiac troponin leak or a beneficiary with multi-organ failure, stating that the root cause of small elevation of troponin in these cases would be the underlying condition, not CAD. They also claimed that elderly patients with heart failure or rapid atrial fibrillation may have a secondary AMI ICD–CM diagnosis, yet the heart failure or atrial fibrillation would drive decisions about care, not the AMI.
• Outcomes and cost-of-care for critically ill patients with a secondary AMI diagnosis are likely driven more by the primary condition than by AMI resulting from possible CAD.

Patterns of care are very different for patients with a secondary, as compared to a principal, diagnosis of AMI; and
• Including patients with a secondary diagnosis of AMI increases the variability within the AMI model, limiting opportunity to draw clear conclusions when testing the model.

One commenter requested that CMS account for beneficiaries with AMI who do not have a traditional AMI but coding results in discharge under an AMI MS–DRG by specifying a concrete list of ICD–10–CM codes that, if included on a claim for a beneficiary discharged under an AMI MS–DRG from an AMI model participant, would exclude the beneficiary from the AMI model.

Response: We appreciate the suggestions of the commenters that we include a more homogeneous group of beneficiaries in the AMI model by limiting the model to those beneficiaries with a STEMI ICD–CM diagnosis code in the principal position on the claim for the anchor hospitalization. Under our proposal to include all beneficiaries
in the AMI model discharged from AMI MS–DRGs and beneficiaries discharged from PCI MS–DRGs with an AMI ICD–CM diagnosis code listed in Table 3 (the codes we are analyzing are listed in Table 4) in the principal or a secondary position on the inpatient claim for the anchor hospitalization, all of the diagnosis codes except 410.71 (Subendocardial infarction, initial episode of care) in ICD–9–CM and 121.4 (Non-ST elevation (NSTEMI) myocardial infarction) and 122.2 (Subsequent non-ST elevation (NSTEMI) myocardial infarction) are for STEMI diagnoses. We analyzed historical AMI episodes from 2012–2014 and found that about 78 percent of episodes were for NSTEMI, while 22 percent were for STEMI.50 There are well-established clinical guidelines for the management of beneficiaries with both NSTEMI and STEMI, and the clinical care pathways generally differ for these beneficiaries.51 52 However, to limit the AMI model to beneficiaries with STEMI only, the minority of beneficiaries with AMI whose care is less varied, and exclude beneficiaries with NSTEMI, the majority of beneficiaries with AMI whose care is more varied and highly dependent on the beneficiary’s risk factors for adverse outcomes, would miss a substantial opportunity to test an EPM for a large proportion of Medicare beneficiaries with AMI. We believe there are substantial opportunities for care redesign under the AMI model to improve the quality and efficiency of episode care for both NSTEMI and STEMI patients so we will not limit the model to one subgroup of beneficiaries hospitalized for treatment of AMI. In response to the commenters who were concerned that including beneficiaries with NSTEMI and STEMI in the AMI model could interfere with CMS’ ability to evaluate the impact of the AMI model on patient care and outcomes, we note that as discussed in section IV of this final rule, we will examine the impact of the AMI model on subgroups of beneficiaries to better understand variations in payments and outcomes within and between hospitals. The identification of subgroups to be examined will include a variety of key clinical and demographic factors.

We also analyzed the distribution of AMI ICD–9–CM diagnosis codes for FY 2014 discharges from AMI and PCI MS–DRGs (ICD–10–CM was not in use in that year) in the principal versus secondary position for beneficiaries who would be included in the AMI model under our proposal because of their assignment to an AMI MS–DRG or to a PCI MS–DRG.53 We found that 94 percent of historical episodes assigned to PCI MS–DRGs had an AMI ICD–9–CM diagnosis code in the principal position. Of those episodes with an AMI ICD–9–CM diagnosis code in the secondary position, the most common principal diagnoses were 996.72 (Other complications due to other cardiac device, implant, and graft) and 414.01 (Coronary atherosclerosis of native coronary artery), which constituted 53 percent of cases with an AMI ICD–9–CM diagnosis code only in a secondary position, while the remaining episodes had one of over 200 different ICD–9–CM diagnosis codes in the principal position. In addition, we found that 86 percent of episodes assigned to AMI MS–DRGs had an AMI ICD–9–CM diagnosis code only in the secondary position. Of those cases with an AMI ICD–9–CM diagnosis code in the secondary position, the most common principal diagnoses in order of frequency were 428.23 (Acute on chronic systolic heart failure); 427.31 (Atrial fibrillation); 428.33 (Acute on chronic diastolic heart failure); 428.43 (Acute on chronic combined systolic and diastolic heart failure); 428.0 (Congestive heart failure, unspecified); and 428.21 (Acute systolic heart failure). These diagnoses constituted 62 percent of cases with an AMI ICD–9–CM code only in the secondary position, while the remaining episodes had one of over 200 different, but primarily cardiac, ICD–9–CM diagnosis codes in the principal position. We note that the diagnosis patterns we observed did not confirm the views of some commenters that beneficiaries with underlying noncardiac disease and a troponin leak, such as a metastatic breast cancer with internal bleeding, would be included in the AMI model based on our proposal. However, the AMI model would include some beneficiaries discharged from AMI MS–DRGs with significant underlying cardiac conditions such as heart failure and atrial fibrillation in the principal diagnosis code position, another example provided by some commenters.

ICD–CM diagnosis coding does not rely on clinical definitions; it is the physician who is responsible for documenting the patient’s diagnosis. In other words, coders cannot determine if a patient suffered an AMI based on cardiac biomarkers. If the physician documents an AMI, then the coder is required to report the ICD–10–CM code describing the type of AMI. The coder does not interpret the troponin levels of a beneficiary.

Based on our analysis of historical claims and the established rules for medical coding, we believe that it is appropriate to include the small percentage of beneficiaries with an ICD–CM AMI diagnosis code only in the secondary position upon discharge from AMI and PCI MS–DRGs in the AMI model because the principal diagnoses on these claims generally represent beneficiaries with coronary obstruction. The secondary AMI diagnosis on the claim would have resulted from a physician diagnosis of AMI which, as the commenters stated, should be represented by changes in cardiac biomarker values and at least one other characteristic of a specified list. In addition to representing a reasonably homogeneous population, we believe this approach provides an unambiguous definition for AMI model participants to use to identify beneficiaries discharged from PCI MS–DRGs who would be in the AMI model. Because the model is focused on a condition, AMI, rather than a procedure, and some beneficiaries admitted for PCI will not have an AMI, it is necessary for PCI MS–DRGs to pair ICD–CM diagnosis codes with the MS–DRG to identify AMI model beneficiaries.

While we observed that 14 percent of beneficiaries assigned to AMI MS–DRGs only had an AMI ICD–9–CM diagnosis code in the secondary position and most commonly another cardiac diagnosis in the principal position, this group is a small minority of beneficiaries discharged from AMI MS–DRGs. We do not believe that it is necessary to exclude these beneficiaries from the AMI model for purposes of clinical homogeneity because the clinicians should have had an AMI documented by a physician for an AMI diagnosis.

50 Episodes for AMI beneficiaries initiated by all U.S. IPPS hospitals not in Maryland and constructed using standardized Medicare FFS Parts A and B claims, as proposed in this rule that began in CYs 2012–2014.

53 Inpatient claims from all U.S. IPPS hospitals not in Maryland were derived from the October 2013–September 2014 Inpatient Claims File located in the Chronic Conditions Warehouse.
code to be included in a secondary position on the hospital claim. We further observed from our analysis of FY 2014 claims for discharges from AMI MS–DRGs that those beneficiaries with an AMI ICD–9–CM code in the principal position commonly had similar cardiac diagnoses (for example, atrial fibrillation and heart failure) as those beneficiaries where the order of diagnosis coding was reversed. Care coordination and management of other cardiac conditions which would be included in the AMI episode definition as discussed in section III.C.3.b. of this final rule would be common for beneficiaries discharged from AMI MS–DRGs, regardless of whether AMI is the principal or a secondary diagnosis on the hospital claim that led to the beneficiary’s discharge from an AMI MS–DRG. Therefore, limiting the AMI model beneficiaries only to those assigned to AMI MS–DRGs based on a principal diagnosis code of AMI would not significantly increase clinical homogeneity of those AMI model beneficiaries discharged after medical treatment for AMI. Moreover, to exclude beneficiaries discharged from AMI MS–DRGs with an AMI ICD–9–CM diagnosis code only in a secondary position on the hospital claim from the model could substantially complicate timely EPM participant identification of the beneficiaries in the model by including only a subset of beneficiaries assigned to AMI MS–DRGs upon discharge. Thus, we do not believe it is necessary for AMI MS–DRGs to pair AMI ICD–CM diagnosis codes with the MS–DRG to identify AMI model beneficiaries.

Comment: In addition to the commenters who recommended that CMS apply specific coding strategies to increase clinical homogeneity of beneficiaries in AMI episodes, other commenters recommended that CMS exclude a variety of beneficiaries who would otherwise meet the proposed AMI model criteria for inclusion. Some commenters further recommended CMS to make a pricing adjustment for AMI episodes for these beneficiaries if CMS does not exclude them from the model altogether. Suggestions included excluding beneficiaries who are in the following clinical scenarios:

- Cardiogenic shock or, at a minimum, the subset of beneficiaries with cardiogenic shock who are transferred from an AMI model participant or who are transferred to an AMI model participant, as the impact of the AMI model on transfer decisions could delay access to life-saving therapies at specialized centers.
- Sepsis who do not have clinically traditional AMI and would not be expected to follow a typical clinical pathway for AMI.
- Responding a second or greater AMI, who are more likely to have complex cardiac needs beyond immediate management of the AMI.
- Undergoing organ transplantation or ventricular assist device (VAD) implantation during the episode, because regional pricing could limit access to life-saving therapies only available at those few centers capable of caring for advanced heart failure patients and organ transplant candidates.
- Receiving outpatient inotropes for advanced heart failure during AMI episodes, because these therapies allow beneficiaries to avoid a surgical bridge to transplant with VAD implantation but are used by a high percentage of beneficiaries who might otherwise receive a VAD. The commenters believes this would be consistent with excluding beneficiaries who receive VAD during AMI episodes from the AMI model.
- Undergoing CABG or other cardiac surgery within 90 days following discharge from the hospitalization for AMI because they must be medically optimized prior to surgery to ensure safe outcomes. This percentage of beneficiaries is higher for certain hospitals with complex patient populations, and the proposed payment methodology would not adequately account for these high-cost cases.

Response: We appreciate the recommendations of the commenters regarding the exclusion of certain complex, potentially high-cost beneficiaries from the AMI model. We do not believe it would be appropriate to exclude beneficiaries experiencing cardiogenic shock or a second or subsequent AMI from the AMI model because there are significant opportunities for improving the quality and efficiency of care for these beneficiaries during episodes, despite their greater complexity and medical needs, and we believe it is important to include these beneficiaries in the test of the AMI model. In response to the commenters who recommended that we exclude beneficiaries with sepsis and atypical AMI from the AMI model, based on our proposed definition of the beneficiaries to be included in the AMI model and the ICD–CM diagnosis code analysis discussed in the response to the previous comment, we do not believe that beneficiaries with sepsis and clinically atypical AMI would generally be included in the AMI model because they would not be assigned to AMI or PCI MS–DRGs.

While readmission for cardiac transplantation or VAD implantation would be excluded from AMI episodes based on our proposed AMI model exclusion list, these beneficiaries would otherwise initiate and remain in AMI episodes throughout the 90-day post-discharge period both before and following cardiac transplantation or VAD implantation that occurs during the 90-day period. Other readmissions and Part B services furnished to these beneficiaries would be included in the episodes based on the proposed exclusion list. We believe it is important to include in the AMI model these beneficiaries with complex care needs following hospitalization for AMI, including those receiving outpatient inotropes during AMI episodes, because there are opportunities to improve the quality and efficiency of their care, despite their experiencing severe sequelae following AMI.

Finally, we note that we also do not believe it would be appropriate to exclude from the AMI model those beneficiaries receiving CABG or other cardiac surgery during AMI episodes after a period of medical optimization following discharge from the anchor hospitalization. As discussed in section III.D.4.b.(2)(c) of this final rule, we are providing a pricing adjustment for AMI episodes with a CABG readmission for beneficiaries who follow this medically appropriate clinical pathway. We refer to section III.D.4.b.(2) of this final rule for further discussion of risk adjustment in the context of the AMI model’s implementation of downside risk and progression to regional pricing for AMI episodes.

Comment: Several commenters supported excluding intracardiac valvular and ablation procedures from historical AMI episodes for clinical consistency between historical AMI episodes and those during the AMI model performance years. They explained that intracardiac valvular and ablation procedures are typically unrelated to management of an AMI but would historically have substantially impacted the total spending in historical AMI episodes for beneficiaries discharged from MS–DRGs 246 through 251 in centers that performed those procedures.

Response: We appreciate the support from the commenters. We continue to believe it is appropriate to define historical AMI episodes for beneficiaries discharged under PCI MS–DRGs 246–251 as those that do not include the ICD–9–CM procedure codes in Table 4.
Final Decision: After consideration of the public comments received, we are finalizing the proposals in §512.100(c)(1) to include the care of beneficiaries in the AMI model who meet the general beneficiary care inclusion criteria as discussed in section III.C.4.a.(1) of this final rule and who are discharged under an AMI MS–DRG (280–282), representing those individuals admitted with AMI who receive medical therapy but no revascularization, or discharged under a PCI MS–DRG (246–251) with an ICD–10–CM diagnosis code of AMI as displayed in Table 6 on the IPPS claim for the anchor hospitalization in the principal or secondary diagnosis code position, without modification.

We are also finalizing the proposals in §512.100(d)(4) to define historical AMI episodes for beneficiaries discharged under PCI MS–DRGs 246–251 as those that do not include the ICD–9–CM procedure codes in Table 4, without modification.

Finally, we are finalizing the proposals in §512.100(d)(1)–(3) for the sub-regulatory process to be used on an annual, or more frequent, basis to update the AMI ICD–10–CM diagnosis code list and to address issues related to AMI diagnosis codes raised by the public, without modification. As part of this process, we will use the following standard when revising the list of ICD–10–CM diagnosis codes representing AMI: The ICD–10–CM diagnosis code is sufficiently specific that it represents an AMI. We will post a list of potential AMI ICD–10–CM diagnosis codes to the CMS Web site at https://innovation.cms.gov/initiatives/epm to allow for public input on our planned application of the standard, and then adopt the AMI ICD–10–CM diagnosis code list with posting to the CMS Web site of the final AMI ICD–CM diagnosis code list after our consideration of the public input. We will provide sufficient time for public input based on the complexity of potential revisions under consideration, typically at least 30 days, and, while we will not respond to individual comments as would be required in a regulatory process, we can discuss the reasons for our decisions about changes in response to public input with interested stakeholders.

We note that we reviewed the FY 2017 ICD–10–CM diagnosis code changes that became available after publication of the EPM proposed rule in the Federal Register on August 2, 2016. There are no changes or additions to the ICD–10–CM diagnosis codes reporting AMI for FY 2017 so we are not suggesting modifications for FY 2017 to the final list displayed in Table 6 of ICD–10–CM AMI diagnosis codes in the model was included in proposed §512.100(c)(2). We sought comment on our proposal to identify beneficiaries included in the CABG model.

The following is a summary of the comments received and our responses. Comment: Similar to the suggestions of commenters recommending that CMS exclude certain beneficiaries discharged from AMI MS–DRGs or PCI MS–DRGs with an AMI ICD–10–CM diagnosis code from the AMI model, several commenters recommended that CMS exclude a variety of beneficiaries from the CABG model who would otherwise meet the proposed CABG model criteria for inclusion. Recommendations include excluding beneficiaries who are in the following clinical scenarios:

- Cardiogenic shock or, at a minimum, the subset of beneficiaries with cardiogenic shock who are transferred from a model participant or who are transferred to a model participant, as the impact of the CABG model on transfer decisions could delay access to life-saving therapies at specialized centers;
- Undergoing organ transplantation or VAD implantation during the CABG episode, as regional pricing could limit access to life-saving therapies only available at those few centers capable of caring for advanced heart failure patients and organ transplant candidates;
- Receiving outpatient inotropes for advanced heart failure during CABG episodes, because these therapies allow beneficiaries to avoid a surgical bridge to transplant with ventricular assist device (VAD) implantation but are used in a group of beneficiaries who might otherwise receive a VAD.
commenters state that this would be consistent with excluding beneficiaries who receive VAD during CABG episodes from the CABG model.

• Undergoing a second or greater CABG, given the increase in complexity and comorbidities associated with this population.
• Undergoing a salvage CABG due to a failed or aborted PCI, either during a single admission or a readmission, due to the clinically frail beneficiaries that result in high-cost episodes.
• Responding to the recommendations of the commenters regarding the exclusion of certain complex, potentially high-cost beneficiaries from the CABG model, and note that in some cases recommendations for exclusion were the same as for the AMI model. We do not believe it would be appropriate to exclude beneficiaries experiencing cardiogenic shock, undergoing a second or subsequent CABG, or undergoing salvage CABG from the CABG model because there are significant opportunities for improving the quality and efficiency of care for these beneficiaries during episodes, despite their greater complexity and medical needs, and we believe it is important to include these beneficiaries in the test of the CABG model.

While readmission for cardiac transplantation or VAD implantation would be excluded from CABG episodes based on our proposed CABG model exclusion list, these beneficiaries would otherwise initiate and remain in CABG episodes throughout the 90-day post-discharge period both before and following cardiac transplantation or VAD implantation that occurs during the 90-day period. Other readmissions and Part B services furnished to these beneficiaries would be included in the episodes based on the proposed exclusion list. We believe it is important to include in the CABG model these beneficiaries with complex care needs following CABG surgery, including those receiving outpatient intravascular and CABG episodes, because there are opportunities to improve the quality and efficiency of their care, despite their experiencing severe sequelae following CABG. We refer to section III.D.4.b.(2) of this final rule for further discussion of risk adjustment in the context of the CABG model’s implementation of downside risk and progression to regional pricing for CABG episodes.

Final Decision: After consideration of the public comments received, we are finalizing the proposals in § 512.100(c)(3)(iv) to include the care of beneficiaries in the CABG model who meet the general beneficiary care inclusion criteria as discussed in section III.C.4.a.(1) of this final rule and are discharged under a CABG MS–DRG (231–236) paid under the IPPS, without modification.

3) SHFFT (Excludes Lower Extremity Joint Replacement) Model

We proposed the SHFFT model to incentivize improvements in the coordination and quality of care, as well as episode efficiency, for beneficiaries treated surgically for hip and femur fractures, other than hip arthroplasty. Together, the CJR and SHFFT models would cover all surgical treatment options (that is, hip arthroplasty and fixation) for Medicare beneficiaries with hip fracture.

The SHFFT model would be similar to the CJR model in that the anchor hospitalization would be defined by admission for a surgical procedure, which would be defined by the MS–DRGs for that procedure alone (80 FR 73280). Additionally, most SHFFT procedures are furnished in the inpatient hospital setting, consisting primarily of hip fixation procedures, with or without reduction of the fracture, as well as open and closed surgical approaches. Thus, we proposed to include beneficiaries admitted and discharged from an anchor hospitalization paid under SHFFT MS–DRGs (480–482) under the IPPS in the SHFFT model. Based on Medicare claims data for historical SHFFT episodes beginning in CYs 2012–2014, the annual number of potentially eligible beneficiary discharges for the SHFFT model nationally was approximately 109,000.56

The proposal for identifying beneficiaries included in the SHFFT model was included in proposed § 512.100(i)(3). We sought comment on our proposal to identify beneficiaries included in the SHFFT model.

The following is a summary of the comments received and our responses. Comment: A number of commenters expressed support for the proposal to define the clinical conditions included in the SHFFT model as beneficiaries who are admitted and discharged under SHFFT MS–DRGs. Other commenters recommended that CMS apply additional episode-specific criteria to exclude beneficiaries from the SHFFT model who would be discharged from the SHFFT MS–DRGs.

Recommendations of beneficiaries from some commenters to be excluded include:

• Beneficiaries with fracture due to falls or trauma in association with acute myocardial infarction; cardiac arrhythmia; syncope; cerebrovascular accident; seizure; head injury; or polytrauma to reduce the large risk of increases in patient transfers from EPM participants seeking to reduce their financial responsibility for high-cost beneficiaries;
• Beneficiaries with dementia or Alzheimer’s disease due to ethical issues around withholding surgery that could arise in the case of EPM participants attempting to reduce their financial risk;
• Beneficiaries already residing in a SNF at the time of fracture, who would necessitate an unavoidable SNF stay after discharge from the anchor hospitalization that would increase the episode cost attributable to the EPM participant;
• Beneficiaries with fractures related to cancer, who would be expected to be high-cost cases;
• Beneficiaries with a history of previous hip fracture; previous surgery in the region; retained hardware; open fracture; periprosthetic fractures; and congenital deformities who would be expected to have atypical and potentially costly hip fracture care pathways; and
• Beneficiaries who smoke or have diabetes, which are risk factors for fracture nonunion and infection, respectively, because these behaviorally mediated risk factors for costly care cannot be managed prior to hip surgery, unless the SHFFT model adjusts prices for the higher financial risk attributable to these beneficiaries.

Response: We appreciate the recommendations of the commenters to exclude certain beneficiaries receiving SHFFT from the SHFFT model due to their personal circumstances, other clinical conditions, or circumstances that led to the hip fracture. We agree with the commenters that beneficiaries in this group may be more likely to require complex care during the anchor hospitalization and significant, intensive health services during the 90 day post-hospital discharge period, which could result in high-cost SHFFT episodes. However, we do not believe it would be appropriate to exclude beneficiaries with complex social or clinical circumstances from the SHFFT model because there are significant opportunities for improving the quality and efficiency of care for these beneficiaries during episodes, despite their greater complexity and medical needs, and we believe it is important to
include these beneficiaries in the test of the SHFFT model. As discussed in section III.G.4. of this final rule, we will be monitoring for issues related to access to care. We expect that all Medicare beneficiaries with hip fracture are offered clinically appropriate treatments for their fracture and that all transfers of beneficiaries with hip fracture to other hospitals are medically necessary and not determined by the SHFFT model participant’s assessment of the beneficiary’s risk of a high-cost SHFFT episode. We also refer to section III.D.4.b.(2) of this final rule for further discussion of risk adjustment in the context of the SHFFT model’s implementation of downside risk and progression to regional pricing for SHFFT episodes.

Comment: Some commenters stated that there is a sizeable minority of beneficiaries with hip fracture who should not and do not get hospitalized or if hospitalized are not treated with surgery for fracture so would not be included in the SHFFT or CJR models. These commenters observed that these beneficiaries were not discussed in the proposed rule and, therefore, no discussion was included about the decisions related to the appropriate treatment of hip fracture in the case of serious disability, frailty, and concurrent illness. The commenters contended that EPM participants that have historically served a substantial frail population could be seriously disadvantaged under the SHFFT model due to the significant care needs for these following hip fracture surgery and might seek to reduce their traditional commitment to this population in various ways, which were contrary to the interests of this highly vulnerable population. Some commenters further speculated that beneficiaries with hip fracture could be shifted to no surgery or to joint replacement if SHFFT model participants seek to reduce high-cost cases that present the most financial risk under the SHFFT model. The commenters further stated that the SHFFT model drove SHFFT model participants to provide more expensive hip replacement to beneficiaries due to their desire to avoid SNF admission because of the longer need for protected weight-bearing post-internal fixation after SHFFT in comparison with total joint replacement where immediate weight-bearing may be possible.

Response: While we agree with the commenters that surgical fracture repair may not be appropriate for some beneficiaries with hip fracture, the proposed SHFFT model was designed to include only those beneficiaries with surgical fracture repair other than joint replacement and not those for which surgical fracture repair was not performed. We believe the decision about fracture treatment should remain that of the beneficiary in consultation with any caregivers and his or her treating physicians. We did not propose to define the SHFFT model by hip fracture alone because we believe the primary opportunities for care redesign under an EPM that seeks to improve episode quality and efficiency are in the surgical treatment of hip fracture, rather than in the primary non-surgical management of hip fracture for beneficiaries who may or may not be hospitalized.

We do not believe that EPM participants would direct Medicare beneficiaries to other treatments that would result in their not being included in the SHFFT model simply on the basis of the beneficiary’s potential for being a high-cost hip fracture surgical episode. We refer to section III.D.4.b.(2) for discussion of risk adjustment for complex beneficiaries under the SHFFT model. In addition, we note that beneficiaries with hip fracture who are treated with joint replacement, a care pattern that some commenters believe could result from SHFFT model participants’ efforts to avoid of high-cost cases under the SHFFT model, would be included in the CJR model for most SHFFT model participants who are also CJR participant hospitals as discussed in section III.B.3. of this final rule. Thus, it is unlikely that a shift from a SHFFT procedure to joint replacement would financially benefit the SHFFT model participant. As discussed in sections III.G.4. through 6. of this final rule, we will be closely monitoring for access to care, quality of care, and delayed care under the SHFFT model.

Final Decision: After consideration of the public comments received, we are finalizing the proposals in § 512.100(c)(3) to include the care of beneficiaries in the SHFFT model who meet the general beneficiary care inclusion criteria as discussed in section III.C.4.a. (are discharged under a SHFFT MS–DRG (480–482) under the IPPS, without modification). We refer to section III.D.4.b.(2) for discussion of risk adjustment for complex beneficiaries under the SHFFT model. In addition, we note that beneficiaries with hip fracture who are treated with joint replacement, a care pattern that some commenters believe could result from SHFFT model participants’ efforts to avoid of high-cost cases under the SHFFT model, would be included in the CJR model for most SHFFT model participants who are also CJR participant hospitals as discussed in section III.B.3. of this final rule. Thus, it is unlikely that a shift from a SHFFT procedure to joint replacement would financially benefit the SHFFT model participant. As discussed in sections III.G.4. through 6. of this final rule, we will be closely monitoring for access to care, quality of care, and delayed care under the SHFFT model.

b. Definition of the Related Services Included in EPM Episodes

The general principles for the definition of related services are the same for the AMI, CABG, and SHFFT models, so we address them in a single discussion in this section. Like the CJR model, we are interested in testing inclusive AMI, CABG, and SHFFT episodes to incentivize comprehensive, coordinated, patient-centered care for the beneficiary throughout the episode (80 FR 73303). Therefore, we proposed to exclude Medicare items and services furnished during the EPM episodes only when unrelated to the EPM episode diagnosis and procedures based on clinical rationale that would result in standard exclusions from all of the episodes in a single EPM. Thus, we proposed to include all items and services paid under Medicare Part A and Part B unless they fall under an exclusion because they are unrelated to the EPM episodes.

As like the CJR model, we proposed that the items and services ultimately included in the EPM episodes after the exclusions are applied are called related items and services, and that Medicare spending for related items and services be included in the historical data used to set EPM-episode benchmark prices and in the calculation of actual EPM episode payments that would be compared against the quality-adjusted target price to assess the performance of EPM participants (80 FR 73303 and 73315). Additionally, we proposed that Medicare spending for unrelated items and services (excluded from the EPMs episode definitions) would not be included in the historical data used to set EPM-episode benchmark prices or in the calculation of actual EPM episode payments. We proposed that related items and services for EPM episodes would include the following items and services paid under Medicare Part A and Part B, after the EPM-specific exclusions are applied:

- Physicians’ services.
- Inpatient hospital services.
- Inpatient psychiatric facility (IPF) services.
- Long-Term Care Hospital (LTCH) services.
- Inpatient Rehabilitation Facility (IRF) services.
- Skilled Nursing Facility (SNF) services.
- Home Health Agency (HHA) services.
- Hospital outpatient services.
- Independent outpatient therapy services.
- Clinical laboratory services.
- Durable medical equipment.
- Part B drugs.
- Hospice.

We note that inpatient hospital services would include services paid through IPPS operating and capital payments. The AMI, CABG, and SHFFT episodes also could include certain per-member-per-month model payments as discussed in section III.D.6. d. of the proposed rule (81 FR 50871 through 50872). These items and services for the
EPMs are the same items and services included in CJR episodes (80 FR 73303 and 73315).

Similar to the CJR model and for the reasons explained in the CJR Final Rule, we proposed to exclude drugs that are paid outside of the MS–DRGs included in the EPM episode definitions, specifically hemophilia clotting factors, identified by CPT code, diagnosis code, and revenue center on IPPS claims, from the EPM episodes (80 FR 73303 and 73315). Hemophilia clotting factors, in contrast to other drugs that are administered during a hospitalization and paid through the MS–DRG, are paid separately by Medicare in recognition that clotting factors are costly and essential to appropriate care of certain beneficiaries. Therefore, we believe there are no EPM episode efficiencies to be gained in the variable use of these high cost drugs.

We also proposed to exclude IPPS new technology add-on payments for drugs, technologies, and services from these EPMs excluding them from both the actual historical episode data used to set EPM-episode benchmark prices and from actual EPM episode payments that are reconciled to the quality-adjusted target prices like the CJR model (80 FR 73303–73304 and 73315). This would apply to both the anchor hospitalization and any related readmissions during the EPM episodes. New technology add-on payments are made separately and in addition to the MS–DRG payment under the IPPS for specific new drugs, technologies, and services that substantially improve the diagnosis or treatment of Medicare beneficiaries and would be inadequately paid under the MS–DRG system. We believe it would not be appropriate for the EPM to potentially diminish beneficiaries’ access to new technologies or to burden hospitals who choose to use these new drugs, technologies, or services with concern about these payments counting toward EPM participants’ actual EPM episode payment. Additionally, new drugs, technologies, or services approved for the add-on payments vary unpredictably over time in their application to specific clinical conditions.

Finally, we proposed to exclude OPPS transitional pass-through payments for medical devices as defined in §419.66 from the EPM episodes because, through the established OPPS review process, we have determined that these technologies have a substantial cost but also lead to substantial clinical improvement for Medicare beneficiaries. This proposal is consistent with the CJR model final exclusions policy (80 FR 73308 and 73315).

We proposed to follow the same general principles in determining other proposed excluded Part A and Part B services from the EPM episodes that we use in the CJR model in order to promote coordinated, high-quality, patient-centered care (80 FR 73304). These include identifying excluded (unrelated) services rather than included (related) services based on clinical review. We would operationalize these principles for the new EPMs, as we do for the CJR model, by excluding unrelated inpatient hospital admissions during the EPM episode by identifying MS–DRGs for exclusion on an EPM-specific basis (80 FR 73304 through 73312 and 73315). We would further exclude unrelated Part B services during the EPM episode based on the diagnosis code on the claim by identifying categories of ICD–CM codes for exclusion (identified by code ranges) on an EPM-specific basis. ICD–9–CM diagnosis code exclusions would apply to historical episodes used to construct EPM-episode benchmark prices, while ICD–10–CM diagnosis code exclusions would apply to EPM episodes during the EPMs’ performance years. We proposed to identify unrelated Part B services and readmissions based on the BPCI Model 2 Part B exclusion lists that apply to the anchor MS–DRG that initiates the EPM episode, or to the price MS–DRG if it is different than the anchor MS–DRG as described further in section III.D.4.b.(2)(a) of this final rule. This proposal is consistent with our use of the BPCI Model 2 LEJR ICD–9–CM, ICD–10–CM, and MS–DRG exclusion lists in the CJR model (80 FR 73304 and 73315).

The BPCI episode-specific exclusion lists were initially developed more than 3 years ago for the BPCI initiative through a collaborative effort of CMS staff, including physicians from medical and surgical specialties, coding experts, claims processing experts, and health services researchers. The lists have been shared with thousands of entities and individuals participating in episodes in one or more phases of the BPCI initiative, and have undergone refinement in response to stakeholder input about specific diagnoses for exclusion, resulting in only minimal changes over the last 3 years. Thus, the BPCI exclusion lists have been vetted broadly in the health care community; refined based on input from a wide variety of providers, researchers and other stakeholders; and successfully operationalized in the BPCI models. We proposed their use in the AMI, CABG, and SHFFT models based on our confidence related to our several years of experience that these definitions are reasonable and workable for AMI, CABG, and SHFFT episodes, for both providers and CMS, and based on our rulemaking for the CJR model. We note that the BPCI Model 2 exclusion lists for the 48 clinical conditions being tested in the BPCI models include lists that apply to every MS–DRG that could be an anchor MS–DRG (or price MS–DRG, if applicable) for the AMI, CABG, and SHFFT episodes.

Similar to the CJR model, we proposed to include in EPM episodes all Part A services furnished post-hospital discharge during the EPM episode, as these services are typically intended to be comprehensive in nature (80 FR 73304 and 73315). We specifically proposed to exclude unrelated hospital readmissions for MS–DRGs that group to the following categories of diagnoses: Oncology, trauma medical admissions, surgery for chronic conditions unrelated to a condition likely to have been affected by care furnished during the EPM episode, and surgery for acute conditions unrelated to a condition resulting from or likely to have been affected by care during the EPM episode. The rationale for these exclusions is the same as the rationale for their exclusion in the CJR model (80 FR 73304).

Specifically with respect to Part B services, similar to the CJR model, we proposed to exclude acute disease diagnoses unrelated to a condition resulting from or likely to have been affected by care during the EPM episode and certain chronic disease diagnoses, as specified by CMS on a diagnosis-by-diagnosis basis, depending on whether the condition was likely to have been affected by care during the EPM episode or whether substantial services were likely to be provided for the chronic condition during the EPM episode (80 FR 73305 and 73315). Thus, we would include all Part B services with principal diagnosis codes on the associated Part B claims that are directly related (clinically and per coding conventions) to EPM episodes, claims for diagnoses that are related to the quality and safety of care furnished during EPM episodes, and claims for services for diagnoses that are related to preexisting chronic conditions such as diabetes, which may be affected by care furnished during EPM episodes.

In general, the anchor MS–DRG that initiates the AMI, CABG, or SHFFT episode would determine the exclusion list that applies to the EPM episode. For example, AMI episodes may have different exclusion lists applied based on whether the AMI episode is initiated by admission to the participant hospital
that results in discharge from an AMI anchor MS–DRG or a PCI anchor MS–DRG with AMI ICD–10–CM diagnosis code. If a price MS–DRG applies to the AMI episode that includes a chained anchor hospitalization as described in section III.D.4.b.(2)(a) of this final rule, the exclusion list that applies to the price MS–DRG would apply to the AMI episode. Complete lists of excluded MS–DRGs for readmissions and excluded ICD–CM codes for Part B services furnished during EPM episodes after EPM beneficiary discharge from an anchor or chained anchor hospitalization in the AMI, CABG, and SHFFT models are posted on the CMS Web site at https://innovation.cms.gov/initiatives/epm.

Like the CJR model policy, we proposed that these exclusion lists would be updated by sub-regulatory guidance on an annual basis, at a minimum, to reflect annual changes to ICD–10–CM coding and annual changes to the MS–DRGs under the IPPS, as well as to address any other issues that are brought to our attention throughout the course of the EPMs’ performance period (80 FR 73304 through 73305 and 73315). The standards for this updating process reflect the previously discussed general principles for determining excluded services. That is, we proposed to not exclude any items or services that are directly related to the EPM episode diagnosis or procedure (for example, a subsequent admission for heart failure or repeat revascularization) or the quality or safety of care (for example, sternal wound infection following CABG); or to chronic conditions that may be affected by the EPM diagnosis or procedure and the post-discharge care (for example, prostate removal for cancer), and for acute clinical conditions not arising from existing EPM episode-related chronic clinical conditions or complications from the EPM episode (for example, appendectomy).

Similar to the CJR model, we proposed that the potential revised exclusions, which could include additions to or deletions from the exclusion lists, would be posted to the CMS Web site to allow for public input (80 FR 73305 and 73315). Through the process for public input on potential revised exclusions and then posting of the final revised exclusions, we proposed to provide information to the public about when the revisions would take effect and to which episodes they would apply.

The proposal for included services for an EPM was included in proposed § 512.210(a). The proposal for excluded services from the EPM episode was included in proposed § 512.210(b). The proposal for updating the lists of excluded services for EPMs was included in proposed § 512.210(c). We sought comment on our proposals for included and excluded services for the AMI, CABG, and SHFFT models and updating the lists of excluded services. The following is a summary of the comments received and our responses.

Comment: Most commenters expressed general support for CMS’ proposed episode definition strategy that would include Part A and Part B items and services and exclude certain unrelated readmissions based on a list of MS–DRGs, as well as certain unrelated Part B services based on the principal diagnosis on the claim, consistent with episode definition approach for LEJR under the CJR model and the approach used in the BPCI initiative for several years for BPCI, SHFFT, AMI, PCI, and CABG episodes. The commenters acknowledged that most items and services would be included in the episode definition under the proposal, thus creating broadly defined SHFFT, AMI, and CABG episodes. In some cases, while commenters agreed with the proposed general strategy for identifying EPM episode exclusions, they made specific recommendations for additional exclusions based on a different exclusions standard, and these commenters are summarized later in this section, where responses are also provided. In other cases, commenters who agreed with the strategy for identifying EPM episode exclusions stated that if CMS finalizes broad EPM episode definitions, risk adjustment would be necessary in order to ensure fair payment to EPM participants.

Response: We appreciate the support of many commenters for our proposed general approach to identifying excluded items and services for the EPMs. As we stated in the proposed rule (81 FR 50832), we are interested in testing inclusive AMI, CABG, and SHFFT episodes to incentivize comprehensive, coordinated, patient-centered care for the beneficiary throughout the episode. We agree with the commenter that it can be hard to distinguish included versus excluded services because sick people have many complex and interrelated clinical conditions and corresponding health care needs. The proposed EPM episode definitions are broad in part for this reason. Additionally, while we also agree with the commenter that the ongoing and acute health care needs of medically complex beneficiaries may be addressed through a patient-centered medical home or ACO, many of these vulnerable beneficiaries currently are not included in such models or programs. In the case of other beneficiaries who are included in medical home or ACO models or programs, they may have specific, new care management needs arising from an acute cardiac event, CABG, or hip fracture surgery that may be best managed by the EPM participant that has substantial expertise in coordinating and managing care throughout AMI, CABG, or SHFFT episodes because of its participation in the EPM, while the ACO or patient-centered medical home may have less specific expertise in managing beneficiaries recovering from major orthopedic or cardiac surgery or an AMI. We expect that EPM participants, accountable for EPM episode quality and cost performance
under the EPMs, will work closely with all providers and other organizations with which a model beneficiary has established relationships, toward the mutual goal of high quality, well-coordinated care that maximizes the rate of a beneficiary’s return of function and improvements in health following surgery or AMI. We further expect that the medical management and care coordination during EPM episodes will continue to be provided as beneficiaries’ transition out of EPM episodes, potentially into a primary care medical home or another model or program with accountability for population health, such as an ACO.

Because our proposed inclusive approach to EPM episode definitions results in many more items and services that are included in EPM episodes than excluded, we believe it is most efficient to identify excluded items and services as we proposed. With regard to the commenters who were concerned that an exclusion list could include inappropriate services by default, we note that we posted to the CMS Web site the proposed exclusion lists for the AMI, CABG, and SHFFT models for comment in association with the proposed rule and are finalizing the initial exclusion lists through this rulemaking where we have considered and responded to all the comments we received on our proposed exclusions. Thus, no items and services would be included in EPM episodes by default because the exclusion lists have been established through notice and comment rulemaking. In addition, as discussed later in this section, we proposed a sub-regulatory process for updating the exclusion lists to reflect ICD–10–CM coding and annual changes to the MS–DRGs under the IPPS, as well as to address any other issues that are brought to our attention throughout the course of the EPMs’ performance periods. The standards for the process reflect the proposed general principles for excluded services and the process itself allows opportunity for public input. Thus, we believe that all items and services identified in EPM episodes are intentionally included, after consideration of public input, rather than included by default.

We note that in the example raised by the commenter of “default inclusion,” we disagree with the commenter that readmissions for neurological and mental health conditions would not be excluded from AMI episodes because they are not MS–DRGs that we proposed to exclude from the AMI episodes, specifically oncology; trauma medical; chronic disease surgical unrelated to a condition likely to have been affected by care during the EPM episode; or acute disease surgical unrelated to a condition resulting from or likely to have been affected by care during the AMI episode. Thus, we consider those readmissions related to AMI episodes as they are medical MS–DRGs for conditions that are likely to have resulted from or been affected by care during the AMI anchor hospitalization or during the 90 days post-hospital discharge.

By posting to the CMS Web site the lists of excluded services for the EPMs, we believe we are providing the clarity and detail needed for any provider to understand whether his or her services furnished to a beneficiary in an EPM episode are included in the EPM episode definition because they are related to the episode or excluded from the EPM episode because they are unrelated. To date, we have applied the same general approach to identifying exclusions in the BPCI initiative, the CJR model, and the proposed EPMs, which should facilitate provider understanding about exclusions under these different episode payment models. We note, however, that the exclusion list differs based on the clinical condition that is the focus of the episode so a provider that is paid under Part B care may not be able to have a uniform determination of whether services furnished were included or excluded from an episode without knowledge of the beneficiary’s specific episode in an episode payment model as well as the clinical condition for which the provider furnished services. All of the Innovation Center episode payment models except Model 4 of BPCI use retrospective payment, so all providers would be paid according to the usual fee-for-service systems that apply, regardless of whether the items or services furnished by the provider are included in or excluded from a beneficiary’s episode.

Comment: While some commenters expressed full support for CMS’ proposed definition of related services, other commenters recommended CMS to exclude specific additional groups of services from EPM episodes. The commenters requested that CMS further exclude:

- Readmissions that were already planned for the beneficiary prior to the anchor hospitalization because their occurrence would be unrelated to episode care;
- Readmissions that were part of the planned post-discharge care for the beneficiary after the anchor hospitalization, because these provide no opportunity for efficiency yet could lead to high-cost episodes;
- Medical readmissions for unrelated acute and chronic conditions;
- Part B services that are not directly related to the episode;
- Cardiac rehabilitation, intensive cardiac rehabilitation, and chronic care management services where appropriate utilization under the EPMs in the context of historical low utilization would lead to increased episode costs during the EPM performance period;
- Behavioral and substance abuse services because these are not always integral or of strong relevance to the clinical definitions of the EPMs, and CMS does not provide claims data to model participants for these services so no participants can predict, model, or calculate episode spending; and
- Outpatient chemotherapy, psychiatric readmissions, and high cost intravenous therapy administered through DME that are unrelated to the episode and could lead to increased episode costs.

Response: We believe that it is not necessary to exclude from EPM episodes planned readmissions and outpatient services, regardless of whether those plans were made prior to the anchor hospitalization or during the anchor hospitalization but prior to discharge, solely because the readmissions or outpatient services are planned in advance. While we understand that certain other CMS programs account differently for planned readmissions by excluding them from readmission calculations, such as the HHRRP which reduces payments to hospitals with excess readmissions, we do not believe that planned readmissions should be

excluded from EPM episodes, where the goals of the EPMs are to improve the quality and efficiency of episode care and where we do not make a specific assessment about excess readmissions. Just like unplanned readmissions, we believe that planned readmissions should be excluded from EPM episodes only if they are unrelated to the EPM episode; and acute disease surgical unrelated to a condition resulting from or likely to have been affected by care during the EPM episode. We continue to believe these standards are appropriate to identify excluded readmissions from EPM episodes given our design of the EPMs to test comprehensive, coordinated patient-centered care for the beneficiary throughout broadly defined EPM episodes. Unless a readmission is excluded from the EPM episode based on these standards, any readmission, whether planned or unplanned, would be related to the EPM episode and affected by the clinical condition that is the basis for that episode. We appreciate the concerns of the commenters about ensuring appropriate EPM episode prices in the case of planned readmissions. While we are not adopting any specific methodologies for identifying and making episode payment adjustments for such planned, related readmissions now except in the case of a CABG readmission during an AMI episode as discussed in section III.D.4.b.(2)(c), we will study this issue in more detail especially as it relates to the cardiac models. Should we determine a change to our policies regarding planned, related readmission could be appropriate, we will make proposals through future rulemaking.

To the extent that planned readmissions reflect certain clinically appropriate care patterns for beneficiaries in EPM episodes based on plans made during the anchor hospitalization, we expect that such readmissions would be included in the historical EPM episodes used to establish EPM-episode payments and thus hospitals would be appropriately paid, on average, for EPM episode care. To the extent that efficiencies in EPM episode care are possible and medically appropriate, reducing planned readmissions that are planned to provide an opportunity for increased EPM episode efficiencies. However, we would not expect EPM participants to reduce EPM-episode spending by shifting the utilization of medically necessary services, such as planned readmissions, until after the EPM episode ends. We refer to section III.D.4.b.(2)(c) of this final rule for discussion of the pricing adjustment for CABG readmissions during AMI episodes due to this costly, clinically-appropriate care pattern of delayed CABG for some beneficiaries with AMI.

Furthermore, while we expect that certain elective admissions considered related under the EPMs may be planned prior to the anchor hospitalization for the EPM episode and could, therefore, occur during the 90-day post-discharge period, we believe that such actual readmissions after CABG, SHFFT or AMI treatment are uncommon during the post-surgical recovery or post-AMI recovery period for EPM beneficiaries that extends 90 days following discharge from the anchor hospitalization. If such readmissions were planned, they would often be canceled due to the intervening surgery or AMI until the beneficiary has fully recovered. We will not exclude them all as unrelated because any readmission not on the EPM exclusion list may be related care furnished during the post-surgical or post-AMI recovery period. Our exclusion methodology does not allow us to identify those readmissions that are truly elective; that is, the condition was present and the readmission was planned prior to the hospitalization that anchored the EPM episode and scheduled during the 90-day post-hospital discharge period. For readmissions to medical MS-DRGs, the selection of the principal diagnosis code is not clear-cut so we believe they should all be included in the EPM episode definition so providers focus on comprehensive care to beneficiaries in episodes. We believe that readmissions to medical MS-DRGs are generally linked to the hospitalization or event as a complication of the illness that led to the procedure or event, a complication of treatment or interactions with the health care system, or a chronic illness that may have been affected by the course of care. Therefore, we believe it is infeasible under the EPMs to identify medical readmissions for unrelated acute and chronic medical conditions, other than our proposal to exclude readmissions for oncology and trauma medical diagnoses.

Similarly, our proposal identified those Part B services unrelated to the episode and acute disease diagnoses unrelated to a condition resulting from or likely to have been affected by care during the EPM episode and certain chronic disease diagnoses depending on whether the condition was likely to have been affected by care during the EPM episode or whether substantial services were likely to be provided for the chronic condition during the EPM episode. We do not believe that requiring a direct relationship between the diagnosis for the Part B services and the clinical condition that is the basis for the EPM episode is appropriate under the broadly defined episodes of the EPMs. Most medical conditions are likely to be affected by care during the EPM episode, yet they may not have a direct relationship to the clinical condition that is the reason for the anchor hospitalization.

We also do not believe that it would be appropriate to exclude other specific Part B services that are related to the clinical conditions that are the basis for EPM episodes, such as cardiac rehabilitation, intensive cardiac rehabilitation, and chronic care management services, just because they are underrepresented in the baseline period upon which benchmark episode prices are set. As discussed in section III.D.4.b.(3) of this final rule, to the extent that care redesign under the EPMs increases utilization of these services to improve episode quality and efficiency, periodic updates to the 3 years of historical data used to establish EPM-episode benchmark prices would result in greater representation of these services that reflect more recent care patterns.

Additionally, we do not believe that it would be appropriate to exclude behavioral health and substance abuse services, including psychiatric readmissions, from EPM episodes because these services are for conditions that are likely to affect EPM episode care. We note that these services are not common in episodes and, while we acknowledge that the episode claims data provided to EPM participants will not include these data, our proposal to exclude this information but include the costs of the services in EPM episodes is consistent with our usual treatment of these services in other similar CMS programs and models where providers must take on risk in managing the care of their beneficiaries, such as the Shared Savings Program and BPCI initiative. Based on our experience to date with bundled payment models and the Shared Savings Program, this policy has not been a significant impediment to the operations of these efforts. For example, in the most recent episodes in BPCI Models 2 and 3, the claims for behavioral health and substance abuse services included in episodes that we
did not share with BPCI participants accounted for less than 0.1 percent of total episode spending. We refer to section III.K. of this final rule for further discussion of issues related to sharing beneficiary-identifiable data for behavioral health and substance abuse services with EPM participants.

With regard to the commenters requesting that we exclude outpatient chemotherapy services from the EPM episode definitions, we agree that these should be excluded from EPM episodes in accordance with our proposal that excludes services based on ICD–9–CM and ICD–10–CM diagnosis codes that would identify these services as unrelated to the EPM episodes. Otherwise, despite the cost of this therapy, these services would be included in EPM episodes because they are related.

Comment: Several commenters recommended CMS to exclude readmissions for PCI from AMI episodes, stating that current STEMI clinical guidelines for the culprit artery lesion in addition to other multi-vessel stenosis states, “Approximately 50% of patients with STEMI have multivessel disease. PCI options for patients with STEMI and multivessel disease include: (1) culprit artery-only primary PCI, with PCI of non-culprit arteries only for spontaneous ischemia or intermediate or high-risk findings on pre-discharge noninvasive testing; (2) multi-vessel PCI at the time of primary PCI; or (3) culprit artery-only primary PCI followed by staged PCI of non-culprit arteries.”

Another commenter quoted on the topic from the most recent update to the guidelines published in 2016, “Although several observational studies and a network meta-analysis have suggested that multivessel staged PCI may be associated with better outcome than multivessel primary PCI, there are insufficient observational data and no randomized data at this time to inform a recommendation with regard to the optimal timing of non-culprit vessel PCI.”

The commenters recommended CMS to exclude planned readmissions for PCI from the AMI episode definition because the AMI model as proposed would discourage the recommended course of care of a secondary PCI procedure for AMI patients with multivessel disease. The commenters believe that the AMI episode definition could encourage the treatment of secondary lesions during the initial angioplasty and in other cases could provide an incentive to delay treatment of the secondary lesions until after the 90-day post-hospital discharge duration of the AMI episode has concluded. The commenters added that another strategy of EPM participants to deal with limited AMI episode payments might be to inappropriately refer multivessel disease patients into the separate CABG model.

Alternatively if CMS does not exclude planned PCI readmissions, the commenters recommended CMS to exclude STEMI beneficiaries with multivessel disease from the AMI model and/or make accommodations in the pricing methodology for the extra cost of treating such beneficiaries appropriately. As another alternative, the commenters requested that CMS shorten the AMI episode duration to 30 days post-discharge so that secondary PCI could be performed for multivessel disease without the financial constraints of an ongoing AMI episode. Finally, the commenters recommended that if the AMI episodes cannot be revised to avoid these potentially harmful incentives, CMS should monitor and evaluate whether these shifts in pattern of care are occurring and whether they have affected patient outcomes.

Response: While we appreciate the concerns of the commenters, as we stated in the proposed rule (81 FR 50852), fewer than 3 percent of those AMI model beneficiaries who receive inpatient or outpatient PCIs during AMI episodes receive the PCIs between 2 and 90 days post-discharge from an anchor or channeled anchor hospitalization. Since a PCI for an AMI typically is provided during the anchor hospitalization and most PCIs later in an episode occur in the context of a beneficiary presenting through the emergency department, we believe that in most cases of PCI following discharge from the anchor hospitalization, the beneficiary likely has experienced a complication of care resulting in a PCI that may potentially be avoided through care management during the AMI episode. This PCI would clearly be related to the AMI episode and should not be excluded from the AMI episode.

It would also be inappropriate to exclude beneficiaries with STEMI and multivessel disease from the AMI model simply because their plan of care could include a secondary PCI procedure as these beneficiaries would represent nearly 50 percent of STEMI patients, who themselves make up a significant percent of beneficiaries in the AMI model. While we expect that few beneficiaries would follow this care pattern based on our analysis of historical AMI episodes, in this scenario the PCI would clearly be related to the AMI and, therefore, be appropriately included in the AMI episode definition. Given that our intention is to offer appropriate incentives for care quality and efficiency by holding AMI model participants accountable for readmissions that could be related to the quality of care provided prior to the readmission, we believe that a pricing adjustment for a PCI readmission or outpatient PCI would not be appropriate.

We note that the recently updated treatment guidelines cited by the commenters state there is insufficient observation data and no randomized data to inform a recommendation regarding the optimal timing of non-culprit vessel PCI. The guidelines contain no specific recommendation for the timing of delayed treatment of secondary lesions, while specifically stating that the “recommendation with regard to multivessel primary PCI in hemodynamically stable patients with STEMI has been upgraded and modified to include consideration of multivessel PCI either at the time of primary PCI or as a planned, staged procedure.” Given that there is no specific recommendation regarding the routine performance of multivessel PCI for patients with STEMI and multivessel disease, nor a recommendation on the timing for multivessel PCI if it is performed, we do not believe the AMI model definition discourages patterns of care that are recommended for AMI patients with multivessel disease. We also do not see any reason why care patterns related to primary PCI for multivessel disease following STEMI should lead us to shorten the AMI episode duration from 90 days post-discharge to 30 days or to make a pricing adjustment for AMI episodes that include this pattern of care. We refer to section III.C.4.e.(2) of this final rule for further discussion of the AMI episode duration.

As recommended by the commenters, we will evaluate care patterns under the AMI model for secondary PCI following an initial PCI for treatment of AMI to determine whether shifts in care are

Comment: One commenter requested confirmation of their understanding of CMS' proposal to exclude MS–DRGs for inpatient hospital readmissions that group to the “Trauma medical” category of diagnoses. The commenter interpreted this provision as trauma diagnoses unrelated to the initial MS–DRG triggering an episode.

Response: By trauma medical diagnoses, we mean that those MS–DRGs that represent a readmission for medical treatment of trauma during an EPM episode are excluded. For example, we would exclude MS–DRGs 082–087 in the Traumatic Stupor & Coma series and MS–DRGs 088–090 in the Concussion series.

Comment: Several commenters recommended CMS to exclude hospice services from the EPM episode definition as they generally would be unrelated to the EPM episodes. The commenters stated that including hospice services in EPM episodes could result in incentives for underutilization of the hospice benefit. They encouraged CMS to exclude all hospice services in order to ensure timely access to hospice for EPM beneficiaries. One commenter pointed out that exclusion of hospice services from the EPM episode definitions would be consistent with their exclusion from BPCI episodes.

Response: We appreciate the interest of the commenters in ensuring continued beneficiary access to hospice services under the EPMs. We note that although we exclude hospice services from BPCI episodes, we include them in LEJR episodes in the CJR model (80 FR 73307). We understand that EPM beneficiaries could receive hospice services during an episode under several different types of clinical circumstances. For example, the beneficiary could be enrolled in hospice prior to a SHFFT episode, experience a pathologic hip fracture, and require a SHFFT procedure to stabilize his or her hip. Alternatively, the beneficiary could have a CABG and enter into hospice at some point during the episode in the 90 days following discharge from the anchor hospitalization, either after experiencing a surgical complication leading to a terminal prognosis, progressive severe heart failure despite the CABG, or based on a new diagnosis of a terminal stage of an illness.

As we explained in the CJR Final Rule (80 FR 73307), cardia care hospice care is palliative care for individuals with a prognosis of living 6 months or less if the terminal illness runs its normal course. As referenced in § 418.22(b)(1), to be eligible for Medicare hospice services, the patient’s attending physician (if any) and the hospice medical director must certify that the individual is “terminally ill,” as defined in section 1861(dd)(3)(A) of the Act and our regulations at § 418.3; that is, the individual’s prognosis is for a life expectancy of 6 months or less if the terminal illness runs its normal course. When an individual is terminally ill, many health problems are brought on by underlying condition(s), as bodily systems are interdependent. Section 1861(dd)(1) of the Act establishes the services that are to be rendered by a Medicare certified hospice program and those services include: Nursing care; physical therapy; occupational therapy; speech-language pathology therapy; medical social services; home health aide services (now called hospice aide services); physician services; homemaker services; medical supplies (including drugs and biologics); medical appliances; counseling services (including dietary counseling); short-term inpatient care (including both respite care and care necessary for pain control and acute or chronic symptom management in a hospital, nursing facility, or hospice inpatient facility); continuous home care during periods of crisis and only as necessary to maintain the terminally ill individual at home; and any other item or service which is specified in the plan of care and for which payment may otherwise be made under Medicare, in accordance with Title XVIII of the Act. The services offered under the Medicare hospice benefit must be available, as needed, to beneficiaries 24 hours a day, 7 days a week (section 1861(dd)(2)(A)(i)of the Act). The regulations at § 418.54(c) stipulate that the comprehensive hospice assessment must identify the patient’s physical, psychosocial, emotional, and spiritual needs related to the terminal illness and related conditions, and address those needs in order to promote the hospice patient’s well-being, comfort, and dignity. The comprehensive assessment must take into consideration the following factors: The nature and condition causing admission (including the presence or lack of objective data and subjective complaints); complications and risk factors that affect care planning; functional status; immienence of death; and severity of symptoms (§ 418.54(c)). Additionally, the hospice Conditions of Participation (CoPs) at § 418.56(c) require that the hospice must provide all reasonable and necessary services for the palliation and management of the terminal illness, related conditions and interventions to manage pain and symptoms. Therapy and interventions must be assessed and managed in terms of providing palliation and comfort without undue symptom burden for the hospice patient or family. In the December 16, 1983, Hospice final rule (48 FR 56010 through 56011), regarding what is related versus unrelated to the terminal illness, we stated: “We believe that the unique physical condition of each terminally ill individual makes it necessary for these decisions to be made on a case–by-case basis. It is our general view that hospices are required to provide virtually all the care that is needed by terminally ill patients.” Thus, we believe that hospice services furnished to EPM beneficiaries should be included in the episode definition for the EPMs, regardless of the specific diagnosis of the beneficiary, because hospices are to provide virtually all care that is needed by terminally ill patients. This is consistent with our conclusion when we considered hospice services in the LEJR episode definition under the CJR model (80 FR 73307). If an EPM beneficiary was receiving hospice services during an episode, either because the beneficiary was enrolled in hospice prior to surgery or a cardiac event and continued in hospice following surgery or the cardiac event or the beneficiary enrolled in hospice following surgery or cardiac event that initiated the EPM episode, we believe that hospice services would encompass care related to the EPM episode and should, therefore, be included in the episode definition. As previously noted, given the comprehensive nature of the hospice benefit and the fact that body systems are interdependent at end of life, virtually all care needed by the terminally-ill individual would be related to the terminal prognosis and thus the responsibility of the hospice.

As previously noted, hospices are required, per the hospice CoPs at § 418.56(c), to provide all reasonable and necessary services for the palliation and management of the terminal illness, related conditions, and interventions to manage pain and symptoms. For patients that underwent surgery or cardiac care under the EPMs that have also elected the Medicare hospice benefit, hospice services would need to respond to the care needs of the EPM beneficiary following surgery or hospitalization for cardiac care. As in the case of other medically necessary services that would improve a beneficiary’s quality of care and quality
of life, we expect that EPM beneficiaries will receive clinically appropriate referrals to hospice in a timely manner. Furthermore, we also believe hospice services could contribute to episode efficiency through improved comprehensive care coordination and management for EPM beneficiaries that have a terminal prognosis. As previously stated, hospices are required to provide comprehensive care coordination and management per the hospice CoPs at 418.56. As discussed in sections III.G.4. through 6. of this final rule, we will be monitoring for access to care, quality of care, and delayed care and will take actions as described if problems are found.

Comment: One commenter recommended that CMS exclude Inpatient Psychiatric Facility (IPF) services from the EPM episode definition as not being related to or resulting from the EPM clinical condition, consistent with their treatment in BPCI episodes.

Response: We are clarifying that under the BPCI models, IPF services furnished following discharge from the episode anchor hospitalizations but during the episode are included in the episode definition, unless they fall into one of the excluded MS–DRGs for the episode. Thus, we include inpatient psychiatric services whether paid under the IPPS or the IPF PPS in all episodes under the BPCI initiative according to the same policy that would exclude readmissions paid under either payment system based on the same exclusion list. As we concluded for the CJR model (80 FR 73306), we see no reason for the EPMs not to apply the standards we proposed to define related and unrelated Part A and Part B services with respect to IPF services furnished during EPM episodes. Therefore, we believe the list of excluded MS–DRGs applicable to the EPM episode identifies those IPF admissions during the episode that would be clinically unrelated to the episode so we exclude them from the EPM episode definition, whereas IPF services any time during an EPM episode that result in discharge from an MS–DRG that is not excluded would be related and included in the EPM episode definition. We disagree with the commenter that all IPF services furnished following discharge from the anchor hospitalization that initiates the EPM episode after surgery are unlikely to be related to or resulting from the EPM clinical condition or its treatment. Thus, we believe the MS–DRG exclusions for the EPM episodes identify those circumstances when IPF services are unrelated to the episode.

Comment: Several commenters recommended that CMS exclude post-acute care services from EPM episodes if the beneficiary chooses a facility not recommended by the EPM participant or treating physician. Other commenters recommended that CMS exclude post-acute care services following excluded readmissions due to how little is known about the causal relationship between an unrelated hospital readmission and subsequent post-acute care services.

Response: As discussed in section III.G.2. of this final rule, the proposed EPMs would not limit an EPM beneficiary’s ability to choose among Medicare providers or the range of services that would be available to them. Beneficiaries would continue to choose any Medicare participating provider, or any provider that has opted out of Medicare, with the same costs, copayments, and responsibilities as they have with other Medicare services. Therefore, it would not be appropriate to exclude post-acute care services from the EPM episode definition if the beneficiary chooses a post-acute care facility that is not recommended by the EPM participant or the beneficiary’s treating physician.

With regard to requests that we exclude post-acute services from EPM episodes following exclusion readmissions, as Part A services are generally intended to be comprehensive in nature and because the beneficiary in an EPM episode would still be in the recovery period for the 90 days following surgery or an AMI, we believe any post-acute care services provided during the EPM episode would be related to the SHFFT, CABG, or AMI. Regardless of the reason for the hospitalization immediately preceding the initiation of post-acute care services during an EPM episode, the post-acute care provider would need to address the beneficiary’s post-surgical or post-AMI recovery, even if the post-acute care services followed an unrelated admission to the hospital.

Comment: Several commenters identified additional MS–DRGs or conditions resulting in hospitalization that they recommended be excluded from the cardiac episodes. The commenters requested that clinical conditions that group to the following MS–DRGs be excluded from the AMI and CABG model episode definitions, generally on the basis that these readmissions are not integral to the management of beneficiaries in the 90 days following discharge from the AMI or CABG anchor hospitalization:

- 223 (Cardiac Defibrillator Implant with Cardiac Catheterization with AMI/HF/Shock without MCC).
- 224 (Cardiac Defibrillator Implant with Cardiac Catheterization without AMI/HF/Shock with MCC).
- 225 (Cardiac Defibrillator Implant without Cardiac Catheterization without AMI/HF/Shock with MCC).
- 226 (Cardiac Defibrillator Implant without Cardiac Catheterization with MCC).
- 227 (Cardiac Defibrillator Implant without Cardiac Catheterization without MCC).
- 266 (Endovascular Cardiac Replacement with MCC).
- 267 (Endovascular Cardiac Replacement without MCC).
- 273 (Percutaneous Intracardiac Procedures with MCC).
- 274 (Percutaneous Intracardiac Procedures without MCC).

Another commenter claimed that CMS’ proposal to include nearly all surgical MS–DRGs within Major Diagnostic Category (MDC) 5 (Diseases and Disorders of the Circulatory System) in the AMI and CABG episode definition, rather than also requiring an acute care ICD–CM diagnosis code on the claim for the MS–DRG in MDC 5 to be included in the episode, especially within the 31 to 90 days following discharge from the anchor hospitalization, could penalize hospitals for providing necessary care within the timeframe for AMI and CABG episodes. Examples provided by the commenter included abdominal aortic aneurysm; peripheral bypass surgical and endovascular procedures; surgical valve repair or replacement; planned inpatient or outpatient electrophysiology admissions to replace cardiac defibrillators or pacemakers; and staged outpatient revascularization procedures several months after an initial intervention for AMI.

One commenter recommended that readmissions for extracorporeal membrane circulation (ECMO) that would group to MS–DRG 003 (ECMO or Tracheostomy with MV > 96 hours or PDX Except Face, Mouth and Neck with Major O.R. Procedure) be excluded from the CABG episode definition. Another commenter recommended the addition of 241 MS–DRGs to CMS’ the readmissions exclusion list for CABG episodes, in addition to the 370 MS–DRGs proposed by CMS on the list, on the basis that these MS–DRGs did not have any clinical relevance to CABG. These additional MS–DRGs would result in the exclusion of 611 MS–DRGs out of a total of approximately 760 MS–DRGs from CABG episodes.
Finally, the commenter who favored CMS’ adopting a more robust methodology for differentiating planned from unplanned use of inpatient and outpatient services within the 90-day post-discharge period, similar to the methodology used in the HRRP for AMI and CABG, requested that should CMS continue with the MS–DRG exclusion list that CMS revisit the proposed exclusion lists for AMI and CABG episodes. The commenter claimed there were some inconsistencies in the treatment of AMI MS–DRG-anchored AMI episodes and CABG episodes compared with PCI MS–DRG-anchored AMI episodes. The commenter identified MS–DRGs 326 (Stomach, Esophageal, and Duodenal Procedures with CC/MCC); 327 (Stomach, Esophageal, and Duodenal Procedures with CC); 328 (Stomach, Esophageal, and Duodenal Procedures without CC/MCC); 266 (Endovascular Cardiac Valve Replacement with MCCI); and 267 (Endovascular Cardiac Valve Replacement without MCCI) as on the PCI MS–DRG-anchored AMI exclusion list but not on the AMI MS–DRG-anchored AMI episode list. This exclusion list, and was unclear about PCI MS–DRG-anchored AMI exclusion list, and was unclear about the rationale for these differences.

Response: We appreciate the requests by the commenters to add certain MS–DRGs to the exclusion list for one or both of the cardiac care models. CMS clinicians and coding staff reviewed the three different proposed exclusion lists for AMI MS–DRG-anchored AMI episodes, PCI MS–DRG-anchored AMI episodes, and CABG episodes for the inconsistencies identified by one of the commenters against the proposed standards for excluding readmissions during EPM episodes. We proposed to exclude MS–DRGs 326–328 from PCI-anchored AMI episodes and CABG episodes but not from AMI MS–DRG-anchored episodes. Based on clinical review, we determined that admissions to these MS–DRGs would be for acute disease surgical diagnoses unrelated to a condition likely to have been affected by care during the AMI or CABG episode so these MS–DRGs meet the proposed standards for exclusion from AMI MS–DRG-anchored AMI episodes. Therefore, we are adding MS–DRGs 326–328 to the AMI MS–DRG-anchored AMI exclusion list. MS–DRGs 266–267 are on the exclusion list for PCI MS–DRG-anchored AMI episodes, but not on the exclusion list for AMI MS–DRG-anchored AMI episodes or CABG episodes. Based on clinical review, we determined that admissions to these MS–DRGs would be for chronic disease surgical diagnoses unrelated to a condition likely to have been affected by care during the AMI or CABG episode so these MS–DRGs meet the proposed standards for exclusion from both AMI MS–DRG-anchored AMI episodes and CABG episodes. Therefore, we are adding MS–DRGs 266–267 to the AMI MS–DRG-anchored AMI exclusion list and the CABG exclusion list.

We note that MS–DRGs 222–227 and 273–274 requested for exclusion from AMI and CABG episodes by several commenters are surgical MS–DRGs in MDC 5. As another commenter pointed out, some of these may represent planned readmissions following discharge from the anchor hospitalization during the 90-day post-discharge period. However, based on our proposed readmission exclusion methodology that identifies excluded MS–DRGs without examining the diagnosis coding on hospital claims to determine the reason for the readmission, as discussed in our response to comments earlier in this section, we will not exclude planned readmissions from the AMI and CABG episode definitions. Thus, we proposed that MS–DRGs 222 through 227 and 273 through 274 not be excluded from AMI (regardless of PCI or AMI MS–DRG anchor) and CABG episodes, and we are continuing to include these MS–DRGs in those episodes, as well as the other surgical MS–DRGs in MDC 5 that we did not propose to exclude from all AMI and CABG episodes. Based on clinical review, we determined that these readmissions for circulatory system procedures are related services in AMI and CABG episodes, and based on our proposed standards for excluding readmissions from EPM episodes, we will also not exclude any of these MS–DRGs because they do not meet our standards for excluding MS–DRGs from other episodes, namely that the readmissions are for chronic disease surgical diagnoses unrelated to a condition likely to have been affected by care during the EPM episode; and acute disease surgical diagnoses unrelated to a condition resulting from or likely to have been affected by care during the EPM episode. While some commenters stated that these readmissions were not integral to AMI and CABG episodes, that is not the standard we used for determining related readmissions because we are adopting broad episode definitions for the EPMs. While we are not adopting any specific methodologies for identifying and making episode payment adjustments for such planned, related readmissions now except in the case of a CABG readmission during an AMI episode as discussed in section III.D.4.b.(2).c. of this final rule, we will study them, especially as it relates to the cardiac models. Should we determine a change to our policies regarding planned, related readmission could be appropriate, we will make proposals through future rulemaking.

Finally, we carried out a clinical review of the 241 MS–DRGs recommended by a commenter for addition to the CABG exclusion list, as well as MS–DRG 003 that was recommended for exclusion by another commenter. About three-quarters of the MS–DRGs recommended for exclusion were medical MS–DRGs that did not meet our proposed standards for excluding readmissions based on medical diagnoses, specifically oncology or trauma medical diagnoses. As we first discussed in the CJR Final Rule (80 FR 73304) and in the EPM proposed rule (81 FR 50833), we believe all other readmissions for medical MS–DRGs should be included in EPM episodes because these are generally linked to the condition that was the focus of the anchor hospitalization as a complication of that illness, a complication of treatment or interactions with the health care system, or a chronic illness that may have been affected by the course of episode care. The inclusion of most MS–DRGs in EPM episodes should encourage providers to focus on comprehensive care for beneficiaries during episodes. More than half of the surgical MS–DRGs recommended for CABG episode exclusion were in MDC 5 and, with the exception of MS–DRGs 266–267 discussed previously, we will not exclude them from CABG episodes based on the reasoning discussed earlier in this response. Of the remaining surgical MS–DRGs spread across 7 MDCs representing different body systems, we will also not exclude any of these MS–DRGs because they do not meet our standards for excluding MS–DRGs from other episodes, namely that the readmissions are for chronic disease surgical diagnoses unrelated to a condition likely to have been affected by care during the CABG episode or acute disease surgical diagnoses unrelated to a condition resulting from or likely to have been affected by care during the EPM episode. We believe that our determinations may be different than the commenters’ recommendations because our standard for exclusion in broadly defined CABG episodes is much more stringent than the commenters’ review of MS–DRGs based on their clinical relevance to CABG.

Comment: Several commenters requested that CMS add MS–DRGs 469 and 470 for major joint replacement of the lower extremity to the exclusion list for SHFFT episodes, unless the joint replacement was for the joint that
underwent a SHFFT procedure that initiated the SHFFT episode. The application of the exclusion in this way would exclude elective LEJR readmissions from SHFFT episodes. The commenters claimed this approach would avoid outliers and penalizing the orthopedic surgeon for identification and treatment of unmet medical needs while treating a beneficiary following a hip fracture. One commenter stated that these circumstances would be highly variable, particularly in hospitals with small patient volume. They recommended excluding MS–DRGs 469 and 470 from SHFFT episodes so as not to penalize low-volume hospitals who performed costly elective LEJR during SHFFT episodes on an occasional basis.

Response: Based on our proposed methodology to identify excluded readmissions by a list of MS–DRGs, we would have to substantially increase the complexity of our exclusions methodology to identify only a subset of MS–DRG 469 and 470 readmissions for exclusion because they were not related to the joint surgery that initiated the SHFFT episode. We do not believe this additional complexity is necessary because we expect that LEJR replacement of another joint, whether elective or for fracture, would be rare during SHFFT episodes. Most LEJR is elective, rather than for fracture, and given the prolonged partial weight-bearing commonly required for recovery from SHFFT procedures and the general complexity and frailty of many beneficiaries who would be included in SHFFT episodes, we believe that elective LEJR of a joint other than that involved in the initial SHFFT surgery during the 90 days post-discharge from the SHFFT model anchor hospitalization would be exceedingly rare. We would expect that most LEJR procedures during SHFFT episodes would be related because they would involve the joint that had an initial SHFFT procedure.

Comment: One commenter recommended that CMS exclude Part B services from CABG episodes based on individual ICD–9–CM and ICD–10–CM diagnosis codes, rather than categories as CMS proposed. The commenter claimed that CMS’ proposed process would result in over 22,000 ICD–10–CM diagnosis codes that would be classified as included in the CABG episode, thereby resulting in those services being considered as related items and services. The commenter believes that this methodology would result in many of the included services having no clinical relevance to a CABG. The commenter recommended CMS to specify Part B episode exclusions at the ICD–CM code level to ensure that only services that are clinically related to a CABG are included in the episode. The commenter recommended 4,960 specific ICD–9–CM and 18,859 specific ICD–10–CM diagnosis codes be added to the CABG exclusion list.

Another commenter recommended that CMS exclude the following ICD–10–CM diagnosis code categories from AMI episodes as they are not integral to AMI treatment: I47 (Paroxysmal tachycardia); I48 (Atrial fibrillation and flutter); and I49 (Other cardiac arrhythmias). The same commenter recommended that CMS exclude ICD–9–CM diagnosis code category 427 (Cardiac dysrhythmias) from AMI episodes.

Response: We appreciate the recommendations from the commenter about additional ICD–9–CM and ICD–10–CM diagnosis code categories to be excluded from AMI episodes. However, with respect to their requested additions to the AMI Part B exclusion list, we believe the few ICD–CM codes recommended for exclusion do not meet our proposed Part B exclusions standards, specifically those services that are for acute disease diagnoses unrelated to a condition resulting from or likely to have been affected by care during the EPM episode or for certain chronic disease diagnoses, depending on whether the condition was likely to have been affected by care during the EPM episode or whether substantial services were likely to be provided for the chronic condition during the EPM episode. The ICD–CM diagnosis code categories describe different types of cardiac arrhythmias, which can result from an AMI, where the arrhythmia would be an acute condition related to the AMI episode, or can be a chronic condition where the management of the arrhythmia would be affected by the AMI treatment. Thus, we do not agree that the additional ICD–CM diagnosis code categories should be excluded from AMI episodes.

With respect to CABG episodes, another commenter recommended almost 19,000 ICD–10–CM diagnosis codes be added to the CABG exclusion list. The commenter submitted individual codes in 750 ICD–10–CM categories for exclusion, of which there were 563 categories (75%) in which they requested excluding all codes. We note that there are about 71,000 billable ICD–10–CM codes in 1,910 categories, compared to about 15,000 ICD–9–CM codes in 1,042 categories. Due to the large number of diagnosis codes, we believe it is impractical, infeasible and unnecessarily complex to determine excluded Part B services at the individual diagnosis code level. We further believe that the ICD–CM diagnosis code categories are sufficiently narrow and descriptive that they can be appropriately used to determine Part B exclusions without substantial risk of misidentifying services that are unrelated to CABG episodes according to our proposed Part B exclusions standards. We have several years of experience with 48 different BPCI clinical episodes in Model 2, including CABG, which has a similar design to the proposed CABG model. We have encountered no significant concerns from BPCI Awardees or other stakeholders about our BPCI methodology which excludes Part B services based on ICD–CM diagnosis code categories, just as we use in the CJR model and proposed for the CABG model. Therefore, we are continuing to consider changes to the Part B exclusion list for the EPMs based on ICD–CM categories.

We did not perform another clinical review of the 187 categories where the commenter only requested that we exclude some of the individual ICD–10–CM diagnosis codes in the category, because we will continue to exclude ICD–10–CM codes at the category level. CMS clinicians and coding staff reviewed all of the 563 ICD–10–CM diagnosis code categories where the commenter recommended that we exclude all the diagnosis codes in order to make a determination about additional exclusions at the category level. While the commenters claimed that diagnosis codes in these categories had no clinical relevance to CABG, we do not agree that the additional categories where the commenter recommended 100 percent of the ICD–10–CM diagnosis codes for exclusion meet our proposed standards for exclusion. For example, the commenter requested that we exclude the categories K20 (Esophagitis) and I12 (Hypertensive chronic kidney disease) for Part B services from the CABG model episode definition. However, these two ICD–10–CM diagnosis code categories do not meet our proposed standards for the exclusion of Part B services because they include acute disease diagnoses for a condition arising from or likely to have been affected by care during the CABG episode in the case of Esophagitis and chronic disease diagnoses likely to have been affected by care during the CABG episode in the case of Hypertensive chronic kidney disease. The commenter’s recommendations were prepared based on a standard of “clinical relevance” to CABG which we believe is too narrow to define related
Part B services for the proposed CABG model which was designed to test comprehensive, coordinated patient-centered care for the beneficiary throughout broadly defined EPM episodes. In our clinical review based on the proposed standards for Part B exclusions, we determined that the 563 ICD–10–CM diagnosis code categories where the commenter recommended that we exclude 100 percent of the diagnosis codes do not meet the standards for exclusion from CABG episodes. Therefore, we are making no changes to the CABG episode ICD–10–CM Part B exclusion list.

The same commenter who made recommendations about additional ICD–10–CM diagnosis code exclusions also recommended ICD–9–CM diagnosis codes in 436 ICD–9–CM categories for exclusion, and of those, the commenter recommended that all codes be excluded in 336 (77 percent) of the categories. We did not perform an additional clinical review of the categories where the commenter only requested that we exclude some of the individual ICD–9–CM diagnosis codes in the category, as we will continue to exclude ICD–9–CM codes at the category level. CMS clinicians and coding staff reviewed all of the 100 ICD–9–CM diagnosis categories where the commenter recommended that we exclude all the diagnosis codes in order to make a determination about additional exclusions at the category level. Similar to our findings from our review of the ICD–10–CM diagnosis code categories where all codes were recommended for exclusion, the ICD–9–CM categories with all codes recommended by the commenter for CABG episode exclusion do not meet our proposed exclusion standards for Part B services. For example, the commenter recommended that we exclude all codes in ICD–9–CM diagnosis code category 584 (Acute kidney failure) and 250 (Diabetes mellitus) from CABG episodes. However, these two ICD–9–CM diagnosis code categories do not meet our proposed standards for the exclusion of Part B services because they include acute disease diagnoses for a condition arising from or likely to have been affected by care during the CABG episode in the case of Acute kidney failure and chronic disease diagnoses likely to have been affected by care during the CABG episode in the case of Diabetes mellitus. In our clinical review, we found that none of the 100 ICD–9–CM codes where the commenter recommended that we exclude 100 percent of the diagnosis codes meet our proposed standards for excluding Part B services from CABG episodes, so we are making no changes to the CABG episode ICD–9–CM Part B exclusion list.

Comment: One commenter stated that their understanding was that emergency transportation of beneficiaries with AMI would be included in AMI episodes. The commenter pointed out that this cost could vary substantially based on the transport mileage and the mode of transport, with air transport being substantially more costly than ground transport. The commenter claimed that the EPM participant where the episode would be initiated has little or no input on the transport method used but would be held accountable for the transportation cost in the AMI episode. The commenter requested that transport of the beneficiary to the AMI model participant where the AMI episode is initiated be excluded because the AMI model participant would have little or no control of that cost.

Response: We proposed to include all Part A and Part B items and services in AMI episodes beginning with the admission of the beneficiary for the anchor hospitalization and extending through anchor hospitalization discharge, whereupon the AMI model exclusion list would be applied to Part A and Part B items and services during the 90 days post-discharge to make a determination about their inclusion in the AMI episode definition. With respect to the inclusion of Part B ambulance claims for air or ground transport in the AMI episode definition, we would exclude those services that occurred prior to the hospital admission. If the ambulance transport occurs on the day of initial admission for the anchor hospitalization and has place-of-service code for ambulance on the claim, the claim would not be included in the AMI episode definition, an approach which would be consistent with the specific request of the commenter.

However, if ambulance transport occurs any other time during the anchor hospitalization, the transportation would be included in the AMI episode definition as we include all Part B services without regard to the Part B exclusion list, except DME to which we apply the Part B exclusion list during the anchor hospitalization as well. Following discharge from the anchor hospitalization, the inclusion or exclusion of ambulance transport in the AMI episode during the 90 day post-discharge would be determined by our proposed methodology for determining exclusion of any Part B items and services based on the principal diagnosis code on the claim and whether that diagnosis code is on the AMI model exclusion list.

We note that medically appropriate air ambulance transportation is a Medicare-covered service regardless of the state or region in which it is rendered. However, contractors approve claims only if the beneficiary’s medical condition is such that transportation by either basic or advanced life support ground ambulance is not appropriate. Medical reasonableness is only established when the beneficiary’s condition is such that the time needed to transport a beneficiary by ground, or the instability of transportation by ground, poses a threat to the beneficiary’s survival or seriously endangers the beneficiary’s health.59 Thus, the circumstances of covered air transport are limited and, once the AMI episode is initiated, the AMI model participant would have an ongoing role in beneficiary care that would result in the participant’s input into the mode of transport should transport be required.

Comment: One commenter recommended that CMS include the costs of pre-operative home visits in EPM episodes, including services to discuss goals of care and advance care planning services. Another commenter requested that CMS account for preventive services in the EPMs, although they acknowledged the associated challenges in benchmarking target prices based on historical claims data. One commenter suggested that CMS include the proposed HCPCS G-codes for the Collaborative Care model such that screening and follow-up would be included in the payment structure for each EPM, while another commenter recommended CMS to make resources for care coordination strategies available to support advancing care coordination through appropriate pre-discharge planning and post-discharge follow up. The commenter observed that the majority of opportunities to advance care coordination and improve patient outcomes are in decreasing hospital length of stay to only what is necessary for appropriate treatment, preventing unnecessary readmissions, and controlling post-acute care costs.

The commenter stated that opportunities to improve care coordination include strong pre-discharge planning activities; prevention of unnecessary patient visits to the emergency department through early recognition of decompensation; increasing appropriate referral to cardiac rehabilitation services; and

59 Medicare Benefit Policy Manual, Chapter 10—Ambulance Services, 10.4 and 10.4.2.
effective patient and family education. The commenter claimed that ensuring the social and environmental components are in place prior to discharge is critical and that communication of the most appropriate post-acute care facilities to not only the patients, but to their families and caregivers, can be essential to a patient’s recovery.

Response: The only items and services that are included in EPM episode definitions are those that are separately paid by Medicare under Part A or Part B. We established EPM episode definitions in order to add Medicare payments for items and services included in the EPM episode definitions into EPM-episode benchmark prices based on historical EPM episodes and into the calculation of actual EPM-episode spending. In addition, we proposed that EPM episodes begin with the anchor hospitalization. Therefore, for the same reasons as discussed in the CJR Final Rule (81 FR 73316 through 73317) regarding FDR episodes, we would not include any pre-operative home visits that could be separately paid by Medicare in the EPM episode definitions because they would precede the initiation of the episode which begins with admission to the hospital and discharge from an MS–DRG that is included in the EPM.

In terms of including preventive services and potential new HCPCS G-codes for Part B services in the Collaborative Care model in the EPM episode definitions, we note that according to our standard methodology for identifying excluded Part B services under the EPMs, specific Part B services would be included in both historical EPM episodes and actual EPM episodes to the extent that the ICD–9–CM or ICD–10–CM diagnosis code on the claim for the preventive service or HCPCS G-code for Part B services in the Collaborative Care model is related to the EPM episode and, therefore, not on the EPM episode exclusion list. With regard to CMS making specific financial resources available to EPM participants for pre-discharge planning, post-discharge follow-up, or other care coordination activities, EPM participants would need to develop their own strategies and use their own resources for these activities, as well as engage with EPM collaborators, to redesign care to achieve good quality and cost performance under the EPMs. CMS will not provide additional payments under the EPMs specifically for these types of planning and follow-up activities. However, EPM participants who achieve acceptable episode quality or better and reduce actual EPM-episode spending below the quality-adjusted price are eligible for payment of the difference through a reconciliation payment, which can support the resources used by EPM participants and collaborators in redesigning care to achieve model success.

Comment: Several commenters commended CMS for proposing to exclude IPPS new technology add-on payments for drugs, technologies, and services from EPM episodes, as well as OPPS transitional pass-through payments for medical devices. They believe that these proposals would ensure EPM beneficiaries’ access to valuable new drugs, technologies, services, and devices. The commenters recommended CMS to go further and exclude additional innovative technologies from EPM episodes by establishing a review process to determine whether their costs should be excluded from EPM-episode benchmark prices and actual EPM-episode spending. The commenters reasoned that this new review process would allow manufacturers to identify high-cost breakthrough technologies and treatments that offer clinical improvements for all or certain types of patients or offer significant therapeutic advances for new populations or conditions. The commenters recommended that CMS utilize the same processes as those used to determine eligibility for IPPS new technology add-on payments but without regard to the statutory or regulatory policies that apply to the IPPS new technology add-on approval process.

Response: We appreciate the support of the commenters for our proposals regarding the exclusion of new technology payments from EPM episodes and agree that EPM beneficiaries should have access to beneficial new technologies while they are in EPM episodes. We do not believe it would be appropriate for the EPMs to potentially hamper beneficiaries’ access to new technologies that are receiving IPPS new technology add-on payments or OPPS transitional pass-through payments or to burden EPM participants who choose to use these new drugs, technologies, services, or devices with concerns about these payments counting toward actual EPM-episode spending. However, for the same reasons that were discussed previously in the CJR Final Rule (80 FR 73308) regarding LEJR episodes, we will not establish a new process to review innovative technologies or different technologies that would be ineligible for a payment adjustment under the Medicare program and make individual determinations regarding their exclusion from the EPM episode definitions, as recommended by some commenters. Because the EPMs are retrospective reconciliation models that pay all providers and suppliers under the regular Medicare program throughout the episode of care, we believe it is more appropriate to rely on the existing processes under the Medicare program to make determinations about separate payment for new technology items and services. If those existing processes identify new technologies that would qualify for add-on payments under the IPPS or transitional pass-through payments under the OPPS, we will exclude them from the EPM episode definitions as we proposed, to ensure that beneficiaries’ access to new technology items and services is not influenced by their care being included in the EPMs. Similarly, under these retrospective EPMs, we will not provide additional payments for new technologies beyond those that are paid under the Medicare program.

Finally, we do not believe it would be appropriate under the EPMs to provide financial incentives to EPM participants to use specific technologies that improve beneficiary outcomes and reduce cost over any specific period of time. We understand that because the EPMs would extend 90 days post-discharge from the anchor hospitalization, the EPMs specifically incentivize the use of technologies and provision of services that improve quality and reduce cost within the limited episode timeframe for which the EPM participant is responsible for episode quality and cost performance. However, we believe that EPM participants, treating physicians, and other EPM collaborators are best positioned to select technologies and furnish services that improve the quality of care and reduce cost for EPM beneficiaries and expect that their...
decisions factor in the long-term interests of beneficiaries as well. **Comment:** One commenter stated that there was significant evidence demonstrating that the use of more expensive drug-eluting stents (DES) results in better long-term outcomes in many patients and fewer repeat procedures for in-stent restenosis. The commenter added that long-term benefit for patients (avoiding the risk, inconvenience and cost of secondary procedures) and to Medicare (via fewer repeat procedures in the long term) would not be fully captured in an episode extending 90 days post hospital discharge, but the full additional costs of DESs would be. The commenter recommended CMS take steps to ensure that the financial models used for the EPMs do not discourage the appropriate use of DES. The commenter claimed that if the AMI model results in fewer beneficiaries receiving DES, long-term outcomes may deteriorate and overall costs may grow.

**Response:** As discussed in section III.C.4.a.(2) of this final rule, we would initiate AMI episodes from PCI MS–DRGs (246–251) with an AMI ICD–CM diagnosis code in the principal or a secondary position on the claim for the anchor hospitalization. Medicare payment for coronary stents, whether bare metal or DES, used during a PCI performed during a hospitalization are included in the IPPS payment for the inpatient hospitalization. While they are not paid separately by Medicare, payment for the required resources would be included in an AMI episode because the IPPS services for the anchor hospitalization are included in the episodes. We proposed to risk-stratify EPM–episode prices based on MS–DRG as discussed in section III.D.4.b.(1) of this final rule and there are separate MS–DRGs for PCI that use DES (246 and 247) and non-DES (248 and 249) for which there would be separate AMI episode prices. Therefore, we do not believe that the financial incentives under the AMI model encourage the use of any specific coronary stent because the episode prices take into consideration the IPPS payment for the specific MS–DRG that applies to the AMI model beneficiary. We do not expect the AMI model to discourage the appropriate use of DES.

**Comment:** Several commenters pointed out that Arkansas and Tennessee have bundled payment programs that include CABG episodes, and their efforts to implement bundled payments include state Medicaid and commercial health plans. The commenters stated that in Arkansas, the episode definition is consistent, specifically naming the duration, responsible entity, and the included services and conditions, across all participating payers. If MSAs from Arkansas or Tennessee are selected for the AMI and CABS models, the commenters recommended that CMS should align the CABS episode definition with that of the state Medicaid plan. The commenters stated that this approach to episode definition would decrease the complexity and cost to providers in those states and reduce overlapping, independent efforts at care redesign that both hospitals and cardiac surgery groups would be simultaneously undertaking, potentially independently. The commenters added that this would also allow CMS to experiment with different episode definitions than those under the BPCI initiative and CJR model and proposed for the EPMs.

**Response:** We appreciate the commenters drawing our attention to the states that are currently engaged in testing bundled payment models. We are encouraged that several states have identified clinical conditions that overlap with those proposed in the EPMs for testing bundled payment models, specifically CABS and PCI in the context of acute AMI (acute PCI). The choice of these states to test bundled payment models for some of the same clinical conditions that are included the EPMs provides additional support for the opportunities under our proposal of these models for Medicare beneficiaries. Specifically, Arkansas and Tennessee are testing CABS bundled payment models not similar to the CMS CABS model, while Ohio and Tennessee are testing acute PCI bundled payment models that are similar to the subset of beneficiaries in the CMS AMI model discharged from PCI MS–DRGs with an AMI ICD–CM diagnosis code on the hospital claim. As displayed in section III.B.5 of this final rule, MSAs in Arkansas, Tennessee, and Ohio have been selected for participation in the CMS AMI and CABS models.

The state and CMS models for acute PCI and CABS episodes have similar design features. First, the responsible entity for CABS episodes is the hospital in Tennessee (the physician in Arkansas) like the CMS model and for acute PCI episodes in both states it is the facility where the PCI is performed, which would most commonly be the hospital for an acute procedure as in the CMS model where the hospital is responsible. Second, both the state and CMS models begin with the inpatient hospitalization (or with performance of the procedure) and the state model episodes extend 30 days following discharge, whereas the CMS model episodes extend 90 days. We note that for CMS CABS episodes, 92 percent of episode spending occurs during the anchor hospitalization and the 30 days post-discharge, while 84 percent of acute PCI episode spending occurs during that same period of time. Thus, despite the differences in episode duration between the state and CMS models, the large majority of episode spending occurs in the first 30 days post-discharge so the state and CMS models contain most of the same episode spending. Third, the state and CMS models include most services furnished in the episode post-discharge from the anchor hospitalization, although the state models are not quite as inclusive. Fourth, episode payments are tied to quality measures in both the state and CMS models. Finally, both the state and CMS models included two-sided risk and risk adjustment (or risk stratification) based on payer-specific factors.

Both the state and CMS CABG and acute PCI models support the implementation and testing of bundled payment models for these costly episodes that significantly impact the health of individuals with cardiac disease. While it is operationally infeasible for CMS to apply the different definitions used by state Medicaid agencies in different states testing episode payment in an EPM of the scope of the CMS CABG and AMI models, the state and CMS models that included CABG and acute PCI are sufficiently similar and clinical pathways around CABG and acute PCI reasonably well-established such that we believe coordination among the various providers, including hospitals and physicians, caring for all beneficiaries in CABG and acute PCI episodes, regardless of payer, should not pose a significant burden on the providers involved. Although the CMS CABG model places the responsibility for the episode upon the hospital, like the Tennessee CABG model, the financial arrangements that are permissible for individuals and entities that collaborate with the hospital toward the goal of improved quality and efficiency of CABG episode care as discussed in section III.I. of this final rule provide participants hospitals with substantial opportunity to share upside and downside risk with their collaborators, including physicians that might be leading CABG bundled payment efforts.
in Arkansas. The financial arrangement policies under the CMS CABG model should help to minimize the occurrence of independent, potentially overlapping efforts of hospitals and physician groups to redesign care for CABG patients covered by different insurers. We believe that the state and CMS bundled payment models for overlapping clinical conditions are complementary efforts that will provide substantial new information about the effects of bundled payments on the quality and cost of care for CABG and acute PCI. While we understand that implementation of the EPMs will result in testing CABG and acute PCI episodes with minor differences in design for beneficiaries of Medicare versus Medicaid and other commercial payers in MSAs selected for the AMI and CABG models in Arkansas, Tennessee, and Ohio, these differences are unlikely to affect the episode care redesign strategies of the responsible hospitals under the CMS and state models.

Comment: While a number of commenters supported the proposal to update the EPM excluded services through the proposed sub-regulatory process to provide for flexibility and timeliness in adding exclusions to EPM episodes, several commenters opposed CMS’ proposal to make changes to EPM episode exclusions through an annual, at a minimum, update outside of rulemaking. The commenters encouraged CMS to use notice and comment rulemaking to evaluate and exclude additional services from EPM episodes. We will explore the additional services to be excluded from these episodes through notice and comment rulemaking, so that provider feedback throughout the course of EPM implementation is reflected in CMS’ decisions. They added that hospitals of different sizes, geographic locations, organizational capabilities, and socio-economic factors all have unique preferences, and their ideas and opinions should be accounted for when CMS makes changes to the list of conditions and services to be included and/or excluded from the episodes.

Many commenters recommended CMS to continue to evaluate the list of services to be excluded from EPM episodes. They encouraged CMS to consider excluding a variety of additional services, including hospital readmissions planned for the beneficiary prior to the anchor hospitalization for consistency with other CMS policies such as the treatment of planned readmissions under the HRRP; ongoing care for beneficiaries’ chronic conditions for which management is outside the scope of the EPMs and their exclusion could confound the EPM test of optimizing quality and costs for certain episodes; and post-acute care following excluded readmissions where little is known about the causal relationship between the hospital readmission and subsequent post-acute care services.

Response: We appreciate the interest of the commenters in ensuring that future changes to the EPM episode definitions involve a transparent process with opportunity for broad stakeholder input. We have some experience with a similar sub-regulatory update process for the CJR model for both the list of excluded services and the fracture ICD–10–CM diagnosis codes that are used to identify episodes for fracture risk-stratification. We used this process after publication of the CJR Final Rule and again more recently to update the CJR model exclusion list for changes to the FY 2017 IPPS MS–DRGs and ICD–10–CM diagnosis codes. We have received significant public input through those processes, which has allowed us to consider and incorporate, as appropriate based on the regulatory review standards for the processes, stakeholder input and in turn communicate timely final updates to the exclusions and fracture lists to CJR participant hospitals. We have not heard any concerns about the sub-regulatory update processes as we have applied them during CJR model implementation.

As we concluded for the CJR model, we continue to believe that updating the exclusions annually, at a minimum, is most appropriate for the 5-year EPMs, and allowing more frequent updates than through rulemaking as necessary to accommodate timely ICD–10–CM annual coding changes and annual IPPS MS–DRG changes, as well as to address significant issues raised by EPM participants and other stakeholders or by CMS as we continue to evaluate the list of excluded services for the EPM episodes. We will explore the additional areas recommended by the commenters and others that may arise during EPM implementation, and we will utilize the exclusion list update process to suggest any future changes based on our additional analyses.

The commenters who supported an exclusion list update process outside of rulemaking did not suggest specific revisions to the proposed standards for updating the EPM episode exclusions, namely:

- We would not exclude the following items or services that are:
  - ++ Directly related to the EPM episode or the quality or safety of the EPM episode care.
  - ++ For chronic conditions that may be affected by the EPM episode care.
  - We would exclude the following items and services that are:
  - ++ For chronic conditions not generally affected by the EPM episode care.
  - ++ For acute clinical conditions, not arising from existing EPM episode-related chronic clinical conditions or complications of EPM episode care.

Thus, we continue to believe these standards provide the appropriate clinical review framework for updates to the EPM exclusion list. Finally, we believe that our proposed process to post the potential revised exclusions, which could include additions to or deletions from the exclusion list, to the CMS Web site to allow for public input on our planned application of these standards, and then adopt changes to the exclusion list with posting to the CMS Web site of the final revised exclusion list after our consideration of the public input is consistent with the recommendation of commenters that we use a transparent process reflective of broad opportunity for public input, including implementation experience with the EPMs. Conducting this update process outside of rulemaking based on the standards set forth in this final rule allows us the greatest flexibility to update the exclusions as changes to the MS–DRGs and ICD–10–CM diagnosis codes, upon which our exclusions rely, are released. This process also allows us to respond quickly to any episode definition issues that arise during implementation of the EPMs across the broad array of EPM participants in the selected MSAs, as well as consider any new analysis conducted by CMS or stakeholders about the relationship among items and services to the EPM episodes that might result in a different assessment of the inclusion or exclusion of existing MS–DRGs or ICD–10–CM diagnosis codes in the definition of EPM episodes. We would widely publicize the opportunity for review and public input through the CMS Web site and listserve. We also note that any changes to our overall approach to identifying excluded items and services or to our standards for evaluating items and services for exclusion would be address through future rulemaking. Therefore, we are finalizing our proposal to update the exclusion list annually, at a minimum, using the standards and process as described.
Final Decision: After consideration of the public comments received, we are finalizing the proposals in § 512.210(a), without modification, to identify related items and services for EPM episodes as the following items and services paid under Medicare Part A and Part B, after the EPM-specific exclusions are applied:

- Physicians’ services.
- Inpatient hospital services.
- IPF services.
- LTCH services.
- IRF services.
- SNF services.
- HHAs.
- Hospital outpatient services.
- Independent outpatient therapy services.
- Clinical laboratory services.
- Durable medical equipment.
- Part B drugs.
- Hospice.

We are also finalizing the proposals, without modification, to use the following standards to exclude items and services from EPM episodes:

- Hospital readmissions for MS–DRGs that group to the following categories of diagnoses: Oncology; trauma medical admissions; surgery for chronic conditions unrelated to a condition likely to have been affected by care furnished during the EPM episode; and surgery for acute conditions unrelated to a condition resulting from or likely to have been affected by care during the EPM episode.
- Part B items and services for acute disease diagnoses unrelated to a condition resulting from or likely to have been affected by care during the EPM episode, and certain chronic disease diagnoses, as specified by CMS on a diagnosis-by-diagnosis basis, depending on whether the condition was likely to have been affected by care during the EPM episode or whether substantial services were likely to be provided for the chronic condition during the EPM episode.
- Drugs that are paid outside of the MS–DRGs included in the EPM episode definitions, specifically hemophilia clotting factors.
- IPPS new technology add-on payments for drugs, technologies, and services.
- OPPS transitional pass-through payments for medical devices.

We are finalizing the proposals in § 512.210(b) to exclude from EPM episodes specific readmissions, Part B-covered items and services with specific ICD–9–CM or ICD–10–CM diagnosis codes in the principal position on claims for items and services during the 90 days post-discharge from the anchor hospitalization, and additionally Part B-covered DME with specific ICD–9–CM or ICD–10–CM diagnosis codes in the principal position on claims during the anchor hospitalization, with modification to place MS–DRGs 326–328 on the AMI MS–DRG–anchored AMI exclusion list and MS–DRGs 266–267 on the AMI MS–DRG–anchored AMI exclusion list and the CABG exclusion list. As discussed in section III.C.4.a.(5) of this final rule, we are not finalizing our proposed AMI model inpatient-to-inpatient transfer episode initiation and attribution policy so we will not use the terms chained anchor hospitalization and price MS–DRG in the final AMI episode definition and pricing policies.

Therefore, the applicable EPM exclusion list is applied to the EPM episode on the basis of the MS–DRG that anchors the EPM episode. The final EPM exclusion lists based on ICD–9–CM and ICD–10–CM diagnosis codes and MS–DRGs as of FY 2016 are posted on the CMS Web site at https://innovation.cms.gov/initiatives/epm.

Lastly, we are finalizing our proposals in § 512.210(c) to update the exclusion list by sub-regulatory guidance on an annual basis, to reflect annual changes to ICD–9–CM coding and annual changes to the MS–DRGs under the IPPS, as well as to address any other issues that are brought to our attention throughout the course of the EPMs, without modification. The standards for this updating process are:

- Include any items or services that are directly related to the EPM episode diagnosis or procedure (for example, a subsequent admission for heart failure or repeat revascularization) or the quality or safety of care (for example, sternal wound infection following CABG);
- Include items or services for chronic conditions that may be affected by the EPM diagnosis or procedure and the post-discharge care (for example, diabetes);
- Exclude items and services for chronic conditions that are generally not affected by the EPM diagnosis or procedure and the post-discharge care (for example, prostate removal for cancer); and
- Exclude items and services for acute clinical conditions not arising from existing EPM episode-related chronic clinical conditions or complications from the EPM episode (for example, appendectomy).

The potential revised exclusions, which could include additions to or deletions from the exclusion lists, will be posted to the CMS Web site to allow for public input. After receiving and reviewing public input on potential revised exclusions, we will post the final revised exclusion lists, including providing information to the public about when the revisions would take effect and to which episodes they would apply.

With the publication of this final rule, we are initiating the sub-regulatory update process to incorporate changes to the MS–DRGs and ICD–10–CM diagnosis codes for 2017 into the EPMs by posting potential changes to the exclusion lists for the EPMs. We did not consider the 2017 changes in the EPM proposed rule, because the final MS–DRGs and ICD–10–CM codes were not yet available when the proposed rule was published in the Federal Register on August 2, 2016. There are no MS–DRG changes for FY 2017 that resulted in our suggesting potential changes to the exclusion lists for the EPMs. We are suggesting potential modifications to the principal ICD–10–CM diagnosis code categories for excluded Part B services in the AMI, CABG, and SHFFT models as of July 1, 2017, based on new ICD–10–CM diagnosis code categories to which new ICD–10–CM diagnosis codes have been added for FY 2017. The potential modifications to the exclusion list for each EPM are posted on the CMS Web site at https://innovation.cms.gov/initiatives/epm. We request that public input on the potential modifications be sent to epm@cms.hhs.gov by 11:59 p.m. on Friday, January 27, 2017. After receiving and reviewing public input on potential revised exclusions, we will post the final revised exclusions by February 24, 2017, including providing information to the public about when the revisions will take effect and to which episodes they would apply.

4. EPM Episodes

a. Beneficiary Care Inclusion Criteria and Beginning of EPM Episodes

(1) General Beneficiary Care Inclusion Criteria

Because of the clinical variability leading up to these EPM episodes and the challenge of identifying unrelated services given the multiple chronic conditions experienced by many EPM beneficiaries, we proposed to follow the CJR model precedent and not begin an EPM episode prior to the anchor hospitalization (80 FR 73315 and 73318). We proposed that all services that were already included in the IPPS payment based on established Medicare policies (for example, 3-day payment window payment policies) would be included in these EPM episodes, and that the defined population of Medicare beneficiaries whose care would be included in the EPMs would meet all of
the following criteria on admission to the anchor or chained anchor hospitalization:

- Enrolled in Medicare Part A and Part B.
- Eligible for Medicare not on the basis of end-stage renal disease.
- Not enrolled in any managed care plan (for example, Medicare Advantage, Health Care Prepayment Plans, cost-based health maintenance organizations).
- Not covered under a United Mine Workers of America health plan, which provides health care benefits for retired mine workers.
- Have Medicare as their primary payer.
- Not aligned to an ACO in the Next Generation ACO model or an ACO in a track of the Comprehensive ESRD Care Initiative incorporating downside risk for financial losses.
- Not under the care of an attending or operating physician, as designated on the inpatient hospital claim, who is a member of a physician group practice that initiates BPCI Model 2 episodes at the EPM participant for the MS–DRG that would be the anchor MS–DRG under the EPM.
- Not already in any BPCI model episode.
- Not already in an AMI, SHFFT, CABG or CJR model episode with an episode definition that does not exclude the MS–DRG that would be the anchor MS–DRG under the applicable EPM.
- Not already in any AMI model.

For a discussion of our proposal to exclude certain ACO-assigned beneficiaries from EPM episodes, we refer to section III.D.6.c.(3) of the proposed rule (81 FR 50869 through 50870). For a discussion of our proposals for addressing potential overlap of beneficiaries in episode payment models that are relevant to these last two criteria, we refer to sections III.D.6.c.(1) and (2) of the proposed rule (81 FR 50868 through 50869).

The proposal for beneficiary care inclusion policies was included in proposed § 512.230. We sought comment on our proposal of beneficiary care inclusion policies.

The following is a summary of the comments received and our responses. We refer to sections III.D.6.c.(1) through (3) of this final rule for a summary of the comments received and our responses on the proposed three general beneficiary care inclusion criteria that relate to beneficiaries in other CMS models and programs.

**Comment:** Many commenters expressed support for the proposed general beneficiary care inclusion criteria as reasonable and consistent with other models and programs. On the other hand, a number of commenters requested that CMS exclude beneficiaries with certain clinical characteristics from all three proposed EPMs, including beneficiaries receiving hospice care before or during the episode; experiencing an inpatient psychiatric hospitalization preceding or during an episode; having preexisting functional disabilities in activities of daily living; bearing a diagnosis of dementia; residing in a SNF; and experiencing illnesses for which it is expected that the beneficiary would be likely to die within the upcoming year. The commenters generally stated that these beneficiaries should be excluded due to high and variable needs for care that would not be typical for beneficiaries in EPM episodes. One commenter recommended CMS to adopt an “out clause” for the most complex patients to be exempt from the EPMs, such as beneficiaries with multi-organ system involvement or comorbidities or poly-chronic illnesses. The commenters were concerned that without accurate risk adjustment under the EPMs, hospitals disproportionately caring for these beneficiaries would experience undue financial risk for necessary episode care. The commenters recommended that if CMS did not exclude high-risk beneficiaries, CMS must adopt more robust risk adjustment to account for socioeconomic, clinical, or other risk factors that are out of the hospital’s control and impact patients’ health and recovery. Several commenters recommended that at least the initial implementation of the EPMs should exclude vulnerable populations with complicated or intensive care needs from the EPMs until the EPMs demonstrate sufficient quality outcomes and have developed accurate risk adjustments and patient safeguards to ensure high-quality care for populations that the commenters believe could face serious care disadvantages in the EPMs and put hospitals at an unacceptable level of financial risk.

**Response:** Most beneficiaries with anchor hospitalizations that would initiate EPM episodes would have underlying conditions that may affect care throughout the episode or that may be influenced by the surgery or AMI that initiates the episode. Similar to our rationale in the CJR Final Rule regarding LEJR episodes (80 FR 73371), we believe it is important to include these beneficiaries in the EPMs so that they can benefit from the increased opportunities for the care coordination and management throughout the episodes, and including the broadest feasible array of Medicare beneficiaries in the EPMs provides EPM participants with the greatest volume of episodes and incentive to redesign episode care. We do not believe it would be appropriate to exclude beneficiaries from the EPMs just because they are potentially expected to have high-cost, variable health care needs under the EPMs. We refer to section III.D.4.b.(2) of this final rule for a discussion of risk adjustment for the EPMs. Therefore, we will not exclude additional beneficiaries with certain clinical characteristics from the EPMs beyond those general beneficiary care inclusion criteria that we proposed.

**Comment:** Several commenters requested that CMS exclude beneficiaries with a home address not in the service area of the treating hospital. The commenters believe that including beneficiaries in this scenario would result in an unfair financial and administrative burden for EPM participants relative to other EPM beneficiaries residing in the service area of the hospital in meeting the challenges of remote post-discharge care coordination and ensuring ultimate quality outcomes for medically complex out-of-state patients.

**Response:** We acknowledge that in occasional circumstances, EPM participants may have limited ability to coordinate care. For similar reasons as our discussion in the CJR Final Rule (80 FR 73317 through 73318) regarding LEJR episodes, following the care coordination that takes place in the EPM participant during the anchor hospitalization, we expect that much of the subsequent coordination of post-acute care services and other related services for EPM beneficiaries during the 90 days post-discharge can be accomplished through telecommunications that do not require the patient to remain within the geographic proximity of the hospital responsible for the EPM episode. In addition, the design of the EPMs does not preclude hospitals from coordinating care with other providers outside of their immediate service area, which may be necessary especially in the case of beneficiaries who are admitted to a o-i or inpatient-to-inpatient (i-i) transfer hospital after an outpatient-to-inpatient or inpatient-to-inpatient transfer, respectively, for a different or higher level of cardiac care that is not available at the local hospital to which they originally presented with symptoms of an AMI. As discussed in section III.C.4.a.(5) of this final rule, under our final AMI model policy we are canceling all EPM episodes that begin at an initial treating hospital through an inpatient admission that...
initiates the AMI episode when the beneficiary is transferred for admission to an i-i transfer hospital after the AMI episode begins. Thus, hospitals that are AMI and CABG model participants and that receive beneficiaries in transfer either from outpatient or inpatient status at an initial treating hospital will commonly initiate and be responsible for AMI or CABG episodes that begin at the o/i-i transfer hospital. This attribution of episodes to the o/i-i transfer hospital increases the probability that the home of beneficiaries is not in the service area of the responsible hospital under the AMI or CABG model, yet most commenters requested that we adopt this transfer attribution policy. Therefore, we believe that most EPM participants have the tools to engage in effective remote care coordination that results in high quality episode care.

Finally, we note that we are finalizing several waivers of Medicare program rules, as discussed in section III.J. of this final rule, to facilitate efficient and effective episode care coordination for beneficiaries in remote or distant locations outside of the EPM participant’s immediate community. We are also finalizing policies for financial arrangements in section III.I. of this final rule that allow EPM participants to share upside and downside financial risk with a variety of individuals and entities who collaborate with the EPM participant in redesigning care and caring for EPM beneficiaries, regardless of the geographic proximity of these individuals and entities to the EPM participant. Through financial arrangements, EPM participants could align the financial incentives of providers in the EPM beneficiary’s home community with the goals of the EPM participant to improve the quality and reduce the cost of EPM episodes. Therefore, we will not exclude beneficiaries from the EPMs who are referred to EPM participants that are not close to the beneficiary’s home.

Comment: Several commenters requested clarification about whether patients who buy in to Medicare A or Medicare B through the Medicaid program would be included in the EPMs. Comment: A commenter presented a scenario where an EPM participant admitted and successfully treated a beneficiary with a SHFFT procedure, but the patient later falls and has a subsequent hip fracture requiring surgical fracture repair within the post-acute period of the episode. The commenter requested clarification about whether this instance would trigger a new SHFFT episode or the cost of the readmission to repair the second fracture would be included in the prior SHFFT episode’s total cost.

Response: During such a readmission, the beneficiary would already be in a SHFFT episode. Therefore, the ongoing SHFFT episode would not be canceled and a new SHFFT episode would not be initiated because the beneficiary would not meet the proposed beneficiary care inclusion criteria to initiate a SHFFT episode since he or she is already in a SHFFT episode. Because SHFFT MS–DRGs 480–482 are not on the exclusion list for SHFFT episodes, the related readmission would be included in the ongoing SHFFT episode and its cost included in the calculation of actual episode spending for the SHFFT episode that began with the initial hospitalization for a SHFFT procedure.

Final Decision: After consideration of the public comments received, we are finalizing the proposals in §512.230 for the general beneficiary care inclusion criteria, with modification to remove references to chained anchor hospitalization which we are not including in the final EPM policies as discussed in section III.C.4.a.(5) of this final rule. We are additionally excluding from EPM episodes beneficiaries who are assigned to a Shared Savings Program ACO in Track 3, as discussed in section III.D.6.c.(3) of this final rule. We define the population of Medicare beneficiaries whose care is included in the EPM as those who meet all of the following criteria on admission to the anchor hospitalization:

- Enrolled in Medicare Part A and Part B.
- Eligible for Medicare not on the basis of end-stage renal disease.
- Not enrolled in any managed care plan (for example, Medicare Advantage, Health Care Prepayment Plans, cost-based health maintenance organizations).
- Not covered under a United Mine Workers of America health plan, which provides health care benefits for retired mine workers.
- Have Medicare as their primary payer.
- Not prospectively assigned to:
  ++ An ACO in the Next Generation ACO model;
  ++ An ACO in a track of the Comprehensive ESRD Care Model incorporating downside risk for financial losses; or
  ++ A Shared Savings Program ACO in Track 3.
- Not under the care of an attending or operating physician, as designated on the inpatient hospital claim, who is a member of a physician group practice that initiates BPCI Model 2 episodes at the EPM participant for the MS–DRG that would be the anchor MS–DRG under the EPM.
- Not already in any BPCI model episode.
- Not already in an AMI, SHFFT, CABG or CJR model episode with an episode definition that does not exclude the MS–DRG that would be the anchor MS–DRG under the applicable EPM.

(2) Beginning AMI Episodes

We proposed that, as long as the beneficiary met the general beneficiary care inclusion criteria, then an AMI episode would begin with admission of a Medicare beneficiary to an IPPS hospital for the following MS–DRGs, where the specific MS–DRG would be called the anchor MS–DRG for the episode:

- AMI MS–DRGs—
  ++ 280 (Acute myocardial infarction, discharged alive with MCC);
  ++ 281 (Acute myocardial infarction, discharged alive with CC); and
  ++ 282 (Acute myocardial infarction, discharged alive without CC/MCC).
- PCI MS–DRGs, when the claim includes an AMI ICD–10–CM diagnosis code in the principal or secondary position on the IPPS claim as specified in Table 3:
  ++ 246 (Percutaneous cardiovascular procedures with drug-eluting stent with MCC or 4+ vessels/stents);
  ++ 247 (Percutaneous cardiovascular procedures with drug-eluting stent without MCC);
  ++ 248 (Percutaneous cardiovascular procedures with non-drug-eluting stent with MCC or 4+ vessels/stents);
  ++ 249 (Percutaneous cardiovascular procedures with non-drug-eluting stent without MCC);
  ++ 250 (Percutaneous cardiovascular procedures without coronary artery stent with MCC); and
  ++ 251 (Percutaneous cardiovascular procedures without coronary artery stent without MCC).

Table 3 displays the ICD–9–CM codes that we proposed to use to identify historical AMI episodes for beneficiaries discharged from PCI MS–DRGs, as well as the ICD–10–CM diagnosis codes that would be used to identify AMI episodes for beneficiaries discharged from PCI MS–DRGs throughout the duration of the AMI model. The sub-regulatory process for updating this AMI ICD–10–CM diagnosis code list was described in
section III.C.3.a.(1) of the proposed rule (81 FR 50831). We first identified the ICD–9–CM diagnosis codes for the initial AMI episode-of-care that were historically used to report care for a newly diagnosed AMI patient admitted to the hospital. These codes all have a fifth digit of “1” and were applicable until the patient was discharged from acute care. However, as noted in section III.C.3.a.(1) of this final rule, these codes are not included in proposed episodes. We sought comment on whether these codes should be excluded from the AMI model-episode diagnosis codes for benchmark purposes. We proposed to cross-walk the ICD–9–CM diagnosis codes for the initial AMI episode-of-care to the ICD–10–CM diagnosis codes that would be reported for similar beneficiaries during the AMI model performance years. The crosswalk in Table 5 is consistent with the crosswalk CMS posted for public comment regarding ICD–9–CM to ICD–10–CM diagnosis codes used for HIQR Program measures, including AMI quality measures.61

### Table 5—Proposed ICD–9–CM and ICD–10–CM AMI Diagnosis Codes in the Principal or Secondary Position on the IPPS Claim for PCI MS–DRGs (246–251) That Initiate AMI Episodes

The proposal for beginning AMI episodes was included in proposed § 512.246(a)(1). We sought comment on our proposal to begin AMI episodes. We address some of the comments related to the proposed AMI ICD–CM diagnosis codes displayed in Table 5 in the context of our discussion of the clinical conditions that define AMI episodes. We received no comments specific to the ICD–9–CM to ICD–10–CM crosswalk of the AMI ICD–CM diagnosis codes included in Table 5.

---

The following is a summary of the comments received on other issues related to our proposal to begin AMI episodes and our responses.

Comment: Several commenters stated that uncomplicated acute AMI can be treated and discharged the next day. They pointed out that under Medicare’s Two-Midnight rule, these beneficiaries would be classified as outpatients. They requested clarification about whether CMS believes these beneficiaries with AMI should be classified as inpatient even if the expectation of the treating physician is a less than Two-Midnight hospital stay so the AMI model would include all beneficiaries with AMI.

Response: The AMI model does not change Medicare’s current payment policy for classifying Medicare beneficiaries as outpatients or inpatients, including beneficiaries with AMI. Therefore, AMI model participants should continue to follow all existing Medicare rules that apply to classifying beneficiaries as inpatients or outpatients for beneficiaries with AMI who could potentially initiate AMI episodes if they were admitted to the AMI model participant.

To provide greater clarity to hospitals and physician stakeholders, and to address the higher frequency of beneficiaries being treated as hospital outpatients for extended periods of time, CMS adopted the Two-Midnight rule for admissions beginning on or after October 1, 2013. This rule established Medicare payment policy regarding the benchmark criteria to use when determining whether inpatient admission is reasonable and necessary for purposes of payment under Medicare Part A.62 In general, the original Two-Midnight rule stated that:

- Inpatient admissions would generally be payable under Part A if the admitting practitioner expected the patient to require a hospital stay that crossed two midnights and the medical record supported that reasonable expectation.
- Medicare Part A payment was generally not appropriate for hospital stays expected to last less than two midnights or cases involving a procedure identified on the inpatient-only list or that were identified as “rare and unusual exception” to the Two-Midnight benchmark by CMS were exceptions to this general rule and were deemed to be appropriate for Medicare Part A payment.

The Two-Midnight rule also specified that all treatment decisions for beneficiaries were based on the medical judgment of physicians and other qualified practitioners. The Two-Midnight rule did not prevent the physician from providing any service at any hospital, regardless of the expected duration of the service.

We acknowledge that full provider implementation of hospital care in accordance with the Two-Midnight rule did not occur immediately on October 1, 2013 and that the first CMS’ contractor reviews of short stay inpatient admissions did not begin until October 2015. Therefore, we understand that shifts in classifying certain beneficiaries with uncomplicated AMI as outpatients instead of inpatients could have occurred during the period of historical AMI episodes that would span January 1, 2013 and December 31, 2015 and would be used for setting quality-adjusted target prices in performance years 1 and 2 of the AMI model. Under our monitoring and evaluation activities as discussed in sections III.G.4. through 6. and section IV. of this final rule, respectively, we will monitor the site-of-service for beneficiaries with AMI over the course of the model to detect any issues related to access to care, quality of care, or delayed care. We will also evaluate the AMI model with respect to changes in AMI case mix for AMI model participants, and if we observe them, we would conduct analyses about the potential causes of such changes, including whether AMI model participants shifted to treating some uncomplicated beneficiaries with AMI as outpatients rather than inpatients. We further note that when we first update the data used for historical EPM episode payments in performance year 3 of the EPMs to be calendar years 2015 through 2017, we expect that any changes in care patterns related to the Two-Midnight rule would have been made by the beginning of that 3-year period.

Comment: One commenter agreed with CMS that it is currently rare for a beneficiary with AMI to have an outpatient PCI and, therefore, almost all beneficiaries with AMI who are treated with PCI would be in the AMI model under current hospital treatment practices. However, the commenter added that by excluding beneficiaries who receive outpatient PCI from the AMI model, EPM participants may change their billing to outpatient PCI, especially for more complex and costly beneficiaries for which AMI episode costs would be expected to be high. The commenter recommended that CMS should put all AMI patients on the inpatient only list.

Response: We appreciate the concern expressed by the commenter about the potential for the financial incentives in the AMI model to lead to shifting in the site-of-service for PCI for beneficiaries with AMI from inpatient to outpatient. We note that the OPPS inpatient only list includes procedures that are only paid under the IPPS and does not assign certain diagnoses to inpatient only care. PCI currently is commonly performed in the outpatient hospital department for beneficiaries that do not have AMI, and we do not believe it would be appropriate to place PCI procedures on the inpatient only list due to concerns about the shifting of the site-of-service from inpatient to outpatient for AMI model beneficiaries who require PCI.

As we stated in the proposed rule (81 FR 50829) patients experiencing an AMI are almost uniformly admitted to the hospital for further evaluation and management based on clinical guidelines for the treatment of beneficiaries with AMI.63 We do not believe that EPM participants would change their patterns of treatment of beneficiaries with AMI, especially for those complex patients with significant medical needs, in ways that would risk beneficiaries not receiving the medically necessary inpatient hospital evaluation and management recommended for their AMI treatment. We will be monitoring patterns of care as discussed in sections III.G.4. through 6. of this final rule for evidence of clinically-unexplained changes in care, including the site-of-service for AMI beneficiaries who receive PCI, especially if we believe there is the potential to compromise beneficiary access to care or quality of care or to delay care.

Response: A commenter requested that CMS further clarify how an EPM participant can determine whether beneficiaries with AMI who have a CABG would be attributed to the AMI or CABG model.

Response: We appreciate the opportunity to provide clarification on the specific episode attribution of beneficiaries with AMI who have a CABG. We refer to section III.D.4.a.(5) of this final rule for further discussion of the final transfer attribution policy for AMI episodes that involve an inpatient-to-inpatient transfer for AMI care. AMI and CABG episodes are initiated based on the MS–DRG that is assigned to the final discharge that occurs during the anchor hospitalization. Thus, if a beneficiary hospitalized for treatment of AMI has a CABG during that anchor hospitalization, we expect that the

beneficiary would be discharged from a CABG MS–DRG (231–236) and, therefore, would initiate a CABG episode. We refer to section III.D.4.b.(b) of this final rule for the pricing adjustment that would apply to CABG episodes for beneficiaries who have a CABG during the initial hospitalization for AMI treatment. However, if a beneficiary with an AMI hospitalized for initial treatment is discharged from the anchor hospitalization and then readmitted for CABG during the 90 day post-discharge episode duration, the beneficiary would initiate an AMI episode, which would not be canceled due to the CABG readmission. We refer to section III.D.4.b.(c) of this final rule for the pricing adjustment that would apply to AMI episodes with CABG readmissions.

Final Decision: After consideration of the public comments received, we are finalizing the proposals in § 512.240(a)(1), without modification, to begin AMI episodes with admission of a Medicare beneficiary to an IPPS hospital for the following MS–DRGs, where the specific MS–DRG is called the anchor MS–DRG for the episode:

- AMI MS–DRGs—
  - ++ 281 (Acute myocardial infarction, discharged alive with MCC); and
  - ++ 282 (Acute myocardial infarction, discharged alive without CC/MCC); and
- PCI MS–DRGs, when the claim includes an AMI ICD–10–CM diagnosis code in the principal or secondary position on the IPPS claim as specified in Table 6—
  - ++ 246 (Percutaneous cardiovascular procedures with drug-eluting stent with MCC or 4+ vessels/stents);
  - ++ 247 (Percutaneous cardiovascular procedures with drug-eluting stent without MCC);
  - ++ 248 (Percutaneous cardiovascular procedures with non-drug-eluting stent with MCC or 4+ vessels/stents);
  - ++ 249 (Percutaneous cardiovascular procedures with non-drug-eluting stent without MCC);
  - ++ 250 (Percutaneous cardiovascular procedures without coronary artery stent with MCC); and
  - ++ 251 (Percutaneous cardiovascular procedures without coronary artery stent without MCC).

(3) Beginning CAGB Episodes

We proposed that, as long as a beneficiary met the general beneficiary care inclusion criteria, a CAGB episode would begin with the admission of a Medicare beneficiary to an IPPS hospital for a CAGB that is paid under the following CAGB MS–DRGs and the specific MS–DRG would be called the anchor MS–DRG for the episode:

- 231 (Coronary bypass with percutaneous transluminal coronary angioplasty (PTCA) with MCC).
- 232 (Coronary bypass with PTCA without MCC).
- 233 (Coronary bypass with cardiac catheterization with MCC).
- 234 (Coronary bypass with cardiac catheterization without MCC).
- 235 (Coronary bypass without cardiac catheterization with MCC).
- 236 (Coronary bypass without cardiac catheterization without MCC).

The proposal for beginning CAGB episodes was included in proposed § 512.240(b)(1). We sought comment on our proposal to begin CAGB episodes. The following is a summary of the comments received and our responses.

Comment: One commenter recommended that CMS begin elective CAGB prior to admission for the anchor hospitalization, since all of the workup prior to an elective CAGB happens in the weeks or months before the hospitalization. The commenter claimed that the patient workup can vary considerably among providers, which may result in unnecessary costs. As an example, the commenter stated that a patient could have every cardiac diagnostic test prior to CABG when only several may be necessary. To help address unnecessary utilization prior to elective CAGB, the commenter recommended that CMS begin the episode for elective CAGB prior to the hospitalization for surgery.

The commenter further disagreed with CMS’ proposal that elective and urgent CAGB would be included in one EPM, because the beneficiaries behave differently during the episode and with respect to their risk profiles. The commenter recommended that CMS separate CAGB cases under these two circumstances into separate EPMs and test both models.

Response: We appreciate the interest expressed by the commenter in starting CAGB episodes prior to the hospital admission, and we recognize that the beneficiary’s care that ultimately leads to the CAGB, including the physician-patient relationship and diagnostic workup, can begin long before the surgical procedure. However, for similar reasons to our consideration of analogous comments in the CJR Final Rule (81 FR 73316 through 73317) regarding LEJR episodes, beginning the episode too far in advance of the CAGB would make it difficult to avoid bundling unrelated items and services, and starting the episode prior to the hospital admission is more likely to encompass costs that vary widely among beneficiaries with CAD that are potential candidates for CAGB, which would make the episode more difficult to price appropriately. We continue to believe that beginning the CAGB episode with the anchor hospitalization is most appropriate due to the clinical variability leading up to the CAGB and the challenge of distinguishing between related and unrelated services. We also believe that beginning the episode with the anchor hospitalization, and not prior to admission, would be easier to administer and provide more consistent episodes for testing the CAGB model.

Furthermore, we agree with the commenter that beneficiaries experiencing elective versus urgent CAGB behave differently during the episode due to their different health care needs. However, rather than creating two EPMs for these beneficiaries for whom we believe the same CAGB episode definition would apply, we are providing a pricing adjustment as discussed in section III.D.4.b.(2)(b) of this final rule for CAGB model beneficiaries with an AMI diagnosis code on the claim for the anchor hospitalization who have substantially higher historical episode spending than CAGB model beneficiaries without AMI. The two groups correspond to the urgent versus elective groups recommended by the commenter. We believe this pricing adjustment policy accomplishes the major objective of the commenter who recommended two CAGB EPMs so that we price CAGB episodes for the two groups of CAGB model beneficiaries differently based on their different patterns of health care utilization.

Final Decision: After consideration of the public comments received, we are finalizing the proposals in §512.240(b)(1), without modification, to begin CAGB episodes with the admission of a Medicare beneficiary to an IPPS hospital for a CAGB that is paid under the following CAGB MS–DRGs and the specific MS–DRG is called the anchor MS–DRG for the episode:

- 231 (Coronary bypass with percutaneous transluminal coronary angioplasty (PTCA) with MCC).
- 232 (Coronary bypass with PTCA without MCC).
- 233 (Coronary bypass with cardiac catheterization with MCC).
- 234 (Coronary bypass with cardiac catheterization without MCC).
- 235 (Coronary bypass without cardiac catheterization with MCC).
- 236 (Coronary bypass without cardiac catheterization without MCC).

(4) Beginning SHFFT Episodes

We proposed that as long as a beneficiary met the general inclusion criteria, a SHFFT episode would begin with the admission of a Medicare beneficiary to an IPPS hospital for surgical treatment of hip or femur fracture (other than joint replacement) that is paid under the following SHFFT MS–DRGs and where the specific MS–DRG would be called the anchor MS–DRG for the episode:

- 480 (Hip and femur procedures except major joint with MCC).
- 481 (Hip and femur procedures except major joint with complication or comorbidity (CC)).
- 482 (Hip and femur procedures except major joint without CC or MCC).

The proposal for beginning SHFFT episodes was included in proposed §512.240(c)(1). We sought comment on our proposal to begin SHFFT episodes. We received no comments specific to our proposal to begin SHFFT episodes.

Final Decision: We are finalizing the proposals in §512.240(c)(1), without modification, to begin SHFFT episodes with the admission of a Medicare beneficiary to an IPPS hospital for
surgical treatment of hip or femur fracture (other than joint replacement) that is paid under the following SHFFT MS–DRGs and where the specific MS–DRG is called the anchor MS–DRG for the episode:

- 480 (Hip and femur procedures except major joint with MCC).
- 481 (Hip and femur procedures except major joint with complication or comorbidity (CC)).
- 482 (Hip and femur procedures except major joint without CC or MCC).

(5) Special Policies for Hospital Transfers of Beneficiaries With AMI

The asymmetric distribution of cardiac care across hospitals makes transfer, either from an inpatient admission or from the emergency department (without inpatient admission) of one hospital to another, a common consideration in the treatment course for beneficiaries with an initial diagnosis of AMI. Therefore, transfer for cardiac care is an important consideration for the AMI and CABG models.

The availability of revascularization and intensive cardiac care are particularly important considerations in the transfer of beneficiaries with an AMI. A substantial portion of hospitals do not have revascularization capability (that is, a cardiac catheterization lab for PCI or cardiothoracic surgeons who can perform CABG) or cardiovascular intensive care units (CVICU) and, therefore, must transfer beneficiaries to provide access to these services. In the PCI and CABG examples, the discharge from the transfer hospital that accepted the beneficiary would result in discharge under the MS–DRGs for PCI (246–251) or CABG (231–236). For the CVICU example, the transfer hospital’s discharge MS–DRG would be AMI (280–282). There is evidence of the asymmetric distribution of cardiac care in the 2014 IPPS and critical access hospital claims data: While 4,332 hospitals filed at least one claim for PCI and 282 (Hip and femur procedures except major joint without CC or MCC).

The potential transfer scenarios are best illustrated by the care pathways experienced by beneficiaries with AMI. These beneficiaries typically present to a hospital’s emergency department where the evaluation identifies the AMI diagnosis and determines the initial indicated treatments. Depending on the beneficiary’s clinical needs and the hospital’s treatment capacity, the beneficiary could be:

- Admitted to the initial treating hospital, with no transfer to another hospital during the initial hospitalization for AMI. We refer to this scenario as no transfer;
- Admitted to the initial treating hospital and later transferred to a transfer hospital. We refer to this scenario as inpatient-to-inpatient transfer and the transfer hospital as an i-i transfer hospital; or
- Transferred from the initial treating hospital to a transfer hospital without admission to the initial treating hospital. We refer to this scenario as outpatient-to-inpatient transfer and the transfer hospital as an o-i transfer hospital.

Our proposals and alternatives considered for these scenarios are described in detail in this section. In our proposals for AMI or CABG episodes for initial AMI care, our overarching policy was that every AMI or CABG episode began at the first AMI or CABG model participant to which the beneficiary was admitted for an AMI MS–DRG, PCI MS–DRG with an AMI ICD–CM diagnosis code, or CABB MS–DRG. The AMI or CABB model participant where the episode began would then be financially responsible for the AMI or CABB episode unless the episode was canceled.

Based on our analysis of Medicare claims data, in the proposed rule (81 FR 50836), we presented the finding that about 75 percent of historical AMI episodes and CABG episodes for beneficiaries with AMI began through the emergency department of the hospital where the anchor hospitalization for the AMI or CABG episode would occur. In another 18 percent of historical AMI episodes and CABG episodes for beneficiaries with AMI, the anchor hospitalization occurred at a transfer hospital following an emergency department visit at another hospital without admission to that hospital for an MS–DRG that would initiate an AMI or CABG episode.

In each of these scenarios, policies to determine which episode type would apply, the beginning of the episode, and the specific hospital with financial responsibility for the episode must be determined (for example, AMI or CABG, if CABB is provided as an initial treatment in an outpatient-to-inpatient or inpatient-to-inpatient scenario). In the proposed rule, we discussed each of the scenarios in detail and provide a summary of the scenarios in Table 7.

In the no transfer scenario, the episode would begin upon admission to an AMI or CABB model participant under circumstances that meet the criteria discussed in sections III.C.4.a(1) and (2) or (3) of the proposed rule (81 FR 50847 through 50848), and the AMI or CABB episode that applied would be determined by the specific MS–DRG for the anchor hospitalization. Financial responsibility for the episode would be attributed to the sole treating hospital involved in the initial AMI care. Under this proposal, the treating hospital’s quality measure performance would determine the effective discount factor to be applied to the AMI or CABB model benchmark episode price for the episode at reconciliation as described in section III.D.4.b.(10) of the proposed rule (81 FR 50881 through 50886).

The inpatient-to-inpatient transfer scenario had several potential outcomes. If the beneficiary initially presented for AMI care to a hospital that was not an AMI model participant and was admitted and then transferred to an i-i transfer hospital that was an AMI or CABB model participant, the episode would first initiate at the i-i transfer hospital and, therefore, the i-i transfer hospital would be financially responsible for the AMI or CABB episode. The i-i transfer hospital’s quality measure performance would determine the effective discount factor to be applied to the AMI or CABB model benchmark episode price for the episode at reconciliation as described in section III.D.4.b.(10) of the proposed rule (81 FR 50861 through 50862).

If a beneficiary initially presented for AMI care to an AMI model participant and was admitted and then transferred to an i-i transfer hospital (hereinafter a chained anchor hospitalization) and the i-i transfer hospital was not an AMI or CABB model participant, the episode would initiate at the initial treating hospital and would only be canceled for beneficiaries discharged from the i-i transfer hospital under MS–DRGs that were not anchor MS–DRGs for AMI or CABB episodes as discussed in section III.C.4.b. of the proposed rule (81 FR 50841 through 50842). The initial treating hospital’s quality measure performance would determine the effective discount factor to be applied to the AMI or CABB model benchmark episode price for the episode at reconciliation as described in section III.D.4.b.(10) of the proposed rule (81 FR 50861 through 50862).

64 AMI, CABB and PCI MS–DRG inpatient claims from all U.S. IPPS hospitals and CAHs derived from the 2014 Geographic Variations Inpatient Claims File located in the Chronic Conditions Warehouse.

65 Episode for beneficiaries with AMI initiated by all U.S. IPPS hospitals and constructed using standardized Medicare FFS Parts A and B claims, as proposed in the proposed rule, that ended in CY 2014.
further discussion of our proposal for price MS–DRGs that could differ from the anchor MS–DRG in AMI episodes that included a chained anchor hospitalization, in order to provide pricing adjustments for episodes where the initial treating hospital was responsible for the AMI episode.

Inpatient-to-inpatient transfers between AMI and CABG model participant hospitals were further considered in this section and specifically included beneficiaries experiencing an AMI who were transferred for revascularization (that is, PCI or CABG) or a higher level of medical AMI care. We noted that of all beneficiaries experiencing an AMI in historical episodes, about half received no revascularization (PCI or CABG) during the anchor hospitalization or the 90-day post-hospital discharge period, about 40 percent received a PCI, and less than 10 percent had CABG surgery. Moreover, three-quarters of CABG procedures and over 90 percent of PCIs for beneficiaries experiencing an AMI occurred at the hospital that first admitted the beneficiary for an inpatient hospitalization.

However, given the asymmetric distribution of cardiac care capacity, we noted in the proposed rule (81 FR 50837) that there would be beneficiaries who initiated an AMI episode by admission to an initial treating hospital but then required transfer to an i-i transfer hospital for additional treatment during the AMI episode, resulting in a chained anchor hospitalization. For historical AMI episodes ending in CY 2014, only about 12 percent of beneficiaries who would have initiated an AMI episode through admission and assignment to an AMI MS–DRG at the initial treating hospital were transferred to an i-i transfer hospital, with 30 percent and 20 percent receiving PCI or CABG, respectively, at the i-i transfer hospital. Another 20 percent were discharged from the i-i transfer hospital in the chained anchor hospitalization under an AMI MS–DRG. The remaining 30 percent of beneficiaries were discharged from the i-i transfer hospital in the chained anchor hospitalization under other MS–DRGs that would not have initiated AMI or CABG episodes, including cardiac

67 Episodes for beneficiaries with AMI initiated by all U.S. IPPS hospitals and constructed using standardized Medicare FFS Parts A and B claims, as proposed in the proposed rule, that end in CY 2014.

68 Episodes for AMI and CABG beneficiaries initiated by all U.S. IPPS hospitals and constructed using standardized Medicare FFS Parts A and B claims, as proposed in the proposed rule, that end in CY 2014.

69 Of further relevance for beneficiaries with an AMI diagnosis was that significant follow up care was usually performed by cardiologists who managed the patient’s underlying cardiovascular disease, rather than the interventional cardiologist or cardiothoracic surgeon that performed the revascularization procedure. PCI procedures, billed by interventional cardiologists, have a 0-day global period, reflecting that follow up care is not typically furnished by interventional cardiologists.

70 https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/HospitalQualityInits/Measure-Methodology.html
beneficiary was transferred to another AMI or CABG model participant hospital for further medical management of AMI, or for a PCI or CABG during a chained anchor hospitalization. Under this proposal, the initial treating hospital’s quality measure performance would determine the effective discount factor to be applied to the AMI model benchmark episode price for the episode at reconciliation as described in section III.D.4.b.(10) of the proposed rule (50861 through 50862) rule. Our proposal to cancel AMI episodes for beneficiaries discharged from the i-i transfer hospital under MS–DRGs that were not anchor MS–DRGs for AMI or CABG episodes was discussed in section III.C.4.b. of the proposed rule (81 FR 50841 through 50842). We also referred to section III.D.4.b.(2)(a) of the proposed rule (81 FR 50849 through 50851) for further discussion of the proposal for price MS–DRGs that could differ from the anchor MS–DRG in AMI episodes that included a chained anchor hospitalization, in order to provide pricing adjustments for episodes where the initial treating hospital was responsible for the AMI episode.

In the proposed rule (81 FR 50838), we noted that we did not propose to cancel the AMI episode even if the transfer and admission to the i-i transfer hospital would otherwise initiate a CABG episode at the i-i transfer hospital. We believed that once the AMI episode had been initiated, all related care during the episode (including hospital care for transfers and related readmissions for CABG) should be fully attributed to the AMI episode in the manner described in this section for the episode and that the first hospital that initiated the AMI episode should be financially responsible for the AMI episode. Therefore, we did not propose to cancel the AMI episode if a CABG was performed during a chained anchor hospitalization, nor did we propose that a beneficiary could simultaneously be in an AMI and CABG episode for overlapping periods of time due to the different MS–DRGs that applied during the chained anchor hospitalization. Instead, we would make an AMI episode pricing adjustment for these circumstances by paying the AMI model participant based on a price MS–DRG that was different from the anchor MS–DRG to reflect Medicare payment for the CABG as discussed in section III.D.4.b.(2)(a) of the proposed rule (81 FR 50849 through 50851).

We considered several alternatives to our proposed for AMI episode attribution for inpatient-to-inpatient transfer scenario where both hospitals are AMI or CABG model participants. First, we considered canceling the AMI episode initiated at the initial treating hospital when a transfer occurs, and basing any AMI or CABG episode initiation on the MS–DRG for the final i-i transfer hospital admission in the chained anchor hospitalization as long as that hospital was an AMI or CABG model participant. This would place financial responsibility for the episode on the i-i transfer hospital if the beneficiary went on to be discharged from acute care at that hospital. Attributing episodes under this alternative policy would assign beneficiaries to the final i-i transfer hospital for the AMI or CABG episode based on the model episode definitions in sections III.C.4.a.(2) and (3) of the proposed rule (81 FR 50834 through 50835). That is, if the beneficiary was discharged from the final admission in the chained anchor hospitalization under an AMI MS–DRG or a PCI MS–DRG, then the AMI episode initiated at the initial treating hospital would be canceled and the i-i transfer hospital accepting the beneficiary on referral would initiate an AMI episode. Similarly, if the beneficiary was discharged from the final admission in the chained anchor hospitalization under a CABG MS–DRG, then the AMI episode initiated at the final hospital would be canceled and the i-i transfer hospital accepting the beneficiary on referral would initiate a CABG episode. Under this alternative, the i-i transfer hospital’s quality measure performance would determine the effective discount factor to be applied to the AMI or CABG model benchmark episode price for the episode at reconciliation as described in section III.D.4.b.(10) of the proposed rule (81 FR 50861 through 50862). However, we did not propose this alternative because we believed, like the first alternative we considered, this could frequently lead to episode responsibility being attributed to the i-i transfer hospital when the local hospital first caring for the beneficiary with AMI may be better positioned to coordinate care in the beneficiary’s home community.

Thus, our proposal would have placed responsibility for care during the 90-day post-hospital discharge period in the AMI episode on the AMI model participant hospital to which the beneficiary initially presented for AMI care and was admitted, rather than on the i-i transfer hospital to which the beneficiary was transferred after initiating the AMI episode. Given the broad episode definition of AMI episodes, we believed that the post-discharge care required following hospitalization that included CABG, PCI, or medical management was best coordinated and managed by the hospital that originally admitted the beneficiary for the AMI. Such post-discharge care could include follow up for adherence to cardiac rehabilitation referral and management of the beneficiary’s underlying CAD and comorbidities. Even in the case of the more common surgical complications of CABG, such as wound infection, the beneficiary commonly would be admitted to the local hospital for treatment.

We further proposed that, as discussed in section III.L.3. of the proposed rule (81 FR 50918 through 50920), hospitals could be collaborators in the AMI, CABG, and SHFFT models in order to increase the financial alignment of hospitals and other EPM collaborators with EPM participants that were financially responsible for EPM episodes. Therefore, we expected that community hospital participants in the AMI model would be able to enter into sharing arrangements with i-i transfer hospitals accepting AMI model beneficiaries on referral to allow sharing of episode reconciliation payments or
reimbursement responsibility with the i-i transfer hospitals if those hospitals played a significant role in care redesign of AMI or CABG care pathways or management of beneficiaries throughout AMI or CABG episodes, including during the 90 days post-hospital discharge. We expected that community hospitals would need to coordinate closely with i-i transfer hospitals accepting AMI model beneficiaries on referral as the beneficiaries in AMI episodes were discharged from those hospitals, in order to improve the quality and efficiency of AMI episodes. This coordination could potentially be enhanced if i-i transfer hospitals were AMI model collaborators with financial incentives that were aligned with those of the AMI model participants through sharing arrangements.

The proposal for AMI episode attribution in circumstances that involve inpatient-to-inpatient transfers of beneficiaries with AMI was included in proposed §512.240(a)(2). We sought comment on our proposal for AMI episode attribution in circumstances that involved inpatient-to-inpatient transfers of beneficiaries with AMI, including comment on the alternatives considered.

In the outpatient-to-inpatient transfer scenario where a beneficiary with AMI was transferred from the emergency department of the initial treating hospital without admission to that hospital as an inpatient to an o-i transfer hospital for admission, we proposed that the AMI or CABG episode would begin at the o-i transfer hospital based on the MS–DRG (and AMI ICD–CM diagnosis code if a PCI MS–DRG applies) that was assigned to that anchor hospitalization. That is, if a beneficiary received initial AMI care in a hospital emergency department without admission and was transferred to an AMI or CABG model participant (the o-i transfer hospital) for admission, then the AMI or CABG episode would begin in the first hospital involved in the beneficiary’s AMI or CABG care that admitted the beneficiary as an inpatient, specifically the o-i transfer hospital. Therefore, the o-i transfer hospital would be financially responsible for the AMI or CABG episode. This attribution was in accordance with the AMI and CABG model rules, as discussed in sections III.C.4.a.(2) and (3) of the proposed rule (81 FR 50861 through 50862), that initiated an AMI episode with a hospitalization that resulted in discharge from a CABC MS–DRG. Under this proposal, the o-i transfer hospital’s quality measure performance would determine the effective discount factor to be applied to the AMI or CABG model benchmark episode price for the episode at reconciliation as described in section III.D.4.b.(10) of the proposed rule (81 FR 50861 through 50862). Under this proposal, regardless of whether the initial treating hospital was an AMI or CABG model participant, an AMI or CABG episode would only be initiated at the o-i transfer hospital if that hospital was an AMI or CABG model participant.

We considered an overarching alternative policy that would begin every AMI or CABG episode at the first AMI or CABG model participant at which either:

- The beneficiary presented to the emergency department for initial AMI care before being transferred to an o-i transfer hospital;
- The beneficiary was admitted for an AMI MS–DRG, PCI MS–DRG with an AMI ICD–CM diagnosis code, or a CABC MS–DRG.

The AMI or CABG model participant where the episode began would then be financially responsible for the AMI or CABG episode unless the episode was canceled. Under this alternative, there would no changes to our proposals for attributing episodes with no transfers or inpatient-to-inpatient transfers.

However, under this alternative, if the beneficiary presented for initial AMI care to the emergency department of an AMI or CABG model participant, the AMI or CABG episode would begin at this initial treating hospital when a beneficiary was transferred from the emergency department for his or her first inpatient hospitalization which occurred at an o-i transfer hospital. This would place financial responsibility for the AMI or CABG episode on the initial treating hospital despite the fact that the beneficiary was transferred from that hospital without being admitted, and the initial treating hospital’s quality measure performance would determine the effective discount factor to be applied to the AMI or CABG model benchmark episode price for the episode at reconciliation as described in section III.D.4.b.(10) of the proposed rule (81 FR 50861 through 50862).

Identifying the emergency department visit at the initial treating hospital would require using Field (Form Locator) 15—Point of Origin for Admission or Visit code on the CMS 1500 IP AB o-i transfer hospital to identify transfer from another hospital and linking that claim to the hospital outpatient claims from the initial treating hospital for the emergency department visit and other hospital outpatient services that occurred within a certain period of time prior to the o-i transfer hospital admission and that were related to the AMI care. The episode would be assigned to the AMI model even if the beneficiary received a CABC at the o-i transfer hospital, and we would assign financial responsibility for the AMI episode to the initial treating hospital. Under this alternative, the initial treating hospital’s quality measure performance would determine the effective discount factor to be applied to the AMI model benchmark episode price for the episode at reconciliation as described in section III.D.4.b.(10) of the propose rule (81 FR 50861 through 50862). We would also need to identify other types of related services to include in the episode that would begin prior to the o-i transfer hospital admission, such as physicians’ services for care in the emergency department. This alternative would have had the benefit of consistently including all care in each AMI or CABG episode that occurred following presentation of a beneficiary with AMI to the emergency department of an AMI or CABG model participant to the AMI or CABG episode, regardless of whether an AMI or CABG episode involved no transfer, o-i transfer, or i-i transfer. However, because this alternative would have begun the AMI episode prior to the initial hospital admission, we would have needed to establish different policies for identifying the beneficiaries who initiated these episodes and defined the timeframe and services that would have been included in the AMI or CABG episode prior to admission to the o-i transfer hospital.

We did not propose this alternative because we believed the policies necessary to begin the AMI or CABG episode at the first treating hospital when an inpatient hospitalization did not occur would be complex, challenging to operationalize, and required assumptions about the relationship of care to the AMI based solely on administrative claims data that were insufficient to ensure we could accurately identify related care. We believed it remained problematic to define the services to be included in AMI or CABG episodes if those services preceded an inpatient hospitalization that would otherwise initiate the AMI or CABG episode. For example, we would need to define the timeframe for beginning an AMI or CABG episode with an emergency department visit for AMI that resulted in a transfer to the o-
The following is a summary of the comments received and our responses.

Comment: A number of commenters expressed support for the proposed AMI model episode initiation and attribution policy that would initiate an AMI episode under the responsibility of an initial treating hospital that is an AMI model participant where the beneficiary is assigned to an AMI MS–DRG or PCI MS–DRG with AMI ICD–CM diagnosis code and the beneficiary is later transferred to another hospital and ultimately discharged from an AMI, PCI, or CABG MS–DRG. One commenter further recommended that CMS consider this policy in the BPCI initiative and future episode payment models that are under development. Several commenters stressed the importance of beneficiaries receiving rehabilitation services in their home communities to improve adherence to the treatment plan, and acknowledged that CMS’ AMI model transfer attribution proposal would encourage this care pattern. Another commenter pointed out that CMS should differentiate patient-directed presentation with AMI at a hospital emergency department versus emergency medical services-directed delivery to the hospital emergency department. The commenter explained that the usual practice in the care of STEMI identified in the field by emergency medical services would be to transport the beneficiary to a hospital with appropriate capacity to avoid any need for transfer that could delay treatment and impair outcomes. The commenter added that the trend nationally for emergency medical services delivery of patients with an AMI is for the patient to be taken to a facility that is capable of managing that patient rather than taking them to the closest hospital. Thus, the commenter believes the transfer issues should be only applicable to the minority of beneficiaries who present to the emergency department under their own power.

Other commenters who supported the proposed AMI model transfer episode initiation and attribution policy, including the proposal to cancel
episodes that contain a chained anchor hospitalization with a final discharge MS–DRG that is not an AMI, PCI, or CABG MS–DRG, however expressed concern that the proposal for a price MS–DRG payment adjustment does not go far enough to provide a level playing field for AMI episodes involving a chained anchor hospitalization. One of these commenters presented analysis showing that while only a minority of episodes involving a chained anchor hospitalization resulted in a final discharge MS–DRG other than an AMI, PCI, or CABG MS–DRG, the episode costs were very high in those cases because they were atypical. The commenter concluded that CMS’ proposal to cancel these episodes was appropriate.

Additional analysis by the commenter demonstrated that hospitals that transfer AMI beneficiaries frequently are more likely to be smaller community hospitals with much higher episode spending, who would be penalized by the lack of a more robust transfer-adjustment method just because they do not have the most sophisticated cardiac care available. Several commenters stated that these hospitals often have no choice but to transfer their most complicated patients to larger, tertiary hospitals so that the patients can receive the most appropriate cardiac care and that hospitals should not be penalized for doing so. These commenters requested that CMS exclude the IPPS amount paid to the initial admitting hospital when calculating quality-adjusted target prices and actual episode spending to put these hospitals on a more level playing field with larger referral hospitals that offer comprehensive cardiac care in order to encourage the best provision of care to beneficiaries in AMI episodes. Additionally, the commenters recommended that CMS provide additional explanation of the framework for chained anchor hospitalizations in the final rule and include illustrative examples about how the methodology works.

One commenter expressed support for the second of the two alternatives considered by CMS for attributing AMI episodes in inpatient-to-inpatient transfer scenarios that would begin an AMI episode and assign episode responsibility to the hospital in the chained anchor hospitalization discharging the beneficiary under the most resource-intensive MS–DRG according to a hierarchy of CABG, PCI, and AMI MS–DRGs in descending order of inpatient MS–DRG resource-intensity. The commenter reasoned that in comparison with CMS’ proposal, this approach would provide a more direct association in the transfer policy between hospital episode responsibility and the hospital providing the highest level of care for the beneficiary with AMI during the chained anchor hospitalization. The commenter stated that if a hospital admits a beneficiary but then has to transfer the beneficiary to another hospital for more advanced cardiac care that the initial treating hospital cannot provide, it does not seem reasonable to make that initial hospital responsible for all follow up care post-discharge for that condition.

The majority of commenters opposed CMS’ proposed AMI model transfer episode initiation and attribution policy, with the majority addressing the inpatient-to-inpatient transfer scenario where the initial treating hospital and the i-i transfer hospital are both AMI and CABG model participants. In general, the commenters believe the inpatient-to-inpatient transfer proposal was too complex and would be unmanageable for EPM participants. They stated that while CMS partially predicated its AMI model transfer episode initiation and attribution proposal on public input on the CJR model that beneficiaries often prefer to receive follow up care after hospital discharge in their community, the AMI and CABG models are sufficiently different from the CJR model that this perspective may not apply to the proposed models. In the AMI and CABG models, the commenters emphasized that beneficiaries would be more likely to require emergent care and, therefore, have less of an opportunity to seek care from a facility located outside of their region. Thus, the commenters believe that many AMI model beneficiaries experiencing a chained anchor hospitalization during their initial hospital treatment for AMI would remain in the same region as the i-i transfer hospital for post-acute care services, in contrast to primarily elective LEJR under the CJR model where procedures may be planned in advance and involve farther travel for the surgery. Thus, the commenters reasoned that the initial treating hospital and the i-i transfer hospital caring for a beneficiary in an AMI episode would be likely to be in the same region as one another and the beneficiary’s home community. Thus, they concluded that CMS’ interest in AMI model attribution policy for inpatient-to-inpatient transfers that could support beneficiary follow up in their original region would be more justly and fairly minded than the CMS’ proposal.

Additional analysis by the commenter demonstrated that hospitals that transfer AMI beneficiaries frequently are more likely to be smaller community hospitals with much higher episode spending, who would be penalized by the lack of a more robust transfer-adjustment method just because they do not have the most sophisticated cardiac care available. Several commenters stated that these hospitals often have no choice but to transfer their most complicated patients to larger, tertiary hospitals so that the patients can receive the most appropriate cardiac care and that hospitals should not be penalized for doing so. These commenters requested that CMS exclude the IPPS amount paid to the initial admitting hospital when calculating quality-adjusted target prices and actual episode spending to put these hospitals on a more level playing field with larger referral hospitals that offer comprehensive cardiac care in order to encourage the best provision of care to beneficiaries in AMI episodes. Additionally, the commenters recommended that CMS provide additional explanation of the framework for chained anchor hospitalizations in the final rule and include illustrative examples about how the methodology works.

One commenter expressed support for the second of the two alternatives considered by CMS for attributing AMI episodes in inpatient-to-inpatient transfer scenarios that would begin an AMI episode and assign episode responsibility to the hospital in the chained anchor hospitalization discharging the beneficiary under the most resource-intensive MS–DRG according to a hierarchy of CABG, PCI, and AMI MS–DRGs in descending order of inpatient MS–DRG resource-intensity. The commenter reasoned that in comparison with CMS’ proposal, this approach would provide a more direct association in the transfer policy between hospital episode responsibility and the hospital providing the highest level of care for the beneficiary with AMI during the chained anchor hospitalization. The commenter stated that if a hospital admits a beneficiary but then has to transfer the beneficiary to another hospital for more advanced cardiac care that the initial treating hospital cannot provide, it does not seem reasonable to make that initial hospital responsible for all follow up care post-discharge for that condition.

The majority of commenters opposed CMS’ proposed AMI model transfer episode initiation and attribution policy, with the majority addressing the inpatient-to-inpatient transfer scenario where the initial treating hospital and the i-i transfer hospital are both AMI and CABG model participants. In general, the commenters believe the inpatient-to-inpatient transfer proposal was too complex and would be unmanageable for EPM participants. They stated that while CMS partially predicated its AMI model transfer episode initiation and attribution proposal on public input on the CJR model that beneficiaries often prefer to receive follow up care after hospital discharge in their community, the AMI and CABG models are sufficiently different from the CJR model that this perspective may not apply to the proposed models. In the AMI and CABG models, the commenters emphasized that beneficiaries would be more likely to require emergent care and, therefore, have less of an opportunity to seek care from a facility located outside of their region. Thus, the commenters believe that many AMI model beneficiaries experiencing a chained anchor hospitalization during their initial hospital treatment for AMI would remain in the same region as the i-i transfer hospital for post-acute care services, in contrast to primarily elective LEJR under the CJR model where procedures may be planned in advance and involve farther travel for the surgery. Thus, the commenters reasoned that the initial treating hospital and the i-i transfer hospital caring for a beneficiary in an AMI episode would be likely to be in the same region as one another and the beneficiary’s home community. Thus, they concluded that CMS’ interest in AMI model attribution policy for inpatient-to-inpatient transfers that could support beneficiary follow up in their original region would be more justly and fairly minded than the CMS’ proposal.

The commenters claimed that it is the
discharging i-i transfer hospital that would develop the discharge plan; make recommendations on the type of post-acute care services necessary and make arrangements with specific post-acute care providers; schedule follow up appointments; educate the beneficiary and caregivers about the beneficiary’s clinical condition; and communicate post-discharge instructions.

In addition, several commenters pointed out that the initial treating hospital may not know the beneficiary’s final MS-DRG until days after discharge from the i-i transfer hospital. They stated that this time lag makes it problematic to assign episode responsibility to the initial treating hospital because that hospital would not be able to identify and intervene with AMI model beneficiaries prior to their discharge from acute care, a care redesign strategy that the commenters believe is important for AMI model success. Some commenters stated that CMS failed to appreciate the complexity of accurate beneficiary identification and its impact on facilitating effective post-acute care services in the proposed AMI model transfer policy.

A number of commenters recognized CMS’ intent to link transferring hospitals with larger, tertiary hospitals through the AMI model transfer episode initiation and attribution proposal in order to strengthen the quality and efficiency of health care within communities. The commenters agreed that there needs to be increased communication and collaboration among these hospitals in order to achieve better patient outcomes, yet they also believe that ongoing challenges with the timely communication of beneficiary information among providers and the current competitive healthcare landscape are not conducive to this type of collaboration.

In general, many commenters expressed concern that the complexity of the AMI model’s proposed transfer attribution policies and the potential resulting confusion about beneficiary notification and hospital episode responsibility in an environment that lacks established electronic tracking programs that can communicate among many hospitals in different systems. Several commenters believe the proposed policy could focus an AMI model participant’s limited resources on administrative issues that do not actually improve care and reduce episode costs for AMI beneficiaries. They stated that hospital time and resources would be better spent improving care, developing sharing arrangements among providers, and tracking beneficiary outcomes. The commenters emphasized that this is especially true since transfers are expected to occur in a small minority of AMI episodes.

The majority of commenters also expressed various concerns about potential beneficiary harm due to AMI model transfer policies under an EPM. Whether those proposed or recommended by some of the commenters, that would establish new financial incentives for hospitals around transfers for beneficiaries with AMI in the absence of clear best transfer practices for hospitals with varying levels of cardiac care capacity. The commenters claimed that CMS’ proposal did not include sufficient protections against EPM participants engaging in adverse patient selection to improve quality and cost performance in each type of transfer scenario (no transfer, outpatient-to-inpatient, and inpatient-to-inpatient). The commenters believe that inappropriate transfers and cost-shifting among competitors in a geographic market would experience under the AMI model, and they recommended to CMS to provide robust patient protections and transfer methodologies in the final rule.

Most commenters expressed support for CMS’ proposal to initiate AMI episodes upon admission to the o-i transfer hospital in an outpatient-to-inpatient transfer scenario, as well as attribute responsibility for the episode to the o-i transfer hospital. The commenters agreed with CMS that this approach would not require potentially flawed assumptions about the relatedness of services preceding the hospital admission and, therefore, would result in clearly defined AMI episodes. However, several commenters recommended CMS to address the operational issues identified in the proposed rule (81 FR 50839) related to outpatient-to-inpatient transfers that would not allow CMS to begin AMI episodes when an initial treating hospital provides only outpatient emergency care prior to transfer to an o-i transfer hospital. The commenters believe it would be important to mitigate these concerns in order to avoid the potential unintended consequences of unnecessary and medically inappropriate outpatient-to-inpatient beneficiary transfers.

Due to the complexity of transfer scenarios and the lack of clarity about the best approaches to caring for beneficiaries with AMI under an EPM in communities with varying cardiac care capacity that operate among hospitals in the region, several commenters further recommended that CMS gather clinical expert advice through an advisory panel or other dialogue with stakeholders to further explore the AMI model transfer policy consequences on hospitals’ willingness to transfer patients. Finally, many commenters recommended CMS to provide clarification and ongoing guidance and support to AMI model participants related to transfers and episode attribution and monitor for any unintended consequences of the final AMI model transfer episode initiation and attribution policies.

Response: We appreciate the variety of perspectives of the commenters on the proposed AMI model transfer episode initiation and attribution policies. We agree with the commenters that this area of policy is both complex and significant under the AMI model, given the variety of care patterns experienced by beneficiaries with AMI and the variation in cardiac care capacity among hospitals. The transfer policy has substantial implications for AMI and CABC model participants with varying cardiac care capacity, beneficiaries who experience transfers during emergency treatment of AMI, and CMS due to the potential for the AMI model transfer policy to result in changes in transfer patterns that do not improve the quality or efficiency of care for beneficiaries with AMI, both those beneficiaries included the model and those whose care is not included in the AMI model. We recognized the importance of considering the potential advantages and disadvantages of various approaches to AMI model transfer episode initiation and attribution for beneficiaries and hospitals in our extensive discussion in the proposed rule (81 FR 50838 through 50840) about alternatives considered for outpatient-to-inpatient and inpatient-to-inpatient transfer scenarios. We also continue to believe that collaboration among community hospitals and referral hospitals with more advanced cardiac care capacity is important to improving the quality and efficiency of health care in communities, especially for beneficiaries with conditions requiring emergency evaluation and treatment such as AMI.

We considered the analysis provided by some commenters and the commenters’ different perspectives on the proposed AMI model transfer episode initiation and attribution proposal and the alternatives considered, including the potential for unintended consequences under any transfer policy we would establish for the AMI model. At this point in time, we appreciate that there are important advantages and disadvantages to each of the potential AMI model transfer
episode initiation and attribution policies that require ongoing consideration over the longer-term during AMI model implementation in order to optimize the interests of beneficiaries, hospitals, and CMS, while limiting the risk of unintended consequences that could create problems for beneficiaries, hospitals, and CMS. For example, several commenters stressed that changes to current AMI transfer patterns under transfer policies of the AMI model that encourage the initial treating hospital to either more quickly transfer patients who present to the emergency department with symptoms of AMI or not transfer AMI patients at all to retain control of the episode and its associated cost could be clinically appropriate but also could reflect premature transfers that were not medically necessary or a care pattern that poses a risk to beneficiaries’ health. Thus, while we are finalizing a policy now to address transfer situations under the AMI model to allow for implementation of the model, we are also coupling this policy with heightened monitoring and evaluation of transfers of Medicare AMI beneficiaries to and from AMI and CABG model participants and may propose refinements to the policy or payment adjustments in the future depending on our findings.

With respect to the policy for outpatient-to-inpatient transfers of beneficiaries with AMI, we proposed to begin AMI and CABG episodes upon the first inpatient admission to a treating hospital that is an AMI or CABG model participant, rather than in the outpatient department of the initial treating hospital that did not admit the beneficiary. In the proposed rule (81 FR 50839), we also considered an overarching alternative policy that could begin every AMI and CABG episode at the first AMI or CABG model participant at which the beneficiary was either admitted for an AMI MS–DRG, PCI MS–DRG with an AMI ICD–CM diagnosis code, or CABG MS–DRG or presented to the emergency department for initial AMI care (including observation status) before being transferred to an o-i transfer hospital. However, we are not beginning AMI or CABG episodes with care furnished by an AMI or CABG model participant when the beneficiary is not admitted as an inpatient to that hospital. Given the commenters’ concerns about our proposal to begin AMI episodes at the initial treating hospital under the circumstances of an inpatient-to-inpatient transfer, we believe that beginning AMI episodes at a hospital furnishing only emergency AMI care could interfere with the hospital’s focus on emergency stabilization and transfer of the beneficiary. It could also place an undue burden on the initial treating hospital for long-term responsibility for the AMI episode in which the initial treating hospital had a role that was limited to stabilization prior to transfer for AMI treatment. We would not expect the initial treating hospital in these circumstances to be substantially involved in the beneficiary’s AMI treatment after the initial emergency care. The commenters confirmed our concerns, as discussed in the proposed rule (81 FR 50839), that this approach would be complex, challenging to operationalize, and require assumptions about the relationship of care to the AMI based solely on administrative claims data that would be insufficient to ensure we could accurately identify related care.

Thus, we have concluded that it remains problematic to define the services to be included in AMI episodes if those services precede an inpatient hospitalization that would otherwise initiate the AMI or CABG episode. As we discuss in section III.C.4.a.(1) of this final rule, we are not beginning an EPM episode prior to the anchor hospitalization because of the clinical variability leading up to all EPM episodes and the challenge of identifying unrelated services prior to the inpatient hospitalization. Thus, we will not make an exception for transfers from the emergency department or observation status of the initial treating AMI or CABG model participant when the beneficiary with AMI is not admitted to that hospital. As discussed in sections III.C.4. through 6. and IV. of this final rule, we will be engaged in monitoring and evaluation specifically as they relate to the risks associated with this policy of adverse patient selections that could result in increased transfers of complex beneficiaries with AMI to other hospitals so that an AMI model participant can avoid high-cost episodes. Should we observe concerning outpatient-to-inpatient transfer patterns, we may engage in future rulemaking to refine the AMI episode initiation policy or to make a payment adjustment for this scenario.

With respect to the proposed policy for inpatient-to-inpatient transfers, we appreciate the detailed comments on the proposal as well as on the two alternatives considered in the proposed rule (81 FR 50838). In response to the commenters who contended that the proposal to assign AMI episode responsibility to the initial treating hospital in an inpatient-to-inpatient transfer scenario could increase premature transfers, we are unclear that this would be the case since we also proposed not to initiate AMI episodes based only on care in the outpatient department. Thus, we believe it would be more likely expected that AMI model participants pursuing early transfer would transfer the beneficiary prior to admission to the hospital. However, we are concerned that the proposal to assign AMI episode responsibility to the initial treating hospital could lead to beneficiaries not being transferred in circumstances where they need a higher level of cardiac care, as a number of commenters claimed.

We appreciate the support of the commenter for the second alternative we discussed in the proposed rule (81 FR 50838) for inpatient-to-inpatient transfer, which would assign AMI or CABG episode responsibility to the hospital in the chained anchor hospitalization discharging the beneficiary under the most resource-intensive MS–DRG according to a hierarchy of CABG, PCI, and AMI MS–DRGs in descending order of inpatient hospital resource-intensity. While we continue to believe that this alternative could have merit by placing AMI episode responsibility on the hospital that furnished the most intensive treatment to the AMI beneficiary during the chained anchor hospitalization, we are not adopting this policy due to concerns about the episode attribution complexity that it would present. Many commenters pointed out significant challenges for AMI model participants that would arise under our proposal to assign AMI episode responsibility consistently to the initial treating hospital that admitted the beneficiary regarding the ability of AMI model participants to meet the requirements of the model, such as timely beneficiary notification. They also raised concerns about the timeliness of the responsible hospital’s identification of model beneficiaries especially if the hospital is not the one discharging the beneficiary from acute care and stated that a delay in beneficiary identification could seriously impede the hospital’s ability to intervene with AMI and CABG model beneficiaries to begin coordinating care prior to hospital discharge. Thus, we believe that an inpatient-to-inpatient transfer policy that assigns AMI episode responsibility in some cases to the initial treating hospital and in other cases to the i-o transfer hospital depending on the different MS–DRGs during the chained anchor hospitalization would be even more
complex and could lead to even greater hospital confusion than our proposal.

We also considered the potential for making a payment adjustment while holding the initial treating hospital accountable for the AMI episode as recommended by a number of commenters, in order to put hospitals with lesser cardiac care capacity that more frequently need to transfer AMI beneficiaries on a more level playing field with hospitals that can themselves furnish comprehensive cardiac care. While this recommendation from the commenters would be operationally feasible and address some of the concerns raised by commenters about the transfer incentives inherent in our proposal, while maintaining the responsible hospital for the AMI episode in an inpatient-to-inpatient transfer scenario as the initial treating hospital that would be most likely to be in the beneficiary’s community, this recommendation would add even greater complexity to the AMI model pricing methodology, already an area of significant concern to the commenters. This refinement also would not address the challenges for the initial treating hospital raised by other commenters related to timely beneficiary identification and notification.

Therefore, we are not adopting this recommendation for the AMI model. However, we note that because we are changing the responsible hospital for AMI and CABG episodes that involve inpatient-to-inpatient transfers in our final policy as discussed later in this section, we believe the commenters’ interest in creating a more level playing field among AMI model participants that transfer beneficiaries to variable degrees is addressed through that final policy.

Most commenters favored the first alternative we discussed in the proposed rule (81 FR 50838) for AMI model transfer episode initiation and attribution in the inpatient-to-inpatient transfer scenario. Specifically, this policy would cancel the AMI episode initiated at the initial treating hospital that is an AMI model participant when any inpatient-to-inpatient transfer occurs. The beneficiary would initiate a new AMI or CABG episode at the i-i transfer hospital if that hospital is an AMI or CABG model participant and the MS–DRG for that hospitalization is an AMI MS–DRG, PCI MS–DRG with AMI ICD–CM diagnosis code, or CABG MS–DRG. If the i-i transfer hospital is not an AMI or CABG model participant, then the beneficiary would not be included in any AMI or CABG episode regardless of the MS–DRG assigned. This approach would place financial responsibility for the AMI or CABG episode on the i-i transfer hospital if the beneficiary went on to be discharged from acute care at that hospital. Episode initiation and attribution in this way addresses the concerns of commenters about establishing a level playing field for AMI model participants that more frequently transfer beneficiaries for AMI treatment because it would not hold those hospitals accountable for AMI episodes with inpatient-to-inpatient transfers that are, on average, higher-cost than AMI episodes without transfers.

This approach also addresses the commenters’ significant concerns about the potential burden our proposal would have placed on the initial treating hospital to track beneficiaries transferred to the i-i transfer hospital and determine if they were discharged from the i-i transfer hospital under an MS–DRG that would assign the beneficiary to an AMI episode for which the initial treating hospital would be responsible. The resources necessary for the initial treating hospital to coordinate with the i-i transfer hospital that was actually discharging the beneficiary around the discharge and follow up plan could be substantial, given that the i-i transfer hospital would hold the discharge planning responsibility for that beneficiary. It is not clear that the opportunity for the initial treating hospital to enter into financial arrangements to share upside and/or downside risk with the i-i transfer hospital as discussed in section III.I. of this final rule would have been sufficient to incentivize the degree of timely collaboration and coordination by the i-i transfer hospital that would be needed by the responsible initial treating hospital.

Therefore, we believe the most prudent final AMI model transfer episode initiation and attribution policy at this time is to cancel the AMI episode initiated at the initial treating hospital whenever an inpatient-to-inpatient transfer occurs, and base any new AMI or CABG episode initiation on the MS–DRG for the i-i transfer hospital admission if the i-i transfer hospital is an AMI or CABG model participant. This attribution approach is simple and unambiguous. It eliminates the need for us to adopt the concept of chained anchor hospitalization altogether, as well as the complex policy that would have established a price MS–DRG that could be different from the MS–DRG that was assigned to the hospitalization that initiates the AMI episodes as discussed in section III.D.4.b.(2)(a) of this final rule. We do not believe there is a need to make any additional pricing adjustments for inpatient-to-inpatient transfer scenarios that include more than one IPPS payment for continuous acute care services in the beginning of AMI episodes in order to ensure a level playing field for hospitals that more commonly transfer beneficiaries for AMI treatment. By making the hospital ultimately discharging the beneficiary from acute care responsible for the AMI or CABG episode and beginning the episode at that hospital, we reduce the hospital’s uncertainty as much as possible around identifying beneficiaries in the model. In the inpatient-to-inpatient transfer scenario, the uncertainty about identification of beneficiaries who were transferred is no different than if all the care for the beneficiary occurred at a single hospital. We also do not hold a hospital financially responsible for inpatient or outpatient hospital and Part B services that precede the beneficiary’s admission to the responsible hospital, services the responsible hospital would be unable to influence according to the commenters.

While we are finalizing this AMI model transfer episode initiation and attribution policy at this time for the AMI model that differs from our proposal for the reasons discussed, we continue to have some concerns about the care patterns that could be perpetuated and changes that could be incentivized by the policy. First, we recognize that this policy does not encourage any efficiencies in the transfer patterns of beneficiaries with AMI, while we know that episodes with include inpatient-to-inpatient transfers in the beginning of AMI care are costly for the Medicare program. A recent analysis by DataGen of 90-day episodes of care for AMI found that nationally, Medicare payments (that is, costs to the program) for AMI acute care transfers (not just those receiving PCI) were second only to the costs for patients going to long-term care.71 This analysis is consistent with information provided by the commenters that AMI episodes that include inpatient-to-inpatient transfers are significantly more costly than AMI episodes that do not include such transfers. The analysis identified three scenarios for AMI care as follows:

- In hospitals that are licensed to perform PCIs, a patient who is admitted with AMI and needs a PCI receives his or her full treatment at that hospital. This results in one MS–DRG assignment and payment for the PCI.

In hospitals not licensed to perform PCI, a patient admitted with an AMI who needs a PCI is assigned an AMI MS–DRG at the initial treating hospital and then transferred to an i-i transfer hospital for the PCI. This results in two MS–DRG payments, one for the AMI care and one for the PCI. In this case, the inpatient acute care costs for the initial AMI treatment are substantially higher. The analysis found that the average length-of-stay at the initial treating hospital was 3 days, but it was not possible to determine from administrative claims whether that relatively long-length-of-stay was due to patient stabilization or the need to wait for the PCI to be scheduled at the i-i transfer hospital.

In hospitals that are licensed to perform PCI, a patient who is admitted with an AMI and needs a PCI receives some care at the initial treating hospital and then is transferred to an i-i transfer hospital for the PCI. This also results in two MS–DRG payments and substantially higher inpatient acute care costs for the initial AMI treatment.

In summary, medically unnecessary or inappropriate inpatient-to-inpatient transfers lead to inefficiencies in initial AMI treatment, yet both the second and third scenarios may provide opportunities for care redesign. However, the final AMI model transfer episode initiation and attribution policy is not able to test such opportunities at this time.

In addition to not creating incentives for transfer efficiency, the final AMI model policy may create additional incentives for an AMI model participant to transfer complex beneficiaries or beneficiaries with potentially avoidable complications resulting from AMI treatment who would be expected to result in high-cost episodes to i-i transfer hospitals. Transfers could occur to i-i transfer hospitals that are also participants in the AMI model where the costs of care at the initial treating hospital would not be included in the AMI episode initiated at the i-i transfer hospital or to hospitals outside the MSA that would not be participants in the AMI model. Such transfer patterns could ultimately result in either complex beneficiaries or those with complications resulting from the initial AMI treatment disproportionately not being the financial responsibility of the initial AMI model treating hospital or not being included in the AMI model at all.

Given these concerns about the potential missed opportunities and inefficiencies due to the final AMI model transfer episode initiation and attribution policy, we will be examining AMI transfers to and from AMI model participants very closely through our monitoring and evaluation activities as discussed in sections III.G.4. through 6. and IV. of this final rule, both of beneficiaries that ultimately are included in AMI episodes and those that are not. We may revisit the transfer policy or propose payment adjustments through future rulemaking if we see reduced AMI transfer efficiency; opportunities to increase transfer efficiency; disproportionate transfers of complex AMI beneficiaries suggesting that AMI model participants are engaging in adverse patient selection; high rates of transfers of beneficiaries with potentially avoidable complications of AMI treatment at the initial treating hospital; inordinate loss of beneficiaries from the AMI model due to transfer outside of the MSAs where the AMI and CABG models are being tested; or other patterns of concern.

The final policies for initiation and attribution of AMI and CABG episodes that involve no transfer, outpatient-to-inpatient transfer, or inpatient-to-inpatient transfers at the beginning of AMI care are summarized in Table 8.

**Comment:** One commenter requested that CMS establish a transfer attribution policy for the SHFFT model as well, because beneficiaries with SHFFT are occasionally transferred from the initial treating hospital to another hospital for SHFFT surgery. The commenter recommended that the SHFFT episode be attributed to the transfer hospital, that is, the hospital receiving the beneficiary upon transfer from the initial treating hospital.

**Response:** We appreciate the commenter’s suggestion. However, we do not believe it is necessary to establish a specific transfer policy for the SHFFT model. A SHFFT episode would only be initiated in the hospital where the beneficiary had SHFFT surgery and where a SHFFT model MS–DRG is first assigned to the beneficiary’s hospitalization. The initial treating hospital would only assign a SHFFT model MS–DRG to the beneficiary if the beneficiary received SHFFT surgery at that hospital and the transfer hospital could not assign a SHFFT model MS–DRG unless the beneficiary had surgery on the other hip, an unlikely scenario. Therefore, under the circumstances described by the commenter, without any special policies beyond the standard rules of SHFFT episode initiation, the SHFFT episode would be initiated at the transfer hospital, which would be responsible for the SHFFT episode. If the SHFFT surgery was performed at the initial treating hospital where an episode was initiated and then the beneficiary was transferred to another hospital for additional care, the SHFFT episode would continue under the responsibility of the initial treating hospital. We note that we would apply the SHFFT model exclusion list to the transfer hospital MS–DRG to determine whether those inpatient services were included in the SHFFT episode.

**Final Decision:** After consideration of the public comments received, we are not finalizing our proposal to attribute AMI episodes to the initial treating hospital when an inpatient-to-inpatient transfer occurs during the anchor hospitalization. Instead, we are adopting a final policy to cancel the AMI episode initiated at the initial treating hospital when an inpatient-to-inpatient transfer occurs, and base any AMI or CABG episode initiation on the MS–DRG for the final i-i transfer hospital admission if the i-i transfer hospital is an AMI or CABG model participant. If the i-i transfer hospital is not an AMI or CABG model participant, the beneficiary’s care is not included in any AMI or CABG model.

The proposal for AMI episode attribution in circumstances that involve inpatient-to-inpatient transfers of beneficiaries with AMI was included in proposed § 512.240(a)(2). We no longer need a specific attribution provision for the AMI model because attribution of AMI and CABG episodes occurs in the usual manner to the AMI or CABG model participant that discharges the beneficiary under an AMI MS–DRG, PCI MS–DRG with AMI ICD–CM diagnosis code, or CABG MS–DRGs that initiates the AMI or CABG episode at that hospital. Therefore, we are renumbering proposed § 512.240(a)(3) (Cancellation of an AMI model episode) to § 512.240(a)(2), and revising proposed § 512.240(a)(3)(ii) which has been renumbered § 512.240(a)(2)(ii) to specify that an AMI model episode is canceled if the beneficiary is transferred during the anchor hospitalization to another hospital for inpatient hospitalization.

The final policies for initiation and attribution of AMI and CABG episodes that involve no transfer, outpatient-to-inpatient transfers, or inpatient transfers at the beginning of AMI care are summarized in Table 8.
TABLE 8—FINAL INITIATION AND ATTRIBUTION OF AMI AND CABG EPISODES THAT INVOLVE NO TRANSFER, OR OUTPATIENT-TO-INPATIENT OR INPATIENT-TO-INPATIENT TRANSFERS AT THE BEGINNING OF AMI CARE

b. Middle of EPM Episodes

Similar to the CJR model, we proposed that once an EPM episode begins, it would continue until the end of the episode as described in the following section, unless certain circumstances arise during the episode (80 FR 73318). When an EPM episode was canceled, we proposed that the services furnished to beneficiaries prior to and following the EPM episode cancellation would continue to be paid by Medicare, but would not be actual EPM episode spending calculation that would be reconciled against the EPM quality-adjusted target price.

Specifically, we proposed that the following circumstances occurring during an EPM episode would cancel the EPM episode:

- The beneficiary dies during the anchor hospitalization.
- The beneficiary initiates any BPCI model episode.
- The beneficiary ceases to meet any of the general beneficiary inclusion criteria described in section III.C.4.a.(1) of the proposed rule (81 FR 50834), except the three criteria regarding inclusion in other episode payment model episodes.
- The beneficiary dies during the anchor hospitalization.
- The beneficiary initiates any BPCI model episode.

For purposes of cancellation of EPM episodes for beneficiary overlap with other episode payment models, we proposed that if a beneficiary dies during an EPM episode would initiate any BPCI model episode, the EPM episode would be canceled. We refer to section III.D.6.c.(1) of the proposed rule (81 FR 50868) for further discussion of our proposals addressing potential overlap of beneficiaries in the EPMs with the BPCI initiative. We also refer to section III.D.6.c.(3) of the proposed rule (81 FR 50869 through 50871) for discussion of our proposal to cancel EPM episodes for beneficiaries who become assigned to specified ACOs during EPM episodes. Our proposal to only cancel the EPM episode if a beneficiary dies during the anchor hospitalization differs from the final CJR model policy that cancels an episode if a beneficiary dies any time during the episode (80 FR 73318). As discussed in the CJR Final Rule for LEJR episodes, we believe that it also would be appropriate to cancel an episode if a beneficiary dies during the anchor hospitalization as there would be limited incentives for efficiency that could be expected during the anchor hospitalization itself (80 FR 73318). We agreed with commenters on the CJR model proposed rule that we should cancel CJR episodes for death any time during those episodes, because beneficiary deaths following LEJR would be uncommon and expected to vary unpredictably, leading to extremely high or low episode spending that was not typical for a LEJR episode. A recent analysis that pooled results from 32 studies showed the incidence of mortality during the first 30 and 90 days following hip replacement to be 0.30 percent and 0.65 percent, respectively, confirming our expectation of low mortality rates during LEJR episodes.72

In contrast, the 30-day national CABG and AMI mortality rates as displayed on Hospital Compare are significantly higher at approximately 3 percent and 14 percent respectively. Several CMS programs use 30-day mortality measures for CABG and AMI as measures of hospital quality, and these measures were proposed for use in the pay-for-performance methodology for the CABG and AMI models as discussed in section III.E.3.f. of the proposed rule (81 FR 50880). Similarly, a 2009 study shows a 30-day hip fracture mortality rate for Medicare beneficiaries of approximately 5 percent, significantly higher than the mortality rate following LEJR procedures.

Thus, we would expect that deaths during SHFFT episodes would be more common than in CJR episodes. Because beneficiaries in AMI, CABG, and SHFFT episodes would be at significant risk of death during these episodes that we proposed to extend 90 days post-hospital discharge, we considered mortality to be a harmful beneficiary outcome that should be targeted for improvement through care redesign incentivized by the EPMs for these clinical conditions. Therefore, in the proposed rule (81 FR 50841) we discussed our belief that it would not be appropriate to exclude beneficiaries from AMI, CABG, or SHFFT episodes who die any time during the episode like we do in the CJR model. Instead, we proposed to maintain beneficiary episodes in the EPMs even if death occurred during the episodes, meaning we would calculate actual EPM episode spending when beneficiaries die following discharge from the anchor hospitalization but within the 90-day post-hospital discharge episode duration and reconcile it against the quality-adjusted target price. We believed this proposal would encourage EPM participants to actively manage EPM beneficiaries to reduce their risk of death, especially as death would often be preceded by expensive care for emergencies and complications.

Because of the higher mortality rates for all of the EPM episodes than for LEJR episodes in the CJR model, we did not consider mortality following hospital discharge to be atypical and, therefore, we proposed to cancel EPM episodes only for death during the anchor hospitalization.

We further proposed that the following circumstances also would cancel an AMI episode in the circumstances of a chained anchor hospitalization when the beneficiary was discharged from acute care under an MS–DRG from the final transfer hospital in the chained anchor hospitalization that could not, itself, initiate an AMI or CABG episode, regardless of whether the final transfer hospital was an AMI or CABG model participant (that is, the episode would be canceled if the final transfer hospital MS–DRG was any MS–DRG other than an AMI MS–DRG, PCI MS–DRG, or CABG MS–DRG).

While we proposed to begin an AMI episode with the first hospitalization in the chained anchor hospitalization that would initiate an episode as discussed in section III.C.4.a.5(5) of the proposed rule (81 FR 50836 through 50840), we also proposed to cancel AMI episodes under the circumstances when a beneficiary in an AMI episode was discharged from acute care under an MS–DRG from the final i-i transfer hospital in the chained anchor hospitalization that was not an AMI, PCI, or CABG MS–DRG that could initiate an AMI or CABG episode (that is, the episode would be canceled if the final transfer hospitalization MS–DRG was any MS–DRG other than an AMI, PCI, or CABG MS–DRG). Overall, this proposal treated the hospital that initiated the AMI episode and then transferred the beneficiary most similarly to a hospital that furnished all of the beneficiary’s inpatient care itself, with respect to whether or not the beneficiary’s care was ultimately included as an episode in the AMI model.

Finally, we did not propose to cancel an AMI episode altogether for a CABG readmission during the 90-day post-hospital discharge period or cancel the AMI episode and initiate a CABG episode because planned CABG readmission following an anchor hospitalization that initiates an AMI episode may be an appropriate clinical pathway for certain beneficiaries. Instead, we proposed to provide an adjusted AMI model-episode benchmark price that includes a CABG readmission in such circumstances so as not to financially penalize participating hospitals for relatively uncommon, costly, clinically appropriate care patterns for beneficiaries in AMI episodes. We refer to section III.D.4.b.2(c) of the proposed rule (81 FR 508520 for discussion of the adjusted AMI model-episode benchmark price that would apply in the case of CABG readmission during an AMI episode.

The conclusions of EPM episodes were included in proposed §§ 512.240(a)(3), (b)(2), and (c)(2). We sought comment on our proposals for cancellation of EPM episodes.

The following is a summary of the comments received and our responses.

Comment: With the exception of the proposal for cancellation of EPM episodes for death only during the anchor hospitalization, many commenters expressed support for the other proposed EPM episode cancellation policies, especially the proposal to cancel EPM episodes in the circumstances of a chained anchor hospitalization when the beneficiary is discharged from acute care under an MS–DRG from the final transfer hospital in the chained anchor hospitalization that could not, itself, initiate an AMI or CABG episode. The commenters pointed out that when a transfer results in discharge from the final hospital in the chained anchor hospitalization under an MS–DRG that could not initiate an AMI or CABG episode, those episodes are disproportionately likely to reflect high-cost episodes that would not be conducive to care redesign due to beneficiary complexity and the need for atypical beneficiary care. Several commenters encouraged CMS to monitor cancellation circumstances because EPM participants could engage in gaming by discharging a dying patient from the hospital to garner a low-cost episode or encouraging beneficiaries to enroll in a Medicare Advantage plan.

A few commenters requested that CMS cancel EPM episodes when a beneficiary has an excluded readmission because the Part A and Part B services furnished following that readmission would be related to the clinical condition that was the basis for the readmission, and not the condition that was the focus of the EPM.

Response: We appreciate the support for our proposals to cancel an EPM episode when a beneficiary initiates an EPM episode but then fails to meet the general beneficiary care inclusion criteria sometime during the episode, which include enrollment in Medicare Part A and Part B; eligibility for Medicare not on the basis of end-stage renal disease; not enrolled in any managed care plan; not covered under a United Mine Workers of American health plan; have Medicare as their primary payer; and not to an ACO in the Next Generation ACO model or an ACO in a track of the Comprehensive ESRD Care Model incorporating downside risk for financial losses. In addition, we appreciate the support for our proposals to cancel an AMI episode when a beneficiary initiates an BPCI episode and when an AMI model beneficiary is discharged from the final hospital in a
chained anchor hospitalization under an MS–DRG that is not an AMI, PCI, or CABG MS–DRG, regardless of whether the final transfer hospital is an AMI or CABG model participant. As discussed in section III.C.4.a.(5) of this final rule, we are finalizing this proposal, but with modification to cancel all AMI episodes that begin at an initial treating hospital when an inpatient-to-inpatient transfer occurs after the AMI episode has begun.

In response to those commenters requesting that we cancel EPM episodes for the occurrence of an excluded readmission, we do not agree that all Part A and Part B services furnished following discharge from the excluded readmission but within the original 90-day post-discharge period for the EPM episode would be unrelated to the clinical condition that is the focus of the EPM. Instead, we believe care during that period would also be furnished for EPM beneficiary management and recovery following the AMI, CABG, or SHFFT hospitalization that initiated the EPM episode. The application of our exclusion list for readmissions and Part B services continues to identify those readmissions and Part B services that would be excluded from the EPM episode definition throughout the full post-discharge episode duration, regardless of the occurrence of an excluded readmission during the EPM episode.

Additionally, as discussed in sections III.G.4. through 6. of this final rule, we plan to monitor EPM participants’ claims data and audit EPM participants’ and their collaborators’ medical records and claims as we deem appropriate and will include canceled EPM episodes in this monitoring to ensure that we do not observe patterns of cancellation suggestive of gaming of the EPM episode cancellation policies.

Comment: Several commenters expressed support for CMS’ proposal to cancel EPM episodes for death during the anchor hospitalization but not for death during the 90-day post-discharge episode period. These commenters agreed that death during the inpatient hospitalization would be atypical and should result in EPM episode cancellation, whereas death within the 90 days following hospital discharge would not be rare for the clinical conditions in the EPMs and could appropriately be targeted for improvement through EPM care redesign. The commenters pointed out that CMS’ proposals to use AMI and CABG mortality rates in the AMI and CABG model pay-for-performance methodology are consistent with the opportunities for EPM care redesign to reduce mortality rates in the 30 days following discharge from the anchor hospitalization for AMI and CABG. A few commenters suggested that CMS should not cancel EPM episodes for any death once they are initiated, even for death during the anchor hospitalization, arguing that such cancellations could skew episode costs and that some in-hospital deaths may be preventable, which the EPMs should provide incentives to prevent.

However, many commenters, including MedPAC, recommended that CMS adopt the same policy as the CJR model and cancel episodes for death at any time during the EPM episode, including during the 90 days post-hospital discharge. Some of the commenters stated that episodes during which a beneficiary dies usually involve atypical courses of care, which may include extensive end-of-life care that hospitals should not be penalized for providing. MedPAC speculated that on the one hand, stays during which the EPM beneficiary dies could be exceptionally high-cost if the patient lives for most of the 90 days and receives end-of-life care. On the other hand, if the EPM beneficiary dies shortly after discharge from the hospital, the patient may receive little post-acute care services or end-of-life care, resulting in unusually low-cost episodes. They concluded that in either case, the episode spending would not be typical and, therefore, these stays should be excluded from calculating the target price and reconciliation payment for the EPM participant. They stated that excluding these episodes would make the spending data less “noisy” and better reflect the typical spending for the EPM participant’s episodes. MedPAC also claimed that CMS has better tools than including in the EPMs beneficiaries who die in the 90 days following hospital discharge that encourage lower mortality rates, such as use of the AMI and CABG mortality rates in the HVBP Program, and care coordination, such as the Medicare Spending Per Beneficiary (MSPB) measure in the HVBP Program and the HRRP.

Some commenters further contended that the proposal to cancel SHFFT episodes only for death during the anchor hospitalization compared to CJR model episode cancellation for beneficiary death any time during a LEJR episode leads to a lack of consistency between hip fracture beneficiaries included in the CJR and SHFFT models. Under CMS’ proposal, hip fracture beneficiaries treated with a SHFFT would be subject to one set of rules, while those treated with a hip replacement would be subject to another set, leading to confusion among the hospitals that would be participants in both the CJR and SHFFT models and inequitable treatment of beneficiaries with the same clinical condition of hip fracture. The commenters also believe that CMS’ rationale for not canceling SHFFT episodes for beneficiaries who die following discharge from the anchor hospitalization due to a higher risk of death for hip fracture patients than patients receiving LEJR ignored the fact that a substantial portion of the hip fracture population is treated with a LEJR. These commenters concluded that this overlap of fracture beneficiaries between SHFFT and LEJR confounded the comparison CMS was trying to make between the higher mortality rate of beneficiaries following SHFFT versus LEJR and led to questions about its validity.

Response: While we appreciate that there may be some opportunities to reduce in-hospital deaths for beneficiaries treated with CABG or SHFFT, we believe that there are limited efficiencies that could be expected during the anchor hospitalization itself. Furthermore, we note that there are three separate MS–DRGs for beneficiaries who die during a hospitalization for AMI (MS–DRG 283 Acute Myocardial Infarction, Expired with MCC; MS–DRG 284 Acute Myocardial Infarction, Expired with CC; MS–DRG 285 Acute Myocardial Infarction, Expired without CC/MCC), and we did not propose that these MS–DRGs would initiate AMI episodes. Thus, there would be no situations when AMI episodes were canceled for death during an anchor hospitalization. Thus, we do not believe it would be appropriate to include beneficiaries who die during the anchor hospitalization in any of the EPMs.

While beneficiary deaths in the 90-days post-discharge from the anchor hospitalization would be expected to be more common in AMI, CABG, and SHFFT episodes than in the LEJR episodes included in the CJR model, we agree with the commenters that the costs of such episodes are likely to vary unpredictably across EPM participants. We also agree with the commenters’ argument about the importance of policy consistency in similar episode payment models for deaths because adopting different cancellation policies for death under the CJR model than we proposed for the EPMs could be confusing for those hospitals that are participants in both the SHFFT and CJR models. While we continue to believe that reducing mortality following discharge from a hospitalization for AMI, CABG, or SHFFT are a harmful
beneficiary outcome that should be targeted for improvement through care redesign incentivized by the EPMs for these clinical conditions, we agree with the commenters that it would be appropriate to cancel all EPM episodes for beneficiary death any time during the episode. We note that our use of 30-day AMI and CABG mortality measures in the pay-for-performance methodologies of the AMI and CABG models, respectively, as discussed in sections III.E.2.b. and c. of this final rule encourages AMI and CABG model participants to actively manage AMI and CABG beneficiaries to reduce this risk of death, to supplement existing incentives in other CMS programs that encourage lower mortality rates.

Comment: Several commenters requested that CMS clarify its administrative policies for identifying and informing EPM participants about beneficiaries whose episodes are initiated and then canceled. The commenters stated that CMS should inform EPM participants in a timely manner when an episode is canceled for any reason, with one commenter specifying at least quarterly notification. The commenters pointed out that an EPM participant’s awareness of episode cancellation is important for several reasons, including the EPM participant’s simultaneous calculation of EPM episode spending; beneficiary notification; provision of beneficiary engagement incentives; and determination of beneficiary eligibility for certain Medicare program rule waivers which is discussed further in section III.J. of this final rule. The commenters claimed that while the EPM participant is in the best position to know when the triggering procedures or services they have been providing will result in a MS–DRG that would initiate an EPM episode, the EPM participant will not always know when a patient meets certain exclusion criteria throughout the course of the EPM episode. The commenters emphasized that it is important for the EPM participant to know if beneficiaries they expect to be part of the EPM episode are going to be part of the EPM episode on a timely basis for cancellations or events that would serve to disqualify the beneficiary from a given hospital’s attribution of an episode. Therefore, the commenters recommended that CMS inform EPM participant and CJR participant hospitals timely when an episode is canceled for any reason.

Response: We appreciate the interest of the commenters in conducting timely analysis of EPM episode spending, as well as ensuring that the requirements of the EPM are met in their treatment of Medicare beneficiaries. Given our plans for providing and updating episode claims data to EPM participants upon request as frequently as quarterly as discussed in section III.K.5 of this final rule, we will explore adding indicators to the beneficiary-identifiable claims data supplied to EPM participants that provide information about circumstances that could result in EPM episode cancellation, such as admission of a beneficiary to a hospital that initiates episodes under a BPCI model for care that could potentially cancel an EPM episode. To the extent adding such indicators to the claims data is feasible, providing this information through the claims data to EPM participants would ensure that EPM participants are informed as frequently as quarterly about beneficiary circumstances that could result in EPM episode cancellation. This information would not be real-time, however, and while our best estimate, would likely be incomplete even based on the best available information at the time. At a minimum, it would always reflect the time lag for the EPM episode claims to be submitted and processed and then reported back to the EPM participant in the updated claims data. We note that the reconciliation, complete information would be provided to EPM participants that have requested beneficiary-level claims data or summary beneficiary claims data reports about those episodes that were ultimately included in the EPM participant’s reconciliation report as discussed in section III.D.5. of this final rule.

We note that we expect EPM participants to be actively managing all of their beneficiaries with conditions characterized by AMI, CABG, or SHFFT based on their care pathways developed for such beneficiaries, regardless of the model or program that may ultimately apply to the beneficiary under the uncommon circumstances of EPM episode cancellation. We also emphasize the importance of strong, ongoing communication among providers in a given geographic area caring for beneficiaries in similar models or programs where provider interests in delivering high quality, efficient health care should align.

Final Decision: After consideration of the public comments received, we are finalizing the proposals in §§512.240(a)(2), (b)(2), and (c)(2) for cancellation of EPM episodes, with modification to also cancel EPM episodes if the beneficiary dies during the episode.

We are canceling EPM episodes for the following circumstances:

- The beneficiary ceases to meet any of the general beneficiary inclusion criteria described in section III.C.4.a.(1) of this final rule, except the three criteria regarding inclusion in other episode payment model episodes.
- The beneficiary dies.
- The beneficiary initiates any BPCI model episode.

Additionally, in the AMI model we are canceling the AMI episode when a beneficiary is transferred during the anchor hospitalization for inpatient hospitalization at another hospital as discussed in section III.C.4.a.(5) of this final rule.

Because we are not finalizing the proposed AMI model transfer episode initiation and attribution policy, as discussed in section III.C.4.a.(5) of this final rule, we are not adopting the policy included in proposed §512.240(a)(2). Therefore, we are renumbering proposed §512.240(a)(3) to §512.240(a)(2) to specify the final AMI episode cancellation policy. This includes renumbering proposed §512.240(a)(3)(iii) to final §512.240(a)(2)(iii) and revising the provision to specify the final inpatient-to-inpatient transfer policy that cancels an AMI model episode if the beneficiary is transferred during the anchor hospitalization for inpatient hospitalization at another hospital.

c. End of EPM Episodes

(1) AMI and CABG Models

We proposed a 90-day post-hospital discharge episode duration for AMI episodes. AMI in general, whether managed medically or with revascularization, has a lengthy recovery period, during which the beneficiary has a higher than average risk of additional cardiac events and other complications, as well as higher utilization of diagnostic testing and related cardiac procedures. AMI frequently serves as a sentinel event that marks the need for a heightened focus on medical management of coronary artery disease and other beneficiary risk factors for future cardiac events, cardiac rehabilitation over multiple months, and beneficiary education and engagement. Given the broad episode definition for AMI episodes that includes beneficiaries receiving both medical and PCI management for an acute event, we do not believe that an episode longer than 90 days would be feasible due to the higher risk of including unrelated services in the episode beyond several months after hospital discharge. However, we believe that 90-day post-hospital discharge episodes would provide substantial
incentives for aggressive medical management, cardiac rehabilitation, and beneficiary education and engagement, whereas a shorter episode duration would have less effect. We acknowledge that ongoing disease management for beneficiaries with cardiovascular disease must extend long after the conclusion of the AMI episodes. However, we believe the 90-day post-hospital discharge episode duration remains appropriate for an episode payment model focused around a hospitalization. We expect that the medical management and care coordination during AMI episodes would continue to be provided as beneficiaries transition out of AMI episodes, potentially into a primary care medical home or other model or program with accountability for population health, such as an ACO.

We further note based on analysis of historical episodes that about 10 percent of beneficiaries hospitalized with AMI who received a CABG received the CABG between 2 and 90 days post-discharge from the anchor hospitalization (these beneficiaries would be in AMI episodes), while the remaining 90 percent of CABGs for beneficiaries hospitalized with AMI were provided during the initial hospitalization (these beneficiaries would be in CABG episodes). In contrast, fewer than 3 percent of those AMI model beneficiaries who received an inpatient or outpatient PCI during an AMI episode received the PCI between 2 and 90 days post-discharge from the anchor hospitalization, while more than 97 percent received the PCI during the anchor hospitalization. 75 We refer to section III.D.4.b.(2)(c) of this final rule for further discussion of pricing adjustments and alternatives considered for setting EPM-episode benchmark prices for AMI episodes where PCI or CABG occurs during the AMI episode but post-discharge from the anchor or chained anchor hospitalization.

Finally, for similar reasons, we believe CABG episodes should extend 90 days post-discharge. About one-third of CABG procedures are performed in the context of a hospital admission for AMI, leading to the same considerations discussed previously in this section around the appropriate episode duration for beneficiaries with AMI. The remaining CABG model beneficiaries are likely to have significant ischemic heart disease, making the occurrence of CABG itself a sentinel event, like AMI, that marks the need for a heightened focus on medical management of CAD and other beneficiary risk factors for future cardiac events, cardiac rehabilitation over multiple months, and beneficiary education and engagement. Moreover, CABG procedures have 90-day global periods under the Physician Fee Schedule, consistent with the lengthy period of recovery associated with major chest surgery. Thus, a 90-day post-hospital discharge episode duration is consistent with the recovery period from CABG surgery. We acknowledge that ongoing disease management for beneficiaries with cardiovascular disease must extend long after the conclusion of the CABG episodes. However, we believe the 90-day post-hospital discharge episode duration remains appropriate for an episode payment model focused around a hospitalization. We expect that the medical management and care coordination during CABG episodes would continue to be provided as beneficiaries transition out of CABG episodes, potentially into a primary care medical home or other model or program with accountability for population health, such as an ACO.

As in the CJR model, we proposed that the day of discharge from the anchor hospitalization counts as day 1 of the post-hospital discharge period (80 FR 73324). Since the post-hospital discharge period is intended to extend 90 days for recovery following hospital discharge, we believe it is appropriate under these circumstances to begin the 90-day count when the beneficiary is ultimately discharged from acute care for the first time during the AMI episode. However, the hospital that initiated the AMI episode in the chained anchor hospitalization would continue to be responsible in the AMI model for the episode discussed previously in section III.C.4.a.(5) of this final rule.

The proposals for the end of AMI and CABG episodes were included in proposed §§ 512.240(a)(1) and (b)(1), respectively. We sought comment on our proposals to end AMI and CABG episodes.

We received a number of comments on the proposed episode duration for the AMI and CABG models, although most commenters provide similar rationale and recommendations for the three proposed EPMs. Thus, we refer to the next section for a discussion of the comments regarding the proposed ending of EPM episodes, including SHFFT as well as AMI and CABG episodes.

75 Episodes for AMI beneficiaries initiated by all U.S. IPPS hospitals and constructed using standardized Medicare FFS Parts A and B claims, as proposed in the proposed rule, that end in CY 2014.
includes 90-day post-discharge. CMS was, in effect, making hospitals managers of population health. These commenters believe that hospitals lack the resources, skill sets, and infrastructure to engage in the mission of managing population health, and stated that the requirements are much different and more complex and demanding than what is need for episode payments. Several commenters reasoned that since the proposed quality metrics for the EPMs were 30 days after discharge and they believe that hospitals are more effective managing the first 30 days of an episode, the episode duration should be shortened to 30 days so the quality and performance metrics would be aligned.

A number of commenters requested that CMS shorten the episode duration to 30 days because 30 days is a more appropriate duration for exacerbations of existing, unrelated chronic conditions to the condition that is the focus of the episode. Some commenters claimed that a post-surgical or post-event episode duration under the AMI, CAGB, and SHFFT models longer than 30 days poses a greater risk for variability due to medical events outside the intended scope of the model and control of the hospital. They stated that this is particularly true for ill patients who are likely to have major complications or comorbidities when admitted and are at higher risk for developing new complications post-discharge. The commenters stated that because all the proposed models are urgent or emergent, rather than elective or time-sensitive, this danger poses greater concern than under other Innovation Center episode payment models, such as the CJR model and OCM. While such comorbidities contributing to all-cause readmission can be reasonably controlled in the immediate and 30-day post-operative or post-event period, the commenters contended that the most complex patients develop complications after discharge, which are highly varied and predominantly unrelated to the quality of care they receive. Therefore, they concluded that care for chronic conditions and other non-anchor MS–DRG-related conditions becomes much more prevalent in days 31 to 90 following hospital discharge. One commenter observed based on experience in its hospitals that after 30 days, an over 30 percent increase in readmissions to a hospital other than the original facility occurred, creating a need for additional strategies to coordinate episode care after 30 days. The commenters stated that hospitals do not have the time, money, skill set or recourse to develop the infrastructure to support episode care management during the 31- to 90-day post-discharge period. Finally, several commenters observed that Medicare beneficiaries may have more than one residence during the year, creating challenges with follow up for an episode that extends 90 day following hospital discharge.

Response: We appreciate the support of many commenters for the proposed 90-day post-hospital discharge EPM episode duration. We agree with the commenters that the episode duration should capture the majority of health care services that are related to the episode and be sufficiently long to include many complications and follow-up care to the anchor hospitalization. We believe that hospitalization is often a sentinel event for Medicare beneficiaries, representing an opportunity for increased care coordination and, in the case of the EPMs, improved care management of chronic conditions that may have led to the hospitalization for the cardiac event or cardiac or orthopedic surgery. This episode duration provides EPM participants with a substantial period of time in which to work to improve the quality and efficiency of EPM episode performance for beneficiaries who are hospitalized for the targeted conditions.

We have substantial BPCI Model 2 experience in testing AMI, PCI, CAGB, and SHFFT episodes that include beneficiaries who are most similar to those who would be included in the proposed EPMs. Almost all BPCI Model 2 Award winners testing these episodes have selected the 90-day episode duration, compared to the 30-day and 60-day alternative durations that are available in BPCI Model 2. Ninety days post-hospital discharge is also the episode duration in the CJR model. Our goal in the EPMs is to incentivize efficient, high quality care that returns beneficiaries to the community in the best health possible, and we believe that a 90-day post-discharge duration reflects a full continuum of clinical services and transition of care for average SHFFT, AMI, and CAGB model beneficiaries, at which time the beneficiary’s functional recovery and stabilization of medical conditions are relatively complete so the beneficiary is able to resume most usual activities of daily living.

Similar to LEJR episodes under the CJR model, in our analysis of episode spending for the EPMs we observed the concentration of Medicare post-discharge episode spending in the earlier part of the episode following discharge from the anchor hospitalization in all the EPMs. Specifically, in the first 30 days following anchor hospitalization discharge in AMI episodes, excluding those AMI episodes with readmissions for CAGB for which we make a payment adjustment under the AMI model as discussed in section III.D.4.b.12(c) of this final rule, we found 61 percent and 54 percent of post-discharge episode spending for AMI MS–DRG-anchored and PCI MS–DRG-anchored AMI episodes, respectively. Similarly, in the 30 days following discharge, we observed 68 percent and 69 percent of post-discharge episode spending for CAGB and SHFFT episodes. For all of the EPMs, about 60 to 70 percent of the remaining post-discharge spending occurred in days 31–60 post-discharge, and one-third in days 61–90 post-discharge. Thus, while the 90-day post-discharge episode duration increases the EPM participant’s financial risk somewhat compared to episodes that extend only 30 days, because we found that significant services related to the clinical condition that is the focus of the models occurred during days 31–90 post-discharge, we believe there are significant opportunities for improved quality and efficiency in EPM episodes after 30 days and extending through 90 days post-discharge from the anchor hospitalization. If, as some commenters speculated, a post-surgical or post-event episode duration under the AMI, CAGB, and SHFFT models longer than 30 days posed a significant risk of variability primarily due to medical events that are unrelated to the clinical condition that is the focus of the EPM episode, we would have expected to see an equal percentage of post-discharge episode spending in the periods of time from days 31–60 and 61–90. That was not the case in our analysis, because we continued to see EPM episode spending as a proportion of post-discharge spending drop off in relation to increasing time after discharge, suggesting that the EPM episode definitions are capturing related episode spending that declines, as would be expected, over the period of time post-discharge as the beneficiary recovers and returns to the community.

While we understand that uncommon events during the 90-day post-discharge episode duration may occur for an individual beneficiary, resulting in an unanticipated or unavoidable need for costly health care services, we believe...
that our EPM episode definitions that exclude unrelated items and services and our payment policies, namely the adjustment for high payment episodes and stop-loss policies discussed in sections III.D.3.d., III.D.7.b.(1), and III.D.7.d. of this final rule, provide sufficient protections for EPM participants from undue financial responsibility for the care of unrelated clinical conditions as well as for unusual circumstances. We also believe that shorter episode durations may incur a higher clinical risk for beneficiaries if EPM participants delay services beyond the EPM episode, and the risk to beneficiaries of this response by providers to episode payment can be minimized by the longer 90-day episode duration that we proposed for the EPMs. We refer to sections III.G.4. through 6. of this final rule for discussion of our plans to monitor for access to care, quality of care, and delayed care.

In response to the commenters recommending a shorter episode duration in the earlier stages of bundled payment, as noted, we have several years of experience with BPCI Model 2 where the majority of Awardee have selected a 90-day episode duration for episodes of a similar design to the EPMs that target the same clinical conditions. While entities choose to participate in the BPCI models, we have also established a 90-day episode duration in the CJR model, which is the first episode payment model which has a geographic basis. Thus, we do not believe that it is necessary to adopt a shorter episode duration for the EPMs either permanently or temporarily.

Regarding those commenters who believe that the 90-day post discharge episode duration and broad episode definitions would make hospitals responsible for population health, we note that the EPMs are not total cost-of-care models. As discussed in section III.C.3.b of this final rule, we exclude items and services that are unrelated to EPM episodes, namely those that are not directly related to the EPM episode or the quality or safety of the EPM episode care that is included in the EPM episode: for chronic conditions that are generally not affected by the EPM episode care; and for acute clinical conditions not arising from existing EPM episode-related chronic clinical conditions or complications of EPM episode care. We agree with the commenters in favor of the proposed 90-day post-discharge episode duration for the EPMs who stated that the proposed EPMs of this episode duration move providers closer to long-term population health management. Given the diversity of commenters’ views on hospitals’ readiness to assume responsibility for episodes of the proposed duration, we appreciate that EPM participants in models where participation is required are in various stages of readiness for managing the quality and cost performance of episode, based on their prior experience, resources, and infrastructure. We believe that all EPM participants have substantial opportunities to increase their capacity to manage the quality and cost of EPM episodes and achieve significant financial rewards from good performance, regardless of their starting point. We note that many of the EPM policies such as data sharing, financial arrangements, the phase-in of two-sided risk, and stop-loss limits afford hospitals the opportunity to learn about EPM episode care patterns, collaborate with others who have expertise in care redesign, and implement their initial EPM care plans for their beneficiaries in an initial environment of limited financial risk.

We do not believe that the measurement period for the quality measures and the duration of the EPM episodes must necessarily align, although we note that we sought comment in the EPM proposed rule about potentially using quality measures that examine patient outcomes over a period that extends at least as long as the EPM episode (81 FR 50901). We proposed to use existing AMI and CABG outcome measures that assess outcomes over a 30-day period following discharge, at least initially, because they are in wide use and have gained acceptance among hospitals and because the AMI and CABG mortality measures have been reviewed and endorsed by the National Quality Forum. However, we believe that 90 days is a period over which hospitals have substantial ability to influence the quality and efficiency of care that EPM beneficiaries receive. Rather than shorten EPM episodes to align with the existing 30-day quality measure timeframe as some commenters recommended, we believe it would be more appropriate to adapt the existing measures or to develop new related measures to assess outcomes over a longer timeframe, including timeframes at least as long as the EPMs. We refer to section III.E.4 of this final rule for further discussion of our plans regarding future quality measures that could be incorporated into the EPM pay-for-performance methodologies.

Finally, we appreciate the perspective of the commenters who believe that a 30-day episode duration would be more appropriate because a longer episode duration poses a greater risk for variability due to events outside the intended scope of the model and control of the hospital, including readmissions to a different hospital, and that this risk is higher for the EPMs than other Innovation Center bundled payment models due to the urgent or emergent clinical conditions included in the EPMs. We agree with the commenters that the EPMs test different clinical scenarios than the CJR model that targets LEJR, which is primarily elective, and that the complexity of many EPM beneficiaries requires new approaches to redesigning and coordinating care for the 90 days post-hospital discharge. While EPM beneficiaries may be more likely to develop a variety of complications requiring more related services following discharge than those in the CJR model, we continue to believe that complications most commonly have patterns and bear a significant relationship to the quality of care and effectiveness of care coordination following hospital discharge. Even though some EPM beneficiaries may be medically complex and fragile, we continue to believe there are substantial opportunities to improve the quality and efficiency of their care under the EPMs where EPM participants have quality and cost performance responsibility for episodes that extend 90-day post-discharge from the anchor hospitalization. We also agree with the commenters that EPM participants who are required to participate in the EPMs be protected from undue financial risk. We refer to section III.D.4.b.(2) of this final rule for further discussion of risk adjustment under the EPMs.

Final Decision: After consideration of the public comments received, we are finalizing the proposals in §§ 512.240(a)(1), (b)(1), and (c)(1) for the end of AMI, CABG, and SHFFT episodes, respectively, based on an EPM episode duration that extends 90 days following discharge from the anchor hospitalization, with modification to revise § 512.240(a)(1) to eliminate proposed paragraphs (a)(1)(i) and (ii) and incorporate the 90-day post-discharge episode duration in the general provision. We no longer need to specify the episode duration separately for an AMI episode that includes an inpatient-to-inpatient transfer after an AMI episode has been initiated because we are not adopting the proposed policies for chained anchor hospitalizations. As discussed in section III.C.4.a.(5) of this final rule, we are not finalizing the AMI partial transfer episode initiation and attribution proposal that would have required us to
identify chained anchor hospitalizations.

**D. Methodology for Setting EPM Episode Prices and Paying EPM Participants in the AMI, CABG, and SHFFT Models**

1. Background

   a. Overview

   We proposed that the AMI, CABG, and SHFFT models would provide incentives for EPM participants to work with other health care providers and suppliers to improve the quality and efficiency of care for Medicare beneficiaries by paying EPM participants or holding them responsible for repaying Medicare based on EPM participants’ performance with respect to the quality and spending for AMI, CABG, and SHFFT episodes in a manner similar to the CJR model. Given the general similarity between the design of the CJR model and these EPMs, there is precedent for adopting the general payment and pricing parameters used under the CJR model, with modification to appropriately pay for EPM episodes that include the different clinical conditions treated in AMI, CABG, and SHFFT model episodes. The following sections describe our proposals for the:

   - Performance year, retrospective episode payments, and two-sided risk EPMs.
   - Adjustments to actual EPM-episode payments and to historical episode payments used to set episode prices.
   - EPM episode price-setting methodologies.
   - Process for reconciliation.
   - Adjustments for overlaps with other Innovation Center models and CMS programs.

   b. Key Terms for EPM Episode Pricing and Payment

   For purposes of ease of understanding of the technical discussion that follows around EPM episode pricing and payment, our proposed rule provided the following definitions of terms that were used in sections that preceded their technical definition and cross-references to other sections of the proposed rule for more detailed discussion of the policies associated with these terms.

   - Anchor hospitalization—hospitalization that initiates an EPM episode and has no subsequent inpatient-to-inpatient transfer chained anchor hospitalization.

   - Chained anchor hospitalization—an anchor hospitalization that initiates an AMI model episode and has at least one subsequent inpatient-to-inpatient transfer.

   - Anchor MS–DRG—MS–DRG assigned to the first hospitalization discharge, which initiates an EPM episode.

   - Price MS–DRG—for EPM episodes without a chained anchor hospitalization, the price MS–DRG is the anchor MS–DRG. For AMI model episodes with a chained anchor hospitalization, the price MS–DRG is the MS–DRG assigned to the AMI model episode according to the hierarchy that was described in III.D.4.b.(2)(i) of the proposed rule.

   - Episode benchmark price—dollar amount assigned to EPM episodes based on historical EPM-episode data (3 years of historical Medicare payment data grouped into EPM episodes according to the EPM episode definitions as discussed in sections III.C.3. and III.C.4. of the proposed rule) prior to the application of the effective discount factor, as described throughout sections III.D.4.b through e. of the proposed rule.

   - CABG readmission AMI model episode benchmark price—episode benchmark price assigned to certain AMI model episodes with price MS–DRG 280–282 or 246–251 and with a readmission for MS–DRG 231–236, as described in sections III.D.4.b.(2)(c) and III.D.4.e. of the proposed rule.

   - Quality-adjusted target price—dollar amount assigned to EPM episodes as the result of reducing the episode benchmark price by the EPM participant’s effective discount factor based on the EPM participant’s quality performance, as described in sections III.D.4.b.(10) and III.E.3.f. of the proposed rule.

   - Excess EPM-episode spending—dollar amount corresponding to the amount by which actual EPM-episode payments for all EPM episodes attributed to an EPM participant exceed the quality-adjusted target prices for the same EPM episodes, as discussed in section III.D.2.c. of the proposed rule.

2. Performance Years, Retrospective Episode Payments, and Two-Sided Risk EPMs

   a. Performance Period

   Consistent with the methodology for the CJR model, we proposed 5 performance years (PYs) for the EPMs, which would include EPM episodes for the periods displayed in the following Table 9:

   **TABLE 9—PROPOSED PERFORMANCE YEARS FOR EPMs**

<table>
<thead>
<tr>
<th>Performance year (PY)</th>
<th>Calendar year</th>
<th>EPM episodes included in performance year</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>

<td>2021</td>
<td>EPM episodes that end between January 1, 2021 and December 31, 2021, inclusive.</td>
</tr>
</tbody>
</table>

   As displayed in Table 9, some EPM episodes that would begin in a given calendar year may be captured in the following performance year due to some EPM episodes ending after December 31st of a given calendar year. For example, EPM episodes beginning in December 2017 and ending in March 2018 would be part of performance year 2. As we noted in our proposed rule, we believe that the proposed period of time for the EPMs, which generally aligns with the performance period for other Innovation Center models, for example, the CJR and Pioneer ACO models, should be sufficient to test and gather the data needed to evaluate the EPMs (80 FR 73323). In contrast, we were concerned whether an EPM with fewer than 5 performance years would be sufficient for these purposes.

   We considered extending the first PY, for example, to 18 months. As discussed further in section III.D.2.c. of the proposed rule, however, we instead proposed to delay the requirement for participants to begin accepting downside risk until the second quarter of PY2. As such, EPM participants would have a comparable transition period to that of CJR participants with respect to when they must accept downside risk while still allowing us to make timely reconciliation payments to EPM participants as well as to most effectively align EPM reconciliation...
with the reconciliation processes for other models and programs with which the EPMs overlap (for example, the Shared Savings Program, Pioneer ACO model, Comprehensive Primary Care Initiative, and Oncology Care Model). As stated in our proposed rule, we believe that it is important to synchronize the timing of reconciliation for EPMs with other efforts that need this information when making their financial calculations. We sought comment on this proposal.

The following is a summary of the comments received and our responses.

Comment: Many commenters requested that CMS delay implementation of the models; typically, for at least 6 months to a year—or a year from the final rule’s issuance—so that participants would have a sufficient time to prepare for the new models. Some commenters recommended delaying the models entirely until CMS had additional time to consider evaluation results for BPCI or the CJR model. Other commenters recommended a phased-in approach for implementing the models, for example, by (1) first implementing the SHFFT model no sooner than January 1, 2018 and then implementing the cardiac EPM models no sooner than 6 months later as well as additional time if the final rule is delayed beyond January 1, 2018 or (2) conversely delaying the SHFFT model, given that hospitals are in the early stages of building infrastructure for the CJR model and having to do so for the SHFFT model as well could be too great a burden. A commenter recommended that CMS delay the start date to January 1, 2018 as it would better align with private payers’ regulatory and business models, which are also developing and rolling out bundled payment models. In their view, this synchronization would reduce burden by simplifying record keeping requirements, performance metric submission, and financial tracking by both CMS and private payers.

Among the reasons cited for a delay, some commenters expressed concern with the rapid pace of implementing additional models—particularly, geographic-based models, which a number of commenters have said they oppose. For example, commenters expressed concerns that CMS was moving forward with new models in the absence of empirical results from the CJR model or promising results from BPCI. Specifically, results from the evaluation of year 2 results for BPCI showed no statistically significant differences in Medicare payments and an increase in mortality for the cardiovascular surgical episodes between the BPCI participants (which were voluntary), and comparison groups. Further, while there was a significant reduction in utilization of institutional post-acute care settings, there were instances where BPCI patients exhibited less functional improvement. As one commenter noted, CMS has not yet been able to ensure that the quality of care and beneficiary outcomes under the model are at least equivalent, if not better than, those in traditional fee-for-service Medicare.

Commenters also pointed to the pre-implementation efforts that would be needed for participants to be successful with episode payment bundles, which they believe would take more time than would be granted under the proposal. For example, hospitals need more time than proposed to better understand the models’ requirements and clinical and financial risk of their patient populations; build the clinical, legal, financial and quality infrastructure; analyze and understand the clinical and cost factors that affect their performance; and identify changes to care pattern to be successful. Moreover, there is considerable variation in hospital preparedness and capabilities to implement these models without a delay as well as challenges in doing so while simultaneously fulfilling the requirements of multiple models including the CJR model, MACRA, and the end of the grace period for ICD–10.

Among the reasons cited for a delay, some commenters expressed concern with the rapid pace of implementing additional models—particularly, geographic-based models, which a number of commenters have said they oppose. For example, commenters expressed concerns that CMS was moving forward with new models in the absence of empirical results from the CJR model or promising results from BPCI. Specifically, results from the evaluation of year 2 results for BPCI showed no statistically significant differences in Medicare payments and an increase in mortality for the cardiovascular surgical episodes between the BPCI participants (which were voluntary), and comparison groups. Further, while there was a significant reduction in utilization of institutional post-acute care settings, there were instances where BPCI patients exhibited less functional improvement. As one commenter noted, CMS has not yet been able to ensure that the quality of care and beneficiary outcomes under the model are at least equivalent, if not better than, those in traditional fee-for-service Medicare.

Commenters also pointed to the pre-implementation efforts that would be needed for participants to be successful with episode payment bundles, which they believe would take more time than would be granted under the proposal. For example, hospitals need more time than proposed to better understand the models’ requirements and clinical and financial risk of their patient populations; build the clinical, legal, financial and quality infrastructure; analyze and understand the clinical and cost factors that affect their performance; and identify changes to care pattern to be successful. Moreover, there is considerable variation in hospital preparedness and capabilities to implement these models without a delay as well as challenges in doing so while simultaneously fulfilling the requirements of multiple models including the CJR model, MACRA, and the end of the grace period for ICD–10.

A commenter noted that, given the broad-based clinical experience with continuity-of-care across episodes, appropriate workforce capacity and technology infrastructure, and significant investment by both the public and private sectors needed to be successful, the cardiac models could be particularly challenging. Further, these challenges could be especially acute for small hospitals that often have limited financial resources, have low case volume across which to spread financial experience, have high amounts of uncompensated care or are located in lower income geographic regions, do not yet have experience with episode-based payments, or lack existing networks with physicians and other providers. In addition to provider readiness, a commenter questioned whether CMS has the administrative and personal resources to manage the complexities of the newly proposed and expanded models in a way that would meet hospitals’ needs to be successful under the models. Another commenter believed that, despite CMS proposing certain waivers under the models, insufficient protections existed with regard to regulatory and legal risk.

Response: We appreciate the concerns expressed by participants or episodes than is the case.
with BPCI or the CJR model, which will expand our understanding of these models with a broader and more complex array of conditions and procedures. We also do not believe that the unique challenges that could be presented under the cardiac models is a reason to delay the models. Rather, among other things, we would expect these models to assist us in empirically identifying what challenges there may be as well as the steps needed to overcome them. We also share commenters’ concerns that smaller hospitals be successful under the models. Accordingly, our proposed rule included additional protections to limit financial risk for certain hospitals, including rural hospitals and sole community hospitals, through more generous stop loss thresholds, which we finalized in section III.D.7.c.(1) of this final rule. Also, as discussed further in section III.D.7.c.(1) of this final rule, we are extending these protections to hospitals determined to have a low volume of episodes under an EPM.

We appreciate the comment on whether CMS is prepared administratively and with respect to personnel resources to implement the models, and note that the proposed models would not be implemented in the absence of our readiness to do so. Finally, we have considered and made final a range of waivers of program rules and provisions for financial arrangements that we believe are necessary and sufficient to facilitate participation in the models through allowing additional flexibilities in care delivery and giving participants to the tools to align the financial incentives of other providers, suppliers, and ACOs with the goals of the EPMs (see sections III.I. and III.J. of this final rule).

Final Decision: After consideration of the public comments received, we are finalizing the proposal, without modification, to establish five performance years beginning with EPM episodes that start on or after July 1, 2017 as displayed in Table 10.

b. Retrospective Payment Methodology

Consistent with the CJR model (80 FR 73329), we proposed to apply a retrospective payment methodology to the proposed EPMs (81 FR 50844). Under this proposal, all providers and suppliers caring for Medicare beneficiaries in EPM episodes would continue to bill and be paid as usual under the applicable Medicare payment systems. After the completion of an EPM performance year, Medicare claims for services furnished to EPM beneficiaries would be grouped into EPM episodes and aggregated, and EPM participants’ actual EPM episode payments would be compared to quality-adjusted target prices (which account for the level of EPM episode quality), as described in section III.D.5.a. of the proposed rule (81 FR 50864 through 50865). Based on an EPM participant’s performance (taking into account quality and spending), we would determine if Medicare would make a payment to the participant (reconciliation payment), or if the participant owes money to Medicare (resulting in Medicare repayment).

We considered an alternative option of paying for EPM episodes prospectively by paying one lump sum amount to the EPM participant for the expected spending for the EPM episode which extends 90 days post-hospital-discharge. However, as was the case when we established regulations for the CJR model (80 FR 73329), we believed that such an option would be challenging to implement at this time given the payment infrastructure changes for both EPM participants and Medicare that would need to be developed to pay and manage prospective episode payments under these EPMs. Moreover, we continued to believe that a retrospective payment approach can accomplish the objective of testing episode payments in a broad group of hospitals, including financial incentives to streamline care delivery around that episode, without requiring core billing and payment changes by providers and suppliers, which would create substantial administrative burden.

We sought comment on this proposal. The following is a summary of the comments received and our responses.

**Comment:** Most of the comments supported CMS’ proposal to use a retrospective payment methodology. Commenters agreed with CMS’ view that this would be the most administratively feasible and straightforward payment option since it uses the existing payment system infrastructure and processes. Some of these commenters reported that alternatively applying a prospective payment methodology, which would make one lump sum payment to the hospital for the episode, would be challenging to implement given the administrative and infrastructure changes it would entail for hospitals, other participating providers and Medicare. One commenter expressed concern that our proposed models would, in fact, require all payments be made to the responsible hospital so that other providers would have to submit bills for services they provided under an EPM episode to that hospital, which the commenter believed could result in both decreased access to care and increased administrative complexity.

**Response:** We appreciate the comments we received that were in support of our proposed retrospective payment methodology, and concur with commenters’ views on some of the benefits of this model. We would clarify that, as stated previously in this section, all providers and suppliers caring for Medicare beneficiaries in EPM episodes would continue to bill and be paid as usual under the applicable Medicare payment systems. As such, providers would submit claims for payment as they always have and would not submit claims to the responsible hospital.

**Comment:** While not opposing the proposal, a commenter expressed the view that a retrospective model should be viewed as a stepping stone toward rather than the destination to requiring greater levels of financial risk. In their view, disadvantages of a retrospective model include their potential to reduce spending within an episode of care but not the volume of the episodes themselves, which could encourage a greater number of bundled procedures;
implementation, fragmentation of care delivery due to the existence of multiple bundled payment programs designed around different disease states or procedures; and the potential that the considerable cost and effort expended to organize people and systems around each bundled episode could cause the total cost of these programs combined to be higher than the cost associated with operating a single program covering the full population and the full spectrum of care. As such, the commenter supported the proposed bundled payments for a limited time and for the purpose of stimulating efforts to full population based efforts.

Response: We understand the commenter’s view that bundled payments could be a stepping stone toward other models that establish greater risk for providers and recognize the various limitations of a fee-for-service system with respect to higher volume of services and less coordinated delivery of care. In contrast to the commenter, however, we believe in and hence are empirically testing within our proposed models the potential to improve upon these dimensions as well as assist in lowering the cost of services within a fee-for-service rather than capitated framework.

Comment: Some commenters opposed the proposed retrospective methodology. For example, a commenter reported their view that the proposed retrospective payment model would limit the possibility for real, innovative care redesign because it (1) offered no upfront incentive dollars to invest in new care delivery models and services that could deliver true value and (2) confined innovation care redesign by what the FFS structure will reimburse. That is, while participants would be held financially accountable for ensuring that care is delivered below the quality-adjusted target price, they could do little to affect the costs for the episode within their own setting as they continue to receive a MS–DRG payment for the diagnosis regardless of whether the patient stays a longer or shorter period of time, additional services are offered, or care coordination is provided. Thus, if a participant seeks to reduce costs, it is limited to reducing readmissions, improving care transitions, or reducing post-acute care costs—either by reducing the length of stay within a SNF (as it is paid on a per diem) or through substitutions of care (for example, directly discharging the patient home with or without services).

In this commenter’s view, significant care redesign would be better facilitated through providing a group of provider partners with a prospective payment.

Similarly, a commenter suggested that participants are impeded in their ability to plan for the delivery of services if they do not know how much money will be available to support those services. As such, participants should have a risk-adjusted budget for the condition or episode in advance rather than after care has already been delivered. Further, payment amounts should be based on the actual costs of all of the services being delivered, not just the amounts that would have been paid under the fee-for-service system for the subset of services that would have been separately billable. As such, the commenter recommended that participants and their collaborators be paid for high-value services that are not currently billable as part of condition-based and episode-based payment models if providers have agreed to be accountable for overall spending related to a condition or episode.

Another commenter recommended that CMS determine payment benchmarks through negotiated rates or other competitive bids (rather than fee-for-service claims) as it would foster more rapid transformation in cost and resource use as well as encourage competition among providers to achieve the best outcomes for the lowest cost. In their view, a prospective negotiated rate would offer providers more opportunity to innovate in how they deploy professional staff, choose technology, and engage with outpatient and home-based services. Also, a prospectively negotiated rate would foster collaboration among all clinicians involved in patient care and provide predictable pricing.

Response: We appreciate the concerns and challenges raised by these commenters, but are not persuaded to change our methodology. Rather, we believe that participants are capable of innovative care redesign in the absence of upfront incentives dollars and within the constraints of fee-for-service Medicare payment requirements. While our proposal did not provide participants with an up-front budget or a capitated payment amount, we would be providing them detailed information on their benchmark and likely quality-adjusted target prices as well as their financial performance both historically and during their participation in the models (see section III.K. of this final rule). We believe this information should be sufficient to enable participants’ abilities to assess their performance as well as determine and plan changes in their practices to make them successful. Also, where appropriate, we have offered participants improved flexibilities under the models by waiving certain Medicare requirements and allowing for financial arrangements, which should facilitate their participation under the models (see sections III.I. and III.J. of this final rule). To the extent, we identify additional adjustments, we could consider them through future rulemaking. Finally, while we wish to explore and test a range of payment models, which could include capitated or competitive bidding models, the purpose of the proposed models is to examine ways in which to improve health care quality and reduce costs in a fee-for-service framework.

Final Decision: After consideration of the public comments received, we are finalizing the proposal, without modification to implement a retrospective payment methodology. Also, we would like to clarify that when referring to Medicare claims data for services furnished to EPM beneficiaries, as we have stated immediately here and throughout this section, we mean any payment from the Part A or Part B trust fund on behalf of a beneficiary that is not specifically excluded as specified in section III.C. or III.D.6 of this final rule. Consistent with this, we have made conforming changes to our regulatory text—specifically, to our definition of actual episode payments as well as to §512.305(c)(1) and §512.307(a)(1).

c. Two-Sided Risk EPMs

As we did for the CJR model (80 FR 73229 through 7333), we proposed to establish two-sided risk for EPM participants (81 FR 50844). Under this proposal, for each of performance years 1 through 5, we would make EPM-episode reconciliation payments to EPM participants that achieve reduced actual EPM payments relative to their quality-adjusted target prices. Likewise, beginning with episodes ending in the second quarter of performance year 2 and extending through each of performance years 3 through 5, we would hold EPM participants responsible for repaying Medicare when their actual EPM-episode payments exceed their quality-adjusted target prices. As such, our proposal differed from CJR in that we proposed a modestly shorter period in which EPM participants would accept downside risk in order to allow them a comparable transition period to that of CJR participants in which to do so. Accordingly, we referred to the two portions of performance year 2 as either having no downside risk (NDR) or having downside risk (DR).
January 1, 2018 to March 31, 2018, in which EPM participants assume no downside risk and therefore would have no Medicare repayment responsibility; and

- Performance Year 2 (DR) or PY 2 (DR) for the second, third and fourth quarters, that is April 1, 2018 to December 31, 2018, in which EPM participants assume downside risk and would have Medicare repayment responsibility.

Our proposed rule noted our continued belief that our proposal to establish two-sided risk would provide appropriate incentives for EPM participants to improve their care quality and efficiency under the EPMs, and that we would diminish these incentives if we instead proposed to establish one-sided risk, in which an EPM participant could qualify for a reconciliation payment but not be held responsible for Medicare repayments. In recognition that EPM participants may need to make infrastructure, care coordination and delivery, and financial preparations for the EPMs, which can take several months or longer to implement, we thought that it was reasonable to delay EPM participant responsibility for repaying excess EPM-episode spending in performance year 1 to more strongly align EPM-participant incentives with care quality. Thus, similar to what we did for the CJR model, we proposed to phase-in this repayment responsibility beginning in the second quarter of EPM performance year 2 as displayed in Table 11.

### Table 11—Proposed Stop-Loss Thresholds and Discount Percentage Ranges for Medicare Repayments by PY

<td>1.5–3.0</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

*Stop-loss thresholds for certain hospitals, including rural and sole-community hospitals are 3% for PY2 (DR) and 5% for PY3–PY5.

We refer to section III.E.3.f. of this final rule for additional information on the effective discount factors used to calculate quality-adjusted target prices, as well as the quality categories that determine an EPM participant’s effective discount factor that would be applied to the EPM benchmark episode price at reconciliation to calculate the repayment amount during the phase-in period under the models.

We sought comment on this proposal. The following is a summary of the comments received and our responses.

**Comment:** A number of commenters supported CMS’ proposal to phase-in downside risk noting that doing so would allow providers with little or limited experience and who were not ready to take on risk additional time to prepare to do so. However, nearly all of the commenters on this proposal urged CMS to extend the period of time during which participants would not be subject to downside risk as 6 months would not be an adequate timeframe in which to begin managing episodes that will be subject to downside risk. A number of commenters noted that because of the way that episodes are defined during a performance year, participants would actually have only 6 months before episodes that will incur downside risk begin. This is because the models would begin on July 1, 2017 and downside risk would begin for episodes ending April 1, 2018. Therefore, participants would actually only have from July 1, 2017 until about January 1, 2018 before episodes that will incur downside risk begin.

Most of the commenters requested a 12-month period during which participants would not be required to assume downside risk with some commenters requesting longer periods, for example, up to 2 years. In some cases, commenters requested that CMS delay the requirement to assume downside risk, but to allow participants flexibility to assume risk earlier if they wished to do so. A commenter requested that CMS stagger downside risk across the models, for example, allow a longer period without downside risk for AMI episodes than for CABG episodes as the commenter believed there was greater complexity and uncertainty associated with the former than the latter. Additionally, several commenters opposed the proposal to require downside risk altogether or asking that CMS make this requirement contingent upon also further risk-adjusting target prices and financial performance data.

The reasons offered for delaying downside risk often paralleled those for delaying the models in general—that is, additional time is needed to develop infrastructure and expertise with the models. Some commenters raised concerns about the effects of the proposal on beneficiary access; particularly, for smaller hospitals and academic medical centers. As such, a commenter expressed support for CMS’ plans to monitor access and recommended that CMS publish data and consider alternatives if this is found among complicated AMI or CABG cases.

A commenter suggested that CMS completely waive downside risk for certain protected hospitals such as SCHs, MDHs, RRCs, and low-volume hospitals. Another commenter stated that participants should not have to take on additional risk given they are already facing payment reductions through other efforts such as those for the HRRP. If participants must face downside risk through the proposed models, the commenter requested that CMS exclude conditions under the model from the HRRP. Some commenters pointed to delays in receiving performance data from CMS as well as time need to review these data needed to assist them in assessing and adjusting care patterns. Commenters also noted that because not all participants have had experience with bundled payment models, they are likely not ready to assume downside risk.

In addition to comments requesting that CMS delay downside risk, commenters also requested that EPM participants be permitted to voluntarily adopt downside risk sooner, for example, to fulfill one of the requirements to qualify as participating in an Advanced APM.

**Response:** We appreciate comments supporting our proposal to phase-in downside risk. We are also persuaded by commenters that delaying the date by which participants would be required to
assume downside risk would improve participants’ ability to successfully achieve the goals of the models. Accordingly, we are revising our proposal so that participants in the proposed models would not be required to assume downside risk until PY3—that is, episodes ending on or after January 1, 2019, with anchor discharges that occur on or after October 4, 2018. We believe that this delay period appropriately balances participants’ desire for additional experience under the models in the absence of downside risk with our desire to establish appropriate incentives for improved care quality and cost control. Given we believe this delay period is sufficient for all models, we do not believe it necessary to stagger downside risk separately by model. We also disagree with comments opposing our proposal to require downside risk or asking that CMS make this requirement contingent upon our also further risk-adjusting target prices and financial performance data. First, we believe downside risk is necessary for purposes of establishing appropriate provider incentives. Second, as discussed in section III.D.4.b.(2). of this final rule, we plan to explore additional risk-adjustment options that could be implemented beginning in PY3 and would thus apply to episodes that would be subject to downside risk for all participants.

While we are delaying the requirement to assume downside risk under the models, we have decided to allow EPM participants, including those seeking to qualify as participating in an Advanced APM, to voluntarily begin to assume downside risk for episodes ending on or after January 1, 2018, with anchor discharges that occur on or after October 4, 2017. Table 12 presents our final policies for phasing-in downside risk for all participants, along with associated stop-loss limits and discount percentages, for participants that voluntarily assume risk on this accelerated schedule.

We appreciate the concerns raised on the potential effects of our proposal on beneficiary access to care, and would note that we have made final a range of quality measures (see section III.E. of this final rule), monitoring activities (see section III.G. of this final rule), and compliance efforts (see section III.F. of this final rule) that would address beneficiary access issues. We disagree with the suggestions to waive downside risk for certain protected hospitals such as SCHs, MDHs, RRCs, and low-volume hospitals or given that hospitals are already facing payment reductions as SCHs, MDHs, RRCs, and low-volume hospitals or given that hospitals are already facing payment reductions under the proposed models are not dissimilar to the potential reductions hospitals already simultaneously face for programs such as the HRRP, HAC, and EHR incentives without exemption.

**Final Decision:** After consideration of the public comments received, we are finalizing the proposal, with modification, to phase-in downside risk. Accordingly, we are delaying the requirement to assume downside risk by 9 months so that episodes ending on or after January 1, 2019 would assume downside risk as compared to our proposal that would have required this for episodes that ended on or after April 1, 2018 and beyond. Also, we are allowing participants to voluntarily elect downside risk for episodes ending on or after January 1, 2018. Table 12 presents our final policies on this in conjunction with modified stop-loss thresholds and discount percentages by performance year. These final policies are further discussed in sections III.D.7.b.(1), III.D.7.c.(1) and III.E.3.f of this final rule, respectively.

*Including rural and sole-community hospitals, rural referral centers, Medicare Dependent Hospitals and hospitals determined to be EPM volume protection hospitals within an EPM.
3. Adjustments to Actual EPM-Episode Payments and to Historical Episode Payments Used To Set Episode Prices

a. Overview

Using Medicare payments for Parts A and B claims for services included in the EPM episode definitions, we proposed to calculate historical episode payments (3 years of historical Medicare payment data grouped into EPM episodes), EPM-quality-adjusted target prices, and actual EPM-episode payments according to the EPM episode definitions as discussed in sections III.C.3. and III.C.4. of the proposed rule (81 FR 50829 through 50843) as we did for the CJR model. As was the case for the CJR model (80 FR 73330 through 73336), we also proposed to include certain payment adjustments in the EPMs for: (1) Special payment provisions under existing Medicare payment systems; (2) payments for services that straddle episodes; and (3) high payment episodes (81 FR 50846).

We also proposed to additionally include an adjustment for reconciliation payments and Medicare repayments when updating EPM participant episode benchmark and quality-adjusted target prices (81 FR 50847). We refer to section III.D.6. of the proposed rule for discussion of adjustments for overlaps with other Innovation Center models and CMS programs (81 FR 50867 through 50872).

b. Special Payment Provisions

Many of the existing Medicare payment systems have special payment provisions that have been created by regulation or statute to improve quality and efficiency in service delivery. IPPS hospitals are subject to incentives under the HRRP, the HVBP Program, the Hospital-Acquired Condition (HAC) Reduction Program, and the HIQR Program and Outpatient Quality Reporting (OQR) Program. IPPS hospitals and CAHs are subject to the Medicare Electronic Health Record (EHR) Incentive Program. Additionally, the majority of IPPS hospitals receive additional payments for Medicare Disproportionate Share Hospital (DSH) and Uncompensated Care, and IPPS teaching hospitals can receive additional payments for Graduate Medical Education (GME) and Indirect Medical Education (IME). IPPS hospitals that meet certain requirements related to low volume Medicare discharges and distance from another hospital receive a low volume add-on payment. Also, some IPPS hospitals qualify to be sole community hospitals (SCFs) or Medicare Dependent Hospitals (MDHs), and they may receive enhanced payments based on cost-based hospital-specific rates for services; whether a SCH or MDH receives enhanced payments may vary year to year, in accordance with §419.43(g) and §412.108(g), respectively.

Medicare payments to providers of post-acute care services, including IRFs, SNFs, IPFs, HHAs, LTCHs, and hospice facilities, are conditioned, in part, on whether the provider satisfactorily reports certain specified data to CMS: Inpatient Rehabilitation Facility Quality Reporting Program (IRF QRP); Skilled Nursing Facility Quality Reporting Program (SNF QRP); Inpatient Psychiatric Facility Quality Reporting Program (IPF QRP); Home Health Quality Reporting Program (HH QRP); Long-Term Care Hospital Quality Reporting Program (LTCH QRP); and Hospice Quality Reporting Program.

Additionally, IRFs located in rural areas receive rural add-on payments, IRFs serving higher proportions of low-income beneficiaries receive increased payments according to their low-income percentage (LIP), IRFs with teaching programs receive increased payments to reflect their teaching status. SNFs receive higher payments for treating beneficiaries with human immunodeficiency virus (HIV), HHAs located in rural areas also receive rural add-on payments.

Ambulatory Surgical Centers (ASCs) have their own Quality Reporting Program (ASC QRP). Physicians also have a set of special payment provisions based on quality and reporting: Medicare EHR Incentive Program for Eligible Professionals; Physician Quality Reporting System (PQRS); and Physician Value-based Modifier Program.

Consistent with how we determine payments under the CJR model (80 FR 7333), we proposed to adjust both the actual and historical EPM-episode benchmark and quality-adjusted target prices by excluding these special payments from EPM-episode calculations using the CMS Price Standardization methodology (81 FR 50846). Our proposed rule noted our view that in applying this methodology to exclude these payments from our calculations, we would best maintain appropriate incentives for both the EPMs and the existing incentive programs. Also, not excluding add-on payments based on the characteristics of providers caring for EPM beneficiaries, such as more indigent patients, having low Medicare hospital volume, being located on campuses supporting greater levels of physician training, and having a greater proportion of beneficiaries with HIV, from actual EPM-episode payments could inappropriately result in certain EPM participants that receive more add-on payments having worse episode payment performance compared to quality-adjusted target prices than what their performance would otherwise have been. Additionally, not excluding enhanced payments for MDHs and SCHs could result in higher or lower quality-adjusted target prices just because EPM participants received their enhanced payments in 1 historical year but not the other, regardless of actual utilization.

We also noted that excluding special payments would ensure an EPM participant’s actual episode payment performance is not artificially improved or worsened because of payment reduction penalties or incentives or enhanced or add-on payments, the effects of which we were not intending to test under the models. In addition to the various incentives, enhanced payments, and add-on payments, we noted that sequestration came into effect for Medicare payments for discharges on or after April 1, 2013, per the Budget Control Act of 2011 and delayed by the American Taxpayer Relief Act of 2012. Sequestration applies a 2-percent reduction to Medicare payment for most Medicare FFS services.

For more information on the CMS Price (Payment) Standardization Detailed Methodology, we referred to the QualityNet Web site at http://www.qualitynet.org/dcs/ContentServer?c=Page&pagename=QnetPublic%2FPage%2FQnetTier4&cid=1228772057350 and to 80 FR 73331. Accordingly, we proposed to exclude these special payments from EPM-episode calculations using the CMS Price Standardization methodology at §512.300(e)(2). We sought comment on our proposal to exclude special payments using the CMS Price Standardization methodology.

The following is a summary of the comments received and our responses.

Comment: Commenters generally supported the proposal to adjust actual and target spending amounts for various special payments such as IME and DSH.

Response: We appreciate the comments we received supporting our proposal to exclude special payments from EPM-episode calculations using the CMS Price Standardization methodology. We wish to clarify that like CJR, we will follow the CMS Price Standardization methodology with modifications as necessary to be consistent with our episode definition in section III.C. of this final rule and to ensure timely reporting of reconciliation.
results, for the performance year reconciliations, which begin 2 months after the conclusion of a performance year. We will account for the information available at the time due to claims run-out, payment system updates, and the calculations necessary to fully implement the standardization methodology. We will utilize the methodology, consistent with our episode definition, for the target price calculations and subsequent reconciliation calculations 14 months after the conclusion of the performance year, in which we incorporate full claims run-out and further account for overlap with other models. This approach will provide feedback and reconciliation payments, as available, to hospitals in a timely manner and as accurately as feasible, while ensuring the standardization approach is utilized for the subsequent reconciliation calculation for a performance year.

Comment: Commenters requested more clarity on whether IPPS capital payments are included, and requested that we exclude these costs. A commenter noted that these capital costs are not included under the BPCI models, hospitals need stability in capital cost reimbursement to plan for major capital expenditures, and thus capital cost reimbursement to plan for these costs should not be placed at risk because of models affecting only cardiovascular and orthopedic services.

Response: To clarify, as is the case with CJR, IPPS capital payments will be included in EPM-episode calculations. As we stated in the CJR Final Rule (80 FR 73335), these payments are included in Medicare FFS payments, which we use to calculate benchmark and actual expenditures. Further, including IPPS capital payments affords participants an opportunity to achieve greater reconciliation payments if they are able to achieve efficiencies for the costs that the capital portion of IPPS payments would cover, which may or may not actually be capital costs.

Comment: A commenter requested that CMS exclude outlier payments EPM-episode calculations. The commenter expressed concern that because CMS proposed a limited risk-adjustment methodology, hospitals that treat the least healthy beneficiaries such as academic medical centers would be penalized for longer lengths of stay that result in receiving outlier payments for the index admission, particularly as financial targets transition to regional pricing.

Response: We disagree that outlier payments should be excluded from our calculation. We expect the models to encourage more efficient care that should result in lower costs and potentially the frequency for which outlier payments are needed. Second, as discussed in section III.D.3.d. of this final rule, we are finalizing policies to cap high-cost episodes with payments 2 standard deviations or more above the mean calculated at the regional level for purposes of determining benchmark prices and actual expenditures, which should assist in protecting participants from higher costs associated with outlier payments. Third, as discussed in section III.D.4.b.(2). of this final rule, we will be exploring options to further risk-adjust costs and payments under the models with the goal of making them effective for episodes ending after January 1, 2019, with anchor discharges occurring on or after October 4, 2018. These further adjustments for risk would offer additional financial protections to participants with high-cost episodes.

Comment: Several commenters recommended that costs for chronic care management, cardiac rehabilitation, and intensive cardiac rehabilitation services be excluded from payment calculations.

Response: As we noted in section III.C.3.b. of this final rule, we do not believe that it would be appropriate to exclude other specific Part B services, including chronic care management services, cardiac rehabilitation, intensive cardiac rehabilitation services that are related to the clinical conditions that are the basis for EPM episodes, just because they are underrepresented in the baseline period upon which benchmark episode prices are set. Likewise, we do not believe it is appropriate to exclude the costs of these included services from our financial calculations. To the extent that care redesign under the EPMs increases utilization of these services to improve episode quality and efficiency, periodic updates to the 3 years of historical data used to establish EPM-episode benchmark prices, as is discussed in section III.D.4.b.(3) of this final rule, would result in greater representation of these services that reflect more recent care patterns.

Final Decision: After consideration of the public comments received, we are finalizing the proposal, without modification, to exclude certain special payments from EPM-episode calculations using the CMS Price Standardization methodology. Our final policy for excluding special payments is included in §512.300(e)(2).

c. Services That Straddle Episodes

A service that straddles an EPM episode is one that begins before the start of or continues beyond the end of an EPM episode that extends 90 days post-hospital discharge. Under the CJR model, we prorate payments so that they include only the portion of the payment that is included in the CJR model episode, using separate approaches to prorate payments under each payment system, for example, IPPS, non-IPPS and other inpatient services, and home health services (80 FR 73333 through 73335). We proposed to apply the CJR model methodologies for prorating payments when calculating actual EPM-episode payments and when calculating historical EPM-episode payments used to set EPM-episode benchmark and quality-adjusted target prices (81 FR 50846). We believed these methodologies would most accurately account for spending within EPM episodes under the EPMs. The methodologies for prorating payments under the EPMs were included in §512.300(f). We sought comment on our proposed methodologies for prorating payments.

The following is a summary of the comments received and our responses.

Comment: We received comments requesting greater clarity on how we would prorate payments for services that straddle episodes. We also received a comment requesting greater clarity for “prorated” payments for “straddled” episodes with the presence of an AMI diagnosis treated with CABG.

Response: Following are the steps we use for the CJR model that we proposed to apply when prorating payments under the proposed methodology, which were specifically cited in our proposed rule (80 FR 73333 through 73335).
These steps have been updated to reflect our methodology as applied to an AMI episode involving a CABG.

In general, assuming we have a beneficiary in an EPM episode who is admitted to a SNF for 15 days, beginning on Day 86 post-discharge from the anchor EPM hospitalization, the first 5 days of the admission would fall within the episode, while the subsequent 10 days would fall outside of the episode. Under our proposal, to the extent that a Medicare payment for included episode services spans a period of care that extends beyond the episode, these payments would be prorated so that only the portion attributable to care during the episode is attributed to the episode payment when calculating actual Medicare payment for the episode.

For non-IPPS inpatient hospital (for example, CAH) and inpatient post-acute care (for example, SNF, IRF, LTCH, IPF) services, we would prorate payments based on the percentage of actual length of stay that falls within the episode window. Prorated payments would also be similarly allocated to the 30-day post-episode payment calculation in section III.D.7.e. of this final rule. In the previous example, one-third of the days in the 15-day length of stay would fall within the episode window, so under the proposed approach, one-third of the SNF payment would be included in the episode payment calculation, and the remaining two-thirds (because the entirety of the remaining payments fall within the 30 days after the episode ended) would be included in the post-episode payment calculation.

For HHA services that extend beyond the episode, the payment proration would be based on the percentage of days, starting with the first billable service date (“start of care date”) and through and including the last billable service date, that fall within the EPM episode window. Prorated payments would also be similarly allocated to the 30-day post-episode payment calculation in section III.D.7.e. of this final rule. In the previous example, one-third of the days in the 15-day length of stay would fall within the episode window, so under the proposed approach, one-third of the SNF payment would be included in the episode payment calculation, and the remaining two-thirds (because the entirety of the remaining payments fall within the 30 days after the episode ended) would be included in the post-episode payment calculation.

For HHA services that extend beyond the episode, the payment proration would be based on the percentage of days, starting with the first billable service date (“start of care date”) and through and including the last billable service date, that fall within the EPM episode window. Prorated payments would also be similarly allocated to the 30-day post-episode payment calculation in section III.D.7.e. of this final rule. In the previous example, one-third of the days in the 15-day length of stay would fall within the episode window, so under the proposed approach, one-third of the SNF payment would be included in the episode payment calculation, and the remaining two-thirds (because the entirety of the remaining payments fall within the 30 days after the episode ended) would be included in the post-episode payment calculation.

For HHA services that extend beyond the episode, the payment proration would be based on the percentage of days, starting with the first billable service date (“start of care date”) and through and including the last billable service date, that fall within the EPM episode window. Prorated payments would also be similarly allocated to the 30-day post-episode payment calculation in section III.D.7.e. of this final rule. In the previous example, one-third of the days in the 15-day length of stay would fall within the episode window, so under the proposed approach, one-third of the SNF payment would be included in the episode payment calculation, and the remaining two-thirds (because the entirety of the remaining payments fall within the 30 days after the episode ended) would be included in the post-episode payment calculation.

For HHA services that extend beyond the episode, the payment proration would be based on the percentage of days, starting with the first billable service date (“start of care date”) and through and including the last billable service date, that fall within the EPM episode window. Prorated payments would also be similarly allocated to the 30-day post-episode payment calculation in section III.D.7.e. of this final rule. In the previous example, one-third of the days in the 15-day length of stay would fall within the episode window, so under the proposed approach, one-third of the SNF payment would be included in the episode payment calculation, and the remaining two-thirds (because the entirety of the remaining payments fall within the 30 days after the episode ended) would be included in the post-episode payment calculation.
modification, to prorate payments for services that straddle episodes. Our final policy for prorating payments is included in § 512.300(f).

d. High-Payment EPM Episodes

For the CJR model, we defined a high-payment episode as an episode with payments 2 standard deviations above the mean calculated at the regional level (80 FR 73336 through 73337). As with the CJR model, we proposed to apply a high-payment episode ceiling when calculating actual EPM-episode payments and when calculating historical EPM-episode payments used to set EPM-episode benchmark and quality-adjusted target prices (81 FR 50846). We proposed to apply the ceiling according to the following groupings that align with our proposed EPM price-setting methodology.

First, for SHFFT model episodes, we proposed to calculate and apply the ceiling separately for each SHFFT price MS–DRG at the regional level.

Second, for AMI model episodes with price MS–DRGs 280–282 or 246–251 without readmission for CABG MS–DRGs, we proposed to calculate and apply the ceiling separately for each price MS–DRG at the regional level.

Third, for CABG model episodes, we proposed to apply ceilings separately to the payments that occurred during the anchor hospitalization of the CABG model episode and to the payments that occurred after the anchor hospitalization. For the anchor hospitalization portion of the CABG model episode, we proposed to calculate and apply the ceiling separately by each price MS–DRG at the regional level.

Fourth, for AMI model episodes with price MS–DRG 280–282 or 246–251 and without readmission for CABG MS–DRGs, we proposed to apply the ceiling separately to the payments that occurred during the CHAID readmission and all other payments during the episode. For payments during the CHAID readmission portion of the AMI model episode we proposed to apply the regional level ceiling calculated for the anchor hospitalization portion of a CABG model episode for the corresponding price MS–DRG, as described previously. For all other payments during the AMI model episode, we proposed to apply the regional level ceiling calculated for AMI model episodes with price MS–DRG 280–282 or 246–251 without readmission for CABG MS–DRGs corresponding to the AMI price MS–DRG.

We believed that the proposed ceiling would protect EPM participants from variable repayment risk for especially-high payment EPM episodes where the clinical scenarios for these cases each year may differ significantly and unpredictably.

The proposal for capping high payment EPM episodes was included in § 512.300(e)(1). We sought comment on our proposal to cap high payment EPM episodes.

The following is a summary of the comments received and our responses. Comment: Commenters supported the proposal for capping high payment episodes. A commenter noted that the proposal does not separately address an episode where Medicare accepts a beneficiary’s appeal of Medicare Provider Non-Coverage after the discharging physician determined not to certify that patient for care. The commenter noted that under such a scenario, in contradiction with the hospital’s clinical judgment on appropriate level of care, the proposed policy would not cap spending unless it reached the proposed threshold. The commenter recommended that CMS create additional flexibilities or protections for hospitals where a Medicare appeal overturns a hospital’s decision that is based on clinically-directed, evidence-based discharge criteria.

Response: We appreciate comments in support of our proposal to cap high payment EPM episodes. We disagree with the suggestion to include protections in addition to what we have proposed to address scenarios where a Medicare appeal contradicting a hospital’s discharge decision increases the costs of an episode. We believe our proposal offers sufficient protection under such circumstances. Further, if a hospital’s discharge decision was overturned upon appeal, we would have to believe the final decision was correct and any additional costs that resulted from the appeal would be appropriately included as an episode cost.

Final Decision: After consideration of the public comments we are finalizing the proposal, with modification, to cap high payment EPM episodes. Specifically, we are not finalizing our proposal to apply ceilings separately to the payments that occurred during the chained anchor hospitalization and to the payments that occurred after the chained anchor hospitalization with respect to AMI model episodes with MS–DRG 231–236, and instead will simply apply ceilings separately for each MS–DRG at the regional level as we would with MS–DRGs 280–282 or 246–251 without readmission for CABG MS–DRGs. Our final policy for capping high payment EPM episodes is included in § 512.300(e)(1).

e. Treatment of Reconciliation Payments and Medicare Repayments When Calculating Historical EPM-Episode Payments To Update EPM-Episode Benchmark and Quality-Adjusted Target Prices

For the CJR model, we exclude CJR model reconciliation payments and Medicare repayments from the expenditure data used to update historical claims when calculating CJR model target prices, although we received comments on the proposed rule encouraging us to include these payments. For example, commenters supported their inclusion because CJR-participating hospitals otherwise would be providing care coordination services that would not be paid directly or accounted for under applicable Medicare FFS systems and thus might be funded through reconciliation payments. Further, by
excluding reconciliation payments from the calculations, commenters suggested that we may underestimate their actual resource costs when updating target prices for the care necessary during episodes. The CJR Final Rule discussed our view that including reconciliation payments would have the effect of Medicare paying CJR model participant hospitals their target prices, regardless of whether such participant was below, above, or met their episode target price. We also noted that we had not discussed any alternatives in the CJR model proposed rule, and that we might consider including these payments in updating historical claims through future rulemaking (80 FR 73332). After further consideration, we proposed to include both reconciliation payments and Medicare repayments when calculating historical EPM-episode payments to update EPM-episode benchmark and quality-adjusted target prices (81 FR 50847). We concurred with the views expressed by commenters on the CJR model proposed rule that including these payments would more fully recognize the total resource costs of care under an EPM than would their exclusion. As indicated in section V.B. of the proposed rule (81 FR 50950 through 50951), we also proposed to modify our policy for the CJR model to also include reconciliation payments and Medicare repayments when updating target prices under that model. We also considered an option where we would include only reconciliation payments when updating but not Medicare repayments; however, we believed this option would not achieve our intention of more fully capturing the costs of care under the EPM. We further noted that the inclusion of both reconciliation payments and Medicare repayments could have differential effects on an EPM participant’s benchmark and quality-adjusted target prices based on whether or not they received a reconciliation payment or made a Medicare repayment. For example, all else equal, including an EPM reconciliation payment when updating an EPM participant’s EPM-episode benchmark and quality-adjusted target prices would modestly increase the quality-adjusted target prices in performance years 3 through 5 in comparison to not including the reconciliation payment. Conversely, all else equal, including a Medicare repayment when updating an EPM participant’s EPM-episode benchmark and quality-adjusted target prices would reduce the next performance year’s quality-adjusted target price in comparison to not including the Medicare repayment. Following analogous logic, we also proposed to include BPCI Net Payment Reconciliation Amounts in our calculations when updating EPM-episode benchmark and quality-adjusted target prices. We noted, however, that the effects of these proposals would largely be confined to PY3 of the EPMs and diminish as EPM-participant historical EPM-episode updates are eventually determined based on regional payments in subsequent years of the EPMs. This is because the net sum of EPM reconciliation payments, Medicare repayments, and BPCI Net Payment Reconciliation Amounts would represent a small portion of the total historical EPM-episode payments captured in regional pricing.

When updating EPM-episode benchmark and quality-adjusted target prices for CABG model episodes, we proposed to apportion EPM reconciliation payments and BPCI Net Reconciliation Payment Amounts proportionally to the anchor hospitalization and post-anchor hospitalization portions of CABG model historical episodes. We also proposed to calculate the proportions based on regional average historical episode payments that occurred during the anchor hospitalization portion of CABG model episodes and regional average historical episode payments that occurred during the post-anchor hospitalization portion of CABG model episodes that were initiated during the 3 historical years. This aligns with the general proposal to calculate the CABG model-episode benchmark price as the sum of the corresponding CABG anchor hospitalization benchmark price and the corresponding CABG post-anchor hospitalization benchmark price, as discussed in III.D.4.b.(2)(i) and III.D.4.d. of the proposed rule. The proposal to include both reconciliation payments and Medicare repayments when calculating historical EPM-episode payments to update EPM-episode benchmark and quality-adjusted target prices was included in §512.300(c)(8). We sought comment on our proposal to include both reconciliation payments and Medicare repayments when calculating historical EPM-episode payments to update EPM-episode benchmark and quality-adjusted target prices.

The following is a summary of the comments received and our responses.

Comment: Multiple commenters supported the proposal to include reconciliation payments when calculating target prices in order to more fully recognize the costs of care under the models. A number of commenters expressed the view that the proposal will help avoid participants from constantly competing against their prior success and better ensure that target prices decrease at a slower rate, which is critical for those providers that are already efficient, allow more, viable financial targets for the participating providers that are better aligned with effective patient care. A commenter requested that CMS include these reconciliation payments and repayments in PY2 rather than PY3. Another commenter requested that CMS exclude Medicare repayments given that the targets would fall for hospitals that increased their spending to improve care, which then caused them to exceed their target prices.

Response: We appreciate the comments supporting our proposal to include reconciliation and Medicare repayments when calculating historical EPM-episode payments to update EPM-episode benchmark and quality-adjusted target prices. We disagree with comments suggesting that we accelerate their inclusion to PY2 or to exclude Medicare repayments for these purposes. We would further note that since the historical data for determining PY1 and PY2 benchmarks is based on 2013 to 2015 expenditure data, the effects of a reconciliation determination for PY1, which is based on 2017 expenditure data, would not pertain to the data used to determine target prices for PY2. Moreover, given that reconciliation determinations are made 2 months after the completion of a performance year, it would not be possible to apply the PY1 reconciliation results to the PY2 benchmark data even if we were to adjust our timeframe for determining historical payments.

Final Decision: After consideration of the public comments received, we are finalizing the proposal, without modification, to include both reconciliation payments and Medicare repayments when calculating historical EPM-episode payments to update EPM-episode benchmark and quality-adjusted target prices. The final policy for including reconciliation payments and Medicare repayments is included in §512.300(c)(8).

4. EPM-Episode Price-Setting Methodologies

a. Overview

Whether an EPM participant receives a reconciliation payment or is made responsible to repay Medicare under the EPM is based on the EPM participant’s actual EPM-episode payments relative to quality-adjusted target prices, as well
as the EPM participant’s eligibility for reconciliation payment based on acceptable, good, or excellent quality performance. While our proposals for relating EPM participant quality performance to EPM payments were further discussed in section III.E.3.f of the proposed rule (81 FR 50887 through 50893), this section of the proposed rule discussed the approach to establishing EPM-episode benchmark and quality-adjusted target prices (81 FR 50847 through 50864).

For the purposes of price-setting, any references in our proposed rule to AMI ICD–CM diagnosis codes meant those ICD–9–CM and ICD–10–CM diagnosis codes for historical EPM episodes or ICD–10–CM diagnosis codes for EPM episodes during the EPM performance years that can be found in the specific EPM episode definitions parameters spreadsheet. Also, for the purposes of price-setting, any references in the proposed rule to intracardiac ICD–CM procedure codes meant those ICD–9–CM procedure codes for historical EPM episodes that can be found in the specific EPM episode definitions parameters spreadsheet. The EPM episode definitions parameters spreadsheets are posted on the CMS Web site at https://innovation.cms.gov/initiatives/epm.

We proposed to establish EPM-episode benchmark and quality-adjusted target prices for each EPM participant based on the following MS–DRGs and diagnoses included in the AMI, CABG, and SHFFT models as discussed in sections III.C.3 and III.C.4. of the proposed rule:

(1) AMI model
• AMI MS–DRGs —
  ++ 280 (Acute myocardial infarction, discharged alive with MCC);
  ++ 282 (Acute myocardial infarction, discharged alive with CC);
  ++ 281 (Acute myocardial infarction, discharged alive without CC/MCC); and
  • PCI MS–DRGs, when the claim includes an AMI ICD–CM diagnosis code in the principal or secondary position on the inpatient claim and when the claim does not include an intracardiac ICD–CM procedure code in any position on the inpatient claim—
  ++ 246 (Perc cardiovasc proc with drug-eluting stent with MCC or 4+ vessels/stents);
  ++ 247 (Perc cardiovasc proc with drug-eluting stent without MCC);
  ++ 248 (Perc cardiovasc proc with non-drug-eluting stent with MCC or 4+ vessels/stents);
  ++ 249 (Perc cardiovasc proc with non-drug-eluting stent without MCC);
  ++ 250 (Perc cardiovasc proc without coronary artery stent with MCC); and
  ++ 251 (Perc cardiovasc proc without coronary artery stent without MCC).
(2) CABG model DRGs—
• 231 (Coronary bypass with PTCA with MCC);
• 232 (Coronary bypass with PTCA without MCC);
• 233 (Coronary bypass with cardiac cath with MCC);
• 234 (Coronary bypass with cardiac cath without MCC);
• 235 (Coronary bypass without cardiac cath with MCC); and
• 236 (Coronary bypass without cardiac cath without MCC).
(3) SHFFT model DRGs—
• 480 (Hip and femur procedures except major joint with MCC);
• 481 (Hip and femur procedures except major joint with CC); and
• 482 (Hip and femur procedures except major joint without CC or MCC).
We proposed to generally apply the CJR model methodology to set EPM-episode benchmark and quality-adjusted target prices (80 FR 73337 through 73338), with the addition of some adjustments based on the specific clinical conditions and care patterns for EPM episodes included in the AMI, CABG, and SHFFT models. The price-setting methodology incorporated the following features:
• Set different EPM benchmark and quality-adjusted target prices for EPM episodes based on the assigned price MS–DRG in one of the included MS–DRGs to account for patient and clinical variations that impact EPM participants’ costs of providing care. Inpatient claims with PCI MS–DRGs 246–251 that contain an intracardiac ICD–CM procedure code in any position would not anchor an historical episode, nor be considered when assigning a price MS–DRG. This is because beginning in FY 2016, inpatient claims containing an intracardiac ICD–10–CM procedure code in any position no longer map to Medicare spending below the quality-adjusted target price potentially available as reconciliation payments to the EPM participant where the anchor hospitalization occurred.
• Further discussion on each of the features and sequential steps to calculate EPM-episode benchmark and quality-adjusted target prices can be found in sections III.D.4.b through e. of both our proposed rule and this final rule.
We also proposed to calculate and communicate EPM-episode benchmark and quality-adjusted target prices to EPM participants prior to the performance period in which the prices apply (that is, prior to January 1, 2018, for prices covering EPM episodes that start between January 1, 2018, and September 30, 2018; prior to October 1, 2018, for prices covering EPM episodes that start between October 1, 2018, and December 31, 2018). We stated our belief that prospectively communicating
EPM-episode benchmark and quality-adjusted target prices to EPM participants would help them make infrastructure, care coordination and delivery, and financial refinements they may deem appropriate to prepare for the new episode target prices under the model.

The proposal to prospectively communicate quality-adjusted target prices was included in § 512.300(c)(9). We sought comment on our proposal to prospectively communicate these prices.

The following is a summary of the comments received and our responses.

Comment: Commenters supported the proposal to establish and prospectively communicate benchmark and quality-adjusted target prices. Commenters also expressed concerns about how far in advance the information would be made available and the level of detail that would be included in the information.

Commenters indicated that knowing the target price prior to the relevant performance period is essential for participants to be able to implement efficient care redesigns linked explicitly to established payment rates. As such, commenters requested that CMS provide this information 60 to 90 days prior to the start of the relevant performance period. Other commenters requested that CMS make all of the components necessary to calculate the target price for both the CJR model and proposed EPMs available to participants so they can verify that CMS accurately calculated the target price as some CJR participants have reported an inability to replicate the target price calculation due to CMS’ use of “black box” inputs for certain national factors.

Response: We appreciate the comments and support we received for our proposal to prospectively communicate benchmark and quality-adjusted target prices, agree with commenters on the importance of having this information in advance of each performance year, and intend to make as much information available as we deem appropriate to participants as far in advance of the models’ implementation as is possible.

Comment: Several commenters recommended that CMS annually reevaluate and update the price-setting assumptions through a notice and comment process. One of these commenters reported that the proposal to make historical claims data available before implementation of the models would still not give hospitals an opportunity to comment on problems with the methodology until after the models had begun. Another commenter based their request on significant and unexplained changes in prices reported under BPCI and the Pioneer ACO model.

Response: We appreciate these comments and suggestions. We believe the information we provided in both our proposed and this final rule is sufficiently detailed for participants to understand our assumptions and methodology for setting target prices. In the event we intend to materially change our price-setting assumptions or methodology, we would make those proposed changes available through a notice and comment process.

Final Decision: After consideration of the public comments we received, we are finalizing the proposal, without modification, to prospectively communicate quality-adjusted target prices.

b. EPM-Episode Benchmark and Quality-Adjusted Target Price Features

(1) Risk-Stratifying EPM-Episode Benchmark Prices Based on MS–DRG and Diagnosis

To account for some of the clinical and resource variations that would be expected to occur under the EPMs, we proposed generally to apply the episode pricing methodology that was applied to the CJR model to develop the EPM-episode benchmark prices, which we referred to as the standard EPM-episode benchmark price (81 FR 50848). In addition, for each EPM participant, we proposed to risk-stratify and establish special EPM-episode benchmark prices for episodes in different pricing scenarios as described in this section, as well as sections III.D.4.c. through e. of the proposed rule (81 FR 50848 through 50864). For purposes of the proposed rule, risk-stratification meant the methodology for developing the EPM-episode benchmark price that accounts for clinical and resource variation in historical EPM episodes so that the quality-adjusted target price (calculated from the EPM-episode benchmark price) can be compared to actual EPM episode payments for EPM beneficiaries with similar care needs to those in historical EPM episodes.

For the SHFFT model, we proposed to set the price MS–DRG equal to the anchor MS–DRG. We proposed to calculate standard SHFFT model-episode benchmark prices based on price MS–DRGs following the general payment methodology that was applied to the CJR model (80 FR 73337 through 73358) with risk stratification according to the anchor MS–DRG. We proposed to apply the CJR model payment methodology separately to AMI model episodes with anchor AMI MS–DRGs 280 through 282 and anchor PCI MS–DRGs 246 through 251 with a corresponding AMI ICD–CM diagnosis code on the inpatient claim for the anchor hospitalization and without an intracardiac ICD–CM procedure code in any position on the inpatient claim for the anchor hospitalization.

For episodes in the AMI model with chained anchor hospitalizations and no readmissions for CABG MS–DRGs, we proposed to set the price MS–DRG based on the hierarchy described in section III.D.4.b.(2)(a) and to calculate AMI model-episode benchmark prices based on price MS–DRGs as described in sections III.D.4.b.(2)(a) and III.D.4.c. of the proposed rule.

For AMI model episodes with chained anchor hospitalizations that do not include CABG MS–DRGs and with readmissions for CABG MS–DRGs, we proposed to set the price MS–DRG as the anchor MS–DRG and to calculate CABG readmission AMI model-episode benchmark prices as described in sections III.D.4.b.(2)(b), III.D.4.b.(2)(c), and III.D.4.e. of the proposed rule.

For AMI model episodes, we proposed to set the price MS–DRG as the anchor MS–DRG and to calculate CABG model-episode benchmark prices as the sum of the CABG anchor hospitalization portion price and the CABG post-anchor hospitalization portion price, which would be calculated by applying the general payment methodology that was applied to the CJR model (80 FR 73337 through 73358) separately to the expenditures that occurred during the anchor hospitalization of the CABG model episode and to the expenditures that occurred after the anchor hospitalization as discussed in sections III.D.4.b.(2)(b) and III.D.4.d. of the proposed rule.
Finally, we proposed that after assigning an EPM–episode benchmark price to each EPM episode, the EPM–episode quality-adjusted target price would be the EPM–episode benchmark price reduced by the effective discount factor for the corresponding EPM that corresponds to the EPM participant’s quality category, as discussed in sections III.D.4.(10) and III.E.3.f. of the proposed rule.

The following is a summary of the comments received and our responses.

Comment: One commenter commended CMS for attempting to create a target price methodology that accounts for the variations in episode spending that are characteristic of these specific clinical scenarios while other commenters noted that the complexity of the proposals made it difficult to evaluate them. Several commenters disagreed with the proposal to base prices on MS–DRGs or anticipated that they could result in unintended consequences. For example, commenters noted concerns that it would be challenging to generate sufficient savings where a sizeable portion of episode costs are embedded in the MS–DRG costs attributed to the initial hospitalization and cannot be changed by hospitals’ performance. Other commenters noted that the higher payments associated with higher-weighted MS–DRGs could serve as a disincentive to participants from making quality improvements or to reduce complications because they would be paid more when there are complications that raise the MS–DRG, but paid less when quality improvements they made resulted in a lower cost MS–DRG where only CMS rather than the hospital benefitted from the reduced costs. Likewise, several commenters claimed that participant coding behavior could result in similar unintended consequences. As such, several commenters recommended that CMS consider a price-setting methodology that removes the MS–DRG payment from the target price or mitigates coding effects from the calculations or differentially weights cost components that would be “locked in” to the episode spending.

Response: The purpose of our models is to test EPMs within the existing parameters and payment systems of FFS Medicare. As we noted in section III.A.1.c. of this final rule, issues such as those commenters raised are generally present for every episode payment model that sets a price Medicare will pay for an episode-of-care. While our models are not intended to change these existing FFS payment systems, we intend that by incorporating both the MS–DRG payment and Part B services furnished during the anchor inpatient hospitalization, the EPMs will create incentives for increased care coordination and efficient care delivery from the time of inpatient admission through 90 days after discharge. Moreover, we hope the EPMs can identify the effectiveness of a bundled payment model within those parameters as well as the factors that could impede success. As discussed further in sections III.G.4. through III.G.6. of this final rule, we will monitor access to care, the quality of care, and delayed care under the EPMs and may take actions against EPM participants if we find evidence that supports concerns in these areas. In addition, the evaluation as discussed in section IV. of this final rule will analyze beneficiary outcomes and their relationship to clinical pathways under the EPMs.

Comment: Several commenters addressed EPM payments under the SHFFT model. One commenter noted that the proposed SHFFT model would include beneficiaries discharged under hip and femur procedures except major joint replacement MS–DRGs (480–482), representing IPPS admissions for hip fixation procedures in the setting of hip fractures. As these procedures are emergent rather than elective, they would have more risk to manage than would an elective LEJR and would more often require a SNF stay and non-weight bearing status for weeks, which results in higher costs than for an elective procedure. The commenter questioned whether such non-elective procedures would have a higher benchmark price and expressed concerns that bundled payment models are potentially less successful for non-elective procedures which they believe require more time for planning and rehabilitation.

Other commenters suggested that the differences in severity and fracture type for episodes under the SHFFT model are not adequately represented by the three MS–DRGs we proposed. One of these commenters noted that the separate target prices as CMS had done for the CJR model, which would serve as a rough form of risk-adjustment and would make it easier for hospitals to devise protocols and strategies best suited to fracture type. Another commenter suggested that since patients who experience SHFFT episodes often require lengthier and more complicated care, and typically require longer post-acute care than those receiving joint replacement, the calculation of target prices should also take into account the proportion of SHFFT episodes in the bundle in order to most accurately capture the risk of SHFFT episodes. One commenter recommended that CMS adopt transfer mechanisms within the SHFFT model, including price adjustments, which are similar to those proposed for inpatient-to-inpatient hospital transfers under the AMI model but that the receiving hospital would bear the risk if a SHFFT patient is transferred to that hospital.

Response: We proposed to set prices based on anchor MS–DRGs, which implicitly adjust payments based on their relative weights with respect to the IPPS resources required for each MS–DRG. For example, average episode expenditures for historical SHFFT episodes increases from roughly $36,000 in episodes with anchor MS–DRG 482 to more than $52,000 for episodes with anchor MS–DRG 480. Further, our benchmark prices would reflect the historic costs of post-acute care associated with these MS–DRGs. If historic post-acute care costs for the emergent MS–DRG are higher than those for a similar elective MS–DRG, then those higher resources would be reflected in and produce a larger increase in the benchmark amount than would be the case for the elective procedure. We would also note that as discussed in section III.D.4.(2) which follows, we will be exploring additional options to adjust benchmark prices and performance payments to better account for cost variation associated with risk. These adjustments, which we intend to be effective beginning in FY3, should further account for some of the potential variation in costs across episodes as has been highlighted. We disagree with the view that a bundled payment would be any less effective with an emergent than an elective procedure. Our proposed models are intended to encourage changes and improvements in participants’ care practices, in general, with respect to the episodes covered under the models, which we believe would apply regardless of whether the episode is elective or emergent.

As discussed in section III.D.4.(a), we are not finalizing our proposal with regard to inpatient-to-inpatient transfers for AMI episodes. For AMI model episodes alone, we will cancel the AMI episode that begins at the initial treating hospital when an inpatient-to-inpatient transfer occurs during the anchor hospitalization. For CABG and SHFFT model episodes, once the episode begins and an inpatient-to-inpatient transfer occurs, the episode will continue and...
the hospitalization at the transfer hospital will be included or excluded from the CABG or SHFFT episode based on whether or not the MS–DRG for the admission at the transfer hospital is excluded from the CABG or SHFFT episode definition.

Comment: One commenter stated that the proposed EPMs do not adequately account for research and teaching functions and that CMS should adjust payments to account for the overhead associated with these functions. Response: We disagree that our proposed models should include additional payment adjustments for research and teaching function beyond the payments Medicare already makes for these purposes under the IPPS. In contrast, we believe that participants should seek improved care quality and efficiencies as broadly as is possible, including any that can be attained with research or teaching activities.

Comment: A commenter noted their view that providers should have EHR capability, including the ability to share EHR data across sites of service in order to speed decision-making and eliminate duplication of effort. The commenter suggested that CMS include incentive funds to assist post-acute care providers in implementing a robust EHR system and tools to share the data with other providers. Similarly, a commenter suggested that the proposed models will require technology and services for monitoring care during a post-acute care stay, and that CMS should incentivize the use of such technology and services. The commenter recommended that CMS should pay for remote patient monitoring using the CPT-code 94040, which is similar to what is done in certain state models.

Response: We agree that EHR capability and monitoring technologies can be useful tools toward improving care coordination and care quality; however, our models are based on incentives to improve care quality and efficiency, with a goal of improving control of cost growth. We do not believe that adding funding to encourage further adoption of technologies under the models is consistent with our goals. However, we would note that to the extent a participant establishes sharing arrangements with post-acute care collaborators under the models, those collaborators could choose to use such shared funds for purposes of improving their EHR or monitoring capacities.

Comment: As discussed in section III.C.3.b. of this final rule, one commenter provided evidence demonstrating that the use of drug-eluting stents (DESs) results in better long-term outcomes in many patients and fewer repeat procedures for in-stent restenosis than do less costly non-drug-eluting stents. The commenter expressed concern that while the costs of these more expensive stents would be captured in the episode cost calculation, the long-term benefit for patients both in terms of outcomes and costs would not be fully captured in the 90-day post-discharge episode period and hence discourage the appropriate use of DES by causing fewer patients to receive them, resulting in poorer outcomes and increased cost growth. The commenter requested that CMS consider various means so to ensure the 90-day post-discharge episode target price does not discourage the longer term outcomes that are better for Medicare beneficiaries and potentially overall savings for CMS. Another commenter requested an adjustment or additional financial protection for costs associated with the implantation of an Implantable Cardioverter Defibrillator (ICD) given strong empirical support and its Class I recommendation for prevention of sudden cardiac death for certain patients.

Similarly, another commenter recommended that CMS include a payment adjustment such as an additional outlier or add-on payment for using new technology, having higher cost cases, or adopting a breakthrough/ high cost treatment in advance of other providers.

Finally, one commenter recommended that CMS coordinate with the device industry to create a process wherein the use and associated cost of new technologies can be added to episodes of care definitions on a routine basis and modify the proposal to ensure that providers have financial incentives to provide optimal care for high-risk patients with severe coronary artery disease even if the initial treatment episode has a higher cost. The commenter expressed concern that insufficient data were available at this time to inform a clinical guideline recommendation with regard to the optimal timing of non-culprit vessel PCI, and the proposed payment bundles could encourage procedures that may not provide the best clinical outcomes for Medicare beneficiaries but instead have financial benefits with respect to the target price. As guidelines change based on available data, CMS should consider potential adjustments to reconciliation to the episodes quality adjusted target prices based on guideline changes.

Response: As we noted in section III.C.3.b. of this final rule, Medicare payment for coronary stents, whether bare metal or DES, used during a PCI performed during a hospitalization are included in the IPPS payment for the inpatient hospitalization. While they are not paid separately by Medicare, payment for the required resources would be included in AMI episodes because the IPPS services for the anchor hospitalization are included in the episodes. We propose to risk-stratify EPM-episode prices based on MS–DRG as discussed in section III.D.4.b.(1) of this final rule and there are separate MS–DRGs for PCIs that use DES (246 and 247) and non-DES (248 and 249) for which there would be separate AMI episode prices. Therefore, we do not believe that the financial incentives under the AMI model encourage the use of any specific coronary stent because the episode prices take into consideration the IPPS payment for the specific MS–DRG that applies to the AMI model beneficiary. We do not expect the AMI model to discourage the appropriate use of DES. We will also note, as stated in section III.D.4.b.(2), we will be exploring additional mechanisms to risk adjust payments that should become available beginning in PY3. We believe that these adjustments will provide participants further protections that should help mitigate the concerns commenters raised.

Likewise, we do not agree with comments requesting payments in addition to those currently made available when participants adopt specific or new technologies, provide services for high-cost cases, or adopt breakthrough technologies. The purposes of the proposed models are to improve care quality and efficiency while better controlling Medicare cost growth within a FFS framework. As such, the models seek to achieve these goals to the greatest extent possible within the regulatory framework that applies within FFS Medicare, and are not intended to create new or substitute payment mechanisms or processes for establishing new payments under FFS Medicare.

Comment: A commenter recommended that when establishing episode target payments, price calculations should incorporate clinical practice guidelines and appropriate use criteria that are endorsed by all stakeholders to ensure that patients are not receiving inadequate care.

Response: We disagree with the recommendation that prices should include clinical practice guidelines as, to the contrary, they are based on Medicare FFS payments and their historical utilization for services included in the EPMs, and should not.

The Federal Register is a daily publication for Federal Government notices and rules. The information presented here is for educational purposes only and should not be considered legal advice.
include specifications reflecting normative criteria regarding clinical practice guidelines, which could be overly prescriptive for EPM participants and providers and suppliers treating EPM beneficiaries. That said, we would assume that EPM participants would be following clinical practice guidelines as we would expect should also be the case for services and paid under the Medicare FFS program.

Comment: We received a comment suggesting that CMS make payment adjustments for cases where a beneficiary receives the majority of their post-acute care in a different MSA from the MSA in which the anchor hospitalization occurred. The commenter presented an example where a beneficiary with an anchor hospitalization in Massachusetts receives post-acute care in Florida. In their view, the MSA in Florida could have higher service utilization and spending than the Massachusetts MSA given different care practices. Further, the commenter believed it was unlikely that the hospital in Massachusetts could have influence on a provider in another distant MSA. The commenter recommended a payment adjustment to both avoid penalizing hospitals in the initiating MSA and to help in not deterring tertiary care facilities from accepting patients that could not receive necessary care in their own distant MSA.

Response: As noted in section III.C.4.a. of this final rule, we recognize that in occasional circumstances, EPM participants may have limited ability to coordinate care, but that we generally expect that much of the subsequent coordination of post-acute care services and other related services for EPM beneficiaries during the 90 days post-discharge can be accomplished through telecommunications that do not require the patient to remain within the geographic proximity of the hospital responsible for the EPM episode. In that section, we also noted that the design of the EPMS does not preclude hospitals from coordinating care with other providers outside of their immediate service area, that most EPM participants have the tools to engage in effective remote care coordination that results in high quality episode care, and that we finalized several waivers of Medicare program rules, as discussed in section III.J. of this final rule, to facilitate efficient and effective episode care coordination for beneficiaries in remote or distant locations outside of the EPM participant’s immediate community. We also finalized policies for financial arrangements in section III.L. of this final rule that allow EPM participants to share upside and downside financial risk with a variety of individuals and entities who collaborate with the EPM participant in redesigning care and caring for EPM beneficiaries, regardless of the geographic proximity of these individuals and entities to the EPM participant. Through financial arrangements, EPM participants could align the financial incentives of providers in the EPM beneficiary’s home community with the goals of the EPM participant to improve the quality and reduce the cost of EPM episodes. Therefore, we do not believe it is necessary to make a payment adjustment when a beneficiary receives post-acute care in a different MSA from the MSA in which the anchor hospitalization occurred. However, we plan to monitor these occurrences and could consider modifying our policy should that be determined appropriate.

Comment: Several commenters requested that CMS include more flexibility with respect to payments for post-acute care services under the EPM Models and noted that while Medicare payments for inpatient rehabilitation facility or long-term care hospital services are based on a prospective amount, payments for skilled nursing facility services are less “encompassing” and are based on a per diem amount. Commenters suggested that these differences can create an unequal playing field and prevent efficiencies that are realized from being reflected in payments. As such, commenters requested that CMS identify flexibilities so that payments among a broader array of post-acute care providers could more closely reflect any efficiencies that are realized, for example, through payments on a per diem basis or at a reduced rate.

Response: We appreciate the suggestions commenters offered to better align payments across post-acute care providers. We will not be adopting these suggestions for purposes of these models as, to the greatest extent possible, we want to test the effects of bundled payments within the existing FFS Medicare environment. We will consider the applicability of the suggestions offered, however, as we explore future models that involve payments for post-acute care services.

(2) Adjustments To Account for EPM-Episode Price Variation

We also considered further adjustments to account for clinical and resource variation that could affect EPM participants’ costs for EPM episodes. As was the case for the CJR model (80 FR 73338 through 73339), we stated our belief that no standard risk adjustment approach that is widely-accepted throughout the nation exists for the proposed EPM episodes. Thus, we did not propose to make risk adjustments based on beneficiary-specific demographic characteristics or clinical indicators. Likewise, we questioned whether CMS Hierarchical Condition Categories (HCC) used to adjust for risk in the Medicare Advantage program would be appropriate for risk-adjusting EPM episodes as such categories are used to predict total Medicare expenditures in an upcoming year for MA plans and may not be appropriate for use in predicting expenditures over a shorter period of time, such as the EPM episodes. Further, the validity of HCC scores for predicting Medicare expenditures for shorter episodes-of-care or specifically for the AMI, CABG, and SHFFT model episodes that we are proposing has not been determined. Thus, we did not propose to risk-adjust EPM-episode benchmark or quality-adjusted target prices using HCC scores for the EPMS. We referred to the CJR Final Rule for additional discussion of our assessment of risk-adjustment options for the CJR model, which informed our views on their appropriateness for the EPMS (80 FR 73338 through 73340).

We also noted, however, that there are circumstances that could account for spending variation in EPM episodes where certain pricing adjustments could be appropriate. We identified several scenarios where increased EPM-episode efficiencies would be limited for certain groups of EPM beneficiaries and a standard EPM-episode benchmark price based on the anchor MS–DRG would, therefore, not account for circumstances where clinically-appropriate care could consistently result in higher EPM-episode payments. For example, as discussed in section III.C.4.a.(3) of the proposed rule, variation could arise from the asymmetric distribution of cardiac care across hospitals, which makes transfers, either from a hospitalization or from the emergency department (without inpatient admission) of one hospital to another, a common consideration in the treatment course for beneficiaries with an initial diagnosis of AMI, resulting in a chained anchor hospitalization for inpatient-to-inpatient transfers. We also recognized that certain episodes involving hospital readmissions for clinically-appropriate planned follow-up care may have higher episode spending than episodes with a single hospitalization or with chained anchor hospitalizations involving transfers that do not have any readmissions. Further, a beneficiary
who has a CABG in the context of hospitalization for an AMI may have different spending in the 90 days post-hospital-discharge due to different health needs than a beneficiary who has an elective CABG. Accordingly, we proposed specific policies and payment adjustments in recognition of the systematic, consistent variation in episode spending that could result from such circumstances.

The following is a summary of the comments received and our responses.

Comment: While one commenter supported the proposal to risk-stratify episode costs based largely on MS–DRGs with additional adjustments for scenarios including chained anchor hospitalizations, readmissions, and CABG, many commenters expressed concerns that no further risk-adjustment was proposed beyond the risk-stratification inherent in the MS–DRGs and CMS’ proposed adjustments for such scenarios as chained anchor hospitalizations or episodes involving readmissions. These commenters noted their views that the absence of further risk-adjustment would penalize hospitals treating the sickest, most complicated, and most vulnerable patients for factors that are beyond the hospitals’ control. One commenter reported that adequate risk-adjustment is especially important as CMS considers additional clinical groups for bundling programs, such as cardiac care or SHFFT patients, that are more clinically heterogeneous than CJR patients. MedPAC noted that it has “consistently found that chronic conditions and advanced age play a major role in explaining variation in spending across beneficiaries. CMS proposes no further risk-adjustments beyond the DRG/subgroups but provides no data to assess whether the proposed stratification is sufficient to adjust for differences in spending across beneficiaries within each episode type. The Commission urges CMS to evaluate whether additional risk adjustment strategies, such as comorbidities and age, would improve the accuracy of the benchmarks.”

Many of the commenters pointed to a recent study noting that the use of region-based target pricing can lead to reduced reconciliation payments for hospitals. However, reconciliation payments would substantially increase for hospitals that treat patients with high complexity and be reduced for hospitals that treat patients with low complexity when CMS–HCC scores are applied. Some commenters cited additional data in support of their views that the absence of risk-adjustment ignores the substantial variation in episode payments that exists, penalizes hospitals for assuming the risk of higher-cost/higher-risk patients, or potentially impedes access to high quality care.

A number of commenters related the absence of further risk-adjustment to concerns with the proposal to phase-in regionally determined target prices. For example, commenters noted that the use of a regional spending component will hold all hospitals in a region to the same target price, even though they would have different clinical capabilities and different risk profiles that results in their treating patient populations with differing levels of severity and costs, which further buttressed the view that substantial variation in episode payments exist within each target price category, not just between the target price categories. Some commenters expressed concerns that differences in clinical capabilities, and therefore, differing rates of more costly transfer episodes, could penalize smaller hospitals that do not have the most sophisticated cardiac care available.

Some commenters expressed the view that the absence of risk adjustment would particularly affect hospitals that typically treat more complex patients, for example, tertiary hospitals or hospitals that are academic medical centers because the absence of risk adjustment would not account for the complexity of their patients, which often included multiple co-morbidities, longer lengths of stay, and higher costs. As hospitals could view these patients as increasing their financial risk under the EPMs, commenters expressed concerns that patients who suffer from multiple chronic conditions or comorbidities may find it more difficult to find participating hospitals willing to serve them.

Other commenters expressed concern that hospitals serving communities with a high percentage of lower income patients could be adversely affected by the absence of risk-adjustment. Moreover, the lack of further risk-adjustment could create a risk-adverse environment with the possibility of withholding appropriate care to patients with moderate to high-risk profiles, for example to women, due to their older age at cardiac presentation and minorities due to increased frequency of clinical renal disorder. These commenters noted that such patients could have higher costs due to their age or presence of multiple co-morbidities.

Further, by not providing an adjustment factor, there could be a greater chance of transfer abuse whereby smaller providers might shift risk for these patients to tertiary providers by transferring emergency room patients that are at greater risk for complications or readmissions.

Commenters also noted that CMS appeared to be inconsistent and contradictory in not proposing to apply CMS–HCC scores for the proposed models or for the CJR model when it does so for similar programs and applications. Specifically, commenters observed that CMS–HCC scores are applied to quality measures such as Medicare Spending per Beneficiary (MSPB), 30-day mortality and readmission, as well as for the quality measures proposed to be included under the proposed models.

Commenters remarked that this gives the impression of poor harmonization of efforts within CMS, which leads to fragmented programs.

The commenters requested that CMS apply some kind of additional risk-adjustment to the proposed models and the CJR model at the latest before downside risk begins. One commenter noted that even if not ideal, further risk-adjustment would be at least as good as CMS’ proposal, but simpler and easier to understand than the 75 different target prices CMS proposed. Other commenters recommended that CMS explore and incorporate additional risk-adjustment to address socio-demographic factors such as the availability of primary care, physical therapy, easy access to medications and appropriate food, and other supportive services, which are beyond providers’ control, affect hospitals’ performance on outcome measures.

Several commenters recommended that CMS apply the CMS–HCC scores. In their view, some benefits of these scores is that they capture the severity of a patient’s level of underlying illness, better match hospital’s payment to the complexity of their patients, appropriately account for the expected increase in utilization of health care services, reduce the likelihood of a Medicare repayment, and should be administratively simple to apply given their use for other efforts and programs under Medicare. One commenter offered that these codes could, at a minimum, serve as a basis for CMS to begin to construct an appropriate risk-

---

adjustment for CJR episodes, as well as for SHFFT episodes if it re-proposes their implementation in the future.

Another commenter suggested that CMS identify a means to adjust the CMS–HCC codes so that they could better apply to a 90-day episode. Moreover, while encouraging further risk-adjustment as soon as possible within the period of the model, this commenter also suggested that the proposed models could be an opportunity to obtain the data needed to develop EPM risk-adjusters.

One commenter encouraged the use of physician-defined patient condition categories to ensure effective risk stratification in condition-based payment models. This commenter reported that alternative payment models that are designed to control overuse need to incorporate effective risk adjustment or risk stratification components in order to protect patients against underuse and to avoid penalizing physicians for delivering and ordering services that patients need. In their view, CMS–HCCs and other claims-based regression models are not adequate for risk adjustment in condition-based payment models. Rather, condition-based payment models must be risk stratified based on the clinical characteristics and functional status of patients that are most relevant to the types of conditions being managed.

Some commenters urged CMS to improve the risk-adjustment methodology by collaborating with the clinical community and relevant medical specialty societies such as the cardiovascular community that have experience with the different risks facing patients who will be treated within these episode models. Other commenters recommended that CMS review risk adjustment methodologies used by other’s bundling models or to incorporate data from the STS Risk Calculator into the risk-adjustment methodology or to use multiple model better predict the cost of care.

Commented that CMS expand risk-adjustment to other provider types or measures factors in addition to the patient alone. For example, one commenter expressed concern that CMS has no risk-adjustment methodology in place for patients’ transitions into the post-acute and long-term care sector and that many factors contribute to cost variation in these milieu are outside of the control of the facilities themselves. The commenter requested CMS to clearly define risk stratification indices and develop a cost-to-risk algorithm based on previous utilization data and incorporating specific, patient characteristics, including functional status, age, and frailty, to accurately evaluate EPM performance. Another commenter recommended that CMS examine whether the CMS–HCC model would be an appropriate way to measure the resource use of geriatricians as well as serve as a risk-adjustment mechanism. Finally, one commenter urged CMS to modify the risk-adjustment policy to reflect the relative riskiness of the procedures as well as the beneficiary-specific demographic characteristics and clinical indicators.

Response: We appreciate the comment supporting our proposal to risk-stratify episode costs based largely on MS–DRGs with additional adjustments for scenarios including chained anchor hospitalizations, readmissions, and CABG as well as the many comments expressing concerns about our proposal, data cited in support of these concerns, requests for additional measures to adjust for risk, and suggestions on approaches to consider for this purpose. We share commenters’ interests in ensuring that payments under the models are well aligned with costs and adequately recognize cost variation associated with either the services provided or beneficiary characteristics so that participants are encouraged and able to be successful under the models, which includes providing access to high quality care to Medicare beneficiaries. In particular, we share commenters’ concerns that episode payments be more closely aligned with costs when all EPM participants will assume downside risk and have their payments determined more fully based on regional pricing.

Based on the comments we received, we are persuaded to explore additional measures with which we could adjust EPM episode payments for risk to complement our proposals to stratify and adjust episode payments based on type and combination of anchor MS–DRGs included in an episode. As such, we plan to examine a range of options such as CMS–HCC scores, beneficiary factors, clinical factors, pathways including planned readmissions after discharge for an acute cardiac event, and other measures that potentially further explain variation in costs, including socio-demographic factors such availability of primary care services. As discussed in section III.D.7.e. of this final rule, CMS will also consider and potentially incorporate results from studies conducted under the Improving Medicare Post-Acute Care Transformation “IMPACT” Act of 2014 (Pub. L. 113–183) with respect to factors, including socio-demographic factors, that could affect resource use under Medicare and the EPMs.

While we are optimistic that we will be able to identify factors that explain more variation in episode expenditures than risk stratification alone, we acknowledge that no combination of adjustments will account for all variation in episode expenditures. Still, we intend to proceed with the models and as discussed elsewhere in this rule are finalizing other financial protections like an extended period of no downside risk (see section III.D.2.c.), capping high payment episodes (see section III.D.3.d.), and more generous stop-loss protections for certain hospitals (see III.D.7.e.1). We also intend to engage with and seek input from stakeholders as we examine this range of options prior to rulemaking.

Our goal is to make our refinements to the pricing methodology to reflect risk adjustment effective beginning in PY3, which would establish based on notice and comment rulemaking process. As such, the additional measures would apply to episodes ending on or after January 1, 2019 and that had anchor discharges occurring after October 1, 2018 and thus be in place at the time downside risk is required.

Final Decision: After consideration of the public comments received, we are finalizing the proposal, without modification, to risk-stratify episodes based on adjustments to recognize the combination of MS–DRGs and pathways associated with an episode. We will also explore and plan to implement additional adjustments to account for risk through rulemaking to be effective in PY3.

(a) Adjustments for Certain AMI Model Episodes With Chained Anchor Hospitalizations

In section III.C.4.a.(5) of the proposed rule, we stated that once an AMI model episode is initiated at an AMI model participant, the AMI model episode continues under the responsibility of that specific participant, regardless of whether the beneficiary is transferred to another hospital for further medical management of AMI or revascularization through PCI or CABG during a chained anchor hospitalization. Given there could be significant differences between the discharge MS–DRG from the hospital that initiates the AMI episode and the hospital to which a beneficiary is transferred, as well as the Medicare payment associated with the revascularization, AMI model payment and the post-discharge spending for these beneficiaries, we stated that it would be
appropriate to adjust the AMI model-episode benchmark prices for certain AMI model episodes involving a chained anchor hospitalization. More specifically, we indicated that it would be appropriate to make an adjustment when a final hospital discharge MS–DRG in the chained anchor hospitalization is an anchor MS–DRG under either the AMI or CABG model. Thus, for episodes involving a chained anchor hospitalization with a final discharge diagnosis of any of AMI MS–DRG 280–282, PCI MS–DRG 246–251 without an intracardiac ICD–CM procedure code in any position on the corresponding inpatient claim, we proposed that the AMI model episode would begin with and be attributed to the first hospital, and we proposed to set the price MS–DRG to the AMI model-episode benchmark price with the highest IPPS weight.

If the price MS–DRG was an AMI or PCI MS–DRG, we proposed to set the episode benchmark price as the "price MS–DRG" based on the AMI, PCI, or CABG MS–DRG in the chained anchor admission with the highest IPPS weight. If a CABG MS–DRG occurred in a chained anchor hospitalization that was initiated with an AMI MS–DRG or PCI MS–DRG without an intracardiac ICD–CM procedure code in any position on the corresponding inpatient claim, we proposed that the AMI model episode would begin with and be attributed to the first hospital, and we proposed to set the price MS–DRG to the CABG MS–DRG in the chained anchor hospitalization with the highest IPPS weight.

We stated our belief that this proposal could minimize potential disincentives to AMI model participants from transferring patients when different or higher levels of care are needed. This is because the AMI model-episode benchmark prices we set would be more representative of the AMI spending based on the totality of care furnished during the chained anchor hospitalization and post-discharge period within the AMI model episode and for which the AMI model participants would be held accountable. We also stated our view that our proposal could encourage AMI model participants that frequently transfer patients after admission to improve their efficiency and the quality of care by transferring beneficiaries needing higher levels of care prior to hospital admission and managing those beneficiaries admitted to reduce the need for later transfers.

As an alternative, we also considered an approach where we would set the target price taking into consideration IPPS payments for both the MS–DRG assigned to the first admission in the chained anchor hospitalization and the MS–DRG assigned to the final admission in the chained anchor hospitalization. We could apply this approach to all AMI model participant hospitals or to only a subset of hospitals based on special situations that could lead to more common transfer scenarios that are unavoidable, such as small bed-size, rural location, interventional or cardiac surgery capacity, or other characteristic of the hospitals. All AMI model episodes involving chained anchor hospitalizations would include at least two IPPS payments for the chained anchor hospitalization, compared to one IPPS payment for most AMI episodes with only an anchor hospitalization that does not result in an inpatient-to-inpatient transfer. In our view, the alternative approach would likely result in a higher AMI-model episode benchmark price than under our proposal for AMI model episodes including a chained anchor hospitalization. Therefore, we noted that this alternative approach could have the effect of further reducing potential disincentives to hospitals from transferring patients when different or a higher level of care is needed; however, we were not convinced this approach would ultimately improve care quality and efficiency under the AMI model.

First, we were concerned that this alternative approach could serve as an incentive for hospitals to admit and then transfer patients when doing so might not be medically necessary, which would neither enhance care quality nor efficiency. A recent study showed that non-procedure hospitals, defined as hospitals that lack onsite cardiac catheterization and coronary revascularization facilities, vary substantially in their use of the transfer process for Medicare beneficiaries admitted with AMI.79 Barreto-Filho J, Wang Y, Rathore SS, et al. Transfer Rates From Nonprocedure Hospitals After Initial Admission and Outcomes Among Elderly Continued
transferred from hospitals that had a high transfer rate experienced greater use of invasive cardiac procedures after admission to the transfer hospital than beneficiaries transferred from hospitals with a low transfer rate. However, higher transfer rates were not associated with a significantly lower risk-standardized mortality rate at 30 days, and at one year, there was only a 1.1 percent mortality rate difference between hospitals with higher and lower transfer rates. As such, we believed this alternative approach could be appropriate for only a subset of AMI model participant hospitals based on specific hospital characteristics that could lead to a higher frequency of unavoidable transfers for AMI model beneficiaries rather than appropriate for hospitals overall. In addition, if we were to adopt this alternative approach, we believed it would also be necessary to incorporate methods for monitoring changes in the frequency of AMI model participant hospital patient transfers over the model’s performance years, as well as assessing the appropriateness of those transfers. For example, to address changes in transfer frequency, we might compare how often an AMI model participant hospital transferred a beneficiary following an inpatient admission within each performance year relative to the frequency of transfers during its initial 3-year historical period. To address appropriateness of transfers, we might consider reviewing and comparing a sample of a hospital’s transfers within a performance year as compared to the historical period. Furthermore, we might also propose future changes to this approach where changes in the frequency or appropriateness of transfers were identified.

Second, in contrast to our proposal, we believed that this alternative approach would not have the benefit of encouraging AMI model participant hospitals to make an early decision and transfer patients prior to rather than following inpatient admission when doing so prior to admission would be appropriate for the beneficiary’s clinical circumstances and the hospital’s capabilities. While we recognized that in some cases, an AMI model beneficiary admitted to the initial treating hospital may need to be transferred to a referral hospital that can provide a different or higher level of care, we noted our belief it is important that the AMI model’s payment methodology support the goal of rapid decision-making by the AMI model participant hospital about the AMI model beneficiary’s care pathway based on clinical guidelines that often incorporate a time dimension in the guidelines for care.

Thus, on balance, we believed that our proposed methodology would best establish appropriate incentives to improve care quality and efficiency under the AMI model by encouraging timely decisions about admission to the initial treating hospital and incentivizing only those transfers that are necessary to meet AMI model beneficiary’s health care during the course of their hospitalization. Our proposal would adjust the AMI model-episode benchmark price that applies to the episode when a chained anchor hospitalization occurs and results in more costly care at the transfer hospital than would be expected based on the anchor MS–DRG at the initial treating hospital who would be accountable for the episode under the AMI model, thus accounting for the care at the referral hospital.

In contrast, some chained anchor hospitalizations could begin an episode based on an MS–DRG that anchors an episode in the model such as an AMI MS–DRGs that subsequently also includes an MS–DRG that does not anchor an episode under the model (for example, heart failure, renal failure, or cardiac valve replacement). Some of these non-anchor MS–DRGs could be related to the AMI episode but are unavoidable, for example, cardiac valve surgery, while others could potentially reflect complications resulting from inadequate care management during the episode (for example, heart or renal failure).

As discussed in section III.C.4.b. of the proposed rule, we proposed to cancel an AMI model episode when the final MS–DRG in a chained anchor hospitalization is from an MS–DRG that would not anchor an MS–DRG under the AMI or CABG model. We believed that, in tandem, these proposals would allow for appropriate pricing of AMI model episodes that continue and include chained anchor hospitalizations.

The proposals to establish pricing for AMI model episodes involving chained anchor hospitalizations were included in §512.300(c)(7)(i). We sought comment on our proposals for pricing AMI episodes involving chained anchor hospitalizations and the alternative proposals we considered. We also sought comment on the alternative consideration of a benchmark price for both the MS–DRGs at the first and last hospitals caring for the AMI model beneficiary during the chained anchor hospitalization in setting the AMI-model-episode benchmark price for episodes involving a chained anchor hospitalization. In particular, under such an alternative, we sought comment on the clinical circumstances in which inpatient-to-inpatient transfers are unavoidable and whether or not there are hospital characteristics that would lead us to expect higher frequencies of unavoidable inpatient-to-inpatient transfers for AMI model beneficiaries than hospitals overall. We also sought comment on how we could discourage unintended consequences under this alternative, such as less timely decisions about the most appropriate hospital to treat the beneficiary and increased beneficiary transfers that are unnecessary or inappropriate for improved quality of AMI model episode care.

The following is a summary of the comments received and our responses.

Comment: As discussed earlier in Section III.C.4.a. of the final rule, many commenters expressed concerns and opposed the proposal that once an AMI model episode is initiated at an AMI model participant, the AMI model episode continues under the responsibility of that specific participant, regardless of whether the beneficiary is transferred to another hospital for further medical management of AMI or revascularization through PCI or CABG during a chained anchor hospitalization. Similarly, many commenters expressed concerns with respect to the pricing of episodes in the case of these chained anchor hospitalizations that generally paralleled the comments discussed in section III.C.4.a. of this final rule.

Response: As discussed in section III.C.4.a., we were persuaded by commenters to not finalize our proposal that once an AMI model episode is initiated at an AMI model participant, the AMI model episode would continue under the responsibility of that specific participant when a beneficiary is transferred to another hospital for further medical management of AMI or revascularization through PCI or CABG during a chained anchor hospitalization. Instead, we are finalizing a policy that for an episode involving an inpatient-to-inpatient transfer, the episode would be attributed to the transfer hospital rather than the initial hospital.

Accordingly, we are also not finalizing our proposed pricing methodology for these episodes, which would have set a chain-adjusted AMI model-episode benchmark price or “price MS–DRG” based on the AMI, PCI, or CABG MS–DRG in the chained-
anchor admission with the highest IPPS weight. Instead, we are finalizing a policy where an episode’s price will be determined only by the anchor MS–DRG for the AMI or CABG model episode as determined by the transfer hospital in the same manner as we would for any other AMI model that does not involve a transfer.

Since we are not finalizing our original proposal, we also will not be finalizing the terms “chained anchor hospitalization” or “price MS–DRG” as all episodes under the model will be priced based on their assigned anchor MS–DRG. Accordingly, we will be deleting these terms from our proposed regulations.

Final Decision: After consideration of the public comments received, we are not finalizing the proposal to make payment adjustments for AMI episodes involving a chained anchor hospitalization, but will instead attribute the episode to the final hospital and calculate prices for these episodes based on the anchor MS–DRG for that episode determined by the transfer hospital. As such, we are replacing the term “price MS–DRG” with “MS–DRG” and deleting references to “chained-anchor hospitalizations.”

Also as discussed in section III.C.4.a.(5) of this final rule, given our concerns about the potential missed opportunities and unintended consequences due to the final AMI model transfer episode initiation and attribution policy, we will be examining AMI transfers to and from AMI model participants very closely through our monitoring and evaluation activities as discussed in sections III.G.4 through 6 and IV. of this final rule, both of beneficiaries that ultimately are included in AMI episodes and those that are not. We may revisit the transfer policy or propose payment adjustments through future rulemaking if we see reduced AMI transfer efficiency, opportunities to increase transfer efficiency, disproportionate transfers of complex AMI beneficiaries or those with potentially avoidable complications suggesting that AMI model participants are engaging in adverse patient selection or providing poor quality care, inordinate loss of beneficiaries from the AMI model due to transfer outside of the MSAs where the AMI and CABG models are being tested, or other patterns of concern.

(b) Adjustments for CABG Model Episodes

Among Medicare beneficiaries historically discharged under a CABG MS–DRG, average episode spending was substantially higher for those beneficiaries who also had AMI ICD–CM diagnosis codes on their inpatient claims ($57,000) than those who did not ($44,000). About 30 percent of CABG beneficiaries had AMI ICD–CM diagnosis codes on their claims, while about 70 percent did not, and this percentage of CABG beneficiaries with AMI varied substantially across IPPS hospitals furnishing CABG procedures. While average spending, in total, was substantially higher for CABG beneficiaries without AMI, average spending during the anchor hospitalization was not substantially higher. Rather, much of this variation in CABG model episode spending occurred after discharge from the anchor hospitalization and correlated both with the presence of AMI and whether the CABG beneficiary was discharged from the anchor hospitalization in a CABG MS–DRG with major complication or comorbidity (MS–DRGs 231, 233, or 235) as opposed to a CABG MS–DRG without major complication or comorbidity (MS–DRGs 232, 234, or 236). Specifically, we found that average CABG episode spending after discharge from the anchor hospitalization was:

- $9,000 for non-AMI CABG beneficiaries discharged from MS–DRGs 232, 234, or 236;
- $11,000 for CABG beneficiaries with AMI discharged from MS–DRGs 232, 234, or 236;
- $16,000 for non-AMI CABG beneficiaries discharged from MS–DRGs 231, 233, or 235; and
- $20,000 for CABG beneficiaries with AMI discharged from MS–DRGs 231, 233, or 235.

Thus, for CABG model episodes, we proposed to set CABG model-episode benchmark prices by first splitting historical CABG model-episode expenditures into expenditures that occurred during anchor hospitalizations and expenditures that occurred after discharge from the anchor hospitalizations.

We proposed to calculate the CABG anchor hospitalization benchmark price by following the general payment methodology that was applied to the CJR model (80 FR 73337 through 73358), with expenditures limited to those that occurred during the anchor hospitalization and risk stratification according to the price CABG MS–DRG.

We also proposed to calculate the CABG post-anchor hospitalization benchmark price by following the general payment methodology that was applied to the CJR model (80 FR 73337 through 73358), with expenditures limited to those that occurred after the anchor hospitalization and risk stratification according to the presence of an AMI ICD–CM diagnosis code on the anchor inpatient claim and whether the price MS–DRG is a CABG MS–DRG with major complication or comorbidity (231, 233, or 235) or a CABG MS–DRG without major complication or comorbidity (232, 234, or 236).

We proposed that the CABG model-episode benchmark price for an episode would be the sum of the corresponding CABG anchor hospitalization benchmark price and the corresponding CABG post-anchor hospitalization benchmark price, as discussed in this section and in III.D.4.d. of the proposed rule.

The proposals to establish pricing for CABG model episodes were included in § 512.300(c)(7)(ii). We sought comment on our proposals to establish pricing for CABG model episodes.

The following is a summary of the comments received and our responses.

Comment: One commenter suggested that CMS create a separate target price for CABG episodes where a patient has a previous history of CABG.

Response: We appreciate the commenter’s suggestion, but believe the existing MS–DRGs that apply under the IPPS, which similarly do not distinguish CABG MS–DRG discharges based on whether or not a beneficiary had a previous history of CABG, our proposed pricing adjustments for CABG episodes, and additional risk-adjustments that we anticipate will be effective in FY13 should appropriately recognize the potential costs for beneficiaries within CABG episodes whether or not they had a previous history of CABG.

Final Decision: After consideration of the public comments received, we are finalizing the proposal, without modification, to establish pricing for CABG model episodes. Our final policy for establishing CABG model episodes is included in § 512.300(c)(7)(ii).

(c) Adjustments for Certain AMI Model Episodes With CABG Readmissions

In section III.C.4.b. of the proposed rule, we discussed AMI model episodes where a beneficiary is discharged from an AMI model participant under an AMI...
MS–DRG and is later readmitted for a CABG. In that section, we did not propose to cancel the AMI model episode altogether for a CABG readmission during the 90-day post-hospital discharge period or cancel the AMI model episode and initiate a CABG model episode because planned CABG readmission following an anchor hospitalization that initiates an AMI episode may be an appropriate clinical pathway for certain beneficiaries. For example, we noted that historically approximately 10 percent of those AMI beneficiaries who received CABGs during AMI episodes would receive the CABG between 2 and 90 days post-discharge from the anchor hospitalization, and most of those readmissions did not occur through hospital emergency departments. Even though CABG readmissions are not excluded from AMI model episodes (because they are clinically-related to the AMI model episode), we proposed to provide an adjusted AMI model-episode benchmark price in such circumstances so as not to financially penalize AMI model participants for relatively uncommon, costly, clinically-appropriate care patterns for AMI model beneficiaries. Accordingly, we proposed to establish an adjusted CABG-readmission AMI model-benchmark price for AMI model episodes with a price MS–DRG of 280–282 or 246–251 that have readmission for a CABG MS–DRG 231–236.

Specifically, if a CABG readmission occurs during an AMI model episode with a price MS–DRG of 280–282 or 246–251, we proposed to calculate a CABG-readmission AMI model-episode benchmark price equal to the sum of the standard AMI model-episode benchmark price corresponding to the price MS–DRG (AMI MS–DRGs 280–282 or PCI MS–DRGs 246–251) and the CABG anchor hospitalization benchmark price corresponding to the MS–DRG of the CABG readmission. Because the adjustment would be based on the anchor hospitalization benchmark price, which does not include costs associated with the post-discharge period for CABG, this adjustment approach would avoid “double counting” post-discharge costs. Because adjusting for spending that occurred during a CABG readmission accounts for most of the spending variation between AMI model episodes with a CABG readmission and AMI model episodes without a CABG readmission, we proposed no additional adjustment to the price for AMI model episodes with a CABG readmission.

In the other readmission other than CABG during an AMI model episode that is not excluded from the AMI model episode definition, we would apply the usual rules of EPM-episode pricing that would include the spending for the related readmission in the actual AMI model-episode spending, without other adjustments. Fewer than 3 percent of those AMI model beneficiaries who receive inpatient or outpatient PCIs during AMI episodes receive the PCIs between 2 and 90 days post-discharge from the anchor or chained anchor hospitalizations, and we did not propose to make a pricing adjustment for PCIs that occur later in the AMI model episodes after discharge from the anchor or chained anchor hospitalizations. Since a PCI for an AMI typically is provided during the anchor or chained anchor hospitalization and most PCIs later in an episode occur in the context of a beneficiary presenting through the emergency department, we believe that the beneficiary likely has experienced a complication of care resulting in a PCI that may potentially be avoided through care management during the AMI model episode. Given that our intention is to offer appropriate incentives for care quality and efficiency by holding AMI model participants accountable for readmissions that could be related to the quality of care provided prior to the readmission, we believe that an adjustment other than for a CABG readmission would not be appropriate.

The proposal for adjusting episodes involving CABG readmissions was included in § 512.300(c)(7)(ii). We sought comment on our proposal for adjusting episodes involving CABG readmissions.

The following is a summary of the comments received and our responses.

Comment: Several commenters expressed concerns about the proposal for adjusting episodes involving CABG readmissions—specifically, that the proposal does not sufficiently account for the increased post-acute care that a beneficiary typically receives after a CABG, but which they would not receive after only an AMI. One of the commenters presented data supporting their concern suggesting that post-discharge spending for certain MS–DRGs with a CABG readmission was substantially higher than for those same MS–DRGs without a CABG readmission. The commenters requested that CMS modify the methodology to account for the increased post-acute care that a beneficiary typically receives after a CABG.

Response: We appreciate the concerns raised by the commenters and have conducted further analysis of our proposal with respect to how well our proposal would account for post-acute care costs for AMI episodes involving CABG readmissions. While we agree that spending after discharge from the anchor stay for AMI episodes with CABG readmissions is substantially higher than for episodes without these readmissions, we disagree with suggestions that our proposal inadequately adjusts for these differences. Rather, based on our analysis, on average, the proposed adjustments account for the overwhelming majority of additional spending that occurs in AMI episodes with CABG readmissions relative to episodes without CABG readmissions. Additionally, the number of episodes for many of the affected MS–DRGs is relatively small, which we believe would impede our ability to establish reliable prices that would be an improvement over our current proposal in terms of payment accuracy. Accordingly, we are not persuaded to modify our proposal.

Final Decision: After consideration of the public comments received, we are finalizing the proposal, without modification, to adjust episodes with CABG readmissions. Our final policy for adjusting episodes with CABG readmissions is included in § 512.300(c)(7)(ii).

(d) Potential Future Approaches To Setting Target Prices for AMI and Hip Fracture Episodes

As previously described, our proposed approach for pricing AMI and CABG model episodes for beneficiaries with AMI set different episode target prices depending upon whether the beneficiary is managed medically, undergoes PCI, or undergoes CABG during the acute phase of the episode, as well as whether the episode involved a chained anchor hospitalization or CABG readmission. Similarly, the target price set for beneficiaries experiencing hip fracture would depend on whether the patient undergoes hip fixation (and therefore initiates a SHFPT model episode) or hip arthroplasty (and therefore initiates a CJR model episode). We believed that this would be a prudent approach that both recognizes the resource costs of services provided while encouraging care redesign during the portions of these episodes that we believe present the greatest opportunities to improve the quality and efficiency of the care delivered. However, we noted that the general principle guiding our payment reform efforts is that the payment system should hold providers accountable for the overall quality and cost of the care their beneficiaries receive rather than...
setting their payment based on the specific services delivered or settings in which they are delivered. We indicated that this approach would give providers maximum flexibility to redesign care in ways that both produce the best outcomes for patients and controls the growth in spending for these services.

For this reason, we expressed interest in exploring future approaches to episode payment that would set an inclusive target price for episodes for beneficiaries with AMI that does not depend on whether the beneficiary is managed medically or receives PCI or CABG during the acute portion of the episode and, similarly, future approaches that would set prices for episodes for beneficiaries with hip fracture that do not depend on whether the beneficiary undergoes hip fixation or hip arthroplasty. While we believe that the choice of treatment during the acute phase of these episodes may be determined predominantly by clinical factors such that financial factors may play a smaller role in shaping episode care redesign than they do following hospital discharge, we nevertheless believe it would be valuable to consider testing an inclusive episode payment model. Providers may be able to redesign and implement care pathways that we might not have otherwise anticipated, especially as the evidence-base for AMI and hip fracture treatment continues to grow and evolve.

We sought comment on this type of approach to setting an inclusive episode target price and on any episode payment model design features that would be needed to make such an approach successful. In particular, we sought comment on potential approaches to risk-adjustment aimed at ensuring that providers are appropriately paid for caring for high-complexity episode beneficiaries in the context of this alternative approach. We would seek to ensure that all providers caring for these episode beneficiaries, including those providers for which we proposed additional protections and those that serve a high percentage of potentially vulnerable populations of medically and socially complex patients as discussed in section III.D.7.c. of the proposed rule, would not bear undue financial risk and to mitigate any incentives to avoid caring for high-complexity patients. In addition, we sought comment on whether and how our methodology linking quality performance to payment under the EPMs and the CJR model might need to be modified in the context of this alternative approach that would set an inclusive episode target price, in order to appropriately incentivize the delivery of high-quality care and discourage stunting on appropriate care.

The following is a summary of the comments received and our responses. The comments we received typically recommended that we consider either population-based models or capitated models, which we have addressed in section III.D.2.b. of this final rule; however, we are providing some specific examples that were recommended in the following comments.

Comment: A commenter recommended that we consider a population-based model that was tied to an “event” such as a beneficiary’s initial Medicare enrollment in a selected geographic area such as a county or MSA; however, we should exclude Medicare Advantage enrollees or enrollees participating in other Medicare payment reform efforts. The model would include multiple quality measures reflecting both a clinical perspective and a beneficiary perspective. It would include two tracks: Full financial accountability and partial financial accountability. Under the first track, we would pay participating providers a monthly, all-inclusive, beneficiary-risk-adjusted premium based on regional historical expenditures and the provider would assume full risk for all Part A and Part B expenditures. Under the partial financial accountability track, we would continue to provide the plan administration (allowing provider organizations without claims-payment and risk-assumption capabilities the opportunity to participate). Model participants would receive a monthly, beneficiary-risk-adjusted target budget for Medicare Part A and Part B services and their actual expenditures would be compared against their target budget at the end of each year for reconciliation. If costs exceeded the target, then the participant would repay CMS an agreed amount. If costs were below the target, then CMS would pay the participant an agreed upon amount. Both tracks could be eligible for Advanced APM designation under the Quality Payment Program, if they had a certified Electronic Health Record technology requirement for participants.

Another comment, who had suggested that CMS adopt a model including prospective negotiated rates rather than retrospective reconciliation of fee-for-service claims, suggested that a capitated model would allow providers to experiment with services, in addition to telehealth consultations, that do not generate a fee-for-service claim. In their view, hospitals and surgeons have more opportunity to innovate in how they deploy professional staff, choose technology, and engage with outpatient and home-based services when they have full flexibility within a budgeted payment amount, and would encourage collaboration between all clinicians involved in patient care as well as provide predictable pricing. Also, the commenter believes that using prospectively determined negotiated rates or competitive bids would result in a more rapid transformation in cost and resource use. In their view, using target prices based on a provider’s historical costs or the region’s average costs is inconsistent with the goal of implementing innovative payment models. Moreover, current practice patterns should not be used to set a total cost for care, given the unnecessary care, excessive costs and cost variations that result from this payment approach. As such, this commenter recommends that providers competitively bid their episode price to encourage competition among providers to achieve the best outcomes for the lowest cost.

A commenter recommended that CMS design EPMs that would allow providers two options; specifically to (1) organize themselves in the manner most efficient to accept a prospective bundled payment from Medicare, and allocate it among the participating providers or (2) if other providers find it easier to continue billing under current payment systems, then retrospectively reconcile those payments against a prospectively defined budget. In this commenter’s view, jointly-governed teams would have the flexibility to determine which organizational approach and retrospective or prospectively-determined payment model best works for their particular circumstances.

Another commenter suggested that CMS consider a model that pays specialists for management of specific conditions and combinations of conditions using the same payment model concepts being used with primary care physicians in the Comprehensive Primary Care Plus initiative. Under this model, CMS should focus accountability on services directly related to the condition, rather than total spending on all of the patients’ health care needs and for which the physician may be unable to control. Further, the model would encourage the use of physician-defined patient condition categories to ensure effective risk stratification in condition-based payment models. These models would be risk stratified based on the clinical characteristics and functional status of patients that are most relevant to the types of conditions being
managed. Patients could designate the physician who would be managing care for their condition(s) but would be required to use the team of providers chosen by that physician for delivery of services related to the condition(s). Further, target spending amounts would be set for condition-based payments and episode payments prior to the beginning of the performance period. Finally, physicians and other providers could be for high-value services that are not currently billable as part of condition-based and episode-based payment models that use retrospective reconciliation.

Another commenter noted that while not recommending a specific framework, CMS should consider additional geographic-based models that include other costly procedures that vary in total episode costs, for example, spine surgery.

Response: We appreciate the comments and suggestions that were offered and that while not adopting these suggestions for these models, we will take them into consideration as we explore similar models in the future.

(e) Summary of Final Pricing Methodologies for AMI, CABG, and SHFFT Model Episode Scenarios

Tables 14 through 16 summarize our final standard pricing methodologies and the adjustments that will occur that are in sections III.D.4.b.(1) and (2) of this final rule for AMI, CABG, and SHFFT model episodes.

### TABLE 14—AMI MODEL PRICING SCENARIOS

<table>
<thead>
<tr>
<th>AMI pricing scenario</th>
<th>Price</th>
</tr>
</thead>
<tbody>
<tr>
<td>Single hospital AMI MS–DRG or PCI MS–DRG (with AMI diagnosis)</td>
<td>Episode benchmark price is standard episode benchmark price based on anchor MS–DRG.</td>
</tr>
<tr>
<td>An AMI MS–DRG or PCI MS–DRG (with AMI diagnosis) anchored episode with CABG re-admission.</td>
<td>Episode benchmark price is the sum of the standard episode benchmark price corresponding to the anchor MS–DRG and the CABG anchor hospitalization benchmark price corresponding to the CABG re-admission MS–DRG.</td>
</tr>
</tbody>
</table>

### TABLE 15—CABG MODEL PRICING SCENARIOS

<table>

(3) Three Years of Historical Data

As was the case for the CJR model (80 FR 73340 through 73341), we proposed to use 3 years of historical EPM episodes for calculating EPM participants’ EPM-episode benchmark prices, with each set of historical episodes updated every other year (81 FR 50854). Under our proposal, each of the first 2 years of historical data would be trended to the most recent of the 3 years, based on national trend factors for each combination of price MS–DRGs and payments would be updated for each payment system (for example, IPPS, PFS, etc.) based on annual changes in input costs (see sections III.D.4.b (4) and III.D.4.b (5) of the proposed rule). Under our proposal, we would establish historical EPM-episode payments based on episodes that started between—

- January 1, 2013 and December 31, 2015 for performance years 1 and 2;
- January 1, 2015 and December 31, 2017 for performance years 3 and 4; and
- January 1, 2017 and December 31, 2019 for performance year 5.

We believe that 3 years of historical EPM-episode data should provide sufficient historical episode volume to reliably calculate EPM-episode benchmark prices, and that updating these data every other year would allow us to make the most current claims data available in a way that incorporates the effects of regular Medicare payment system updates and changes in utilization without creating uncertainty in pricing for EPM participants. We would further note that the effects of updating EPM-participant hospital-specific data on an EPM-episode’s benchmark prices would diminish over time as the contribution of regional pricing on EPM benchmark prices will increase from one-third for performance years 1 and 2 to two-thirds in performance year 3, and 100 percent in performance years 4 and 5.

The proposal for 3 years of historical data updated every other year under the EPMs was included in § 512.300(c)(1).

We sought comment on our proposal for 3 years of historical data updated every other year.

The following is a summary of the comments received and our responses.

Comment: Some commenters requested that CMS apply more trend data than the 3 years we proposed. A commenter expressed concern that in the absence of several years of historical data, target setting would not fully reflect case mix and behavior changes in addition to historical claims patterns.
Further, an impact of a focus on short-term costs may be a shift away from new technologies proven to improve outcomes and reduce costs. Another commenter requested an additional 2 years of trend data for Program Year 1, to bring the data up from 2015 to the 2017 program level and another 3 years of trend data to bring the 2015 claims up to the 2018 level. A commenter requested that the process be open and transparent so as to ensure that all impacted collaborators are given the information and opportunity to comment and adjust.

Response: We continue to believe our proposed period for 3 years of historical data updated every other year is appropriate for the models. We disagree that including additional years of data beyond those we proposed would be necessary or helpful. Instead, rather than improving our historical data, the request for additional years of data could result in more heterogeneous historical data that is less reflective of a participant’s most recent performance.

Final Decision: After consideration of the public comments received, we are finalizing the proposal, without modification to use 3 years of historical EPM episodes for calculating EPM participants’ EPM-episode benchmark prices, with each set of historical episodes updated every other year. The final policy for using 3 years of historical EPM episodes for calculating benchmark prices is included in § 512.300(c)(1).

(4) Trending Historical Data to the Most Recent Year

We recognize that some payment variation could exist in the 3 years of historical EPM-episode data due to annual Medicare payment system updates (for example, IPPS, OPPS, IRF PPS, SNF PPS) and national changes in utilization patterns. Thus, EPM episodes in the third year of the 3 historical years might have higher average payments than those from the earlier 2 years, in part due to Medicare payment rate increases over the course of the 3-year period. Also, EPM-episode payments could change over time due to national trends reflecting changes in industry-wide practice patterns. For example, readmissions for all patients, including those in CABG model episodes, may decrease nationally due to improved industry-wide surgical protocols that reduce the chance of infections. We do not intend for the incentives under the EPMs to be affected by Medicare payment system rate changes that are beyond EPM participants’ control or to provide reconciliation payments to (or require repayments from) EPM participants for achieving lower (or higher) Medicare expenditures solely because they followed national changes in practice patterns. Instead, we aim to incentivize EPM participants to improve care quality and efficiency based on their hospital-specific inpatient and post-discharge care practices under the EPMs.

To mitigate the effects of Medicare payment system updates and changes in national utilization practice patterns on the 3 years of historical episode data, we proposed to apply a national trend factor to each of the years of historical EPM-episode payments (81 FR 50855) as we do with the CJR model (80 FR 73341 through 73342). Specifically, we proposed to inflate the 2 oldest years of historical EPM-episode payments for EPM episodes to the most recent year of the 3 historical years using changes in the national EPM-episode payments for each different type of EPM episode. That is, we proposed to apply separate national trend factors for the following pricing scenarios:

- SHFFT model episodes, separately by each price MS–DRG in 480–482.
- AMI model episodes without CABG readmissions, separately by each price MS–DRG in 280–282 and 246–251; and
- The anchor hospitalization portion of CABG model episodes, separately by each price MS–DRG in 231–236.
- The post-anchor hospitalization portion of CABG model episodes, separately for:
  - With AMI ICD–CM diagnosis code on the anchor inpatient claim and CABG price MS–DRG with major complication or comorbidity (231, 233, or 235);
  - With AMI ICD–CM diagnosis code on the anchor inpatient claim and CABG price MS–DRG without major complication or comorbidity (232, 234, or 236);
  - Without AMI ICD–CM diagnosis code on the anchor inpatient claim and CABG price MS–DRG with major complication or comorbidity (231, 233, or 235); and
  - Without AMI ICD–CM diagnosis code on the anchor inpatient claim and CABG price MS–DRG without major complication or comorbidity (232, 234, or 236).

For example, when using Calendar Year (CY) 2013 through 2015 historical EPM-episode data to establish EPM-episode benchmark prices for performance years 1 and 2, we would calculate an aggregate national average SHFFT model episode payment in historical episodes with price MS–DRG 480 for the 2 years. Then, we would update prices for that episode type in a previous year and for the most recent year. Thus, in this example, we would create a ratio of national average SHFFT model historical episode payment with price MS–DRG 480 in CY 2015 as compared to that national average SHFFT model historical episode payment in CY 2013 in order to trend the CY 2013 historical SHFFT model episode payments to CY 2015. Similarly, we would determine the ratio of the national average SHFFT model historical episode payment for CY 2015 to national average SHFFT model historical episode payment in CY 2014 to trend 2014 SHFFT model episode payments to CY 2015. This process would be repeated for each pricing scenario previously listed.

We noted our belief that this method for trending data would capture updates in Medicare payment systems as well as national utilization pattern changes that might have occurred within that 3-year period. Moreover, as with the CJR model, we believed that adjusting for national rather than regional trends in utilization would be most appropriate as any Medicare payment system updates and significant changes in utilization practice patterns would not be region-specific but rather be reflected nationally.

The proposal for trending historical data was included in § 512.300(c)(11). We sought comment on our proposal for trending historical data.

The following is a summary of the comments received and our responses. Comment: A few commenters addressed the use and trending of historical data. A commenter expressed their general agreement with the proposed trending methodology, but recommended that CMS update prices every other year rather than annually to limit the extent that participants would face increasingly more difficult targets. Another commenter recommended that CMS trend the initial 3 years of historical data for the full five years of the models. A commenter suggested that CMS apply more trend data to each performance year and expressed concerns that while CMS would trend data to the end of the benchmark 3-year period, CMS would not be trending data from the end of the benchmark period to match the time period for which the prices will be applied to pay providers.

Response: We appreciate the comments we received on our proposal to trend data and would like to clarify that their application would be on a semi-annual basis with we update target prices rather than annually. We disagree with the suggestion to apply...
the 3 initial years of trend data to all five performance years as our intention is to establish target prices for the models using more recent performance data so as to maintain incentives for participants to continuously improve. Similarly, we disagree with the suggestion to expand the number of years used to trend data or to permanently relate trend data for a given performance year to those data for the initial 3-year benchmark period as doing so would result in data that are less representative of a participant’s most recent performance.

Final Decision: After consideration of the public comments received, we are finalizing the proposal, without modification, to trend data. Our final policy for trending data is included in §512.300(c)(11).

(5) Update Historical EPM-Episode Payments To Account for Ongoing Payment System Updates

As previously mentioned, we proposed to prospectively update the historical EPM-episode payments to account for ongoing updates to Medicare payment systems (for example, IPPS, OPPS, IRF PPS, SNF, PFS, etc.) in order to ensure we incentivize EPM participants based on historical utilization and practice patterns, not Medicare payment system rate changes that are beyond hospitals’ control. Under our proposal (81 FR 50853), we would apply the same methodology developed for the CJR model to incorporate Medicare payment updates (80 FR 73342 through 73446).

Because Medicare payment systems rates are not updated at the same time during the year—for example, rates under the IPPS, IRF PPS, and SNF payment systems are updated effective October 1, while the hospital OPPS and MPFS rates are updated annually effective January 1—we proposed to generally update historical EPM-episode payments and calculate EPM-episode benchmark prices separately for EPM episodes initiated between January 1 and September 30 versus October 1 and December 31 of each performance year, and at other intervals if determined necessary. The EPM-episode benchmark price in effect as of the day the EPM episode is initiated would be the EPM-episode benchmark price for the whole EPM episode. Note that for performance year 5, the second set of EPM-episode benchmark prices would be for EPM episodes that start and end between and including October 1 and December 31 because the fifth performance period of the SHFT, CABG, and AMI models would end on December 31, 2021. Also, an EPM episode benchmark price for a given EPM performance year could be applied to EPM episodes included in another performance year. For example, an EPM episode initiated in November 2017, and ending in February 2018 would have an EPM-episode benchmark price based on the second set of 2017 EPM-episode benchmark prices (for EPM episodes initiated between October 1, 2017, and December 31, 2017), and it would be captured in the CY 2018 EPM performance year (performance year 2) because it ended between January 1, 2018, and December 31, 2018. We refer to section III.D.2.a. of this final rule for further discussion on the definition of EPM performance years.

We proposed to update historical EPM-episode payments by applying separate Medicare payment system update factors each January 1 and October 1 to each of the following six components of each EPM participant’s historical EPM-episode payments:

- Inpatient acute.
- Physician.
- IRF.
- SNF.
- HHA.
- Other services.

A different set of update factors would be calculated for January 1 through September 30 versus October 1 through December 31 each EPM performance year. The six update factors for each of the previously stated components would be EPM-participant hospital-specific and would be weighted by the percent of the Medicare payment for which each of the six components accounts in the EPM participant’s historical EPM episodes. The weighted update factors would be applied to historical EPM-participant-specific average payments to incorporate ongoing Medicare payment system updates. A weighted update factor would be calculated by multiplying the component-specific update factor by the percent of the EPM participant’s historical EPM-episode payments the component represents, and summing together the results. Each of an EPM participant’s six update factors would be based on how inputs have changed in the various Medicare payment systems for the specific EPM participant.

As an example, we would assume for purposes of this example that 50 percent of an EPM participant’s historical EPM-episode payments were for inpatient acute care services, 15 percent were for physician services, 35 percent were for SNF services, and 0.0 percent were for the remaining services. We would also assume for purposes of this example that the update factors for inpatient acute care services, physician services, and SNF services are 1.02, 1.03, and 1.01, respectively. The weighted update factor in this example would be the following: (0.5 * 1.02) + (0.15 * 1.03) + (0.35 * 1.01) = 1.018. The EPM participant in this example would have its historical average EPM-episode payments multiplied by 1.018 to incorporate ongoing payment system updates. The specific order of steps, and how this step fits in with others, is discussed further in sections III.D.4.c through d. of the proposed rule. Also, as discussed further in sections III.D.4.c through d. of the proposed rule, the update factors would vary by price MS–DRG. For example, in CABS model episodes, the update factors would be calculated separately for the anchor hospitalization portion of episodes and the post-anchor hospitalization portion of episodes, as described in section III.D.4.d. of the proposed rule.

Region-specific update factors for each of the previously stated components and weighted update factors would also be calculated in the same manner as the EPM-participant-specific update factors. Instead of using historical EPM episodes attributed to a specific hospital, region-specific update factors would be based on all historical EPM episodes initiated at any IPPS hospital within the region with historical EPM episodes, regardless of whether or not the MSAs in which the hospitals are located were selected for inclusion in the models. We referred to the CJR Final Rule (80 FR 73342 through 73446) for further discussion of our specific methodology and considerations for adopting this methodology for updating historical EPM-episode payments for ongoing payment system updates.

The proposal for updating episode payments for ongoing annual Medicare payment updates was included in §512.300(c)(10). We sought comment on our proposal for updating episodes payments for ongoing annual Medicare payment updates. We received no specific comments on our proposal for updating historical EPM-episode payments to account for ongoing payment system updates. However, we wish to highlight that, as we do for the CJR model (80 FR 73343 through 73344), where an equation is used to calculate update factors for payment systems that apply annual updates to their rates effective October 1 of each year such as for inpatient acute, SNF, and IRF services, in lieu of calculating the update factors using the values applicable at the end of the latest historical year used to calculate target prices, we use a blend of the values applicable during the latest historical
year. This blend is intended to account for the payment systems that update payment rates on a fiscal year cycle, and ensure we are calculating update factors based on the payment rates that apply to a given period to the extent feasible, and result in more accurate target price calculations.

**Final Decision:** We are finalizing the proposal, without modification, to update episode payments for ongoing annual Medicare payment updates. The final policy for updating episode payments for ongoing annual Medicare payment updates is included in § 512.300(c)(10).

(6) Blend Hospital-Specific and Regional Historical Data

We proposed to calculate EPM-episode benchmark prices using a blend of EPM-participant-specific and regional historical average EPM-episode payments, including historical EPM-episode payments for all IPPS hospitals that submitted U.S. Census division, which was discussed further in section III.D.4.b.(7) of the proposed rule (81 FR 50856). Specifically, we proposed to blend two-thirds of the EPM-participant-specific historical EPM-episode payments and one-third of the regional historical EPM-episode payments to set an EPM participant’s EPM-episode benchmark prices for the first 2 performance years of the EPMs (CYs 2017 and 2018). For performance year 3 of the EPMs (CY 2019), we proposed to adjust the proportion of the EPM-participant-specific and regional historical EPM-episode payments used to calculate the EPM-episode benchmark prices from two-thirds EPM participant-specific and one-third regional to one-third EPM participant-specific and two-thirds regional. Finally, we proposed to use only regional historical EPM-episode payments for performance years 4 and 5 of the EPMs (CYs 2020 and 2021) to set an EPM participant’s EPM-episode benchmark prices, rather than a blend between the participant-specific and regional historical EPM episode payments.

Consistent with our methodology for the CJR model (80 FR 73544), we proposed two exceptions. First, we proposed to use only regional historical EPM-episode payments to calculate EPM episode-benchmark prices for EPM participants with low historic EPM-episode volume. For SHFFT model episodes, this exception applies to SHFFT model participants with fewer than 50 historical SHFFT model episodes total across the 3 historical years. For AMI model episodes anchored by MS–DRGs 280–282, this exception applies to AMI model participants with fewer than 75 of these particular AMI model historical episodes in total across the 3 historical years. For AMI model episodes anchored by PCI MS–DRGs 246–251, this exception applies to AMI model participants with fewer than 125 of this particular AMI model historical episodes in total across the 3 historical years. For CABG model episodes, this exception applies to CABG model participants with fewer than 50 historical CABG model episodes in total across the 3 historical years. The thresholds for low historic volume in this final rule are higher than the CJR model threshold for low historical LEJR model episode volume of 20 episodes in total across the 3 historical years. The higher thresholds are based on the volume thresholds from the BPCI Model 2 Risk Track B for 90-day episodes, which increase when the ratio of within-hospital episode spending variation to between-hospital episode spending variation increases. That is, as EPM episode payment variation increases within a hospital relative to EPM-episode payment variation between hospitals, it is necessary to have more EPM episodes at that hospital to estimate a stable EPM-episode benchmark price using data from only that hospital. We proposed to set higher thresholds for the SHFFT, AMI, and CABG models based on internal analysis from BPCI episode data that shows higher within-hospital episode spending variation relative to between-hospital episode spending variation for episodes anchored by the EPM MS–DRGs, compared to episodes anchored by MS–DRGs 409 and 470 included in the CJR model.

Second, in the case of an EPM participant that has undergone a merger, consolidation, spin-off, or other reorganization that results in a new hospital entity without 3 full years of historical claims data, we proposed that EPM participant hospital-specific historical EPM-episode payments would be determined using the historical EPM episode payments attributed to their predecessor(s), as in the CJR model (80 FR 73544).

The aforementioned proposals align with our method for blending EPM participant hospital-specific and regional data under the CJR model. We referred to the CJR model Final Rule (80 FR 73346 through 73349) for further discussion on alternatives to and reasons for adopting this methodology for the EPMs, which informed our proposal with respect to the EPMs.

The proposal for blending payments when establishing participants’ benchmark and quality-adjusted targets and certain exceptions was included in § 512.300(c)(2), (3), and (4). We note that the specific order of steps, and how this step fits in with others, is discussed further in section III.D.4.c. of this final rule. We sought comment on our proposal for blending payments when establishing participants’ benchmark and quality-adjusted targets as well as the exceptions.

The following is a summary of the comments received and our responses.

**Comment:** Commenters expressed different views on the proposal to base prices initially on a blend of participant-specific and regional historical data, while phasing in full regional pricing. Their perspective commonly related to the proposal to determine regional prices based on U.S. Census Divisions, which is discussed in section III.D.4.b.(7) that immediately follows. Some commenters appreciated the proposal of moving to regional pricing because it would help attenuate the effect of participants having to compete against their own best performance and where the most efficient participants in a region could be rewarded. Moreover, some of these commenters recommended that CMS even accelerate regional pricing or allow efficient participants the option to transition from historic to regional target prices at an accelerated rate. A commenter viewed the proposal as a way to incentivize both historically efficient and less efficient hospitals to provide high quality, efficient care.

**Response:** We appreciate the comments supporting our proposal to blend payments when establishing participants’ benchmark and quality-adjusted targets and agree with their perceived benefits of the proposal. We do not agree with suggestions to accelerate regional pricing or allowing flexibility for hospitals to accelerate their transition to regional prices. We continue to believe our proposed phase-in period for regional pricing would generally be most protective of participants as they adjust to the models because their performance would be compared to their own historical performance rather than hospitals in their region. We are also concerned that allowing certain hospitals the option to accelerate toward regional pricing as was suggested could affect our estimates...
and possibly generate inflated reconciliation payments due to potential selection issues if historically efficient hospitals were to opt earlier for a more generous regional price. Allowing certain hospitals the option to select regional pricing earlier would also increase administrative complexity under the models.

**Comment:** Several commenters opposed proposed regional pricing policy, asking that CMS slow its phase-in period, asking that CMS phase-in regional prices to something less than 100 percent, for example, to only a 50–50 blend of participant-specific and regional pricing, or relying solely on participant-specific performance data. Some commenters suggested that hospitals might not be prepared to compete relative to regional pricing while others expressed concern that hospitals would be penalized for factors beyond their control, for example, hospitals with a disproportionately large population of high-cost or vulnerable beneficiaries. Thus, several commenters suggested that CMS also account for beneficiaries. As we stated in the CJR Final Rule (80 FR 73348), we believe that using the higher of regional and participant-specific prices would not sufficiently incentivize inefficient participants to become more efficient. That is, participants with historically high episode expenditures would have less of an incentive to become more efficient over the course of a model if they can quality for reconciliation payments by improving only slightly relative to their own historical performance while still being less efficient than their regional peers.

**Response:** We agree with MedPAC on the benefits of national prices as well as their view that national prices should ultimately be adopted if the EPMs were fully integrated into Medicare on a national basis. We also continue to believe that our proposal to phase-in regional pricing from participant-specific prices offers the most appropriate balance of incentives and benchmarks for purposes of testing the proposed EPMs. In particular, we are concerned that immediately moving toward national pricing could impede the chances for success among participants in high cost regions. As a result, we are reluctant to adopt national pricing at this time. We also do not agree with the suggestion that moving toward national pricing would benefit participants in rural areas with respect to device costs. This is because financial performance, including spending on devices, during the performance years would be generally compared to a participant’s historical costs or to the historical costs of providers in their region. In either case, the costs for...
devices should be relatively more comparable than if comparisons were made to a national measure.

**Final Decision:** After consideration of the public comments received, we are finalizing the proposal, without modification, to blend payments when establishing participants’ benchmark and quality-adjusted targets. We would note that our final policy would also include § 512.300(c)(5) in conjunction with § 512.300(c)(2), (3), and (4). Thus, the final policy for blending payments when establishing benchmark and quality-adjusted targets is included in § 512.300(c)(2), (3), (4), and (5).

(7) Define Regions as U.S. Census Divisions

As we did for the CJR model (80 FR 73349 through 73350), for all 5 performance years, we defined "region" as one of the nine U.S. Census divisions in Figure 1 (81 FR 50857).

**FIGURE 1: U.S. CENSUS DIVISIONS**

We believe U.S. Census divisions provide the most appropriate balance between very large areas with highly disparate utilization patterns and very small areas that would be subject to price distortions due to low volume or participant-specific utilization patterns. Our proposed rule also clarified that we would ascribe the same regional component of EPM-episode benchmark prices for EPM participants in MSAs that span U.S. Census divisions. That is, selected MSAs that span U.S. Census divisions would be attributed to one U.S. Census division for purposes of calculating the regional component of an EPM-episode benchmark price. Specifically, we would attribute an MSA to the U.S. Census division in which the majority of people in the MSA reside.

The proposal to define a region as one of the nine U.S. Census divisions was included in § 512.300(c)(2). We sought comment on our proposal to define region in this manner.

---

84 There are four census regions—Northeast, Midwest, South, and West. Each of the four census regions is divided into two or more “census divisions”. Source: [https://www.census.gov/geo/reference/gtc/gtc_census_divreg.html](https://www.census.gov/geo/reference/gtc/gtc_census_divreg.html). Accessed on April 15, 2015.

85 http://www.eia.gov/consumption/commercial/census_maps.cfm.

The following is a summary of the comments received and our responses.

**Comment:** Many of the commenters on the proposed regional definition expressed concerns about the proposal to blend participant-specific and regional pricing. In general, the commenters expressed concerns that, given the size and diversity of the proposed U.S. Census divisions with respect to health conditions and costs, a single regional price would potentially not be an accurate measure of a participant’s costs. As a result, those participants that treated sicker patients would be penalized in particularly large and diverse regions. Thus, many of these commenters requested that CMS set prices based on a narrower and more cohesive geographic area, for example, at the MSA level, IPPS wage index level, or based on MAC regions. A commenter recommended that CMS not base benchmark prices on a regional average but consider taking into account a participant’s relative mix of patients with respect to CCs and MCCs.

Another commenter suggested that, while some financial risk is captured based on CMS-HCC scores, the best way to remove unintended consequence is by comparing participants with similar patient populations, instead of using Census Divisions to calculate target prices. In their view, using Census Divisions to set target prices penalizes high acuity hospitals for existing in the same multi-state “region” as lower-acuity hospitals, even if those hospitals are more capable at caring for sicker patients. As such, many hospitals are funneled the most complex AMI, CABG, or fracture cases, which may increase average costs in a way that is consistent with providing the highest-quality care. As such, this commenter recommended that CMS instead compare hospitals against other hospitals with similar patient populations for the purpose of calculating target prices. As high-acuity
referral centers are most at-risk given that they treat the most ill patients in the nation for all of the proposed EPMs, the commenter recommended that CMS group together such high-acuity referral centers and treat them as their own “Peer group” cohort rather than by region or within each region for the purpose of calculating target price. This would ensure that locations systematically treating the most complex cases are being compared appropriately. Another commenter suggested this concept be expanded more broadly so that peer groups might be formed around characteristics such as urban teaching hospitals, suburban hospitals, or small rural hospitals.

Response: We appreciate the comments and concerns raised on our proposal to base regional pricing on U.S. Census Divisions as well as the suggested alternatives. Our proposal intended to balance our goal of identifying relatively cohesive, homogeneous, and meaningful groups for purposes of establishing benchmark prices with what was administratively feasible. While we appreciate the suggested alternatives that were offered and could consider them for future models, we continue to believe, as we stated in the CJR Final Rule (80 FR 73350), that U.S. Census Divisions provide the most appropriate balance between very large areas with highly disparate utilization patterns and very small areas that would be subject to price distortions due to low volume or hospital specific utilization patterns. We would also note that as discussed earlier in section III.D.4.b.(2), we will be exploring additional methods for further risk-adjusting episodes under the models that we intend to make effective by PY3. We believe that these additional adjustments will make comparisons of financial performance among participants more comparable regardless of a region’s diversity.

Final Decision: After consideration of the public comments received, we are finalizing the proposal, without modification, to define a region as one of the nine U.S. Census divisions. Our final policy for defining regions is included in §512.300(c)(2).

(8) Normalize for Provider-Specific Wage Adjustment Variations

Some variation in historical EPM-episode payments across hospitals in a region may be due to wage adjustment differences in Medicare payments. In setting Medicare payment rates, Medicare typically adjusts facilities’ costs attributable to wages and wage-related costs (as estimated by the Secretary from time to time) by a factor (established by the Secretary) that reflects the relative wage level in the geographic area of the facility or practitioner (or the beneficiary’s residence, in the case of home health and hospice services) compared to a national average wage level. Such adjustments are essential for setting accurate payments, as wage levels vary significantly across geographic areas of the country. However, having the wage level for one hospital influence the regional-component of another hospital’s EPM episode-benchmark price with a different level would introduce unintended pricing distortion not based on utilization pattern differences.

To preserve how wage levels affect provider payment amounts, while minimizing the distortions introduced when calculating the regional-component of blended EPM-episode benchmark prices, we proposed to normalize for wage indices at the claim level for both historical EPM-episode payments and actual EPM-episode payments (81 FR 50858). As discussed in section III.D.3.b. of the proposed rule (81 FR 50845 through 50846), we utilize the CMS Price (Payment) Standardization Detailed Methodology to calculate EPM-episode benchmark and quality-adjusted target prices and actual EPM-episode spending. This methodology removes wage level differences in calculating standardized payment amounts.

We believe it is important to reintroduce wage index variations near the end of the EPM-episode price-setting methodology and when calculating actual EPM-episode payments during an EPM performance year, to account for the differences in cost for care redesign across different geographic areas of the country. For example, hiring additional hospital staff to aid in patient follow-up during the post-discharge period of an AMI model episode would be significantly more costly in San Francisco than in rural Idaho. If we do not reintroduce wage index variations into EPM-episode benchmark price and actual EPM-episode payment calculations, we would calculate reconciliation and repayment amounts that would not capture labor cost variation throughout the country, and EPM participants in certain regions may see less opportunity and financial incentive to invest in care redesign. Thus, when setting EPM-episode benchmark prices and calculating actual EPM-episode payments, we proposed to reintroduce the participant-specific wage variations by multiplying EPM-episode payments by the wage normalization factor when calculating the EPM-episode benchmark prices and actual EPM-episode payments for each EPM participant, as described in section III.D.4.c. of the proposed rule.

We proposed to use the following algorithm to create a wage normalization factor: 0.7 * IPPS wage index + 0.3. The 0.7 approximates the labor share in IPPS, IRF PPS, SNF, and HHA Medicare payments. The specific order of steps, and how this step fits in with others, is discussed further in section III.D.4.c. through III.D.4.e. of the proposed rule (81 FR 50862 through 50864). We also referred to the CJR model Final Rule for more detailed information on our normalization process adopted for the CJR model (80 FR 73350 through 73352).

The proposal to normalize for provider-specific wage adjustment variations was included in §512.300(c)(12). We sought comment on our proposal to normalize for these variations.

We received no specific comments on our proposal to normalize for provider-specific wage adjustment variations other than one in support of the proposal.

Final Decision: We are finalizing the proposal, without modification, to normalize for provider-specific wage adjustment variations. Our final policy for normalizing provider-specific wage adjustment variations is included in §512.300(c)(12).

(9) Combining Episodes to Set Stable Benchmark and Quality-Adjusted Target Prices

For the purposes of having sufficient episode volume to set stable EPM-episode benchmark and quality-adjusted target prices, we proposed generally to follow the process from the CJR model (80 FR 73352 and 73353) to calculate severity factors, EPM participant-specific weights, and region-specific weights that allow us to surmount issues of low volume for EPM episodes with particular characteristics by aggregating EPM episodes and portions of EPM episodes across dimensions that include anchor MS–DRGs, the presence of AMI ICD–CM diagnosis code on the anchor inpatient claim, and the presence of a major complication or comorbidity for anchor CABG MS–DRGs (81 FR 50858 through 50861). Where the CJR Final Rule referred to anchor factors, however, for the purposes of the proposed rule, we referred to severity factors to avoid confusion when performing calculations pertaining to expenditures that occurred during the anchor hospitalization and after the anchor hospitalization in CABG model episodes.
For SHFFT model episodes, we proposed to combine episodes with price MS–DRGs 480–482 to use a greater historical episode volume to set more stable SHFFT episode benchmark and quality-adjusted target prices. To do so, we proposed to calculate severity factors for episodes with price MS–DRGs 480 and 481 equal to—

\[
MS - DRG\ 480\ severity\ factor = \frac{\text{Natl. avg. } MS - DRG\ 480\ episode\ spend}{\text{Natl. avg. } MS - DRG\ 482\ episode\ spend}
\]

\[
MS - DRG\ 481\ severity\ factor = \frac{\text{Natl. avg. } MS - DRG\ 481\ episode\ spend}{\text{Natl. avg. } MS - DRG\ 482\ episode\ spend}
\]

The national average would be based on SHFFT model episodes attributed to any IPPS hospital. The resulting severity factors would be the same for all SHFFT model participants. For each SHFFT model participant, a hospital weight would be calculated using the following formula, where SHFFT model episode counts are SHFFT-model-participant hospital-specific and based on the SHFFT model episodes in the 3 historical years used in SHFFT model episode benchmark and quality-adjusted target price calculations:

\[
\text{Count of episodes with price } MS - DRG\ 480 - 482 = MS - DRG\ 480\ episode\ count \times MS - DRG\ 480\ severity\ factor + MS - DRG\ 481\ episode\ count \times MS - DRG\ 481\ severity\ factor + MS - DRG\ 482\ episode\ count \times 1
\]

A SHFFT model participant’s specific average episode payment would be calculated by multiplying such participant’s weight by its combined historical average episode payment (sum of historical episode payments for historical episodes with price MS–DRGs 480–482 divided by the number of historical episodes with price MS–DRGs 480–482). The calculation of the participant weights and the participant-specific pooled historical average episode payments would be comparable to how case-mix indices are used to generate case-mix adjusted Medicare payments. The participant weight essentially would count each episode with price MS–DRGs 480 and 481 as more than one episode (assuming episodes with price MS–DRGs 480 and 481 have higher average payments than episodes with price MS–DRG 482) so that the pooled historical average episode payment, and subsequently the SHFFT model episode benchmark and quality-adjusted target prices, are not skewed by the SHFFT model participant’s relative breakdown of historical episodes with price MS–DRGs 480 and 481 versus historical episodes with price MS–DRG 482.
